

The proposal for compulsory purchase of Pegwell Bay as a form of storage facility will cause untold destruction to a site that has shown nature at it's very best....restoration of precious a natural environment. The proposals for the whole project will also have horrendous impact on those who love to walk there and on the surrounding area and who appreciate the beauty of nature plus those who live in the vicinity will suffer both constant noise and traffic disturbance. Thanet is already under siege from relentless house building so to loose what little precious natural environment is left doesn't bare thinking about. Surely the idea of green energy production to help protect the environment and so to take a wrecking ball to it seems at odds and opposite the so called aims of this project.
