

I am writing this comment to raise my objections to the use of the Hoverport for access to the intertidal mudflats at Pegwell Bay in relation to the Sealink project.

I find hard to believe that National Grid have no information/knowledge about the colliery waste materials used for foundations for the Hoverport

National Grid conclusion that significant effects in relation to geology and hydro geology from existing contamination are unlikely, minor and not significant to cause any permanent damage are yet another example of their arrogance and lack of concern to themselves and irrelevant to them.

What environmental surveys have led to this conclusion remains a mystery to me.

I would like to highlight again of the disregard to wildlife habitat, damage to the Flora and Founa that depend on.their habitat

It's not good for daily life being stuck next to a building site for a long period.

A negative affect on property prices within the catchment area isn't a grea situation. !

I hope some common sense will prevail, to prevent these reckless plans to be authorised, and realisation that this site is unsuitable for Sealink project.

Regards.

Paul Ashby.
