

How can this be possible to make such a devastating development on protected land! It's so close it will damage the ecology beyond repair.

The pylons will kill the birds and the land will have run off like the run off from the road and destroy the sea life that's supporting the sSSI.

How can you allow this to happen?

It will affect the local people because this area has become a real jewel in the area and I often walk it to take in the seals and nature. You could disturb the seals and the rare flowers that grow. Please stop the world needs places like this saved for the good of humanity
