

We are the owners of [REDACTED] on which the Sea link project put together by National Grid Electricity Transmissions will seek place cable routes and associated landscaping areas on our land

I wish to strongly oppose the acquisition and 'change application consultation document' of the said land in my ownership along the B1119 is affected and would be grateful if you could accept this letter as an objection.

The land added in the 'change application consultation document' is still pursued to despite the assurances of Sea link representatives that this would not happen. Due to the fact that it will have little effect on screening. Other than screening the trees that already exist.

The need for 18m width of land for the purpose of screening by way of creating a hedgerow is in our opinion is excessive. The land is currently utilized for the cropping of Christmas trees which is an integral part of our farm business. The project is already consuming areas critical to this operation and rendering it sterile for this practice.
