

I am particularly concerned about the use of Benhall Bridge which is not suitable for the proposed loads to access the converter station. I believe the applicant has acted in a dishonest way by introducing this change after the process has started and after the open floor hearings in November. This has put the community at a disadvantage and is an unfair way to proceed. Suffolk county council have also raised serious concerns as the bridge is totally unsuitable for loads of this magnitude. To close the bridge to access sealink and potentially lionlink will cause severe disruption to the local community on multiple occasions and add to the significant effects road closures and increased traffic is already having in relation to Sizewell
