

We strongly feel that the proposed National Grid Sea Link development in this area is the wrong solution for distributing energy from offshore wind power. This area is already overloaded with the massive Sizewell C development and to add Sea Link to it puts too much pressure on the precious natural habitat, endangers the flora and fauna and the physical and mental health of local residents and visitors. The best solution is to deal with the energy offshore and bring it in at a brownfield site further to the south. We implore the EXA to listen to the local objections and consult with the SEAS organisation.
