

The Hoverport and Pegwell Bay are the green lung for Thanet and once they are gone they are gone forever.our energy infrastructure must not prioritise shareholder profits over & above the needs of the environment & community. Another issue I want to comment on is the Applicants proposal AS-167. This would allow a future hypothetical DESNZ which I understand does not exist and has no defined powers or procedures to take over the discharge of the D C O requirements. Under this approach councils would be sidelined reduced to consultees with no say in the final decision. This would push aside the people who actually know their communities, our roads, our landscape, and the pressures we already live with. It would replace local judgement with an untested approval system that has never been examined. I would urge you to reject AS-167 in full as it represents a material & unjustified late change to the Examination. Thank you.
