

A lot of the very worrying issues raised in summary statements to National Grid have not been satisfactorily resolved! National Grids mitigation measures for the destruction of 22 acres of diverse marsh and farmland are wholly inadequate. So many birds, mammals, reptiles and plants (many rare and endangered) will lose their unique habitat and saying they can have a field by an industrial estate 3 miles down the road is an insult to any intelligent person!! How also will they mitigate for the huge security risk of having this massive convertor station perched on the edge of our South East Coast, a very easy target in this dangerous new world we find ourselves in? The people of Thanet will suffer hugely if this goes ahead! We have already lost so much nature under concrete housing estates being built on our agricultural fields. People need nature in their busy lives. Also tourism will die out in Thanet because of the destruction and chaos on our roads for many years to come, ruining so many businesses that rely on it. This is an ill thought out project, with the only winners being the private company National Grid!! Please don't allow this to happen. Nature, our environment and the people of Thanets livelihoods and mental and physical health must come first and other ways less damaging must be found.
