I am writing once again to join my voice to the numerous others who deplore the proposed wreckage of the ancient beautiful, historic, rural county of Suffolk. This is not a NIMBY protest..we all agree that we need green energy to stabilise the ever growing demands for clean energy...
However, the totally indiscriminate siting of such demands by SeaLink and Lionlink (an American company who have no local knowledge whatsoever) is beyond belief.

Firstly, neither of the projects take any notice of each others' plans for carving up this area of designated Heritage Coast, and Site of Scientific ecological interest, and choose to bring cables ashore on the very edge of an historic village with connections to building ships in Tudor times...when (at the very least) there is a stretch of coast between Walberswick and Dunwich which is uninhabited...

But the most crucial point of the argument,
is that there is a perfectly sited brownfield site - a decommissioned power station at Bradfield further down the coast in North Essex - which offers the solution... It is there, and near to Friston (its destination) and would minimise the amount of infrastructure required for it's installation ..

Why hasn't the National Grid attempted to determine how the two separate projects interact?
And realised that two huge projects in one tiny inhabited and historic village should in no circumstances be viable?

In hopes that sanity will prevail.
