Dear Sir, Madam,

Interested Party Number: [redacted]

I write in respect of the proposed South East Anglia Link Project.

I wish to reiterate that, in my view, choosing Pegwell Bay/Minster Marshes as the preferred location for National Grid's convertor station is one that will cause irreparable damage to both the surrounding environment and associated species and their habitats and from which many aspects may never fully recover.

Further, people's enjoyment of the location will be subjected to severe blight and detriment.

National Grid's evaluation process, leading to site selection is fundamentally flawed and is lacking in fundamental detail, sufficient to evidentially support their preferred choice of location.

The subsequent response does not address the initial matters of concern raised by local people, businesses and wildlife groups.

Namely:
Destruction of Habitats.
Water Environment.
Traffic and Transport.
Climate Change.
Noise and Vibration.
Human Health and Wellbeing.
Socio-economics and Tourism.
Cumulative Impacts.

On this basis, I request that this application is rejected and that a further detailed review of options is undertaken in order to ascertain the most suitable location for a project of this scale, and is one that minimises the impact on the environment and associated habitats and species.

Yours faithfully,

Peter Armstrong-Cribb
