Subject: Sea link project - Thanet

Dear [redacted]

I am writing to you with a solution to the sea link project in Thanet which I believe is to be decided on by yourself shortly

We have a 250 acre farm on the exact same marsh as the proposed infrastructure project and we are about to go live with a BNG scheme. We are located in [redacted] ([redacted]

I understand that as of November, national infrastructure projects will be liable for BNG and as such our farm will be able to offset the environmental impact of this project.

150 acres of our farm is on the marsh and has been assigned ‘lowland wetland mosaic’ units which are of ‘higher distinctiveness’ providing rare habitat for wetland species.

We have worked closely with natural England and the habitats proposed by our plan were masterminded by [redacted]

By engaging BNG so close to the proposed site the national grid could show they have taken all measures to not just limit but improve the environmental effects of the project

I believe this solution to offset the impact would be well received by all after so much opposition.

I hope this can be taken into consideration and would welcome any queries you and your team may have.

Kind regards,

William Heddle
