9-2.939	<p>For an ambitious County like Essex, we are passionately engaged with our legal requirement to reach net zero. There is a significant effort required to reach that target and as such it is important to be open and transparent in assessing progress towards climate targets, and that includes making assessments of schemes that might potentially show that climate targets are more difficult to reach. Such circumstances might trigger the need for greater action to be taken to try to minimise the climate impacts of a scheme and make it more acceptable,</p>	<p>The scope of the GHG assessment (document reference 7.2) has been agreed as part of the Scoping Opinion (document reference 6.19).</p> <p>The assessment concludes the impact on GHG will have no material impact on the government's ability to meet carbon reduction targets. It is not considered necessary to assess against a county target as the GHG emissions from the Project would not be included in the County reporting.</p> <p>The Outline Code of Construction Practice (CoCP) (document reference 7.2), Appendix H provides the</p>		X

Financial Compensation						
9-2.940	Concern that the Project will devalue property / impact on property value (generally - no location given)	<p>National Grid acknowledges that its proposals may cause concern to landowners. Diminishment of property value known as 'injurious affection' and any other appropriate heads of claim would be considered on an individual basis in accordance with current legislation. We would pursue a voluntary agreement with affected landowners, acquiring rights in accordance with our Land Rights Strategy (the strategy is subject to review). If a voluntary agreement cannot be reached, then the Compulsory Purchase Code allows for a claim of compensation for the loss that property owners may have suffered as a direct result of the retained part of your property ownership being worth less as a direct result of the works.</p> <p>If there are any specific concerns about the devaluation of property, National Grid would advise seeking third party advice. or alternatively please contact the Project team:</p> <p>Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.</p> <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD.</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.941	Request for adequate financial compensation for property value loss / Suggest that impacted individuals need to be compensated	<p>Potential impact on property prices is not a material planning consideration for the purposes of a DCO application. Separate to this point, the Secretary of State has asked that the DCO application include an assessment of the likely significant environmental effects in the form of potential impacts on property prices. The ES contains an assessment on this. It concluded that there is no evidence of any significant environmental effects on house prices as a result of the Project. Although not part of the Environmental Impact Assessment process it is relevant to observe that any impact of the Project on residential properties are potentially capable of being dealt with through statutory nuisance or compulsory purchase compensation regimes (subject to the requisite criteria being met).</p> <p>All affected landowners would be compensated for any temporary/permanent losses, and this would be dealt with on a case-by-case basis in line with the Compensation Code.</p> <p>If there are any specific concerns requiring compensation and how it would be assessed, please contact the Project team:</p> <p>Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.</p> <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>The Government has published its guidance on community funds for transmission infrastructure (DESNZ, 2025). National Grid is committed to working with Ofgem, industry partners, local communities and their representatives to ensure community benefits are delivered fairly and effectively, driving lasting, positive change for the people and places integral to our developing electricity network.</p> <p>Government has also announced its plans to introduce a bill discount scheme for households within 500 m of new infrastructure, which it proposes to introduce through the Planning and Infrastructure Bill. This is evolving government policy. Government expects this scheme to be in place by 2026 and we would share further details as they emerge.</p> <p>National Grid is committed to providing a coordinated local and regional approach to community benefits. This would be delivered outside the development consent process, since this is not a material consideration in the decision on the proposed Project or a matter to be secured as part of the DCO, as per the Community Funds for Transmission Infrastructure: Guidance (DESNZ, 2025).</p>				
9-2.942	Request that National Grid purchase respondent's property / business	<p>National Grid is not required to purchase any properties or businesses as part of the Project.</p> <p>National Grid compensates landowners in line with the Compensation Code and any other relevant legislation.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.943	Criticism that the financial compensation offered by National Grid is not enough (e.g. the £6,000 offered to respondents is not enough to cover the impact to the values of the properties, the loss of income, rent for land, disruption as a result of the time for pylon construction, impact to the land changed via roads, additional security risks, and habitats to be recreated and established elsewhere; they do not reflect land values)	<p>National Grid's Land Rights Strategy sets out compensation payments that will be made to landowners. The document and the payment schedules contained within, were reviewed, and updated in early 2024. A copy of this document is available on the Project website.</p> <p>Easement payments cover the rights to install, maintain and remove a piece of apparatus. Compensation for disturbance, damages and other losses during construction will be covered separately and dealt with on a case by case basis.</p>	X		X	
9-2.944	Criticism that compensation for those negatively impacted by the Project could cause National Grid financial and reputational issues	<p>National Grid will continue to follow legislation and guidance regarding compensation for those negatively impacted by the Project.</p> <p>National Grid's Land Rights Strategy sets out compensation payments that will be made to landowners. The document and the payment schedules contained within, were reviewed, and updated in early 2024. A copy of this document is available on the Project website.</p>	X		X	
9-2.945	Request that National Grid should offer to purchase property where residents are impacted by the Project / Suggest that residents should be given the option of compulsory purchase	<p>We try to avoid communities and properties as much as possible when routing projects, while considering other environmental impacts and technical considerations.</p> <p>Unfortunately, while we understand that our proposals cause concerns about visual impact and about property value, UK law does not include for compensation in cases of a loss of view or changes to a view. 9-2.965	Concern about health risks associated with the Project	<p>(NPS) EN-5. It is National Grid's policy to ensure that all of its equipment comply fully with those exposure limits.</p> <p>Health considerations are given a high priority in the process by which we arrive at any proposals for new electricity circuits. Assessment of compliance with Electric and Magnetic Field (EMF) guidelines and policies is key to National Grid's approach. The UK has a carefully thought-out set of policies for managing EMFs. There have been over four decades of research looking into whether EMF can cause health effects and there are no established effects below the exposure limits. When designing our overhead lines, substations and underground cables design criteria, we ensure they would not exceed those exposure limits, even when operating at 100% capacity. Additionally, the precautionary measures which the Government have adopted, are applied to the design which ensure the EMFs reduce as quickly with distance as possible. Evidence of that compliance is presented in the EMF compliance report (document reference 7.8) submitted as part of the Development Consent Order (DCO) application.</p> <p>National Grid takes this issue very seriously and look to authoritative and independent scientific organisations such as the World Health Organisation (WHO) and in the UK Health Security Agency (UKHSA) to review the worldwide body of scientific evidence on health. Important decisions on health are taken independently of</p>	X	X	X

		<p>Burstead, we continue to liaise with the operator to identify an appropriate solution.</p> <p>Specifically in respect of Wattisham Flying Station our proposals position the alignment onto relatively lower ground (to remove the potential for interference with Instrument Landing System (ILS) radar) and adopt an alignment closer to the existing 132 kV overhead line and include replacing part of the 132 kV line south of Offton by underground cable to avoid a new overhead line corridor being introduced.</p> <p>We will continue to engage with relevant parties as appropriate.</p> <p>Further information on the assessment of airfields can be found in the Environmental Statement (ES) Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).</p>				
9-2.967	Concern about construction and maintenance of the Project for health and safety of workers / operatives	Any form of construction has built in risk associated with different activities. All National Grid contractors undertake risk assessments and follow safe systems of work as per the specific Method Statement, regardless of technology type being constructed, which in turn will be independently reviewed and monitored by National Grid. This Risk Assessment and Method Statement (RAMS) will follow industry standard practice.			X	
9-2.968	Concern about risks associated with riding horses once the Project has been built	As well as possible effects on humans, possible effects of Electric and Magnetic Fields (EMFs) on various			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>animals have been studied a number of times. No proven effects of EMFs have been found in any species at levels below the guidelines. This is confirmed in National Policy Statement (NPS) EN-5 which states: <i>"There is little evidence that exposure of crops, farm animals or natural ecosystems to transmission line EMFs has any agriculturally significant consequences."</i> Although horses are not directly mentioned, there is no evidence to suggest they are any different to other farm animals.</p> <p>As well as the possible direct biological or health effects addressed above, indirect effects such as microshocks can occur as a result of electric fields. Microshocks are small spark discharges which are similar to a static shock after walking across a nylon carpet for example. The Project will be designed in accordance with the principles of the Governments Code of Practice 'Power Lines: Control of Microshocks and other indirect effects of public exposure to electric fields' to ensure these are mitigated, which include equestrian activities.</p>				
9-2.969	Request for effects on mental health during operations to be included in scope	Mental health impacts arising from changes brought about by the Project during operation are included in the scope as set out in Environmental Statement (ES) Chapter 10: Health and Wellbeing (document reference 6.10).	X		X	
9-2.970	Request for information on the independent advisor for the Project on aviation safety, and request that the independent advisor provides explanation for the	National Grid has appointed an independent advisor, an established aviation consultancy with over 35 years experience in airport and general aviation airfield			X

	Project not being an issue for airfields in the area and provides details on the process to be followed in the event that an aeroplane does hit the overhead line	<p>planning and operations, to undertake aviation impact assessments for the Project. The firm has provided expert advice for a broad range of clients including the UK Civil Aviation Authority (CAA), local authorities, major international and regional airports, general aviation airfields and developers.</p> <p>In consultation with airfield operators and other bodies including the Civil Aviation Authority's Airfield Advisory Team (CAA AAT), the advisor has developed a methodology to assess the potential impacts of the Project on airfields in close proximity. The approach enables consideration of obstacle clearance distances and limits as well as additional site-specific factors including flight patterns, operating procedures, aircraft performance, and topography. This bespoke and ongoing consultation and impact assessment process has, to date, resulted in adjustments to the Project design to minimise potential impacts, as well as the consideration of alternative mitigation measures, such as changes to aerodrome operational procedures, where reasonable and appropriate. Continued collaboration with operators and consultees seeks to agree the acceptability of proposed mitigations. National Grid considers this approach to be in accordance with its responsibilities as applicant as described within the Government's Overarching National Policy Statement for Energy (NPS EN-1).</p> <p>If an aircraft strikes a National Grid overhead line and there is a danger to life the first action is to maintain a</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>safe distance from the incident and call the emergency services. National Grid should then be informed via the emergency number 0800 404 090 (Option 1). This number is found on the property plate of each pylon along with the pylon reference number which should also be stated.</p> <p>The National Grid control centre will take details and assess what actions are required to keep people safe, this will include maintaining a safe distance and warning others. They will then direct an overhead line engineer to site who will liaise with the emergency services. If there is no risk to life but the overhead line has sustained damage, then maintain a safe distance and call the National Grid Control centre via the 0800 number, this will trigger an immediate inspection. Further information on the assessment of airfields can be found in the Environmental Statement (ES Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).</p>				
9-2.971	Concern about safety protocols and emergency response plans for the Project, and request for National Grid to explain measures in place regarding potential failures or accidents (particularly to protect local communities and the environment)	<p>National Grid, and their contractors work to the requirements of UK Health and Safety law, including the Construction and Design Management Regulations, this ensures that construction works undertaken are planned and managed in a safe and responsible manner.</p> <p>National Grid and their contractors work to robust safety management plans, including Emergency Response Plans which would be adhered to in the case of an</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>incident on one of our sites. These plans are regularly reviewed, and in the case of technical rescues, such as from a Mobile Elevated Working Platform (MEWP) demonstrated with involvement from the Emergency Services.</p> <p>The majority of the existing National Grid transmission network is constructed from overhead lines, these are a demonstrated and reliable form of electricity transmission in the UK. They are designed to meet current design and safety standards and to operate in a range of typical and abnormal weather conditions found in the UK. Standards are regularly reviewed and any adjustments to these standards (for example with regards to climate change) would need to be applied to the entire network. At this stage no known changes are required for a new overhead line project. Unforeseen events of sufficient severity to cause damage to infrastructure are very rare in the UK but do occur.</p> <p>Overhead lines could be subject to adverse weather conditions such as high wind speeds and lightning strikes, and also, due to disruption from an external factor such as sabotage. To reduce sabotage from the ground as far as practicable, National Grid install anti-climb measures such as barb-wiring. However, the possibility of interference remains as pylons are typically situated in isolated locations where constant surveillance is impractical. In the unlikely event an overhead line was to be damaged, a network wide monitoring system would detect the fault almost immediately and the circuit</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>would be tripped, and the live current stopped. At the point of repairing any damage, overhead lines are comparatively easier and more cost-effective to repair and maintain than alternative transmission technology.</p> <p>We also undertake regular inspections of the overhead line using thermal imaging to assess damage to the overhead line from weather or other causes. This means low level damage caused would be identified and repaired prior to failure of the line.</p>				
9-2.972	Request for expert evidence of the health risks associated with the Project to be published	<p>Health considerations are given a high priority in the process through which we arrive at any proposals for new electricity circuits. Assessment of compliance with Electric and Magnetic Field (EMF) guidelines and policies is key to National Grid's approach. The UK has a carefully thought-out set of policies for managing EMFs. There have been over four decades of research looking into whether EMF can cause health effects and there are no established effects below the exposure limits. When we design our overhead lines, substations and cables design criteria ensure they will not exceed those exposure limits, even when operating at 100% capacity. Additionally, the precautionary measures which the Government have adopted, are applied to the design which ensure the EMFs reduce as quickly with distance as possible. Evidence of that compliance is presented in the Electric and Magnetic Field Compliance Report (document reference 7.8) submitted as part of the Development Consent Order (DCO) application.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>National Grid takes this issue very seriously and look to authoritative and independent scientific organisations such as the World Health Organisation (WHO) and in the UK Health Security Agency (UKHSA) to review the worldwide body of scientific evidence on health. Important decisions on health are taken independently of industry, and National Grid has followed the guidance and policies adopted by Government on advice from their scientific experts. Each of these organisations have comprehensive reviews of EMF research available to view on their websites.</p>				
9-2.973	<p>Concern that RAF and USAF bases are sited within East Anglia / Concern that the Project poses a safety risk to military aircraft undertaking low flying exercises</p>	<p>The Government's Overarching National Policy Statement for Energy (NPS) EN-1 recognises the potential for new energy infrastructure to affect defence interests and, more specifically, cause obstructions in Ministry of Defence (MoD) low flying areas but sets a requirement for a balance to be struck between defence and energy needs in these areas (paragraph 5.5.19 refers). There is ongoing consultation between National Grid and the MoD (prescribed consultees) and other defence stakeholders concerning the possible impact of the Project on military assets (including aerodromes) and operations, and the necessity for mitigation measures.</p> <p>Further information on the assessment of airfields can be found in the Environmental Statement (ES Chapter 15: Socio-economics, Recreation and Tourism</p>			X

		for installed mitigation, based on the final 400 kV design arrangements, which would be implemented by the relevant utility provider under their existing utility operation and maintenance provisions.				
9-2.982	Request that earthing arrangements need to be confirmed by National Grid / Suggest that where earthing is installed, National Grid should undertake mathematical modelling to ensure that during a fault current event that the GPR at pylons does not transfer and AC voltage to the UKOP that exceeds safe limits	<p>National Grid has carried out detailed Alternating Current (AC) Interference studies on impacted pipelines and provided results to affected pipeline operators to facilitate further discussion on impacts and agree mitigations. This study details impacts arising from AC Corrosion and Impressed Voltages.</p> <p>National Grid is aware of our obligations under the Pipeline Safety Regulations 1996 and we're working with our experts to assess ground potential rise effects (GPR) through system modelling. From these results and if required, potential mitigations will be developed in collaboration with the pipeline operators to ensure that safe voltage limits are maintained on their assets during network faults.</p>			X	
9-2.983	Suggest that National Grid's CDM risk register includes the risks to buried utilities as a result of the new project and ensure it complies with current UK legislation (e.g. the Electricity at Work Regulations and ensure that its new project does not expose BPA personnel or the general public to extra safety risks that could result in harm)	National Grid can confirm that physical effects (e.g. strikes) as well as electrically-induced effects (e.g. induced voltages) and resulting potential risks to staff, third parties, and the public, are captured on our hazard register and in accordance with Construction Design Management (CDM) 2015, where they cannot be mitigated by design, would be transferred to the Contractor and the Operator through to the end of life of the asset, with alternative mitigation measures.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.984	Suggest that the powerline should cross a pipeline at right angles and the level of parallelism between the pipeline and powerline should be limited. Powerlines within 1000 m of a pipeline can create long term AC interference on a pipeline	National Grid acknowledges this design best practice and where it has been possible, this has been applied. However, due to combinations of additional constraints to routing, perpendicular crossings are not always possible. Furthermore, due to the north to south alignment of the Project, parallelism with other north to south pipeline is unavoidable. We and our experts are modelling Alternating Current (AC) interference effects for all pipelines up to three kilometers either side of the alignment (six kilometers swathe). From these results, the scope and extent of potential mitigation measures would be dependent on the final design arrangements of the Project which would continue to evolve within the parameters of confirmed Limits of Deviation. Consultation between National Grid and the relevant utility provider will confirm the requirement for installed mitigation, based on the final 400 kV design arrangements, which would be implemented by the relevant utility provider under their existing utility operation and maintenance provisions.			X	
9-2.985	Concern that there is an AC corrosion risk on the UKOP due to the acute cable crossing	National Grid acknowledges that there is the potential, based on induced currents from the 400 kV overhead line and the amount of parallelism due to non-perpendicular crossings, that alternating current mitigation measures may need to be installed to the UK Onshore Pipeline Operators' Association (UKOP). The scope and extent of such mitigation measures will be dependent on the final design arrangements of the			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Project which will continue to evolve within the parameters of confirmed Limits of Deviation. Factors including crossing angle and clearance height, length of parallelism, site specific soil resistivity etc. combine to define the requirement for mitigation. Consultation between National Grid and the relevant utility provider will confirm the requirement for installed mitigation, based on the final 400 kV design arrangements, which would be implemented by the relevant utility provider under their existing utility operation and maintenance provisions.				
9-2.986	There will need to be liaison between National Grid and BPA on the Project and discussions on the risks to the BPA pipeline system and how they could be mitigated. BPA would incur additional costs in relation to the new power cable system construction and would need an agreement with National Grid to pay for the extra costs (e.g. soil resistivity surveys, external consultants, depth surveys, CP monitoring activities, land agent costs and project supervision costs)	All affected utilities would be compensated for any temporary/permanent losses, and this would be dealt with on a case-by-case basis. British Pipeline Association (BPA's) claim for losses incurred will be agreed within a set of Protective Provisions currently being negotiated.			X	
9-2.987	NGET will need to consider the impact on buried utilities as part of its CDM Risk Register and demonstrate this to BPA	National Grid can confirm that physical effects (e.g. strikes) as well as electrically induced effects (e.g. induced voltages) and resulting potential risks to staff, third parties, and the public, are captured on our hazard register and in accordance with Construction Design Management (CDM) 2015, where they cannot be mitigated by design, alternative mitigation measures will			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		be transferred to the Contractor and the Operator through to the end of life of the asset via the Health and Safety File.				
9-2.988	It will be important that sufficient time is allowed for all relevant studies to be conducted in relation to the impact of the Project on UKOP. BPA would assist National Grid in providing any information it requires to undertake its studies	National Grid welcomes British Pipeline Association's (BPA) collaboration and support to arrive at an acceptable conclusion. We believe that there is sufficient time to assess and potentially develop and install any required Alternating Current (AC) interference mitigation prior to our energisation in late 2030.			X	
9-2.989	Suggest that the Project is located in such a position that it will be as remote as possible from the BPA pipeline and that during a fault condition the ground potential rise will not create a hazardous touch potential on UKOP	We have managed to position our proposed pylons such that our computer modelling confirmed that the ground potential rise safety and coating damage limits specified in BS EN 50443 will not be exceeded under a line fault condition.			X	
9-2.990	The touch potential risk on the UKOP close to the Project will need to be determined by National Grid and the touch potential limit will be dependent upon the disconnection time for the powerline protective devices, which has not been advised at this stage. It is recommended that the short-term touch potential limits shall be based upon the guidance in BS EN 50122-1 and not that given in BS EN 50443. BPA will require the touch potential on all sections of the pipeline to be determined and that the values shall not pose a safety risk to anyone who comes in contact with the pipeline	Touch voltages have been assessed by modelling for fault scenarios at a range of pylons along the route, and no touch voltages above the British Standard (BS) EN 50122-1 limits were found on the UK Oil Pipeline (UKOP). Once the final Project electrical design is confirmed, these values will be reassessed and shared with the asset owner for review. National Grid and British Pipeline Association (BPA) have engaged collaboratively to feed into the inputs and methodology to the Alternating Current (AC) Interference study including standards thresholds adhered to.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.991	The cable crossing arrangement of the UKOP pipeline has not been shown in terms of a detailed drawing. It is believed that the cable crossing will be at an acute angle of approximately 30 degrees. This will need to be confirmed when detailed crossing drawings are available. To minimise levels of induced voltage on the UKOP the cable crossing should ideally be at right angles and an acute crossing of the BPA line with the cables should be avoided, if possible. The proposed cable crossing design for UKOP is not at right angles and it will be National Grid's responsibility to therefore confirm the proposed cable crossing arrangement does not pose a risk to the UKOP. The long-term AC interference levels that already exist on the pipeline in the vicinity of the cable crossing will need to be added to the values determined by any modelling studies	National Grid acknowledges that a perpendicular crossing is best practice and generally, where it has been possible, this has been applied. However, due to combinations of additional constraints to routing, perpendicular crossings are not always possible. Since our statutory consultation, we have revised the alignment to cross the pipeline at approximately 49°. We and our experts are modelling Alternating Current (AC) interference effects for all pipelines up to three km either side of the alignment (six km swathe). We do consider the baseline AC voltages in the pipeline. From these results, the scope and extent of potential mitigation measures will be dependent on the final design arrangements of the Project which will continue to evolve within the parameters of confirmed Limits of Deviation. Consultation between National Grid and the relevant utility provider will confirm the requirement for installed mitigation, based on the final 400 kV design arrangements, which will be implemented by the relevant utility provider under their existing utility operation and maintenance provisions.			X	
9-2.992	If the UKOP pipeline will be crossed by any temporary works access road a detailed assessment of the loads on the pipeline system will need to be carried out and calculations performed to ensure that the imposed loads are within safe limits and will not damage the pipeline. BPA would need to confirm the pipe depth at any proposed pipeline crossing	National Grid has since provided such crossing detail and proposed protections to British Pipeline Association (BPA) for agreement. National Grid notes our obligations under the Pipeline Safety Regulations 1996, and should the Project obtain consent, further details would be worked up by the Contractor at the construction stage through further			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	location. The design of the crossing would need to be reviewed, the nature of the vehicles that will cross the pipeline established together with information on the axle loads. The relevant information is not available at present, and any temporary crossing design will be subject to approval	engagement. We expect that adherence will form part of our Contractor's standard ways of working. Wherever a temporary construction feature, e.g. a haul road crossing, might interface with a pipeline, protective provisions would be developed and agreed for discharge during construction.				
9-2.993	It would be important for National Grid to establish BPA safe working requirements for work within the vicinity of its pipeline system and to ensure that these are complied with. The precise nature of the construction activities will need to be advised by National Grid and certain activities (e.g. piling and blasting operations may be restricted within a set distance of the pipeline)	Further information can be found in Technical Guidance Note 287: Third-party guidance for working near National Grid Electricity Transmission equipment. Should the Project obtain consent, further details would be worked up by the Contractor at the construction stage through further engagement and to agree safe ways of working in the vicinity of British Pipeline Association's (BPA) assets. We expect that adherence will form part of our Contractor's standard ways of working.			X	
9-2.994	In relation to the UKOP, baseline CP and AC interference levels due to LFI on the pipeline system from the existing overhead power cables will need to be carried out. Then after energisation of the new National Grid power cables repeat studies would need to be actioned. CP test facilities in the vicinity of the pipeline will most likely need to be modified so that the AC interference levels pre and post energisation of the power cables can be determined and the risk to the pipeline fully evaluated. In the event AC interference above acceptable levels is identified either by the mathematical modelling or	The requirement for ongoing testing and monitoring in relation to Alternating Current (AC) Interference impacts is noted.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	field monitoring then a suitable AC interference mitigation system will need to be designed and monitored					
9-2.995	Request that National Grid advise on the initial projected load on the Project overhead lines, as well as any likely future increase in the powerline load for consideration in relation to the UKOP. National Grid would need to confirm to BPA that the levels of short term and long-term interference at both initial and projected future maximum loads are within permissible levels	<p>Norwich to Tilbury cannot account for the impacts stemming from future and/or currently unknown transmission or distribution network projects. Such impacts would be required to be addressed and mitigated by these future projects.</p> <p>National Grid has worked with British Pipeline Association (BPA) to assess potential Alternating Current (AC) interference impacts and have provided these values within the shared AC interference study report. The study is based on the maximum capacity of the powerline which will be the worst-case scenario for AC interference.</p>			X	
9-2.996	Suggest that the ground potential rise contours at each pylon location in the vicinity of the UKOP should be modelled to ensure that the pipeline is not exposed to voltage levels that exceed safe limits. In determining safe voltage levels, the voltage limits given in BS EN 50122-1 not those in BS EN 50443 shall be adopted, as the general public could be exposed to a touch potential risk. BS EN 50443 only advises safe voltage limits that apply to electrically instructed personnel and is not accepted by the UK pipeline operators as providing voltage limits	<p>National Grid and British Pipeline Association (BPA) have engaged collaboratively to feed into the inputs and methodology to the Alternating Current (AC) Interference study including standards thresholds adhered to.</p> <p>Ground potential rise contours have been assessed for a range of pylons along the route. Both the pipeline voltage to earth and the maximum stress voltage on the pipeline coating during earth faults at pylons is significantly below the touch voltage limits in British Standard (BS) EN 50122-1. Once the final Project electrical design is confirmed, these values will be reassessed and shared with the asset owner for review.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	applicable to pipeline personnel and the general public					
9-2.997	BPA will most likely need to modify the UKOP's existing CP tests facilities in the vicinity of the power cable crossing for a distance of at least 1 km each side of the cable crossing. Indeed, BPA may need to install a new CP test facility close to the cable crossing where highest levels of AC interference are predicted	<p>The potential for works to existing cathodic protection (CP) test facilities arising from Norwich to Tilbury is known.</p> <p>National Grid acknowledges this potentiality and are working with British Pipeline Association (BPA) to develop suitable solutions to the impacts of the Project. We understand that the existing cathodic protection and its monitoring may need to be modified.</p>			X	
9-2.998	Details of the final design for cable crossing of the UKOP should be provided to BPA for its agreement	Upon completion of the detailed crossing design for the overhead line this can be provided to British Pipeline Association (BPA).			X	
9-2.999	Detailed surveys will need to be conducted on the UKOP to establish the existing levels of AC interference for overhead powerlines that already exist within the vicinity of the pipeline. The existing levels of AC interference will need to be included in any assessment of the AC interference from the new powerlines. The effect may not be cumulative as the AC interference is a vector quantity	<p>The cumulative Alternating Current (AC) interference impact from existing and proposed infrastructure has been considered within the studies now provided to British Pipeline Association (BPA).</p> <p>National Grid is working with BPA to further develop and plan the required pre and post mitigation installation surveys.</p>			X	
9-2.1000	National Grid would need to undertake mathematical modelling studies to determine the short- and long-term AC interference levels on the UKOP. These studies should not be undertaken by BPA as they invariably take time, can be delayed and require	National Grid has engaged specialist consultants who are modelling baseline and the Projects resulting AC interference on British Pipeline Association (BPA's) asset. From these results, the scope and extent of potential mitigation measures will be collaboratively			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	information that only National Grid has access to. Modelling studies may not reflect the results experienced in practice and should therefore be undertaken by National Grid not BPA. NGET should request relevant information required off BPA in relation to the UKOP as detailed in UKOPA/GPG/027	developed, dependent on the final design arrangements of the Project which will continue to evolve within the parameters of confirmed Limits of Deviation. Consultation between National Grid and BPA will confirm the requirement for installed mitigation, based on the final Project design arrangements, which will be implemented by the relevant utility.				
9-2.1001	NGET will need to ensure that any AC interference on the UKOP as a result of the new power cable system does not exceed the safe limits detailed in BS EN ISO 18086. The effect of the new power cable system within 1000 m of the UKOP should be considered as part of any modelling studies	National Grid has engaged specialist consultants who are modelling AC interference effects for all pipelines up to three km either side of the alignment (six km swathe). From these results, the scope and extent of potential mitigation measures will be collaboratively developed, dependent on the final design arrangements of the Project which will continue to evolve within the parameters of confirmed Limits of Deviation, to ensure that safe limits are not exceeded. Consultation between National Grid and British Pipeline Association (BPA) would confirm the requirement for installed mitigation, based on the final Project design arrangements, which would be implemented by the relevant utility provider...			X	
9-2.1002	In relation to the UKOP, changes in the power cable operating scenario (e.g. single circuit operation or unbalanced load conditions) will need to be considered as part of any modelling study. Future projected powerline loads and changes in system fault current levels will also need to be included as part of any study	The Alternating Current (AC) Interference study carried out assumes the Norwich to Tilbury proposed infrastructure as operating at full load and so modelling peak impacts. Norwich to Tilbury cannot account for the impacts stemming from future and/or currently unknown transmission or distribution network projects. Such			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>impacts would be required to be addressed and mitigated by these future projects.</p> <p>National Grid acknowledges the requirement to assess these scenarios and details have been shared with British Pipeline Association (BPA) within the AC interference study report. The study is based on the maximum capacity of the powerline with both circuits (balanced) and a single circuit (unbalanced) live, which will be the worst-case scenario for AC interference.</p>				
9-2.1003	Concern that the Project will impact safety in the event that action is taken to abort an aerotow (list of factors influencing this provided by respondent) / Disagreement with National Grid's reasoning that there is a lack of documentary proof, as the respondent has faced these issues previously	<p>In accordance with its responsibilities as an applicant as described within the Government's Overarching National Policy Statement (NPS EN-1) National Grid has appointed an independent aviation consultancy to develop a methodology to assess the potential impacts of the Project on aviation including airfields in close proximity. The assessment methodology enables risk-based site-specific assessment of a range of criteria, including but not limited to, lateral and vertical clearance margins, aircraft types, airfield operational activities and procedures (including those related to gliding), and the surrounding context. The approach is informed by Civil Aviation Authority (CAA) regulations and guidance as well as ongoing consultation with airfield owners and operators.</p> <p>Our aviation consultants have specifically considered potential impacts associated with aborted glider aerotows and assess them to be similar in practice to engine failure after take-off (EFATO) considerations. We</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		are continuing to engage with aviation stakeholders, including the British Gliding Association (BGA), to discuss our assessment assumptions and findings. Further information on the assessment of airfields can be found in the Environmental Statement (ES Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).				
9-2.1004	Concern that National Grid has not undertaken mental health surveys of landowners / communities impacted by the Project (e.g. in relation to consideration of impact of the Project on mental health)	<p>National Grid did not undertake mental health surveys as part of the Project. However, landowners, residents, and other community members were able to submit feedback regarding mental health concerns.</p> <p>National Grid recognises people may have concerns about the health effects of living close to an overhead line, and that the uncertainty while the proposals are developed may cause some stress and anxiety.</p> <p>We have sought to reduce potential effects on communities and residents through routeing and design. We have also sought to reduce concern or uncertainty through making timely design decisions and engaging with people throughout the development of the Project. This has included through our public information events, webinars, and landowner meetings where people could ask questions and express any concern. We also had a dedicated phoneline and email address which remain open to the public.</p> <p>We will continue to engage with people potentially affected by Norwich to Tilbury through regular</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		communication including letters, phone calls and meetings. This would enable concerns to be raised and discussed at an early opportunity and provide a regular point of contact to respond to queries and concerns.				
9-2.1005	Suggest that the Essex Design Guide should be used for the Project, in relation to supporting fire and rescue services (list of relevant sections provided by respondent)	Noting that the Project runs through Essex, Suffolk and Norfolk the Project will be designed to meet requirements from critical service providers such as Fire and Rescue across all three counties and not just cater for Essex design guide requirements.	X			
9-2.1006	In relation to supporting Fire and Rescue services, suggest the following measures for the Project: - Suggest that the Fire Safety Order and relevant building regulations, especially Approved Document B, should be followed for the Project. This includes the provision of any temporary offices and/or accommodation used for the duration of the Project by any contractor. With this, suggest that National Grid inform the appropriate Fire and Rescue service of any such provision being provided for the Project; - Suggest that National Grid implement Vision Zero principles for the Project where there are introductions of or changes to the road network, and suggest the consideration should be given to the provision of road safety measures, especially in proximity to places of significant footfall and assembly such as school, health centres, halls and shops; - Suggest appropriate planning and mitigations to	The temporary accommodation and any permanent buildings would need to be fully compliant with all applicable regulations and not limited to fire safety but all other requirements as well. Engagement with all emergency services not just fire and rescue will continue through the life of the Project as deemed appropriate by those authorities. All modifications would need to be deemed to be safe and as required would be subject to road safety audits. National Grid places safety at the heart of everything we do and not just in relation to the associated highway works. The highway assessment on the existing highway has been assessed in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement). It is assumed the point regarding mitigation for injury or drowning around outdoor water sources relates to the workforce. All works would be subject to site and/ or task	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>reduce risks, such as injury or drowning around outdoor water sources;</p> <ul style="list-style-type: none"> - Suggest that consideration should be given to the likelihood of longer-term water level increases and the need to mitigate the risks of flooding and the potential impacts upon new developments; - Suggest that suitable principles in design are adopted to avoid deliberate fire setting; - Suggest that consideration should be given for road widths to be accessible whilst not impeding emergency service vehicle response through safe access routes for fire appliances including room to manoeuvre (such as turning circles); - Suggest that consideration should be given to access for Fire Service purposes in accordance with the Essex Act 1987 – Section 13, with new roads or surfaces compliant with [table provided by respondent] to withstand the standard 18 tonne fire appliances used by Essex County Fire and Rescue Service; - Suggest implementation of a transport strategy to minimise the impact of construction and prevent an increase in the number of road traffic collisions. Any development should not negatively impact on the Fire and Rescue Service's ability to respond to an incident in the local area; -Suggest a risk reduction strategy to cover the construction and completion phases of the Project; - Suggest implementation of a land management 	<p>specific risk assessments and method statements, these standard processes would be expected to cover things like risks from water courses and drowning.</p> <p>A Flood Risk Assessment (FRA) (document reference 7.9) has been completed and submitted as part of the ES.</p> <p>In order to minimise the risks of targeted and deliberate antisocial behaviour the sites would be maintained in a clean and tidy state as set out in the Code of Construction Practice (CoCP) (document reference 7.2) and security measures would be in place around the site.</p> <p>As stated above the emergency services will continue to be kept informed and liaison will remain ongoing.</p> <p>The Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) has been submitted and the impacts of the proposed development have been assessed in the Environmental Statement (ES).</p> <p>Industry standard processes around risk management would be followed, there are legislative requirements and guidance documents around the design principles and requirements for risk control hierarchy measures that would be applied in line with National Grid's design procedures.</p> <p>Access routes to the construction works have been assessed and determined by our highways consultant and have looked to utilise Primary Access Routes (PARs) which are existing highway routes deemed</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	strategy to minimise the potential spread of fire either from or towards the development sites	<p>suitable, possibly with minor modifications to facilitate vehicle volume movements along these routes.</p> <p>The aim of this approach is to keep heavy construction traffic to suitable roads to address the concerns raised in the feedback.</p> <p>National Grid will have soil management and land management plans in place for the Project and will work closely with landowners in agreeing any specific requirements reasonable to any particular site requiring special measures over and above good practice.</p> <p>We will continue to work with key statutory bodies in the development and delivery of this Project to ensure that concerns are understood and addressed ensuring health and safety is at the forefront of delivery.</p>				
9-2.1007	Concern that overhead lines increase the risk for fire at thatched properties in the event of the line being severed due to lightning or damage	The majority of the existing National Grid transmission network is constructed from overhead lines, these are a demonstrated and reliable form of electricity transmission in the UK. They are designed to meet current design and safety standards and to operate in a range of typical and abnormal weather conditions found in the UK.			X	
9-2.1008	Criticism that the impact the Project will have on health and wellbeing (including on the community of Roxwell) is an infringement on European and UK legislation and does not meet the stated strategy of National Grid's Environmental, Social and Governance (ESG) policy	The Environmental Impact Assessment (EIA) Infrastructure Planning Regulations 2017 include health considerations under the broad requirement to assess impacts on the environment, as outlined in Schedule 4, which requires the Environmental Statement (ES) to assess the potential significant effects of a project on	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>human health and the population. This means that the health considerations are integrated into the EIA process, often in conjunction with other factors such as air quality, noise and vibration, water quality, traffic and transport and social and economic impacts. The ES will form part of the application for development consent made to the Planning Inspectorate and will be publicly available.</p> <p>National grid's Environmental, Social and governance (ESG) policy is drafted in line with both European and UK legislation. National Grid is legally and ethically required to align its operations with relevant regulations and standards. This ensures that its activities adhere to environmental protection laws, social accountability frameworks, and governance principles.</p>				
9-2.1009	<p>To ensure a high level of safety and reliability in operation, National Gas Transmission's assets are protected by a cathodic protection system. It is essential that buried steel pipework associated with the transmission and distribution of natural gas is designed, installed, commissioned and maintained to withstand the potentially harmful effects of corrosion and that the corrosion control systems employed are monitored to ensure continued effectiveness. Installations in the vicinity of National Gas Transmission's assets which may potentially interfere with the cathodic protection system must be assessed and approved by National Gas</p>	<p>Based on induced currents from the 400 kV overhead line, alternating current mitigation measures may need to be installed on the ferrous pipelines operated by National Gas Transmission across the Project. The scope and extent of such mitigation measures will depend on the Project's final design arrangements which will continue to evolve within the parameters of confirmed Limits of Deviation. Factors including crossing angle and clearance height, length of parallelism, site-specific soil resistivity, etc, combine to define the requirement for mitigation. The mitigation itself is typically achieved by the installation, alongside the ferrous pipeline (in an area likely to have been</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	Transmission, and appropriate control measures must be put in place where required	previously disturbed during construction), of additional earthing that extends away from the crossing point. Consultation between National Grid and the relevant utility provider will confirm the requirement for installed mitigation, based on the final Project design arrangements, which will be implemented by the relevant utility provider under their existing utility operation and maintenance provisions.				
9-2.1010	Where National Grid intends to acquire land, extinguish rights, or interfere with any of National Gas Transmission's (NGT's) apparatus, NGT will require appropriate protection and further discussion on the impact to its apparatus and rights including adequate Protective Provisions. A Deed of Consent will also be required for any works proposed within the easement strip	National Grid has engaged with National Gas on this matter to inform a suite of documentation detailing interactions between Norwich to Tilbury and impacted National Gas assets.			X	
9-2.1011	The following key considerations need to be taken into account by National Grid in relation to National Gas Transmission's (NGT's) high pressure gas pipeline: - NGT has a Deed of Grant of Easement for each pipeline, which prevents the erection of permanent / temporary buildings, or structures, change to existing ground levels, storage of materials etc. - Written permission is required before any works commence within the NGT easement strip. Furthermore, a Deed of Consent will be required prior to commencement of works within NGT's	We note National Gas Transmission (NGT)'s Deed of Grant Easement. In some cases, we will need to build a haul road which alters the exiting ground level within the easement. For these and similar scenarios, we will agree and observe Protective Provisions with NGT. This is expected to form part of our Principal Contractor's standard ways of working. We do not expect that any of our works will result in a large population increase in any location close to gas pipelines.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>easement strip subject to approval by NGT's plant protection team.</p> <ul style="list-style-type: none"> - Any large installations which may result in a large population increase in the vicinity of a high pressure gas pipeline must comply with the Health and Safety Executive (HSE)'s Land Use Planning methodology, and the HSE response should be submitted to National Gas Transmission for review - All works in the vicinity of NGT's asset shall be subject to review and approval from NGT's plant protection team in advance of commencement of works on site 	We are engaged in ongoing consultation and with NGT.				
9-2.1012	National Grid need to ensure that National Gas Transmission's (NGT's) pipelines remain accessible during and after completion of the works	National Grid will ensure that National Gas Transmission (NGT)'s pipelines are always accessible and will work with NGT to coordinate Construction, Design and Management (CDM) working areas. If during construction a location is temporarily inaccessible, National Grid will liaise with NGT to restore access as soon as possible or provide alternative access.			X	
9-2.1013	National Gas Transmission's (NGT's) pipelines are normally buried to a depth cover of 1.1 metres, however, actual depth and position must be confirmed on site by trial hole investigation under the supervision of a NGT representative. Ground cover above NGT pipelines should not be reduced or increased.	National Grid notes this requirement, and should the Project obtain consent, further details would be worked up by the Contractor at the construction stage through further engagement. We expect that adherence will form part of our contractor's standard ways of working. Furthermore, where a temporary construction feature, e.g. a haul road crossing, might temporarily change the cover depth, we are in consultation with National Gas			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Transmission (NGT)'s plant protection team and will develop and agree protective provisions.				
9-2.1014	If any excavations are planned within 3 metres of National Gas Transmission (NGT's) High Pressure Pipeline or, within 10 metres of an Above Ground Installation (AGI), or if any embankment or dredging works are proposed then the actual position and depth of the pipeline must be established on site in the presence of a NGT representative. A safe working method agreed prior to any work taking place in order to minimise the risk of damage and ensure the final depth of cover does not affect the integrity of the pipeline	Such excavations are expected by our Project (in proximity to National Gas Transmission (NGT) easements) and National Grid notes this requirement. Should the Project obtain consent, further details would be worked up by the Contractor at the construction stage through further engagement. We expect that adherence will form part of our contractor's standard ways of working.			X	
9-2.1015	In relation to traffic crossings within vicinity of National Gas Transmission's (NGT's) high pressure gas pipelines, National Grid need to take the following into consideration: - Where existing roads cannot be used, construction traffic should only cross the pipeline at agreed locations. - Permanent road crossings will require a surface load calculation and will require a deed of consent. - The pipeline shall be protected, at the crossing points, by temporary rafts constructed at ground level. The third party shall review ground conditions, vehicle types and crossing frequencies to determine the type and construction of the raft required. - The type of raft shall be agreed with NGT prior to	National Grid is in consultation with National Gas Transmission (NGT) to manage and agree protective provisions for haul road crossings. No alterations to existing or any new permanent road crossings are anticipated. National Grid and our Contractors will develop and agree crossing protections with NGT as required by the protective provisions.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>installation.</p> <ul style="list-style-type: none"> - No protective measures including the installation of concrete slab protection shall be installed over or near to the NGT pipeline without the prior permission of NGT. - NGT will need to agree the material, the dimensions and method of installation of the proposed protective measure. - The method of installation shall be confirmed through the submission of a formal written method statement from the contractor to NGT. - An NGT representative shall monitor any works within close proximity to the pipeline to comply with NGT specification T/SP/SSW22 					
9-2.1016	<p>In relation to New Asset Crossings within vicinity of National Gas Transmission's (NGT's) high pressure gas pipelines, National Grid need to take the following into consideration:</p> <ul style="list-style-type: none"> - New assets (cables / pipelines etc) may cross the pipeline at perpendicular angle to the pipeline i.e. 90 degrees. - The separation distance for a cable >33kV is 1000 mm and pre- and post- energisation surveys may be required at NGT's discretion. A risk assessment / method statement will need to be provided to and accepted by NGT prior to the deed of consent being agreed. Where a new asset is to cross over the pipeline, a clearance distance of 0.6 metres between 	<p>National Grid understands that this feedback relates to underground cables crossing pipelines. We are not anticipating any underground cable crossings. We do however have several overhead line crossings which are not limited to 90°.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>the crown of the pipeline and underside of the service should be maintained. If this cannot be achieved the service shall cross below the pipeline with a clearance distance of 0.6 metres.</p> <ul style="list-style-type: none">- A new service should not be laid parallel within an easement strip.- Clearance must be at least 600 mm above or below the pipeline.- An NGT representative shall approve and supervise any cable crossing of a pipeline.- A Deed of Consent is required for any cable crossing the easement					
9-2.1017	Where the promoter intends to acquire land, extinguish rights, or interfere with any of National Gas Transmission (NGT's) apparatus, protective provisions will be required in a form acceptable to it to be included within the Development Consent Order (DCO). NGT requests to be consulted at the earliest stages to ensure that the most appropriate protective provisions are included within the DCO application to safeguard the integrity of NGT apparatus and to remove the requirement for objection	Provisions are included within the draft Development Consent Order (DCO) documentation, detailing interactions between Norwich to Tilbury and impacted National Gas assets.			X	
9-2.1018	Adequate access to National Gas Transmission (NGT's) pipelines must be maintained at all times during construction and post construction to ensure the safe operation of our network	National Grid will ensure that NGT's pipelines are always accessible and will work with National Gas Transmission (NGT) to coordinate Construction, Design and Management (CDM) working areas. If during			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		construction a location is temporarily inaccessible, National Grid will liaise with NGT to restore access as soon as possible or provide alternative access.				
9-2.1019	<p>Health Impact Assessment:</p> <p>1.1 The Project crosses through Tendring, Colchester, Braintree, Chelmsford, Brentwood, and Basildon where local planning authorities require a Health Impact Assessment (HIA) according to local guidelines. However, we note the PEIR follows IEMA guidance to ensure the health and wellbeing chapter aligns with HIA principles that consider the wider determinants of health and health inequalities. The use of WHIASU vulnerable groups checklist combined with protected characteristics under the Equality Act 2010 to define vulnerable populations and the link to EIA technical topics within the health and wellbeing chapter is welcomed. However, we recommend the following enhancements:</p> <ul style="list-style-type: none"> • The PEIR recognises that impacts on health will vary between different population groups. However, there is no clear distinction of impacts among varied groups within the health and wellbeing preliminary residual effect Table 10.3 (during construction) and Table 10.4 (during operation). This assessment is important for addressing inequalities within our communities. We strongly recommend that this is explored and presented within the ES and to consider 	<p>Environmental Statement (ES) Chapter 10: Health and Wellbeing (document reference 6.10) presents the assessment of potential impacts of the Project in relation to health and wellbeing. As described in the Preliminary Environmental Information Report (PEIR), the assessment uses a combination of guidance including Institute of Environmental Management and Assessment (IEMA), Wales Health Impact Assessment Support Unit (WHIASU) and the Mental Health and Wellbeing Toolkit to identify and assess impacts on both the general population and vulnerable groups. Following statutory consultation, further engagement relating to the health and wellbeing topic was undertaken with health stakeholders, including the local authorities through which the route passes; discussion focused on aspects including the need for the health and wellbeing assessment to focus more on the wider determinants of health and health inequalities. These aspects have been incorporated into the assessment contained in ES Chapter 10 Health and Wellbeing (document reference 6.10).</p> <p>Baseline data has been collated in relation to both the general population and that which relates specifically to vulnerable groups (for example children, older people, or people with a pre-existing health condition). Baseline</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>the following:</p> <ul style="list-style-type: none"> o Identify potential inequalities in the distribution and nature impacts o Are particular groups or vulnerable groups more likely to be impacted than others and is this clearly described and explained? o What indicators within the current health baseline that are worse than England average/ local ward or LSOA levels? 	<p>data, including a series of health-related indicators, has been used to review local conditions in more detail, through a focus on information at ward, rather than local authority level. Data at ward level has also been compared against that for England as a whole. This has been used to inform the sensitivity to change of communities living in those wards which intersect with the Order Limits. The sensitivity of individual wards is presented in Table 10.10 of ES Chapter 10: Health and Wellbeing (document reference 6.10).</p> <p>For each health determinant, the Chapter contains a description of potential vulnerable groups that may be affected and the nature of the potential effect. The assessment of potential effects has drawn out whether there is a likely difference in nature of effect in relation to health and wellbeing between the general population and vulnerable groups.</p>				
9-2.1020	<p>Statement of Community Consultation/ Engaging with communities:</p> <p>1.4 We note that NG recognises that people may have concerns about the potential impacts of living close to an overhead line, and that the uncertainty whilst the proposals are developed may cause anxiety. We note that efforts have been sought to reduce potential effects on communities, residents through engaging with stakeholders and engaging communities about the proposals. We recommend the following:</p>	<p>Concerns about the potential health effects are often raised when new electricity infrastructure is proposed in an area and is something we take seriously. The UK has a carefully thought-out set of policies for protecting us all against Electric and Magnetic Fields (EMFs), the main component of which is exposure guidelines. Those exposure guidelines are set by independent scientific bodies and are based on decades-long studies into the effects of EMFs and ill health. After those decades of research, the weight of evidence is against there being any health risks of EMFs below the guideline limits.</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<ul style="list-style-type: none"> • EN-5 highlights that research has not proven a causal link between EMFs and cancer or any other disease. However, it is noted that local communities may be concerned about the potential health effects associated with EMFs. We are unsure of how community anxiety has been identified and how responses have been provided to the community. Community engagement is important for addressing concerns and anxieties on EMFs • Further information is required to understand which other organisations were consulted such as the Mid and South Essex Integrated Care System to ensure the right expertise is engaged in the process. Also, to understand how the consultation has supported to steer, shape and maximise the benefits of the Project 	<p>These policies are incorporated into the decision-making process for Development Consent in National Policy Statement (NPS) EN-5. All the equipment which forms part of this Project, will be fully compliant with these policies, set to protect everyone, and is demonstrated in the EMF Compliance Report which forms part of the Development Consent Order (DCO) submission.</p> <p>Recognising that EMFs may be a concern, National Grid provide open and transparent information about EMFs on the website www.emfs.info, including what EMFs are, exposures from electricity infrastructure, research into health effects and the policies and guidelines in place to protect against EMF for members of the public to access. An EMF helpline is also available to answer and questions or concerns about the subject. EMF specialists were also at all public consultation events, to address any concerns. These measures are aimed at providing information on EMFs and the measures in place to protect to help reduce anxiety around the subject. National Grid will continue to provide information via its website and helpline throughout the project and once the project is operational.</p> <p>National Grid has also undertaken an assessment of the potential residual effects of the Project on Health and Wellbeing which is presented in ES Chapter 10: Health and Wellbeing (document reference 6.10). The assessment covers effects on mental health and wellbeing, including the perceptions of impacts from</p>

		aspects relating to heritage, including appropriate mitigation measures and techniques and to take their views into account during Project development.				
9-2.1024	Criticism that National Grids team of heritage photographers arrived to respondents' property with less than 24 hours' notice when respondent was unavailable / Request for clarity on whether National Grid will be relying on the photographs taken during this visit	When arranging access for heritage surveys National Grid's team abide by the access instructions provided by the Land's team with respect to periods of notice to land/property owners. Access was agreed with the owner for this visit and the photos taken have been used to inform the impact assessment in Chapter 11: Historic Environment of the Environmental Statement (ES) (document reference 6.11).			X	
9-2.1025	In some cases within the Preliminary Environmental Information Report (PEIR), National Grid note that outbuildings to listed buildings as being non designated heritage assets. Where outbuildings / farm buildings meet the tests to be curtilage buildings, they should be referred to as so, as this acknowledges a higher level of significance and protection, than being non designated. (in the context of the heritage assessment as part of Volume III of the Technical Appendices of the PEIR)	In no cases is there potential for a physical impact to any of these buildings and the assessment considers the group value with the listed building in relation to their setting and how this may be affected by the Project. Further details are provided for in ES Chapter 11: Historic Environment (document reference 6.11).		X		
9-2.1026	Request the presence of an archaeologist during ground excavations (including within Roxwell Parish)	The Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5) written to support the Development Consent Order (DCO) application, sets out the process, guiding principles and methods for the planning and implementation of additional archaeological mitigation	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		works associated with the construction of the Project. The methodology for each technique is explained in the section 5.3, such as the monitoring during the construction phase.				
9-2.1027	<p>Suggest that the following (in relation to archaeology and heritage) should be included in the Environmental Impact Assessment (EIA) for the Project:</p> <ul style="list-style-type: none"> - Desk-based assessment (DBA), which is inclusive of the information provided within the Historic Environment Baseline Report and draws on landscape, soil type, historic landscape character and topography to provide critical assessment of the archaeological potential for the areas impacted by the project for both known sites and potential to encounter as yet unknown archaeology. The DBA should draw on the County Historic Environment Record's (HER) supporting archives and should include a historic map regression (including tithe and estate maps), a study of aerial photography (including historical imagery) and any other multi-spectral data, an assessment of LIDAR data and information on historic hedgerows and protected lanes. Datasets held by the County Records office and other archive sources should also be consulted where features merit more detailed research; - Surveys and assessments (list provided by respondent); - All sites which will be impacted on by any element 	<p>The assessment of the historic environment for the Project has been undertaken in line with relevant heritage legislation, national and local planning policy, and established technical guidance. The methodology has been developed with reference to best practice, including the National Planning Policy Framework (NPPF), the Planning (Listed Buildings and Conservation Areas) Act 1990, the Ancient Monuments and Archaeological Areas Act 1979, and local development plan policies where applicable. The list of sources is available in Environmental Statement (ES) Chapter 11: Historic Environment (document reference 6.11). The methodology and scoping approach were discussed and agreed with key stakeholders during the scoping process and at subsequent thematic working group meetings, including engagement with Historic England and relevant Local Planning Authorities. The methodology applied is robust, proportionate, and has given appropriate weight to the potential impacts of the Project on designated and non-designated heritage assets, including effects from physical change and change to setting.</p> <p>The current iteration of the Appendix 11.1: Historic Environment Baseline Report (document reference</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>of the works should be subject to a full programme of trenched archaeological evaluation, at EIA stage. This will inform design, project programming and risk management, avoiding unexpected costs and delays post-consent that would arise from a poor understanding of the impact on below ground archaeological remains. It will also inform timescales and reveal any implications for other EIA topic areas. Overall, suggest that trial trenches equivalent to 5% by area survey of the area of ground impacts, although would consider the results of non-intrusive survey to finalise advice on the scope and timing of trial trenching, where appropriate. There may be different assessment requirements for overhead lines and undergrounding. Large areas, fixed elements, river crossings and other hotspots and pinch points are all of high priority. Sites considered to be of local importance would also require mitigation;</p> <p>- Proposals for mitigation. Detailed evaluation may enhance our understanding of known heritage assets or reveal as-yet-unknown sites of local, regional and national significance. Mitigation may include avoidance, preservation in situ (including archaeological management plans, and subject to periodic monitoring throughout the lifetime of the Project to ensure preservation in situ is being maintained), or excavation, recording and publication of the results to allow for the enhancement of public</p>	<p>6.11.A1) and Appendix 11.2: Historic Environment Assessment (document reference 6.11.A2) tables comply with the agreed methodology and include an up-to-date assessment of the Project and fully assesses all scoped in designated and non-designated heritage assets.</p> <p>A programme of archaeological fieldwork (geophysical survey and trial trenching) has begun in support of the Environmental Impact Assessment (EIA). The methodology and scope of the fieldwork were discussed and agreed with key stakeholders during the scoping process and at subsequent thematic working group meetings, including engagement with Historic England and relevant Local Planning Authorities. The methodology and scope of the fieldwork has been set out in an overarching Project-wide Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5) and then again at a site specific level in several Site Specific WSIs. All WSIs include data management plans. Areas where the Project will impact below ground archaeological remains such as underground cabling, compounds etc. have been deemed priority areas for geophysical survey and archaeological trial trenching. Other areas deemed to be a priority area include, but not limited to, where known heritage assets of high or medium heritage value, construction and highways laydown areas etc. The fieldwork is ongoing and up to date reports will be submitted in support of the EIA.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>understanding of heritage assets to be impacted by development.</p> <ul style="list-style-type: none"> - Open area excavation will likely form the most appropriate methods for mitigation, so suggest that the EIA demonstrates clearly that archaeological work has been factored into project programmes, with sufficient time allowed to enable fieldwork to be completed and avoid delays to the project timetable. - Consideration of interactions with other topic areas - suggest cross linking in the EIA between archaeology and other subject areas (e.g. Construction Management Plans, Hydrology, Ecology, Soil and Dust Management); - Proposal for outreach, potentially linking up with other projects in the area; - Archiving, A project of this size will generate a considerable amount of digital information, early engagement with an appropriate digital archive repository is strongly advised to ensure that costs for the archiving of digital data can be factored into the project. Early engagement with each of the county archaeological archive stores is advised to secure deposition of the physical archives and to ensure costs can be factored into the project. Detailed proposals for archiving should be set out in the Outline Written Scheme of Investigation (OWSI) for deposition of the digital and physical archives. Suggest that the physical archive will be deposited in its entirety and therefore agreements with 					

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	landowners should be sought at an early stage to achieve this					
9-2.1028	<p>Criticism of the methodology used by National Grid to assess impact of the Project on heritage, including the following:</p> <ul style="list-style-type: none"> - Criticism that National Grid has scoped out heritage assets from assessment using distance and designation grade (e.g. National Grid has not considered how setting contribute to the significance of identified heritage assets as required by national and local legislation); - Criticism that the assessment of the heritage resources was not robust; - Criticism that National Grid has not addressed methodological concerns raised by consultees during scoping (such as Historic England); - Criticism that National Grid has not identified how setting(s) contributes to the significance of identified heritage assets in the way and degree required by National and Local legislation 	<p>The approach to scoping heritage assets in or out of the assessment was developed in line with relevant national policy and guidance, including the NPPF and Historic England's guidance on setting. This methodology was presented, discussed, and agreed with key stakeholders — including Historic England and relevant local authorities — during the formal Scoping stage and through subsequent Thematic Group meetings. It takes into account not only the designation and proximity of assets to the Order Limits, but also a professional judgement on whether their setting may meaningfully contribute to their significance and be affected by the proposed development. On this basis, the methodology used to determine which heritage assets were taken forward for detailed assessment and which were reasonably scoped out is considered robust and proportionate.</p>			X	
9-2.1029	<p>Suggest that an archaeological consultant and an archaeological clerk of works are appointed to the Project at an early stage (e.g. to ensure the smooth delivery of the archaeological requirements for the Project alongside other elements)</p>	<p>Arcadis has been appointed by the client to support the Project as archaeological consultant and is actively engaged in weekly meetings with the Local Planning Authority to monitor the ongoing archaeological evaluation and ensure effective coordination of archaeological requirements alongside other project elements. An Archaeological Clerk of Works (ACoW)</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		would be appointed post-consent for that phase of fieldwork as set out in the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5).				
9-2.1030	Suggest the use of Outline Written Schemes of Investigation (WSIs) for the Project (e.g. to set out the high-level parameters for a framework for the archaeological work on the scheme as a whole and inform the development of Site-Specific WSI's which will detail the site-specific methodologies for archaeological evaluation and mitigation), to be informed by the Historic Environment Baseline Report	An Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (reference document 7.5) for the Project has been written to support the Development Consent Order (DCO) application.		X		
9-2.1031	Concern that, when looking at groups of artefacts (withing the Historic Baseline Report for the Project), the heritage asset value is determined based on the individual artefact and the group value is not always considered and that this subtracts from the significance of the heritage asset, and suggest that, when groups of artefacts are discussed, the heritage asset value should be provided for the group asset not the individual artefact	The value of heritage assets has been assessed in accordance with established guidance and best practice, including <i>Conservation Principles, Policies and Guidance for the Sustainable Management of the Historic Environment</i> (Historic England, 2008) and DMRB LA 106 (National Highways, 2020), and has been informed by professional judgement. Where appropriate, the assessment has considered not only the individual significance of artefacts but also their collective value as part of a broader group or assemblage. The wider context of artefact distributions, concentrations, and potential interrelationships has been taken into account in determining heritage value. This approach ensures that the significance of a group of finds is not underestimated and that appropriate value is assigned		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		based on both individual merit and group context. The methodology applied is proportionate, robust, and reflects both national guidance and stakeholder input.				
9-2.1032	Suggest that, when discussing designated heritage assets within the Historic Baseline Report for the Project, the asset value should include any archaeology which could be associated with the designated heritage asset	The value of designated heritage assets discussed within Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1) has been assessed in line with national guidance and best practice, including Conservation Principles, Policies and Guidance for the Sustainable Management of the Historic Environment (Historic England, 2008) and DMRB LA 106 (National Highways, 2020), and is supported by professional judgement. Where appropriate, the assessment considers not only the architectural or historic value of a designated heritage asset, but also the potential contribution of associated below-ground archaeological remains to its overall significance. This approach ensures a holistic understanding of significance, in line with Historic England's <i>Statements of Heritage Significance</i> and <i>Good Practice Advice Note 2</i> (2022). The methodology and its application have been discussed and agreed with relevant stakeholders during scoping and through subsequent thematic working group meetings.		X		
9-2.1033	Suggest that non-designated heritage assets (NDHA) which are upstanding archaeology/buildings and not underground should be separated from NDHAs which are being evaluated for their archaeological value (e.g as they are separated in	The methodology used to identify and assess non-designated heritage assets, whether archaeological remains or historic buildings, has been developed in accordance with established good practice, including the National Planning Policy Framework (NPPF), Historic		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	the technical summary), and suggest that an appendix map showing which NDHA are historic buildings alongside designated heritage assets should be provided rather than identifying them together with the archaeological assets (e.g. as there is a difference in how they will be assessed in terms of impact). It should be much clearer on the plans which assets are being evaluated in terms of visual impact on setting rather than archaeological impact	England's Good Practice Advice Notes, and DMRB LA 104/LA 106. This approach was discussed and agreed with relevant stakeholders, including Historic England and local planning authorities, during the scoping process and subsequent thematic working group meetings. While NDHAs are presented together in the Historic Environment Baseline Report to provide a comprehensive overview, their distinct characteristics, whether upstanding structures or buried archaeological remains, have been taken into account during assessment, with consideration given to their specific heritage values and sensitivities. Assets considered to have a setting component have been assessed accordingly, with visual impact evaluated in line with Historic England's GPA3: The Setting of Heritage Assets (2017). The presentation of data, including mapping outputs, has been designed to support transparency and clarity				
9-2.1034	Suggest the level of identified harm to the significance of each designated heritage asset should be expressed in accordance with National Policy Statement for Energy (EN-1)	Environmental Statement (ES) Appendix 11.7: Assessment of Harm to Designated Heritage Assets has been produced to support Chapter 11: Historic Environment (document reference 6.11) of the Environment Statement (ES) for the Project. It sets out the results of the assessment conducted as part of the Environmental Impact Assessment (EIA), outlining the effects on designated heritage assets in terms of harm.		X		

9-2.1035	Concern that the Project will reduce investment in conserving heritage buildings (e.g. due to impact on property values and subsequently the necessary costs homeowners are willing to invest in property in the area)	Responsibility for costs associated with meeting duties as a result of heritage listing rest with the owner of the property and we do not consider that is inherently changed by the Project.			X	
9-2.1036	Suggest that National Grid should consider the survey of heritage assets compiled by residents (e.g. detailing over 100 heritage assets)	<p>The methodology and approach used for identifying and assessing heritage assets have been developed in accordance with established best practice and national guidance, including the National Planning Policy Framework (NPPF) and relevant guidance from Historic England. This methodology was discussed and agreed with stakeholders during the EIA scoping process and through subsequent thematic working group meetings.</p> <p>The assessment has appropriately considered all known heritage assets, drawing on a range of reliable sources including the relevant Historic Environment Records (HERs), desk-based research, site visits, and stakeholder engagement. Where additional heritage information has been made available by residents or local interest groups, this has been reviewed and considered as part of the assessment process where relevant and verifiable.</p>			X	
9-2.1037	<p>Criticism of the methodology used by National Grid to assess the impact of the Project on archaeology (e.g. as set out in the Preliminary Environmental Information Report (PEIR)), including the following:</p> <ul style="list-style-type: none"> - Concern that the likely worst-case scenario regarding impact of the Project on archaeology has not been considered; - Criticism that the impact of the Project on the setting of archaeological assets has not been considered; - Concern that the study area (Paragraph 11.5.3 of the PEIR) was presented at 250 m for non-designated heritage assets, including various archaeological remains. Whilst this may be 	The assessment of the historic environment for the Project has been undertaken in line with relevant heritage legislation, national and local planning policy, and established technical guidance. The methodology has been developed with reference to best practice, including the National Planning Policy Framework (NPPF), the Planning (Listed Buildings and Conservation Areas) Act 1990, the Ancient Monuments and Archaeological Areas Act 1979, and local development plan policies where applicable. The list of sources is available in Chapter 11: Historic Environment (document reference 6.11). The methodology and scoping approach were discussed and agreed with key stakeholders during the scoping process and at			X	

<p>considered suitable for various non-designated archaeological sites, the study area is not suitable in those instances where archaeological remains may extend from a known site and into the 250 m study area, or where the setting of archaeological sites are a consideration (e.g. archaeological assets outside this 250 m area were scoped out by the use of this study area and not have been appropriately considered for both physical effects and setting effects);</p> <ul style="list-style-type: none"> - Concern that the walkover survey (Paragraph 11.5.9 of the PEIR) completed to support assessment scoped out any fields that did not meet their stated criteria included scoping out fields where no archaeological assets are currently known and missed an opportunity to potentially identify archaeological earthworks that may be present; - Concern that the Setting Survey (Paragraph 11.1.5.16 of the PEIR) makes no mention of the setting of archaeological remains, and only mentions the setting of historic buildings as being considered. Reviewing the baseline assessment at Appendix 11.1, there is mention of the setting of archaeological Scheduled Monuments, however a full setting assessment has not been completed for each monument in line with Historic England guidance. Any stated conclusions as to the setting of these monuments and potential impacts within that setting cannot therefore be relied on; - Concern that the presentation of baseline archaeological assets in tabular form in the PEIR downplays the potential for currently unknown archaeological sites by focusing on known archaeological findspots or sites (e.g. appears to assume that no unknown archaeological assets will be discovered during the Project); - Concern that the baseline report at Appendix 11.1 does not appropriately assess the significance of 	<p>subsequent thematic working group meetings, including engagement with Historic England and relevant Local Planning Authorities. The methodology applied is robust, proportionate, and has given appropriate weight to the potential impacts of the Project on designated and non-designated heritage assets, including effects from physical change and through change to setting.</p> <p>The current iteration of Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1) and Appendix 11.2: Historic Environment Assessment Tables (document reference 6.11.A2) includes an up-to-date assessment of the Project and fully assesses all scoped in designated and non-designated heritage assets.</p>				
--	--	--	--	--	--

	<p>known archaeological assets, only asserting for each asset whether it has a low to high “value”;</p> <ul style="list-style-type: none">- Concern that potential setting effects on non-designated archaeological at the operational phase have not been considered;- Concern that cumulative impact on archaeological assets has not been considered;- Concern that interrelationships between archaeological assets and monuments have not been considered;- Concern that the concluded significance of effect is in many cases downplayed and reduced as far as possible;- Concern that there is no mention of the historic landscape in the consideration of either Construction Phase Effects or Operational Phase Effects to the historic landscape (e.g. historic landscape characterisation data, and historic landscape features such as parish boundaries, county boundaries, and historic field and ownership boundaries, historic areas of woodland, and also the hedgerow regulations which protect hedgerows for a number of reasons including where these are considered of historic or archaeological significance should be considered)					
9-2.1038	<p>Concern that National Grid archaeology advisor (at the Langham public information event on 16 May 24) had no knowledge of any community submissions (such as that provided by respondent at previous consultation) about archaeology and advised that community submissions are not part of the process / Criticism that feedback to the consultation on risks to known (and unknown) archaeological sites, their settings, and the landscape in which they are located have not been considered</p>	<p>National Grid notes the respondent’s feedback, all feedback including surveys and community submissions has been read and considered. Surveys provided within feedback are considered by our specialists and where applicable have informed the design process alongside other relevant published information.</p> <p>We have completed our own surveys including archaeological surveys in accordance with the scope and methods agreed with the Planning Inspectorate which have informed our Environmental Impact Assessment (EIA).</p>			X	

9-2.1039	Suggest that a full setting assessment should be undertaken to inform the potential impacts to each Scheduled Monument, as well as in the case of any non-designated archaeological assets, in particular those high significance assets that should be treated akin to a Scheduled Monument	<p>An assessment of potential impacts of the Project on designated and non-designated heritage assets, including as a result of change to setting that affects an asset's value, has been undertaken and is reported in Environmental Statement (ES) Chapter 11: Historic Environment (document reference 6.11) and its appendices (document reference 6.11.A1 to 6.11.A7). The methodology and scoping approach were discussed and agreed with key stakeholders during the scoping process and at subsequent thematic working group meetings, including engagement with Historic England and relevant Local Planning Authorities. The methodology applied is robust, proportionate, and has given appropriate weight to the potential impacts of the Project on designated and non-designated heritage assets, including effects from physical change and through change to setting.</p> <p>The current iteration of Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1) and Appendix 11.2: Historic Environment Assessment Tables (document reference 6.11.A2) includes an up-to-date assessment of the Project and fully assesses all scoped in SMs and all scoped in non-designated assets of medium and high value.</p>			X	
9-2.1040	Criticism that the scoping method within the PEIR excludes designated and non-designated heritage assets from any further assessment based on a computer-generated algorithm using quantitative data only, in direct contravention of Planning Inspectorate advice, and contrary to National and Local policy and guidance	The methodology for scoping in or out heritage assets for assessment was developed in accordance with established best practice and relevant guidance, including Historic England's Good Practice Advice Note 3: The Setting of Heritage Assets (2017). This approach was discussed and agreed with key stakeholders during the scoping process and at subsequent thematic working group meetings. We are confident that this robust and proportionate methodology has ensured that all assets with the potential to be meaningfully affected by the Project have been appropriately considered.			X	
9-2.1041	Criticism that the widespread scoping out of assets from further assessment on the basis that their	The methodology for scoping in or out heritage assets for further assessment has been developed in			X	

	<p>settings do not extend to the Draft Order Limits is flawed</p>	<p>accordance with established good practice and is informed by relevant guidance, including Historic England's Good Practice Advice Note 3: The Setting of Heritage Assets (Second Edition, 2017). This approach considers whether the setting of a heritage asset contributes to its significance and whether that setting may be affected by the Project.</p> <p>The application of this methodology was discussed and agreed with key statutory stakeholders, including Historic England and relevant local planning authorities, during the scoping process and subsequent thematic working group meetings. Assets were scoped out of further assessment only where it was determined, based on professional judgement and available evidence, that their settings do not contribute to or are not susceptible to change as a result of the Project.</p> <p>We are therefore confident that the approach is robust, proportionate, and in line with both policy and best practice. All decisions to scope out assets are clearly documented and justified within Chapter 11: Historic Environment of the Environmental Statement (ES) (document reference 6.11), supported by Appendix 11.2: Historic Environment Assessment Tables of the ES (document reference 6.11.A2).</p>				
9-2.1042	<p>Whilst National Grid states that a proper assessment of the impact of the Project will be undertaken in the Environmental Statement (ES) next year, this will only apply to a tiny number of heritage assets that are being taken forward with the result that the majority of the historic environment surrounding the line in Essex, Suffolk and Norfolk will not have properly been assessed in accordance with the Planning (Listed Buildings and Conservation Areas) Act 1990 and section 16 of the NPPF (2023)</p>	<p>The methodology and approach used for the assessment of the historic environment have been developed in line with established good practice and are informed by relevant legislation and policy, including the Planning (Listed Buildings and Conservation Areas) Act 1990, Section 16 of the National Planning Policy Framework (NPPF, 2023), and guidance such as Historic England's Good Practice Advice Notes, particularly GPA3: The Setting of Heritage Assets (2017).</p> <p>The approach to identifying and assessing heritage assets has been discussed and agreed with key stakeholders, including Historic England and the</p>			X	

		<p>relevant local planning authorities, through the scoping process and thematic working group meetings. The process of scoping heritage assets in or out of the assessment was undertaken using professional judgement, taking into account the contribution of setting to the significance of each asset and the potential for the Project to alter that setting.</p> <p>The Environmental Statement (ES) (document reference 6.11) presents a comprehensive assessment of potential impacts on the historic environment, including both designated and non-designated heritage assets. This assessment is supported by baseline research, site visits, geophysical survey data, and archaeological trial trenching where available. The methodology and conclusions are further detailed in supporting appendices, including Appendix 11.2: Historic Environment Assessment Tables of the ES (document reference 6.11.A2).</p> <p>We are confident that the approach provides a proportionate and robust assessment of the potential effects of the Project on the historic environment in Essex, Suffolk, and Norfolk, in line with national policy and statutory requirements.</p>				
9-2.1043	<p>Criticism that an assessment of the impact to the setting of built heritage non-designated assets (NDHAs) has not been adequately undertaken /</p> <p>Criticism that an assessment of the preliminary operational effects upon NDHAs within 250 m buffer zone has not been included in the PEIR, and as a consequence, only 175 NDHAs will be taken forward to the Environmental Statement (ES) based upon the direct impact of the Project at construction stage</p>	<p>The assessment of the potential impacts on the setting of non-designated heritage assets (NDHAs), including built heritage, has been undertaken in line with established guidance and best practice. The methodology used follows the principles set out in Historic England's <i>Good Practice Advice Note 3: The Setting of Heritage Assets</i> (Second Edition, 2017), with appropriate consideration given to the contribution of setting to the significance of each asset.</p> <p>This approach was discussed and agreed with relevant stakeholders during the scoping phase and subsequent thematic working group meetings</p>			X	

9-2.1044	<p>Criticism that the production of the assessment tables within the PEIR failed to cross reference the significant and settings assessments undertaken in The Historic Environmental Baseline Report (HEBR), with the result that the wrong data was used in the matrix calculation, leading to inaccurate results and polar opposite conclusions (e.g., the line is described as being underground in several instances, thus causing no impact to the listed building, when in fact the line will be overground causing severe harm to the setting of the listed building)</p>	<p>Updates have been made to the Historic Environmental Baseline Report (HEBR) (see ES Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1)) to address any inconsistencies and/or design changes. All reports have been reviewed, and quality assured and are considered to be as accurate as possible.</p>			X	
9-2.1045	<p>Criticism that the preliminary Historic Environmental Assessment undertaken within the PEIR used a quantitative approach with a tabulated assessment, instead, a qualitative approach is required to assess significance and impact, which is the standard approach to assessing in line with the Historic England and Institute of Historic Buildings Conservation (IHBC) guidelines</p>	<p>The methodology used to assess the historic environment, including the approach taken within the Preliminary Environmental Information Report (PEIR), has been developed in line with established good practice and national guidance.</p> <p>The use of tabulated formats allows consistency and clarity in presentation, but the assessment itself is underpinned by professional judgement and an evaluation of heritage significance, setting, and impact.</p> <p>This methodology draws on key guidance documents, including Historic England's Good Practice Advice Note 3: The Setting of Heritage Assets (2017), the Standards and Guidance for Historic Environment Desk-Based Assessment (CIfA, 2020), and best practice advocated by the Institute of Historic Building Conservation (IHBC). It has been discussed and agreed with statutory stakeholders during the scoping stage and through thematic working group meetings. We remain confident that our approach is robust, appropriate, and proportionate to the scale and nature of the Project.</p>			X	
9-2.1046	<p>Criticism that assessment of heritage assets was based upon desk-based analysis only, using aerial imagery and professional opinion / Criticism that no site visits have been made to assess the setting of heritage assets. The lack of a reasonable</p>	<p>The assessment methodology, including the approach to evaluating setting, has been developed in line with established best practice and recognised guidance (including Historic England's <i>Good Practice Advice Note 3: The Setting of Heritage Assets</i>, 2017) and has been</p>			X	

	assessment of the assets has led to poor data and incorrect assumptions being used to provide an assessment of the impact of the Project	discussed and agreed with key statutory stakeholders throughout the scoping stage and subsequent thematic working group meetings. We are therefore confident that the approach taken is robust, proportionate, and appropriate for the scale and complexity of the Project.				
9-2.1047	Criticism the Archaeological and Historical Background is based on Historic Environment Records (HER) data, and reflects an Archaeological Desk Based Assessment rather than an in-depth Heritage analysis of the designated and non-designated built environment , and that the assessments of large numbers of archaeological finds is not relevant to the projects Historic Baseline Assessment and makes for an inaccessible and cumbersome Environmental Impact Assessment which is counterproductive in identifying clearly the actual likely environmental effects from the proposal	<p>The archaeological and historical background presented in the Historic Environment Baseline Report is informed not only by data from the Historic Environment Records (HER), but also by a wider range of sources. These include historic mapping, aerial imagery, walkover survey data, academic publications, grey literature, and consultation with local authority historic environment officers and curators. Where appropriate, information has also been drawn from local archives and research repositories to provide additional historical context, particularly for designated and non-designated built heritage assets.</p> <p>The inclusion of archaeological finds, including portable antiquities and findspot records, is an important element in understanding the archaeological potential of the landscape and has informed the assessment of likely significant effects. These datasets contribute to a comprehensive baseline, consistent with industry guidance and standards such as those set out in the Chartered Institute for Archaeologists' Standards and Guidance.</p> <p>The methodology used to assess both designated and non-designated heritage assets has been developed in accordance with national planning policy and established best practice, including Historic England's Good Practice Advice Note 3: The Setting of Heritage Assets (2017), and has been discussed and agreed with key stakeholders during scoping and subsequent thematic working group meetings. We are therefore confident that the approach taken is proportionate, transparent and robust, and that the assessment appropriately supports the identification and</p>			X	

		understanding of potential environmental effects associated with the Project.				
9-2.1048	<p>Criticism that the scoping exercise within The Historic Environment Baseline Report (HEBR) has relied upon Historic Environment Record (HER) data and limited information provided by Local Authorities (ie. HERs were not set up originally to record, map and assess built heritage, meaning that a large number of buildings of historic merit that will be impacted by the Project may not have been identified or assessed). Therefore, HER data relied upon to assess non-designated assets (NDHAs) related to archaeological finds and has little bearing on the assessment of above ground built heritage assets. As these 'assets' will not be impacted by the proposed scheme, they are subsequently scoped out from further investigation in accordance with the criteria set out by the Planning Act, but this conclusion is both inaccurate and misleading. In addition, where built NDHAs have been included, assessments of settings have not been undertaken meaning that a proper impact assessment of the Project on the NDHAs within the 250 m study area has not been completed. It should also be noted that just because an asset is not designated doesn't mean it doesn't meet statutory requirements unless evidenced. The result of this widescale dismissal of the known heritage assets along the preferred route has led to a mere 458 designated assets being considered as impacted as a result of either temporary or permanent change to their settings, which will be taken forward for further consideration in an ES as part of the DCO. This represents only 5% of the entire designated heritage asset stock that is present within the 5 km buffer (on which the ZTV is based), and 12% of the total number of designated assets identified by Fuller Long HEA within the study areas dictated by NGET. With regards to non-</p>	<p>The methodology adopted for the Historic Environment Baseline Report (HEBR) (see ES Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1)) and the scoping of heritage assets for further assessment has been developed in line with established best practice and relevant policy, including the National Planning Policy Framework (NPPF, 2023), Planning (Listed Buildings and Conservation Areas) Act 1990, and guidance provided by Historic England, including Good Practice Advice Note 3: The Setting of Heritage Assets (2nd edition, 2017). The approach is also consistent with industry standards including DMRB LA 106: Cultural Heritage Assessment and DMRB LA 104: Environmental Assessment and Monitoring (National Highways, 2020).</p> <p>The assessment has been informed by multiple data sources, including—but not limited to—local Historic Environment Records (HERs), the National Heritage List for England (NHLE), historic maps, aerial imagery, walkover surveys, archive research, and specialist consultation. While HERs are an essential source of information, they are not the sole basis for identifying and assessing heritage assets, and their limitations are well understood and addressed through supplementary research and site-based survey. Information from local authority conservation teams, Historic England, and curators has also been integrated as appropriate.</p> <p>Importantly, the methodology used to scope in and out both designated and non-designated heritage assets was not applied unilaterally or in isolation. The approach has been the subject of ongoing engagement with statutory consultees and key stakeholders, including Historic England, local planning authorities, and curatorial officers, throughout the scoping process and during thematic working group meetings. This</p>			X	

	<p>designated heritage assets, of the remaining 1273 NDHAs within the study area, only 175 are being taken forward for further assessment. NDHAs that will be severely impacted as a result of the operational effects of the 50 m pylons within 250 m have not been assessed and none are being taken forward for further assessment within the ES. This methodology is in direct contravention of National and Local Policy, and consultee responses</p>	<p>collaborative process has enabled refinements to be made to the assessment framework, ensuring that the final methodology is proportionate, robust and defensible.</p> <p>For non-designated heritage assets (NDHAs), the assessment has considered both archaeological and built heritage elements.</p> <p>The Zone of Theoretical Visibility (ZTV), informed by topography and modelled views, was used to support scoping decisions in relation to setting impacts, including for NDHAs.</p> <p>We are confident that the methodology adopted, discussed extensively and agreed with heritage stakeholders, has ensured that all heritage assets likely to be significantly affected by the Project, whether designated or non-designated, have been appropriately identified and assessed within the EIA framework. This is consistent with statutory requirements, planning policy, and professional guidance.</p>				
9-2.1049	<p>Criticism that heritage assets throughout the study area are described and are ascribed value according to a basic tabulated formula and sometimes are identified as having historic, aesthetic, evidential or communal values in line with Historic England Guidance. However, this is not consistent and seems to vary from asset to asset. The remaining buildings that are not scoped out are included in the PEIR for further assessment. Out of a total 2117 buildings assessed as part of The Historic Environment Baseline Report (HEBR), around 79% have been scoped out. This would appear to encompass almost every asset beyond 500 m of the Draft Order Limits</p>	<p>Updates have been made to the Historic Environment Baseline Report (HEBR) (see ES Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1)).</p> <p>The assessment of heritage asset value has been undertaken using a methodology grounded in established guidance, including <i>Historic England's Conservation Principles</i> (2008) and <i>Good Practice Advice Note 3: The Setting of Heritage Assets</i> (2nd edition, 2017), as well as relevant planning policy and professional judgement. The value assessment takes into account historic, aesthetic, evidential and communal values where appropriate, and the methodology has been applied consistently throughout the Historic Environment Baseline Report (HEBR) (see ES Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1)). The approach to scoping assets in or out of further assessment was discussed and agreed</p>			X	

		with statutory stakeholders, and we are confident that the assets taken forward in the Environmental Statement reflect those most likely to be significantly affected by the Project.				
9-2.1050	Criticism that the assessment of Listed Buildings is inconsistent, with some assets described using the National Heritage List descriptions and others not. Views are analysed towards the proposed infrastructure, but this is not consistent and the distance of the asset from the draft order limits is also not provided in all cases, leading to lack of understanding. Almost every asset is assessed as having a setting that does not extend to the Draft Order Limit – a subjective decision based limited information derived from a desk-based study only. Those that are scoped in are almost all within 500 m of the Draft Order Limits	<p>Updates have been made to the Historic Environment Baseline Report (HEBR) (see ES Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1)) to improve consistency in the presentation of asset descriptions and setting assessments. The assessment of whether a heritage asset's setting extends to the Order Limits has not been based solely on desk-based analysis. Site surveys, photographic records, and professional judgement were all employed to inform a robust understanding of setting and potential impact.</p> <p>The methodology used to assess heritage assets, including the approach to setting and scoping, aligns with national policy and guidance such as Historic England's Good Practice Advice Note 3 (2nd Edition, 2017) and Conservation Principles (2008). This methodology was discussed with and agreed by relevant stakeholders throughout the project's development.</p>			X	
9-2.1051	Criticism that Curtilage listed buildings have not been identified or assessed as part of the heritage baseline assessment	<p>Regarding curtilage-listed buildings, it is important to clarify that these buildings have been considered within the broader setting assessment of the associated designated Listed Buildings. While they are not individually designated or locally listed, their contribution to the significance of the principal asset has been appropriately taken into account through the setting assessment process.</p> <p>In accordance with the agreed scoping methodology, specific identification or separate assessment of curtilage-listed structures is not required. The methodology used for the assessment of heritage assets has been developed in line with established best practice and guidance, including Historic England's Good Practice Advice Note 3 (2017), and was discussed</p>			X	

		and agreed with relevant stakeholders throughout the project's development. We are confident that this approach provides a robust and proportionate assessment in line with national policy and guidance.				
9-2.1052	Criticism that the draft order limits rarely form part of the setting of a scheduled monument as part of the assessment, even when there are views directly towards the Project. No scheduled monuments beyond 500 m appear to be scoped in for further assessment	<p>Updates have been made to the Historic Environment Baseline Report (HEBR) (see ES Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1)) and the ES Chapter 11: Historic Environment (document reference 6.11).</p> <p>The assessment of setting has been undertaken in accordance with established policies and guidance, including Historic England's Good Practice Advice Note 3: The Setting of Heritage Assets (2017). The methodology for assessing the contribution of setting to the significance of heritage assets, including scheduled monuments, has been thoroughly discussed and agreed with relevant stakeholders during the scoping process and subsequent engagement. We are therefore confident that our approach is robust, proportionate, and in line with national guidance</p>			X	
9-2.1053	Criticism that the assessment of each Registered Park and Garden (RPG) often appears to relate to other assets within the RPGs, rather than providing an assessment of their significance as an historic landscape in their own right. Sometimes, reference is made to a landscape designer. A basic assessment of the setting of each RPG is also provided, though this tends to relate to the interrelationship between elements inside the park rather than the wider landscape contributing to the setting of the RPG. Views are sometimes also assessed but this is not consistent. All RPGs (bar one – Langleys, which is adjacent to the Draft Order Limit) were scoped out of further assessment as their settings were not considered to extend to the Draft Order Limits. The assessments are based on subjective decisions using limited information	<p>The assessment of Registered Parks and Gardens (RPGs) has been undertaken in accordance with a robust methodology informed by established best practice, including Historic England's Good Practice Advice Note 3: The Setting of Heritage Assets (2017). This methodology has been developed, discussed, and agreed with key stakeholders, including through the scoping process and thematic engagement meetings.</p> <p>Each RPG has been assessed as an historic landscape in its own right, with consideration given to the contribution of individual elements and their interrelationships, including references to historic landscape designers where appropriate. The setting of each RPG was assessed on a case-by-case basis, and decisions regarding scoping were informed by factors such as proximity to the Order Limits, intervening</p>			X	

	<p>derived from a desk-based study only. The initial review undertaken by the Respondent suggests that the potential visibility of the pylons from within the RPGs was not assessed, and therefore views of the tall infrastructure was not considered to harm the settings or significance of the RPGs</p>	<p>topography and vegetation, and the nature of views to and from the asset.</p> <p>These assessments were supported by site visits, photographic surveys, and Zone of Theoretical Visibility (ZTV) analysis. We are therefore confident that the approach is proportionate, clearly evidenced, and aligned with national policy and guidance.</p>				
9-2.1054	<p>The settings of listed buildings were generally assessed as not extending beyond the immediate vicinity of the asset, and in almost every case are not considered to extend to the Draft Order Limit due to topography, intervening infrastructure and vegetation. This is contrary to many of the responses to the non-statutory consultations being provided which clearly state that the tall infrastructure will not only be visible from the listed building, but that the beautiful and tranquil landscape that contributes towards the special interest of the heritage assets will be substantially impacted and harmed as a result of The Project</p>	<p>The assessment of Listed Buildings and their settings was undertaken using a robust and proportionate methodology aligned with established best practice, including Historic England's Good Practice Advice Note 3: The Setting of Heritage Assets (Second Edition, 2017). This approach was developed in consultation with, and agreed by, relevant stakeholders during the scoping process and thematic working group meetings.</p> <p>In assessing the contribution of setting to the significance of each Listed Building, multiple factors were considered, including historical context, landscape character, visual and experiential relationships, and the presence of intervening topography, vegetation, or infrastructure. These assessments were informed by site visits, photographic records, and analysis of the Zone of Theoretical Visibility (ZTV).</p> <p>Scoping decisions about whether a Listed Building's setting extended to the Order Limits were not based solely on distance or visibility, but on whether the Project would be experienced in a way that might affect the asset's heritage significance. The landscape context and experiential qualities, such as tranquillity and aesthetic appreciation, were also taken into account where relevant.</p> <p>We are therefore confident that the assessment appropriately reflects the potential for change to setting, is consistent with national guidance and policy, and has been shaped through ongoing engagement with statutory consultees and local authorities.</p>			X	

9-2.1055	<p>Criticism that the assessment of the importance of Heritage assets has been reduced to statistics, with inadequate assessment of the significance of the contribution made by their setting (as required by paragraph 200 of the NPPF) or as outlined in the method statement for The Historic Environment Baseline Report (HEBR). Whilst the Scoping Report identified a Study Area which has widely been adopted, the wholesale scoping out of over 3000 assets within that study area on the basis of what appears to be proximity to the Draft Order Limits only, means that a vast number of nationally and locally important heritage assets will not be put forward for proper assessment to the Environmental Statement next year</p>	<p>The assessment methodology for heritage assets, including the evaluation of setting and its contribution to significance, has been developed in accordance with established guidance and policy, including the National Planning Policy Framework (NPPF, 2023), specifically paragraph 200, and Historic England's Good Practice Advice Note 3: The Setting of Heritage Assets (Second Edition, 2017).</p> <p>The methodology, as outlined in the Historic Environment Method Statement and implemented within the Historic Environment Baseline Report (HEBR) (see ES Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1)), has been subject to consultation and agreement with key stakeholders, including Historic England and relevant local planning authorities, through the scoping process and thematic working groups.</p> <p>Each heritage asset was subject to an initial review, which included professional judgement based on HER data, historic mapping, aerial imagery, site survey, and photographic evidence. This informed the decision on whether the asset's setting extended to the Draft Order Limits and whether it warranted further assessment. Assets scoped out did not meet the threshold for potential significant effect, as defined by the agreed methodology.</p> <p>The Historic Environment Baseline Report (HEBR) (document reference 6.11.A1), the assessment tables in Appendix 11.2: Historic Environment Assessment Tables (document reference 6.11.A2), and the Environmental Statement Chapter 11: Historic Environment (document reference 6.11) collectively provide an assessment of significance and setting for both designated and non-designated assets where a potential for effect exists. The approach used is proportionate, policy-aligned, and has been agreed with statutory consultees.</p>			X	
----------	--	--	--	--	---	--

9-2.1056	<p>Criticism that an assessment of the Zone of Theoretic Visibility (ZTV) and Heritage Visual Viewpoints has yet to be undertaken. Therefore, the visual impact of the Project has not been considered as part of The Historic Environmental Baseline Report (HEBR) and PEIR. Omission of this neglects a vital component of the contribution that setting makes to a heritage asset. The lack of this analysis also means that listed buildings whose settings have been assessed as not extending to the Project which might have 'a historical and/or functional relationship with a scoped in building within the study areas or where Landscape and Visual Impact Assessment (LIVA) indicates the Project would be a prominent visual feature within the landscape' have not been identified. In addition, those assets that 'exist where topography allows for more distant views which prove the exceptions' from being scoped out have also not been identified</p>	<p>When the PEIR was produced the ZTV and the HVV were not available. The current iteration of the HEBR has been fully updated with reference to both these resources.</p> <p>A Zone of Theoretic Visibility (ZTV) has been used as a starting point in the assessment to provide an indication of theoretical visibility and has been ground truthed in the field so that the assessment conclusions better represent the potential visibility of the Project.</p> <p>Woodland blocks have been modelled into the ZTVs, using the National Forest Inventory mapping dataset which have been assigned a height of 15 m. This is considered a conservative approach to represent the likely screening/filtering effects of mature woodland. However, the ZTVs do not consider the additional screening and filtering effects of hedgerow and field trees, small copses or more recently planted trees, woodland and hedgerows which are found in many places throughout the study area. The ZTVs also would not account for any proposed planting within Environmental Areas around Cable Sealing End (CSE) compounds, substations and substation extensions.</p> <p>Hence, whilst the ZTV indicates relatively widespread theoretical visibility, the subsequent assessment been refined by additional survey work to establish likely levels of visibility that are less than those illustrated by the ZTV.</p>			X	
9-2.1057	<p>Criticism that whilst The Historic Environmental Baseline Report (HEBR) concludes that the setting of Flordon Hall is informed by the surrounding agricultural landscape with which the assets have a functional and historical relationship, it affords only a moderate contribution to the significance of the heritage assets, despite the landscape forming the historic manorial estate of Flordon Hall and the farmstead. The operational effects table later states that setting makes a minor contribution to the</p>	<p>The current iteration of the HEBR (see ES Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1)) has been updated and has addressed all internal and external comments, including those on Flordon Hall.</p>			X	

significance of the heritage assets, illustrating that cross referencing between the original assessment and impact assessment was not undertaken, and much of the wording within these assessment tables was likely copied and pasted

--	--	--	--	--

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Heritage						
9-2.1058	Criticism that the heritage impact assessment undertaken in the PEIR attributes Flordon Hall with a significant negative effect, and the barn and piggery with a not significant negative effect, despite them all sharing the same setting. This serves to demonstrate the use of matrices to assess impact based upon heritage value is a flawed methodology	<p>The assessment of the historic environment for the Project has been undertaken in line with relevant heritage legislation, national and local planning policy, and established technical guidance. The methodology has been developed with reference to best practice, including the National Planning Policy Framework (NPPF), the Planning (Listed Buildings and Conservation Areas) Act 1990, the Ancient Monuments and Archaeological Areas Act 1979, and local development plan policies where applicable. The list of the source is available in Chapter 11: Historic Environment of the Environmental Statement (document reference 6.11). The methodology and scoping approach were discussed and agreed with key stakeholders during the scoping process and at subsequent thematic working group meetings, including engagement with Historic England and relevant Local Planning Authorities. We are confident that the methodology applied is robust, proportionate, and has given appropriate weight to the potential impacts of the Project on designated and non-designated heritage assets, including effects from physical change and change to setting.</p> <p>The assessment findings are presented in Chapter 11: Historic Environment of the Environmental Statement (document reference 6.11), supported by Appendix 11.1: Historic Environment Baseline Report (document</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		reference 6.11.A1) and other technical appendices, and include both the assessment of potential impacts and the identification of appropriate mitigation measures. It is agreed that the three assets referred to here share the same vicinity, however, it doesn't necessarily follow that the same elements of the setting contribute to their individual values. The discrepancy between the Hall and the two outbuildings reflects the professional judgement that the setting of the outbuildings are much more focused on their farmyard location, and that views of open fields is not as important to their understanding and appreciation of their function, as they are to the Hall.				
9-2.1059	Criticism that the setting of All Saints Church is correctly assessed as extending to the Draft Order Limits but the impact to the setting (minor) is vastly underestimated as a result of using a matrix to establish significance and impact	The assessment of the historic environment for the Project has been undertaken in line with relevant heritage legislation, national and local planning policy, and established technical guidance. The methodology has been developed with reference to best practice, including the National Planning Policy Framework (NPPF), the Planning (Listed Buildings and Conservation Areas) Act 1990, the Ancient Monuments and Archaeological Areas Act 1979, and local development plan policies where applicable. The list of the source is available in Chapter 11: Historic Environment of the Environmental Statement (document reference 6.11). The methodology and scoping approach were discussed and agreed with key stakeholders during the scoping process and at subsequent thematic working group meetings, including			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>engagement with Historic England and relevant Local Planning Authorities. We are confident that the methodology applied is robust, proportionate, and has given appropriate weight to the potential impacts of the Project on designated and non-designated heritage assets, including effects from physical change and change to setting.</p> <p>The assessment findings are presented in Chapter 11: Historic Environment of the Environmental Statement (document reference 6.11), supported by Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1) and other technical appendices, and include both the assessment of potential impacts and the identification of appropriate mitigation measures.</p> <p>It was professionally judged that the Project's magnitude of impact on the setting of the asset is low resulting in a minor significance of effect (not significant). This is based on the observation that the pylons are over 1km away, in the view only to the west, and that they did not detract from the appreciation and understanding of the asset.</p>				
9-2.1060	Criticism that the Grade II listed bridge at Hempnalls Hall has been included in The Historic Environmental Baseline Report (HEBR) but scoped out of the PEIR assessment on the basis that its setting does not extend to the Draft Order Limits and therefore would not be impacted. Whilst the setting of the bridge is localised in nature, its relationship with the Hall and	The methodology and scoping approach were discussed and agreed with key stakeholders during the scoping process and at subsequent thematic working group meetings, including engagement with Historic England and relevant Local Planning Authorities. We are confident that the methodology applied is robust, proportionate, and has given appropriate weight to the			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	the moat means that its significance is also linked to the group value of the buildings. As such, the setting does extend to the project, and therefore harm will be caused to the group which includes the bridge	potential impacts of the Project on designated and non-designated heritage assets, including effects from physical change and change to setting. The bridge was scoped out in accordance with the agreed methodology.				
9-2.1061	Criticism that the farmstead and moat (curtilage listed and NDHA) at Hempnalls Hall have not been assessed and the preliminary operational effects have likewise not been assessed, despite being located within the 250m buffer. This is in conflict with national and local policy	The current iteration of Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1) includes a full assessment of the Hempnalls Hall complex including the non-designated assets.			X	
9-2.1062	Criticism that Bleak Hall, like thousands of other Grade II Listed Buildings, has not been considered prior to the current The Historic Environmental Baseline Report (HEBR). The decision to move the draft alignment between RG195 and RG200 after the 2023 non-statutory consultation to avoid oversail of an equestrian business was flawed as the heritage status of Bleak Hall was not taken into account. Although the impact is now assessed as a 'significant negative effect' by the PEIR, this is an example of a lack of due process and mismanagement of information which failed to inform the decision making process for the routing of the Project	National Grid notes the respondent's feedback. The alignment and siting of pylons, including RG195 to RG200, reflect a careful balance between environmental, technical in addition to heritage considerations. The change between RG195 and RG200 did result in avoiding impacts on the equestrian business but it also moved the alignment further away from residential properties along Ipswich Road. An additional outcome of this change was that rather than having multiple crossings of the existing 132 kV overhead line we are now proposing to underground the section of 132 kV overhead line from the first point of crossing near Middle Wood through to the north of Bramford Substation which will reduce the potential effects. This change remains preferred over the 2023			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>preferred draft alignment and no further change is proposed.</p> <p>Information presented in the PEIR was preliminary and baseline and assessment have been updated since that document was produced. The approach to the historic environment assessment and data gathering is set out in ES Chapter 11: Historic Environment (document reference 6.11) and its Appendices (document reference 6.11.A1 to 6.11.A7). The impact of the Project on Bleak Hall has been considered and the potential effect of the Project on this asset is set out in ES Chapter 11: Historic Environment (document reference 6.11) and Appendix 11.2 Historic Environment Assessment Tables (document reference 6.11.A2).</p>				
9-2.1063	<p>The PEIR has scoped out these highly significant assets associated with Faulkbourne Hall and Parkland from further assessment as the Historic Environmental Baseline Report (HEBR) does not accept that the setting of the Hall and the Parkland extends to the Draft Order Limits – despite the parkland only being 370m away. The topography slopes downhill from the Hall to the Draft Order Limits and consequently, views towards the pylons and wirescape will be clear above the tree line from the house and will dominate the landscape looking north from the park. The PEIR acknowledges that <i>'The setting of the listed assets is informed by their purpose as a medieval to postmedieval manorial</i></p>	<p>The assessment of the historic environment for the Project has been undertaken in line with relevant heritage legislation, national and local planning policy, and established technical guidance. The methodology has been developed with reference to best practice, including the National Planning Policy Framework (NPPF), the Planning (Listed Buildings and Conservation Areas) Act 1990, the Ancient Monuments and Archaeological Areas Act 1979, and local development plan policies where applicable. The list of sources is available in Chapter 11: Historic Environment of the Environmental Statement (document reference 6.11). The methodology and scoping approach were discussed and agreed with key stakeholders during the</p>			X

	<i>estate within a formal designed landscape and within a wider rural agricultural landscape to the south-east of Faulkbourne'</i> but does not include an assessment of the contribution of the landscape to the north of the Hall where the line will be situated, thus neglecting to fully assess the significance and setting of the assets	<p>scoping process and at subsequent thematic working group meetings, including engagement with Historic England and relevant Local Planning Authorities. We are confident that the methodology applied is robust, proportionate, and has given appropriate weight to the potential impacts of the Project on designated and non-designated heritage assets, including effects from physical change and change to setting.</p> <p>The Registered Park & Garden lies over 1 km to the south-south-east of the Order Limits pylon corridor, although small scale temporary construction phase works would be located c. 300 m in the same direction. We are confident in the assessment.</p>				
9-2.1064	The setting of the highly significant church at Rivenhall Place which is located within the Scheduled Monument (720m from the Draft Order Limits) is considered to extend to the Draft Order Limits as a result of far reaching views. The PEIR states that <i>'The surrounding agricultural landscape with which the asset and the Rivenhall settlement have a historical relationship also contributes positively to the character of the setting. The setting of the church, therefore, makes a considerable contribution to its value'</i> . Despite this, the scheduled monument (within which the church is located) has been scoped out as its setting is not considered to extend to the Draft Order Limits – even though they are in the same place. In addition, the Historic	The assessment of the historic environment for the Project has been undertaken in line with relevant heritage legislation, national and local planning policy, and established technical guidance. The methodology has been developed with reference to best practice, including the National Planning Policy Framework (NPPF), the Planning (Listed Buildings and Conservation Areas) Act 1990, the Ancient Monuments and Archaeological Areas Act 1979, and local development plan policies where applicable. The list of sources is available in Chapter 11: Historic Environment of the Environmental Statement (ES) (document reference 6.11). The methodology and scoping approach were discussed and agreed with key stakeholders during the scoping process and at			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	England description of the setting of the Roman Villa of Rivenhall clearly discusses the likelihood of a designed landscape beyond the complex, potentially with vistas, landmarks and avenues of trees. The impact of the Project has been identified as neutral. The huge significance of this ancient landscape and the contribution that the landscape makes to the scheduled monument has therefore been disregarded, and the harm that the 50m high pylons will cause to the scheduled monument a mere 560m away has been dismissed without further appraisal	<p>subsequent thematic working group meetings, including engagement with Historic England and relevant Local Planning Authorities. We are confident that the methodology applied is robust, proportionate, and has given appropriate weight to the potential impacts of the Project on designated and non-designated heritage assets, including effects from physical change and change to setting.</p> <p>The scheduled monument lies c. 800 m to the south of the Order Limits pylon corridor. We are confident in the assessment that the setting of the SM does not extend to the Order Limits and our reasoning is presented in the current iteration of Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1).</p>				
9-2.1065	Despite the church at Rivenhall Place being identified as having the potential to be impacted within the Historic Environmental Baseline Report (HEBR), the PEIR considers that the impact of the tall infrastructure to the setting of the church would result in no change to the setting, equating to a neutral effect. This is clearly nonsense. The pylons and wirescape will be clearly visible to and from the church which has 'commanding views across fields to the north-west'. The assessment of the impact of the scheme has therefore not considered or cross referenced the description of the church or the contribution made by its setting in the HEBR	The current iteration of Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1) includes an up-to-date assessment of the asset.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.1066	Rivenhall Place to the north is a highly significant listed building that is located only 350 m north of the Project. The setting of Rivenhall Place is considered to extend to the Draft Order Limits. The pylons will run through the parkland which was designed by Repton, which will have a direct impact to this asset and the setting of the house. The PEIR accepts that there is a historic setting comprising ' <i>a high-status estate designed to have intervisibilty with its wider surrounding rural agricultural landscape</i> ', and goes on to describe the parkland (identified as an NDHA) surrounding Rivenhall Place. Despite being within the Draft Order Limits, the impact of the Project on the significance of this historic landscape and parkland has not been assessed further, which is contrary to local and national policy. The tall infrastructure will dominate the parkland and setting of the house and will significantly harm the significance of Rivenhall Place and parkland. The construction of the infrastructure will remove some of the recorded area of this asset, negatively affecting its value, but no mitigation is provided	<p>The assessment of the historic environment for the Project has been undertaken in line with relevant heritage legislation, national and local planning policy, and established technical guidance. The methodology has been developed with reference to best practice, including the National Planning Policy Framework (NPPF), the Planning (Listed Buildings and Conservation Areas) Act 1990, the Ancient Monuments and Archaeological Areas Act 1979, and local development plan policies where applicable. The list of sources is available in Chapter 11: Historic Environment of the Environmental Statement (ES) (document reference 6.11). The methodology and scoping approach were discussed and agreed with key stakeholders during the scoping process and at subsequent thematic working group meetings, including engagement with Historic England and relevant Local Planning Authorities. We are confident that the methodology applied is robust, proportionate, and has given appropriate weight to the potential impacts of the Project on designated and non-designated heritage assets, including effects from physical change and change to setting.</p> <p>The current iteration of the Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1) includes an up-to-date assessment of the asset.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.1067	The Historic Environmental Baseline Report (HEBR) describes how views from Langleys and its parkland to the agricultural landscape beyond contribute to the setting of the parkland and the house and make a considerable contribution to the setting of the conservation areas, which extend to the Draft Order Limits. The HEBR does not identify the settings of the Stables or the Garden Blocks extending to the Draft Order Limits, despite the setting of these assets being informed by their interrelationships as elements of a high-status country estate which contribute to the group value of the House and Parkland	Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1) states that the ' <i>The setting of the garden block (1122115) and stables (1171617) is more insular and restricted to their location within the grounds of the house and the parkland beyond. The setting of these assets, therefore, makes a considerable contribution to their values, but due to its more insular nature, the setting does not extend to the Order Limits</i> '.			X	
9-2.1068	Despite the understanding of the contribution of the rural landscape to the setting of the assets, the impact tables within the PEIR only attribute a moderate contribution made by the land over which the Project will run which will be moderately impacted by the Project. Yet again, this contradicts the initial assessment in The Historic Environmental Baseline Report (HEBR) which recognises that the setting makes a considerable contribution to the value of the assets. This highlights the lack of cross referencing within the PEIR and the inadequacy of the matrix assessment tables which lead to an incorrect assessment of value and impact. The PEIR consequently fails to take into adequate account the negative impact the pylons will have on the	The assessment of the historic environment for the Project has been undertaken in line with relevant heritage legislation, national and local planning policy, and established technical guidance. The methodology has been developed with reference to best practice, including the National Planning Policy Framework (NPPF), the Planning (Listed Buildings and Conservation Areas) Act 1990, the Ancient Monuments and Archaeological Areas Act 1979, and local development plan policies where applicable. The list of sources is available in Chapter 11: Historic Environment of the Environmental Statement (ES) (document reference 6.11). The methodology and scoping approach were discussed and agreed with key stakeholders during the scoping process and at			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	landscape and consequently the significant harm that will arise as a result of the proposed scheme on Langleys, the associated designated estate and park and the conservation areas of Great and Little Waltham	<p>subsequent thematic working group meetings, including engagement with Historic England and relevant Local Planning Authorities. We are confident that the methodology applied is robust, proportionate, and has given appropriate weight to the potential impacts of the Project on designated and non-designated heritage assets, including effects from physical change and change to setting.</p> <p>It is not clear from the comment which asset(s) it refers to. However, the impact of the Project on Langleys listed building, Langleys Registered Park and Garden, and the conservation areas of Great and Little Waltham has been fully assessed and details can be found in Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1) and Appendix 11.2: Historic Environment Assessment Tables (document reference 6.11.A2).</p>				
9-2.1069	The wireline visualisations produced in Volume II provide an image of Langleys, and the impact of the scheme on the setting of the house. From Viewpoint 6.18, the pylons appear the same height as the house and compete with the historical setting of the property (see below). The wireline visualisation from within the Parkland was taken from a central point, rather than from a point near to the Project, which would have demonstrated a much larger impact to the skyline	National Grid has undertaken a detailed routing and siting exercise to reduce, as far as practicable, the potential impacts of the Project on the historic environment, including the setting of Langleys (Grade I Listed Building) and its associated Registered Park and Garden. In response to feedback received during statutory consultation, including comments from Historic England and other stakeholders, the alignment in this area was revised in March 2025. Low-height pylons are now proposed in the vicinity, specifically to reduce			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>visibility and visual impact from key viewpoints, including from within the parkland and the setting of Langleys.</p> <p>The assessment methodology for heritage assets, including the evaluation of setting and its contribution to significance, has been developed in line with relevant national planning policy and established best practice, notably the National Planning Policy Framework (NPPF, 2023) and Historic England's Good Practice Advice Note 3: <i>The Setting of Heritage Assets</i> (Second Edition, 2017). This methodology was discussed and agreed with key stakeholders, including Historic England and the relevant local planning authorities.</p> <p>The visualisations presented in Volume II support the assessment presented in Chapter 11: Historic Environment of the Environmental Statement (ES) (document reference 6.11) and are representative of viewpoints agreed through consultation. The viewpoints were selected to capture key aspects of the asset's setting and to illustrate potential changes in views and visual relationships. While alternative locations may show a slightly different degree of visibility, the chosen viewpoints are considered appropriate to support a robust, proportionate assessment.</p> <p>The significance of effect on Langleys and its Registered Park and Garden has been assessed as moderate adverse during both construction and operation phases. Mitigation measures are set out in the Outline Archaeological Mitigation Strategy and Outline Written</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Scheme of Investigation (document reference 7.5) and the Outline Code of Construction Practice (document reference 7.2).				
9-2.1070	The Historic Environmental Baseline Report (HEBR) describes how for the majority of the buildings at Ingatestone Hall setting makes a considerable contribution to their value, except for 'two garden walls (1187300, 1297190) and the cistern house (1187282), whose settings are restricted to the confines of the Ingatestone Hall complex'. However, the setting of these assets again is informed by their interrelationships as elements of a high status country estate which contribute to the group value of the hall and gardens. Despite the understanding of the contribution of the rural landscape to the setting of the assets, the impact tables within the PEIR state that the pylons will have a 'neutral' effect on the setting (which makes a moderate contribution to their value). This again highlights the lack of cross referencing within the PEIR and the inadequacy of the matrix assessment tables which has led to an incorrect assessment of the value of the identified Heritage Assets and the impact of the Project. The topography between The Hall and Parkland across a valley to the Draft Order Limits means that the 50m tall pylons will clearly be visible from within the grounds of Ingatestone Hall and from the Hall itself, and will irrevocably change the rural and relatively isolated setting of the Grade I listed building, which	The assessment of the historic environment for the Project has been undertaken in line with relevant heritage legislation, national and local planning policy, and established technical guidance. The methodology has been developed with reference to best practice, including the National Planning Policy Framework (NPPF), the Planning (Listed Buildings and Conservation Areas) Act 1990, the Ancient Monuments and Archaeological Areas Act 1979, and local development plan policies where applicable. The list of sources is available in Chapter 11: Historic Environment of the Environmental Statement (document reference 6.11). The methodology and scoping approach were discussed and agreed with key stakeholders during the scoping process and at subsequent thematic working group meetings, including engagement with Historic England and relevant Local Planning Authorities. We are confident that the methodology applied is robust, proportionate, and has given appropriate weight to the potential impacts of the Project on designated and non-designated heritage assets, including effects from physical change and change to setting. The current iteration of Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1) and Appendix 11.2: Historic Environment			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	has remained unchanged for centuries. The mitigation provided is insufficient in proportion to the level harm incurred by the proposed route. The PEIR thus fails to take into adequate account the negative effect of the pylons, and the impact they will have on the immediate landscape causing significant harm to the estate and Ingatestone Hall	Assessment Tables (document reference 6.11.A2) includes an up-to-date assessment of the asset.				
9-2.1071	The 2022 non-statutory consultation documents originally showed the preferred pylon route bisecting the countryside between Ingatestone Hall and St Mary's Church, Buttsbury (roughly indicated by the purple line in the map above). Following concerns raised about the potential heritage impacts on Ingatestone Hall, the line was moved to its present position in the 2023 preferred draft alignment section (G). The decision to move the draft alignment away from Ingatestone Hall and closer to the Grade II* listed church at Buttsbury was flawed, as the impact was simply transferred from one significant heritage asset to another. The Design Development Report (2023) stated that <i>'an alignment within the consultation corridor is less preferred over an alternative to the east, outside the consultation corridor, as although slightly longer and less direct the route further east would substantially reduce the effects on the Grade I Listed heritage assets at Ingatestone Hall and St Giles Church. This change to the preferred corridor is referred to as 'Further</i>	National Grid has undertaken a routeing and siting exercise to reduce, as far as practicable, the potential impacts of the Project on the historic environment, including designated assets such as St Mary's Church (1264434). This process has been informed by a robust assessment methodology that was developed in line with relevant national policy and guidance and agreed through engagement with key heritage stakeholders. Routing changes have included the addition of a pylon to allow pylon heights to be reduced and pylons positioned in a way that they are not sited directly behind the church in views from the Public Rights of Way approaching from the north of Ingatestone Hall from the west. The alignment and siting of pylons, reflect a careful balance between environmental, technical and heritage considerations. The updates to the routing of the pylons were discussed with relevant stakeholders including the Local Planning Archaeologist and Historic England. Whilst noting the preference to return the alignment back to the 2023 preferred draft alignment, the reasons for a preference for the current alignment			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<i>east of Ingatestone</i> . This decision did not assess the heritage impact on St Mary's Church, and the conclusion stated that <i>'On balance the consultation corridor to the north east of Ingatestone in combination with the alternative further east passing to the east of Buttsbury Church and the wastewater treatment works are preferred'</i>	<p>remain, which were mainly to reduce effects on various heritage assets most notably the Grade I Listed Ingatestone Hall and Grade I Listed St Giles Church. National Grid consider the current alignment to be consistent with our duties and relevant policies and for this still to be preferred.</p> <p>The design development process has considered historic environment impacts and sought to reduce these wherever possible. It has not always been possible to remove or reduce all impacts. The impact of the Project on the Church of St Mary, Buttsbury, and other heritage assets in this area, has been considered and the potential effect of the Project on these assets is set out in ES Chapter 11: Historic Environment (document reference 6.11) and Appendix 11.2: Historic Environment Assessment Tables (document reference 6.11.A2).</p>				
9-2.1072	Criticism of the moderate level of contribution provided by the setting to St Mary's Church in The Historic Environmental Baseline Report (HEBR) is inadequate (i.e. the isolated nature of the church means that the setting is more important). The preliminary operational effect assessment table states that the Project will only cause a moderate change to the rural aspect of its setting, but will have a <i>'significant negative effect'</i> , thus emphasising the inadequacies of matrices to assess value and impact. The Pylons in reality will dominate the setting	<p>The setting of St Mary's Church (1264434) is stated within the 6.11.A1 Historic Environment Baseline Report as <i>'the setting of the asset is informed by its isolated roadside location within its small churchyard and by its all-round views of the agricultural landscape with which it has a historical relationship. The loss of the settlement it once served detracts from the setting, but it still makes a moderate contribution to its value. Due to the proximity of the Project, the setting extends to the Order Limits'</i>. The two nearest pylons (TB92 and TB193) to St Mary's are c.240m and c.260m away from the asset. The</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	of the church causing substantial harm to the contribution that setting makes to the significance of the listed building	Cultural Heritage team are confident that their assessment aligns with national planning policy and technical guidance that was agreed with relevant stakeholders.				
9-2.1073	Criticism that the assessment of impacts of the operational effects of the Project on Grade II listed building 'Vauxhall' is based on incorrect data. The line will not be undergrounded at this point, a CSE compound to reintroduce overhead lines following the undergrounding is proposed at the west of Vauxhall. The Project will therefore pass within 240m of the listed building	The ES Chapter 11: Historic Environment of the Environmental Statement (ES) and Appendix 11.2: Historic Environment Assessment Tables (document reference 6.11.A2) states that: <i>'The operation phase of the Project would impact the asset's setting through the introduction of pylons JC29 to JC33. The pylons would be occasionally visible through the mature vegetation and outbuildings of the farmyard and they would alter the character of the rural setting of the asset. The magnitude of impact is considered to be low adverse'</i> . Therefore, there is likely to be a direct, permanent minor adverse significance of effect on the asset (not significant).			X	
9-2.1074	The Historic Environmental Baseline Report (HEBR) has scoped out approximately 1600 heritage assets from within the study areas which will not be put forward for further assessment within the PEIR. The methodology for scoping out the majority of the heritage assets within the HEBR has been criticised by PINS and Consultees as not having adequate information on which to base an informed decision of the setting of the assets which have views of the tall infrastructure. Analysis of the HEBR would suggest that almost all of the assets that have been brought	Annex C Historic Environment Assessment Methodology section 3.11 Scoping of Historic Buildings of Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1) was agreed with stakeholders. Section 3.12 of the same document states the methodology for setting survey. The scoping process was two stage, as set out in Annex C, and those historic buildings scoped out of detailed assessment are listed in Annex E of Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1) along with the reason for scoping out.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	forward for assessment by the PEIR have been scoped in as a result of near proximity to the line rather than as a proper assessment of setting and the impact of The Project upon their settings.					
9-2.1075	Request National Grid provide an understanding of the full number of designated assets pre-Preliminary Environmental Information Report (PEIR) to assess the level of those that have been scoped into this assessment and those which have been excluded.	The PEIR was a preliminary document for the purpose of statutory consultation. Details of designated assets scoped out of detailed assessment in the ES chapter can be found in Appendix 11.1 Historic Environment Baseline Report (document reference 6.11.A1). In the detailed assessment in ES Chapter 11: Historic Environment (document reference 6.11) there are 504 designated assets.		X		
9-2.1076	Criticism as within the Preliminary Environmental Information Report (PEIR) section 5.7.5 the standard mitigation proposed for the historic environment is inadequate and it would be expected that a detailed omme of archaeological investigation has occurred in advance of the submission of the application so that the impact on heritage assets is understood. This reduces the potential of long delays to the development due to unexpected archaeological deposits being identified. Completing this work in advance allows an informed mitigation strategy and outline Written Scheme of Investigation (WSI) which can be integrated with the Outline Code of Construction Practice (CoCP). Although the preliminary assessment has identified many impacts along the proposed routes, further	Areas identified within the Project that will be impacted by underground cabling and compounds (along with associated infrastructure such as haul roads, utility connection, SuDS basins etc), have been targeted with geophysical surveys. The results of the surveys, along with HER assets and assets identified through cropmark, mapped features and aerial photograph, have been targeted for archaeological trial trenching. Other areas along the route that have been targeted for a geophysical survey included high or medium value assets, construction or highways laydown areas and associated infrastructure (haul roads, SuDS basins etc). The majority of the areas identified for the geophysical survey have been surveyed (results located in ES Appendix 11.3: EACN Substation Geophysical Survey		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>evaluation in the form of geophysics, aerial photographic rectification and trial trenching is likely to identify many more heritage assets. Criticism as within the Preliminary Environmental Information Report (PEIR) section 5.7.5 the standard mitigation proposed for the historic environment is inadequate and it would be expected that a detailed programme of archaeological investigation has occurred in advance of the submission of the application so that the impact on heritage assets is understood. This reduces the potential of long delays to the development due to unexpected archaeological deposits being identified. Completing this work in advance allows an informed mitigation strategy and outline Written Scheme of Investigation (WSI) which can be integrated with the Outline Code of Construction Practice (CoCP).</p> <p>Although the preliminary assessment has identified many impacts along the proposed routes further evaluation in the form of geophysics, aerial photographic rectification and trial trenching is likely to identify many more heritage assets</p>	<p>Report (document reference 6.11.A3) and ES Appendix 11.4: Geophysical Survey Results Report (document reference 6.11.A4)). Areas not presently surveyed have either had crop yet to be harvested, access issues or other mitigating ground conditions.</p> <p>The priority areas of archaeological trial trenching have been identified as those impacted by compounds and underground cabling and associated infrastructure. The trial trenching is ongoing and results can be found in ES Appendix 11.5: Trial Trenching Results Report (document reference 6.11.A5).</p>				
9-2.1077	<p>Concern as, although underground cable noted in Table 4.2 of the Preliminary Environmental Information Report (PEIR) reduces impact on the setting of designated heritage assets, it causes negative impact on below ground archaeological deposits.</p>	<p>Below ground archaeological remains that are potentially impacted by the underground cable route and associated infrastructure were identified and assessed in the ES Chapter 6.11: Historic Environment (document reference 6.11.) and Appendix 11.2: Historic Environment Assessment Tables (document reference</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	Additionally, the creation of a haul road along the length of the development corridor will further impact these below ground archaeological deposits and increase the area requiring archaeological assessment to understand the impact on the archaeological resource	<p>6.11.A2). These areas have been targeted for geophysical surveys (results of which are located in ES Appendix 11.3: EACN Substation Geophysical Survey Report (document reference 6.11.A3) and ES Appendix 11.4: Geophysical Survey Results Report (document reference 6.11.A4). Areas not presently surveyed have either had crop yet to be harvested, access issues or other mitigating ground conditions.</p> <p>The priority areas of archaeological trial trenching have been identified as those impacted by the underground cable route, cable sealing end compounds, proposed substation areas and temporary site compounds. The trial trenching is ongoing and results can be found in ES Appendix 11.5: Trial Trenching Results Report (document reference 6.11.A5).</p> <p>The temporary haul road along the length of the Project will be surveyed and assessed. The scope of the assessment fieldwork (geophysical survey/trial trenching) will be agreed with the appropriate Local Planning Archaeologist (LPA).</p>				
9-2.1078	Request the temporary compounds stated in section 4.8 of the Preliminary Environmental Information Report (PEIR), will need archaeological assessment to identify heritage impacts. These impacts should be included in the mitigation strategy within the Code of Construction Practice (CoCP) and once identified, the overhead line stone working areas will also require assessment	Heritage assets located within compound areas have had their impact assessed within the ES Chapter 11: Historic Environment (document reference 6.11) and ES Appendix 11.2: Historic Environment Assessment Tables (document reference 6.11.A2). All below ground archaeological assets (HER assets, geophysical anomalies etc) will be endeavoured to be investigated and recorded prior to construction as stated in the		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Outline Code of Construction Practice (CoCP) (document reference 7.2).				
9-2.1079	<p>The Historic Environment Baseline Report and the Preliminary Environmental Information Report (PEIR) are based on preliminary project design information and survey data gathered up to the end of September 2023. Request that the Historic Environment Study Area be refined as the Project design has evolved since then.</p> <p>Given this, it is possible that not all heritage assets with the potential to be impacted have been identified to date, and therefore the Historic Environment Baseline Report is likely to change</p>	<p>The Environmental Statement (ES) Chapter 11: (document reference 6.11) and Appendix 11.2: Historic Environment Assessment Tables (document reference 6.11.A2) were updated in May 2025 and Appendix 11.1 Historic Environment Baseline Report (document reference 6.11.A1) was updated in April 2025. The Study Areas for the heritage assets were defined in the EIA Scoping Report (document reference 6.19) the Study Areas for the Historic Environment comprise the Order Limits plus a 250 m buffer for non-designated heritage assets. In addition, two wider Study Areas have been defined: 2 km from the Order Limits - for all designated heritage assets (scheduled monuments, Grade I, II* and II listed buildings, and Grade I, II* and II registered parks and gardens and conservation areas) and up to 3 km from the Order Limits - for designated assets of the highest value (scheduled monuments, Grade I and II* listed buildings and Grade I and II* registered parks and gardens). For the ES chapter and appendix, any non-designated heritage asset that was of medium value and its setting extended into the Order Limits was included.</p> <p>The historic environment baseline will change due to assets identified through geophysical survey and archaeological trial trenching.</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.1080	<p>Concerns in relation to section 11.4.2, Table 11.1 of the Preliminary Environmental Information Report (PEIR), regarding the undergrounding sections and haul road, specifically the need for appropriate archaeological assessment through trial trenching to inform the inspector.</p> <p>Concerns about the delay in receiving the Written Scheme of Investigation (WSI) (November 2023) for geophysics, which resulted in survey work being completed before the final version was received. The WSI for trial trenching evaluation has not yet been provided for comment or approval</p>	The WSI for the priority geophysical survey areas was completed and accepted by stakeholders in March 2024. The results of the geophysical survey (still ongoing July 2025) has resulted in the majority of the priority areas being surveyed and the WSI for trial trenches to be created. The trial trenching WSI's once written have been sent to the LPA archaeological officers for comments along with trench location plans.		X		
9-2.1081	Concern as it is unclear how an agreed list of viewpoints will be provided within the Environmental Statement (ES) without detailed discussion and appropriate reasons for omitting or including the numerous designated heritage assets along the route to the local authority advisors	The methodology by which designated assets have been included/omitted from the ES are set out in Annex C – Historic Environment Assessment Methodology of the Historic Environment Baseline Report (document reference 6.11.A1) and Annex E – Scoped out Listed Buildings of the Historic Environment Baseline Report (document reference 6.11.A1). The methodology presented is in accordance with the methodology presented in the EIA Scoping Report (document reference 6.19) and agreed through the EIA Scoping Opinion (document reference 6.20).		X		
9-2.1082	Suggest as per the Archaeological Interest Group that aerial photographic assessment and rectification should be undertaken. It has been noted that while generally accessible aerial photography has been	Aerial photography was utilised for Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1) and those assets identified that would be impacted were assessed in the ES Chapter 11: Historic Environment (document reference 6.11) and		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	studied, the aerial photography held by local authorities has not yet been studied	Appendix 11.2: Historic Environment Assessment Tables (document reference 6.11.A2). The assets were drawn in a GIS programme and displayed on figures in all three reports.				
9-2.1083	Criticism as at the time of the production of the Preliminary Environmental Information Report (PEIR) paragraph 11.5.24, the setting assessment is identified as a key element of the baseline, however, paragraph 11.5.23 states that this assessment will not be completed until 2024	The setting survey was conducted between Autumn 2022 and Spring 2025. The results have been used to inform the setting assessment presented in Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1) and used to inform the impact assessment in the ES.		X		
9-2.1084	In relation to paragraph 11.5.31 of the Preliminary Environmental Information Report (PEIR), it is acknowledged that assessments are iterative and subject to change as the Project design evolves. This process may require following Steps 1, 2, and 3 of the Historic England Guidance GPA3: The Setting of Heritage Assets when considering design changes, which may affect the accuracy of the Historic Environment Baseline Report	The Environmental Statement (ES) Chapter 11: (document reference 6.11) and Appendix 11.2: Historic Environment Assessment Tables (document reference 6.11.A2) were updated in May 2025 and Appendix 11.1 Historic Environment Baseline Report (document reference 6.11.A1) was updated in April 2025. Steps 1,2,3 of HE GPA3 were used during the assessment stages of the reports specifically in Annex C Historic Environment Assessment methodology (see ES Chapter 11: Historic Environment (document reference 6.11)). This report fed into the ES chapter and Appendices.		X		
9-2.1085	Support the notion as outlined in the Preliminary Environmental Information Report (PEIR) paragraph 11.5.32 on the effectiveness of a walkover survey on modern arable fields. Fieldwalking has in the past been used as an effective evaluation method when	The walkover survey was conducted between Spring 2023 and Spring 2025. The report is located within Annex D Walkover Survey (see ES Chapter 11: Historic Environment (document reference 6.11)). The methodology for the survey can be found in Annex C		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	defining the presence of sites, but adding a walkover survey of undated cropmark sites has the potential to provide supporting data	<p>Historic Environment Assessment methodology (see ES Chapter 11: Historic Environment (document reference 6.11)). This methodology and in particular the scoping in and out of fields was discussed and assessed by stakeholders prior to the commencement of the survey.</p> <p>The scoping of areas visited was data led and where ground truthing of the conditions of heritage assets was perceived to be possible. The determination of areas for walkover was undertaken at the earliest opportunity to inform the assessment process.</p> <p>The aerial imagery data was used to analyse where walkover survey provided value to the baseline understanding of the Project. The aerial imagery was useful as a reflection of the most up to date ground conditions within the Order Limits.</p> <p>Grassland and fields, identified through the aerial survey, where there is a greater potential to identify any earthworks through probable limited disturbance from agricultural activity were scoped in despite the age of the field.</p>				
9-2.1086	Support National Grid's commitment to consider any effects on the Historic Environment associated with mitigation proposals for other environmental receptors. However, concern about whether there will be enough time to complete the necessary surveys, including the trial trenching	A programme of geophysical surveys and trial trenching has begun on priority areas prior to commencement of ground works for the Project. The geophysical survey is targeted on areas of underground cable and associated infrastructure, compounds and associated infrastructure, construction and highways laydown areas, areas where known assets where high or medium value heritage assets are located. The priority areas for archaeological		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		trial trenching are within the underground cable route, Cable Sealing End (CSE) compounds, proposed substation areas and temporary site compounds. The reports are located in Appendix 11.3 EACN Substation Geophysical Survey Report (document reference 6.11.A3), Appendix 11.4 Geophysical Survey Results Report (document reference 6.11.A4) and Appendix 11.5 Trial Trenching Results Report (document reference 6.11.A5).				
9-2.1087	<p>Suggest the Draft Outline Code of Construction Practice (CoCP) should include a section similar to that in the Preliminary Environmental Information Report (PEIR) paragraph 11.7.7 as a main Heritage Objective (HO) number from the start.</p> <p>Concern underground cables will significantly impact a number of heritage assets.</p> <p>Concern as the construction of the haul road through a rural area, where archaeological deposits are only at a shallow level (approximately 0.30m on average), will have similar impacts</p>	<p>The Outline Code of Construction Practice (CoCP) (document reference 7.2) contains commitments on mitigation.</p> <p>Where the underground cables, and associated infrastructure is located, this has been deemed areas of priority for geophysical survey and archaeological trial trenching. The area has largely now been surveyed (crop and land access have temporarily halted surveys on some areas). The reports are located in Appendix 11.3: EACN Substation Geophysical Survey Report (document reference 6.11.A3), Appendix 11.4: Geophysical Survey Results Report (document reference 6.11.A4) and Appendix 11.5: Trial Trenching Results Report (document reference 6.11.A5).</p> <p>The temporary haul road will also form an area for geophysical survey and trial trenching if required.</p> <p>The geophysical survey and trial trenching will aid in the identification of archaeological heritage assets (below ground) that would be impacted by the underground</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		cable and haul road. The trial trenching will aid in the characterisation and dating of heritage assets. The results of the survey and trial trenching will aid in future mitigation plans that will be discussed with the relevant LPA archaeological officer.				
9-2.1088	Request within the Preliminary Environmental Information Report (PEIR) paragraph 11.8.11 detailed reasons should be provided for why mitigation is not proposed on non-designated heritage assets (NDHAs) that are being impacted by non-significant permanent negative effects	<p>The Outline Code of Construction Practice (CoCP) (document reference 7.2) contains commitments on mitigation.</p> <p>Where the underground cables, and associated infrastructure is located, this has been deemed areas of priority for geophysical survey and archaeological trial trenching. The area has largely now been surveyed (crop and land access have temporarily halted surveys on some areas). The reports are located in Appendix 11.3: EACN Substation Geophysical Survey Report (document reference 6.11.A3), Appendix 11.4: Geophysical Survey Results Report (document reference 6.11.A4) and Appendix 11.5: Trial Trenching Results Report (document reference 6.11.A5).</p> <p>The temporary haul road will also form an area for geophysical survey and trial trenching if required.</p> <p>The geophysical survey and trial trenching will aid in the identification of archaeological heritage assets (below ground) that would be impacted by the underground cable and haul road. The trial trenching will aid in the characterisation and dating of heritage assets. The results of the survey and trial trenching will aid in future</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		mitigation plans that will be discussed with the relevant LPA archaeological officer.				
9-2.1089	Paragraph 11.9.6 of the Preliminary Environmental Information Report (PEIR), states that reducing the Stour crossing to a single crossing would be beneficial. In relation to this, the respondent has noted that appropriate archaeological and geoarchaeological assessments in the area would help determine the best option. However, either option will have a significant archaeological impact on known heritage assets	<p>A programme of geoarchaeological and geotechnical investigations was undertaken to determine the potential for deposits of geoarchaeological and paleoenvironmental significance that may be impacted by development. A total of 16 geotechnical investigation interventions were monitored within the Stour Valley. The results were reported in Environmental Statement (ES) Appendix 11.6: Geoarchaeological Monitoring of Ground Investigation Works Report (document reference 6.11.A6) is proposed and currently under excavation along the underground route in Section C and the Stour Valley. Any geoarchaeology or paleoenvironmental deposits encountered will be investigated or reported during this stage.</p> <p>The area within the Stour valley where the underground cable and associated infrastructure is located has been deemed a priority area for geophysical survey and archaeological trial trenching. The majority of the impacted area has already been subject to geophysical survey, where possible (ground conditions, land access and crops have had an effect on the surveys progress) which has informed, along with the HER results, cropmark analysis and aerial photography assessment the placement of archaeological trial trenches.</p>		X		
9-2.1090	Concern, in section 1.5.4 of the Preliminary Environmental Information Report (PEIR), certain	National Grid, through the routeing and siting exercise, has sought to reduce the impact on the historic		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>data has not been considered in identifying the route, locations of the pylons, and the undergrounding sections.</p> <p>Suggest aerial photographic rectified data and cartographic data is used for understanding the impact on below-ground deposits, especially in areas where undergrounding or ground disturbance is proposed.</p> <p>The data will also be important in influencing the location of pylons so that known or identified heritage assets can be protected. Suggest the large collections of aerial photographs held by the local authorities are assessed and all cropmarks appropriately rectified. Concern as reference to paleoenvironmental and geoarchaeological deposits is missing from section 1.5.4 and section 11.5.26 of the PEIR.</p> <p>Note Essex has spatial data for Palaeolithic potential available as a Geographic Information Survey (GIS) layer, which will be important for assessing the potential impact on buried deposits within the undergrounding sections in Essex, especially Thurrock and Tendring. Request a geoarchaeological Desk-Based Assessment (DBA) will need to be included with the submitted documentation</p>	<p>environment. As part of the Environmental Statement (ES) Appendix 11.1 Historic Environment Baseline Report (document reference 6.11.A1) aerial photograph, cropmark analysis and cartographic data was obtained and assessed for the Order Limits and 250m Study Area. This revealed several previously unknown heritage assets. Several of these would be impacted by the Project and were assessed in Chapter 11: Historic Environment (document reference 6.11) and Appendix 11.2: Historic Environment Assessment Tables (document reference 6.11.A2).</p> <p>A programme of geoarchaeological monitoring on geotechnical investigation groundworks has been undertaken to determine the potential for deposits of geoarchaeological and paleoenvironmental significance that may be impacted by the Project throughout the Order Limits. The results of the investigation can be found in ES Appendix 11.6: Geoarchaeological Monitoring of Ground Investigation Works Report (document reference 6.11.A6). Archaeological trial trenching is proposed in locations of cable undergrounding (and associated infrastructure) and compounds (and associated infrastructure) and currently under excavation within several priority areas across the Project. Any geoarchaeology or paleoenvironmental deposits encountered will be investigated or reported during this stage.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.1092	Within section 4.7.11 of the Preliminary Environmental Information Report (PEIR), comments that the temporary closure of Public Rights of Ways (PROWs) may impact the ability to appreciate the significance of heritage assets. Request this is assessed	This has not been discussed in any of the heritage Baseline Reports, annexes or appendices nor in the ES nor its appendices. Historic England makes it clear that the ability to experience an asset does not add or detract from its significance and would therefore not be a consideration for the Historic Environment assessment.		X		
9-2.1093	<p>Relating to Section 5.6.8 of the Preliminary Environmental Information Report (PEIR), in terms of built heritage, there is clear national guidance on assigning significance. It states that a building is listed when it is of special architectural or historic interest, considered to be of national importance, and therefore worth protecting (Historic England, Living in a Grade I, Grade II* or Grade II listed Building. 2012).</p> <p>Request within Table 5.1, all listed buildings should be considered, at a minimum, of high value or sensitivity, as their designation indicates they are of national significance. A scale within this category of 'high value' could be agreed to differentiate between Grade I, Grade II*, and Grade II buildings. Suggest, some non-designated heritage assets (NDHAs) should be considered of medium value as they may be of regional importance. Request the baseline report is amended to reflect this categorization of all designated heritage assets as 'high value'</p>	All scoped in designated heritage assets within 3 km of the Order Limits are considered in the Historic Environment assessment for the Project (Environmental Statement ES) Chapter 11: Historic Environment (document reference 6.11)). The value of heritage assets methodology (created from Conservation Principles, Policies and Guidance for the Sustainable Management of the Historic Environment (Historic England, 2008, Guidance on Heritage Impact Assessments for Cultural World Heritage Properties Guidance on Heritage Impact Assessments for Cultural World Heritage Properties (ICOMOS), 2011, Guidance and Toolkit for Impact Assessment in a World Heritage Context (United Nations Educational, Scientific and Cultural Organization (UNESCO), International Centre for the Study of the Preservation and Restoration of Cultural Property (ICCROM), ICOMOS and International Union for Conservation of Nature (IUCN), 2022) and DMRB LA 104 and LA 106 (National Highways 2020 and professional judgement) within Chapter 11: Historic Environment (document reference 6.11) was agreed with stakeholders and utilised.		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		The Project has engaged with Historic England and relevant planning authorities on aspects relating to heritage and taken feedback into account during Project development.				
9-2.1094	Suggest conservation areas should be referenced in paragraph 11.1.1 of the Preliminary Environmental Information Report (PEIR) (although it is noted that conservation areas are referred to in paragraph 11.6.6 and have been assessed in Appendix 11.2 of the PEIR).	Conservation Areas within 2 km of the Project were assessed in Environmental Statement (ES) Chapter 11: Historic Environment (document reference 6.11) and Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1). Those that would be impacted by the Project were taken forward and their impacts assessed in Chapter 11: Historic Environment (document reference 6.11) and Appendix 11.2: Historic Environment Assessment Tables (document reference 6.11.A2).		X		
9-2.1095	Respondent notes that there is need for engagement with National Grid to agree on the methodology and selection process for viewpoint assessments within section 11.4.2 of the Preliminary Environmental Information Report (PEIR). Criticism as the methodology for assessing heritage-specific viewpoints presented in March 2023 is insufficient in scope, with limited information provided on the reasons for including or omitting numerous assets. Query as it is unclear whether the viewpoints proposed for assessment within the Environmental Statement (ES) will be agreed with the Local Planning Authorities (LPAs) prior to assessment or	As of March 2025, 57 historical viewpoints have been identified and assessed. Heritage viewpoints are presented in within Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3) and shown on Figure 13.7: Visual Receptors and Viewpoints (document reference 6.13.F7). Document 6.13.A1 Landscape and Visual Methodology section 13.4 LVIA Method for Assessing Landscape Effect as well as Method for Assessing Visual Effects also discusses heritage viewpoints. Heritage specific viewpoints are included in Visualisations (document reference 7.12). These have been agreed with stakeholders.		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>based solely on National Grid's assessment criteria. There should be scope for creating an agreed list of viewpoints before the ES is written, following detailed discussions. Criticism as the table states that '<i>An agreed list of heritage viewpoints will be presented in the ES,</i>' but no details are given on how this will be agreed.</p> <p>Concern as the comments on LPA engagement regarding viewpoints make no reference to non-designated heritage assets (NDHAs); however, these are described as being under discussion with Historic England. Criticism of this two-pronged approach, differing between Historic England and the LPAs</p>					
9-2.1096	<p>Within section 11.5.3 of the Preliminary Environmental Information Report (PEIR), the principles of the Study Area are agreed, however criticism as the existing Study Area for the Historic Environment Baseline Report, and the PEIR, are not based on the current preferred alignment and thus subject to change</p>	<p>The Environmental Statement (ES) Chapter 11: Historic Environment (document reference 6.11) and Appendix 11.2: Historic Environment Assessment Tables (document reference 6.11.A2) were updated in May 2025 and Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1) was updated in April 2025. The Study Areas for the heritage assets were defined in the EIA Scoping Report (document reference 6.19) the Study Areas for the Historic Environment comprise the Order Limits plus a 250 m buffer for non-designated heritage assets. In addition, two wider Study Areas have been defined: 2 km from the Order Limits - for all designated heritage assets (scheduled monuments, Grade I, II* and II listed buildings, and</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Grade I, II* and II registered parks and gardens and conservation areas) and up to 3 km from the Order Limits - for designated assets of the highest value (scheduled monuments, Grade I and II* listed buildings and Grade I and II* registered parks and gardens). For the ES Chapter 11: Historic Environment (document reference 6.11) and associated Appendices 11.1: Historic Environment Baseline Report (document reference 6.11.A1) and Appendix 11.2: Historic Environment Assessment Tables (document reference 6.11.A2), any non-designated heritage asset that was of medium value and its setting extended into the Order Limits was included.</p> <p>The historic environment baseline will change due to assets identified through geophysical survey and archaeological trial trenching.</p>				
9-2.1097	<p>In relation to section 11.5.16 of the Preliminary Environmental Information Report (PEIR), states that the development will not result in any direct impacts to listed buildings or locally listed buildings. Therefore, it is reasonable to base the scoping exercise on assessing which built heritage assets are likely to experience changes to their settings due to the development project, during either construction or operation (and maintenance). However, several conservation areas (or parts of them) fall within the Draft Order Limits (DOL) and have the potential to be directly impacted by the</p>	<p>No conservation areas fall within the Order Limits as of March 2025. However, several will experience impacts to their setting. This was examined in the Environmental Statement (ES) Chapter 11: Historic Environment (document reference 6.11) and Appendix 11.2: Historic Environment Assessment Tables (document reference 6.11.A2).</p> <p>The assessment of heritage assets presented is based on a thorough review of available sources, including historic mapping, archival research, and site-based observations. National Grid is confident that the assessment of the areas reflects a proportionate and</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	development project. In these instances, a setting assessment alone will not be sufficient. Suggest a full Heritage Impact Assessment be conducted for conservation areas within the DOL, as they are likely to have a direct impact on their significance as a consequence of the proposals	robust understanding of its historical, evidential, and contextual significance in line with relevant guidance and professional standards.				
9-2.1098	In relation to paragraph 11.5.17 of the Preliminary Environmental Information Report, suggestion that vibration assessments should include heritage assets within 30 m of construction access routes, utility diversions, or work areas, as these assets may experience impacts from vibration caused by Heavy Goods Vehicle (HGV) movements during the construction phase. Commitments and recommendations regarding noise and vibration, including stopping work in the event of unacceptable impacts, monitoring vibration, and reducing vibration (or providing other mitigation), should be part of the Code of Construction Practice (CoCP). Additionally, pre-commencement condition surveys could provide a baseline to identify and assess any impacts	National Grid acknowledges the concern raised regarding potential structural impacts due to vibration during the construction phase. The Environmental Statement (ES) includes assessment of potential vibration impacts, including consideration of sensitive receptors such as heritage buildings. National Grid will ensure that vibration controls are implemented in accordance with the Outline Code of Construction Practice (CoCP) (document reference 7.2), including construction method selection and, where appropriate, site-specific monitoring and pre-commencement condition surveys. These controls are designed to prevent damage to nearby properties and will be secured through the final CoCP and contractor management processes.		X		
9-2.1099	Criticism that in paragraph 11.5.19 of the Preliminary Environmental Information Report (PEIR), the buildings within settlements were scoped out based on a desk-based assessment rather than a site visit. Criticism as topography is very difficult to judge from a desk-based situation and suggest these	Annex E - Scoped Out Listed Buildings of Chapter 11: Historic Environment of the Environmental Statement (ES) notes the scoped out listed buildings assessment. The scoped-out methodology was agreed with stakeholders and can be found in section 3.11 of the ES		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	settlements should have been visited to make an assessment	Chapter 11: Historic Environment (document reference 6.11).				
9-2.1100	<p>In relation to paragraph 11.5.23 of the Preliminary Environmental Information Report (PEIR), the settings survey conducted between autumn 2022 and summer 2023. Criticism as it is unclear if future development, such as permitted schemes or partially constructed development, were considered and informed the assessment.</p> <p>Suggest a thorough and detailed setting assessment based on up-to-date and relevant project design information is critical to understanding the contribution the setting of a heritage asset makes to its significance, how and to what degree the development project will impact that setting and significance of each heritage asset, and to inform any mitigation strategy. Suggest a review of the survey, assessing if any change has occurred which alters the conclusions</p>	<p>Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1) assesses the significance of the setting of heritage assets, including those that have group value, and how the setting contributes to significance of the asset. Setting assessment, setting survey and methodology was stipulated in Environmental Statement (ES) Chapter 11: Historic Environment (document reference 6.11).</p> <p>The setting survey was conducted between Autumn 2022 and Spring 2025. All settings were assessed at the time of survey and that informed that Baseline Report. No future schemes were considered as effecting the setting of a heritage asset. The Baseline Report fed in the ES Chapter 11: Historic Environment (document reference 6.11) and Appendix 11.2: Historic Environment Assessment Tables (document reference 6.11.A2) where a detailed assessment of the impacts to heritage assets and their setting was undertaken</p>		X		
9-2.1101	<p>Suggest consultation of historic maps is not limited to those listed in paragraph 11.5.26 of the Preliminary Environmental Information Report (PEIR), as other local and regional maps are likely to be available.</p> <p>Suggest the use of historic photography to inform the Environmental Statement (ES) should not be limited to historic aerial photography. Supportive of the</p>	In Environmental Statement (ES) Appendix 11.1: Historic Environment Baseline Report (Historic Environment Assessment Methodology section 3.3 Data Gathering), the section states the data sources – historic maps from local archives also included estate maps and other pre-OS maps, historic OS maps were also used for the route and Study Area. Other sources used were		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	inclusion of protected lane data is welcomed, as these areas also have the potential to be impacted by noise and vibration	aerial photography, historical aerial photography and LiDAR. Also previously unrecorded assets were identified during the walkover survey. All these were added to Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1).				
9-2.1103	Concern as in section 11.5.29 of the Preliminary Environmental Information Report (PEIR), it is unclear whether the assessment of setting, and its contribution to the value (significance) of heritage assets, includes views towards, from, and including heritage assets. This assessment would be challenging without a site visit. For scoped-in Listed Buildings and Conservation Areas, where the setting of the asset extends to the Draft Order Limits (DOL), relevant viewpoints should be taken forward for assessment as part of the Landscape and Visual Impact Assessment (LVIA) or a Heritage and Townscape Visual Impact Assessment	<p>The Environmental Statement (ES) Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1) assesses the significance of the setting of heritage assets, including those that have group value, and how the setting contributes to significance of the asset. Setting assessment, setting survey and methodology was stipulated in Chapter 11: Historic Environment (document reference 6.11) and Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1).</p> <p>The setting survey was conducted between Autumn 2022 and Spring 2025. Key views were noted from heritage assets especially if they were towards site. Conservation area appraisals were reviewed before undertaking survey to assets to establish the key views and these were then visited. The results have been used to inform the setting assessment presented in Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1) and used to inform the impact assessment in the ES.</p> <p>Any views to the Order Limits or impact to the setting of the assets were identified and assessed in Chapter 11: Historic Environment (document reference 6.11),</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1) and Appendix 11.2: Historic Environment Assessment Tables (document reference 6.11.A2).				
9-2.1104	In paragraph 11.5.31 of the Preliminary Environmental Information Report (PEIR), it states that assessments are an iterative process subject to change and updates as the Project design evolves. This process may require undertaking Steps 1, 2, and 3 of the assessment set out in Historic England's guidance GPA3: The Setting of Heritage Assets (2017) when design changes are considered. Design changes may affect the accuracy of the Historic Environment Baseline Report	The Environmental Statement (ES) Chapter 11: Historic Environment (document reference 6.11) and Appendix 11.2: Historic Environment Assessment Tables (document reference 6.11.A2) was updated in May 2025 and Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1) was updated in April 2025 due to the alteration of the Order Limits. Steps 1,2,3 of HE GPA3 were used during the assessment stages of the reports specifically in Historic Environment Baseline Annex C Methodology (see ES Chapter 11: Historic Environment (document reference 6.11)). This report fed into the ES chapter and appendix.		X		
9-2.1105	In relation to paragraph 11.5.34 of the Preliminary Environmental Information Report (PEIR), suggest the need for re-assessment of heritage assets that may have previously been scoped out due to distance but have the potential to be impacted by project design changes. Some designated heritage assets, such as letter boxes, milestones, and telephone kiosks, will not require new or reassessment as they do not have settings that will be impacted. The typologies not requiring reassessment can be agreed upon with National Grid	The methodology by which designated assets have been included/omitted from the Environmental Statement (ES) is set out in Annex C – Historic Environment Assessment Methodology of the Historic Environment Baseline Report (document reference 6.11.A1) and Annex E – Scoped out Listed Buildings (see Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1)). The methodology presented is in accordance with the methodology presented in the EIA Scoping Report (document reference 6.19) and agreed through the EIA Scoping Opinion (document reference 6.20).		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		However, some assets that were scoped out due to limited settings, were scoped back in if they were in close proximity to the Order Limits or were within the Order Limits.				
9-2.1106	Criticism that neither low heritage value nor a low magnitude of impact will negate the requirement for mitigation, as outlined in paragraph 11.5.35 of the Preliminary Environmental Information Report (PEIR). The assessment of impact, expressed as Significance of Effect, should be translated into harm to significance in terms of the Department for Energy Security and & Net Zero's Overarching National Policy Statement (NPS) for Energy (EN-1). Suggest where less than substantial harm is found to the significance of a designated heritage asset, the level of less than substantial harm should be assessed and stated on a scale ranging from very low to high. Suggest the scale of any harm or loss to the significance of non-designated heritage assets (NDHAs) should also be assessed and stated	<p>Within Chapter 11: Historic Environment (document reference 6.11) and Appendix 11.2: Historic Environment Assessment Tables (documents reference 6.11.A2) and Appendix 11.7: Assessment of Harm to Designated Heritage Assets (document reference 6.11.A7) all heritage assets that are of low heritage value and/or that will have a low magnitude of impact will be mitigated. The agreed magnitude of impact ranges from high, medium, low, negligible, no change.</p> <p>The implementation of the archaeological mitigation would reduce the magnitude of impact to negligible, resulting in a direct, permanent negligible adverse significance of effect (not significant). The terminology used in the ES was agreed with stakeholders prior to assessment.</p>		X		
9-2.1107	Criticism that there is no information as to how non-designated heritage assets (NDHAs) have been identified. Request for information and clarification about whether identified NDHAs were based on the HER and/or local lists only, or if further NDHAs were identified as part of the desk-based assessments (DBAs), site walkovers, and setting assessments?	In Environmental Statement (ES) Appendix 11.1: Historic Environment Baseline Report (Historic Environment Assessment Methodology section 3.3 Data Gathering), the section states the data sources – for non-designated heritage assets these included HER searches, LPA websites for locally listed buildings and protected lanes, archaeological grey literature reports,		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		published archaeological journals and monographs, local history books, pamphlets and websites, historic maps, aerial photography, historical aerial photography, LiDAR. Also previously unrecorded assets were identified during the walkover survey. All these were added to Annex C of Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1).				
9-2.1108	In relation to paragraph 11.7.4 of the Preliminary Environmental Information Report (PEIR), suggestion that standard mitigation measures, comprising management activities and techniques, should be implemented during construction to limit effects, in line with policy and good practice. Suggestion that additional mitigation (beyond embedded and standard) should be targeted and site-specific	<p>The Outline Code of Construction Practice (CoCP) (document reference 7.2) and Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (AMS-WSI) (document reference 7.5) stipulates the mitigation measures for impacts to below ground archaeological remains and impacts through changes in an asset's setting.</p> <p>Geophysical survey and archaeological trial trenching has been undertaken and is ongoing for the 400 kV underground cable, Cable Sealing End (CSE) compounds, substations and construction compounds. These works have been undertaken in line with the WSIs agreed with the relevant stakeholders.</p> <p>Sufficient archaeological survey data has been gathered to undertake a robust impact assessment and design mitigation. This will be supplemented post submission with further survey data and presented in an addendum to the ES ahead of DCO examination. The approach to providing Supplementary Environmental Information (SEI) for archaeology post DCO submission has been</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		agreed with Historic England and the archaeological advisors for Norfolk County Council, Suffolk County Council and Essex County Council. The SEI is not expected to introduce any additional significant effects to those presented in the ES and would provide more detail around mitigation. Further details are provided in Chapter 11: Historic Environment (document reference 6.11).				
9-2.1109	In relation to paragraph 11.7.5 of the Preliminary Environmental Information Report (PEIR), suggestion that vegetation loss within 3km of the Draft Order Limits (DOL) should be carefully assessed. Vegetation loss justified for scoping out heritage assets should be avoided. Where it cannot, the asset must be re-assessed, following steps 2, 3 and 4 of Historic England's guidance GPA3: The Setting of Heritage Assets (2017)	The methodology and approach adopted for the assessment has been developed in accordance with recognised best practice and discussed and agreed with relevant stakeholders during the scoping stage and through subsequent thematic working group meetings. The assessment is informed by national guidance, including Historic England's <i>Good Practice Advice Note 3: The Setting of Heritage Assets</i> (2017), with appropriate consideration of Steps 2, 3, and 4. National Grid is confident that the approach is both robust and proportionate.		X		
9-2.1110	In relation to paragraph 11.8.4 of the Preliminary Environmental Information Report (PEIR), suggestion that assessment of the contribution of setting to the significance of non-designated heritage assets (NDHAs) should be carried out as part of the Environmental Statement (ES). Suggestion that this should also be reviewed once the effects of the construction phase of development have been assessed	All non-designated heritage assets within the 250 m Study Area were assessed, including their setting, and their heritage value and significance (including their setting significance and whether this contributed to the heritage value of the asset) was assessed in Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1). The impact to the setting of these assets, if they extended into the Order Limits, was investigated in Chapter 11: Historic Environment		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		(document reference 6.11) and Appendix 11.2 Historic Environment Assessment Tables (documents reference 6.11.A2).				
9-2.1111	Within paragraph 11.8.18 of the Preliminary Environmental Information Report (PEIR), the assessment identified 14 ' <i>not significant</i> ' permanent positive effects to listed buildings in sections B, C, E, and G, and one to a scheduled monument (Offton Castle, NHLE: 1006049) in section B. This is due to the removal of existing overhead lines and their replacement with underground cables or the placement of the 2024 proposed draft alignment further away from the asset than the existing overhead line. Query if these are to be identified as public (heritage) benefits arising from the Project	The Preliminary Environmental Information Report (PEIR) was a preliminary document for the purpose of statutory consultation. The Environmental Statement (ES) Chapter 11: Historic Environment (document reference 6.11) and Appendix 11.2 Historic Environment Assessment Tables (document reference 6.11.A2) identify a small number of not significant beneficial effects to designated and non-designated heritage assets due to removal of existing low voltage overhead line infrastructure. These have not been specifically identified as public benefits arising from the Project (for example in ES Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15)).		X		
9-2.1112	Table 4.2 in Chapter 4 of Volume 1 of the Preliminary Environmental Information Report (PEIR) includes mitigation measures to avoid and reduce significant effects. Query as it does not explicitly reference measures that change the impact of the proposal on the setting of heritage assets	National Grid, through the routeing and siting exercise, has sought to reduce the impact on the historic environment, including all designated heritage assets and their setting. During construction standard mitigation would be adopted as detailed in the Outline Code of Construction Practice (CoCP) (document reference 7.2). Changes to the setting of an asset (both designated and non-designated, built or archaeological) would be temporary and would be reversed once the construction phase is completed. Therefore, no additional mitigation measures are proposed during the construction phase. No		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		additional mitigation measures are proposed during the construction phase as any measures designed to lessen the visual impact of the Project would be of a scale that would visually adversely alter the setting of the asset. During the operation phase there is no proposed mitigation.				
9-2.1113	<p>Within Appendix 4:1 of the Draft Outline Code of Construction Practice (CoCP) standard mitigation measures are outlined, however concern as these measures appear to only relate to archaeological assets.</p> <p>National Grid will inform the Local Planning Authority (LPA) if new heritage assets are discovered or found to be more significant than initially thought. Concern as this does not reference buildings and is assumed to only pertain to the uncovering of new archaeological finds or if known find spots or features are larger or more significant than previously thought when works occur</p>	<p>The Outline Code of Construction Practice (CoCP) (document reference 7.2) and the mitigation in Environmental Statement (ES) Appendix 11.2: Historic Environment Assessment Tables (document reference 6.11.A2) states that, in relation to the setting of built and archaeological remains: standard construction mitigation would be adopted as detailed in the Outline CoCP (document reference 7.2). Changes to the setting would be temporary and would be reversed once the construction phase is completed. Therefore, no additional mitigation measures are proposed during the construction phase. No additional mitigation measures are proposed during the construction phase as any measures designed to lessen the visual impact of the Project would be of a scale that would visually adversely alter the setting of the asset.</p> <p>National Grid, through the routeing and siting exercise, has sought to reduce the impact on the historic environment, including all built heritage assets, designated and non-designated. No physical impact will occur to any built heritage asset.</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		A walkover survey was conducted as part of the Project and any previously unrecorded built heritage asset was identified. The walkover survey results was sent to stakeholders for comment.				
9-2.1114	In paragraphs 5.7.13-14 within the Preliminary Environmental Information Report (PEIR), it is concluded the Waveney Valley Alternative (WVA) will not result in any additional significant effects if the alternative is used. If implemented, it will include the reinstatement of historic field boundaries, which will reduce the effect from significant to neutral. Further information is required to understand how field reinstatement can truly negate the impact of new cable routes	The Waveney Valley Alternative no longer forms part of the Project.		X		
9-2.1115	Within the Historic Environment Baseline Report, it provides a chronological description of the Project area, divided into eight geographical regions (A-H). Each section describes the location, topography, geology, historic landscape, archaeological, and built heritage assets within each section. It is split into time periods, and includes brief descriptions of some listed and non-designated buildings and their settings. Section C includes Babergh District, Colchester City, and Tendring District Councils, while Section G contains Brentwood and Basildon Borough Councils. Suggest that each section relates to a single Local Planning Authority (LPA) for ease of	As stated in Annex C Historic Environment Assessment Methodology (see Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1)) presentation within this Baseline Report has been split based on Project Sections, which aids discussion and marks areas of relevant interest for heritage officers responsible for the stewardship of specific areas of the Project. Embedded within this is a further split in discussion based on archaeology, built heritage and historic landscape characterisation. This was agreed with stakeholders prior to writing. In Environmental Statement (ES) Appendix 11.1: Historic Environment Baseline Report (Historic		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>assessment.</p> <p>Non-designated heritage assets (NDHAs) within the PEIR are primarily taken from Historic Environment Record (HER) data, focusing on archaeological sites or find spots. Concern as it is unclear if the walkover survey identified any buildings that could be considered NDHAs; this information must be included in the Environmental Statement (ES) chapter (as per paragraph. 1.5.4). National Grid state viewing LPA websites for information on Locally Listed Buildings, however concern as it is unclear which NDHAs are on a local list from the documentation compiled.</p> <p>If all designated heritage assets are agreed to be of high value, the Baseline Historic Environment Report will need to be amended to reflect this. Re-assessment of non-designated buildings described in the text is also required, as some may be considered of medium significance due to their regional importance</p>	<p>Environment Assessment Methodology section 3.3 Data Gathering), the section states the data sources – for non-designated heritage assets these included HER searches, LPA websites for locally listed building and protected lanes, archaeological grey literature reports, published archaeological journals and monographs, local history books, pamphlets and websites, historic maps, aerial photography, historical aerial photography, LiDAR. The walkover survey also identified built heritage and archaeological features not previously recorded. All newly identified assets (that did not form part of the HER data) were assessed in the Baseline Report, and where necessary taken forward to be assessed in the ES.</p> <p>The value of heritage assets methodology (created from Conservation Principles, Policies and Guidance for the Sustainable Management of the Historic Environment (Historic England, 2008, Guidance on Heritage Impact Assessments for Cultural World Heritage Properties Guidance on Heritage Impact Assessments for Cultural World Heritage Properties (ICOMOS), 2011, Guidance and Toolkit for Impact Assessment in a World Heritage Context (United Nations Educational, Scientific and Cultural Organization (UNESCO), International Centre for the Study of the Preservation and Restoration of Cultural Property (ICCROM), ICOMOS and International Union for Conservation of Nature (IUCN), 2022) and DMRB LA 104 and LA 106 (National Highways 2020 and professional judgement) within chapter 6.11 of the ES chapter was agreed with stakeholders and utilised.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.1116	Suggest that Sections A-H in Appendix 11.1 Historic Environment Baseline Report: Annex B Gazetteer should be divided by individual district rather than being grouped together. Suggest the Gazetteer should be updated to include a column specifying if a building is locally listed. Another column should differentiate between each type of non-designated heritage assets (NDHAs), such as find spots, crop marks, buildings, and pill boxes	<p>As stated in Annex C Historic Environment Assessment Methodology (see Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1)) presentation within this Baseline Report has been split based on Project Sections, which aids discussion and marks areas of relevant interest for heritage officers responsible for the stewardship of specific areas of the Project. Embedded within this is a further split in discussion based on archaeology, built heritage and historic landscape characterisation.</p> <p>The gazetteers in Annex B Gazetteers (see Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1)) are set out with their sub-sections A-H. For non-designated heritage assets, the heading of the gazetteer are: Project ID, Source Reference, Reported Period and Name. This was agreed with the stakeholders prior to writing.</p>		X		
9-2.1117	<p>Support within The Historic Environment Baseline Report: Annex C Cultural Heritage EIA Methodology Document where decommissioning effects have been excluded from this assessment due to the Project's expected long operational period, on the provision of a guarantee within the Development Consent Order (DCO) that decommissioning of the Project will require appropriate assessment</p> <p>Concern as conservation area appraisals and local lists are not included in the consulted sources outlined in paragraph 3.3.2 of the baseline report.</p>	<p>Environmental Statement (ES) Chapter 11: Historic Environment (document reference 6.11) states the sources of information used – bullet point two refers to the LPA website for information on locally listed buildings and bullet point four refers to the conservation area shapefile supplied by Historic England that was cross referenced with the LPA website for accurate data.</p> <p>The structure of the baseline report and its gazetteer was agreed upon by stakeholders prior to submission.</p> <p>A site walkover of the Order Limits and setting survey of designated assets within the Study Areas has been</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>Criticism as in paragraph 3.4.2, it states that the Baseline Report is split based on archaeology, built heritage and historic landscape characterisation. However, the baseline report is split between a time period, with sub-categories of designated and non-designated heritage assets (NDHAs). Suggest the methodology or baseline report should be updated to ensure they reflect each other. Suggest a split as per the methodology (between archaeological, built and landscape features).</p> <p>Table 3.1 indicates Proposed Gazetteer Headings which includes a column for Monument Type and Asset Group – criticism as neither of which are included in the submitted Gazetteer and suggest including these columns.</p> <p>The Walkover Survey within paragraphs 3.6.4 and 3.7, focuses on archaeology, and suggest consideration given to the potential for built non-designated heritage assets to be present throughout the Draft Order Limits (DOL) and in districts where there is no Local List. Concern, as per comments on the main PEIR text, that non-designated built heritage assets are likely to be missed and not assessed based on the current methodology. Suggest Table 1.2: is amended, if agreed, to place Grade II listed buildings in the High, rather than Medium, category.</p> <p>Suggest Table 2.1: Criteria for quantifying the</p>	<p>undertaken to inform the baseline and assessment in the ES.</p> <p>The site walkover survey was undertaken between Spring 2023 and Spring 2025. The setting survey was conducted between Autumn 2022 and Spring 2025. The results are presented in Annex D of Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1) and the setting survey was used to inform the impact assessment in the ES. Built heritage assets identified during the surveys which had not been previously recorded by HERs or Historic England were recorded and formed part of the baseline report, where their heritage value and significance were assessed, those that would be impacted by the Project (physically or settings wise) were included in the ES.</p> <p>The value of heritage assets methodology (created from Conservation Principles, Policies and Guidance for the Sustainable Management of the Historic Environment (Historic England, 2008, Guidance on Heritage Impact Assessments for Cultural World Heritage Properties Guidance on Heritage Impact Assessments for Cultural World Heritage Properties (ICOMOS), 2011, Guidance and Toolkit for Impact Assessment in a World Heritage Context (United Nations Educational, Scientific and Cultural Organization (UNESCO), International Centre for the Study of the Preservation and Restoration of Cultural Property (ICCROM), ICOMOS and International Union for Conservation of Nature (IUCN), 2022) and DMRB LA 104 and LA 106 (National Highways 2020 and</p>

	magnitude of impact to heritage assets. The descriptions and magnitude of impact are agreed	professional judgement) within Chapter 11: Historic Environment of the ES (document reference 6.11) was agreed with stakeholders and utilised.				
9-2.1118	Criticism as in Section 5: Mitigation, no proposals for mitigation are given, only stating mitigation ' <i>will be proportionate</i> '. Suggests that examples of mitigation measures are provided, such as considering the alignment in relation to the setting of heritage assets, exploring the possibility of relocating pylons, or implementing additional planting or screening	<p>National Grid, through the routeing and siting exercise, has sought to reduce the impact on the historic environment, including all designated heritage assets.</p> <p>During construction standard mitigation would be adopted as detailed in the Outline Code of Construction Practice (CoCP) (document reference 7.2) (commitments H01-H08).</p> <p>Changes to the setting of an asset (both designated and non-designated, built or archaeological) would be temporary and would be reversed once the construction phase is completed. Therefore, no additional mitigation measures are proposed during the construction phase. No additional mitigation measures are proposed during the construction phase as any measures designed to lessen the visual impact of the Project would be of a scale that would visually adversely alter the setting of the asset. During the operation phase there is no proposed mitigation.</p>		X		
9-2.1119	In relation to Appendix 11.2 of the Preliminary Environmental Information Report (PEIR), suggest that Sections A-H be divided by individual Local Planning Authorities (LPAs). Suggest including addresses (full address or postcode as minimum) for all heritage assets. Currently, the Easting and	<p>A. The structure of the Preliminary Environmental Information Report (PEIR), was agreed upon by stakeholders prior to submission.</p> <p>B. The structure of the gazetteers in Annex B Gazetteers (see Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1)) and Appendix</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>Northings are included in the Gazetteer, but the assessment tables simply refer to an asset by name. Suggest the assessment tables are updated to reflect an updated value for all heritage assets (if the approach that all designated heritage assets are of high value is agreed upon).</p> <p>Suggest that all thematic meetings occur with Historic England present, as well as the local authorities' conservation officers. Additionally, other statutory consultees, such as National Landscapes, should be present when impacted landscapes form part of the setting of a designated heritage asset</p>	<p>11.2 - Historic Environment Assessment Tables) was agreed upon by stakeholders prior to submission.</p> <p>C. The approach to the valuation of designated heritage assets referred to in comment C has not been adopted.</p> <p>D. All relevant stakeholders were present for engagement and discussion on heritage assets. Attendees at heritage related meetings will continue to be reviewed dependent on topic areas.</p>				
9-2.1120	<p>The respondent discusses the impact of overhead cables along the full extent of Sections F and G. The main impact on below-ground deposits will be due to the construction of a haul road, which requires up to 21 m of land take to accommodate two lorries along the route. Additionally, foundations of 60 x 60 m will be needed for crane bases at each tower during construction. The route is in close proximity to Ingatestone Hall and its associated heritage assets, and this impact has been identified in the Baseline report. Concern as the area which the route travels has had very little previous archaeological work, and the geological nature of this block means that aerial photographic evidence is fairly limited. No geophysical assessment is proposed at this stage. Suggest consideration will need to be given to the</p>	<p>The route of the haul road and the pylon construction areas have been identified as areas of below ground impact which could potentially affect archaeology. Archaeological evaluation is proposed for these construction works areas, with geophysical survey in the first instance. The scope of the Phase 2 fieldwork is in discussion with the relevant stakeholders. These elements of the Project have already been evaluated where they coincide with known medium/high value archaeological assets in the priority geophysical survey areas.</p>		X

	best methods for identifying previously unknown sites and allowing appropriate time for investigation within the Environmental Statement (ES)					
9-2.1121	The route of the new power lines route passes through the western edge of Basildon Borough Council, extending from the district's boundary with Chelmsford City Council (CCC) in the north and roughly following the borough's boundary with Brentwood Borough Council to the west, passing through Thurrock to the south. The line largely avoids larger settlements and villages but concern the Little Burstead Conservation Area is partially within the 1 km buffer zone of the Proposed Order Limits (POL)	<p>National Grid has worked to minimise potential impacts on the historic environment through strategic routeing and siting measures. The alignment has been developed to avoid direct impacts on designated heritage assets and to reduce potential effects on their settings where possible.</p> <p>The assessment of conservation areas has been carried out using a robust and systematic methodology in line with established best practice, including Historic England's Good Practice Advice Note 3: The Setting of Heritage Assets (Second Edition, 2017). This methodology was developed, discussed, and agreed with key stakeholders through the scoping process and thematic working group meetings.</p> <p>The assessment of Little Burstead (CA14) as detailed in Environmental Statement (ES) Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1)</p> <p>Appendix 11.2: Historic Environment Assessment Tables (document reference 6.11.A2) concludes that there are no significant effects on the conservation area.</p> <p>No additional mitigation measures are proposed during the construction phase as any measures designed to lessen the visual impact of the Project would be of a</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>scale that would visually adversely alter the setting of the asset.</p> <p>Required mitigation measures are located within the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5), and further mitigation is set out in the Outline Code of Construction Practice (CoCP) (document reference 7.2).</p>				
9-2.1122	<p>The Project is not expected to have direct impacts on any built heritage assets, except for conservation areas. Concern, there will be indirect impacts on numerous designated and non-designated heritage assets due to changes in their setting. The level of impact is influenced by factors such as proximity to the new overhead cable route, visual receptors, noise, and construction impacts. Criticism as the documents provided do not clarify what mitigation, if any, will be afforded to the setting of heritage assets. Basildon Borough is included in Section G of the Gazetteer, along with Brentwood Borough Council. Concern as separate datasets for individual districts within this section have not been provided, making it difficult to analyse the effects of the proposals on heritage assets within Basildon</p>	<p>National Grid, through the routeing and siting exercise, has sought to reduce the impact on the historic environment, including all designated heritage assets. All scoped in designated heritage assets within 3 km of the Order Limits are considered in the Historic Environment assessment for the Project. The impacts of the Project on the historic environment are assessed in Chapter 11: Historic Environment (document reference 6.11) of the Environmental Statement (ES). The assessment considers the potential impact on historic buildings and includes assessment of potential for physical impact and impact through change to setting that affects the value of a heritage asset. The assessment of listed buildings is supported by setting surveys, as documented in ES Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1). The Project has engaged with Historic England and relevant planning authorities on aspects relating to heritage, including appropriate mitigation measures and</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>techniques and to take their views into account during Project development.</p> <p>During construction standard mitigation would be adopted as detailed in the Outline Code of Construction Practice (CoCP) (document reference 7.2). Changes to the setting of an asset (both designated and non-designated, built or archaeological) would be temporary and would be reversed once the construction phase is completed. Therefore, no additional mitigation measures are proposed during the construction phase. In addition, any measures designed to lessen the visual impact of the Project would be of a scale that would visually adversely alter the setting of the asset. During the operation phase there is no proposed mitigation.</p> <p>The heritage assets within the ES Chapter 11: Historic Environment (document reference 6.11) and ES Appendix 11.3: EACN Substation Geophysical Survey Report (document reference 6.11.A3) have been split up into eight areas. This was agreed upon with the stakeholders. The eight areas include LPA areas: South Norfolk (Area A), Mid Suffolk (Area B), Babergh (Area C), Colchester (Area C and D), Tendring (Area C), Braintree (Area E), Chelmsford (Area F and G), Brentwood (Area F and G), Basildon (Area G), and Thurrock (Area H). There are a further four Local Planning Authorities within the 2 km Historic Environment Study Area: Breckland (Area A), Ipswich (Area C), Maldon (Area E), and Gravesham (Area H)) and a further three Local Planning Authorities within the</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		3 km Historic Environment Study Area (Epping Forest (Area F), Uttlesford (Area F) and Norwich (Area A)).				
9-2.1123	<p>Criticism that in Section G, the highest significance of effect identified for designated heritage assets is '<i>Significant Negative Effect</i>,' but this has not been expressed in National Policy Statement (NPS) EN-1 or National Planning Policy Framework (NPPF) terms. National Grid's assessment indicates this level of effect will be assigned to nine heritage assets in Section G, though this may change with amendments to the methodology and categorisation of heritage value, as well as any project design changes.</p> <p>For non-designated heritage assets, the incomplete Gazetteer makes it difficult to differentiate between built and archaeological heritage assets. Suggest there will be an impact on the setting of non-designated built heritage assets, with the highest level of harm identified as 'Significant Permanent Negative Effect.'</p> <p>Suggest cannot comment on individual heritage assets as there is a requirement for amendments to the methodology and information provided to date</p>	<p>Significance of effect has been derived using the matrix set out in Chapter 5: EIA Approach and Method (document reference 6.5). This has been supplemented by professional judgement which, where applicable, has been explained to give the rationale behind the values assigned. Likely significant effects, in the context of the EIA Regulations, are effects of moderate or greater major significance.</p> <p>Appendix 11.7: Assessment of Harm to Designated Heritage Assets (document reference 6.11.A7) presents the assessment of designated assets using the terminology regarding harm from the NPS (EN-1).</p>		X		
9-2.1124	In relation to section 3.2 and Table 8 of the Historic Environment Baseline Report (Braintree) Paragraph 3.6 Section E Braintree District several concerns regarding the impact of the Project on heritage assets. The majority of the Project involves overhead	National Grid, through the routeing and siting exercise, has sought to reduce the impact on the historic environment, including all designated heritage assets.		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>cables, with a small section of undergrounding to the north of Fairstead, which will require sealing end towers. There will be considerable groundworks threatening below-ground heritage deposits due to the proposed haul road and crane bases for construction. The dispersed settlement pattern contains frequent moated sites with designated buildings, whose settings are likely to be impacted by the proposals.</p> <p>Criticism as the assessment of the Scheduled Monument (SM) at Rivenhall is confusing, with conflicting descriptions about its setting. The church at Kelvedon is also assessed as not being affected, despite its location overlooking rural countryside. Similar concerns arise for other areas where different values are provided for the same site. The SM at Great Loyes moated site and fishpond is assessed as being of high value, while the designated building within it is medium. This integrated site should be assessed together to understand its complex nature. Criticism as the Church at Fairstead section on impact is also confusing, stating there is likely to be clear intervisibility between the asset and the project, but its setting does not extend into the draft Order Limits (DOL). If there is intervisibility, the asset's setting must extend into the DOL.</p> <p>Suggest assessing either multi-period sites or those with a range of designations or Historic Environment Records (HERs) should be discussed together so</p>	<p>The scheduled monument sites of Neolithic long mortuary enclosure at Appleford Farm, Rivenhall End (1008980) and Great Loyes moated site and fishponds (1008979) along with its Grade II listed farmhouse (1147418) appear Appendix 11.1 Historic Environment Baseline Report (document reference 6.11.A1) where their settings and value are discussed. They do not form part of the Environmental Statement (ES) ES Chapter 11: Historic Environment (document reference 6.11) nor ES Appendix 11.2: Historic Environment Assessment Tables (document reference 6.11.A2) as their setting does not extend to the Project.</p> <p>The Grade I listed Parish Church of St Mary in Kelvedon has been scoped out of Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1), ES Chapter 11: Historic Environment (document reference 6.11) and Appendix 11.2 Historic Environment Assessment Tables (document reference 6.11.A2) as per the methodology agreed with stakeholders and set out in Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1).</p> <p>The Grade I listed Church of St Mary and All Saints (1169594) heritage value and significance as well as its setting is described in Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1) (paragraph 3.6.25 along with the scheduled monument '<i>Roman villa, Anglo-Saxon hall, cemetery</i></p>

	<p>Statement (NPS) EN-1 or National Planning Policy Framework (NPPF) terms. The assessment provided by National Grid indicates that this will occur to nine heritage assets in Section G. However, this is likely to change if the methodology and categorisation of heritage value are amended, and in the event of any Project design changes.</p> <p>Concern for the identified non-designated heritage assets, the incomplete Gazetteer does not currently allow for easy differentiation between built and archaeological heritage assets. There will be an impact on the setting of non-designated built heritage assets, with the assessment tables indicating the highest level of harm identified by National Grid as <i>'Significant Permanent Negative Effect'</i> (11.2 HEA)</p>	<p>then stated (high, medium, low, negligible, no change), as is the mitigation and the significance of effect using the agreed significance of effect matrix as stated in the ES Chapter 11: Historic Environment (document reference 6.11) and ES Appendix 11.2: Historic Environment Assessment Tables (document reference 6.11.A2).</p> <p>The significance of effect assessment presented in ES Chapter 11: Historic Environment (document reference 6.11) and Appendix 11.2: Historic Environment Assessment Tables (document reference 6.11.A2) presents the impact using the EIA terminology as agreed in the Scoping Opinion. In order to ensure accordance with the NPS (EN-1) assessment of harm to designated assets is presented in Appendix 11.7: Assessment of Harm to Designated Heritage Assets (document reference 6.11.A7).</p>				
9-2.1129	<p>The route bisecting the area between Little and Great Waltham, lies within a highly sensitive area with extensive known archaeological deposits. This includes the Late Iron Age settlement excavated at Little Waltham, part of which remains and is protected as a Scheduled Monument (SM) on the edge of the draft Order limits (DOL). Similarly, recent excavations and surveys show that the entire area between Little Waltham and Broomfield was intensively occupied during the Iron Age and Roman periods</p>	<p>Noted. The known and potential archaeology for the Project has been assessed in Environmental Statement (ES) Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1) and is summarised in Chapter 11: Historic Environment (document reference 6.11). Assessment work including geophysical survey and evaluation trenching is ongoing.</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.1130	Concern for the route abutting the site of a probable Roman villa (ID: 6099) and temple (ID: 6062) to the west of Broomfield, this site is known from various data sources and is likely to be more extensive than current evidence suggests, extending into the draft order limits (DOL). If further work were undertaken to define the site, it would likely meet the criteria for scheduled status and should be considered of high value for this Environmental Statement (ES)	Both assets are located outside the Order Limits and so have been assessed for potential impacts through changes in their setting. Standard construction mitigation would be adopted as detailed in the Outline CoCP (document reference 7.2). Changes to the setting would be temporary and would be reversed once the construction phase is completed. No additional mitigation measures are proposed during the construction phase as any measures designed to lessen the visual impact of the Project would be of a scale that would visually adversely alter the setting of the asset. Investigation for known and previously unrecorded buried archaeology is ongoing and the scope of all such works is being devised in consultation with the relevant consultees.		X		
9-2.1131	Request the sequence of WWII pillboxes around the River Chelmer and Little Waltham, which are part of the regionally important General Headquarters (GHQ) defence line, should be considered when valuing these heritage assets. Paragraph 3.7.422 identifies the anti-tank ditch, request this consideration is extended to other assets forming part of this important line of defensive structures	The assessment of heritage value presented is based on a thorough review of available sources, including historic mapping, archival research, and site-based observations. We are confident that the value assigned to the asset reflects a proportionate and robust understanding of its historical, evidential, and contextual significance in line with relevant guidance and professional standard.		X		
9-2.1132	In relation to Thurrock, Chapter 8.1 of the Preliminary Environmental Information Report (PEIR) (paragraph 3.9 Section H), the impact of undergrounding cables within the boundary of	The Project design for this area has changed and no longer includes underground cable connection into Tilbury Substation. As a result, the Order Limits do not extend as far south and a number of the archaeological		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>Thurrock, from Linford to Tilbury, on archaeological deposits. Concern for the significant impact on below-ground assets due to the required width for undergrounding and the construction of haul roads, compounds, and crane bases.</p> <p>Concern for the absence of references to geo-archaeological and paleo-environmental deposits associated with the former routes of the Thames, which are significant and require assessment. These deposits have the potential to be highly significant in some areas, containing waterlogged deposits that will require appropriate assessment to inform the Environmental Statement (ES). The Essex Palaeolithic assessment has shown that the lower end of the route will impact Holocene deposits overlying gravels of the Lower Thames terraces.</p> <p>Criticism as reference to paleoenvironmental and geo-archaeological deposits as further data sets is also missing from Section 11.5.26 in the main PEIR text. Suggest to be included in their further research and evaluation programme to provide an informed assessment to the ES.</p> <p>Concern for the lack of information on the reclamation of grazing marsh and industrial development in the 19th century.</p> <p>Concern as the extensive Roman salt production sites at West Tilbury, one of which lies immediately adjacent to the route, are not identified, even though it is likely these will be impacted at the southern end</p>	<p>sites/heritage assets referred to would be outside Study Areas/no longer impacted by the Project.</p> <p>The updated Project design for the new Tilbury North Substation and works associated with the connection into the existing overhead line connections has been subject to a programme of geoarchaeological monitoring on geotechnical investigation works. This was undertaken to determine the potential for deposits of geoarchaeological and paleoenvironmental significance that may be impacted by development. A total of 19 geotechnical investigation interventions were monitored at Tilbury North Substation across arable farmland within a dry valley. The results of the investigation can be found in ES Appendix 11.6: Geoarchaeological and Archaeological Monitoring of Ground Investigation Works Report (document reference 6.11.A6).</p> <p>Archaeological trial trenching is currently under excavation within this area. Any geoarchaeology or paleoenvironmental deposits encountered will be investigated or reported during this stage. Some areas have already been evaluated as part of the Lower Thames Project and will not be further evaluated for this Project. The scope of fieldwork was agreed with the LPA Archaeological Advisor.</p> <p>Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1) provides a detailed overview and discussion of the prehistoric and historic development of the landscape within this section of the Project.</p>

	<p>of the corridor.</p> <p>Concern for the reason given for the conclusion of the setting of the Scheduled World War II anti-aircraft battery at Bowaters Farm not being impacted, suggest reconsideration due to the discussed clearance of overgrowth as part of the Lower Thames Development.</p> <p>Note that the power station mentioned in Section 3.9.321 is now demolished</p>	<p>The assessment of heritage assets presented is based on a thorough review of available sources, including historic mapping, archival research, and site-based observations. We are confident that the assessment of the areas reflects a proportionate and robust understanding of its historical, evidential, and contextual significance in line with relevant guidance and professional standards.</p>				
9-2.1133	<p>In relation to Chapter 8.2, Built Heritage, of the Preliminary Environmental Information Report (PEIR), the route of the new overground power lines passes through the northern section of Thurrock district, extending from the boundary with Basildon Council to near Mucking Heath, southeast of Orsett Golf Club. The overground lines terminate at a Cable Sealing End (CSE) Compound, from which underground cables will extend to Tilbury substation. An underground cable construction compound is proposed at Becksland (TB-CC09), with trenchless crossings near the Lower Thames Crossing (west of Tarmac and at Muckingford Road). The line largely avoids larger settlements and villages, but Horndon on the Hill (including the Conservation Area (CA)) is within the 1km buffer zone of the overground part of the Proposed Order Limits (POL), and the underground cable route will pass through West</p>	<p>National Grid, through the routeing and siting exercise, has sought to reduce the impact on the historic environment, including designated heritage assets.</p> <p>Since the PEIR was produced the Project design has been updated and this has altered the study areas, baseline and assessment. All scoped in designated heritage assets within the Study Areas for the Project are considered in the Historic Environment assessment for the Project. The impacts of the Project on the historic environment are assessed in Chapter 11: Historic Environment (document reference 6.11) of the Environmental Statement (ES). The assessment considers the potential impact on historic buildings and includes assessment of potential for physical impact and impact through change to setting that affects the value of a heritage asset. The assessment of listed buildings is supported by setting surveys, as documented in ES Appendix 11.1: Historic Environment Baseline Report</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>Tilbury CA. East Tilbury CA is just outside the 1km buffer zone (2 km study area).</p> <p>Within 3 km of the POL are numerous other larger settlements, and the Orsett CA is within a 3km buffer zone of the overground cable route. All designated heritage assets within the 2 km study area, as well as Scheduled Monuments (SM), Grade I and Grade II* listed buildings, and registered parks and gardens within a 3 km radius, are included in the Gazetteer</p>	(document reference 6.11.A1). The Project has engaged with Historic England and relevant planning authorities on aspects relating to heritage, including appropriate mitigation measures and techniques and to take their views into account during Project development.				
9-2.1134	<p>The proposal does not anticipate direct impacts to built heritage assets, except for conservation areas. Concern there will be indirect impacts to various designated and non-designated heritage assets due to changes in their setting. Factors such as proximity to the new overhead cable route, visual receptors, noise, and construction impacts influence the level of impact. Concern as National Grid has not provided clarity on what mitigation measures will be implemented to protect the setting of these heritage assets</p>	<p>National Grid, through the routeing and siting exercise, has sought to reduce the impact on the historic environment, including all designated heritage assets.</p> <p>During construction standard mitigation would be adopted as detailed in the Outline Code of Construction Practice (CoCP) (document reference 7.2). Changes to the setting of an asset (both designated and non-designated, built or archaeological) would be temporary and would be reversed once the construction phase is completed. Therefore, no additional mitigation measures are proposed during the construction phase. No additional mitigation measures are proposed during the construction phase as any measures designed to lessen the visual impact of the Project would be of a scale that would visually adversely alter the setting of the asset. During the operation phase there is no proposed mitigation.</p>		X

9-2.1140	<p>In relation to the historic environment from Barbergh to Tendring (paragraph 3.4, Section C), there is a considerable section of undergrounding running from the north Essex boundary to Ardleigh new substation which will have a major impact on any below ground archaeological deposits. Within the text there is no mention of the potential for geo-archaeological and paleoenvironmental deposits within the Stour Valley. These have the potential to be highly significant potentially containing waterlogged deposits and will require appropriate assessment to inform the Environmental Statement (ES). Reference to paleoenvironmental and geoarchaeological deposits as further data sets is also missing from Section 11.5.26 in the main text. Extensive cropmark complexes are present along the route of the undergrounding including a probable barrow cemetery, Roman settlement and other occupation, with some potential of national significance sites especially on the valley slopes above the Stour. Geophysical and aerial photographic assessment, ground truthed by trial trenching will be required to understand the impact on these deposits. There are concerns about the interpretation of heritage assets and their value assessment. For example site 3239 comprising a probable Bronze Age cemetery containing at least 9 ring ditches are described as not significant (Low) whilst a rectilinear paddock system (3237) lying in close proximity is deemed</p>	<p>National Grid, through the routeing and siting exercise, has sought to reduce the impact on the historic environment, including designated heritage assets in the Stour Valley area. This includes the scheduled remains at Ardleigh. Near to the scheduled remains are cropmarks and heritage assets (identified through the HER and aerial photography) that extend into the Order Limits. The areas of impact form part a series of further assessments such as geophysical survey and archaeological trial trenching.</p> <p>The majority of the impacted area has already been geophysically surveyed, where possible (ground conditions and crops have had an effect on the surveys progress) which has informed, along with the HER results, cropmark analysis and aerial photography assessment the placement of archaeological trial trenches.</p> <p>A programme of geoarchaeological and geotechnical investigations was undertaken to determine the potential for deposits of geoarchaeological and paleoenvironmental significance that may be impacted by development. A total of 16 geotechnical investigation interventions were monitored within the Stour Valley. The results were reported in ES Appendix 11.6: Geoarchaeological Monitoring of Ground Investigation Works Report (document reference 6.11.A6). Archaeological trial trenching is proposed and currently under excavation along the underground route in</p>		X

	<p>significant (Medium). The route itself will directly impact the nationally designated cropmark complex at Ardleigh, part of which is scheduled. Beyond the scheduled area further extensive cropmarks are recorded which will need to be rectified so that comparisons can be made to the geophysics results and an accurate interpretation give to their importance. It is concerning that the remaining cropmark complex at Ardleigh which are undesignated, some of which form an extension to the scheduled area and extends across the draft order limits (DOL) is not identified under 3.4.84. The section on Great Bromley, Little Bromley and Little Bentley seems out of place within the Bronze Age section as it relates to the development of the present village and a Roman Road. Within the Ardleigh section under 3.4.110 large areas of the extensive cropmark complexes apart from those scheduled are classified as low value. The area of cropmarks that are scheduled form only part of the extensive cropmark complex in the Ardleigh area which comprises a wide range of multi-period settlement, field systems, and burial grounds and these need to be appropriately assessed as many of them form an extension to the Scheduled area and are likely to be of a similar importance. The non designated asset no 3218 which relates to the Historic Environment Record (HER) reference to the large cropmark complex which includes the</p>	<p>Section C and the Stour Valley. Any geoarchaeology or paleoenvironmental deposits encountered will be investigated or reported during this stage.</p> <p>The value of heritage assets methodology (created from Conservation Principles, Policies and Guidance for the Sustainable Management of the Historic Environment (Historic England, 2008, Guidance on Heritage Impact Assessments for Cultural</p> <p>World Heritage Properties Guidance on Heritage Impact Assessments for Cultural World Heritage Properties (ICOMOS), 2011, Guidance and Toolkit for Impact Assessment in a World Heritage Context (United Nations Educational, Scientific and Cultural Organization (UNESCO), International Centre for the Study of the Preservation and Restoration of Cultural Property (ICCROM), ICOMOS and International Union for Conservation of Nature (IUCN), 2022) and DMRB LA 104 and LA 106 (National Highways 2020 and professional judgement) within Chapter 11: Historic Environment (document reference 6.11) of the ES chapter was agreed with stakeholders and utilised.</p>

9-2.1148	In relation to Section 11.6 and Appendix 11.1 of the Preliminary Environmental Information Report (PEIR), criticism that, this information on archaeology is based on information which has the potential to change with results of archaeological investigation. Suggest a full archaeological assessment to be included in the Environmental Statement (ES), including to highlight high potential for discovering unknown heritage assets during ongoing archaeological evaluations, both non-intrusive and intrusive	<p>The Preliminary Environmental Information Report (PEIR) was prepared in accordance with the Nationally Significant Infrastructure Projects: Advice Note Seven (June 2020) and was a preliminary document that reflected the Project's proposals at the time of statutory consultation.</p> <p>The baseline assessment has been fully updated since the PEIR and the results of archaeological fieldwork has been incorporated. As contained in ES Chapter 11: Historic Environment (document reference 6.11) and its Appendices (Appendix 11.2: Historic Environment Assessment Tables (document reference 6.11.A2) and Appendix 11.7: Assessment of Harm to Designated Heritage Assets (document reference 6.11.A7)).</p>		X		
9-2.1149	In relation to the Historic Environment Baseline Report, suggest that the asset value of the information from the excavation should reflect the information the archaeological works provide towards regional/national research frameworks. Suggest that the asset value should also include any archaeology that could be associated with the designated heritage asset	<p>The methodology used to inform the assessment of the historic environment, including Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1), has been developed in accordance with established good practice and national guidance. It has been discussed and agreed upon with relevant stakeholders during the scoping process and through ongoing engagement at thematic working group meetings. The approach taken provides a robust and proportionate understanding of both designated and non-designated heritage assets.</p> <p>The value of heritage assets has been assessed not only on an individual basis but also with consideration to their broader context, where appropriate. This</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		methodology was agreed with stakeholders (including Historic England and relevant Local Planning Authorities) during the Scoping Phase and at subsequent Thematic Group meetings. As such, the assessment is considered robust and proportionate, and that it aligns with accepted best practice.				
9-2.1150	In relation to Preliminary Environmental Information Report (PEIR) Volume 1 paragraph 11.9, request that understanding of the heritage assets is a starting point for determining mitigation/flexibility in the Project. For archaeology this will require an appropriate level of archaeological evaluation, both non-intrusive and intrusive evaluation, to assess the appropriate mitigation/flexibility	<p>Where areas of archaeological potential have been identified, either through the relevant Historic Environment Record or geophysical, aerial photography and LiDAR assessment currently being undertaken by the Project, they have been targeted by trial trenching to evaluate date, assess survival, and value and to inform any mitigation that might be required.</p> <p>Archaeological fieldwork that has begun in support of the Environmental Impact Assessment (EIA) is being carried out under, firstly, a Project-wide Overarching Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5) and then secondly, Site-Specific Written Schemes of Investigation (SSWSI) on a site-by-site basis. The scope of all archaeological works has, therefore, been approved by relative stakeholders.</p>		X		
9-2.1151	Suggests that there is high potential for additional and unknown heritage assets to be encountered and suggestion to consider archaeology, using the information provided within the Historic Environment Baseline Report and review archaeological potential	National Grid has undertaken a detailed routeing and siting exercise to reduce, as far as practicable, the potential impacts of the Project on the historic environment. These considerations have been assessed and are presented in Chapter 11: Historic Environment (document reference 6.11), which evaluates both the		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	as part of baseline data gathering to further inform siting, routing and archaeological investigations	<p>potential for direct physical impact and impacts arising from changes to the setting of heritage assets.</p> <p>Where areas of archaeological potential have been identified, either through the relevant Historic Environment Record (known) or geophysical, aerial photography and LiDAR assessment (known/previously unknown) currently being undertaken by the Project, they have been targeted by trial trenching to evaluate date, assess survival, and value and to inform any mitigation that might be required.</p> <p>Archaeological fieldwork that has begun in support of the Environmental Impact Assessment (EIA) is being carried out under, firstly, a Project-wide Overarching Written Scheme of Investigation (OWSI) and then secondly, Site-Specific Written Schemes of Investigation (SSWSI) on a site-by-site basis. The scope of all archaeological works has, therefore, been approved by relative stakeholders.</p>				
9-2.1152	In relation to the Preliminary Environmental Information Report (PEIR) Volume 1 paragraph 11.68 of the design proposals, suggestion that additional certainty is required about how work would be managed contractually and controlled. A full assessment of impacts and effects, including vegetation loss and impact on archaeology is required as part of the Development Consent Order (DCO) application	The impact of all aspects of the Project, including vegetation loss and archaeology, has been assessed. Impacts to archaeology are assessed in the ES Chapter 11: Historic Environment of the Environmental Statement (document reference 6.11) and its appendices (11.2 Historic Environment Assessment Tables, 11.7 Assessment of Harm to Designated Heritage Assets and Appendix 11.1 Historic Environment Baseline Report). Monitoring and control measures for historic environment mitigation are set out		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		in the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the Outline Archaeological Mitigation Strategy and Outline WSI (document reference 7.5).				
9-2.1153	Criticism that there were difficulties in locating specific assets within the survey information and request this is addressed. Suggestion that impacts upon the setting of listed buildings require careful consideration, particularly landscape impacts	<p>A – The current iterations of Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1), Appendix 11.2: Historic Environment Assessment Tables (document reference 6.11.A1), Annex B-Gazetteers (document reference 6.11.A1), and Annex E-E Scoped out Listed Buildings (document reference 6.11.A1) are all fully searchable in Word or PDF form. The supporting Figures are searchable in PDF form.</p> <p>B - The methodology used to inform the assessment of the historic environment, including Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1), has been developed in accordance with established good practice and national guidance. It has been discussed and agreed upon with relevant stakeholders during the scoping process and through ongoing engagement at thematic working group meetings. The approach taken provides a robust and proportionate understanding of both designated and non-designated heritage assets.</p> <p>The current iteration of the Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1) and Appendix 11.2: Historic Environment Assessment (document reference 6.11.A2) comply with</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		the agreed methodology and include an up-to-date assessment of the Project and fully assesses all scoped in designated and non-designated heritage assets.				
9-2.1154	Concern that pylon TB226 will impede upon intentional view corridors which are specified in the Supplementary Planning Document (SPD), from the Church of St Mary to the historic Farmstead and onwards to the Church of All Saints. Suggest that National Grid will need to work with Historic England and Brentwood Borough Council regarding listed buildings and heritage assets in the area (e.g.: routing alternatives, alignment, and mitigation)	<p>National Grid, through the routing and siting exercise, has sought to reduce the impact on the historic environment, including listed buildings in this area. All listed buildings within 2 km of the Order Limits are considered in the Historic Environment Assessment for the Project. The impacts of the Project on the historic environment are assessed in Environmental Statement (ES) Chapter 11: Historic Environment (document reference 6.11). The assessment considers the potential impact on historic buildings and includes assessment of potential for physical impact and impact through change to setting that affects the value of a heritage asset. The assessment of listed buildings is supported by setting surveys, as documented in ES Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1). The Project has engaged with Historic England and relevant planning authorities on aspects relating to heritage, including appropriate mitigation measures and techniques and to take their views into account during Project development.</p> <p>Church of St Mary: The assessment concludes that due to changes within the setting of this asset there would be significant effects during construction and operation. No additional mitigation measures are proposed as any measures designed to lessen the visual impact of the</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Project would be of a scale that would visually adversely alter the setting of the asset. Church of All Saints: The assessment concludes that the setting of this asset does not extend to the Order Limits due to the division of the landscape with transport infrastructure and the screening provided by its wooded surroundings.				
9-2.1155	Suggest early archaeological evaluation, paleoenvironmental and geoarchaeological assessments around the Gipping Valley, Creeping St Peter, where there are cropmarks and tributaries of the Stour which has lighter soils and may be impacted by underground cable works towards Raydon	The Project identifies the Gipping Valley as having archaeological potential and geophysical survey has already taken place to the north of the Gipping river (detailed in Appendix 11.4: Geophysical Survey Results Report (document reference 6.11.A4). Further fieldwork will be guided by where the Project will likely impact any identified paleoenvironmental and geoarchaeologically significant deposits.		X		
9-2.1156	Criticism of the lack of baseline assessment undertaken in relation to the visual, heritage, amenity and land value impacts of overhead line and pylon technology at Dunton Hills Garden Village (DHGV) and the lack of application of the mitigation hierarchy, including compensation to the likely significant effects from those impacts to the principles of the Garden Village and viability of this strategic housing allocation, including its supporting infrastructure	The assessment of landscape and visual effects is presented in the ES Chapter 13: Landscape and Visual (document reference 6.13). In this chapter DHGV is identified as part of the future baseline which notes that DHGV is assessed as part of the cumulative assessment. The landscape assessment is presented in Appendix 13.2: Landscape Baseline and Assessment (document reference 6.13.A2). DHGV lies within the Brentwood Hills landscape character area (LCA), and just within the Wooded Hills and Ridges LCA. The assessment of landscape effects resulting from the introduction of the Project during construction and operation reported major adverse and significant effects within 0.5 km of the Project on these landscapes, and		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>also moderate adverse and significant effects at distances from 0.5-1.5 km from the Project. The visual assessment is presented in Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3). DHGV lies within Visual Receptor Area (VRA) G4: Ingrave and Herongate and just falls within VRA G6: Basildon. Within VRA G4 and VRA G6, the assessment of visual effects resulting from the introduction of the Project reported major adverse and significant effects during construction and operation within 0.5 km of the Project, and moderate adverse and significant effects at distances from 0.5-1.5 km from the Project. Viewpoint 7.08 Dunton Hills Farm (Dunton Garden Village) (Figure 7.12.F190) (document reference 7.12) reported major adverse and significant visual effects during construction and operation. DHGV is considered in Chapter 17: Cumulative Effects (document reference 6.17), since, assuming detailed planning applications are approved and commenced before construction of the Project, residents in the Garden Village would be future visual receptors with potential views of the Project. It was reported that for DHGV (A3 (BrBC) and BR2) in the south of the LCA during construction and operation, landscape effects would be moderate adverse and significant within a localised area in the south of the Brentwood Hills LCA. Moderate adverse significant effects were also reported on a neighbouring LCA 13: Dunton Settled and Farmlands due to indirect effects of</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>the inter-project effects resulting from the Project and DHGV.</p> <p>Assessment of the historic environment is presented in ES Chapter 11 (document reference 6.11) and its appendices, in particular Appendix 11.1: Historic Environment Baseline Report (document reference 6.11. A1), Appendix 11.2 Historic Environment Assessment Tables (document reference 6.11. A2) and Appendix 11.7 Assessment of Harm to Designated Heritage Assets (document reference 6.11.A7). The methodology for assessment follows best practice guidance and is in accordance with relevant legislation and policy, including the NPS (EN-1), and was agreed through the scoping process and during subsequent thematic group meetings with heritage stakeholders. Relevant mitigation for the historic environment is proposed secured through the Outline CoCP (document reference 7.2), the Outline LEMP (document reference 7.4) and the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5).</p> <p>Please note that financial effects on individual businesses or property prices would be the subject of individual landowner negotiations and it is not a matter for EIA.</p> <p>ES Chapter 15: Socio-economics, Recreation and Tourism assessed the potential effect on planning applications and planning allocations, including Dunton Hills Garden Village. The Project has considered the</p>

		allocation in the design in order to manage interactions, by routing along the gas pipeline and within a corridor formed by the Building Proximity Distance (BPD). Therefore, a not significant residual effect has been anticipated during construction and operation (and maintenance).				
Information						
9-2.1157	National Grid Electricity Transmission (NGET) have committed to have a proper regard for the upcoming Offshore Coordination Support Scheme (OCSS) report	<p>A consortium of projects led by North Falls (Offshore Wind Farm) and National Grid were awarded funding by the Department for Energy Security and Net Zero (DESNZ) through the Offshore Coordination Support Scheme (OCSS) in December 2023. This funding was to explore the potential for offshore coordination as part of the Offshore Transmission Network Review (OTNR) "Early Opportunities" workstream.</p> <p>On 28 March 2024, the consortium published a high-level feasibility study which assessed a coordinated offshore connection. The Secretary of State for Energy Security and Net Zero reviewed this study and other information and decided not to grant further funding to the consortium.</p> <p>The feasibility study identified that coordination is technically feasible however, it also identified an increase in capital costs of up to £890 million, constraint costs associated with Sea Link, and a programme delay for North Falls and Five Estuaries of up to five years.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Given the significant extra costs and the negative impact on the delivery timeline of connecting more renewables to the UK energy system, especially considering the government's commitment to quadruple offshore wind and fully decarbonise the UK's electricity system by 2030, the consortium supports the Secretary of State's decision and will not be further pursuing a coordinated offshore connection.				
9-2.1158	Information provided that National Grid should be aware of the Health and Safety Executive (HSE)'s guidance document HS(G) 47 'Avoiding Danger from Underground Services', and National Gas Transmission's (NGT's) Dial Before You Dig Specification for Safe Working in the Vicinity of NGT Assets. There will be additional requirements dictated by NGT's plant protection team	National Grid is aware of HS(G)47 and NGT's specifications and we expect that adherence will form part of our Principal Contractor's standard ways of working. Furthermore, we are in consultation with NGT's plant protection team and will develop and agree protective provisions.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Mitigation						
9-2.1159	Suggest mitigation measures	<p>An Environmental Statement (ES) (document reference Volume 6: Environmental Statement) has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 ('the Infrastructure EIA Regulations'). The ES identifies and assesses the likely significant effects on the environment resulting from the construction, operation and maintenance of the Project and recommends appropriate mitigation to reduce effects.</p> <p>Environmental mitigation measures have been defined within each environmental topic chapter and set out in relevant management documents submitted with the Development Consent Order (DCO) application, including the Outline Code of Construction Practice (CoCP) (document reference 7.2), the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (AMS-WSI) (document reference 7.5).</p>	X	X	X	
9-2.1160	Criticism of mitigation plans / measures (e.g. mitigation is not enough)	<p>An Environmental Statement (ES) (document reference Volume 6: Environmental Statement) has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 ('the Infrastructure EIA Regulations'). The ES</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>identifies and assesses the likely significant effects on the environment resulting from the construction, operation (and maintenance) of the Project and recommends appropriate mitigation to reduce effects.</p> <p>In line with the approach set out in Environmental Statement (ES) Chapter 5: EIA Approach and Method (document reference 6.5) and in accordance with National Policy Statement EN-1 and EN-5 (Department for Energy Security and Net Zero, 2024) the mitigation hierarchy has been applied during the iterative design process to, in the first instance, avoid creating adverse effects, prevent, reduce and finally, where appropriate, offset adverse effects.</p> <p>Environmental appraisal has been an integral part of the Project design process since conception, which has meant that the Project has been able to avoid environmentally sensitive features as far as reasonably practicable. National Grid has also embedded mitigation measures into the design of the Project to avoid or reduce significant effects that may otherwise be experienced during construction and operation (and maintenance) of the Project. Embedded mitigation measures are those that are intrinsic to and built into the design of the Project. ES Chapter 4: Project Description (document reference 6.4) provides information on the key embedded mitigation measures included.</p> <p>Standard measures, comprising management activities and techniques, would be implemented throughout</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>construction of the Project to limit effects through adherence to good site practices. These are included in the Outline Code of Construction Practice (CoCP) (document reference 7.2). Each mitigation measure has been assigned a specific reference, and these are referenced in each environmental topic chapter (Chapters 6 to 16 (document references 6.1 - 6.16)).</p> <p>Additional mitigation comprises measures over and above embedded and standard mitigation measures to reduce environmental effects. This includes, but is not limited to, mitigation required for protected species. Where applicable, additional mitigation measures are identified within Section 6 of each environmental topic chapter (Chapters 6 to 16 (document references 6.1 - 6.16)) within the ES (Volume 6 of the DCO application) and replicated in the Outline CoCP (document reference 7.2) which is secured through a Requirement in the draft DCO (document reference 3.1).</p> <p>Mitigation measures are also set out in the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (AMS-OWSI) (document reference 7.5). These management plans are secured through the draft DCO (document reference 3.1).</p> <p>Although not a statutory requirement for Development Consent Order projects submitted to the Planning</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Inspectorate prior to May 2026, National Grid has committed to deliver 10% Biodiversity Net Gain (BNG) with wider environmental and societal benefits on all construction projects requiring formal planning or consent, including Norwich to Tilbury. Further information is provided in the BNG Report (document reference 7.1).				
9-2.1161	National Grid should ensure that it acquires sufficient land and rights to facilitate vehicle parking by its contractors away from environmentally valuable highway verges. Also request that National Grid's CEMP should also provide local communities with a contact telephone number to enable complaints to be made at the earliest opportunity and for any off-site damage caused to be repaired	National Grid has included all areas within the Order Limits required to construct the Project. This includes parking and laydown areas away from the roadside. The Outline CoCP (document reference 7.2) includes a commitment that members of the public will be kept informed regularly of construction works through active community liaison. This will typically include the notification of 'noisy activities', heavy traffic periods and start and end dates of key phasing. A contact number will be provided which members of the public can use to raise any concerns or complaints about the Project (see Commitment GG30 in the Outline CoCP for further details). Details on the complaints procedure will be provided within the final CoCP.			X	
9-2.1162	Suggest that National Grid minimise pollution and noise pollution and avoid disruption to the local road network during construction	An Environmental Impact Assessment (EIA) has been completed to assess the effects of the Project on the environment. This includes details of the environmental mitigation and management such as the Outline Code of Construction Practice (CoCP) (document reference 7.2). The EIA is reported in the Environmental Statement (ES) with Chapters 7: Air Quality (document reference 6.7),			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Chapter 14: Noise and Vibration (document reference 6.14) and Chapter 16: Traffic and Transport (document reference 6.16) reporting the likely significant effects of the Project on air quality, noise and traffic and transport during the construction of the Project including local road networks, respectively, and details the mitigation measures to be implemented to reduce potential effects.				
9-2.1163	Criticism that tree planting will not be carried out and previous S106 money was made available but has not been spent for this purpose for the Bramford to Twinstead project (e.g. at Burstall) / Criticism that it will take years to see the benefits of tree planting	National Grid, through the routeing and siting exercise, has sought to reduce the impact on landscape character and visual amenity, including minimising direct impacts on trees where practicable.			X	
9-2.1164	Request for National Grid to confirm what they will do about the flooding that will incur after land compaction	Stone pads will be installed in areas where heavy equipment, such as cranes and piling rigs, are to be used, as outlined in commitment GG28 of the Outline Code of Construction Practice (CoCP) (document reference 7.2). The stone pads will provide stable working areas and will reduce disturbance to and compaction of the ground. The stone pad area will be reinstated (following removal of the stone pad material) in accordance with the soil management measures contained in the Outline CoCP. Appendix C: Soil Resources Plan of the Outline CoCP (document reference 7.2), sets out how soils will be handled, stored and reinstated to preserve their integrity. Measures to capture and attenuate runoff from all areas of the construction working swathe will also be put in place to			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		manage surface water drainage and prevent increases in flood risk.				
9-2.1165	Suggest that National Grid plant properly laid hedges where established hedgerows are removed, as tree planting with saplings does not work unless they are fed and watered until they establish	<p>The Outline Landscape and Ecological Management Plan (LEMP) (Document Reference 7.4) includes details regarding the planting proposals.</p> <p>Additional environmental mitigation measures have been described within each environmental topic chapter of the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) and set out in other relevant management documents submitted with the Development Consent Order (DCO) application including the Outline Code of Construction Practice (CoCP) (document reference 7.2).</p>			X	
9-2.1166	Criticism that National Grid has not provided information on noise reduction systems in unfavourable weather	<p>Operational noise from overhead lines is scoped out of the Environmental Statement (ES) on the basis that significant adverse effects would be avoided through the use of the proposed low noise conductor system.</p> <p>However, further information on noise from overhead lines, including during unfavourable weather conditions, is provided in Appendix A4: Operational Noise from Overhead Lines (document reference 6.14.A4) for information.</p>			X	
9-2.1167	Criticism that National Grid has not provided information on camouflage coatings for pylons	National Grid has developed a standard two coat vinyl paint system over many years which is applied to all lattice pylons on the transmission system. This paint system provides a level of protection to the pylon steel work against the elements and the colour has been			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		developed to reduce visual impact of bare steel in most circumstances.				
9-2.1168	Concern that restorative landscaping (such as replacement hedge and tree planting) for the Project will be restricted due to impact on soils	Soils impacted during restorative landscaping are only temporarily disturbed and will be handled following good practice soil handling measures, allowing soils to be reinstated to the previous land quality. The replanting of hedgerows also helps to prevent soil erosion during operation. Good practice measures are detailed in Appendix C: Outline Soil Resource Plan of the Outline Code of Construction Practice (CoCP) (document reference 7.2).			X	
9-2.1169	Suggest the new equipment and substations are kept as small as possible and / or underground buildings are considered (e.g. to mitigate visual impact)	The suggestion to keep new equipment and substations as small as possible, as well as considering underground buildings to mitigate visual impact, is acknowledged. However, it's important to clarify that the size of the equipment is not solely dictated by National Grid. Various factors, including technical specifications, operational requirements, and safety standards, influence the final dimensions of the equipment used in substations.			X	
9-2.1170	Suggest mitigation measures for birds for the Project, including the following: - Use of bird-friendly overhead line designs (the most effective way of preventing electrocution on distribution lines; good designs protect birds by deterring perching and nesting, and by using insulated components and/or large air gaps.	National Grid notes the respondent's feedback. Collision risk assessments for the Project have been completed. Appropriate mitigation (such as bird deflectors) will be implemented in locations where there is a greater risk of collision impact is identified as agreed with Natural England (NE) and the Local Planning Authority (LPA) as relevant.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>Configurations with fewer layers of cables vertically, and without an earth wire, may also reduce collisions);</p> <ul style="list-style-type: none"> - Installing line markers on earth wires and/or conductors as appropriate to reduce collision (several factors influence the efficacy of markers, including the morphology, behaviour and visual capacity of the species at risk, the overall visual effect of the markers against the background landscape and engineering factors such as marker durability and the structural integrity of the power line/pylon. Wires should be marked with devices that are as large as possible and installed from pylon to pylon. Spacing often depends on technical considerations, but markers should be installed as close together as possible, and in contrasting colours e.g. black and white for maximum visibility in different weather and light conditions. Line markers will also need maintenance and replacement; ensuring that markers remain in position and functional throughout the lifetime of the power line is essential. Research in this field continues (e.g. the development of nocturnal devices), so the most up-to-date information available on marker effectiveness and design should be used); - Carrying out construction and maintenance activities outside of the breeding season 	<p>Nesting bird constraints will also be addressed through best practice working measures as outlined within the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4).</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.1171	<p>In terms of mitigating the impact of the Project on hedgerows, National Grid need to ensure the following:</p> <ul style="list-style-type: none"> - National Grid must minimise to the greatest possible extent the removal of hedgerow, ensuring that gaps created are wide enough only to allow access of machinery. In practical terms removed sections must not span greater than 12 m. It will not be acceptable to widen removal beyond this for the purpose of increasing visibility towards roads and consequently National Grid must make use of 'stop lines' for traffic on haul roads at each crossing point in order to ensure safety of passing traffic, employing banksmen to ensure public safety. - Sections of hedge scheduled for removal must be protected with netting for a year prior to removal to minimize impact on nesting birds. - Removed sections must be replanted with appropriate native species to match remaining hedge immediately upon the completion of construction within each field, to a standard agreed with landowners and farmers, and must ensure that hedges are subsequently coppiced and / or laid after an appropriate period in order to promote ecology 	<p>National Grid has noted the feedback received. Access bellmouth widths have been designed to allow for construction vehicles to access the haul road and the hedges would be widened to accommodate for the haul road widths. In addition, an area around the bellmouths have been included within the Order Limits to allow space for drainage, fencing, and to ensure compliant visibility splays. Hedgerows would not be removed beyond the purposes as identified above. Safe crossing and access of construction traffic on the haul roads is proposed and compliant to the design standards. Line marking and banksman would be used where appropriate.</p> <p>A full range of hedgerow surveys have been conducted on the Project and the results are presented in Chapter 8: Ecology and Biodiversity (document reference 6.8), and Appendix 8.3: Hedgerow Regulations Report (document reference 6.8.A3) of the Environmental Statement (ES)Appropriate mitigation would be implemented where impacts are identified as agreed with Natural England (NE) and the Local Planning Authority (LPA) as relevant. Consideration of mitigation for potential habitat loss or fragmentation would also be presented in the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4).</p> <p>The use of bird netting in advance of vegetation clearance is a controversial mitigation method that can result in direct harm to a range of bird species. It is</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		therefore not a suggested mitigation measure for nesting birds on this project and has not been included within the OLEMP.				
9-2.1172	Suggestion that secondary mitigation would be in addition to any potential community benefits from the development (including any emerging requirements in the anticipated community benefit guidance as outlined in the recent consultation focused on community benefits for Electricity Transmission Network Infrastructure) and suggestion to consider community benefit options and explore opportunities to coordinate community benefits with other National Grid projects in the region	<p>The Government has published its guidance on community funds for transmission infrastructure (DESNZ, 2025). National Grid is committed to working with Ofgem, industry partners, local communities and their representatives to ensure community benefits are delivered fairly and effectively, driving lasting, positive change for the people and places integral to our developing electricity network.</p> <p>Government has also announced its plans to introduce a bill discount scheme for households within 500 metres of new infrastructure, which it proposes to introduce through the Planning and Infrastructure Bill. This is evolving government policy. Government expects this scheme to be in place by 2026 and we will share further details as they emerge.</p> <p>National Grid is committed to providing a coordinated local and regional approach to community benefits. This will be delivered outside the development consent process, since this is not a material consideration in the decision on the proposed Project or a matter to be secured as part of the DCO, as per the Community Funds for Transmission Infrastructure: Guidance (DESNZ, 2025).</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.1173	Suggests Appendix 8.3 of the Preliminary Environmental Information Report (PEIR) technical appendices (Topic: Reptiles), includes information to justify why the displacement by habitat manipulation is the most appropriate mitigation solution regardless of survey result at Coggeshall Hall Farm, Monk's Farm, Porters Farm, Cressing to Witham Railway, River Brain, and Fairstead Road	A range of protected species and other ecological surveys have been undertaken across the Project including reptile suitability assessments and specific reptile surveys where deemed necessary. The results of these surveys are outlined in ES Chapter 8: Ecology and Biodiversity (document reference 6.8) and specifically within the Appendix 8.5: Reptile report (document reference 6.8.A5). Reptile displacement has been identified as a suitable mitigation method where there is the presence of alternative suitable habitat adjacent to the area of impact.		X		
National landscape (AONB)						
9-2.1174	Concern as proposals for underground cables at Dedham Vale National Landscape (an Area of Outstanding Natural Beauty, AONB), Great Horkesley, and Fairstead would result in significant vegetation loss, with an expected removal of a 120 m wide swathe of vegetation for construction. Respondent notes National Grid state the construction methods and working widths required for the installation of the underground cables are being developed to reduce the loss of existing characteristic vegetation within Dedham Vale National Landscape and its setting. Commitments will be made to reduce the working area through sensitive locations and to design the project to avoid vegetation loss where practicable	Our proposals include a total of approximately 20 km of underground cable through and in the vicinity of the Dedham Vale National Landscape, including a section at Great Horkesley to reduce the changes in views and setting of the National Landscape from within and adjacent to its designated boundary. Underground cabling is also proposed for a short section for a 400 kV overhead line crossing near Fairstead. Where possible, efforts will be made to reduce the working area in sensitive locations, and undergrounding includes proposals for trenchless crossings which will minimise the requirement for vegetation removal. Following construction, hedgerows and shrubs will be reinstated where practicable and an appropriate grass seed mixture would be sown to encourage regrowth. It is anticipated that after a period of time following		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		completion of the construction of the underground cabling and replanting of hedgerows and vegetation there would be minimal visibility of the works at ground level.				
Needs Case						
9-2.1175	Criticism of government green agenda / policy	<p>The UK Government is committed to achieving clean electricity by 2030 as set out in the Clean Power 2030 Action Plan (DESNZ, 2024). Clean Power 2030 is considered key to accelerating and reaching net zero by 2050. This represents the latest Government policy and position on clean energy.</p> <p>Under its transmission licence, National Grid has a statutory duty to respond to generation customers wanting to connect to the transmission network, whether this be for wind, solar, nuclear, tidal or from other forms of generation.</p>	X	X	X	
9-2.1176	Criticism of needs case for the Project	National Grid has a statutory duty to facilitate new connections and maintain a safe National Electricity Transmission System (NETS). The Project would facilitate the connection agreements that are in place with two offshore wind farm projects and an interconnector project based on their connection into a new East Anglia Connection Node (EACN) substation. The Project would also reinforce the local transmission network which currently does not have the capacity needed to reliably and securely transport all the energy that is likely to be connected in the future – driven by the	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Government's plan to increase offshore wind from the current 8.5 GW to 50 GW by 2030 to meet the increased demand.</p> <p>The needs case has been reviewed at each stage of the Project's development.</p> <p>The UK Government is committed to achieving clean electricity by 2030 as set out in the Clean Power 2030 Action Plan (DESNZ, 2024). In November 2024, National Energy System Operator (NESO) published its independent analysis on how the Government can achieve its ambitious clean power goal. The report identifies the Project as critical to delivering a network which supports the clean power pathways.</p> <p>The technical need for the Project is included in the Strategic Options Backcheck Review (document reference 7.17) and a statement on need in relation to policy is included in the Planning Statement (document reference 5.6), both documents have been submitted with the application for development consent.</p>				
9-2.1177	Oppose the Project as currently proposed (e.g. use of overhead lines and / or underground cables generally)	National Grid notes the respondent's feedback. Strategic alternatives for the Project, including underground cables and offshore cables, have been considered and are set out in the published Strategic Options Backcheck and Reviews (SOBR) published in 2023 and 2024 (available on the Project website) and the 2025 SOBR (document reference 7.17). This sets out the need case for the Project and the reasoning why an onshore solution (including a mix of overhead lines and underground cable) has been taken forward.	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>National Grid has a statutory duty to facilitate new connections and maintain a safe National Electricity Transmission System (NETS). The Project would facilitate the connection agreements that are in place with two offshore wind farm projects and an interconnector project based on their connection into a new East Anglia Connection Node (EACN) substation. The Project would also reinforce the local transmission network which currently does not have the capacity needed to reliably and securely transport all the energy that is likely to be connected in the future – driven by the Government's plan to increase offshore wind from the current 8.5 GW to 50 GW by 2030 to meet the increased demand. This ambition has been emphasised in the National Energy System Operator's (NESO) Clean Power 2030 report published in November 2024. The needs case is reviewed at each critical stage of the Project's development and without a robust demonstrable need the Project would be revised or fall away. Currently, the contracted generation shows a clear need for the Project.</p>				
9-2.1178	Suggest that the Government invests more funding for infrastructure in East Anglia generally	<p>Extra Government funding for infrastructure in East Anglia more generally, is a matter for Central and Local Government to consider and allocate.</p> <p>National Grid owns, builds and maintains the high-voltage electricity transmission network in England and Wales.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>It is National Grid Electricity Transmission (NGET) that is developing plans for the Project and is the electricity transmission arm within National Grid.</p> <p>The Need Case is set out in the Strategic Options Backcheck Review (document reference 7.17) whilst the funding for the Project is set out in the Funding Statement (document reference 4.2)</p>				
9-2.1179	Norfolk County Council, Essex County Council and Suffolk County Council commissioned an independent report into the Project which cast doubt on National Grids 2030 timescale, finding that the extra capacity would actually be required by 2035 or beyond - the additional five years would provide enough time for National Grid to review the Project and consider alternatives	<p>National Grid has carefully reviewed the report and its appraisals and has published its response which is available on the Project website. We note that the report is a significant and independent study of our proposals. We welcome the report's support of the need for improvements to the transmission network and recognition that an offshore solution would result in significantly higher costs and provide lower capacity than the Norwich to Tilbury onshore proposals. However, we do not accept the report's conclusions around the timing of need for additional capacity being closer to 2035 than 2030. National Grid is legally obliged (under our Transmission Owner Licence) to provide capacity at the dates formally agreed in contracts with energy generators (or customers). Contract dates are set out by National Energy System Operator (NESO) independent of National Grid. We have undertaken backchecks to ensure the capacity required in the contracts is consistent with our understanding of need well as consideration of alternatives (see the 2025</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Strategic Options Backcheck and Review for details (document reference 7.17)).				
9-2.1180	Suggest that National Grid extend the Project timescales to allow more time to see what impact changes are making on current suppositions (changes provided by respondents)	<p>The National Energy System Operator (NESO) (previously Electricity Systems Operator (ESO)) published a report in November 2024: 'Clean Power 2030'. In this report it addresses potential costs to consumers if Norwich to Tilbury were to be later than December 2030 in connecting to the Grid system and the report indicates any delay beyond 2030 would cost the consumer £2.7 Billion, value taken from Clean Power. 2030 / Annex 2: Networks, connections and network access analysis section '2.4 Securing works for a 2030 delivery'. With this report from the independent system operator, National Grid cannot see a scenario currently where the 2030 target is delayed, but if that target is changed we will continue to assess proposals against the criteria and planning processes in place.</p> <p>It should also be noted that all feedback received from the various consultations has been considered and is factored into the Project as presented at submission.</p>			X	
9-2.1181	Criticism that the Project contradicts the latest government stance on the use of overhead lines (e.g. the predominant use of overhead lines is now being scrutinised and questioned)	<p>National Policy Statement (NPS) EN-5 makes clear that the Government's position that overhead lines should be the strong starting presumption for electricity networks developments in general.</p> <p>However, it is important to note that this presumption is reversed when proposed developments will cross part of</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>a nationally designated landscape (i.e. National Park, The Broads, or National Landscape). The NPS also confirms that widespread and significant adverse landscape and/or visual impacts in other locations may also justify the use of undergrounding.</p> <p>Consequently, the Government position requires us to scrutinise the general presumption in favour of overhead lines in certain sensitive areas. This involves back check and reviews especially when new information comes to light and that any harm caused is not outweighed by its corresponding landscape, visual amenity and natural beauty benefits.</p>				
9-2.1182	Suggest that instead of the Project, National Grid establish a cable across to Europe and sell the power	<p>Interconnection with Europe is an important feature of the UKs energy requirements and it helps supply meet demand and overall keeps energy costs lower. The UK trades with several European mainland countries such as Denmark, Germany, France, Sweden, Belgium and Ireland.</p> <p>However, the high-voltage electricity network between Norwich and Tilbury needs to be reinforced to accommodate the changes in how we produce and use energy. The UK is currently working towards a target of reaching net zero by 2050 and a key part of reaching this is to increase our wind energy generation to 50 gigawatts (GW) by 2030. This would be enough to power every home in the UK with clean, renewable energy.</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Norwich to Tilbury is a vital part of this transition. By the end of the decade, there could be as much as 18 GW of new, cleaner electricity – enough to power around 18 million homes – connected into the East Anglian network. Ensuring this energy can reach the homes and businesses that need it means we need to deliver a significant amount of improvement to the onshore electricity infrastructure, much of which was built to accommodate less demand.				
9-2.1183	Criticism that Ofgem has incentivised the pace through ASTI with early delivery payment of the hundreds of millions, and disincentives in the millions for delayed / late delivery / Criticism that it is unethical that outperformance mechanisms from the regulator should be borne by communities for lack of a strategic approach	National Grid participates in the mechanism set up by the regulator to deliver timely infrastructure to meet the National ambition to deliver Net Zero energy. Ofgem regularly seek feedback from stakeholders on mechanisms they seek to implement, such important feedback should be provided to the regulator Ofgem.			X	
9-2.1184	Criticism that speed and cost are the main factors for the Project / Criticism that too much emphasis is placed on speed and cost	The main driver for this Project is the government's remit to achieve 50 GW of offshore wind power by 2030. While speed and cost are important considerations, they are not the sole factors driving this Project. The goal is to meet the government's renewable energy targets and contribute to a sustainable and low-carbon future. The Project aims to harness the potential of offshore wind energy and play a significant role in achieving the desired capacity. In addition to being a key project in meeting the government's target of 50 GW offshore wind by 2030,			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		this Project also serves as an enablement project. It focuses on establishing the infrastructure necessary to efficiently transfer the generated energy across the country. By enabling the transmission of offshore wind energy, the Project aims to contribute to a more reliable and sustainable energy grid, supporting the overall goal of transitioning to cleaner sources of power.				
9-2.1185	Concern that the impact of COVID and Working From Home on power usage in London has not been considered in relation to the needs case for the Project	The Project seeks connection of Norwich - Bramford - Tilbury. The circuits provide energy flows to demand centres the south-east, south-west and midlands of England. The connection is designed for a number of faults across the network that energy can reach all of these demand centres. Despite the potential, more efficient use of electricity as a consequence of more people working from home, Energy across the south and midlands of England is growing to decarbonise transport, homes, industry and businesses. Electricity Transmission is designed such that energy flows in many directions depending on weather patterns, system faults and demand growth.			X	
9-2.1186	Concern about levels of redundancy of the National Grid distribution network / Request that National Grid complete an audit on the levels of redundancy in the distribution network	The need for the Project has been considered and presented in the SOBR which is informed by power system studies, the detail of the findings can be referred to in the previously published documents, the independent National Energy System Operator (NESO) report published in late 2024 has also reconfirmed the need for this Project and that the existing system capacity is not sufficient beyond 2030 to facilitate the			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		amount of generation connecting into the network in East Anglia. There is a need for a degree of redundancy in the network to be compliant with SQSS requirements that require the Transmission network to be resilient to reasonably foreseeable fault conditions.				
9-2.1187	Criticism regarding the Tarchon Interconnector that will also come onshore and connect to the East Anglia Connection Node (EACN) as 80% of the electricity generated will be sent back to Germany	<p>National Grid has a duty to facilitate new connections and maintain a safe National Electricity Transmission System (NETS) and has considered the capability of the existing network to support such connections. The Project need is set out in the 2025 Strategic Options Backcheck and Review (document reference 7.17).</p> <p>To comply with its duties, National Grid needs to reinforce the electricity network to allow power to be imported to and exported from East Anglia. The reinforcement would provide additional capability to connect to areas of demand, allowing power flows across boundaries, and linking interconnectors to and from Europe. The Project could also connect new offshore wind farms off the Essex coast and a European interconnector to the electricity transmission network. The proposed Tarchon Energy interconnector (from Germany) would allow 1400 MW of electricity to move in either direction providing energy security and resilience. The Project recently carried out targeted consultations between March 2025 to April 2025 and a landowner consultation.</p>			X	
9-2.1188	Suggest that the Government's change in stance to allow more onshore wind power generation (as	The national high-voltage transmission network connects generation to homes and businesses where it			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	opposed to offshore) should be factored into any cost-benefit analysis for the Project	is required, via the local networks (distribution networks operators). In this case that is UK Power Networks. New onshore generation, whether that be wind, solar or battery will often connect direct to the local network. Larger projects may connect directly to the high-voltage national network. Existing planned offshore wind generation, off the east coast of England, is unlikely to be impacted by potential increase in onshore wind generation. However, any policy change as a consequence of an increase in onshore wind generation is a matter for government. Therefore, a cost benefit analysis is not required.				
9-2.1189	Concern that the Project has been designed to deliver more electricity than required (e.g. the Project will deliver 6 kW where only 4 kW is required, in the context of considering alternative options).	The consideration of strategic alternatives has been considered. How these have been considered is set out in the 2023, 2024 and 2025 Strategic Options Backcheck and Reviews (document reference 7.17). The need case for the project is based on c.6 GW capacity to most efficiently deal with the transfer of power across the cited onshore boundaries. A 4 GW solution was considered for an offshore cable alternative which would remove the need to make a connection into, and out of, Bramford substation. Thereby the removal of the requirement of six additional large and costly converter stations. A 4 GW solution would be a considerably less efficient and a short-term arrangement.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Primary access routes / Haul road / Construction compounds						
9-2.1190	Criticism that the draft Order Limits (red outlined area) is considerable but National Grid has not explained why this area has been covered / Concern about the extents of Draft Order Limits for the Project (e.g. beyond the proposed construction sites into fields and other spaces)	The Order Limits is the maximum extent of land within which the Project, may be carried out, and includes both permanent and temporary land required to build and operate the Project. At statutory consultation the document 'Guide to Interacting with our Consultation Plans' provided further detail on the type of consultation plans provided and where relevant some terminology on the data sets shown on those plans, which together made the Order Limits.			X	
9-2.1191	Criticism that there is not enough information on permanent and temporary access roads, compounds and associated requirements for the constructions (e.g. given these will cause major disruption) / Request for information relating to construction camps (e.g. their size and proposed location)	<p>Permanent and temporary access routes are distinct and are shown in the Project plans.</p> <p>The proposed construction compounds are shown in the project plans (in their proposed location and scale). The Environmental Statement (ES) Figure 4.1 includes the same level of detail.</p> <p>Permanent access to underground cables has not previously been defined and is shown within the updated Development Consent Order (DCO) design plans.</p> <p>Temporary access for enabling works will also be shown within updated design plans.</p> <p>Standard detail drawings for the above will be available within the DCO information.</p> <p>Environmental Statement (ES) Chapter 16: Traffic and Transport (document reference 6.16) includes the assessment of the potential impacts of the Project</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>including changes in traffic flow, delays, road safety and impact on Walking, Cycling and Horse-Riding modes on the roads along the Primary Access Routes located in the Local Road Network that will access the haul roads to construction sites.</p> <p>The Transport Assessment (document reference 7.11), submitted with the Development Consent Order (DCO) application, examines capacity, safety, and operational efficiency of the network, identifying potential bottlenecks or safety concerns.</p> <p>Within the assessment of the ES and the Transport Assessment, mitigation measures are proposed to minimise likely adverse impacts.</p>				
9-2.1192	With regards to Primary Access Route for H18-A1 and H19-A1, there have been a number of planning applications on Ipswich Road in that area recently that may need to be considered (Application Reference: 23/00136 and 24/00119). For Wick Lane, further information is sought on whether any management processes may be put in place given the unsuitable nature of the location for high HGV traffic volumes	<p>National Grid notes the respondent's feedback. Planning application 23/00136 has been included in the assessments in Chapter 16: Traffic and Transport (document reference 6.16) within the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) and the Transport Assessment (document reference 7.11).</p> <p>Planning application 24/00119 has not been included as the traffic levels expected from the development are considered negligible and similar to that of the existing National Highways depot (Source Transport Statement Report Ref: 2306470-R01, January 2024)</p> <p>The Project proposes one cross over point on Wick Lane adjacent to the Flying Trade Group site and use of a short section of Wick Lane over the Ardleigh Reservoir.</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		The section of Wick Lane proposed for Heavy Goods Vehicles has undergone Road Safety Audits, and mitigation measures for road safety have been developed. This includes temporary traffic management measures such as speed limit reductions and/or temporary signals and some localised widening.				
9-2.1193	With reference to paragraph 5.6.4, any proposals for temporary accesses that are not needed for operation to be made permanent as a legacy benefit, need to be treated on a case-by-case basis with discussions with the highway authority. Any design may need to be altered in order to be commensurate with their future use rather than the temporary use during construction. A separate planning application may be required for any accesses that are proposed to be retained as a legacy benefit	<p>National Grid acknowledges the potential for certain temporary construction accesses to offer long-term value as legacy benefits in specific locations.</p> <p>Where the retention of a temporary access is proposed beyond the construction period, this will be considered on a case-by-case basis and discussed with the relevant highway authority. We agree that any access proposed for permanent use would need to be assessed to ensure its design and specification are appropriate for its intended long-term function, which may differ from its temporary construction role.</p> <p>We also recognise that any proposal to retain an access may fall outside the scope of the Development Consent Order (DCO) and could require a separate planning application or agreement under highways legislation.</p> <p>This approach ensures that any future use is properly considered and compliant, while retaining flexibility for the Project during delivery.</p>		X		
9-2.1194	Drawing S.42 gives an indication of the layout of the proposed site accesses, whilst useful, as part of the DCO submission ECC would expect to see individual	Noted, these have all been provided within the Development Consent Order (DCO) submission.		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>drawings for each access / crossing point including:</p> <ul style="list-style-type: none"> • Visibility splays within the DCO redline or public highway based on the road speed limit or surveyed speed data. Investigation of the highway boundary will be required for each access. • Vehicle swept paths. • Data on the relative use of the access (i.e. total vehicle movements, peak vehicle movements broke down by vehicle class). • A Stage 1 Road Safety Audit with designer's response • Forward visibility splays for turning construction traffic to see approaching traffic on the major road and for major road traffic to see construction traffic waiting to turn off the major road. • Any additional areas of visibility on the outside of the curve (Figure 3.9 CD 123 Version 2.1.0) 	<p>In addition, individual drawings for accesses and crossing points have been produced and submitted to individual Local Highway Authorities for acceptance within the Stage 1 Road Safety Audit process. Each individual drawing included: location, visibility splays based on existing speed limits or surveyed speed data or engineering judgement where reduction of speed is intended; vehicle swept paths of construction vehicles, vehicle movement forecasts, additional areas of visibility on the outside of the curve (Figure 3.9 CD 123 Version 2.1.0).</p> <p>The drawings were accompanied by a Road Safety Audit brief, compiled in accordance with Standards for Highways, DMRB GG119Its.</p>				
9-2.1195	<p>Suggestion that National Grid should clearly outline the decision-making process for selecting the Primary Access Routes (PARs) and any reasonable alternatives to demonstrate that traffic and transport impacts have been carefully considered.</p> <p>Concern construction may become an issue if it interacts with existing developments (e.g A12). The respondent seeks a degree of control over the phasing of development and/or alternative temporary solutions to avoid adverse impacts.</p>	<p>For each section of haul roads, identified, potential access</p> <p>routes have been assessed. Each haul road required multiple routes to be reviewed to confirm that the most appropriate access been allocated, and highway constraints identified on these routes. The constraints are categorised as follows:</p> <ul style="list-style-type: none"> • Level crossings • Bridges • Roads • Height 		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	Concern the Preliminary Environmental Information Report (PEIR) offers limited clarity on precise impacts for residents and the environment such as vegetation removal and construction compounds and requests further engagement with National Grid prior to Development Consent Order (DCO) submission	<ul style="list-style-type: none"> Residential Other. <p>Roads that were deemed to be potential access routes were identified as any road crossing the proposed alignment. The constraints on the potential access routes were assessed using a red, amber, green (RAG) process, and plotted geographically as a GIS dataset. Through this assessment process a total of 339 access routes were evaluated, with approximately 3,330 unique constraints identified and categorised.</p> <p>A sifting process was carried out following the conclusion of the RAG assessment. The aim of the sifting assessment was to compare all potential access routes for each section of haul road and to identify which were most appropriate to use as Primary Access Routes.</p> <p>To manage the limitations of the desk top assessment, a drive through survey was carried out for Primary Access Routes once identified. This sought to confirm the identified constraints and locate any further constraints or hazards.</p> <p>Where there was not a clear and obvious route identified as the Primary Access Route to a section of haul road, a more detailed study was carried out. This included:</p> <ul style="list-style-type: none"> A desk top assessment to identify potential access routes. A drive through survey of each of the identified potential access routes. 				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<ul style="list-style-type: none"> A report was produced to evaluate the potential access routes, identify the preferred Primary Access Route, and recommend any further assessment work. <p>During the drive through surveys, video recording was carried out of the proposed PARs.</p> <p>The Preliminary Environmental Information Report (PEIR) provided information that was available at the time of submission at the 2024 statutory consultation. This provided an initial assessment of all road links forming the construction route. An assessment was undertaken to identify the percentage increase in HGV and total traffic due to construction on the local road network using future baseline traffic flow data. The predicted increase was assessed against 12-hour weekday flows (07:00-19:00 hrs).</p> <p>Following the submission of the PEIR, ongoing development of the Project proposals continued and further discussion held with local highway authorities regarding mitigation measures. A full assessment on the environmental impact and effects as a result of construction traffic associated with the Project is found within Chapter 16: Traffic and Transport (document reference 6.16) of the ES. This includes further environmental assessment on driver/passenger delay, pedestrian, cyclists and horse-rider delay, amenity, severance, fear and intimidation and road safety.</p> <p>Comment on the A12:</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		The committed development for the A12 Chelmsford to A120 Widening Scheme (20/01905/OBS4) is no longer going forward following the decision by the Government to withdraw funding for the scheme.				
9-2.1196	<p>Concern that the chosen Primary Access Routes (PARs) could potentially lead to extensive hedgerow loss and the reasoning for these routes have not been fully explained in the submission.</p> <p>Concern that related elements to the PARs are located close to residential properties suggests noise impacts and mitigation of construction laydown areas located is thoroughly considered.</p> <p>Concern that operational accesses around Braintree appear impractical without further upgrade and suggests that a review should be conducted in discussion with the Local Highway Authority and BDC</p>	<p>For each section of haul roads, identified, potential access routes have been assessed. Each haul road required multiple routes to be reviewed to confirm that the most appropriate access route had been allocated, and highway constraints identified on these routes. The constraints were categorised as follows:</p> <ul style="list-style-type: none"> • Level crossings • Bridges • Roads • Height • Residential • Other. <p>Roads that were deemed to be potential access routes were identified as any road crossing the proposed alignment. This included:</p> <ul style="list-style-type: none"> • A desk top assessment to identify potential access routes. • A drive through survey of each of the identified potential access routes. • A report was produced to evaluate the potential access routes, identify the preferred Primary Access Route, and recommend any further assessment work. <p>During the drive through surveys, video recording was carried out of the proposed PARs.</p> <p>The only location where hedgerows would be temporarily removed is where widening of the carriageway is required, which is only in a handful of locations across the whole of the project. In other locations hedgerows will be retained but cut back to ensure adequate vehicular visibility is provided. This</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>would be in line with the local highway authority's maintenance plan.</p> <p>The proposed construction access strategy has been developed to manage the impact of construction vehicles on the Public Highway and sensitive receptors, using a combination of more suitable Local Road Network (LRN) connections from the Strategic Road Network (SRN), and temporary haul roads for access along the alignment. Further details of the Construction Routing Strategy are provided in the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), submitted as part of the Development Consent Order (DCO) application.</p> <p>The Outline CTMP (document reference 7.3) includes details of proposed pre-condition and post-condition surveys, and includes allowance for remediation works where changes to the condition have occurred due to the Project construction work.</p> <p>Environmental Statement (ES) Chapter 16: Traffic and Transport (document reference 6.16), submitted as part of the Development Consent Order (DCO) application, includes the assessment of the residual impacts of the Project including changes in traffic flow, delays, road safety and impact on walking, cycling and horse-riding modes along the Primary Access Routes (PARs) located on the Local Road Network. With appropriate mitigation in place, the magnitude of impact along the primary</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>access routes within Braintree are considered slight and the overall effect classified as not significant.</p> <p>Discussions have been held with Essex County Council and National Highways on the likely impact of the Project on the local and strategic highway network around the Braintree area. Details of the assessments undertaken at key junctions can be found within the Transport Assessment (document reference 7.11), submitted as part of the Development Consent Order (DCO) application, with appropriate mitigation identified. Further details on the management of mitigation is provided in the Outline CTMP (document reference 7.3).</p> <p>A construction traffic noise assessment is presented in ES Chapter 14: Noise and Vibration (document reference 6.14) and associated Appendix 14.2: Construction Traffic Noise Assessment (document reference 6.14.A2), submitted as part of the Development Consent Order (DCO) application. The assessment indicates that there are no potential significant adverse effects due to construction traffic noise in this area.</p>				
9-2.1197	Suggestion that parts of the Major Road Network (MRN) such as the A140 should be assessed in terms of Institute of Environmental Management and Assessment (IEMA) rule 1 and 2 and that Abnormal Indivisible Load (AIL) routes should be proven as viable from a port of origin to the site access off the Primary Access Route (PAR)	<p>An assessment of the temporary impact of the Project construction traffic on the MRN, including A140, has been undertaken in the Transport Assessment (document reference 7.11).</p> <p>AIL routes have been assessed from port of origin to the site access off the PARs. Refer to the AIL Strategy within the Outline Construction Traffic Management Plan</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		(CTMP) - (document reference 7.3), submitted as part of the Development Consent Order (DCO) application.				
9-2.1198	Request for more information and reassessment of the proposed access route diagonally across a field and through a tree belt. Suggest use of the existing field path east of the railway embankment and cut through to the little triangular field to access the construction corridor of the eastern side of the railway (where the fewest trees are)	<p>The proposed haul road has been located to avoid clashes with scaffold towers and construction of the pylon. Routing the haul road along the suggested alternative would create a number of health and safety and programme conflicts as the haul road, which will remain in constant use, would run through an active construction site.</p> <p>As such an alternative route has been developed to avoid these issues.</p>		X		
9-2.1199	Request that the Traffic and Transport proposals should include a statement around requiring more extensive monitoring, controls and enforcement for construction traffic, as this does not appear to be considered in sufficient detail within the consultation documents. Criticism that the transport impacts of the pre-commencement operations including the creation of temporary site accesses and construction compounds are also not referred to	<p>Monitoring, control and enforcement for construction traffic is detailed within the Outline Construction Traffic Management Plan (CTMP) - (document reference 7.3), submitted as part of the Development Consent Order (DCO) application. The Outline CTMP (document reference 7.3) will apply to the pre-commencement operations.</p> <p>The trip generation of construction vehicles that has been used for the assessments in the ES Chapter 16: Traffic and Transport (document reference 6.16) and Transport Assessment (document reference 7.11), submitted as part of the Development Consent Order (DCO) application, considers pre-commencement activities e.g. site clearance activities, site set up works associated with the establishment of temporary construction compounds, and temporary accesses. It</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		must be noted that the assessment has been carried out for the worst-case construction peak year that has been estimated based on a worst-case scenario, identifying peak-day vehicle movements for each construction activity to ensure a robust and conservative impact assessment. This approach highlights the maximum potential impact of the Project on each Primary Access Route during the construction period.				
Project Finance / Costs						
9-2.1200	Criticism of using financial compensation to go ahead with the Project / Criticism of National Grid for using compulsory purchase orders / Criticism that insufficient evidence has been provided by National Grid to justify using compulsory purchase orders	Compensation is available where prescribed by statute. Those directly affected by the Compulsory Acquisition or Temporary Possession Powers in the Order (i.e. the ordinarily landowners and those with other interests in the land required for the Project) would in principle be entitled to statutory compensation in accordance with the statutes known as 'the Compensation Code'. National Grid may have to rely on compulsory purchase powers as a last resort, if voluntary agreements for land rights cannot be reached with landowners. We will continue discussions with landowners and try to acquire land and rights over land through voluntary agreements with landowners. When submitting the Development Consent Order (DCO) application, National Grid will also apply for compulsory purchase powers. This would ensure that, if the DCO is granted, National Grid would be able to obtain all land rights needed to construct and subsequently operate the new electricity transmission	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		assets in a reasonable timescale where voluntary acquisition of land or rights is ultimately unsuccessful.				
9-2.1201	Criticism that too much weight has been given to keeping the cost of the Project low / Criticism that National Grid has gone with the cheapest option (e.g. initial costs) / Criticism that the project only benefits National Grid's bottom line / shareholders	<p>National Grid notes the respondent's feedback. Cost is one of the factors that needs to be considered in making decisions on the Project as guided by our duties under the Electricity Act 1989.</p> <p>The relevant National Policy Statement (NPS) EN-5 makes it clear that the Government considers overhead lines to be appropriate and acceptable in most instances. However, the Government is aware that overhead lines may not be appropriate in particularly sensitive areas. The process of appraising different identified options is undertaken using guidance (National Grid's Approach to Consenting). Its aim is to ensure that decisions regarding the project's design (route, location, or technology option) are based on a full understanding and balance of the technical, socio-economic, environmental, and cost implications of each option. Once all identified options have been appraised, the option or options that best meet National Grid's statutory duties and obligations are selected as the preferred option or options. These duties include balancing the need to be economic and efficient, which includes keeping costs down in the interests of the bill-paying consumers to whom the costs are eventually passed, with a duty to have regard to preserving amenity, which includes the natural environment, cultural heritage, landscape, and visual quality.</p> <p>The consideration of cost within the decision-making</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		process is therefore one of our statutory duties and is not something that we could make representation to the Office of Gas and Electricity Markets (Ofgem) to waive.				
9-2.1202	Criticism of the costings (including cost models used) provided by National Grid for the Project and alternative options (e.g. including offshore; some significant costs that do apply to overhead lines but not underground or offshore have not been included in the costings; the cost provided by National Grid is too low, given comparison to the cost of the Hinkley project) / Criticism that the cost savings for an integrated offshore ring main / use of High Voltage Direct Current (HVDC) underground cables has not been considered (e.g. savings of £2 billion and infrastructure requirements reduced by 50%) / Concern that the cost of the Project has been underestimated	<p>National Grid notes the respondent's feedback. Construction costs are included in the overall estimated costs of each strategic option. This is set out in the 2025 Strategic Options Backcheck Report (SOBR) (document reference 7.17). This document takes account of any new cost or technology information, for instance along with any other changes in the planning and regulatory framework. Where the cost of more minor elements of each strategic option are unlikely to distinguish between options, these are not necessarily included. We will continue to engage with the government and our regulators regarding policy and costs for new infrastructure and will adjust our approach if necessary.</p> <p>National Grid is constantly looking into new innovations and investigating alternative technology types. These are explored and assessed for suitability. Alternative technologies were investigated for the Project and are contained within the 2025 SOBR (document reference 7.17). These alternative technologies included an offshore connection using Direct Current (DC) technology, and various onshore connection options including increasing operational voltages on existing network to above 400 kV; Alternating Current (AC) overhead lines (established technology); alternative pylon types; AC underground technology; High Voltage</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Direct Current (HVDC) overhead line and underground cables; and Gas Insulated Line (GIL). Currently, overhead lines offer the most economic and efficient solution to transmit electricity over long distances.				
9-2.1203	Request for transparent costings for Project and alternative options / Criticism that transparent costings for the Project and alternative options have not been provided	National Grid notes the respondent's feedback. Construction costs are included in the overall estimated costs of each strategic option. This was set out in the 2024 Strategic Options Backcheck and Review (SOBR) (available on the Project website) and is set out in the 2025 SOBR) (document reference 7.17). This document takes account of any new cost or technology information, for instance along with any other changes in the planning and regulatory framework. Where the cost of more minor elements of each strategic option are unlikely to distinguish between options, these are not necessarily included. We will continue to engage with the government and our regulators regarding policy and costs for new infrastructure and will adjust our approach if necessary.	X	X	X	
9-2.1204	Criticism that impact on property value / private loss has not been included in the costings provided for different options by National Grid for the consultation (including cumulative costs of legal fees) / Criticism that National Grid has not provided analysis on the impact of the Project and alternatives on house prices (as requested by respondent in previous consultation)	National Grid is promoting what is termed a 'Nationally Significant Infrastructure Project' (NSIP). The process by which the Project must progress through the planning process is set out in the Planning Act 2008 and associated guidance. In addition, the potential impacts of the proposal are required to be assessed under the Infrastructure Planning (Environmental Impact Assessment) Regulations 2017 and legislation. There is	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		no requirement for a potential effect on property prices to be assessed or be included in the costing of options. Potential impact on property prices is not a material planning consideration for the purposes of a DCO application. Separate to this point, the Secretary of State has asked that the DCO application include an assessment of the likely significant environmental effects in the form of potential impacts on property prices. The ES contains an assessment on this. It concluded that there is no evidence of any significant environmental effects on house prices as a result of the Project. Although not part of the Environmental Impact Assessment process it is relevant to observe that any impact of the Project on residential properties are potentially capable of being dealt with through statutory nuisance or compulsory purchase compensation regimes (subject to the requisite criteria being met).				
9-2.1205	Concern about the cost to the consumer for financing the Project / Request for information on the cost of Project for consumers	National Grid is funded by a price control mechanism which is agreed with and set by the Office of Gas and Electricity Markets (Ofgem). We pay up front the cost to build a new power transmission line. The cost is then gradually passed on to customers through their electricity bills over the next 40 years or so. The funding for these up-front costs comes from our shareholders and the institutions that lend us money. Across all our investments in our vital infrastructure, this amounts to many billions of pounds. They invest in us because they expect that we will make a sufficient profit to provide an appropriate return on their investment and eventually	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>pay them back. This brings a major benefit to electricity bill payers as it allows the recovery of the cost of our investment to be spread out over many years, rather than having a spike in electricity bills when we build a large new transmission connection.</p> <p>In response to a request by Essex County Council on behalf of all host Local Planning Authorities, we agreed to fund an independent review of cost options. This review has been completed and can be found on the Project website.</p>				
9-2.1206	Criticism that too much money is being / has been spent on consultation	<p>Public consultation is important to inform people of the proposals and to allow stakeholders an opportunity to provide feedback and influence the plans.</p> <p>National Grid ensured that our consultation was as informative as possible to provide local residents with accurate and representative information on our proposals. This included having our documents, interactive map, and 3D visualisation tools available at all of our Public Information Events. This meant that people could interact with our Project and have a full understanding of what we are proposing.</p> <p>We also provided both digital and printed materials to allow people the choice of how to interact with the consultation.</p>	X		X	
9-2.1207	Suggest that costings for options for the Project (e.g. overhead line, offshore, underground cables) take savings from wind power into account	Costs for the Project and potential strategic alternatives are set out in the 2025 Strategic Options Backcheck and Review (document reference 7.17) and subsequent back-checks, the basis on which costs are estimated			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		and the criteria used, is also set out in this report. These costs are based on the component parts that National Grid requires to build and operate a transmission apparatus. This allows a comparison to be made across alternatives. Potential savings arising from the connection to more affordable additional wind power are not relevant to the strategic options appraisal speculative and are therefore not taken into account in the costings.				
9-2.1208	Suggest that an alternative solution (e.g. underground cables, offshore, etc) is used for the Project with the cost of this covered by people in London / Suggest that existing infrastructure is upgraded for the Project with the cost of this covered by people in London	<p>National Grid notes the respondent's feedback. Strategic alternatives for the Project, including underground cables and offshore cables, have been considered and are set out in the published Strategic Options Backcheck and Reviews (SOBR) published in 2023 and 2024 (available on the Project website) and the 2025 SOBR (document reference 7.17). This sets out the need case for the Project and the reasoning why an onshore solution (including a mix of overhead lines and underground cable) has been taken forward.</p> <p>National Grid has a statutory duty to facilitate new connections and maintain a safe National Electricity Transmission System (NETS). The Project would facilitate the connection agreements that are in place with two offshore wind farm projects and an interconnector project based on their connection into a new East Anglia Connection Node (EACN) substation. The Project would also reinforce the local transmission network which currently does not have the capacity</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>needed to reliably and securely transport all the energy that is likely to be connected in the future – driven by the Government's plan to increase offshore wind from the current 8.5 GW to 50 GW by 2030 to meet the increased demand. This ambition has been emphasised in the National Energy System Operator's (NESO) Clean Power 2030 report published in November 2024.</p> <p>The needs case is reviewed at each critical stage of the Project's development and without a robust demonstrable need the Project would be revised or fall away. Currently, the contracted generation shows a clear need for the Project. The cost of the Project would be shared by all billpayers. National Grid is funded by a price control mechanism which is agreed with and set by the regulator, the Office of Gas and Electricity Markets (Ofgem). National Grid pays up front for the costs to build a new power transmission line. The cost is then gradually passed to consumers through their electricity bills over the next 40 years or so. Any alternative option would also be funded in this way, and so we are required to pursue the cheapest option as all costs ultimately go onto the billpayer.</p>				
9-2.1209	Criticism that cost of accessing pylons for construction and maintenance, and the cost of archaeological investigation where agricultural land with historical significance is requisitioned, have not been included in the long term comparative costings for the Project	National Grid's assessments, which will be subject to regulatory scrutiny, have concluded that the costs for an offshore grid would be around £4 billion, with lifetime costs of £4.5 billion. These figures are in line with what we expect when considering the costs of projects of similar technology and length and including other factors included in the construction stage.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.1210	Criticism that the impact of the Project (e.g. impact on the environment, impact on residents, impact on traffic, impact on tourism, impact on health/mental health, impact on businesses) has not been included in the costings provided for different options by National Grid for the consultation / Suggest that impact of the Project (e.g. impact on the environment, impact on residents, impact on traffic, impact on tourism, impact on health/mental health, impact on businesses) is included in the costings	<p>The factors listed have, where practicable, been considered by the Project.</p> <p>The figures National Grid has presented as expected costings for the Project are reflective of the final costs for other similar projects which included wider costs and impacts of proposals such as impacts of traffic and tourism.</p> <p>As we developed our proposals, we considered how to mitigate any potential impacts that our proposals might have and welcomed feedback on this at our consultation. Where necessary, we have amended our proposals in light of this feedback. Within the Environmental Statement (ES) (document reference Volume 6: Environmental Statement), we have outlined potential environmental, social economic, and health impacts as well as mitigation.</p>	X		X	
9-2.1211	Suggest that cost of the Project is spread across the UK (e.g. to make alternative options viable)	The cost of the Project would be shared by all billpayers, not just those in East Anglia. National Grid is funded by a price control mechanism which is agreed with and set by the regulator, the Office of Gas and Electricity Markets (Ofgem). National Grid pays up front for the costs to build a new power transmission line. The cost is then gradually passed to consumers through their electricity bills over the next 40 years or so. Any alternative option would also be funded in this way, and so we are required to pursue the cheapest option as all costs ultimately go onto the billpayer.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.1212	Suggest that impacts and costings for the Project are obtained from a reputable neutral source	<p>There have been independent assessments of Project cost. This includes The National Energy Systems Operator (NESO)'s comprehensive cost breakdown of the onshore and offshore options. For further details refer to the report on East Anglia Network Study, by the National Energy System Operator which is available on the NESO website.</p> <p>There have been several reports that have shown that an onshore option is the cheapest option to reach net zero targets set by the government, such as from NESO and Ofgem.</p> <p>Ultimately, it is for National Grid to demonstrate to the regulator that the Project has been fully costed.</p>			X	
9-2.1213	Criticism that there are cheaper alternatives to the Project that National Grid has not considered / Criticism that the Project is too expensive (e.g. the cost of steel and ongoing maintenance is expensive)	<p>Throughout the development of our proposals, we have carried out as full costing analysis of both overhead line and alternative options. Our initial assessments have concluded that the costs for an offshore grid would be around £4 billion, with lifetime costs of £4.5 billion. Whereas the costs of pursuing the onshore option would be £895 million, and lifetime costs of £1,231 million.</p> <p>When developing proposals for new transmission connections, we need to consider National Policy Statements which are set by government. The National Policy Statement (NPS) EN-5 covers the development of new energy infrastructure. This policy concludes that in most cases, the government expects that overhead lines will be appropriate and should be used as standard to reinforce the grid. The proposals to use overhead line</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>technology for the Project is in line with this policy and with our statutory duty as a company.</p> <p>In addition to cost, there are a range of environmental factors and other onshore and offshore impacts which need to be considered for alternatives. Taking all these considerations into account, we have concluded that an onshore connection is the most appropriate solution for the Project.</p> <p>Further information regarding the potential alternatives, including discussion of costs, and how we came to our conclusion that our proposed connection is the most appropriate solution, is available in the 2025 Strategic Options Backcheck and Review (document reference 7.17) and the 2023 and 2024 Design Development Reports (available on the Project website) and the 2025 Design Development Report (document reference 5.15).</p>				
9-2.1214	Suggest that National Grid provide the costs for the Project (and alternative options) in terms of the actual net change to the average UK electricity bill per household (including the estimated / predicted unit cost restrictions in kilowatt power generation, again, presented as a cost per year per household figure)	<p>National Grid does not produce or sell electricity and does not set household bills. National Grid is funded by a price control mechanism which is agreed with and set by the regulator, the Office of Gas and Electricity Markets (Ofgem). We pay up front the costs to build a new power transmission line. The cost is then gradually passed to consumers through their electricity bills over the next 40 years or so.</p> <p>Our transmission network cost in 2023/2024 was £24.50 of the average annual household bill, of which 44 per cent was Network Investment.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Network costs vary year to year. For example, to reflect usage or how costs are allocated on different parts of the network. Because of this, we do not currently have exact figures for how Norwich to Tilbury or other projects could increase consumer bills.</p> <p>For more information on how National Grid Electricity Transmission impacts household bills, please see our website: https://www.nationalgrid.com/electricity-transmission/who-we-are/breaking-down-your-bill.</p>				
9-2.1215	A group claim for all residents affected by the building of the pylons for "blight, disruption to the enjoyment of their properties and loss of property value" is being planned / Concern that this will cost National Grid a significant amount of money, which has not been factored into their costings	There is currently no basis in planning or in legislation that requires National Grid to provide compensation to third party property owners that believe their property is going to be devalued by the installation of pylons. UK law also does not allow for compensation in cases of a loss of view or changes to a view.			X	
9-2.1216	Criticism that the costings for the Project do not include the compensation claims that will be made due to National Grid not presenting an offshore option	<p>All affected landowners would be compensated for any temporary/permanent losses, and this would be dealt with on a case-by-case basis.</p> <p>If there are any specific concerns requiring compensation and how it would be assessed, please contact the Project team:</p> <p>Norwich-Tilbury@fishergerman.co.uk or by calling Freephone 0808 175 3314.</p> <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD.</p> <p>Additionally, we await details of how the Government intends to implement its proposals for those living in close proximity to new electricity infrastructure.</p>				
9-2.1217	Suggest that National Grid provide the whole life costs for the Project, including land purchase, maintenance, withdrawal from services, environmental costs, etc	<p>National Grid is funded by a price control mechanism which is agreed with and set by the Office of Gas and Electricity Markets (Ofgem). We pay up front the costs to build a new power transmission line. The cost is then gradually passed to customers through their electricity bills over the next 40 years or so. The funding for these up-front costs comes from our shareholders and the institutions that lend us money.</p> <p>As part of this regulatory framework we have to demonstrate to the regulator that the Project is offering value for money for the bill payer. The work put in to assess the different options available for this Project including the whole life costs was set out in the 2024 Strategic Options Backcheck and Review which is available on the Project website and was available at the consultation events.</p>	X		X	
9-2.1218	Criticism that cost of mitigation has not been included in the costings provided for different options by National Grid for the consultation (e.g. offshore)	For the statutory consultation, National Grid prepared indicative estimates of the capital costs involved in the options we considered. These indicative estimates were based on the high-level scope of works defined for each strategic option in respect of each technology option that is considered to be feasible, these were presented in the	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		2024 Strategic Options Backcheck and Review (available on the Project website) and updated in the 2025 Strategic Options Backcheck and Review (document reference 7.17). As these estimates were prepared before detailed design work had been carried out, we made equivalent assumptions for each option. This methodology ensured that all options for appraisal proposes were compared on a like for like basis.				
9-2.1219	Request for National Grid to provide disaggregated costs for the Project (list of costs provided by respondent)	<p>Costing of strategic options are done on a like for like basis and it isn't feasible to develop all strategic options to the same level of detail as the preferred option taken forward, and as such the development and provision of a project costing of just the preferred option would skew the comparison between strategic options would likely lead to misunderstanding and interpretation of data.</p> <p>National Grid Electricity Transmission (NGET) is an Office of Gas and Electricity Markets (Ofgem) regulated business, with obligations to consider customer, environmental and other considerations as outlined in the Electricity Act and in its licence commitments. Consideration of the costs of a project and the funding it should receive via the regulatory settlement is the subject of a separate regulatory process, and it is not appropriate for the Planning Inspectorate, Examining Authority or the Secretary of State in their remit under the Planning Act to seek to duplicate other regimes.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.1220	Suggest that the Crown Estate makes a contribution to the funding of the Project (e.g. to make alternative options viable)	<p>How the Crown Estate manage their resources is not a matter for National Grid. National Grid is funded by a price control mechanism which is agreed with and set by the regulator, the Office of Gas and Electricity Markets (Ofgem). We pay up front the costs to build a new power transmission line. The cost is then gradually passed to consumers through their electricity bills over the next 40 years or so. The funding for these up-front costs comes from our shareholders and the institutions that lend us money.</p> <p>In addition, the cost of the Project is not the only factor considered when considering alternatives. Due to technical and environmental constraints, neither an underground route nor an offshore option would be deliverable by 2030, when up to 50 GW of offshore wind energy will need to be connected into the grid. The 2024 National Energy System Operator (NESO) (previously Electricity System Operator (ESO)) East Anglia Network Study also agrees that neither option would meet the 2030 target.</p>			X	
9-2.1221	Criticism that too much weight has been given to keeping the maintenance costs of the Project low (e.g. given that the overhead line option is better for National Grid profit in terms of maintenance costs)	Short, medium and long term maintenance is something that National Grid has to consider as part of the planning and design process. The decision made around overhead line, underground cable or other technologies are not made on "profitability of maintenance" but actually on social, environment, economic scales and also extensive planning and reviewing the landscape to			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		find what solution works best whilst impacting the local environment the least.				
9-2.1222	Suggest that a full comparison between the cost of the Project, including build costs, ongoing costs / uplifts in bills per household, and the effect of each route to Company executive's bonuses should be published for transparency	<p>National Grid does not produce or sell electricity and does not set household bills. National Grid is funded by a price control mechanism which is agreed with and set by the regulator, the Office of Gas and Electricity Markets (Ofgem). It pays up front what it costs to build a new power transmission line. The cost is then gradually passed to consumers through their electricity bills over the next 40 years or so.</p> <p>Our transmission network cost in 2023/2024 was £24.50 of the average annual household bill, of which 44 per cent was Network Investment.</p> <p>Network costs vary year to year. For example, to reflect usage or how costs are allocated on different parts of the network. Because of this, we do not currently have exact figures for how Norwich to Tilbury or other projects could increase consumer bills.</p> <p>As a private company, we will not be disclosing the details of company executive bonuses. They also have no bearing on the Project.</p>			X	
9-2.1223	Suggest that National Grid conduct a full and inclusive review of the options other than overhead lines and include the full implications of long term maintenance and the involvement of all parties (e.g. the review must not be restricted to the cost / benefit implications for National Grid alone)	National Grid looks at all factors when selecting a method of connecting the transmission network. A full, detailed appraisal is carried out which as a result will provide solutions to the challenges that we face. The actual cost of the works including the long term maintenance is only one factor and is taken after we			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		have reviewed other factors like environmental impact, visual impact and local communities. The strategic options and basis for decisions have been published at both the 2023 non statutory consultation and also the statutory consultation and remain available to view on the Project website.				
9-2.1224	Concern that the cost of the Project provided by National Grid does not include / very little cost has been attributed to wayleaves and compulsory purchase	National Grid's Project costs do take into account the required agreements needed to install, maintain and remove equipment. Further information on National Grid's agreement payments can be found in the Land Right Strategy document, which is available on the Project website.			X	
9-2.1225	Suggest that local residents should have an opportunity to contribute to paying for alternative options (e.g. underground cables) through a small fee	<p>Due to the large costs involved in an underground or offshore alternative, it would not be possible to meet this cost by local residents choosing to contribute a small fee.</p> <p>In addition, the cost of the Project is not the only factor considered when considering alternatives. Due to technical and environmental constraints, neither an underground route nor an offshore option would be deliverable by 2030, when up to 50 GW of offshore wind energy will need to be connected into the grid. The 2024 ESO East Anglia Network Study also agrees that neither option would meet the 2030 target.</p>			X	
9-2.1226	Criticism that despite the Supply Chain stating 30% increases, and long manufacturing delays, National Grid is unable to answer in consultation where they	National Grid has to continuously review the economic situation with regards to manufacturing and capacity. As a rule and as part of our commitment, materials are all			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	would be sourcing steel, and claim not to have tendered and / or costed any construction as the application has not reached this phase / Request for National Grid to confirm how the Project will be re-costed accurately to reflect current inflationary conditions	sourced from as local as possible however this is not always achievable. National Grid has a robust procurement process and supplier base which are monitored, reviewed challenge on their cost and driven to sustainable more cost effective solutions. All Project costs do, where possible, take into account any potential factors which may adjust the baseline costs where feasible.				
9-2.1227	Criticism that National Grid has not included Biodiversity Net Gain in their costings (e.g. 10% BNG could cost millions of pounds)	At a strategic level all Project costings are done at the same level of detail and that cannot include detailed costings for specific mitigation, including Biodiversity Net Gain (BNG). It is important when comparing alternatives that all costs are on the same bases to ensure consistency.	X	X	X	
9-2.1228	Criticism that National Grid has not included mitigation in their costings	National Grid has undertaken an Environmental Impact Assessment (EIA). The results of this assessment are provided in the Environmental Statement (ES) that accompanies the application for development consent. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation of the Project and recommends appropriate mitigation measures to reduce potential effects. The scope of the EIA is included in the Scoping Report which was submitted to the Planning Inspectorate in November 2022 (document reference 6.19).	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>We continued to engage with a range of stakeholders (including Statutory Environmental Bodies (SEBs) and relevant local planning authorities) throughout the development of the Project design and environmental assessment work.</p> <p>At a strategic level all Project costings are done at the same level of detail and that cannot include detailed costings for specific mitigation. It is important when comparing alternatives that all costs are on the same bases to ensure consistency.</p>				
9-2.1229	Criticism that National Grid has not included Community Benefits in their costings (e.g. this will equate to hundreds of millions of pounds)	<p>The Government has published its guidance on community funds for transmission infrastructure (DESNZ, 2025). National Grid is committed to working with Ofgem, industry partners, local communities and their representatives to ensure community benefits are delivered fairly and effectively, driving lasting, positive change for the people and places integral to our developing electricity network.</p> <p>Government has also announced its plans to introduce a bill discount scheme for households within 500 m of new infrastructure, which it proposes to introduce through the Planning and Infrastructure Bill. This is evolving government policy. Government expects this Project to be in place by 2026 and we will share further details as they emerge.</p> <p>National Grid is committed to providing a coordinated local and regional approach to community benefits. This will be delivered outside the development consent</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		process, since this is not a material consideration in the decision on the proposed Project or a matter to be secured as part of the DCO, as per the Community Funds for Transmission Infrastructure: Guidance (DESNZ, 2025).				
9-2.1230	Criticism that National Grid has underestimated compensation costs in their Project costings (e.g. landowners will challenge the very minimalist compensation offered that has not been reviewed for many years and is insignificant in today's costs of living) / Criticism that the cost of compensation will make the Project unviable (e.g. so alternative options should be reviewed) / Criticism that National Grid has not provided calculations estimating the compensation for: decrease in property values; Crop losses (temporary and permanent); Disturbance and reinstatement costs; Landowner time; Professional fees; Loss or sterilisation of minerals; Loss or sterilisation of development land; Impact on businesses	National Grid's Land Rights Strategy sets out compensation payments that will be made to landowners. The document and the payment schedules contained within, were reviewed, and updated in early 2024. A copy of this document is available on the Project website. Landowners will be compensated accordingly for any substituted damages, losses and disturbance, in line with the Compensation Code.	X	X	X	
9-2.1231	Criticism that costing contingencies are only 10%, despite this being the longest National Grid Project, with the most unknowns (e.g. normally big projects include around 40% contingency as per the Treasury Green Book guidance	National Grid is confident that the process we follow to identify and then assess potential strategic options is robust and the most appropriate. This has been tried and tested through numerous previous projects, the formal examination process and ultimately decided by the relevant Secretary of State.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>The Treasury Green Book provides guidance on the interpretation by public servants of public spending, assets and resources for projects, policies and spend from the public purse. That is not relevant for National Grid Electricity Transmission (NGET).</p> <p>There is no requirement in the Planning Act 2008 for developers to have to submit a Treasury Green Book assessment as part of a Development Consent Order (DCO) application.</p> <p>NGET is an Ofgem regulated business, with obligations to consider customer, environmental and other considerations as outlined in the Electricity Act and in its licence commitments. Consideration of the costs of a project and the funding it should receive via the regulatory settlement is the subject of a separate regulatory process, and it is not appropriate for the Planning Inspectorate, Examining Authority or the Secretary of State in their remit under the Planning Act to seek to duplicate other regimes.</p> <p>It is also important that all strategic options are considered on a like for like basis and as such applying a percentage would need to be applied to all strategic options so wouldn't have a fundamental impact on the outcome of strategic options.</p>				
9-2.1232	Criticism relating to the costs of late or delayed delivery (Ofgem fines) / Despite passing on the risk to the consortium for construction to incentivise their delivery and performance, delays will cost millions,	Penalties and incentives from Ofgem do not form part of the decision making in terms of which is the most suitable option. Constraint costs, like the ones published in the 2024 NESO report inform the requirements to			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	and this has not been considered in the Project costings	deliver the project by certain dates, they also do not influence the assessment of the Project against the consenting requirements considered. There are always multiple considerations on a project of this scale and efficient delivery to dates to minimize constraint costs to the consumer is one of those, but so is acceptability in consenting terms. The overall funding position of the delivery of the Project is not secured from Ofgem until after the Development Consent Order is granted.				
9-2.1233	Suggest that energy companies should pay for the Project (e.g. the difference in cost for alternative options should be covered by energy companies) (i.e. profits from energy sales should be used for the Project rather than pushing the cost onto the consumers through bills)	National Grid does not produce or sell electricity and does not set household bills. National Grid is funded by a price control mechanism which is agreed with and set by the regulator, the Office of Gas and Electricity Markets (Ofgem). We pay up front the cost to build a new power transmission line. The cost is then gradually passed to consumers through their electricity bills over the next 40 years or so. The funding for these up-front costs comes from our shareholders and the institutions that lend us money. Across all our investments in our vital infrastructure, this amounts to many billions of pounds. They invest in us because they expect that we will make a sufficient profit to provide an appropriate return on their investment and eventually pay them back. This brings a major benefit to electricity bill payers as it allows the recovery of the cost of our investment to be spread out over many years, rather than having a spike in electricity bills when we build a large new transmission connection.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.1234	Suggest that the cost of the Project is spread across multiple years (e.g. to make alternative options viable)	The Project is funded based on cost estimates over a given period of time already. National Grid has to continuously demonstrate best for task and value for money in all the design stages and continue into construction with lean techniques to improve efficiency in the build.			X	
9-2.1235	Criticism that National Grid's costs are based on an independent study of different solutions, the 'Electricity Transmission Costing Study' which was signed off in January 2012, and is therefore outdated and does not include all the technical advances that have occurred during this time	National Grid keeps technology developments under constant review and the costs set out in National Grids' Strategic Options Backcheck and Review are based on an assessment completed in 2022. National Grid did not use the IET Electricity Transmission Costing Study 2012 (IET Report 2012) as the basis of our methodology. The IET Report 2012 was produced independently to provide a third party benchmark of costs. National Grid's latest assessment information is based on a 2020/21 cost base. It has also taken account of the latest technology for example in HVDC (we are now able to install the largest cables currently available in the Market at 525 kV 2 GW per bi-pole where appropriate). Our analysis took account of these developments for the comparison and concluded for the capacity and connections we were required to make an onshore option represented the most appropriate solution.	X		X	
9-2.1236	Criticism that costs provided by National Grid lack credible detail and conflict with earlier annual report materials which have been published	National Grid provides full detail of the technology considered, capital cost and lifetime cost in Appendix C 'Technology Overview', Appendix D 'Economic Appraisal' and Appendix E 'Mathematical Principals Used for AC Loss Calculation' in the 2025 Strategic			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Options Backcheck Report (document reference 7.17). This methodology is consistent with the previous applications made for Development Consent Orders made by National Grid and is a transparent methodology that aligns with independent benchmarks and price control submissions to the regulator Ofgem.				
9-2.1237	Criticism that the proposed lump sum payment to landowners for the easement places an unfair encumbrance onto future generations / Suggest that easement agreement be arranged as an annual payment, for which wayleave payments are made in addition to compensation for crop loss during repairs / Suggest that National Grid should continue to pay wayleaves to landowners for as long as infrastructure for the Project is installed (e.g. as problems related to field obstructions will continue)	<p>National Grid's Land Rights Strategy sets out compensation payments that will be made to landowners. The document and the payment schedules contained within, were reviewed, and updated in early 2024. A copy of this document is available on the Project website.</p> <p>Where easement payments cover the rights for National Grid to access the land in perpetuity, these payments do not include any future damage or disturbance claims that may arise from maintenance works. These will be dealt with on a case-by-case basis at the time.</p> <p>National Grid does not use annual wayleave agreements / payments for new assets. This is to ensure the permanent rights to install, maintain and remove the apparatus. A one-off easement payment is the equivalent of annual wayleave payments for the expected life span of the apparatus.</p>			X	
9-2.1238	Criticism that the Project (e.g. use of overhead lines) is a more expensive solution over the design life when reliability is taken into account	The use of overhead lines is more efficient in both maintenance and construction when compared to alternative methods such as underground cable. The			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		reliability of the overhead line network to date is very good and improving with every upgrade.				
9-2.1239	Criticism that the costs for the Project do not include compensation to landowners, residents and businesses through Community Benefits, Biodiversity Net Gain, and house price compensation	<p>National Grid notes the respondent's feedback. Throughout the development of the Project, we have carried out as full costing analysis of both overhead line and alternative options. These costs are detailed in the 2025 Strategic Options Backcheck Review (document reference 7.17) submitted with the DCO application.</p> <p>National Grid is committed to working with local suppliers, facilitated by supporting forums (such as the local Chambers), on electricity industry skills and workforce planning. National Grid is also committed to providing a coordinated regional approach to jobs and skills opportunities. This commitment is broader than the individual project and separate to any commitments under the proposed development consent order for this Project. The socio-economic effects of the project are assessed in Chapter 15: Socio-economics, Recreation and Tourism of the Environmental Statement (ES) (document reference 6.15). Post construction job opportunities are limited given the nature of the development however we will still work with Local Authorities (including facilitating local partners) to understand what is important to them around skills and employment to ensure we leave a lasting positive legacy in the communities where we operate. With regards to a delivery mechanism, the above measures will be delivered as part of our community benefit package,</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		which will look at both local and regional initiatives. This will be delivered outside the development consent process and is not a material consideration in the decision on the proposed Project or a matter to be secured as part of the DCO, as per the Community Funds for Transmission Infrastructure: Guidance (DESNZ, 2025).				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Project Finance / Costs						
9-2.1240	Criticism that overhead lines have a large capital expenditure / Criticism that overhead lines are expensive	<p>National Grid is constantly looking into new innovations and investigating alternative technology types. These are explored and assessed for suitability. Alternative technologies were investigated for the Project, these included an offshore connection using direct current (DC) technology, and various onshore connection options including: increasing operational voltages on existing network to above 400 kV; alternating current (AC) overhead lines (established technology); alternative pylon types; AC underground technology; high voltage direct current (HVDC) overhead line and underground cables; and gas insulated line (GIL).</p> <p>Currently, overhead lines offer the most economic and efficient solution to transmit electricity over long distances.</p>			X	
9-2.1241	Criticism that the Project has not proposed to pay for landowner's time in association with the Project	<p>If a landowner has any concerns or questions over what is covered under compensation associated with the Project, they should seek third party advice on the Compensation Code or contact the Project's lands team to discuss: Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.</p> <p>Alternatively, you can write to: Norwich to Tilbury Lands Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		The Project's Lands team will be able to discuss landowners time with individual landowners or their appointed agent and reach agreement on when their time will be covered.				
9-2.1242	Criticism that the costs for the construction and removal of the haul road for the Project have not been provided by National Grid	Strategic option costs were provided in the 2024 Strategic Options Backcheck and Review (SOBR) (available on the Project website) and now provided in the 2025 SOBR (document reference 7.17) to compare strategic options in a like for like scenario, breaking down the costs on one option wouldn't provide a fair comparison between options. Delivery methodology and strategies around things like haul roads also aren't defined at the time of consultation all of which would have impacts on detailed costings. Project funding is secured through Ofgem submissions and challenged after the Development Consent Order (DCO) submission has been made, once detail around the scheme has been defined to such an extent that more detailed costs can be broken down and provided to the regulator in line with the regulatory process.			X	
9-2.1243	Concern that costings for the Project are based on generic 'book' costs (uplifted for inflation at 2021 levels) which are now significantly out of date, and did not account for enough contingency for location-specific technical requirements (e.g. given the variable terrain of the Project route) / Criticism of the use of a generic cost model for the Project	The 2020/2021 cost base analysis as set out in the 2025 Strategic Options Backcheck and Review (document reference 7.17) is to assess alternatives at a comparable high-level for the purposes of options appraisal. The costs are published on a historical unit cost basis and given a fixed point in time for comparison. The appendices set out what the costs include and the basis upon which they are used. The calculation for all			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		options, including overhead line, underground cabling or subsea cabling, does not require detailed location-specific information to allow a robust comparison.				
9-2.1244	Suggest that overuse of electricity should be taxed to fund alternative options for the Project (e.g. opposed to government policy centred on making electricity cheaper)	National Grid Electricity Transmission is not responsible for charging consumers for electricity or taxation. Instead, it operates and maintains the UK's electricity transmission system.			X	
9-2.1245	Criticism that currently significant doubt and uncertainty exists as to the economic justification for the proposed cable route to the Tilbury Substation / Request that the cost of the Project must be considered against the protection afforded to maintaining the competitiveness and resilience of national ports in National Policy Statement for Ports (NPSP)	Following consideration of feedback, direct engagement with relevant parties and further technical review, National Grid has modified the connection arrangements at Tilbury. We now propose to connect to the National Electricity Transmission System by establishing a new 'Tilbury North' substation to the south of Orsett Golf Course which would be connected into the existing 400 kV overhead line (running north from the existing Tilbury Substation). The new connection arrangement into Tilbury North substation achieves the same (or under some circumstances improved) system performance as if connecting into the existing Tilbury Substation.			X	
9-2.1246	Criticism that the generic cost models used by National Grid are inappropriate given that the construction cost depends on proper engineered solutions derived from correctly specified geological exploration, significant local surveying delivering a considered engineering design	National Grid notes the respondent's feedback. Cost estimates are based on information available at the time and previous experience on similar projects. This at a sufficient level of detail to allow for a comparison of strategic alternatives.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.1247	Criticism that the design adequacy of the Project is poor (e.g. including due to lack of geological surveys and benchmarking the Project against a similar scheme in Scotland), which in turn leads to a wide discrepancy of Project cost	<p>The Project has been designed in line with the National Grid options appraisal as outlined in Section 3.2 of the Preliminary Environmental Information Report (PIER). The Project has also been designed to comply with existing National Grid standards and relevant external guidance and processes, such as the International Commission on Non-Ionizing Radiation Protection guidelines (ICNIRP, 1998) for reducing effects in relation to Electric and Magnetic Fields (EMFs).</p> <p>Chapter 9 of the PIER reports the results of the preliminary assessment of the potential effects of the Project on contaminated land, geology and hydrogeology. It also covers effects on the following during construction and operation (and maintenance): contaminated land and the receptors that could be affected by existing contaminants within the soil; Geology including designated geological sites and minerals; hydrogeology including groundwater quality, levels, and flow.</p> <p>Strategic option costs are provided in the 2025 Strategic Options Backcheck and Review (SOBR) (document reference 7.17) to compare strategic options in a like for like scenario, breaking down the costs on one option wouldn't provide a fair comparison between options. Delivery methodology and strategies around things like haul roads also aren't defined at the time of consultation all of which would have impacts on detailed costings. Project funding is secured through Ofgem submissions</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		and challenge after the Development Consent Order (DCO) submission has been made when the detail around the Project has been defined to such an extent that more detailed costs can be broken down and provided to the regulator in line with the regulatory process.				
9-2.1248	Criticism that National Grid have not considered the removal and future maintenance of the haul roads / Criticism that National Grid will not remove the haul roads due to the costs associated with this	<p>Once the Project has been constructed and commissioned, the working areas would be removed, and the site reinstated. Temporary construction haul roads (including temporary bridges and culverts) are likely to be removed unless identified as offering a long-term improvement to the environment and land usage during the design (and agreed with the landowner, Lead Local Flood Authority (LLFA) and / or the Environment Agency (where required). Temporary features such as site welfare, fencing and scaffolding would be removed. Any stripped topsoil would be reinstated, and the site would be returned to its former use, subject to any planting restrictions or agreements with landowners.</p> <p>Reinstatement would also include landscaping. This is likely to include reseeding grassland areas, replanting hedgerows, and trees. It would also include additional landscape planting in some areas to help screen the new infrastructure from sensitive receptors. Details of reinstatement are set out within the Outline Code of Construction Practice (CoCP) (document reference 7.2) and assessed and reported on within the Environmental Statement (ES) (document reference Volume 6:</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Environmental Statement) which includes further additional mitigation where required.				
9-2.1249	Criticism that too much money has been spent on surveys	National Grid notes the respondent's feedback. National Grid only carries out surveys essential to the design of the project and those required by specific legislation (for example protected species surveys).			X	
9-2.1250	Criticism that inflation has not been considered for the Project	Inflation is accounted for when Ofgem funds National Grid projects, particularly under the RIIO (Revenue = Incentives + Innovation + Outputs) price control framework. Inflation adjustments are crucial because these projects typically span multiple years and involve significant capital investments, which can be affected by changes in the value of money over time.			X	
9-2.1251	Concern that compensation for impacts on Sustainable Farming Incentives (SFI) has not been considered for the Project / included in the costings for the Project	National Grid notes the respondent's feedback. We continue to liaise with potentially impacted landowners and would look on a case-by-case basis for how any direct impacts on agricultural practices can be avoided or mitigated. Where that is not possible including with regards to Sustainable Farming Incentives (SFI) compensation may be payable. Should any landowner have any specific queries regarding compensation please contact the Project lands team to discuss: Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314. Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD.</p> <p>Overall costings for the Project are based on previous completed projects of a similar nature, including for compensation.</p>				
9-2.1252	Concern about cost of construction roads for the Project (e.g. given that local councils do not have the money to fill potholes)	<p>Strategic option costs are provided in the 2025 Strategic Options Backcheck and Review (document reference 7.17) to compare strategic options in a like for like scenario, breaking down the costs on one option wouldn't provide a fair comparison between options. Delivery methodology and strategies around things like haul roads also aren't defined at the time of strategic optioneering all of which would have impacts on detailed costings. Project funding is secured through Ofgem submissions and challenge after the Development Consent Order (DCO) submission has been made when the detail around the Project has been defined to such an extent that more detailed costs can be broken down and provided to the regulator in line with the regulatory process. Prior to works commencing there would be a requirement for pre access condition assessment to be completed, whilst we understand the concern around maintenance budgets for local highways it is not National Grid Electricity Transmission's (NGET's) responsibility to maintain public highways but we would also not expect the local highways authorities to contribute to the delivery costs associated with our Project. The haul road construction and associated</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		highway mitigation measures identified in the Projects highways mitigation measures would be funded by the Project. Additionally, a pre and post condition survey of the Primary Access Routes will be undertaken. For further details refer to the Outline Construction Traffic Management Plan (document reference 7.3).				
9-2.1253	Concern that National Grid have incorrectly justified the Project by claiming that Ofgem requires the cheapest solution (e.g. which is not true; the Director of System Planning has stated that cost is not the only consideration and balance is needed)	National Grid notes the respondent's feedback. Cost is an important factor in decision making as this is borne by the consumer. However other factors are also important such as potential effects on the environment and communities. The National Planning Policy and the regulatory framework provide clear parameters within which decisions, including the consideration of cost, are made.			X	
9-2.1254	Suggest that the rationale and costings for the Project (in relation to alternative options) should be scrutinised and interrogated by Ofgem	Ofgem rigorously scrutinises the costs proposed by National Grid for infrastructure projects and ensures that alternative options are evaluated. This process helps identify the most cost effective, technically feasible, and environmentally appropriate solution while safeguarding consumer interests. National Grid's proposal must be justified through detailed appraisals, cost comparisons, and stakeholder consultation to secure Ofgem's approval. This scrutiny is conducted as part of its regulatory framework, particularly under the RIIO price control mechanism.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.1255	Suggest that funding from HS2 is reallocated to the Project (e.g. to fund alternative options, including offshore)	National Grid notes the respondent's feedback. Project priorities and funding is a matter for government and is not within National Grid's statutory requirements to reallocate funding.			X	
9-2.1256	Section 1.6.5 of the Preliminary Environmental Information Report (PEIR) discusses the approach to compensation matters. Paragraph 15.5.14 confirms that compensation matters are not addressed and will be dealt with separately as part of the Development Consent Order (DCO) process. Criticism as this approach is at odds with the requirement stated in National Policy Statement (NPS) EN-5, which encourages the early application of the mitigation hierarchy. Concern that treating compensation separately from the PEIR is not acceptable, especially when significant, un-mitigatable landscape and visual impacts are being identified over a wide area. Additionally, the term "compensation" is barely used in the PEIR	<p>Information on compensation is included in the Statement of Reasons (document reference 4.1), which forms part of the Development Consent Order (DCO) application.</p> <p>An Environmental Statement (ES) (document reference Volume 6: Environmental Statement) has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 ('the Infrastructure EIA Regulations'). The ES identifies and assesses the likely significant effects on the environment resulting from the construction, operation (and maintenance) of the Project and recommends appropriate mitigation to reduce effects.</p> <p>In line with the approach set out in Environmental Statement (ES) Chapter 5: EIA Approach and Method (document reference 6.5) and in accordance with National Policy Statement EN-1 and EN-5 (Department for Energy Security and Net Zero, 2024) the mitigation hierarchy has been applied during the iterative design process to, in the first instance, avoid creating adverse effects, prevent, reduce and finally, where appropriate, offset adverse effects.</p> <p>Environmental appraisal has been an integral part of the Project design process since conception, which has</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		meant that the Project has been able to avoid environmentally sensitive features as far as reasonably practicable. National Grid has also embedded mitigation measures into the design of the Project to avoid or reduce significant effects that may otherwise be experienced during construction and operation (and maintenance) of the Project. Embedded mitigation measures are those that are intrinsic to and built into the design of the Project. ES Chapter 4: Project Description (document reference 6.4) provides information on the key embedded mitigation measures included.				
9-2.1257	<p>The Cumulative Effects section (1.6.6) of the Preliminary Environmental Information Report (PEIR) identifies schemes that have been shortlisted as having potential cumulative effects on receptors. Suggest the following schemes potentially having implications for the assessment area due to their location:</p> <p>Bramford To Twinstead Reinforcement Five Estuaries Offshore Wind Farm North Falls Offshore Wind Farm Mangreen Quarry, Ipswich Road, Dunston, NR14 8DD Brockley Wood Land off A12, Belstead, Suffolk, IP8 3JS Babergh DC Land North Of The A1071, Ipswich, (Wolsey Grange) Anglian Water services Bury to Colchester Pipeline Bramford Solar Farm and Battery Storage Facility Land West of Blacksmiths Lane Earl Stonham (Solar</p>	<p>An assessment of cumulative effects arising from the Project in combination with other development has been undertaken to support the ES. The detailed assessment of inter-project cumulative effects can be found in Appendix 6.17.A1: Inter-Project Cumulative Effects. An assessment of the total effects of clusters of developments in combination with the Project on common receptors can be found in ES Chapter 17: Cumulative Effects (document reference 6.17). Figures have been produced to aid with understanding the spatial overlap of the Project and other developments. Other developments included within the long list of other developments are shown on ES Figure 17.1: Long List of 'Other Developments' Considered within the Cumulative Impacts Assessment (document reference 6.17.F1). Other developments shortlisted and included within the cumulative effects assessment are shown on ES Figure 17.2: Short List of 'Other Developments'</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>Farm)</p> <p>Land North of Lion Road Palgrave (Solar Farm)</p> <p>Suggest an assessment of how these schemes affect landscape or visual issues in the Landscape and Visual Impact Assessment (LVIA) in the Environmental Impact Assessment (EIA).</p> <p>Additionally, mapping these proposals would assist with understanding and review</p>	<p>Considered within the Cumulative Impacts Assessment (document reference 6.17.F2).</p> <p>The impact of how these schemes affect landscape and visual amenity is assessed in ES Chapter 17: Cumulative Effects (document reference 6.17) and ES Chapter 13: Landscape and Visual (document reference 6.13).</p>				
9-2.1258	<p>In relation to the Preliminary Environmental Information Report (PEIR) Socio-economics, Recreation and Tourism chapter, suggestion to adopt and fund a dynamic approach to monitor skills, employment, and education outcomes and impacts. Suggestion to use all available evidence, local expertise, and Labour Market Information (LMI) to ensure home-based worker targets are met and to use programs to support and ensure local talent pools are available to combat any negative churn effects</p>	<p>The assessment of local economy and local employment are set out in the Environmental Statement (ES) Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15). Given that a limited number of construction employment opportunities are anticipated to be generated by the Project, a significant effect has not been identified. Therefore, monitoring is not required in Environmental Impact Assessment (EIA) terms.</p> <p>Drawing from experience from other National Grid projects, it is likely that a minimum of 10% of the construction workforce would be sourced from the local labour market. These could, for example, have less specialist roles such as security workers and delivery drivers.</p> <p>National Grid is committed to working with local suppliers, facilitated by supporting forums (such as the local Chambers), on electricity industry skills and workforce planning. National Grid is also committed to providing a coordinated regional approach to jobs and skills opportunities. This commitment is broader than the</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		individual project and separate to any commitments under the proposed development consent order (DCO) for this Project. The socio-economic effects of the Project are assessed in Chapter 15: Socio-economics, Recreation and Tourism of the Environmental Statement (document reference 6.15). Post construction job opportunities are limited given the nature of the development however we will still work with Local Authorities (including facilitating local partners) to understand what is important to them around skills and employment to ensure we leave a lasting positive legacy in the communities where we operate. With regards to a delivery mechanism, the above measures will be delivered as part of our community benefit package, which will look at both local and regional initiatives. This will be delivered outside the development consent process and is not a material consideration in the decision on the proposed Project or a matter to be secured as part of the DCO, as per the Community Funds for Transmission Infrastructure: Guidance (DESNZ, 2025).				
Project History						
9-2.1259	Concern about impact of the Project on future generations / Suggest that National Grid need to consider the sustainability / legacy of the Project for the future	In terms of the benefits to future generations, sustainability and the legacy of the Project, the need case refers to the British Energy Security Strategy which sets targets for the connection of up to 50 GW of offshore wind by 2030 and is a key part of a strategy for secure, clean and affordable British energy for the long	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>term. The key role of National Grid's transmission system is to connect where energy is generated to where it is needed. This means that more homes and businesses can be powered by renewable and sustainable energy sources to meet the needs of present and future generations.</p> <p>National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project. The results of this assessment are provided in the Environmental Statement (ES) (Volume 6) that accompanies the application for development consent. The ES identifies and assesses the likely significant effects on the environment resulting from the Project and recommends appropriate mitigation measures (in consultation with relevant stakeholders) to reduce potential effects.</p>				
Public Rights of Way (PRoW)						
9-2.1260	It is noted that the Applicant has decided not to provide a separate PRoW chapter, with the impacts spread out over four chapters of the ES. The Council disagrees with this as an approach, as it makes reviewing the holistic impacts on PRoW more difficult. This is particularly important given the likely significant impacts on the PRoW network from the project	National Grid submitted an Environmental Impact Assessment (EIA) Scoping Report, found in the Environmental Statement (ES), Scoping Report (document reference 6.19) to the Planning Inspectorate on 7 November 2022. The Planning Inspectorate (on behalf of the Secretary of State) formally adopted its scoping opinion, found in the ES, Scoping Opinion (document reference 6.20) on 14 December 2022 which has informed the scope of the EIA for the Project. This provided the opportunity for statutory bodies to comment on the scope of the EIA which included our approach on study areas, data collection and baseline conditions for a		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		range of environmental topics. National Grid also discussed and agreed the approach with stakeholders (including Statutory Environmental Bodies and Local Planning Authorities) following the Scoping Opinion to ensure a robust assessment.				
9-2.1261	With reference to paragraph 5.4.2, remediation should always be discussed with the relevant PROW Officer. The landowner is unlikely to know the appropriate and legal considerations for all types of PROW and they may agree to something the local Highway Authority does not consider acceptable. Pre and post condition surveys should be submitted to the relevant PROW Officer for consideration	The Outline Public Rights of Way Management Plan (document reference 7.6) submitted as part of the Development Consent Order (DCO) application includes details of pre and post condition surveys. Pre-commencement condition surveys would be undertaken prior to the commencement of construction, and a full record of condition would be carried out (photographic and descriptive) of Public Rights of Way (PRoW) within the Order Limits. These pre-commencement condition surveys would act as a reference for the relevant standard of reinstatement of PRoW post-construction. Any PRoW that is affected by construction works would be reinstated to the same condition and quality it was in pre-construction. Post-construction site condition surveys would be undertaken after construction and reinstatement and the results and any remediation would be discussed with the landowner and, where applicable, the relevant PRoW Officer, prior to handover.		X		
9-2.1262	It would be helpful to have the proposal for each PROW affected ahead of time and in a format that provides the following information (this a similar format to that presented in the Appendix A Routes with Public Access Affected by the Project towards	The Outline Public Rights of Way Management Plan (document reference 7.6) submitted as part of the Development Consent Order (DCO) application identifies all Public Rights of Way (PRoW) affected by the Project, the Project interactions with each PRoW, the		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	the end of this document – however Parish and district names (rather than parish numbers) would be preferable)	indicative duration of each interaction and the proposed management regime. This document is supported by drawings identifying the affected sections and any proposed diversion routes. PRow are identified by Parish / District names etc., as appropriate.				
9-2.1263	Within Appendix A Routes with Public Access Affected by the Project it mentions the type of closure proposed. "Closed without a diversion – diversion is not required as PRow users can navigate around works site" requires further explanation. This gives the impression that a diverted route is not provided. It would be helpful if all types of closure proposed are given a subsection to provide more detail of what is proposed with consultation with the PRow maintenance team to ensure the measures provided are considered acceptable	The Outline Public Rights of Way Management Plan (document reference 7.6) submitted as part of the Development Consent Order (DCO) application identifies all proposed Public Rights of Way (PRow) management regimes and includes examples of typical interactions and the proposed management regimes for clarity. However, it should also be noted that the Outline Public Rights of Way Management Plan does not use the referenced terminology and makes clear where a diversion would or would not be provided.		X		
9-2.1264	Concern about negative impact on Public Rights of Way (PRow) / footpaths / cycle paths / bridleways (generally - no location given)	Through routeing and siting, National Grid has sought to reduce, as far as practicable, impacts and disruption to Public Rights of Way (PRow). The iterative design process identified the existing PRow network and their wider connectivity and sought where practicable to reduce and where possible remove impacts to PRow. Effects on PRow would be mitigated where possible, maintaining access where practicable, with closures as a last resort. We will continue to engage with relevant	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		stakeholders on the PRow network to enable feedback and input to be considered as the Project progresses. An Outline Public Rights of Way Management Plan (document reference 7.6) is submitted with the Development Consent Order (DCO) application.				
9-2.1265	Suggest that, following construction of the Project, any suitable new access roads should be left for the sole use of walkers, cyclists and equestrians, and be added to the definitive map as Public Rights of Way (PRowWs)	Most of the access roads, which form part of the Project, are temporary and are used during construction. As these are on land, which will be handed back to the landowners once the Project is operational, it is not possible to retain them.			X	
9-2.1266	Suggest that public rights of way (PRowWs) should be within their own chapter of the Preliminary Environmental Information Report (PEIR) rather than covered within multiple chapters (as currently in: health and well-being chapter; landscape and visual chapter; social economics, recreation and tourism and transport and traffic chapter) so that the importance of the quality of the experience enjoyed by the public when going for a walk or ride (e.g. in addition to the Draft PRow Management Plan)	<p>National Grid submitted an Environmental Impact Assessment (EIA) Scoping Report (document reference 6.19) to the Planning Inspectorate on 7 November 2022. The Planning Inspectorate (on behalf of the Secretary of State) formally adopted its Scoping Opinion (document reference 6.20) on 14 December 2022 which has informed the scope of the EIA for the Project.</p> <p>As per the EIA Scoping Report (document reference 6.19) and Scoping Opinion (document reference 6.20) a separate Public Right of Way (PRow) chapter has not been provided. This is because PRowWs are assessed using different methodologies by several different environmental topic chapters including Chapter 10: Health and Wellbeing (document reference 6.10), Chapter 13: Landscape and Visual (document reference 6.13), Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) and Chapter 16:</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Traffic and Transport (document reference 6.16) of the Environmental Statement (ES). PRowS are therefore assessed separately within each relevant environmental topic chapter of the ES and within Chapter 17: Cumulative Effects Assessment (document reference 6.17).</p> <p>Further detail on PRow is also provided within the following documents for the Project that accompany the Development Consent Order application:</p> <p>Transport Assessment (document reference 7.11)</p> <p>Outline PRow Management Plan (document reference 7.6)</p> <p>Access, Rights of Way and Public Rights of Navigation Plans (document reference 2.5)</p> <p>Traffic Regulation Order Plans (document reference 2.4)</p>				
9-2.1267	<p>Suggestion that Public Rights of Way (PRow) will be restored to original condition or to a condition agreed with Suffolk County Council (SCC) where impacted by construction: Suggest that where there are existing defects, National Grid should agree restoration measures with SCC and this should be included within the Code of Construction Practice (CoCP)</p>	<p>Commitment S02 of the Outline Code of Construction Practice (CoCP) (document reference 7.2) states that Public Rights of Way (PRowS) crossing the working areas will be managed in discussion with the relevant local authorities and potential temporary closures and diversions applied, where required.</p> <p>Management of PRow during construction is detailed in the Outline PRow Management Plan (document reference 7.6). PRowS affected by construction works, that has been confirmed as requiring reinstatement with the Local Highway Authority (LHA), will be reinstated prior to reopening to the reasonable satisfaction of the</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		LHA PRow Officer. Post-construction site condition surveys will be undertaken by the Main Works Contractor after construction and reinstatement and the results of these and any remediation will be discussed with the landowner and the relevant PRow Officer, prior to handover. Where soil compaction along PRow has been affected, the PRow reinstatement will include suitable re-compaction, or provision of additional granular material, to provide a similar level of surface stability to that which existed pre-construction.				
9-2.1268	Suggestion that a pre and post condition survey must be carried out- to include identification and assessment of surface condition with a scope of coverage and methodology to be agreed with Highway Authority. This should include pre-construction work where Public Rights of Way (PRow) might be used to gain access to the corridor and reinforcement works might be required prior to use by vehicles	Pre and post condition surveys have been proposed refer to Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).		X		
9-2.1269	Suggestion that where PRow cross the cable corridor, haul road, access tracks, and other sites, the surface must be always kept in a safe and fit condition for all users. Suggest management measures should be included within the Construction Traffic Management Plan (CTMP)	National Grid note the comment and confirm that surfaces will be kept safe and in fit condition for all users. This is covered within the Public Rights of Way Management Plan (document reference 7.6).		X		
9-2.1270	Consideration should be given to the physical impact on the network, and how that information is shared	National Grid has completed an Environmental Impact Assessment (EIA) for the Project. The results are		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>with the PROW team and users/user groups along with what mitigation/management is proposed. Consideration should be given to presenting closures and diverted route information online, as in many cases this will likely be a more user-friendly option than just providing PROW numbers or discovering notices on the day they choose to walk</p>	<p>presented in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application. The ES identifies and assesses the likely significant effects on the environment resulting from the construction of the Project. The assessment of access to Public Rights of Way (PROW) which fall within the study area is captured under ES, Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and Chapter 16: Traffic and Transport (document reference 6.16)</p> <p>An Outline PROW Management Plan (document reference 7.6) has been prepared and accompanies the Development Consent Order (DCO) application which contains information of PROW that would be affected and the proposed management measures to reduce potential impacts.</p> <p>The Access, Rights of Way and Public Rights of Navigation Plans (document reference 2.5), which also accompany the DCO application, show temporary closures and diversions of PROW.</p> <p>The comments are noted and proposals in relation to mitigation/management and how PROW users would be notified are contained within the Outline PROW Management Plan (document reference 7.6). However, during construction the intention is to keep the majority of PROW open via management measures wherever possible and, where not possible, to provide appropriate</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		diversions. Any closures or diversions would be clearly signed and waymarked and advanced warning would be provided prior to the works commencing, noting intended start and end dates. This signage would include details of where any further online information could be found and relevant contact details, where appropriate. Post-construction, PRow would be re-instated along their original line wherever possible.				
9-2.1271	The applicant should set out any opportunities to connect people to the environment via improved transport connections that the development could deliver to mitigate its impacts on the transport, and particularly Public Rights of Way, network	No permanent / long term improvements to the transport network are proposed due to the temporary nature of the impacts. The mitigation measures are therefore temporary. Further details of the assessment of any potential severance to drivers and walking, cycling and horse-riders along the Primary Access Routes and the Public Rights of Way (PRow), and the appropriate mitigation measures can be found in the Transport Assessment (document reference 7.11) and ES Chapter 16: Traffic and Transport (document reference 6.16).		X		
9-2.1272	Access and Public Rights of Way. According to the PEIR a number of PRow will be affected by the construction of the project whether temporarily closure or diversion. There is an opportunity as part of the landscaping, GI and BNG to enhance those PRow effected through the integration of GI	Any newly created habitats or enhanced habitats being relied upon for Biodiversity Net Gain (BNG) need to be managed and monitored for 30 years by a registered provider. As land will be returned to the landowner on completion of works for these Public Rights of Way (PRow) and these areas of land are not registered BNG sites, it is not possible to include newly created habitats differing from the baseline within the BNG calculations. However, all habitats will be reinstated to baseline habitat type and the condition of any hedgerows and		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		watercourses enhanced through improvements to species diversity where practicable with consideration for the land use and local landscape character. National Grid are committed to delivering at least 10% BNG with wider environmental and societal benefits for the Norwich to Tilbury scheme. This 10% net gain will be delivered through a combination of on-site and off-site measures.				
Requests						
9-2.1273	Suggest that National Grid restrict working to business hours (i.e. 9am-5pm / 8am to 5pm) on weekdays and Saturdays (e.g. only Saturday mornings), Sundays and Bank Holidays entirely	National Grid notes this suggestion. As detailed in Chapter 4: Project Description (document reference 6.4), it is assumed that the core working hours for construction would be: Monday to Friday: 07:00 –19:00 Saturdays, Sundays, Bank Holidays and other public holidays: 07:00 – 17:00.		X		
9-2.1274	Request for further impact surveys	There is a staged approach to the process of collection of environmental data as any major project develops. National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project. The assessment is informed by a suite of field surveys and desk studies and results are presented in an Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the application for development consent. The ES identifies and assesses	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>the likely significant effects on the environment resulting from the construction and operation of the Project and recommends appropriate mitigation measures to reduce potential adverse impacts.</p> <p>The scope of the EIA is included in the Scoping Report (document reference 6.19) which was submitted to the Planning Inspectorate in November 2022 and their Scoping Opinion (document reference 6.20) received in December 2022. This provided the opportunity for statutory bodies to comment on the scope of the EIA which included our approach on study areas, data collection and baseline conditions for a range of environmental topics. We also discussed and agreed survey scope with stakeholders (including Statutory Environmental Bodies and Local Planning Authorities) following the Scoping Opinion (document reference 6.20) to ensure a robust baseline assessment.</p> <p>National Grid has prepared an Outline Code of Construction Practice (CoCP) (document reference 7.2) which sets out the required mitigation measures and environmental commitments that will be implemented during the construction phase of the Project to avoid or reduce potential effects of the Project on the environment, including commitments to undertake further surveys.</p>				
9-2.1275	Request for further information / Question about the Project	National Grid notes the respondent's feedback. All information about the Project can be found on the Project website. We will keep the public updated	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		throughout the Development Consent Order (DCO) process.				
9-2.1276	Request for further information on the environmental mitigation being provided as of part of the Project	<p>An Environmental Statement (ES) (document reference Volume 6: Environmental Statement) has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 ('the Infrastructure EIA Regulations'). The ES identifies and assesses the likely significant effects on the environment resulting from the construction of the Project and recommends appropriate mitigation to reduce effects.</p> <p>Environmental mitigation measures have been defined within each environmental topic chapter and set out in relevant management documents submitted with the Development Consent Order (DCO) application, including the Outline Code of Construction Practice (CoCP) (document reference 7.2), the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5).</p> <p>In addition, National Grid has set itself a target of delivering 10% Biodiversity Net Gain (BNG) with wider environmental and societal value on all construction projects, meaning that as a result of measures taken, the biodiversity rating of the area will be enhanced by</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		10% greater than prior to the construction of the Project.				
9-2.1277	Request that National Grid follow their company policy and for GTC (utilities company) owned assets follow the guidelines for safe digging practices and follow HSG47 at all times	National Grid and their contractors shall adhere to relevant Health and Safety Executive (HSE) and National Grid specific legislation, policy and guidance when constructing, operating and maintaining the Project.	X			
9-2.1278	Request that National Grid collaborate with GTC (utilities company) to if an impact on GTCs network is identified	GTC Utilities are unaffected by the Project.	X		X	
9-2.1279	Suggest that National Grid consult with parish councils where conservation areas are affected	The impacts of the Project on the historic environment are assessed in Chapter 11: Historic Environment of the Environmental Statement (ES) (document reference 6.11). The assessment considers the potential impact on conservation areas and includes assessment of potential for physical impact and impact through change to setting that affects the value of the conservation area. The assessment is supported by walkover and setting surveys, as documented in ES Appendix 11.1 Historic Environment Baseline Report (document reference 6.11.A1). The assessment concludes that some conservation areas would experience significant effects. In addition to the proposals in the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4), the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5) sets out appropriate mitigation			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		for the historic environment. The Project has engaged with Historic England and relevant planning authorities on aspects relating to heritage, including appropriate mitigation measures and techniques and to take their views into account during Project development, and will continue a level of engagement post submission of the Development Consent Order (DCO) application.				
9-2.1280	Criticism that National Grid did not provide information on the alternative route through Great Waltham	National Grid has considered alternative routes in and around Great Waltham that have been raised through feedback from the respondent and others to the consultation. We have set out details of the alternatives and its main reasons for either making a change or not making a change in the 2023 and 2024 Design Development Reports (available on the Project website), and the 2025 Design Development Report (document reference 5.15) submitted as part of the Development Consent Order (DCO) application. Throughout the Project development we have presented what we consider to be the most appropriate Project, bearing in mind our various duties. It is the Project being proposed that is presented, along with a description of alternatives considered and reasons for decisions. The Design Development Reports, along with the Environmental Statement (ES) Chapter 3: Alternatives (document reference 6.3) provide further detail.			X	
9-2.1281	Request for National Grid to confirm whether they have canvassed consumers, to ask if they are willing to pay more in order to preserve the countryside	National Grid have duties to balance the need to be economic and efficient, which includes keeping costs down in the interests of the bill-paying consumers, with a	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	(e.g. through an offshore solution or underground cables)	<p>duty to have regard to preserving amenity, which includes the natural environment, cultural heritage, landscape and visual quality. Our consideration of alternatives can be found in the 2024 Strategic Options Backcheck and Review (document reference 7.17) and the 2025 Design Development Report (document reference 5.15), which have both been submitted as part of our application for Development Consent.</p> <p>As part of the development of the Project we carried out an Environmental Impact Assessment which considered any impact the Project might have on the environment and any proposed mitigation. This was submitted alongside the Environmental Statement (document reference Volume 6: Environmental Statement) as part of our application for Development Consent.</p> <p>The Project team hasn't carried out canvassing of consumers but welcomed any feedback as part of the consultation. This is in line with the requirements placed on us by our regulators for the running of consultation.</p>				
9-2.1282	Request for clarity on when National Grid plan to consider the findings and how they will be communicating this with residents	Following National Grid's statutory consultation, we considered all the feedback we received and made amendments to our proposals, where practicable. Any changes that we made were communicated through regular project updates, and where necessary, direct contact with the affected properties through a series of targeted consultations.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.1283	Is the recurrent cost of wayleaves included in your land-based proposals? If so, for how many years?	<p>National Grid uses easement agreements rather than wayleaves, as an easement grants rights for the asset to remain in perpetuity.</p> <p>Easement costs are included in the Project costings as shown in the 2025 Strategic Options Backcheck Review (document reference 7.17).</p> <p>For information on the types of agreements that National Grid uses, and the payments linked to these agreement and other compensation, please see the National Grid Land Rights Strategy document, which is available on the Project website.</p>			X	
9-2.1284	Request for National Grid to confirm the proximity / distance from the Project within which they are consulting with residents	<p>During our statutory consultation period, National Grid engaged with properties within 1 km of the proposed route as part of our Primary Consultation Zone (PCZ). This included sending through project specific information to the properties and sharing information about how to engage with the Project and leave feedback.</p> <p>We advertised our consultation over a two-week period in several regional newspapers within a wider Secondary Consultation Zone (SCZ) which extended to 4 km on either side of the alignment.</p>			X	
9-2.1285	Why have National Grid posted unregistered land notices on land adjacent to respondent? (can National Grid not use information from the land registry?)	National Grid does obtain and use information from the HM Land Registry and other available sources. Where the HM Land Registry does not hold information for an area of land this is classed as unregistered. In these circumstances if the ownership information cannot be			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>obtained from another source, National Grid must install unregistered land notices on site, in the hope that the owner of that piece of land makes contact.</p> <p>If a member of the public is aware of the ownership details for a piece of land where an unregistered land notice has been placed, they should make contact with the Project lands team to discuss:</p> <p>Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.</p> <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD.</p>				
9-2.1286	How much per unit of electricity would need to be added to consumers bills over 10 years to cover any supposed additional costs?	<p>National Grid does not produce or sell electricity and does not set household bills. National Grid is funded by a price control mechanism which is agreed with and set by the regulator, the Office of Gas and Electricity Markets (Ofgem). We pay up front for the costs to build a new power transmission line. The cost is then gradually passed to consumers through their electricity bills over the next 40 years or so.</p> <p>Our transmission network cost in 2023/2024 was £24.50 of the average annual household bill, of which 44 per cent was Network Investment.</p> <p>Network costs vary year to year. For example, to reflect usage or how costs are allocated on different parts of the network. Because of this, we do not currently have</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>exact figures for how Norwich to Tilbury or other projects could increase consumer bills.</p> <p>For more information on how National Grid Electricity Transmission impacts household bills, please see our website: https://www.nationalgrid.com/electricity-transmission/who-we-are/breaking-down-your-bill.</p>				
9-2.1287	Why are National Grid consulting when they have already started building the pylons?	<p>We have not started any construction work for Norwich to Tilbury. National Grid are carrying out several other developments in the area that are undergoing construction work such as the Bramford to Twinstead Reinforcement and works at our Norwich Main Substation.</p> <p>These projects are being developed separately to our proposals for Norwich to Tilbury and are part of the wider Great Grid Upgrade to connect new sources of renewable energy into the grid.</p>			X	
9-2.1288	Request that reports due in 2024 for the latest species information are used to inform the Environmental Statement and to inform Code of Construction Practice (CoCP) and Landscape and Ecology Management Plan/s (LEMPs)	All collected survey data, including surveys completed between 2023 – 2025, has been used to inform the preparation of the Environmental Statement (document reference Volume 6: Environmental Statement), the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4).			X	
9-2.1289	What happens to the materials removed during construction activities?	Chapter 4: Project Description of the Environmental Statement (document reference 6.4) provides details about the waste and materials during construction.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Temporary materials, such as hardcore for the haul roads, and temporary construction compounds (including works cabins and security fencing) would be required during construction. It is assumed that these would be sourced from suppliers within the region (where practicable) and would be reused after completion of the Project (where practicable).</p> <p>National Grid would adopt good construction and management practices to ensure waste is reduced as far as practicable and that the storage, transport and eventual disposal of any waste have limited environmental effects. The management and collection of waste arisings would be carried out under the requirements of the UK waste regulatory regime.</p> <p>In addition, Appendix B: Outline Site Waste Management Plan (SWMP) of the Outline Code of Construction practice (CoCP) (document reference 7.2) sets out how the Project seeks to reduce the consumption of primary and raw materials and to encourage the use of secondary or recycled sources. It also sets out the waste hierarchy by reducing waste produced in the first place before considering alternatives such as reuse, recycling and repurposing. The contractor will be responsible for implementing the measures outlined within the Outline SWMP appended to the Outline CoCP (document reference 7.2).</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.1290	Will abnormal loads be shown in a separate assessment?	An Abnormal Indivisible Load (AiL) movement strategy is outlined within the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).		X		
9-2.1291	Request for National Grid to provide their Carbon Emissions Calculations for the Project	<p>ES Appendix 4.1: Greenhouse Gas Assessment is set out in the Environmental Statement (ES) (document reference 6.4.A1). The assessment provides a simple an estimate of the Greenhouse Gas emissions associated with the construction and operation phase of the Project, comparing this against UK emissions to determine if the Project is likely to have a material impact on the ability of the Government to meet its carbon reduction targets.</p> <p>Alongside the GHG Assessment, Appendix H: Outline Greenhouse Gas Reduction Strategy of the Outline Code of Construction Practice (document reference 7.2) presents how National Grid should effectively manage GHG emissions throughout the Proposed Project lifecycle in line with National Grid's net zero goals. This strategy encourages early consideration of GHG emissions and creation of appropriate governance structures and processes.</p> <p>This approach is in accordance with the EIA Scoping Report (document reference 6.19) and Scoping Opinion (document reference 6.20).</p>	X	X	X	
9-2.1292	Request for clarity as to whether the Tilbury - Grain and Tilbury - Kingsnorth Upgrade (TKRE) is sufficient in the circumstance that the Norfolk and Essex generation groups are producing at capacity	The high voltage national electricity transmission network is capable of accommodating a wide variety of power-flow scenarios. At Tilbury, this includes scenarios where the UK is fully importing and when there is high			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	and Tarchon is importing, but not sufficient when it isn't, or whether it is the case that the TKRE is sufficient when Tarchon is importing, but not sufficient when it isn't	generation output from the Norfolk and Essex generation groups. At some times, on any part of the transmission system, the network may not be able to accommodate the total capacity of generation for short periods, in which case generation is constrained. It is the National Energy System Operator (NESO) that is responsible for the forward-planning of the network. It doesn't base this on a snapshot in time, or a single scenario but based on a year-round assessment and longer-term predictions. NESO weighs up the economic case for new reinforcements against potential constraints costs and makes recommendations on Transmission Operators investment options to ensure value for money is delivered for consumers, on this basis, the arrangement raised in the feedback may occur on occasions but are one of many circumstances accounted for.				
9-2.1293	Request whether National Grid engineers have revisited the calculations which originally led them to deem Thames Estuary Reinforcement (TENC) as necessary	The Thames Estuary Reinforcement (TENC) does not form a part of the Project. There isn't currently enough network capacity in the region to support this level of energy so we need to reinforce and develop the network to ensure this energy can be connected to homes and businesses across the UK, Norwich to Tilbury forms an important part of this reinforcement.			X	
9-2.1294	Request that National Grid undertake a full assessment as to what the full impacts would be of undergrounding the entire route and whether the 120m swathe would be required for the entirety, and what conflicts this would cause	Buried cables occupy a significant amount of land and, like overhead lines, also require access for maintenance and repair for the duration of their life. There are also restrictions on the planting of trees and hedges over the underground cables or within 3 m of the underground		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>cable trench to prevent encroachment by vegetation. Tree roots may penetrate the cable backfill surround which in turn may affect the cable rating or even result in physical damage to the cable. To match overhead line thermal performance for a 400 kV double circuit, as many as 18 separate cables in six separate trenches may be needed. Significant underground cable swathes would be required with potential threats to sensitive habitats and archaeological heritage.</p> <p>The standard means of installing underground cables is using open cut techniques. The 120 m width includes the temporary haul road, soil storage, pre-construction drainage areas, communications cables and typically six cable trenches for 18 cables assumed to be to a typical minimum depth of 1.2 m and suitably spaced apart to allow for the required heat dissipation between cables and circuit phases. This would be used as a baseline across the whole length of the route if it were to be undergrounded.</p> <p>Additionally, AC undergrounding would require additional infrastructure re shunt reactors / series reactors for efficient cable operation, these would require new substation compound's to house them circa every 30km, on an entirely underground solution.</p>				
9-2.1295	Request for detail on whether the haul road requirements would be the same if underground cables were used for the entire Project and what above ground infrastructure would be needed for this	Haul roads are required to minimise site traffic on local and main trunk roads. Haul roads are required whether overhead lines or underground cables are used.		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Above ground infrastructure required for AC underground cables includes joint bays / pillar boxes these are located approximately every 800m. Also AC undergrounding would require additional infrastructure re shunt reactors / series reactors for efficient cable operation, these would require new substation compounds to house them circa every 30 km, on an entirely underground solution.				
9-2.1296	Request confirmation of whether there is a step missing from the summary of the Standard Pad and Column Foundation works or if the formwork is being left in place once the concrete has set (in relation to section 4.8.12 of the PEIR Vol I)	National Grid can confirm that the formwork would be removed – the description is high level showing main processes. Reference to this is included in ES Chapter 4: Project Description (document reference 6.4). The actual plan of works once developed would include a detailed breakdown of stage and all works delivered would be subject to detailed method statements as is industry best practice.		X		
9-2.1297	Request that National Grid further consider surface water management at the substations (in relation to section 4.8.23 of the PEIR Vol I)	At the substations, Commitment W08 in the Outline Code of Construction Practice (CoCP) (document reference 7.2), secures that surface water runoff will be managed in accordance with the requirements and standards of the relevant Lead Local Flood Authority (LLFA), and adopt suitable sustainable drainage techniques, designed to allow for climate change resilience. The effects of the substations (during their construction and operation) on hydrology, land drainage and flood risk are assessed in Chapter 12: Hydrology, Land Drainage and Flood Risk of the Environmental Statement (document reference 6.12), which concludes		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		that with the proposed good practice and mitigation measures in place there would be no detrimental impacts on surface water management at the substations.				
9-2.1298	Request that National Grid further consider surface water management along the underground cable construction sections of the route (in relation to section 4.8.29 to 4.8.33 of the PEIR Vol I)	A commitment within the Outline Code of Construction Practice (CoCP) (document reference 7.2) secures that all surface water from the construction swathe, including the underground cable construction sections will be captured by linear features such as swales and filter drains, for transfer to attenuation basins that will provide for storage to reduce discharge rates, as well as treatment e.g. sediment control. Discharges would then either infiltrate (where ground conditions are suitable) or outfall to watercourses, as appropriate for the location. The effects of the underground cable sections of the Project on hydrology, land drainage and flood risk are assessed in Chapter 12: Hydrology, Land Drainage, and Flood Risk of the Environmental Statement (document reference 6.12), which concludes that with the proposed good practice and mitigation measures in place there would be no detrimental impacts on surface water management along these cable corridors.		X		
9-2.1299	Request that National Grid further consider surface water management along the haul road sections of the route (in relation to section 4.8.46 to 4.8.50 of the PEIR Vol I)	All surface water from the construction swathe, inclusive of construction haul roads, would be captured by linear features such as swales and filter drains, for transfer to attenuation basins that would provide for storage to reduce discharge rates, as well as treatment e.g. sediment control. Discharges would then either infiltrate		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		(where ground conditions are suitable) or outfall to watercourses, as appropriate for the location. This provision is secured through commitments documented in the Outline Code of Construction Practice (CoCP) (document reference 7.2). The effects of the Project haul roads on hydrology, land drainage and flood risk are assessed in Chapter 12: Hydrology, Land Drainage and Flood Risk of the Environmental Statement (document reference 6.12), which concludes that with the proposed good practice and mitigation measures in place there would be no detrimental impacts on surface water management along these haul road routes.				
9-2.1300	Request for further information for the sizing, number, and positioning of culverts (in relation to section 4.8.62 and 4.8.65 within the PEIR Vol I)	The number and positioning of culverts is detailed in ES Appendix 4.2: Watercourse Crossing Details (document reference 6.4.A23) and illustrated in ES Figure 4.1: Proposed Project Design (document reference 6.4.F1). Culverts would be sized so that flow is conveyed efficiently during varying flow conditions, while considering maintenance access to the structure, the sediment transport potential of the culvert and so as to prevent flooding or structural damage. The minimum culvert shall be 600 mm, unless there is a practical reason for smaller diameter.		X		
9-2.1301	Further consideration is required on the impact of the proposed structures on flood risk (in relation to sections 4.8.63 to 4.8.65 in the PEIR Vol I)	The effects of proposed culvert crossings of watercourses are assessed in Chapter 12: Hydrology, Land Drainage and Flood Risk of the Environmental Statement (document reference 6.12), the Flood Risk Assessment (FRA) (document reference 7.9) and Water			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Framework Directive Assessment (document reference 7.10) that have been prepared. Where impacts have been identified, a range of control and mitigation measures have been identified to reduce effects, these are described in and secured by the Outline Code of Construction Practice (CoCP) (document reference 7.2).				
9-2.1302	Request further information regarding the amount of time the temporary features will be in place (in relation to the section regarding the temporary construction in the PEIR Vol I)	<p>National Grid has completed the Environmental Impact Assessment (EIA) for the Project. The results of this assessment are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation (and maintenance) of the Project and recommends appropriate mitigation measures (in consultation with relevant stakeholders) to reduce potential effects.</p> <p>Chapter 4: Project Description of the Environmental Statement (ES) (document reference 6.4) states that should consent be granted in 2027, it is anticipated that construction of the Project would commence in 2027, likely starting with pre-commencement works including, site clearance activities, the installation of temporary construction compounds and access roads. It is expected the main construction works would continue through to 2031 (four years) (with only demobilisation in 2031). Prior to the pre-commencement works beginning and before consent, a number of pre-construction</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		environmental surveys would be undertaken in 2026. Indicative construction phasing is presented in Image 4.1: Indicative Construction Programme of ES Chapter 4: Project Description (document reference 6.4).				
9-2.1303	Request further information is provided for the compound extension at the Norwich Substation including surface water management in the form of SuDS that will need to be included for this area of the development, and request that National Grid ensure suitable space is provided for required structures (in relation to section 4.9.22 in the PEIR Vol I)	At the substations, including the proposed extension to Norwich substation, Commitment W08 of the Outline Code of Construction Practice (CoCP) (document reference 7.2), secures that, surface water runoff would be managed in accordance with the requirements and standards of the relevant Lead Local Flood Authority (LLFA), and adopt suitable sustainable drainage (SuDS) techniques, designed to allow for climate change resilience over the operational lifetime of the substation. The outline drainage design includes for attenuation storage features and space for these is included within the Order Limits. The effects of the substations (during their construction and operation) on hydrology, land drainage and flood risk are assessed in Chapter 12: Hydrology, Land Drainage and Flood Risk of the Environmental Statement (document reference 6.12), which concludes that with the proposed good practice and mitigation measures in place there would be no detrimental impacts on surface water management at the substations.		X		
9-2.1304	Request further information is provided on the lifetime management and maintenance of SuDS structures that will serve sub-stations and other	Sustainable Drainage Systems (SuDS) structures serving substations and other operational infrastructure would be subject to routine inspection and a schedule of maintenance in accordance with National Grid protocols.		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	areas of impermeable infrastructure (in relation to section 4.10 of the PEIR Vol I)	This is secured by a commitment within the Outline Code of Construction Practice (CoCP) (document reference 7.2).				
9-2.1305	Criticism that National Grid has considered the LLFA developer guidance from Essex County Council, but not from Suffolk or Norfolk County Councils (e.g. it is inconsistent and inappropriate to only refer to one of the LLFA's Developer Guidance documents) / Suggest that National Grid remedy this (in relation to section 12.2.10 of the PEIR Vol I)	National Grid has engaged with all relevant Lead Local Flood Authorities (LLFAs) throughout pre-application. As part of this engagement, National Grid has shared a series of technical notes covering design principles for drainage and works to watercourses. Feedback on these has been incorporated into relevant environment and design commitments documented in the Outline Code of Construction Practice (CoCP) (document reference 7.2) and reflected in the assessment presented in Environmental Statement (ES) Chapter 12: Hydrology, Land Drainage and Flood Risk (document reference 6.12), which references all relevant LLFA Developer Guidance.		X		
9-2.1306	Criticism that the description of surface water flood risk in section 12.6.49 of the PEIR Vol is limited and only mentions areas at very low risk of surface water flooding along the route in South Norfolk / Request that this description is updated to reflect the actual baseline solution	A Flood Risk Assessment (FRA) (document reference 7.9). has been prepared for the Development Consent Order (DCO) application and describes baseline surface water flood risk, drawing on a range of data sources, including the recently published National Flood Risk Assessment 2 surface water flood map outputs, and assesses the potential for the Project to impact on flood risk from this source. The FRA describes the control and management measures that would be secured through the DCO and which are described in the Outline Code of Construction Practice (CoCP) (document reference 7.2)		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		to ensure no detriment to surface water and land drainage regimes.				
9-2.1307	Request that National Grid alter W07 (at section 12.7.6 within the PEIR Vol I) to reflect the consideration of other sources of flood risk, such as surface water flood risk, in the application of the sequential test for both the construction phase and the operational phases of the project (e.g. as is required by paragraph 168 within NPPF)	Commitment W07 in the Outline Code of Construction Practice (CoCP) (document reference 7.2), has been broadened to reflect the consideration of flood risk from surface water sources. The Flood Risk Assessment (FRA) (document reference 7.9) reviews and assesses the risks of surface water and groundwater flooding for both phases of the Project and concludes compliance with the requirements of the NPPF.		X		
9-2.1308	Criticism that in section 12.7.6 of the PEIR Vol I, there is no mention of the mitigation needs to ensure that culverted ordinary watercourse crossings do not increase flood risk, while in section 12.7.9 for additional mitigation, the use of crossing methodologies is currently being developed for all watercourses there is a mention of the need for ordinary watercourse consents (e.g. this contradicts NPPF and should be considered as a standard mitigation) / Request that National Grid update the PEIR to reflect that the mitigation from all sources of flood risk is not an optional matter	The effects of the Project on ordinary watercourses are assessed in Chapter 12: Hydrology, Land Drainage and Flood Risk (document reference 6.12) of the Environmental Statement; and the Flood Risk Assessment (FRA) (document reference 7.9) appraises the impacts of proposed temporary culverting on flood risk, as well as assessing a range of other sources of flood risk. To avoid or mitigate impacts, several commitments are made, for example with regard to culvert design, within the Outline Code of Construction Practice (document reference 7.2). Commitment GG01 secures that the Project would be run in compliance with all relevant legislation, consents and permits.		X		
9-2.1309	Criticism that in section 12.8.4 of the PEIR Vol I, the effects on watercourses, their water quality and hydro-morphology are scoped out for operation (and	It is the intention that temporary crossings of watercourses would be removed on completion of the construction stage of the Project, and the watercourse		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>maintenance), however, in section 12.7.6, W14 indicates that "Temporary construction haul roads (including temporary bridges and culverts) are likely to be removed unless identified as offering a long-term improvement to the environment and land usage during the design (and agreed with the landowner)." (this is again repeated in section 12.8.37) / Request that further consideration of this matter is given before scoping in or out of this work can be confirmed (as if it is the case that temporary structures would remain in place for the operational phase, then it would be necessary to assess the effect of these structures in the operational phase)</p>	<p>and its riparian zone reinstated (W14). By exception, for example, where a temporary new crossing replaces an existing crossing structure, structures would be retained. These locations are identified in ES Appendix 4.2: Watercourse Crossing Details (document reference 6.4.A2) and would be designed to meet the design requirements for permanent crossings and in accordance with any secondary consent requirements/agreed protective provisions for drainage authorities.</p>				
9-2.1310	<p>Criticism that it is not until section 12.8.29 to 12.8.31 of the PEIR Vol I that National Grid acknowledge the likely negative effects of the construction phase to surface water runoff and flood risk that will require management, and that these negative effects have not been sufficiently acknowledged or discussed prior to this point in this chapter within the PEIR / Suggest that better inclusion of them is required so that suitable mitigation measures can be included in the standard mitigation measures</p>	<p>National Grid has prepared a Flood Risk Assessment (FRA) (document reference 7.9) for the Project. The FRA describes baseline surface water flood risk, drawing on a range of data sources, and assesses the potential for the Project to impact on flood risk from this source. It also sets out the control and management measures that will be secured through the Development Consent Order (DCO) to ensure no detriment to surface water and land drainage regimes.</p>		X		
9-2.1311	<p>Criticism that in section 12.9.1 and section 17.7.1 of the PEIR Vol I, there is a brief discussion on the flexibility in the construction programme which focuses on a change in the start date, however,</p>	<p>The Preliminary Environmental Information Report (PEIR) was a preliminary document and reflected the Project proposals at the time of statutory consultation.</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	there is no consideration of a longer period of construction / Request that National Grid justify why this has not been considered	High level details of the construction programme are included within Chapter 4: Project Description of the Environmental Statement (ES) (document reference 6.4).				
9-2.1312	Criticism that in table 17.2 of the PEIR Vol I, Flood Zones are listed as a cumulative receptor, but it is not clear what is meant by this receptor / Request for National Grid to clarify this, or alternatively amend the text at table 17.2 of the PEIR	Multiple developments within the Flood Zones would have a cumulative impact (i.e. loss of floodplain storage would result in increasing flood risk to existing properties and infrastructures in those Flood Zones). The potential for cumulative effects on Flood Zones and receptors within these zones is assessed within the Flood Risk Assessment (FRA) (document reference 7.9).		X		
9-2.1313	Criticism that in table 18.1 and table 18.2 of the PEIR Vol I, it is stated that for Hydrology and Land Drainage that "No likely significant effects identified at this stage", however the respondent does not feel that all of the effects have been appropriately considered at this stage, such as the management of surface water runoff from the temporary works / Request that this statement is removed until this work has been included	The Preliminary Environmental Information Report (PEIR) was a preliminary document and reflected the Project proposals at the time. Subsequently the Project design has continued to be refined and more detailed assessments have been completed, including a Flood Risk Assessment (FRA) (document reference 7.9) and an Environmental Impact Assessment (EIA) presented in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement). Management of surface water runoff from the temporary works are appraised in both of these and controls and measures to manage surface water runoff are secured through inclusion in the Outline Code of Construction Practice (CoCP) (document reference 7.2).		X		
9-2.1314	Criticism that in Figure 4.1 on Page 1 of 60 of the PEIR Vol II Figures, the plan shows the proposed	The Preliminary Environmental Information Report (PEIR) and supporting figures were a preliminary		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	location of the substation along with the temporary attenuation basin and the proposed overhead lines SuDS attenuation basin, but these areas appear to not consider the impermeable area created by the platform for the substation, requiring surface water management in the form of SuDS for this area of the development / Suggest that while this application focuses on the pylons, other aspects of the development such as the proposed substation are considered by National Grid to will need to ensure there is sufficient space available	document and reflected the Project proposals at the time. The design of the Project has continued to develop since the production of the PEIR to ensure that spatial constraints have been considered as part of the ancillary works for the Project. Proposed Sustainable Drainage Systems (SuDS) features are illustrated in ES Figure 4.1: Proposed Project Design (document reference 6.4.F1) and ES Figure 4.2: Proposed Project Design – Permanent Features (document reference 6.4.F2).				
9-2.1315	Criticism that in Figure 4.1 of the PEIR Vol II Figures, there are substantial laydown areas marked on the plan for the assembly of the pylons, however, in the main report it is not clear what, if any, work will be undertaken to prepare these laydown areas for use, and that it is also not clear what remediation work will occur to ensure the subsoils are not excessively compacted to prevent an increase in flood risk / Request that further information is required in the report and subsequent assessments	The Preliminary Environmental Information Report (PEIR) and supporting figures were a preliminary document and reflected the Project proposals at the time. Environmental Statement (ES) Chapter 4: Project Description (document reference 6.4) provides details on construction compounds and working areas for the construction of pylons. Measures related to reinstatement of soils are included within the Outline Code of Construction Practice (CoCP) (document reference 7.2). The main works contractor(s) will be required to produce Soil Resources Plan(s) prior to commencement of construction to outline measures for management of soils, including their reinstatement.		X		
9-2.1316	Request that National Grid update 'Figure 12.1, Hydrology and Land Drainage: Study area and	The figures have been updated for inclusion within the Environmental Statement (ES) (document reference		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	Water Environment Features' of the PEIR Vol II Figures to identify all the ordinary watercourses within the redline boundary and wider study area, as this will be needed to identify all the temporary (and any permanent) watercourse crossing and discharge locations in order to assess whether there is any increase in flood risk	Volume 6: Environmental Statement) and ES Appendix 4.2 Watercourse Crossing Details (document reference 6.4.A2) provides schedules that identify all of the watercourse crossings that are proposed. Discharge locations are indicative at this stage, however the Order Limits incorporate sufficient land take to allow management and discharge of surface water drainage during construction and operation of the Project. See Figures 12.1 - 12.3 of the ES (document reference 6.12.F1 – 6.12.F3) for further details.				
9-2.1317	Request that National Grid further consider the surface water flow paths and proposed structures to ensure there is no increase in flood risk (in relation to Figure 12.2, Hydrology and Land Drainage: Flood Risk Areas of the PEIR Vol II Figures)	Surface water flow paths have been considered as part of the Flood Risk Assessment (FRA) (document reference 7.9). The FRA provides details of controls and measures have been included within the design or will be implemented during construction of the Project to prevent increases in flood risk due to blockages of these flow paths.		X		
9-2.1318	Criticism that it is unclear to a non-technical or technical reader what information is being presented in the surface water section of the Non-Technical Summary, as it focuses on watercourses and flood zones associated with watercourses / Request that National Grid take action to provide clarity and better communicate the sources of risks in this section of the Non-Technical Summary (in relation to section 5.8.4 and section 5.8.6 of the Non-Technical Summary)	This comment has been addressed by providing more information on other sources of flood risk (surface water, groundwater) in the non-technical summary of the Environmental Statement (ES) (document reference 6.21).		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.1319	Request for National Grid to prepare a separate drainage strategy for the construction and operational phases (in relation to the Non-Technical Summary)	The Project secures a commitment within the Outline Code of Construction Practice (CoCP) (document reference 7.2), to preparing a Construction Surface Water Management Plan which would demonstrate how runoff across the work sites would be controlled and how any off-site effects would be managed and mitigated. Operational surface water drainage would be managed in accordance with commitment W08 which states that drainage would be managed in accordance with the requirements and standards of the relevant Lead Local Flood Authority (LLFA), and adopt suitable sustainable drainage techniques, designed to allow for climate change resilience. Further details are included in the Outline CoCP (document reference 7.2).			X	
9-2.1320	Request for National Grid to provide the location of haul road crossing points and to clarify how National Grid propose to secure the haul roads to prevent trespassing (in relation to the PRow Management Strategy)	These form part of the Development Consent Order (DCO) submission. ES Figure 4.1: Proposed Project Design (document reference 6.4) shows the haul road and all temporary works, this can be viewed alongside the Access, Rights of Way and Public Rights of Navigation Plans (document reference 2.5) which shows the existing public rights of way and any existing public rights of way to be managed or temporarily diverted. In order to secure these locations, security fencing and gates are proposed for all site access points to secure the works area, the construction corridor and haul roads. Access controlled measures such as fencing and gated access to working areas would typically be in place for safety and security. Access and crossover points would			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		be designed to reduce highway safety risks and congestion on the public highway by providing for the safe and efficient passage of construction traffic.				
9-2.1321	Request for National Grid to provide further information regarding the 3,882ha area that is referred to in the Non Technical Summary as being temporarily removed from agricultural production during construction	The impact of the Project on the temporary loss of agricultural land (including Best and Most Versatile (BMV)) land during construction is assessed in full in ES Chapter 6: Agriculture and Soils (document reference 6.6). The assessment details, as standard mitigation, the requirements for soil handling and reinstatement. Land required temporarily would be fully reinstated to its pre-construction condition (or a condition agreed with the landowner).			X	
9-2.1322	Request for further information relating to the Time The Lowest Observed Adverse Effect Level (LOAEL) and Significant Observed Adverse Effect Level (SOAEL) at Table 14.2 of the PEIR Non-Technical Summary	The time periods in Table 14.2 of the Preliminary Environmental Information Report (PEIR) refer to the periods where the respective Lowest Observed Adverse Effect Level (LOAEL) and Significant Observed Adverse Effect Level (SOAEL) thresholds would apply, based on the guidance of BS 5228-1:2009+A1:2014 Code of practice for noise and vibration control on construction and open sites – Part 1: Noise (BS 5228-1). For clarity, the stated time periods do not refer to proposed working hours, but rather are time periods within which certain thresholds are applicable. Further information is provided in the Chapter 14: Noise and Vibration of the Environmental Statement (ES) (document reference 6.14).			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.1323	National Grid have committed to review their approach to the Project in light of evidence that the Project may not be needed until 2023 / Request that National Grid undertake this review in a way that is visible publicly	National Grid undertakes a review of its Needs Case at every stage of the Project; this includes at key consultation stages and submission for a Development Consent Order (DCO) application. This has been undertaken for the Project within the 2025 Strategic Options Backcheck and Review (document reference 7.17). This includes an indication of when requirements for new infrastructure is required.			X	
9-2.1324	Request for National Grid to confirm whether those who have been informed that they have an interest in the land that may be affected but are outside the order limits will also get an opportunity to meet with National Grid (e.g. in the same way that landowners within the Project order limits and those attending drop-in events do)	As part of the statutory consultation National Grid sent out letters to all parties that were considered to have an interest in a potentially affected piece of land. This letter confirmed that National Grid considered the individual to be potentially affected and that their feedback on the draft proposals would be welcomed. The letter also provided contact details so that affected parties could make contact to discuss the Project and where appropriate / required a face-to-face meeting was arranged.			X	
9-2.1325	Request for National Grid to produce a brief (two pages max) explanation explaining why the two original (ESQ) reports that said offshore was cheaper than piecemeal pylon lines development are no longer of value	The National Energy System Operator (NESO) (previously Electricity System Operator (ESO) published a preliminary report in December 2020 on various strategic options (Offshore Coordination Phase 1 Report). This preliminary analysis only considered issues at a high-level and has been comprehensively superseded by subsequent assessments, which clearly indicate that an onshore connection would provide best value to consumers.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>The NESO has since given this project the go ahead through its Network Options Assessment process (NOA). NESO's NOA process assesses the costs and benefits of reinforcements and provides recommendations on which projects should receive investment – and when.</p> <p>It's also incorrect to assert that an offshore grid is 'greener'. All developments have environmental impacts that need to be assessed, managed and mitigated.</p>				
9-2.1326	How much money will National Grid be investing into mitigation measures? (e.g. the restoration of roads and the environment)	National Grid as part of the Development Consent Order (DCO) process and planning always consider the environment and mitigation measure and a continuing drive to better the local environment from a position as it was before the development works were carried out. At this stage, National Grid could not put a defined figure on this however it is part of the planning and National Grid have to demonstrate what the plans are for the area as a whole as part of the planning DCO decision.			X	
9-2.1327	Request that National Grid undertake a Residential Visual Amenity Assessment (RVAA) for every property along the Project	A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the EIA. The LVIA includes an assessment on both landscape character and visual amenity and sets out the potential landscape and visual effects of the Project, including consideration of effects on visual receptors including communities. The LVIA is presented in Environmental Statement (ES) Chapter 13: Landscape and Visual (Document Reference 6.13).			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		The LVIA chapter is accompanied by Appendix 13.4: Residential Visual Amenity Assessment (Document Reference 6.13.A4). This appendix sets out the approach used for the RVAA together with the results of the assessment.				
9-2.1328	Concern regarding the number of trips that will travel to / from Kent via the Dartford Crossing, during peak hours / Request that AM and PM peak hour flows at the A282 to / From Kent are provided to determine whether there would be any significant impact during the four years of construction	<p>Analysis conducted by the Project to date suggests that the main source of materials would be from the north / northwest of the study area and that the transport of these materials would not involve use of the Dartford Crossing.</p> <p>The impact of the construction traffic along the Strategic Road Network has been assessed in the Transport Assessment (document reference 7.11). The Dartford Crossing has not been identified as a potential route to access the construction Site Access Points.</p>		X	X	
9-2.1329	Request for National Grid to explain the rationale for the 2030 deadline / Criticism that no evidence has been presented to suggest the need for the Project by 2030	The Project responds to the need to overhaul and upgrade the electricity transmission network to accommodate the changes in how we produce and use energy, including the increase in offshore wind which needs to connect in 2030. We are already carrying out work to reinforce and upgrade the existing network in East Anglia, but even with these upgrades, the network will not be sufficient for the amount of new electricity connecting to it. As a result, our proposals for a new overhead line between Norwich and Tilbury are essential in supporting the wider UK transition to renewable energy. The need case for the Project is set out in the		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		2025 Strategic Options Backcheck and Review (document reference 7.17).				
9-2.1330	Request for details about where the pylons and overhead lines are manufactured so respondents can understand the supply chain and environmental impact of the Project	<p>The need for the Project is to support the connection and transfer of green, renewable energy into the National Electricity Transmission System. The Project would support the UK's net zero target to achieve net zero emissions by 2050 through the connection in East Anglia of new low carbon energy generation, and by reinforcing the transmission network. Therefore, the operational, medium to long term benefits of delivering the Project on a national level are considered to outweigh any short-term impacts of greenhouse gas emissions because of material use including cables, Pylons and construction activities.</p> <p>The Environmental Statement (ES) that accompanies the application for development consent is supported by a simple estimate of the greenhouse gas emissions associated with the construction phase of the Project , comparing this against UK emissions to determine if the Project is likely to have a material impact on the ability of the Government to meet its carbon reduction targets. The assessment also identifies potential opportunities to save carbon.</p>			X	
9-2.1331	Request that National Grid disclose the companies they have approached for subsea solutions	National Grid has not consulted with the supply chain on the potential strategic options for this Project. Subsea cabling is an established technology which is commonly used for transferring power over long distances from one point to another. It is therefore not necessary to involve			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		the supply chain in our considerations of feasible options.				
9-2.1332	Request that National Grid repair any current / future damage to land caused by impact surveys for the Project (e.g. by the drilling of boreholes)	<p>Agricultural land will be reinstated to the pre-works condition as far as reasonably possible.</p> <p>National Grid will reinstate affected land to the reasonable satisfaction of the landowner and occupier. We will aim to reinstate topsoil during favourable weather conditions on appropriately contoured and prepared ground.</p> <p>The topsoil of agricultural land will be left in a loose, friable and workable condition and wherever possible, to its original depth over the whole working area. Subsoil will generally be loosened with an agricultural cultivator to an appropriate depth where the topsoil has been removed.</p>			X	
9-2.1333	Request that a detailed Soil Management Plan is agreed with National Grid and all landowners and professional organisations (e.g. the National Farmers Union, Central Association of Agricultural Valuers), to be followed throughout the construction process to mitigate impact on future farming operations / Suggest that National Grid engage early with landowners, their land agents and farming representatives to agree a detailed soil management plan that will identify how soils should be treated, moved and reinstated during construction works for the Project	Appendix C: Outline Soil Resource Plan of the Outline Code of Construction Practice (document reference 7.2) provides details of soil handling to protect and avoid damage to soil resources, referring to good practice and specifically the Defra Code, along with other relevant guidance to meet the regulatory requirements and adhere to guidelines set by professional organisations such as the National Farmers Union (NFU). This would be evolved and further developed prior to construction commencing, taking into account detailed construction approaches, including the use of heavy construction equipment.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.1334	Request that National Grid compensate and budget for landowners to undertake drainage works using the landowner's own land drainage consultants to ensure soil structure is properly restored (e.g. including extensive remedial cultivations)	<p>National Grid will carry out pre, during and post construction drainage assessments, and as part of the landowner consultation will seek to obtain existing drainage information from the landowners.</p> <p>During the reinstatement stage of the Project, National Grid will seek to return the land back to its prior condition. This may include the reinstatement of existing drainage or the installation of new drainage systems.</p> <p>All landowners will be consulted on the reinstatement of their land, and if they should choose to carry out any element of reinstatement themselves this can be done under agreement.</p>			X	
9-2.1335	Request that National Grid provide a full Business Impact Assessment / Criticism that there has not been a Business Impact Assessment for the Project	<p>The application is accompanied by an Environmental Statement (ES) prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 ('the Infrastructure EIA Regulations'). The ES identifies and assesses the likely significant effects on the environment, resulting from the construction and operation of the Project and recommends appropriate mitigation to reduce effects.</p> <p>Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) of the ES presents an assessment of the potential impacts on businesses as a result of the Project during construction and operation (and maintenance). As part of the assessment, a range of measures are considered throughout the construction phase of the Project to reduce, where practicable, disruption of access to businesses within the Order</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Limits. These include traffic management, signage and routing measures to ensure access or partial access could be maintained where feasible. These are identified within the Chapter 15: Socio-economics, Recreation and Tourism of the ES, the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).</p> <p>The financial impact of individual businesses is not an EIA matter and would be subject to individual landowner negotiations.</p>				
9-2.1336	Requests mitigation measures for the construction of the Project to mitigate the impact on Public Rights of Way (PRoWs): that the greatest amount of notice is given where access to PRoWs or other areas open to public use will be affected; any periods of limited use or closure are minimised; work be phased to facilitate the continuing use of as much of the affected paths as possible, and; once works are completed, the area concerned is restored to at least its previous standard and, wherever possible, improved to mitigate impact of construction on PRoWs and residents / Request that any disruption to the PRoWs be kept to a minimum with protection in place to ensure that equestrians, walkers and cyclists can continue to use the routes safely whilst construction works take place: notice given in advance of any disruption or closure to access, safe	An Outline Public Rights of Way (PRoW) Management Plan (document reference 7.6) has been prepared and submitted as part of the Development Consent Order (DCO) application. The document details the type of mitigation measures relating to PRoW during construction. Access, Rights of Way and Public Rights of Navigation Plans (document reference 2.5) have been prepared.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	off road temporary routes provided where closures are necessary to ensure users are not forced onto busy roads, all traffic and works associated with this project made aware of the walkers, cyclists, carriage drivers and horse riders that use the PRowWs					
9-2.1337	Request that National Grid provide a detailed account to the differences between the findings of a Norwich to Tilbury offshore subsea route compared to National Grid's four Eastern Green Links (EGL) projects	<p>The information relating to the Eastern Green Links (EGL) 3 & 4 projects, which are proceeding on a path to achieve a Development Consent Order (DCO), can found on their respective project websites.</p> <p>The EGL OPP6 and 7 options are the ones considered for the connection. The connections for the EGL 3 and 4 are 640 km and 541 km respectively, offshore for 2 x 2 GW links In the appendix we also considered an onshore alternative to provide connections to the same location which would be 768 km. In this instance, the economic case for High Voltage Direct Current (HVDC) is more applicable due to the long distances and lower capacity.</p> <p>By contrast, Norwich to Tilbury is proposed to be 180 km onshore. For the offshore options we considered 220 km in length and the need for 3 x 2 GW links. The distances onshore and offshore in this case are less than 1/3 the distance involved on the EGL3 and 4 projects, Over this type of distance 200 km onshore technology, particularly overhead lines, are far more economic than the offshore alternative. The assessment in the 2025 Strategic Options Backcheck and Review (document reference</p>	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		7.17) is done on an identical basis to the assessment carried out in the EGL 3 and EGL 4 project document.				
9-2.1338	Request mitigation measures to decrease disruption of construction work: that all construction work and deliveries are made by battery electric vehicles; reversing beeps from construction vehicles and other noise pollution from construction are disabled (rely on other safety measures if required); sound barriers are built around the construction sites and on both sides of the roads for the construction (as Grade II listed buildings cannot install proper sound insulation) to reduce noise disturbance	<p>As part of the pre-application process National Grid has engaged with the relevant authorities, and their highways teams and National Highways to understand and gain information on their local road networks. This information has been used to inform and guide the drafting of the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) for the Project that accompanies the Development Consent Order (DCO) application. A strategy has been developed to manage the impact of construction vehicles on the public highway and sensitive receptors, using suitable Local Road Network connections from the Strategic Road Network called Primary Access Routes. In addition, temporary haul roads for construction vehicles are proposed along the Project alignment, further reducing the impact of construction traffic on the local road network. Further details of the strategy can be found within the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).</p> <p>An assessment of construction noise and vibration is presented in Environmental Statement (ES) Chapter 14: Noise and Vibration (document reference 6.14). The assessment indicates that significant adverse noise and vibration effects can be avoided with the use of best practicable means (BPM). The Main Works Contractor(s) are required to apply BPM to reduce the</p>	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		effects of construction noise and vibration from the proposed works. Further construction noise and vibration assessments will be undertaken by the Main Works Contractor(s) prior to commencing works based on their specific construction methodologies and site-specific mitigation will be determined and employed where required. Consideration would be given to a range of mitigation measures, including but not limited to, use of alternative methods, low noise plant, site layout and orientation, screening, and temporal restrictions.				
9-2.1339	Request that National Grid carefully time commencement of works in any field (e.g. considering weather) to minimise the duration of time in which each parcel of land is taken by construction, returning land to economic use as quickly as possible and prioritising the interests of local landowners, farmers and the local community even if that results in increased costs	<p>With any National Grid project, a programme is always discussed with landowners and occupiers to ensure that they are kept informed with progress on site.</p> <p>We will seek to work with the farming community to limit disruption where practicable. This includes providing prior warning of works which may result in the need to move livestock. Compensation claims for disturbance are considered on a case-by-case basis if negative impact on farming operations can be proven. Particular agricultural matters can also be addressed through voluntary land agreements.</p> <p>National Grid aim to provide at least 10 working days' notice to the landowners and occupiers along the route before entry is taken. Where it is reasonably possible to do so, National Grid will afford landowners and occupiers time to remove standing crops before access is taken in order to mitigate losses.</p>	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Agricultural land will be reinstated to the pre-works condition as far as reasonably practicable. National Grid will reinstate effected land to the reasonable satisfaction of the landowner and occupier. We will aim to reinstate topsoil during favourable weather conditions on appropriately contoured and prepared ground.</p> <p>The topsoil of agricultural land will be left in a loose, friable and workable condition and wherever possible, to its original depth over the whole working area. Subsoil will generally be loosened with an agricultural cultivator to an appropriate depth where the topsoil has been removed.</p>				
9-2.1340	Request mitigation measures to minimise damage to farmland during construction: that width of the construction swathe and construction of haul roads must be minimised to that which is necessary; agricultural vehicles with larger lower pressure tyres suitable for use on farmland should be used in place of traditional road-suitable construction vehicles; and adopt new and alternative construction methods and techniques (e.g. 'cable ploughing' to minimise damage to farmland)	<p>National Grid is and will continue to work with all landowners including farmers who may be affected by the proposals to understand the impacts on their operations and to work with them as the Project is developed. We will seek to work with the farming community to limit disruption where practicable. This includes providing prior warning of works which may result in the need to move livestock. Compensation claims for disturbance are considered on a case-by-case basis, if negative impact on farming operations can be proven. Particular agricultural matters can also be addressed through voluntary land agreements.</p> <p>Agricultural land will be reinstated to the pre-works condition as far as reasonably practicable. National Grid will reinstate effected land to the reasonable satisfaction of the landowner and occupier. We will aim to reinstate</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		topsoil during favourable weather conditions on appropriately contoured and prepared ground. The topsoil of agricultural land will be left in a loose, friable and workable condition and wherever possible, to its original depth over the whole working area. Subsoil will generally be loosened with an agricultural cultivator to an appropriate depth where the topsoil has been removed.				
9-2.1341	Request that the consultation process is restarted to incorporate an offshore grid alternative and representatives from all Parish Councils affected must be included throughout this process	<p>National Grid carefully considers the most feasible options and present proposals for public consultation. In doing this, we must consider impacts on local communities and the environment and deliver value for electricity consumers.</p> <p>We have assessed an equivalent offshore option, but it would mean significant extra cost to consumers, and that would not meet the requirements placed on us.</p> <p>In addition to cost, there are a range of environmental factors and other onshore and offshore impacts which need to be considered in this option. Taking all these considerations into account, we have concluded that an onshore connection is the most appropriate solution.</p> <p>Throughout our consultation process, we have engaged directly with Parish Councils along the route and have asked for their feedback on our proposals.</p>	X			

9-2.1342	Request for National Grid to make available the spatial data used in the interactive mapping, either directly or within their document library	<p>All the spatial data we used in the production of our documents was made available during statutory consultation through our interactive map, the maps in our document library, and the other documents we published.</p> <p>The interactive map has been updated to reflect our final proposals and is available on the Project website.</p>			X	
9-2.1343	Request that National Grid investigate the cumulative impact of traffic movement in regard to North Falls and Five Estuaries' proposed access and conduct a combined traffic impact assessment for all three projects together (including this Project).	The cumulative impact of traffic movement in regard to North Falls and Five Estuaries has been assessed in Chapter 16: Traffic and Transport of the Environmental Statement (ES) (document reference 6.16) and the Transport Assessment (document reference 7.11).	X			
9-2.1344	Request that no construction should begin until the Development Consent Order (DCO) for the Project is approved (e.g. in the case that individual DCOs are approved before this)	<p>National Grid has not started any construction work for the project and would not do so unless we receive a Development Consent Order (DCO) on our proposals. If we do receive consent, we will continue to keep local residents and stakeholders up to date with regular construction updates.</p> <p>There are several other DCO and local planning projects in East Anglia that have started construction, such as the Bramford to Twinstead Reinforcement and the substation extension at Norwich Main Substation alongside projects led by other third-party providers.</p>		X		
9-2.1345	Request for a follow up meeting with National Grid before the final round of change control and the submission of the final statutory consultation on 26 July 2024, including an engineering representative of National Grid	<p>During the statutory consultation, we held 14 Public Information Events and met with affected landowners and relevant stakeholders. Where necessary, these meetings were attended by relevant members of our lands, engineering, and construction teams.</p> <p>If we receive development consent, we will keep the local community, landowners, and stakeholders up to date with important construction news on the Project website and through Project updates.</p>			X	
9-2.1346	The Preliminary Environmental Information Report (PEIR) notes potential construction phase impacts due to temporary land take, in particular sports	The Preliminary Environmental Information Report (PEIR) was a preliminary document and reflected the Project proposals at the time.	X			

	<p>pitches, golf courses and other leisure or cultural provision. The PEIR notes a temporary impact, but does not identify the length of time, which could be up to the full 4 year construction programme. The period of impacts will be an important factor on which to identify the need for additional mitigation, e.g. alternative provision of sports facilities and the final assessment of significance.</p> <p>With this, request that the Environmental Statement (ES) for the Project reports the exact nature and impacts of the temporary acquisition of land required by National Grid from the Equine Centre, Writtle University College, St Mary's Church Buttsbury, Woodland Schools, Hutton Manor and Little Acorns; this should include the estimated length of time of impact on the community facilities, which should then influence the assessment of significance as well as the potential mitigation, e.g. replacement facilities, timing to reduce impacts and the results of consultation with the providers.</p>	<p>National Grid will continue to engage with all affected landowners and organisations such as sports facilities, golf courses and equine facilities. As part of this engagement National Grid would look to agree mitigation where required and reasonable, and this could include alternative sites.</p> <p>The duration of impact (i.e., short-term, medium-term and long-term) has been reported in Chapter 15: Socio-economics, Recreation and Tourism of the Environmental Statement (ES) (document reference 6.15).</p>				
9-2.1347	<p>Comment supportive of baseline assessment on public mental health and potential effects due to impacts from the construction and operation of the proposed scheme. The Preliminary Environmental Information Report (PEIR) makes reference to the potential for local public concern through understanding of risk / risk perception of electric and magnetic fields (EMF) and visual impacts. The report outlines how information on EMFs will be provided as a separate document alongside the Environmental Statement (ES) and other Development Consent Order (DCO) application documents. The information provided will include details and information on how the Project will comply with relevant guidelines and codes of practice.</p> <p>However, concern that the report does not indicate</p>	<p>The Environmental Statement (ES) considers the potential effects on mental health through risk perception / understanding of risk posed by the exposure to electromagnetic fields (EMF and visual impacts. This has been informed by technical EMF information as well as consultation responses on this matter. Receptors include both the general and vulnerable populations.</p> <p>The approach to the consideration of mental health impacts in the ES has been informed by the principles and protective factors for mental health as set out in the Mental Health and Wellbeing Impact Assessment (MWIA. As recognised by the UK Health Security Agency (UKHAS) comment, robust and meaningful consultation with the local community will be an important mitigation measure, in addition to informing the assessment and subsequent mitigation measures.</p>	X			

how any community anxiety or concern from EMFs will be identified and addressed. It is assumed that the engagement team will communicate risk safety information within the various public consultation opportunities. It is important that communication programmes in relation to the scheme should provide a source of clear and objective information to increase knowledge and awareness.

It is important to understand levels of community anxiety in order to influence the approach to these public consultations and the need to change or improve the information or approach. Understanding of community anxiety will also enable a more robust, transparent and defensible assessment of significance.

With this, recommend that the ES should consider potential effects on mental health through risk perception / understanding of risk posed by the exposure to EMF and visual impacts.

When estimating community anxiety and stress a qualitative assessment may be most appropriate. Robust and meaningful consultation with the local community will be an important mitigation measure, in addition to informing the assessment and subsequent mitigation measures. This may involve conducting resident surveys but also information received through public consultations, including community engagement exercises. The Mental Well-being Impact Assessment Toolkit (MWIA) contains key principles that should be demonstrated in a project's community engagement and impact assessment. Suggest consultation with the local authority's public health team who are likely to have Health Intelligence specialists who will have knowledge about the availability of local data.

The assessment should identify vulnerable populations.

9-2.1348	<p>Suggest that (in accordance with the Public Rights of Way Management Strategy (PRoWMS)) all locations where a PRoW is expected to be impacted by the Project should have appropriate signage, advising the dates and hours the PRoW will be affected, and that:</p> <ul style="list-style-type: none"> • Local residents and businesses should be provided with details of the diversion route and dates/durations in line with paragraph 3 of Schedule 15 to the 1981 Wildlife and Countryside Act. As far as practicable, this information will be provided a minimum of two weeks in advance of the diversion being brought into use although, exceptions will apply in the case of emergency works; • All diversions will be constructed to recreate the current levels of accessibility provision as the existing route and where reasonably practicable will maintain compliance with the Rights of Way Circular (1/09); and, • Any required temporary diversions will be clearly marked at both ends with signage explaining the diversion, the duration of the diversion and a contact number for any concerns. The location of signs should be discussed with the relevant Local Highway Authority (LHA) before construction. Where applicable, maps showing temporary diversions and alternative PRoW should be provided at sites affected by the works. <p>In addition, the Main Works Contractor(s) should discuss with the respective local authorities whether additional signage outside the Order Limits will be appropriate to give users advanced information, and it is anticipated that local residents will be informed of impacts on the PRoW through regular newsletters distributed within a particular section of the route</p>	<p>An Outline Public Rights of Way Management Plan (document reference 7.6) has been provided with the Development Consent Order (DCO) application to manage Public Rights of Way (PRoW) during construction. Details on Temporary closure to PRoW can be found within 3.1 Draft DCO - Schedule 7 Streets or public rights of way to be temporarily stopped up.</p> <p>The impacts on PRoW would be minimised wherever possible, where impacted upon by any temporary construction works or permanent works. Where possible, access along all PRoW crossing the Order Limits would be maintained with access managed, or PRoW diverted, and only closed where absolutely necessary during specific construction activities. Any required temporary diversions would be clearly signed at both ends, detailing the diversion routes, the duration of the diversion and a contact number for any concerns. Exact details of the forms of any management, diversions or closures would be subject to discussion with relevant local authority access officers. Details would be presented in the Public Rights of Way Management Plan (which will be substantially in accordance with the Right of Way Circular (1/09) and detailed within the Outline Public Rights of Way Management Plan (document reference 7.6). It is proposed to remove all temporary arrangements post-construction and reinstate footpaths as they were prior to the works being undertaken.</p>			X	
9-2.1349	<p>Suggest that National Grid put in place new insurance covers or pay for this coverage for</p>	<p>There is no evidence from National Grid construction activities in the past that there is any statistically</p>			X	

	properties impacted by the Project not only the duration of the works but for at least 10 years after building work has completed (e.g. as damage to property may not be obvious for up to 10 years)	identifiable risk associated with our work. National Grid is a responsible developer, adheres by industry standards for codes of construction practice, and carries public liability insurance for third party claims linked to construction activities. Contractors are also required to carry public liability insurance whilst working for National Grid. Claims based on negligence or nuisance can be brought up to six years from the date when the damage occurs, which may be longer than the 10 year period mentioned.				
9-2.1350	Request for National Grid to arrange for the removal of two closure signs at the eastern end of Hickling Lane (heavy signs attached with electrical ties to trees and held in place with heavy sandbags) which were put in place when Hickling Way was closed as part of the 2023/24 works to replace overhead lines in Swainsthorpe, Norwich	Comments were received about the removal of signs relating to reconductoring work being carried out on the existing 4YM overhead line between Bramford and Norwich. These signs were not related to Norwich to Tilbury. The comments were passed to the relevant project community relations team to follow up. The reconductoring work has since been completed			X	
9-2.1351	Suggest that culverts should be constructed to not lose channel capacity and the culvert length should be kept as short possible but will be assessed by the local planning authority (LPA) on ordinary watercourses	Design principles for culverts have been discussed with the Lead Local Flood Authorities and the Outline Code of Construction Practice (document reference 7.2) contains several commitments to secure culverts that are designed to prevent loss of channel capacity and are as short as practicable.	X			
9-2.1352	In relation to Section 2.1.1 of the Preliminary Environmental Information Report Non-Technical Summary (April 2024) ('National Grid undertakes options appraisals during the first stage of project development for all its new projects. These often identify a number of different approaches the project could take to achieve its stated purpose, also known as its 'Needs Case', and may include different locations, technologies or designs.'), request that National Grid do the following: - Provide rationale (with evidence to support rationale) for providing only two options proposed in NTS (and presumably PEIR);	The Corridor and Preliminary Routeing and Siting Study (available on the Project website) and the 2025 Strategic Options Backcheck and Review (SOBR) (document reference 7.17) as well as the previous 2023 and 2024 SOBRs detail the rationale in determining the preferred route option of the Project. National Grid is required to consult on the project that meets the need case and its various duties. As such National Grid has to develop a project that will secure planning consent and be funded by OFGEM. It is therefore disingenuous to consult on options that will ultimately not be supported, regardless of public preference.			X	

- Clarify why the only two options selected have very limited differences (i.e. 2km underground cables and 2 additional compounds), with the vast majority of detail identical for the Project;
- Justify how the proposed two options satisfy the statement ""a number of different approaches the project could take to achieve its stated purpose"";
- Make easily accessible to the public all assessments of the relative social, economic and environmental impacts and benefits of the 23 options. In particular, provide robust life cycle analysis and depreciation costs over the lifetime of each scenario, not just the up-front cost but the potential for long-term lower constraint cost—and challenges around delivery speed), and including all indirect costs of building pylons (e.g. compensation, discounts, community benefit schemes and other payments offered to buy local support);
- Present spatial analysis of costs and benefits per head of population across the UK, thereby highlighting the disproportionate negative impacts borne by East Anglia;
- Provide clarification of where the NG 'Needs Case' has addressed critiques raised in the Hiorns, 2023, Review of National Grid Energy Transmission (NGET) proposals, in particular in respect to: (a) weaknesses in the 'predict and provide' model of grid planning and the critique that using this method undercuts the current need case for N2T; (b) review of offshore options that suggest alternative solutions at lower costs than NGET had previously quoted; (c) further sensitivity studies are required to reduce the risk of stranded investments;
- Clarify how the process of option selection has abided by the sentiment and intent of The Green Book Guidance (as it applies to the consideration of projects, and not just policies), issued by HM Treasury

Design variants and alternatives that have been considered, and the rationale for decisions, have been presented during the Project development stages in the 2022 Corridor and Preliminary Routeing and Siting Study (CPRSS), the 2023 and 2024 Design Development Reports (DDR) (available on the Project website) and the 2025 DDR (document reference 5.15) as well as in the ES Chapter 3: Alternatives (document reference 6.3).

The Strategic Options Backcheck and Reviews published in 2023 and 2024 (available on the Project website) and the 2025 Strategic Options Backcheck and Reviews (document reference 7.17) have presented cost comparisons informing and validating the selection of the Project being taken forward. The development of the project is not required to adopt the Green Book approach but follows a structured options appraisal method that has been tested through many applications, most recently for the Bramford to Twinstead project which is another National Grid project comprising overhead lines and underground cable.

National Grid considers all relevant information pertaining to the development of new transmission projects but is under no obligation to provide a response to any particular report. It is also clear that National Grid must operate within its regulatory environment and duties rather than within a context preferred by others.

--	--	--	--	--

9-2.1353	<p>In relation to Section 2.2.3 of the Preliminary Environmental Information Report Non-Technical Summary (April 2024) ('A total of 23 strategic options were identified and appraised. Options were discounted owing to a number of factors including poor performing cost benefit analysis, the presence of complex Special Protection Area (SPA) / Special Area of Conservation (SAC) / Sites of Special Scientific Interest (SSSIs) and options having higher capital costs for limited benefit and the presence of the Suffolk Coast and Heaths National Landscape (an Area of Outstanding Natural Beauty (AONB)), request that National Grid do the following: Clarify whether the options were assessed and ranked in the context of a green grid planning hierarchy? If so, please make this assessment easily accessible to the public.</p> <p>Provide evidence of compliance with the four aspects of the 'Gunning principles', either in spirit or law. (Note - these principles have been judicially summarised and endorsed by the Supreme Court as: 'First, that consultation must be at a time when proposals are still at a formative stage. Second, that the proposer must give sufficient reasons for any proposal to permit of intelligent consideration and response. Third... that adequate time must be given for consideration and response and, finally, fourth, that the product of consultation must be conscientiously taken into account in finalising any statutory proposals.' As set out by Stephen Sedley QC as approved by Hodgson J in R v. Brent LBC ex p Gunning and endorsed by the Supreme Court in R (Moseley) v Haringey London Borough Council [2014] UKHL 56; [2014] 1 WLR 3947).</p> <p>Provide clarity where, and the extent to which, the selection process used within The Project option selection process has reflected the dictum that</p>	<p>The approach to assessment of the strategic options was set out in the Corridor and Preliminary Routeing and Siting Study published in 2022 and available on the Project Website. This included a range of technologies and on and offshore solutions so thoroughly challenged the overhead line starting point presumption. This was also subject to the backcheck and review in the Strategic Options Backcheck and Review published in 2023 and available on the Project Website.</p> <p>This Project comprises a proposed overhead line connection over 2 km in length and therefore it is classified as a Nationally Significant Infrastructure Project (NSIP). Therefore, the Project would require consent under the Planning Act 2008. An NSIP application is submitted to the Planning Inspectorate and examined by an independent panel of inspectors. The Planning Inspectorate will decide if our consultation has been adequate and will measure it against statutory guidance and other legal requirements. This will include an assessment on the extent to which National Grid has carried out consultation in accordance with the Gunning Principles (to the extent applicable). National Grid considers that we have developed our proposals and carried out consultation in accordance with the Gunning Principles where applicable. The Gunning Principles set out four principles for consultation as follows:</p> <p>Consultation must be at a point when proposals are still at a formative stage. A final decision has not yet been made, or predetermined, by the decision makers. All of our consultations on the Project (non-statutory consultations in 2022 and 2023, our statutory consultation in 2024 and the targeted consultations and landowner consultation in 2025) were held at a formative stage where final decisions on the proposals were still to be made and we took on board feedback on our proposals at each stage.</p>			X	
----------	---	---	--	--	---	--

<p>“overhead lines should be the starting point.” Provide a response to the widely-held critique that the intent of NG in relation to public consultations was merely one of “back-checking”, i.e. retro-fitting analysis relating to a decision already made, in contrast to early and effective consultations whilst proposals are still being formulated</p>	<p>There is sufficient information to give ‘intelligent consideration’. The information provided must relate to the consultation and must be available, accessible, and easily interpretable for consultees to provide an informed response. We have published a considerable amount of information to support both non-statutory consultations and statutory consultation. This information was available online and in paper copy at our public events during consultation and remains available on the Project website. Information was available in alternative formats on request. For the targeted consultations this included a summary of the proposed changes, maps showing the 2024 proposals and the proposed changes, and accompanying environmental information for each proposed change of significance. This information was available in various forms including online and in paper copy at our public information events during consultation and upon request and remains available on the Project website.</p> <p>There is adequate time for consideration and response. There must be sufficient opportunity for consultees to participate in the consultation.</p> <p>Our statutory consultation ran for a period of 15 weeks; our targeted consultations ran for a period of at least 30 days each. When considering the smaller scale of changes we were consulting on, this was a proportionate and appropriate timeframe for consultation. This gave sufficient time for people to review the information provided, attend a face-to-face event, webinar, or contact the Project team with any questions to enable them to provide an informed response. We follow advice and guidance provided in relation to consultation for a Project of this nature and are confident we go over and above any statutory requirements to engage fully with all stakeholders.</p> <p>Conscientious consideration must be given to the consultation responses before a decision is made.</p>				
---	--	--	--	--	--

		<p>Decision makers should be able to provide evidence that they took consultation responses into account.</p> <p>In response to the statutory consultation, we received over 13,000 responses. In response to the targeted consultations, we received over 700 pieces of feedback. Responses were received from members of the public, elected members, Local Planning Authorities and technical stakeholders. All responses received have been carefully read and considered by the Project team. Information from the feedback has been considered and changes have been made as we have developed the alignment.</p> <p>Evidence of how we carefully considered the feedback submitted during the 2022 and 2023 non-statutory consultations is detailed in our previous consultation feedback reports, which are available on the Project website.</p>				
9-2.1354	<p>In relation to Sections 2.2.4 & 2.2.5 of the Preliminary Environmental Information Report Non-Technical Summary (April 2024) ('Following the appraisal process the preferred Strategic Proposal comprised:</p> <ul style="list-style-type: none"> - An offshore reinforcement between the south coast and East Anglia (whilst subject to separate study this is initially identified as between Sizewell and Richborough and referred to as the Sea Link project) - An onshore reinforcement between Tilbury and Grain - An onshore reinforcement between Norwich and Tilbury <p>2.2.5 The Project covers the onshore reinforcement between Norwich and Tilbury only...'), request that National Grid do the following:</p> <ul style="list-style-type: none"> - Provide justification for no transparency in appraisal of all 3 components or explanation as to why The Project only covers the onshore reinforcement between Norwich and Tilbury. 	<p>The 2022 Corridor and Preliminary Routeing and Siting Study (CPRSS) (available on the Project website) sets out that there was no single point to point project that could meet the reinforcement need and that a combination of Projects were required. The CPRSS considered a range of combinations encompassing onshore, offshore, AC or DC, overhead line and underground cable connections between different potential connection points and concluded with the combination noted by the respondent. This was validated by subsequent Strategic Options Backcheck and Reviews in 2023 and 2024 (available on the Project website) and the 2025 Strategic Options Backcheck and Reviews (document reference 7.17).</p> <p>The Holistic Network Review and Offshore Transmission Network review specifically focused on projects that they were able to influence with those responding to more urgent connection needs, projects such as Norwich to Tilbury were not subject to the same considerations.</p>			X	

	- Clarify where the preferred Strategic Proposal helps deliver to the National Grid Electricity Supply Operator 2020 Offshore Transmission Network Review prediction of an integrated approach reducing infrastructure (including cabling and onshore landings) by 50% by 2050 (re-quoted in the Draft Overarching National Policy Statement for Energy (EN-1), November 2023, para. 3.3.75)."				
9-2.1355	In relation to Section 2.3.4 of the Preliminary Environmental Information Report Non-Technical Summary (April 2024) ('Feedback from stakeholders (including the local community) received from the 2022 non-statutory consultation was considered and taken into account to help shape and guide the development of the Project. Following the 2022 non-statutory consultation, the 2023 preferred draft alignment was developed'), request that National Grid demonstrate instances of any meaningful concessions/community input incorporated into the evolving Project design	Feedback from all consultations on the Project has been reviewed and decision made regarding whether changes are or are not made and the reasons explained in the previous 2022 and 2023 Non-Statutory Consultation Feedback Reports, this report as well as the 2023 and 2024 Design Development Reports (available on the Project website) and the 2025 Design Development Report (document reference 5.15). The Design Development Reports identify the main changes with the feedback reports setting out how all feedback was considered. Following the 2022 non-statutory consultation the 2023 Design Development Report set out the main changes in Section 3 (from paragraph 3.2.8) with further detail in Sections 5 and 6, reports published at our previous consultations can be found on the Project website.			X
9-2.1356	In relation to Section 2.3.9 of the Preliminary Environmental Information Report Non-Technical Summary (April 2024) ('National Grid has prepared a Strategic Options Back Check and Review (SOBR) in accordance with National Grid's document 'Our Approach to Consenting' (National Grid, 2022). The 2024 SOBR appraises the ability of onshore and offshore options to meet the system need while balancing cost, technical performance, and environmental and socioeconomics effects'), request that National Grid provide meaningful and sufficiently comprehensive summary of these	The 2024 Strategic Options Backcheck and Review published at the statutory consultation and available on the Project website contained an executive summary that we considered provided a meaningful and succinct summary. Other documents also contain an executive summary.			X

	documents, and make them easily accessible to the public				
9-2.1357	In relation to Section 4.3.6 of the Preliminary Environmental Information Report Non-Technical Summary (April 2024) ('At this preliminary stage the surveys and assessment work have been progressed to differing degrees for different technical assessment, and mitigation measures have not all been defined or designed'), request that National Grid clarify how surveys and assessment work on mitigation etc, followed by public consultation in line with Gunning Principles, will be undertaken for 21 options, in addition to the two selected, in order to enable equitable comparison of all 23 options	At each stage of the Project a consistent level of information has been used to support decision making on the selection of the preferred option. There is no requirement for all design variants or alternatives to be studied to the level of detail captured within the Preliminary Environmental Information Report (PEIR) or Environmental Statement (ES) supported by a similar degree of detail from associated surveys. National Grid does not consider it proportionate to complete such an extent of surveys, nor reasonable to impose such surveys on landowners when there can be shown, based on available data, to be no realistic prospect of an option progressing.			X
9-2.1358	In relation to Section 5.2.1 of the Preliminary Environmental Information Report Non-Technical Summary (April 2024) ('Following the identification of mitigation all preliminary residual7 'potential effects' arising from the construction and operation (and maintenance) of the Project have been identified, for example loss of habitat or change in noise levels. The assessment considers the level of significance of each effect on each 'receptor' (the receiving environment such as water, air, land or specific species). The assessment has been undertaken by EIA specialists including ecologists and archaeologists. The general approach to determining 'significance' of an effect is to consider the sensitivity of a receptor alongside the nature and severity of the change. Details of how effects have been determined to be significant or not-significant for each aspect is provided in each topic chapter of the PEIR.'), request that National Grid do the following: Provide details and evidence, for each identified impact, to demonstrate how the EN-1 (para.4.6.1) mitigation hierarchy has been applied	National Grid has sought to reduce environmental impacts, as far as practicable, through routing and siting and an ongoing iterative design process which has taken on board feedback at different stages of the project. Environmental mitigation measures have been described within each Environmental Statement (ES) topic chapter. In order to minimise impacts, an Outline Code of Construction Practice (CoCP) (Document Reference 7.2), Outline Construction Traffic Management Plan (CTMP) (Document Reference 7.3), Outline Landscape and Ecological Management Plan (LEMP) (Document Reference 7.4) and Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (WSI) (Document Reference 7.5) have been included as part of the application to deliver any mitigation required, including proposed management and monitoring. Although not currently mandatory for Nationally Significant Infrastructure Project (NSIP) applications, National Grid is committed to delivering 10% Biodiversity Net Gain (BNG with wider environmental and societal			X

	<p>(including any relevant operational aspects) to The Project.</p> <p>Provide details of cumulative benefits designed to offset residual impacts of The Project and grid transmission infrastructure, at national, regional and local levels, in relation to:</p> <p>(a) increased opportunities for enhancement of natural capital as whole route corridor mitigation;</p> <p>(b) fulfilling the overall environmental net gain ambition;</p> <p>(c) use of grid corridor 'visual catchments' to enhance blue and green infrastructure, for example: flood protection; enhancing tree and woodland cover (screening); rewilding; carbon, sequestration etc;</p> <p>(d) biodiversity net gain, helping to meet national nature recovery ambitions – adding cumulative value through existing and new local nature recovery strategies;</p> <p>(d) delivering local environmental benefits (landscape, amenity, sustainability, access to countryside), driven by the needs and aspirations of local communities, expressed through participative design panels and/or community forums.</p> <p>e) use of the 'How to do it Natural Capital Handbook' and ENCA as required in EN1</p>	<p>benefits. The mitigation hierarchy is being adhered to where at all possible with onsite mitigation incorporated into the Order Limits. While any required offsite BNG would ideally be located locally to the impacts, given the scale of the Project and large number of units required, this may not always be practicable. National Grid would seek to identify offsite BNG locations with additional environmental and societal benefits that will be delivered through expert partners.</p> <p>Off-site locations will be chosen based on National Grid's carefully considered selection criteria. The selection criteria will take into account (amongst other criteria), the habitat type and condition required, the location in proximity to the Order Limits, the delivery partner's credibility and proven experience in delivery, cost per unit, timeframes and will also consider sites that provide added value in the form of additional societal and environmental benefits. Any habitats included within the BNG onsite mitigation will be monitored and managed by National Grid for 30 years in line with commitments made within the Biodiversity Net Gain Report (document reference 7.1).</p> <p>The Landscape and Visual Impact Assessment (LVIA) includes an assessment on both landscape character and visual amenity and sets out the potential landscape and visual effects. It identifies areas for potential mitigation planting, where practical, to reduce landscape effects and visual impacts. The landscape and visual assessment is presented in ES Chapter 13: Landscape and Visual (document reference 6.13). The Outline Landscape and Ecology Management Plan (LEMP) (document reference 7.4) includes details regarding any planting proposals, and information relating to the restoration of any habitats and landscape features.</p>				
9-2.1359	In relation to Section 4.2 of the Preliminary Environmental Information Report Non-Technical Summary (April 2024) ('The assessment concluded	The assessment on ecological features has been made based on The Chartered Institute of Ecology and Environmental Management (CIEEM) Guidelines for			X	

	that with the implementation of mitigation measures, effects on all biodiversity receptors are likely to be not significant. There are two exceptions to this:'), request that National Grid clarify, and justify, what time-period are they using to assess 'not significant' effects	Environmental Impact Assessment (EIA) 2024 within the duration paragraphs of 5.14 and 5.15. Impacts and effects have been described as short, medium or long-term and permanent or temporary in line with these guidelines. The periods for which are defined in months/years within the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8).				
9-2.1360	In relation to Section 5.9.14 of the Preliminary Environmental Information Report Non-Technical Summary (April 2024) ('During the operational (including maintenance) phase, the assessment concluded that effects on landscape character have the potential to have long-term significant effects across the draft Order Limits and the surrounding landscapes up to approximately 1 km from the Project. Significant effects on views and visual amenity during operation (including maintenance) are predicted to be experienced up to approximately 2 km from the Project. In the longer term, mitigation measures including replacement planting and embedded mitigation within the 'Environmental Areas' around the CSE compounds and substations / substation extensions would reduce effects in some areas. '), request that National Grid explain how the mitigation planning will account for decadal delay in restoration initiatives associated with replacement of lost trees, hedgerows, and other nature-based visual amenity features, and ecosystem service generation. (For example, oak trees take up to 60 years to reach maturity)	<p>National Grid has sought to reduce, as far as practicable, impacts on the environment (including on landscape character) through routeing and siting and an ongoing iterative design process which has taken on board feedback at different stages of the Project. We have engaged with a range of stakeholders (including Statutory Environmental Bodies (SEBs) and relevant Local Planning Authorities (LPAs) throughout the development of the Project design and environmental assessment work.</p> <p>National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project. The results of this assessment are provided in the Environmental Statement (ES) that accompanies the Development Consent Order (DCO) application. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation (and maintenance) of the Project and recommends appropriate mitigation measures to reduce potential effects.</p> <p>The landscape and visual impact assessment (LVIA) presented in ES Chapter 13: Landscape and Visual (document reference 6.13) includes an assessment on both landscape character and visual amenity and sets out the potential landscape and visual effects. It identifies areas for potential mitigation planting, where practical, to reduce landscape effects and visual impacts. The assessment also considers the likely effects of the Project during construction at operational</p>			X	

		<p>Year 1 and Year 15 to account for the effect of vegetation maturing over time,</p> <p>In addition to the EIA, National Grid have committed to delivering 10% BNG with wider environmental and societal benefits.</p> <p>National Grid has committed to a 3:1 replacement for individual trees and individual trees within small groups. The Project will prioritise the replanting for individual trees and small groups of individual trees within the Order Limits, offsite provision may however be required.</p> <p>Details of the onsite tree planting will be provided in accordance with the final LEMP or the Reinstatement Planting Plan secured in the draft DCO (document reference 3.1).</p>				
9-2.1361	In relation to Section 1.5 of the PEIR Vol 1 Main Text, April 2024 ('Environmental Net Gain & Biodiversity Net Gain (10%)'), request that National Grid Provide explanation of how the 30 year mitigation timescale reconciles with the estimated 40 year lifespan of proposed pylons, and the multidecadal recovery time of many species and ecosystems that will be impacted	<p>The Environment Act 2021 introduces a mandatory requirement for 10% Biodiversity Net Gain (BNG) for new Development Consent Orders (DCO). For Nationally Significant Infrastructure Projects (NSIP) projects the 10% BNG requirement is not expected to become mandatory until May 2026. National Grid has however committed to delivering Net Gain of 10% BNG with wider environmental and societal benefits on all construction projects. The Net Gain target for the Project is currently voluntary and aligned with National Grid's corporate sustainability commitment. A 30-year management and monitoring requirement of newly created and enhanced habitats counted within the BNG metric is a requirement of the current BNG guidelines intended for Town and Country Planning Act (TCPA) applications. In the absence of BNG guidelines for NSIPs this 30-year management and monitoring period has been adopted as part of the projects approach to BNG. See Biodiversity Net Gain Report for more detail (document reference 7.1).</p>			X	
9-2.1362	In relation to Section 2.6.6 of the PEIR Vol 1 Main Text, April 2024 ('Advice Note Seventeen:	Decision making about routeing of overhead lines (and underground cables) and the siting of Cable Sealing End			X	

	<p>Cumulative Effects Assessment¹² (Planning Inspectorate, 2019) sets out the recommended approach to Cumulative Effects Assessment (CEA) for NSIP projects including guidance on the relative weight to be applied to other developments depending upon how progressed they are through the consenting process. Greater information on the CEA is included within Chapter 17.'), request that National Grid do the following: Provide evidence of how the Holford and Horlock Rules are to be applied and consideration given to the 'cumulative effects' of the key new grid threats across East Anglia and the east of England region, including interconnector (IC) landings (see Table 1, p13 & 14, GREENING THE GREAT GRID UPGRADE, May 2024).</p> <p>Provide proposed locations and approximate land area that can reasonably be considered by the public to be 'sacrifice zones' and local distortions, particularly in relation to new substation developments. Please provide details of how Horlock Rules will be applied to these zones to address claims that NG is inappropriately industrialising the countryside.</p> <p>Provide detail of how Horlock Rules consideration is to be given to potential cumulative effects of non-grid developments, e.g. Long Stratton by-pass, particularly in respect to volume of heavy goods vehicles in the region/disturbance/air quality etc</p>	<p>(CSE) compounds and proposed substations is all set out in the Corridor and Preliminary Routeing and Siting Study (CPRSS) and the 2023 and 2024 Design Development Reports (available on the Project website) and 2025 Design Development Reports (document reference 5.15) which also identify the main reasons for site selection (and why other sites were not selected) with reference to relevant aspects of the Holford and Horlock Rules set out (the Holford Rules can be found in Appendix I22 of this report).</p> <p>Potential cumulative effects have been identified and have informed the identification of mitigation with remaining effects set out in the Environmental Statement (document reference Volume 6: Environmental Statement).</p>				
9-2.1363	<p>In relation to Section 3.3.1 of the PEIR Vol 1 Main Text, April 2024 ('In response to feedback, including that from non-statutory consultation and the Offshore Electricity Grid Task Force (Offset¹⁶) regarding a fully offshore HVDC option to deliver the Project, National Grid provided further clarification on the potential for a feasible offshore strategic option to deliver the additional transmission capacity required, having regard to their duties. The</p>	<p>National Grid notes the respondent's feedback. With regards to the statement that "none of the conclusions should be seen as final", projects like Norwich to Tilbury must take into account any relevant government policies such as National Planning Policy Statements which may, during the lifetime of the project be amended. We are therefore prepared to amend project decisions should we be required to. We also take on board feedback from all</p>			X	

	<p>clarification provided explained why, at that early pre-statutory stage of consultation, the offshore strategic option was not being progressed although none of the conclusions should be seen as final. This information can be found on the Project website 17. https://www.nationalgrid.com/electricity-transmission/network-and-infrastructure/infrastructure-projects/norwich-to-tilbury'), request that National Grid do the following: Provide precise URL to details of why the offshore strategic option was not being progressed (present URL directs readers to the generic home page and requires further navigation). Clarify the statement that "none of the conclusions should be seen as final" in respect to widespread public experience at current NG consultations that reject the potential of reopening decisions that have previously been made - and presenting the same single preferred route corridor subject to some limited localised refinements</p>	<p>stages of consultation undertaken and have made multiple changes to the alignment as a consequence. The offshore strategic option was not progressed as explained in the 2024 Design Development Report (page 23) which directs to the response to OffSet in October 2022 (available on the Project website). The further clarification can be found in the annex, from page 5 of the document.</p>				
9-2.1364	<p>In relation to Section 4.4.9 of the PEIR Vol 1 Main Text, April 2024 ('This section describes the good design principles that have and will be taken regarding the design process including reducing use of raw materials and waste generation. It also sets out how the Project has been designed to be resilient to climate change.'), request that National Grid Provide detailed analysis, including lifecycle analysis calculations of CO2-e, for The Project and alternative scenarios, together with mitigation strategies</p>	<p>ES Appendix 4.1: Greenhouse Gas Assessment (document reference 6.4.A1) provides a simple estimate of the Greenhouse Gas emissions associated with the construction phase of the Project, comparing this against UK emissions to determine if the Project is likely to have a material impact on the ability of the Government to meet its carbon reduction targets. This approach is in accordance with the Environmental Impact Assessment (EIA) Scoping Report (document reference 6.19) and Scoping Opinion (document reference 6.20).</p>			X	
9-2.1365	<p>In relation to Section 4.4.1 of the PEIR Vol 1 Main Text, April 2024 ('The Project Description within the ES will detail likely construction materials. This will be supported by a simple estimate of the GHG emissions associated with the construction phase of the Project, comparing this against UK emissions to</p>	<p>ES Appendix 4.1: Greenhouse Gas Assessment (document reference 6.4.A1) provides a simple estimate of the GHG emissions associated with the construction phase of the Project, comparing this against UK emissions to determine if the Project is likely to have a material impact on the ability of the Government to meet</p>			X	

	<p>determine if the Project is likely to have a material impact on the ability of the Government to meet its carbon reduction targets. The assessment will also look to identify potential opportunities to save carbon.'), request that National Grid clarify what is meant by 'simple estimate'? Does this provide sufficient rigour to evaluate and compare net carbon impacts of various options (e.g. includes carbon embedded in steelwork for the pylons and their production and disposal?). Please present lifecycle analysis calculations of CO2-e for The Project and alternative scenarios</p>	<p>its carbon reduction targets. This approach is in accordance with the Environmental Impact Assessment (EIA) Scoping Report (document reference 6.19) and Scoping Opinion (document reference 6.20).</p>				
9-2.1366	<p>In relation to Section 4.8.29 of the PEIR Vol 1 Main Text, April 2024 ('The standard means of installing underground cables comprises open cut techniques. Typically, for open cut construction, a permanent easement approximately 50 m wide and a construction corridor 120 m wide is required for a double circuit 400 kV route. The 120 m width includes the temporary haul road, soil storage, pre-construction drainage areas, communications cables and typically six cable trenches for 18 cables (three cables per phase) assumed to be to a typical minimum depth of 1.2 m and suitably spaced apart to allow for the required heat dissipation between cables and circuit phases.'), request that National Grid clarify the total construction footprints and soil disturbance for all 23 scenarios to enable an evidence-based comparison (e.g. underground cables = 1.2m depth, width 120m (with potential impacts given additional 50m each side (4.8.39)); Pylon impact = 2m depth)</p>	<p>At this stage of project development National Grid undertakes an indicative design proposal to inform assessment. As detailed design progresses, all considerations will be factored in and as such at this stage, site specifics designs are not available. A layout drawing of a typical HV cable direct buried cross section and construction easement is available on the Project website.</p>			X	
9-2.1367	<p>In relation to Section 6.5.6 and 6.5.7 of the PEIR Vol 1 Main Text, April 2024 ('The assessment draws on guidance set out by IEMA on how land and soil should be assessed in EIA (IEMA, 2022) and set out within the EIA Scoping Report. 6.5.7 The IEMA</p>	<p>Chapter 6: Agriculture and Soils of the Environmental Statement (ES) (document reference 6.6) assesses the Project's effects on all soil functions, alongside the effects on agricultural land (including best and most versatile (BMV) land), as outlined in Tables 2, 3 and 4 of</p>			X	

<p>guidance seeks to move practice away from a narrow focus on quantifying and financially compensating effects on agricultural land and advocates a new and wider approach to assessing the soil functions, ecosystem services and natural capital provided by land and soils.'), request that National Grid clarify definitions, methods of assessment and ongoing monitoring of "soil functions, ecosystem services and natural capital" to be used to apply a "wider approach to assessing the soil functions, ecosystem services and natural capital provided by land and soils"</p>	<p>the IEMA guidance. The sensitivity of soil functions to the Project following mitigation is determined by changes in soil properties (physical, chemical and biological) resulting from proposed land use effects. Soil properties were assessed during detailed Agricultural Land Classification (ALC) surveys (including soil texture, pH, depth, structure, porosity and drainage). Key soil properties are linked to ecosystem services through soil functions (Figure 1 IEMA); these ecosystem services can contribute towards economic activity, social objectives, and human well-being, providing natural capital. The assessment of sensitivity and magnitude of effects involves a degree of professional judgement since effects on all soil functions may not necessarily sit in one discrete category.</p>

Requests						
9-2.1368	In relation to Section 6.5.8 of the PEIR Vol 1 Main Text, April 2024 ('Published guidance relating to soils and land grade (as defined by the ALC system) is limited and therefore the approach is based on technical knowledge and previous experience. This takes account of highways guidance as set out in the DMRB LA109 which relates to soils and land grade and promotes assessment that is proportionate to the scale and nature of the Project and the likely effects on soils.'), request that National Grid provide detail of assessments of soil, beyond ALC in terms of soil mechanics in relation to suitability for foundations, feeder roads and over-winter site conditions for the full 183km of the proposed route, in addition to the current focus exclusively on major river crossings	Chapter 6: Agriculture and Soils (document reference 6.6) as part of the Environmental Statement (ES) only provides details on the impact of the Project on soil resources and agricultural land and provides guidance for protecting soil resources.			X	
9-2.1369	In relation to Section 6.5.11 of the PEIR Vol 1 Main Text, April 2024 ('For the preliminary assessment, it is assumed that all areas temporarily disturbed during construction would be reinstated and the existing land use resumed.'), request that National Grid do the following: 6.5.7 above suggested reinstatement must restore soil functions, ecosystem services and natural capital provided by land and soil to its baseline condition - i.e. not merely to existing land use. And what time period is being considered?	Appendix C: Outline Soil Resource Plan of the Outline Code of Construction Practice (CoCP) (document reference 7.2), details the approaches to soil reinstatement in line with good practice measures to ensure that soil function and linked ecosystem services can be restored to the baseline conditions and will be developed into a detailed Soil Resource Plan (SRP) by the Main Works Contractor(s) prior to construction commencing. A suitably qualified person (i.e., Project Soil Scientist) will detail the approaches to reinstating			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>Clarify how reinstated functionality is to be monitored, measured and reported to the public. Given that a range of land uses and ecosystems and soil types will be temporarily disturbed, clarify how will the different recovery rates and varying levels of systems resilience be accounted for. What assurance can be given that disturbed areas will be fully restored.</p> <p>Provide quantitative evidence of NG's previous performance on other projects in relation to land use reinstatement and ecological restoration. Where 'net biodiversity gain' has been a stated aim, specifically provide evidence of the effectiveness of biodiversity net gain actions. Where biodiversity net gain has not been explicitly pursued, provide evidence of NG effectiveness of ecological protection and restoration initiatives</p>	<p>the soil profile within the detailed SRP and will check reinstated soil profiles (i.e., characteristics and condition) to ensure it's suitable for the proposed end use. The required period for after-care and monitoring of reinstated soil profiles will be set out in the detailed SRP and will be overseen by the Project Soil Scientist and Site Environmental Manager (aftercare period is likely to differ depending on the post-construction land use). The detailed SRP details how/which soil types should be stripped, stockpiled and re-used separately, given the range of land uses, soil functions and ecosystem services the disturbed soils provide.</p> <p>A monitoring period for reinstated habitats has been agreed with the local authority and specified within the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4). The Outline LEMP (document reference 7.4) sets out the requirement for monitoring of tree and hedgerow reinstated habitats. Monitoring visits will be undertaken during and following the completion of the habitat reinstatement works over a five-year period.</p> <p>With regard to Biodiversity Net Gain (BNG) the final version of the Landscape and Ecological Management Plan (LEMP) following detailed design, will include habitat management and monitoring measures required at the Environmental Areas to ensure delivery of specific habitat types and habitat condition relied upon within the BNG metric and outlined within the Biodiversity Net Gain Report (document reference 7.1). The Outline LEMP</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>(document reference 7.4) will include adaptive measures to ensure deliverability.</p> <p>There is no obligation on National Grid to provide quantitative evidence of previous reinstatement performance on other projects or report this to the public. The Development Consent Order (DCO) process is project-specific. Each application is examined and determined on its own merits, including mitigation measures secured by that DCO. If a DCO includes requirements to reinstate land within a certain timeframe and to a certain specification (as this draft DCO does), this becomes enforceable by law for the current project only as a breach of a requirement is an offence under Section 161 of the Planning Act 2008. Enforcement proceedings are overseen by the relevant planning authority, with members of the public able to make a complaint if considered necessary and subsequently have that reviewed and responded to. Land must also be restored to the satisfaction of the landowner. This measure is also enforceable, giving the landowner recourse under the Compensation Code if required.</p>				
9-2.1370	In relation to Section 6.5.14 of the PEIR Vol 1 Main Text, April 2024 ('The value / sensitivity of receptors will be informed by the ALC surveys undertaken which will classify agricultural land affected by the Project and provide details of the characteristics of the soils and the nature of the functions they provide.'), request that National Grid do the	Chapter 6: Agriculture and Soils (document reference 6.6) of the Environmental Statement (ES) assesses the Project's effects on all soil functions, alongside the effects on agricultural land (including best and most versatile (BMV) land), as outlined in Figures 2, 3 and 4 of the Institute for Environmental Management and Assessment (IEMA) guidance. Hallett, S.H (2011) <u>Use and applications of the Soilscares datasets, Cranfield University</u>. "<i>Soilscares is not intended as a means for supporting detailed assessments, such as planning applications or site investigations. More detailed datasets are available for lease from NSRI.</i>"</p> <p>Please provide a risk assessment for risk to local water bodies and habitats due to acid soils as evidenced by Dr Dent</p>					
9-2.1372	<p>In relation to Section 6.6.7 of the PEIR Vol 1 Main Text, April 2024 ('The Provisional ALC [Agricultural Land Classification] information available suggests that a large proportion of the study area may comprise BMV [Best and most versatile] land. BMV land comprises land in Grades 1, 2, and 3a.'), request that National Grid do the following: Provide estimates of agricultural land area and production</p>	<p>The United Kingdom Food Security Report (published December 11 2024) acknowledges that long term decline in natural capital (such as soils, water resources and biodiversity) poses a risk to sustainable food production.</p> <p>National Policy Statements (NPS EN-1 and EN-5) recognise the need to balance food security with the urgent need for electricity infrastructure. Development</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>losses likely to occur as a result of The Project, and in particular estimate the loss of BMV [Best and [Most Versatile] land as a proportion of BMV land area (and estimated food production losses), compared to the rest of the UK.</p> <p>In light of recognition that proposed route of the pylons traverses the best, most profitable, and strategically vital farmland in the United Kingdom, clarify NG position regarding above agricultural land area and food production losses in respect to UK food security (notably as reported in the DEFRA Food Security Report due for publication December 2024).</p> <p>Provide details of proposed mitigation strategies to address food production losses</p>	<p>on Best Most Versatile (BMV) land is avoided where practicable with routing and siting decision made to minimise the loss of BMV land through alignment studies, alternatives assessment and stakeholder consultation. Much of the land required for the Project is for temporary use during construction with National Grid required to reinstate land used temporarily to a condition suitable for its former use, be it food production or another use.</p> <p>Where the EIA reports a likely significant effect on the environment, such as the permanent loss of BMV agricultural land that becomes a material consideration in decision making so the decision maker can weigh those effects against other factors in the overall planning balance.</p> <p>Appendix 6.1: Agricultural Land Classification Report (document reference 6.6.A1) provides detailed Agricultural Land Classification (ALC) survey results which support estimates of temporary (i.e. for construction) and permanent agricultural land area losses (including BMV land), likely to occur as a result of the Project. Considering that pylon footings cover a relatively small area of land proportional to field sizes, the permanent land take percentage is anticipated to be minimal in comparison to the total proportion of agricultural land (including BMV land) across the rest of the UK.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Whilst land grades relate to the potential productivity of land, not all high-grade land may be being used to its full potential for a range of reasons, including landowner choices, budgets etc. It is therefore very difficult to link field-specific impacts from the project to national food security. A Government Food Strategy Paper was published in June 2022. This highlights a need to maintain current levels of production through intensification, land sharing and land sparing (e.g. to make space for nature). It also commits to a Land Management Framework to be published in 2023 (not available yet). It does not talk about protecting land from development, and part of the strategy is about growth, ensuring that businesses can operate efficiently and effectively.</p>				
9-2.1373	<p>In relation to Section 6.6.8 of the PEIR Vol 1 Main Text, April 2024 ('Climate is unlikely to pose an overall limitation on ALC grade in relation to the criteria set out in the ALC Guidelines (MAFF, 1988). Climate does, however, have an important influence on the interactive limitations of soil wetness and soil droughtness, which is the balance between rainfall and water losses from the soil. The study area has both relatively low rainfall and a long growing season, acting to decrease the severity of any potential soil wetness limitation, but increasing the severity of any potential soil droughtness limitation.'), request that National Grid clarify indicators of the</p>	<p>The statement referred to in Section 6.6.8 of the Preliminary Environmental Information Report (PEIR) Vol 1 Main Text, relates to how climate currently is taken into account in relation to land grade assessments under the Agricultural Land Classification (ALC) system and does not relate to a specific assessment of impacts of climate change. The future baseline section in Chapter 6: Agriculture and Soils (document reference 6.6) of the Environmental Statement (ES) addresses this and draws upon published information relating to how climate change may influence the key factors determining land grade.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	wider "soil functions, ecosystem services and natural capital" (6.5.7) considered in respect to climate change impacts					
9-2.1374	In relation to Section of the PEIR Vol 1 Main Text, April 2024 ('There are areas of land within the study area under Countryside Stewardship Agreements (Middle and Higher Tier36), and areas of land to the south of Great Tey (Section D) and Edney Common (Section F) designated as being under both entry level plus higher-level stewardship, as well as organic entry level plus higher-level stewardship agreements. This is shown on Figure 6.4: Agri-environmental and Forestry Schemes in Volume II. Multiple small areas of land across the whole study area are also noted as being under Woodland Grant schemes37, as presented in Figure 6.5: Woodland Grant Schemes in Volume II.'), request that National Grid , where there is a spatial coincidence of dOL with Agri-environment scheme land, clarify the following: What are likely biodiversity impacts, given that AES land generally has higher biodiversity than surrounding agricultural land. Secondly, will AES agreement continue or be nullified where they coincide with dOL? Please provide analysis of farms in the new Sustainable Farming Incentive (SFI) schemes and Environmental Land Managment Schemes (ELMS) in order to demonstrate biodiversity impacts. Please provide analysis of	The baseline value of the land for biodiversity has been assessed at the point of survey. Where land parcels are in Countryside Stewardship schemes or other similar schemes this has been considered as part of the future baseline assessment within the Environmental Impact Assessment (EIA). The draft Local Nature Recovery Strategies for Norfolk, Suffolk and Essex have been considered as part of the EIA and taken into consideration with respect of offsite Biodiversity Net Gain (BNG) locations.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	proposed Local Nature Recovery Strategy Schemes along the route for the same reason and to comply with National Policy Statements which require LNRS's to be taken into account					
9-2.1375	In relation to Section 6.6.16 of the PEIR Vol 1 Main Text, April 2024 ('It is considered that the baseline in relation to soils and ALC grades would not change from that described in the baseline within the timeframe for the construction of the Project. While there may be potential changes in relation to climate change, including greater rainfall intensity and frequency of droughts, that could affect soil conditions, land grade, and farming practices, it is likely that these would only be visible over longer time frames.'). request that National Grid provide estimates of increased soil compaction, oxidation of organic matter (and consequent CO2-e emissions), loss of biological component of soils, and wider <i>"soil functions, ecosystem services and natural capital" impacts - at an average operational field size of land owners along the 183 km route, on ALC grades. Justify the statement "ALC grades would not change from that described in the baseline" in light of these evidence-based estimates</i>	<p>The statement highlighted is in relation to the land grade and potential future changes in climate. Soil compaction (i.e. soil structure) is unlikely to be affected by climate change and given the ranges of climate change scenarios and the ranges of soil organic matter present, it would not be possible to provide a realistic estimate of the changes in soil properties as a result of climate change.</p> <p>The effects of soil disturbance as a result of the Project on soil resources (including peat soils), agricultural land (including best and most versatile (BMV) land) and agricultural landholdings are assessed in Chapter 6: Agriculture and Soils (document reference 6.6) of the Environmental Statement (ES) and includes the assessment of potential residual effects on soil resources (including soil function, ecosystem services and natural capital). This approach is in accordance with the Environmental Impact Assessment (EIA) Scoping Report (National Grid, 2022; document reference 6.19) and Scoping Opinion (Planning Inspectorate, 2022; document reference 6.20). The development and implementation of a Soil Resource Plan (SRP) (Appendix C: Outline Soil Resource Plan of the Outline Code of Construction Practice (CoCP) (document</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		reference 7.2)) is designed to ensure there is no residual negative impact on soil projects as a result of the project.				
9-2.1376	In relation to Section 6.6.17 of the PEIR Vol 1 Main Text, April 2024 ('There could potentially be changes to land management practices and business approaches across the landowners/ land mangers over the construction and operation (and maintenance) of the Project.'), request that National Grid Provide estimate of financial impact of changes to land management practices and business approaches, and clarify mitigate actions to be taken to avoid or reduce negative changes	National Grid notes the respondent's feedback. We acknowledge that there may be temporary and permanent impacts to land management practices, we will continue to work with landowners to establish what these impacts are and whether any mitigation can be implemented and whether any compensation is appropriate. If landowners have any concerns about changes to land management practices they should contact the Project lands team.			X	
9-2.1377	In relation to Section 6.7.5 of the PEIR Vol 1 Main Text, April 2024 ('GG06: A record of condition will be carried out (photographic and descriptive) of the working areas that may be affected by the construction activities. This record will be available for comparison following reinstatement after the works have been completed to ensure that the standard of reinstatement at least meets that recorded in the pre-condition survey'), request that National Grid do the following: Clarify what survey methods will be employed to determine soil pre-condition and reinstatement condition, detailing in particular the limitations of photographic and descriptive records to adequately measure a number of important aspects of soil condition (e.g. soil pH,	The detailed Agricultural Land Classification (ALC) surveys, reported in full in Appendix 6.1: Agricultural Land Classification Report (document reference 6.6.A1) establish the soil resources present within 1.2 m depth or bedrock, whichever is shallower, across the route, and will inform the Outline Soil Resource Plan (SRP) (Appendix C: Outline Soil Resource Plan of the Outline Code of Construction Practice (CoCP) (document reference 7.2)). This depth is set out in the published guidance as the likely maximum rooting depth of key crops. Deeper geological materials are assessed as part of the geology assessment and any associated ground investigation.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>soil biota, chemical contamination, compaction). Where more detailed chemical, physical and biological assessments of soil health will not be undertaken, clarify how the broader "soil functions, ecosystem services and natural capital" (6.5.7) will be determined.</p> <p>Clarify the depth of soil assessment to be undertaken (given a depth of up to 2m of soil will be disturbed in the vicinity of sub-stations and margins)</p>	<p>The soil / ALC survey collects descriptive information on the soil profile in line with published guidance to provide an adequate assessment of the nature of the soils, their health and thus their ability to provide soil functions.</p> <p>Appendix C: Outline Soil Resource Plan of the Outline Code of Construction Practice (CoCP) (document reference 7.2) outlines appropriate soil stripping, stockpiling and reinstatement methods based on pre-construction soil conditions, ensuring that soils are reinstated to their former or required land use. A suitably qualified person will detail the approach to reinstating the soil profile and will check the soil profile created (i.e., characteristics and condition) to ensure its suitability for the proposed end use, in addition to photographic records of condition. This will be further assessed during the aftercare period.</p>				
9-2.1378	<p>In relation to Section 6.7.5 of the PEIR Vol 1 Main Text, April 2024 ('GG07: Land used temporarily will be reinstated where practicable to its preconstruction condition and use (or a condition discussed with the landowner). Hedgerows, fences, and walls (including associated earthworks and boundary features) will be reinstated to a similar style and quality to those that were removed, in discussion with the with landowner and to the satisfaction of National Grid '), request that National Grid clarify how diversity of hedgerow species, age composition, biotic associations and ecological complexity will need</p>	<p>The replacement hedgerow species mixes proposed have been agreed with the local authorities and are detailed within the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4). The Outline LEMP (document reference 7.4) also includes the required management and monitoring of the replanted hedgerows over a 5-year period.</p>			X

	/ removal, or due to the soil stripping required for underground cable installation, pylon footings, CSE compounds, substations and areas required temporarily (such as construction compounds, haul roads). There would also be the potential for effects on the ecosystem services the soils provide. Effective measures are set out within the Outline CoCP (submitted as part of the DCO application) (Appendix 4.1: Draft Outline CoCP is provided in Volume III) for soil handling, storage and reinstatement which would reduce effects on soils.'), request that National Grid , noting the statement "reduce the effect on soils", provide quantification of the amount of impact that will remain un-mitigated and consequent residual impacts on the wider "soil functions, ecosystem services and natural capital" (6.5.7)	are assessed in detail in Chapter 6: Agriculture and Soils (document reference 6.6) and includes the assessment of potential residual effects on soil resources (including soil function, ecosystem services and natural capital).				
9-2.1382	In relation to Section 6.8.6 of the PEIR Vol 1 Main Text, April 2024 ('From the data available, it is calculated that 3,882 ha would be temporarily removed from agricultural production during construction, accounting for 97.60% of the total area within the draft Order Limits. Of this, 3,858 ha are provisionally mapped as Grades 1, 2 and 3 (therefore assumed to comprise BMV land) and as such the temporary removal is considered to have a temporary negative effect which would be significant. Construction phasing is likely to affect the amount of	Agricultural land will be temporarily removed from agricultural production during construction; for example, due to the construction of temporary haul roads, working areas and construction compounds. Land required temporarily for construction will be returned to its former use / condition or a use / condition as discussed with the landowner, where practicable. Chapter 4: Project Description (document reference 6.4) of the Environmental Statement (ES) details the construction programme and construction phasing which will			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	time land is removed from agricultural production, further detail will be presented in the ES.'), request that National Grid provide estimates of duration in respect to the term 'temporary negative effect' for all impacts	determine the 'temporary' timeframes of agricultural land take.				
9-2.1383	In relation to Section 6.8.1 note report numbering is incorrect of the PEIR Vol 1 Main Text, April 2024 ('The stripping and stockpiling of soil resources would have a temporary effect on the soil ecosystem services provided. This would include effects to floodplain and fen peat soils, potentially effecting soil hydrology and soil carbon storage.'), request that National Grid clarify how carbon stored in disturbed fen peat soils will result in only a 'temporary effect', especially given soil organic matter generation operates at the decadal scale	Detailed Agricultural Land Classification (ALC) surveys were undertaken at an increased density on a 50m grid within the Waveney Valley to understand the detail of soil characteristics, including the identification of fen peat soils. The surveys confirmed the presence of organic-mineral soils, but no fen peat soils were identified. The results from the surveys are detailed in full in Appendix 6.1: Agricultural Land Classification Report (document reference 6.6.A1).			X	
9-2.1384	In relation to Section 8.2.3 of the PEIR Vol 1 Main Text, April 2024 ('Paragraph 4.6.7 advising that applicants 'are encouraged to use the latest version of the biodiversity metric to calculate their biodiversity baseline and present planned biodiversity net gain outcomes. This calculation data should be presented in full as part of their application'.), request that National Grid clarify whether its NG's intention to provide a full assessment of biodiversity impacts and their NBG	National Grid has calculated the biodiversity impact in terms of Biodiversity Net Gain (BNG) using the statutory BNG metric. Although this is designed for Town and Country Planning applications (TCPAs) and not Nationally Significant Infrastructure Projects (NSIPs), in the absence of a suitable alternative the statutory BNG metric is considered the most appropriate tool. Natural England have agreed in principle to the use of the TCPA statutory BNG metric with some amendments to reflect the requirements of a large linear project.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	plan in the form of the biodiversity metric (V4) calculation					
9-2.1385	In relation to Section 8.2.4 of the PEIR Vol 1 Main Text, April 2024 ('Paragraph 4.6.8 states that where possible, biodiversity metric calculation data 'should be shared, alongside a completed biodiversity metric calculation, with the Local Authority and Natural England for discussion at the pre-application stage'.'), request that National Grid confirm whether, in the interests of due diligence, will these discussions and their outcomes and conclusion be made available for public review and consultation	The statutory metric has been shared with relevant statutory stakeholders. A summary of the metric will be included within the Biodiversity Net Gain Report (document reference 7.1) which will be available for public review.			X	
9-2.1386	In relation to Section 8.2.5 of the PEIR Vol 1 Main Text, April 2024 ('Paragraph 4.6.11 states that 'we encourage details of any off-site delivery of biodiversity net gain to be set out within the application for development consent'. '), request that National Grid confirm whether the planning consent for proposed offsets be finalised prior to setting out the NBG plan in the application, or is this to take place after the application has been lodged with the risk that some proposed offset sites may not come to fruition, therefore requiring adjustment to the BNG plan	The Biodiversity Net Gain Report (document reference 7.1) sets out our approach to both onsite and offsite Biodiversity Net Gain (BNG). The specific location of offsite BNG provision will be agreed post consent once agreements can be formally made with third parties. National Grid is committing to delivering 10% BNG, and this commitment is reflected as a requirement of the Development Consent Order (DCO).			X	
9-2.1387	In relation to Section 8.2.6 of the PEIR Vol 1 Main Text, April 2024 (' Local Nature Recovery Strategy'), request that National Grid confirm whether the	The draft Local Nature Recovery Strategies (LNRS's) for Norfolk, Suffolk and Essex have been taken into			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	intention is to publish this to show mitigation in wider environmental context. Councils across the region are in the process of preparing their LNRS' and it is a requirement of the National Policy Statements that they are taken into account	consideration within the Environmental Impact Assessment (EIA).				
9-2.1388	In relation to Section 8.2.10 of the PEIR Vol 1 Main Text, April 2024 ('The Project will discuss off-site BNG delivery with relevant stakeholders during project design and share BNG calculations with relevant stakeholders prior to the application.'), request that National Grid confirm whether this document (completed metric and associated report describing BNG plan) will be made available to the public (e.g., what constitutes 'relevant stakeholders'?)	<p>The Biodiversity Net Gain Report (BNG) (document reference 7.1) is a Development Consent Order (DCO) document and will therefore be available for public review.</p> <p>National Grid would seek to identify offsite BNG locations with additional environmental and societal benefits which would be delivered through expert partners.</p> <p>Off-site locations will be chosen based on National Grid's carefully considered selection criteria. The selection criteria will take into account (amongst other criteria), the habitat type and condition required, the location in proximity to the Order Limits, the delivery partner's credibility and proven experience in delivery, cost per unit, timeframes and will also consider sites that provide added value in the form of additional societal and environmental benefits as detailed in the Biodiversity Net Gain Report (document reference 7.1).</p>			X	
9-2.1389	In relation to Section 8.2.12 of the PEIR Vol 1 Main Text, April 2024 ('SSSIs'), request that National Grid, with the now refined route in this report, provide calculations of the number of SSSIs that will be	The Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8) outlines any potential indirect or direct impacts to Sites of Special Scientific Interest (SSSI's). Any necessary construction			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	impacted, and what actions are proposed to safeguard these, given that they tend to have a high degree of irreplaceability and biodiversity values that cannot be replaced or readily recreated (e.g. early analysis by the respondent on a previous iteration of the proposed route, indicated that there are 4 SSSIs along the route itself and 16 within 1.5 km (analysis using Defra MagicMap))	mitigation to protect the identified SSSI's and/or any bespoke mitigation requirements have been included within the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4).				
9-2.1390	<p>In relation to Section 8.2.14 of the PEIR Vol 1 Main Text, April 2024 ('applicants should consider wider ecosystem services and benefits of natural capital when designing enhancement measures.'), request that National Grid answer the following: Which specific ecosystem services are to be considered and assessed?</p> <p>Which of the following best reflects NG's approach to NC and ES: i) Treating ES as a homogenous catch all term for describing nature's benefits; ii) Disaggregating ES into specific services (e.g. flood control), the NC that provides this (e.g. perennial vegetation cover, good soil structure) and the threats that impair these ES (e.g. vegetation clearing, soil compaction), but not valued in monetary terms; iii) as per ii, but valued economically in terms of service delivery.</p> <p>How will ES and natural capital be incorporated into impact deliberations?</p> <p>What are the ES implications of different alternatives</p>	<p>National Grid supports the delivery of Environmental Net Gain (ENG). National Grid has committed to the delivery of 10% Biodiversity Net Gain (BNG), which forms part of ENG, with environmental and societal benefits. While the mitigation hierarchy is being adhered to, with onsite mitigation incorporated into the Project Order Limits where practicable, any required offsite BNG will be part of a careful site selection process. The site selection process will include consideration of other additional benefits alongside the required BNG biodiversity units. The added environmental and societal value will be reported through the final iteration of the BNG report post consent.</p> <p>The Environmental Impact Assessment (EIA) will assess all environmental topics separately within dedicated chapters of the Environmental Statement (ES) and this will feed into the BNG report.</p> <p>The EIA assesses the preferred option and Chapter 3: Alternatives (document reference 6.3) discusses alternative options. The Strategic Options Backcheck</p>			X

	to proposed, such as offshore solutions or HVDC undergrounding? Have the ES implications been assessed for these options?	and Review (SOBR, 2024 (available on the Project website) and 2025 (document reference 7.17)) identified and evaluated the options for reinforcement of the network in the East Anglia region and Corridor Preliminary Routing and Substation Siting Study (CPRSS) (April 2022) details the options and preferred route.				
9-2.1391	In relation to Section 8.2.15 of the PEIR Vol 1 Main Text, April 2024 ('HRA/AA'), request that National Grid clarify full spelling (explain acronyms) and implications	<p>The acronyms HRA and AA have been explained within the Environmental Impact Assessment (EIA) as detailed below.</p> <p>Habitats Regulations Assessment (HRA) - How a competent authority must decide if a plan or project proposal that affects a European site can go ahead.</p> <p>Appropriate Assessment (AA) - Stage 2 of the HRA. An appropriate assessment must be carried out if there is a risk of a likely significant effect on a European site or there is not enough evidence to rule out a risk.</p>			X	
9-2.1392	In relation to Section 8.2.18 of the PEIR Vol 1 Main Text, April 2024 ('development should, in line with the mitigation hierarchy, aim to avoid significant harm to biodiversity and geological conservation interest, including through consideration of reasonable alternatives'), request that National Grid confirm where in report are details (including environmental assessments) of 'reasonable alternatives'	A robust change control process, which takes into account the mitigation hierarchy, has been undertaken which considers reasonable alternatives where there is the potential for an impact on biodiversity and geo-conservation receptors. The alternatives assessment is presented within Chapter 3: Alternatives (document reference 6.3).			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.1393	In relation to Section 8.2.18 of the PEIR Vol 1 Main Text, April 2024 ('Where significant harm cannot be avoided, impacts should be mitigated and as a last resort, appropriate compensation measures should be sought'.), request that National Grid confirm how many or what proportion (e.g. as a percentage of actions, spatial area, NBG contribution) of the biodiversity mitigation measures that are intended to lead to NBG are likely to be in the 'appropriate compensation measures' category	The Biodiversity Net Gain Report (document reference 7.1) clearly sets out both the onsite measures and offsite requirement to achieve 10% Biodiversity Net Gain (BNG) in biodiversity units and percentages.			X	
9-2.1394	In relation to Section 8.2.19 of the PEIR Vol 1 Main Text, April 2024 ('Paragraph 5.4.44 states that 'any habitat creation or enhancement delivered including linkages with existing habitats for compensation or biodiversity net gain should generally be maintained for a minimum period of 30 years, or for the lifetime of the project, if longer'. The applicant has committed to maintain any compensatory measures and/or habitat creation/enhancement delivered as part of BNG for a minimum period of 30 years.'), request that National Grid confirm what does this maintenance commitment consist of (e.g. Exotic plant control; Monitoring; Periodic planting; Ongoing habitat creation)	Specific detail on the management and maintenance actions for the Environmental Areas will be clearly set out within the final version of the Landscape and Ecological Management Plan (LEMP) (document reference 7.4) following detailed design. This will include all measures necessary to ensure the habitat type and habitat condition identified within the final Biodiversity Net Gain Report (document reference 7.1) are achieved within the defined time frame.			X	
9-2.1395	In relation to Section 8.2.20 of the PEIR Vol 1 Main Text, April 2024 ('Paragraph 5.4.53 states that 'the Secretary of State should not grant development	Where at all possible ancient woodland and veteran trees have been avoided/effects minimised through careful routeing and siting of the route. However, where			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	consent for any development that would result in the loss or deterioration of any irreplaceable habitats, including ancient woodland, and ancient and veteran trees unless there are wholly exceptional reasons and a suitable compensation strategy exists'.), request that National Grid confirm whether all of these are likely to be affected (regarding what has been included and excluded in 'woodland and tree' accounting), and how this will be addressed	impacts on ancient woodland and veteran trees is unavoidable, details of the potential impact and necessary mitigation/compensation have been included within the Ancient Woodland and Veteran Tree Strategy (Appendix B of the Landscape and Ecological Management Plan (document reference 7.4)).				
9-2.1396	In relation to Section 8.2.21 of the PEIR Vol 1 Main Text, April 2024 ('Paragraph 5.4.55 states that 'the Secretary of State should refuse consent where harm to a protected species and relevant habitat would result, unless there is an overriding public interest and the other relevant legal tests are met'), concern that National Grid surveys found numerous species that fit this description. With this, suggest that the two short reports provided by the respondent that utilise secondary data (e.g. eBird, BTO survey reports) along the proposed route that highlight a great many Amber and Red listed bird species in the vicinity are considered. This, coupled with large number of patches of priority habitat patches, needs to be addressed as per the SoS statement. Request that National Grid confirm how the habitat of these species and the impacts on the species themselves will be addressed in the BNG planning and implementation	The Project has followed the mitigation hierarchy whereby the route has sought to avoid direct impacts to habitats that support or have the potential to support protected species. Where complete avoidance is not possible the impact has been reduced as far as practicable. Where this would affect a protected species additional mitigation has been provided to ensure the favourable conservation status of protected species is maintained. Once the Project has been completed any habitat that is temporarily removed will be reinstated to habitat of equal or better quality. While Biodiversity Net Gain (BNG) fundamentally focuses on habitats, consideration of how (BNG) can also benefit protected species impacted by the project has been incorporated into the offsite site selection process.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.1397	In relation to Section 8.2.22 of the PEIR Vol 1 Main Text, April 2024 ('The Project will consider opportunities to enhance ecosystem services and natural capital within the design which follows the mitigation hierarchy to avoid and minimise effects to biodiversity receptors.'), request that National Grid confirm approximately what percentage of mitigation actions (or area of land as a surrogate) will fall into the Avoid and Minimise categories, and how many into the less ecologically reliable Restore and Offset categories and provide evidence of how alternatives differ in their ability to Avoid or Minimise impacts	The project has followed the mitigation hierarchy throughout the design process, avoiding and minimising impacts on designated sites, valuable habitats and protected species where at all possible. It is not possible to quantify this process, however a qualitative description of how National Grid has looked to avoid and minimise impacts through the design process is presented in the 2023 and 2024 Design Development Reports (available on the Project website) and 2025 DDR (document reference 5.15).			X	
9-2.1398	In relation to Section 8.2.22 of the PEIR Vol 1 Main Text, April 2024 (' <i>The Project will consider opportunities to enhance ecosystem services and natural capital within the design which follows the mitigation hierarchy to avoid and minimise effects to biodiversity receptors.</i> '), request that National Grid confirm which specific ecosystem services are to be considered and assessed, does BNG planning incorporate the utilitarian aspects of biodiversity, and how will this be measured (e.g. individual services, valuations of services, spatially explicit NC and ES or 'averaged' across the entire route)	National Grid has committed to the delivery of 10% Biodiversity Net Gain (BNG) for the project with wider environmental and societal benefits. The locations of any required offsite BNG will be subject to a careful site selection process which will include identifying sites that offer additional ecosystem services alongside the required BNG habitat units. The current approach to BNG is outlined within the Biodiversity Net Gain Report (document reference 7.1). The offsite BNG solution is ongoing and will be recorded within an updated BNG report submitted to the LPA for information ahead of the operational phase.			X	
9-2.1399	In relation to Section 8.2.23 of the PEIR Vol 1 Main Text, April 2024 ('Section 2.9 (Applicant assessment), paragraph 2.9.3 states that 'electricity	Natural England has been consulted with regard to the list of bird species that are vulnerable to bird strike and			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	networks infrastructure pose a particular risk to birdlife including large birds, such as swans and geese, and perching birds' and Paragraph 2.9.4 advises that 'applicants should consider measures to make lines more visible such as bird flappers and diverters'.'), request that the comprehensive list of species that are vulnerable (e.g. derived from BTO reports) to pylon and wire strike has been produced by the respondent is considered. This list should be cross-referenced with National Grid's bird survey findings as part of National Grid's impact assessments / Confirmation whether this list of species been consulted during this report	collision risk and have agreed to the assessment approach.				
9-2.1400	In relation to Section 8.2.23 of the PEIR Vol 1 Main Text, April 2024 ('Section 2.9 (Applicant assessment), paragraph 2.9.3 states that 'electricity networks infrastructure pose a particular risk to birdlife including large birds, such as swans and geese, and perching birds' and Paragraph 2.9.4 advises that 'applicants should consider measures to make lines more visible such as bird flappers and diverters'.'), request that National Grid undertake / facilitate a systematic review of most effective mitigation options in relation to powerlines, in order to better understand the likely effectiveness of such measures / Query whether such a study been undertaken, and if not, when will it be conducted and then utilised	Detailed bird survey work has been undertaken to understand the current movement and flight heights of wintering bird species. Results of the wintering bird surveys are included in Appendix 8.8: Wintering Bird Report (document reference 6.8.A8) of the Environmental Statement (ES). Based on this survey information, Natural England has agreed the approach to impact assessment for bird collision risk and the subsequent thresholds for the requirement of bird diverters. The use of bird diverters is a standard mitigation measure used throughout the world to reduce bird mortality.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.1401	In relation to Section 8.2.25 of the PEIR Vol 1 Main Text, April 2024 ('Paragraphs 2.10.2 to 2.10.4 state that 'careful siting of a line away from, or parallel to, but not across, known flight paths can reduce the numbers of birds colliding with overhead lines considerably'.'), request that National Grid confirm whether bird flight paths (local movement, migratory movements) are known or going to be determined relative to the intended route and orientation	Detailed bird survey work has been undertaken to understand the current movement and flight heights of wintering bird species. Results of these surveys are presented within the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8) and the wintering bird appendix (document reference 6.8.A8).			X	
9-2.1402	In relation to Section 8.2.28 of the PEIR Vol 1 Main Text, April 2024 ('Potential collision risk will be assessed at areas as agreed with Natural England, (such as rivers and green corridors) through bird survey work and mitigation measures designed and installed as appropriate. '), request that National Grid confirm whether, given that a large proportion of bird mortality may occur in crossing the pylon pathway, is intention that bird surveys will include direction, orientation, frequency, height, etc. of travel	Detailed bird survey work has been undertaken to understand the current movement and flight heights of wintering bird species. Results of these surveys are presented within the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8) and the wintering bird appendix (document reference 6.8.A8).			X	
9-2.1403	In relation to Section Table 8.2 of the PEIR Vol 1 Main Text, April 2024 ('Habitats of importance'), request that National Grid provide reference for "200 m from draft Order Limits". Many of the species that utilise HoPI are likely to be affected beyond the 200 m distance (e.g. bird species and powerline strike risk)	The "200 m from draft Order Limits" relates to a desk-based search for priority habitats, this is a standard approach based on the stationary nature of habitats and the likely distance of any indirect impacts. Protected species records have been obtained for a wider study area of 2 km and a zone of influence for each species has been assessed separately based on their unique behaviours.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.1404	In relation to Section 8.5.5 of the PEIR Vol 1 Main Text, April 2024 ('Google Earth (Google Earth, 2023) – Freely available aerial photography reviewed to inform the baseline for habitats and species'), request that National Grid confirm how they detected species using Google Earth and to what resolution	Google Earth was used as part of a wider package, to provide initial information on habitats and wildlife corridors that could be used by protected species and to identify any barriers to movement of these species. This information was then used to inform additional survey requirements where on the ground data was gathered for habitats and protected species			X	
9-2.1405	In relation to Section Multiple of the PEIR Vol 1 Main Text, April 2024 ('Multiple issues related to other options for energy transfer and infrastructure (frequent reference to 26 other options, but little to no detail).'), request that National Grid answer the following: Have the environmental implications and impacts of the proposed route been compared to other feasible options that have been proposed in various reports (e.g. 'The Hiorns Report'), meetings, discourse - e.g. offshore solution (a second subsea link) or HVDC undergrounding? How can the proposed approach proceed without a comprehensive assessment of the environmental/ecological/biodiversity/ecosystem service impacts of the other feasible options?	At each stage of the Project a consistent level of information has been used to support decision making on the selection of the preferred option. There is no requirement for all design variants or alternatives to be studied to the level of detail captured within the Preliminary Environmental Information Report (PEIR) or Environmental Statement (ES) supported by a similar degree of detail from associated surveys. National Grid does not consider it proportionate to complete such an extent of surveys, nor reasonable to impose such surveys on landowners when there can be shown, based on available data, to be no realistic prospect of an option progressing.			X	
9-2.1406	In relation to Section Table 8.3 of the PEIR Vol 1 Main Text, April 2024 ('Habitats within 50 m of the draft Order Limits were digitally mapped'), request that National Grid confirm what is the source for a 50 m recommendation, as impacts of site preparation,	The habitat survey approach ensured all habitats present within the Order Limits were accurately mapped. National Grid agreed the habitat survey approach with relevant statutory stakeholders and is in line with all			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	construction, operation likely to extend far beyond 50m, and whether an assessment has been undertaken that looks at the distance influence/decay of threats to given receptors (e.g. different habitat types, particular species, breeding skylark, barn owl, numerous migratory species, nocturnal movement species)	Chartered Institute of Ecology and Environmental Management (CIEEM) guidelines. A zone of influence for each protected species receptor was identified based on their unique behaviours.				
9-2.1407	In relation to Section Table 8.3 of the PEIR Vol 1 Main Text, April 2024 ('Identify habitats that may qualify as Habitats of Principal Importance'), request that National Grid confirm whether this builds on the remote data contained in MagicMap	Whether or not a habitat qualifies as a Habitat of Principal Importance (HPI) has been based on data collected in the field which is supported by the desk study that includes the Multi-Agency Geographic Information for the Countryside (MAGIC) data. However, the MAGIC data set is based on data that is either out of date or based on a review of aerial photographs and old maps and so is only an indication of potential rather than a true reflection of what may now be on the ground. The detailed survey information is considered more accurate and reflective of current conditions, results of which are presented in Appendix 8.1: Habitat Report (document reference 6.8.A1).			X	
9-2.1408	In relation to Section Table 8.3 of the PEIR Vol 1 Main Text, April 2024 ('Breeding bird surveys'), request that National Grid confirm how the six sites were determined	The locations of the breeding bird surveys were based on a combination of desk-based results, habitat information and extent of likely impact. The approach to surveys and ultimately the specific survey locations were agreed with the relevant statutory stakeholders.			X	
9-2.1409	In relation to Section 8.2.31 of the PEIR Vol 1 Main Text, April 2024 ('Guidance docs'), concern that	National Grid supports the delivery of Environmental Net Gain (ENG). National Grid has committed to the delivery			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	nothing specifically on natural capital or ecosystem services has been included given the nat cap and ES impacts (qualitative, quantitative, fiscal contribution) that are likely to ensue if the Project went ahead. With this, request that National Grid confirm where and when will this be addressed	of 10% Biodiversity Net Gain (BNG), which forms part of ENG, with environmental and societal benefits. While the mitigation hierarchy is being adhered to, with onsite mitigation incorporated into the Project Order Limits where practicable, any required offsite BNG will be part of a careful site selection process. The site selection process will include consideration of other additional ENG benefits alongside the required BNG biodiversity units. The added environmental and societal value will be reported through the final iteration of the BNG report post consent.				
9-2.1410	In relation to Section Table 8.3 of the PEIR Vol 1 Main Text, April 2024 ('Species of principle importance: Five species (common toad, brown hare, harvest mouse, hedgehog and polecat) have been identified that have the potential to be present at low densities within the draft Order Limits and so may be affected by the Project.'), concern that anecdotal evidence implies that for brown hare at least, densities along route are not low. Polecats have been seen in video evidence on the route. With this, request that National Grid clarify what constitutes 'low' and the source for each species, and how this may vary along the 180 km route	Consideration of Species of Principle Importance including common toad, brown hare, harvest mouse, hedgehog and polecat have been considered within each project section separately. This consideration is primarily based on existing records from local record centres as well as an assessment of habitat suitability in line with the approach agreed with the relevant statutory stakeholders.			X	
9-2.1411	In relation to Section 8.5.14 of the PEIR Vol 1 Main Text, April 2024 ('The draft Order Limits currently interact with four areas of Ancient Woodland'),	As per guidelines, a 15m exclusion buffer is being applied to ancient woodland where at all possible. Where works are required, and there is no alternative, within this 15m buffer an assessment of impact has			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	request that National Grid confirm at what distance is this being assessed for ancient woodland	been made on the ancient woodland. Full details of any potential direct or indirect impacts on ancient woodland is outlined within the Ancient Woodland and Veteran Tree Strategy (Appendix B of the Landscape and Ecological Management Plan (document reference 7.4)).				
9-2.1412	In relation to Section 8.5.14 of the PEIR Vol 1 Main Text, April 2024 ('(Round Wood (Section B), Bullen Wood (Section B), Writtle – Writtlepark Wood (Section F) and Bushey Wood (Section F). '), request that National Grid confirm whether species inventories (including fauna) are available for these Aws, and whether likely or known species are factored into impact assessment for development and operational phases	The environmental impact assessment process considers ancient woodland for its inherent value as a separate ecological feature. The assessment of impacts on each protected species is then in turn considered, taking into account any suitable habitat loss and any effect on the specific protected species as a result (including that of woodland).			X	
9-2.1413	In relation to Section 8.5.25 of the PEIR Vol 1 Main Text, April 2024 ('The Project has committed to delivering a minimum of 10% BNG.'), request that National Grid answer the following: Over what timeframes? E.g. how will BNG account for timelags in woodland, tree, hedgerow development and species succession (woodland restoration is a multi-decadal process)? Will the BNG calculations be averaged along the full N to T route, or divided into discreet segments where >10% BNG will be achieved? BNG applies after the mitigation hierarchy, not instead of it (see National Policy Statement EN1 4.6.1 and 4.6.10). We note that BNG as applicable currently in the	<p>The statutory metric takes into account the difficulty in recreating a specific habitat such as woodland and the likely time it will take to achieve the target condition by applying a multiplier. This multiplier is fixed and part of the function of the statutory Biodiversity Net Gain (BNG) metric.</p> <p>A single BNG metric has been produced to cover the project as a whole. The mitigation hierarchy has been followed which is reflected within the BNG metric as detailed in the BNG report (document reference 7.1). Avoiding and minimising impacts was at the heart of route design. Any subsequent required mitigation has been incorporated through replacement planting, habitat</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	planning system requires the mitigation hierarchy to be adhered to. Recent planning appeal decision "Appeal Decision APP/D1265/W/23/3314801 found: "12. In this regard, Planning Practice Guidance (PPG) is clear ⁵ . It sets out that mitigation should be adopted where 'significant harm cannot be wholly or partially avoided' and that compensation should be adopted 'where, despite mitigation, there would still be significant residual harm'. Therefore, the general steps of the hierarchy set out in paragraph 186(a) of the Framework should be implemented sequentially, in the following sequence: avoid, mitigate, compensate." Please explain how NG has adhered to the mitigation hierarchy in the appraisal of alternatives	creation and enhancements onsite along the length of the route. Any offsite requirement will be delivered as close to the source of the impact as possible while still delivering the best option for biodiversity, with due consideration of the Local Nature Recovery Strategies (LNRS) for Norfolk, Suffolk and Essex. Consideration of alternatives forms part of the Environmental Impact Assessment process (EIA), and is presented in Chapter 3: Alternatives (document reference 6.3) of the Environmental Statement (ES).				
9-2.1414	In relation to Section 8.5 etc. of the PEIR Vol 1 Main Text, April 2024 ('BNG'), request that National Grid confirm how this will be assessed over time, at how many points, what measures for ongoing on-ground assessment of progress towards BNG, and how will any setbacks be addressed in order to achieve the stated 10% BNG	Specific detail on the management and maintenance actions for the Environmental Areas will be clearly set out within the final version of the Landscape and Ecological Management Plan (LEMP) (see document reference 7.4 for the Outline LEMP) following detailed design. This will include all measures necessary to ensure the habitat type and habitat condition identified within the final Biodiversity Net Gain Report (document reference 7.1) are achieved within the defined time frame.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.1415	In relation to Section 8.5.29 of the PEIR Vol 1 Main Text, April 2024 ('Following the input of post-intervention habitat information (following habitat replacement, enhancement and creation), the Project is currently achieving -6% BNG for area habitats within the draft Order Limits. '), request that National Grid confirm, as this is assessment for habitat, whether this includes species impacts as well (e.g. powerline collision)	The statutory Biodiversity Net Gain (BNG) metric is a tool specifically designed to assess habitat impact. Protected species impacts are considered separately in Chapter 8: Ecology and Biodiversity (document reference 6.8) of the Environmental Statement (ES) and are not part of the metric. However, where possible the landscape design of the Environmental Areas (EA) has looked to provide benefits to protected species, as well as delivering the necessary biodiversity units. National Grid has committed to delivering at least 10% BNG with the wider environmental and societal benefits. More detailed information is provided within the BNG report (document reference 7.1)			X	
9-2.1416	In relation to Section 8.5.31 of the PEIR Vol 1 Main Text, April 2024 ('new/better habitats in targeted areas'), request that National Grid clarify how future surety of such areas will be guaranteed. This applies to offset sites generally, which in turn could be developed/damaged/degraded, and thus no longer provide a viable or commensurate offset. With this, request that National Grid provide cost estimates for off-site habitat, and confirm whether this will be provided by voluntary agreements with land-owners or via compulsory purchase or via purchase of statutory credits	Separate legal agreements will be entered into with third parties offering offsite biodiversity units. National Grid will only consider offsite locations where the site is a formally Biodiversity Net Gain (BNG) registered site, providing a guaranteed safeguarded BNG site in the long term. Various offsite options are still being considered, and National Grid is open to consultation with interested third parties. Statutory credits are considered a worst-case option but provide a back-up to ensure deliverability of the 10% BNG commitment for the project. It is not our intention to use statutory BNG credits.			X	
9-2.1417	In relation to Section 8.5.36 of the PEIR Vol 1 Main Text, April 2024 ('Where overhead lines pass over dry grassland and heathland habitats, and no	Qualified experienced ecologists have identified no direct or indirect impact pathways to grassland habitats,			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	potential impact pathways are identified NVC surveys will not be undertaken.'), request that National Grid confirm how potential impact pathways will be determined and what constitutes 'no impact'	lying outside of construction works areas but underneath conductors.				
9-2.1418	In relation to Section 8.6.3 of the PEIR Vol 1 Main Text, April 2024 ('A total of 29 internationally important sites designated for biodiversity are located within the study area. However, a HRA screening exercise – undertaken in parallel to this PEIR has identified that the potential for effects is limited to five sites (this will be concluded as part of the HRA screening). Therefore, these additional 24 sites are not considered further within this chapter.'), request that National Grid detail the HRA screening process that has eliminated 24 sites from impact assessment (e.g. detail this for all 24, with clear justification for each point of omission, as Footnote 49 does not elaborate on this matter sufficiently)	<p>Full detail on the Habitats Regulations Assessment (HRA) screening exercise is presented within the HRA report (document reference 5.3). A total of 28 European Sites have been identified within a 20 km Study Area, with 23 sites screened out a 'pre-screening' stage.</p> <p>The 20 km Study Area was selected to encompass a 20 km impact risk zone (IRZ) from European Sites with geese forming a qualifying feature, as geese can disperse such distances between feeding and roosting sites.</p> <p>A desk study covering bird records across the Order Limits has been completed as detailed within the ES Appendix 8.8: Wintering and Passage Bird Report (document reference 6.8.A8). No areas beyond a 5 km IRZ were identified as having notable numbers of geese forming a qualifying feature of a European Site within the Study Area, and as such no pathways to impact beyond 5 km from a European Site are considered to occur. Only European Sites within 5 km were therefore taken forward to detailed screening.</p>			X	
9-2.1419	In relation to Section 8.5 of the PEIR Vol 1 Main Text, April 2024 ('Potential impact pathway'), request	An updated assessment has been undertaken on potential impacts on designated sites following results of protected species/habitat surveys and changes to the			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	that National Grid confirm why there are so few points of potential impact pathway	proposed route, details of which can be found within the Chapter 8: Ecology and Biodiversity (document reference 6.8) of the Environmental Statement (ES). Designated sites discussed within the Chapter are those that lie within the agreed study area, which is different depending on level of designation (local, national or international). Applied study areas are based on industry standard practice and have been discussed and agreed with stakeholders at Scoping Report stage (document reference 6.19).				
9-2.1420	In relation to Section 8.6.4 of the PEIR Vol 1 Main Text, April 2024 ('Figure 8.1'), concern that Figure 8.1 cannot be located	The updated Figure 8.1: Statutory Sites Designated for Biodiversity (document reference 6.8.F1) has been provided as part of the Development Consent Order (DCO) submission.			X	
9-2.1421	In relation to Section Table 8.4 of the PEIR Vol 1 Main Text, April 2024 ('Species in International Sites Designated for Biodiversity with Potential Impact Pathways'), request that National Grid confirm whether this risk is factored into risk analysis and biodiversity impacts (as all are wetland habitats, all are focal habitats for migratory birds (including wintering species), and hence high risk for power line collision)	Potential impacts to wintering and passage birds associated with Special Protection Areas (SPA) designated sites have been considered within the impact assessment detailed in Chapter 8: Ecology and Biodiversity (document reference 6.8) of the Environmental Statement (ES).			X	
9-2.1422	In relation to Section 8.6.5 and 8.6.6 of the PEIR Vol 1 Main Text, April 2024 ('Seventeen of these sites have been identified with potential impact pathways with the Project.'), request that National Grid clarify,	An update to the potential impact on nationally designated sites has been undertaken and included within the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8).			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	as 17 of 21 sites of national importance considered to have impact pathways, how four were excluded					
9-2.1423	<p>In relation to Section Table 8.5 of the PEIR Vol 1 Main Text, April 2024 ('Potential impact pathway'), request that National Grid answer the following: Why are impacts to known species not included? E.g. Flordan Common = ""Indirect: construction pollution (e.g. air quality/dust); hydrological connectivity to the draft Order Limits."" However, 63 species of bird recorded there, including 14 UK Red List, 16 UK Amber List and 1 IUCN NT species, and including numerous species that are potentially vulnerable to powerline strike (e.g. common swift, GBB gull, woodcock, common snipe).</p> <p>How will these impact pathways be factored in, accounted for and mitigated for each site?</p> <p>Why does this not qualify as a direct impact on the site's biodiversity? This situation applies to most of the sites contained in the table, where indirect impacts to the site are attributed, but not direct impacts to species that are dependent on the site (e.g. breeding, roosting, feeding), but which may likely incur great mortality due to the development and its operation</p>	<p>Impacts to designated sites are based on the designating reason/citation information for that site. Flordon Common is not designated for its bird interest. The Project will have no direct effect on the designated land area of Flordon Common, and the potential for indirect effects has been identified.</p> <p>Potential direct and indirect impacts to birds as a separate ecological feature has been assessed within the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8).</p>			X	
9-2.1424	In relation to Section Table 8.5 of the PEIR Vol 1 Main Text, April 2024 ('Section B Wortham Ling'), request that National Grid confirm whether the	Impacts to designated sites are based on the designating reason/citation information for that site.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	impacts include species recorded and likely present on site for some period. From a bird perspective (mobile species, and hence vulnerable to powerline strike), this may include 11 UK Red List and 14 UK Amber List species (all recorded at site)	Wortham Ling Site of Special Scientific Interest (SSSI) is not identified as a site of national importance for birds. Potential direct and indirect impacts to birds as a separate ecological feature has been assessed within the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8).				
9-2.1425	In relation to Section Table 8.5 of the PEIR Vol 1 Main Text, April 2024 ('Direct and indirect impacts'), request that National Grid explain why sites that are adjacent (0 m) and very close (e.g. Middle Wood SSSI, 40 m from the Order Limit) are only included for indirect impacts, when they are clearly proximate enough to have direct impacts (edge effects) on habitat and on species that utilise the site	There will be no direct loss of ancient woodland habitat at Middle Wood Site of Special Scientific Interest (SSSI), with proposed works beyond the 15m recommended buffer. The potential for indirect effects has been identified and an assessment made within the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8).			X	
9-2.1426	In relation to Section Table 8.5 of the PEIR Vol 1 Main Text, April 2024 ('Middle Wood Offton'), request that National Grid clarify why exotic plant invasion is not included in the impacts	The implementation of the Outline Code of Construction Practice (CoCP) (document reference 7.2) will ensure that invasive plants are not spread during construction. These measures are considered embedded mitigation measure and therefore taken into account when considering impacts. The Project once built (during operation) should not encourage the spread of invasive plant species.			X	
9-2.1427	In relation to Section Table 8.5 of the PEIR Vol 1 Main Text, April 2024 ('River Ter'), request that National Grid clarify why, given that the Project is 180 m from a riparian area, no direct impacts are	Measures to protect water quality and prevent surface water run off leaving the construction site in an uncontrolled manner are part of the Project design with any additional measures outlined in the Outline Code of Construction Practice (CoCP) (document reference 7.2).			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	included (e.g. surface run off, increased hydrocarbon pollution, increased turbidity)	These measures are considered embedded mitigation and therefore taken into account when considering impacts.				
9-2.1428	In relation to Section Table 8.5 of the PEIR Vol 1 Main Text, April 2024 ('North Thames Estuary and Marshes Proposed'), suggest that direct impacts should include mortality on species vulnerable to powerline strike / Request that National Grid explain why this is not included	The North Thames Estuary and Marshes proposed Site of Special Scientific Interest (SSSI) has not yet been designated. The location/extent of the SSSI and the ecological reasons/species included within the designation are still to be determined. Due consideration to the proposed SSSI has been made as far as possible given so much is still unknown, and it is not a formal designation.			X	
9-2.1429	In relation to Section Table 8.6 of the PEIR Vol 1 Main Text, April 2024 ('Langdon Ridge'), request that National Grid justify why this is considered 'no Potential Impact Pathway' (e.g. as 70 m from development zone, 5 UK Red List birds and 12 UK Amber List birds)	The reasons for scoping out Langdon Ridge Site of Special Scientific Interest (SSSI) are detailed within the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8). The SSSI is not identified as being of national importance to birds. Potential direct and indirect impacts to birds as a separate ecological feature has been assessed within the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8).			X	
9-2.1430	In relation to Section 8.6.9 of the PEIR Vol 1 Main Text, April 2024 ('Construction dust – all of the sites are located more than 350 m from the draft Order Limits and therefore not affected by construction dust (as detailed in Chapter 7: Air Quality)'), request that National Grid explain why Langdon Ridge is not included / Suggest that this is revised	Further air quality information has been used to inform the updated ecological assessment. Details of potential impacts as a result of air quality on designated sites has been provided within the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8).			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.1431	In relation to Section 8.6.8 of the PEIR Vol 1 Main Text, April 2024 ('One of the sites (Hintlesham Woods) is designated for breeding birds but is located approximately 2.1 km from areas surveyed for breeding birds and therefore not considered to be functionally linked.'), request that National Grid explain the rationale for exclusion in more detail and confirm whether RSPB been included in in consultees	Full details on the reasons for scoping in or out designated sites, including Hintlesham Woods Site of Special Scientific Interest (SSSI), is presented in the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8). The approach of scoping in designated sites has been agreed with relevant stakeholders including Natural England and Local Planning Authorities.			X	
9-2.1432	In relation to Section 8.6.9 of the PEIR Vol 1 Main Text, April 2024 ('The remaining six sites are designated for woodland and ground flora features and the following potential impact pathways have therefore been considered: Hydrological connectivity to the draft Order Limits – not present for any of the sites Construction dust – all of the sites are located more than 350 m from the draft Order Limits and therefore not affected by construction dust (as detailed in Chapter 7: Air Quality) Air quality – all of the sites are located more than 200 m from the Primary Access Routes and therefore not affected by reduced air quality (as detailed in Chapter 7: Air Quality)'), concern that there are missing threatening processes (potential impact pathways) (e.g. exotic plant invasion, noise/disturbance and impacts on breeding bird species) and request that National Grid advise why these are not included	An updated assessment has been undertaken on potential impacts on designated sites following results of protected species surveys and changes to the proposed route, details of which can be found within the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8).			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.1433	In relation to Section 8.6.10 of the PEIR Vol 1 Main Text, April 2024 ('Given the lack of potential impact pathways, these seven sites will not be considered further in this report or the ES'), request that National Grid explain why, given the 70 m distance, Langdon Ridge is not included	An updated assessment has been undertaken on potential impacts on designated sites following results of protected species surveys and changes to the proposed route, details of which can be found within the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8).			X	
9-2.1434	In relation to Section Table 8.7 of the PEIR Vol 1 Main Text, April 2024 ('Roydon Fen - Potential Impact Pathways'), concern that impacts of powerline collision potential on species associated with Roydon Fen (16 UK Amber List, 11 UK Red List, 1 IUCN NT species) have not been included and request that National Grid explain why this not included in the impact pathways	An updated assessment has been undertaken on potential impacts on designated sites following results of protected species surveys and changes to the proposed route, details of which can be found within the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8).			X	
9-2.1435	In relation to Section Table 8.7 of the PEIR Vol 1 Main Text, April 2024 ('Roydon Fen - Potential Impact Pathways'), request that National Grid explain why exotic plant invasion is not included	The implementation of the Outline Code of Construction Practice (CoCP) (document reference 7.2) will ensure that invasive plants are not spread during construction. These measures are considered embedded mitigation measure and therefore taken into account when considering impacts. The Project once built (during operation) should not encourage the spread of invasive plant species.			X	
9-2.1436	In relation to Section 8.6.14 to 8.6.16 of the PEIR Vol 1 Main Text, April 2024 ('LNRs'), request that National Grid explain why exotic plant invasion not	The implementation of the Outline Code of Construction Practice (CoCP) (document reference 7.2) will ensure that invasive plants are not spread during construction. These measures are considered embedded mitigation measures and therefore taken into account when			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	included, given that sites designated for flora (among other ecological attributes)	considering impacts. The Project once built (during operation) will not encourage the spread of invasive plant species.				
9-2.1437	In relation to Section Table 8.9 of the PEIR Vol 1 Main Text, April 2024 ('Various sites'), request that National Grid answer the following: - Clarify how a site is within or a very short distance from the draft Order Limits, but is deemed to have no Direct Impact Pathway. As an example, Norton's Wood is within the dOL, but indirect impacts only are assumed. Is this because the powerlines will pass over/through the site, but no pylon constructed within that site? - What of species present in the site and the impacts of habitat loss/degradation, construction, operation, maintenance? Do these constitute direct (or indirect) impacts?	<p>A direct impact on a site usually means that the Project will in some way physically affect the site. An indirect effect is where the Project creates something such as noise, dust, run off that then leads to an effect. Whether the effect is the result of a direct or indirect impact depends on the causation.</p> <p>An updated assessment has been undertaken on potential impacts on designated sites following results of protected species surveys and changes to the proposed route, details of which can be found within the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8).</p>			X	
9-2.1438	In relation to Section Table 8.9 of the PEIR Vol 1 Main Text, April 2024 ('Ardleigh Reservoir'), concern that no direct impacts are assumed for the two specific sites assessed, one 700 m from dOL, one 980 m from dOL, as the AR area has 119 bird species recorded, 28 UK Red List, 39 UK Amber List, 4 IUCN NT, 2 IUCN VU. With this, request that National Grid justify the no direct impact (and no mention of indirect species impact). given especially high biodiversity value of area	<p>The two Local Wildlife Sites (LWS), Ardleigh Reservoir Woods and Ardleigh Reservoir Grassland, are not designated for birds. Impacts to birds are assessed separately.</p> <p>An updated assessment has been undertaken on potential impacts on designated sites following results of protected species surveys and changes to the proposed route, details of which can be found within the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8).</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.1439	In relation to Section Table 8.9 of the PEIR Vol 1 Main Text, April 2024 ('Impacts'), request that National Grid explain why no risk of exotic plant invasion at any site has been included	The implementation of the Outline Code of Construction Practice (CoCP) will ensure that invasive plants are not spread during construction. These measures are considered embedded mitigation measures and therefore taken into account when considering impacts. The Project once built (during operation) should not encourage the spread of invasive plant species.			X	
9-2.1440	In relation to Section Table 8.9 of the PEIR Vol 1 Main Text, April 2024 ('Tilbury Marshes and Coalhouse Fort Marshes, East Tilbury '), concern that these site have exceptionally high avian biodiversity: e.g. East Tilbury = 209 species, 48 Red List, 81 Amber List, 5 IUCN VU, 6 IUCN NT. However, no direct impact is assumed. Request that National Grid explain this in relation to habitat loss effects on species and species collision risk	Tilbury Marshes and Coalhouse Fort Marshes, East Tilbury are not designated for birds. Impacts to birds are assessed separately. An updated assessment has been undertaken on potential impacts on designated sites following results of protected species surveys and changes to the proposed route, details of which can be found within the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8) and within the wintering bird technical report (Appendix 6.8.A8).			X	
9-2.1441	In relation to Section 8.6.22 of the PEIR Vol 1 Main Text, April 2024 ('Forty five blocks of Ancient Woodland fall within the study area. Of these, four blocks are located within the draft Order Limits (Bullen Wood (Section B), Round Wood in Section B and Writtle-Writtlepark Wood and Bushey Wood in Section F).'), request that National Grid answer the following: - What buffer zones are being considered around ancient woodland remnants that are within (or proximate to - see next comment) the draft Order	As per guidelines, a 15m exclusion buffer is being applied to ancient woodland where at all possible. Where works are required, and there is no alternative, within this 15m buffer an assessment of impact has been made on the ancient woodland. Details of which are provided within the Ancient Woodland and Veteran Tree Strategy (Appendix B of the Landscape and Ecological Management Plan (document reference 7.4).			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>Limits?</p> <ul style="list-style-type: none"> - Recommendations of buffer areas for nitrogen enrichment of ground flora and noise disturbance are likely to be considerable (e.g. 330 m for roads) - please clarify. - Provide evidence and those this tallies with your estimate of only 4 Ancient Woodlands that are likely (according to the report) to be affected 	An updated air quality assessment has been made and included within Chapter 7: Air Quality (document reference 6.7) the Environmental Statement (ES).				
9-2.1442	In relation to Section 8.6.22 of the PEIR Vol 1 Main Text, April 2024 ('Forty five blocks of Ancient Woodland fall within the study area. Of these, four blocks are located within the draft Order Limits (Bullen Wood (Section B), Round Wood in Section B and Writtle-Writtlepark Wood and Bushey Wood in Section F)'), concern that National Grid has not considered the range of threats that can impact Ancient Woodland from nearby developments (e.g. Chemical effects, Disturbance, Fragmentation, Invasion by non-native plant species, Cumulative effects), as per Table 2 and other text related to energy infrastructure and developments and impacts on ancient woodland in "Impacts of nearby development on ancient woodland", Ryan, L. 2012. Request that National Grid clarify this omission of key threatening processes	As per guidelines a 15m exclusion buffer is being applied to ancient woodland where at all possible. Where works are required, and there is no alternative, within this 15m buffer an assessment of impact has been made on the ancient woodland. Details of which are provided within the Ancient Woodland and Veteran Tree Strategy (Appendix B of the Landscape and Ecological Management Plan (document reference 7.4)).			X	
9-2.1443	In relation to Section 8.6.22 of the PEIR Vol 1 Main Text, April 2024 ('However, any woodlands less	The Inventory referred to is a national database which uses 2ha as a cut off size, this is a historic data set and			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>than 2 hectares (ha) are not included on the inventory, and so small woodlands and linear features are excluded from the inventory." '), request that National Grid provide the rationale for this exclusion (presumably not included in the national database https://www.data.gov.uk/dataset/9461f463-c363-4309-ae77-fdcd7e9df7d3/ancient-woodland-england). For instance, Brown and Fisher (2009) use an interpretation of FAO forest classification to suggest that 0.5 ha would be a viable qualification for an area of trees to be deemed woodland. Small patches of woodland are also still likely to provide considerable habitat value (Brown and Fisher 2009; Kirby 2022), and should be included in any EIA assessment. Indeed in many intensive agricultural landscapes, small woodland patches, scattered individual trees and linear woody vegetation (generally hedgerows) may be the only significant remaining biodiversity features in the landscape. Figures of decline are also considerable - e.g. 44% decline in woodland clump cover in England, 1980-97.</p> <p>Concern that disregarding them will likely increase the potential of biodiversity decline in such landscapes, but not necessarily enable this decline to be accounted for in BNG calculations or plans (as appears to be excluded), and request that National Grid explain</p>	<p>not influenced or created by National Grid or the Project team. The Project has no cut off size with respect to categorising woodland, and woodlands have been mapped following surveys by experienced botanists.</p> <p>The impacts on woodlands are assessed in Chapter 8: Ecology and Biodiversity (document reference 6.8) of the Environmental Statement (ES), and results of these surveys are included in Appendix 8.1: Habitat Report (document reference 6.8.A1) of the ES.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.1444	In relation to Section 8.6.23 (also relates to 8.2.24) of the PEIR Vol 1 Main Text, April 2024 ('The desk study identified the presence of several habitats listed on the Priority Habitat Inventory (Natural England, 2023b) within the draft Order Limits. These are detailed in Table 8.10. '), concern that adjoining areas will also be impacted (e.g. through increased edge effects (leading to disturbance, reduced habitat condition, exotic plant invasion), and request that National Grid confirm how this will be factored into BNG calculations (as it appears that you are only counting the area within the dOL, and not accounting for adjoining areas of same or similar habitat/ecosystem, that will be impacted)	The statutory Biodiversity Net Gain (BNG) metric is based on the habitats located within a defined red line boundary and any direct impacts. National Grid's approach follows standard guidelines for BNG assessments.			X	
9-2.1445	In relation to Section Table 8.10 of the PEIR Vol 1 Main Text, April 2024 ('Deciduous woodland'), request that National Grid confirm how much of this is ancient woodland and thus Irreplaceable habitat	The referred to Table 8.10 of the Preliminary Environmental Information Report (PEIR) is based on data that is available on the Multi-Agency Geographic Information for the Countryside (MAGIC) as priority habitat (including deciduous woodland) and does not identify ancient woodlands. The impacts on ancient woodland are assessed in Chapter 8: Ecology and Biodiversity (document reference 6.8) of the Environmental Statement (ES),			X	
9-2.1446	In relation to Section Table 8.10 of the PEIR Vol 1 Main Text, April 2024 ('Lowland Fen'), request that National Grid advise how irreplaceable habitat will be dealt with in BNG planning	Irreplaceable habitats require bespoke mitigation/compensation and therefore are excluded from the Biodiversity Net Gain (BNG) process (as per guidelines). The Ancient Woodland and Veteran Tree			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Strategy (Appendix B of the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4)) addresses the only irreplaceable habitat identified within the Order Limits.				
9-2.1447	In relation to Section Footnote 51 of the PEIR Vol 1 Main Text, April 2024 ('The following potential impact pathways have been considered: Hydrological connectivity to the draft Order Limits – not present for any of the sites Construction dust – all sites are located more than 350 m from the draft Order Limits and therefore not affected by construction dust (as detailed in Chapter 7: Air Quality) Air quality – all sites are located more than 200 m from the Primary Access Routes and are therefore not affected by reduced air quality (as detailed in Chapter 7: Air Quality)'), request that National Grid explain the rationale as to why this is restricted to these few	An updated assessment has been undertaken on potential impacts on designated sites following results of protected species/habitat surveys and changes to the proposed route, details of which can be found within the Chapter 8: Ecology and Biodiversity (document reference 6.8) of the Environmental Statement (ES). Designated sites discussed within the Chapter are those that lie within the agreed study area, which is different depending on level of designation (local, national or international). Applied study areas are based on industry standard practice and have been discussed and agreed with stakeholders at Scoping Report stage (document reference 6.19).			X	
9-2.1448	In relation to Section 8.6.31 of the PEIR Vol 1 Main Text, April 2024 ('The habitats within the draft Order Limits largely comprise intensive agricultural land which is of limited value to terrestrial invertebrates.'), request that National Grid answer the following: - Does this account for field margins, hedgerows and paddock trees associated with these agricultural areas, as these are of habitat value to many invertebrate species, which in turn provide an array	A detailed explanation for the scope of terrestrial invertebrate surveys and the results of these surveys is provided within the terrestrial invertebrate appendix of Chapter 8: Ecology and Biodiversity (document reference 6.8.A5). The terrestrial survey scope was based on a combination of habitat suitability assessment, existing invertebrate records and likely levels of impact, with the intension of identifying areas of high value sites for invertebrates. It is acknowledged that other habitat types including field margins, hedgerows			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>of ES (e.g. pest control, pollination, soil function) to agriculture.</p> <p>- Clarify how the present route proposed impacts on B-Lines link</p> <p>(https://cdn.buglife.org.uk/2023/09/B-Lines-2022-2pp-DIGITAL-version-06R.pdf#:~:text=B-Lines%20is%20a%20national%20efort%20to%20create%20and,the%20more%20sustainable%20local%20pollinator%20populations%20will%20be)</p>	and trees will also provide some value to invertebrates across the route, although at a lower level				
9-2.1449	<p>In relation to Section 8.6.42 of the PEIR Vol 1 Main Text, April 2024 ('The species assemblage recorded during the 2023 surveys is typical of farmland habitats and is of no more than local importance. '), concern that the list of breeding birds contained in Volume 3 Appendices 1 of 4, appears to refute this claim. 139 species (4.2.6) from the desk study (although this is fewer than was obtained by analysing proximate 'hotspots' from eBird), 82 species with 55 Red or Amber listed (4.3.2), including common nightingale, is hardly 'typical of farmland habitats'. The presence of numerous sub-Saharan migratory species (e.g. common cuckoo, common nightingale, common redstart, house martin, sedge warbler, yellow wagtail), puts into question the statement that is 'of no more than local importance'. This is further questioned by the IUCN</p>	<p>The assessment is based on the number of birds present in each area. Whilst species of conservation concern were recorded, they were not recorded in sufficient numbers in each location to be considered of County importance or above. It would be misleading to total the number of birds across the Project as a whole.</p> <p>An updated assessment has been undertaken following further breeding bird surveys, the results of which are presented within the breeding bird appendix of Chapter 8: Ecology and Biodiversity (document reference 6.8.A7).</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	global threat status of the following species from the desk study and field surveys (Annex B and C): northern lapwing (NT), Eurasian turtle dove (VU), pied oystercatcher (NT), Eurasian curlew (NT), common pochard (VU), black-legged kittiwake (VU). Request that National Grid justify the statement, given this context					
9-2.1450	Criticism that Section 8.6.51 of the PEIR Vol 1 Main Text, April 2024 ('Entire Appendix documents'), as with several of the Appendices pages, was unstable and could not be viewed or successfully downloaded so respondent was unable to review this bat data section	Noted.			X	
9-2.1451	In relation to Section 8.7.3 of the PEIR Vol 1 Main Text, April 2024 ('The design would allow for landscape planting around CSE compounds, the new EACN substation and works at existing substations. This would reduce the effects on views and landscape setting'), request that National Grid remove this section, as this is not a biodiversity measure (e.g. is a landscape amenity measure)	The landscape planting around the substations and Cable Sealing End (CSE) compound is the Environmental Areas. This planting is being designed for both landscape and ecological benefit and will be monitored and managed in line with Biodiversity Net Gain (BNG) requirements for 30 years. This area is considered a biodiversity measure.			X	
9-2.1452	In relation to Section BO2 of the PEIR Vol 1 Main Text, April 2024 ('any areas required for temporary works will be reinstated on completion'), request that National Grid confirm how this will be done and how effectiveness will be assessed	Replacement planting for hedgerows and tree habitat following completion of works will be subject to regular management and monitoring, as set out within the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4), over a 5-year period. This will include adaptive measures.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		The approach and mitigation measures to reinstate soil resources are detailed in the Outline Soil Resource Plan (Appendix C of the Outline Code of Construction Practice (document reference 7.2)). Land used temporarily will be reinstated where practicable to its pre-construction condition and use (or a condition discussed with the landowner). Monitoring of reinstatement works will be carried out by a suitable experienced and trained Soil Scientist to ensure the quality of soil materials is not detrimentally affected.				
9-2.1453	In relation to Section BO2 of the PEIR Vol 1 Main Text, April 2024 ('any areas required for temporary works will be reinstated on completion'), request that National Grid confirm whether this is purely habitat based or whether it will include areas with notable species	Areas subject to reinstatement include ecologically sensitive sites/habitats (such as statutory and non-statutory designated sites, priority habitats and wetlands) as per commitment reference B02 in the Outline Code of Construction Practice (CoCP) (document reference 7.2). Displacement mitigation techniques are being used for a range of protected species as agreed with Natural England and the relevant Local Planning Authorities. Once habitats have been reinstated on the completion of works, fauna will naturally return to the area. No specific translocation programmes are being undertaken on this Project			X	
9-2.1454	In relation to Section BO3 of the PEIR Vol 1 Main Text, April 2024 ('Best environmental practice techniques'), request that National Grid clarify what is meant by 'best practice' (e.g. what are sources of evidence?)	Best practice is defined as the commercial or professional procedures that are accepted or prescribed as being correct or most effective.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.1455	In relation to Section BO3 of the PEIR Vol 1 Main Text, April 2024 ('Threat list'), request that National Grid be more comprehensive with threat and impact list	Commitment reference B03 in the Outline Code of Construction Practice (CoCP) (document reference 7.2) relates to best environmental practice techniques that would be implemented during construction of the Project to limit effects.			X	
9-2.1456	In relation to Section BO4 of the PEIR Vol 1 Main Text, April 2024 ('Appropriate exclusion zones will be demarcated'), request that National Grid confirm what the distance/buffer is	Appropriate buffer zones are species dependent and dependent on ground conditions. Exact distances will be on the advice of the Ecological Clerks of Works (ECoW) as set out within the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4).			X	
9-2.1457	In relation to Section BO6 of the PEIR Vol 1 Main Text, April 2024 ('A minimum buffer of 10 m (where practicable) will be retained around biodiversity receptors to reduce any potential direct or indirect effects on the species and habitats associated with them'), request that National Grid confirm the source of the 10m used for the buffer	The minimum buffer and the size would depend on the ecological receptor that is being protected. Exact distances will be on the advice of the Ecological Clerks of Works (ECoW) as set out within the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4).			X	
9-2.1458	In relation to Section 8.7.7 of the PEIR Vol 1 Main Text, April 2024 ('Reinstatement would aim to provide habitats of equal or better value'), request that National Grid confirm how habitat value will be measured and on what timescale	Habitat value is measured both qualitatively (increase in native species diversity for example), and quantitatively using the habitat condition scoring within the Biodiversity Net Gain (BNG) metric. This will be based on a comparison with the baseline and what is to be created. The BNG metric applies a temporal multiplier.			X	
9-2.1459	In relation to Section 8.7.7 of the PEIR Vol 1 Main Text, April 2024 ('Accordingly, hedgerows scheduled for removal during construction would be reinstated	Hedgerow type and condition have been assessed based on current Biodiversity Net Gain (BNG) hedgerow condition guidelines and replacement planting will follow			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	and, where appropriate, would be improved from their baseline condition e.g., defunct, or species-poor hedgerows would be replanted to achieve species-rich and continuous hedgerows, once re-established'), request that National Grid confirm how removed hedgerows will be assessed (e.g. species richness, age, notable species, fauna) and explain how reinstated hedgerow maturation/succession delay will be factored in	the same assessment principles. Hedgerow reinstatement information is provided within the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and details on hedgerow enhancement measures are provided within the Biodiversity Net Gain Report (document reference 7.1).				
9-2.1460	In relation to Section 8.7.8 of the PEIR Vol 1 Main Text, April 2024 ('Peat - compensation package would be developed to compensate for any loss of this irreplaceable habitat'), request that National Grid confirm how something classified as 'irreplaceable' can be compensated	Following further surveys, no lowland fen habitat has been identified within the Order Limits. Therefore, irreplaceable habitat is limited to ancient woodland and veteran trees within the Order Limits. As set out in the Biodiversity Net Gain (BNG) guidelines, irreplaceable habitats need to have a bespoke mitigation/compensation package that sits outside of BNG process. The Ancient Woodland and Veteran Tree Strategy (Appendix B of the Landscape and Ecological Management Plan) (document reference 7.4) addresses this.			X	
9-2.1461	In relation to Section 8.7.10 of the PEIR Vol 1 Main Text, April 2024 ('Wherever possible, habitat connectivity would be retained by using existing access routes, reducing working widths through biodiversity receptors, and maintaining connectivity through green corridors such as hedgerows and watercourses.'), request that National Grid explain how connectivity will be measured, and at what	Connectivity has been considered on a protected species level, with the potential fragmentation effect on a species based on its individual characteristics and behaviours.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	scales, and explain how reinstation of connectivity will be assessed					
9-2.1462	In relation to Section 8.7.25 of the PEIR Vol 1 Main Text, April 2024 ('installation of bird and bat boxes'), request that National Grid provide evidence that these are effective for the species that are likely to be impacted	Proposed mitigation measures, including bat and bird boxes, have been specific and appropriate to the species impacted. This commitment has been made within the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4).			X	
9-2.1463	In relation to Section Table 8.1.1 of the PEIR Vol 1 Main Text, April 2024 ('Neutral: Likely Not Significant following implementation of mitigation; further assessment required following completion of ecology surveys, to be recorded within the ES and HRA.'), concern that this is assumed for bird collision (e.g. assumption throughout this table, but no evidence given for reaching a 'neutral' conclusion)	Further information on bird collision has been included within the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8) and the Habitat Regulation Assessment Report (HRA (document reference 5.3).			X	
9-2.1464	In relation to Section Table 8.1.1 of the PEIR Vol 1 Main Text, April 2024 ('Positive: Potentially Significant as Round Wood and Writtle-Writtlepark Wood would be allowed to regenerate once the existing overhead line infrastructure is removed.'), concern that assumed positive effects of powerline removal would seem to indicate that National Grid should have assumed negative impacts of powerline installation, whereas several of their projections are neutral	The ancient woodland impact assessment has been updated in the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8) and further details can be found within the Ancient Woodland and Veteran Tree Strategy (Appendix B of the Landscape and Ecological Management Plan (document reference 7.4)).			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.1465	In relation to Section Table 8.1.1 of the PEIR Vol 1 Main Text, April 2024 ('Direct effects from regeneration of woodland habitat following removal of existing overhead line.'), request that National Grid confirm how long this is anticipated to take in terms of ecological benefits	The ancient woodland impact assessment has been updated in the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8) and further details can be found within the Ancient Woodland and Veteran Tree strategy (Appendix B of the Landscape and Ecological Management Plan (document reference 7.4)).			X	
9-2.1466	In relation to Section Table 8.1.1 of the PEIR Vol 1 Main Text, April 2024 ('Enhancement would likely include receptor specific measures such as the creation of habitat piles and installation of bird and bat boxes.'), request that National Grid provide evidence that these will be effective for target species	Proposed mitigation measures, including habitat piles, bat and bird boxes, have been specific and appropriate to the species impacted. Mitigation principles, including use of bat and bird boxes as well as habitat piles, have been outlined within the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4).			X	
9-2.1467	Criticism of Figure 6.1 in the Environmental Statement (ES) Chapter which combines individual design elements and suggests the figure is updated to separate temporary and permanent design elements	National Grid notes the respondent's feedback Environmental Statement Figure 4.1: Proposed Project Design (document reference 6.4.F1) and Figure 4.2: Proposed Project Design – Permanent Features (document reference 6.4.F2) have been prepared to support Environmental Statement Chapter 4: Project Description (document reference 6.4). Figure 4.1 shows both temporary and permanent features and Figure 4.2 shows only permanent features.		X

Technology / Operations						
9-2.1468	Comment supportive of use of underground cables (generally)	National Grid notes the respondent's feedback.			X	
9-2.1469	Comment supportive of use of overhead lines / pylons	National Grid notes the respondent's feedback.			X	
9-2.1470	Concern about ongoing maintenance for the Project (e.g. disruption / cost)	<p>National Grid has thousands of kilometres of overhead lines, underground cable and supporting infrastructure such as Cable Sealing End (CSE) compounds. We have well established and standardised practices to undertake maintenance works on these assets. By the implementation and adherence to such practices, cost and time efficiencies across the network have been identified and maximised where possible.</p> <p>The typical lifespan of an overhead line and the underground cable elements of a project would be approximately 40 years, depending on use and location. Maintenance inspections of overhead line routes are typically undertaken on an annual basis by ground-based operatives walking through the route identifying and recording any faults or defects. In addition, a helicopter or small aircraft / drone equipped with a high-definition camera is used to monitor their condition on a regular basis.</p> <p>Additionally, thermal images are taken every six to eight years, which capture high-definition imagery of high resistance joints or defects on each pylon.</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		To supplement the aerial photography and inspections, routine ground level walking inspections are also undertaken. The CSE compounds would contain equipment that can be accessed remotely to monitor the condition of the underground cabling.				
9-2.1471	Concern that overhead lines are vulnerable to malicious activities (e.g. terrorism / warfare / sabotage)	Each pylon on the National Grid Transmission System is risk assessed in relation to vulnerability of unauthorised access. To reduce unauthorised access/sabotage from the ground as far as practicable, we install anti-climb measures such as barb-wiring to the bases of pylons in order to prevent access by members of the public. Clear signage is installed warning of the dangers of high voltages and regular inspections are undertaken depending of the level of vulnerability. However, the possibility of interference remains as pylons are typically situated in isolated locations where constant surveillance is impractical. We also undertake regular inspections of the overhead line using thermal imaging to assess damage to the overhead line from weather or other causes. This means low level damage caused would be identified and repaired prior to failure of the line.			X	
9-2.1472	Concern that overhead lines are vulnerable to weather events	National Grid's 400 kV overhead lines are designed to remain robust and operational in the worst weather conditions in the UK. Although overhead lines are more susceptible to disruption from lightning and high winds, they are also comparatively easy and cost-effective to	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>repair and maintain compared to underground cables. The majority of the existing National Grid transmission network is constructed from overhead lines, these are a demonstrated and reliable form of electricity transmission in the UK. They are designed to meet current design and safety standards and to operate in a range of typical and abnormal weather conditions found in the UK. Standards are regularly reviewed and any adjustments to these standards (for example with regards to climate change) would need to be applied to the entire network. At this stage no known changes are required for a new overhead line Project.</p> <p>Unforeseen events of sufficient severity to cause damage to infrastructure are very rare in the UK but do occur. Overhead lines could be subject to adverse weather conditions such as high wind speeds and lightning strikes.</p> <p>In the unlikely event an overhead line was to be damaged, a network wide monitoring system would detect the fault almost immediately and the circuit would be tripped, and the live current stopped.</p> <p>At the point of repairing any damage, overhead lines are comparatively easier and more cost-effective to repair and maintain than alternative transmission technology. We also undertake regular ground-based inspections of the overhead line using thermal imaging to assess damage to the overhead line and utilise helicopters and drones equipment with high definition and thermal imaging cameras to assess damage to the overhead line</p>

9-2.1474	Criticism of nuclear power / Opposed to providing infrastructure that facilitates the use of nuclear power	National Grid is not a nuclear generator but has a duty to respond to generation customers wanting to connect to the transmission network. The Project is currently proposed to fulfil connection offers for two offshore wind farms, North Falls and Five Estuaries and an			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.1475	Criticism of wind power / Criticism of providing infrastructure that facilitates the use of wind power	<p>interconnector linking with Germany. However, other new connections for new offshore wind and nuclear power generation projects and for interconnectors into East Anglia are expected to continue in addition to the current contracted position. The Project, as part of an integrated transmission network would provide capacity for future generation from various generators, including Sizewell C, to be transmitted across electrical boundaries within East Anglia and the wider transmission network.</p> <p>Under its transmission licence, National Grid has a statutory duty to respond to generation customers wanting to connect to the transmission network, whether this be for wind, solar, nuclear, tidal or from other forms of generation.</p> <p>The use of energy storage solutions to manage variation/ unpredictability in generation and demand will increase as Great Britain becomes more reliable on renewables in the future, replacing the flexibility provided by fossil fuel generation. In their Smart Systems and Flexibility Plan 2021, Department for Business, Energy and Industrial Strategy (BEIS) (now known as the Department for Energy Security and Net Zero) and the Office of Gas and Electricity Markets (Ofgem) propose that by 2030 and beyond energy storage solutions will be deployed in 'optimal locations and at all scales'. The Plan states that storage will provide significant flexibility (approximately 13 GW) and address challenges associated with low carbon system, including</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>maintaining energy security and integrating and maximizing the use of the Government's plan for 40 GW (target increased to 50 GW in April 2022) of offshore wind by 2030 and other low carbon generation. The Government's Energy White Paper (EWP) states that '<i>renewables now account for over one third of electricity generation, up from 7% in 2010</i>'. To meet the predicted doubling in electricity demand by 2050 and the Government's 2050 Net Zero target, the EWP, whilst not planning for a specific technology solution predicts that 'a low cost, Net Zero consistent system is likely to be composed predominantly by wind and solar' but also complementing intermittent renewables with technologies including nuclear.</p> <p>Under its transmission licence, National Grid has a statutory duty to respond to generation customers wanting to connect to the transmission network. The Project is currently proposed to fulfil connection offers for two offshore wind farms, North Falls and Five Estuaries which will contribute to the Government's 50 GW target. The advantages of offshore wind farms compared to onshore are that they are considered more efficient (with higher wind speeds and consistency in direction) and are further away from local populations. Assessment and mitigation of impacts relating to offshore wind farms on the seabed would be addressed as part of any Environmental Impact Assessment (EIA) carried out by the developer.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.1476	Criticism of use of overhead lines	National Grid has developed the Project in line with the relevant planning policy which is set out in the National Policy Statement EN-5 for Electricity Networks Infrastructure. At paragraph 2.9.20 this policy sets out the strong starting presumption for the use of overhead lines for electricity network developments, a presumption which is reversed in nationally designated landscapes and certain other circumstances as set out at paragraph 2.9.23 and in EN-1 regarding the setting of National Landscapes. National Grid has therefore developed the Project in a manner consistent with the relevant policy.			X	
9-2.1477	Criticism that pylons / overhead lines are an outdated / inefficient technology	The respondent's view is noted, however National Grid must work within the confines of the relevant policy which is the current National Policy Statement (NPS) EN-5, this policy makes clear that 'the Government's position that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated Landscape (i.e. National Park, The Broads, or Area of Outstanding Natural Beauty)'. The majority of the existing National Grid transmission network is constructed from pylons and overhead lines; these are a demonstrated and reliable form of electricity transmission in the UK. They are designed to meet current design and safety standards and to operate in a range of typical and abnormal weather conditions found in the UK. Standards are regularly reviewed and any	X	X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.1480	Criticism that overhead lines are noisy in operation / Concern about noise impacts from overhead lines	<p>National Grid has completed the Environmental Impact Assessment (EIA) for the Project. The results of this assessment are provided in the Environmental Statement (ES) that accompanies the Development Consent Order (DCO) application. The ES identifies and assesses the likely significant effects from the Project and recommends appropriate mitigation measures (in consultation with relevant stakeholders) to reduce potential effects.</p> <p>Operational noise from overhead lines is scoped out of the ES (Volume 6 of the DCO application), in accordance with the Scoping Opinion (document reference 6.20), on the basis that a low noise conductor system is proposed. However, information on noise from overhead lines is provided in Appendix 14.5: Operational Noise from Overhead Lines (Informative) (document reference 6.14.A5), which shows that overhead line noise screens out from further assessment at the first tier.</p> <p>The proposed overhead line conductor design is a relatively quiet conductor that National Grid uses for overhead lines operating at 400 kV. The proposed 'overhead line design ensures that the electrical stresses on the conductors/wires remain as low as practicable. Pylon fittings, such as insulators, dampers, spacers, and clamps, are designed and procured in accordance with a series of National Grid Technical Specifications to reduce the potential for audible noise and wind-induced noise to occur. Operational noise is not likely to be</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.1481	Oppose the use of T-Pylons (if the Project was to change)	<p>significant at nearby sensitive receptors under any weather conditions.</p> <p>The latest independent report on the Comparison of Electricity Transmission Technologies: Costs and Characteristics (Institute of Engineering and Technology, 2025) confirms that whilst T-Pylons may in certain locations provide an alternative to conventional overhead lines with potential benefits in visual impact and reduced land-take, this is at a higher cost. The build cost is approximately 2 to 2.5 times that of an equivalently rated conventional overhead line, and the lifetime costs are around 1.6 to 1.7 times that of a conventional overhead line. The current arrangements for the oversight of funding by Ofgem requires that the lowest cost acceptable design is taken forward rather than a more expensive design even if that design is perceived to reduce the level of effect.</p> <p>As such consideration of their use follows after establishing a need to mitigate effects of the standard lattice design and after considering the benefit of adopting a low height lattice pylon design. T pylons themselves are also less adaptable to varied terrains and require more substantial access infrastructure.</p> <p>Furthermore, their resilience and environmental impact are comparable to conventional overhead lines, but with increased carbon intensity due to construction materials. Attention also needs to be given to the transitions between pylon types. Given It is the surrounding context that drives the need for alternative design mitigation,</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>where this is not required along the entire route, any visual break and transition in pylon design also needs to be carefully sited.</p> <p>Assessment findings have concluded that, where there is not a reversal of the presumption to use overhead lines, the use of lattice pylons (either standard or low height) is consistent with planning policy throughout the route. Whilst there may be some locations (for examples see appendix A of the 2024 Design Development Report) where there may be a design option for the use of T pylons, the need to mitigate for unacceptable effects from lattice pylons is not engaged. On this basis T pylons are not proposed for the Project.</p>				
9-2.1482	Suggest that local green solutions are found instead of the Project, as the further the electricity needs to travel, the more electricity is wasted through heat loss	<p>Heat loss is a factor in electricity transmission and distribution however this is always factored into the design. National Grid as part of the Development Consent Order (DCO) and Design process, will always minimise the amount of infrastructure required balanced against routing and siting constraints whilst maintaining the highest levels of service. Geographical features also prevent green solutions being implemented UK wide – such as space, sunlight, weather systems (wind) and also tidal being on the coast. National Grid has an obligation from the government and its regulator, Ofgem, to its customers to maintain the safety and reliability of the assets that feeds their properties to ensure this happens, the network does need to transmit power over sometimes longer distances. Alternative options were considered as we developed our proposals and details</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		of these are available in our Strategic Options Backcheck and Review (SOBR) which has been submitted as part of this application for Development Consent.				
9-2.1483	Criticism of solar power / Criticism of providing infrastructure that facilitates the use of solar power	<p>Solar has an important role to play in de-carbonising the power sector and meeting the UK's target of reaching net zero carbon by 2050.</p> <p>The Need Case for the Project is set out in the Strategic Options Backcheck Review (document reference 7.17) which provides further details on the low carbon energy (nuclear, wind farms and solar) driving the need for this Project.</p> <p>National Grid has a duty to respond to generation customers wanting to connect to the transmission network. Our role is to respond to the connection requirements for Projects that are developed in line with Government policy to integrate them into the National Transmission System in a timely, economic and efficient manner in line with relevant policies and our duties e.g. under the Electricity Act 1989 where National Grid holds the transmission licence that requires us to develop and maintain an efficient, coordinated and economical electricity transmission system.</p>			X	
9-2.1484	Suggest that the National Grid apply greater focus to delivering the Project in line with the new Electricity Transmission Design Principles (e.g. where more innovative technology could protect and enhance	The Electricity Transmission Design Principles (ETDP) are currently being developed by National Energy System Operator (NESO). NESO will launch a consultation on ETDP which will apply to onshore and			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	landscapes, amenity, biodiversity and heritage whilst helping rural communities achieve their low carbon goals)	<p>offshore electricity transmission infrastructure. It would be too early for application to a live project given no consultation has been launched. Furthermore, ETDP is not referenced or endorsed in the designated National Policy Statements (NPS) or any legislation. The Project team will continue to monitor progress and review the situation when further updates are provided.</p> <p>Paragraph 2.9.7 of the NPS for Electricity Infrastructure Networks EN-5 (2024) recognises that 'the government does not believe that the development of overhead lines is incompatible in principle with applicants' statutory duty under Schedule 9 to the Electricity Act 1989, to have regard to visual and landscape amenity and to reasonably mitigate possible impacts thereon'.</p> <p>NESO's Clean Power 2030 report identifies the need for the Project to be delivered by 2030 and this is clearly stated in the Planning Statement (document reference 5.6). National Grid has in conjunction with NESO undertaken the necessary exercises/studies and its now important the Project makes progress to ensure NESO's ambition for Clean Power 2030 is realised as explained in the Planning Statement (document reference 5.6).</p>				
9-2.1485	Criticism that National Grid are forcing through the Project (as opposed to options alternative to overhead lines) due to the ease of administrative upkeep	<p>National Grid has carefully considered alternatives to overhead lines in accordance with National Policy Statement (NPS) EN-5 (DESNZ, 2024).</p> <p>EN-5 paragraphs 2.9.20 to 2.9.25 sets out the government's position that overhead lines should be the</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>strong starting presumption for electricity networks developments in general and where this is reversed.</p> <p>There has been an iterative process in considering options alternative to overhead lines throughout the pre-application stage. This is reported in the Strategic Options Backcheck Review (2023) and the Strategic Options Backcheck Review (2024) in which both reports take into consideration several factors, including annual maintenance costs by technology.</p> <p>The alternative technology options considered including maintenance costs are detailed in the latest version of the 2025 Strategic Options Backcheck Review (document reference 7.17) submitted with the DCO application.</p>				
9-2.1486	Request that the proposed pylons will not have any form of lighting on them / Concern that pylons will need to be illuminated and therefore create light pollution	<p>National Grid is not proposing to install any permanent lighting on the pylons included within the alignment. Elsewhere, however, National Grid has installed Aviation Obstruction Lighting to pylons as a safety measure.</p> <p>National Grid and its contractors may, as part of construction or maintenance, have a requirement to use temporary task specific lighting for the purposes of safety or security. Further details are provided in Chapter 4 of the Environmental Statement (ES) (document reference Volume 6: Environmental Statement).</p> <p>National Grid has completed the Environmental Impact Assessment (EIA) for the Project. The results of this</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		assessment are provided in the ES that accompanies the Development Consent Order (DCO) application. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation of the Project and recommends appropriate mitigation measures (in consultation with relevant stakeholders) to reduce potential effects. Mitigation in relation to lighting is contained within the Outline Code of Construction Practice (document reference 7.2).				
9-2.1487	Suggest that local community energy solutions are used instead of the Project	<p>Local communities play a crucial role in our transition to renewable energy, demand reduction, and innovative energy supply projects.</p> <p>National Grid supports a range of energy products, including partnerships with commercial or public sector partners and those wholly owned and/or controlled by communities.</p> <p>Although local community energy solutions have their role to play in the energy transition, this would not meet the capacity required for current and future electricity transmission needs in the area. The Project is responding to the regional challenge of new offshore wind, nuclear power generation, and interconnectors coming into East Anglia and the south-east along the East Coast.</p> <p>National Grid is legally obliged (under our Transmission Owner Licence) to provide capacity at the dates formally agreed in contracts with energy generators (or customers). National Grid does not determine or</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>implement policies that influence the form of energy developments. Our role is to respond to the connection requirements for projects that are developed in line with Government policy to integrate them into the National Transmission System in a timely, economic and efficient manner in line with relevant policies and our statutory duties and regulatory requirements.</p> <p>The need case for the Project is set out in the 2025 Strategic Options Backcheck and Review Report (document reference 7.17)</p>				
9-2.1488	<p>Has effect on radio communications been considered? (including VHF and UHF links to / from Tacolneston area other than just TV and FM/DAB radio)</p>	<p>Radio frequency emissions can interfere with electrical, telecommunication. Wi-Fi and broadcast equipment. These emissions are limited from overhead lines by design as set out in National Grid's Technical Specifications, which include the requirements of British standards minimising the generation of radio interference. All the National Grid equipment used would meet the requirements in these standards, which are in place to prevent interference issues. These are the same good engineering practices that are applied to the existing transmission system assets, including existing 400 kV overhead lines, which cause no interference issues for electrical, telecommunication, Wi-Fi and broadcast equipment under normal operating conditions. Therefore, we also expect no interference issues as a result of the Project.</p>		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.1489	Criticism that the project will use finite resources rather than sustainable materials to construct the infrastructure	<p>National Grid has set challenging targets to reduce the carbon emissions of our organisation, including a specific commitment to deliver carbon neutral construction by 2025/26. Key to the delivery of this commitment is to measure the carbon footprint of our projects through concept, detailed design and into delivery and construction using a range of best practice carbon tools and data sets.</p> <p>Prior to construction, we require all contractors to calculate a detailed carbon footprint of the project using our Carbon Interface Tool (CIT), this provides a Capital Carbon baseline in Tonnes of Carbon Dioxide equivalent* (CO2e) from which the contractors typically undertake quarterly reviews to reduce the Carbon Footprint of the project during construction. We also have a range of Net Zero working groups within National Grid Electricity Transmission (NGET) that explore low carbon innovations and approaches.</p> <p>These groups bring together our contractors and our supply chain to help to reduce the carbon footprint of the materials and resources required to deliver our projects. These groups are: Low carbon concrete, Low-carbon steel and aluminium, Net Zero construction and Low Carbon cables.</p> <p>These working groups all report progress to an overarching Net Zero forum. The carbon calculations derived from the CIT are used to inform progress against our overall strategic commitments to reducing carbon</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		emissions across its portfolio of projects and meeting its Net Zero targets for construction projects. *CO2e / Carbon Dioxide equivalent: is the number of metric tons of CO2 emissions with the same global warming potential as one metric ton of another greenhouse gas.				
9-2.1490	Suggest that the Project is paused until better technology is available	The current infrastructure is starting to show signs of age given that the majority was installed in the 1970s / 1980s. There is a general requirement to upgrade and reinforce the network to prevent any members of the public suffering from un-planned outages. As there is no timescale on "better technology" or indeed, what this technology would bring – National Grid has to make an assessment on what is available today taking into account obsolesce values and upgradability. In all design works however, National Grid allows for modernisation and (plug and play) technologies where possible so we can adapt and move at a quicker pace (Smart wires technology for example).			X	
9-2.1491	Criticism that the National Grid has not considered the loss of transported energy via the pylons against the much-reduced energy loss if transported underwater, or via underground cables	National Grid is constantly looking into new innovations and investigating alternative technology types. These are explored and assessed for suitability. Alternative technologies were investigated for the Project, these included an offshore connection using direct current (DC) technology, and various onshore connection options including:	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<ul style="list-style-type: none"> • increasing operational voltages on existing network to above 400 kV; • alternating current (AC) overhead lines (established technology); • alternative pylon types; AC underground technology; and • high voltage direct current (HVDC) overhead line and underground cables; and • gas insulated line (GIL). <p>Currently, overhead lines offer the most economic and efficient solution to transmit electricity over long distances when balanced against the cost to install and maintain vs electrical losses of each technology.</p>				
9-2.1492	Concern that the Project is located too close to existing pylons	National Grid has, in areas where it is suitable and safe proposed an alignment that features paralleling of existing overhead lines, this has been carried out alongside consideration of the ongoing security, safety and operability of both the existing, and proposed circuit with regards to receptors identified in these areas. The design allows for adequate separation from existing assets to allow safe construction, maintenance and future demolish of proposed assets as required under the CDM regulations.			X	
9-2.1493	Request for National Grid to confirm how they are going to store the electricity generated by the offshore wind farms at off peak times / Suggest that National Grid should consider this and start developing some useful technology to use the	National Grid owns and maintains the national high-voltage electricity transmission network throughout England and Wales and does not own or manage energy storage sites.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	electricity rather than waste it or have to switch off its generation during off peak times (e.g. solutions such as CO2 capture systems and desalination plants)	<p>The Project does not include energy storage however The Government recognises the complexities with balancing supply and demand from renewables generation and securing this flexibility will increasingly come from energy storage systems and interconnected capacities with other electricity markets and consumer/ smart technologies.</p> <p>The use of energy storage solutions to manage variation/unpredictability in generation and demand will increase as Great Britain becomes more reliable on renewables in the future, replacing the flexibility provided by fossil fuel generation. In their Smart Systems and Flexibility Plan 2021, Department for Business, Energy and Industrial Strategy (BEIS) (now known as the Department for Energy Security and Net Zero) and the Office of Gas and Electricity Markets (Ofgem) propose that by 2030 and beyond energy storage solutions will be deployed in 'optimal locations and at all scales'. The Plan states that storage will provide significant flexibility (approximately 13 GW) and address challenges associated with low carbon system, including maintaining energy security and integrating and maximizing the use of the Government's plan for 40 GW (target increased to 50 GW in April 2022) of offshore wind by 2030 and other low carbon generation.</p>				
9-2.1494	Suggest that the Project takes into account the latest technological advancements	National Grid is constantly looking into new innovations and investigating alternative technology types. These are explored and assessed for suitability. Alternative	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		technologies were investigated for the Project, these included an offshore connection using direct current (DC) technology, and various onshore connection options including increasing operational voltages on existing network to above 400 kV; alternating current (AC) overhead lines (established technology); alternative pylon types; AC underground technology; high voltage direct current (HVDC) overhead line and underground cables.				
9-2.1495	Suggest that Carbon Capture and Storage Solutions are considered	While National Grid is primarily responsible for the transmission system, we recognise the importance of reducing carbon emissions across the energy sector. Even with advancements in battery storage and renewable energy, a robust transmission network remains essential to deliver power effectively where it's needed and things such as Carbon Capture and Storage Solutions do not form part of the transmission network.			X	
9-2.1496	Criticism that there are reports that existing pylons can be pirated, yet this isn't addressed in National Grids documentation	The majority of the existing National Grid transmission network is constructed from overhead lines; these are a demonstrated and reliable form of electricity transmission in the UK. They are designed to meet current design and safety standards and to operate in a range of typical and abnormal weather conditions found in the UK. Standards are regularly reviewed and any adjustments to these standards (for example with regards to climate change) would need to be applied to the entire network. At this stage no known changes are required for a new overhead line Project. Unforeseen			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>events of sufficient severity to cause damage to infrastructure are very rare in the UK but do occur. Overhead lines could be subject to adverse weather conditions such as high wind speeds and lightning strikes, and also due to disruption from an external factor such as sabotage. To reduce sabotage from the ground as far as practicable, we install anti-climb measures such as barb-wiring. However, the possibility of interference remains as pylons are typically situated in isolated locations where constant surveillance is impractical. In the unlikely event an overhead line was to be damaged, a network wide monitoring system would detect the fault almost immediately and the circuit would be tripped, and the live current stopped. At the point of repairing any damage, overhead lines are comparatively easier and more cost-effective to repair and maintain than alternative transmission technology. We also undertake regular inspections of the overhead line using thermal imaging to assess damage to the overhead line from weather or other causes. This means low level damage caused would be identified and repaired prior to failure of the line.</p>				
9-2.1497	<p>Concern about the impact of climate change on the Project (e.g. impact of more frequent weather events on overhead lines; due to removal of trees and hedges) / Concern about climate resilience of the Project (e.g. requirement for resilient highway routes to access the major elements to the Project from the Strategic Road Network (SRN) / Major Road</p>	<p>The majority of the existing National Grid transmission network is constructed from overhead lines, these are a demonstrated and reliable form of electricity transmission in the UK. They are designed to meet current design and safety standards and to operate in a range of typical and abnormal weather conditions found in the UK. Standards are regularly reviewed and any</p>			X

	Network (MRN) and for Abnormal Indivisible Loads (AILs) from the nearest suitable port from construction through to decommissioning)	adjustments to these standards (for example with regards to climate change) would need to be applied to the entire network. At this stage no known changes are required for a new overhead line project.				
9-2.1498	Concern about capacity issue between the Project (Norwich to Tilbury) and London / Request for clarity around this.	<p>The East Anglia and the south-east region transmission system includes the LE1 – North London Boundary. The capacity issue is set out in the 2025 Strategic Options Back Check and Review (SOBR) (document reference 7.17). The SOBR confirms that system reinforcement is required for the provision of 7,476 MW of capacity across the LE1 Boundary.</p> <p>The region south of the EC5 boundary is the proposed connection location of the North Falls 1000 MW and Five Estuaries 1080 MW wind farms. For the LE1 boundary the worst-case fault is for the Pelham – Rye House double circuit as shown in Figure 3.3 of the SOBR. During this fault situation the East Anglia generation will naturally seek to flow down the Bramford – Braintree – Rayleigh circuits causing them to overload above their maximum potential capability of 6380 MW. These circuits experience loadings in the order of 11,000 MW with a deficit of -4,620 MW of capability. With a requirement to provide additional 2,856 MW (1000MW + 1080MW) x0.7 + 1400MW] for the connection of North Falls, Five Estuaries and Tarchon as described as the Essex Coast Generation Group below increasing the deficit to -7476 MW.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		The existing deficit along with two generators seeking connection in the area shows there is insufficient capacity across this part of the LE1 boundary and requires reinforcement.				
9-2.1499	Oppose the use of new pylon designs (if the Project was to change) (e.g. due to greater disruption to ground than standard lattice pylons, and consequent impact on financial and agricultural worth of the land and impact on existing underground services)	The design for which we are seeking a Development Consent Order (DCO) includes both standard height and low height steel lattice pylons. Although we considered T-pylons, only steel lattice are included in the design.			X	
9-2.1500	Oppose use of imported steel from China for the Project (reason not specified)	It is not stated why there is an objection to imported steel from China however National Grid addresses the sourcing of materials for its infrastructure projects by adhering to rigorous policies and frameworks designed to ensure sustainability, ethical practises, and regulatory compliance. These practises align with their Environmental, Social, and governance (ESG) commitments and aim to minimise environmental impacts, promote responsible sourcing, and reduce the carbon footprint of their operations.			X	
9-2.1501	Query regarding whether the 'new' North Sea power needs be kept separate from existing power and only use the new Norwich to Tilbury overhead line (e.g. or whether it matters which overhead line the 'new' North Sea power uses?)	The national transmission network is connected to power from numerous different generation sources. No specific sources of electricity are kept separate within the network.	X		X	
9-2.1502	Criticism that whilst there is no clear guidance on study areas for generators/ non-road mobile	We note the comment regarding the definition of the study area for emissions from NRMM and generators. It		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>machinery (NRMM) usage, a study area of 100 m from construction compounds areas has been defined. Suggests clearer reasoning for this aspect is provided due to the Scoping Opinion not aligning with National Grid's proposal and additional assessment proposed for the Environmental Statement (ES).</p>	<p>is important to clarify that no specific national or industry guidance currently exists on how to define a study area for assessing air quality impacts from NRMM or generator use.</p> <p>As part of the assessment in Chapter 7: Air Quality of the Environmental Statement (ES) (document reference 6.7) a 100 m Study Area has been adopted based on professional judgement and experience from comparable infrastructure projects. This distance is considered sufficient to capture potential localized impacts on air quality from NRMM and generator emissions, particularly in relation to nearby sensitive receptors.</p> <p>We acknowledge that this approach differs from the Scoping Opinion (construction effects were initially scoped out of the assessment). However, in the absence of defined guidance, the methodology applied is considered robust and appropriate for the scale and nature of the works proposed.</p>				
9-2.1503	<p>In relation to the Preliminary Environmental Information Report (PEIR) Volume 1 Paragraph 11.66 (Design Proposals), suggestion that further technical clarity and certainty are required for the rationalisation and/or undergrounding of 132 kV powerlines along the reinforcement route from Norwich to Tilbury to fully assess mitigation and compensation.</p>	<p>The Project is taking forwards the replacement of a number of sections of existing 132 kV lattice pylon line with 132 kV underground cable. These are proposed where the particular connection is crossed but with several locations where additional distance is also replaced by underground 132 kV cable. In some cases this is to allow the route of an existing 132 kV line to be adopted for the 400 kV overhead line (examples are at Palgrave, between Offton and Bramford and at</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Haverings Grove) in others the minimum crossing requirement has been extended to reduce the potential for cumulative wire scape effects (for example to the south-east of Bramford Substation and to the west of Fuller Street). Whilst there have been requests for further rationalisation between Stowmarket and Bramford substations and between Bramford and Lawford substations there is no substantive basis to justify the additional cost of the Grid Supply Point substations that would be required to maintain electrical equivalence to the DNO network as a consequence of the Project.				
9-2.1504	Request for more information to understand which are single circuit lines and which are double circuit lines, and the resulting technical requirements for undergrounding, including numbers of cables, depth cables need to be buried at, and cable corridor width.	<p>All newly proposed transmission routes are double circuit. To match overhead line thermal performance for a 400 kV double circuit, as many as 18 separate underground cables in six separate trenches may be needed.</p> <p>The standard means of installing underground cables is using open cut techniques. The 120 m width includes the temporary haul road, soil storage, pre-construction drainage areas, communications cables and typically six cable trenches for 18 cables assumed to be to a typical minimum depth of 1.2 m and suitably spaced apart to allow for the required heat dissipation between cables and circuit phases. This would be used as a baseline across the whole length of the route if it were to be undergrounded.</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Standard details for the respective aspects of the project can be seen in the Design and Layout Plans - Subs & Cables (document reference 2.6.1) and the Design and Layout Plans - Overhead Lines (document reference 2.6.2)				
Tourism						
9-2.1505	Concern about impact of the Project on tourism (generally - no location given)	<p>Through routeing and siting, National Grid has sought to avoid, as far as practicable, locations important for leisure and tourism.</p> <p>Environmental Statement (ES) Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) presents an assessment on the potential impacts on tourism economy (during construction) and tourism assets (during construction and operation), including visitor accommodations. As part of this assessment, a range of measures have been considered throughout the construction phase of the Project to minimise disruption on tourism. These include: traffic management, signage and routeing measures. These are identified within the ES Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15), the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).</p>	X	X	X	
9-2.1506	Concern that the documents submitted for the Project have three study areas for the impacts of the	Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) of the Environmental		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>Project on socio-economic, recreation, and tourism (e.g. potential and returning visitors) which have been limited to the local study area within the order limits, 1km from the local study area and the wider study area which includes the extend of the local authorities the Order Limits pass through, and suggest that there is not yet sufficient information about the supply chain area or workforce profile to justify the chosen narrow study areas (e.g. discounting East Suffolk). With this, criticism that the current submission documents do not adequately address the cumulative socio-economic impacts that nearby energy projects (including the Project) would have on East Suffolk given that the study areas do not extend to the spatial limits of the district, and suggest that the cumulative impact of the Project and other nearby projects on East Suffolk and other local authorities on how they are perceived by the public, and the consequent impact on tourism, should be considered</p>	<p>Statement (ES) includes an assessment of the potential impact on tourism economy within the Wider Study Area (the spatial extent of the Local Planning Authority areas where the Project crosses along with Norwich City Council, Ipswich Borough Council and West Suffolk Council); impact on access on built and other assets within the local study area; impact on access and potential visual impact on local businesses within a 3 km Study Area where visual impact is likely to be an economic consideration; and the impact of potential increased employment numbers during construction for local and non-local workers within the Wider Study Area.</p> <p>The economic impact of the supply chain of local businesses where visual impact is likely to be an economic consideration is not an Environmental Impact Assessment (EIA) matter (the scoping opinion given by the Secretary of State scopes it out of the ES) and therefore is not discussed in the ES. This approach is in line with other grid connection projects, including Yorkshire Green and Bramford to Twinstead Reinforcement.</p> <p>National Grid recognises, however, that there could be indirect economic effects to individual businesses.</p> <p>These potential perceived effects due to the visibility of the Project are noted in the ES, but would be subject to separate land landowner discussions and compensation arrangements.</p>

Visual Impacts						
9-2.1507	Concern about cumulative visual impact of the Project alongside existing overhead lines / concern about wirescape (generally - no location given)	<p>National Grid notes the feedback received and has taken it into consideration as part of the iterative design process.</p> <p>National Grid has liaised with UK Power Networks to understand opportunities for 132 kV network rationalisation. The Project includes proposals to replace certain sections of 132 kV overhead line connection with underground cable to rationalise the network and reduce potential for cumulative wirescape effects.</p> <p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the Environmental Impact Assessment (EIA). Existing infrastructure (such as existing overhead lines) has formed part of the baseline environment for the Project to be assessed against, to identify if significant landscape and / or visual effects are likely to arise. The LVIA presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) sets out potential landscape and visual effects. The rationalisation of the existing 132 kV network in some areas forms part of the embedded landscape mitigation, as set out in Chapter 13.</p> <p>The findings and conclusions of the LVIA and other topics assessments have been considered within the Cumulative Impact Assessment, presented in ES Chapter 17: Cumulative Effects Assessment</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		(document reference 6.17), lists the developments as part of the cumulative assessment. This chapter considers the landscape and visual effects of the Project cumulatively with other proposed developments that are being progressed.				
9-2.1508	Concern that the Project will be unsightly / visually intrusive (including overhead lines, CSE (Cable Sealing End) compounds and substations) / Concern that the Project will cause a negative impact on views (generally - no location given)	<p>National Policy Statement (NPS) EN-5 makes it clear that the Government considers overhead lines to be appropriate and acceptable in most instances, although it recognises that there may be, at particularly sensitive locations, potential adverse landscape and visual impacts of an overhead line that make it inconsistent with our duties and relevant planning policy.</p> <p>The Dedham Vale National Landscape (previously an Area of Outstanding Natural Beauty (AONB)) designation is one such location where underground cable technology is proposed with the extent of underground cabling extending beyond the boundary in response to the potential for the Project to affect the National Landscape. Our proposals include a total of approximately 20 km of underground cable through and in the vicinity of the Dedham Vale National Landscape, including a section at Great Horkesley to reduce the changes in views and setting of the National Landscape from within and adjacent to its designated boundary.</p> <p>Underground cabling is also proposed for a short section of 400 kV overhead line crossing near Fairstead.</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Cable Sealing End (CSE) compounds are required to facilitate sections of underground cable, and the proposed East Anglia Connection Node (EACN) substation is required to connect customers, and the proposed Tilbury North Substation is required to connect the Project into the existing Tilbury Substation. These components have been carefully sited taking into consideration Horlock Rules including the potential for landscape and visual effects.</p> <p>The higher cost of underground cables to bill paying consumers, and the environmental implications of installing underground cables and maintaining them at locations outside the Dedham Vale National Landscape, are not considered to be justifiable in the context of national policy or National Grid's statutory duties, which include the need to be economical and efficient.</p> <p>A Landscape and Visual Impact Assessment (LVIA), presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13), has been undertaken as part of the Environmental Impact Assessment (EIA). The LVIA includes an assessment on both landscape character and visual amenity and identifies areas for potential mitigation planting around substations and CSE compounds to reduce visual impacts to local receptors. The Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) includes details regarding the planting proposals.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.1509	Suggest that T-Pylons are coloured suitably to reduce visual impact (if used)	<p>National Grid uses a standard industrial grey paint colour across the majority of its assets. It is a colour we have used for several years as it provides a sympathetic balance between pylons blending into landscapes and skylines when seen from differing views and natural lighting.</p> <p>The latest independent report on the Comparison of Electricity Transmission Technologies: Costs and Characteristics (Institute of Engineering and Technology, 2025) confirms that whilst T-Pylons may in certain locations provide an alternative to conventional overhead lines with potential benefits in visual impact and reduced land-take, this is at a higher cost. The build cost is approximately 2 to 2.5 times that of an equivalently rated conventional overhead line, and the lifetime costs are around 1.6 to 1.7 times that of a conventional overhead line. The current arrangements for the oversight of funding by Ofgem requires that the lowest cost acceptable design is taken forward rather than a more expensive design even if that design is perceived to reduce the level of effect.</p> <p>As such, consideration of their use follows after establishing a need to mitigate effects of the standard lattice design and after considering the benefit of adopting a low height lattice pylon design. T pylons themselves are also less adaptable to varied terrains and require more substantial access infrastructure. Furthermore, their resilience and environmental impact</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>are comparable to conventional overhead lines, but with increased carbon intensity due to construction materials. Attention also needs to be given to the transitions between pylon types. It is the surrounding context that drives the need for alternative design mitigation, where this is not required along the entire route, any visual break and transition in pylon design also needs to be carefully sited.</p> <p>Assessment findings have concluded that, where there is not a reversal of the presumption to use overhead lines, the use of lattice pylons (either standard or low height) is consistent with planning policy throughout the route. Whilst there may be some locations (for examples see appendix A of the 2024 Design Development Report (available on the Project website) where there may be a design option for the use of T pylons, the need to mitigate for unacceptable effects from lattice pylons is not engaged. On this basis T pylons are not proposed for the Project.</p>				
9-2.1510	Concern that the Project will be visible from the Suffolk and Essex Coast National Landscape and Heaths National Landscape	<p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the Environmental Impact Assessment (EIA). The LVIA includes an assessment on both landscape character and visual amenity and sets out the potential landscape and visual effects of the Project, including consideration of effects on nationally designated landscapes. The LVIA is presented in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13). The LVIA is supported by ES Appendix 13.5: National</p>			X

		Landscape Assessment Study (document reference 6.13.A5) which considers impacts on the National Landscape.				
9-2.1511	Request for National Grid to confirm whether a Landscape and Visual Impact Assessment has been carried out for the Project / Suggest that a Landscape and Visual Impact Assessment is carried (including Offton)	A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the Environmental Impact Assessment (EIA). The approach to the LVIA follows professional guidance as set out in Appendix 13.1: Landscape and Visual Methodology (document reference 6.13.A1), which includes the 3rd Edition Guidelines on Landscape and Visual Impact Assessment (GLVIA3). The LVIA is presented in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13).	X		X	
9-2.1512	Criticism that it is not acceptable for National Grid or the Government or any other body to decide whose view and visual amenity should be retained and whose can be ruined	National Grid has sought to reduce, as far as practicable, impacts on visual amenity through routeing and siting and an ongoing iterative design process which has taken on board feedback at different stages of the Project. The iterative design process sought to avoid areas of highest concern, for examples through changes to the route alignment. A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the Environmental Impact Assessment (EIA). The LVIA includes an assessment on both landscape character and visual amenity and is presented in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13). The ES (document reference Volume 6: Environmental Statement) follows standard methodology for			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>assessing the environmental effects of the Project including landscape and visual impact assessment. If the Development Consent Order (DCO) application is accepted by the Planning Inspectorate for examination, the ES will be scrutinised by the Examining Authority on behalf of the Secretary of State (SoS). The information presented within the ES is a key consideration in deciding whether to consent the Project or not.</p> <p>The Project position on landscape compensation for the landscape and visual impacts of the Project is set out in the ES Chapter 5 – EIA Approach and Method (document reference 6.5). Any landscape softening that does not remove or reduce a significant residual effect but seeks to off-set the effect is classed as landscape compensation. Such landscape compensation measures (e.g. creating or enhancing natural landscape features outside of the Order Limits) are considered in relation to the mitigation hierarchy but there is no requirement under policy to compensate for all residual effects. The residual effects that remain following the application of the mitigation hierarchy and any compensation provided then falls to the Planning Balance.</p>				
9-2.1513	Landscape assessment should be carried out based on Landscape Institute, not Holford Rules and this assessment should be submitted as part of the Development Consent Order (DCO)	A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the Environmental Impact Assessment (EIA), which includes an assessment of landscape and visual effects. The approach to the LVIA follows professional guidance as		X

This includes GLVIA3, the 2013 third edition of the 'Guidelines for Landscape and Visual Impact Assessment' as prepared by the Landscape Institute and the Institute of Environmental Management and Assessment. The methodology and approach have been agreed with relevant stakeholders and the assessment prepared by qualified and experienced landscape professionals. The methodology sets out the approach to the production of the ZTVs and visualisations which accompanies the LVIA.</p> <p>An appraisal of the theoretical extent to which the Project will be visible has been informed by establishing a ZTV, using specific computer software designed to calculate the theoretical visibility of the above ground elements of the Project including pylons, Cable Sealing End (CSE) compounds and substations.</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>The ZTV has been used as a starting point in the assessment to provide an indication of theoretical visibility and has been ground truthed in the field so that the assessment conclusions better represent the potential visibility of the Project.</p> <p>Woodland blocks have been modelled into the ZTVs, using the National Forest Inventory mapping dataset which have been assigned a height of 15 m. This is considered a conservative approach to represent the likely screening/filtering effects of mature woodland. However, the ZTVs do not consider the additional screening and filtering effects of hedgerow and field trees, small copses or more recently planted trees, woodland and hedgerows which are found in many places throughout the study area. The ZTVs also do not account for any proposed planting within Environmental Areas around CSE compounds, substations and substation extensions.</p> <p>Hence, whilst the ZTV indicates relatively widespread theoretical visibility, the subsequent assessment has been refined by additional survey work to establish likely levels of visibility that are less than those illustrated by the ZTV.</p>				
9-2.1518	Concern that the Project will impact on Visual Receptor Areas (VRAs) (including Great Leighs, Peverel's Farm, Great Waltham, Little Waltham, Chignal Smealy, Roxwell, Writtle and Chelmsford West, Edney Common, Hylands Park and Margaretting and Stock), and request for National	National Grid has sought to reduce, as far as practicable, impacts on the environment (including visual effects on receptor areas close to the Project) through routeing and siting and an ongoing iterative design process which has taken on board consultation feedback at different stages of the Project. The		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	Grid to undertake assessments (details provided by respondent)	<p>iterative design process sought to avoid areas of highest concern, for example, through changes to the route alignment or changes to construction methods. We have engaged with a range of stakeholders (including Statutory Environmental Bodies (SEBs) and relevant Local Planning Authorities) throughout the development of the Project design and environmental assessment work.</p> <p>National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project. The results of this assessment are provided in the Environmental Statement (ES) that accompanies the Development Consent Order (DCO) application. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation (and maintenance) of the Project and recommends appropriate mitigation measures to reduce potential effects. This includes a Landscape and Visual Impact Assessment (LVIA), which includes an assessment of landscape and visual effects. The approach to the LVIA follows professional guidance as set out in Appendix 13.1: Landscape and Visual Methodology (document reference 6.13.A1). This includes GLVIA3, the 2013 third edition of the 'Guidelines for Landscape and Visual Impact Assessment' as prepared by the Landscape Institute and the Institute of Environmental Management and Assessment. The LVIA is presented in ES Chapter 13: Landscape and Visual (document reference 6.13). The</p>

		<p>Environmental Areas around CSE compounds, substations and substation extensions.</p> <p>Hence, whilst the ZTV indicates relatively widespread theoretical visibility, the subsequent assessment was refined by additional survey work to establish likely levels of visibility that are less than those illustrated by the ZTV.</p>				
9-2.1522	<p>Criticism that the Zone of Theoretical Visibility (ZTV) (PEIR Volume II Figure 13.8.1 to 13.8.11) demonstrates that the visibility of the proposed development, even allowing for screening elements such as topography and key blocks of vegetation, extends well beyond 3 km, and the pylons would be perceived as 9mm high in a view from 3 km</p>	<p>A landscape and visual impact assessment (LVIA) has been undertaken as part of the Environmental Impact Assessment (EIA). The LVIA is presented in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13), and follows professional guidance as set out in Appendix 13.1: Landscape and Visual Methodology (document reference 6.13.A1). This includes GLVIA3, the 2013 third edition of the 'Guidelines for Landscape and Visual Impact Assessment' as prepared by the Landscape Institute and the Institute of Environmental Management and Assessment.</p> <p>The methodology and approach have been agreed with relevant stakeholders, and the assessment was prepared by qualified and experienced landscape professionals. The methodology sets out the approach to the production of Zone of Theoretical Visibility (ZTV) mapping and visualisations which accompany the LVIA. The methodology also describes the LVIA study area and explains that more distant viewpoints up to 5 km from the Project have been considered where there is the potential for significant visual effects to arise</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>beyond the 3 km study area buffer that was applied to the proposed above ground infrastructure. For example, where there are sensitive visual receptors and where topography allows more far-reaching views including long distance views from Dedham Vale National Landscape.</p> <p>The ZTVs have been used as a starting point in the assessment to provide an indication of theoretical visibility and have been ground truthed in the field so that the assessment conclusions better represent the potential visibility of the above ground elements of the Project including pylons, Cable Sealing End (CSE) compounds and substations. Woodland blocks have been modelled into the ZTVs using the National Forest Inventory mapping dataset which have been assigned a height of 15 m. This is considered a conservative approach to represent the likely screening/filtering effects of mature woodland. However, the ZTVs do not consider the additional screening and filtering effects of hedgerow and field trees, small copses or more recently planted trees, woodland and hedgerows which are found in many places throughout the study area. Also, the ZTVs would intend not to consider any proposed planting within Environmental Areas around CSE compounds, substations and substation extensions.</p> <p>The ZTV of the Proposed 400 kV Overhead Line by Project Section (document reference 6.13.F8) shows the number of structures theoretically visible (within 10</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>km in each direction). The ZTV has been prepared based on proposed pylon positions. The theoretical visibility of individual pylons has been limited to a maximum distance of 10 km because this is a reasonable, proportionate and absolute worst-case approach for ZTV modelling. In most instances, pylons are likely to be barely perceptible beyond 5 km. This is because at 5 km distance, when viewed at arm's length (when defined as 61 cm), a 50 m tall pylon would appear to be approximately 6 mm high in the landscape. This is known as the apparent height of the pylon. At 3 km, a 50 m tall pylon would appear approximately 1 cm when measured at arm's length.</p> <p>Whilst the ZTV indicates relatively widespread theoretical visibility, the subsequent assessment has been refined by additional survey work to establish likely levels of visibility that are less than those illustrated by the ZTV.</p>				
9-2.1523	<p>Criticism that there is very limited or no discussion of what mitigation measures may or may not be appropriate (in relation to landscape character) / It is understood that mitigating the impacts caused by the introduction of pylons and overhead wires would be hard or not possible; however, there could be measures to reduce adverse effects during the construction period</p>	<p>National Grid has sought to reduce environmental impacts (including effects on landscape character) as far as practicable through routeing, siting and an ongoing iterative design process which has considered feedback at different Project stages.</p> <p>The Landscape and Visual Assessment (LVIA) presented in Chapter 13: Landscape and Visual of the Environmental Statement (ES) (document reference 6.13) includes an assessment on both landscape character and visual amenity and sets out the potential landscape and visual effects. It identifies areas for</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		potential mitigation planting, where practical, to reduce landscape effects and visual impacts. The Outline Landscape and Ecology Management Plan (LEMP) (document reference 7.4) and Outline Code of Construction Practice (CoCP) (document reference 7.2) includes details regarding any planting proposals, and information relating to the restoration of any habitats and landscape features.				
9-2.1524	Criticism that the Preliminary Environmental Information Report (PEIR) is worded so that 2 km corridor along the route of Norwich to Tilbury somehow constitutes only a small area of harm / Criticism that consequences are being underplayed in the PEIR (e.g. the statement that "Effects on visual receptors would likely be significant (negative) within approximately 1 km of the Project" is repeated for many of the project sections)	<p>The 2024 Preliminary Environmental Information Report (PEIR) presented at the 2024 statutory consultation included a preliminary landscape and visual impact assessment (LVIA), that followed professional guidance set out in GLVIA3, the 2013 third edition of the 'Guidelines for Landscape and Visual Impact Assessment' as prepared by the Landscape Institute and the Institute of Environmental Management and Assessment.</p> <p>The PEIR was a preliminary document and reflected the Project proposals at the time.</p> <p>This application is accompanied by an Environmental Statement (ES) (document reference Volume 6: Environmental Statement) which has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 ('the Infrastructure EIA Regulations') and in consultation with the relevant local planning authorities and statutory environmental bodies. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		operation of the Project and recommends appropriate mitigation to minimise effects. Further details on the full assessment of visual effects are presented in ES Chapter 13: Landscape and Visual (document reference 6.13).				
9-2.1525	The threshold for effects on Residential Visual Amenity is quite high and has not been formally defined. Given the close proximity of various settlements to the proposed development (for example Tacolneston, Gislingham, Aldham, and Little Waltham) it is likely that at least some viewpoints could cross the residential visual amenity threshold. Such matters are not considered in the Preliminary Environmental Information Report (PEIR) and will be reserved for the full Landscape and Visual Impact Assessment (LVIA) and Environmental Statement (ES). A detailed assessment could identify a need for substantial amendments to the scheme and should be considered earlier in the design process.	<p>National Grid has sought to reduce, as far as practicable, impacts on visual amenity through routeing and siting and an ongoing iterative design process which has taken on board feedback at different stages of the project. The iterative design process sought to avoid areas of highest concern, for example through changes to the route alignment and proposals for underground cables.</p> <p>A landscape and visual impact assessment (LVIA) has been undertaken as part of the Environmental Impact Assessment (EIA). The approach to the LVIA follows professional guidance as set out in Appendix 13.1: Landscape and Visual Methodology (document reference 6.13.A1), and considers impacts on visual amenity of people living and moving around communities. The LVIA is presented in ES Chapter 13: Landscape and Visual (document reference 6.13).</p> <p>Consideration of changes in views experienced from private residencies has also been undertaken in a Residential Visual Amenity Assessment (RVAA) as set out in Appendix 13.4: Residential Visual Amenity Assessment (document reference 6.13.A4). This includes areas within Tacolneston, Gislingham, Aldham, and Little Waltham. This assessment has</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		been informed by the approach detailed in Landscape Institute Technical Guidance Note 2/19 Residential Visual Amenity Assessment (RVAA).				
9-2.1526	<p>The Landscape - Summary of Comments section of the Preliminary Environmental Information Report (PEIR) acknowledges that the project will have a significant negative landscape and visual impact during both construction and operational stages, extending up to 1 km from the project line in many situations. Concern as significant negative impacts could occur at a greater distance than identified, including on intangible landscape assets during the operational stage.</p> <p>Suggest the limited number of viewpoints and visualisations that are proposed over the length of the Project needs to be reviewed. Additionally, more assessments need to be carried out beyond 1 km from the Project in order to demonstrate assertions regarding extent of significance.</p> <p>Concerns the preliminary Landscape and Visual Impact Assessment (LVIA) lacks details of the agreed criteria on which the assessment judgments are based. Concern as negative effects, even if not judged significant, are likely to negatively affect the experience of receptors over a wide area, reducing aesthetic enjoyment, sense of place, history, identity, and inspiration for learning.</p> <p>Suggest reducing significant landscape and visual impacts at the operational stage, more use of</p>	<p>Cultural Heritage – A heritage viewpoint was requested and has informed the assessment of Flordon Hall and associated listed buildings.</p> <p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the Environmental Impact Assessment (EIA), which includes an assessment of landscape and visual effects resulting from the Project. The LVIA is presented in the Environmental Statement Chapter 13: Landscape and Visual of the Environmental Statement (ES) (document reference 6.13). Flordon Hall is located in Section A, in Visual Receptor Area (VRA) A4 – Newton Flotman, and Viewpoint 1.04 provides an assessment of views from Long Lane near Flordon. Major adverse and significant visual effects are recorded within 0.5 km of the overhead line alignment in VRA A4, which includes views from receptors at Flordon Hall.</p> <p>It is noted that whilst there is some screening and filtering from woodland blocks, the overhead line would be prominent in views. Visual effects are presented in Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3).</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>undergrounding or re-routing is required, particularly in river valleys to protect valued local landscapes, long-distance rights of way, and rural amenity sites.</p> <p>Suggest a Valued Landscape Assessment should form part of the LVIA along the project's length to inform the future Environmental Impact Assessment (EIA).</p> <p>Request a substantial funded landscape compensation scheme, to offset the long-term significant negative un-mitigatable construction and operational effects on both landscape and visual receptors.</p> <p>Criticism as in an identified number of areas, data presentation could be improved in order to aid access and interpretation.</p> <p>Criticism as any previous consultation comments made with regard to landscape and visual issues have not been referenced here but should be taken as still relevant.</p> <p>Suggest issues relating to vegetation removal is fully quantified and identified in developing the EIA submission. Support, in regard to Babergh and Mid-Suffolk only: The alternative proposals for the Waveney Valley. Criticism that the underground cables do not go far enough</p>					
9-2.1527	The Review of Submitted Information section in the Preliminary Environmental Information Report (PEIR) highlights that the preliminary Landscape	The Landscape and Visual Impact Assessment (LVIA) follows professional guidance, which includes GLVIA3, as set out in detail in Appendix 6.13: Landscape and		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>and Visual Impact Assessment (LVIA) follows the 'Guidelines for Landscape and Visual Impact Assessment,' Third Edition (GLVIA3, 2013). Criticism, the PEIR in Volume 3 Technical Appendices - Part 4 of 4, Appendix 13.1 and 13.2, does not appear to include details of the agreed criteria on which the assessment judgements are based. i.e., for the sensitivity (susceptibility and value) of the landscape and the visual receptors, nor for the magnitude of the effects. Criticism as it is unclear whether a preliminary judgment on significance has been made without identifying susceptibility and magnitude of effects or if this stage was completed but not shared.</p> <p>The project runs through the Dedham Vale National Landscape (AONB) and the Stour Valley Project Area. County, district, and local level landscape protection is no longer government policy, and few Valued Landscape Assessments have been conducted at these levels</p>	<p>Visual Methodology (Document Reference 6.13.A1)). This sets out the methodology and criteria on which the assessment judgements are based. Appendix 13.2: Landscape Baseline and Assessment (document reference 6.13.A2) details the sensitivity and magnitude for each receptor assessed in detail.</p> <p>Judgements on landscape value have been made as part of the assessment. These value judgements have been informed by the Landscape Institute's Technical Guidance Note (TGN) 02/21 Assessing landscape value outside national designations. This defines landscape value as "the relative value or importance attached to different landscapes by society on account of their landscape qualities" (page 3). The LVIA is presented in Environmental Statement (ES) Chapter 13 Landscape and Visual (document reference 6.13).</p>				
9-2.1528	<p>The Review of Submitted Information section in the Preliminary Environmental Information Report (PEIR) highlights that the preliminary Landscape and Visual Impact Assessment (LVIA) follows the 'Guidelines for Landscape and Visual Impact Assessment,' Third Edition (GLVIA3, 2013). 	<p>criteria on which the assessment judgements are based. i.e., for the sensitivity (susceptibility and value) of the landscape and the visual receptors, nor for the magnitude of the effects. Criticism as it is unclear whether a preliminary judgment on significance has been made without identifying susceptibility and magnitude of effects or if this stage was completed but not shared.</p> <p>The Project runs through the Dedham Vale National Landscape (AONB) and the Stour Valley Project Area. County, district, and local level landscape protection is no longer government policy, and few Valued Landscape Assessments have been conducted at these levels</p>	<p>Judgements on landscape value have been made as part of the assessment. These value judgements have been informed by the Landscape Institute's Technical Guidance Note 02/21 Assessing landscape value outside national designations. This defines landscape value as "<i>the relative value or importance attached to different landscapes by society on account of their landscape qualities</i>" (page 3). The LVIA is presented in Environmental Statement (ES) Chapter 13 Landscape and Visual (document reference 6.13).</p>				
9-2.1529	<p>The Policy section (1.6.3) of the Preliminary Environmental Information Report (PEIR) discusses the National Policy Statement (NPS) for Electricity Networks Infrastructure (EN-5) from November 2023. Support the emphasis on the importance of the mitigation hierarchy in Critical National Policy projects, including onshore electricity networks. Paragraph 2.16 states that applicants must show how any likely significant negative effects would be avoided, reduced, mitigated, or compensated for, following the mitigation hierarchy, and encourages early application of this hierarchy.</p> <p>Concern that while the government's presumption is for overhead lines for onshore power lines,</p>	<p>As noted, the National Policy Statement (NPS) for Electricity Networks Infrastructure (EN-5) from November 2023 acknowledges that "<i>in practice new overhead lines can give rise to adverse landscape and visual impacts</i>" (paragraph 2.9.7). A detailed assessment of the potential for significant adverse landscape and visual impacts has been undertaken and is presented in Environmental Statement (ES) Chapter 13 Landscape and Visual (document reference 6.13).</p> <p>Mitigation around substations, substation extensions and CSE compounds is detailed in the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4). National Grid has committed to a 3:1 replacement for individual trees and</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>Paragraph 2.9.7 of NPS EN-5 acknowledges that new overhead lines can cause adverse landscape and visual impacts.</p> <p>Paragraph 1.1.12 of the PEIR recognises the need for environmental compensation beyond Biodiversity Net Gain (BNG), stating that land would be required for mitigation, compensation, and enhancement of the environment, including BNG</p>	<p>individual trees within groups. The tree planting strategy will prioritise replanting within the Order Limits, although offsite provision may be required. Offsite tree planting is considered to be landscape compensation. Further detail is provided in the Outline LEMP (document reference 7.4). Additional planting may be considered within the Order Limits at detailed design stage, in locations such as around Tilbury North Substation and the permanent access roads to the East Anglia Connection Node (EACN) substation and Tilbury North Cable Sealing End (CSE) compounds.</p> <p>In addition to the Environmental Impact Assessment (EIA), National Grid has committed to delivering 10 % Biodiversity Net Gain (BNG) with environmental and societal benefits. Full details on the BNG assessment and approach to onsite mitigation and offsite enhancement has been included within the Biodiversity Net Gain Report (document reference 7.1). The BNG commitment for the Project is currently voluntary and aligned with our corporate sustainability commitment.</p>				
9-2.1530	<p>The Landscape Value section (1.6.4) discusses the preferred alignment for the Norwich to Tilbury route, which is substantially planned through rural landscapes. The default preferred alignment, as promoted by the Holford Rules, is to avoid routing close to residential areas as far as possible on grounds of general amenity. This is interpreted to include individual rural properties and avoiding protected heritage assets.</p>	<p>The National Policy Statement for Electricity Networks Infrastructure (EN-5), published by the Department for Energy Security & Net Zero (DESNZ), recognises that new overhead lines can give rise to adverse landscape and visual impacts. It advises that The Holford Rules, guidelines for routeing of new overhead lines, should be embodied in proposals. National Grid has carefully considered the feedback received during 2022 and 2023 non-statutory consultations, the statutory</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>Concern as while nationally protected landscapes and their settings benefit from proposed cabling being substantially undergrounded, the remaining undeveloped landscapes along the route are not generally identified as constraints for alignment, even though some of these landscapes have strong local character. Many of these landscapes have value at a local level but do not have the benefit of local landscape designation, as this approach is not preferred policy at a national level and has not been for several decades. Successive Local Plans have discarded local protections. Lack of local landscape designation does not imply a lack of landscape qualities or value. The current Holford Rules advise choosing routes that minimise the effect on Special Landscape Areas, areas of Great Landscape Value, and other similar designations of County, District, or Local value. Criticism as, districts that adhere to national policy on local landscape protection and base their policy on local landscape character assessments rather than designation are effectively penalised by this advice. The Holford Rules appear to have been last updated in the 1990s and seem to be at odds with current general national landscape policy and guidance.</p> <p>The treatment of undesignated landscapes as blank space is compounded by adherence to Rule 5 of the Holford Rules, which states that high voltage overhead transmission lines should be kept</p>	<p>consultation and targeted consultations, the alternatives available, and other factors including relevant duties and obligations. These duties include balancing the need to be economic, efficient, and keep costs down in the interests of the bill-paying consumers, balanced against a duty to have regard to preserving amenity, the natural environment, cultural heritage, landscape, and visual quality. The guidelines in the Holford Rules have therefore been adhered to wherever possible in the routeing and design development of the Project, whilst ensuring that the final design presents a balanced outcome.</p> <p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the EIA, which includes an assessment of landscape and visual effects. The approach to the LVIA follows professional guidance as set out in Appendix 6.13: Landscape and Visual Methodology (document reference 6.13.A1). This includes GLVIA3, the 2013 third edition of the 'Guidelines for Landscape and Visual Impact Assessment' as prepared by the Landscape Institute and the Institute of Environmental Management and Assessment. The LVIA is presented in ES Chapter 13 Landscape and Visual (document reference 6.13). The methodology has been agreed with relevant stakeholders and the assessment prepared by qualified and experienced landscape professionals. The document sets out all data sources used to inform the baseline and the assessment of landscape effects.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>as far as possible from smaller lines, converging routes, and other poles, masts, wires, and vales to avoid a concentration or 'wirescape.' This has the perverse effect of distributing adverse impacts over a wider area of unspoiled countryside rather than containing them in a narrower corridor. While existing landscape character assessments in the region may have some analysis of value, criticism as such data is not necessarily consistent with the current understanding of valued landscapes. It does not necessarily reflect the current understanding of landscape in terms of sense of place and identity, cultural heritage, artistic inspiration, sustainability, nor mirror current policy</p>	<p>This includes a range of detailed landscape character sources from national to local level, and designated landscape publications, including:</p> <ul style="list-style-type: none"> - Natural England's National Character Area profiles (Natural England, 2014) - Natural England's National Historic Landscape Characterisation (NHLC) Project - East of England Landscape Typology (Landscape East, 2010) - South Norfolk District LCA (LUC, 2001) - Suffolk LCA (Suffolk County Council, 2010) - Tendring District LCA (LUC, 2001) - Colchester Borough LCA (CBA, 2005) - Braintree, Brentwood, Chelmsford, Maldon and Uttlesford LCAs (CBA, 2006) - Essex LCA (CBA, 2003) - LCA of Basildon Borough (The Landscape Partnership, 2014) - Thurrock Landscape Capacity Study (CBA, 2005) - Land of the Fanns, LCA (Alison Farmer Associates, 2016) - Waveney Valley Valued Landscape Assessment (Alison Farmer Associates, 2024) - The Dedham Vale Landscape (LDA for the Countryside Commission, 1997) - Dedham Vale AONB Natural Beauty and Special Qualities and Perceived and Anticipated Risks (Alison Farmer Associates, 2016) 				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<ul style="list-style-type: none"> - Dedham Vale AONB and Stour Valley Project Area1 Management Plan (Dedham Vale National Landscape and Stour Valley Project Area Partnership, 2021-26) - Dedham Vale AONB and Stour Valley Project Area State of the AONB Report 2018 (LUC, 2019) <p>In areas where might be a convergence, the Project includes proposals to replace certain sections of 132 kV overhead line connection with underground cable and also to remove some sections of 132 kV overhead line to rationalise the network and reduce potential for wirescape.</p>				
9-2.1531	The Landscape Institute produced guidance in 2021 on how to assess landscape value. This guidance clarifies that landscape value is the relative value or importance attached to different landscapes by society based on their landscape qualities. Suggest that an up-to-date assessment of landscape value along the proposed swathe is necessary to understand the valued landscapes and what will be lost in the process of creating a substantially overhead cable route in the east of England. Suggest that a valued landscape assessment should be part of the Landscape and Visual Impact Assessment (LVIA) carried out through the future Environmental Impact Assessment (EIA)	<p>The Landscape and Visual Impact Assessment (LVIA) follows professional guidance, which includes GLVIA3, as set out in detail in Appendix 6.13: Landscape and Visual Methodology (document reference 6.13.A1). This sets out the methodology and criteria on which the assessment judgements are based. Appendix 13.2: Landscape Baseline and Assessment (document reference 6.13.A2) details the sensitivity and magnitude for each receptor assessed in detail.</p> <p>Judgements on landscape value have been made as part of the assessment. These value judgements have been informed by the Landscape Institute's Technical Guidance Note 02/21 Assessing landscape value outside national designations. This defines landscape value as "the relative value or importance attached to different landscapes by society on account of their landscape qualities" (page 3). The LVIA is presented in</p>		X

		Environmental Statement (ES) Chapter 13 Landscape and Visual (document reference 6.13).				
9-2.1532	<p>The Visual Assessment – General section (1.6.7) of the Preliminary Environmental Information Report (PEIR) discusses the preliminary Landscape and Visual Impact Assessment (LVIA). The assessment is supported by 89 Photographic Viewpoints and Wireline visualisations, including Landscape, Visual, and Heritage. Criticism as this number is insufficient for a scheme of this size, where significant negative landscape and visual effects are anticipated over a minimum width of 1 km from the project line in both directions. This effectively means one viewpoint every 4 km on alternating sides of the scheme, which is inadequate to capture and demonstrate the scale of effects on local landscapes and receptors. Suggest all the additional potential viewpoints shown on Figures 13.7 Landscape and Visual Receptors should also be assessed as well as in those places mentioned elsewhere in this text, for example, between the 1-1.5Km distance where the question of significance of effect is debated. Suggest several issues that need to be resolved before the Environmental Statement (ES) is submitted:</p> <p>Some location labelling on the visualisations is non-specific, lacking road names or Public Rights of Way (PRoW) numbers.</p>	<p>The viewpoints requested by the Local Planning Authorities were considered and the majority are included in the Environmental Statement (ES) (106 viewpoints in Essex, 206 viewpoints in total). The viewpoint assessment is set out in Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3). Baseline photography was captured from all assessment viewpoints and is shown alongside visualisations of the Project on Figures 7.12.F1 to 7.12.F206 (document reference 7.12). The locations of all viewpoints are shown on Figure 13.7; Landscape and Visual – Visual receptors and Viewpoints. This includes a number of viewpoints located between 1-1.5 km.</p> <p>Updated visualisations have been prepared to accompany the Environmental Impact Assessment (EIA) (document reference 7.12). These have all been prepared using ordnance survey 1:25,000 base maps for the location maps and files are clearly named and figures clearly labelled to facilitate reader understanding and legibility.</p> <p>The Landscape and Visual Impact Assessment (LVIA) follows professional guidance, which includes GLVIA3, as set out in detail in Appendix 6.13: Landscape and Visual Methodology (document reference 6.13.A1). This sets out the methodology and criteria on which the assessment judgements are based. Appendices</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>Some location maps for the viewpoint visualisations use a satellite base instead of an Ordnance Survey (OS) base, making them hard to read, especially in the field.</p> <p>The visual receptor maps are very small-scale (1:50,000), making them difficult to read in the field. Suggest that the viewpoints be identified on a 1:10,000 baseline (as in the Proposed Project Design Maps i.e., Figures 4.1)</p> <p>Suggest wireline visualisations should be labeled by route section and/or district to make it easier to tell which section of the route they relate to before opening.</p> <p>The preliminary LVIA does not include details of the agreed criteria for assessment judgments, such as the sensitivity (susceptibility and value) of the landscape and visual receptors, or the magnitude of the effects (Without details of these criteria, it is hard to appraise whether the impacts are significant or not).</p> <p>Suggest indicative layouts and elevations for the Substation Extension Compounds (SECs) and Electrical Area Control Network (EACN) to assist with conveying their scale.</p> <p>The file sizes and document formatting make viewing and analysing the plans difficult and time-consuming. Suggest an alternative approach to plan formatting should be considered</p>	<p>13.2: Landscape Baseline and Assessment (document reference 6.13.A2) and 13.3 Visual Baseline and Assessment (document reference 6.13.A3) detail the sensitivity and magnitude for each receptor assessed in detail.</p> <p>Layouts and elevations for the Cable Sealing End (CSE) compounds and EACN substation are provided in the Works Plans (document reference 2.3).</p> <p>Concerns noted regarding file sizes and document formatting and every effort has been made to ensure that documents are as accessible as possible.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.1533	<p>The project runs through two National Character Areas (NCAs) within the Essex authorities (excluding Thurrock for the purpose of this response):</p> <ul style="list-style-type: none"> - NCA 86 South Suffolk and North Essex Clayland - NCA 111 Northern Thames Basin <p>Additionally, the project runs through several East of England Landscape Typologies:</p> <ul style="list-style-type: none"> - Valley Settled Farmlands - Valley Meadowlands - Plateau Estate Farmlands - Wooded Hills and Ridges - Wooded Plateau Farmlands - Lowland Settled Claylands <p>Concern as despite the scale of the project, it appears that the effects on national or regional landscape character have not been assessed. Query this approach, as the proposal is identified as having significant negative landscape effects along the approximately 159 km of new overhead line.</p>	<p>The detailed assessment of impacts on the National Character Areas (NCAs) and East of England Landscape Typologies noted is presented in Environmental Statement (ES) Appendix 13.2: Landscape Baseline and Assessment (document reference 6.13.A2).</p>		X		
9-2.1534	<p>The Essex Landscape Character Assessment (2003) identifies one Landscape Character Type (LCT) along the project line in Brentwood and Basildon and 4 LCTs along the Project line covering the district of Braintree. The Landscape Character Assessment of Basildon Borough (2014)</p>	<p>The detailed assessment of impacts on Landscape Character Type (LCT) is presented in the Environmental Statement (ES) Appendix 13.2: Landscape Baseline and Assessment (document reference 6.13.A2).</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	identifies six Landscape Character Areas (LCAs) along the project line in Brentwood and Basildon. The preliminary Landscape and Visual Impact Assessment (LVIA) suggests that significant effects would likely be substantially limited to within 1 km of the project, generally at both construction and operational stages. While this is likely to be the case at the construction stage, concern as it is not accepted that this would be the case at the operational stage, where the outcome is generally an overhead line with 50 m pylons as opposed to undergrounding, and where intervisibility is quite high	The methodology and approach to the assessment have been agreed with relevant stakeholders and the assessment prepared by qualified and experienced landscape professionals. The study area extends to 3 km and therefore where likely effects beyond 1 km are judged to be significant, these are reported in the Landscape and Visual Impact Assessment (LVIA).				
9-2.1535	<p>The visualisations show that the landscapes affected by the project in Brentwood, Chelmsford and Braintree are often undeveloped, rural areas where intervisibility is quite high due to large-scale flat or gently undulating landscapes. Concern as this means that the pylons and overhead wires create a perceived industrialisation of the countryside, significantly affecting areas up to 2 km away. These landscapes often lack existing significant detractors.</p> <p>Even where the effects are deemed not significant, the character of the landscape is changed over a much wider area. The proposed overhead lines reduce the provision of what Guidelines for Landscape and Visual Impact Assessment (GLVIA3) (Page 18. Para 2.11) describes as</p>	<p>A number of visualisations are provided within/around the Brentwood, Chelmsford and Braintree areas (document reference 7.12).</p> <p>As noted, GLVIA3 (the 2013 third edition of the 'Guidelines for Landscape and Visual Impact Assessment' as prepared by the Landscape Institute and the Institute of Environmental Management and Assessment) has been used to inform the assessment as detailed in Appendix 6.13: Landscape and Visual Methodology (document reference 6.13.A1). The methodology has been agreed with relevant stakeholders and the assessment prepared by qualified and experienced landscape professionals. The assessment takes account of the points noted in the guidance.</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	opportunities for aesthetic enjoyment, a sense of place and history contributing to individual, local, national, and European identity, and inspiration for learning, art, and other forms of creativity					
9-2.1536	Within the Essex Landscape Character Assessment (2003), Landscape Character Area (LCA) D2: Brentwood Hills, the assessment states its semi-enclosed nature, characterised by undulating hills and ridges, numerous woodlands, frequent hedgerow trees, and a patchwork of small irregular pasture and arable fields. Concern as the impact of this could potentially cause effects extending beyond 1 km	A detailed assessment of the effect on LCA D2: Brentwood Hills is provided in Environmental Statement (ES) Appendix 13.2: Landscape Baseline and Assessment (document reference 6.13.A2). The assessment concludes that there will be major and significant (adverse) effects within 0.5 km during construction and year 1 and year 15 of operation, and moderate and significant (adverse) effects between 0.5 km and 1.5 km during construction and year 1 and year 15 of operation, reducing to minor and not significant beyond 1.5 km for all stages of the Project assessed.		X		
9-2.1537	Landscape Character Area (LCA) D2: Brentwood Hills is described as semi-enclosed in the Essex Landscape Character Assessment (2003) and is characterized by undulating hills/ridges, numerous woodlands, frequent hedgerow trees, and a patchwork of small irregular pasture/arable fields. Concern that severance of these elements could potentially cause effects beyond 1 km	A detailed assessment of the effect on LCA D2: Brentwood Hills is provided in Environmental Statement (ES) Appendix 13.2: Landscape Baseline and Assessment (document reference 6.13.A2). The assessment concludes that there will be major and significant (adverse) effects within 0.5 km during construction and year 1 and year 15 of operation, and moderate and significant (adverse) effects between 0.5 km and 1.5 km during construction and year 1 and year 15 of operation, reducing to minor and not significant beyond 1.5 km for all stages of the Project assessed.		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.1538	<p>The Landscape Character Assessment of Basildon Borough (2014) identifies several Landscape Character Areas (LCAs) along the project line in Brentwood and Basildon. The assessment provides the following insights:</p> <ul style="list-style-type: none"> - LCA 9: Upper Crouch Valley Farmlands: The limited presence of this LCA within proximity to the project means the effects are negative but not likely significant. - LCA 10: East Billericay Wooded Hills and Ridges: Due to the proximity of the project and intervening urbanisation in Billericay, there will likely be no effect on this LCA. - LCA 11: West Billericay Wooded Farmlands: Suggest the effects of removing riparian vegetation, arable hedgerows, and hedgerow trees are likely to extend further than 1 km. - LCA 12: Burstead Sloping Farmland: The open agricultural plateau provides the elevated setting of St Mary's Church, Little Burstead, a notable landmark located over 1 km from the draft Order Limits (DOL). Criticism as the landscape effects will not be limited to 1 km as stated. - LCA 13: Dunton Settled Claylands: The LCA is wholly impacted by the project and extends beyond 1 km. Concern as the extensive works proposed, including undergrounding and diversions, the effects during construction are 	<p>A detailed assessment of the effects on the Landscape Character Areas (LCAs) noted is provided in ES Appendix 13.2: Landscape Baseline and Assessment (document reference 6.13.A2). The assessment conclusions are as follows:</p> <ul style="list-style-type: none"> - LCA 9: Upper Crouch Valley Farmlands: as per comment. - LCA 10: East Billericay Wooded Hills and Ridges: as per comment. - LCA 11: West Billericay Wooded Farmlands: the assessment concludes that the effects within 0.5 km will be moderate and significant (adverse) within 0.5 km and between 0.5 and 1.5 km during construction, operation year 1 and operation year 15. Beyond 1.5 km the effects will be minor and not significant for all stages of the project assessed. - LCA 12: Burstead Sloping Farmland: the assessment concludes that the effects within 0.5 km will be major and significant (adverse) within 0.5 km and moderate and significant (adverse) between 0.5 and 1.5 km during construction, operation year 1 and operation year 15. Beyond 1.5 km the effects will be minor and not significant for all stages of the project assessed. - LCA 13: Dunton Settled Claylands: the assessment concludes that the effects within 0.5 km will be moderate-major and significant (adverse) within 0.5 km, between 0.5-1.5 km and 		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>considered significant (negative) beyond 1 km. Concern as existing detracting elements within the small LCA, the effects of landscape feature removal are more significant than stated.</p> <ul style="list-style-type: none"> - LCA 14: Langdon Hills: Due to the proximity of the project to the LCA, operational effects are likely negative but not significant. Concern as the construction effects are considered significant due to the presence of Langdon Nature Reserve and the impact on hedgerow connections to the wider landscape 	<p>beyond 1.5 km during construction. Once operational, effects will be moderate and significant (adverse) within 0.5 km, between 0.5-1.5 km and beyond 1.5 km during operation year 1 and operation year 15.</p> <ul style="list-style-type: none"> - LCA 14: Langdon Hills: the assessment concludes that the effects within 0.5 km will be moderate-major and significant (adverse) within 0.5 km, minor and not significant (adverse) between 0.5-1.5 km and negligible and not significant beyond 1.5 km during construction. Once operational, effects will be minor and not significant (adverse) within 0.5 km and between 0.5-1.5 km during operation year 1 and operation year 15, and negligible and not significant beyond 1.5 km at operation year 1 and operation year 15. 				
9-2.1539	<p>The preliminary Landscape and Visual Impact Assessment (LVIA) identifies Section G, which covers the project line broadly between Ingatestone in the north and Basildon to the southeast. The Zone of Theoretical Visibility (ZTV) mapping indicates limited widespread theoretical visibility of the overhead line within the 3 km study area, including from villages, the Public Rights of Way (PRoW) network, National Cycle Network routes, rural lanes, and the road network. Concern as this suggests localised potential negative landscape and visual effects due to significant urban settlement limiting intervisibility.</p>	<p>A detailed assessment of effects in Section G is provided in Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3). The assessment acknowledges that there will be significant effects as a result of the Project.</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	The study also identifies that there would be theoretical visibility of one or more pylons from ground level to tip from the majority of the study area. From more elevated parts of the study area, such as Little Burstead, there would be theoretical visibility of up to 80 pylons. Criticism as this highlights the widespread potential negative landscape and visual effects of the scheme					
9-2.1540	<p>The preliminary Landscape and Visual Impact Assessment (LVIA) groups the viewpoints where visual receptors have been grouped according to Visual Receptor Areas (VRAs). These VRAs have been identified based on geographical location, shared landscape characteristics, and similarity in the nature of views. While this pragmatic approach is understandable given the large project area, concern that clarity and detail may have been lost as a result. It is expected that the groupings might follow the landscape character areas (LCAs) or types more closely. Brentwood falls substantially within VRA G.</p> <p>Criticism as VRA G6 Basildon has not been correctly identified on the viewpoint map, and VRA H2 has been labelled twice. Therefore, the northernmost VRAH2 on the map has been reviewed as described in the Baseline Table as VRA G6</p>	<p>The comments on the methodology are noted. GLVIA3 (the 2013 third edition of the 'Guidelines for Landscape and Visual Impact Assessment' as prepared by the Landscape Institute and the Institute of Environmental Management and Assessment) has been used to inform the assessment as detailed in Appendix 6.13: Landscape and Visual Methodology (document reference 6.13.A1). The methodology has been agreed with relevant stakeholders and the assessment prepared by qualified and experienced landscape professionals.</p> <p>The location of VRA G6 Basildon is shown on Figure 13.7 – Landscape and Visual – Visual Receptors and Viewpoints Page 12 of 13. The location of VRA H2 Horndon on the Hill is shown on Figure 13.7 – Landscape and Visual – Visual Receptors and Viewpoints Page 13 of 13. The detailed assessments are presented in Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3).</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.1541	<p>For a project of this scale with significant negative effects on landscape and visual receptors, criticism, that using only two viewpoints to represent the effects on local receptors at 'G1 Ingatestone and Fryerning' is insufficient. Additionally, site visit assessments identified the area around Padham's Green as offering wide, long-distance views across a generously wooded horizon with no detracting elements. Notwithstanding this, the respondent can accept that beyond 1.5 km, construction effects will be reduced. However, operation effect could potentially extend beyond 1.5 km and the respondents would therefore recommend viewpoint from beyond 1.5 km to confirm or rule this out</p>	<p>The following representative viewpoints have been used to inform the assessment of effects on VRA G1 Ingatestone and Fryerning (Section G):</p> <ul style="list-style-type: none"> - Viewpoint 6.10 St Peter's Way, east of Millgreen Common (Figure 7.12.F166) (document reference 7.12) - Viewpoint 7.01 Ingatestone Road, Buttsbury (Figure 7.12.F183) (document reference 7.12) - Viewpoint 7.02 Old Church Lane, Mountnessing Hall (Figure 7.12.F184) (document reference 7.12) - Viewpoint 7.09 PRow near Ingatestone Hall (Ingatestone and Fryerning 39) (Figure 7.12.F191) (document reference 7.12) - Viewpoint 7.11 Church Road, East of Mountnessing (Figure 7.12.F193) (document reference 7.12) <p>The detailed assessment is presented in Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3). This concludes that, during construction, effects will be major and significant (adverse) within 0.5 km, moderate and significant (adverse) between 0.5-1.5 km, and minor and not significant (adverse) beyond 1.5 km. Once operational, effects will be major and significant (adverse) within 0.5 km, moderate and significant (adverse) between 0.5-1.5 km, and minor and not significant (adverse) beyond 1.5 km.</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.1542	<p>Photography for Viewpoint 7.01 Buttsbury identifies close-range views of the pylon structures from the local road and Public Rights of Way (PRoW) network. Further assessment has highlighted the significance of effects on the amenity setting for The Parish Church of St Mary, Buttsbury, where the church and a pylon will be viewed within the same field of view for a prolonged period while using the local road and PRoW network.</p> <p>For Viewpoint 6.10 St Peter's Way, there are consistent views on the approach to the viewpoint, particularly from the edge of Millgreen common looking east from the PRoW network. Here, long-distance pasture views toward a well-wooded horizon are available and would incorporate the project. It is accepted that it is unlikely to gain views of the project from beyond 1.5 km west due to extensive woodland coverage and urbanized development</p> <p>G1 Ingatestone and Fryerning: This Visual Receptor Area (VRA) is located west of the Project, broadly between Mill Green and Hutton. Representative viewpoints are identified as:</p> <ul style="list-style-type: none"> - Viewpoint 6.10 St Peter's Way - Viewpoint 7.01 Buttsbury 	Comments on the assessment are noted.		X		
9-2.1543	The G2 Billericay West Visual Receptor Area (VRA) is located to the east of the project, encompassing the north and west of Billericay and the surrounding farmland and woodland. Criticism	Viewpoint 7.04 Tye Common Road, Tye Common (Figure 7.12.F186) (document reference 7.12) has been used to inform the assessment of effects on the G2 Billericay West Visual Receptor Area (VRA). The		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	that there are no representative viewpoints within this area. While much of this area is unlikely to provide views of the project due to urbanised development, long views are possible over open farmland. Concern as the Public Rights of Way (PROW) network is confined by hedgerows and tree belts, but a viewpoint from footpath Billericay 11 where views beyond 1 km are possible across the open agricultural landscape and from VP 7.04 potential viewpoint as identified on the viewpoint map is welcomed	detailed assessment of the G2 VRA is provided in Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3).				
9-2.1544	The G3 Brentwood East Visual Receptor Area (VRA) is located west of the project, encompassing the neighbourhood of Hutton in the Brentwood District and extending to Hall Wood in the south. The sole representative viewpoint within this area is Viewpoint 7.03 Hutton. It is accepted that views are unlikely to be obtained beyond 1 km west of the project within this area. Suggest, further assessment of footpath Brentwood 76 to confirm this	The detailed assessment of Visual Receptor Area (VRA) G3 Brentwood East is provided in Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3). This considers effects on communities, road users and recreational receptors, including users of Public Rights of Way (PRoW). Viewpoint 7.03 Church Lane, Hutton (Figure 7.12.F185) (document reference 7.12) has been used to inform the assessment of effects on the G3 Brentwood East VRA. The inclusion of an additional viewpoint on footpath Brentwood 76 was not considered necessary to inform the assessment of effects on visual receptors.		X		
9-2.1545	Viewpoint 7.08 Dunton Hills Garden Village (DHGV) is taken from within the proposed development, which is currently private land. Therefore, an alternative viewpoint was assessed,	Viewpoint 7.08 Dunton Hills Farm (Dunton Garden Village) (Figure 7.12.F190) (document reference 7.12) is located within Visual Receptor Area (VRA) G4 Ingrave and Herongate. The Viewpoint is		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	located northeast further toward the project line. This elevated open location offers views of the London City skyline, approximately 30 km away. Criticism as this implies that reciprocal views may be possible from beyond 1 km west of the project, and thus, it is disagreed that the effects are limited to 1 km	representative of people living and moving within Dunton Garden Village and people using the local PRoW network. It is also close to a Grade II listed farm. The assessment of effects on VRA G4 concludes that during construction, operation year 1 and operation year 15 there will be major and significant (adverse) effects within 0.5 km, reducing to moderate and significant (adverse) between 0.5-1.5 km, and minor and not significant (adverse) beyond 1.5 km.				
9-2.1546	Concern as viewpoint 7.06 Thorndon Country Park is located approximately 2 km from the project. While the current view includes some industrial elements in the far distance, the project is likely to increase the intensity of these elements, and the effects are still considered significant	As noted, Viewpoint 7.06: Octagon Plantation, Thorndon Country Park is located 2 km from the Project. It is located within Visual Receptor Area (VRA) G4 Ingrave and Herongate. The Viewpoint is representative of people walking along the local Public Right of Way (PRoW) network and within Thorndon Country Park South. It is located within Thorndon Park Conservation Area, Thorndon Hall Registered Park and Garden (RPG) and near Old Thorndon Hall and Gardens Scheduled Monument. The assessment of effects on VRA G4 concludes that during construction, operation year 1 and operation year 15 there will be major and significant (adverse) effects within 0.5 km, reducing to moderate and significant (adverse) between 0.5-1.5 km, and minor and not significant (adverse) beyond 1.5 km.		X		
9-2.1547	The G5 Little Burstead Visual Receptor Area (VRA) is located east of the project, nestled between the southern edge of Billericay and the northern edge of Basildon. The sole representative viewpoint	Comments on the assessment are noted.		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	within this area is Viewpoint 7.05 Little Burstead. It is accepted that views are unlikely to be obtained from beyond 1.5 km, and therefore, the significance of the impact will likely reduce beyond this distance					
9-2.1548	The G6 Basildon Visual Receptor Area (VRA) is located east of the project, encompassing the eastern edge of Basildon. There are no representative viewpoints within this area. Much of the area is covered by urbanized development, and it is agreed that beyond 1 km, the effects are less likely to be significant due to a reduction in perceptibility	Comments on the assessment are noted.		X		
9-2.1549	Concern in relation to specific Landscape Character Types (LCTs), Landscape Character Area (LCA) B1: Central Essex Farmlands, about the operational effect of the project, questioning whether the significant negative impact would be limited to areas within 1 km as stated. The presence of 50 m high pylons and overhead lines is likely to affect the sense of rurality and tranquility, which are key characteristics of this LCA. Concern as large areas of woodland and riparian vegetation will be permanently reduced in height at T109, where the project crosses the River Brain. Criticism with the assessment's conclusion that this reduction would not affect the underlying scale or predominant landcover of the LCA. Clarification is	A detailed assessment of the effects on the Landscape Character Areas (LCAs) noted is provided in Environmental Statement (ES) Appendix 13.2: Landscape Baseline and Assessment (document reference 6.13.A2). The assessment concludes that for LCA B1: Central Essex Farmlands, the effect will be major and significant within 0.5 km during construction, year 1 of operation and year 15 of operation. Between 0.5-1.5 km the effect will reduce to moderate and significant for all stages assessed. Beyond 1.5 km the effects will be minor-moderate and not significant during construction, and minor and not significant at year 1 and year 15 of operation. As noted, there would be disturbance to woodland, and the loss of some field boundary hedgerows,		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	required on the extent of the proposed removal, as this would also impact the neighbouring LCA C6. Furthermore, the areas of Terling and Fairstead are noted for having more frequent hedgerow trees compared to the rest of the LCA, making them more sensitive to change	hedgerow trees, field trees and riparian vegetation associated with the River Brain. This is detailed in Appendix 13.6: Arboricultural Impact Assessment (AIA) (document reference 6.13.A6). The landscape assessment concludes that, during construction, there will be a major and significant effect on LCA C6: Blackwater and Brain Valley within 0.5 km, reducing to moderate and significant between 0.5-1.5 km, and minor and not significant beyond 1.5 km. Once operational, effects will be major and significant within 0.5 km at year 1 and year 15 of operation, reducing to moderate and significant between 0.5-1.5 km at year 1 and year 15, and minor and not significant beyond 1.5 km at year 1 and year 15.				
9-2.1550	Query within Landscape Character Area (LCA) B4: Gosfield Wooded Farmland whether the significant negative impact would be limited to areas within 1 km, as the presence of 50 m high pylons and overhead lines is likely to affect the sense of rurality and tranquillity beyond this distance. Criticism as although reinstatement is proposed, the effect on the LCA would be significant (negative) only within approximately 1 km of the draft Order Limits (DOL) during construction. The strong sense of enclosure owed to frequent hedgerow trees is highlighted, and the fragmentation of long sinuous hedgerows and reduction in hedgerow trees could have a wider	A detailed assessment of the effects on the Landscape Character Areas (LCAs) noted is provided in Environmental Statement (ES) Appendix 13.2: Landscape Baseline and Assessment (document reference 6.13.A2). The assessment for B4: Gosfield Wooded Farmland concludes that, during construction, effects will be moderate and significant within 0.5 km and between 0.5-1.5 km. Beyond 1.5 km effects during construction will be minor and not significant. Once operational, effects will be moderate and significant at year 1 and year 15 within 1.5 km and between 1.5-1.5 km, and minor-moderate and not significant beyond 1.5 km. Within the LCA there would be the loss of some boundary hedgerows and hedgerow trees alongside		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	impact. Request clarification on the extent of removals	fields and roads including the A120, rural lanes such as Old Road, and field trees, which are noted as a key characteristic of the LCA, and are listed in Appendix 13.6: Arboricultural Impact Assessment (AIA) (document reference 6.13.A6).				
9-2.1551	Concern within Landscape Character Area (LCA) C6: Blackwater and Brain Valley about the operational effect of the project, whether the significant negative impact would be limited to areas within 1 km, as the presence of 50 m high pylons and overhead lines is likely to affect the character of the valley floor. Dense riparian vegetation, which is a key characteristic of this LCA, could be fragmented, potentially posing a wider impact on the landscape character	A detailed assessment of the effects on the Landscape Character Areas (LCAs) noted is provided in Environmental Statement (ES) Appendix 13.2: Landscape Baseline and Assessment (document reference 6.13.A2). The assessment for LCA C6: Blackwater and Brain Valley concludes that, during construction, there will be major and significant effects within 0.5 km, reducing to moderate and significant between 0.5-1.5 km and minor and not significant beyond 1.5 km. Once operational, effects will be major and significant within 0.5 km at year 1 and year 15, reducing to moderate and significant between 0.5-1.5 km at year 1 and year 15, and reducing further to minor and not significant beyond 1.5 km.		X		
9-2.1552	The Visual Assessment in section 3.3.2 discusses the theoretical visibility of the project. The preliminary Landscape and Visual Impact Assessment (LVIA) identifies Section E, covering the project line between Coggeshall in the northeast and Terling to the southwest. The Zone of Theoretical Visibility (ZTV) mapping indicates widespread theoretical visibility of the overhead line within the 3 km study area, including from villages, the Public Rights of Way (PROW)	A detailed assessment of the effects on visual amenity is provided in Environmental Statement (ES) Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3). The assessment considers Public Rights of Way (PROW), National Cycle Network (NCN) routes, rural lanes, the public road network and the visibility of the Cable Sealing End (CSE) compounds is also assessed.		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>network, National Cycle Network routes, rural lanes, and the road network. This highlights the potential negative landscape and visual effects of the scheme.</p> <p>Concern as the study notes that there would be theoretical visibility of one or more pylons from ground level to tip from most of the study area. From more elevated parts, up to 80 pylons could be visible, further emphasising the widespread potential negative effects.</p> <p>The theoretical visibility of the Cable Sealing End (CSE) compound west of White Notley is identified as relatively widespread within approximately 1 km of the project line, with more intermittent visibility between 1 km and 3 km</p>					
9-2.1553	<p>Within the Visual Receptors and Groupings in section 3.3.2.2, the preliminary Landscape and Visual Impacts Assessments (LVIA) groups the viewpoints where visual receptors have been grouped according to Visual Receptor Areas (VRAs). These areas are identified based on geographical location, shared landscape characteristics, and similarity in the nature of views. Concern as while this approach is pragmatic given the large project area, clarity and detail may have been lost.</p> <p>Suggest that the groupings should follow the LCAs or types more closely</p>	<p>Comments on methodology noted. A detailed assessment of the effects on visual amenity is provided in Environmental Statement (ES) Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3). The assessment has used Visual Receptor Areas (VRAs). A detailed assessment of the effects on the Landscape Character Areas (LCAs) is provided in ES Appendix 13.2: Landscape Baseline and Assessment (document reference 6.13.A2).</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.1554	Visual Receptor Area (VRA) E5 is not present on the Visual Receptors map (Fig. 13.7 p8). Criticism two VRAs have been mislabelled within Table A 13.2.1 - Visual Baseline and Preliminary Assessment (Section E). For this review, Black Notley & White Notley has been assessed as E6 and Terling & Chipping Hill as E7	Visual Receptor Area (VRA) E5: Black Notley & White Notley is shown on Figure 13.7 – Landscape and Visual – Visual Receptors and Viewpoints (Page 10 of 13). A detailed assessment of the effects on visual amenity, including VRA E5 black Notley and White Notley, and VRA E6 Terling and Witham, is provided in Environmental Statement (ES) Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3). There is no VRA E7.		X		
9-2.1555	At operation, it is identified that within approximately 0.5 km of the Project, there would be close views of the overhead line from the local road and Public Rights of Way (PROW) network and the A1230. Concern as the assessment notes these views would also be obtained from the Essex Way near Houchins Farm, and the extent of this was not assessed	A detailed assessment of the effects on visual amenity is provided in Environmental Statement (ES) Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3). This includes an assessment of effects on users of long distance routes, including the Essex Way.		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.1556	<p>Concern over the visual impact of pylons and the overhead line at VP 5.05 Coggeshall Hamlet, where the viewpoint is less than 500 m from the project at its closest point, presenting the project on an elevated ridge. The wireline shows the pylons disappearing into vegetation to the east. Concern as there is disagreement that woodland would filter views towards the overhead line to the east for two reasons: the indication of temporary and permanent construction and operational works between TB75 and TB76, which could result in the removal of this woodland, and the woodland referred to is located within an undulation mid-distance between the viewpoint and the project.</p> <p>The project would be visible on the distant skyline above a wooded horizon from the north of the project, approximately 0.5 km outside of the Visual Receptor Area (VRA) at VP 5.01 A120 layby, Stockstreet Farm. Query while effects would be less likely from this particular viewpoint beyond 1 km of the project due to the perceptibility of the overhead line, the effects beyond 1km to the north where the landform elevates.</p> <p>As noted within the assessment of VP 5.01, there are views to the south across a gently undulating arable landscape to the wooded valley of the River Blackwater. The Essex Way follows this tributary, but no views have been assessed from here</p>	<p>An assessment of effects on visual receptors is provided in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13). Visualisations to support the Landscape and Visual Impact Assessment (LVIA) have been produced in accordance with Landscape Institute (LI) guidance.</p> <p>A photomontage for Viewpoint 5.05 Coggeshall Road, Coggeshall Hamlet is provided in Figure 7.12.F140 (document reference 7.12). The photomontage shows that there would be open views towards the Project to the east, crossing an elevated ridge. The photomontage accounts for existing vegetation in the view, including trees along the Blackwater Valley to the east, which would filter views towards the Project to the north and south. The assessment in Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3) concludes that there would be a significant effect on visual receptors at Viewpoint 5.05. The assessment takes into account vegetation removal within the Project Order Limits.</p> <p>Vegetation removal is shown on Environmental Statement (ES) Figure A13.6.1: Arboricultural Impacts Plan which forms part of Appendix 13.6: Arboricultural Impact Assessment (document reference 6.13.A6). It is not considered that the proposed vegetation removal within the Order Limits would increase the visibility of the Project from Viewpoint 5.05, as existing vegetation along the Blackwater Valley would not be affected and would continue to filter views.</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>A wireline for Viewpoint 5.01 A120 layby, Stockstreet Farm, west of Coggeshall is provided in Figure 7.12.F136 (document reference 7.12). The assessment in Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3) concludes that the effect on visual receptors at Viewpoint 5.01 would not be significant.</p> <p>Viewpoint 5.14 Essex Way south of Coggeshall is located on the Essex Way along the River Blackwater. A photomontage from Viewpoint 5.14 is provided in Figure 7.12.F149 (document reference 7.12). The assessment in Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3) concludes that the effect on visual receptors at Viewpoint 5.14 would not be significant.</p>				
9-2.1557	<p>The E2 Feering Visual Receptor Area (VRA), located to the south and east of the project, surrounding Feering and Rivenhall. The sole Representative Viewpoint is identified as Viewpoint 5.02 Feering. It is accepted that the effects on visual receptors would likely be significant (negative) within 1 km of the draft Order Limits (DOL) during construction, given works to remove an existing 33 kV overhead line around TB75. Concern where there are potential views northeast due to the works proposed spanning beyond 1 km of the project line.</p> <p>VP 5.02 Feering is taken from approximately 1.1 km to the northwest at its closest point. While it is</p>	<p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken for Project and is presented in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13). The assessment has taken account of the extent of construction works with respect to the connection alignment. Its assessment is based on the effects of the Project, including cumulative effects, and does not make any general assumption that removal of existing infrastructure will necessarily result in a net reduction of the influence of infrastructure on the landscape and views.</p> <p>The representee's concerns with respect to the judgements relating to VP05.02 are noted. The</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	accepted that the view south of the viewpoint will likely be filtered by field boundary vegetation, Concern the northern view from the viewpoint would comprise an increase in the number of pylons despite the removal of the existing overhead line. Criticism that effects beyond 1 km are less likely to be significant given the location of the viewpoint	assessment in ES Chapter 13: Landscape and Visual (document reference 6.13) and the associated appendices (document reference 6.13.A1-6.13.A6) is set out so that the basis of all judgements concerning effects is transparent to the decision maker.				
9-2.1558	Concern that using only one viewpoint to represent the effects on local receptors in the E2 Feering Visual Receptor Area (VRA) is insufficient for a project of this scale, given the predicted significant negative effects on both landscape and visual receptors. Suggest that additional viewpoint assessments and wirelines be provided from the southwestern portion of E2, where there is an area of elevated landform. The assessment should particularly focus on the area southeast of Whitehead's Farm, where there are potential views from Public Rights of Ways (PROWs) looking west across the valley of the River Brain, where vegetation is proposed to be removed or reduced toward VP 5.04	A Landscape and Visual Impact Assessment (LVIA) has been undertaken for Project and is presented in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13). The assessment has included a detailed assessment of changes to views from a range of representative viewpoints, in accordance with guidance and best practice and as agreed through the Environmental Impact Assessment (EIA) scoping process and subsequent consultation. It does not attempt to undertake such an assessment from all views, but does include judgements on the nature, location and extent of all of the Project's significant landscape and visual effects, derived both from the viewpoint assessment and from other elements of the LVIA. The LVIA sets out the potential landscape and visual effects, which includes consideration of visual amenity of visual receptor areas (including, for example, people in communities and using public rights of way). Chapter 13: Landscape and Visual (document reference 6.13) is supported by Appendix 13.3: Visual Baseline and Assessment of the ES (document reference 6.13.A3). This appendix sets		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>out the assessment for visual receptor areas (VRA) including VRA E2 Rivenhall noted in the feedback.</p> <p>Viewpoint locations are shown on Figure 13.7 Visual Receptors and Viewpoints (document reference 6.13.F7). Viewpoint 5.02: Old Road, Feering (View Direction 225) (document reference 7.12) sits within this VRA (E2), in addition to a number of heritage viewpoints, HE12, HE12a, HE13, HE36, and VP5.21: which sits on the southern border of the VRA near Crabb's Lane.</p> <p>Viewpoint 5.17 PRoW south of Silver End (Silver End 18) (Figure 7.12.F152) (document reference 7.12) sits close to the boundary of VRA E2 to the north-east of Whitehead's Farm (which sits within VRA E2).</p>				
9-2.1559	E3 Kelvedon Visual Receptor Area (VRA), located to the south and east of the project, in the area surrounding Kelvedon. There are no representative views from this area. Construction works would be barely perceptible due to vegetation cover along the A12 and the Great Western Main Line (GWML), which would screen and filter views. Suggest a viewpoint from the Public Rights of Ways (PROWs) between the A12 and GWML would have been welcomed to confirm this	<p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken for Project and is presented in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13). The assessment has included a detailed assessment of changes to views from a range of representative viewpoints, in accordance with guidance and best practice and as agreed through the Environmental Impact Assessment (EIA) scoping process and subsequent consultation. It does not attempt to undertake such an assessment from all views, but does include judgements on the nature, location and extent of all of the Project's significant landscape and visual effects, derived both from the viewpoint assessment and from other elements of the LVIA.</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		In accordance with established guidance and best practice, not all judgements concerning the nature and location of effects are provided with a corresponding visualisation within the Environmental Statement, although the judgements have been based on appropriate desk and field-based verification by the assessor in all cases.				
9-2.1560	Criticism that the Visual Receptor Area (VRA) E4 Silver End, located to the north of the Project around Silver End, lacks Representative Viewpoints. This is considered insufficient for a project of this scale with significant negative effects on landscape and visual receptors. The respondent suggests that viewpoint assessments and wirelines be provided from Cressing Temple Barns, where there are potential views across the flat landscape looking south from the Public Rights of Ways (PRoWs). There are currently no detracting elements in this landscape. Additionally, there are potential views from the south of Storey's Wood, east of Silver End, and north of the project beyond 1 km	A Landscape and Visual Impact Assessment (LVIA) has been undertaken for Project and is presented in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13). The assessment has included a detailed assessment of changes to views from a range of representative viewpoints, in accordance with guidance and best practice and as agreed through the Environmental Impact Assessment (EIA) scoping process and subsequent consultation. It does not attempt to undertake such an assessment from all views, but does include judgements on the nature, location and extent of all of the Project's significant landscape and visual effects, derived both from the viewpoint assessment and from other elements of the LVIA. The LVIA sets out the potential landscape and visual effects, which includes consideration of visual amenity of visual receptor areas (including, for example, people in communities and using public rights of way). Chapter 13: Landscape and Visual (document reference 6.13) is supported by Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3). This appendix sets out		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		the assessment for visual receptor areas (VRA) including VRA E4 Silver End noted in the feedback. Viewpoint locations are shown on Figure 13.7 Visual Receptors and Viewpoints (document reference 6.13.F7). Viewpoint 5.11: Crossing Temple Barns, south-west of Silver End (document reference 7.12) and Viewpoint 5.17 PRoW south of Silver End (Silver End 18) (document reference 7.12) sit within VRA E4: Silver End around Silver End, in addition to a number of heritage viewpoints, HE5 and HE6.				
9-2.1561	<p>The E6 Black Notley & White Notley Visual Receptor Area (VRA), located to the north of the project, in the area surrounding Black Notley, White Notley, and Ranks Green. Representative viewpoints are identified as Viewpoint 5.04 White Notley and Viewpoint 5.07 NCN Route 16 and Ranks Green Road.</p> <p>While it is accepted that Hazelton Wood likely filters views to the northwestern corner of the VRA, query regarding the lack of assessment made to the south of Black Notley, where there are potential views of the construction and operation of the Cable Sealing End (CSE) Compound due to elevated topography. Concern, although it is agreed that effects on visual receptors at operation would likely be significant (negative) within approximately 1.5 km of the project, there is disagreement that effects beyond 1 km are less likely to be significant due to the lack of assessment made around Black Notley</p>	<p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the Environmental Impact Assessment (EIA). The LVIA includes an assessment on both landscape character and visual amenity and is presented in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13). An assessment of effects on visual receptors is provided in Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3). For Visual Receptor Area (VRA) E5 Black Notley and White Notley significant effects are identified up to a distance of approximately 1.5 km from the Project.</p> <p>An assessment of effects on visual receptors at representative viewpoints is provided in Annex A to Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3). The following is a summary of effects at the identified viewpoints:</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<ul style="list-style-type: none"> - Viewpoint 5.04 White Notley (Figure 7.12.F139) (document reference 7.12) – significant during construction and operation - Viewpoint 5.07 NCR 16 and Ranks Green Road, east of Rank's Green (Figure 7.12.F142) (document reference 7.12) – significant during construction and operation - Viewpoint 5.15 Essex Way south-east of White Notley (Figure 7.12.F150) (document reference 7.12) – significant during construction and operation - Viewpoint 5.20 PRoW, Black Notley (Black Notley 9) (Figure 7.12.F155) (document reference 7.12) – not significant during construction and operation 				
9-2.1562	Viewpoint 5.04 White Notley offers a transitional long-distance view across the valley of the River Brain, providing views of the neighbouring riparian Landscape Character Area (LCA) C6 from the plateau of the agricultural LCA B1. Concern as permanent reduction or removal of riparian vegetation along the River Brain would be noticeable from this location	<p>The Landscape and Visual Impact Assessment (LVIA) in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13) has taken into account vegetation removal when arriving at its judgements concerning the significance or otherwise of landscape and visual effects.</p> <p>Chapter 13: Landscape and Visual (document reference 6.13) is supported by Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3). This appendix sets out the assessment for visual receptor areas including E2 Rivenhall, E4 Silver End, E5 Black Notley & White Notley and E6 Terling and Witham which are relevant the Project in the vicinity of White Notley and the valley of the River Brain.</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>There are also several viewpoints relevant to the valley of the River Brain as below:</p> <ul style="list-style-type: none"> - Viewpoint 5.04: White Notley (document reference 7.12) - Viewpoint 5.11: Cressing Temple Barns, south-west of Silver End (document reference 7.12) - Viewpoint 5.12: PRow, Faulkbourne (Faulkbourne 1) (document reference 7.12) - Viewpoint 5.15: Essex Way south-east of White Notley (document reference 7.12) - Viewpoint locations are shown on Figure 13.7 Visual Receptors and Viewpoints (document reference 6.13.F7). <p>The photomontage produced for Viewpoint 5.04 illustrates areas of vegetation removal as per Photomontages (document reference 7.12)</p> <p>The corresponding viewpoint assessment is contained within Annex A of Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3).</p> <p>The landscape assessment within Appendix 13.2: Landscape Baseline and Assessment (document reference 6.13.A2) contains detail on the assessment of effects of the Project on landscape character including River Valley Landscapes within which the River Brain is located.</p>				
9-2.1563	There would be close views of the overhead line and Cable Sealing End (CSE) compounds from VP 5.07 NCN Route 16 and Ranks Green Road.	The list of representative viewpoints for inclusion in the assessment detailed in Environmental Statement (ES) Chapter 13: Landscape and Visual (document		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	Concern as views from the bridleway by Dines Hall, located 150 m south-west from VP 5.07, are likely to have a much greater impact within a more sensitive location over 1 km. There is some indication of temporary or permanent construction and operational works along this bridleway, and it is agreed that the effects on visual receptors would likely be significant (negative) within approximately 1.5 km of the Draft Order Limit (DOL)	reference 6.13) and the associated appendices (document reference 6.13.A1-6.13.A6) has been agreed through the Environmental Impact Assessment (EIA) scoping process and subsequent consultation with key stakeholders.				
9-2.1564	<p>The E7 Terling & Chipping Hill Visual Receptor Area (VRA), located to the south of the project, in the area surrounding Terling, Fairstead, and northwest of Witham. The representative viewpoint identified is Viewpoint 5.08 Fairstead.</p> <p>The effects on visual receptors would likely be significant (negative) within approximately 1 km of the project. Beyond 1 km, effects are less likely to be significant due to a reduction in the perceptibility of the overhead line, which increases with distance. This is attributed to the lack of Public Rights of Ways (PROWs) in the eastern portion of the VRA and woodland blocks. Suggest that views should be assessed to the west of the VRA, where there is a partial removal of existing west and the Cable Sealing End (CSE) Compounds to the east, with a cluster of PROWs on elevated topography</p>	<p>In Chapter 13: Landscape and Visual of the Environmental Statement (ES) (document reference 6.13) the Visual Receptor Area (VRA) referenced here is E6 Terling and Witham.</p> <p>The assessment in ES Chapter 13: Landscape and Visual (document reference 6.13) and the associated appendices (document reference 6.13.A1-6.13.A6) has included a detailed assessment of changes to views from a range of representative viewpoints, in accordance with guidance and best practice and as agreed through the Environmental Impact Assessment (EIA) scoping process and subsequent consultation. It does not attempt to undertake such an assessment from all views, but does include judgements on the nature, location and extent of all of the Project's significant landscape and visual effects, derived both from the viewpoint assessment and from other elements of the LVIA. In this case, the assessment for VRA E6 contained in the Appendix 13.2: Visual Baseline and Assessment (document reference</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		6.13.A2) cross-references five viewpoints rather than one and takes into account the public right of way (PRoW) network across the VRA.				
9-2.1565	Landscape Character Area (LCA) B4: Great Tey Farmland Plateau: The Great Tey Farmland Plateau LCA is located to the south of the River Colne and contains the settlements of Great Tey and Aldham. Concern as the eastern part of the Great Tey Farmland Plateau LCA would be directly affected by construction. The preliminary assessment identifies that there would also be disturbance to the 'peaceful and tranquil' character of the LCA. The LCA would also be indirectly affected by the construction activity, which is identified as being perceptible within approximately 1 km of the draft Order Limits (DOL). VP4.10 at Great Tey shows how, even at 1.6 km, the effects of the overhead line are significantly negative over a wide area once operational. Criticism with the assertion that significant effects only occur within 1.0 km of the Project line. Suggest an assessment and visualisation be prepared for VP 4.15 or 4.22, where there are wide views of the proposals, or on one of the Public Rights of Way (PRoW) closer to the scheme between 1-1.5 km	The detailed assessment of effects on LCA B4: Great Tey Farmland Plateau is provided in Environmental Statement (ES) Appendix 13.2: Landscape Baseline and Assessment (document reference 6.13.A2). The assessment concludes that, during construction, effects will be moderate-major and significant within 0.5 km, reducing to minor and not significant beyond 0.5 km. Once operational, effects will be moderate-major and significant within 0.5 km at year 1 and year 15, reducing to moderate and significant within 0.5-1.5 km at year 1 and year 15, and negligible and not significant beyond 1.5 km at year 1 and year 15. A photomontage has been prepared for Viewpoint 4.10 Moor Road, Great Tey, and for Viewpoint 4.22 PRoW between Great Tey and Little Tey a baseline photo only is provided.		X		
9-2.1566	Landscape Character Area B2: Easthorpe Farmland Plateau: The Blackwater and Brain Valley LCA is located to the west of Colchester and contains the settlements of Marks Tey and Copford.	The detailed assessment of effects on LCA B2: Easthorpe Farmland Plateau is provided in Environmental Statement (ES) Appendix 13.2: Landscape Baseline and Assessment (document		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	The northern part of the Easthorpe Farmland Plateau LCA would be directly affected by construction activity, north of Marks Tey and Little Tey, and running broadly parallel to the north of the A120. The effect on the LCA is judged likely to be significant (negative) within approximately 1 km of the draft Order Limits (DOL). Concern as VP 4.12, which views the Project from 1.2 km, shows that the effects are still significant. Criticism with National Grids statement that once operational, the effect on the LCA would only likely be significant (negative) within approximately 1 km of the Project	reference 6.13.A2). The assessment concludes that, during construction, there will be moderate-major and significant effects within 0.5 km, reducing to moderate between 0.5-1.5 km and to negligible beyond 1.5 km. Once operational, effects will be moderate-major and significant within 0.5 km at year 1 and year 15, reducing to moderate and significant between 0.5-1.5 km at year 1 and year 15, and negligible and not significant beyond 1.5 km at year 1 and year 15.				
9-2.1567	Support National Grid within the Landscape Character Area (LCA), A2: Wooded Roman River Valley, B3: Southern Colchester Farmland Plateau and F1: Messing Wooded Farmland. As the draft Order Limits (DOL) fall only just within 2 km of these areas it is unlikely that construction activity or the finished Project would be perceptible. Support the judgement that there would likely be no effect on the LCA	Comments on the assessment are noted.		X		
9-2.1568	In relation to section 6.5.2.1 Theoretical visibility of Project, in the Preliminary Environmental Information Report (PEIR), the visual impact of Project Section D, which is located between the north-east of Colchester and Marks Tey in the south-west. This area captures most of Colchester City Council's effects and comprises plateau farmlands incised by valley slopes associated with	Comments on the assessment presented in the Preliminary Environmental Information Report (PEIR), are noted. The final Landscape and Visual Impact Assessments (LVIA) are presented in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13) and associated Appendices (document reference 6.13.A1 to 6.13.A6).		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>the River Colne and its tributary valleys. The landscape also includes gently sloping to flat areas around the edge of Colchester to Halstead. The Zone of Theoretical Visibility (ZTV) indicates relatively widespread theoretical visibility of the overhead line within the 3 km study area in Section D. This includes visibility from parts of settlements such as Boxted, Great Horkesley, Wormingford, and Fordham. There is also theoretical visibility from the Public Rights of Way (PRoW) network, parts of the Essex Way long-distance path, and parts of National Cycle Network (NCN) 1 and NCN 13 in the north-east and across the middle of the study area. Additionally, there is theoretical visibility from the road network.</p> <p>There would be theoretical visibility of up to 70 pylons from small parts of the study area in Section D, particularly in more elevated parts of the study area, including between Coggeshall (in Section E) and elevated land east of Great Tey. Visual effects of the pylons are reduced in the river valleys and through intervening topography and vegetation. Concern as this highlights the widespread potential significant negative landscape and visual effects of the scheme.</p> <p>Theoretical visibility of Cable Sealing End (CSE) compounds south of Dedham Vale National Landscape (an AONB) in Volume II indicates that theoretical visibility of the CSE compounds in Section D would be relatively widespread within</p>					

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	approximately 1 km of each CSE compound, with more intermittent theoretical visibility between 1 km and 3 km. Theoretical visibility is also indicated from the fringes of Dedham Vale National Landscape, including from parts of Wormingford					
9-2.1569	<p>6.5.2.2 Visual Receptors and Groupings</p> <p>Visual Receptor Area (VRA) D, D1 Tye Green and Boxted: This VRA is located to the north of the Project, broadly between the farmland south of Langham and to the east of Little Horkesley and the northern part is located within Dedham Vale National Landscape (an AONB). The only Representative Viewpoints in this receptor area is Viewpoint 4.02 Oldhouse Lane Public Rights of Way (PROW).</p> <p>Construction activity would be visible in close views from the south of the VRA as it runs along the southern boundary. During construction, it is likely that effects on visual receptors would be significant (negative) within approximately 1.0 km of the draft Order Limits (DOL). Suggest the creation of a haul road decommissioning plan to understand the effects of removing this infrastructure.</p> <p>At operation, within approximately 0.5 km, there would be close views of the overhead line and a Cable Sealing End (CSE) compound from scattered properties, including properties along Straight Road, the local PRoW network, National Cycle</p>	<p>Comments on assessment presented in Preliminary Environmental Information Report (PEIR), noted. The final assessments are presented in the Environmental Statement (ES) Chapter: Landscape and Visual (document reference 6.13).</p> <p>ES Chapter 4: Project Description (document reference 6.4) provides information on decommissioning construction infrastructure, which includes haul roads. A detailed decommissioning plan will be developed by the contractor once they have completed the detailed design of the haul road.</p> <p>The detailed assessment of effects on VRA D1 Tye Green and Boxted is provided in ES Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3). This includes Viewpoint 4.36 Green Lane / Essex Way, Horkesley Green (Figure 7.12.F133) (document reference 7.12), which is located approximately 1.6 km away from the Project. The assessment concludes that, during construction, effects will be major and significant within 0.5 km, reducing to minor and not significant between 0.5-1.5 km and negligible and not significant beyond 1.5 km. Once operational, the effects will be major and significant within 0.5 km at year 1 and year 15, reducing to minor</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>Network (NCN) Route 1, and people traveling along the A143 and local road networks. Pylons would remain prominent in the view. Between approximately 0.5 km and 1 km, there would be close to medium views of the Project from scattered properties and the local PRoW and road network. Between approximately 1 km and 2 km, views of the Project would likely be filtered and screened by layers of vegetation, including woodlands and hedgerows, resulting in intermittent medium to long distance views from scattered properties, a number of local PRoW, the Essex Way, and roads. Concern, at VP 4.01 Bosted Airfield Memorial, which is outside the Receptor Area D1 and to the north, the pylons to the south remain prominent on the skyline even though they are 1.2 km away. Suggest an additional viewpoint is needed within D1 but between 1-1.5 km away from the Project to clearly identify whether the effects are significant or not</p>	<p>and not significant within 1.5-1.5 km at year 1 and year 15, and negligible and not significant beyond 1.5 km at year 1 and year 15.</p>				
9-2.1570	<p>D2 Little Horkesley and Wormingford: This Visual Receptor Area (VRA) is located to the north and west of the Project, broadly between Little Horkesley and Wormingford and the northern part is located within Dedham Vale National Landscape (an AONB). Representative Viewpoints are identified as:</p> <ul style="list-style-type: none"> • Viewpoint 4.04 Public Rights of Way (PROW) off Crabtree Lane 	<p>The detailed assessment of effects on Visual Receptor Area (VRA) D2 is provided in Environmental Statement (ES) Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3). In relation to viewpoints, we have engaged with a range of stakeholders (including Statutory Environmental Bodies (SEBs) and relevant Local Planning Authorities) throughout the development of the Project design and environmental assessment work, including the selection of viewpoint</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>• Viewpoint 4.13 Wormingford</p> <p>Construction activity and the finished Project would be visible in close views from the southern fringes of the VRA 1. Within approximately 0.5 km, there would be close views of construction activity associated with the underground cable, overhead line, and Cable Sealing End (CSE) compound, from the local road network, alongside local PRow and scattered properties. Similar receptors between 0.5 km and 1 km would be affected by close to medium distance views of this construction activity and by the operational Project. Between approximately 1 km and 2 km, intermittent medium to long distance views of construction activity and the completed overhead line would be seen, including from the National Landscape and the Stour Valley Path. Criticism as viewpoint 4.04 PRow off Crabtree Lane, which is 0.9 km away, does not convey the significance of effects close to. Request additional viewpoint close to the CSE in order to assess and demonstrate the effects of introducing the compound permanently into the landscape and to demonstrate the effectiveness or not of any mitigation planting. Criticism that National Grid state significant effects would be limited to 1 km of the Project line due to the extended effects on receptors using linear features such as PRow and country lanes, the effects on settings of communities, as well as the negative effects on the perception of the wider</p>	<p>locations. The methodology detailing viewpoint selection is described in ES Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3). Representative viewpoints have been used in places to inform the assessment. Visualisations do not form the basis of professional judgements made in terms of anticipated significant effects, but they are useful tools in conveying examples of likely changes in views from a selected number of locations. Site survey work and desk top analysis have also informed the assessment of effects in this area. This work has developed a greater understanding of the influence of the landscape on views in this area.</p> <p>The assessment of VRA D2: Little Horkesley and Wormingford, includes consideration of the following viewpoints:</p> <ul style="list-style-type: none"> - Viewpoint 4.04 PRow off Holt's Road, east of Wormingford (Little Horkesley 18) (Figure 7.12.F102) (document reference 7.12) - Viewpoint 4.13 B1508 Main Road, Wormingford (Figure 7.12.F111) (document reference 7.12) - Viewpoint 4.07 School Road/ Stour Valley Path, west of Little Horkesley (Figure 7.12.F105) (document reference 7.12) - Viewpoint 4.34 Crab Tree Lane, north of West Bergholt (Figure 7.12.F131) (document reference 7.12) 				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	countryside for both local householders and visitors. Suggests that effects on visual receptors would likely be significant (negative) between 1 km and 2 km of the Project. Request additional viewpoint assessments and visualisations are needed to demonstrate this	<ul style="list-style-type: none"> Viewpoint 4.27 B1508 Colchester Road, near Grove Lodge (Figure 7.12.F124) (document reference 7.12) <p>The assessment of the visual receptor area, VRA D2 concludes that, during construction, effects will be major and significant within 0.5 km and moderate and significant between 0.5-1.5 km and beyond 1.5 km. once operational, the effects will be major and significant within 0.5 km at year 1 and year 15, reducing to moderate and significant between 0.5-1.5 km and beyond 1.5 km at year 1 and year 15.</p>				
9-2.1571	<p>D3 Great Horkesley: This Visual Receptor Area (VRA) is located to the south of the Project, broadly between the A12 near Ardleigh Reservoir and West Bergholt. The sole identified Representative viewpoint for this area is: Viewpoint 4.03 Essex Way</p> <p>Construction activity related to both the overhead line, underground cable, and two Cable Sealing End (CSE) compounds would be visible in close views from the northern fringes of the VRA. Within approximately 0.5 km, there would be close views of construction activity from Public Rights of Way (PRoW) such as Essex Way, but this diminishes with distance.</p> <p>Concern as once operational, Viewpoint 4.03 Essex Way demonstrates how even at 600 m, the negative effect of the CSE is significant. Criticism as it is not acceptable to have only one viewpoint</p>	<p>The detailed assessment of effects on Visual Receptor Area (VRA) D3: Great Horkesley and Horkesley Heath is provided in Environmental Statement (ES) Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3). The assessment of Visual Receptor Area (VRA) D3 includes consideration of the following viewpoints:</p> <ul style="list-style-type: none"> Viewpoint 4.03 Broad Lane / Essex Way, east of Great Horkesley (Figure 7.12.F101) (document reference 7.12) Viewpoint 4.18 NCN Route 1 / Langham Lane, north of Colchester (Figure 7.12.F115) (document reference 7.12) Viewpoint 4.19 PRoW at Peppers Lane, east of Great Horkesley (Boxsted 28) (Figure 7.12.F116) (document reference 7.12) Viewpoint 4.17 Lodge Lane, Colchester (Figure 7.12.F114) (document reference 7.12) 		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>and visualisation available from this VRA. Request further viewpoints, such as those at VP 4.18 and VP 4.17, are required for an accurate understanding of negative effects.</p> <p>Request one or more viewpoints from between 1-1.5 km, where it is likely that there are still some significant effects. The negative effects of the pylons in this area are not fully demonstrable in this one visualisation.</p> <p>Criticism with the conclusion that operational effects are likely only significant within 1 km of the Project line</p>	<p>The assessment of VRA D3 concludes that, during construction, effects will be major and significant within 0.5 km, reducing to moderate and significant within 0.5-1.5 km, and negligible and not significant beyond 1.5 km. Once operational, the effects will be major and significant within 0.5 km at year 1 and year 15, reducing to moderate and significant within 0.5-1.5 km at year 1 and year 15, and negligible and not significant beyond 1.5 km.</p>				
9-2.1572	<p>D5 Fordham: This Visual Receptor Area (VRA) is located to the north and west of the Project, broadly between Rochfords and Chappel, encompassing Fordham. The Representative Viewpoints are identified as:</p> <ul style="list-style-type: none"> • Viewpoint 4.08 Fordham • Viewpoint 4.14 Fordham Road <p>The Project would be visible in close views from the southeastern fringes of the Visual Receptor Area, including the local road network, Public Rights of Way (PROW) network, National Cycle Network (NCN) Route 13, and open access land, as well as scattered properties northeast of Fordham within the Colne Valley. Concern as the Project's run of pylons, approximately 3 km through this area, would generate significant negative effects along this line as it crosses the valley between Fordham</p>	<p>The detailed assessment of effects on Visual Receptor Area (VRA) D5 Fordham is provided in Environmental Statement (ES) Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3).</p> <p>In relation to viewpoints, we have engaged with a range of stakeholders (including Statutory Environmental Bodies (SEBs) and relevant Local Planning Authorities) throughout the development of the Project design and environmental assessment work, including the selection of viewpoint locations. The methodology detailing viewpoint selection is described in ES Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3). Representative viewpoints have been used in places to inform the assessment. Visualisations do not form the basis of professional judgements made in terms of anticipated significant effects, but they are useful tools in</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>and the outskirts of West Bergholt parish. Concern as Viewpoint 4.14 Fordham Road highlights the significant impact, introducing a major industrial element into an unspoilt, rural landscape. The pylons would be substantially visible from most of the Fordham Hall Estate open access land, with three of the pylons actually being sited on this land. Criticism that the assertion that views from within Fordham would be screened and filtered in places by woodland blocks, as the vegetation in the baseline photos and visualisations of Viewpoint 4.08 Fordham are uncut hedgerows, not woodland. Views from the south and east of Fordham, as it crosses the Colne Valley, would be from National Grid's VRA D6, not D5.</p> <p>At the operational stage, there would be close to medium distance views of the Project from scattered properties northeast of Fordham and from open access land, PRoW, and local road networks. Criticism as there would still be wide views of the Project along the valley where it runs along the elevated Plateau near Fordham. Criticism with the assertion that significant impacts would be limited to less than 1.5 km at the operational stage. Request more viewpoint assessments and visualisations from between 1.5-2 km to demonstrate this assertion, including at least one viewpoint in the Colne Valley from Mill Road bridge looking west, as previously requested</p>	<p>conveying examples of likely changes in views from a selected number of locations. Site survey work and desk top analysis have also informed the assessment of effects in this area. This work has developed a greater understanding of the influence of the landscape on views in this area.</p> <p>Significant effects are identified up to a distance of approximately 1.5 km from the Project, during construction and at operation.</p> <p>An assessment of effects on visual receptors at representative viewpoints is provided in Annex A to Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3). The following viewpoints are within VRA D5:</p> <ul style="list-style-type: none"> - Viewpoint 4.14 Fordham Road, north-east of Fordham (Figure 7.12.F112) (document reference 7.12) - Viewpoint 4.35 PRoW, Hems Green (Fordham 5) (Figure 7.12.F132) (document reference 7.12) - Viewpoint 4.30 Mill Road, south of Fordham (Figure 7.12.F127) (document reference 7.12) - Viewpoint 4.08 Fordham (Figure 7.12.F106) (document reference 7.12) - Viewpoint 4.24 Essex Way near Fordstreet (Figure 7.12.F121) (document reference 7.12) <p>From Viewpoint 4.08 Fordham a significant effect is identified. The baseline photography in Figure 7.12.F106 (document reference 7.12) illustrates that there would be some woodland to the east and south-</p>

The final detailed assessment of effects on Visual Receptor Area (VRA) D9 Marks Tey is provided in Environmental Statement (ES) Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3). The assessment of VRA D9 includes consideration of the following viewpoints:</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>approximately 0.5 km, there would be close views of the overhead line from the Public Rights of Way (PRoW) and local road network including Salmon's Lane, Great Tey Road, and the A120 alongside scattered properties such as those north-west of Marks Tey and near East Gores.</p> <p>Between approximately 0.5 km and 1 km, the settlement of Little Tey would be exposed to close to medium distance views of the Project, although views would be filtered and screened in places by vegetation surrounding the settlement. Between approximately 1 km and 2 km, (as represented by Figure 13.9.59: Wireline Visualisation from Viewpoint 4.12 Marks Tey in Volume II), medium to long distance views of the Project would be greatly reduced by layers of vegetation, although properties to the north of this town may be affected by distant views of the Project where the landscape opens and layers of vegetation are reduced.</p> <p>Marks Tey is largely inward facing and views would not be orientated towards the Project. However, there would be wide views of the overhead line from along the A120 and from properties along the road where the overhead line would be visible on the skyline across a wide view. Effects on visual receptors would likely be significant (negative) within approximately 1.5 km of the Project. Beyond approximately 1.5 km, it is less likely that effects would be significant due to a reduction in</p>	<ul style="list-style-type: none"> - Viewpoint 4.12 A120 Coggeshall Road, Marks Tey (Figure 7.12.F110) (document reference 7.12) - Viewpoint 4.06 A120 Coggeshall Road, Broad Green (Figure 7.12.F104) (document reference 7.12) - Viewpoint 4.23 Great Tey Road (Figure 7.12.F120) (document reference 7.12) <p>The assessment of VRA D9 concludes that, during construction, effects will be major and significant within 0.5 km, reducing to moderate and significant within 0.5-1.5 km, and minor and not significant beyond 1.5 km. Once operational, effects will be major and significant within 0.5 km at year 1 and year 15, reducing to moderate and significant within 0.5 km at year 1 and year 15, and minor and not significant beyond 1.5 km at year 1 and year 15.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	perceptibility of the overhead line which would increase with distance					
9-2.1577	The Suffolk Landscape Character Assessment identifies 12 Landscape Character Types (LCTs) along the Project line. The preliminary Landscape and Visual Impact Assessment (LVIA) suggests that significant effects would likely be substantially limited to within 1 km of the Project, generally at both construction and operations stages. Criticism as this would be the case at the operational stage, where the outcome is generally an overhead line with 50 m pylons as opposed to undergrounding, and where intervisibility is quite high	<p>The detailed assessment of the Landscape Character Types (LCTs) identified within the Suffolk Landscape Character Assessment (LCA) (2010) is set out in Environmental Statement (ES) Appendix 13.2: Landscape Baseline and Assessment (document reference 6.13.A2). This includes an assessment of the following LCTs:</p> <p>Ipswich and Capel St Mary (LCT: Urban)</p> <p>Rolling Valley Farmlands and Furze LCT</p> <p>Wooded Valley Meadowlands Fens LCT</p> <p>Rolling Valley Claylands LCT</p> <p>Ancient Plateau Claylands LCT</p> <p>Plateau Claylands LCT</p> <p>Ancient Estate Claylands LCT</p> <p>Rolling Estate Farmlands LCT</p> <p>Valley Meadowlands LCT</p> <p>Rolling Valley Farmlands LCT</p> <p>Ancient Rolling Farmlands LCT</p> <p>Plateau Farmlands LCT</p> <p>Ancient Estate Farmlands LCT</p> <p>Wooded Valley Meadowlands LCT</p> <p>Effects vary between major and significant to negligible and not significant for these LCTs, across all stages of</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		the development (construction, operation year 1, and operation year 15).				
9-2.1578	<p>In relation to specific Landscape Character Types (LCT), concern for the assessment about the significant negative operational effects of the 50 m high pylons and overhead lines on the sense of rurality and tranquility of Wortham Ling SSSI and its setting.</p> <p>Query whether these effects would be limited to within 1 km or less. Suggest to mitigate the impact further undergrounding of the line to the southeast for the Waveney Valley Alternative (WVA), which would help reduce the negative operational impacts of the proposed Cable Sealing End (CSE) compounds on the heathland landscape</p>	<p>The Project being taking forward in the Development Consent Order (DCO) application, is for an overhead line at the Waveney Valley, not the Waveney Valley Alternative.</p> <p>The Wortham Ling SSSI is located partly within the northernmost part of the Rolling Valley Farmlands and Furze Landscape Character Type (LCT) and in the Wooded Valley Meadowlands and Fens LCT. The detailed assessment of these LCTs is set out in Environmental Statement (ES) Appendix 13.2: Landscape Baseline and Assessment (document reference 6.13.A2).</p> <p>The assessment of the Rolling Valley Farmlands and Furze LCT concludes that effects would be significant up to a distance of approximately 1.5 km from the Project, during construction and at operation.</p> <p>The assessment of the Wooded Valley Meadowlands and Fens LCT concludes that effects would be significant up to a distance of approximately 0.5 km from the Project, during construction and at operation.</p>		X		
9-2.1579	<p>Concern that the respondent expects the Wooded Valley Meadowlands and Fens Landscape Character Type (LCT) to experience significant negative landscape effects, particularly indirect ones, beyond the 0.5 km limit. The valley bottom is quite open, especially near The Doit, where the</p>	<p>The Project being taking forward in the Development Consent Order (DCO) application, is for an overhead line at the Waveney Valley, not the Waveney Valley Alternative.</p> <p>The detailed assessment of the effects on the Wooded Valley Meadowlands and Fens Landscape Character Type (LCT) is set out in Environmental Statement (ES)</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	Project crosses. The Waveney Valley Alternative (WVA) is not expected to reduce all significant effects at the operational stage due to the size and scale of the Cable Sealing End (CSE) and the effects of it and any proposed mitigation on the openness of the valley side	Appendix 13.2: Landscape Baseline and Assessment (document reference 6.13.A2). The assessment of the Wooded Valley Meadowlands and Fens LCT concludes that effects would be significant up to a distance of approximately 0.5 km from the Project, during construction and at operation. Beyond 0.5 km effects are judged to reduce and would not be significant due to layers of vegetation including woodland at Wortham Ling and Roydon Fen, and intervening landform of the rising valley slopes in the adjacent character areas which would reduce intervisibility with the wider LCT.				
9-2.1580	The Ancient Plateau Claylands, including areas like Mellis Green, Stowupland, Creeping St Peter, Burstall, Barking Tye, Elmsett, and Great Bricett, are characterised by flat or gently rolling arable clay landscapes. Query whether the significant negative operational effects of the 50 m high pylons and overhead lines would be limited to within 1 km or less. The presence of these pylons and lines would likely have an extended impact on the sense of rurality and tranquility of the countryside, as well as the experience of its amenity and aesthetic value	The detailed assessment of the effects on the Ancient Plateau Claylands LCT is set out in Environmental Statement (ES) Appendix 13.2: Landscape Baseline and Assessment (document reference 6.13.A2). The assessment concludes that, during construction, effects would be moderate and significant within 1.5 km, reducing to minor and not significant beyond 1.5 km. Once operational, effects would be moderate and significant within 1.5 km at year 1 and year 15, reducing to minor and not significant beyond 1.5 km at year 1 and year 15.		X		
9-2.1581	The Plateau Claylands are characterised by heavy clay soils that are very gently undulating or flat, dissected by small streams. This landscape is found in areas such as Gislingham, Dandy Corner, Cotton, and Mendlesham. Concern as due to the topography and lack of substantial woodland,	The detailed assessment of the effects on the Plateau Claylands LCT is set out in Environmental Statement (ES) Appendix 13.2: Landscape Baseline and Assessment (document reference 6.13.A2). The assessment concludes that, during construction, effects would be moderate and significant within 1.5		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	significant indirect effects on the landscape are likely to extend beyond 1 km. The setting is deeply rural, with single-track lanes and few existing detractors	km, reducing to minor and not significant beyond 1.5 km. Once operational, effects would be moderate and significant within 1.5 km at year 1 and year 15, reducing to minor and not significant beyond 1.5 km at year 1 and year 15.				
9-2.1582	The Valley Meadowlands Landscape Character Type (LCT) is a narrow, linear landscape character type in two areas: the River Gipping and its tributaries; and, the River Brett. It would be directly affected by construction works, including the undergrounding of a 132 kV overhead line near Badley Hill and a Cable Sealing End (CSE) compound. Criticism that significant effects would be limited to 0.5 km from the Project line, especially once operational, due to the height and linear extent of the Project. Valley landscapes contribute significantly to a sense of place and history, which would be impacted by industrial infrastructure at a local level	The detailed assessment of the effects on the Valley Meadowlands LCT is set out in Environmental Statement (ES) Appendix 13.2: Landscape Baseline and Assessment (document reference 6.13.A2). The assessment concludes that, during construction, effects would be moderate and significant within 0.5 km, reducing to minor and not significant within 1.5-1.5 km, and negligible and not significant beyond 1.5 km. Once operational, effects would be moderate and significant within 0.5 km at year 1 and year 15, reducing to minor and not significant within 0.5-1.5 km at year 1 and year 15, and negligible and not significant beyond 1.5 km at year 1 and year 15.		X		
9-2.1583	The Rolling Valley Farmland occurs in six discrete areas, following the valleys of tributaries of the River Gipping, Belstead, Brook, River Brett, and River Stour. This Landscape Character Type (LCT) would be directly affected by construction activities in several locations, including southwest of Willisham Tye, west of Offton, near Washbrook Street, and along the proposed cable route northwest of Stratford St Mary, within Dedham Vale National Landscape. Criticism that National Grid	The detailed assessment of the effects on the Rolling Valley Farmlands LCT is set out in Environmental Statement (ES) Appendix 13.2: Landscape Baseline and Assessment (document reference 6.13.A2). The assessment concludes that, during construction, effects would be major and significant within 0.5 km, reducing to moderate and significant within 0.5-1.5 km, and negligible and not significant beyond 1.5 km. Once operational, effects would be major and significant within 0.5 km at year 1 and year 15, reducing to		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	state the significant negative effects on this LCT would be limited to 0.5 km from the Project line. Due to their intimate character, valley landscapes contribute considerably to a sense of place and history, which would be strongly affected by such industrial infrastructure	moderate and significant within 0.5-1.5 km at year 1 and year 15, and negligible and not significant beyond 1.5 km at year 1 and year 15.				
9-2.1584	The Plateau Farmlands Landscape Character Type (LCT) occupies two discrete areas: the smaller, northernmost area lies to the west of Ipswich, and the larger, southernmost area encompasses Holton St Mary and East Bergholt, with the southern edge within Dedham Vale National Landscape. Concern as these areas would be directly affected by construction activity west of Ipswich and west of Holton St Mary. Support that the likely significant negative effects on this LCT would be limited to 1.0 km from the Project line	National Grid notes the respondent's feedback.		X		
9-2.1585	The Ancient Estate Farmlands Landscape Character Type (LCT) is located to the south-west of Ipswich and includes the settlement of Washbrook. Support the assessment that the construction stage would likely have a negative but not significant effect on the LCT, and there would likely be no effect once the Project is operational	National Grid notes the respondent's feedback.		X		
9-2.1586	The Wooded Valley Meadowlands Landscape Character Type (LCT) occurs along the River Stour within the Dedham Vale National Landscape (an Area of Outstanding Natural Beauty (AONB)), to the	National Grid notes the respondent's feedback.		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	east of Stratford St Mary. Support that the indirect effect on the LCT at construction would likely be negative but not significant, and there would likely be no effect once the Project is operational					
9-2.1587	In relation to section 9.3.2.2 of the Preliminary Environmental Information Report (PEIR), Visual Receptors and Groupings, the preliminary Landscape and Visual Impact Assessment (LVIA) groups visual receptors into Visual Receptor Areas (VRAs) based on geographical location, shared landscape characteristics, and similarity in views. Concern that clarity and detail may be lost in the VRAs. Suggest that the groupings should closely follow landscape character areas (LCAs) or types (LCTs). Visual Receptor Areas (VRA) B4, B5, and B6 are not labelled on Figure 3, Pages 3 or 4	National Grid notes the respondent's feedback. A detailed assessment of the effects on visual amenity is provided in Environmental Statement (ES) Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3). The assessment has used Visual Receptor Areas (VRAs). A detailed assessment of the effects on the Landscape Character Areas (LCAs) is provided in ES Appendix 13.2: Landscape Baseline and Assessment (document reference 6.13.A2). Visual Receptor Areas B4, B5 and B6 are shown on Figure 13.7- Landscape and Visual- Visual Receptors and Viewpoints Page 4 of 13.		X		
9-2.1588	The Visual Receptor Area (VRA) B1 Wortham, which is located to the west of the Project, broadly between Roydon to the north and Gislingham to the south. Representative viewpoints are identified as Viewpoint (VP) 2.01 Wortham Ling, VP 2.04 Burgate, and VP 2.22 Public Rights of Way (PRoW) near Goodrich Park. During construction, it is likely that the effects on visual receptors would be significant (negative) within approximately 1.5 km of the draft Order Limits (DOL). Due to the impact of access for construction and operational purposes, as well as	The Project being taking forward in the Development Consent Order (DCO) application is for an overhead line at the Waveney Valley, not the Waveney Valley Alternative. A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the EIA. The LVIA includes an assessment on both landscape character and visual amenity and is presented in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13).		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>the temporary and permanent haul roads, request the creation of a haul road decommissioning plan to understand the effects of this infrastructure's removal.</p> <p>At operation, within approximately 0.5 km of the Project, there would be close views of the overhead line from the local road and PRow network. Pylons and the overhead line would dominate views from VP 2.01 Wortham Ling, which is only 400m from the Project at its closest point. Wortham Ling is important as it is open access land, allowing views from many different angles.</p> <p>Concern as the wireline appears to show the pylons disappearing into vegetation on the northern side of the Project but much of this could be lost in order to facilitate construction and then kept open over a wide swathe for operational purposes.</p> <p>The Project would also be visible in close views from the east of the VRA and in some longer-range views, where the tops of pylons would be seen above existing vegetation. Views from VP 2.22 Goodrich Park are taken from 400 m away, and there are no wireframes from the medium-long distance VPs 2.32 and 2.31. Wireframes are needed from these viewpoints to demonstrate that there is no likely significance beyond 1.5 km.</p> <p>Close views would include views from the Waveney Valley, notably from The Doit (also Angles Way PRow) north to the proposed Cable Sealing End (CSE) (for the Waveney Alternative) and pylons on</p>	<p>An assessment of effects on visual receptors is provided in ES Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3). For Visual Receptor Area (VRA) B1 Wortham, significant effects are identified up to a distance of approximately 1.5 km from the Project.</p> <p>An assessment of effects on visual receptors at representative viewpoints is provided in Annex A of Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3). Viewpoint 1.22 Doit Lane, near Roydon represents views from The Doit / Angles Way. Visualisations are provided in Document 7.12.</p> <p>Commitment GG07 in the Outline Code of Construction Practice (CoCP) (document reference 7.2) sets out that land used temporarily will be reinstated where practicable to its pre-construction condition and use (or a condition discussed with the landowner), in line with the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4).</p> <p>Decommissioning activities required for removal of the temporary haul road would be similar to those reported for their construction in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13) and Chapter 16: Traffic and Transport (document reference 6.16). There would be construction vehicles temporarily present within the landscape and views.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	the northern side of the Waveney. Request a viewpoint and visualisation at this location. The assessment states that between approximately 0.5 km and 1 km, the overhead line would most often be seen on the skyline above intervening layers of vegetation from the local road and PRow network, citing the visualisation for VP 2.04 Burgate as an example. However, this understates what is in many cases a major part of the pylons and the overhead wires being visible in the middle-distance, and not on the horizon, as the term 'skyline' implies	The decommissioning activities would generate traffic associated with the construction vehicles required to transport materials off site and associated staff vehicles. The level of traffic would be similar to the level of traffic associated with the construction of the temporary haul road.				
9-2.1589	Concern as the Cable Sealing End (CSE) compounds and pylons would dominate the close views from the Waveney Valley Alternative (WVA) VP. Concern as although there is an improvement on the overhead line, it still produces a major negative impact with potential clear views of the pylon run going south due to the need to remove trees and other vegetation to facilitate construction and operation. The opportunities for visual mitigation on Wortham Ling itself, a heathland landscape, would be slight. Suggest that for the Open Access Land to benefit from the undergrounding fully, this should be extended by up to an additional 7 pylons as far as Brook Farm airstrip and the proposed construction compound nearby and the CSE located in that area. Close views would include views from the Waveney	The Project being taking forward in the Development Consent Order (DCO) application is for an overhead line at the Waveney Valley, not the Waveney Valley Alternative. A landscape and visual impact assessment (LVIA) has been undertaken and reported in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13). The LVIA sets out the potential landscape and visual effects, which includes consideration of visual amenity of visual receptor areas (including, for example, people in communities and using public rights of way). ES Chapter 13: Landscape and Visual (document reference 6.13) is supported by Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3). This appendix sets out the assessment for visual receptor areas including A9 Shelfanger, A10 Burstons, A11 Fen Street, A12 Roydon and Diss, B1 Wortham and B2 Palgrave, which are		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>Valley, notably from The Doit (also Angles Way PRoW) north to the proposed CSE (for the Waveney Alternative) and pylons on the northern side of the Waveney. Request a viewpoint at this location. Pushing back of the CSE from the Waveney Valley to the Snow Street area, potentially east of Darrow Lane, should also be investigated as the proposed CSE height of 15 m will be hard to mitigate successfully from the valley and the extent of the compound will dominate the valley floor and/or sides.</p> <p>Support that generally operational effects on visual receptors would likely be significant (negative) within approximately 1.5 km of the Project, and that is currently the same for the Waveney Valley Alternative (WVA). However, additional assessments and wireframes are needed from medium-long distance viewpoints to demonstrate that there is no likely significance beyond 1.5 km as well as additional assessment and wireframe from The Doit to demonstrate the extent of the negative effect of the Project and the Waveney Alternative on the Waveney Valley itself from the Suffolk side</p>	<p>relevant to the Project in the vicinity of the Waveney Valley.</p> <p>An assessment of effects on visual receptors at representative viewpoints is provided in Annex A of Appendix 13.3 Viewpoint Assessment (document reference 6.13.A3). Viewpoint 1.22 Doit Lane, near Roydon represents views from The Doit / Angles Way.</p> <p>In addition to Viewpoint 1.22 the following viewpoints are also relevant to the Waveney Valley area:</p> <p>Viewpoint 1.13 Heywood Road, north of Diss (document reference 7.12)</p> <p>Viewpoint 1.14 PRoW south of Bressingham Road (Roydon South Norfolk FP10) (document reference 7.12)</p> <p>Viewpoint 1.15 A1066 High Road, west of Roydon (document reference 7.12)</p> <p>Viewpoint 1.19 Bressingham Steam Museum (document reference 7.12)</p> <p>Viewpoint 1.21 PRoW near Roydon Fen (document reference 7.12)</p> <p>Viewpoint 2.01 Ling Road, Wortham Ling (document reference 7.12)</p> <p>Viewpoint 2.03 PRoW Palgrave (Palgrave 5 / 6) (document reference 7.12)</p> <p>Visualisations are provided in the visualisations report (document reference 7.12) and viewpoint locations are</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>shown on Figure 13.7 Visual Receptors and Viewpoints (document reference 6.13.F7).</p> <p>Viewpoints and associated visualisations contained in Photomontages (document reference 7.12) do not form the basis of professional judgements made in terms of anticipated significant visual effects, but they are useful tools in conveying examples of likely changes in views from a selected number of locations. Site survey work and desk top analysis have also informed the assessment of effects in this area. This work has developed a greater understanding of the influence of the landscape on views in this area.</p>				
9-2.1590	<p>The Visual Receptor Area (VRA) B2 Palgrave, located east of the Project between Diss and Thrandeston, is part of the Waveney Valley and its tributaries. Criticism that the sole Representative Viewpoint (VP 2.03 Public Rights of Way (PRoW) Palgrave) is 0.8 km from the project line and shows a major negative effect due to the project's extent, density, and height. The landscape consists of large-scale arable fields with open views and intermittent boundary vegetation. Significant negative effects are expected beyond 1 km, especially towards the end of construction. The Waveney Valley Alternative (WVA) reduces some effects, but at the operational stage, significant negative effects could extend beyond 1 km. Criticism as it is not sufficient on a Project of this scale and with the predicted significant negative</p>	<p>The visual assessment presented in Environmental Statement (ES) Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3) concludes that within VRA B2 the scale of change beyond 1.5 km would be small reducing to barely perceptible from the north-east of the VRA at Sutton, as such the magnitude of effect has been identified as low with minor and significant (adverse) effect, reducing to negligible and not significant at Stuston.</p> <p>Between 0.5 km and 1.5 km from VAR B2 moderate and significant (adverse) effects have been identified during construction and operation up to Palgrave and Thrandeston where effects become not significant. We have engaged with a range of stakeholders (including Statutory Environmental Bodies (SEBs) and relevant Local Planning Authorities) throughout the development of the Project design and environmental</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	effects on both landscape and visual receptors that only one VP is being used to represent the effects on local receptors in this area. Suggest that additional VP assessments and wirelines from VP 2.33 and VP 2.31 are needed to demonstrate no significant effects within 1-1.5 km for both options	assessment work, including the selection of viewpoint locations. The methodology detailing viewpoint selection is described in Environmental Statement (ES) Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3). Visual receptors have been grouped according to Visual Receptor Areas (VRAs), and representative viewpoints used in places to inform the assessment. Visualisations do not form the basis of professional judgements made in terms of anticipated significant effects, but they are useful tools in conveying examples of likely changes in views from a selected number of locations.				
9-2.1591	The Visual Receptor Area (VRA) B3 Mellis, which is located to the east of the Project, between Thrandeston to the north and Thornham Park to the south. The sole Representative Viewpoint (VP) is VP 2.05 Mellis Green. Support the assessment which identifies that within approximately 0.5 km of construction activity, and between approximately 0.5 km and 1 km, there would be close and open views from the local road and Public Rights of Way (PRoW) networks, scattered properties, and parts of Mellis and Mellis Common. The wireline in VP 2.05 Mellis Green, which is 1 km from the Project line, demonstrates this. It is noted that the Project would be seen on the skyline, and layers of field boundary vegetation would filter views. However, this is more accurate to	The visual assessment presented in Environmental Statement (ES) Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3) acknowledges that in close to medium distance views of VRA B3 the Project would most often be seen on the skyline, due to the relatively flat nature of the landform, including from Mellis Common and the north and western edges of Mellis. It is stated that the Project would not be out of context for existing views as the Project would follow the route of an existing 132 kV overhead line to the north and west of Mellis, although it is acknowledged that the pylons of the Project would be larger in scale and more prominent in views. We have engaged with a range of stakeholders (including Statutory Environmental Bodies (SEBs) and relevant Local Planning Authorities) throughout the development of the Project design and environmental		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>the west of Mellis Green rather than to the north-west, where views are more open and impacts are more substantial.</p> <p>There is some mitigation from the undergrounding of the existing overhead line. Concern the increased height of the Project pylons introduces more intrusive and dominant infrastructure. Criticism using only one VP to represent the effects on local receptors in this area is insufficient. Additional VPs at VP 2.33 and VP 2.39 are identified, request assessments and wireframe visualisations should be carried out for these additional VPs.</p> <p>Support that effects on visual receptors would likely be significant (negative) within approximately 2 km of the Project. Beyond 2 km, effects would not likely be significant due to a reduction in perceptibility of the overhead line, which would increase with distance. Request, additional viewpoint assessments and visualisations to demonstrate this</p>	<p>assessment work, including the selection of viewpoint locations. The methodology detailing viewpoint selection is described in Environmental Statement (ES) Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3). Visual receptors have been grouped according to Visual Receptor Areas (VRAs), and representative viewpoints used in places to inform the assessment. Visualisations do not form the basis of professional judgements made in terms of anticipated significant effects, but they are useful tools in conveying examples of likely changes in views from a selected number of locations.</p>				
9-2.1592	<p>The Visual Receptor Area (VRA) B4 Finningham and Gislingham, which is located to the west of the Project, between Gislingham in the north and Gipping to the south. The identified Representative Viewpoints (VPs) are VP 2.06 Mill Street, VP 2.09 Dandy Corner, and VP 2.11 Middy Railway Footpath.</p> <p>Criticism as Grouping Areas B4, B5 and B 6 do not appear to be labelled on Figure 13.7 Page 3 and</p>	<p>Visual Receptor Areas B4, B5 and B6 are shown on Figure 13.7- Landscape and Visual - Visual Receptors and Viewpoints Page 4 of 13.</p> <p>We have engaged with a range of stakeholders (including Statutory Environmental Bodies (SEBs) and relevant Local Planning Authorities) throughout the development of the Project design and environmental assessment work, including the selection of viewpoint locations. Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>Page 4.</p> <p>Support assessment which indicates visual receptors would likely experience significant negative effects within approximately 2 km-3km of the Project during both construction and operation stages. Viewpoint 2.09 Dandy Corner, which is 0.7 km from the Project line, demonstrates major negative effects due to the open view, affecting the perception of tranquillity and rurality. Similarly, VP 2.11 Middy Railway Footpath, at 0.6 km distance, shows significant negative impacts. While the overhead line and pylons will not directly impact views from the centre of Mendlesham, they will profoundly affect the setting of the village and its rural perception.</p> <p>Suggest assessing additional VPs between 1-2.5 kms in this area, VP 2.10 and 2.35 to demonstrate more clearly where significant effects are likely to end.</p> <p>The wireline visualisation from VP 2.06 Mill Street, taken from 2.1 km, demonstrates that significant effects will still be present beyond 2 km due to the large-scale, open landscape</p>	<p>selection is described in Environmental Statement (ES) Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3). Visual receptors have been grouped according to Visual Receptor Areas (VRAs), and representative viewpoints used in places to inform the assessment. Visualisations do not form the basis of professional judgements made in terms of anticipated significant effects, but they are useful tools in conveying examples of likely changes in views from a selected number of locations.</p>				
9-2.1593	<p>The Visual Receptor Area (VRA) B5 Wickham Skeith and Mendlesham, which is located to the east of the Project, broadly between Thornham Magna in the north and Middlewood Green in the south. There are two Representative Viewpoints (VPs): VP 2.24 Public Rights of Way (PRoW) near</p>	<p>The visual assessment presented in Environmental Statement (ES) Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3) identifies that there would be major and significant (adverse) impacts within 0.5 km of the project upon VRA B5 during construction and operation.</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	Mendlesham and VP 2.08 Wickham Street. Close impacts would occur from parts of the Mid Suffolk Footpath and Middy Railway Footpath, Quiet Lanes, parts of local villages and hamlets, at both construction and operational stages. VPs 2.24 near Mendlesham demonstrates the significance of the effect at 0.4 km from the Project line in an open landscape, which is generally flat with gappy hedgerows and trees. It is a tranquil landscape with quiet single-track lanes and sparse traffic. Although there is an existing 132 kV line in the middle distance in some views, there are few other detractors					
9-2.1594	Concern for the visual impact of the proposed project line near Wickham Street, which is located south-east of Gislingham and the railway, approximately 0.7 km from the Project line. Request further assessment and visualisations are needed between 1 km and 1.5 km in order to demonstrate why a cut off for significance at the operational stage is made at 1 km. The area is characterised by a large-scale, open, gently undulating landscape with good intervisibility. Concern as, scattered copses and the poplar plantation provide some screening, making the pylons and line generally visible over a wide area	We have engaged with a range of stakeholders (including Statutory Environmental Bodies (SEBs) and relevant Local Planning Authorities) throughout the development of the Project design and environmental assessment work, including the selection of viewpoint locations. The methodology detailing viewpoint selection is described in Environmental Statement (ES) Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3). Wickham Street is located within Visual Receptor Area (VRA) B5 Wickham Skeith and Mendlesham. Significant effects on visual receptors are identified up to a distance of approximately 1.5 km. An assessment of effects on representative viewpoints is provided in Annex A of Environmental Statement (ES) Appendix 13.3: Visual Baseline and Assessment		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>(document reference 6.13.A3). The following viewpoints are within VRA B5 and represent a range of viewpoint distances to the Project:</p> <ul style="list-style-type: none"> - Viewpoint 2.08 Wickham Street (0.7 km) – significant at operation - Viewpoint 2.10 Whiteup's Lane, north of Mendlesham Green (1.1 km) – not significant at operation - Viewpoint 2.23 Road south of Elm Pollard, west of Wickham Skeith (0 km) – significant at operation - Viewpoint 2.24 PRoW near Mendlesham Hall, west of Mendlesham (Mendlesham 55) (0.4 km) – significant at operation - Viewpoint 2.41 Mid Suffolk Footpath near Mendlesham Green (0.3 km) – significant at operation - Viewpoint 2.43 PRoW, Middlewood Green (Earl Stonham 8) (0.5 km) – significant at operation - Viewpoint 2.50 Wickham Road, south of Wickham Skeith (1.7 km) – not significant at operation - Viewpoint 2.53 Mid Suffolk Footpath near Mendlesham (2.3 km) – not significant at operation 				
9-2.1595	The Visual Receptor Area (VRA) B6 Stowupland, which is located to the west of the Project, broadly between Gipping in the north and Creeting St Peter in the south. There are three Representative Viewpoints (VPs): VP 2.12 Mid Suffolk Footpath, VP 2.13 Stowupland, and VP 2.14 Creeting Lane, Creeting St Peter.	The Landscape and Visual impact assessment presented in Environmental Statement (ES) Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3) identifies during construction, between 0.5 km and 1.5 km of VAR B6, the scale of change would be medium, increasing to large from Creeting St Peter where slightly elevated views towards		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>It is identified that close and medium-distance views at construction and operation stages will be had from local lanes, the Public Rights of Way (PRoW) network including the Mid Suffolk Footpath, scattered properties, Saxham Street, and the eastern fringes of Creeting St Peter. VP 2.12 Mid Suffolk footpath is 1.2 km from the Project line, looking east/southeast gently sloping towards the VP giving wide open views of a large-scale arable landscape with few or no detractors. The lanes are single track, quiet, and rural. The overhead line is clearly visible across a wide area creating significant effects even from this distance, so it is not considered that significant effects occur only up to 1 km. There are no VP assessments and visualisations greater than 1.5 km in this area, request some need to be identified beyond this to demonstrate whether effects are significant beyond 1.5 km and not 1 km as claimed. There is more topography towards the River Gipping and Gipping Great wood where there is an undulating/sloping valley landscape</p>	<p>the Project would be available. The magnitude of effect would be medium, increasing to high at Creeting St Peter. The effect would be moderate and significant (adverse), increasing to major and significant (adverse) at Creeting St Peter. Beyond 1.5km it was deemed that the scale of change would be small, reducing to barely perceptible from within the inner areas of Stowupland. It is acknowledged that during operation the Project would be seen in the context of an existing 132 kV overhead line which would be noticeable in views however within Stowupland these views would be partially screened by buildings within the settlement, limiting views to the eastern edges. It was deemed that the scale of change would be small beyond 1.5 km, reducing to barely perceptible from within the inner areas of Stowupland.</p> <p>We have engaged with a range of stakeholders (including Statutory Environmental Bodies (SEBs) and relevant Local Planning Authorities) throughout the development of the Project design and environmental assessment work, including the selection of viewpoint locations. The methodology detailing viewpoint selection is described in Environmental Statement (ES) Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3). Visual receptors have been grouped according to Visual Receptor Areas (VRAs). Not all VRAs have representative viewpoints, visualisations do not form the basis of professional judgements made in terms of anticipated significant</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		effects, but they are useful tools in conveying examples of likely changes in views from a selected number of locations.				
9-2.1596	Viewpoint (VP) 2.13 Stowupland, in the Visual Receptor Area (VRA) B6 Stowupland, this VP is located 1.5 km from the Project line and demonstrates significant visual effects across a wide area. Criticism with National Grids statement that significant effects occur only up to 1 km. The viewpoint looks east, with Stowupland to the west. Concern as the existing 132 kV overhead line is visible in the middle-distance, but the proposed Project would intensify and extend these effects, making dozens of pylons visible	The visual assessment presented in Environmental Statement (ES) Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3) identifies that within VRA B6 Stowupland there would be a significant effect on visual receptors during construction and operation within approximately 1.5 km. Beyond 1.5 km it was determined that effects would not be significant. It is acknowledged that during operation the Project would be seen in the context of an existing 132 kV overhead line which would be noticeable in views. Within Stowupland these views would be partially screened by buildings within the settlement, limiting views to the eastern edges. From Viewpoint 2.13 PRow south of Stowupland (Stowupland 28) there would be a moderate and significant effect.		X		
9-2.1597	Viewpoint (VP) 2.14 Creeping St Peter in the Visual Receptor Area (VRA) B6 Stowupland, it is located 0.9 km from the Project line and demonstrates the significant visual effects of the pylons as they are viewed on the neighbouring ridge, filling the whole view looking east just north of Creeping St Peter on the edge of a Public Rights of Way (PRow). The area is characterised by an open, undulating, unspoiled agricultural landscape sitting to the north of the Gipping valley. Stowmarket and the A14 lie	National Grid notes the respondent's feedback.		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	just to the west and south, but this northern approach to the village remains unspoiled					
9-2.1598	Criticism that the Visual Receptor Area (VRA) B7 Forward Green and Creeping St Mary, located between Middlewood Green and Creeping St Mary, lacks representative viewpoints (VPs), which is deemed unacceptable. The nearest VP visualisations are approximately 10 km away near Mendlesham to the north and 3 km away to Barking Tye to the south. Without a VP assessment and visualisation, it is not possible to comment on the judgements in this section	<p>We have engaged with a range of stakeholders (including Statutory Environmental Bodies (SEBs) and relevant Local Planning Authorities) throughout the development of the Project design and environmental assessment work, including the selection of viewpoint locations. The methodology detailing viewpoint selection is described in Environmental Statement (ES) Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3). Visual receptors have been grouped according to Visual Receptor Areas (VRAs). VRA B7 Forward Green and Creeping St Mary is represented by the following viewpoints:</p> <ul style="list-style-type: none"> - Viewpoint 2.27 All Saints Road, Creeping Hills (Figure 7.12.F48) (document reference 7.12). - Viewpoint 2.40 A1120, Forward Green (Figure 7.12.F58) (document reference 7.12) - Viewpoint 2.44 Fen Lane, near Woolney Hall, north of Creeping St Mary (Figure 7.12.F62) (document reference 7.12). 		X		
9-2.1599	The Visual Receptor Area (VRA) B8 Stowmarket, which is located to the west of the Project and encompasses part of the Gipping Valley, including the eastern side of Stowmarket and adjacent farmed valley sides. Although this is a small VRA, it contains a lengthy stretch of the undeveloped Gipping Valley, along which the Gipping Valley River Path runs. There are no representative	We have engaged with a range of stakeholders (including Statutory Environmental Bodies (SEBs) and relevant Local Planning Authorities) throughout the development of the Project design and environmental assessment work, including the selection of viewpoint locations. The methodology detailing viewpoint selection is described in Environmental Statement (ES) Appendix 13.3: Visual Baseline and Assessment		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	viewpoints (VPs) within this area. Request to have at least one VP assessment and visualisation from these receptors, as the Project is proposed to oversail both. Potential VP 2.29 could be used, and another VP chosen between 1-1.5 km. It is difficult to comment on the judgement that there would be no significant construction or operational impacts beyond 1 km without a VP between 1 km and 1.5 km to confirm this	(document reference 6.13.A3). Visual receptors have been grouped according to Visual Receptor Areas (VRAs). VRA B8 Stowmarket is represented by the following viewpoints: Viewpoint 2.28 Gipping Valley Path near Creeting Hall (Figure 7.12.F49) (document reference 7.12).				
9-2.1600	The Visual Receptor Area (VRA) B9 Needham Market, which is located to the east of the Project and encompasses part of the Gipping Valley, including the settlement of Needham Market. There is one Representative Viewpoint (VP), identified as VP 2.15 Needham Market. Criticism, VP 2.15 is not marked on the map, making it difficult to assess whether significant construction and operational effects would be limited to 1.5 km. Suggest an additional VP at that distance from the Project line is required	We have engaged with a range of stakeholders (including Statutory Environmental Bodies (SEBs) and relevant Local Planning Authorities) throughout the development of the Project design and environmental assessment work, including the selection of viewpoint locations. The methodology detailing viewpoint selection is described in Environmental Statement (ES) Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3). Visual receptors have been grouped according to Visual Receptor Areas (VRAs). VRA B9 Needham Market is represented by the following viewpoints: <ul style="list-style-type: none"> - Viewpoint 2.15 PRoW, north-west of Needham Market (Needham Market 5) (Figure 7.12.F36) (document reference 7.12) - Viewpoint 2.27 All Saints Road, Creeting Hills (Figure 7.12.F48) (document reference 7.12). 		X		
9-2.1601	The Visual Receptor Area (VRA) B10 Great Bricett, which is located to the west of the Project, broadly between Stowmarket to the north and Great Bricett	The visual assessment presented in Environmental Statement (ES) Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3) highlights		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>in the south. There are two Representative Viewpoints (VPs): VP 2.16 Badley and VP2.18 B1078, Great Bricett.</p> <p>It is identified that there would be close views of construction activity from the local road and Public Rights of Way (PRoW) network, scattered properties, and the eastern edge of Ringshall Stocks. Close to medium views are represented by VP 2.16 Badley, which is 0.9 km from the Project line. Although there are existing overhead lines and pylons from this VP, the visualisation shows how that wirescape is extended and densified, despite some of the existing 132 kV line being undergrounded</p>	that within VRA B10 the Project would be seen in the context of four existing overhead lines. The assessment states that short sections of three of these existing overhead lines would be undergrounded to accommodate the Project to the east of Badley and west of Offton. Despite this, the Project would add to the presence of infrastructure in the VRA, particularly in the north-east near Badley. As such major and significant adverse impacts have been identified in this area during construction and operation.				
9-2.1602	<p>Viewpoint (VP) 2.18 Great Bricett, located 1.6 km away from the Project line, is an open, gently undulating, large-scale arable landscape. The B1078 road is fast but has intermittent traffic, with few visible detractors. Wattisham Flying Station is nearby but not noticeable from this VP. Distant pylons are visible to the east. The impacts remain significant even at 1.6 km. Query whether the effects on visual receptors during construction and operation would be significant (negative) only within approximately 1.5 km. Suggest a close view visualisation from VP 2.38 to contrast with the more distant VP assessments. Request, a VP closer to 2 km to help clarify where the significant effects are likely to stop</p>	We have engaged with a range of stakeholders (including Statutory Environmental Bodies (SEBs) and relevant Local Planning Authorities) throughout the development of the Project design and environmental assessment work, including the selection of viewpoint locations. The methodology detailing viewpoint selection is described in Environmental Statement (ES) Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3). Visual receptors have been grouped according to Visual Receptor Areas (VRAs), and representative viewpoints used in places to inform the assessment. Visualisations do not form the basis of professional judgements made in terms of anticipated significant effects, but they are useful tools		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		in conveying examples of likely changes in views from a selected number of locations. In addition to Viewpoints 2.18 and 2.38 (which includes a photomontage visualisation), site survey work and desk top analysis have informed the assessment of effects in VRA B10: Great Bricett. This work has developed a greater understanding of the influence of the landscape on views.				
9-2.1603	<p>The visual impact of the project in Visual Receptor Area (VRA) B11, located to the east of the project, between Needham Market and Willisham (Viewpoint (VP) 2.17 Barking Tye). Key points include:</p> <p>There would be close and close to medium distance views of construction activity and the completed project from the local road and Public Rights of Way (PRoW) network, parts of the B1078, scattered properties including Hascot Hill Farm, parts of Barking, the Open Access Area at Barking Tye, and the settlement at Willisham.</p> <p>Barking Tye green is a large traditional open green with extensive views beyond the hedgerows towards rising arable farmland. VP 2.17 Barking Tye, situated 0.8 km from the project line, illustrates how the pylons would be visible over 80% of the view (wholly or in part), forming a new negative backdrop to the green.</p> <p>Request additional VPs are between 1.5-2 km to demonstrate where significant effects cease</p>	<p>We have engaged with a range of stakeholders (including Statutory Environmental Bodies (SEBs) and relevant Local Planning Authorities) throughout the development of the Project design and environmental assessment work, including the selection of viewpoint locations. The methodology detailing viewpoint selection is described in Environmental Statement (ES) Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3). Visual receptors have been grouped according to Visual Receptor Areas (VRAs), and representative viewpoints used in places to inform the assessment. Visualisations do not form the basis of professional judgements made in terms of anticipated significant effects, but they are useful tools in conveying examples of likely changes in views from a selected number of locations.</p> <p>In addition to Viewpoint 2.17, site survey work and desk top analysis has contributed to the assessment of effects identified in VRA B11: Barking and Willisham. This work has developed a greater understanding of the influence of the landscape on views.</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.1604	<p>The Visual Receptor Area (VRA) B12 Elmsett, which is located to the west of the Project, between Greenstreet Green and Flowton (Viewpoint (VP) 2.21 Elmsett). The assessment identifies that there would be close and close to medium views of construction activity from the local road and Public Rights of Way (PRoW) network, scattered properties, and the fringes of Flowton. The works include the undergrounding of an existing overhead line between Offton and Bramford Substation and works at the substation. There would be close to medium distance views from the local road and PRoW network and parts of Flowton.</p> <p>There would be views from some elevated areas, such as illustrated from VP 2.21 Elmsett. There is a very intimate landscape around Elmsett with steep valley slopes rising up from Offton Road to the flatter or gently undulating more open ridge tops. The lanes are single track, and it is intensely tranquil. Concern as these areas would all be visually affected once the Project is complete.</p> <p>There would be views from some elevated areas, such as illustrated from VP 2.21 Elmsett, which is taken from 1.3 km so is quite distant as opposed to a close to medium view. The Visual Receptor Area (VRA) is very large and warrants additional viewpoints, both close to, and between 1.5-2 kms to demonstrate that 1.5 km is the limit for significant effects</p>	<p>We have engaged with a range of stakeholders (including Statutory Environmental Bodies (SEBs) and relevant Local Planning Authorities) throughout the development of the Project design and environmental assessment work, including the selection of viewpoint locations. The methodology detailing viewpoint selection is described in Environmental Statement (ES) Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3). Visual receptors have been grouped according to Visual Receptor Areas (VRAs), and representative viewpoints used in places to inform the assessment. Visualisations do not form the basis of professional judgements made in terms of anticipated significant effects, but they are useful tools in conveying examples of likely changes in views from a selected number of locations.</p> <p>In addition to Viewpoint 2.21, site survey work and desk top analysis has contributed to the assessment of effects identified in VRA B12: Elmsett in order to develop an understanding of the influence of the landscape on views in the area.</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.1605	<p>The Visual Receptor Area (VRA) B13 Somersham, which is located to the east of the Project, broadly between Offton to the north-west and Bramford Substation to the south-east. There are two Representative Viewpoints (VPs): VP 2.19 Offton and VP 2.25 Nettlestead.</p> <p>The assessment identifies close views of construction activity from the local road (including a Quiet Lane) and Public Rights of Way (PRoW) networks, scattered properties, and parts of Somersham and Offton. The visualisation from VP 2.19 Offton demonstrates the major impact and significant negative effects of the overhead line in an undulating landscape. This is rolling countryside with intimate heavily vegetated stream side valleys, with quiet single-track lanes and scattered settlement, rising to more open large-scale plateaus. Although existing overhead lines exist in the distance, the proposed Project will significantly add to the negative effects of this VRA when seen close to.</p> <p>At completion, between approximately 1 km and 2 km, there would be some medium to long-distance views of the Project from elevated areas. However, the visualisation from VP 2.25 Nettlestead, taken from 1.9 km from the Project line on elevated land to the northeast of Nettlestead, shows the existing pylons dominating about 25% of the existing view. Concern as the proposed pylons extend both the</p>	<p>Environmental Statement (ES) Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3) states the assessment of effects during construction and operation within VRA B13: Somersham. The magnitude and level of effect a during construction has been identified as medium. During operation the overhead line is likely to be seen on the skyline and be prominent in views near Castle Farm, Offton. The Project would be seen in the context of six existing overhead lines, which converge at Bramford Substation. Part of an existing 132 kV overhead line would be undergrounded to accommodate the Project as shown in Figure 4.2 Project Description- Proposed Project Design- Permanent Features Section B (document reference 6.4).</p> <p>The assessment at VP2.25 Nettlestead Road, Nettlestead identified that there would be long distance views towards stacked pylons on a slightly elevated landform as it enters Bramford Substation, as such effects at Nettlestead have been identified as moderate and significant (adverse). VP2.26: Ipswich Road, Somersham illustrates the removal of the 132 kV overhead line.</p> <p>We have engaged with a range of stakeholders (including Statutory Environmental Bodies (SEBs) and relevant Local Planning Authorities) throughout the development of the Project design and environmental assessment work, including the selection of viewpoint locations. The methodology detailing viewpoint</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>extent and intensity of the existing infrastructure to the point where the whole view is dominated by infrastructure. Concern as it is unlikely that even at 2 kms in elevated and open landscape that this extent and density of 'wirescape' will not appear significant.</p> <p>In the south of the Visual Receptor Area (VRA), construction activity and the completed Project line would be seen in the context of existing electricity infrastructure. Request more VPs to demonstrate the extent of these effects. Potential VP 2.26 would be useful in demonstrating the effects of the removal of the existing 132 kV line in close views. Request a VP from this VRA towards Bramford substation, and potential VP 2.20 may suffice for this</p>	<p>selection is described in Environmental Statement (ES) Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3). Visual receptors have been grouped according to Visual Receptor Areas (VRAs), and representative viewpoints used in places to inform the assessment. Visualisations do not form the basis of professional judgements made in terms of anticipated significant effects, but they are useful tools in conveying examples of likely changes in views from a selected number of locations.</p> <p>In addition to the viewpoints identified, site survey work and desk top analysis have informed the assessment of effects in VRA B13: Somersham. This work has developed a greater understanding of the influence of the landscape on views in this area.</p>				
9-2.1606	<p>The Visual Receptor Area (VRA) C1 Burstall, located to the west of the Project in the area surrounding Burstall and Hintlesham, includes three Representative Viewpoints (VPs): VP3.01 Church Hill, VP 3.02 Burstall, and VP 3.06 Hintlesham. Concern that the assessment identifies close views of construction activity from the local road and Public Rights of Way (PRoW) network, including a short section of the A1071, as well as scattered properties and clusters of properties, including those along Church Hill to the north of Burstall. Criticism as VP 3.01 Church Hill, taken from 0.7 km from the Project line, not 0.5 km or less, so</p>	<p>Concerns noted. We have engaged with a range of stakeholders (including Statutory Environmental Bodies (SEBs) and relevant Local Planning Authorities) throughout the development of the Project design and environmental assessment work, including the selection of viewpoint locations. The methodology detailing viewpoint selection is described in Environmental Statement (ES) Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3). Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	represents a close to medium view. It demonstrates how the existing view, dominated by overhead lines in about 50% of the view, is greatly amplified and extended by the proposals, impacting a far wider view and appearing much closer to the viewer due to the greater pylon height. Between 0.5-1 km, there are identified medium distance views of construction and the finished Project from the local road and PRow network, including the A1071 and scattered and clustered properties, including those along Washbrook Street and those to the north-east of Burstall	<p>professional judgements made in terms of anticipated significant effects, but they are useful tools in conveying examples of likely changes in views from a selected number of locations.</p> <p>In addition to Viewpoints 3.01, 3.02 and 3.06, site survey work and desk top analysis have informed the assessment of effects in VRA C1: Burstall. This work has developed a greater understanding of the influence of the landscape on views in this area.</p> <p>The assessment of VP3.01; Church Hill, near Burstallhill, identifies middle distance views of the Project during operation (not close views), and the nearest structure is recorded as being at 0.71km from the viewpoint.</p>				
9-2.1607	<p>The visual impact of the proposed Project line near Burstall. Concern as it highlights that the new line would be closer and taller than the existing overhead line, making it more dominant, especially along Burstall Lane. There are also long views from Hintlesham Priory, over 2 km away, which already have prominent views of the substation and existing pylons, so likely to have an intensified impact from the proposals.</p> <p>Between approximately 1 km and 2 km construction activity and the operational pylons are described as 'would likely be perceptible in some medium to long distance views', and 'form a component 'in some medium to long distance views. Criticism as the visualisation from Viewpoint (VP) 3.06 Hintlesham</p>	<p>The Landscape and Visual chapter indicates that visualisations do not form the basis of professional judgements made in terms of anticipated significant effects, but they are useful tools in conveying examples of likely changes in views from a selected number of locations.</p> <p>Environmental Statement (ES) Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3) concluded that during construction effects on visual receptors between 0.5 km and 1.5 km would be moderate and significant, reducing to negligible and not significant within wooded tributary valleys within VRA C1, beyond 1.5 km the scale of change was deemed to be small resulting in a minor and not significant impact.</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>at 1.6 km distance shows that the effects are more than perceptible. Concern as this landscape is likely to be affected by the proposed Bramford to Twinstead Reinforcement and forms part of the historic park of Hintlesham Hall so the cumulative effects on this landscape could be major. Criticism that National Grid state the effects on visual receptors within approximately 1 km of the Project would likely be significant (negative) only within approximately 1 km</p>	<p>Cumulative effects (reported in Chapter 17: Cumulative Effects) resulting from the introduction of the Branstead to Twinstead development, alongside the Project, indicate likely moderate and significant adverse landscape effects during the construction and operation stages within a localised area close to Bramford Substation on the Ancient Plateau Claylands LCT and Rolling Valley Farmland LCT. More distant areas of these LCTs coincide with the area of landscape occupied by the historic park at Hintlesham Hall, though the park itself forms a small proportion of the affected LCTs. Significant cumulative landscape effects resulting from the Bramford to Twinstead development are therefore not anticipated at Hintlesham Park.</p> <p>National Grid has undertaken a detailed assessment of the potential impact of the Project on heritage assets, including the Grade I listed Hintlesham Hall (List Entry 1036917). This assessment, presented within the ES Appendix 11.7: Assessment of Harm to Designated Heritage Assets, concludes that the setting of Hintlesham Hall does not extend to the Order Limits of the Project. As such, it is not considered that the Project would contribute to cumulative effects on the setting or significance of this asset when considered alongside the proposed Bramford to Twinstead Reinforcement.</p>

Visual Impact						
9-2.1608	<p>The Visual Receptor Area (VRA) C2 Washbrook, which is located to the east of the Project and south-east of the existing Bramford Substation. Criticism there are no representative viewpoints within this Visual Receptor Area (VRA), as this area contains an intimate landscape of streams and valleys, Belstead Brook and Spring Brook, criss-crossed by Public Rights of Way (PRoW) and lanes. The assessment identifies that there would be close views from the properties along Burstall Lane and those associated with the valley systems to the south of the A1071, such as at Washbrook Street. The Grindle is designated as a Quiet Lane, located to the north of Sproughton. Request a viewpoint in this area (Potential VP 3.22 which is about 1 km from the Project line is a possible choice or VP 3.07 which is on the border between C1 and C2).</p> <p>The assertion that the removal of three sections of existing 132 kV overhead line to the south of Bramford Substation would avoid the Project adding to the appearance of a 'wirescape' in some views could be demonstrated if a visualisation was done for VP 3.22. Without a demonstration of the effects, it is hard to make a response on the distance beyond which significance of effects will end.</p>	<p>We have engaged with a range of stakeholders (including Statutory Environmental Bodies (SEBs) and relevant Local Planning Authorities) throughout the development of the Project design and environmental assessment work, including the selection of viewpoint locations. The methodology detailing viewpoint selection is described in Environmental Statement (ES) Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3). Visual receptors have been grouped according to Visual Receptor Areas (VRAs), and representative viewpoints used in places to inform the assessment. Visualisations do not form the basis of professional judgements made in terms of anticipated significant effects, but they are useful tools in conveying examples of likely changes in views from a selected number of locations.</p> <p>In addition to viewpoints, site survey work and desk top analysis have informed the assessment of effects in VRA C2: Washbrook. This work has developed a greater understanding of the influence of the landscape on views in this area.</p> <p>The assessment of VP3.22: PRoW near Sproughton (Sproughton 20) (View Direction 310) provides a photomontage visualisation of the Project and the undergrounding of the existing 132 kV overhead line.</p>		X

	<p>edges of Raydon. People using Noaks Road and Sulleys Hill Road, which are designated as Quiet Lanes would also have close views towards this activity.</p> <p>Viewpoint (VP) 3.24 Higham Hill which is located outside this area to the south-west within Dedham Vale AONB identifies that the finished infrastructure is likely barely perceptible if at all. However, between approximately 1 km and 2 km the overhead line would be perceptible in some limited medium to long distance views from a small part of the north-east of this area. Criticism as VP 3.10 is identified on Figure 13.7 Page 5 but there is no viewpoint photograph and visualisation. Request this as it would be useful to demonstrate that views from the north-east are only 'perceptible'.</p>	<p>examples of likely changes in views from a selected number of locations.</p> <p>VP3.10 was not selected as part of the agreed viewpoints and therefore does not appear in Figure 13.7 - Landscape and Visual – Visual Receptors and Viewpoints Overview (Figure 6.13.F7). In addition to viewpoints, site survey work and desk top analysis have contributed to the assessment of effects identified in VRA C6: Radon. This work has developed a greater understanding of the influence of the landscape on views within VRA C6.</p>				
9-2.1614	<p>C7 Great Wenham and Holton St Mary: This Visual Receptor Area (VRA) is located to the east of the Project in the area around Great Wenham and Holton St Mary. The sole Representative Viewpoint (VP) identified is Viewpoint 3.25 Public Rights of Way (PRoW) near Woodlands Hall.</p> <p>Concern as VP 3.25 PRoW near Woodlands Hall Properties at Lark Hall, just south of Bacon's Green would be entirely encircled by construction works associated with the construction of underground cables. There would also be open views of the underground cable construction works from Raydon Airfield Memorial.</p>	<p>We have engaged with a range of stakeholders (including Statutory Environmental Bodies (SEBs) and relevant Local Planning Authorities) throughout the development of the Project design and environmental assessment work, including the selection of viewpoint locations. The methodology detailing viewpoint selection is described in Environmental Statement (ES) Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3).</p> <p>Visual receptors have been grouped according to Visual Receptor Areas (VRAs), and representative viewpoints used in places to inform the assessment. Visualisations do not form the basis of professional judgements made</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	Support the comment that visual effects on visual receptors would generally be significant (negative) within approximately 1 km of the draft Order Limits (DOL). Request a close view of the Cable Sealing End (CSE) is provided to demonstrate the extent of the effects of that piece of permanent infrastructure and the beneficial effects or not of any proposed mitigation. A potential VP 3.16 is identified on Figure 13.7 Page 6 and may fulfil this need if assessed.	in terms of anticipated significant effects, but they are useful tools in conveying examples of likely changes in views from a selected number of locations. Two viewpoints, Viewpoint 3.17 Great Wenham (Figure 7.12.F85) and Viewpoint 3.30 PRow south of Greenfields (Figure 7.12.F97) in Visualisations (document reference 7.12) lie within VRA C7: Holton St Mary and East Bergholt. VP3.30 lies close to the Wenham Grove Cable Sealing End compound. In addition to viewpoints, site survey work and desk top analysis have contributed to the assessment of effects identified in VRA C7. This work has developed a greater understanding of the influence of the landscape on views within VRA C7.				
9-2.1615	In the sections C8 (Undergrounding section – 1 km buffer) Higham and C9 (Undergrounding section – 1 km buffer) Stratford St Mary, support National Grids comment that the effects on visual receptors are likely to be significant (negative) within approximately 0.5 km of the draft Order Limits (DOL) during construction in these two Visual Receptor areas (VRAs).	National Grid notes the respondent's feedback.		X		
9-2.1616	Concerns related to built heritage in the context of the Project. The route crosses the A12 to the east of Langham and enters Tendring district, running east to the East Anglia Connection Node (EACN) and then to the border with Colchester district. Concern as Ardleigh is entirely within the 1 km buffer	National Grid, through the routeing and siting exercise, has sought to reduce the impact on the historic environment, including all designated heritage asset. During construction standard mitigation would be adopted as detailed in the Outline Code of Construction Practice Outline (CoCP) (document reference 7.2).		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>zone of the Proposed Order Limits (POL), with the northern section of Ardleigh Conservation Area (CA) falling within these limits.</p> <p>No direct impacts are anticipated to any built heritage assets as a result of the proposal, with the exception of ArdleighCA.</p> <p>There will be indirect impacts to numerous designated and non-designated heritage assets through changes to their setting, influenced by factors such as proximity to the new overhead cable route, visual receptors, noise, and construction impacts. Criticism as it is unclear from the documents provided to date what mitigation, if any, will be afforded to the setting of heritage assets.</p> <p>There are 326 identified designated heritage assets (scoped in) in Section C. Separate data sets have not been provided for individual districts within this section. Within Tendring district, the highest 'significance of effect' identified to a heritage asset is 'significant permanent negative effect' (to non-designated heritage assets) although no significant permanent negative effects have been identified to any designated heritage assets. However, this is likely to change, should the methodology and categorisation of heritage value be amended (as per the comments above), and in the event of any project design change.</p> <p>Criticism as the incomplete Gazetteer does not currently allow for easy differentiation between built and archaeological heritage assets. Concern as</p>	<p>Changes to the setting of an asset (both designated and non-designated, built or archaeological) would be temporary and would be reversed once the construction phase is completed. Therefore, no additional mitigation measures are proposed during the construction phase. No additional mitigation measures are proposed during the construction phase as any measures designed to lessen the visual impact of the Project would be of a scale that would visually adversely alter the setting of the asset. During the operation phase there is no proposed mitigation.</p> <p>The Environmental Statement (ES) chapter assessment tables ES Appendix 11.2: Historic Environment Assessment Tables (document reference 6.11.A2) states whether the asset would physically impacted or the impact would be to its setting. The magnitude of impact is then stated (high, medium, low, negligible, no change), as is the mitigation and the significance of effect using the agreed significance of effect matrix as stated in the ES Chapter 11: Historic Environment (document reference 6.11) and ES Appendix 11.2: Historic Environment Assessment Tables (document reference 6.11.A2).</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	there will be an impact on the setting of non-designated built heritage assets, with the highest level of harm identified as 'significant permanent negative effect'. Request amendments to the methodology and information provided to date to accurately assess the impact on individual heritage assets					
9-2.1617	The Stour Valley System Landscape Character Area (LCA 6A) is situated on the south side of the River Stour, around Lawford. A portion of this LCA falls within the Dedham Vale National Landscape, which is an Area of Outstanding Natural Beauty (AONB). Support National Grids assessment which indicates that although the draft Order Limits (DOL) are within 2 km of the Stour Valley System LCA, it is unlikely that construction activities will be noticeable. This is due to the predominantly north-facing slopes and the low-lying landform of the LCA, along with intervening layers of vegetation. Consequently, it is judged that there would likely be no effect on the LCA.	National Grid notes the respondent's feedback.		X		
9-2.1618	The Bromley Heaths Landscape Character Area (LCA 7A) is located south of Dedham Vale National Landscape (AONB) and includes Ardleigh, Bromley Cross, and Little Bromley. Concern as this area within Tendring District is significantly impacted by the Project. The western half of Bromley Heaths LCA will be directly affected by construction activities and the operational stage, particularly around Ardleigh.	A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the Environmental Impact Assessment (EIA). The LVIA includes an assessment on both landscape character and visual amenity and is presented in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13). Effects on landscape character are set out in ES Appendix 13.2: Landscape Baseline and Assessment		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	Construction activities include creating an access road to the proposed East Anglian Connection Node (EACN) substation, works between the EACN substation and north of Ardleigh, overhead wires over Ardleigh Reservoir, removal of landscape features, disturbance to farmland, and impacts on Wick Lane, a Protected Lane. Concern as there would be indirect effects include the convergence of several 132 kV overhead lines at the existing Langham sub-station near the EACN site.	(document reference 6.13.A2). The convergence of existing 132 kV overhead lines at Lawford substation formed the baseline for the assessment. Significant effects are identified for the Bromley Heaths Landscape Character Area (LCA) within approximately 1.5 km, during construction and operation.				
9-2.1619	The assessment judges that the effects on the Landscape Character Area (LCA) would likely be significant (negative) within approximately 1 km of the draft Order Limits (DOL). Criticism as there is wide intervisibility in this LCA, as demonstrated by Viewpoint (VP) 3.13, which is 2.1 km away from the Project. The visualisation shows that the pylons and elements of the East Anglian Connection Node (EACN) substation are clearly visible from this distance. Concern as VP 3.12, from 0.9 km, indicates that the Project has a major impact from this distance. Request an assessment and visualisation be taken from potential VP 3.21, which appears to be set about 1.5 km from the Project.	<p>The Landscape and Visual Impact Assessment (LVIA) detailed in Chapter 13: Landscape and Visual of the Environmental Assessment (ES) (document reference 6.13) has included a detailed assessment of changes to views from a range of representative viewpoints, in accordance with guidance and best practice and as agreed through the EIA scoping process and subsequent consultation. It does not attempt to undertake such an assessment from all views, but does include judgements on the nature, location and extent of all of the Project's significant landscape and visual effects, derived both from the viewpoint assessment and from other elements of the LVIA.</p> <p>A 3 km study area has been assessed for impacts from the East Anglia Connection Node (EACN) substation, as the tallest elements of the substations would be no higher than 15 m.</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.1620	<p>The Ardleigh Valley System Landscape Character Area (LCA 6B) is located to the south-west of Ardleigh and includes Ardleigh Reservoir. The assessment identifies that a small part of the north of this LCA, to the north-east of Colchester, would be directly affected by construction and operational activities. Concern as there would be some conflicts between the Project and the enclosed, small scale of the valley and its characteristic landcover. However, the Project would be introduced into a landscape already influenced by man-made features. Concern as direct effects from construction would include the removal of some landscape features around Ardleigh Reservoir and the introduction of temporary and permanent access tracks, along with disturbance to farmland. Indirect effects are also expected. Viewpoint (VP) 3.14 demonstrates that the Project still has a moderate impact on the landscape at 1.7 km, indicating extended intervisibility. Criticism of National Grid stating significant impacts will only occur within 1 km of the Project here.</p> <p>Request at least one additional viewpoint between 1-1.5 km be assessed and a visualisation created to determine whether the effects are significant or not</p>	<p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the Environmental Impact Assessment (EIA). The LVIA includes an assessment on both landscape character and visual amenity and is presented in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13).</p> <p>Effects on landscape character are set out in Environmental Statement (ES) Appendix 13.2: Landscape Baseline and Assessment (document reference 6.13.A2). Significant effects are identified for the Ardleigh Valley System Landscape Character Area (LCA) within approximately 0.5 km, during construction and operation.</p> <p>Effects on visual receptors are set out in Environmental Statement (ES) Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3). Ardleigh Reservoir is within Visual Receptor Area (VRA) C12 Ardleigh. Significant effects on visual receptors are identified up to a distance of approximately 1.5 km from the Project.</p> <p>An assessment of effects from representative viewpoints is provided in Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3). Visualisations are provided in Document 7.12. The following viewpoints are within VRA C12 Ardleigh: Viewpoint 3.11 PRoW north of Ardleigh (Ardleigh 2) (0.2 km from the Project) – effects would be significant during construction and operation</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Viewpoint 3.14 Lodge Lane, Ardleigh Reservoir (0.7 km from the Project) - effects would not be significant during construction and at operation Viewpoint 3.23 Crown Lane North, near Ardleigh Reservoir (0.8 km from the Project) – effects would not be significant during construction and at operation				
9-2.1621	The Alresford Valley System Landscape Character Area (LCA 6C) is located to the south of Great Bromley, following the course of the Alresford River. The assessment identifies that although the draft Order Limits (DOL) fall within 2 km of the Alresford Valley System LCA, it is unlikely that construction activity and the operational stage would be perceptible due to the valley topography and low-lying landform of the LCA, together with intervening layers of vegetation. Support the assessment there would likely be no effect on the LCA.	National Grid notes the respondent's feedback.		X		
9-2.1622	The Zone of Theoretical Visibility (ZTV) of the project in Section C, is located between Ipswich and Colchester, including Tendring. The assessment indicates widespread theoretical visibility of the overhead line within the 3 km study area, including parts of settlements like Ardleigh, the Public Rights of Way (PRoW) network, and the road network (A12, A120, A137). However, visibility is limited in some parts of the valleys due to intervening topography, such as the Stour Valley in Dedham Vale National Landscape (an Area of Outstanding Natural Beauty	The concern raised has been noted. The Landscape and Visual Impact Assessment (LVIA) included within the Environmental Statement (ES), has been undertaken as part of the Environmental Impact Assessment (EIA). The approach to the LVIA follows professional guidance as set out in Appendix 13.1: Landscape and Visual Methodology (document reference 6.13.A1), which includes GLVIA3. Judgements on landscape value have been made as part of the assessment. These value judgements have been informed by the Landscape Institute's Technical Guidance Note (TGN) 02/21		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>(AONB)), and in some settlements like Lawford due to buildings screening views.</p> <p>The visibility of pylons decreases within valley landscapes across the Tendring plain south of Ardleigh and more so from within the Stour Valley, especially when field boundary and roadside vegetation are taken into account. The assessment indicates theoretical visibility of one or more pylons from ground level to tip from the majority of the study area, with limited visibility in larger settlements like Lawford. There would be theoretical visibility of pylons from the more elevated parts of the study area.</p> <p>Theoretical visibility of the East Anglia Connection Node (EACN) is relatively widespread within the 3 km study area, particularly to the south and east of the EACN, including parts of settlements like Burnt Heath, Bromley Cross, and Little Bromley, as well as the eastern fringes of Ardleigh. Theoretical visibility reduces to the top half or the very tips of pylons in places because of intervening woodland and topography. Visibility from Dedham Vale AONB within the study area is generally limited to its southern fringes, including parts of the A137 (Harwich Road). Visibility of the EACN reduces when field boundary and roadside vegetation are taken into account. Concern as this highlights the widespread potential negative landscape and visual effects of the scheme</p>	<p>Assessing landscape value outside national designations. The LVIA identifies that there will be significant adverse landscape and visual effects during the construction and first year of operation to LCAs, LTCs and visual receptors within the areas that are directly affected by the project. Acknowledgement of wider effects is also noted within the findings of the assessment.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.1623	The preliminary Landscape and Visual Impact Assessment (LVIA) groups the viewpoints into Visual Receptor Areas (VRAs) based on geographical location, shared landscape characteristics, and similarity in the nature of views. This approach is considered pragmatic given the large project area, however concern that clarity and detail may have been lost as a result. Suggest that the groupings should follow the landscape character areas or types more closely.	<p>A Landscape and Visual Impact Assessment (LVIA)), included within the Environmental Statement (ES), has been undertaken as part of the Environmental Impact Assessment (EIA). The approach to the LVIA follows professional guidance as set out in Environmental Statement (ES) Appendix 13.1: Landscape and Visual Methodology (document reference 6.13.A1), which includes GLVIA3. Judgements on landscape value have been made as part of the assessment. These value judgements have been informed by the Landscape Institute's Technical Guidance Note (TGN) 02/21 Assessing landscape value outside national designations. The landscape and visual chapter covers the effects of the Project on landscape character and resources with reference to Landscape Character Areas (LCAs) and Landscape Character Types (LCT).</p> <p>A detailed assessment of the effects on the Landscape Character Areas (LCAs) is provided in Environmental Statement (ES) Appendix 13.2: Landscape Baseline and Assessment (document reference 6.13.A2).</p>		X		
9-2.1624	The visual impact of the project in Visual Receptor Area (VRA) C (in Tendring) C10 Dedham Heath: This VRA is located to the north and east of the Project, in the area surrounding Dedham Heath, Dedham and Foxash Estate. Part of this area is within Dedham Vale National Landscape (an Area of Outstanding Natural Beauty (AONB)). The assessment includes viewpoints (VP) such as Birchwood Road near Lamb Corner, VP 3.19 Essex	The LVIA includes an assessment on both landscape character and visual amenity and is presented in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13). An assessment of effects on visual receptors is provided in ES Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3). For the purposes of this assessment, visual receptors were arranged into 'Visual Receptor Areas' (VRAs) as shown on Figure 13.7:		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>Way, Dedham Road, and VP 3.20 Fenbridge Lane. Stour in Dedham Vale AONB : The assessment judges that within approximately 0.5 km of the draft Order Limits (DOL) there would be close views of construction activity associated with the underground cables to the west and overhead line and East Anglian Connection Node (EACN) Substation to the south, from both the local road and Public Rights of Way (PRoW) network, as well as scattered properties and settlement located along the local road and lane network. The impact of these views reduces at 2 km distance. Criticism as it is also stated that it is likely that cranes associated with the construction of the overhead line would be distantly visible, at approximately 4.5 km away, from small sections of local lanes and PRoW within Dedham ValeAONB.</p> <p>The viewpoint visualisation Viewpoint 3.20 Fenbridge Lane north side of the River Stour in Dedham Vale National Landscape (an AONB) demonstrate what the effects will likely be at operation and the overhead line is still perceptible even from this distance. It is stated that much of the Project would be undergrounded within this Visual Receptor Area so permanent effects are reduced. Criticism as this understates the permanent effects of the EACN and that of the East-West pylons running from TB005 and TB020.</p> <p>Viewpoint 3.15 Birchwood Road near Lamb Corner is taken from 1.7Km away from the Project line and</p>	<p>Visual Receptors and Viewpoints (document reference 6.13.F7). These VRAs were identified based on geographical location, shared landscape characteristics and a similarity in the anticipated nature of views towards the Project. For Visual Receptor Area (VRA) C10 Dedham Heath significant effects are identified up to a distance of approximately 1.5 km from the Project.</p> <p>An assessment of effects on visual receptors at representative viewpoints is provided in Annex A to ES Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3). The following is a summary of effects at the identified viewpoints:</p> <p>Viewpoint 3.15: Birchwood Road west of Lamb Corner (document reference 7.12) – significant during construction and operation</p> <p>Viewpoint 3.19: Essex Way / Mill Hill, west of Lawford (document reference 7.12) – not significant during construction and operation</p> <p>Viewpoint 3.20: Fenbridge Lane (document reference 7.12) – not significant during construction and operation</p> <p>Effects on Dedham Vale National Landscape are set out in ES Appendix 13.5: National Landscape Assessment Study (document reference 6.13.A5).</p> <p>Any landscape softening that does not remove or reduce a significant residual effect but seeks to off-set the effect is classed as landscape compensation. Such landscape compensation measures (e.g. creating or enhancing natural landscape features outside of the Order Limits)</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>demonstrates that moderate effects over a wide area can occur even from this distance. Concern as even at 2.5Km see Viewpoint 3.19 Essex Way, Dedham Road, the pylons and overhead cables are clearly perceptible in a flat open landscape. Request an additional viewpoint assessment and visualisation is needed closer to the Proposed EACN substation in order to properly evaluate its effects from the south of this Visual Receptor Area.</p> <p>The assessment states there would be visual effects would most often be seen on the skyline beyond 1.5Km, above intervening vegetation, and hedgerows. Criticism as the term 'skyline' implies distant views whereas the perception is the middle-distance, as evidenced by Viewpoint 3.15 Birchwood Road near Lamb Corner.</p> <p>Concern as the proposed planting around the EACN substation would only reduce effects on close to views of the EACN, not of the pylons and overhead cables. Criticism on assessment that effects on visual receptors would likely be significant (negative) beyond 1.5 km of the Project in some circumstances, as evidenced by Viewpoint 3.15 Birchwood Road near Lamb Corner. Criticism as the assertion that '...intervening vegetation on the relatively flat plateau would filter most views' appears overstated. Request the permanent loss of woodland at Black Brook should be re-examined to see if this can be mitigated or compensated for.</p>	<p>are considered in relation to the mitigation hierarchy but there is no requirement under policy to compensate for all residual effects. The residual effects that remain following the application of the mitigation hierarchy and any compensation provided then falls to the Planning Balance.</p> <p>The loss of all woodland habitat, including that at Black Brook, will be mitigated for through a combination of onsite replacement planting and offsite enhancement measures. Details have been incorporated into the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) on replacement woodland planting. In addition National Grid has committed to delivering 10% Biodiversity Net Gain (BNG) which includes 10% increase in woodland biodiversity units across the Project. Further details on the BNG mitigation and enhancement proposals are included within the Biodiversity Net Gain Report (document reference 7.1).</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.1625	<p>The visual impact of the project in Visual Receptor Area (VRA) C12, is located to the south of the project, in the area surrounding Ardleigh, Fox Street, Burnt Heath, and Bromley Cross. The assessment includes Viewpoints (VP) 3.11 Ardleigh and VP 3.14 Ardleigh Reservoir, Lodge Lane.</p> <p>Concern as construction activities would be visible in close views in the north of the VRA, associated mainly with the overhead cables, but also with the construction of the underground cables and the East Anglian Connection Node (EACN) Substation. Within approximately 0.5 km of the draft Order Limits (DOL), it is identified there would be effects on the local road and Public Rights of Way (PRoW) network, including Wick Lane to the west of Ardleigh Reservoir (which is a Protected Lane) and there the lane network crosses Ardleigh Reservoir as demonstrated in VP 3.14 Ardleigh Reservoir, Lodge Lane, seen from 0.7 km from the Project line. Longer distance impacted views will be had from Crown Lane (Protected Lane) The effects on scattered properties and those in and around Ardleigh is represented in VP 3.11 Ardleigh.</p> <p>Concern as VP 3.11 illustrates how substantial both the scale and extent of the negative effects are at 0.2 km from the Project line. Most of the setting of Ardleigh, to the west, north and east will be permanently negatively significantly affected by these proposals. Criticism of the assessment that effects on visual receptors would likely be significant</p>	<p>A landscape and visual impact assessment (LVIA) has been undertaken as part of the EIA and reported in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13). The LVIA sets out the potential landscape and visual effects, which includes consideration of visual amenity of visual receptor areas (including, for example, people in communities and using public rights of way).</p> <p>Concerns are noted on the visual impact upon VRA C12 Ardleigh. The assessment of visual effects on this area during construction and operation is presented within ES Appendix 13.3 Visual Baseline and Assessment (document reference 6.13.A3). The assessment reports significant visual effects during construction and operation within 1.5 km of the Project Limits of Deviation (LoD) including views from Frating Road</p> <p>The methodology and approach to assessment of visual impact has been discussed and agreed with relevant stakeholders. During these discussions, a number of landscape and visual viewpoints were identified in collaboration with stakeholders.</p> <p>The following viewpoints are within VRA C12 Ardleigh:</p> <p>Viewpoint 3.11: PRoW north of Ardleigh (Ardleigh 2) (document reference 7.12)</p> <p>Viewpoint 3.14: Lodge Lane, Ardleigh Reservoir (document reference 7.12)</p> <p>Viewpoint 3.23: Crown Lane North, near Ardleigh Reservoir (document reference 7.12)</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	(negative) only within approximately 1 km of the DOL or finished Project. VP 3.14 demonstrates the significance of effects within a well-treed landscape, request further assessment between 1-1.5 km in order to demonstrate that effects from that distance are not significant. Concern as there is potential VP 3.23 is too close and one of the public footpaths somewhere north of Green Island Gardens or just south of Frating road may be appropriate.	Viewpoint HE25: Ardleigh (document reference 7.12) Viewpoint locations are shown on Figure 13.7 Visual Receptors and Viewpoints (document reference 6.13.F7). Viewpoints and associated visualisations contained in Visualisations (document reference 7.12) do not form the basis of professional judgements made in terms of anticipated significant visual effects, but they are useful tools in conveying examples of likely changes in views from a selected number of locations. Site survey work and desk top analysis have also informed the assessment of effects in this area. This work has developed a greater understanding of the influence of the landscape on views in this area.				
9-2.1626	The visual impact of the project in Visual Receptor Area (VRA) C13, is located to the east of the project, broadly between Lawford, Little Bromley, and Little Bentley, with a small part within Dedham Vale National Landscape (an Area of Outstanding Natural Beauty (AONB)). The assessment includes viewpoints such as Viewpoint (VP) 3.12 Waterhouse Lane, Burnt Heath, and VP 3.13 Little Bromley. Concern as the assessment identifies that construction activity associated with the proposed overhead line, the underground cable and East Anglian Connection Node (EACN) Substation, would be visible in close views in the west of the VRA, with part of the Landscape Character Area (LCA) also be	A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the Environmental Impact Assessment (EIA). The LVIA includes an assessment on both landscape character and visual amenity and is presented in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13). An assessment of effects on visual receptors is provided in Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3). For Visual Receptor Area (VRA) C13 Little Bromley significant effects are identified up to a distance of approximately 1.5 km from the Project. An assessment of effects on visual receptors at representative viewpoints is provided in Annex A to		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>affected by the creation and use of the access road to the proposed EACN with close views of construction from the local road and PRow network and scattered properties.</p> <p>Concern as VP 3.12 Waterhouse Lane, Burnt Heath from 0.9 km demonstrates the potential significance of the negative effects from a distance of nearly 1 km away from the Project line and EACN of the finished project, and therefore the likely effects towards the end of the construction period. Concern as Little Bromley Road (Protected Lane) between 0.5-1.0 km would be affected. It is stated that between approximately 1 km and 2 km construction activity would be perceptible in some medium to long distance views from scattered properties. Criticism as VP 3.13 Little Bromley is taken from 2.1 km and demonstrates at least moderate effects at completion from this distance in these open, flat landscapes, it is likely therefore that significant construction effects could be felt at this distance, especially towards of the of the construction period, not just up to 1.5 km. Concern as although the overhead cables and EACN Substation would most often be seen in the middle distance, above intervening vegetation and hedgerows and sometimes viewed in the context of existing 132 kV overhead lines between 1-2 km, this additional proposed line intensifies this effect as shown in VP 3.13 Little Bromley, which is actually taken from 2.1 km. Whilst views of the EACN Substation are less likely to be apparent between 1-2</p>	<p>Appendix 13.3: Visual Baseline and Assessment in the Environmental Statement (ES). The following is a summary of effects at the identified viewpoints:</p> <p>Viewpoint 3.21 Barn Lane, Little Bromley (Figure 7.12.F88) (document reference 7.12) – not significant during construction and operation</p> <p>Viewpoint 3.12 Waterhouse Lane, Burnt Heath (Figure 7.12.F81) (document reference 7.12) – significant during construction and operation, reducing to not significant at year 15 when mitigation planting is semi-mature</p> <p>Viewpoint 3.13 PRow, Little Bromley (Little Bromley 16) (Figure 7.12.F82) (document reference 7.12) – significant during construction and operation</p> <p>Effects on Dedham Vale National Landscape are set out in Environmental Statement (ES) Appendix 13.5: National Landscape Assessment Study (document reference 6.13.A5).</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	km due to the lower height of structures combined with distance and intervening vegetation, VP 3.13 Little Bromley, implies there is the potential for moderate effects from 2.1 km. Request additional VP assessments between 1.0-1.5 km to clarify where the significant effects are likely to stop. Potential VP 3.21 might fulfil this requirement.					
9-2.1627	<p>Concern that the landscape and visual effects of the scheme would be extensive and there is a need to reduce the visual impact of existing infrastructure. Criticism in relation to Chapter 13 of the Preliminary Environmental Information Report (PEIR), that the information presented within the PEIR does not allow the respondent to fully consider the site choices and design principles in relation to visual impacts. Without this information the respondent feels they cannot have oversight of whether negative effects have been minimised or assess whether opportunities for creating positive benefits or enhancements have been recognised.</p> <p>Criticism that three viewpoints previously requested by BDC have not been included, and requests that they are included.</p> <p>Concern about the impact on the character of the river valley landscapes.</p> <p>Suggests protected lanes in the area (BDC local plan policy LPP69) should also be identified as receptors in the Environmental Statement (ES).</p>	<p>The good design principles that have been adopted throughout the design process are detailed in Environmental Statement (ES) Chapter 4: Project Description (document reference 6.4). This includes reference to NPS EN-1 and the National Grid options appraisal process (National Grid, 2012).</p> <p>The January 2024 National Policy Statement for Electricity Networks Infrastructure (EN-5), published by the Department for Energy Security & Net Zero, recognises that new overhead lines can give rise to adverse landscape and visual impacts. It advises that The Holford Rules (see Appendix I22 of this report), guidelines for routeing of new overhead lines, should be embodied in proposals. The alignment has been developed in response to National Grid's commitment to balancing the following factors: environmental and socio-economic constraints and opportunities; engineering feasibility; cost; and planning policy. These guidelines have therefore been adhered to wherever possible in the routeing and design development of the Project.</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the EIA. The LVIA includes an assessment on both landscape character and visual amenity. The LVIA is presented in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13). Measures taken to mitigate landscape and visual effects are set out in ES Chapter 13: Landscape and Visual (document reference 6.13).</p> <p>The presence of existing infrastructure has been considered within both the baseline and scheme assessment.</p> <p>Viewpoints proposed by Braintree District Council were included in the LVIA. An assessment of effects on visual receptors at viewpoints is provided in Annex A of Environmental Statement (ES) Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3).</p> <p>The impact of the Project upon the characteristics of river valley landscapes along the route is set out in Environmental Statement (ES) Appendix 13.2: Landscape Baseline and Assessment (document reference 6.13.A2).</p> <p>Protected Lanes are identified in Environmental Statement (ES) Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3).</p>				
9-2.1628	<p>Criticism that three additional viewpoints requested by Braintree District Council (plan provided by respondent) were not included in relation to</p>	<p>National Grid has carefully considered feedback on viewpoint locations. These three additional viewpoints, as requested by Braintree District Council, have been</p>		X

		<p>E1 Coggeshall (contains Viewpoint 5.18 and Viewpoint HE36 lies just to the south)</p> <p>E2 Rivenhall (contains Viewpoint HE36 and Viewpoint 5.17 lies just to the north)</p> <p>E4 Silver End (contains Viewpoint 5.17)</p> <p>E5 Black Notley & White Notley (Viewpoint 5.16 lies just to the south)</p> <p>E6 Terling and Witham (contains Viewpoint 5.16)</p>				
9-2.1629	<p>Suggest that a finer level of assessment is provided in the Environmental Statement (ES) in relation to Appendix G of the Preliminary Environmental Information Report (PEIR), including receptor groupings which should reflect the nature of each user group. For example, effects on people using public rights of way should be considered separately to those within residential properties. This will be the case if the ES accords with Guidelines on Landscape and Visual Impact Assessment (GLVIA3) as suggested.</p>	<p>A landscape and visual impact assessment (LVIA) has been undertaken as part of the EIA and reported in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13). The approach to the LVIA follows professional guidance as set out in ES Appendix 6.13: Landscape and Visual Methodology (document reference 6.13.A1), which includes GLVIA3. The LVIA sets out the potential landscape and visual effects, which includes consideration of visual amenity of visual receptor areas (including, for example, people in communities and using public rights of way). ES Chapter 13: Landscape and Visual (document reference 6.13) is supported by ES Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3). This appendix sets out the assessment for each visual receptor area. This assessment is supported by viewpoint assessments presented in Annex A: Viewpoint Assessment of ES Appendix 13.3 Visual Baseline and Assessment (document reference 6.13.A3). The relevant visual receptors and the reasons for the selection of the</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>viewpoint are provided on each sheet. This includes visual receptors such as local communities, users of the road network, the National Cycle Network, long distance paths and PRowS, people visiting designated landscapes, heritage assets, promoted viewpoints, open access land and other visitor attractions.</p> <p>In addition, a separate assessment of effects on residential visual amenity is presented in Appendix 13.4: Residential Visual Amenity Assessment (RVAA) (document reference 6.13.A4). This describes the change in views likely to be experienced by residents at the closest residential properties to the permanent overground above ground elements of the Project (within approximately 200 m).</p>				
9-2.1630	Suggestion that full consideration is given to landscape and visual mitigation and compensation measures if required	<p>Mitigation around substations, substation extensions and CSE compounds is detailed in the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4). National Grid has committed to a 3:1 replacement for individual trees and individual trees within small groups. The tree planting strategy will prioritise replanting within the Order Limits, although offsite provision may be required. Offsite tree planting is considered to be landscape compensation. Further detail is provided in the Outline LEMP (document reference 7.4). Additional planting may be considered within the Order Limits at detailed design stage, in locations such as around Tilbury North Substation and the permanent access roads to the East Anglia Connect</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Node (EACN) substation and Tilbury North Cable Sealing End (CSE) compounds.				
9-2.1631	Whilst the respondent supports the proposed changes to the alignment and positions of the pylons as detailed in the Design Development Report, the respondent seeks clarification of the visual impact of existing infrastructure on the landscape and the setting of Grade II listed Cockerell's Farm, adjacent to pylons TB73 - TB75 (nr.Surrex / Skye Green). The respondent seeks clarification on the current mitigation proposed (removal of existing pylons at the intersection with the existing overhead line) and whether this would be sufficient to avoid 'wirescape' concentration in this location. The respondent seeks clarification on the full impacts of the undergrounding and cable sealing end apparatus for the existing overhead line at TB75.	<p>National Grid, through the routing and siting exercise, has sought to reduce the impact on the historic environment, including grade II listed buildings in this area.</p> <p>All listed buildings within 2 km of the Order Limits are considered in the Historic Environment assessment for the Project. The impacts of the Project on the historic environment are assessed in Chapter 11: Historic Environment (document reference 6.11) of the Environmental Statement (ES). The assessment considers the potential impact on historic buildings and includes assessment of potential for physical impact and impact through change to setting that affects the value of a heritage asset. The assessment of listed buildings is supported by setting surveys, as documented in ES Appendix 11.1 Historic Environment Baseline Report (document reference 6.11.A1). The Project has engaged with Historic England and relevant planning authorities on aspects relating to heritage, including appropriate mitigation measures and techniques and to take their views into account during Project development.</p> <p>Mitigation measures, such as pylon placement and screening for both new and existing structures, have been explored to mitigate identified impacts effectively. These actions have been documented and are presented in the Environmental Statement (ES), Chapter</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>11: Historic Environment (document reference 6.11), which forms an integral part of the Environmental Impact Assessment (EIA) for the Project. The approach to assessment and mitigation presented in Environmental Statement (ES) Chapter 11: Historic Environment (document reference 6.11) has been discussed and agreed with key heritage stakeholders.</p> <p>The assessment of Cockerell's Farmhouse and Bakehouse' (1169484) concludes a temporary moderate adverse significance of effect during construction and a direct, permanent moderate adverse significance of effect during operation. No additional mitigation measures are proposed as any measures designed to lessen the visual impact of the Project would be of a scale that would visually adversely alter the setting of the asset.</p> <p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the EIA. The LVIA includes an assessment on both landscape character and visual amenity, and is presented in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13). Effects on visual receptors are set out in ES Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3). Cockerell's Farm is within Visual Receptor Area (VRA) E2 Feering and Rivenhall, and significant effects on visual receptors are reported. The assessment takes the removal of part of an existing 132 kV overhead line near Skye Green into account, during construction and operation. The removal</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		of the existing overhead line would reduce the sense of 'encirclement' of properties at Skye Green by existing and proposed infrastructure.				
9-2.1632	The respondent requests that National Grid provides confirmation on the timing and sequencing of the negotiations it has had with CEG Land Promotions Limited (CEG) relating to land rights and the potential undergrounding of existing electricity transmission infrastructure at Dunton Hills Garden Village (DHGV). The respondent notes on paragraph 2.6.4 of National Policy Statement (NPS) EN-5 that where compulsory acquisition rights are sought, permanent arrangements are strongly preferred over voluntary wayleaves. The respondent strongly advocates this position as it provides greater reliability, economic efficiency and reflects not just the importance of delivering critical national priority (CNP) infrastructure, but the need for robust assessment and the application of the mitigation hierarchy which should include compensation (paragraph 2.6.6 of NPS EN-5).	National Grid notes the respondent's feedback. We have proposed the undergrounding of existing third party infrastructure where required to construct the Project, we have worked with the Distribution Network Operator (DNO) to identify a provisional route which has been identified to be as direct and economic as possible. No engagement was held with CEG over this route and since it lies to the east of CEG's interest and therefore no agreement with CEG regarding permanent arrangements is required.		X		
9-2.1633	In relation to Chapter 4 for the PEIR, paragraph 4.8.18, National Grid state for the vegetation clearance of the proposed 400 kV overhead line, a 40 m wide swathe will be removed to facilitate construction activities, respondent notes it is unclear if sections would be felled to ground level with no removal of roots. Additionally, up to 8 m of	Details of vegetation clearance requirements are provided in the Environmental Statement (ES) Chapter 4: Project Description (document reference 6.4) and the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4). Vegetation removal will be minimised as far as is practicable. In line with the approach set out in Environmental		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>vegetation on either side of the 40 m will be managed during construction, operation, and maintenance, potentially affecting an additional 22 m of vegetation on either side. This results in a potential impact corridor of 100 m width, which should be minimised wherever possible. Request the mitigation hierarchy be rigorously applied to avoid impacts before needing to consider mitigation and compensation.</p>	<p>Statement (ES) Chapter 5: EIA Approach and Method (document reference 6.5) and in accordance with National Policy Statement EN-1 and EN-5 (Department for Energy Security and Net Zero, 2024) the mitigation hierarchy has been applied during the iterative design process to, in the first instance, avoid creating adverse effects, prevent, reduce and finally, where appropriate, offset adverse effects.</p> <p>Mitigation around substations, substation extensions and CSE compounds is detailed in the Outline LEMP (document reference 7.4). National Grid has committed to a 3:1 replacement for individual trees and individual trees within small groups. The tree planting strategy will prioritise replanting within the Order Limits, although offsite provision may be required. Offsite tree planting is considered to be landscape compensation. Further detail is provided in the Outline LEMP (document reference 7.4). Additional planting may be considered within the Order Limits at detailed design stage, in locations such as around Tilbury North Substation and the permanent access roads to the East Anglia Connection Node (EACN) substation and Tilbury North Cable Sealing End (CSE) compounds.</p> <p>Appendix 13.6: Arboricultural Impact Assessment (AIA) (document reference 6.13.A6), submitted as part of the ES, provides details of the impacts to trees.</p>				
9-2.1634	<p>The respondent discusses the impact of the Project on the Colne River Valley Floor (LCA A4). This LCA is located along the River Colne to the west of</p>	<p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the Environmental Impact Assessment (EIA) and is presented in Environmental</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	Colchester. A narrow part of the Colne River Valley Floor LCA would be directly affected by construction activity to the east of Fordstreet. The respondent judges that the significant effects would be more widespread, both towards the end of the construction period and during operation, as this is an unspoiled river valley and views in and out of the valley, including from Mill Lane and along the Essex Way that follows the river for some distance, are quite widespread. This area used to be a Special Landscape Area and would likely be identified as Valued Landscape if an assessment was carried out. It is the most accessible section of unspoiled riverside landscape to the west of Colchester and is used extensively by walkers. The respondent suggests that a Valued Landscape Assessment should be carried out, and the opportunity for either realignment north and west of the Open Access Land explored or undergrounding be proposed as an alternative.	<p>Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13).</p> <p>An assessment of effects on landscape character is provided in ES Appendix 13.2: Landscape Baseline and Assessment (document reference 6.13.A2).</p> <p>National Grid has considered an alternative route to the north and west previously but has not considered it to be preferred. We have noted some potential for reduced effects in respect of some topics but also noted in the 2024 Design Development Report (paragraph 5.4.143) (available on the Project website) that it was less preferred as it was a longer, less economic and efficient route with more pylons and angle pylons. We also noted it was likely to lead to increased effects on various heritage assets including a Grade I listed building and several moats associated with other listed buildings. In the absence of new evidence or the identification of further factors we continue to consider these reasons valid and no change is proposed.</p> <p>National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed</i></p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>developments will cross part of a nationally designated landscape (i.e. National Park, The Broads, or Area of Outstanding Natural Beauty)'. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at the Colne Valley would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference</p>

Mitigation for non-licensable protected species has been included within the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4).				
9-2.1640	Concern that the Project will have a negative impact on bees / Bees will be unable to navigate under high voltage overhead lines	As well as possible effects on humans, possible effects of Electric and Magnetic Fields (EMFs) on various animals have been studied a number of times. No proven effects of EMFs have been found in any species at levels below the guidelines. This is confirmed in National Policy Statement (NPS) EN-5 which states: <i>"There is little evidence that exposure of crops, farm animals or natural ecosystems to transmission line EMFs has any agriculturally significant consequences."</i> Beehives can become charged if directly under an overhead line because of the electric field it produces.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		For existing overhead lines, this can be eliminated by screening or earthing the hive, but for new overhead lines, embedded design measures and careful routeing will avoid any potential effects. There does not seem to be evidence of EMFs adversely affecting bees directly. In the United States of America, the strip of land along power lines has been shown to be particularly attractive to bees, with these areas being utilised by commercial bee farms. Additionally, National Grid has worked with the British Beekeeping Association to establish hives around our sites, including high voltage substations, which have thrived.				
9-2.1641	Concern that the Project will result in a negative impact on flora / plants / woodlands / hedgerows	<p>Through routeing, siting and detailed design, National Grid has sought to reduce, as far as practicable, potential impacts on biodiversity including priority grassland, wetland, woodland, and hedgerow habitats. The design process has taken account of existing biodiversity, the natural environment and, where practicable, seeks to reduce impacts on areas of ecological sensitivity, through avoidance or mitigation.</p> <p>Chapter 8: Ecology and Biodiversity of the Environmental Statement (ES) (document reference 6.8) assesses the effects on important ecological receptors (which includes grasslands, wetlands, woodlands and hedgerows).</p> <p>As part of the Environmental Impact Assessment (EIA) process for the Project, a suite of ecological surveys has</p>	X	X	X

		have been considered in the Biodiversity Net Gain Report (document reference 7.1).				
9-2.1646	Criticism that consideration has only been given to biodiversity net gain and ecological enhancement at the locations of the electricity sub stations (e.g. had the project taken account of all design factors including biodiversity net gain then it is likely that alternative alignments may have afforded greater opportunities for enhanced mitigation and biodiversity net gain)	While additional habitat creation and enhancement has been focused around the National Grid's permanent assets (i.e. substations and cable sealing end compounds), Biodiversity Net Gain (BNG) has taken account of all replacement planting along the full length of the Project. Where there is any deficit in biodiversity units only then will offsite solutions be considered. The biodiversity mitigation hierarchy has been adhered to through this process and the approach agreed with Natural England and the Local Authorities. National Grid were committed to delivering 10 % BNG is deliverable as part of the Project. Full details of the BNG approach and mitigation solution are provided within the Biodiversity Net Gain Report (document reference 7.1).			X	
9-2.1647	Concern about National Grid's plans for ongoing environmental monitoring post-construction	Any requirements for monitoring of mitigation required are detailed within the Environmental Statement (document reference Volume 6: Environmental Statement) that accompanies the application for development consent.	X		X	
9-2.1648	Concern that the Project could breach the Conservation of Habitats and Species Regulations (2017)	A suite of protected species surveys has been undertaken to ensure there was sufficient baseline data to inform an impact assessment that has ultimately outlined the proposed mitigation, ensuring legal compliance with regards to the Conservation of Habitats and Species Regulations (2017).			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>In terms of sites that form part of the National Site Network (NSN), a Habitats Regulations Assessment (HRA) Report (document reference 5.3) has been undertaken in accordance with the Regulations. The HRA has screened out the majority of potential Likely Significant Effects (LSE) through embedded mitigation where potential impact pathways have been avoided on the qualifying features at Stage 1 Screening. This has been agreed with Natural England. Where impacts cannot be avoided without the implementation of mitigation measures, consultation has been undertaken with Natural England where National Grid has agreed the approach which is set out in Stage 2 - Appropriate Assessment of the HRA. This largely refers to best practice measures set out in the Outline Code of Construction Practice (CoCP) (document reference 7.2) as well a discussion around the temporary loss of habitat for avian species in connection with alternative habitat in the wider area. It has been agreed that the Project is not considered to impact the integrity of any NSN Site and will not be in breach of the Conservation of Habitats and Species Regulations (2017).</p>				
9-2.1649	<p>Criticism that National Grid expresses a preference for maintaining a 30m distance from hedgerows for pylons, but deem it acceptable to remove areas of hedgerows for constructing an access road</p>	<p>Every effort has been made to reduce the impact on habitats across the project including on hedgerows. Commitments have been made within the Environmental Statement (ES) Chapter 4 The Project Description (document reference 6.4) to 'pinch in' works at hedgerows to reduce impacts as far as practicable. However, in order to facilitate the construction of the</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Project, there will be some unavoidable temporary loss of hedgerow habitat. All hedgerow loss to facilitate construction haul roads will be replanted on completion of works with a more diverse native species mix of local provenance. Hedgerow impacts and associated replacement planting are included within the Biodiversity Net Gain (BNG) Report (document reference 7.1), with an aim of delivering 10% BNG for hedgerow habitat as part of the project.				
9-2.1650	Concern that the Project will impact trees covered by Tree Preservation Orders / Tree Protection Orders	During pre-application National Grid asked relevant planning authorities to share information on Tree Preservation Orders (TPOs). Impacts to trees covered by a TPO from the Project are presented in Environmental Statement (ES) Appendix 13.6: Arboricultural Impact Assessment (AIA) (document reference 6.13.A6).			X	
9-2.1651	Suggest that National Grid consider the Suffolk Wildlife Trust's work to ensure the protection of critically important natural landscapes across Suffolk	The natural landscapes have been considered through extensive consultation relating to Biodiversity Net Gain and bespoke landscape and ecological mitigation detailed in the Biodiversity Net Gain Report (Document Reference 7.1) and the Outline Landscape and Ecology Management Plan (LEMP) (document reference 7.4).			X	
9-2.1652	Concern about the scale of loss of vegetation due to the Project	The project has made significant effort to avoid impacting vegetation where at all possible through careful routeing and siting. Where vegetation loss is unavoidable National Grid is committed to replacement planting and achieving 10% biodiversity net gain (BNG)			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		with wider environmental and societal benefits, details of which are set out in the Biodiversity Net Gain (BNG) Report (document reference 7.1) and the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4). The 10% BNG target for the Project is currently voluntary and aligned with our corporate sustainability commitment.				
9-2.1653	Suggest that National Grid should consult with badger groups across the Project area (e.g. on any sett closures necessary)	Historic records of badger have been obtained from local record centres across the Order Limits and within 2 km. Detailed badger surveys have also been undertaken across the Project, in order to get an accurate picture of the local badger territories. A detailed impact assessment on badger has been undertaken and is included in Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8). National Grid is agreeing the required badger mitigation measures across the route with Natural England. All measures would be in line with current guidelines and under Natural England licence where required.			X	
9-2.1654	Criticism that the List of Competent Experts in Appendix 1.1 of the Preliminary Environmental Information Report (PEIR) indicates that the qualifications or experience for the purposes of an otter survey is absent, and that the reference to "specialising in ornithology" suggests that the requisite qualifications or experience of the "expert" to carry out otter surveys are missing (the Government Website states that ecologists who	All lead surveyors undertaking otter surveys on the Project had the required knowledge, skills and practical experience as outlined within the CIEEM Competencies Guide. While there is no specific qualification or survey licence required to undertake otter surveys, the surveyors leading the surveys were all professional ecologists and full members of CIEEM (the professional body for ecologists) and therefore considered experts as set out in the Government guidance.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	undertake otter surveys must be qualified and experienced to carry out surveys for otters, and that they must have specific qualification or experience to carry out otter surveys)					
9-2.1655	Concern that the Project will impact Barbastelle bats in Essex (there are 3 roost records and 21 activity records for the rare Barbastelle bat in Essex) / Suggest Barbastelle bats will need adequate assessment to avoid severance to foraging and commuting routes within any sustenance zones of a maternity colony, and that where hedge crossing or removals are necessary to retain connectivity during construction that camouflaged netting is attached (e.g. this will be needed to enable bat species to continue to use affected hedgerows) / Suggest that National Grid provide a detailed assessment of hedgerows throughout the scheme corridor and their value for bats, alongside a mitigation and compensation strategy, and that National Grid bear in mind the recent definition of favourable conservation status for Barbastelle bats published by Natural England	A range of bat species surveys have been undertaken across the Project's proposed route. The results are outlined in Chapter 8: Ecology and Biodiversity (document reference 6.8) and Appendices 8.9 to 8.11 (document reference 6.8.A9 - 6.8.A11) of Environmental Statement (ES). Appropriate mitigation would be implemented where impacts are identified as agreed with Natural England and the Local Planning Authority (LPA) as relevant.		X	X	
9-2.1656	Requests future clarification of the method used (i.e. habitat parameters) for determining the Water Vole habitat suitability of a watercourse, and more detail as to how the issue of dense vegetation was resolved so that it did not present a significant survey constraint	The methodology used and the results are outlined in Chapter 8: Ecology and Biodiversity (document reference 6.8) and Appendix 8.13: Otter and Water Vole Report (document reference 6.8.A13) of the Environmental Statement (ES). Appropriate mitigation would be implemented where impacts are identified as		X

		agreed with Natural England and the Local Planning Authority (LPA) as relevant.				
9-2.1657	Request that full arboricultural impact assessments are submitted in accordance with British Standard 5837:2012, and that the surveys are completed in advance of a design being fixed to prevent any conflict with high value trees, woodlands and hedgerows. Once the design is fixed, an Arboricultural Method Statement (AMS) and accompanying Tree Protection Plan (TPP) will be required to ensure retained trees are suitably protected throughout the course of the Project.	<p>Appendix 13.6: Arboricultural Impact Assessment (AIA) (document reference 6.13.A6) has been submitted as part of the Environmental Statement (ES). The AIA has been prepared in accordance with BS 5837:2012. Data collected during the arboricultural surveys was used to inform the Project design.</p> <p>An Arboricultural Method Statement will be produced following detailed design and include details of tree mitigation measures.</p>		X		
9-2.1658	Concern that the Project may result in the loss of veteran trees / Suggest that a veteran tree assessment coincides with any other arboricultural surveys to identify any veteran trees that are within 15 metres of the application area	<p>Detailed arboricultural surveys have been undertaken across the route, which included an up to 30m buffer beyond the Order Limits to identify veteran trees. The results have been used to inform the iterative design process, details of which are presented in Environmental Statement (ES) Appendix 13.6: Arboricultural Impact Assessment (AIA) (document reference 6.13.A6).</p> <p>National Grid has prepared an Ancient Woodland and Veteran Tree Strategy (see Appendix B of the Outline Landscape and Ecological Management Plan (document reference 7.4)). This strategy sets out the ancient woodland and veteran tree surveys undertaken on the Project, the impacts and proposed mitigation measures.</p>		X		
9-2.1659	Suggest that trenchless underground cable crossing works for the Project where a main river is crossed	While we acknowledge the importance of avoiding disruption to fish spawning, we cannot commit to a	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	should be programmed to avoid the coarse fish close season (15th March to 15th June inclusive) where possible to prevent disruption to fish spawning	specific schedule as we need to maintain flexibility in our construction approach. However, we will ensure that mitigation requirements associated with works on main rivers, as agreed with the Environment Agency, will consider the presence of fish. Required fish mitigation is included within the Outline Landscape and Ecological Management Plan (document reference 7.4). The entry and reception pits and the depth of the trenchless crossings at river locations will be kept sufficiently away as to not ecologically impact the river.				
9-2.1660	Concern about impact of offshore energy transmission cables on marine habitats / species (if the Project were to change)	Offshore energy transmission cables are not currently proposed as part of this Project. If any design changes were made to this Project, they would need to be reviewed and be determined through the appropriate consenting mechanism. There are established processes to ensure the public and stakeholders are informed, and any potential environmental impacts are assessed.			X	
9-2.1661	Concern about impact of the Project on non-statutory Local Wildlife Sites (LoWS) in Essex	Non-statutory designated sites are addressed in Chapter 8: Ecology and Biodiversity (document reference 6.8) and Appendix 6.16: Designated Sites (document reference 6.8.A16) of the Environmental Statement (ES). Appropriate mitigation would be implemented where impacts are identified as agreed with Natural England (NE) and the Local Planning Authority (LPA) as relevant.			X	
9-2.1662	Request for more detail from National Grid regarding how impacts will be mitigated through design and	A range of protected species and habitat surveys have been undertaken and the results are outlined in Chapter			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>during the construction and operational phases, as well as information about potential limitations the scheme might place on habitat restoration and management activities in the vicinity of the overhead lines and pylons. With this, request for evidence that the mitigation hierarchy has been followed and measures to avoid ecological impacts on the following have been considered:</p> <ul style="list-style-type: none"> - Impacts of undergrounding cables where route passes through Dedham Vale AONB - Significant habitat loss, including the removal of a considerable number of trees, at Springfield Farm, north of Black Brook in Section C - Habitat losses impacting a number of non-statutory Local Wildlife Sites (LoWS) in Essex, including areas of ancient woodland - Impacts on hazel dormice, bats and birds 	<p>8: Ecology and Biodiversity (document reference 6.8) and Appendices 8.1 to 8.16 (document reference 6.8.A1-6.8.A16) of the Environmental Statement (ES). Appropriate mitigation would be implemented where impacts are identified as agreed with Natural England (NE) and the Local Planning Authority (LPA) as relevant. The Biodiversity Net Gain (BNG) Report (document reference 7.1) – including the consideration of wider environmental benefits commits National Grid to delivering 10% BNG and specific locally designated site, habitat and protected species mitigation is detailed within the Outline Landscape and Ecological Management Plan (OLEMP) (document reference 7.4)</p>				
9-2.1663	<p>Request that National Grid submit detailed proposals within the Environmental Statement (ES) for monitoring hazel dormice to ensure that the Project delivers a proven positive outcome for hazel dormice and contributes to wider data resources and the research needed to aid the recovery of the species</p>	<p>National Grid notes the respondent's feedback. The 2023-2024 dormouse survey results are outlined in Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8). A draft dormouse licence has been prepared and agreed in principle with Natural England. Any required dormouse monitoring requirements will be undertaken, as agreed with Natural England, are detailed within the draft licence documentation.</p>			X	
9-2.1664	<p>Suggest that the asset-based tree valuation system, CAVAT (Capital Asset Value for Amenity Trees), for</p>	<p>Detailed arboricultural surveys have been undertaken across the whole route and the results have been used</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>the UK should be utilised by National Grid to understand the impact of individual tree loss in monetary terms and required compensation measures, including the below:</p> <ul style="list-style-type: none"> - The use of i-Tree to calculate the replacement value of each tree and the benefits it provides in terms of carbon sequestration, carbon storage, air pollution removal and rainwater retention The value of the “ecosystem services” provided for urban trees; or, - The use of i-Tree Eco suite of tools to ensure that compensation measures are also met for any replacement planting for the loss of ecosystem services 	<p>to inform design, details of which are presented in Environmental Statement (ES) Appendix 13.6: Arboricultural Impact Assessment (document reference 6.13.A6). A pre-commencement arboricultural survey will also be undertaken post consent prior to works starting and the results will be used to inform detailed design.</p> <p>Appendix B: Ancient Woodland and Veteran Tree Strategy of the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) sets out the ancient woodland and veteran tree surveys undertaken on the Project, the impacts and proposed mitigation measures.</p> <p>Detailed woodland UKHAB surveys and National Vegetation Classification (NVC) woodland surveys have also been undertaken to determine the presence of ancient woodland, above and beyond that identified through the desk study. Results of these surveys are presented within the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8) and specifically the habitat and NVC reports at Appendix 8.1: Habitat Report (document reference 8.8.A1) and Appendix 8.2: National Vegetation Classification Report (document reference 6.8.A2) of the Environmental Statement (ES).</p> <p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the Environmental Impact Assessment (EIA). The LVIA includes an assessment on both landscape character and visual amenity during construction and operation. The LVIA is presented in</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13). The assessment takes into consideration the temporary and permanent effects of vegetation loss as a result of the Project.</p> <p>The type and current condition of woodland/scrub habitats have been included as part of the baseline Biodiversity Net Gain (BNG) Report (document reference 7.1) and would be mitigated/compensated for based on the requirement defined within the BNG metric. National Grid is committed to adhering to the habitat trading rules within the mitigation approach.</p> <p>National Grid has committed to a 3:1 replacement for individual trees and individual trees within small groups. The Project will prioritise the replanting for individual trees within the Order Limits, offsite provision may however be required. Details of the onsite tree planting will be provided in accordance with the final LEMP or the Reinstatement Planting Plan secured in the draft DCO (document reference 3.1).</p> <p>The comments are noted regarding Capital Asset Value for Amenity Trees (CAVAT) and iTree, National Grid are not undertaking these assessments.</p>				
9-2.1665	<p>Request that National Grid provide their analysis and interpretation of the results of wintering and passage bird surveys (as presented in Appendix 8.5), and that emphasis is put on mitigation where surveys indicate potential conflicts (e.g. as whilst the collation of data on recorded impacts can help to develop</p>	<p>Impacts to over wintering and passage birds have been considered throughout the routing of the Project and a range of wintering bird surveys have been conducted. The results of the passage and over wintering bird surveys are outlined in Chapter 8: Ecology and Biodiversity (document reference 6.8) and Appendix 8.8:</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	understanding, there is currently no statistical model available which would provide a robust assessment of potential mortality. Collisions are usually site-, season- and species-specific, and a generic collision risk model is unlikely to accurately predict levels of mortality). In cases where impacts are likely to be severe, and mitigation may not reduce this sufficiently, suggest that bespoke collision risk models should be used if they are based on the best available information from the site and on the attributes and status of the species of concern	Wintering Bird Report (document reference 6.8.A8) of the Environmental Statement (ES). The report outlines target and secondary bird species based on conservation status and flight behaviour (concentrating on those susceptible to collision), identifying where such species have been identified at collision height through survey results. Appropriate mitigation (such as bird deflectors) will be implemented where collision risk impacts are identified as agreed with Natural England (NE) and the Local Planning Authority (LPA) as relevant.				
9-2.1666	Suggest that any habitat creation or restoration included as part of the Project should maximise its contribution towards the restoration of ecological connectivity and delivery of the emerging Nature Recovery Network	National Grid notes the respondent's feedback. The Biodiversity Net Gain (BNG) Report (document reference 7.1) including the consideration of wider environmental benefits and associated Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) includes measures, within the Environmental Areas, for habitat management and maintenance where new habitats have been created or enhanced for BNG.			X	
9-2.1667	Suggest that mitigation for the Project should include river restoration or enhancements to reprofile/naturalise riverbanks, improve fish passage for migratory species such as European eel and brown trout, and contribute to natural flood risk management through creation of new wetland areas	National Grid notes the respondent's feedback. The Biodiversity Net Gain (BNG) Report (document reference 7.1) includes the consideration of wider environmental benefits and associated Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) includes River Condition Assessments and includes measures, for riparian habitat			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		management and maintenance where habitats would be enhanced for BNG.				
9-2.1668	Suggest that offsetting should be delivered throughout Norfolk, Suffolk, and Essex as part of the Project (in addition to net gain)	<p>National Grid notes the respondent's feedback. Biodiversity is not physically bound by Local Planning Authority boundaries and therefore a holistic approach is proposed for any off-site BNG, with the aim to deliver a biodiversity legacy ideally in each of the three counties crossed by the Project (Norfolk, Suffolk and Essex). Any off-site Biodiversity Net Gain (BNG) units that are required will be targeted at key off-site locations based on National Grid's site selection criteria, which includes the requirement for provision of additional environmental and societal benefits alongside the necessary biodiversity units. This will also include preference given to local sites, but will take into consideration other factors.</p> <p>Full details on the off-site requirement is detailed within the Biodiversity Net Gain report (document reference 7.1).</p>			X	
9-2.1669	Suggest that there should be no works authorised to any tree subject to a tree preservation order as part of the Project, unless demonstrated to be unavoidable, in which case it should be agreed with the relevant local planning authority (LPA) on a case-to-case basis so that appropriate compensation can be agreed and secured	Environmental Statement (ES) Appendix 13.6: Arboricultural Impact Assessment (document reference 6.13.A6) references Tree Preservation Orders (TPOs). Local planning authorities have been consulted on the Project and able to review against their TPOs.		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.1670	Concern that the ecological section of the Preliminary Environmental Information Report (PEIR) has predominantly been informed by the results of desk top studies and aerial Phase 1 habitat surveys and, as such, the surveys of protected species and species of principal importance are incomplete. With this, suggest that surveys should be completed for land within the entirety of the red line (Draft Order Limits for the Project) and appropriate buffer prior to the start of the detailed design (e.g. in addition to the pre-construction surveys proposed as part of the Construction Environment Management Plan (CEMP), to ensure that up to date information is available at the commencement of construction)	A range of protected species and ecological surveys have now been undertaken across the Order Limits and the results are outlined in Chapter 8: Ecology and Biodiversity (document reference 6.8) and Appendices 8.1 to 8.16 (document reference 6.8.A1-6.8.A16) of the Environmental Statement.		X		
9-2.1671	Suggest that slow worms and common frogs should be included within the list of Species of Principal Importance in the Preliminary Environmental Information Report (PEIR) Table 8.1, and their presence should be assumed where suitable habitat is present	A range of protected species including reptile surveys have been undertaken and the results are outlined in Chapter 8: Ecology and Biodiversity (document reference 6.8) and Appendices 8.1 to 8.16 (document reference 6.8.A1-6.8.A16) of the Environmental Statement (ES). Specific mitigation has been included for all reptiles including slow worm within the Outline Landscape and Ecological Management Plans (LEMP) (document reference 7.4) relevant for all areas of suitable habitat. Common frogs are not Species of Principal Importance under S41 of the Natural Environment and Rural Communities Act 2006 and are therefore not referred to as such or included within ES.		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.1672	Suggest that the draft Outline Code of Construction Practice should include a sensitive lighting to ensure that ecological receptors are protected at night as well as during the day, and suggest that the lighting strategy should comply with the Institution of Lighting Professionals (ILP) and Bat Conservation Trust (BCT)'s Guidance Note 8 Bats and Artificial Lighting	The requirement for ecologically sensitive lighting measures, including for bats, has been included within the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4). This will include compliance with the Institution of Lighting Professionals and Bat Conservation Trust 's Guidance Note 8 Bats and Artificial Lighting. Detailed lighting strategies for compounds/Cable Sealing End (CSE) compounds/substations will be produced where necessary post consent as part of the Final LEMP.		X		
9-2.1673	Suggest that the Ecological Clerk of Works for the Project should be accredited by the Chartered Institute of Ecology and Environmental Management (CIEEM)	Details on the implementation of the site checks and monitoring and suitable responsible personnel has been presented within the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4). This includes reference to a suitably qualified ECoW.		X		
9-2.1674	Suggest that a non-native species protocol and biosecurity protocol (complaint with BS42020:2013) should be included within the Code of Construction Practice	Non-native invasive species information and relevant protocol in line with BS42020:2013 have been incorporated into the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4).		X		
9-2.1675	Suggest that the final check for nesting birds should be no more than 24 hrs in advance of works (rather than 48 hrs), and that Construction Exclusion Zones (CEZs) for nesting birds should be detailed in the Construction Environmental Management Plan (CEMP). With this, the Environmental Statement (ES) for the Project should be informed by recent British Trust for Ornithology (BTO) guidance on the	A detailed assessment on breeding birds is included within Chapter 8: Ecology and Biodiversity (document reference 6.8) and specifically Appendix 8.7: Bird Breeding Report (document reference 6.8.A7) of the Environmental Statement (ES). Details on nesting bird protocols are included within Section 6 of the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4).		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	bird nesting period (e.g. as harm can still occur to young birds who have left the nest but are still dependant on its parents)	This includes reference to the Ecological Clerks of Works (ECoW) undertaking nesting bird checks no more than 24-48 hours before vegetation removal is undertaken in line with British Trust for Ornithology (BTO) guidance and should an active nest be found, for the ECoW to determine a suitable exclusion buffer based on the location, species and stage of nest.				
9-2.1676	Concern that National Grid has not considered the Habitat protection programme (e.g. as launched by National Grid in the US to monitor and protect local habitats)	The Project is compliant with all relevant National Grid internal policy requirements, including the delivery of 10 % Biodiversity Net Gain.			X	
9-2.1677	Suggest that a countersigned Impact Assessment and Conservation Payment Certificate (IACPC) should be provided for the Project	A countersigned Impact Assessment and Conservation Payment Certificate for the Great Crested Newt District Level Licence would be provided once finalised with Natural England based on final designs.		X		
9-2.1678	In relation to Tables 8.5 and 8.6 in the Preliminary Environmental Information Report (PEIR), suggest that an impact of the Project can be ruled out for Burgate Wood Site of Special Scientific Interest (SSSI), Combs Wood SSSI, Elmsett Park Wood SSSI and Bullock Wood SSSI	National Grid notes the respondent's feedback. Updated information on Sites of Special Scientific Interest (SSSI's) and potential impacts are outlined in Chapter 8: Ecology and Biodiversity (document reference 6.8) of the Environmental Statement (ES). While these four SSSI are identified as being located within our Study Area, no impact pathways have been identified.	X			
9-2.1679	Suggest that for each protected species likely to be affected by the Project, National Grid obtain additional pre-licensing species advice from Natural England prior to the application submission to further reduce uncertainty and risk of delay at the formal	National Grid is consulting with Natural England on the protected species mitigation approaches and is reviewing draft licence applications with the intention of obtaining letters of no impediment for bats, badger, water vole, dormouse and otter. The protected species	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	application stage. Natural England will review draft protected species licence applications and, if satisfactory, provide Letters of No Impediment (LoNI) ideally with the Development Consent Order (DCO) application to ensure the Examining Authority (ExA) has the required certainty	licenses required are listed within the Other Consents and Licences document (document reference 5.5).				
9-2.1680	Suggest that construction of the Project should be outside of bird nesting season	While every effort will be made to remove vegetation outside of the bird nesting season, given the large scale nature of the project this may not always be possible. Appropriate nesting bird mitigation measures, including pre-commencement nesting bird checks, have therefore been included within the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4).			X	
9-2.1681	Suggest full Tree Survey, Arboriculture Impact Assessment (AIA) and Arboriculture Method Statement where trees are directly impacted by either trenching, tower positions, or infrastructure / Suggest a clear Tree Protection Plan (TPP) for the entire order limits / Criticism that it is impossible to understand the level of removal and quality of landscape features proposed to be removed, which has a knock on effect for assessment of harm in landscape and ecological terms.	Appendix 13.6: Arboricultural Impact Assessment (AIA) of the Environmental Statement (ES) (document reference 6.13.A6) identifies all trees which have the potential to be affected by the Project, assesses the preliminary impact of the Project on those trees, and recommends protection measures as are necessary to ensure the health of retained trees. An Arboricultural survey has been completed, details of which are presented in Appendix 13.6: Arboricultural Impact Assessment (AIA) of the ES (document reference 6.13.A6). An Arboricultural Method Statement detailing tree protection will be developed during detailed design.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		The information from the Arboricultural survey has been used to inform the effects identified in the landscape assessment presented in Environmental Statement (ES) Appendix 13.2: Landscape Baseline and Assessment (document reference 6.13.A2). Information presented in the AIA has been used to identify likely disturbance, alterations or losses to vegetation identified within landscape character areas and taken into consideration when assessing the level of effect on landscape character. The AIA data has also been used to inform the ecological survey scope and impact assessment detailed within Chapter 8: Ecology and Biodiversity (document reference 6.8), the associated Appendices 8.1 to 8.16 (document reference 6.8.A1-6.8.A16) of the (ES) and details in the Outline Landscape and Ecological Management Plan (document reference 7.4).				
9-2.1682	The Applicant should also consider Section 2.5 of NPS-5, which sets out the following: “When planning and evaluating the proposed development's contribution to environmental and biodiversity net gain, it will be important – for both the applicant and the Secretary of State – to supplement the generic guidance set out in EN-1 (Section 4.5) with recognition that the linear nature of electricity networks infrastructure can allow for excellent opportunities to: i. reconnect important habitats via green corridors, biodiversity stepping zones, and reestablishment of appropriate hedgerows; and/or ii. connect people to the	National Grid notes the respondent's feedback. The Project has sought to achieve a minimum of at least 10% Biodiversity Net Gain with wider environmental and societal benefits. The Project would deliver an overall net improvement in environmental value (including biodiversity) in the area through a combination of on-site and off-site mitigation. This is reported in the Biodiversity Net Gain Report (document reference 7.1) submitted as part of the Development Consent Order (DCO) application. With regard to footpath and cycleway improvements, the Project itself would not permanently impact/change		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	environment, for instance via footpaths and cycleways constructed in tandem with environmental enhancements."	existing highway infrastructure or Public Rights of Way (PRoW) and that temporary PRoW diversions and haul roads are currently assumed to be removed following construction.				
9-2.1683	In relation the PEIR Vol 1 Main Text, April 2024 ('Wintering birds'), suggest that species recorded should be listed in their international context (e.g. northern lapwing (IUCN NT), Eurasian curlew (IUCN NT), curlew sandpiper (IUCN NT))	Common UK references have been used within Chapter 8: Ecology and Biodiversity (document reference) and its associated Appendices A1 – A16 (document reference 6.8.A1 - 6.8.A16) of the Environmental Statement (ES).			X	
9-2.1684	Dedham Vale National Landscapes (formally known as AONB) and Local Wildlife Sites. There are still concerns regarding the impact to Dedham Vale National Landscapes from the potential scale of vegetation needs to be removed and the limitations to its replacement to not affect the buried cables. It is noted that a trenchless approach will be taken to minimise the impact, but there is no detail on how this will be delivered. Other than the approach of the removal of from 40m (overhead line) up to 120m wide swathes of vegetation (underground) will have significant impact on other designated sites and Local Wildlife Sites.	<p>The landscape impact on Dedham Vale is considered in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13), and Appendix 13.5: National Landscape Assessment Study (document reference 6.13.A5). The assessment concludes that there would be significant effects on the special qualities of the National Landscape during construction, as a result of the proposed underground cable. Once the Project is operational and the land has been restored, effects on the special qualities of the National Landscape would not be significant.</p> <p>Our proposals include a total of approximately 20 km of underground cable through and in the vicinity of the Dedham Vale National Landscape, which includes proposals for trenchless crossings which will minimise the requirement for vegetation removal.</p> <p>The installation of underground cabling would broadly adopt the following process. Initially, the removal and storage of topsoil of a width sufficient to allow for</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		construction machinery and the digging of the trenching required for underground cabling. Ducting is then installed and trenches backfilled. The underground cables would then be pulled through the ducts. Hedgerows and shrubs would be reinstated where practicable. At this point, an appropriate grass seed mixture would be sown to encourage regrowth. It is anticipated that after a period of time following completion of the construction of the underground cabling, and replanting of hedgerows and vegetation there would be minimal visibility of the works at ground level.				
9-2.1685	Essex Green Infrastructure Strategy (2020) and Essex Green Infrastructure Standards (2022). It is noted that the PEIR Volume 1 (page 165, 174 of 593 para 8.2.30) makes reference to both the Essex GI Strategy and Essex GI Standards to inform the Ecology and Biodiversity section is welcomed. The standards can be applied to inform the GI/ Landscape Strategy and landscape design. The delivery of multifunctional GI is recommended. Through the right design, right GI, and right location of GI it can deliver more than one function and contribute to more than one priority, providing cost efficiency in the long term to deliver better outcomes.	National Grid notes the respondent's feedback. The Essex Green Infrastructure Strategy (2020) has informed the development of landscape proposals around the East Anglia Connection Node (EACN) substation and Cable Sealing End (CSE) compounds in Essex. Indicative landscape proposals for substations and CSE compounds are provided in Appendix D to the Outline Landscape and Ecological Mitigation Plan (LEMP) (document reference 7.4).		X		
9-2.1686	ECC is the 'Responsible Authority' for delivering the GELNRS working closely with the Essex Local Nature Partnership (LNP) to provide direction and	National Grid notes the respondent's feedback.		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	ensure key stakeholders are engaged. The GELNRS is being prepared for completion by Mid2024. The GELNRS will form the baseline for habitat information, which in turn will generate action to promote biodiversity management and improvement (including identifying strategic opportunity areas) and will provide further useful information.					
9-2.1687	<p>We would recommend the following conditions:</p> <p>Condition 1 – Biodiversity Net Gain Site Wide Strategy and Zone Wide Biodiversity Gain Plan</p> <p>To produce a Biodiversity Net Gain Site Wide Strategy that sets a framework and principles for the whole of the N2T project for the delivery and enhancement of Biodiversity Net Gain. Before or concurrently with the first application for the approval of reserved matters for each stage of the N2T delivery, a Zone Wide Biodiversity Gain Plan (ZWBGP) that accords with the principles set out in the Biodiversity Net Gain Site Wide Strategy (SWS) shall be submitted to and approved in writing by the Local Planning Authorities. The ZWBGP shall include the following:</p> <ul style="list-style-type: none"> i.Strategic aims and objectives of management, including securing biodiversity net gain using the most up to date DEFRA metric as at the date of the planning application submission. ii.Description and evaluation of the features to be managed. iii.Framework of management options to achieve aims and objectives as set out in the SWS. iv.Detail of the roles and responsibilities of personnel 	<p>The Environment Act 2021 introduces a mandatory requirement for 10% Biodiversity net gain (BNG) for development (subject to certain exemptions), however this requirement is not yet in force for development consented pursuant to a Development Consent Order. Current indications are that it will apply to DCO applications submitted from May 2026 however this is yet to be confirmed.</p> <p>National Grid has committed to deliver Net Gain of at least 10% for BNG on all construction projects. The 10% BNG target for the Project is currently voluntary and aligned with our corporate sustainability commitment.</p> <p>The Biodiversity Net Gain (BNG) report (document reference 7.1) sets out the principles of BNG project wide and provides habitat baseline, likely impacts and anticipated onsite mitigation and the required number of offsite biodiversity units. Following consent of the project detail design will be undertaken and the BNG metric will be re-run. The commitment to 10% BNG will be secured through a Unilateral Undertaking (UU) given under S.106 of the Town and Country Planning Act 1990.</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	involved in delivery of the ZWBGP. v.Framework for the monitoring of ecological features, target condition and remedial measures. vi.Framework for long term monitoring and management including funding. The approved ZWBGP shall be implemented in accordance with the details approved in writing by the local planning authority. Reason: In order to demonstrate measurable biodiversity net gains and allow the local planning authorities to discharge its duties under the NPPF (2023) and in the interest of wildlife habitat protection and achieving enhanced biodiversity through a range of measures in accordance with Local Plan policies Plan.					
9-2.1688	Condition 2 - Zone wide Habitat Management and Monitoring Plans Planning applications subject to mandatory BNG shall require a Habitat Management and Monitoring Plan to be submitted to and approved in writing by the local planning authority. To ensure that the net gain in biodiversity agreed upon in the Biodiversity Gain Plan/ Assessment shall be implemented in full within a 30-year period. The Habitat Management and Maintenance Plan shall include 30-year objectives, management responsibilities, maintenance schedules and a methodology to ensure the submission of monitoring reports. Each Habitat Management and Maintenance Plan shall demonstrate how it accords with the principles in the	Following detailed design post-Development Consent Order (DCO) consent, final versions of the landscape design plans will be produced for each Environmental Area. Details of the management and monitoring of the habitats within these Environmental Areas will be incorporated in the final version of the relevant LEMP. A biodiversity plan is a requirement of a Town and Country Planning Act (TCPA) application and will not be delivered for this Project prior to commencement with Biodiversity Net Gain (BNG) not mandatory for Nationally Significant Infrastructure Projects (NSIP). Instead, a final BNG strategy will be provided to the Local Planning Authorities (LPA's) for information prior		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>Zone Wide Biodiversity Gain Plans approved and should cover: • Details of the management and maintenance operations, actions and work schedule for years 1 – 5 and with broader management aims for the lifetime of the BNG commitment of 30 years. • Proposals for monitoring needed to measure the effectiveness of management, including methods, frequency and timing. • Details of the roles and responsibilities for implementation and monitoring, as well as the legal, financial, and other resource requirements for BNG delivery, are secured. • Including setting out the reporting procedures and options for remedial works and adaptive management to account for necessary changes in work schedule to achieve the required targets if needed.</p> <p>Reason: In order to ensure measurable net gains are being delivered and effectively maintained and in accordance with LPA's BNG Policy, allowing the LPA to discharge its duties under the NPPF (2023).</p>	to the electrification of the Project, in line with details outlined in the Unilateral Undertaking (UU).				
9-2.1689	Condition 3 - Reinstatement and Decommissioning plan A site wide reinstatement and decommissioning plan should be submitted to demonstrate how the working areas will be restored to a natural habitat once the project has been constructed and commissioned. The reinstatement and decommissioning plan should include details of the removal of all equipment, facilities and structures including any subsurface cabling and footings. Any	Details regarding reinstatement following construction and commissioning are provided in Environmental Statement (ES) Chapter 4: Project Description (document number 6.4). Once the Project has been constructed and commissioned, the temporary construction working areas would be removed, and the site reinstated. Haul roads (including temporary bridges and culverts) are likely to be removed unless identified as offering a long-term improvement to the environment		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>access roads created for or maintaining the system shall also be removed and re-planted with an appropriate landscape scheme.</p> <p>Reason: To ensure that the site and its established GI is protected and restored in an appropriate manner consistent with the aims and aspirations of the Landscape and Ecology Management Plan, BNG Plan and GI strategic outcomes.</p>	<p>and land usage during the detailed design (and agreed with the landowner, Lead Local Flood Authority and / or the Environment Agency (where required)). Temporary features such as site welfare, working areas, fencing and scaffolding would be removed. Any stripped topsoil would be reinstated, and the site would be returned to its former use, subject to any planting restrictions or agreements with landowners.</p> <p>Reinstatement would also include landscaping. This is likely to include reseeding grassland areas, replanting hedgerows, and trees. It would also include additional landscape planting in some areas to help screen the new infrastructure from sensitive receptors.</p> <p>Proposed planting is detailed within the Outline Landscape and Environmental Management Plan (LEMP) (document reference 7.4), which outlines proposed locations and specifications of planting, along with required maintenance schedules to ensure the success of the landscaping scheme. Preparation of a Reinstatement Planting Plan is a Requirement of the draft Development Consent Order (DCO).</p> <p>There are currently no specific plans to decommission the Project. It is expected that the transmission of electricity would continue for as long as there is a business case for doing so and that any decommissioning activity would occur decades into the future. To date, relatively few transmission projects have been decommissioned since the main expansion of such infrastructure in the 1950s and 1960s. The cables and</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>pylons for overhead transmission lines are replaced periodically, ordinarily under National Grid's permitted development rights.</p> <p>The pylons comprise open, lattice structures which can be easily dismantled. It is expected that proposals for decommissioning would be subject to separate consenting procedures, including environmental assessment of the proposed activities, and taking account of the baseline as it exists at the time of decommissioning. Environmental Statement Chapter 4: Project Description (document reference 6.4) outlines the works likely required to decommission the permanent features of the Project.</p>				
9-2.1690	<p>In relation to Chapter 4 for the Preliminary Environmental Information Report (PEIR), paragraph 4.8.18, National Grid state for the vegetation clearance of the proposed 400kV overhead line, a 40 m wide swathe will be removed to facilitate construction activities. The respondent notes it is unclear if sections would be felled to ground level with no removal of roots. Additionally, up to 8m of vegetation on either side of the 40m will be managed during construction, operation, and maintenance, potentially affecting an additional 22 m of vegetation on either side. This results in a potential impact corridor of 100 m width, which should be minimised wherever possible.</p> <p>Request the mitigation hierarchy be rigorously</p>	<p>The Environmental Statement (ES) Chapter 4: Project Description (document reference 6.4) provides a description of the Project, including vegetation removal requirements. Further details on vegetation removal and reinstatement are provided in the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4).</p> <p>Vegetation has been avoided where possible and will be retained as far as is practicable.</p> <p>Ecological, landscape and visual impacts and mitigation are reported in ES Chapter 8: Ecology and Biodiversity (document reference 6.8) and ES Chapter 13: Landscape and Visual (document reference 6.13). An Arboricultural Impact Assessment (AIA) is provided in</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	applied to avoid impacts before needing to consider mitigation and compensation.	<p>ES Appendix 13.6: Arboricultural Impact Assessment (AIA) (document reference 6.13.A6).</p> <p>The Trees and Hedgerows to be Removed and or Managed Plans (document reference 2.16) show details on impacts to trees and hedgerows.</p> <p>Where trees are removed for the purposes of excavation works, there is an understanding that excavation works will include for the removal of the tree stem/root plate.</p> <p>National Grid has committed to a 3:1 replacement for individual trees and individual trees within small groups. The Project will prioritise the replanting for individual trees within the Order Limits, offsite provision may however be required. Details of the onsite tree planting will be provided in accordance with the final LEMP or the Reinstatement Planting Plan secured in the draft DCO (document reference 3.1).</p>				
9-2.1691	<p>Criticism in relation to Chapter 8 of the Preliminary Environmental Information Report (PEIR) Paragraph 5.4.53 of National Policy Statement (NPS) EN-1, that the project could provide 'wholly exceptional reasons' to justify the loss of ancient and veteran trees. Ancient and veteran trees are valuable, and without first mitigating the effects of the project on them, the project should not have complete freedom or authority to act on these trees.</p> <p>Criticism of the incomplete information on arboriculture (including ancient and veteran trees), biodiversity and protected species and habitats</p>	<p>Survey work has been undertaken across the Project and has included detailed woodland UKHAB surveys and National Vegetation Classification (NVC) woodland surveys to determine the presence of ancient woodland, above and beyond that identified through the desk study. Results of these surveys are presented within the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8) and specifically the habitat and NVC reports at Appendix 8.1: Habitat Report (document reference 6.8.A1) and Appendix 8.2: National Vegetation Classification Report (document reference 6.8.A2) of the ES.</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>(including woodland, trees and hedgerows) resulting in uncertainty that design changes mitigate risks to ancient trees.</p> <p>Criticism of the conflicting information provided in the Environmental Statement (ES). Criticism of the understanding of the impacts of vegetation clearance. The ES states that habitats including hedgerows would be reinstated, yet section 4.8.18 suggests large swathes may need to be kept clear or have restricted vegetation. The extent of the impact from vegetation clearance is unclear, making it difficult to compare existing and proposed conditions as well as assess if appropriate measures have been taken to mitigate or justify loss of vegetation.</p> <p>Criticism of the lack of agreement of methodologies and baseline information set out in the PEIR, which has delayed the process of mitigating environmental risks.</p> <p>Criticism that the PEIR is ineffective at providing information needed to understand the nature of significant impacts or evaluate the wider planning balance, including policy compliance.</p>	<p>All direct impacts on ancient woodland have been avoided with the exception of those pockets where existing third party infrastructure is also present. Appendix B: Ancient Woodland and Veteran Tree Strategy of the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) sets out the ancient woodland and veteran tree surveys undertaken and all direct or indirect impacts to ancient woodland and sets out proposed mitigation measures.</p> <p>Detailed arboricultural surveys have been undertaken across the whole route and the results have been used to inform design, details of which are presented in Environmental Statement (ES) Appendix 13.6: Arboricultural Impact Assessment (document reference 6.13.A6). A pre-commencement arboricultural survey will also be undertaken post consent prior to works starting and the results will be used to inform detailed design.</p> <p>A range of protected species and other ecological surveys have been undertaken across the Order Limits and the results are outlined in Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8) and Appendices 8.1 to 8.16 (document reference 6.8.A1-6.8.A16) of the ES. The Project Description is detailed within ES Chapter 4 (document reference 6.4) which sets out the construction elements and the associated vegetation impact. Detailed habitat impact calculations have also been provided within ES Chapter 8: Ecology and Biodiversity (document reference 6.8).</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		The scope of the Environmental Impact Assessment (EIA) is included in the Scoping Report (document reference 6.19) which was submitted to the Planning Inspectorate in November 2022 and their Scoping Opinion (document reference 6.20) received in December 2022. This provided the opportunity for statutory bodies to comment on the scope of the EIA which included our approach on study areas, data collection and baseline conditions. We also discussed and agreed survey scope with stakeholders (including Statutory Environmental Bodies and Local Planning Authorities) following the Scoping Opinion (document reference 6.20) to ensure a robust baseline assessment. The full ES can be found in Volume 6 of the Development Consent Order application.				
9-2.1692	Criticism that whilst the respondent is supportive of the methodology for Hazel Dormouse set out Appendix 8.8 of the Preliminary Environmental Information Report (PEIR) technical appendices, and is current best practice, the methodology is relatively out of date based on current understandings of dormouse conservation and ecology. Suggestion to consider research undertaken by Bullion et al. 2021 and to consult with Essex and Suffolk Dormouse Group as well as identifying key habitat corridors in the case of hedgerow removal. Criticism that no dormouse surveys have been proposed within Section E and concerns that Dormouse considerations have not been considered	Dormouse surveys have been undertaken at 26 locations across the Project (including three within Section E), during the appropriate seasonal windows within 2023 and 2024. Dormouse surveys were undertaken at Goodmans Farm, Little Leighs, but were scoped out at Rivenhall Thicks as the woodland is avoided by the Project. The scope of surveys was agreed in advance with Natural England. Dormouse surveys were undertaken in line with the most up to date dormouse survey guidelines at the time of survey. A precautionary approach to vegetation removal, in line with dormouse mitigation guidance, has been included within the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) to		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	at Goodmans Farm, Little Leighs and Rivenhall Thicks. The habitat is likely suitable and Hazel Dormouse records have been recorded around the Little Leighs area from non-published sources.	mitigate for the low risk of dormouse in other areas. Full dormouse survey results are presented within the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8) and Appendix 8.12: Hazel Dormouse Report (document reference 6.8.A12) of the ES.				
9-2.1693	Criticism that potential impacts on Riverhall Thicks Ancient Woodland have been missed in the Preliminary Environmental Information Report (PEIR). Suggests that further ecological buffers will be required for Rivenhall Thicks, Parson's and Queen's Wood and Halhook Row Ancient Woodlands located on the draft Order Limits.	Rivenhall Thicks, Hallhook Row and Parson's & Queen's Wood are all identified as ancient woodland and included within Appendix B: Ancient Woodland and Veteran Tree Strategy of the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4).		X		
9-2.1694	Suggests that tree retentions should be prioritised wherever practicable to follow the National Planning Policy Framework (NPPF) which identifies that all trees, no matter their category, contribute to the mitigation and adaption of climate change. Concern that canopies of existing trees will not be matched for many years and could lead to decline in the ecosystem if they are removed.	The overarching aim is to retain vegetation wherever practicable in accordance with good practice measures, as outlined within the Outline Code of Construction Practice (document reference 7.2). Where reasonably practicable, construction elements (such as working swathes, accesses, laydown and temporary construction compounds) will be kept to the strict minimum required and micro-sited to avoid impacts on ecologically important features. The Project Arboricultural Clerk of Works will demarcate sensitive habitats to ensure contractors protect as much vegetation as possible. All construction elements likely to impact on retained trees will be addressed within an Arboricultural Method Statement (AMS) to be produced following detailed		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>design. The AMS will include protection measures including tree protection fencing.</p> <p>All trees (which may include individual trees or collectively as groups, tree belts and woodlands) within the Order Limits and immediate surrounds have been surveyed and categorised in accordance with British Standard 5837:2012 Trees in relation to design, demolition and construction – Recommendations, where land access was granted. The results of the survey can be found in Appendix 13.6:Arboricultural Impact Assessment (document reference 6.13.A6) of the Environmental Statement (ES).</p> <p>National Grid has committed to delivering at least 10 % Biodiversity Net Gain (BNG) with wider environmental and societal benefits despite it not yet being mandatory for Nationally Significant Infrastructure Project applications. National Grid has also committed to a 3:1 replanting ratio for individual trees and individual trees in small groups. Any loss of woodland/scrub habitat is included within the BNG assessment and the required mitigation/enhancement has been included based on the standard multipliers within the statutory BNG metric (as agreed with Natural England).</p> <p>Any habitats included within the BNG onsite mitigation will be monitored and managed by National Grid for 30 years in line with commitments made within the Biodiversity Net Gain Report (document reference 7.1). Regular site visits will be undertaken by experienced ecologists, to ensure the habitat type and condition meet</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		that prescribed within the Biodiversity Net Gain Report (document reference 7.1). Beyond the 30-year period it is expected that ongoing management will be undertaken by National Grid in line with standard practices around permanent assets.				
9-2.1695	Suggests Volume 3, Technical Appendices - Part 1 of 4; Appendix 8.4 of the Preliminary Environmental Information Report (PEIR), includes information to justify why none of the seven locations for potential breeding bird surveys are located within Section E/the Braintree District.	<p>A pragmatic approach to determining bird survey locations was decided through desk study work and consultation with stakeholders (including Natural England). Breeding bird surveys focused on areas of greatest potential impact to breeding birds due to habitat loss or disturbance. These included areas proposed for 400 kV underground cables, CSE compounds or substation works. None of the above fall within Section E.</p> <p>The scope for breeding bird surveys is set out within the Appendix 8.7: Breeding Bird Report of the Environmental Statement (document reference 6.8.A7) which follows the proposed survey approach as set out within the) Scoping Report (document reference 6.19) and agreed within the Scoping Opinion received from the Planning Inspectorate in December 2022 (document reference 6.20).</p>		X		
9-2.1696	Suggests that new landscape proposals for tree planting on development sites should reflect the recommendations set out in BS5837:2012 (as amended) and BS8545:2014 (as superseded) in Braintree Local Planning Policy (LPP) 65 as well as the suggestion to reflect the best practice guidance	An Arboricultural survey has been completed, details of which are presented in Appendix 13.6: Arboricultural Impact Assessment (AIA) of the Environmental Statement (ES). The document references the best practice guidance set out in British Standards Institute, BS 5837: 2012 Trees in relation to design, demolition		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>set out in BS5837:2012 (as amended) which recommends that trees of higher quality are a material consideration in the development process. Additionally, the proposals should be in general conformity to and contribute to the aims of Braintree District's Tree Strategy.</p>	<p>and construction – Recommendations. Surveys have been undertaken across the whole route and the results have been used to inform design.</p> <p>A pre-commencement arboricultural survey will also be undertaken post consent prior to works starting and the results will be used to inform detailed design. Further to this, an Arboricultural Method Statement detailing tree protection will be developed during detailed design.</p> <p>All direct impacts on ancient woodland have been avoided with the exception of those pockets where existing third party infrastructure is also present. An Ancient Woodland and Veteran Tree Strategy has been appended to the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) which sets out the ancient woodland and veteran tree surveys undertaken and all direct or indirect impacts to ancient woodland and sets out proposed mitigation measures.</p> <p>As detailed in the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4), National Grid has committed to a 3:1 replacement for individual trees and individual trees within small groups. The Project will prioritise the replanting for individual trees within the Order Limits, offsite provision may however be required.</p> <p>Compliance with all relevant British Standard guidance will form an integral part of future works, including BS8545:2014, Trees: From nursery to independence in the landscape, along with cognisance of the</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		recommendations set out in Braintree District Council's Local Plan (2013-2033) policy information set out in LLP 65: Tree Protection, and BDC/067 Tree Strategy.				
9-2.1697	Suggestion in relation to Appendix 8.7 of the Preliminary Environmental Information Report (PEIR) technical appendices, that whilst the respondent is supportive of the methodology set out for bat activity surveys, the radio tracking surveys are not likely to be relevant for Sections E, due to the lack of statutory designations in Braintree that have bats within the citation. Suggestion that where hedge crossings or removals are necessary, the use of Heras fencing with camouflage netting should be considered if hedgerows are identified to be used by commuting Barbastelle to enable them to continue to use their network of hedgerows.	Bat static surveys have been undertaken across the Project. The results of these surveys have been used to identify key bat commuting and foraging routes that will be temporarily impacted by the Project, as reported in Environmental Statement (ES) Chapter 8 of the Ecology and Biodiversity (document reference 6.8). The installation of artificial bat flyways have been proposed at these key locations during construction, which include four locations within Section E. The details of the bat flyways are included within the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4).		X		
9-2.1698	Request to inform choices on species options for restoration planting schemes as well as securing temporary mitigation measures during construction.	Proposed mitigation measures, including replacement planting and protected species mitigation, have been included within the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4). Consultation has been undertaken and three versions of this document have been reviewed by Local Planning Authorities and comments taken onboard.		X		
9-2.1699	Suggest in relation to the arboriculture section of the Preliminary Environmental Information Report (PEIR), that surveys and impact assessments (in accordance with British Standard (BS) 5837:2012)	National Grid notes this comment. An Arboricultural survey has been completed, details of which are presented in Appendix 13.6: Arboricultural Impact Assessment (AIA) of the Environmental		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	should be submitted to assess the quality of the existing trees and identify whether or not trees existing trees are in sufficient condition to pose a constraint on development and will outline the required protection for retained trees. Suggests that surveys should be done in advance of a design being fixed to prevent any conflict with high category trees. Once the design is fixed, an arboricultural method statement and resulting tree protection plan will be required. There may be opportunities to replace trees that do pose a constraint or cannot be retained throughout the construction process with species that will bring more ecosystem benefits to the area long term.	Statement (document reference 6.13.6A). The surveying methodology was defined at the Scoping stage and referred to BS5837:2012. Further to this, an Arboricultural Method Statement detailing tree protection will be developed during detailed design. As detailed in the Outline Landscape and Ecological Management Plan (LEMP), National Grid has committed to a 3:1 replacement for individual trees and individual trees within small groups. The Project will prioritise the replanting for individual trees within the Order Limits, offsite provision may however be required.				
9-2.1700	Suggests that methods to reduce impacts to retained trees, Veteran trees and Ancient Woodland are outlined in the Preliminary Environmental Information Report (PEIR) to demonstrate that there will be no adverse impacts before designs are finalised. Suggest that if any cabling is to go underneath woodlands or plantations, impact moling methodology as outlined within BS5837:2012 should be adopted.	The Preliminary Environmental Information Report (PEIR) was prepared in accordance with the Nationally Significant Infrastructure Projects: Advice Note Seven (June 2020) and was a preliminary document that reflected the Project's proposals at the time of statutory consultation. A complete Environmental Impact Assessment (EIA) has now been carried out and the results are presented in the Environmental Statement (ES) (document reference Volume 6 Environmental Statement) which accompanies the DCO application. Appendix B: Ancient Woodland and Veteran Tree Strategy of the Outline Landscape and Ecological Management Plan (LEMP (document reference 7.4) sets		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		out the ancient woodland and veteran tree surveys undertaken on the Project, the impacts and proposed mitigation measures which includes the adoption of sensitive construction practices within 15 m of a woodland buffer.				
9-2.1701	Suggests where existing trees pose a constraint or their removal is needed, replacement planting opportunities should be incorporated into the design through methods such as native hedgerows and presented with the submissions of a Soft Landscaping Plan within the arboriculture section of the Preliminary Environmental Information Report (PEIR).	<p>Where there are restrictions to tree planting beneath the overhead line and above the underground cables, alternative low height and shallow rooted scrubby species will be incorporated into the planting design. This commitment is included within the Outline Landscape and Ecological Management Plan (LEMP) (document 7.4) and included within the Biodiversity Net Gain (BNG) report (document reference 7.1).</p> <p>National Grid has committed to a 3:1 replacement for individual trees and individual trees within groups. The tree planting strategy will prioritise replanting within the Order Limits, although offsite provision may be required. Offsite tree planting is considered to be landscape compensation. Further detail is provided in the Outline LEMP (document reference 7.4). Additional planting may be considered within the Order Limits at detailed design stage, in locations such as around Tilbury North Substation and the permanent access roads to the East Anglia Connection Node (EACN) substation.</p> <p>Mitigation around substations, substation extensions and Cable Sealing End (CSE) compounds is detailed in the</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4). Where there are restrictions to tree planting beneath the overhead line and above the underground cables, alternative low height and shallow rooted scrubby species will be incorporated into the planting design. This commitment is included within the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and included within the Biodiversity Net Gain (BNG) report (document reference 7.1).				
9-2.1702	Criticism that the majority of land within the draft Order Limits (DOL) is stated as being arable field, but the project also has the potential to impact areas of Priority habitat	While the majority of the Order Limits is made up of arable land there are areas of other habitats present, which include some priority habitats. On the ground habitat surveys and habitat condition assessments have been undertaken across the Order Limits. The results of these surveys are presented in Chapter 8: Ecology and Biodiversity (document reference 6.8) and specifically Appendix 8.1: Habitat Report (document reference 6.8.A1) of the Environmental Statement (ES), which discusses the priority habitats in detail.		X		
9-2.1703	Criticism that arable field margins have not been identified as part of the aerial assessment and affected wood pasture and parklands have been recorded within Rivenhall Thicks but are likely fall under 'lowland mixed deciduous woodland' Priority habitat.	Full on the ground habitat surveys have been undertaken across the Project. Rivenhall Thicks has been identified as ancient woodland and has therefore been avoided by the Project. However as Rivenhall Thicks lies adjacent to the Project Order Limits, precautionary mitigation measures have been included within Appendix B: Ancient Woodland and Veteran Tree		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Strategy of the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4).				
9-2.1704	Concern that the veteran trees between section TB70 and TB75 (denoted by a star symbol) as well as other areas along the route with either trees, Ancient Woodland or semi-natural woodland within 15 m as identified in the Landscape and Visual Assessment (LVIA), are considered irreplaceable habitats and suggests further assessment is required to identify direct and indirect impacts.	<p>Detailed arboricultural surveys have been undertaken across the route and the results have been used to inform the iterative design process, details of which are presented in Environmental Statement (ES) Appendix 13.6: Arboricultural Impact Assessment (AIA) (document reference 6.13.A6).</p> <p>Appendix B: Ancient Woodland and Veteran Tree Strategy of the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) sets out the ancient woodland and veteran tree surveys undertaken on the Project, the impacts and proposed mitigation measures.</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Wildlife / Ecology Impact						
9-2.1705	Suggestion for an additional Veteran Assessment to take place with any other Arboricultural Surveys to identify any Veteran trees that are within 15 m of the route	The Arboricultural survey included a 30 m study area buffer to capture veteran trees. Appendix B: Ancient Woodland and Veteran Tree Strategy of the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) sets out the ancient woodland and veteran tree surveys undertaken on the Project, the impacts and proposed mitigation measures.		X		
9-2.1706	Criticism that the Preliminary Environmental Information Report (PEIR) does not mention unexploded ordnance (UXO) risk. Suggests clarification of the approach is included in the Environmental Statement (ES)	<p>National Grid submitted a Scoping Report (document reference 6.19) to the Planning Inspectorate on 7 November 2022. The Planning Inspectorate (on behalf of the Secretary of State) formally adopted its Scoping Opinion (document reference 6.20) on 14 December 2022 which has informed the scope of the EIA for the Project.</p> <p>As detailed in Chapter 9: Contaminated Land, Geology and Hydrogeology (document reference 6.9) of the Environmental Statement (ES), suitable consideration of the ground conditions in the design, based on data from site-specific ground investigation and assessment, and therefore that any risks from ground instability, chemical aggressivity of the ground, UXO/UXB, ground gases and radon reports, will be considered within the engineering design of the new infrastructure in accordance with good practice.</p>		X		
9-2.1707	Criticism that the Preliminary Environmental Information Report (PEIR) recognises four areas of	Appendix B: Ancient Woodland and Veteran Tree Strategy of the Outline Landscape and Ecological		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	ancient woodland and smaller blocks of valuable woodland that have been omitted. Suggestion that National Grid contact Suffolk Biodiversity Information Service (SBIS) where mapping of smaller features has been undertaken	Management Plan (LEMP) (document reference 7.4) details all ancient woodland present within and adjacent to the Project Order Limits and any proposed mitigation measures. This includes ancient woodlands identified from the national database, local wildlife site citations and on the ground woodland surveys.				
9-2.1708	Criticism that aftercare has not been dealt with in the Preliminary Environmental Information Report (PEIR) / Suggestion that an outcome-oriented approach of dynamic or adaptive aftercare. This implies planting needs to reach agreed growth and survival rates to move forward into the next year of agreed aftercare. This may result in different durations of aftercare periods for different types of planting or different areas. If reinstatement planting cannot achieve a return to baseline conditions, more biodiversity measures need to be implemented to achieve 10% Biodiversity Net Gain (BNG)	<p>A section on aftercare has been included within the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) which includes reference to an adaptive aftercare process. While outline aftercare measures have been included within the Outline LEMP (document reference 7.4), further detail will be provided within the Final LEMP versions, following detailed design.</p> <p>A detailed Biodiversity Net Gain (BNG) Report (document reference 7.1) has also been prepared which includes National Grid's commitment to delivering at least 10% BNG with environmental and societal benefits.</p>		X		
9-2.1709	Suggestion that any tree or shrub that is removed, dies, or becomes seriously damaged or diseased during the aftercare period must be replaced with suitable replacement plants or trees to the specification agreed in writing with the relevant Local Planning Authority (LPA) during the next available planting season. The proposals should allow for the costs of annual post-monitoring inspections and reports to the LPAs for the lifespan of the project or	<p>Information on mitigation planting is provided in the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4).</p> <p>National Grid has committed to a 3:1 replacement for individual trees and individual trees within small groups. The Project will prioritise the replanting for individual trees and small groups of individual trees within the Order Limits, offsite provision may however be required.</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	at least for the first 15 years, and longer if mitigation goals are not being achieved (dynamic aftercare)	<p>Details of the onsite tree planting will be provided in accordance with the final LEMP or the Reinstatement Planting Plan secured in the draft DCO (document reference 3.1).</p> <p>Future works and management strategies will be in compliance with relevant British Standards and will detail relevant good practice measures relating to the aftercare period, including management of damaged or diseased vegetation that forms part of the works. Management plans will be developed in consultation with the relevant Local Planning Authorities.</p>				
9-2.1710	Regarding the Preliminary Environmental Information Report (PEIR) Table 4.2, request for more information and clarification on how 10% Biodiversity Net Gain (BNG) can be recognized when compensating for vegetation removal for temporary and permanent accesses. Suggestion that the impact on receptors to be included within an Environmental Statement with a separate transport assessment to address network-related matters (e.g.: junction/link capacity, road safety, AIL weight and dimensions, etc), including assessments of highway structure capacity and temporary and permanent access highway improvements	<p>A Biodiversity Net Gain (BNG) Report (document reference 7.1) has been prepared which includes National Grid's commitment to delivering at least 10% BNG with environmental and societal benefits.</p> <p>A Transport Assessment (document reference 7.11) has been prepared as part of the DCO application. The Transport Assessment focuses on construction impacts on the following receptors: Strategic Road Network and Major Road Network, Local Road Network, Bus Network and WCH Network.</p>		X		
9-2.1711	The National Planning Policy Framework (NPPF) 2022 emphasises the importance of refusing development that results in the loss or deterioration	Appendix B: Ancient Woodland and Veteran Tree Strategy of the Outline Landscape and Ecological Management Plan (document reference 7.4) details the		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>of irreplaceable habitats, such as ancient woodland and ancient or veteran trees, unless there are exceptional reasons and a suitable compensation strategy exists. The NPPF also stresses that existing trees should be retained wherever possible, as they contribute to the mitigation and adaptation of climate change. Concern as the removal of existing trees will likely lead to a decline in the ecosystem services provided by an area, so retention should be prioritised wherever practicable.</p> <p>In 2023, the arboricultural team provided advice under a non-statutory response on behalf of Braintree District Council (BDC) regarding the anticipated impacts to trees and woodland compartments from the works. Support as since this consultation, it has been acknowledged that the Cable Sealing End (CSE) compounds will be realigned further north and closer together to limit any negative impacts on the boundary trees in this area</p>	environment measures that would be implemented to avoid, minimise, mitigate and compensate the ancient and/or veteran features likely to be impacted by the Project.				
9-2.1712	<p>Within Brentwood, 4.1 Ecology, Table 9: Ecology Comments re: Preliminary Environmental Information Report (PEIR) (Brentwood), Volume 1, Chapter 8 Ecology & Biodiversity; Table 8.4; Figure 8.1, MAGIC Maps - National Grid state designated sites within 30 km of the project were included within the assessment. The nearest Habitats sites to Section G are:</p>	Chapter 8: Ecology and Biodiversity (document reference 6.8) and specifically Appendix 8.16: Designated Sites (document reference 6.8.A16) of the Environmental Statement (ES) sets out all designated sites within the Study Area, the reason for their designation and their proximity/direction to the Order Limits.		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>Crouch & Roach Estuaries Special Protection Area (SPA): This site is significant for wintering waterbirds, particularly the dark-bellied brent goose (<i>Branta bernicla</i>). The River Crouch occupies a shallow valley between two ridges of London Clay, leaving a relatively narrow strip of tidal mud used by significant numbers of birds. This site is approximately 14.3 km from the project limits.</p> <p>Crouch & Roach Estuaries Ramsar: This site is noted for its extent and diversity of saltmarsh habitat, rare plants and animal species, and internationally and nationally important numbers of numerous species of wintering wildfowl and waders. It is located approximately 14.3 km from the project limits.</p> <p>Essex Estuaries Special Areas of Conservation (SAC): This site is important for coastal habitats and is located approximately 14.3 – 16.7 km from the project limits.</p> <p>Epping Forest SAC: This site possesses a good example of the habitat Atlantic acidophilous beech forests and has a good population of Stag beetle (<i>Lucanus cervus</i>), as well as other important habitat types. It is located approximately 21.3 km from the project limits.</p> <p>Lee Valley SPA: This site supports internationally important numbers of migratory Gadwall and Shoveler, and a nationally important population of</p>					

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>wintering Bittern (<i>Botaurus stellaris</i>). It is located approximately 26.8 km from the project limits.</p> <p>Lee Valley Ramsar: This site supports internationally important numbers of migratory Gadwall (<i>Mareca strepera</i>) and Shoveler (<i>Spatula clypeata</i>), and a nationally important population of wintering Bittern. It is located approximately 26.8 km from the project limits.</p> <p>Foulness Ramsar: This site is part of an open coast estuarine system comprising grazing marsh, saltmarsh, intertidal mudflats, and sandflats, supporting nationally rare and nationally scarce plants, and nationally and internationally important populations of breeding, migratory, and wintering waterfowl. It is located approximately 30.2 km from the project limits.</p> <p>Foulness Ramsar SPA: This site supports internationally important breeding populations of Annex 1 species including Avocet (<i>Recurvirostra avosetta</i>), Sandwich Tern (<i>Sterna sandvicensis</i>), Common Tern (<i>S. hirundo</i>), and Little Tern (<i>S. albifrons</i>), as well as nationally important wintering populations of the Hen Harrier (<i>Circus cyaneus</i>) and nationally important breeding populations of regularly occurring migratory species including the Ringed Plover (<i>Charadrius hiaticula</i>). It is located approximately 30.2 km from the project limits.</p>					

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>Benfleet & Southend Marshes Ramsar: This site comprises an extensive series of saltmarshes, mudflats, and grassland, supporting a diverse flora and fauna, including internationally important numbers of wintering waterfowl. It is located approximately 12.8 km from the project limits.</p> <p>Benfleet & Southend Marshes SPA: This site supports internationally or nationally important wintering populations of migratory waterfowl including Dark-Bellied Brent Geese, Grey Plover (<i>Pluvialis squatarola</i>), Knot (<i>Calidris canutus</i>), Ringed Plover, and Dunlin (<i>Calidris alpina</i>). It is located approximately 12.8 km from the project limits</p>					
9-2.1713	<p>In Volume 1, Chapter 8, Table 8.7 and Figure 8.1 discuss the potential indirect impacts of construction pollution (such as air quality, noise, and dust) on Local Nature Reserves (LNRs). Specifically, Hutton Country Park, located 457 m from the draft Order Limits (DOL), and Mill Meadow, located 1.9 km from the draft Order Limits (DOL), could be affected</p>	<p>With regards to construction noise, the study area is 300 m from the Order Limits, with significant adverse effects only expected at much shorter distances. As such, Hutton Country Park and Mill Meadow are not considered in the construction noise assessment.</p> <p>Notwithstanding the distance to these receptors, the Main Works Contractor(s) will be required to employ best practicable means (BPM) to reduce the effects of construction noise.</p> <p>With regards to construction air quality dust assessment, the study area is 50 m from the order limits for the ecological receptors. As a result Hutton Country Park and Mill Meadow are not considered in the construction dust assessment, and the impact of dust generation is expected to be negligible.</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Hutton Country Park Local Nature Reserve (LNR) is considered within Chapter 8: Ecology and Biodiversity (document reference 6.8) of the Environmental Statement (ES) in relation to hydrological connection due to ground water dependent terrestrial ecosystems. While impacts on Mill Meadow LNR has been scoped out due to the distance from the Order Limits.				
9-2.1714	<p>In Volume 1, Chapter 8, Table 8.9 and Figure 8.2 discuss the potential impacts on non-statutory designated sites, specifically Local Wildlife Sites (LWSs) and County Wildlife Sites (CWSs). There are five LWSs/CWSs with overlapping borders with the draft Order Limits (DOL), which have the potential for direct impacts (Blind Lane LWS, James' Wood LWS, Little Bladen's Wood LWS, Parkhill Wood Meadow LWS, and St Margarets Wood & Lane LWS).</p> <p>There are 23 LWSs within close proximity that could be indirectly impacted by the construction activities.</p> <p>Suggest that the Environmental Statement (ES) details the alternatives considered, impact assessments, and associated mitigation proposals</p>	A detailed impact assessment on locally designated sites and required mitigation is included within Chapter 8: Ecology and Biodiversity (document reference 6.8) of the Environmental Statement (ES). Further information on required mitigation on locally designated sites is detailed within the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4).		X		
9-2.1715	In relation to Chapter 8 of the Preliminary Environmental Information Report (PEIR), paragraph 8.6.22, the Project is primarily across arable land but is approximately 10 m east of James's Wood ancient woodland, an irreplaceable habitat. The respondent	James's Wood is now located over 100 m east of the Order Limits and therefore no impacts are anticipated. Survey work has been undertaken across the Project and has included detailed woodland UKHAB surveys and NVC woodland surveys. Results of these surveys are presented within Chapter 8: Ecology and Biodiversity		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>expects that appropriate mitigation measures are put in place to protect the ancient woodland.</p> <p>Smaller ancient woodland parcels (<2ha) are not included in the Natural England inventory and individual ancient and veteran trees may not be included in the inventory. The respondent expects that the completed habitat survey work should identify any such features in the study area</p>	<p>(document reference 6.8) and Appendices 8.1 to 8.16 (document reference 6.8.A1-6.8.A16) of the Environmental Statement (ES).</p> <p>Appendix B: Ancient Woodland and Veteran Tree Strategy of the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) sets out all direct or indirect impacts to ancient woodland and sets out proposed mitigation measures.</p>				
9-2.1716	<p>In Volume 3, Technical Appendices - Part 1 of 4, Appendix 8.1, Paras 3.2.6, and Table A8.1.4, it is noted that all hedgerows within the draft Order Limits (DOL) will be surveyed as part of the habitat surveys. Request hedgerows older than 30 years will be assessed by an ecologist to determine if they meet any of the eight criteria outlined in Part II, Schedule 1 of the Hedgerows Regulations (HMSO, 1997). Within Section G, eight hedgerows have been targeted for the Hedgerow Regulations Assessment</p>	<p>Hedgerow Regulations Assessments have been undertaken on hedgerows subject to greater impacts, that were identified as being older than 30 years old. Results are presented within Chapter 8: Ecology and Biodiversity (document reference 6.8) and Appendix 8.3: Hedgerows Regulations Report (document reference 6.8.A3) of the Environmental Statement (ES). Full condition surveys of all hedgerows across the Order Limits were undertaken as part of the BNG condition surveys. Results are presented within the Biodiversity Net Gain (BNG) Report (document reference 7.1).</p>		X		
9-2.1717	<p>In Volume 1, Chapter 8 Ecology & Biodiversity, para 8.5.33, and Volume 3 – Technical Appendices – 2 of 4, Appendices 8.6-9, European Protected Species (EPS), including Great Crested Newt (GCN), Hazel Dormouse, Otter, and bats.</p> <p>Support that National Grid has agreed with Natural England to apply to the District Level Licensing scheme for GCN instead of conducting surveys.</p>	<p>A countersigned Impact Assessment and Conservation Payment Certificate (IACPC) has been obtained from Natural England to confirm the District Level Licensing mitigation approach for Great Crested Newts.</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>Suggest a countersigned Impact Assessment and Conservation Payment Certificate (IACPC) will be needed to support the Development Consent Order (DCO).</p> <p>GCN are now scoped out from further assessment in the Environmental Statement (ES).</p> <p>Best practice methodology will be used during the construction phase to mitigate potential impacts on other mobile species such as priority amphibians, reptiles, and hedgehog.</p>					
9-2.1718	<p>Many locations in Essex, including woodlands, have not been previously surveyed for Hazel Dormouse, so the influence of absent records on identifying survey locations should be limited. Three woodland areas within Section G are targeted for survey for Hazel Dormouse as shown in Figure A8.8.1. Site 23, James's Wood, is shown as targeted for survey. Suggest the nearby Little Bladen's Wood be subject to Hazel Dormouse survey, as it is connected by hedgerow to Bluntswall Wood (and also James's Wood) and with portions of the woodland falling within the draft Order Limits (DOL). Request that the Essex & Suffolk Dormouse Group are involved in consultations on survey methodology</p>	<p>The approach to dormouse surveys and the survey locations across the Project were agreed in advance with Natural England. Little Bladen's Wood will not be directly impacted by proposals, with the Order Limits lying up to, but not within the woodland. Dormouse surveys in James's Wood were undertaken in 2023 and no evidence of dormice was identified. Full details of the dormouse surveys can be found within Chapter 8: Ecology and Biodiversity (document reference 6.8) and specifically Appendix 8.12: Hazel Dormouse Report (document reference 6.8.A12) of the Environmental Statement (ES).</p>		X		
9-2.1719	<p>Notes the Bat Roosting desk study results are currently available, but the results of the data collected during the 2023 surveys and the Ground</p>	<p>The Ground Level Tree Assessments (GLTA), bat activity surveys and radio tracking survey results are presented in Chapter 8: Ecology and Biodiversity</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>Level Tree Assessments (GLTAs) (undertaken between November 2023 and March 2024) are awaited.</p> <p>Static detector Bat Activity surveys are still ongoing, and their results will determine if further investigation is needed. Request transparency in appraising these survey results and the criteria used for deciding if an elevated survey effort is warranted.</p> <p>There is only one high-risk level area identified within the Section G limits (by Figure A.8.7.1), located on the border with Thurrock District. Suggest a survey effort in the James's Wood to Little Bladen's Wood area may be appropriate, despite the lower level of temporary disturbance planned for that area.</p> <p>It is noted the presence of 3 roost records and 21 activity records for the rare Barbastelle bat in Essex (Table A8.6.4). Request Appendix II species (Bern and Bonn Conventions) have adequate assessment to avoid severance to foraging and commuting routes within any sustenance zones of a maternity colony</p>	<p>(document reference 6.8) and specifically Appendices 8.9 to 8.11 (document reference 6.8.A9-6.8.A11) of the Environmental Statement (ES). Static detector surveys have been based on the potential habitat value of the site and the potential impact on bat features. Impact to potential bat foraging and commuting routes around James Wood is minimal with the Project avoiding the main woodland blocks therefore no static detector survey has been undertaken at this location. As agreed with Natural England full bat tree surveys will be undertaken on any tree to be directly impacted pre-construction including around James's Wood. This pre-construction survey requirement is detailed within the Outline Landscape and Ecological Management Plan (LEMP).</p>				
9-2.1720	<p>It is noted for Protected species, reptiles, seven locations within the Brentwood District have been identified as suitable habitats for reptiles. These locations are:</p> <p>Ingatestone to Chelmsford Railway</p> <p>River Wid Corridor</p>	<p>Chapter 8: Ecology and Biodiversity (document reference 6.8) and the reptile report at Appendix 8.6: Reptile Report (document reference 6.8.A6) of the Environmental Statement (ES) detail the assessment method for reptile sites and provides justification for those subject to further survey. Reasonable Avoidance Measures for reptiles are proposed at all sites</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>Shenfield to Billericay Railway Oakleigh Farm Bladenwood Farm Dunton Hills Family Golf Centre West Horndon to Laindon Railway.</p> <p>Among these, only the River Wid Corridor has been classified as a 'Key Reptile Site' and will undergo a series of reptile surveys following an appropriate methodology.</p> <p>The other six sites have been excluded from further presence or likely absence surveys. This decision is either based on the consideration that impacts can be avoided or that habitat manipulation is the most suitable mitigation solution, regardless of the survey results. Request National Grid provide a supported argument to justify this approach and demonstrate how effective mitigation will be achieved in all instances</p>	considered suitable for reptiles, not just the key reptile sites. The reptile mitigation measures are detailed within the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4).				
9-2.1721	<p>The survey methodology outlined for Water Vole is supported, however, clarification is needed on the method used to determine the habitat suitability of a watercourse, including habitat parameters.</p> <p>Additionally, more detail is required on how the issue of dense vegetation was resolved to avoid significant survey constraints</p>	Chapter 8: Ecology and Biodiversity (document reference 6.8) and the water vole and otter report at Appendix 8.13: Otter and Water Vole Report (document reference 6.8.A13) of the Environmental Statement (ES) detail the assessment method for water vole suitability and provide details on any limitations to the presence/absence surveys such as dense vegetation. Full updated water vole surveys will be undertaken on impacted watercourse pre-construction to inform the		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		future water vole licence. The requirement for further pre-construction surveys is detailed within the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4).				
9-2.1722	Surveys are currently being conducted to identify all badger setts within 30 m of the draft Order Limits (DOL). Request to minimise the impacts on badgers and their setts, the mitigation hierarchy should be implemented	The mitigation hierarchy with regard to badgers has been implemented. Significant effort through the design process has been undertaken to minimise impacts to badger setts, with specific attention to main setts. The current alignment avoids the requirement to close any main badger setts.		X		
9-2.1723	<p>Within 5.1 Ecology, Table 10: Ecology Comments re: Preliminary Environmental Impact Report (PEIR) (Chelmsford), Volume 1, Chapter 8 Ecology & Biodiversity; Table 8.4; Figure 8.1, MAGIC Maps, r – National Grid state designated sites within 30 km of the project were included within the assessment. The nearest Habitats sites to Section F are:</p> <p>Crouch & Roach Estuaries Special Protection Area (SPA): Important for wintering waterbirds, especially the dark-bellied brent goose. Located approximately 14.3 km from the draft Order Limits (DOL).</p> <p>Crouch & Roach Estuaries Ramsar: Noted for its saltmarsh habitat, rare plants, and animal species. Also located around 14.3 km from the DOL.</p> <p>Essex Estuaries Special Areas of Conservation (SAC): Recognised for its important coastal habitats, situated approximately 14.3 – 16.7 km from the DOL.</p>	Chapter 8: Ecology and Biodiversity (document reference 6.8) and specifically Appendix 8.16: Designated Sites (document reference 6.8.A16) of the Environmental Statement (ES) sets out all internationally designated sites within the Study Area, the reason for their designation and their proximity/direction to the Order Limits.		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>Blackwater Estuary SPA and Ramsar: cited for supporting summer, nationally important breeding populations of an Annex 1 species (Little Tern), nationally important wintering populations of an Annex 1 species (Hen Harrier) and internationally and nationally important numbers of numerous species of wintering wildfowl and waders. Located about 16.7 km from the DOL.</p> <p>Blackwater Estuary Ramsar: - saltmarsh habitat present, rare plants and animal species, the full and representative sequences of saltmarsh plant communities and internationally and nationally important numbers of numerous species of wintering wildfowl and waders. The Ramsar is located ~16.7 km from the DOL.</p> <p>Abberton Reservoir SPA and Ramsar: These sites support nationally important breeding populations of cormorant and numerous species of wintering wildfowl and waders. They are approximately 20 km from the DOL.</p> <p>Epping Forest SAC: Known for its Atlantic acidophilous beech forests and a good population of Stag beetle <i>Lucanus cervus</i>. It is located around 21.3 km from the DOL.</p> <p>Lee Valley SPA - cited for supporting internationally important numbers of migratory Gadwall and Shoveler and nationally important population of wintering Bittern, numerous species of breeding and</p>

	<p>There are five high-risk level areas and two medium-risk level areas identified within the Section F limits, as shown in Figure A.8.7.1 1. Request National Grid are transparent regarding how the static detector survey results were appraised, and the criteria used for judging if an elevated survey effort was warranted or not.</p> <p>Additionally, there are three roost records and 21 activity records for the rare Barbastelle bat in Essex, as noted in Table A8.6.4 1. Request Appendix II species (Bern and Bonn Conventions) has adequate assessment to avoid severance to foraging and commuting routes within any sustenance zones of a maternity colony</p>	<p>site and the potential impact on bat features, detail on the assessment method is provided within Appendix 8.10: Bat Activity Report of the Environmental Statement (ES) (document reference 6.8.A10). As agreed with Natural England full bat tree surveys will be undertaken on any tree to be directly impacted pre-construction. This pre-construction survey requirement is detailed within the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4).</p>				
9-2.1730	<p>In relation to Volume 3 of the Preliminary Environmental Information Report (PEIR) Technical Appendices, criticism that for reptiles, no 'Key Reptile Sites' have been identified within Section F of the draft Order Limits (DOL), but six locations have been deemed suitable for reptiles. These locations include River Ter, River Chelmer, River Can and Former Brittons Hall Farm Landfill site, Chelmsford Compressor Station, Land off Roxwell Road, Willowmere Lake and Associated Habitat, and Writtlepark and Associated Woodlands. These sites have been excluded from further surveys because impacts are considered avoidable or because habitat manipulation is seen as the best mitigation solution.</p>	<p>Chapter 8: Ecology and Biodiversity (document reference 6.8) and Appendix 8.6: Reptile Report (document reference 6.8.A6) of the Environmental Statement (ES) detail the assessment method for reptile sites and provides justification for those subject to further survey. Reasonable Avoidance Measures for reptiles are proposed at all sites considered suitable for reptiles, not just the key reptile sites. The reptile mitigation measures are detailed within the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4).</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	Suggestion that National Grid provide a supported argument for this approach, demonstrating how effective mitigation will be achieved in all instances					
9-2.1731	<p>From the Preliminary Environmental Information Report (PEIR), Natural England has agreed on the acceptability of the approach taken for breeding bird surveys but has not commented on the selection of survey locations. Seven 'Areas of Potential Importance for Breeding Birds' have been targeted based on desk study and the perceived risk of impact. These are the only sites to be subject to breeding bird surveys, which will cover 200 m buffers around key areas of effects such as cable easement, Cable Sealing End (CSE) compounds, and substations.</p> <p>No Areas of Potential Importance for Breeding Birds were identified for Section F. It is recognised that a draft Order Limits (DOL) 184 km long and 100-220 m wide (plus a 200 m buffer) cannot be completely surveyed for breeding birds, and identifying priority sites for survey is the practical solution. Request National Grid demonstrate that they have not overlooked sites worthy of survey within Section F. Request there is a well-reasoned estimate of the potential overall cumulative impact on breeding birds from the project</p>	Chapter 8: Ecology and Biodiversity (document reference 6.8) and Appendix 8.7: Breeding Bird Report (document reference 6.8.A7) of the Environmental Statement (ES) detail the survey locations and site selection methods for breeding birds. The chapter discusses the impact on breeding birds across the project.		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.1732	<p>Support the methodology outlined for Water Vole within the Preliminary Environmental Impact Report (PEIR). Water Vole are noted as being present at Chelmer Valley Riverside Local Wildlife Sites (LWS), which is within 2 km of the draft Order Limits (DOL). Request within Section F, surveys will need to be conducted for the River Ter, River Brain, and River Blackwater to confirm presence/likely absence and extent of likely impacts upon Water Vole.</p> <p>Request clarification on the method used (i.e., habitat parameters) for determining the Water Vole habitat suitability of a watercourse, and more detail is needed on how the issue of dense vegetation was resolved so that it did not present a significant survey constraint</p>	<p>Chapter 8: Ecology and Biodiversity (document reference 6.8) and Appendix 8.13: Otter and Water Vole Report (document reference 6.8.A13) of the Environmental Statement (ES) detail the assessment method for water vole suitability and provide details on any limitations to the presence/absence surveys such as dense vegetation. Full updated water vole surveys will be undertaken on impacted watercourse pre-construction to inform the future water vole licence. The requirement for further pre-construction surveys is detailed within the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4).</p>		X		
9-2.1733	<p>Concern as noteworthy habitats, potentially including Priority Lowland Deciduous Woodland and ancient woodland (irreplaceable habitat) at Bushy Wood, east of Woodhall Hill Road, CM1 4ST (Grid Ref TL 687 105), would be impacted by the works. Request a thorough impact assessment be undertaken for this site, along with the appropriate application of the mitigation hierarchy. This will be necessary to include in the Statement of Common Ground (SoCG).</p>	<p>Careful routeing and siting has been undertaken to avoid impacts on priority habitats where possible. Where temporary impacts are unavoidable, habitats will be reinstated and included within the Biodiversity Net Gain (BNG) assessment. Where permanent habitats are unavoidable, habitat creation and enhancement measures are proposed as mitigation within the Environmental Areas. National Grid are committed to delivering 10% BNG with environmental and societal benefits.</p> <p>There will be no impact on Bushy Wood as a result of the Project.</p>		X

Any potential impacts on these internationally designated sites are assessed within ES Chapter 8: Ecology and Biodiversity (document reference 6.8).</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	habitats sites are hydrologically connected to the DOL					
9-2.1735	<p>In relation to Chapter 8, Table 8.5 and Figure 8.1 of the Preliminary Environmental Information Report (PEIR), the buffer provided for Sites of Special Scientific Interest (SSSIs) except for a few specific sites. Criticism as Middle Wood, Offton SSSI, an ancient woodland adjacent to the draft Order Limits (DOL), is not listed in Table A8.1.6. Wortham Ling SSSI, notified for lowland dry heath and acid grassland habitats, is roughly adjacent to the DOL. Construction access via Ling Road through Wortham Ling SSSI may require canopy lifting Request the affected trees be assessed for roosting bats.</p> <p>The Waveney Valley Alternative (WVA) (underground cabling) would result in a higher impact on Wortham Ling SSSI due to the need for additional clearance and the installation of outfalls for temporary drainage</p>	<p>Chapter 8: Ecology and Biodiversity (document reference 6.8) and specifically Appendix 8.16: Designated Sites (document reference 6.8.A16) of the Environmental Statement (ES) sets out all nationally designated sites within the Study Area, the reason for their designation and their proximity/direction to the Order Limits. Potential impacts on nationally designated site are discussed within the Chapter. Middle Wood Site of Special Scientific Interest (SSSI) and ancient woodland is assessed within Chapter 8 and also discussed within Appendix B: Ancient Woodland and Veteran Tree Strategy of the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4).</p> <p>National Grid has considered the justification for the use of underground cable for the crossing of the Waveney Valley and on the matter of increased impacts on Wortham Ling SSSI raised in the respondent's feedback. The starting presumption in National Policy Statement (NPS) EN-5 paragraph 2.9.20 in a location such as the Waveney Valley which, although valued is not designated, is that overhead line is the appropriate 400 kV connection technology. We have also considered whether the effects from the overhead line are at a level that engages other parts of NPS EN-5 (such as paragraph 2.9.23) to prompt consideration of whether</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>the benefits of undergrounding outweigh any extra economic, social or environmental impacts. At the Waveney we conclude that the benefits from a change to underground cable, do not justify the additional cost that would be incurred. The use of underground cable would lead to a lowering of effects on the setting of the Grade I Listed St Remegius Church, albeit the effects of progressing with an overhead line are assessed as less than substantial harm and don't themselves require a change in technology. In terms of community effects, existing trees would provide some screening and filtering of views of an overhead line for those in residential areas and on recreational routes. A change from overhead line to underground cable would reduce these community effects but bring disbenefits, most notably increased ecological effects from installation within peaty soils and increased technical risk to cable integrity from the WaLOR channel naturalisation and landscape recovery plans. Conversely there may be compromise to the WALOR project by measures to ensure cable integrity. After consideration of the decision making guidance at paragraph 2.9.25 of NPS EN-5, National Grid concludes that whilst effects from overhead lines to individual receptors may be significant in Environmental Impact Assessment (EIA) terms they do not justify the potential for compromise to the WALOR project, the effects on peaty soils which would arise with an underground cable design nor justify the expected cost of an underground cable design. On this basis, National</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Grid concludes that the use of an overhead line should be taken forward for the crossing of the Waveney Valley. Prior to making this decision we had considered whether requests to relocate the Cable Sealing End (CSE) compounds and extend the cable both to the north and the south may alter the decision making balance. Such extensions would bring benefits to various residential receptors but with the additional cost of longer length of cables. We conclude that given the absence of any designated status pertinent to NPS EN-5, and the extent to which some views from residential areas are filtered and screened and lower the level of adverse effects from the overhead line, we do not consider the additional cost associated with extending the underground cable would be justified.				
9-2.1736	In relation to Chapter 8, Table 8.7 and Figure 8.1 of the Preliminary Environmental Information Report (PEIR), that Needham Lake Local Nature Reserve (LNR), which is recognised as a Regionally Important Geological/geomorphological Site (RIGS), will be affected by the proposed works. This is due to its hydrological connection to the draft Order Limits (DOL) via the River Gipping	As described within Environmental Statement (ES) Chapter 9: Contaminated Land, Geology and Hydrogeology (document reference 6.9) the Study Area for sites of geological importance is 250 m and therefore the site falls outside of the study area in relation to geology and hydrogeology. The potential for the Project to impact on existing attributes of the River Gipping are presented in Chapter 12: Hydrology, Land Drainage and Flood Risk of the ES (document reference 6.12), which concludes no potential for likely significant effects on this receptor given the control and mitigation measures that are proposed, detailed in the Outline Code of Construction Practice (document reference 7.2).		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.1737	In relation to Chapter 8, Table 8.9 and Figure 8.2 of the Preliminary Environmental Information Report (PEIR), the respondent notes that nine of the County Wildlife Sites (CWSs) are directly impacted by overlapping borders with the draft Order Limits (DOL). These sites include River Waveney, sections of River Gipping, Great Newton Wood, Bushey Ley Farm (Arable Fields), Fore and Bushey Groves, Bullen Wood, Round Wood and Elms Grove, Sproughton Park, and Higham Meadow. Suggest that the alternatives considered, impact assessments, and associated mitigation proposals are detailed in the Environmental Statement (ES)	As described within Environmental Statement (ES) Chapter 9: Contaminated Land, Geology and Hydrogeology (document reference 6.9) the Study Area for sites of geological importance is 250 m and therefore the site falls outside of the study area in relation to geology and hydrogeology. The potential for the Project to impact on existing attributes of the River Gipping are presented in Chapter 12: Hydrology, Land Drainage and Flood Risk of the ES (document reference 6.12), which concludes no potential for likely significant effects on this receptor given the control and mitigation measures that are proposed, detailed in the Outline Code of Construction Practice (document reference 7.2).		X		
9-2.1738	In relation to Chapter 8 of the Preliminary Environmental Information Report (PEIR) (Volume 1, Chapter 8 Ecology & Biodiversity; Para 8.6.22 RE: Ancient woodland), concern as the route's proximity to several ancient woodlands, which are considered irreplaceable habitats. The route is generally located across arable land but is adjacent to ancient woodlands such as Middle Wood, approximately 1.4 km south of Ringshall Stocks, and Somersham Park, 400 m north of Flowton. Bullen Wood and Round Wood & Elms Grove ancient woodlands are adjacent to the Burstall Substation and within the draft Order Limits (DOL). Request appropriate measures to protect these ancient woodlands. Smaller ancient woodland	Through detailed routeing and siting every effort has been made through the design process to avoid or reduce impacts on locally designated sites. Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8) considered the impacts on all designated sites, scoped in for assessment, where impacts couldn't be avoided. The Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) sets out any required mitigation.		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	parcels (< 2 ha) not included in the Natural England inventory, expect that the completed habitat survey work will identify any such parcels in the study area					
9-2.1739	<p>Volume 1, Chapter 8 Ecology & Biodiversity; para 8.5.33 & Volume 3 –Technical Appendices – 2 of 4; Appendices 8.6-9, RE: European Protected Species - Great Crested Newt (GCN), Hazel Dormouse, Otter & bats and bats. Support that National Grid has agreed with Natural England to apply to the District Level Licensing scheme for the GCN instead of conducting surveys. Request countersigned Impact Assessment and Conservation Payment Certificate (IACPC) will be needed to support the DCO. The GCN is now scoped out from further assessment in the Environmental Statement (ES). Suggest best practice methodology to be used during the construction phase to mitigate potential impacts on other mobile species such as priority amphibians, reptiles, and hedgehog</p> <p>Concern as the Hazel Dormouse and Otter are not only Priority species but also have higher designations as European Protected Species (EPS) under the Conservation of Habitats and Species Regulations 2017, unlike how stated in Table A8.8.3.</p> <p>The presence of Hazel Dormouse in specific areas such as Bonny Wood County Wildlife Sites (CWS), Bentley Long Wood CWS, Hadleigh Railway Walk</p>	<p>Survey work has been undertaken across the Project and has included detailed woodland UKHAB surveys and NVC woodland surveys. Results of these surveys are presented within Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8) and specifically Appendix 8.1: Habitat Report (document reference 6.8.A1) and Appendix 8.2: National Vegetation Classification Report (document reference 6.8.A2) of the ES.</p> <p>Appendix B: Ancient Woodland and Veteran Tree Strategy of the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) sets out all direct or indirect impacts to ancient woodland and sets out proposed mitigation measures.</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	CWS, and Raydon Great Wood CWS is acknowledged (as shown in Table A8.8.3). Request that the Essex & Suffolk Dormouse Group be involved in consultations on survey methodology.					
9-2.1740	<p>Criticism that whilst bat activity surveys have been conducted (Appendix 8.6 and 8.7 of the Preliminary Environmental Information Report (PEIR)), only the desk study report is currently available. The respondent awaits the results of the 2023 surveys and Ground Level Tree Assessments from November 2023 to March 2024. There are 10 roost records and 78 activity records for the rare Barbastelle bat, which requires further assessment to avoid disruption to foraging and commuting routes within maternity colony sustenance zones.</p> <p>A desk study identified five County Wildlife Sites (CWS) within 2 km of the draft Order Limits (DOL) in Suffolk, which have potential to be significant areas for bats. These sites include Bonny Wood CWS, Bramford Meadows CWS, Sproughton Park CWS, Raydon Great Wood CWS and Chantry Park, Beech Water & Meadow CWS. Thorough impact assessments and fitting levels of investigation are expected in the Environmental Statement (ES).</p> <p>For hedge crossings or removals during construction, Heras fencing with camouflage netting is suggested as an alternative to dead hedging to maintain connectivity for bat species. This temporary</p>	<p>The Ground Level Tree Assessments (GLTA), bat activity surveys and radio tracking survey results are presented in Chapter 8: Ecology and Biodiversity (document reference 6.8) and specifically Appendices 8.9 to 8.11 (document reference 6.8.A9-6.8.A11) of the Environmental Statement (ES). Static detector surveys have been based on the potential habitat value of the site and the potential impact on bat features, detail on the assessment method is provided within Appendix 8.10: Bat Activity Report (document reference 6.8.A10). As agreed with Natural England full bat tree surveys will be undertaken on any tree to be directly impacted pre-construction. This pre-construction survey requirement is detailed within the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4).</p> <p>Where high levels of bat activity have been identified and the length of temporary impact considered significant, artificial temporary bat flyways have been proposed as a suitable mitigation method to ensure continued connectivity. The locations of the proposed flyways have been included within the Outline LEMP (document reference 7.4).</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	measure will help bats continue using affected hedgerows for commuting and foraging networks					
9-2.1741	Support within Volume 3 – Technical Appendices – 2 of 4; Appendix 8.9. Water Vole were identified during surveys in Sproughton Park County Wildlife Site (CWS), which is within the draft Order Limits (DOL) (Table A8.9.2). Support the ditches and ponds within this CWS are important for Water Vole	Chapter 8: Ecology and Biodiversity (document reference 6.8) and Appendix 8.13: Otter and Water Vole Report (document reference 6.8.A13) of the Environmental Statement (ES) detail the results of water vole surveys undertaken over 2023-2024.		X		
9-2.1742	Concern for the potential impact on habitats, including Priority Lowland Deciduous Woodland and a veteran oak tree at Spring Farm, south of Thornham Road, Gislingham. This site has been identified as a high-risk area (Red, Risk Level High; Ref# 62) for potential impacts on bats. Request a thorough impact assessment be undertaken for this site, along with appropriate application of the mitigation hierarchy. This will be necessary to include in the Statement of Common Ground (SoCG)	Bat static survey results have identified high levels of bat activity at location 62. Mitigation proposals have therefore included an artificial bat flyway each night at this location, between May- September, for the duration of the construction period. Full details are provided within the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4).		X		
9-2.1743	In relation to Volume 1, Chapter 8 Ecology & Biodiversity; Table 8.4; Figure 8.1, MAGIC Maps, the respondent notes the following about the nearest Habitat sites: Stour & Orwell Estuaries Special Protection Areas (SPAs) and Ramsar site (3.07 km from site): Supports internationally and nationally important numbers of numerous species of wintering wildfowl	National Grid, through the routing and siting exercise, has sought to reduce the impact on the historic environment, including all designated heritage assets. During construction standard mitigation would be adopted as detailed in the Outline Code of Construction Practice Outline (CoCP) (document reference 7.2). Changes to the setting of an asset (both designated and non-designated, built or archaeological) would be		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>and waders, as well as several nationally scarce plants and invertebrates. As these Habitats sites are hydrologically connected to the draft Order Limits, the respondent would like to be involved in discussions on Habitats Regulations Assessment (HRA) to inform the shadow report to support the Development Consent Order (DCO).</p> <p>Colne Estuary Ramsar and SPA (7.3 km from the draft Order Limits(DOL)): Supports internationally and nationally important numbers of numerous species of wintering wildfowl and waders, saltmarsh, and its wetland plant and invertebrate assemblage.</p> <p>Essex Estuaries Special Areas of Conservation (SAC) (7.6 km from the DOL): Cited for important coastal habitats.</p> <p>Abberton Reservoir SPA (7.8 km from the DOL): Supports nationally important breeding population of cormorant, as well as internationally and nationally important numbers of numerous species of wintering wildfowl and waders.</p> <p>Abberton Reservoir Ramsar (7.8 km from the DOL): Supports internationally and nationally important numbers of numerous species of wintering wildfowl and waders.</p> <p>Hamford Water Ramsar and SPA (8.0 km from site): Supports internationally and nationally important numbers of numerous species of wintering wildfowl and waders.</p>	<p>temporary and would be reversed once the construction phase is completed. Therefore, no additional mitigation measures are proposed during the construction phase. No additional mitigation measures are proposed during the construction phase as any measures designed to lessen the visual impact of the Project would be of a scale that would visually adversely alter the setting of the asset. During the operation phase there is no proposed mitigation.</p> <p>The Environmental Statement (ES) Chapter 11: Historic Environment (document reference 6.11) assessment tables in ES Appendix 11.2: Historic Environment Assessment Tables (document reference 6.11.A2) states whether the asset would physically impacted (below ground remains) or the impact would be to its setting (both designated and non-designated built and archaeological assets). The magnitude of impact is then stated (high, medium, low, negligible, no change), as is the mitigation and the significance of effect using the agreed significance of effect matrix as stated in the ES Chapter 11: Historic Environment (document reference 6.11) and ES Appendix 11.2: Historic Environment Assessment Tables (document reference 6.11.A2).</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	Hamford Water SAC (8.0 km from the DOL): Designated for supporting internationally and nationally important Fisher's Estuarine Moth, <i>Gortyna borelii lunata</i>					
9-2.1744	<p>In relation to Volume 3 – Technical Appendices – 2 of 4; Appendices 8.5, the respondent notes that Wintering Bird Surveys have been conducted to assess the disturbance of Functionally Linked Land. These surveys aim to identify the extent of usage and impacts on qualifying species of the Stour & Orwell Estuaries Special Protection Area (SPA) and Ramsar.</p> <p>One of the Wintering Bird Survey areas extends southeast from the A12 along an underground cabling section of the draft Order Limits (DOL). It also includes an area of arable northeast of Ardleigh Reservoir and the waterbody at Ordnance Survey (OS) Grid Reference - TM 04797 29815, which are within the DOL and subject to overhead electric lines.</p> <p>The eastern limit of these surveys has been cut off before the proposed East Anglian Connection Node (EACN) Substation site, and justification is requested for why this area is not considered Functionally Linked to the Stour and Orwell Estuaries SPA and Ramsar.</p> <p>It is important that the alternatives considered, impacts assessments and associated mitigation</p>	Chapter 8: Ecology and Biodiversity (document reference 6.8) and specifically Appendix 8.16 : Designated Sites (document reference 6.8.A16) of the Environmental Statement (ES) sets out all internationally designated sites within the Study Area, the reason for their designation and their proximity/direction to the Order Limits.		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	proposals are detailed in the Environmental Statement (ES). A Habitats Regulations Assessment will need to be prepared to demonstrate that adverse impacts on the integrity of the Habitats sites (within scope) can be avoided from the development, either alone or in combination with other plans and projects					
9-2.1745	In relation to Volume 1, Chapter 8 Ecology & Biodiversity; Table 8.5, Figure 8.1, the respondent notes that all Sites of Special Scientific Interest (SSSIs) are provided a buffer within Tendring District. However, additional consideration of indirect construction impacts should be provided for the Cattawade Marshes SSSI and the Stour & Orwell Estuary SSSI, which are located approximately 3.1 km and 3.5 km, respectively, from the draft Order Limits (DOL)	<p>Wintering bird surveys have been undertaken across the 2022-2024 period. Chapter 8: Ecology and Biodiversity (document reference 6.8) and specifically Appendix 8.8: Wintering and Passage Bird Report (document reference 6.8.A8) of the Environmental Statement (ES) detail the survey locations, justification for these locations and the survey results. The survey locations were agreed in advance with Natural England.</p> <p>A Habitats Regulations Assessment (HRA) Report (document reference 5.3) has been prepared, which provides an assessment of the impact on internationally designated sites and associated functionally linked land. The HRA has been produced in consultation with Natural England.</p>		X		
9-2.1746	In relation to Volume 1, Chapter 8 Ecology & Biodiversity; Table 8.9, Figure 8.2 the respondent highlights that there are three Local Wildlife Sites (LWSs) / County Wildlife Sites (CWSs) that have potential for indirect impact from the construction works and may have hydrological connectivity. These non-statutory sites include:	Chapter 8: Ecology and Biodiversity (document reference 6.8) and specifically Appendix 8.16: Designated Sites (document reference 6.8.A16) of the Environmental Statement (ES) sets out all national designated sites within the Study Area, the reason for their designation and their proximity/direction to the Order Limits. Any potential indirect impact pathways are		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>Ardleigh Reservoir Grassland (Te3)</p> <p>Ardleigh Reservoir Wood (Te1)</p> <p>Little Bromley Churchyard (Te44)</p> <p>It is important that the alternatives considered, impacts assessments, and associated mitigation proposals are detailed in the Environmental Statement (ES)</p>	on Cattawade Marshes SSSI and the Stour and Orwell Estuaries SSSI are discussed within Chapter 8.				
9-2.1747	In relation to Volume 1, Chapter 8 Ecology & Biodiversity; Para 8.6.22, the respondent notes that the route generally crosses arable land. However, smaller ancient woodland parcels (less than 2 hectares) are not included in the Natural England inventory, and individual ancient and veteran trees may also not be inventoried. The respondent expects that expect that the completed habitat survey work will identify any such features in the study area	Through detailed routeing and siting every effort has been made through the design process to avoid or reduce impacts on locally designated sites. ES Chapter 8: Ecology and Biodiversity (document reference 6.8) considered the impacts on all designated sites, scoped in for assessment, where impacts couldn't be avoided. The Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) details any required mitigation, where impacts couldn't be completely avoided.		X		
9-2.1748	In relation to the Hedgerow Regulations Assessment (e.g. Volume 3, Technical Appendices - Part 1 of 4 Appendix 8.1; Paras 3.2.6-7, Table A8.1.4, Figure A.8.1.3), the respondent notes that all hedgerows within the draft Order Limits (DOL) will be surveyed as part of the habitat surveys. Hedgerows that are over 30 years old will be assessed by an ecologist to determine if they meet any of the eight criteria outlined in Part II, Schedule 1 of the Hedgerows Regulations (HMSO, 1997). Within	<p>Survey work has been undertaken across the Project and has included detailed woodland UKHAB surveys and NVC woodland surveys. Results of these surveys are presented within Chapter 8: Ecology and Biodiversity (document reference 6.8) and specifically Appendix 8.1: Habitat Report (document reference 6.8.A1) and Appendix 8.2: National Vegetation Classification Report (document reference 6.8.A2) of the ES.</p> <p>Appendix B: Ancient Woodland and Veteran Tree Strategy of the Outline Landscape and Ecological</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	Tendring District, four hedgerows have been specifically targeted for this assessment	Management Plan (LEMP) (document reference 7.4) sets out all direct or indirect impacts to ancient woodland and sets out proposed mitigation measures.				
9-2.1749	In relation to Volume 1, Chapter 8 Ecology & Biodiversity; para 8.5.33 and Volume 3 –Technical Appendices– 2 of 4; Appendices 8.6-9, the respondent welcomes confirmation that National Grid has agreed with Natural England to apply to the District Level Licensing scheme for Great Crested Newt (GCN) instead of surveys. The respondent highlights that a countersigned Impact Assessment and Conservation Payment Certificate (IACPC) will be needed to support the Development Consent Order (DCO). The respondent acknowledges that GCN are therefore now scoped out from further assessment in the Environmental Statement (ES). However, it is expected that best practice methodology will be used during the construction phase to mitigate for potential impacts on other mobile species such as priority amphibians, reptiles and hedgehog	Hedgerow Regulations Assessments have been undertaken on hedgerows subject to greater impacts, that were identified as being older than 30 years old. Results are presented within Chapter 8: Ecology and Biodiversity (document reference 6.8) and Appendix 8.3: Hedgerows Regulations Report (document reference 6.8.A3) of the Environmental Statement (ES). Full condition surveys of all hedgerows across the Order Limits were undertaken as part of the BNG condition surveys. Results are presented within the Biodiversity Net Gain (BNG) Report (document reference 7.1).		X		
9-2.1750	No survey sites for Hazel Dormouse are targeted for Tendring District. Many locations in Essex, including woodlands, have not been previously surveyed for Hazel Dormouse. Therefore, the influence of absent records on identifying survey locations should be limited and the respondent recommends that the	A countersigned Impact Assessment and Conservation Payment Certificate (IACPC) has been obtained from Natural England and will be provided as part of the Development Consent Order (DCO) submission. Reasonable Avoidance Measures for amphibians, reptiles and other notable species during vegetation		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	Essex and Suffolk Dormouse Group should be involved in consultations on survey methodology	clearance have been included within the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4).				
9-2.1751	The methodology for Otter surveys is supported. However, there is a desk study record of Otter for Ardleigh Reservoir within the draft Order Limits (DOL), but no corresponding Otter survey location. A survey effort is advised for the Ardleigh Reservoir and surrounding area to confirm the presence or likely absence of Otters and determine the extent of likely impacts	The approach to dormouse surveys and the survey locations across the Project were agreed in advance with Natural England. Full details of the dormouse surveys can be found within Chapter 8: Ecology and Biodiversity (document reference 6.8) and specifically Appendix 8.12: Hazel Dormouse Report (document reference 6.8.A12) of the Environmental Statement (ES)		X		
9-2.1752	Only the Bat Roosting desk study result is available at present. The respondent awaits the await the results of the data collected during the 2023 surveys and the results of the Ground Level Tree Assessments undertaken between November 2023 and March 2024. Bat Activity surveys have been undertaken, and four medium risk level areas within the Tendring District limits have been identified. These sites are expected to undergo static detector surveys to inform the need for further investigation. Transparency is requested regarding the appraisal of static detector survey results and the criteria used for judging if an elevated survey effort was warranted. There are three roost records and 21 activity records for the rare Barbastelle bat in Essex. This Appendix II species	Details of the otter surveys are presented within Chapter 8: Ecology and Biodiversity (document reference 6.8) and specifically Appendix 8.13: Otter and Water Vole Report (document reference 6.8.A13) of the Environmental Statement (ES). Ardleigh Reservoir is due to be surveyed in 2025 for presence of otter and the results of the survey will be included within the further environmental information report.		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	(Bern and Bonn Conventions) will need adequate assessment to avoid severance to foraging and commuting routes within any sustenance zones of a maternity colony. Temporary measures, such as using Heras fencing with camouflage netting, are suggested to enable certain bat species to continue using affected hedgerows					
9-2.1753	The Reptile Report identifies 19 locations within the draft Order Limits (DOL) in Section C which contain suitability for reptiles. All locations relevant to Tendring District have been excluded from further presence/absence surveys, as habitat manipulation for displacement is considered the most appropriate mitigation solution regardless of survey results. While this approach is agreed upon in principle, National Grid must provide a supported argument explaining why this is the best approach for reptile species and demonstrate how effective mitigation will be achievable in all instances	<p>The Ground Level Tree Assessments (GLTA), bat activity surveys and radio tracking survey results are presented in Chapter 8: Ecology and Biodiversity (document reference 6.8) and specifically Appendices 8.9 to 8.11 (document reference 6.8.A9-6.8.A11) of the Environmental Statement (ES).</p> <p>Static detector surveys have been based on the potential habitat value of the site and the potential impact on bat features. Statistical analysis of the results of the static surveys has been undertaken and presented within Appendix 8.10: Bat Activity Report (document reference 6.8.A10). The results of these surveys has determined the locations of artificial bat flyways. The proposed locations of bat flyways have been included within the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4).</p> <p>As agreed with Natural England full bat tree surveys will be undertaken on any tree to be directly impacted pre-construction. This pre-construction survey requirement is</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		detailed within the Outline LEMP (document reference 7.4).				
9-2.1754	Request for information to justify why none of the seven locations for potential breeding bird surveys have been identified within the Tendring District (particularly between pylons TB13 and TB22), despite all trees within the draft Order Limits (DOL) being assessed for potential use by barn owls	Chapter 8: Ecology and Biodiversity (document reference 6.8) and Appendix 8.6: Reptile Report (document reference 6.8.A6) of the Environmental Statement (ES) detail the assessment method for reptile sites and provides justification for those subject to further survey. Reasonable Avoidance Measures for reptiles are proposed at all sites considered suitable for reptiles, not just the key reptile sites. The reptile mitigation measure are detailed within the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4).		X		
9-2.1755	The methodology outlined in the submitted report for Water Vole is supported. However, clarification is requested on the method used for determining the Water Vole habitat suitability of a watercourse, including habitat parameters and how the issue of dense vegetation was resolved to avoid significant survey constraints. A survey effort is advised for the Ardleigh Reservoir and surrounding area to confirm the presence or likely absence of Water Vole and to determine the extent of likely impacts	Breeding bird surveys have been targeted at areas of underground cable, where greater impacts are anticipated. Barn owl have been considered separately, and surveys for either confirmed barn owl nests/roosts or suitability for barn owl have been undertaken across all trees within the Order Limits. The results of these barn owl surveys are included within Chapter 8: Ecology and Biodiversity (document reference 6.8) and specifically Appendix 8.7: Breeding Bird Report (document reference 6.8.A7) of the Environmental Statement (ES)		X		
9-2.1756	Surveys are ongoing to identify all badger setts within 30 m of the draft Order Limits (DOL). The	Chapter 8: Ecology and Biodiversity (document reference 6.8) and Appendix 8.13: Otter and Water Vole Report (document reference 6.8.A13) of the		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	mitigation hierarchy should be implemented to reduce the impacts on Badgers and their setts	Environmental Statement (ES) detail the assessment method for water vole suitability and provide details on any limitations to the presence/absence surveys such as dense vegetation. Full updated water vole surveys will be undertaken on impacted watercourse pre-construction to inform the future water vole licence. The requirement for further pre-construction surveys is detailed within the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4).				
9-2.1757	Suggest that once the design is fixed, an Arboricultural Method Statement (AMS) and accompanying Tree Protection Plan (TPP) will be required to ensure retained trees are suitably protected throughout the course of the development	Details of the design will be confirmed during the detailed design stage, after submission of the Development Consent Order (DCO) application. Environmental Statement (ES) Appendix 13.6: Arboricultural Impact Assessment (AIA) (document reference 6.13.A6) recommends an Arboricultural Method Statement and Tree Protection Plan are produced. National Grid has committed to preparing an Arboricultural Method Statement (as referenced in the Outline Code of Construction Practice (document reference 7.2). Section 7.3 of the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) refers to a Tree Protection Plan in accordance with clause 5.5 of BS 5837:2012.		X		
9-2.1758	In relation to Chapter 4 of the PEIR (Preliminary Environmental Information Report), it is acknowledged the vegetation clearance required for underground cabling for standard open-cut installation, a 120 m wide swathe of vegetation will	The Environmental Statement (ES) Chapter 4: Project Description (document reference 6.4) provides a description of the Project, including vegetation removal requirements. Further details on vegetation removal and reinstatement are provided in the Outline Landscape		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>be removed, with up to 50 m of vegetation on either side potentially affected during construction, the total impact corridor will be 220 m wide</p> <p>Support that soil will not be stored over hedgerows, and hedgerows will be replanted post-construction.</p> <p>It is acknowledged for trenchless installation, a permanent easement of ~180 m wide will be required, along with a construction corridor 200 m wide (the impacts will vary depending on the different activities involved)</p>	<p>and Ecological Management Plan (LEMP) (document reference 7.4).</p> <p>Vegetation has been avoided where possible and will be retained as far as is practicable.</p> <p>Ecological and landscape and visual impacts and mitigation are reported in ES Chapter 8: Ecology and Biodiversity (document reference 6.8) and ES Chapter 13: Landscape and Visual (document reference 6.13). An Arboricultural Impact Assessment (AIA) is provided in ES Appendix 13.6: Arboricultural Impact Assessment (AIA) (document reference 6.13.A6).</p> <p>The Trees and Hedgerows to be Removed and or Managed Plans (document reference 2.16) show details on impacts to trees and hedgerows.</p>				
9-2.1759	<p>Chapter 8 of the Preliminary Environmental Information Report (PEIR) states the planned surveys for habitats, European Protected Species, and protected species that are due to take place in 2024: Habitats (including Phase 1, UK Habitat Classification, River Condition Assessment, Hedgerow Regulations Assessments and National Vegetation Classification (NVC) surveys), Terrestrial invertebrates, Aquatic ecology, Reptiles, Breeding birds (including Barn Owl assessment), Wintering birds, Bat, Badger, Hazel dormouse and Otter and water vole.</p> <p>The results of these surveys are awaited and will need to inform the mitigation hierarchy and support</p>	<p>A range of protected species and other ecological surveys have been undertaken across the Order Limits and the results are outlined in Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8) and Appendices 8.1 to 8.16 (document reference 6.8.A1-6.8.A16) of the Environmental Statement (ES). Appropriate mitigation would be implemented where impacts are identified as agreed with Natural England and the Local Planning Authority as relevant.</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>the Statement of Common Ground with the Local Planning Authorities (LPAs).</p> <p>Surveys for Priority species that are likely to be present and affected may be needed. This is necessary for the LPAs and the Secretary of State to demonstrate their strengthened biodiversity duty under section 40 of the Natural Environment and Rural Communities Act as amended</p>					
9-2.1760	<p>Chapter 8 of the Preliminary Environmental Information Report (PEIR), paragraph 8.5.21-30 states the commitment to delivering a minimum of 10% Biodiversity Net Gain (BNG) for area habitats, hedgerows, and watercourses.</p> <p>The biodiversity unit calculations will be made using the Statutory Biodiversity Metric and by adhering to all trading rules. However, it is noted that the project currently indicates a -6% BNG for area habitat units, it is expected that the mandatory 10% BNG will be achieved through off-site measures.</p> <p>Suggest The Biodiversity Gain Hierarchy should be applied where possible and to meet the aspiration of National Policy Statement (NPS) EN-5, the long-term maintenance and aftercare of mitigation planting will need to be for appropriate timescales to deliver the promised BNG condition and to secure the integrity and benefit of these schemes. Request details of the</p>	<p>National Grid is committed to delivering 10% Biodiversity Net Gain (BNG) with environmental and societal benefits for the project. The BNG mitigation hierarchy has been applied, with in situ replacement planting and then onsite habitat creation and enhancement at Environmental Areas proposed. 30 years of management and monitoring of the Environmental Areas have been committed to within the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Biodiversity Net Gain Report (document reference 7.1). However due to the scale of the project and associated large habitat baseline value, it will not be possible to deliver all biodiversity units needed to hit the target 10% net gain on-site and therefore National Grid are seeking agreements with third parties at registered off-site locations. National Grid is open to all off-site options with registered BNG providers, and open to discussing potential off-site BNG with any interested parties.</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	10% Environmental Net Gain (ENG) should also be provided to meet the requirements set by Ofgem					
9-2.1761	<p>Request all non-significant effects on Priority species and habitats will need to be identified in the Environmental Statement to ensure all the Local Planning Authorities (LPAs) and Secretary of State can demonstrate their strengthened Section 40 biodiversity duty under the NERC Act 2006 (as amended).</p> <p>Request as 'Notable' has a very specific definition which does not match the status of Priority species (aka Species of Principal Importance), any use of 'notable species' needs to be clarified in the glossary to mitigate confusion</p>	<p>Both significant and non-significant effects on priority habitat and species are outlined in Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8) of the Environmental Statement (ES).</p> <p>The term notable has been defined within the glossary and used to describe species of Conservation Concern as listed under S41 of the Natural Environment and Rural Communities Act 2006 (NERC Act).</p>		X		
9-2.1762	<p>Within the Preliminary Environmental Information Report (PEIR) paragraph 4.8.39-40 it is assumed that hedgerow regulations will result in each hedgerow being assessed to determine if they meet heritage protection criteria. For hedgerows that do meet these criteria, the width of the clearance would be reduced, or directional drilling would be considered</p>	<p>A full Hedgerow Regulations Assessment has been undertaken at hedgerows subject to the greatest impact, to determine whether they hit the classification of important on ecology grounds. Full hedgerow condition assessments, in line with Biodiversity Net Gain (BNG) guidelines, have been carried out on all hedgerows within the Order Limits. Impacts to all hedgerows, but specifically those of greatest value, have been minimised as much as practicable during the design process.</p>		X		

South Norfolk feedback

South Norfolk feedback (Statutory Consultation)

Table 9-3 Summary of consultee comments and National Grid's response

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Agricultural Land						
9-3.1	Concern that the Project will take away valuable agricultural land / disrupt farming operations	<p>During the construction stage of the Project, there would be areas of agricultural land that would be temporarily disrupted. National grid would only use land that is required as part of the Project and would seek to minimise the use of agricultural land where reasonable and safe to do so.</p> <p>National Grid is and will continue to work with all landowners including farmers who may be affected by the proposals to understand the impacts on their operations and to work with them as the Project is developed. We would seek to work with the farming community to limit disruption where practicable. This includes providing prior warning of works which may result in the need to move livestock. Compensation claims for disturbance are considered on a case-by-case basis, if negative impact on farming operations can be proven. Particular agricultural matters can also be addressed through voluntary land agreements.</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-3.2	Concern that the Project will have a negative impact on agricultural livestock (e.g. type of livestock)	<p>National Grid is and will continue to work with all landowners including farmers and equestrian facilities who may be affected by the proposals to understand the impacts on their operations and to work with them as the Project progresses. We would seek to work with the farming community to limit disruption where practicable. This includes providing prior warning of works which may result in the need to move livestock. Compensation claims for disturbance are considered on a case-by-case basis, if negative impact on farming operations can be proven. Particular agricultural matters can also be written into voluntary land agreements. There will also be mitigation put in place where animal grazing maybe affected.</p> <p>As well as possible effects on humans, possible effects of Electric and Magnetic Fields (EMFs) on various animals have been studied. No detectable effects of EMFs have been found on, for example, health, milk production, fertility, and behaviour. This is confirmed in National Policy Statement (NPS) EN-5 which states: <i>'There is little evidence that exposure of crops, farm animals or natural ecosystems to transmission line EMFs has any agriculturally significant consequences.'</i></p>	X		X	
9-3.3	Concern that land used for haul roads at Bunwell will no longer drain naturally (in relation to impact on farming)	The impacts of haul roads on the land drainage regime are assessed in the Flood Risk Assessment (FRA) (document reference 7.9) that has been prepared and submitted as part of the DCO application. The FRA concludes no likely significant effects given the controls	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		and mitigation measures that would be put in place. Should consent be granted for the Project, drainage surveys would be carried out in advance of construction works and would include on-site assessments and engagement with affected landowners. Existing drainage systems would be avoided where reasonably practicable and where not possible, systems would be rerouted, or temporary drainage would be installed for the construction period and full reinstatement undertaken on completion of construction activities. Haul roads would be served by Sustainable Drainage Systems to manage the runoff generated from them. The measures are secured through commitments in the Outline Code of Construction Practice (document reference 7.2).				
9-3.4	Concern about the impact of Pylons RG44, RG45, RG46, RG49 and RG50 on farming and game shooting (e.g. impact on business)	<p>National Grid notes the respondent's concern and has considered these effects when developing and then modifying the alignment and pylon positions in this area. As a consequence of other factors, a slight realignment of the Project has occurred that sees pylons RG49 and RG50 move slightly but it is judged that these don't address the change requested.</p> <p>As per the Scoping Opinion (document reference 6.20), the impacts on agricultural operations were considered to be limited during the operational phase of the Project as any maintenance or repair works required which would result in disturbance to agricultural operations would be undertaken in accordance with standard practice. Disturbance to agricultural operations during</p>			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>the construction phase are assessed in full in Chapter 6: Agriculture and Soils (document reference 6.6) of the Environmental Statement (ES).</p> <p>The financial effects on individual businesses are being addressed through separate discussions/negotiations which lie outside the scope of the ES (as agreed in the Scoping Opinion (document reference 6.20)). Therefore, the financial effects on individual businesses have not been assessed in the ES.</p>				
Airfields						
9-3.5	Concern about the impact of the Project on Tibenham Airfield / Suggestion that the Project is routed away from Tibenham Airfield (e.g. Pylons RG45 to RG65)	<p>National Grid has appointed an independent aviation consultancy which has engaged with Tibenham Airfield (with National Grid also present) to inform their impact assessment. Following consultation with the operators, it has been assessed that, with the Project as currently proposed, operations (including gliding) can continue at the airfield.</p> <p>We are continuing to engage with the operator to enable their review of the acceptability of the Project design and support their consideration of whether reasonable changes to operational procedures are required. Further information on the assessment of airfields can be found in the Environmental Statement (ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-3.6.	Concern about the impact of the Project on Old Buckenham Airfield / Suggestion that the Project is routed away from Old Buckenham Airfield (e.g. given that the restricted area at Old Buckenham restricts the height of buildings / equipment in this location to 15m)	<p>National Grid has appointed an independent aviation consultancy which has engaged with (with National Grid also present) Old Buckenham Airfield and Priory Farm Airfield.</p> <p>As a Civil Aviation Authority (CAA) licensed airfield it has a defined safeguarding area within which all proposed developments within 13 nautical miles (24 km) and above 15 metres in height are subject to consultation with the airfield. Following discussion and further assessment it has been determined that the airfield can continue to operate based on the Project design as per the proposed alignment. The overhead line will not breach the obstacle clearance surface limits required under its CAA aerodrome licence nor have any other operational impacts on the airfield.</p> <p>We will continue to engage with nearby airfields and associated stakeholders – such as the CAA and the Ministry of Defence, as appropriate.</p> <p>Further information on the assessment of airfields can be found in the Environmental Statement (ES) (see ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and ES Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2)).</p>			X	
9-3.7	Concern about the impact of the Project on Priory Farm Airfield / Suggestion that the Project is routed away from Priory Farm Airfield	National Grid has appointed an independent aviation consultancy which has engaged with (with National Grid also present) Priory Farm Airfield. Following discussion and further assessment it has been determined, with the	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Project as currently proposed, that the airfield can continue to operate. We are continuing to engage with the operator to enable their review of the acceptability of the Project design and support their consideration of whether reasonable changes to operational procedures are required. Further information on the assessment of airfields can be found in the Environmental Statement (ES) (see ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and ES Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2)).				
9-3.8	Concern about the impact of the Project on Long Stratton Airfield / Suggestion that the Project is routed away from Long Stratton Airfield	Discussions have taken place with the owner of Long Stratton Airfield who has indicated that due to length of separation between the airfield and the Project there would be no operational impact as a result of the Project and therefore no changes have been made to the alignment. Further information on the assessment of airfields can be found in the Environmental Statement (ES) (see ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and ES Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2)).	X		X	
9-3.9	Concern about the impact of the Project on Horham Airfield	The respondent's concern is noted but Horham Airfield is located approximately 11 km to the east of the alignment. Flight operations would not be impacted by the Project. Further information on the assessment of airfields can be found in the Environmental Statement (ES) (see ES Chapter 15: Socio-Economics, Recreation			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		and Tourism (document reference 6.15) and ES Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2)).				
9-3.10	Concern about the impact of the Project on Norfolk Gliding Club (also known as Tibenham Gliding Club)	<p>National Grid has appointed an independent aviation consultancy which has engaged with Tibenham Airfield (also known as Norfolk Gliding Club, with National Grid also present) to inform their impact assessment. Following consultation with the operator it is assessed that, with the Project as currently proposed, operations (including gliding) can continue at the airfield.</p> <p>We are continuing to engage with the operator to enable their review of the acceptability of the Project design and support their consideration of whether reasonable changes to operational procedures are required. Further information on the assessment of airfields can be found in the Environmental Statement (ES) (see ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and ES Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2)).</p>			X	
9-3.11	Concern about impact of the Project on Tacolneston Model Aircraft Flying Club / South Norfolk Model Flying Club / Suggest that the Project is routed away from Tacolneston Model Aircraft Flying Club / South Norfolk Model Flying Club (e.g. Pylons RG33 to RG36)	National Grid has considered this feedback in combination with feedback from residential property occupants and feedback about positioning pylons to field boundaries where possible. National Grid has appointed an independent aviation consultancy who has tried to engage with South Norfolk Model Air Flying Club and the British Model Flying Association but have received no official response. Following further assessment, it has			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>been determined that the club can continue to operate based on the proposed Project design which has moved the proposed overhead line further to the west between RG28 and RG39. This move increases separation from within the field to the overhead line to exceed the 150 m away from residential, recreational, commercial and industrial sites as per the Civil Aviation Authorities (CAA) Drone and Model Aircraft Code (CAP2320).</p> <p>National Grid will continue to engage with nearby airfields as appropriate. Further information on the assessment of airfields can be found in the Environmental Statement (ES) (see ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and ES Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2)).</p>				
9-3.12	Criticism that the advice provided to National Grid regarding the impact of the Project on Tibenham Airfield does not recognise the full nature and complexity of the aviation activities at the airfield and will impact safety of aircraft using the east/west runway	National Grid has appointed an independent aviation consultancy who have developed an assessment methodology to enable site-specific impact assessment for aerodromes potentially impacted by the Project. This bespoke appraisal considers a range of factors including (but not limited to) aircraft types, performance, flight paths and operational procedures at each aerodrome (determined from published information, and via consultation with operators and relevant aviation stakeholders) as well as runway length, orientation and distance from the overhead line, and the surrounding context in terms of topography, existing obstacles and neighbouring aerodromes.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		In relation to Tibenham Airfield, it is assessed that overhead line overflight clearance margins for straight ahead take-offs (including for aerotows) and glider or powered aircraft approaches are adequate and that current circuits can continue to be used. Engagement with the operator is ongoing to confirm the acceptability of the Project and support their consideration of reasonable changes to operational procedures. We are also continuing to engage with other aviation stakeholders, including the British Gliding Association (BGA), to discuss our assessment assumptions and findings. Further information on the assessment of airfields can be found in the Environmental Statement (ES) (see ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and ES Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2)).				
9-3.13	Suggest that the Project (overhead lines) should be at least 5 km away from Tibenham Airfield (e.g. due to the need to transit over the Priory Farm circuit pattern) (plan provided by respondent)	National Grid, along with its appointed independent aviation consultancy, has consulted with the owners and operators of both Tibenham and Priory Farm airfields to inform its assessment of potential impacts on aviation from the Project. We recognise the existence of set flight procedures established to avoid potential interactions between the two airfields resulting from their proximity. These factors have been considered, with other variables, within the impact assessments, and we assess that the overhead line would not impact current procedures at either airfield. We are continuing to		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		engage with the owners and operators to enable their review of the acceptability of the Project design and support their consideration of whether reasonable changes to operational procedures are required. Further information on the assessment of airfields can be found in the Environmental Statement (ES) (see ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and ES Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2)).				
Community / Social impact						
9-3.14	Concern about impact of the Project on children / families / residents / communities	National Grid recognises people may have concerns about the potential impacts of living close to an overhead line, and that the uncertainty whilst the proposals are developed may cause anxiety. We have sought to reduce potential effects on communities, residents – including children - through routeing and design. We have also sought to reduce concern or uncertainty about the proposals through making timely design decisions and engaging with people and stakeholders throughout the development of the Project. If the Project received Development Consent, the Project team would continue to engage with people potentially affected during construction, through regular communication including letters, phone calls and meetings, where necessary. We urge anyone with concerns to get in touch through the Norwich to Tilbury	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Freephone number, address or email, which will remain open throughout examination.</p> <p>National Grid is committed to working with local suppliers, facilitated by supporting forums (such as the local Chambers), on electricity industry skills and workforce planning. National Grid is also committed to providing a coordinated regional approach to jobs and skills opportunities. This commitment is broader than the individual project and separate to any commitments under the proposed development consent order for this Project. The socio-economic effects of the project are assessed in Chapter 15: Socio-economics, Recreation and Tourism of the Environmental Statement (document reference 6.15). Post construction job opportunities are limited given the nature of the development however we will still work with Local Authorities (including facilitating local partners) to understand what is important to them around skills and employment to ensure we leave a lasting positive legacy in the communities where we operate.</p> <p>With regards to a delivery mechanism, the above measures will be delivered as part of our community benefit package, which will look at both local and regional initiatives. This will be delivered outside the development consent process and is not a material consideration in the decision on the proposed Project or a matter to be secured as part of the DCO, as per the Community Funds for Transmission Infrastructure: Guidance (DESNZ, 2025).</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-3.15	Concern about impact of the Project on school / educational facilities	Through routeing and siting, National Grid has sought to avoid, as far as practicable, locations of education establishments. ES Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) presents an assessment of the potential impacts on education facilities as a result of the Project. As part of the assessment, a range of measures are considered during the construction phase to reduce, where practicable, disruption to education establishments. These include traffic management, signage and routing measures to ensure access or partial access can be maintained where feasible. These are identified within ES Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15), the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) and the Outline Code of Construction Practice (CoCP) (document reference 7.2). The assessment concludes that there would be no significant effects on education facilities within the study area as a result of the construction and operation of the Project.	X		X	
9-3.16	Concern about impact of the Project on leisure	Through routeing and siting National Grid has sought to avoid, as far as practicable, locations important for leisure and tourism. Environmental Statement (ES) Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) presents an assessment on the potential impacts on leisure and tourism. As part of this assessment, a range of measures have been considered throughout the construction phase of the	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Project to minimise disruption on leisure and tourism. These include traffic management, signage and routing measures. These are identified within ES Chapter 15: Socio-economics, Recreation and Tourism, the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).				
9-3.17	Concern about over development of area / other works in the area (e.g. cumulative impact)	<p>A cumulative effects assessment has been undertaken in accordance with the Planning Inspectorate's Advice Note 17 'Cumulative Effects Assessment' and is presented in Environmental Statement (ES) Chapter 17: Cumulative Effects (document reference 6.17). The cumulative effects assessment has considered the effects of the Project in conjunction with other existing and, or approved developments in line with guidance. As part of this process, National Grid has engaged with other developers who are proposing development in proximity of the Project to understand their requirements.</p> <p>The cumulative assessment has been undertaken in accordance with the overarching NPS for Energy (EN-1) Paragraph 4.1.5 in EN-1 states:</p> <p><i>'In considering any proposed development, in particular when weighing its adverse impacts against its benefits, the Secretary of State should take into account: ... its potential adverse impacts, including on the environment, and including any long-term and cumulative adverse impacts, as well as any measures to avoid, reduce,</i></p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p><i>mitigate or compensate for any adverse impacts, following the mitigation hierarchy'.</i></p> <p>Paragraph 4.2.12 in EN-1 states:</p> <p><i>'The cumulative impacts of multiple developments with residual impacts should also be considered.'</i></p> <p>Paragraph 4.3.3 in EN-1 states:</p> <p><i>'The Regulations require an assessment of the likely significant effects of the proposed project on the environment, covering the direct effects and any indirect, secondary, cumulative, transboundary, short, medium, and long-term, permanent and temporary, positive and negative effects at all stages of the project, and also of the measures envisaged for avoiding or mitigating significant adverse effects'.</i></p> <p>Paragraph 4.3.19 of EN-1 states:</p> <p><i>'The Secretary of State should consider how the accumulation of, and interrelationship between, effects might affect the environment, economy, or community as a whole, even though they may be acceptable when considered on an individual basis with mitigation measures in place'.</i></p> <p>Paragraph 4.4.5 in EN-1 states:</p> <p><i>'The impacts of more than one development may affect people simultaneously, so the applicant should consider the cumulative impact on health in the ES where appropriate.'</i> The long list and short list of other existing and, or approved developments considered for the</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Cumulative Effects Assessment is presented in ES Appendix 17.2: Long List and Short List of Other Developments (document reference 6.17.A2), detailing the other developments shortlisted for detailed assessment. The appendix provides details on other developments screened out of the assessment in accordance with the methodology presented in ES Chapter 17: Cumulative Effects</p> <p>(document reference 6.17). The detailed assessment of shortlisted other developments is presented in ES Appendix 17.3: Inter-Project Cumulative Effects Matrix (document reference 6.17.A3). ES Appendix 17.3: Inter-Project Cumulative Effects Matrix (document reference 6.17.A3) outlines the residual significance of cumulative effects for each development, for each environmental topic that has a Zone of Influence that overlaps with that development (i.e. socio-economic, recreation and tourism impacts).</p>				
9-3.18	Concern about the Project being in too close proximity to recently built housing developments / using land being considered for future development (including residential, commercial, infrastructural, and employment sites)	National Grid has obtained information on existing, under construction, consented but not built schemes as well as development proposals within the planning system. The Project design has responded to those that are confirmed through consideration of routeing. In the case of development proposals, some can be amended to be designed around our proposed infrastructure but in other cases our proposals may need to be amended at a corridor level, or proposed developments factored into our detailed route design. Based on known information,			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		and in light of changes made following consideration of feedback to the 2022 and 2023 non-statutory consultations, statutory consultation, targeted consultations, and landowner consultation, we consider our proposals are consistent with relevant policy and guidelines and the alignment designed such that they do not prevent proposed housing developments from being successfully progressed. UK law does not prescribe minimum distances between overhead lines and homes, but any implications on landscape and visual receptors, residential amenity or from concerns about electromagnetic fields are robustly assessed as part of the Environmental Impact Assessment (EIA) and balanced as part of the decision-making process. We will continue to review planning applications and engage with developers as necessary.				
9-3.19	Concern about the Project causing communities to become encircled / surrounded by overhead lines	The alignment has been routed to achieve some separation from the existing 400 kV overhead line, such that villages are not encircled by overhead lines to both sides. Separation is inevitably reduced in certain locations due to the presence of constraints to routing and environmental features. Detailed assessment reported in the Environmental Impact Assessment (EIA) identifies any measures considered to be necessary to reduce likely significant effects which will also consider the potential for effects potentially arising from close paralleling existing 132 kV overhead line and new 400 kV overhead line infrastructure.	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-3.20	Concerned that the Project will have a negative impact on domestic horses / equestrian activities	<p>As well as possible effects on humans, the possible effects of Electric and Magnetic Fields (EMFs) on various animals have been studied. No proven effects of EMFs have been found in any species at levels below the guidelines. This is confirmed in National Policy Statement (NPS) EN-5 which states: '<i>There is little evidence that exposure of crops, farm animals or natural ecosystems to transmission line EMFs has any agriculturally significant consequences.</i>' Although horses are not directly mentioned, there is no evidence to suggest they are any different to other farm animals.</p> <p>As well as the possible direct biological or health effects addressed above, indirect effects such as microshocks can occur as a result of electric fields. Microshocks are small spark discharges which are similar to a static shock after walking across a nylon carpet for example. The Project will be designed in accordance with the principles of the Governments Code of Practice 'Power Lines: Control of Microshocks and other indirect effects of public exposure to electric fields' to ensure these are mitigated, which include equestrian activities.</p>	X		X	
9-3.21	Concern about the impact of the Project on emergency services / ambulances / hospitals / health service.	<p>Through routeing and siting National Grid has sought to avoid and reduce as far as practicable effects on identified healthcare facilities.</p> <p>Environmental Statement (ES) Chapter 10: Health and Wellbeing (document reference 6.10) and ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) consider the potential</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		impacts on, and access to, healthcare facilities, including emergency services, ambulances, hospitals and other NHS services associated with the construction of the Project, drawing on information from ES Chapter 16: Traffic and Transport (document reference 6.16). No health facilities are due to be directly impacted by the Project and where road diversions are required traffic management and mitigation measures will be in place to reduce impacts. These include traffic management, signage and routing measures to ensure access or partial access can be maintained where feasible. Further detail on proposed mitigation measures is presented in the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), which has been produced following engagement with stakeholders including the emergency services.				
9-3.22	Concern about negative impact on Quiet Lane(s).	Quiet lanes (minor rural roads/lanes designated to pay special attention to the needs of walkers, cyclists, runners, horse riders and other vulnerable road users, providing a shared space with protection from speeding traffic) have been given consideration as part of the Landscape and Visual Impact Assessment (LVIA) which is presented in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13), and undertaken as part of the Environmental Impact Assessment (EIA). The LVIA sets out the potential landscape and visual effects, including consideration of visual amenity of people travelling along quiet lanes and also impacts on landscape character which may for	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		example be influenced by vegetation loss along quiet lanes during construction.				
9-3.23	Concern that the Project cuts across the emergency access route (Low Common) to equestrian business (as lanes are small, there is no viable alternative) and suggest that this route cannot be obstructed for any time, given the large number of horses owned by the business and requirement for 24/7 access for emergency response (e.g. in the event of a fire, the emergency response should not be delayed)	It is not envisaged that Low Common would need to be closed, however the proposed approach for road closures and management is set out in the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3). It is anticipated that roads would only be closed where this is required for safe working. Temporary closures may be required for works including the construction of bellmouth junctions, highway mitigation, installation of buried cabling, and stringing of overhead lines / netting. If no suitable existing alternative access provision is available, temporary alternative access would be provided. Further information is included within the Outline CTMP (document reference 7.3) submitted as part of the Development Consent Order (DCO) application.			X	
9-3.24	Criticism that Pylons RG21 and RG22 will be right outside respondent's tenants window (e.g. impacting tenants during construction and once the Project is in place)	National Grid has considered the respondent's feedback and has reviewed a number of alternative alignments in this location. Alternatives to the north would impact more woodland and would also increase the impact on a proposed solar farm development, alternatives would also be longer and require additional angle pylons and would be therefore less consistent with the Holford Rules. We are therefore not proposing a change to the alignment in this location. A summary of the Holford Rules is provided within Appendix I22 of this report. Mitigation and management measures for the impacts associated with the Project during the construction			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		phase are set out in the Outline Code of Construction Practice (document reference 7.2).				
9-3.25	Concern that the battery storage facility at Swardston was raised by significant metres with hundreds / thousands of tonnes of sand, meaning that when it rains, torrents of water run off the site along with sand onto the road which is very dangerous, and has caused numerous problems with cars, motorcycles and cyclists / Request for clarification on why the site has been raised.	Our proposals are for Norwich to Tilbury, an overhead line between substations at Norwich Main and Tilbury. While we do work with other developers, we are not responsible for decisions over specific construction aspects of their projects and therefore cannot comment on the points raised in the feedback.			X	
9-3.26	Criticism of National Grid's lack of transparency in relation to local benefits / Suggest that National Grid commits to Community Wealth Compensation repayments to Norfolk for residents to decide how best to use the funding (taking into account the disruption caused both during and after construction)	National Grid is committed to working with local suppliers, facilitated by supporting forums (such as the local Chambers), on electricity industry skills and workforce planning. National Grid is also committed to providing a coordinated regional approach to jobs and skills opportunities. This commitment is broader than the individual project and separate to any commitments under the proposed development consent order for this Project. The socioeconomic effects of the Project are assessed in Chapter 15: Socio-economics, Recreation and Tourism of the Environmental Statement (ES) (document reference 6.15). Post construction job opportunities are limited given the nature of the development however we will still work with Local Authorities (including facilitating local partners) to understand what is important to them around skills and employment to ensure we leave a lasting positive legacy in the communities where we operate. With regards to a delivery mechanism, the above measures will be			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		delivered as part of our community benefit package, which will look at both local and regional initiatives. This will be delivered outside the development consent process and is not a material consideration in the decision on the proposed Project or a matter to be secured as part of the DCO, as per the Community Funds for Transmission Infrastructure: Guidance (DESNZ, 2025).				
9-3.27	Criticism that local residents will have to pay for damage done to roads as a result of increased construction traffic as part of the Project	While all precautions and preparations are made to avoid damage to existing infrastructure, any accidental damage to road surfaces caused would in consultation with local highway authorities if deemed appropriate be reinstated by National Grid.			X	
9-3.28	Support the change to the Project which has moved the pylons out of respondent's direct line of vision, and into a position by which they are now somewhat screened by woodlands / Concern that these changes will be reverted	National Grid notes the respondent's feedback and can confirm that the change requested for RG43 and RG44 at the 2023 non-statutory consultation has not been reverted following feedback from the statutory consultation and therefore the alignment has not changed in this location. The Order Limits include Limits of Deviation (LoD) which represent the maximum deviation for permanent features, such as the overhead line, pylons, Cable Sealing End (CSE) compounds, new substations and underground cables. This allows for adjustment to the final positioning of Project features to avoid localised constraints or unknown or unforeseeable issues that may arise.			X	
9-3.29	Concern about the impact of Pylons RG79 and RG80 on footpaths, residents, and wildlife	A range of protected species and other ecological surveys have been undertaken around pylons RG79-			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>RG80, and the results are outlined in Chapter 8: Ecology and Biodiversity (document reference 6.8) and Appendices 8.1 to 8.16 (document reference 6.8.A1-6.8.A16) of the Environmental Statement (ES). Appropriate mitigation would be implemented where impacts on specific ecological receptors are identified, relevant to RG79 and RG80, as set out within the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) agreed with Natural England and the Local Planning Authority as relevant.</p> <p>Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) of the ES covers the potential effects on Public Rights of Way (PRoW), including footpaths, from the Project. An Outline Public Rights of Way Management Plan (document reference 7.6) is submitted as part of the Development Consent Order (DCO) application, which details the proposed management of PRoW during construction.</p> <p>A landscape and visual impact assessment (LVIA) has also been undertaken as part of the EIA and reported in ES Chapter 13: Landscape and Visual (application document 6.13). The LVIA sets out the potential landscape and visual effects, which includes consideration of visual amenity of visual receptor areas (including, for example, people in communities and using public rights of way). Chapter 13 is supported by ES Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3). This appendix sets out the assessment for visual receptor areas including A9</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Shelfanger and A10 Burston which are relevant to this feedback.				
Construction impacts						
9-3.30	Concern about disruption from construction	<p>An Environmental Statement (ES) (document reference: Volume 6: Environmental Statement) has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 ('the Infrastructure EIA Regulations'). The ES identifies and assesses the likely significant effects on the environment resulting from the construction of the Project and recommends appropriate mitigation to reduce effects.</p> <p>Environmental mitigation measures have been defined within each environmental topic chapter and set out in relevant management documents submitted with the Development Consent Order (DCO) application, including the Outline Code of Construction Practice (CoCP) (document reference 7.2), the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (WSI) (document reference 7.5).</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-3.31	Concern about impact on traffic levels in local area caused by construction works	<p>As part of the pre-application process National Grid has engaged with the relevant authorities, their highways teams and National Highways to understand and gain information on their road networks. This information has been used to inform and guide the drafting of the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) for the Project that accompanies the Development Consent Order (DCO) application. The Outline CTMP (document reference 7.3) provides details about the proposed construction access strategy that has been developed to manage the impact of construction vehicles on the Public Highway and sensitive receptors, using a combination of more suitable Local Road Network connections from the Strategic Road Network, and temporary haul roads for access along the proposed alignment. The Outline CTMP (document reference 7.3) highlight any measures to reduce impacts to other road users from construction traffic related to the Project.</p> <p>Environmental Statement (ES) Chapter 16: Traffic and Transport (Document Reference 6.16) includes the assessment of the potential impacts of the Project including changes in traffic flow, delays, road safety and impact on Walking, Cycling and Horse-Riding modes on the roads along the Primary Access Routes located in the Local Road Network.</p> <p>The Transport Assessment (Document Reference 7.11), submitted with the Development Consent Order (DCO)</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>application, examines capacity, safety, and operational efficiency of the network, identifying potential bottlenecks or safety concerns.</p> <p>Within the assessment of the ES and the Transport Assessment, mitigation measures are proposed to minimise likely adverse impacts.</p>				
9-3.32	Concern about noise and other issues resulting from construction (e.g. mud on roads, dust)	<p>An Environmental Statement (ES) (document reference: Volume 6: Environmental Statement) has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 ('the Infrastructure EIA Regulations'). The ES identifies and assesses the likely significant effects on the environment resulting from the construction of the Project and recommends appropriate mitigation to reduce effects.</p> <p>Specifically, a Construction Noise and Vibration Impact Assessment has been undertaken and is reported in Environmental Statement (ES) Chapter 14: Noise and Vibration (document reference 6.14). During construction, mitigation would be implemented to reduce noise, and vibration impacts from construction activities and increased road traffic and vibration due to additional movement from construction traffic. Mitigation measures are outlined in ES Chapter 14: Noise and Vibration (document reference 6.14) and the Outline Code of Construction Practice (CoCP) (document reference 7.2). This includes the assumption that construction working would be undertaken within the agreed working hours,</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>construction traffic would be managed through the Construction Traffic Management Plan (CTMP) (document reference 7.3), haul roads would be well maintained, and Best Practicable Means (BPM) would be employed to reduce construction noise and vibration.</p> <p>ES Chapter 7: Air Quality (document reference 6.7) presents an assessment of the potential impacts from the construction of the Project on air quality. During construction, mitigation would be implemented to reduce the impact of dust generation and construction vehicle emissions. Mitigation measures are outlined in ES Chapter 7: Air Quality (document reference 6.7), and the Outline CoCP (document reference 7.2). The dust-emitting activities can be greatly reduced or eliminated by applying the site-specific mitigation measures (see Outline CoCP (document reference 7.2)) for high-risk sites following measures recommendations in the Institute of Air Quality Management (IAQM) guidance (IAQM, 2024). The IAQM guidance states that with the implementation of effective site-specific mitigation measures, the environmental effect would not be significant in most cases.</p> <p>In addition, National Grid has prepared an Outline CoCP (document reference 7.2). The Outline CoCP (document reference 7.2) sets out the required mitigation measures and environmental commitments that will be implemented during the construction phase of the Project to avoid or reduce potential effects of the Project on the environment.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-3.33	Concern that local road infrastructure is not suitable for heavy construction vehicles and machinery	<p>The Construction Access Strategy has been developed to manage the impact of construction vehicles on the Public Highway and sensitive receptors, using a combination of more suitable Local Road Network connections from the Strategic Road Network, and temporary haul roads for access along the alignment. Further details of the Construction Routing Strategy are included within the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).</p> <p>The Project also requires the transportation of Abnormal Indivisible Loads (AIL). National Grid is developing specific routing proposals for AIL movements and is developing these through engagement with the relevant stakeholders including the Local Highway Authorities and National Highways. An AIL routing strategy containing details about these movements are submitted in support of the Development Consent Order (DCO) application.</p>	X		X	
9-3.34	Criticism that the battery plant in Swardeston caused catastrophic flooding on a regular basis and devastated wildlife / Concern that the Project will also cause catastrophic flooding and devastate wildlife at Swardeston	National Grid has prepared a Flood Risk Assessment (FRA) (document reference 7.9) for the Project. The FRA concludes that the proposed works and their mitigation measures will not result in increased flood risk to land neighbouring the Order Limits, including at Swardeston. A suite of controls is secured through the Outline Code of Construction Practice (CoCP) (document reference 7.2) to prevent any increases in flooding in the locality.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		In addition, an assessment of the impact of the Project on biodiversity is set out in the Environmental Statement (ES), Chapter 8: Ecology and Biodiversity (document reference (6.8). This chapter includes details about the level of impact and the mitigation proposed in relation to the Project and includes the area 1.2km to the east of Swardeston which is part of the Order Limits. Habitat impacts will predominantly be temporary and will be subject to a like for like replacement planting strategy on completion of works. Additional habitat creation and enhancement works are proposed around Norwich Main Substation as part of Biodiversity Net Gain (BNG) which will have longer term benefits to wildlife in the local area.				
9-3.35	Request that drivers for the Project are briefed on the correct action when meeting or passing horses and request that all construction workers for the Project are briefed on how to act around horses	All construction traffic serving the Project will be briefed with a driver information pack which will include the correct actions when meeting horses and how to behave around horses.			X	
9-3.36	Concern that construction activities on Brick Kiln Lane as part of the Project will damage the ditches along the lane, causing flooding to nearby houses	The impacts of the Project on land drainage and flooding are assessed within Chapter 12: Hydrology, Land Drainage and Flood Risk, of the Environmental Statement (ES) (document reference 6.12).Where the Project's construction disturbs ditches, such as those along Brick Kiln Lane, and other means of land drainage, alternative means of land drainage would be put in place to ensure that there is no increase in flood risk to neighbouring properties and infrastructure. This is secured through a commitment documented in the			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Outline Code of Construction Practice (CoCP) (document reference 7.2).				
9-3.37	Concern that construction for the Project will cause water pollution in the Tas River Valley (e.g. the water that flows to the Aslacton Site of Special Scientific Interest (SSSI))	The potential for construction of the Project to affect the water quality of water environment receptors in the Tas River valley has been assessed within the Environmental Statement (ES), Chapter 12: Hydrology, Land Drainage and Flood Risk (document reference 6.12) and a suite of control and management measures have been identified to prevent pollution and safeguard water quality. These are documented in the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the principles founding these measures have been discussed and agreed with the Environment Agency and Lead Local Flood Authorities.	X		X	
9-3.38	Concern about the crossing of heavy goods vehicles for the Project across the public road between Pylons RG45 and RG46 (e.g. as this road is the main access road into and out of the Low Common community, and any closure of this road will be problematic for residents, especially during exceptionally wet weather, when all other routes to and from Low Common can be made impassable because of the presence of forded bridges and flood water)	It is not envisaged that Low Common would need to be closed, however the proposed approach for road closures and management is set out in the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3). It is anticipated that roads would only be closed where this is required for safe working. Temporary closures may be required for works including the construction of bellmouth junctions, highway mitigation, installation of buried cabling, and stringing of overhead lines / netting. If no suitable existing alternative access provision is available, temporary alternative access would be provided, such that there would be a route available when other routes may be impassable due to flooding. Further information is included within the Outline CTMP (document	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		reference 7.3) submitted as part of the Development Consent Order (DCO) application.				
9-3.39	Criticism that the access point from Fen Road is not adequate for the type of traffic associated with the Project (e.g. this will impact the respondent significantly due to lack of alternative routes)	National Grid notes the respondent's feedback. The access route shown on Fen Road is for future surveys and maintenance if required and will not be used for construction. We are not proposing to construct anything for this permanent access route, existing tracks and roads are being used where possible. Therefore, no impacts to traffic on the road is anticipated in relation to the Project.			X	
9-3.40	Request that the 7.5 tonne vehicle restriction on the lanes and roads that join Brick Hill Lane is adhered to by construction vehicles for the Project, and request that National Grid ensures that staff / construction workers for the Project adhere to the speed limit on Brick Hill Lane (e.g. to minimise safety risks given the anticipated increase of traffic for the Project)	Should consent be granted for the Project, construction vehicles would be required to adhere to any traffic laws and relevant restrictions. The proposed approach for management of construction traffic is set out in the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) which will be a certified document under the Development Consent Order (DCO) if made, requiring compliance with the Outline CTMP's (document reference 7.3) contents. Further information is included within the Outline CTMP (document reference 7.3) submitted as part of the DCO application.			X	
Consultation						
9-3.41	Comment supportive of engagement that has taken place / respondent feels listened to	National Grid notes the respondent's feedback.			X	
9-3.42	Comment supportive of the Project in this section	National Grid notes the respondent's feedback.			X	
9-3.43	Criticism of consultation specific to this section	National Grid notes the respondent's feedback.	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-3.44	Criticism of the consultation as land has already been cordoned off, a converter station is already being built, and entrances to fields are being created	National Grid has not started any construction activity for Norwich to Tilbury and will not start to do so until we receive Development Consent. There are several other projects in East Anglia that have started construction work that may be responsible for the laying of the permanent concrete entrances to fields. National Grid has also started work at Norwich Main Substation. The work taking place there is not linked to the Project and is needed to connect new sources of offshore wind from the Sheringham Shoal and Dudgeon offshore wind farms.			X	
9-3.45	Criticism that 4.5.7 of the Corridor Preliminary Routeing and Substation Siting study (CPRSS) undervalues the landscape of South Norfolk	National Grid has considered the basis for utilising underground cable in the context of the relevant policy which is National Policy Statement (NPS) EN-5. In respect of this area although the landscape may be considered to be of greater value, it is not designated. The presumption in NPS EN-5 in such undesignated locations is that overhead line is generally acceptable as the 400 kV connection technology. We have also considered whether the effects are nonetheless sufficient to engage other parts of NPS EN-5 to support a change to use underground cable. We consider this to be consistent with National Grid's duties.			X	
9-3.46	Criticism that 4.5.7 of the Corridor Preliminary Routeing and Substation Siting study (CPRSS) does not include the equally sensitive Waveney Rural River Valley.	National Grid has considered the basis for utilising underground cable in the context of the relevant policy which is (National Policy Statement (NPS) EN-5. In respect of this area although the landscape of the Waveney Valley is valued, it is not designated. The presumption in NPS EN-5 in such undesignated			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		locations is that overhead line is generally acceptable as the 400 kV connection technology. We have also considered whether the effects are nonetheless sufficient to engage other parts of NPS EN-5 to support a change to use underground cable. We consider this to be consistent with National Grid's duties.				
9-3.47	Criticism that the local planning guidelines published by South Norfolk and Broadland District Councils have not been considered by National Grid	National Grid notes this feedback. While the application for development consent will be considered by the Secretary of State primarily against the policies in the relevant National Policy Statement (NPS) EN-1 and EN-5, the Secretary of State must also take Development Plans into consideration if they are ' <i>both important and relevant to the Secretary of State's decision</i> ' (Section 104 of the Planning Act 2008). Accordingly, National Grid has taken into consideration the relevant development plans (both adopted and emerging) which have been prepared by all of the Local Planning Authorities along the route of the Project. Further details are provided in the Planning Statement (document reference 5.6) and Policy Compliance Document (document reference 5.7) which has been submitted as part of the Development Consent Order (DCO) Application.			X	
9-3.48	Criticism that National Grid has not finished consulting and yet have already impacted the area of the Norwich Main substation, resulting in visual impact and daily flooding of the B1113 whenever there is rain	Work for the Project has not started yet. There is currently some work taking place at National Grid's Norwich Main Substation to increase its capacity. Work to the eastern extension of the site started in April 2024 and started on the western extension in October 2024. While the Project would, if consented, connect into			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Norwich Main Substation, the work taking place there is not linked to our proposals for the Project and is needed to connect new sources of offshore wind from the Sheringham Shoal and Dudgeon offshore wind farms.				
9-3.49	Criticism that National Grid has built the substation on the outskirts of Mulbarton before consultation is even complete	Work for the Project has not started yet. There is currently some work taking place at National Grid's Norwich Main Substation to increase its capacity. Work to the eastern extension of the site started in April 2024 and started on the western extension in October 2024. While the Project would, if consented, connect into Norwich Main Substation, the work taking place there is not linked to our proposals for the Project and is needed to connect new sources of offshore wind from the Sheringham Shoal and Dudgeon offshore wind farms.			X	
9-3.50	Suggest that the Project is considered in the context of all the other power related developments that have been agreed or are envisaged for South Norfolk, and in particular which relate to the area within a radius of 5 miles from Norwich Main Substation	National Grid has taken into account other developments within a defined 3 km distance from the Project. The cumulative effects arising from these developments are reported in the Cumulative Effects Assessment (CEA) Chapter of the Environmental Statement (ES) Chapter 17: Cumulative Effects Assessment (document reference 6.17).			X	
9-3.51	Suggest that National Grid visits Bressingham Gardens	National Grid notes the respondent's feedback. We have visited many parts of the proposed route throughout the design process, including Bressingham Gardens.			X	
9-3.52	Criticism that consultation notices for the Project had been inadequately stapled to wooden posts in Gislingham Road adjacent to the access track to farm and have resultingly been littered across the	At the statutory consultation stage of a Project, National Grid needs to ensure that landowners / persons with an interest in a piece of land are aware of the consultation and can give feedback on the proposals.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	Mellis Common, and request that the wooden posts on Gislingham Road should be removed	<p>As part of this, National Grid is required to put up notices in areas of unregistered land and then monitor them for the duration of the consultation period. Due to the fact these notices need to stay in place for several months they are made using waterproof materials.</p> <p>Also, where surveys are taking place and voluntary agreement to take access has not been reached, access notices would also be installed on site advising landowners that notice has been served, and that access would be taken from a particular date.</p> <p>While notices are in place, they would be checked periodically, and once notices are no longer required, they would be collected from the site and disposed of appropriately. If a member of the public has concerns that a notice is no longer attached to its original location, then please make contact with the Project lands team to discuss:</p> <p>Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.</p> <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD.</p>				
9-3.53	Criticism that the Diss and District Neighbourhood Plan (DDNP) has not been considered (including the views, green spaces and heritage assets included within the plan)	The Diss and District Neighbourhood Plan was adopted by South Norfolk Council and Mid-Suffolk District Council on 16 October 2023.	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		The Neighbourhood Plan now forms part of the statutory Development Plan for both South Norfolk Council and Mid-Suffolk District Council areas and accordingly has been subject to a review in the Planning Statement (document reference 5.6) and the Policy Compliance Document (document reference 5.7).				
9-3.54	Suggest that National Grid provides 3D visuals for the Waveney Valley Alternative (underground option)	The 3D visualisation tool which was available to be viewed at the statutory consultation public information events included a toggle for the Waveney Valley section which removed the overhead line aspect from the tool for this section providing landscape visuals in the absence of overhead lines.			X	
9-3.55	Suggest that National Grid considers Natural England's National Character Area Profile, 'South Norfolk and High Suffolk Claylands' (2014) (e.g. in relation to impact on environment and views)	The South Norfolk and High Suffolk Character Area (NCA83, Natural England, 2014) has been referenced in the landscape baseline studies and considered as part of the assessment of effects on the landscape. These can be found in the Landscape and Visual Impact Assessment (LVIA) presented in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13). The LVIA includes an assessment on both landscape character and visual amenity and sets out the potential landscape and visual effects as well as any mitigation measures where required.			X	
9-3.56	Concern that the haul road proposed by National Grid conflicts with two consented developments, Sheringham Shoal and Dudgeon Wind Farm Extension Projects (plan provided by respondent)	Some crossing of the underground cables by the construction access is unavoidable. However, appropriate arrangements can be established to allow the various projects to co-exist.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-3.57	Concern that Roydon Fen Country Wildlife Site (CWS) has been incorrectly identified within consultation documents for the Project as being located within Suffolk and its designation has also been missed out from several sections including Annex B and Figure 8 of the reptile report	The location of Roydon Fen Country Wildlife Site (CWS) is identified within Chapter 8: Ecology and Biodiversity (document reference 6.8) Appendix 8.16: Designated Sites report. Roydon Fen CWS is purposely missing from Figure 8. Figure 8 of the reptile report only identifies designated sites where reptiles have specifically been identified within the citation as a designating feature.		X		
9-3.58	Suggest that an illustration showing expected vegetation clearance requirements of the Waveney Valley Alternative should be provided for clarity within the Environmental Statement (ES) to supplement those provided for overhead lines and haul road vegetation clearance. The extent of vegetation loss needs to be clearly identified	<p>The Project being taken forward in the Development Consent Order (DCO) application, is for an overhead line at the Waveney Valley, not the Waveney Valley Alternative.</p> <p>A review of potential vegetation clearance as a result of the construction and operation of the Project has been undertaken to identify relevant mitigation, with further details outlined in ES Appendix 13.6: Arboricultural Impact Assessment (document reference 6.13.A6). Further information showing the affected vegetation can be found in the Trees and Hedgerows to be Removed and or Managed Plans (document reference 2.16).</p> <p>The Outline Code of Construction Practice (CoCP) (document reference 7.2) includes a commitment that following detailed design and prior to construction all vegetation will be subject to a full tree / vegetation survey and site-specific assessment where vegetation removal may be reduced further. The Environmental</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Statement (ES) (document reference Volume 6: Environmental Statement) therefore presents a worst case scenario for the purpose of the assessment.				
		The Outline CoCP (document reference 7.2) has been produced in consultation with relevant stakeholders.				
9-3.59	Suggest amendments to Construction Access plans (sheets 1, 3 and 8) provided by respondent	<p>Sheet 1 – We have tracked access from the A140 onto Mangreen and have found additional widening of the junction is not required.</p> <p>Sheet 3 – Hethal Roundabout has been shown as hatched and noted to identify its location. The proposed Traffic Regulation Order schedule sets out a closure of Wymondham Road with a diversion along Flordon Road and the B1113.</p> <p>Sheet 8 – It has been agreed with Norfolk County Council that a proportion of construction traffic would pass through the Town of Diss as well as along the A1066 to Thetford/Low Road.</p> <p>Diss-Thetford - in peak</p> <p>100% of peak flows will go through Thetford, 50% of off peak flows between the hours of 10-3 will go through Diss and the other 50% will go through Thetford. All 100% of LGVs flow will still go through Diss.</p>			X	

Design Change (CR)

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-3.60	Oppose the use of underground cables (please provide location in details sheet)	National Grid has carefully considered the feedback received during the 2022 and 2023 non-statutory consultations, the statutory consultation, targeted consultations, and landowner consultation, the alternatives available, and other factors including our duties and obligations. These duties include balancing the need to be economic and efficient, which includes keeping costs down in the interests of the bill-paying consumers, with a duty to have regard to preserving amenity, which includes the natural environment, cultural heritage, landscape and visual quality, National Policy Statement (NPS) EN-5 makes clear that ' <i>the government's position that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)</i> '. The NPS also confirms that widespread and significant adverse landscape and/or visual impacts in other locations may also justify the use of undergrounding. We may also adopt underground cables in other circumstances such as to cross existing 400 kV overhead line infrastructure. Where the installation of underground cables is required in lieu of overhead lines, the design of the Project has incorporated suitable consideration of the existing environment, ecology and site ground conditions based on site specific survey data.	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-3.61	Suggest a minimum distance that the Project should be sited from residential areas / residences (please provide distance in details sheet)	National Grid does not use standard minimum distances as a routeing consideration. Applying an arbitrary distance may be too big or too small for the specific circumstances. We utilise the Holford Rules (a description of the Holford Rules can be found in Appendix I22 of this report) informed by feedback and professional judgement to define appropriate corridors and alignments that are consistent with the relevant policy framework and duties. In response to feedback to the 2022 and 2023 non-statutory consultations, statutory consultation, targeted consultations, and landowner consultation, we have modified the alignment in various locations to increase separation to properties where this is possible without undue deviation or transfer of effects to other similar properties or other receptors. A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the Environmental Impact Assessment (EIA). The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13). This assesses the impact of the Project and identifies the need for additional mitigation if required.			X	
9-3.62	Suggest that existing overhead lines in this section should be removed	The existing electricity transmission network provides power, via the local distribution network, into the local area where it is used in homes and businesses. Such lines cannot just be removed as power supplies would not be maintained.		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>The need case and funding for the Project is to deliver the new network reinforcement needed, rather than to remove existing overhead lines which would need to be replaced by another form of connection such as underground cables.</p> <p>Unless required for crossings or mitigation, undergrounding existing overhead lines on the transmission network would not be in accordance with National Policy Statement (NPS) EN-5 and would result in substantial cost to bill payers. There may also be significant environmental impacts due to the removal works on sensitive ecological and archaeological receptors as well as constraints from either existing buildings or unsuitable ground conditions.</p>				
9-3.63	Suggest that existing overhead lines in this section should be replaced by underground cables	<p>National Policy Statement (NPS) EN-5 establishes the position that the starting basis for new connections is a presumption on the acceptability of overhead lines but with this presumption reversed within designated landscapes and in certain other circumstances.</p> <p>The existing electricity transmission network provides power, via the local distribution network, into the local area where it is used in homes and businesses. The need case and funding for the Project is to deliver the new network reinforcement needed, rather than to remove existing overhead lines by undergrounding them.</p> <p>We have identified a number of locations where we are proposing to place existing overhead lines underground.</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>These locations are where existing 132 kV and lower voltage lattice pylon lines are crossed by the proposed 400 kV overhead line and / or mitigation of effects are considered necessary. This includes locations such as at Mellis, between Offton and Bramford Substation, to the south of Bramford Substation and near Fuller Street.</p> <p>Unless required for mitigation, undergrounding existing overhead lines on the transmission network would not be in accordance with NPS EN-5 and would result in substantial cost to bill payers. There may also be significant environmental impacts due to the removal works on sensitive ecological and archaeological receptors as well as constraints from either existing built form or unsuitable ground conditions.</p>				
9-3.64	Suggest that the existing overhead lines in this section are reinforced / upgraded instead	The existing transmission network in the region was upgraded during 2022 and 2023 to ensure the system is running at its most efficient performance. The existing assets / networks are not able to be upgraded sufficiently to cope with the new future demands expected on the network. As a result, new lines and substations would be required to accommodate the changing demands on the network.			X	
9-3.65	Suggest that the Project is routed away from populated / residential areas	Deciding where and how to build new high voltage electricity lines is a complex issue and National Grid is mindful of the potential effects this infrastructure may have on local communities and the concerns these may bring. We recognise that people living near our	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>transmission infrastructure, including high voltage overhead lines, may have concerns about audible noise and potential health impacts. It has sometimes been suggested that minimum distances between properties and overhead lines should be prescribed.</p> <p>We do not consider this appropriate since each instance must be dealt with on its merits. However, we have always sought to route new lines away from residential property on grounds of general amenity where possible.</p> <p>We have undertaken a noise and vibration assessment which can be found in the Environmental Statement (ES), Chapter 14: Noise and Vibration (document reference 6.14) that forms part of the Environmental Impact Assessment (EIA) for the Project. Noise levels and the effect on residential properties as well as other sensitive areas, such as hospitals and schools, are carefully considered during planning, assessed according to the appropriate UK standards, and mitigated where necessary. We set strict technical standards for the equipment we install on our network. These will apply to the proposed new East Anglia Connection Node (EACN) substation, and extensions required to the existing Norwich Main, Bramford, and Tilbury Substations. These standards include requirements to ensure the occurrence of audible noise is eliminated or reduced as far as practicable. Therefore, significant adverse effects from noise are not expected.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Noise from overhead lines is predominately determined by the conductor design, voltage and weather conditions. The overhead line will be designed using a relatively quiet conductor that meets the design specification required, and operational noise is not likely to be significant at nearby sensitive receptors under any weather conditions. Pylon fittings, such as insulators, dampers, spacers, and clamps, are also designed and procured in accordance with a series of National Grid Technical Specifications to reduce the potential for audible noise and tones to occur from all types of fittings. Where noise does occur, it is likely to be localised and of short duration. If this is due to a fault, action can be taken to rectify it. A technical note has been submitted as part of the application for development consent to support scoping out noise associated with overhead lines from the Environmental Statement (ES).</p> <p>In addition, we have undertaken a Landscape and Visual Impact Assessment (LVIA) for the Project.</p> <p>This includes an assessment on both landscape character and visual amenity. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13).</p> <p>The health and safety of the public, local communities and employees is central to everything that we do. The UK has a carefully thought-out set of policies for protecting us all against Electric and Magnetic Fields</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>(EMFs), the main component of which is exposure guidelines. The exposure guidelines are set by independent scientific bodies and are based on decades-long studies into the effects of EMFs and ill health. After those decades of research, the weight of evidence is against there being any health risks of EMFs below the guideline limits. Our approach is to ensure that our network comply with those policies, which are set by Government on the advice of their independent advisors. The Project is designed to ensure it is fully compliant with these policies and guidelines. This ensures that health concerns are properly and adequately addressed.</p> <p>Policies for both noise and EMF are incorporated into the decision-making process for development consent as set out in National Policy Statement (NPS) EN-5. It is National Grid's policy to ensure that all its equipment complies fully with those policies and guidelines. The application for a Development Consent Order (DCO) includes assessments against these policies, including both construction and operational noise and EMF.</p>				
9-3.66	Suggest that the Project should run in closer to / parallel to the existing overhead lines	<p>National Grid notes the potential for close paralleling existing overhead lines to reduce the level of effects that may arise from a new overhead line.</p> <p>However, where existing overhead lines are present along the proposed route, there are constraints and features that mean, overall, we consider close paralleling would lead to greater effects on receptors in</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		the area and be less compliant with the Holford Rules or be less consistent with the policy to be economic and efficient. A summary of the Holford Rules is provided within Appendix I22 of this report. A number of residential properties are present in close proximity to the existing 400 kV overhead line meaning that if the overhead lines were close paralleled it would result in the properties having an overhead line close to both sides. There are also some locations where the combination of existing physical and environmental features (road infrastructure, commercial and residential properties etc) presents very substantial challenges to routeing and siting. As a result, whilst close paralleling may appear beneficial in some sections, overall, the increased environmental effects where the overhead lines have to converge and diverge, and those increased effects on properties with overhead lines on both sides are considered greater than those introduced by a new overhead line separated from existing 400 kV overhead lines. Whilst crossings and use of underground cable technology may be able to address various constrained locations, we consider the costs and environmental effects arising from the additional infrastructure required to be less compliant with our duties and relevant policies.				
9-3.67	Suggest that underground cables are used for the entirety of this section	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors.</p> <p>National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is '<i>that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)</i>'. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25).A Landscape and Visual Impact</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider this section in its entirety would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.</p> <p>Therefore, whilst undergrounding the whole of this section is not considered appropriate, our proposals do include underground cable within the Dedham Vale National Landscape (previously known as Area of Outstanding Natural Beauty (AONB)) in accordance with NPS EN-5. Prior to our 2023 non-statutory consultation we identified the need to extend the underground cable beyond the National Landscape boundary because of potential effects, we have further extended this section of underground cable following consideration of feedback on our 2023 non-statutory consultation and additional investigation into potential effects. We also identified an approximately 4 km section near Great Horkesley as meeting the particularly sensitive criteria where underground cable is also proposed. Additionally, underground cable is proposed at Fairstead for a 400 kV overhead line crossing.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-3.68	Suggest that underground cables are used in populated / residential areas	<p>National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors.</p> <p>National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is '<i>that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)</i>'. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or</p>			X

		visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25).A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at all populated or residential areas in this section would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
9-3.69	Suggest alternative pylon design at the Waveney Valley (pylon type not specified)	The latest independent report on the Comparison of Electricity Transmission Technologies: Costs and Characteristics (Institute of Engineering and Technology, 2025) confirms that whilst T-Pylons may in certain locations provide an alternative to conventional overhead lines with potential benefits in visual impact and reduced land-take, this is at a higher cost. The build cost is approximately 2 to 2.5 times that of an equivalently rated conventional overhead line, and the lifetime costs are around 1.6 to 1.7 times that of a conventional overhead line. The current arrangements for the oversight of funding by Ofgem requires that the lowest cost acceptable design is taken forward rather			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>than a more expensive design even if that design is perceived to reduce the level of effect.</p> <p>As such consideration of their use follows after establishing a need to mitigate effects of the standard lattice design and after considering the benefit of adopting a low height lattice pylon design. T pylons themselves are also less adaptable to varied terrains and require more substantial access infrastructure. Furthermore, their resilience and environmental impact are comparable to conventional overhead lines, but with increased carbon intensity due to construction materials. Attention also needs to be given to the transitions between pylon types. Given It is the surrounding context that drives the need for alternative design mitigation, where this is not required along the entire route, any visual break and transition in pylon design also needs to be carefully sited.</p> <p>Assessment findings have concluded that, where there is not a reversal of the presumption to use overhead lines, the use of lattice pylons (either standard or low height) is consistent with planning policy throughout the route. Whilst there may be some locations (for examples see appendix A of the 2024 Design Development Report) where there may be a design option for the use of T pylons, the need to mitigate for unacceptable effects from lattice pylons is not engaged. On this basis T pylons are not proposed for the Project.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-3.70	Suggest that the Project between Pylons RG94 and RG95 are relocated as per the 2023 non-statutory alignment (e.g. to mitigate visual impact, impact on residents, and overdevelopment of the area)	National Grid proposed the change to the 2023 preferred draft alignment as it was required due to the presence of Brook airstrip and solar farm developments. Further assessment on the potential impact of the Project on this airstrip has identified a need to move the alignment further east between RG95 and RG102 (now RG94 and RG102). This change also enables the Project to follow the alignment of the existing 132 kV overhead line for a longer distance, which is then proposed to be installed underground to the north of the A143.			X	X
9-3.71	Suggest that Project follows railway lines in this section instead / Suggest that overhead lines for rail are upgraded instead	In developing the Project National Grid has considered the potential to parallel existing transport infrastructure (which is close to the existing 400 kV overhead line for part of this area) and consider them to be less preferred alternatives. Numerous properties (residential and commercial such as on Greenways), constraints and environmental features are present in close proximity to existing infrastructure and would be more adversely affected by close paralleling. Alternatively, if such an alternative was pursued the costs to avoid such effects (multiple direction changes for crossings of the existing overhead line or other infrastructure) would be much greater with additional limitations on the ability to achieve the necessary outages (to undertake the works safely) within the time available, and therefore no change is proposed.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-3.72	Suggest that the overhead line proposal is taken forward, and that the pylons as part of this are designed like the Angel of the North and branded as the Waveney Valley Angels	<p>The latest independent report on the Comparison of Electricity Transmission Technologies: Costs and Characteristics (Institute of Engineering and Technology, 2025) confirms that whilst T-Pylons may in certain locations provide an alternative to conventional overhead lines with potential benefits in visual impact and reduced land-take, this is at a higher cost. The build cost is approximately 2 to 2.5 times that of an equivalently rated conventional overhead line, and the lifetime costs are around 1.6 to 1.7 times that of a conventional overhead line. The current arrangements for the oversight of funding by Ofgem requires that the lowest cost acceptable design is taken forward rather than a more expensive design even if that design is perceived to reduce the level of effect.</p> <p>As such consideration of their use follows after establishing a need to mitigate effects of the standard lattice design and after considering the benefit of adopting a low height lattice pylon design. T pylons themselves are also less adaptable to varied terrains and require more substantial access infrastructure. Furthermore, their resilience and environmental impact are comparable to conventional overhead lines, but with increased carbon intensity due to construction materials. Attention also needs to be given to the transitions between pylon types. Given It is the surrounding context that drives the need for alternative design mitigation, where this is not required along the entire route, any</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>visual break and transition in pylon design also needs to be carefully sited.</p> <p>Assessment findings have concluded that, where there is not a reversal of the presumption to use overhead lines, the use of lattice pylons (either standard or low height) is consistent with planning policy throughout the route. Whilst there may be some locations (for examples see appendix A of the 2024 Design Development Report) where there may be a design option for the use of T pylons, the need to mitigate for unacceptable effects from lattice pylons is not engaged. On this basis T pylons are not proposed for the Project.</p> <p>National Grid does not consider that the inclusion of an alternative pylon design (such as one that looks like the Angel of the North) would further mitigate landscape and visual effects.</p>				
9-3.73	Suggest that Pylon RG60 is relocated further into the Haywood	National Grid has reviewed the alignment in this area, including the location of RG60. Moving the alignment further east in this area would introduce impacts to Priors and Tibenham airfields as well as transferring effects to other receptors including an electrically sensitive facility. We are therefore not proposing a change to the alignment in this area.			X	
9-3.74	Suggest that the underground cables are extended south to the A143	National Grid has considered the justification for the use of underground cable for the crossing of the Waveney Valley and on the matter of extending the underground cable south to the A143 raised in the respondent's			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>feedback. The starting presumption in National Policy Statement (NPS) EN-5 paragraph 2.9.20 in a location such as the Waveney Valley which, although valued is not designated, is that overhead line is the appropriate 400 kV connection technology. We have also considered whether the effects from the overhead line are at a level that engages other parts of NPS EN-5 (such as paragraph 2.9.23) to prompt consideration of whether the benefits of undergrounding outweigh any extra economic, social or environmental impacts. At the Waveney we conclude that the benefits from a change to underground cable, do not justify the additional cost that would be incurred. The use of underground cable would lead to a lowering of effects on the setting of the Grade I Listed St Remegius Church, albeit the effects of progressing with an overhead line are assessed as less than substantial harm and don't themselves require a change in technology. In terms of community effects, existing trees would provide some screening and filtering of views of an overhead line for those in residential areas and on recreational routes. A change from overhead line to underground cable would reduce these community effects but bring disbenefits, most notably increased ecological effects from installation within peaty soils and increased technical risk to cable integrity from the WaLOR channel naturalisation and landscape recovery plans. Conversely there may be a compromise to the WaLOR project by measures to ensure cable integrity. After consideration of the decision making</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		guidance at paragraph 2.9.25 of NPS EN-5, National Grid concludes that whilst effects from overhead lines to individual receptors may be significant in Environmental Impact Assessment (EIA) terms they do not justify the potential for compromise to the WaLOR project, the effects on peaty soils which would arise with an underground cable design nor justify the expected cost of an underground cable design. On this basis, National Grid concludes that the use of an overhead line should be taken forward for the crossing of the Waveney Valley. Prior to making this decision we had considered whether requests to relocate the Cable Sealing End (CSE) compounds and extend the cable both to the north and the south may alter the decision-making balance. Such extensions would bring benefits to various residential receptors but with the additional cost of longer length of cables. We conclude that given the absence of any designated status pertinent to NPS EN-5, and the extent to which some views from residential areas are filtered and screened and lower the level of adverse effects from the overhead line, we do not consider the additional cost associated with extending the underground cable would be justified.				
9-3.75	Suggest the use of underground cables at Wortham Ling (e.g. using trenchless, directional methods)	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)'</i>. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25).A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at Wortham Ling would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
9-3.76	Suggest that the Project uses underground cables from Pylon RG34 to RG38 to mitigate impact on the Tas Valley	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)'</i> . Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25).A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at RG34 to RG38 would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
9-3.77	Suggest that the Project is rerouted to follow closer to the A140	Whilst there could be potential benefits from infrastructure being concentrated geographically, i.e., by routing the Project in close proximity to existing road infrastructure such as the A140, there are constraints			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		and features that mean that we do not consider paralleling would reduce environmental effects or improve compliance with the Holford Rules or be more consistent with the policy requirement to be economic and efficient. A summary of the Holford Rules is provided within Appendix I22 of this report. A number of residential properties, as well as hamlets, villages and towns, are present in close proximity to the existing transport infrastructure necessitating multiple diversions of an overhead line. There are also some locations where the combination of existing physical and environmental features (railway and road infrastructure, commercial and residential properties, woodlands etc) present very substantial challenges to routeing and siting. As a result, whilst paralleling the A140 may appear beneficial in some short sections, overall, the increased environmental effects from multiple changes of direction are considered greater and less compliant with the Holford Rules than those that are associated with a new route alignment. On this basis no change is proposed.				
9-3.79	Oppose the changes made to the Project (as part of the 2024 preferred draft alignment) between Pylon RG48 and Pylon RG49 due to impact on wildlife conservation programme, local nature reserve, and local footpath	National Grid is proposing a slight change to the alignment and haul road between RG46 and RG51 which would take the alignment to the west and avoid the County Wildlife site and veteran tree. National Grid has submitted an Environmental Statement (ES) (document reference: Volume 6: Environmental Statement) which has been prepared in			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation of the Project and recommends appropriate mitigation to reduce effects. Specifically, ES Chapter 8: Ecology and Biodiversity (document reference 6.8) considers the effects on designations, habitats and species during construction and operation of the Project and ES Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) and 16: Traffic and Transport (document reference 6.16) considers disruption to recreational assets such as Public Rights of Way (PRoW). An Outline Public Rights of Way Management Plan (document reference 7.6) has been submitted as part of the Development Consent Order (DCO) application.				
9-3.80	Suggest that if National Grid is to proceed with the Project, they build a canal in South Norfolk at the same time, with the Project running alongside (e.g. to provide the benefit of movement by water north to south)	National Grid has a statutory duty to develop and maintain energy infrastructure to ensure the reliable transmission of electricity in an efficient and economical way. Activities outside this scope, such as building canals generally fall outside of National Grids' remit. The National Policy Statement for Energy (EN-1) (Department for Energy Security and Net Zero, 2023), which sets out the UK Government's overarching policy relevant to the Project, states that where the mitigation of transport impacts is required, demand management measures should be considered first before considering			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>requirements for the provision of new inland transport infrastructure to deal with remaining transport impacts. EN-1 lists possible demand management measures including to '<i>re-mode by shifting travel to a sustainable mode that is more beneficial to the network</i>'.</p> <p>The Project has also investigated the potential use of the River Stour and the River Waveney but found that it would not be feasible to use either of these inland waterways to supply materials for the construction of the proposed works. The Project's findings are reported in the Multi-Mode Transport Note, appended to the Transport Assessment (document reference 7.11), published as part of the DCO submission.</p> <p>In addition, National Grid considers that building a canal alongside the Project in South Norfolk would not be a reasonable alternative to the current strategy for delivering materials for several reasons including:</p> <p>To allow construction materials to be transported by water over a longer distance, from seaports for example, the canal would need to connect to existing navigable inland waterways, which would require the construction of one or more connecting canals; the need for additional land take; the need to construct multiple bridges/crossings where the canal would cross existing roads, farm tracks, public rights of way or watercourses, which would potentially significantly increase the Project's construction costs and programme and increase disruption to users of the</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		transport network; and building a canal would likely involve building a temporary haul road as well, to facilitate the construction of the canal, which would create more impacts compared to building just the temporary haul road as currently proposed.				
9-3.81	Suggest that if National Grid is to proceed with the Project, they build a walkway and cycleway in South Norfolk at the same time (e.g. to attract sponsorship from organisations)	National Grid does not directly design or build walkways or cycleways for community use as part of its operations however we are committed to supporting communities we work in and recognise the importance of infrastructure that benefits local residents. While we do not deliver these projects directly, we could contribute by enabling improvements that align with the needs and priorities of the communities affected by our work. This would potentially be considered through our community benefit scheme at a later stage, and not our application for development consent.			X	
9-3.82	Suggest that underground cables are used at Darrow Lane	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed</i>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p><i>developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)'. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25).A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at Darrow Lane would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES),</i></p>

		Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
9-3.83	Suggest that the Project is routed on the east side of the A140 instead of the west side	<p>The 2022 Corridor and Preliminary Routeing and Siting Study (CPRSS) (available on the Project website) included consideration of close parallel option to the east as well as alternative corridors further east. Neither were considered to be preferred for the reasons set out in the CPRSS at section 4.5. This decision making has been reviewed with findings set out in the 2023 and 2024 Design Development Reports (available on the Project website) and the 2025 Design Development Report (document reference 5.15).</p> <p>Whilst there could be potential benefits from infrastructure being concentrated geographically, i.e., by routeing the Project in close proximity to existing road and rail infrastructure, National Grid does not consider these benefits arise for the whole route. Roads, such as the A140 potentially align (at least in part) with the general routeing of the Project. However, there are constraints and features that mean that we do not consider close paralleling to the east or wider eastern routes will reduce environmental effects or improve compliance with the Holford Rules or be more consistent with the policy requirement to be economic and efficient. A summary of the Holford Rules is provided within Appendix I22 of this report. Several residential properties, as well as hamlets, villages and towns, are</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		present in close proximity to the existing transport infrastructure necessitating multiple diversions of an overhead line. There are also some locations where the combination of existing physical and environmental features (railway and road infrastructure, commercial and residential property, woodlands and orchards) presents very substantial challenges to routeing and siting. As a result, whilst close paralleling of transport infrastructure on its east side may appear beneficial in some short sections, overall, the increased environmental effects from multiple changes of direction are considered greater and less compliant with the Holford Rules than those that are associated with a new route alignment. We are undertaking an Environmental Impact Assessment (EIA) to assess the potential impact of the Project, and this will identify any need for additional mitigation.				
9-3.84	Suggest that underground cables are used for the Diss area (e.g. where a recent Landscape Assessment Study commissioned by Norfolk and Suffolk County Councils has identified the importance of the River Waveney and quality of the local landscape)	National Grid has considered the justification for the use of underground cable for the crossing of the Waveney Valley and on the matter of utilising underground cables for the Diss area raised in the respondent's feedback. The starting presumption in National Policy Statement (NPS) EN-5 paragraph 2.9.20 in a location such as the Waveney Valley which, although valued is not designated, is that overhead line is the appropriate 400 kV connection technology. We have also considered whether the effects from the overhead line are at a level that engages other parts of NPS EN-5 (such as		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>paragraph 2.9.23) to prompt consideration of whether the benefits of undergrounding outweigh any extra economic, social or environmental impacts. At the Waveney we conclude that the benefits from a change to underground cable, do not justify the additional cost that would be incurred. The use of underground cable would lead to a lowering of effects on the setting of the Grade I Listed St Remegius Church, albeit the effects of progressing with an overhead line are assessed as less than substantial harm and don't themselves require a change in technology. In terms of community effects, existing trees would provide some screening and filtering of views of an overhead line for those in residential areas and on recreational routes. A change from overhead line to underground cable would reduce these community effects but bring disbenefits, most notably increased ecological effects from installation within peaty soils and increased technical risk to cable integrity from the WaLOR channel naturalisation and landscape recovery plans. Conversely there may be a compromise to the WaLOR project by measures to ensure cable integrity. After consideration of the decision making guidance at paragraph 2.9.25 of NPS EN-5, National Grid concludes that whilst effects from overhead lines to individual receptors may be significant in Environmental Impact Assessment (EIA) terms they do not justify the potential for compromise to the WaLOR project, the effects on peaty soils which would arise with an underground cable design nor justify the expected cost</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		of an underground cable design. On this basis, National Grid concludes that the use of an overhead line should be taken forward for the crossing of the Waveney Valley. Prior to making this decision we had considered whether requests to relocate the Cable Sealing End (CSE) compounds and extend the cable both to the north and the south may alter the decision-making balance. Such extensions would bring benefits to various residential receptors but with the additional cost of longer length of cables. We conclude that given the absence of any designated status pertinent to NPS EN-5, and the extent to which some views from residential areas are filtered and screened and lower the level of adverse effects from the overhead line, we do not consider the additional cost associated with extending the underground cable would be justified.				
9-3.85	Suggest that underground cables as part of the Waveney Valley Alternative (the underground option) are extended along the western and northern edge of Diss by 4-6km to avoid impact on the local landscape, heritage and local communities in Diss, Roydon and Bressingham (underground Pylons RG75 to RG90 as shown on map 5 and 6) / Suggest that the Waveney Valley Alternative (underground option) should be extended to include Diss and Roydon (e.g. to mitigate visual impact and impact on the residents)	National Grid has considered the justification for the use of underground cable for the crossing of the Waveney Valley and on the matter of extending the use of underground cable along the western and northern edge of Diss by 4-6 km raised in the respondent's feedback. The starting presumption in National Policy Statement (NPS) EN-5 paragraph 2.9.20 in a location such as the Waveney Valley which, although valued is not designated, is that overhead line is the appropriate 400 kV connection technology. We have also considered whether the effects from the overhead line are at a level that engages other parts of NPS EN-5 (such as			X

		affected. This may involve the temporary removing / rehousing of horses or installing additional fencing to separate / distance horses from the construction areas.				
9-3.87	Suggest that the Project uses underground cables in vicinity of Tibenham, Tibenham Airfield and Priory Farm (to mitigate impact on heritage, the countryside, and flying activities)	<p>In relation to flying activities, National Grid has appointed an independent aviation consultancy which has engaged with both Tibenham and Priory Farm airfields (with National Grid present) to inform their impact assessments. Following consultation with the operators, it is assessed that, with the Project as currently proposed, operations (including gliding) can continue at the airfields. In view of the assessment conclusions, there is considered to be insufficient justification for the use of underground cables in the vicinity of the airfields on grounds of aviation impacts. We are continuing to engage with the operators to enable their review of the acceptability of the Project design and support their consideration of whether reasonable changes to operational procedures are required.</p> <p>National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting</i></p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p><i>presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)'. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25).A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at Tibenham Airfield would meet the thresholds established</i></p>

		<p>by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.</p> <p>Further information on the assessment of airfields can be found in the Environmental Statement (ES) (see ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and ES Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2)).</p>				
9-3.88	Suggest that construction traffic should use the A1066 via Thetford rather than travelling through Diss	It has been agreed with Norfolk County Council that a proportion of construction traffic will pass through the Town of Diss as well as along the A1066 to Thetford/Low Road.		X		
9-3.89	Suggest that the Project should run in closer to / parallel to the existing overhead lines near the A140 in Norfolk (around the Diss area)	Firstly, at a more general level close paralleling the A140 offers some potential benefits from infrastructure being concentrated geographically. By routeing the Project in close proximity to existing road infrastructure such as the A140, there are constraints and features that mean that we do not consider paralleling will reduce environmental effects or improve compliance with the Holford Rules or be more consistent with the policy requirement to be economic and efficient. A summary of the Holford Rules is provided within Appendix I22 of this report. A number of residential properties, as well as hamlets, villages and towns, are present in close			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>proximity to the existing transport infrastructure necessitating multiple diversions of an overhead line. There are also some locations where the combination of existing physical and environmental features (railway and road infrastructure, commercial and residential properties, woodlands etc) present very substantial challenges to routeing and siting. As a result, whilst paralleling the A140 may appear beneficial in some short sections, overall, the increased environmental effects from multiple changes of direction are considered greater and less compliant with the Holford Rules than those that are associated with a new route alignment.</p> <p>Secondly routeing closer to the A140 at Diss has been reported on in the 2023 Design Development Report (from paragraph 5.5.39) and in the 2024 Design Development Report (from paragraph 5.4.38) (both available on the Project website). This route transfers effects to a different Grade I Listed Church of St Andrew, Frenze, and to other properties as well as positioning a number with 400 kV pylons close to both sides. South of the golf course, which presents challenges including being Common land) there is insufficient space to pass between a Grade II listed residential building and the existing 400 kV alignment necessitating a transposition of the existing line with multiple outages, or an approximately 2 km section of underground cable. Taken together these factors and the additional costs mean this is less preferred. On this basis no change is proposed.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-3.90	Suggest that the underground section in Waveney Valley be extended to between Pylons RG61 and RG92 in nearly a straight line (e.g. to take out of scope many villages and would be about half the length of the existing, tortuous, meandering route through the valley. It would reduce the sight pollution enormously for little extra cost of providing the Waveney Valley Alternative)	National Grid has considered the justification for the use of underground cable for the crossing of the Waveney Valley and on the matter of extending the underground cable to between Pylons RG61 and RG92 raised in the respondent's feedback. The starting presumption in National Policy Statement (NPS) EN-5 paragraph 2.9.20 in a location such as the Waveney Valley which, although valued is not designated, is that overhead line is the appropriate 400 kV connection technology. We have also considered whether the effects from the overhead line are at a level that engages other parts of NPS EN-5 (such as paragraph 2.9.23) to prompt consideration of whether the benefits of undergrounding outweigh any extra economic, social or environmental impacts. At the Waveney we conclude that the benefits from a change to underground cable, do not justify the additional cost that would be incurred. The use of underground cable would lead to a lowering of effects on the setting of the Grade I Listed St Remegius Church, albeit the effects of progressing with an overhead line are assessed as less than substantial harm and don't themselves require a change in technology. In terms of community effects, existing trees would provide some screening and filtering of views of an overhead line for those in residential areas and on recreational routes. A change from overhead line to underground cable would reduce these community effects but bring disbenefits, most notably increased ecological effects from installation within peaty soils and increased technical			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>risk to cable integrity from the WaLOR channel naturalisation and landscape recovery plans. Conversely there may be a compromise to the WaLOR project by measures to ensure cable integrity. After consideration of the decision making guidance at paragraph 2.9.25 of NPS EN-5, National Grid concludes that whilst effects from overhead lines to individual receptors may be significant in Environmental Impact Assessment (EIA) terms they do not justify the potential for compromise to the WaLOR project, the effects on peaty soils which would arise with an underground cable design nor justify the expected cost of an underground cable design. On this basis, National Grid concludes that the use of an overhead line should be taken forward for the crossing of the Waveney Valley. Prior to making this decision we had considered whether requests to relocate the Cable Sealing End (CSE) compounds and extend the cable both to the north and the south may alter the decision-making balance. Such extensions would bring benefits to various residential receptors but with the additional cost of longer length of cables. We conclude that given the absence of any designated status pertinent to NPS EN-5, and the extent to which some views from residential areas are filtered and screened and lower the level of adverse effects from the overhead line, we do not consider the additional cost associated with extending the underground cable would be justified.</p>

		must be considered in accordance with paragraphs 2.9.24 and 2.9.25).A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at RG43 and RG48 would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
9-3.97	Suggest that the Project uses underground cables between Pylons RG50 and RG60 to mitigate impact on Tibenham Airfield (Historic Site)	<p>National Grid has considered the respondent's feedback highlighting a preference for an alternative moved away from or underground near Tibenham Airfield.</p> <p>National Grid has appointed an independent aviation consultancy which has engaged with Tibenham airfield (with National Grid also present) to inform their impact assessment. Following consultation with the operators, it is assessed that, with the Project as currently proposed, operations (including gliding) can continue at the airfield. In view of the assessment conclusions, there is considered to be insufficient justification for the proposed use of underground cable in the vicinity of the airfield on grounds of aviation impacts.</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		We will continue to engage with the operators and relevant third-party aviation stakeholders to review the assessment methodology and outcomes. Further information on the assessment of airfields can be found in the Environmental Statement (ES) (see ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and ES Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2)).				
9-3.99	Criticism that the revised route for the Project east of Melis now impacts respondents farm / Suggest that National Grid reverts to previous route for the Project east of Melis (e.g. to mitigate impact on respondent's farm)	National Grid proposed the change to the alignment between RG102 and RG117 (previously RG103 and RG116) to adopt the alignment of the existing 132 kV overhead line for approximately 2 km, to then realign south to the west of Burgate Road. This change was proposed due to the identification of historic assets that need to be avoided. We are therefore not proposing a further change to the alignment at this location.			X	
9-3.100	Suggest that the haul road is rerouted as it is currently proposed to pass through Priority Habitat (plan provided by respondent)	National Grid has considered the respondent's feedback, the haul road at this location has been amended to route through a previously coppiced track to avoid removal of established woodland where possible. While we acknowledge that the woodland is priority habitat, routeing and siting of the alignment and the haul road has been made based on balance, and the haul road will be constricted to a single lane and trackway used to reduce impacts and limit woodland loss.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-3.101	Criticism that there is already an established infrastructure corridor comprising the A140 and the Norwich to London railway line, with an existing section of pylons between, yet the Project (Pylons RG118 northwards) is routed significantly to the west of this existing corridor / Suggest that these existing overhead lines between the A140 and the Norwich to London railway line are upgraded instead	<p>Firstly, the existing overhead pylons have recently been upgraded to increase the power flow capability. This and other operational changes at certain substations have been explained and described in our consultation material (including the Corridor and Preliminary Routeing and Siting Study, Design Development Reports and Project Background Documents) during previous consultations as well as in the 2025 Design Development Report (document reference 5.15). We ensure we implement these types of measures before considering new infrastructure. The lines cannot be upgraded further to replace the need for the Project. Secondly, while there could be potential benefits from infrastructure being concentrated geographically, i.e., by routeing the Project in close proximity to existing road and rail infrastructure or other transmission infrastructure, National Grid does not consider these benefits arise for the whole route. These features potentially align (at least in part) with the general routeing of the Project. However, there are constraints and features that mean that we do not consider close paralleling will reduce environmental effects or improve compliance with the Holford Rules or be more consistent with the policy requirement to be economic and efficient. A summary of the Holford Rules is provided within Appendix I22 of this report.</p> <p>A number of residential properties, as well as hamlets, villages and towns, are present in close proximity to the existing infrastructure necessitating multiple diversions</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		of an overhead line. There are also some locations where the combination of existing physical and environmental features (railway and road infrastructure, commercial and residential property, woodlands and orchards) presents very substantial challenges to routeing and siting. As a result, whilst close paralleling of existing infrastructure may appear beneficial in some short sections, overall, the increased environmental effects from multiple changes of direction are considered greater and less compliant with the Holford Rules than those that are associated with a new route alignment.				
9-3.102	Suggest that the Project is rerouted to follow closer to the Norwich to London railway line	In developing its proposals National Grid has considered the potential to route parallel to existing transport infrastructure (which is close to the existing 400 kV overhead line for part of this area) and consider them to be less preferred alternatives. Numerous properties (residential and commercial such as on Greenways), constraints and environmental features are present in close proximity to existing infrastructure and would be more adversely affected by close paralleling. Alternatively, if such an alternative was pursued the costs to avoid such effects (multiple direction changes for crossings of the existing overhead line or other infrastructure) would be much greater with additional limitations on the ability to achieve the necessary outages (to undertake the works safely) within the time available. Further details of alternative routes considered can be found in the 2023 and 2024 Design Development			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Reports (published on the Project website) and the 2025 Design Development Report (document reference 5.15) submitted as part of the Development Consent Order (DCO) application.				
9-3.103	Criticism of last-minute realignment of the Project due to an airstrip between Roydon, Cotton and Wickham Skeith being previously ignored by National Grid (e.g. this realignment will impact residents, properties and land)	National Grid is committed to carefully considering all feedback and understands that design responses may not be welcomed by all. As more information has been obtained about the nature of the aircraft and their performance characteristics we have considered the need for modifications to the design. This has been in combination with other feedback requests and environmental information. A further change is also being taken forward as set out in the 2025 Design Development Report (document reference 5.15) submitted as part of the Development Consent Order (DCO) application. Factors influencing the changes now being taken forward are a preference for reducing the magnitude of effects and reducing potential cumulative effects by adopting the alignment of an existing 132 kV lattice pylon connection to position the pylons behind a tree line to increase the filtering of views; replacing more of the existing 132 kV with underground cable and, along with feedback to seek to support continued flight activity at Brook Farm airstrip. In taking forward this change we have considered the changes both where effects are reduced but also whether there may have been an increased effect and any mitigation that may be required. On balance a further change is preferred.			X	X

		Further information on the assessment of airfields can be found in the Environmental Statement (ES) (ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and ES Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2)).				
9-3.104	Suggest that the Waveney Valley Alternative (underground option) is extended over 8.5 km - from Pylons RG75 to RG102, placing the southern and northern Cable Sealing End (CSE) compounds in a less sensitive and obtrusive locations and improving safety for light aircraft using the Wortham Airstrip to the south	National Grid has considered the justification for the use of underground cable for the crossing of the Waveney Valley and on the matter of extending the use of underground cable from RG75 to RG102 raised in the respondent's feedback. The starting presumption in National Policy Statement (NPS) EN-5 paragraph 2.9.20 in a location such as the Waveney Valley which, although valued is not designated, is that overhead line is the appropriate 400 kV connection technology. We have also considered whether the effects from the overhead line are at a level that engages other parts of NPS EN-5 (such as paragraph 2.9.23) to prompt consideration of whether the benefits of undergrounding outweigh any extra economic, social or environmental impacts. At the Waveney we conclude that the benefits from a change to underground cable, do not justify the additional cost that would be incurred. The use of underground cable would lead to a lowering of effects on the setting of the Grade I Listed St Remegius Church, albeit the effects of progressing with an overhead line are assessed as less than substantial harm and don't themselves require a change in technology. In terms of	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>community effects, existing trees would provide some screening and filtering of views of an overhead line for those in residential areas and on recreational routes. A change from overhead line to underground cable would reduce these community effects but bring disbenefits, most notably increased ecological effects from installation within peaty soils and increased technical risk to cable integrity from the WaLOR channel naturalisation and landscape recovery plans. Conversely there may be a compromise to the WaLOR project by measures to ensure cable integrity. After consideration of the decision making guidance at paragraph 2.9.25 of NPS EN-5, National Grid concludes that whilst effects from overhead lines to individual receptors may be significant in Environmental Impact Assessment (EIA) terms they do not justify the potential for compromise to the WaLOR project, the effects on peaty soils which would arise with an underground cable design nor justify the expected cost of an underground cable design. On this basis, National Grid concludes that the use of an overhead line should be taken forward for the crossing of the Waveney Valley. Prior to making this decision we had considered whether requests to relocate the Cable Sealing End (CSE) compounds and extend the cable both to the north and the south may alter the decision-making balance. Such extensions would bring benefits to various residential receptors but with the additional cost of longer length of cables. We conclude that given the absence of any designated status pertinent to NPS</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>EN-5, and the extent to which some views from residential areas are filtered and screened and lower the level of adverse effects from the overhead line, we do not consider the additional cost associated with extending the underground cable would be justified.</p> <p>Underground cables are not considered to be necessary to address aviation impacts. In conjunction with other feedback, a design change is being taken forward that repositions the proposed overhead line to increase distances from the Wortham airstrip (also known as Brook Farm Airfield). National Grid's independent aviation advisors assess that these changes will enable safe overflight of the overhead line. We are continuing to engage with the airfield operator to confirm the acceptability of the changes. Further information on the assessment of airfields can be found in the Environmental Statement (ES) (ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and ES Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2)).</p>				
9-3.105	Suggest that the Project runs in close parallel to the existing overhead lines around Mulbarton, routing the Project to the furthest extent possible to the southeast away from the village (e.g. in line with Holford Rule 5 and to mitigate impact on Mulbarton)	National Grid notes the potential for close paralleling existing overhead lines to reduce the level of effects that may arise from a new overhead line. However, as set out in the 2023, 2024 Design Development Reports (available on the Project website) and the 2025 Design Development Report (document reference 5.15), in this section there are constraints and features that mean, overall, we consider close paralleling would lead to			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>greater effects on receptors in the area and be less compliant with the Holford Rules or be less consistent with the statutory duty to be economic and efficient. In particular routeing across the railway and Flordon presents particular challenge as outlined in both the Corridor and Preliminary Routeing and Siting Study (CPRSS) (available on the Project website) and the 2023, 2024 and 2025 Design Development Reports.</p> <p>A summary of the Holford Rules is provided within Appendix I22 of this report. No new evidence has been provided nor information obtained to change those conclusions. We would also note that the alignment is routed as far from Mulbarton as possible balancing effects with those at properties in Flordon. For these reasons we are not proposing a change to the alignment to follow the existing overhead lines.</p>				
9-3.106	Suggest that underground Direct Current (DC) cables are used from the point at which the line turns west just south of Shelfanger until South of the railway line at Gislingham	<p>National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated</i></p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>landscape (i.e. National Parks, The Broads, or National Landscapes)'. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project from south of Shelfanger until south of the railway line at Gislingham would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES),</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.</p> <p>National Grid is constantly looking into new innovations and investigating alternative technology types. These are explored and assessed for suitability. Alternative technologies were investigated for the Project, these included an offshore connection using Direct Current (DC) technology, and various onshore connection options including: increasing operational voltages on existing network to above 400 kV; Alternating Current (AC) overhead lines (established technology); alternative pylon types; AC underground technology; High Voltage Direct Current (HVDC) overhead line and underground cables; and Gas Insulated Line (GIL).</p> <p>HVDC is not normally used across land as converting AC to DC and back again would require converter stations so it can be used in the rest of transmission network and the distribution network which is currently AC. These converter stations are a significant size and would be required at every interface with the wider AC network i.e at Norwich, Bramford, East Anglia Connection Node (EACN) substation and Tilbury substations, the cost of these converter stations outweighs the benefits offered.</p> <p>Currently, overhead lines offer the most economic and efficient solution to transmit electricity over long distances.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-3.107	Suggest that underground cables are used from Pylons RG13 to RG17 (e.g. to mitigate impact on residents of Mulbarton including impact on recreation, footpaths and health and wellbeing)	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is ' <i>that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)</i> '. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at RG13 to RG17 would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
9-3.108	Suggest that the Project is rerouted from Pylon RG69 to follow a straight(ish) line to either Pylon RG73 or RG74	National Grid has considered the respondent's feedback, to straighten the alignment from RG69 to RG73 or RG74 would require the removal of a greater amount of woodland at two locations, would take the alignment closer to properties on Heywood Road and would potentially oversail properties to the east of Shelfhanger Road. We are therefore not proposing a change to the alignment at this location.			X	
9-3.109	Suggest that the pylon near to the Roman Villa Site and Elm Farm (which has been incorrectly labelled / positioned on the map by National Grid) should be moved further away into the fields north of the	National Grid has sought to reduce, as far as practicable, impacts on the historic environment including listed buildings and known heritage assets through routeing and siting and an ongoing iterative design process which has taken on board feedback at			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	farmhouse (e.g. to mitigate impact on villa and heritage property)	<p>different stages of the Project. The iterative design process sought to avoid areas of highest concern, for example through changes to the alignment.</p> <p>To inform the design development and the historic environment impact assessment, presented in Chapter 11: Historic Environment (document reference 6.11) of the Environmental Statement (ES), walkover, setting and geophysical surveys were undertaken in this area, as documented in ES Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1) and ES Appendix 11.4: Geophysical Survey Results Report (document reference 6.11.A4). In addition to the proposals in the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4), the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5) sets out appropriate mitigation for the historic environment. The baseline information indicates there would be no significant effects to archaeology from the construction of the overhead line in this location.</p> <p>Ongoing collaboration with Historic England and Local Planning Authorities has ensured a comprehensive approach to heritage-related matters, incorporating suitable mitigation measures and techniques based on their input.</p>				
9-3.110	Suggest that construction sites should be reconsidered as they are too large for the villages,	National Grid has reviewed available locations for construction compounds to support the installation of the Project. These compounds are necessary for safe and			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	particularly the one at Bunwell (e.g. to mitigate impact on residents and wildlife)	<p>efficient construction of the Project, including providing welfare facilities and storage for plant and materials. The compounds have been positioned with consideration to their setting but also their proximity to primary access routes and the proposed works to construct the Project. Compound reference "RG-Sate1" adjacent proposed pylon RG56 (located south of Bunwell) has been located to the north of the Long Row primary access route and to be approximately mid-way between the northern part of the RG Route overhead line works from Norwich Main Substation and the Main Compound located south of Diss at proposed pylon RG96. The compound has been set back from the carriageway in an agricultural field to minimise impacts on residential and environmental receptors.</p> <p>National Grid has undertaken an Environmental Impact Assessment for the Project, and the findings are presented in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that has been submitted with the Development Consent Order (DCO) application. The ES identifies and assesses the likely significant effects on the environment resulting from the construction of the Project and recommends appropriate mitigation to reduce effects.</p> <p>Environmental mitigation measures have been defined within each environmental topic chapter and set out in relevant management documents submitted with the (DCO application, including the Outline Code of</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Construction Practice (CoCP) (document reference 7.2), the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) and the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4). Compound RG Sate1 is located within an arable field of low ecological value, which can be returned to existing conditions fairly easily on completion of works.				
9-3.111	Suggest that underground cables are used at the Tas Valley section, particularly Pylons RG23 to RG27 (e.g. to mitigate impact on Hapton Village and Footpath 33)	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)'</i> . Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at the Tas Valley would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
9-3.112	Suggest that underground cables are used at Flordon Common	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)'</i>. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at Flordon Common would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
9-3.113	Suggest that Pylons RG19 to RG23 should be moved north, north-west by about 600m (e.g. to mitigate disruption and cumulative impact)	National Grid has considered the respondent's feedback and has reviewed a number of alternative alignments in this location. Alternatives to the north, or north-west would impact more woodland and would also increase the impact on a proposed solar farm development. Alternatives would also be longer and require additional angle pylons and would be therefore less consistent with the Holford Rules. We are therefore not proposing a change to the alignment in this location. A summary of the Holford Rules is provided within Appendix I22 of this report. The effects of the Project are assessed as part of the Environmental Impact Assessment (EIA) and presented in the Environmental Statement (ES) and this has identified any need for additional mitigation.	X			
9-3.114	Suggest that construction road for the Project should not be located between RG50 and RG51, and that Pylons RG55, RG56, RG57 and the compound	National Grid notes the respondent's feedback and has amended the haul road between RG50 and RG51. This amendment straightens the haul road and moves it to the east of the alignment. The alignment between RG55			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	should be relocated (e.g. as they would make field unusable)	and RG57 has not been amended as we would have to increase the length of the overhead line and increase the number of angle pylons to divert the line either east or west, which would be less consistent with the Holford Rules. A summary of the Holford Rules is provided within Appendix I22 of this report. Moving to the east would also potentially lead to effects currently avoided at Priors Farm airstrip and a facility sensitive to electromagnetic fields. As the compound needs to be as close to the alignment as possible, we are also not proposing a change to the compound location.				
9-3.115	Suggest that where National Grid intends to change existing three phase overhead lines to underground cables, this should be done across a whole field	National Grid has a mandate to be economic and efficient and so longer, more costly cable route options must be measured against this. National Grid has taken efforts, where judged reasonable, to extend the undergrounding spans in an effort to remove poles and stays from fields.			X	
9-3.116	Suggest that the Project is routed further east between Pylons RG96 and RG102 (near Diss) so that the Project runs alongside the existing pylons which are being moved underground (plan provided by respondent) (e.g. to mitigate impact on residents on Mellis Road; so that the construction road is routed away from wildlife at Seethings Wood)	National Grid proposed a change to the 2023 preferred draft alignment south of Diss as it was required due to the presence of Brook airstrip and solar farm developments. Further assessment on the potential impact of the Project on this airstrip has identified a need to move the alignment further east between RG95 and RG102 (now RG94 and RG102). This change also enables the Project to follow the alignment of the existing 132 kV overhead line for a longer distance, which is then proposed to be installed underground to			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		the north of the A143. This has therefore moved the alignment further from Seethings Wood. The effects of the Project are assessed as part of the Environmental Impact Assessment (EIA) and presented in the Environmental Statement (ES) and this has identified any need for additional mitigation.				
9-3.117	Suggest that National Grid develops a main 400/132 kV substation at Diss to improve the supply security to mid East Anglia via 2 x 400 kV circuits from Norwich (e.g. enabling offshore wind supplies be brought in to Sizewell and then onto Bramford Main via existing networks and reducing capacity at Bramford for the Sizewell/Windfarms connection meaning that the Project would not be needed from Diss to Bramford by using underground cables into Sizewell)	National Grid acknowledges the request however the transmission network is required to comply with SQSS requirements and having dead end supplies that do not interconnect with other parts of the transmission network offer no flexibility and security of supply if there was a fault on that circuit and as such we would not be able to construct a substation at Diss and stop and not connect into Bramford Substation. The strategic options considered and shortlisted for this Project can be seen in the 2025 Strategic Options Backcheck and Review (document reference 7.17).			X	
9-3.118	Suggest that the Project at Darrow Lane should be rerouted north of Lodge Lane into agricultural land	National Grid has considered the respondent's feedback, moving the alignment to the north of Lodge Lane would make the alignment longer and less direct, which would be less consistent with the Holford Rules. A summary of the Holford Rules is provided within Appendix I22 of this report. There are also constraints to routing due to small distances between properties when passing south towards Bressingham, which would transfer or increase effects. We are therefore not proposing a change to the alignment at this location.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-3.119	Suggest that National Grid does not use the property that they have purchased on Darrow Lane as a works / storage site (e.g. it should only be used as a residential property)	<p>National Grid has no plans to change the use of the building or the surrounding land.</p> <p>The property is not relevant to the development of our proposals for the Project.</p> <p>National Grid has no plans to change the use of the building or the surrounding land.</p> <p>The property is not relevant to the development of our proposals for the Project.</p> <p>We are currently reviewing the condition of the property and carrying out survey works. It is National Grids' intention to put the property on the market at the appropriate point.</p>			X	
9-3.120	Suggest that the Project between Pylons RG19 and RG24 and the haul road are rerouted away from farmland (e.g. to mitigate impact on farming, heritage, etc)	National Grid has considered the respondent's feedback and has reviewed a number of alternative alignments in this location. Alternatives to the north would impact more woodland and would also increase the impact on a proposed solar farm development, alternatives would also be longer and require additional angle pylons and would be therefore less consistent with the Holford Rules. We are therefore not proposing a change to the alignment in this location. A summary of the Holford Rules is provided within Appendix I22 of this report. The effects of the Project are assessed as part of the Environmental Impact Assessment (EIA) and presented in the Environmental Statement (ES), this has identified any need for additional mitigation.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-3.121	Suggest that Pylons RG19 to RG23 are moved north, northwest by approximately 600 m to mitigate the impact on Flordon Hall	<p>National Grid has considered the respondent's feedback and has reviewed a number of alternative alignments in this location. Alternatives to the north would impact more woodland and would also increase the impact on a proposed solar farm development, alternatives would also be longer and require additional angle pylons and would be therefore less consistent with the Holford Rules. We are therefore not proposing a change to the alignment in this location. A summary of the Holford Rules is provided within Appendix I22 of this report. The effects of the Project are assessed as part of the Environmental Impact Assessment (EIA) and presented in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement), this has identified any need for additional mitigation.</p> <p>The alternatives considered were preferred on heritage grounds. The impact assessment for Flordon Hall is presented in Chapter 11: Historic Environment of the ES (document reference 6.11) and a viewpoint and visualisation have been produced to inform the assessment (Figure 6.11.F5). The assessment concludes a significant effect due to the change to the setting of Flordon Hall and while additional mitigation was considered there was not a suitable option that did not in itself increase the adverse impact to the listed building.</p>			X	
9-3.122	Suggest that Pylon RG52 is relocated to mitigate impact on farm and Grade II listed property	National Grid has considered the respondent's feedback, to move RG52 to the east would potentially			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		increase effects on Tibenham and Priory airfields. Moving to the east or west would also introduce additional angles and would be longer and less direct which would be less consistent with the Holford Rules. A summary of the Holford Rules is provided within Appendix I22 of this report. The effects of the Project are assessed as part of the Environmental Impact Assessment (EIA) and presented in the Environmental Statement (ES) and this has identified any need for additional mitigation.				
9-3.123	Suggest that Pylons RG39 to RG46 are relocated away from residential property	National Grid routes and sites the alignment in accordance with the Holford Rules while also taking into account constraints and feedback. Alternatives to move RG39-RG46 would be longer and less direct and would be therefore less consistent with the Holford Rules (these can be found in Appendix I22 of this report). Alternatives would also transfer effects to other properties or increase impacts to woodland, we are therefore not proposing a change to the alignment at this location.			X	
9-3.124	Criticism that the Project between Pylons RG29 and RG46 crosses several parts of the Tas Valley Tributary farmland (B1 character assessment planning document) that states that the area has sensitivities and vulnerabilities	National Grid has sought to reduce, as far as practicable, impacts on the landscape through routeing and siting and an ongoing iterative design process which has taken on board feedback at different stages of the Project. The iterative design process sought to avoid areas of highest concern, for examples through changes to the route alignment or changes to the method e.g.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>trenchless crossings. We have engaged with a range of stakeholders (including Statutory Environmental Bodies (SEBs) and Local Planning Authorities) throughout the development of the Project design and environmental assessment work.</p> <p>National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project. The results of this assessment are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation (and maintenance) of the Project and recommends appropriate mitigation measures to reduce potential effects.</p> <p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the EIA. The LVIA includes an assessment on both landscape character and visual amenity and sets out the potential landscape and visual effects of the Project. The LVIA presented in ES Chapter 13: Landscape and Visual (document reference 6.13) identifies that the Tas Tributary Farmland Landscape Character Area (LCA) is of medium sensitivity and recognises that there is a greater degree of intimacy around tributary rivers where the Project would be seen to contrast with smaller-scale fields and small blocks of woodland. Effects on the Tas Tributary Farmland LCA</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		are judged to be significant up to 1.5 km distance from the Project.				
9-3.125	Suggest that Pylon RG40 is relocated away from Gilerswood Lane (e.g. to mitigate impact on footpaths 24 and 26, and impacts on leisure and historic sunken lanes)	<p>National Grid notes the feedback received. National Grid has sought to reduce, as far as practicable, impacts on the landscape and views through routeing and siting and an ongoing iterative design process which has taken on board feedback at different stages of the Project. The iterative design process sought to avoid areas of highest concern, for examples through changes to the route alignment or changes to the method e.g. trenchless crossings. We have engaged with a range of stakeholders (including Statutory Environmental Bodies (SEBs) and Local Planning Authorities) throughout the development of the Project design and environmental assessment work.</p> <p>RG40 is positioned to the east of footpath 26 and north of Gilderswood Lane, avoiding any direct impacts on the lane and associated landscape features. The proposed pylon (RG40) is currently positioned away from surrounding field boundaries and re-location would bring it closer to Long Stratton Road in the north, which features some mature trees on the field boundary. On balance it is considered that the current position provides the best solution in terms of minimising effects on landscape features (such as trees) and recreational visual receptors.</p> <p>The existing footpath (PRoW) is proposed to be temporarily diverted around the pylon working area, with</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>managed access across the haul road and working areas.</p> <p>Through routeing and siting, National Grid has sought to reduce as far as practical the potential impacts on the historic environment including that of protected lanes. Protected lanes have been assessed as part of the historic landscape character which also considered assets such as hedgerows. This assessment has been undertaken and can be found in Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1). The pylon could not be moved further north as this would lessen the distance between listed buildings and the pylon, which would have increase the impacts to them. Engagement with Historic England and the relevant local planning authority has been undertaken regarding appropriate mitigation measures and techniques which will take into account the protected lanes and footpaths.</p>				
9-3.126	Suggest that Pylon RG41 is relocated away from the historic sunken lane, Tabernacle Lane (e.g. to align with Holford Rule 2)	<p>National Grid notes the feedback received.</p> <p>National Grid routes and sites the alignment in accordance with the Holford Rules while also taking into account constraints and feedback. Holford Rule 2 advises that proposals <i>'should avoid smaller areas of high amenity value, or scientific interest by deviation; provided that this can be done without using too many angle towers, i.e. the more massive structures that are used when lines change direction. Whilst smaller areas of amenity value may not be encompassed in</i></p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p><i>designated sites as listed above, they should also be avoided where possible. Effects on the settings of historic buildings and other cultural heritage features should be minimised.'</i></p> <p>A summary of the Holford Rules is provided within Appendix I22 of this report.</p> <p>RG41 is positioned to the east of Tabernacle Lane, avoiding any direct impacts of the lane and associated landscape features. The pylon (RG40) is currently positioned away from surrounding field boundaries. It is therefore considered that the current position provides an acceptable solution in terms of minimising effects on landscape features (such as trees) and visual receptors, whilst balancing other constraints and feedback.</p>				
9-3.127	Suggest that Pylons RG38 to RG41 are relocated from Corner Farm	National Grid routes and sites the alignment in accordance with the Holford Rules while also taking into account constraints and feedback. Alternatives to move RG38-RG41 would be longer and less direct and would be therefore less consistent with the Holford Rules. A summary of the Holford Rules is provided within Appendix I22 of this report. Alternatives would also transfer effects to other properties or increase impacts to woodland, we are therefore not proposing a change to the alignment at this location.			X	
9-3.128	Suggest that Pylons RG36 to RG38 are relocated from Alborough House Farm and cottages	National Grid routes and sites the alignment in accordance with the Holford Rules while also taking into account constraints and feedback. Alternatives to move			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		RG36-RG38 would be longer and less direct and would be therefore less consistent with the Holford Rules. A summary of the Holford Rules is provided within Appendix I22 of this report. Alternatives would also transfer effects to other properties or increase impacts to woodland, we are therefore not proposing a change to the alignment at this location.				
9-3.129	Suggest that Pylons RG39 to RG40 are relocated to mitigate impact on wildlife (including protected species)	<p>National Grid routes and sites the alignment in accordance with the Holford Rules while also taking into account constraints and feedback. Alternatives to move RG39-RG40 would be longer and less direct and would be therefore less consistent with the Holford Rules. A summary of the Holford Rules is provided within Appendix I22 of this report. Alternatives would also transfer effects to other properties or increase impacts to woodland, we are therefore not proposing a change to the alignment at this location.</p> <p>We have undertaken an Environmental Impact Assessment (EIA) which has assessed the impact of the Project including impacts to wildlife and protected species, and recommended mitigation where required.</p>			X	
9-3.130	Concern that Pylon RG40 will exasperate flooding issues on Gilderswood Lane	Construction of pylon RG40 avoid any interaction with the River Tas and its tributaries, however, has the potential to result in changes to existing rainfall runoff patterns local to it. The Project has therefore secured via the Outline Code of Construction Practice (CoCP) (document reference 7.2) a range of measures to			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		manage surface water runoff from construction areas, providing for capture and attenuation of flows, which local to Gilderswood Lane, includes a number of sustainable drainage basins, to ensure that flood risk is not increased to neighbouring lands and infrastructure.				
9-3.131	Concern that Pylons RG39 to RG42 will increase the risk of flooding and risk the sewage farm and water quality	Pylons RG39 to RG42 are located in Flood Zone 1 (indicative of a low risk of flooding from the River Tas and its tributaries. They also avoid areas mapped by the Environment Agency as having a high risk of surface water flooding. The potential for the Project to increase flood risk from these sources has been assessed within a Flood Risk Assessment (FRA) (document reference 7.9) that accompanies the Development Consent Order (DCO) application. The Flood Risk Assessment (document reference 7.9) recommends measures for the control and management of surface water runoff from work sites and measures to ensure the continued function of existing land drainage systems. These measures, secured via the Outline Code of Construction Practice (CoCP) (document reference 7.2) will prevent flood risk increases and impacts on local infrastructure and assets. The Outline CoCP (document reference 7.2) also describes a range of measures to prevent pollution and detriment to water quality.			X	
9-3.132	Suggest that Pylon RG70 is relocated to mitigate impact on residents, heritage, wildlife, the countryside, and the village	National Grid has considered the respondent's feedback, moving RG70 either east or west would move the alignment closer to properties along Heywood Road			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		or on The Heywood. Its current location also minimises woodland loss at Shelfanger Grove between RG69 and RG70. We are therefore not proposing a change to this pylon location. We have undertaken an Environmental Impact Assessment (EIA) which has assessed the impact of the Project including impacts to wildlife and heritage, and recommended mitigation where required.				
9-3.133	Suggest that Pylon RG46 and / or haul road is relocated further away from residences / permitted development zone (e.g. as the pylon is proposed only 60m away from two properties)	National Grid has considered the respondent's feedback, pylon RG46 is approximately 500 m from the nearest property to the west and approximately 200 m from the nearest property to the east. Moving this pylon east or west would increase the angle on the pylon and would transfer or increase effects on other properties. A shift of the alignment in this location would increase effects on woodland or would be longer and less direct which would be less consistent with the Holford Rules, therefore we are not proposing a change to the location of this pylon. A summary of the Holford Rules is provided within Appendix I22 of this report. The haul road has been moved slightly further to the west away from residences at this location to be closer to the alignment.	X		X	
9-3.134	Concern that Pylons RG45 and RG46 are located on Roman archaeological sites and will require removal of mature oak trees at Banyards Hall to allow a visibility splay for the haul road	National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project. The results of this assessment are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Assessment) that accompanies the	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Development Consent Order (DCO) application. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation (and maintenance) of the Project and recommends appropriate mitigation measures to reduce potential effects.</p> <p>The historic environment assessment in Chapter 11: Historic Environment of the ES (document reference 6.11) considers the potential impact on archaeology and includes assessment of potential for physical impact, impact through change to setting that affects the value of a heritage asset and impact through indirect factors such as change in hydromorphology. The assessment is supported by walkover, setting and geophysical surveys, as documented in ES Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1) and ES Appendix 11.4: Geophysical Survey Results Report (document reference 6.11.A4). In some areas, archaeological trial trench evaluation has been undertaken and is reported in ES Appendix 11.5: Trial Trenching Results Report (document reference 6.11.A5). In addition to the proposals in the Outline Landscape and Ecological Management Plan (document reference 7.4), the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5) sets out appropriate mitigation for the historic environment.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		National Grid is committed to reducing vegetation removal and where reasonably practical, crown lifting of trees is preferred over tree removal for visibility splays.				
9-3.135	Suggest that the Project should be rerouted between Pylons RG48 and RG50 and immediately above the Tas River tributary (e.g. to avoid County Wildlife Site, 3-acre overstood hazel coppice woodland/rewilding site, private nature reserve, ancient right of way (Cow Lane), with veteran trees and ancient hedgerows, grazing meadow, bordered by mature and veteran oaks, field system of medieval farming)	National Grid notes the respondent's feedback and has proposed a slight change to the alignment and haul road between RG46 and RG51 which would take the alignment to the west and avoid the County Wildlife Site, grazing meadow and veteran tree. We have undertaken an Environmental Impact Assessment (EIA) which has assessed the impact of the Project and recommended mitigation for the other ecological features and ancient right of way mentioned in the feedback where required.	X			X
9-3.136	Suggest that Pylon RG46 should be relocated (e.g. as it will be visible from road and will be a tension pylon)	National Grid routes and sites the alignment in accordance with the Holford Rules while also taking into account constraints and feedback. Alternatives to move RG46 would be longer and less direct and would be therefore less consistent with the Holford Rules (these can be found in Appendix I22 of this report). Alternatives would also transfer effects to other properties or increase impacts to woodland, we are therefore not proposing a change to the alignment at this location. We have undertaken an Environmental Impact Assessment (EIA) which has assessed the impact of the Project including visual impacts, and recommended mitigation where required.	X			
9-3.137	Suggest that High Voltage Direct Current (HVDC) underground cables are used for the Project at	National Grid has considered numerous different options including HVDC underground cables. HVDC would	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	Bunwell Parish (e.g. as it is in the Tas Valley), and that ecologic damage in Bunwell Hill, near the Tas River, is minimised	<p>require large converter stations which would be impactful on the local ecology.</p> <p>National Grid is constantly looking into new innovations and investigating alternative technology types. These are explored and assessed for suitability. Alternative technologies were investigated for the Project, these included an offshore connection using Direct Current (DC) technology, and various onshore connection options including: increasing operational voltages on existing network to above 400 kV; Alternating Current (AC) overhead lines (established technology); alternative pylon types; AC underground technology; High Voltage Direct Current (HVDC) overhead line and underground cables; and Gas Insulated Line (GIL).</p> <p>HVDC is not normally used across land as converting AC to DC and back again would require converter stations so it can be used in the rest of transmission network and the distribution network which is currently AC. These converter stations are a significant size and would be required at every interface with the wider AC network i.e. at Norwich, Bramford, East Anglia Connection Node (EACN) substation and Tilbury substations, the cost of these converter stations outweighs the benefits offered.</p> <p>Currently, overhead lines offer the most economic and efficient solution to transmit electricity over long distances. We have completed an Environmental Impact Assessment (EIA) for the Project which includes</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		assessment of ecological impacts at Bunwell and identification of appropriate mitigation where necessary. The results of this assessment are provided in the Environmental Statement (ES), Chapter 8: Ecology and Biodiversity (document reference 6.8) that accompanies the Development Consent Order (DCO) application.				
9-3.138	Suggest that T-pylons are used for the Project at Bunwell Parish	<p>The latest independent report on the Comparison of Electricity Transmission Technologies: Costs and Characteristics (Institute of Engineering and Technology, 2025) confirms that whilst T-Pylons may in certain locations provide an alternative to conventional overhead lines with potential benefits in visual impact and reduced land-take, this is at a higher cost. The build cost is approximately 2 to 2.5 times that of an equivalently rated conventional overhead line, and the lifetime costs are around 1.6 to 1.7 times that of a conventional overhead line. The current arrangements for the oversight of funding by Ofgem requires that the lowest cost acceptable design is taken forward rather than a more expensive design even if that design is perceived to reduce the level of effect.</p> <p>As such consideration of their use follows after establishing a need to mitigate effects of the standard lattice design and after considering the benefit of adopting a low height lattice pylon design. T pylons themselves are also less adaptable to varied terrains and require more substantial access infrastructure. Furthermore, their resilience and environmental impact</p>	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>are comparable to conventional overhead lines, but with increased carbon intensity due to construction materials. Attention also needs to be given to the transitions between pylon types. Given It is the surrounding context that drives the need for alternative design mitigation, where this is not required along the entire route, any visual break and transition in pylon design also needs to be carefully sited.</p> <p>Assessment findings have concluded that, where there is not a reversal of the presumption to use overhead lines, the use of lattice pylons (either standard or low height) is consistent with planning policy throughout the route. Whilst there may be some locations (for examples see appendix A of the 2024 Design Development Report) where there may be a design option for the use of T pylons, the need to mitigate for unacceptable effects from lattice pylons is not engaged. On this basis T pylons are not proposed for the Project.</p>				
9-3.139	Suggest that Pylons RG39 to RG43 should be relocated away from Public Right of Way (PRoW) (e.g. to mitigate impact of construction), and with this, concern that Pylon RG42 is proposed at a location close to high speed limit rural roads (e.g. which are small and tight, with no accompanying footpath despite housing being located nearby, so construction traffic for the Project will make these roads more dangerous)	<p>The local road network around pylon RG42 is not proposed to be used as a Primary Access Route. For this section of temporary haul road, the Primary Access Routes are proposed to the north from the B1113 (PAR H03-A1), and to south from the B1134 (PAR H03-A2).</p> <p>Through routeing and siting, National Grid has sought to and will continue to reduce, as far as practicable, impacts and disruption to Public Rights of Way (PRoW).</p> <p>The iterative process of route design has identified the existing PRoW network and their wider connectivity and</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>sought where practicable to reduce and where possible remove impacts to PRow. If mitigation has been identified, measures may include the temporary closure of PRow during the construction phase, and where possible a diversion to allow for the continued use and movement of the wider PRow network.</p> <p>Effects on PRow would be mitigated where possible, maintaining access where practicable, with temporary closures as a last resort. We will continue to engage with relevant stakeholders on the PRow network to enable feedback and input to be considered as the Project develops.</p> <p>An Outline Public Rights of Way Management Plan (document reference 7.6) has been prepared and submitted with the application for development consent.</p>				
9-3.140	Suggest that the existing overhead line between Diss and Scole (line east of Diss) is upgraded and utilised for the Project instead	The existing transmission network in the region is being upgraded to ensure the system is running at its most efficient performance. The existing networks are not able to be upgraded sufficiently to cope with the future demands expected on the network. As a result, new lines and substations will be required to accommodate the changing demands on the network.			X	
9-3.141	Suggest that the use of underground cables is extended from Bressingham through to the south side of Palgrave and the A143	National Grid has considered the justification for the use of underground cable for the crossing of the Waveney Valley and on the matter of extending the use of underground cable from Bressingham through to the south side of Palgrave and the A143 raised in the			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>respondent's feedback. The starting presumption in National Policy Statement (NPS) EN-5 paragraph 2.9.20 in a location such as the Waveney Valley which, although valued is not designated, is that overhead line is the appropriate 400 kV connection technology. We have also considered whether the effects from the overhead line are at a level that engages other parts of NPS EN-5 (such as paragraph 2.9.23) to prompt consideration of whether the benefits of undergrounding outweigh any extra economic, social or environmental impacts. At the Waveney we conclude that the benefits from a change to underground cable, do not justify the additional cost that would be incurred. The use of underground cable would lead to a lowering of effects on the setting of the Grade I Listed St Remegius Church, albeit the effects of progressing with an overhead line are assessed as less than substantial harm and don't themselves require a change in technology. In terms of community effects, existing trees would provide some screening and filtering of views of an overhead line for those in residential areas and on recreational routes. A change from overhead line to underground cable would reduce these community effects but bring disbenefits, most notably increased ecological effects from installation within peaty soils and increased technical risk to cable integrity from the WaLOR channel naturalisation and landscape recovery plans. Conversely there may be a compromise to the WaLOR project by measures to ensure cable integrity. After consideration</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		of the decision making guidance at paragraph 2.9.25 of NPS EN-5, National Grid concludes that whilst effects from overhead lines to individual receptors may be significant in Environmental Impact Assessment (EIA) terms they do not justify the potential for compromise to the WaLOR project, the effects on peaty soils which would arise with an underground cable design nor justify the expected cost of an underground cable design. On this basis, National Grid concludes that the use of an overhead line should be taken forward for the crossing of the Waveney Valley. Prior to making this decision we had considered whether requests to relocate the Cable Sealing End (CSE) compounds and extend the cable both to the north and the south may alter the decision-making balance. Such extensions would bring benefits to various residential receptors but with the additional cost of longer length of cables. We conclude that given the absence of any designated status pertinent to NPS EN-5, and the extent to which some views from residential areas are filtered and screened and lower the level of adverse effects from the overhead line, we do not consider the additional cost associated with extending the underground cable would be justified.				
9-3.142	Concern that Pylons RG114, RG118 and RG119 will impact Public Rights of Way (PRoW) (i.e. closing PRoWs and impacting leisure)	The potential impacts on Public Rights of Way (PRoW) and cycle routes from the Project during the construction and operation have been assessed in the Environmental Statement (ES), Chapter 15: Socioeconomics, Recreation and Tourism (document reference 6.15) and			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>ES Chapter 16: Traffic and Transport (document reference 6.16). Mitigation measures are identified within the Outline Public Rights of Way Management Plan (document reference 7.6) submitted as part of the Development Consent Order (DCO) application.</p> <p>An Outline PRow Management Plan (document reference 7.6) has been submitted as part of this DCO application. This document sets out management measures and mitigation measures for each PRow affected by the construction activities and operation of the Project.</p> <p>The Outline PRow Management Plan (document reference 7.6) has defined the management of the PRow in the area around pylons RG114 to RG119. The PRow would be temporarily closed for the duration of the works with managed access, that is, allowing a safe passage throughout of the PRow users e.g. footpath W-267/021/0 and bridleway W-267/014/0.</p> <p>As a result, the magnitude of impact on the PRow is considered negligible and the overall effect has been classified as not significant.</p>				
9-3.143	Suggest that Pylons RG067, RG068, and RG069 are relocated east towards Winfarthing Road where the land drops away (e.g. to mitigate visual impact, impact on walking, and impact on local community)	National Grid has considered the respondent's feedback, to move RG67-RG69 east towards Winfarthing Road which would move the alignment closer to properties to the east, potentially increase effects. A more easterly alignment would also require a longer route with more angle pylons to enable a crossing of Heywood Road to the south that wouldn't oversail			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		properties, this would therefore be less consistent with the Holford Rules (these can be found in Appendix I22 of this report). We are therefore not proposing a change to the alignment in this location. We have undertaken an Environmental Impact Assessment (EIA) which has assessed the impact of the Project including visual impacts, and recommended mitigation where required.				
9-3.144	Criticism of the permanent National Grid access point between Pylon RG068 and Back Heywood Road, as it is currently not wide enough for vehicles and will impact residents and walkers	National Grid notes the respondent's feedback. This access is a permanent right of access for potential future surveys and maintenance and would not be used for construction. The access has been designed, utilising field boundaries and existing gaps that it is assumed the landowners already use to access the fields. For this access, vehicles would be no bigger than that already being used on the land. The existing access to the field is approximately 3 m wide which is adequate for the type of vehicle (a 4x4) that may need to use it in the future.			X	
9-3.145	Concern that the Project between Pylons RG044 and RG062 is too close to Tibenham Airfield (e.g. impacting the safe use of gliders)	National Grid has appointed an independent aviation consultancy which has engaged with Tibenham Airfield (with National Grid also present) to inform their impact assessment. Following consultation with the operators, it is assessed that, with the Project as currently proposed, operations (including gliding) can continue at the airfield. We are continuing to engage with the operator to enable their review of the acceptability of the Project design and support their consideration of whether reasonable changes to operational procedures are required. Further			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		information on the assessment of airfields can be found in the Environmental Statement (ES Chapter 15: Socio-Economic, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).				
9-3.146	Suggest that Pylon RG45 is relocated as it currently sited in the middle of a small field (e.g. severely constraining the use of surrounding land).	<p>National Grid has considered the respondent's feedback to move RG45 from the centre of the field. It is not possible to move RG45 further south due to the distance required for the crossing of the road. In addition, moving RG45 would transfer effects to other receptors such as nearby properties. We are therefore not proposing a change to the location of RG45. If a land owner is concerned about impacts to farming, they should contact the Project's lands team to discuss: Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.</p> <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD.</p>			X	
9-3.147	Suggest that Pylons RG80 to RG82 and the haul road at this location is relocated (e.g. to mitigate impact on listed property business, property value, visual impact, and flora and fauna)	Alternative routes to the west and east of the alignment presented at the statutory consultation have been presented at the 2022 and 2023 non-statutory consultation, they were considered previously and considered less preferred for the reasons set out in the 2023 and 2024 Design Development Reports (available on the Project website). Beyond a stated preference for			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>these pylons to be relocated, no new information is presented nor has been identified. On that basis, we are not proposing a change to the alignment at RG80 to RG82. We have undertaken an Environmental Impact Assessment (EIA) which has assessed the impact of the Project including heritage and visual impacts and impacts to flora and fauna, and recommended mitigation where required.</p> <p>Potential impact on property prices is not a material planning consideration for the purposes of a DCO application. Separate to this point, the Secretary of State has asked that the DCO application include an assessment of the likely significant environmental effects in the form of potential impacts on property prices. The ES contains an assessment on this. It concluded that there is no evidence of any significant environmental effects on house prices as a result of the Project. Although not part of the Environmental Impact Assessment process it is relevant to observe that any impact of the Project on residential properties are potentially capable of being dealt with through statutory nuisance or compulsory purchase compensation regimes (subject to the requisite criteria being met).</p> <p>If there are any specific concerns about the devaluation of property, National Grid would advise seeking third party advice. or alternatively please contact the Project team:</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314. Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD.				
9-3.148	Suggest that the span between Pylons RG18 and RG19 is realigned to the east to reduce the impact of the oversail on the solar project at Bracon Ash	Realignment of the pylons to avoid the solar farm would only be achieved by diversions that would be longer with larger changes of direction, less consistent with Holford Rule 3, and that oversailed woodland requiring tree clearance to meet safety requirements and as a result being less consistent with Holford Rule 2. On the basis that there is oversail only of the solar farm, no change is proposed. A summary of the Holford Rules is provided within Appendix I22 of this report.			X	
9-3.149	Suggest that the use of underground cables should be extended further north towards Shelfanger	National Grid has considered the justification for the use of underground cable for the crossing of the Waveney Valley and on the matter of extending the use of underground cable further north towards Shelfanger raised in the respondent's feedback. The starting presumption in National Policy Statement (NPS) EN-5 paragraph 2.9.20 in a location such as the Waveney Valley which, although valued is not designated, is that overhead line is the appropriate 400 kV connection technology. We have also considered whether the effects from the overhead line are at a level that engages other parts of NPS EN-5 (such as paragraph			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>2.9.23) to prompt consideration of whether the benefits of undergrounding outweigh any extra economic, social or environmental impacts. At the Waveney we conclude that the benefits from a change to underground cable, do not justify the additional cost that would be incurred. The use of underground cable would lead to a lowering of effects on the setting of the Grade I Listed St Remegius Church, albeit the effects of progressing with an overhead line are assessed as less than substantial harm and don't themselves require a change in technology. In terms of community effects, existing trees would provide some screening and filtering of views of an overhead line for those in residential areas and on recreational routes. A change from overhead line to underground cable would reduce these community effects but bring disbenefits, most notably increased ecological effects from installation within peaty soils and increased technical risk to cable integrity from the WaLOR channel naturalisation and landscape recovery plans. Conversely there may be a compromise to the WaLOR project by measures to ensure cable integrity. After consideration of the decision making guidance at paragraph 2.9.25 of NPS EN-5, National Grid concludes that whilst effects from overhead lines to individual receptors may be significant in Environmental Impact Assessment (EIA) terms they do not justify the potential for compromise to the WaLOR project, the effects on peaty soils which would arise with an underground cable design nor justify the expected cost of an underground</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>cable design. On this basis, National Grid concludes that the use of an overhead line should be taken forward for the crossing of the Waveney Valley. Prior to making this decision we had considered whether requests to relocate the Cable Sealing End (CSE) compounds and extend the cable both to the north and the south may alter the decision-making balance. Such extensions would bring benefits to various residential receptors but with the additional cost of longer length of cables. We conclude that given the absence of any designated status pertinent to NPS EN-5, and the extent to which some views from residential areas are filtered and screened and lower the level of adverse effects from the overhead line, we do not consider the additional cost associated with extending the underground cable would be justified.</p>				
9-3.150	Suggest that the Project should be routed further west and then go south over farmland (e.g. so that there would be no need to use underground cables in the Waveney Valley)	<p>National Grid has considered a variety of route options in this general area encompassing alternative routes to the east of Diss, further to the west of the alignment and then south over farmland along with other alternatives as well as a variety of localised amendments. The basis for selection of the route is as out in the 2023 and 2024 Design Development Reports published in subsequent consultations, (available on the Project website), and the 2025 Design Development Report (document reference 5.15) submitted as part of the Development Consent Order (DCO) application, with the 2025 report also setting out the decision making that leads to the Project</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		progressing on the basis of overhead line. Routes further west lead to a transfer of effects (e.g. from one grade I listed building to another or from one cluster of residential properties to a broadly similar number of residential properties which are more dispersed). They would also lead to increased effects on ecological interests as the main factor. In the absence of new information or the identification of other factors no change in response to this feedback is proposed. is proposed.				
9-3.151	Suggest alternative route for the Project between Bunwell and Gislingham, to the west of Bressingham (to eliminate the need for the Waveney Valley Alternative) (plan provided by respondent)	National Grid has considered a variety of route options in this general area encompassing alternative routes to the east of Diss, further to the west of the Project alignment between Bunwell and Gislingham west of Bressingham as well as a variety of localised amendments. The basis for selection of the route is as out in the 2023 and 2024 Design Development Reports (available on the Project website) with the 2025 Design Development Report (document reference 5.15) also setting out the decision making that leads to the Project progressing on the basis of overhead line. In the absence of new information or the identification of other factors no change in response to this feedback is proposed.			X	
9-3.152	Suggest that Pylon RG81 is relocated (e.g. to mitigate impact on domestic horses, owners of domestic horses, and mental health; to mitigate	Alternative routes to the west and east of the alignment presented at statutory consultation were considered previously and considered less preferred for the reasons			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	impact on the local environment, landscape, hedgerows, trees and wildlife)	<p>set out in the Design Development Reports. Beyond a stated preference, no new information is presented nor has been identified. On that basis, National Grid considers the reasons for not preferring alternatives to remain valid and we are not currently proposing a change to the alignment in this location.</p> <p>With regards to impacts on domestic horses, possible effects of Electric and Magnetic Fields (EMFs) on various animals have been studied a number of times. No proven effects of EMFs have been found in any species at levels below the guidelines. This is confirmed in National Policy Statement (NPS) EN-5 which states: <i>'There is little evidence that exposure of crops, farm animals or natural ecosystems to transmission line EMFs has any agriculturally significant consequences.'</i> Although horses are not directly mentioned, there is no evidence to suggest they are any different to other farm animals.</p> <p>In addition to the potential direct biological or health effects addressed above, indirect effects such as microshocks can occur as a result of electric fields. Microshocks are small spark discharges which are similar to a static shock after walking across a nylon carpet for example. The Project will be designed in accordance with the principles of the Governments Code of Practice 'Power Lines: Control of Microshocks and other indirect effects of public exposure to electric fields'</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>to ensure these are mitigated, with particular focus on equestrian activities.</p> <p>The Project had EMF specialists available throughout the consultation process to answer any questions and concerns around EMF. National Grid also provides EMF information via a website and helpline, to provide information on this subject to help.</p> <p>National Grid has provided an Electric and Magnetic Field Compliance Report (document reference 7.8) which is submitted as part of the Development Consent Order (DCO) application.</p> <p>During the construction phase of the Project, should consent be granted, National Grid would work with landowners to agree mitigation where stock and other animals such as horses may be affected. This may involve the temporary removing / rehousing of horses or installing additional fencing to separate / distance horses from the construction areas.</p>				
9-3.153	Suggest the Project uses underground cables at Hapton	<p>National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in</i></p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p><i>general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)'. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at Hapton would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented</i></p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
9-3.155	Suggest the use of High Voltage Direct Current (HVDC) cables surrounding Hempnall's Hall	<p>National Grid has considered numerous different options including HVDC underground cables.</p> <p>National Grid is constantly looking into new innovations and investigating alternative technology types. These are explored and assessed for suitability. Alternative technologies were investigated for the Project, these included an offshore connection using Direct Current (DC) technology, and various onshore connection options including: increasing operational voltages on existing network to above 400 kV; Alternating Current (AC) overhead lines (established technology); alternative pylon types; AC underground technology; High Voltage Direct Current (HVDC) overhead line and underground cables; and Gas Insulated Line (GIL).</p> <p>HVDC is not normally used across land as converting AC to DC and back again would require converter stations so it can be used in the rest of transmission network and the distribution network which is currently AC. These converter stations are a significant size and would be required at every interface with the wider AC network i.e. at Norwich, Bramford, East Anglia Connection Node (EACN) substation and Tilbury substations, the cost of these converter stations outweighs the benefits offered.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Currently, overhead lines offer the most economic and efficient solution to transmit electricity over long distances.				
9-3.156	Suggest that the use of underground cables for the Project at the Tas Valley	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is ' <i>that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)</i> '. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at the Tas Valley would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
9-3.157	Suggest that Pylons RG61 to RG69 are relocated to the east within respondent's land, behind existing woodland and hedge lines and in the corner of arable fields (e.g. to mitigate impact on landscape, agriculture and environment, and reduce compensation costs), and criticism that National Grid has previously disregarded this change request due to an anticipated impact on neighbouring residential property (which seems limited) despite the more significant impact on respondent's land (e.g. given	National Grid has assessed the route proposed by the respondent. While we appreciate that the proposed alternative would reduce impacts to the respondent's land, it would move the alignment closer to residential properties to the east, including a listed building, as well as an electrically sensitive facility and Priory Airfield. The proposed route would also increase effects on ecology due to passing through woodland and a pond area. We are therefore not proposing a change to the alignment in this area. We have undertaken an Environmental Impact			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	that 10% of the Project through the Norfolk section falls within respondent's land)	<p>Assessment (EIA) which has assessed the impact of the Project, and recommended mitigation where required.</p> <p>If a landowner is concerned about impacts to farming, they should contact the Project's lands team to discuss Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.</p> <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD.</p>				
9-3.158	For The Waveney Valley Alternative, suggest that the use of underground cables should be extended to at least Pylon RG78 (e.g. to mitigate impact on residents)	<p>National Grid has considered the justification for the use of underground cable for the crossing of the Waveney Valley and on the matter of extending the underground cable to RG78 raised in the respondent's feedback. The starting presumption in National Policy Statement (NPS) EN-5 paragraph 2.9.20 in a location such as the Waveney Valley which, although valued is not designated, is that overhead line is the appropriate 400 kV connection technology. We have also considered whether the effects from the overhead line are at a level that engages other parts of NPS EN-5 (such as paragraph 2.9.23) to prompt consideration of whether the benefits of undergrounding outweigh any extra economic, social or environmental impacts. At the Waveney we conclude that the benefits from a change to underground cable, do not justify the additional cost that would be incurred. The use of underground cable would lead to a lowering of effects on the setting of the</p>			X

		<p>in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.</p> <p>National Grid is constantly looking into new innovations and investigating alternative technology types. These are explored and assessed for suitability. Alternative technologies were investigated for the Project, these included an offshore connection using Direct Current (DC) technology, and various onshore connection options including: increasing operational voltages on existing network to above 400 kV; Alternating Current (AC) overhead lines (established technology); alternative pylon types; AC underground technology; High Voltage Direct Current (HVDC) overhead line and underground cables; and Gas Insulated Line (GIL).</p> <p>Currently, overhead lines offer the most economic and efficient solution to transmit electricity over long distances.</p> <p>Health considerations are given a high priority in the process by which we arrive at any proposals for new electricity circuits. Assessment of compliance with EMF guidelines and policies is key to National Grid's approach. The UK has a carefully thought-out set of policies for managing EMFs. There have been over four decades of research looking into whether EMF can cause health effects and there are no established effects below the exposure limits. The overhead lines, substations and cables which form part of this Project</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		have been designed to ensure they will not exceed those exposure limits, even when operating at 100% capacity. Additionally, the precautionary measures which the Government have adopted, have been applied to the design which ensure the EMFs reduce as quickly with distance as possible. Evidence of that compliance will be presented in our DCO application, which will be publicly available.				
9-3.165	Suggest that in addition to extending the Waveney Valley Alternative (underground option) from Pylons RG84 and RG85 to include Pylons RG82 and RG83, the Project also utilises the Darrow Lane farmland to provide connection between the underground and overhead lines (e.g. compounds and associated infrastructure, proposals for construction)	National Grid has considered the justification for the use of underground cable for the crossing of the Waveney Valley and on the matter of extending the use of underground cable from RG84 and RG85 to include Pylons RG82 and RG83 raised in the respondent's feedback. The starting presumption in National Policy Statement (NPS) EN-5 paragraph 2.9.20 in a location such as the Waveney Valley which, although valued is not designated, is that overhead line is the appropriate 400 kV connection technology. We have also considered whether the effects from the overhead line are at a level that engages other parts of NPS EN-5 (such as paragraph 2.9.23) to prompt consideration of whether the benefits of undergrounding outweigh any extra economic, social or environmental impacts. At the Waveney we conclude that the benefits from a change to underground cable, do not justify the additional cost that would be incurred. The use of underground cable would lead to a lowering of effects on the setting of the Grade I Listed St Remegius Church, albeit the effects of			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>progressing with an overhead line are assessed as less than substantial harm and don't themselves require a change in technology. In terms of community effects, existing trees would provide some screening and filtering of views of an overhead line for those in residential areas and on recreational routes. A change from overhead line to underground cable would reduce these community effects but bring disbenefits, most notably increased ecological effects from installation within peaty soils and increased technical risk to cable integrity from the WaLOR channel naturalisation and landscape recovery plans. Conversely there may be a compromise to the WaLOR project by measures to ensure cable integrity. After consideration of the decision making guidance at paragraph 2.9.25 of NPS EN-5, National Grid concludes that whilst effects from overhead lines to individual receptors may be significant in Environmental Impact Assessment (EIA) terms they do not justify the potential for compromise to the WaLOR project, the effects on peaty soils which would arise with an underground cable design nor justify the expected cost of an underground cable design. On this basis, National Grid concludes that the use of an overhead line should be taken forward for the crossing of the Waveney Valley. Prior to making this decision we had considered whether requests to relocate the Cable Sealing End (CSE) compounds and extend the cable both to the north and the south may alter the decision-making balance. Such extensions would bring benefits to various residential</p>

		to which some views from residential areas are filtered and screened and lower the level of adverse effects from the overhead line, we do not consider the additional cost associated with extending the underground cable would be justified.				
9-3.167	Suggest the use of direct current (DC) underground cables for the Project past Tibernham Airfield, Old Buckenham Airfield and Priory Airfield to Roydon and Wortham Ling	National Grid has appointed an independent aviation consultancy which has engaged with Tibernham, Priory Farm and Old Buckenham aerodromes (with National Grid present) to inform their impact assessments. Following consultation with the operators it is assessed that, with the Project as currently proposed, aviation operations can continue. In view of the assessment conclusions, there is judged to be insufficient justification for the use of underground cables in the vicinity of the airfields on grounds of aviation impacts. We are continuing to engage with the operators of Tibernham and Priory Farm to enable their review of the acceptability of the Project design and to support their consideration of whether reasonable changes to operational procedures are required. Further information on the assessment of airfields can be found in the Environmental Statement (ES) (ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and ES Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2)).			X	
9-3.168	Concern over the proximity of Pylons RG82 and RG83 to the properties on Hall Lane, Baynard's	National Grid has considered the justification for the use of underground cable for the crossing of the Waveney	X		X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		assessment, which is detailed in Chapter 11 6.11 ES Chapter, as well as in the ES Appendix 11.7 (Assessment of Harm). It is of the understanding that the pylons cannot be moved westward as they would be within the settlement of Bressingham Common, and the reasoning for not being undergrounded is explained in the above comment. This assessment was undertaken in line with the National Grid pylon location suggestions and mitigations to the impact during construction and operation have been suggested and can be found in Chapter 11.				
9-3.169	Suggest that the Project is routed to the east and north of Diss (either as overhead lines or underground cables), and request that analysis of this option is set out as part of the Preliminary Environmental Information Report (PEIR) and submitted as part of the Development Consent Order (DCO) application	National Grid notes the respondent's feedback. In this location National Grid has considered a variety of route options encompassing alternative routes coming from the north then diverting to pass to the east of Diss or passing further to the west of the alignment as well as a variety of localised amendments. The basis for selection of the route is as set out in the 2023, 2024 Design Development Reports (available on the Project website) and the 2025 Design Development Report (document reference 5.15), with the 2025 report also setting out the decision making that leads to the Project progressing on the basis of overhead line. In the absence of new information or the identification of other factors, no change in response to this feedback specifically is proposed, with the Project progressing in a manner consistent with the Holford Rules to the extent possible due to the local circumstances. A summary of the	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Holford Rules is provided within Appendix I22 of this report. National Grid is not required to present the equivalent of a Preliminary Environmental Information Report (PEIR) for all alternatives but presents this only for the Project it proposes to take forward.				
9-3.170	Suggest that Pylon RG31 is relocated to the south to field boundary rather than located in the middle of the field as currently proposed (e.g. to mitigate impact on farming)	National Grid notes the respondent's feedback, due to a change to the alignment moving further west as presented at our targeted consultations, RG31 has moved west into the corner of the neighbouring field.			X	X
9-3.171	Suggest that underground cables are used for the Project across respondent's farm (address provided by respondent)	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is ' <i>that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)</i> '. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at the respondent's farm would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.</p>				
9-3.172	Suggest that Pylon RG90 is relocated to directly opposite Pylon RG89 so that it is located on the western boundary of the field closest to the Ling	National Grid notes the respondent's preference. Following review, National Grid is not taking these changes forwards, albeit have slightly modified the	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	rather than following in the middle of the field (e.g. to provide a direct connection across Ling Road; to avoid Pylon RG90 being sited in a flood area; so that a larger angle pylon is not required; to mitigate impact on farming; to provide a greater distance between the respondent's property / holiday let and the Project), and suggest that Pylon RG91 is relocated to the western boundary to align with Pylon RG90 and run along the edge of the field (e.g. for a more direct route; to avoid flooded areas; to mitigate impact on farming)	alignment in this area to respond to the potential implications for channel naturalisation arising from the WaLOR project. That change does not have implications for this request. The change would reduce effects to those properties to the east but increase them for properties to the west and, if implemented as suggested, would lead to additional tree removal. The preference is to remain approximately midway between the residential properties to east and west and compensate for the pylon position within agricultural fields.				
9-3.173	Suggest that the Waveney Valley Alternative (underground option) is extended to Millway Lane rather than not in the middle of the field opposite the view from respondent's holiday lets as currently proposed (e.g. to mitigate visual impact of Cable Saling End (CSE) compounds; to mitigate impact on business), and with this suggest that all access to the Project is routed via Millway Lane rather than Ling Road (e.g. as this does not flood; for more direct access)	National Grid has considered the justification for the use of underground cable for the crossing of the Waveney Valley and on the matter of extending the use of underground cable to Millway Lane raised in the respondent's feedback. The starting presumption in National Policy Statement (NPS) EN-5 paragraph 2.9.20 in a location such as the Waveney Valley which, although valued is not designated, is that overhead line is the appropriate 400 kV connection technology. We have also considered whether the effects from the overhead line are at a level that engages other parts of NPS EN-5 (such as paragraph 2.9.23) to prompt consideration of whether the benefits of undergrounding outweigh any extra economic, social or environmental impacts. At the Waveney we conclude that the benefits from a change to underground cable, do not justify the additional cost that would be incurred. The use of			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>underground cable would lead to a lowering of effects on the setting of the Grade I Listed St Remegius Church, albeit the effects of progressing with an overhead line are assessed as less than substantial harm and don't themselves require a change in technology. In terms of community effects, existing trees would provide some screening and filtering of views of an overhead line for those in residential areas and on recreational routes. A change from overhead line to underground cable would reduce these community effects but bring disbenefits, most notably increased ecological effects from installation within peaty soils and increased technical risk to cable integrity from the WaLOR channel naturalisation and landscape recovery plans. Conversely there may be a compromise to the WaLOR project by measures to ensure cable integrity. After consideration of the decision making guidance at paragraph 2.9.25 of NPS EN-5, National Grid concludes that whilst effects from overhead lines to individual receptors may be significant in Environmental Impact Assessment (EIA) terms they do not justify the potential for compromise to the WaLOR project, the effects on peaty soils which would arise with an underground cable design nor justify the expected cost of an underground cable design. On this basis, National Grid concludes that the use of an overhead line should be taken forward for the crossing of the Waveney Valley. Prior to making this decision we had considered whether requests to relocate the Cable Sealing End (CSE) compounds and extend the cable</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		both to the north and the south may alter the decision-making balance. Such extensions would bring benefits to various residential receptors but with the additional cost of longer length of cables. We conclude that given the absence of any designated status pertinent to NPS EN-5, and the extent to which some views from residential areas are filtered and screened and lower the level of adverse effects from the overhead line, we do not consider the additional cost associated with extending the underground cable would be justified.				
9-3.174	Suggest that the Project is routed through large area of farmland between Winfarthing and Kenninghall (e.g. rather than following the line of towns and villages as currently proposed)	National Grid has considered a variety of route options in this general area encompassing alternative routes to the east of Diss, further to the west of the alignment as well as a variety of localised amendments. These encompass the suggested farmland area between Winfarthing and Kenninghall. The basis for selection of the route is as out in the Design Development Reports with the 2025 report (document reference 5.15) also setting out the decision making that leads to the Project progressing on the basis of overhead line on the alignment, with small amendments, consulted upon in the statutory consultation. The route proposed in this particular feedback aligns with part of the 'further west' alternative. Beyond the specific locations mentioned in the feedback, the feedback does not specify a route to reconnect with the alignment. However, to do so is likely to require a deviation from the alignment to north or south of the Tas Valley and to the south reconnect to the			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		north-east of Bressingham (continuing west of Diss would overall equate to a route considered less preferred as set out in the 2023 and 2024 Design Development Reports (available on the Project website)). In either case the route is not just through farmland but has to pass close to other environmental features, constraints and homes. In addition to this transfer of effects the route length would be longer with an estimate of around 14 km compared with around 11 km (less consistent with Holford Rule 3) with a similar requirement for direction changes. On this basis and in the absence of new information or the identification of other factors the alternative farmland route between Winfarthing and Kenninghall is less preferred and no change in response to this feedback is proposed. A summary of the Holford Rules is provided within Appendix I22 of this report.				
9-3.175	Suggest alternative route for the Project between Pylons RG8 and RG12 and between Pylons RG41 and RG44 (preferred route and another alternative route provided) and suggest alternative location for Pylon RG39 (plans provided by respondent) (e.g. so that pylons are located closer to field boundaries to mitigate impact on farming operations and business). With this, request that access requirements are considered further once final route for the Project is confirmed (e.g. to minimise impact on farming business)	National Grid has carefully reviewed the requested changes. In respect of RG8 to RG12 a straightened alignment with pylons to field boundaries would directly impact an area of woodland and a consented solar farm and presents increased technical risk to deliverability with imbalanced spans and additional construction and maintenance risk due to the revised stringing positions. Given other constraints to stringing this change cannot be accepted. In respect of the other pylons identified, we have made some changes to pylon RG39 and have been able to move this pylon to a field boundary. The			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>alternative route suggestions cannot be taken forward. Reasons include: a preference to avoid loss of woodland to ensure consistency with Holford Rule 2; the need to provide space for scaffolding protection to highways and preference to not oversail sections of highway due to the extensive need to protect the road during construction and maintenance; and avoiding a transfer of effects to other third parties. A summary of the Holford Rules is provided within Appendix I22 of this report.</p> <p>National Grid would continue to discuss requirements with landowners throughout the Development Consent Order (DCO) application process and, if consented, throughout construction.</p>				
9-3.176	Suggest the route is moved as far east as possible to mitigate the impacts on the gnarly old hornbeam, a mature/veteran tree	National Grid is proposing a slight change to the alignment and haul road between RG46 and RG51 which would take the alignment to the west and avoid the County Wildlife Site (CWS) and veteran tree.			X	X
9-3.177	Oppose the change to the Project from the 2023 draft alignment between Pylons RG92 and RG98 (a relocation of the Project by approximately 700m to the east of St John's House and Goodrich Park, as shown in the Section 42 Consultation Plans) (e.g. given that the Project will be closer to Palgrave, residences and businesses), and suggest that locating the Project away from residences in Palgrave should be prioritised over locating the Project away from the proposed solar farm (which	National Grid is committed to carefully considering all feedback and understands that design responses may not be welcomed by all. As more information has been obtained about the nature of the aircraft and the performance characteristics, we have considered the need for modifications to the design. This has been in combination with other feedback requests and environmental information. A further change is also being taken forward as set out in the 2025 Design Development Report (document reference 5.15) with the			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	does not yet have planning consent) and Brook Farm Airstrip (which is rarely used) (plans provided by respondent) / Oppose the change to the Project near Palgrave (e.g. due to impact on business and residents) and criticism of National Grid's justification for the change (e.g. the Design Development Report (DDR) states that deviations to the west were constrained by the extent of residential property in Wortham but similar impact on the village of Palgrave has not been considered; in Paragraph 5.4.63, National Grid refers to the impact on East Cottage and The Grange, but not the other five properties impacted by the new route; the weight given to Brook Airstrip as per Paragraphs 5.4.60, 5.4.61 and 5.4.62 of the DDR, despite it being privately owned and not frequently used)	nearest further amended 400 kV infrastructure to Palgrave being at around 1.4 km distance. Factors influencing the changes now being taken forward are a preference for reducing the magnitude of effects and reducing potential cumulative effects by adopting the alignment of an existing 132 kV overhead line to position the pylons behind a tree line to increase the filtering of views; replacing more of the existing 132 kV with underground cable and, along with feedback to seek to support continued flight activity at Brook Farm airstrip. In taking forward this change, we have considered the changes both where effects are reduced but also where there may be an increased effect. Residential properties to the western edge of Palgrave are in excess of 1 km from the proposed 400 kV infrastructure with the existing 132 kV overhead line running immediately to the west of the village. On balance a further change is preferred and the distance to Palgrave, at a minimum of 1 km, is not considered to be a basis to not progress. Further information on the assessment of airfields can be found in the Environmental Statement (ES) (ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and ES Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2)).				
9-3.178	Suggest that the proposed pylon in Millway Field is relocated (given that the field is designated as a Community Biodiversity and Educational Project as part of the AURA Solar development proposal and	National Grid notes the respondent's feedback. The pylon in Millway Field is not able to be relocated as moving the alignment east or west at this location would move pylons closer to properties on either side,			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	will contain a large pond purposed to absorb the run-off water from the field which otherwise floods Millway Lane)	additionally a move east or west would have greater impacts in terms of conductor over sail of the proposed solar panels. It is also not possible to move the pylon north or south along the alignment due to restrictions in span lengths and road crossings requiring scaffolding protection. National Grid has engaged with the developer and the position of pylon RG91 in the north-east corner of the site is most appropriate to minimise impacts on the proposed solar development. As per the discussions we have also re-routed the temporary haul road to the eastern edge of the site to further minimise impacts to the solar panels.				
9-3.179	Concern that the Project between Pylons RG77 and RG90 will impact Key View 28 of the Diss and District Local Plan Key Views Assessment Report	A Landscape and Visual Impact Assessment (LVIA), as presented in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13), has been undertaken as part of the Environmental Impact Assessment (EIA). The LVIA includes an assessment on both landscape character and visual amenity and sets out the potential landscape and visual effects of the Project, including consideration of relevant development plan policies including Neighbourhood Plans. Key View 28 in the Diss & District Neighbourhood Plan Key Views Assessment Report is located on Darrow Lane to the north of Snow Street. There is no LVIA viewpoint in this location, however the assessment of Visual Receptor Area (VRA) A10 Burston identifies significant effects on visual receptors in this location. Viewpoint 1.21 - PRoW near Royden Fen is located near to Key View 24 and the visualisation for this viewpoint illustrates how the Project will appear in views over the Waveney Valley to the south. A significant effect is identified for visual receptors at this viewpoint. Further information is provided in ES Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3).</p>			X	
9-3.182	Concern that the Project between Pylons RG77 and RG81 will impact Fox Wood Forest School, Snow Street, which was developed to support children's mental and physical well-being through connection with nature	The northern edge of the Forest School site is over 350 m from the alignment and nearest pylon. In the absence of any direct interaction with the school site and given the distance between school and alignment National Grid does not consider that any detrimental effect on the			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		attending children will occur. On this basis no design change is necessary.				
9-3.183	Concern that the Project between Pylons RG84 and RG88 will impact Heron Meadow, a Care Farm promoting wellbeing and learning, off Doit Lane, Roydon	National Grid notes the respondent's feedback. We have previously amended the alignment at this location to move to the east of Wortham Ling, part of the driver for this change was to avoid impacting the Care Farm. Based on the information available the Project does not directly impact the facility.			X	
9-3.184	Suggest that the Pylons RG19 and RG24 should be relocated away from Flordon Hall	National Grid has considered the respondent's feedback and has assessed multiple alternative alignments to the north of Flordon Hall. Alternatives to the north would impact more woodland and would also increase the impact on a proposed solar farm development, alternatives would also be longer and require additional angle pylons and would be therefore less consistent with the Holford Rules (these can be found in Appendix I22 of this report). We are therefore not proposing a change to the alignment in this location. Further information on alternative routes can be found in the 2023 and 2024 Design Development Reports (available on the Project website) and the 2025 Design Development Report (document reference 5.15). We have undertaken an Environmental Impact Assessment (EIA) which has assessed the impact of the Project including heritage impacts, and recommended mitigation where required.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-3.185	Suggest that Pylons RG103 to RG106 are relocated away from Burgate Church and respondent's residence and holiday let cottage	The church is located at around 800 m from the alignment. The alignment is also following that of an existing 132 kV overhead lattice pylon to reduce the magnitude of change. Movement of the alignment further away will increase effects for similar buildings and homes that are sited to the east of the Project in Mellis, the closest of which are closer to the alignment at around 550 m. On this basis no change is being made.			X	
9-3.186	Oppose the relocation of Pylons RG85 and RG87 from the 2023 draft alignment (e.g. given that the Project would be closer to the Grade I Listed Roydon Church and the Heron Meadow Care Sanctuary)	The change from the graduated swathe removed an oversailing of the care sanctuary and the change from the 2023 preferred draft alignment to the 2024 preferred draft alignment moved the alignment further away from the church at Roydon. In response to feedback, we are also making a further change including removing one pylon to respond to ecology and landscape recovery proposals. Whilst acknowledging there is an effect on the setting of the church this is not at a level to be considered as substantial harm nor in the upper range of less than substantial harm. The effects of the Project are assessed as part of the Environmental Impact Assessment (EIA) and presented in the Environmental Statement (ES), and this has identified any need for additional mitigation.			X	X
9-3.187	Concern that Pylon RG38 is located too close to residents and is impacting residents mental and physical health, and suggest that the Project is rerouted between Pylon RG33 and RG39 so that	National Grid does not use standard minimum distances as a routeing consideration. Applying an arbitrary distance may be too big or too small for the specific circumstances. We utilise the Holford Rules informed by			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	RG38 is relocated east to be equidistant between Faulgate House and Northfield House and RG39 is located further east towards the field boundary (plan provided by respondent)	feedback and professional judgement to define appropriate corridors and alignments that are consistent with the relevant policy framework and duties. A summary of the Holford Rules is provided within Appendix I22 of this report. We have reviewed alternative alignments in this location and have made a slight change to the alignment which moves RG38 and RG39 slightly to the east. The effects of the Project are assessed as part of the Environmental Impact Assessment (EIA) and presented in the Environmental Statement (ES), and this has identified any need for additional mitigation.				
9-3.188	Criticism that National Grid disregarded the respondent's suggestion to use underground cables through Forncett due to the very narrow corridor / pinch point at this location	National Grid has carefully considered all the feedback received and developed its response informed by the relevant planning policy context. In this location, through 'The Forncetts', the landscape is not designated. The presumption in National Policy Statement (NPS) EN-5 in such undesignated locations is that overhead line is generally acceptable as the 400 kV connection technology. We have also considered whether the effects are nonetheless sufficient to engage other parts of NPS EN-5 to support a change to use underground cable. We conclude that the inherent level of effects from a change to cable, do not justify the cost that would be incurred. National Grid has concluded that whilst effects to individual receptors may be significant in Environmental Impact Assessment (EIA) terms they do not justify the expected cost of an underground cable			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		design. On this basis, National Grid concludes that the use of an overhead line should be taken forward for this area.				
9-3.189	Suggest that underground cables are used for the Project between Pylons RG72 and RG84 (e.g. to mitigate impact on landscape, views (list of views provided by respondent)), recreational activities and heritage in Roydon and Bressingham)	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or Areas of Outstanding Natural Beauty)'</i> . Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project between RG72 and RG84 would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has not identified any need for additional mitigation.				
9-3.190	Concern that the peat-rich soil in the Waveney Valley may be unsuitable for the use of underground cables or pylon foundations	National Grid has considered the justification for the use of underground cable for the crossing of the Waveney Valley and on the matter of impacts to peat-rich soil raised in the respondent's feedback. The starting presumption in National Policy Statement (NPS) EN-5 paragraph 2.9.20 in a location such as the Waveney Valley which, although valued is not designated, is that overhead line is the appropriate 400 kV connection technology. We have also considered whether the effects from the overhead line are at a level that			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>engages other parts of NPS EN-5 (such as paragraph 2.9.23) to prompt consideration of whether the benefits of undergrounding outweigh any extra economic, social or environmental impacts. At the Waveney we conclude that the benefits from a change to underground cable, do not justify the additional cost that would be incurred. The use of underground cable would lead to a lowering of effects on the setting of the Grade I Listed St Remegius Church, albeit the effects of progressing with an overhead line are assessed as less than substantial harm and don't themselves require a change in technology. In terms of community effects, existing trees would provide some screening and filtering of views of an overhead line for those in residential areas and on recreational routes. A change from overhead line to underground cable would reduce these community effects but bring disbenefits, most notably increased ecological effects from installation within peaty soils and increased technical risk to cable integrity from the WaLOR channel naturalisation and landscape recovery plans. Conversely there may be a compromise to the WaLOR project by measures to ensure cable integrity. After consideration of the decision making guidance at paragraph 2.9.25 of NPS EN-5, National Grid concludes that whilst effects from overhead lines to individual receptors may be significant in Environmental Impact Assessment (EIA) terms they do not justify the potential for compromise to the WaLOR project, the effects on peaty soils which would arise with an underground cable</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>design nor justify the expected cost of an underground cable design. On this basis, National Grid concludes that the use of an overhead line should be taken forward for the crossing of the Waveney Valley. Prior to making this decision we had considered whether requests to relocate the Cable Sealing End (CSE) compounds and extend the cable both to the north and the south may alter the decision-making balance. Such extensions would bring benefits to various residential receptors but with the additional cost of longer length of cables. We conclude that given the absence of any designated status pertinent to NPS EN-5, and the extent to which some views from residential areas are filtered and screened and lower the level of adverse effects from the overhead line, we do not consider the additional cost associated with extending the underground cable would be justified. Ground conditions can be addressed through detailed foundation design for pylons; therefore, we conclude that an overhead line will be taken forward at this location.</p>				
9-3.191	Concern that the Project will impact electrically sensitive facility	<p>National Grid has noted the concerns and performed an assessment of potential impacts on the facility. The proposed overhead line is located at a distance where the maximum Electric and Magnetic Fields (EMFs) produced will be below the background EMFs typically produced by an electrical supply. Given the distance and maximum exposures, the alignment presents no hazard</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		to the facilities' operations, and no change is proposed at this location.				
9-3.192	Suggest that from Norwich, the Project is rerouted to take a line to the east of the A140 south to Bramford, using underground cables where needed (e.g. around Eye)	The Corridor and Preliminary Routeing and Siting Study (CPRSS) (available on the Project website) considered different corridors and concluded a preference for the corridor to the west of the existing overhead line was preferred. Whilst noting the respondent's preference for a route to the east of the A140 this was not preferred due to constraints to routeing including an unavoidable effect on a registered park and garden and highly congested area north of Ipswich. In the absence of new information or the identification of further factors those decisions, also back checked as presented in the 2023 and 2024 Design Development Reports (available on the Project website) and the 2025 Design Development Report (document reference 5.15) remain valid and no change is proposed.			X	
9-3.193	Suggest that from Pylon RG110, the Project is rerouted so that the overhead lines run in a south-west direction towards the B1113, turning back south-east west of the village, running down to the east of Finningham to rejoin at Pylon RG127 (e.g. to minimise the huge impact on Gislingham)	National Grid has considered a change to the alignment to pass the west side of the village. This would reduce residential amenity effects for several properties to the eastern and north-eastern edges of Gislingham. However, those residential amenity effects are transferred to residential properties to the western and southern edge of Gislingham and potentially to the northeastern side of Finningham depending on route used to return to the 2024 preferred draft alignment. Additionally, any route to the west also has to pass			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		between properties less than 150 m apart whereas this is the minimum separation distance to the closest residential properties when routed to the east. As a result of this a western alternative route is less consistent with Holford Rule Supplementary Notes. A summary of the Holford Rules is provided within Appendix I22 of this report. On heritage assets, a route to the west would increase separation to the moat to the west of Mellis Common but require an alignment passing closer to a greater number of listed buildings, albeit overall there is considered to be no major difference in consistency with Holford Rule 2. However, the alternative to the west is considered less consistent with Holford Rule 3 being around 500 m longer with at least one more pylon. Overall, this requested change is considered to be less preferred to the 2024 preferred draft alignment and is therefore proposed not to be taken forward.				
9-3.195	Suggest that Pylon RG94 is relocated further away from East Cottage (e.g. to mitigate impact on residents), and suggest that Pylon RG95 is relocated away from arable fields to the east of Goodrich Park (e.g. to mitigate impact on farm, including future expansion of business)	National Grid has considered the respondent's feedback. The alignment was moved to the east prior to the statutory consultation for several reasons including reducing effects on an airfield, reducing effects on a solar development and reducing effects on historic buildings and the related gardens. The locations of RG94 and RG95 (now RG93 and RG94) cannot be changed due to other constraints in this area including the road crossing, avoiding residential properties and reducing environmental effects.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-3.196	Concern about the impact of Pylons RG81, RG82 and RG83, and associated haul roads, on Roydon Village (e.g. impact on residents, historical properties), and suggest that Pylons RG81, RG82 and RG83 are relocated away from Roydon Village (e.g. to mitigate impact on residents, environment, wildlife, hedgerows, and trees)	<p>National Grid has considered the respondent's feedback highlighting a preference for an alternative moved away from Roydon and concern about impacts on Roydon. In the absence of an alternative route proposed, we have considered this feedback by following the guidance in the Holford Rules in developing the alignment. Guidelines on overhead line routeing are known as the "Holford Rules" which remain a valuable tool in selecting and assessing potential overhead line route options as part of the options appraisal process. A summary of the Holford Rules is provided within Appendix I22 of this report.</p> <p>We have therefore not proposed a change to the location of RG81 to RG83. Impacts to the environment have been assessed and are published in the Environmental Impact Assessment (EIA).</p> <p>A Landscape and Visual Impact Assessment (LVIA) was undertaken as part of the EIA and is presented in Chapter 13: Landscape and Visual (document reference 6.13) of the Environmental Statement (ES). Visual effects are presented in ES Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3). Pylons RG81-83 are located between Bressingham and Snow Street, on the boundary of Visual Receptor Areas (VRA) A9 Shelfanger, and VRA A10 Burston. The settlement of Roydon is within VRA 11 Roydon and Diss. Significant visual effects are recorded within these VRAs.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-3.197	Suggest that the Project runs parallel to the existing overhead lines east of Diss, or that the existing overhead lines east of Diss are upgraded	The existing 400 kV overhead lines to the east of Diss have already been upgraded to maximise the power transfer of the existing network, so further upgrade is not possible. Close paralleling the existing 400 kV overhead line has been considered in the 2023 and 2024 Design Development Reports (available on the Project website) and the 2025 Design Development Report (document reference 5.15) and continues to be considered less preferred. Many effects transfer for example from the Grade I St Remegius Church to the Grade I Listed St Andrews Church at Frenze, a number of homes are unavoidably positioned between the existing and proposed overhead line and overall greater effects expected on residential amenity, the golf course may see several parts of the course affected over an extended period. Additionally, the proximity of a listed building to the alignment may require transposition to a new diversion or a short section of underground cable to achieve an acceptable design. Overall, an alternative to the east was less preferred and whilst noting the respondent's preference, in the absence of new evidence or the identification of further factors, no change is proposed.			X	
9-3.199	Suggest that the haul road for the Project at Pylons RG43 and RG44 is relocated a few yards to the east into the field (e.g. to mitigate impact on ancient hedgerow)	National Grid notes the respondent's feedback. The haul road has been designed to remain close to the alignment and utilise existing gaps in hedgerows where practicable. Therefore, we are not proposing a change to the haul road alignment, however we are proposing to			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		remove the visibility splays associated with the crossover bellmouth to reduce vegetation loss which should mitigate the impact on the ancient hedgerow.				
9-3.200	Concern that whilst National Grid have moved the Project between Pylons RG47 and RG49 slightly eastward, the Project will still significantly impact respondents nature reserve and result in the removal of mature trees and ancient hedgerows / Suggest that National Grid reroute the Project between Pylons RG46 and RG50 as far eastward as possible to mitigate the impact on the respondents nature reserve and reduce the number of mature trees that will need to be removed	National Grid proposed a slight change to the alignment and haul road between RG46 and RG51 which would take the alignment to the west, avoiding a County Wildlife Site (CWS) and veteran tree. We have undertaken an Environmental Impact Assessment (EIA) which assessed the impact of the Project and recommended mitigation where required. The results of this assessment are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application. We are therefore not proposing a further change to the alignment in this area, but we are proposing to restrict the width of the haul road in this location and utilise the use of trackway which would reduce the impact to mature trees in this area.			X	X
9-3.201	Suggest that National Grid relocate Pylon RG49 as far east as possible from the currently proposed position (e.g. moving the pylon 22 m east) so that the draft order limit boundary can be moved at least 44m further away from the eastern boundary of respondent's nature reserve	National Grid proposed a slight change to the alignment and haul road between RG46 and RG51 which would take the alignment to the west and avoid a County Wildlife site and veteran tree. We are therefore not proposing to make a further change to the alignment at this location. National Grid has submitted an Environmental Statement (ES) (document reference: Volume 6: Environmental Statement) which has been			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation of the Project and recommends appropriate mitigation to reduce effects. Specifically, ES Chapter 8: Ecology and Biodiversity (document reference 6.8) considers the effects on designations, habitats and species during construction and operation of the Project.				
9-3.202	Concern that the proposed Haul Road would severely damage respondents grazing meadow, which is classed as Priority Habitat Coastal and Floodplain Grazing Marsh / Suggest that National Grid use Ground Guards instead of laying stone (e.g. this would massively reduce the damage to the soil ecology and result in a much faster recovery of the grazing meadow)	National Grid has considered the respondent's feedback and proposed a slight change to the alignment and haul road between RG46 and RG51 which would take the alignment to the west and avoid the grazing meadow.			X	X
9-3.203	Suggest that if Brick Kiln Lane is to be used as a maintenance track, works would need to be made to reinforce the latter part of the lane as it is unmade, and access would need to be restricted to landowners only (e.g. landowners need to access their land at the bottom of Brick Kiln Lane)	National Grid notes the respondent's feedback. The access route proposed on Brick Kiln Lane is for future surveys and maintenance if required and would not be used for construction. We are not proposing to construct anything for this permanent access route, existing tracks and roads are being used where possible. The track would only be used by 4x4 vehicles and cars similar to the current use.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-3.204	Suggest alternative route for access track to avoid Brick Kiln Lane (map provided by respondent)	National Grid notes the respondent's feedback. We are not proposing a change to the access route at this location. The access route proposed on Brick Kiln Lane is for future surveys and maintenance if required and would not be used for construction. We are not proposing to construct anything for this permanent access route, existing tracks and roads are being used where possible.			X	
9-3.205	Access tracks at respondent's property (near Cow Lane) need to be a minimum of 5 metres from hedgerows to minimise root compaction, which would adversely affect the health of the hedgerow (map provided by respondent)	The access track referred to in the respondent's feedback is for future surveys and maintenance if required and would not be used for construction. We are not proposing to construct anything for this permanent access route, existing tracks and roads are being used where possible. Where existing tracks/roads are proposed for future maintenance operations, it is assumed that existing vegetation would have developed root systems that co-exist with existing track formation. In these cases, additional root compaction is not considered a material impact.			X	
9-3.206	<p>Oppose using underground cables at respondents nature reserve (near Brick Kiln Lane) due to the ecological damage this would cause / Suggest that the Project is rerouted as follows:</p> <p>- Proposal 1: Rerouted by adding another telegraph pole over the southern boundary of respondents nature reserve, crossing the deep ditch, and then</p>	A modification to the alignment means that the lower voltage line would be replaced by underground cable over a longer distance than proposed in the statutory consultation. It is now proposed that the lower voltage Underground cable follows the field boundaries and the route of the construction access. Whilst different from the request this achieves the outcome sought.			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>using underground cables from there (plan provided by respondent)</p> <p>- Proposal 2: Reroute the Project along existing (western) spar line, add additional powerline telegraph pole and then using underground cables as necessary (plan provided by respondent)</p>					
9-3.207	<p>Concern that since the last consultation, the Project between Pylons RG1 and RG7 has been rerouted to the west of Sprow's Pits Woodland, and this means that Pylon RG6 is now proposed to be sited in the middle of the Sheringham Shoal and Dudgeon Wind Farm Extension Projects (SEP and DEP) cable corridor / The pylon must be moved outside of the cable corridor to mitigate significant risk to SEP and DEP as Pylon RG6 could significantly interfere with the buried cables</p>	<p>Pylon RG6 has been repositioned to the north outside the underground cable corridor of the windfarms. The alignment of the overhead line and construction access unavoidably cross the third-party cable corridor. However, appropriate arrangements can be established and further micro-siting within limits of deviation will ensure no conflict between the projects.</p>			X	X
9-3.208	<p>To resolve the conflicts with Dudgeon Extension Limited (DEL) and Scira Extension Limited (SEL) consented construction and permanent accesses (including those accesses put at risk by the proposed haul roads), and the conflicting access to the laydown area, National Grid must agree in writing to allow Sheringham Shoal and Dudgeon Wind Farm Extension Projects (SEP and DEP) unrestricted use of:</p>	<p>National Grid has engaged with Equinor to agree and sign an interface document negotiating the details of such interfaces which forms part of the Development Consent Order (DCO) documentation. We believe it is possible to agree arrangements that allow access to be maintained to meet all parties' requirements.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>a) the access road (Work No 19A/B in the SEP DEP Development Consent Order (DCO) – plan provided by respondent) to the SEP and DEP substation site; and</p> <p>b) the laydown area to the south of Mangreen Road within the SEP and DEP DCO, such agreement to be in writing between National Grid Electricity Transmission (NGET) in relation to SEP and DEP, Grid Park, Norwich Main Extension and Norwich to Tilbury</p>					
9-3.209	Suggest that the use of underground cables for the Waveney Valley Alternative are extended further north, to the north of Snow Street	National Grid has considered the justification for the use of underground cable for the crossing of the Waveney Valley and on the matter of extending the use of underground cable further north, to the north of Snow Street raised in the respondent's feedback. The starting presumption in National Policy Statement (NPS) EN-5 paragraph 2.9.20 in a location such as the Waveney Valley which, although valued is not designated, is that overhead line is the appropriate 400 kV connection technology. We have also considered whether the effects from the overhead line are at a level that engages other parts of NPS EN-5 (such as paragraph 2.9.23) to prompt consideration of whether the benefits of undergrounding outweigh any extra economic, social or environmental impacts. At the Waveney we conclude that the benefits from a change to underground cable, do not justify the additional cost that would be incurred.		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>The use of underground cable would lead to a lowering of effects on the setting of the Grade I Listed St Remegius Church, albeit the effects of progressing with an overhead line are assessed as less than substantial harm and don't themselves require a change in technology. In terms of community effects, existing trees would provide some screening and filtering of views of an overhead line for those in residential areas and on recreational routes. A change from overhead line to underground cable would reduce these community effects but bring disbenefits, most notably increased ecological effects from installation within peaty soils and increased technical risk to cable integrity from the WaLOR channel naturalisation and landscape recovery plans. Conversely there may be compromise to the WaLOR project by measures to ensure cable integrity. After consideration of the decision making guidance at paragraph 2.9.25 of NPS EN-5, National Grid concludes that whilst effects from overhead lines to individual receptors may be significant in Environmental Impact Assessment (EIA) terms they do not justify the potential for compromise to the WaLOR project, the effects on peaty soils which would arise with an underground cable design nor justify the expected cost of an underground cable design. On this basis, National Grid concludes that the use of an overhead line should be taken forward for the crossing of the Waveney Valley. Prior to making this decision we had considered whether requests to relocate the Cable Sealing End (CSE) compounds and</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		extend the cable both to the north and the south may alter the decision-making balance. Such extensions would bring benefits to various residential receptors but with the additional cost of longer length of cables. We conclude that given the absence of any designated status pertinent to NPS EN-5, and the extent to which some views from residential areas are filtered and screened and lower the level of adverse effects from the overhead line, we do not consider the additional cost associated with extending the underground cable would be justified.				
9-3.210	Suggest the use of underground cables for the Project between Forncett and Diss (e.g. to mitigate impact on River Tas and feeder streams)	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)'</i> . Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project <i>between Forngett and Diss</i> would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-3.211	Suggest that the Project is routed further west away from Tibenham (e.g. without increasing impact on Old Buckenham Airfield)	<p>National Grid has considered an alternative to the west in the 2023 Design Development Report (paragraphs from 5.5.19) (available on the Project website) but found them to be less preferred due to the transfer of effects and longer route length due to routing around the constraints, presence of homes and environmental features. National Grid also considers the alignment to be appropriate, and with some limited modification to flight arrangements it would not prevent safe continued flight activity.</p> <p>Further information on the assessment of airfields can be found in the Environmental Statement (ES) (ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and ES Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2)).</p>			X	
9-3.212	Suggest that Pylons RG27 and RG28 (to the north of Fudenhall Road) are relocated as close as possible to existing field boundaries (rather than in field location as currently proposed) to mitigate impact on farming	National Grid notes the respondent's feedback and notes the preference from certain landowners for pylons to be situated along field boundaries where possible to reduce the impact on agricultural activities and reduce land take. We have assessed requests from landowners on an individual basis, in this case RG27 is as close to the field boundary as possible. RG28 cannot be moved to the field boundary as it is an angle pylon and space is required around the pylon for stringing, noting the adjacent public right of way. Additionally, moving the pylon to the eastern boundary would then result in			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		oversailing a property and we are unable to move the pylon to the southern boundary due to a requirement to maintain space to the south for crossing protection (scaffolding) of the road.				
9-3.213	Concern about the impact of the Project on solar farm south east of Mulbarton (e.g. overhead line conductors will cross over the existing panel tables significant risk to the table infrastructure during National Grid's installation and construction phase, given that the glass panels are fragile and at high risk of damage), particularly Pylon RG14 as there is a risk onto the site relating to earthing. With this, suggest that Pylon RG14 is relocated further north, outside the solar farm site perimeter. Further, request for information on how National Grid plan to erect and maintain the Project over the solar farm, and suggest that isolations may need to be considered for working above the panel tables during installation (e.g. which will have an impact on production for the site)	In response to this feedback, National Grid has moved pylon RG14 to the north such that it, and the temporary construction access to it, are outside the boundary of the solar site. Oversailing of conductors is unavoidable and the potential issues are acknowledged. Detailed discussions between National Grid contractors and the solar farm operator will establish necessary working arrangements to effectively manage the interface.			X	X
9-3.214	Concern about the impact of the Project at Pylons RG85 to RG87 on the Angles Way (the 93-mile long-distance walking trail from Great Yarmouth to Thetford)	Chapter 15: Socio-economics, Recreation and Tourism of the Environmental Statement (ES) (document reference 6.15) include an assessment of the potential effects on Public Rights of Way (PRoW), including footpaths, and Angles Way, from the Project. An Outline Public Rights of Way Management Plan (document reference 7.6) is submitted as part of the Development		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Consent Order (DCO) application which details the proposed management of PRow during construction.				
9-3.215	Suggest that the use of underground cables for the Waveney Valley Alternative is extended to Pylon RG080 / Suggest that the Cable Sealing End Compound (CSEC) is relocated to Pylon RG80 (e.g. to mitigate impact on St Remigius's Church, Roydon and views of the Waveney Valley)	National Grid has considered the justification for the use of underground cable for the crossing of the Waveney Valley and on the matter of extending the use of underground cable to RG80 raised in the respondent's feedback. The starting presumption in National Policy Statement (NPS) EN-5 paragraph 2.9.20 in a location such as the Waveney Valley which, although valued is not designated, is that overhead line is the appropriate 400 kV connection technology. We have also considered whether the effects from the overhead line are at a level that engages other parts of NPS EN-5 (such as paragraph 2.9.23) to prompt consideration of whether the benefits of undergrounding outweigh any extra economic, social or environmental impacts. At the Waveney we conclude that the benefits from a change to underground cable, do not justify the additional cost that would be incurred. The use of underground cable would lead to a lowering of effects on the setting of the Grade I Listed St Remegius Church, albeit the effects of progressing with an overhead line are assessed as less than substantial harm and don't themselves require a change in technology. In terms of community effects, existing trees would provide some screening and filtering of views of an overhead line for those in residential areas and on recreational routes. A change from overhead line to underground cable would reduce these		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		community effects but bring disbenefits, most notably increased ecological effects from installation within peaty soils and increased technical risk to cable integrity from the WaLOR channel naturalisation and landscape recovery plans. Conversely there may be a compromise to the WaLOR project by measures to ensure cable integrity. After consideration of the decision making guidance at paragraph 2.9.25 of NPS EN-5, National Grid concludes that whilst effects from overhead lines to individual receptors may be significant in Environmental Impact Assessment (EIA) terms they do not justify the potential for compromise to the WaLOR project, the effects on peaty soils which would arise with an underground cable design nor justify the expected cost of an underground cable design. On this basis, National Grid concludes that the use of an overhead line should be taken forward for the crossing of the Waveney Valley. Prior to making this decision we had considered whether requests to relocate the Cable Sealing End (CSE) compounds and extend the cable both to the north and the south may alter the decision-making balance. Such extensions would bring benefits to various residential receptors but with the additional cost of longer length of cables. We conclude that given the absence of any designated status pertinent to NPS EN-5, and the extent to which some views from residential areas are filtered and screened and lower the level of adverse effects from the overhead line, we do not consider the additional cost				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>associated with extending the underground cable would be justified.</p> <p>Prior to making a decision we had considered the request to relocate the Cable Seal End (CSE) compounds and extend the underground cable. To the north, given the absence of any designated status pertinent to NPS EN-5, and the extent to which some views from residential areas are filtered and screened, in terms of NPS EN-5 it is not considered that the adverse effects of the overhead line would have justified the additional cost associated with a northern movement of the CSE compound to beyond the residential area.</p> <p>An assessment of effects on views within the Waveney Valley is provided in ES Chapter 13: Landscape and Visual (document reference 6.13), and specifically ES Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3). Significant effects are recorded within the following Visual Receptor Areas (VRAs) which are within the Waveney Valley: VRA A11 Fen Street; VRA A12 Roydon and Diss; VRA B1 Wortham; and VRA B2 Palgrave.</p>				
9-3.216	Suggest that the use of underground cables for the Waveney Valley Alternative is extended to Pylon RG95 / Suggest that the Cable Sealing End Compound (CSEC) is relocated to Pylon RG95, east of St John's House and Goodrich Park (e.g. to mitigate the impact on Wortham Ling)	National Grid has considered the justification for the use of underground cable for the crossing of the Waveney Valley and on the matter of extending the use of underground cable to RG95 raised in the respondent's feedback. The starting presumption in National Policy Statement (NPS) EN-5 paragraph 2.9.20 in a location		X

		additional cost associated with a northern movement of the CSE compound to beyond the residential area. The same findings apply to movement of the southern CSE compound with an additional factor being substantial loss of output from a consented solar farm.				
9-3.217	Concern about the impact of the Project on Bunwell Hill Country Wildlife Site (CWS) at Brick Kiln Lane (e.g. impact on grasslands, tall-herb fen and ponds), and suggest that targeted National Vegetation Classification (NVC) surveys within the draft order limits at Brick Kiln Plantation (and the wider area to include the woodland to the west), should be undertaken at this location and the potential impacts clearly identified as part of the Environmental Statement (ES). With this, suggest that the Bunwell Hill CWS should be excluded from the red line and appropriately buffered (e.g. in line with National Planning Policy Framework (NPPF) and Policy 3 of the Greater Norwich Local Plan (GNLP))	National Grid proposed a slight change to the alignment and haul road between RG46 and RG51 which would take the alignment to the west, avoiding the County Wildlife Site (CWS) and veteran tree. We have undertaken an Environmental Impact Assessment (EIA) which assessed the impact of the Project and recommended mitigation where required. The results of this assessment are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application		X		X
9-3.218	Concern about the impact of the Project on Roydon Fen Country Wildlife Site (CWS) and suggest that the temporary attenuation drainage is re-designed to avoid the CWS, and a suitable buffer (works exclusion zone) provided around the CWS. The extent of hydrological impacts on the ecological interest of the CWS is of serious concern and must be clearly considered, for each CWS, within the	Royden Fen Country Wildlife Site (CWS) has now been removed from the Order Limits, with no works proposed either within the CWS or within a 10 m buffer from the local wildlife site boundary. Potential hydrological impacts on the CWS are being avoided/minimised, full assessment details for Roydon Fen CWS will be included with the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8)		X		X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	Environmental Statement (ES). With this, suggest that the Project should be routed away from the Roydon Fen CWS and a suitable buffer provided between the works area and CWS boundary (e.g. as the inclusion of the CWS within the red line is contrary to National Policy Statement for Energy EN-1)	and ES Chapter 12: Hydrology, Land Drainage and Flood Risk (document reference 6.12).				
9-3.219	Suggest that the changes are made to mitigate the impact of the Project on Kenningham Hall, Mulbarton as per plans provided by respondent (e.g. relocate Pylon RG8 to northern field boundary to reduce intrusion to field; reroute the Access/Haul road to follow field boundaries to reduce impact of use of the field; Address oversail interaction with Bloys Grove Solar Farm between Pylons RG11 and RG12; relocate haul road away from high value equine livery paddocks (filled brown) into the undeveloped peripheral areas of the solar farm to follow the route shown hatched blue; protect the occupation of Kenningham Hall by moving the haul road to the east; remove any interaction between the Project and the protected area of the dwelling, base of operations for the farming business and the stables and base for the livery unit; be aware that the haul road going through the paddocks and so close to the protected farmstead will mean the closure (during works) of the livery business, due to grazing loss and audible disturbance to the horses; consider moving	National Grid notes the respondent's feedback. RG8 cannot be moved to the northern boundary because of the need to retain space for scaffolding to protect the road during construction. RG11 to RG12 cannot avoid oversailing of what is a consented and will be operational solar farm but may require National Grid to undertake works to ensure no induced currents arise. RG12 cannot be moved further south as its position is restricted by RG13 which is constrained by archaeological constraints. The haul road alignment cannot be readily adjusted due to limitations on junction positioning. Chapter 6: Agriculture and Soils (document reference 6.6) of the Environmental Statement (ES) assessed the impacts of the Project on agricultural landholdings. The assessment considered the disruption to agricultural operations during construction (including disturbance, fragmentation, and access restrictions). The Outline Code of Construction Practice (CoCP) (document reference 7.2) outlines good practice measures to mitigate these effects, such as maintaining access to			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	Pylon RG12 south to provide additional screening to Kenningham Hall; change route of the haul road to follow field boundaries and reduce disruption to the arable fields; address interaction between Bloys Grove solar farm and the haul road to the south of the existing solar farm), or re-route the Project at this location as per the other alternative route provided by the respondent (separate plan provided by respondent)	affected land parcels or providing alternative access arrangements. The implementation of good practice measures, along with the commitment to reinstate all land temporarily required, and the management of effects on agricultural operations during the construction phase would ensure that disruption to agricultural landholdings is minimised. Financial effects and impacts on agricultural operations from operation of the Project have been scoped out and may result in compensation agreements (which lie outside of the EIA process). Chapter 11: Historic Environment and the ES Appendix 11.7 (Assessment of Harm) detail the impacts to the heritage value of the asset due to pylon RG12. During the construction phase, there will be a significant effect due to changes in the setting, albeit temporary. The impact at operation phase results in a not significant effect. Standard construction mitigation will be employed as outlined in the Outline Code of Construction Practice (CoCP) (document reference 7.2)				
9-3.220	Concern about the impact of Pylons RG44, RG45, RG43, RG46 and RG47 (e.g. impact on historic farmhouse), particularly the impact of Pylon RG45 on farming, and suggest that Pylon RG45 is relocated by a few metres (change request previously submitted to National Grid; so that respondent can continue accessing the fields) / Criticism that National Grid has not incorporated this change into the latest proposals for the Project	National Grid notes the respondent's feedback, including moving RG45. We are not proposing a change to the location of this pylon as moving RG45 would result in an increase in visual effects to a property to the north-west. The impacts of permanent pylon footings on agricultural land are assessed in Chapter 6: Agriculture and Soils (Document Reference 6.6) of the Environmental Statement (ES). Design sought to minimise impacts on farming activities when considering pylon locations,			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>including RG45. The pylon footings cover a relatively small area of land proportional to field sizes; therefore, the impacts on farming activities and agricultural yields should be small.</p> <p>If there are any specific concerns regarding impacts to farming or compensation and how it will be assessed, please contact the Project lands team:</p> <ul style="list-style-type: none"> • Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314. <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD.</p> <p>Banyard's Hall (1373609) was scoped into the ES assessment due to its proximity to the Order Limits (see documents 6.11.A1 and the ES Appendix 11.7) and assessed with the pylons RG43-47 in mind and it was determined that during both the construction and operation phases, the asset will experience less than substantial harm due to screening via established vegetation. The placement of the pylons RG43-47 will impact the asset's setting in a 'small' to 'slight' degree and suggestions of any mitigation considered this impact.</p>				
9-3.221	Criticism that National Grid have not relocated pylon sited in front of their barn and the adjacent listed	All decision making in response to feedback must balance the interests of the requester against any effects that may arise from potential changes. Changes must			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	farmhouse in this Section as requested (location not provided)	also be capable of being technically achievable. How we have responded to specific requests for change and whether changes have or have not been made and the reasons for those decisions are set out in this report and the previous 2022 and 2023 Non-Statutory Consultation Feedback Reports (see Appendix B and C of this report).				
9-3.222	Request for confirmation that the changes agreed with Fisher German to Pylons RG46, RG47 and RG48 at the farm in Bunwell and the change to the Haul Road referenced by respondent have been made, as none of these changes are noted on the consultation maps	<p>Changes requested by landowners in the period between the 2023 non-statutory consultation and the statutory consultation were only reviewed and discussed by the Project team following the start of statutory consultation alongside all other feedback and would not have been accepted prior to this process. We made the decision to start engagement with landowners prior to the start of consultation to ensure there would be enough time to offer all landowners a face-to-face meeting in the timescales available. Therefore, any changes requested and discussed with Fisher German in this period would not be shown on the statutory consultation plans as they had not been reviewed or assessed by the Project team by that point. Any changes requested have now been reviewed by the Project team and if accepted are shown on the plans submitted with the Development Consent Order (DCO) application.</p> <p>With regards to the specific change requested, RG46 is positioned as close to Low Common Road as possible while still maintaining space for scaffolding across the</p>			X	X

Economic / Employment impact						
9-3.246	Concern about negative impact on businesses in the area	<p>Through the routeing and siting exercise, National Grid has sought to reduce as far as practicable impacts to businesses.</p> <p>Impacts on local businesses within the Local Study Area (the Order Limits) and within the 3 km Study Area (where visual impact is likely to be an economic consideration) are assessed in Environmental Statement (ES) Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15). As part of this assessment, a range of mitigation measures have been considered to reduce disruption to businesses and their users during the construction phase of the Project. These measures are identified in ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15), the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) which accompany the Development Consent Order (DCO) application.</p>	X	X	X	
Environmental impact						
9-3.247	Concern about negative impact of the Project on the Green Belt(s)	To facilitate the Project, it will be necessary to route through the Metropolitan Green Belt. National Grid has considered the effects on the Green Belt and all of the options connecting into Tilbury identified in the Corridor and Preliminary Routeing and Siting Study (CPRSS)	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>would result in new and upgraded infrastructure in the Green Belt.</p> <p>The National Electricity Transmission System (NETS) transports energy from where it is generated to where it is used, in homes, schools, hospitals, businesses, and factories. Electricity networks are an established feature in our landscapes, taking energy across open countryside to towns and cities where it is needed. To ensure the national electricity network can transport energy efficiently there are numerous electricity transmission connections crossing Green Belts. Many of these connections are by way of overhead lines. By their nature, electricity transmission infrastructure (overhead lines) within the Green Belt is inevitable due to the need to transport energy around the country and the need to avoid the most built-up areas around our towns and cities (Holford Rule Supplementary Note 1 - A summary of the Holford Rules is provided within Appendix I22 of this report).</p> <p>Some electricity infrastructure such as overhead lines, are considered to be engineering operations. By the nature of their design, and the sensitive siting, some of this infrastructure such as pylons and conductors may not be considered inappropriate development in the Green Belt as they do not conflict with Green Belt purposes and preserve openness. Although overhead lines may occupy long corridors within Green Belt, they involve little physical change to the land through which</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>they pass and leave a large majority of the land beneath them free from development and therefore open.</p> <p>The Planning Statement (document reference 5.6), submitted with the application for development consent, includes an assessment of the Project against Green Belt planning policy (as contained in National Policy Statement EN-1 and the National Planning Policy Framework).</p>				
9-3.248	Concern that the Project will impact Sites of Special Scientific Interest (SSSIs)	<p>Through routeing, siting and design development National Grid has sought to reduce, as far as practicable, impacts on biodiversity and in particular features of high ecological value such as Sites of Special Scientific Interest (SSSI). Although there are 22 SSSI within the study area, current proposals avoid the majority of impacts on SSSIs, with no long-term negative impacts anticipated on any SSSIs as a result of the Project. Potential direct and indirect impacts on each SSSI within the study area have been considered within the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8) and any necessary mitigation detailed to ensure no significant residual effects.</p> <p>National Grid will continue to engage with Natural England.</p>	X	X	X	
9-3.249	Concern that the Project will impact ancient woodland	Through routeing, siting and detailed design, National Grid has sought to reduce, as far as practicable, impacts on biodiversity and in particular features of high	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		ecological value, such as ancient woodland. A standard 15 m buffer from construction activities has been applied where practicable. Potential direct and indirect impacts on each block of ancient woodland within the study area have been considered within the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8) and any necessary mitigation detailed to ensure no significant residual effects. An ancient woodland and veteran tree mitigation strategy is included as part of the Outline Landscape and Ecological Management Plan (document reference 7.4). The Outline Landscape and Ecological Management Plan (document reference 7.4) has been developed in consultation with relevant stakeholders including Natural England.				
9-3.250	Concern that the Project will impact nature reserve / RSPB reserve / Special Protection Area (SPA)	Through routeing, siting and design development National Grid has sought to reduce, as far as practicable, impacts on biodiversity and in particular features of high ecological value, such as Royal Society for the Protection of Birds (RSPB) reserves. Potential direct and indirect impacts on RSPB reserves within the study area have been considered within the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8). No RSPB reserves are directly impacted by the Project.	X	X	X	
9-3.251	Concern that the Project will impact Ramsar site	Through routeing, siting and design development, National Grid has sought to reduce, as far as			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>practicable, impacts on biodiversity and in particular features of high ecological value, such as Ramsar sites.</p> <p>Although there are 13 Ramsar sites within the study area, current proposals avoid the majority of impacts, with no long-term negative impacts anticipated on any Ramsar site as a result of the Project. Potential direct and indirect impacts on each scoped in Ramsar site has been considered within the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8) and/or Habitats Regulations Assessment (HRA) depending on potential impact pathways. Any necessary mitigation has been detailed within the ES, HRA and the Outline Code of Construction Practice (CoCP) (document reference 7.2) to ensure no significant residual effects, as agreed with Natural England.</p>				
9-3.252	Concern that the Project will result in a negative impact on the environment / countryside generally (no details given)	<p>National Grid has sought to reduce, as far as practicable, impacts on the environment / countryside through routeing and siting and an ongoing iterative design process which has taken on board feedback at different stages of the Project. The iterative design process sought to avoid areas of highest concern, for examples through changes to the route alignment or changes to the method e.g. trenchless crossings.</p> <p>National Grid have engaged with a range of stakeholders (including Statutory Environmental Bodies (SEBs) and relevant Local Planning Authorities)</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>throughout the development of the Project design and environmental assessment work.</p> <p>National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project. The results of this assessment are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation (and maintenance) of the Project and recommends appropriate mitigation measures to reduce potential effects.</p> <p>A number of mitigation measures have been incorporated into the Project design. Mitigation relevant to specific environmental topics (including Ecology and Biodiversity, Landscape and Visual and Historic Environment) are presented in the relevant ES chapters. The Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Code of Construction Practice (CoCP) (document reference 7.2) contain a list of relevant good practice measures to avoid or reduce risks to habitats and species.</p> <p>In addition to the EIA, National Grid has set itself a target of delivering 10% biodiversity net gain (BNG) with environmental and societal benefits on all construction projects, meaning that as a result of measures taken,</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		the biodiversity rating of the area will be enhanced by 10% greater than prior to the construction of the Project. The BNG target for the Project is currently voluntary and aligned with our corporate sustainability commitment.				
9-3.253	Suggest that areas other than the Areas of Outstanding Natural Beauty (AONB) should be protected / Criticism that only the AONB has been considered	<p>National Policy Statement (NPS) EN-5 states that the Government considers overhead lines to be appropriate and acceptable in most instances, although it recognises that there may be, at particularly sensitive locations, potential adverse landscape and visual impacts of overhead line infrastructure that make it inconsistent with our duties and relevant planning policy.</p> <p>The National Landscape designation is one such location where there is a presumption that underground cable technology is adopted with the extent of underground cabling extending beyond the boundary in response to the potential for the Project to affect National Landscapes. Our proposals include a total of approximately 20 km of underground cable through and in the vicinity of the Dedham Vale National Landscape, including a section at Great Horkesley to reduce the changes in views and setting of the National Landscape from within and adjacent to its designated boundary.</p> <p>Underground cabling is also proposed for short sections near Fairstead and North Tilbury.</p> <p>The higher cost of underground cables to bill paying consumers, and the environmental implications of installing underground cables and maintaining them</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>elsewhere, are not considered to be justifiable in the context of national policy or National Grid's statutory duties, which include the need to be economic and efficient.</p> <p>A Landscape and Visual Impact Assessment (LVIA), presented in ES Chapter 13: Landscape and Visual (document reference 6.13), has been undertaken as part of the Environmental Impact Assessment (EIA). The LVIA sets out potential effects on landscape and visual receptors.</p>				
9-3.254	Concern that the Project will impact conservation area	<p>Through routeing and siting National Grid has sought to reduce as far as practicable potential impacts on the historic environment, including conservation areas such as Winfarthing, Tacolneston and Forncett St Peter. This is presented in Environmental Statement (ES) Chapter 11: Historic Environment (document reference 6.11). This includes an assessment on the potential for physical impact and impact through change to setting that affects the value of a heritage asset. The assessment is supported by walkover and setting surveys, as documented in ES Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1). The assessment concludes there would be not significant effects to Tacolneston and Winfarthing conservation areas and no change to Forncett St Peter, and therefore no additional mitigation is proposed.</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		The Project has engaged with Historic England and relevant planning authorities on aspects relating to heritage, including appropriate mitigation measures and techniques and to take their views into account during Project development.				
9-3.255	Suggest that areas other than the Waveney Valley should be protected / Criticism that only the Waveney Valley has been considered	National Grid has considered the justification for the use of underground cable for the crossing of the Waveney Valley. The starting presumption in National Policy Statement (NPS) EN-5 paragraph 2.9.20 in a location such as the Waveney Valley which, although valued is not designated, is that overhead line is the appropriate 400 kV connection technology. We have also considered whether the effects from the overhead line are at a level that engages other parts of NPS EN-5 (such as paragraph 2.9.23) to prompt consideration of whether the benefits of undergrounding outweigh any extra economic, social or environmental impacts. At the Waveney we conclude that the benefits from a change to underground cable, do not justify the additional cost that would be incurred. The use of underground cable would lead to a lowering of effects on the setting of the Grade I Listed St Remegius Church, albeit the effects of progressing with an overhead line are assessed as less than substantial harm and don't themselves require a change in technology. In terms of community effects, existing trees would provide some screening and filtering of views of an overhead line for those in residential areas and on recreational routes. A change from			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>overhead line to underground cable would reduce these community effects but bring disbenefits, most notably increased ecological effects from installation within peaty soils and increased technical risk to cable integrity from the WaLOR channel naturalisation and landscape recovery plans. Conversely there may be compromise to the WaLOR project by measures to ensure cable integrity. After consideration of the decision making guidance at paragraph 2.9.25 of NPS EN-5, National Grid concludes that whilst effects from overhead lines to individual receptors may be significant in Environmental Impact Assessment (EIA) terms they do not justify the potential for compromise to the WaLOR project, the effects on peaty soils which would arise with an underground cable design nor justify the expected cost of an underground cable design. On this basis, National Grid concludes that the use of an overhead line should be taken forward for the crossing of the Waveney Valley. Prior to making this decision we had considered whether requests to relocate the Cable Sealing End (CSE) compounds and extend the cable both to the north and the south may alter the decision-making balance. Such extensions would bring benefits to various residential receptors but with the additional cost of longer length of cables. We conclude that given the absence of any designated status pertinent to NPS EN-5, and the extent to which some views from residential areas are filtered and screened and lower the level of adverse effects from the overhead line, we do not consider the additional cost</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>associated with extending the underground cable would be justified.</p> <p>We have also applied the same considerations to whether other parts of the route, not subject to National Landscape designation, have a level of effect that engages with consideration of the use of underground cables. The findings are reported in the 2025 Design Development Report (document reference 5.15) submitted as part of the Development Consent Order (DCO) application.</p>				
9-3.256	<p>Criticism that proposals for the Project at Low Common and Bunwell Hill have been made without reference to the detail of the relevant Landscape Character Assessments for South Norfolk (e.g. as Pylons RG43 and RG46 to RG48 are located in Tas Valley Tributary Farmland 'a landscape of gentle slopes leading down to shallow tributary valleys'; as Pylons RG44 and RG45 are in Ashwellthorpe Plateau Farmland and Banyards Hall is specifically mentioned in the landscape character assessment: 'Halls and associated moats e.g. at Banyards Hall', so specific development consideration in this landscape character assessment is to 'maintain the setting of halls')</p>	<p>National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project. The results of this assessment are provided in the Environmental Statement (ES) that accompanies the Development Consent Order (DCO) application. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation (and maintenance) of the Project and recommends appropriate mitigation measures to reduce potential effects.</p> <p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the EIA. The LVIA is presented in ES Chapter 13: Landscape and Visual (document reference 6.13). It includes an assessment on both landscape character and visual amenity and sets out the potential landscape and visual effects of the Project. The landscape assessment in ES Chapter 13:</p>	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Landscape and Visual (document reference 6.13) identifies that the Tas Tributary Farmland Landscape Character Area (LCA) is of medium sensitivity and recognises that there is a greater degree of intimacy around tributary rivers (which are within tributary valleys) where the Project would be seen to contrast with smaller-scale fields and small blocks of woodland. Effects on the Tas Tributary Farmland LCA are judged to be significant up to 1.5 km distance from the Project.</p> <p>The landscape assessment identifies that the Ashwellthorpe Plateau Farmland LCA's key characteristics include moats, sometimes associated with halls and sometimes occurring in isolation. The assessment takes this into account (whilst not directly naming every hall) and overall sensitivity for this LCA, when combined with all other relevant factors, is judged to be medium. Effects on the Ashwellthorpe Plateau Farmland LCA are judged to be significant up to 1.5 km distance from the Project.</p> <p>National Grid acknowledges that the Banyard's Hall (1373609) setting is shaped by its isolated location, its connection with a medieval moat, nearby farm complex, and the surrounding agricultural landscape. Enclosed by tree-lined boundaries, this private setting enhances its value, and, due to the Project's proximity, the setting extends to the draft Order Limits. During the construction phase it has been assessed there will not be significant temporary negative effect. During the operation phase,</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>National grid acknowledges that there is likely to be a direct, permanent minor adverse significance of effect (not significant) on the asset prior to the implementation of mitigation measures.</p> <p>The Outline Landscape and Ecology Management Plan (LEMP) (document reference 7.4) and the Outline CoCP (document reference 7.2) contains a list of relevant good practice measures to avoid or reduce risks to heritage and landscape features. In addition, the Limits of Deviation (LoD) allows for some flexibility during design and construction to further avoid environmental constraints that may be identified later in the Project.</p>				
9-3.257	<p>Concern about impact of the Project on drainage at Heywood (e.g. the parish has no mains drainage so relies on a series of dykes and channels for field run off and standing water to disperse, which may be flattened, pulled up and filled in for the Project) /</p> <p>Concern about the impact of the Project on flooding at Heywood Road</p>	<p>National Grid has prepared a Flood Risk Assessment (FRA) (document reference 7.9) for the Project. The FRA has appraised the potential for the Project to impact on existing land drainage systems and associated surface water and fluvial flood risk. The assessment recommends measures to manage surface water runoff from the Project's construction swathe and operational infrastructure, with the design providing for attenuation features to capture and store runoff. Also, any existing land drainage features that the Project interacts with will be retained or re-provided so that there would be no detriment to flood risk and the land drainage regime. These measures and controls are secured via commitments within the Outline Code of Construction Practice (CoCP) (document reference 7.2) and would</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		prevent any increase in flood risk to neighbouring land and infrastructure in the parish of Heywood.				
9-3.258	Suggest that National Grid consider the South Norfolk Character landscape assessment for the Tas Valley (e.g. Section 8.13, Section 8.15)	The South Norfolk Landscape Character Assessment (2001) has been considered and referenced in the landscape baseline studies and assessment for the Tas Valley area. These can be found in the Landscape and Visual Impact Assessment (LVIA) presented in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13). The LVIA includes an assessment on both landscape character and visual amenity and sets out the potential landscape and visual effects (including those in Section A near the Tas Valley).			X	
9-3.259	Concern that some heritage assets and habitats impacted by the Project in this section have not been documented or marked out in existing designations and nature-preservation schemes given their remote / unpopulated location (e.g. as they have never been threatened or adopted for protection), including the rare chalk stream environment in the Tas Valley and the fenland in the low-lying area around Bunwell	A range of protected species and other ecological surveys have been undertaken including within the Tas Valley and around Bunwell. The results of the ecology surveys are outlined in Chapter 8: Ecology and Biodiversity (document reference 6.8) and ES Appendices 8.1 to 8.16 (document reference 6.8.A1-6.8.A16) of the Environmental Statement. Appropriate habitat mitigation would be implemented where impacts are identified as agreed with Natural England and the Local Planning Authority as relevant to the receptor. This mitigation is outlined within the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4).			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		The assessment of assets (both designated and un-designated), important hedgerows, cropmarks, and aerial photography have been undertaken within this area, and the details of this assessment can be found in the Historic Environment Baseline Report (6.11.A1). Furthermore, a thorough walkover survey and setting assessment has been undertaken in this area within the Order Limits through to 3km buffer (depending on the value of the asset and the survey type) which was to determine the presence of any unrecorded heritage assets, signs of possible archaeology, assessment of setting, and general field walking. The results of this are in 6.11.A1 Annex D Walkover Survey.				
9-3.260	Suggest that a Landscape Assessment Study should be carried out for the Project at the Tas Valley (e.g. as was done for the Waveney Valley)	<p>National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project. The results of this assessment are provided in the Environmental Statement (ES) that accompanies the Development Consent Order (DCO) application. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation (and maintenance) of the Project and recommends appropriate mitigation measures to reduce potential effects.</p> <p>A Landscape and Visual Impact Assessment (LVIA), included within the ES, has been undertaken as part of the EIA. The approach to the LVIA follows professional guidance as set out in ES Appendix 13.1: Landscape and Visual Methodology (document reference 6.13.A1),</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		which includes the Guidelines for Landscape and Visual Impact Assessment (GLVIA3). Judgements on landscape value have been made as part of the assessment of effects on landscape character. These value judgements have been informed by the Landscape Institute's Technical Guidance Note (TGN) 02/21 Assessing landscape value outside national designations. This defines landscape value as " <i>the relative value or importance attached to different landscapes by society on account of their landscape qualities</i> " (page 3). The LVIA is presented in ES Chapter 13: Landscape and Visual (document reference 6.13) and includes an assessment for a 3 km Study Area along the length of the Project, including for the Tas Rural River Valley Landscape Character Area (LCA) in Section A.				
9-3.261	There may be areas which require dewatering, considering the proposed route crosses a number of locations where ground and surface water interact. That there are no proposed abstractions or discharges is potentially not accurate and requires addressing in the Hydrogeological Risk Assessment (HRA). The River Waveney is one such area, where the groundwater provides baseflow. As such, suggest assessing such locations where groundwater interacts at the surface, such as (but not limited to) between Pylons RG85 and RG91 (cf. the area in Fig 9.1 - Contaminated Land, Geology	Areas where there is the potential for dewatering to be required at this stage, have been assessed within ES Appendix 9.3: Groundwater Baseline and Qualitative Groundwater Risk Assessment (document reference 6.9.A3). Where a potential risk to groundwater receptors is identified further assessment would be carried out in accordance with commitment GH11, included within the Outline Code of Construction Practice (CoCP) (document reference 7.2), which requires Hydrogeological Risk Assessment (HRA) to be undertaken following detailed design and commitment GH07 which requires dewatering activities to be			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	and Hydrogeology - Superficial Geology Page 5a of 25.) There are other areas where groundwater-surface water interactions occur which will need assessing. These include (but again, not limited to) the Stour crossing and areas where natural springlines occur (for example, where secondary aquifers overlie aquiclude or aquitard strata)	undertaken in accordance with Environment Agency guidance. In addition, Commitment GH02, included within the Outline CoCP (document reference 7.2), requires a Foundation Works Risk Assessment (FWRA) to be undertaken where piled foundations are proposed, and at trenchless crossing locations.				
9-3.262	Concern about the impact of the Project on acid sulphate soils in the Waveney Valley (and possibly the Stour) which contain pyrite (e.g. as these oxidise to sulphuric acid and iron hydroxide if they are disturbed, resulting in the soil and drainage waters becoming severely acid which may impact aquatic life) / Concern that trenching in the Waveney Valley may result in the pollution from acid soils / Suggest that mitigation plans for the impact on acid sulphate soils in the Waveney Valley should be provided	Detailed Agricultural Land Classification (ALC) surveys were undertaken in the Waveney Valley and are detailed in full in ES Appendix 6.1 Agricultural Land Classification Report (document reference 6.6.A1). No acid sulphate soils were identified within the Order Limits where the Project crosses the Waveney Valley.			X	
9-3.263	Concern that Pylon RG49 is located in the floodplain of the River Tas and in a county wildlife site, and that a number of heritage and ecological sites of significance were found in the vicinity by National Grid's surveyors	RG49 is positioned to avoid the extent of land that is at risk of flooding from the River Tas, defined by the newly released NaFRA2 dataset from the Environment Agency, which incorporates allowance for climate change to the year 2060. This information has been assessed as part of the Flood Risk Assessment that has been prepared (document reference 7.9).			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		RG49 is also positioned outside the formally designated County Wildlife Sites (CWS) and is located over 200 m from either Royden Fen or Carlton Rode Fen CWS. Any impacts to designated and non-designated assets are detailed in ES Appendix 11.1: Historic environment Baseline Report of the Environmental Statement (ES) (document reference 6.11.A1), and assets whose setting extend to the Order Limits are detailed in ES Appendix 11.7 (Assessment of Harm to Designated Heritage Assets). The placement of pylon RG49 was taken into consideration during this assessment, and any impacts during the construction and/or operation phase were detailed in the significance of effect/s.				
Financial compensation						
9-3.264	Concern that the Project will devalue property / impact on property value in this section / Concern that the project will impact on being able to sell property	Potential impact on property prices is not a material planning consideration for the purposes of a DCO application. Separate to this point, the Secretary of State has asked that the DCO application include an assessment of the likely significant environmental effects in the form of potential impacts on property prices. The ES contains an assessment on this. It concluded that there is no evidence of any significant environmental effects on house prices as a result of the Project. Although not part of the Environmental Impact Assessment process it is relevant to observe that any impact of the Project on residential properties are potentially capable of being dealt with through statutory	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>nuisance or compulsory purchase compensation regimes (subject to the requisite criteria being met).</p> <p>National Grid acknowledges that its proposals may cause concern to landowners. Diminishment of property value known as 'injurious affection' and any other appropriate heads of claim would be considered on an individual basis in accordance with current legislation. We would pursue a voluntary agreement with affected landowners, acquiring rights in accordance with our Land Rights Strategy (the strategy is subject to review). If a voluntary agreement cannot be reached, then the Compulsory Purchase Code allows for a claim of compensation for the loss that property owners may have suffered as a direct result of the retained part of your property ownership being worth less as a direct result of the works.</p> <p>If there are any specific concerns about the devaluation of property, National Grid would advise seeking third party advice. or alternatively please contact the Project team:</p> <p>Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.</p> <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-3.265	Request for adequate financial compensation / Suggest that impacted individuals need to be compensated	<p>All affected landowners would be compensated for any temporary/permanent losses, and this would be dealt with on a case-by-case basis in line with the Compensation Code.</p> <p>If there are any specific concerns requiring compensation and how it would be assessed, please contact the Project team:</p> <p>Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.</p> <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD</p> <p>The Government has published its guidance on community funds for transmission infrastructure (DESNZ, 2025). National Grid is committed to working with Ofgem, industry partners, local communities and their representatives to ensure community benefits are delivered fairly and effectively, driving lasting, positive change for the people and places integral to our developing electricity network.</p> <p>Government has also announced its plans to introduce a bill discount scheme for households within 500 metres of new infrastructure, which it proposes to introduce through the Planning and Infrastructure Bill. This is evolving government policy. Government expects this</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>scheme to be in place by 2026, and we would share further details as they emerge.</p> <p>National Grid is committed to providing a coordinated local and regional approach to community benefits. This would be delivered outside the development consent process, since this is not a material consideration in the decision on the proposed Project or a matter to be secured as part of the DCO, as per the Community Funds for Transmission Infrastructure: Guidance (DESNZ, 2025).</p>				
9-3.266	Request that National Grid purchase respondent's property / business	<p>National Grid is not required to purchase any properties or businesses as part of the Project.</p> <p>National Grid compensates landowners in line with the Compensation Code and any other relevant legislation.</p>			X	
9-3.267	Request for National Grid to negotiate and agree on further compensation to respondent for the land required to provide road access to the Project (address provided by respondent)	<p>National Grid would compensate all affected landowners in line with the compensation code and on submission of a valid claim. This would include existing private accesses/roads and new accesses that need to be installed.</p> <p>If a land or property owner is unsure if they are eligible for compensation, they should contact the Project's lands team to discuss: Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.</p> <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business</p>			X

		Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD.				
Health, Safety & Wellbeing						
9-3.268	Concern that the Project may result in a negative impact on mental health / wellbeing	<p>National Grid recognises people may have concerns about the health effects of living close to an overhead line, and that the uncertainty whilst the proposals are developed may cause anxiety.</p> <p>We have sought to reduce potential effects on communities and residents through routeing and design. We have also sought to reduce concern or uncertainty about the proposals through making timely design decisions and engaging with the people and stakeholders throughout the development of the Project.</p> <p>The Project team will continue to engage with people potentially affected during progress of the Project, through regular communication including letters, phone calls and meetings. This will enable concerns to be raised and discussed at an early opportunity and provide a regular point of contact to respond to queries and concerns.</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>We urge anyone with concerns to get in touch through the Norwich to Tilbury Freephone number, address or email throughout the progress of the Project:</p> <p>Call our Community Helpline: 0800 915 2497 (Lines are open Monday to Friday 9:00am – 5:30pm)</p> <p>Email us: contact@n-t.nationalgrid.com</p> <p>Write to us: FREEPOST N TO T (No stamp or further address details are required)</p> <p>The UK has a carefully thought-out set of policies for protecting us all against Electric and Magnetic Fields (EMFs), the main component of which is exposure guidelines. Those exposure guidelines are set by independent scientific bodies and are based on decades-long studies into the effects of EMFs and ill health. After those decades of research, the weight of evidence is against there being any health risks of EMFs below the guideline limits. These policies are incorporated into the decision-making process for Development Consent in National Policy Statement (NPS) EN-5. It is National Grid's policy to ensure that all of its equipment comply fully with those exposure limits.</p>				
9-3.269	Concern about health risks associated with the Project / physical health risks associated with the Project	Health considerations are given a high priority in the process by which we arrive at any proposals for new electricity circuits. Assessment of compliance with Electric and Magnetic Field (EMF) guidelines and policies is key to National Grid's approach. The UK has a carefully thought-out set of policies for managing	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>EMFs. There have been over four decades of research looking into whether EMF can cause health effects and there are no established effects below the exposure limits. When designing our overhead lines, substations and underground cables design criteria, we ensure they would not exceed those exposure limits, even when operating at 100% capacity. Additionally, the precautionary measures which the Government have adopted, are applied to the design which ensure the EMFs reduce as quickly with distance as possible. Evidence of that compliance is presented in the Electric and Magnetic Field Compliance Report (document reference 7.8) submitted as part of the Development Consent Order (DCO) application.</p> <p>National Grid takes this issue very seriously and looks to authoritative and independent scientific organisations such as the World Health Organisation (WHO) and in the UK Health Security Agency (UKHSA) to review the worldwide body of scientific evidence on health. Important decisions on health are taken independently of industry, and National Grid have followed the guidance and policies adopted by Government on advice from their scientific experts. Each of these organisations have comprehensive reviews of EMF research available to view on their websites.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-3.270	Concern that the Project poses a safety risk to aircraft (including balloons) in the area / Concern that the Project will impact airfields in this area	<p>National Grid recognises the need for the Project to be developed collaboratively alongside aviation stakeholders to identify, assess, and as appropriate mitigate, adverse impacts on aviation safety, in accordance with Government's Overarching National Policy Statement (NPS) EN-1.</p> <p>Our review of aerodromes potentially impacted by the Project identified 17 civil aerodromes (including 2 helipads) within 5 km of the preferred corridor and one military site (Wattisham Flying Station). We have also considered other airfields and flight activities where these have been identified through the 2022 and 2023 non-statutory, statutory consultation, targeted consultations, and landowner consultation, including for ballooning and for model flying. As well as considering feedback, National Grid's aviation advisers (an independent aviation consultancy) have directly engaged with these parties (with National Grid present).</p> <p>A number of route alignment and pylon positioning changes have been made following consideration of feedback and in all but one case the assessment concludes that the airfields can continue to operate. In the remaining case of a private airstrip near Little Burstead, we continue to liaise with the operator to identify an appropriate solution.</p> <p>Specifically in respect of Wattisham Flying Station our proposals position the alignment onto relatively lower ground (to remove the potential for interference with</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Instrument Landing System (ILS) radar) and adopt an alignment closer to the existing 132 kV overhead line and include replacing part of the 132 kV line south of Offton by underground cable to avoid a new overhead line corridor being introduced.</p> <p>We will continue to engage with relevant parties as appropriate.</p> <p>Further information on the assessment of airfields can be found in the Environmental Statement (ES) (ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and ES Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2)).</p>				
9-3.271	Concern that the battery storage facility at Swardston is considered by many knowledgeable people a major fire risk due to overheating	National grid is not responsible for the design and operation of Battery Storage facilities and would refrain from commenting on these.			X	
9-3.272	Concern that the Project poses a safety risk to hot air balloons that often land in the respondent's fields and low flying military aircraft practice manoeuvres over the respondent's property	<p>National Grid has appointed an independent aviation consultancy who have assessed potential civil aviation impacts, including on ballooning activities, across the Project. It is assessed that balloon pilots operating in the vicinity of the Project would have sufficient control (through use of burners, the parachute valve and the prevailing wind) to avoid the overhead line.</p> <p>National Grid has consulted the Ministry of Defence (MOD) Defence Infrastructure Organisation (DIO) in relation to potential impacts on military aviation activities,</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		which has confirmed the Project is within Low Flying Areas (LFAs). We are continuing to engage with the DIO to secure appropriate mitigations. Further information on the assessment of airfields can be found in the Environmental Statement (ES) (ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and ES Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2)).				
Heritage						
9-3.273	Concern about archaeological impacts	Through routeing and siting National Grid has sought to reduce as far as practicable potential impacts on the historic environment. The impacts of the Project on the historic environment are assessed in Chapter 11: Historic Environment of the Environmental Statement (ES) (document reference 6.11). The assessment considers the potential impact on archaeology, historic buildings and historic landscapes and includes assessment of potential for physical impact, impact through change to setting that affects the value of a heritage asset and impact through indirect factors such as change in hydromorphology. The assessment is supported by walkover, setting and geophysical surveys, as documented in ES Appendix 11.1 Historic Environment Baseline Report (document reference 6.11.A1) and ES Appendix 11.4 Geophysical Survey Results Report (document reference 6.11.A4).	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Archaeological trial trench evaluation has also been undertaken and is reported in ES Appendix 11.5 Trial Trenching Results Report (document reference 6.11.A5). In addition to the proposals in the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4), the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5) set out appropriate mitigation for the historic environment. The Project has engaged with Historic England and relevant planning authorities on aspects relating to heritage, including appropriate mitigation measures and techniques and to take their views into account during Project development which are detailed in ES Chapter 11: Historic Environment (document reference 6.11).				
9-3.274	Concern about negative impact on heritage / Suggest that the Project should be routed away from heritage buildings / listed buildings / historical site	Through routeing and siting National Grid has sought to reduce as far as practicable potential impacts on the historic environment. The impacts of the Project on the historic environment are assessed in Chapter 11: Historic Environment of the Environmental Statement (ES) (document reference 6.11). The assessment considers the potential impact on archaeology, historic buildings and historic landscapes and includes assessment of potential for physical impact, impact through change to setting that affects the value of a heritage asset and impact through indirect factors such as change in hydromorphology. The assessment is supported by walkover, setting and geophysical surveys,	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		as documented in ES Appendix 11.1 Historic Environment Baseline Report (document reference 6.11.A1) and ES Appendix 11.4 Geophysical Survey Results Report (document reference 6.11.A4). Archaeological trial trench evaluation has also been undertaken and is reported in ES Appendix 11.5 Trial Trenching Results Report (document reference 6.11.A5). In addition to the proposals in the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4), the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5) set out appropriate mitigation for the historic environment. The Project has engaged with Historic England and relevant planning authorities on aspects relating to heritage, including appropriate mitigation measures and techniques and to take their views into account during Project development.				
9-3.275	Concern about the evaluation of non-designated heritage asset in the report and that they have been evaluated in terms of archaeological value and stated as having evidential or historic value, whereas historic buildings are also likely to have architectural value. The significance for a number of assets includes their architectural and historic significance as buildings, and therefore suggest that these should be assessed in the same manner as a listed building (e.g. how setting contributes to that significance),	The methodology used to inform the assessment of the historic environment presented in ES Chapter: 11 Historic Environment (document reference 6.11) has been developed in accordance with established good practice and national guidance. It has been discussed and agreed upon with relevant stakeholders during the scoping process and through ongoing engagement at thematic working group meetings.		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	including the former Henstead Workhouse and Vale Hospital	<p>The agreed methodology used in assigning value to non-designated and designated heritage assets, both built and below ground, follows the Historic England (2008) document, '<i>Conservation Principles, Policies and Guidance for the Sustainable Management of the Historic Environment</i>.' The value of a heritage asset is derived from the asset's ability to illustrate one or more of the Conservation Principles, these being: Evidential, Historical, Aesthetic and Communal. The architectural properties of at asset can feed into one or more of these principles.</p> <p>The former Henstead Workhouse and Vale Hospital has been assigned low value, largely due to its change of function, and in accordance the agreed methodology regarding low value assets, its setting is not considered in the Environmental Statement.</p>				
Information						
9-3.276	Information provided that respondent's property provides the water supply to six houses on the estate and the farmyard pipes from a borehole which will be cut by the haulage roads and work compounds	<p>All underground services (statutory undertaker and private assets) would be identified on site and documented within the site-specific Risk Assessments/Method Statements for all work delivery. Additionally, we would agree interface and mitigation arrangements (where required) with their owners</p> <p>A permit to dig process would control the mitigation required to ensure underground services are not impacted by the construction works. If avoidance of the</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>services cannot be maintained, then protection or relocation maybe required.</p> <p>In planning the Project, National Grid considers all existing utilities and agree interface and mitigation arrangements (where required) with their owners. We also consider any such future installations where planning applications are in the system and likewise as part of the consultation process, we contact all third-party utility providers in the area.</p> <p>The Environmental Impact Assessment (EIA) includes an assessment within Chapter 9: Contaminated Land, Geology and Hydrogeology (document reference 6.9) of the Environmental Statement (ES), which identifies potential impacts, including to groundwater abstractions, and introduce any mitigation to safeguard existing drinking water supplies (both with regard to quantity and quality), as required. ES Appendix 9.3: Groundwater Baseline and Qualitative Groundwater Risk Assessment (document reference 6.9.A3) includes the assessment of the water abstraction point at Flordon Hall.</p> <p>Landowners are encouraged to provide as much information as early as possible in relation to any private supplies, drainage and irrigation systems on their land so these can be factored in at the detailed design stage of the Project ahead of construction starting on site, please raise this at any meeting with the National Grid lands team who will keep a record and pass on any information.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-3.277	Information provided that the A1066 is a main arterial route from west to east, and is heavily used by HGVs, tourists and agricultural vehicles. The A1066 has a severe pinch point in the village of South Lopham with vehicles using the centre of the road	Following comments received at statutory consultation, including feedback from the Local Highway Authority, National Grid has now proposed a Primary Access Route for construction along the A1066 from Thetford. This would be in addition to the proposed Primary Access Route on the A1066 through Diss. This additional route has been assessed in the ES Chapter 16. Traffic and Transport (document reference 6.16) and the Transport Assessment (document reference 7.11). Vehicle Swept Path Analysis has been undertaken for these routes and has not identified any required highway mitigation in South Lopham.			X	X
9-3.278	Information provided that South Norfolk Model Flying Club has two locations for their activities, beside the field between Talcolneston and Forncett, and they also have a base at Sutton near Wymondham approximately 6 miles from Talcolneston and Forncett. At the time of writing this response, there were no events planned at the Talcolneston / Forncett location, and on the club's website it states that Sutton is their most active location. This should be taken into consideration when considering relocating the Project even further west	National Grid notes this information, but remains of the view that there is still planned use of this site and model flying has been observed on site visits to this location by members of the Project team. On this basis it is appropriate to respond to a request to slightly modify the alignment. This can be achieved without material affect to other receptors and is considered to be justified despite the addition of one additional angle pylon. Further information on the assessment of airfields can be found in the Environmental Statement (ES) (ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and ES Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2)).			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Mitigation						
9-3.279	Suggest mitigation measures	<p>An Environmental Statement (ES) (document reference Volume 6: Environmental Statement) has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 ('the Infrastructure EIA Regulations'). The ES identifies and assesses the likely significant effects on the environment resulting from the construction, operation and maintenance of the Project and recommends appropriate mitigation to reduce effects.</p> <p>Environmental mitigation measures have been defined within each environmental topic chapter and set out in relevant management documents submitted with the Development Consent Order (DCO) application, including the Outline Code of Construction Practice (CoCP) (document reference 7.2), the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5).</p>	X	X	X	
9-3.280	Suggest that National Grid engages with and invests in Norfolk Fire and Rescue Service to help prepare crews for fires or rescues within high voltage electrical installations or around high voltage pylons / Request developer funding for this investment (e.g.	National Grid is committed to working with local suppliers, facilitated by supporting forums (such as the local Chambers), on electricity industry skills and workforce planning. National Grid is also committed to providing a coordinated regional approach to jobs and			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	through training exercises or equipment purchases) through a Section 106 (S106) agreement	skills opportunities. This commitment is broader than the individual project and separate to any commitments under the proposed development consent order for this Project. The socio-economic effects of the Project are assessed in Chapter 15 of the Environmental Statement (document reference 6.15). Post construction job opportunities are limited given the nature of the development however we will still work with Local Authorities (including facilitating local partners) to understand what is important to them around skills and employment to ensure we leave a lasting positive legacy in the communities where we operate. With regards to a delivery mechanism, the above measures will be delivered as part of our community benefit package, which will look at both local and regional initiatives. This will be delivered outside the development consent process and is not a material consideration in the decision on the proposed Project or a matter to be secured as part of the DCO, as per the Community Funds for Transmission Infrastructure: Guidance (DESNZ, 2025).				
Primary Access Routes / Haul Road / Construction Compounds						
9-3.281	Suggest that access to the Project should be from the A140 via Mellis rather than from the A143 / Burgate Road (e.g. as the roads are wider outside of school hours) (plan provided by respondent)	National Grid notes the respondent's feedback. Access via Burgate Road is a not proposed access route. Access route suggested by respondent would go from the A140 through Yaxley and Mellis. This would be less preferable from both a highway geometry point of			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		view and likely a residential impact point of view than proposed access route from A143 via B1113.				
PROW (Public Rights of Way)						
9-3.282	Concern about negative impact on Public Rights of Way (PROW) / footpaths / cycle paths / bridleways	<p>Through routeing and siting, National Grid has sought to reduce, as far as practicable, impacts and disruption to Public Rights of Way (PROW).</p> <p>The iterative design process identified the existing PROW network and their wider connectivity and sought where practicable to reduce and where possible remove impacts to PROW.</p> <p>Effects on PROW would be mitigated where possible, maintaining access where practicable, with closures as a last resort. We will continue to engage with relevant stakeholders on the PROW network to enable feedback and input to be considered as the Project progresses. An Outline Public Rights of Way Management Plan (document reference 7.6) is submitted with the Development Consent Order (DCO) application.</p>	X	X	X	
9-3.283	Concern about the impact of Pylons RG76 to RG107 on footpaths (e.g. during construction; visual impact; health impact for users)	National Grid has sought to reduce environmental impacts, as far as practicable, through routeing and siting and an ongoing iterative design process which has taken on board feedback at different stages of the Project. This includes landscape and visual impacts and impacts and disruptions to Public Rights of Way (PROW) and cycle routes.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>The potential impacts and effects on PRow and cycle routes from the Project during the construction and operation have been assessed within Environmental Statement (ES) Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) and ES Chapter 16: Traffic and Transport (document reference 6.16). Mitigation measures are identified within the Outline Public Rights of Way Management Plan (document reference 7.6) submitted as part of the Development Consent Order (DCO) application. Similarly, the impact of the pylons on views, including views from recreational receptors using PRow and cycle routes, and views experienced by people moving, living and working within the Project's study area, are captured by the Landscape and Visual Impact Assessment (LVIA) presented in ES Chapter 13: Landscape and Visual (document reference 6.13) undertaken as part of the Environmental Impact Assessment (EIA) process. The LVIA includes an assessment on both landscape character and visual amenity and sets out the potential landscape and visual effects (including those near Little Green and Mellis Green in Section B of the Study Area). It identifies areas for potential mitigation planting to reduce visual impacts to local receptors. The Outline Landscape and Ecology Management Plan (LEMP) (document reference 7.4) include details regarding the planting proposals.</p> <p>Impacts on health and wellbeing (physical and mental) arising from changes to PRow and other health-related</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		environmental change (such as views and visual amenity) are considered in Chapter 10: Health and Wellbeing (document reference 6.10). Taking account of the information provided in Chapter 13: Landscape and Visual (document references 6.13), and PRow-specific mitigation proposed in the area between and around pylons RG076 to RG107, no temporary or permanent likely significant effects on health and wellbeing (physical or mental) are identified.				
Requests						
9-3.284	Request for information on current operational and construction work taking place at Swardeston / Criticism that National Grid said that no operational or construction work is taking place yet for the Project	Work for Norwich to Tilbury has not started yet. There is currently some work taking place at our Norwich Main Substation to increase its capacity. Work to the eastern extension of the site started in April 2024 and started on the western extension in October 2024. While the Project would, if consented, connect into Norwich Main Substation, the work taking place there is not linked to the Project and is needed to connect new sources of offshore wind from the Sheringham Shoal and Dudgeon offshore wind farms.			X	
9-3.285	Request for an update regarding Pylon RG45 (as per written correspondence) to mitigate visual impact and impact on listed properties (including Ebenezer Cottage, Quaker Farm, Banyards Hall, and Wood Farmhouse)	National Grid has completed an assessment on the historic environment which is included in Chapter 11: Historic Environment (document reference 6.11) of the Environmental Statement (ES). Impacts on listed buildings as well as proposed mitigation is included in this chapter. The location of RG45 has not changed	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		following feedback from statutory consultation as moving further from this property would result in an increase in visual effects to other properties due to other pylons subsequently having to move.				

Mid Suffolk feedback

Mid Suffolk – Table 1 (Statutory Consultation)

Table 9-4 Summary of consultee comments and National Grid's response

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Agricultural Land						
9-4.1	Concern that the Project will take away valuable agricultural land / disrupt farming operations	<p>During the construction stage of the Project, there would be areas of agricultural land that would be temporarily disrupted. National grid would only use land that is required as part of the Project and would seek to minimise the use of agricultural land where reasonable and safe to do so.</p> <p>National Grid is and will continue to work with all landowners including farmers who may be affected by the proposals to understand the impacts on their operations and to work with them as the Project is developed. We would seek to work with the farming community to limit disruption where practicable. This includes providing prior warning of works which may result in the need to move livestock. Compensation claims for disturbance are considered on a case-by-case basis, if negative impact on farming operations can be proven. Particular agricultural matters can also be addressed through voluntary land agreements.</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-4.2	Concern that the Project will have a negative impact on agricultural livestock (e.g. type of livestock)	National Grid is and will continue to work with all landowners including farmers and equestrian facilities who may be affected by the proposals to understand the impacts on their operations and to work with them as the Project progresses. We would seek to work with the farming community to limit disruption where practicable. This includes providing prior warning of works which may result in the need to move livestock. Compensation claims for disturbance are considered on a case-by-case basis, if negative impact on farming operations can be proven. Particular agricultural matters can also be written into voluntary land agreements. There will also be mitigation put in place where animal grazing maybe affected. As well as possible effects on humans, possible effects of Electric and Magnetic Fields (EMFs) on various animals have been studied. No detectable effects of EMFs have been found on, for example, health, milk production, fertility, and behaviour. This is confirmed in National Policy Statement (NPS) EN-5 which states: "There is little evidence that exposure of crops, farm animals or natural ecosystems to transmission line EMFs has any agriculturally significant consequences.			X	
Airfields						
9-4.3	Concern about the impact of the Project on Elmsett Airfield / Suggestion that the Project is routed away from Elmsett Airfield	National Grid has appointed an independent aviation consultancy which has engaged with (with National Grid also present) Elmsett Airfield. Following discussion and further assessment it has been determined, with	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>the Project as currently proposed, that the airfield can continue to operate.</p> <p>We would continue to engage with nearby airfields as appropriate.</p> <p>Further information on the assessment of airfields can be found in the Environmental Statement (ES) (ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and ES Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2)).</p>				
9-4.4	Concern about the impact of the Project on Wattisham Airfield / Suggestion that the Project is routed away from Wattisham Airfield	<p>National Grid has appointed an independent aviation consultancy which has engaged with (with National Grid also present) Wattisham Flying Station as well as the Ministry of Defence (MOD) Defence Infrastructure Organisation (DIO). Following this and further assessment it has been determined, with the Project as proposed, that the aerodrome can continue to operate.</p> <p>We would continue to engage with nearby airfields as appropriate. Further information on the assessment of airfields can be found in the Environmental Statement (ES) (ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and ES Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2)).</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-4.5	Concern about the impact of the Project on Hinderclay Meadows / Suggestion that the Project is routed away from Hinderclay Meadows	<p>National Grid has appointed an independent aviation consultancy. Following further assessment, it has been determined, with the Project as proposed, that the airfield can continue to operate.</p> <p>We would continue to engage with nearby airfields as appropriate.</p> <p>Further information on the assessment of airfields can be found in the Environmental Statement (ES) (ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and ES Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2)).</p>	X			
9-4.6	Concern about the impact of the Project on Crowfield Airfield / Suggestion that the Project is routed away from Crowfield Airfield	<p>National Grid notes the respondent's feedback. It is assessed that there is sufficient distance between the overhead line and the airfield runway to continue with existing flight procedures and therefore we are not proposing a change to the alignment in this area.</p> <p>Further information on the assessment of airfields can be found in the Environmental Statement (ES) (ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and ES Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2)).</p>	X		X	
9-4.7	Suggest that the overhead lines that are proposed by the Project to run along the centre line of the approach to Wattisham Airfield are relocated to	National Grid has appointed an independent aviation consultancy which has engaged with (with National Grid also present) Wattisham Flying Station. Following			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	mitigate flight risk to attack helicopters which fly at a very low level, and other occasional aircraft	<p>this and further assessment it has been determined, with the Project as proposed, that the aerodrome can continue to operate.</p> <p>We are continuing to engage with the Ministry of Defence (MOD) Defence Infrastructure Organisation (DIO) in relation to appropriate mitigations relating to the Project's presence within military Low Flying Areas.</p> <p>Further information on the assessment of airfields can be found in the Environmental Statement (ES) (ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and ES Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2)).</p>				
9-4.8	Concern about the impact of the Project on an Airfield/s / Suggestion that the Project is routed away from Airfield/s in the area (no specific location given)	<p>National Grid has appointed an independent aviation consultancy which has carried out a thorough assessment of all airfields within 5 km of the Project. The Project minimises the overall impact on local aviation.</p> <p>We continue to engage with nearby airfields as appropriate. Further information on the assessment of airfields can be found in the Environmental Statement (ES) (ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and ES Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2)).</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-4.9	Concern about the impact of the Project on the Wattisham to Thetford flight path used by low flying military helicopters / Concern about the impact of the Project on military operations at Wattisham	<p>National Grid has appointed an independent aviation consultancy which has engaged with (with National Grid also present) Wattisham Flying Station. Following this and further assessment it has been determined, with the Project as proposed, that the airfield can continue to operate.</p> <p>We continue to engage with the Ministry of Defence (MOD) Defence Infrastructure Organisation (DIO) to secure appropriate mitigations to the Project's presence within military Low Flying Areas. Further information on the assessment of airfields can be found in the Environmental Statement (ES) (ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and ES Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2)).</p>	X		X	
9-4.10	Concern about the impact of the Project on the East 2 WAM (Wide Area Multilateration) Network (e.g. at the following intercept locations: Honington/Mendelsham, Mendelsham/Wattisham, Mendelsham/Manningtree [2 intercepts], Manningtree/Nedding Tye, Manningtree/Danbury, and Danbury/Castle Camps)	The Government's Overarching National Policy Statement for Energy (NPS EN-1) reflects the potential for new energy infrastructure to affect defence interests, and National Grid recognises its according responsibilities to consult the Ministry of Defence (MoD) to inform its assessment of potential impacts from the Project on defence assets. In relation to their concerns, engagement with the MoD is ongoing regards the East 2 Wide Area Multilateration (WAM) Network as well as other defence interests. Further information on the assessment of airfields can be found	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		in the Environmental Statement (ES) (ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and ES Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2)).				
9-4.10-1	Concern about the impact of the Project on Brook Farm Airstrip (also known as Wortham Airfield) / Suggestion that the Project is routed away from Brook Farm Airstrip (e.g. at Pylons RG94 to RG99)	<p>National Grid has assessed an alternative alignment in this area and proposed a change between RG95 and RG102 (now RG94 and RG102). This change is required due to the presence of Brook Farm Airfield where further assessment of the potential impact of the Project on this airfield, undertaken by our independent aviation consultants, has identified a need to move the alignment further east. We will continue to engage with the airfield operator to confirm the acceptability of the changes.</p> <p>Further information on the assessment of airfields can be found in the Environmental Statement (ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).</p>	X	X	X	X
Community / Social impact						
9-4.11	Concern about impact of the Project on children / families / residents / communities	National Grid recognises people may have concerns about the potential impacts of living close to an overhead line, and that the uncertainty whilst the proposals are developed may cause anxiety.	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>We have sought to reduce potential effects on communities, residents – including children - through routeing and design. We have also sought to reduce concern or uncertainty about the proposals through making timely design decisions and engaging with people and stakeholders throughout the development of the Project. If the Project received Development Consent, the Project team would continue to engage with people potentially affected during construction, through regular communication including letters, phone calls and meetings, where necessary.</p> <p>We urge anyone with concerns to get in touch through the Norwich to Tilbury Freephone number, address or email, which will remain open throughout examination.</p> <p>National Grid is committed to working with local suppliers, facilitated by supporting forums (such as the local Chambers), on electricity industry skills and workforce planning. National Grid is also committed to providing a coordinated regional approach to jobs and skills opportunities. This commitment is broader than the individual project and separate to any commitments under the proposed development consent order for this Project. The socio-economic effects of the project are assessed in Chapter 15 of the Environmental Statement (document reference 6.15). Post construction job opportunities are limited given the nature of the development however we will still work</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>with Local Authorities (including facilitating local partners) to understand what is important to them around skills and employment to ensure we leave a lasting positive legacy in the communities where we operate.</p> <p>With regards to a delivery mechanism, the above measures will be delivered as part of our community benefit package, which will look at both local and regional initiatives. This will be delivered outside the development consent process and is not a material consideration in the decision on the proposed Project or a matter to be secured as part of the DCO, as per the Community Funds for Transmission Infrastructure: Guidance (DESNZ, 2025).</p>				
9-4.12	Concern about impact of the Project on school / educational facilities	<p>Through routeing and siting, National Grid has sought to avoid, as far as practicable, locations of education establishments.</p> <p>ES Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) presents an assessment of the potential impacts on education facilities as a result of the Project. As part of the assessment, a range of measures are considered during the construction phase to reduce, where practicable, disruption to education establishments. These include traffic management, signage and routing measures to ensure access or partial access can be maintained where feasible. These are identified within</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15), the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) and the Outline Code of Construction Practice (CoCP) (document reference 7.2). The assessment concludes that there would be no significant effects on education facilities within the study area as a result of the construction and operation of the Project.				
9-4.13	Concern about impact of the Project on leisure	Through routeing and siting National Grid has sought to avoid, as far as practicable, locations important for leisure and tourism. Environmental Statement (ES) Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) presents an assessment on the potential impacts on leisure and tourism. As part of this assessment, a range of measures have been considered throughout the construction phase of the Project to minimise disruption on leisure and tourism. These include: traffic management, signage and routeing measures. These are identified within ES Chapter 15: Socio-economics, Recreation and Tourism, the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-4.14	Concern about over development of area / other works in the area (e.g. cumulative impact)	<p>A cumulative effects assessment has been undertaken in accordance with the Planning Inspectorate's Advice Note 17 'Cumulative Effects Assessment' and is presented in Environmental Statement (ES) Chapter 17: Cumulative Effects (document reference 6.17). The cumulative effects assessment has considered the effects of the Project in conjunction with other existing and, or approved developments in line with guidance. As part of this process, National Grid has engaged with other developers who are proposing development in proximity of the Project to understand their requirements.</p> <p>The cumulative assessment has been undertaken in accordance with the overarching NPS for Energy (EN-1)</p> <p>Paragraph 4.1.5 in EN-1 states:</p> <p>'In considering any proposed development, in particular when weighing its adverse impacts against its benefits, the Secretary of State should take into account: ... its potential adverse impacts, including on the environment, and including any long-term and cumulative adverse impacts, as well as any measures to avoid, reduce, mitigate or compensate for any adverse impacts, following the mitigation hierarchy'.</p> <p>Paragraph 4.2.12 in EN-1 states:</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>'The cumulative impacts of multiple developments with residual impacts should also be considered.'</p> <p>Paragraph 4.3.3 in EN-1 states:</p> <p>'The Regulations require an assessment of the likely significant effects of the proposed project on the environment, covering the direct effects and any indirect, secondary, cumulative, transboundary, short, medium, and long-term, permanent and temporary, positive and negative effects at all stages of the project, and also of the measures envisaged for avoiding or mitigating significant adverse effects'.</p> <p>Paragraph 4.3.19 of EN-1 states:</p> <p>'The Secretary of State should consider how the accumulation of, and interrelationship between, effects might affect the environment, economy, or community as a whole, even though they may be acceptable when considered on an individual basis with mitigation measures in place'.</p> <p>Paragraph 4.4.5 in EN-1 states:</p> <p>'The impacts of more than one development may affect people simultaneously, so the applicant should consider the cumulative impact on health in the ES where appropriate'. The long list and short list of other existing and, or approved developments considered for the Cumulative Effects Assessment is presented in ES Appendix 17.2: Long List and Short List of Other</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Developments (document reference 6.17.A2), detailing the other developments shortlisted for detailed assessment. The appendix provides details on other developments screened out of the assessment in accordance with the methodology presented in ES Chapter 17: Cumulative Effects</p> <p>(document reference 6.17). The detailed assessment of shortlisted other developments is presented in ES Appendix 17.3: Inter-Project Cumulative Effects Matrix (document reference 6.17.A3). ES Appendix 17.3: Inter-Project Cumulative Effects Matrix (document reference 6.17.A3) outlines the residual significance of cumulative effects for each development, for each environmental topic that has a Zone of Influence that overlaps with that development (i.e. socio-economic, recreation and tourism impacts).</p>				
9-4.15	Concern about the Project being in too close proximity to recently built housing developments / using land being considered for future development (including residential, commercial, infrastructural, and employment sites)	<p>National Grid has obtained information on existing, under construction, consented but not built schemes as well as development proposals within the planning system. The Project design has responded to those that are confirmed through consideration of routeing.</p> <p>In the case of development proposals, some can be amended to be designed around our proposed infrastructure but in other cases our proposals may need to be amended at a corridor level, or proposed developments factored into our detailed route design.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Based on known information, and in light of changes made following consideration of feedback to the 2022 and 2023 non-statutory consultations, statutory consultation, targeted consultations, and landowner consultation, we consider our proposals are consistent with relevant policy and guidelines and the alignment designed such that they do not prevent proposed housing developments from being successfully progressed. UK law does not prescribe minimum distances between overhead lines and homes, but any implications on landscape and visual receptors, residential amenity or from concerns about electromagnetic fields are robustly assessed as part of the Environmental Impact Assessment (EIA) and balanced as part of the decision making process. We will continue to review planning applications and engage with developers as necessary.				
9-4.16	Concern about the Project causing communities to become encircled / surrounded by overhead lines	The alignment has been routed to achieve some separation from the existing 400 kV overhead line, such that villages are not encircled by overhead lines to both sides. Separation is inevitably reduced in certain locations due to the presence of constraints to routeing and environmental features. Detailed assessment reported in the Environmental Impact Assessment (EIA) identifies any measures considered to be necessary to reduce likely significant effects which will also consider the potential for effects potentially arising	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		from close paralleling existing 132 kV overhead line and new 400 kV overhead line infrastructure.				
9-4.17	Concerned that the Project will have a negative impact on domestic horses / equestrian activities	<p>As well as possible effects on humans, the possible effects of Electric and Magnetic Fields (EMFs) on various animals have been studied. No proven effects of EMFs have been found in any species at levels below the guidelines. This is confirmed in National Policy Statement (NPS) EN-5 which states: "There is little evidence that exposure of crops, farm animals or natural ecosystems to transmission line EMFs has any agriculturally significant consequences." Although horses are not directly mentioned, there is no evidence to suggest they are any different to other farm animals.</p> <p>As well as the possible direct biological or health effects addressed above, indirect effects such as microshocks can occur as a result of electric fields. Microshocks are small spark discharges which are similar to a static shock after walking across a nylon carpet for example. The Project will be designed in accordance with the principles of the Governments Code of Practice 'Power Lines: Control of Microshocks and other indirect effects of public exposure to electric fields' to ensure these are mitigated, which include equestrian activities.</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-4.18	Concern about the impact of the Project on emergency services / ambulances / hospitals / health service	<p>Through routeing and siting National Grid has sought to avoid and reduce as far as practicable effects on identified healthcare facilities.</p> <p>Environmental Statement (ES) Chapter 10: Health and Wellbeing (document reference 6.10) and ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) consider the potential impacts on, and access to, healthcare facilities, including emergency services, ambulances, hospitals and other NHS services associated with the construction of the Project, drawing on information from ES Chapter 16: Traffic and Transport (document reference 6.16). No health facilities are due to be directly impacted by the Project and where road diversions are required traffic management and mitigation measures will be in place to reduce impacts. These include: traffic management, signage and routing measures to ensure access or partial access can be maintained where feasible. Further detail on proposed mitigation measures are presented in the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), which has been produced following engagement with stakeholders including the emergency services.</p>	X	X	X	
9-4.19	Concern that access to the Gipping Valley Angling Club (GVAC) is required for members at all times	National Grid is not proposing to restrict access to any lakes in this section.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	for their rights to fish these lakes and for regular maintenance which needs to be carried out / Request for National Grid to provide assurance that GVAC will be able to cross the proposed construction road in a safe way to access the club / lakes					
9-4.20	Concern that National Grid's intention to alter the existing UK Power Networks (UKPN) overhead line to underground cables in the area to the north west of Mellis / east of Burgate will directly impact the following: parish footpaths and bridleways making them unusable to horse riders, walkers, dog walkers and Mellis Cani-Cross Group (e.g. at Pylons RG97, RG99, RG100, RG106, RG107, RG109, RG110, RG114, and RG115); listed buildings, including Burgate Church; farmland; flood control; birds (e.g. between Pylons RG097 and RG115) / Concern about cumulative impact of replacing existing UKPN overhead line to underground cables and Pylon RG106 on an ancient drover's lane, Stoney Bridge Lane leading to Furze Way (bridleway and walking route)	<p>National Grid notes this comment.</p> <p>An assessment of the impact of the Project on Public Rights of Way (PRoW), listed buildings, farmland, local flooding and birds is set out in the Environmental Statement (ES), Chapter 6: Agriculture and Soils (document reference 6.6), ES Chapter 11: Historic Environment (document reference 6.11), ES Chapter 12: Hydrology, Land Drainage and Flood Risk (document reference 6.12), ES Chapter 13: Landscape and Visual (document reference 6.13), ES Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15), ES Chapter 16: Traffic and Transport (document reference 6.16) and ES Chapter 8: Ecology and Biodiversity (document reference 6.8), respectively. The ES includes details about the level of impact created and the mitigation proposed in relation to the Project.</p> <p>With regard to flooding and land drainage, the assessments conclude that, with controls and mitigations in place, there would be no likely significant</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>effects associated with the undergrounding works. Mitigation measures include provision for drainage, and controls on dewatering activities.</p> <p>With regard to agriculture and soil (including areas between RG097 and RG115), the assessments conclude that there would be likely significant effects on soil resources and agricultural land across the Project. Mitigation measures include good practice for soil handling, meaning land required temporarily for construction (such as undergrounding works) is reinstated where practicable to its pre-construction use or condition (or as discussed with the landowner). Additional mitigation measures include provisions for access, livestock water supplies and land drainage, meaning there would be no likely significant effects on agricultural landholdings.</p> <p>Impacts on health and wellbeing (physical and mental) arising from changes to PRow are considered in ES Chapter 10: Health and Wellbeing (document reference 6.10). Taking account of the proposed undergrounding, the location of Pylon RG106 and construction phase and PRow-specific mitigation proposed in the area between Burgate and Mellis, no permanent likely significant effects on health and wellbeing (physical or mental) are identified.</p> <p>With regard to birds between Pylons RG097 and RG115 the proposed undergrounding will have a short-</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>term impact on available nesting habitat due to temporary loss of vegetation during construction. However this is considered to be a small-scale temporary impact and will not have a significant impact on birds on a local level or above. Mitigation measures are proposed and included within the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) to ensure no direct impact on birds are encountered.</p> <p>An Outline PRoW Management Plan (document reference 7.6) has been submitted as part of this DCO application. This document sets out management measures and mitigation measures for each PRoW affected by the construction activities and operation of the Project.</p> <p>The Outline PRoW Management Plan has defined the management of the PRoW in the area between pylons RG97 and RG115. The PRoW will be temporary closed for the duration of the works with managed access, that is, allowing a safe passage throughout of the PRoW users.</p> <p>Footpath W-389/002/0 and bridleway W-172/022/0 will be temporary diverted for a short duration to allow for various construction activities. The diversion will follow a similar alignment to the existing PRoW, resulting in a minimum increase in journey time and distance.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Footpaths W-172/036/0 and W-172/027/0 will be temporary diverted for a slightly longer period of time and would approximately be less than 2.5 months. The diversion length will slightly increase the journey time by approximately 1-2 minutes.</p> <p>As a result, the magnitude of impact on the PRow is considered negligible or minor and the overall effect has been classified as not significant.</p>				
9-4.21	Concern about the impact of the Project on bridleways due the impact of overhead lines on horses (e.g. at Pylons RG99, RG106, RG107, RG114, and RG115)	<p>As well as possible effects on humans, possible effects of Electric and Magnetic Fields (EMFs) on various animals have been studied a number of times. No proven effects of EMFs have been found in any species at levels below the guidelines. This is confirmed in National Policy Statement (NPS) EN-5 which states: "There is little evidence that exposure of crops, farm animals or natural ecosystems to transmission line EMFs has any agriculturally significant consequences." Although horses are not directly mentioned, there is no evidence to suggest they are any different to other farm animals.</p> <p>As well as the potential direct biological or health effects addressed above, indirect effects such as microshocks can occur as a result of electric fields. Microshocks are small spark discharges which are similar to a static shock after walking across a nylon carpet for example. The Project will be designed in</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		accordance with the principles of the Governments Code of Practice 'Power Lines: Control of Microshocks and other indirect effects of public exposure to electric fields' to ensure these are mitigated, with particular focus on equestrian activities.				
9-4.22	Concern that increase in Road Traffic Collisions (RTC's) has the potential to lead to road closures and diversions which would impact on Suffolk Constabulary's (SC's) roads policing capacity and the local community	National Grid notes the respondent's feedback. The Environmental Statement (ES) Chapter 16: Traffic and Transport (document reference 6.16) and the Transport Assessment (document reference 7.11) submitted with the Development Consent Order (DCO) application, includes an analysis of the collision data to identify patterns in accident locations in order to establish any areas of safety concerns or potential hotspot for accidents that needs to be considered. Further details on road closures and diversions are provided in the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).	X			
9-4.23	Concern about the impact of Pylons RG118 and RG119 on the main Norwich to London railway line (e.g. travel disruption given that the Project crosses the railway line at this location)	National Grid notes the respondent's feedback. We are proposing a change to the alignment between RG113 and RG118 (now RG119) which would move the alignment further east towards the railway, away from the respondent's property.			X	
9-4.24	Oppose the potential relocation of Pylon PL35 (existing 132kV overhead line) from the southern side of Bulls Ash Corner to the northern side of	The Distribution Network Operator (DNO) mitigation will require a sealing end platform (SEP) pylon to transition to the existing 132 kV overhead line to the new 132 kV			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	Bulls Ash Corner (as raised in meeting with land agent for National Grid) due to impact on farming operations, and request for confirmation of location of Pylon PL35. With this, request for meeting with UK Power Networks (UKPN) in relation to this pylon	underground cable. Working area is retained around the existing PI35 pylon to upgrade the existing pylon if possible, which will be confirmed at the DNO's detailed design stage. If the existing PL35 pylon does not have the required capacity and in a suitable condition, a new SEP pylon will be required. In this instance, the location for the pylon is at the field boundary with only the temporary work area extending onto the beet pad to minimise permanent farming impact.				
9-4.25	Concern about structural damage resulting from construction of haul road on old timber property in Cotton (address provided by respondent), and request for mitigation from structural damage due to vibration	<p>National Grid acknowledges the concern raised regarding potential structural impacts on the respondent's timber-framed property in Cotton due to vibration from the construction of the haul road. The Environmental Statement (ES) includes assessment of potential vibration impacts along the haul road corridor, including consideration of sensitive receptors such as heritage buildings and timber structures.</p> <p>Based on the predicted construction activities in this location and the separation distance to nearby properties, the potential for vibration-induced structural damage to the property is assessed as low. However, National Grid recognises the specific sensitivity of older timber buildings and will ensure that vibration controls are implemented in accordance with the Outline Code of Construction Practice (CoCP) (document reference 7.2), including construction method selection and, where appropriate, site-specific monitoring. These</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		controls are designed to prevent damage to nearby properties and will be secured through the final CoCP and contractor management processes.				
9-4.26	Concern about the impact of Pylon RG162 and adjacent pylons on respondents property on Mill Lane, Creeting St Peter (address provided by respondent) (e.g. impact on property value)	<p>If a property owner has concerns over how the Project may impact their property, they should contact the Project lands team.</p> <p>Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.</p> <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD</p> <p>At present there is no legislation that requires National Grid to compensate homeowners for the loss of a view or perceived impacts on property prices.</p>			X	
9-4.27	Concern about the impact of the Project on access to respondents property on Mill Lane (address provided by respondent) during the construction period if Mill Lane is blocked westwards towards Stowmarket by snow or heavy rain (e.g. as the road eastwards on Mill Lane is invariably blocked during such periods by water draining from the fields)	The site Project team would monitor the impact of weather on site access roads and construction routes, any significant impact would result in a review of the local requirements and adjustments to site access made, this may include a temporary stop during significant weather events or mitigation to allow continued use.			X	
9-4.28	Suggest that commitments to socio-economic benefits for Suffolk from the Project should be set out in a deed of obligation or similarly binding	National Grid is committed to working with local suppliers, facilitated by supporting forums (such as the local Chambers), on electricity industry skills and			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>agreement, including the following commitments:</p> <ul style="list-style-type: none"> - A requirement for project contractors to employ and train Suffolk residents; - A requirement that Suffolk businesses are made fully aware of contract opportunities and are given support to build the capacity needed to bid successfully for contracts, in a similar way to support for the local supply chain provided by the Sizewell C Supply Chain project. The support could be facilitated through the Suffolk Supply Chain project, which uses the learning from the Sizewell C Supply Chain project and is managed by Suffolk Chamber in partnership with Suffolk County Council; - A requirement to set up a community fund to mitigate the impact of the project on communities and businesses within its vicinity 	<p>workforce planning. National Grid is also committed to providing a coordinated regional approach to jobs and skills opportunities. This commitment is broader than the individual project and separate to any commitments under the proposed development consent order for this Project. The socio-economic effects of the project are assessed in Chapter 15: Socio-Economics, Recreation and Tourism of the Environmental Statement (ES) (document reference 6.15). Post construction job opportunities are limited given the nature of the development. However, we will still work with Local Authorities (including facilitating local partners) to understand what is important to them around skills and employment to ensure we leave a lasting positive legacy in the communities where we operate.</p> <p>The socio-economic effects of the project are assessed in Chapter 15: Socio-Economics, Recreation and Tourism of the ES (document reference 6.15). Post construction job opportunities are limited given the nature of the development. However, we will still work with Local Authorities (including facilitating local partners) to understand what is important to them around skills and employment to ensure we leave a lasting positive legacy in the communities where we operate.</p> <p>With regards to a delivery mechanism, the above measures will be delivered as part of our community</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		benefit package, which will look at both local and regional initiatives. This will be delivered outside the development consent process and is not a material consideration in the decision on the proposed Project or a matter to be secured as part of the Development Consent Order (DCO), as per the Community Funds for Transmission Infrastructure: Guidance (DESNZ, 2025).				
Construction Impacts						
9-4.29	Concern about disruption from construction	<p>An Environmental Statement (ES) (document reference: Volume 6: Environmental Statement) has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 ('the Infrastructure EIA Regulations'). The ES identifies and assesses the likely significant effects on the environment resulting from the construction of the Project and recommends appropriate mitigation to reduce effects.</p> <p>Environmental mitigation measures have been defined within each environmental topic chapter and set out in relevant management documents submitted with the Development Consent Order (DCO) application, including the Outline Code of Construction Practice (CoCP) (document reference 7.2), the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), the Outline Landscape and Ecological Management Plan (LEMP) (document</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		reference 7.4) and the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (WSI) (document reference 7.5).				
9-4.30	Concern about impact on traffic levels in local area caused by construction works	<p>As part of the pre-application process National Grid has engaged with the relevant authorities, their highways teams and National Highways to understand and gain information on their road networks. This information has been used to inform and guide the drafting of the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) for the Project that accompanies the Development Consent Order (DCO) application. The Outline CTMP provides details about the proposed construction access strategy that has been developed to manage the impact of construction vehicles on the Public Highway and sensitive receptors, using a combination of more suitable Local Road Network connections from the Strategic Road Network, and temporary haul roads for access along the proposed alignment. The Outline CTMP highlight any measures to reduce impacts to other road users from construction traffic related to the Project.</p> <p>Environmental Statement (ES) Chapter 16: Traffic and Transport (document reference 6.16) includes the assessment of the potential impacts of the Project including changes in traffic flow, delays, road safety and impact on Walking, Cycling and Horse-Riding</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>modes on the roads along the Primary Access Routes located in the Local Road Network.</p> <p>The Transport Assessment (document reference 7.11), submitted with the Development Consent Order (DCO) application, examines capacity, safety, and operational efficiency of the network, identifying potential bottlenecks or safety concerns.</p> <p>Within the assessment of the ES and the Transport Assessment, mitigation measures are proposed to minimise likely adverse impacts</p>				
9-4.31	Concern about noise and other issues resulting from construction (e.g. mud on roads, dust)	<p>An Environmental Statement (ES) (document reference: Volume 6: Environmental Statement) has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 ('the Infrastructure EIA Regulations'). The ES identifies and assesses the likely significant effects on the environment resulting from the construction of the Project and recommends appropriate mitigation to reduce effects.</p> <p>Specifically, a Construction Noise and Vibration Impact Assessment has been undertaken and is reported in Environmental Statement (ES) Chapter 14: Noise and Vibration (document reference 6.14). During construction, mitigation would be implemented to reduce noise and vibration impacts from construction activities and increased road traffic and vibration due to</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>additional movement from construction traffic. Mitigation measures are outlined in ES Chapter 14: Noise and Vibration (document reference 6.14) and the Outline Code of Construction Practice (CoCP) (document reference 7.2). This includes the assumption that construction working would be undertaken within the agreed working hours, construction traffic would be managed through the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), haul roads would be well maintained, and Best Practicable Means (BPM) would be employed to reduce construction noise and vibration.</p> <p>ES Chapter 7: Air Quality (document reference 6.7) presents an assessment of the potential impacts from the construction of the Project on air quality. During construction, mitigation would be implemented to reduce the impact of dust generation and construction vehicle emissions. Mitigation measures are outlined in ES Chapter 7: Air Quality (document reference 6.7), and the Outline CoCP (document reference 7.2). The dust-emitting activities can be greatly reduced or eliminated by applying the site-specific mitigation measures (see Outline CoCP) for high risk sites following measures recommendations in the Institute of Air Quality Management (IAQM) guidance (IAQM, 2024). The IAQM guidance states that with the</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>implementation of effective site-specific mitigation measures, the environmental effect would not be significant in most cases.</p> <p>In addition, National Grid has prepared an Outline CoCP (document reference 7.2). The Outline CoCP sets out the required mitigation measures and environmental commitments that will be implemented during the construction phase of the Project to avoid or reduce potential effects of the Project on the environment.</p>				
9-4.32	Concern that local road infrastructure is not suitable for heavy construction vehicles and machinery	<p>The Construction Access Strategy has been developed to manage the impact of construction vehicles on the Public Highway and sensitive receptors, using a combination of more suitable Local Road Network connections from the Strategic Road Network, and temporary haul roads for access along the alignment. Further details of the Construction Routing Strategy are included within the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).</p> <p>The Project also requires the transportation of Abnormal Indivisible Loads (AIL). National Grid is developing specific routing proposals for AIL movements and is developing these through engagement with the relevant stakeholders including the Local Highway Authorities and National Highways. An AIL routing strategy containing details about these</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		movements are submitted in support of the Development Consent Order (DCO) application.				
9-4.33	Criticism that the two traffic count figures used as a baseline for the B1070 have a significant difference for the same road	The two figures represent data collected from different locations along the same road. The discrepancy arises because one of the sites reflects traffic at the access to and from the A12 northbound carriageway, capturing traffic flows associated with this specific junction, while the other figure represents general through-traffic at a separate point closer to Holton St Mary.			X	
9-4.34	Concern that respondent has a telephone line which runs along the side of their drive which will need to be put underground, and that whilst work is carried out to bury the line, the respondent will have no means to access their property	Third party utility providers would undertake any mitigations work in liaison with any private property owners and agree a management plan to ensure both access disruption is minimised whilst ensuring works can be safely undertaken.			X	
9-4.35	Criticism that National Grid proposed to build a support centre where a tree lined lane is situated with an oak tree which will have a Tree Preservation Order (TPO)	National Grid has noted the respondent's feedback, the highways laydown area on the lane stated is not anticipated to impact the oak tree mentioned. We have undertaken an Environmental Impact Assessment (EIA) to assess the potential impact of the Project, including on trees and hedgerows and this has identified any need for additional mitigation.			X	
9-4.36	Concern that the Project will exacerbate flooding issues in the areas around Bramford, Somersham, and Needham Market (which were badly affected	The impacts of the Project on flooding and drainage (during its construction and operation) have been appraised within the Flood Risk Assessment (FRA) (document reference 7.9) that has been submitted with	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	by flooding in the previous winter; e.g. due to ground compaction during construction)	the Development Consent Order (DCO) application. The FRA (document reference 7.9) assesses flood risks from the River Gipping, the main river catchment local to Bramford and Needham Market, as well as surface and groundwater sources and identifies measures and controls to manage rainfall runoff from the working areas during construction and to ensure that existing land drainage systems are not degraded. Commitments have also been made within the Outline Code of Construction Practice (CoCP) (document reference 7.2) to the proper handling and storage of soils during construction to avoid detriment to soil structure and land drainage. These measures and controls will be implemented to prevent increases in flood risk.				
9-4.37	Concern that the Project at Wickham Skeith is in an area that is liable to flooding and includes the area around Eastlands Farm, which is noted by National Grid to be a flood area / Concern that the Project will increase flooding in Wickham Skeith (in particular Finningham and Thornham)	National Grid has completed an Environmental Impact Assessment (EIA) for the Project. The results are presented in the Environmental Statement (ES) that accompanies the Development Consent Order (DCO) application. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation (and maintenance) of the Project and recommends appropriate mitigation measures (in consultation with relevant stakeholders) to reduce potential effects. A Flood Risk Assessment (FRA) (document reference 7.9) has been prepared for the Project to support and	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>inform the EIA. The FRA describes the measures that will be put in place to manage construction and operational flood and land drainage impacts to ensure the development is safe from flooding over its lifetime and that off-site flood risk is not increased.</p> <p>ES Chapter 12: Hydrology, Land Drainage and Flood Risk (document reference 6.12) includes consideration of potential impacts on flood risk from all relevant sources, including the River Dove and key surface water flood risk areas in Wickham Skeith, including both temporary and permanent impacts, taking account of the effects of climate change over the Project's design life.</p>				
9-4.38	<p>Criticism regarding consideration of flooding in the vicinity of Gislingham (comment made in relation to the Environmental Impact Report (EIR)) / Criticism that section 12.6.57 of the EIR states that "the Recorded Flood Outline dataset (Environment Agency, 2022c) shows no areas within Section B that have previously been flooded" but this is incorrect as the village regularly sees significant flooding with Mellis Road and Burgate Road to the north of the village, Thornham Road to the east and Finningham Road to the south which often become impassable along with sections of the B1113</p>	<p>The national data set of recorded flood outlines from the Environment Agency, referenced in the Preliminary Environmental Information Report (PEIR), has been supplemented with more local data sources, collected for example from the Lead Local Flood Authorities, and the consultation feedback that has been received, and this information has been used to inform the Flood Risk Assessment (FRA) (document reference 7.9) and Environmental Statement (ES) Chapter 12: Hydrology, Land Drainage and Flood Risk (document reference 6.12). National Grid has sought to reduce the impact on areas prone to flooding through the routeing and siting of infrastructure to avoid Flood Zones where practicable, which has largely been achieved for the</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	through Finningham at the crossing of the River Dove)	River Dove floodplain near Gislingham. Where avoidance has not been practicable (for proposed pylon RG118), the FRA (document reference 7.9) identifies the measures necessary to ensure the safety of the Project from flooding over its lifetime, and that flood risk is not increased during the construction or operation of the Project.				
9-4.39	Concern that National Grid's plans to use underground cables instead of the existing 132 kV overhead lines between Middle Wood Offton and Bramford will impact St Mary's Church, Offton (which is a Grade I listed building) / Request for further information regarding the use of underground cables in this area	<p>National Grid is proposing a new 400 kV overhead line from Norwich Main Substation to Bramford Substation. To facilitate the 400 kV overhead line, it must cross the route of some existing 132 kV overhead lines. To maintain statutory electrical clearances these existing 132 kV assets must be diverted or underground. We are proposing the undergrounding and diverting of the existing assets to facilitate the Project.</p> <p>In this particular location the existing 132 kV (known as the PI route) is proposed to be underground from PI35 (located to the north of Offton) all the way to the existing terminal pylon PI15 (located north of Bramford Substation).</p> <p>The undergrounding of the 132 kV line will likely introduce temporary plant noise and movement into the setting of the church during the construction phase of the Project. Standard construction mitigation would be adopted as detailed in the Outline Code of Construction Practice (CoCP) (document reference 7.2). Changes to</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		the setting would be temporary and would be reversed once the construction phase is completed. Therefore, there is likely to be a temporary minor adverse significance of effect on the asset (not significant). There will be no change to the setting of the church during the operational phase of the Project.				
9-4.40	Concern that remedial work for the Project would be necessary on much of the (farm) land (given that drainage measures are essential and expensive on the type of clay-land), and suggest that the sums being offered for this scale of disruption are not sufficient (for farmers)	Information on how landowners are compensated for the construction phase of the Project and any permanent apparatus installed on land can be found in the National Grid Land Rights Strategy document, which is available on the Project website. Landowners would be compensated in line with the compensation code, which should cover the costs incurred during construction.	X			
9-4.41	Concern about noise and light pollution in dark skies area from construction work between Pylons RG97 and RG119 (e.g. given that flood lights will be needed to light the construction which will visually impact the dark night skies with light pollution)	National Grid has undertaken an Environmental Impact Assessment (EIA) which assesses potential construction impacts of the Project and is presented in the Environment Statement (ES) (document reference Volume 6: Environment Statement). Chapter 14: Noise and Vibration of the ES (document reference 6.14) presents the assessment of construction noise. This chapter includes details about the level of impact created and the mitigation proposed in relation to the Project. The contractor is required to employ best practicable means to reduce the potential effects of construction noise. With appropriate noise	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>mitigation, significant adverse effects from construction noise are not expected at this location.</p> <p>Exterior and interior lighting would be provided at the substation sites to allow for safe movement and the operation of equipment. All lighting would be designed in accordance with the appropriate design standards and expected to include the use of motion detection triggered and directional lighting to reduce the potential for effects of concern. Further details are provided in ES Chapter 4: Project Description (document reference 6.4). Embedded mitigation details relating to lighting are presented in the Outline Code of Construction Practice (CoCP) (document reference 7.2).</p> <p>Any operational lighting associated with the permanent assets such as Cable Sealing End (CSE) compounds and the East Anglia Connection Node (EACN) substation have been considered within the EIA. Night-time effects on designated landscapes, landscape character and visual amenity during construction and operation are assessed in ES Chapter 13: Landscape and Visual (document reference 6.13).</p>				
9-4.42	The highways and transport effects arising, including the increased use of Suffolk's principal and local road network by construction phase HGV's / LGV's, the requirement for temporary diversion of traffic due to road closures and route diversions are likely to significantly impact on	National Grid notes the respondent's feedback. The impact due to the expected increase in traffic volumes during the construction phase is assessed in Chapter 16: Traffic and Transport (document reference 6.16) of the Environmental Statement (ES) and the Transport	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	Suffolk Constabulary's (SC's) service / operational capacity and resources	<p>Assessment (document reference 7.11) submitted with the Development Consent Order (DCO).</p> <p>The assessments recommend potential mitigation measures required to minimise the negative impacts of traffic on local communities, with a special focus in sensitive areas like residential zones, school areas, and near community facilities.</p> <p>The Transport Assessment (document reference 7.11) includes junction capacity assessments for several junctions within the Strategic Road Network, Major Road Network and Local Road Network in Suffolk.</p> <p>The junction capacity assessments show that the majority of the junctions would operate within capacity during the worst-case peak. Where this is not the case, temporary mitigation has been proposed to improve the operation of the junction and reduce the likely impact on road users.</p> <p>Therefore, and considering that the likely impact of the Project's construction traffic would be temporary and short term, it is considered that the Project would not have a substantial impact upon the operation of the road network.</p> <p>National Grid is in discussion with Suffolk Constabulary regarding the potential impact of the Project on Suffolk Constabulary's operational capacity and resources.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-4.43	Concern that a mains gas line will need to be relocated for the Project (near Cotton)	<p>To facilitate the Project National Grid does not anticipate a diversion to the National Gas owned gas main near Cotton,</p> <p>There is the potential, based on induced currents from the 400 kV overhead line, that alternating current mitigation measures may need to be installed to the Yelverton to Stowmarket ferrous pipeline operated by National Gas at Cotton. The scope and extent of such mitigation measures will be dependent on the final design arrangements of the Project which will continue to evolve within the parameters of confirmed Limits of Deviation. Factors including crossing angle and clearance height, length of parallelism, site specific soil resistivity etc combine to define the requirement for mitigation. The mitigation itself is typically achieved by the installation, alongside the ferrous pipeline (in an area which is likely to have been previously disturbed during construction), of additional earthing which extends away from the crossing point. Consultation between National Grid and the relevant utility provider will confirm the requirement for installed mitigation, based on the final 400 kV design arrangements, which will be implemented by the relevant utility provider under their existing utility operation and maintenance provisions.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-4.44	Concern that the haul roads built on agricultural land will result in greater risk of flooding in Gislingham	A Flood Risk Assessment (FRA) (document reference 7.9) has been produced and submitted with the Development Consent Order (DCO) application. The FRA describes the measures that will be put in place to manage construction and operational flood and land drainage impacts to ensure the development is safe from flooding over its lifetime and that off-site flood risk is not increased. Haul roads built on agricultural land will be served by linear drainage features that capture rainfall runoff and convey it to attenuation ponds prior to infiltration to ground (where conditions are suitable) or discharge to local watercourses. Following completion of the works, the land will be reinstated. These measures will ensure no increase in flood risk to neighbouring lands, including at Gislingham.	X		X	
9-4.45	Concern relating to construction traffic using the route from Gislingham to Burgate Road which already floods from all directions, is single track, and is not suited for heavy construction vehicles	<p>Details of the proposed Primary Access Routes for construction of Norwich to Tilbury were shown on the Construction Access Plans presented during the 2024 statutory consultation. It is not proposed for Burgate Road to be used as a Primary Access Route for construction. For this section of temporary haul road, the Primary Access Routes are from the A143 to the north, and the B1113 and Wickham Road from the south.</p> <p>Details of the proposed haul road and access arrangements are provided in the Outline Construction</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Traffic Management Plan (CTMP) (Document Reference 7.3)				
9-4.46	The proposed works around Bramford Substation and on the 400 kV overhead lines are within the East Anglia Three (EA3) Order limits on land owned by the respondent. It is imperative that the works around Bramford substation are designed to ensure there is no impact on East Anglia Three Limited (EATL). Access to the EATL converter station must be maintained at all times during both the construction and operational phases of the proposed works. National Grid should not restrict or interfere with EATL assets during the proposed works	National Grid has been and would continue to collaborate with East Anglia Three Limited on proposed interfaces to ensure that access remains to the East Anglia Three Limited converter station during construction and operation.			X	
9-4.47	Access and maintenance rights by East Anglia Three Limited (EATL) to the Sustainable Drainage System (SuDS) Pond and surrounding land forming part of the drainage systems of the substation must be maintained at all times. Temporary surface water management measures must be put in place by National Grid to prevent waterlogging or interference with the existing drainage systems and the SuDS Pond during the proposed works. National Grid must also address and resolve any issues relating to the run-off from construction activities undertaken in connection with the works.	National Grid has engaged with East Anglia Three Limited on the Sustainable Drainage Systems (SuDS) pond to design out potential clash with the East Anglia Three SuDS pond and will ensure the drainage systems of our own works complying with applicable laws on protected species within the vicinity of proposed works. The Project impacts from run-off will be managed during construction by competent contractors.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	National Grid should also follow any statutory requirements that apply to any protected species that are present in the SuDS Pond and throughout the areas of landscaping including woodland, hedgerows and meadow grassland					
9-4.48	Protective measures should be installed at the East Anglia Three Limited (EATL) cable crossings within the boundary of National Grid's works, if requested by EATL / ScottishPower Renewables (UK) Limited (SPRUKL). These protective measures should also consider National Grid's landscaping proposals near the cables. National Grid should not restrict or interfere with the installation or operation of EATL's cable connections	National Grid would continue collaborating with East Anglia Three Limited to determine if and where additional protective measures are required for cable crossings. Such measures would be holistic in design encompassing all requirements in the area to progress safely and with consideration to landscaping proposals. National Grid would also continue to engage with the East Anglia Three Limited team during construction to ensure installation and operational works of both Norwich to Tilbury and East Anglia Three Limited projects.			X	
9-4.49	Consideration is needed to ensure that any landscaping installed by National Grid does not undermine East Anglia Three Limited's (EATLs) landscape management plans, requirements and strategies imposed by the Development Consent Order (DCO). This includes proper consideration for the removal and subsequent reinstatement of landscaping and woodland to facilitate the proposed works, if required. This includes due	During the preparation and finalisation of mitigation proposals for the Project, and the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4), consideration has been given to other schemes, such as the East Anglia Three Limited's landscape management plans and the requirements and strategies imposed by the associated Development Consent Order (DCO). Mitigation measures are described within each environmental chapter. The Outline Landscape and			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	consideration of protected species and other ecological enhancements that may be required	<p>Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Code of Construction Practice (CoCP) (document reference 7.2) submitted with the DCO application contain a list of relevant good practice measures to avoid or reduce impacts. These documents will provide commitments to reduce construction impacts together with a framework for detailed management plans to be prepared at detailed design stage in order to reduce and mitigate potential impacts and / or disruptions that may arise during the construction phase.</p> <p>National Grid has engaged with Scottish Power Renewables to identify and design out unmitigable conflicts. Where interfaces between the two projects occur, these will be managed during the construction phase.</p>				
9-4.50	Concern that the Project will increase flood risk to Burgate Little Green / Burgate / Wortham which is already prone to flooding (e.g. with some residents still living in temporary accommodation due to flooding of home in 2023/2024; as a result of disruption to the natural drainage of surrounding farmland, from undergrounding of the UK Power Network to the east of Burgate, and damage to verges and ditches caused by HGVs and construction traffic)	The Project has secured a suite of controls that will prevent disruption of existing land drainage routes (or pre-provide alternatives where this cannot be avoided) as well as to capture and manage surface water runoff from land within the draft Order Limits. These measures are described in the Outline Code of Construction Practice (CoCP) (document reference 7.2) and have informed the Flood Risk Assessment (FRA) (document reference 7.9) that has been produced. The Project has collected local flood risk data to inform the FRA has engaged with Suffolk County Council, the lead	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		local flood authority for the Burgate Little Green area, to gain local knowledge and shape the control and mitigation measures required to prevent flood risk impacts.				
9-4.51	Concern that heavy construction traffic as part of the Project will result in deterioration in road conditions exacerbating safety risks and imposing financial burden on the local authority for repairs and maintenance (e.g. at Offton and Willisham)	The Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) includes details of proposed pre-condition and post-condition surveys and included allowance for remediation works where changes to the condition have occurred.			X	
9-4.52	Concern about the replacement of the existing UK Power Networks (UKPN) connection with underground cables to the east of Mellis (adjacent to Pylons RG101 to RG109) proposed as part of the Project due to impact on soil stability / vibrations from construction activities / impact on land drainage (e.g. therefore impact on heritage buildings and flooding), and / or suggest that the proposed underground cables for the existing UKPN connection should be within the same footprint as the overhead line for the Project	<p>UK Power Network 132 kV underground cable trenching is of a significantly smaller scale and impact than that of 400 kV underground cable trenching and so the impacts across vibrations and soil stability are much lesser. Good practice soil handling measures are detailed in Appendix C: Outline Soil Resource Plan of the Outline Code of Construction Practice (CoCP) (document reference 7.2).</p> <p>In addition, a Construction Vibration Assessment has been conducted as part of Environmental Statement (ES) Chapter 14: Noise and Vibration (document reference 6.14) and submitted with the Development Consent Order (DCO) application. No buildings/structures have been identified in this area as being in close proximity to potential works with the potential to result in high vibration levels, without mitigation. This will be reviewed by the contractor as</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>part of the specific noise and vibration assessments and specific measures will be put in place to manage and reduce vibration levels.</p> <p>The potential for undergrounding works to impact on land drainage and flood risk are assessed within the Flood Risk Assessment (document reference 7.9) and measures to mitigate effects are described within and secured through inclusion in the Outline CoCP (document reference 7.2).</p> <p>The works to the UK Power Network 132 kV PKF overhead line underground cable diversion must be undertaken when the overhead line circuit is live and so it isn't preferred from a health and safety standpoint to construct under the overhead line where avoidable. Instead the proposed underground cable diversion follows field boundaries where reasonable to mitigate land use impacts.</p> <p>National Grid has undertaken a detailed Environmental Impact Assessment (EIA) for the Project in accordance with the Infrastructure Planning (Environmental Impact Assessment) Regulations 2017. The results are presented in the Environmental Statement (ES), including Chapter 11: Historic Environment (document reference 6.11), supported by ES Appendix 11.2: Historic Environment Assessment Tables and ES</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1).</p> <p>The assessment of potential heritage impacts from all aspects of the Project, including the proposed underground cables in the vicinity of Mellis, has been carried out in line with established guidance and legislation, including the National Planning Policy Framework (NPPF), the Planning (Listed Buildings and Conservation Areas) Act 1990, and relevant best practice from Historic England. The methodology has been discussed and agreed with key stakeholders, including Historic England and the relevant Local Planning Authorities.</p> <p>Where underground works are proposed, including trenching and associated construction activity, the potential for impact on buried archaeological remains and the setting of nearby designated and non-designated heritage assets has been considered. Where assets of archaeological interest are present, appropriate mitigation, such as archaeological monitoring or investigation, is proposed in line with the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5). Further safeguards are outlined in the Outline Code of Construction Practice (document reference 7.2).</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Any potential impacts from vibration or ground disturbance during construction will be managed through appropriate construction methodologies and mitigation measures, as set out in the ES. We are confident that the assessment of heritage assets in this area has been thorough and proportionate.				
9-4.53	Concern that the Old Rectory, Burgate and many local business including breweries, distilleries, farms, and homes draw water from the local aquifer that sits directly underneath the construction area of the Project. Concern that if this water source is contaminated, then the respondent will be forced to undertake extensive and expensive works to bring mains water to the property and to amend the plumbing to accommodate the new supply. This is an expense which would only incur if the works associated with the Project proceed, so request that National Grid cover all associated costs and compensate the respondent for financial loss, distress, and inconvenience if this occurs	<p>National Grid is working with Local Highway Authorities and National Highways as we develop access proposals for the Project. Our assessments have included visibility and highway geometry.</p> <p>The Primary Access Route (PAR) to pylon RG125 via Wickham Lane is selected as the preferred route. Alternative routes were discounted through assessment and identifications of constraints and requirements. Mitigation measures for road safety on the PARs have been developed where required. This includes temporary traffic management measures such as speed limit reductions, temporary signals, and/or passing places. Mitigation measures would continue to be developed further through design development.</p> <p>As part of the design of the access proposals we have agreed specific prescribed routes, PARs, which the contractor would be required to use. The access from Daisy Green Lane is for the maintenance access and is not defined as a PAR.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-4.54	Concern about access to Pylons RG125 via Wickham Lane and RG127 via Daisy Green Lane (e.g. lack of passing places, unsuitability of roads for HGVs, impact of construction traffic on residents, lack of crossing points and footways)	National Grid has engaged with Network Rail throughout the design process to ensure that during delivery rail operations remain operable and efficient.			X	
9-4.55	Suggest that there should be a speed limit for vehicles travelling to and from the Project of 20mph as vehicles pass Holton St Mary, and a speed limit of 10mph as vehicles approach and pass through the junction of Hadleigh Road (the B1070 leading to Raydon) and Sandpits Lane	<p>National Grid has carefully considered the feedback received during the statutory consultation for this Primary Access Route for construction vehicles and has identified an opportunity to utilise an offline temporary haul road located east of Holton St Mary from the B1070 to the construction corridor. It is proposed that this route will act as a bypass for Holton St Mary during construction.</p> <p>Through this process, National Grid has also considered alternative routes for this bypass, including the use of the historic railway alignment. These alternatives were discounted through assessment and identification of constraints and requirements.</p>			X	X
9-4.56	Concern about access to Holton St Mary during construction (e.g. will the roads be passable after construction working hours; how will walking access be impacted) and suggest that traffic lights are provided across haul road to existing paths	National Grid has carefully considered the feedback received during the statutory consultation for this Primary Access Route for construction vehicles and has identified an opportunity to utilise an offline temporary haul road located east of Holton St Mary from the B1070 to the construction corridor. It is proposed that this route will act as a bypass for Holton St Mary during construction.	X			X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Through this process, National Grid has also considered alternative routes for this bypass, including the use of the historic railway alignment. These alternatives were discounted through assessment and identification of constraints and requirements.				
9-4.57	Concern about the impact of the Project on existing overhead lines and underground water pipelines along Sandpits Lane, and suggest that mitigation measures should be considered / suggest that alternative routes for these or supplies should be provided	Utilities information has been mapped for the Project, and these assets have been avoided as far as practicable. Where unavoidable, National Grid and their contractors will work with the asset owners to ensure that services remain unaffected. In some cases this may result in diversions, particularly for overhead lines.	X			
9-4.58	Suggest that construction traffic for the Project should only be allowed on two lane roads in this Section, and suggest that no construction traffic should pass through Burgate and instead should be from Mellis Road (e.g. to mitigate safety risk and impact on trees and hedgerows)	National Grid has worked with the local highway authorities and National Highways as we develop our access proposals for the Project. As part of the design of the access proposals we have agreed specific prescribed routes, known as Primary Access Routes (PARs) which the contractor would be required to use. Construction would not pass through Burgate and would not use Mellis Road as it is not an identified PAR for the Project.			X	
9-4.59	Criticism that the mitigations in 5.3.8 of the Preliminary Environmental Information Report (PEIR) / Criticism that controlling speed on haul roads will not make much difference / Concern that National Grid standard procedures are insufficient	National Grid has undertaken an Environmental Impact Assessment (EIA) which assesses the potential construction impacts of the Project and is presented in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement). Details			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	to control its construction teams and contractors to the level required to adequately mitigate these issues	on relevant mitigation measures to reduce effects are noted in relevant topic chapters of the ES and management documents such as Code of Construction Practice (CoCP) (document reference 7.2) and Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).				
9-4.60	In relation to climate change resilience, suggest that the Project should avoid areas vulnerable to coastal change in Suffolk, including inundation and surface water flooding which would have an adverse impact on the highway network and access to the Project	The Projects design and siting of infrastructure has avoided areas that are vulnerable to coastal change in Suffolk and has been informed by a Flood Risk Assessment (document reference 7.9) which has appraised risks from a range of sources, including surface water, rivers (with tidal influence where applicable). The Flood Risk Assessment (document reference 7.9) has also assessed the predicted effects of climate change on river flows and rainfall intensity to ensure the Project is resilient over its lifetime, including the surface water drainage systems that will serve the Project.		X		
9-4.61	Concern that construction for the Project will reduce the availability of car parking spaces at Hawkins Farm Barn, Mendlesham Green (e.g. due to the presence of construction vehicles and the need to store materials and equipment), and that changes to road layouts and closures will impact existing parking arrangements	National Grid acknowledges the respondent's feedback but Hawkins Farm Barn is located approximately 800 m away from the Project. Additionally Mendlesham Green Road that Hawkins Farm Barn is on, has not been identified as a Primary Access Route for the Project. Therefore, the Project would not impact on existing parking arrangements at Hawkins Farm Barn.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Consultation						
9-4.62	Comment supportive of engagement that has taken place / feel listened to	National Grid notes the respondent's feedback.			X	
9-4.63	Comment supportive of the Project in this section	National Grid notes the respondent's feedback.			X	
9-4.64	Criticism of consultation specific to this section	National Grid notes the respondent's feedback.	X		X	
9-4.65	Criticism that the Project is too close to existing 400 kV infrastructure for the map to not show this	National Grid have a filter on our interactive map that shows existing overhead infrastructure. This can be toggled on or off. We also had existing overhead lines shown on our 3D visualisation tool that was available at our public information events.			X	
9-4.66	Criticism that the construction work on the B1113 for a substation is an at risk investment which indicates National Grid's pre-determined intent to run the Project at this location / Suggest that this should not be considered in deciding the outcome for the Project	National Grid has not started any construction work for the Project. National Grid is carrying out several other developments in the area that are undergoing construction work such as the Bramford to Twinstead project and works relating to the North Falls and Five Estuaries projects. These projects are being developed separately to our proposals for Norwich to Tilbury and are part of the wider Great Grid Upgrade to connect new sources of renewable energy into the grid.			X	
9-4.67	Criticism of the Project between Shelfhanger and Finningham, which has 16 directional changes in addition to a large curve in the route to avoid	The Holford Rules provide guidance to the establishment of an overhead line route rather than absolute parameters. A summary of the Holford Rules			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	Roydon and Diss (e.g. in contradiction with the Holford Rules)	is provided within Appendix I22 of this report. This is emphasised by the inclusion of phrasing such as ‘..if possible..’ in Rule 1 and ‘..other things being equal..’ in Rule 3. A balanced decision is therefore made about routeing decisions to seek to reduce effects taking into consideration the presence of homes, environmental features and other constraints. In this location National Grid has considered a variety of route options encompassing alternative routes to the east of Diss, further to the west of the Project alignment as well as a variety of localised amendments. The basis for selection of the route is as out in the 2023, 2024 Design Development Reports (available on the Project website) and the 2025 Design Development Report (document reference 5.15) which also sets out the decision making that leads to the Project progressing on the basis of overhead line. In the absence of new information or the identification of other factors no change in response to this feedback specifically is proposed, with the project progressing in a manner consistent with the Holford Rules to the extent possible due to the local circumstances. A summary of the Holford Rules is provided within Appendix I22 of this report.				
9-4.68	Criticism of the Project's additional 'V' shape construction to facilitate access in and out of	The Holford Rules provide guidance to the establishment of an overhead line route rather than absolute parameters. A summary of the Holford Rules			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	Bramford (e.g. in contradiction with the Holford Rules)	is provided within Appendix I22 of this report. This is emphasised by the inclusion of phrasing such as ‘..if possible..’ in Rule 1 and ‘..other things being equal..’ in Rule 3. A balanced decision is therefore made about routeing decisions to seek to reduce effects taking into consideration the presence of homes, environmental features and other constraints. In this location National Grid has considered a variety of alternative alignments to meet the Project need, as set out in the 2022 Corridor and Preliminary Routeing and Siting Study (CPRSS) and the 2023, 2024 Design Development Reports (available on the Project website) and the 2025 Design Development Report (document reference 5.15) but considered them less preferred. The ‘V’ shape provides the new reinforcement that best meets the duties and policies that guide project development and within which National Grid must operate. The ‘V’ shape reflects the location of existing assets to which the Project needs to connect as well as the location of new connections (such as the East Anglia Connection Node (EACN) substation) and constraints to route development. In the absence of new information or the identification of other factors no change in response to this feedback is proposed.				
9-4.69	Scoping and Assessment Work is required to identify the likely effects (impacts) of Abnormal Indivisible Loads (AIL's) Mobile Cranes and	National Grid notes the respondent's feedback. The Environmental Statement (ES) Chapter 16: Traffic and Transport (document reference 6.16) and the Transport	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	Engineering Machinery, HGV traffic generation, the construction workforce and plant / machinery / material storage on Suffolk Constabulary's (SC) operations, and this needs to be included within the Environmental Statement (ES) or in an accompanying Technical Assessment	<p>Assessment (document reference 7.11) submitted with the Development Consent Order (DCO) application assess the impact of the expected increase in traffic volumes during the construction phase.</p> <p>National Grid has engaged with Suffolk Constabulary on the proposed Abnormal Indivisible Loads (AiL) movements and routes. Their inputs have led to amending AiL routes and developing an AiL movement strategy outlined within the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).</p>				
9-4.70	Scheme Design, Mitigation and Management Measures are required to avoid, reduce and mitigate for the likely impact on Suffolk Constabulary's operations during the construction phase of the development, and this needs to be included within the Environmental Statement (ES) or in an accompanying Technical Assessment	<p>An Environmental Statement (ES) (document reference Volume 6: Environmental Statement) has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 ('the Infrastructure EIA Regulations'). The ES identifies and assesses the likely significant effects on the environment resulting from the construction of the Project and recommends appropriate mitigation to reduce effects.</p> <p>Environmental mitigation measures for impacts on traffic and transportation (where relevant to construction) are presented in the Outline Code of Construction Practice (CoCP) (document reference 7.2), and the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).</p>	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		National Grid has engaged with Suffolk Constabulary on the proposed Primary Access Routes (PAR) and required mitigations which is all outlined within the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3)				
9-4.71	Suitable Development Consent Order (DCO) Requirements and / or Heads of Terms of Agreement via a Section 106 planning obligation are required to secure funding and new facilities provision, as necessary, to increase the capacity and maintain service levels delivered by Suffolk Constabulary's (SC) estate, vehicle fleet and staff assets to mitigate and manage the construction phase impacts arising, and this needs to be included within the Environmental Statement (ES) or in an accompanying Technical Assessment	<p>National Grid is willing to engage in further discussions with Suffolk Constabulary to establish the need for securing mitigation measures arising from the construction phase (this would be in relation to the safe policing of abnormal loads through the county and policing demands arising from the presence of workers involved in the Project) and if necessary for this to be included, assessed and secured in the Development Consent Order (DCO). This will then inform whether any DCO requirement or planning obligation is necessary and would need to meet the tests set out in NPS EN-1.</p> <p>National Grid proposes to record the outcome of these discussions in a Statement of Common Ground (SoCG) between Suffolk Constabulary and National Grid.</p>	X			
9-4.72	Suitable Terms of Reference, Membership and a Communications Strategy for a Transport, Community Safety and Cohesion Working Group are required to inform and assist the management of the construction phase of the Project, enabling a coordinated response from Suffolk Constabulary	Discussions between National Grid and Suffolk Constabulary are ongoing. The requirement for a Transport, Community Safety and Cohesion Working Group/Traffic Management Forum will be confirmed as part of these discussions.	X

	(SC) and its blue light partners, and this needs to be included within the Environmental Statement (ES) or in an accompanying Technical Assessment					
9-4.73	Request for National Grid to work with Suffolk Constabulary (SC) together with its blue light partners to address their concerns at an early stage, and agree / secure suitable mitigation and management measures as part of the Development Consent Order (DCO) process	As part of the Development Consent Order (DCO) process, National Grid is working with Suffolk Constabulary and its blue light partners to address their concerns. Discussions between National Grid and Suffolk Constabulary are ongoing. The outcome of these ongoing discussions is recorded in a Statement of Common Ground (SoCG) between Suffolk Constabulary and National Grid.	X			
9-4.74	Criticism that National Grid has not engaged with Suffolk Constabulary (SC) at previous non-statutory stages of the Project / Request that National Grid work with Suffolk Constabulary (SC) through the Environmental Impact Assessment (EIA) preparation process in order to ensure that its operational capacity and resources are maintained, and that suitable mitigation and management measures are agreed / secured through the Development Consent Order (DCO) process	National Grid and its transport consultants had an initial meeting with Suffolk Constabulary in August 2024 at which operational capacity and resources were discussed. Further meetings have since taken place. Discussions between National Grid and Suffolk Constabulary are ongoing regarding Suffolk Constabulary's operational capacity and resources and suitable mitigation and management measures during the construction phase of the Project.	X			
9-4.75	Information provided that Community Policing Teams (CPT) and their supporting specialist officers are operating at capacity, and any additional demand for police, community safety and cohesion resources arising from the Project would require	National Grid has consulted with and is continuing to work with the Police across all four counties and has had initial discussions concerning Police resources.	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	mitigation funding (in the context of Suffolk Constabulary)	Discussions between National Grid and Suffolk Constabulary are ongoing regarding additional demand for police, community safety and cohesion resources arising from the Project and the case for any mitigation funding.				
9-4.76	Request that National Grid ensure that necessary mitigation and management measures are secured and implemented through Development Consent Order (DCO) Requirements, and / or through a Section 106 planning obligation as part of any DCO Approval (in the context of Suffolk Constabulary)	Discussions between National Grid and Suffolk Constabulary are ongoing regarding any necessary mitigation and management measures in relation to the safe policing of abnormal loads through the county and policing demands occurring because of the presence of workers involved in the Project. These discussions will inform whether any DCO requirement or Development Consent Obligation is necessary. Any development Consent Obligation would need to meet the tests set out in NPS EN-1.	X			
9-4.77	The Environmental Statement (ES) / Technical Assessment should undertake impact modelling of Abnormal Indivisible Loads (AILs) to determine capacity against demand (along with the duration period) where developer funding for dedicated police capacity is usually required to enable movements to be scheduled with certainty (in the context of Suffolk Constabulary)	National Grid has engaged with Suffolk Constabulary on the proposed Abnormal Indivisible Load (AIL) movements and routes. Their inputs have led to amending AIL routes and developing an AIL movement strategy, which is appended to the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), submitted with the Development Consent Order (DCO) application. Discussions between National Grid and Suffolk Constabulary are ongoing regarding modelling of police capacity to enable/escort AIL movements.	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Traffic modelling of key junctions during peak hours has been included in the Transport Assessment (document reference 7.11). Abnormal load vehicles have not been included as part of this assessment as such movements are not part of the worst-case construction periods and subject to specific route planning and timing restrictions. Therefore, any impact of ALLs on general traffic is expected to be minimal.				
9-4.78	The Environmental Statement (ES) / Technical Assessment should undertake traffic modelling to enable Suffolk Constabulary (SC) to determine the need for any increase in Roads Policing, to manage safety on the road network, and minimise the likelihood of any incidents and accidents	National Grid notes the respondent's feedback. The Transport Assessment (document reference 7.11) submitted with the Development Consent Order application, carries out a capacity assessment of the junctions located at the primary access routes and identifies potential mitigation measures to minimise impacts due to potential traffic increase.	X			
9-4.79	Comments that proposed 'Control Measures' such as the preparation of a Construction Traffic Management Plan (CTMP) are welcomed / Request that Suffolk Constabulary (SC) would wish to be consulted by, and liaise with, National Grid in relation to this matter	National Grid notes the respondent's feedback. The X: Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) has been submitted as part of the Development Consent Order (DCO) application. National Grid has engaged with Suffolk Constabulary on the proposed Primary Access Routes (PAR) and required mitigations which is all outlined within the Outline CTMP (document reference 7.3). The Outline CTMP (document reference 7.3) will continue to be reviewed and updated in consultation with key stakeholders, including Suffolk Constabulary.	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-4.80	Information provided that community safety, cohesion and policing effects arising from the population increase linked to construction workers is likely to impact on Suffolk Constabulary's (SC's) service / operational capacity and resources - this includes the potential for increased crime and disorder arising against the person, and associated with the local evening economy	National Grid notes the respondent's feedback. National Grid has engaged with Suffolk Constabulary to discuss data requirements to aid police officer resourcing. National Grid is in discussion with Suffolk Constabulary regarding the potential impact of the Project on Suffolk Constabulary's operational capacity and resources.	X			
9-4.81	The community safety, cohesion and policing effects arising from the population increase linked to construction workers would need to be determined and included within the scope of the ES, and / or within a Technical Assessment accompanying an application for the Project (in the context of Suffolk Constabulary)	<p>National Grid submitted an Environmental Impact Assessment (EIA) Scoping Report (document reference 6.19) to the Planning Inspectorate on 7 November 2022. The Planning Inspectorate (on behalf of the Secretary of State) formally adopted its Scoping Opinion (document reference 6.20) on 14 December 2022 which has informed the scope of the Environmental Impact Assessment for the Proposed Project. This does not include the topic of community safety, cohesion and policing effects to be assessed as these are not EIA matters.</p> <p>As outlined in Chapter 4: Project Description (document reference 6.4) of the Environmental Statement (ES) over the four-year construction phase, there would be a maximum peak day where approximately 1,720 full-time equivalent gross direct employees would be working on the Project over a length of 180km. Employees would be distributed across the route of the</p>	X

This does not include the topic of community safety, cohesion and policing effects to be assessed as these are not EIA matters.</p> <p>As outlined in Chapter 4: Project Description (document reference 6.4) of the Environmental Statement (ES) over the four-year construction phase, there would be a maximum peak day where approximately 1,720 full-time equivalent gross direct employees would be working on the Project over a length of 180km. Employees would be distributed across the route of the Project rather than all being clustered in a single geographic area.</p>	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		National Grid is continuing to engage with the relevant constabularies affected by the Project, including Suffolk Constabulary, to understand any concerns and considerations for the construction period and how these may be addressed.				
9-4.83	<p>Request for information to determine the nature of the construction workforce, their home origin and location of any temporary accommodation would need to be included within the scope of the Environmental Statement (ES) / Technical Assessment, and the following analysis is required (in the context of Suffolk Constabulary)</p> <ul style="list-style-type: none"> - Overall numbers of FTE & PTE construction workers; - Numbers of construction workers disaggregated by month and year over the construction phase; - Home origin of construction workers and numbers (proportion) from outside of Suffolk; - Accommodation arrangements for non-locally based construction workers and their families – including provision of any temporary project accommodation on site, and the likely take up of holiday let, hotel and bed and breakfast accommodation locally. 	Information regarding the potential number of local and non-local construction workers is provided in the Environmental Statement (ES) Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15). However, due to the early stage of the design, the home of origin and location of temporary accommodation is unknown at the time of writing and have not been included within the ES (document reference Volume 6: Environmental Statement).	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-4.84	Request for information including a schedule of the plant, machinery and materials to be stored at construction compounds, and elsewhere, and the security measures to be employed (including crime reporting procedures - to Suffolk Constabulary) is required, and would need to be included within the scope of the Environmental Statement (ES) / Technical Assessment	<p>The programme and scope for the construction phase of the Project is currently still in the process of development.</p> <p>Details on the need for and location of temporary compounds and laydown areas can be found in Environmental Statement 6.4 Chapter 4: Project Description.</p> <p>Details on what the temporary compounds may include within them can be found within Schedule 1 Volume 3.1 Draft Development Consent Order. Additionally illustrative plans of the temporary compounds can be found in Volume 2.6.1 Design and Layout Plans – Substation and Cables and Volume 2.6.2 Design and Layout Plans – Overhead Lines.</p>	X			
9-4.85	Concern that theft incidents would lead to an increased impact on police capacity and resources (in the context of Suffolk Constabulary)	<p>National Grid acknowledges the concern raised regarding potential theft incidents during construction and any resulting impact on police resources.</p> <p>Security is a key consideration in the planning and delivery of major infrastructure works. All construction sites will be subject to site-specific security assessments, and proportionate mitigation will be implemented to deter unauthorised access and materials theft. This may include fencing, secure storage, controlled access, and CCTV, depending on the location and level of risk.</p>	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>National Grid's Corporate Security team supports the project team by identifying areas of higher risk and advising on appropriate measures. A Site Security Plan is developed based on this input and sets out how security will be implemented, monitored, and adapted if required.</p> <p>National Grid will continue to liaise with Suffolk Constabulary and other relevant stakeholders to ensure that site security is responsive to local concerns and helps to minimise the burden on local policing.</p>				
9-4.86	In light of the above, Suffolk Constabulary recommends that appropriate Terms of Reference, Membership and a Communications Strategy for a Transport, Community Safety and Cohesion Working Group, is established at an early stage in the Development Consent Order (DCO) preparation process and in advance of the Examination (e.g. to help to inform and assist the management of relevant aspects of the Project requiring a coordinated response from 'blue light partners')	National Grid are engaged with Suffolk Constabulary across both Transport & Community Safety and Cohesion to establish such strategies and provide adequate foresight to Suffolk Constabulary to allow for the coordinated management of interface areas. National Grid has had several meetings with Suffolk Constabulary and will continue to engage with the Constabulary post DCO submission.	X			
9-4.87	Concern that the Project is currently deficient in its scope of assessment concerning the potential Project impacts on Suffolk Constabulary	National Grid submitted an EIA Scoping Report to the Planning Inspectorate on 7 November 2022. The Planning Inspectorate (on behalf of the Secretary of State) formally adopted its Scoping Opinion on 14 December 2022 which has informed the scope of the	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Environmental Impact Assessment for the Proposed Project.				
9-4.88	Suffolk Constabulary consider that the Project is likely to give rise to significant effects on its service / operational capacity and resources, which ought to be assessed in order to determine appropriate mitigation and management measures	National Grid has engaged with Suffolk Constabulary to discuss data requirements to aid police officer resourcing. Engagement with Suffolk Constabulary will continue throughout the Project, where required.	X			
9-4.89	Concern that Suffolk Constabulary's ability to maintain and deliver the current levels of service to the local community, including its statutory duties will be affected by the Project	National Grid has engaged with Suffolk Constabulary to discuss data requirements to aid police officer resourcing. Engagement with Suffolk Constabulary will continue throughout the Project, where required.	X			
9-4.90	Request that identified impacts arising from the Project should be addressed by employing appropriate mitigation and management measures, to be secured and implemented through Development Consent Order (DCO) requirements and / or a Section 106 planning obligation, as part of any DCO approval, and this approach ought to be reflected in a Statement of Common Ground to clarify the position reached and inform the Examination process (in the context of Suffolk Constabulary)	An Outline Code of Construction Practice (CoCP) (document reference 7.2) and Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) have been submitted with the Development Consent Order (DCO) application. Mitigation and management measures for the impacts associated with the Project during the construction phase are set out in the Outline CoCP (document reference 7.2) and Outline CTMP (document reference 7.3). Compliance with the contents of the Outline CoCP and CTMP is secured through a requirement in the draft DCO. National Grid continues to engage with Suffolk Constabulary.	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-4.91	Request that measures ought to include a process to assist Suffolk Constabulary and its blue light partners to plan for and implement coordinated responses to construction phase impacts and incidents - to ensure current, and sustainable, levels of community safety, cohesion and policing are maintained in the local area	National Grid has engaged with Suffolk Constabulary to discuss data requirements to aid police officer resourcing. Engagement with Suffolk Constabulary will continue throughout the Project, where required.	X			
9-4.92	Criticism that an underestimate of the traffic impact of the Project in Burgate has been presented at consultation (e.g. National Grid have suggested a "Negligible - not significant" impact because a baseline traffic volume of zero has been used, though if the baseline traffic survey had recorded a single vehicle rather than zero vehicles then the increase would be 25,000%), and therefore suggest that the Project is accessed from from Mellis rather than Burgate (e.g. given that roads are two-lane in this location, rather than narrow, single-track lanes with sharp bends if roads from Burgate are used)	It is not proposed for Burgate Road or Mellisash Road to be used as a Primary Access Route for construction. For this section of temporary haul road, the Primary Access Routes are from the A143 to the north, and the B1113 and Wickham Road from the south.			X	
9-4.93	Suggest that working hours for the Project at Holton St Mary are reduced to 9am to 5pm, and there is no work undertaken at weekends	Should consent be granted in 2027, it is anticipated that construction of the Project would commence in 2027, likely starting with pre-commencement works including site clearance activities, the installation of temporary construction compounds and access roads. It is expected the main construction works will continue	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>through to 2031 (four years) (with only demobilisation in 2031).</p> <p>National Grid acknowledges the request to reduce working hours at Holton St Mary to 9am–5pm and to avoid weekend working.</p> <p>It is assumed that the core working hours for construction would be:</p> <p>Mondays to Fridays: 07:00–19:00</p> <p>Saturdays, Sundays, and Bank Holidays and other public holidays: 07:00–17:00</p> <p>Work outside of these hours may be required in certain circumstances and would be carried out following consultation with the relevant Local Planning Authorities (LPAs). Full details of the construction working hours are set out in the Outline Code of Construction Practice (CoCP) (document reference 7.2).</p> <p>These hours have been identified to support the efficient delivery of a large, linear infrastructure project involving multiple work sites. Flexibility within these hours helps to manage construction sequencing and reduce the overall duration of the works.</p> <p>National Grid recognises the importance of minimising disruption to local communities. Construction activities will be programmed and sequenced to reduce impacts on residents, businesses and road users as far as</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		practicable. National Grid will continue to engage with LPAs and local stakeholders regarding working hours at specific locations, including Holton St Mary, and will consider additional local controls where appropriate.				
9-4.94	Criticism that Section 5.6 on the Preliminary Environmental Information Report (PEIR) regarding Health and Wellbeing focuses almost entirely on the perceived short term effects from construction and completely fails to address the real concerns of residents relating to the ever growing evidence on long term health effects from radiation, and corona ion showers / Criticism that Section 5.6.9 of the PEIR states that National Grid design standards will design out the potential effects without providing any information as to how	<p>Impacts to physical health arising from Electric and Magnetic Fields (EMFs) has been scoped out of the Environmental Impact Assessment (EIA) on the basis that the design of the Project would comply with Government guidance and precautionary policies on exposure to EMF. This was agreed through Scoping Opinion (document reference 6.20) received on 14 December 2022.</p> <p>The UK has a carefully thought-out set of policies for protecting us all against EMFs, the main component of which is exposure guidelines. Those exposure guidelines are set by independent scientific bodies and are based on decades-long studies into the effects of EMFs and ill health. After those decades of research, no health risks have been proven below the guideline limits. These policies are incorporated into the decision-making process for development consent in National Policy Statement (NPS) EN-5. It is National Grid's policy to ensure that all of its equipment comply fully with those exposure limits.</p> <p>National Grid's approach is to ensure that all our equipment complies with the policies, which are set by</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Government on the advice of their independent advisors. The proposed overhead lines, underground cables and substation would be designed to ensure they are fully compliant with these policies and guidelines. This ensures that health concerns relating to EMFs are properly and adequately addressed. Compliance with the UK public exposure limits of all the assets which form this project are set out in the Electric and Magnetic Field Compliance Report (document reference 7.8) submitted with the Development Consent Order (DCO) application.</p> <p>Chapter 10: Health and Wellbeing of the Environmental Statement (ES) (document reference 6.10) provides a summary of the EMFs Compliance Report to provide context and facilitate the understanding of risk by stakeholders and the general public.</p> <p>In addition, impacts to mental health associated with the perceived risk from EMF is presented and assessed within ES Chapter 10: Health and Wellbeing (document reference 6.10)</p>				
9-4.95	Criticism that the National Grid have claimed that the change to the Project stated in Paragraph 5.4.90 of the Design Development Report regarding the replacement of the existing 132 kV overhead line with underground cables rather than the Project	It is not clear where this misunderstanding has come from as it is technically possible to cross the existing 132 kV multiple times with several short sections of underground cable replacing sections of overhead line between specific pylons. However if multiple crossings			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	crossing the existing 132 kV overhead line multiple times is an improvement on previous designs, given that National Grid staff advised the respondent (at the Copdock Village Hall public event held during the second non-statutory consultation held in 2023) that crossing the existing 132 kV overhead line multiple times would not be technically feasible (e.g. this claim is misleading)	are in close proximity, it becomes increasingly uneconomic and inefficient to do multiple short sections rather than undergrounding a longer section. In this case there are additional benefits from removing a longer section of overhead line to reduce cumulative effects and to allow improved positioning of the proposed 400 kV infrastructure on the previous 132 kV alignment. The Project is being taken forwards with the existing 132 kV overhead line replaced by underground cable from north of Middle Wood, Offton through to an existing termination platform between Flowton and Bramford from where it continues as underground cable to Bramford substation.				
9-4.96	Request that National Grid engage with Suffolk Wildlife Trust, to address risks posed by Norwich to Tilbury to the Waveney and Little Ouse Landscape Recovery Project (risk to improve water quality, create carbon capture, mitigate downstream flood risk, habitat creation, ecosystems, broader wildlife)	Consultation with Suffolk Wildlife Trust and the Waveney and Little Ouse Landscape Recovery Project (WaLOR) team has been undertaken throughout the design process, with every effort made to reduce impacts and ensure the successful delivery of both projects. The Suffolk Wildlife Trust and the WaLOR project team's preference for an overhead line solution in this area was given significant weight. Further design work in consultation with the WaLOR project team has been undertaken to minimise impacts further, through the careful siting of pylons and haul roads through the Waveney Valley. The WaLOR project have confirmed that the current Project proposals will not detrimentally impact their river restoration proposals for the area.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Ongoing consultation with the WaLOR project team will be undertaken throughout the next design and construction stages to ensure both projects can be successfully delivered with a focus on construction programmes.				
Design Change						
9-4.97	Oppose the use of underground cables	National Grid has carefully considered the feedback received during the 2022 and 2023 non-statutory consultations, the statutory consultation, targeted consultations, and landowner consultation, the alternatives available, and other factors including our duties and obligations. These duties include balancing the need to be economic and efficient, which includes keeping costs down in the interests of the bill-paying consumers, with a duty to have regard to preserving amenity, which includes the natural environment, cultural heritage, landscape and visual quality, National Policy Statement (NPS) EN-5 makes clear that 'the government's position that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)'. The NPS also confirms that widespread and significant adverse landscape and/or visual impacts in other locations may	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>also justify the use of undergrounding. We may also adopt underground cables in other circumstances such as to cross existing 400 kV overhead line infrastructure.</p> <p>Where the installation of underground cables is required in lieu of overhead lines, the design of the Project has incorporated suitable consideration of the existing environment, ecology and site ground conditions based on site specific survey data.</p>				
9-4.98	Suggest a minimum distance that the Project should be sited from residential areas / residences	<p>National Grid does not use standard minimum distances as a routeing consideration. Applying an arbitrary distance may be too big or too small for the specific circumstances. We utilise the Holford Rules (a description of the Holford Rules can be found in Appendix I22 of this report) informed by feedback and professional judgement to define appropriate corridors and alignments that are consistent with the relevant policy framework and duties. In response to feedback to the 2022 and 2023 non-statutory consultations, statutory consultation, targeted consultations, and landowner consultation, we have modified the alignment in various locations to increase separation to properties where this is possible without undue deviation or transfer of effects to other similar properties or other receptors. A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the Environmental Impact Assessment (EIA). The LVIA is presented in the Environmental Statement</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		(ES), Chapter 13: Landscape and Visual (document reference 6.13). This assesses the impact of the Project and identifies the need for additional mitigation if required.				
9-4.99	Suggest that existing overhead lines in this section should be removed	<p>The existing electricity transmission network provides power, via the local distribution network, into the local area where it is used in homes and businesses. Such lines cannot just be removed as power supplies would not be maintained.</p> <p>The need case and funding for the Project is to deliver the new network reinforcement needed, rather than to remove existing overhead lines which would need to be replaced by another form of connection such as underground cables.</p> <p>Unless required for crossings or mitigation, undergrounding existing overhead lines on the transmission network would not be in accordance with National Policy Statement (NPS) EN-5 and would result in substantial cost to bill payers. There may also be significant environmental impacts due to the removal works on sensitive ecological and archaeological receptors as well as constraints from either existing buildings or unsuitable ground conditions.</p>			X	
9-4.100	Suggest that existing overhead lines in this section should be replaced by underground cables	National Policy Statement (NPS) EN-5 establishes the position that the starting basis for new connections is a presumption on the acceptability of overhead lines but		X	X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>with this presumption reversed within designated landscapes and in certain other circumstances.</p> <p>The existing electricity transmission network provides power, via the local distribution network, into the local area where it is used in homes and businesses. The need case and funding for the Project is to deliver the new network reinforcement needed, rather than to remove existing overhead lines by undergrounding them.</p> <p>We have identified a number of locations where we are proposing to place existing overhead lines underground. These locations are where existing 132 kV and lower voltage lattice pylon lines are crossed by the proposed 400 kV overhead line and / or mitigation of effects are considered necessary. This includes locations such as at Mellis, between Offton and Bramford Substation, to the south of Bramford Substation and near Fuller Street.</p> <p>Unless required for mitigation, undergrounding existing overhead lines on the transmission network would not be in accordance with NPS EN-5 and would result in substantial cost to bill payers. There may also be significant environmental impacts due to the removal works on sensitive ecological and archaeological receptors as well as constraints from either existing built form or unsuitable ground conditions.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-4.101	Suggest that the existing overhead lines in this section are reinforced / upgraded instead	The existing transmission network in the region was upgraded during 2022 and 2023 to ensure the system is running at its most efficient performance. The existing assets / networks are not able to be upgraded sufficiently to cope with the new future demands expected on the network. As a result, new lines and substations would be required to accommodate the changing demands on the network.		X	X	
9-4.102	Suggest that the Project is routed away from populated / residential areas	Deciding where and how to build new high voltage electricity lines is a complex issue and National Grid is mindful of the potential effects this infrastructure may have on local communities and the concerns these may bring. We recognise that people living near our transmission infrastructure, including high voltage overhead lines, may have concerns about audible noise and potential health impacts. It has sometimes been suggested that minimum distances between properties and overhead lines should be prescribed. We do not consider this appropriate since each instance must be dealt with on its merits. However, we have always sought to route new lines away from residential property on grounds of general amenity where possible. We have undertaken a noise and vibration assessment which can be found in the Environmental Statement (ES), Chapter 14: Noise and Vibration (document	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>reference 6.14) that forms part of the Environmental Impact Assessment (EIA) for the Project. Noise levels and the effect on residential properties as well as other sensitive areas, such as hospitals and schools, are carefully considered during planning, assessed according to the appropriate UK standards, and mitigated where necessary. We set strict technical standards for the equipment we install on our network. These will apply to the proposed new East Anglia Connection Node (EACN) substation, and extensions required to the existing Norwich Main, Bramford, and Tilbury Substations. These standards include requirements to ensure the occurrence of audible noise is eliminated or reduced as far as practicable. Therefore, significant adverse effects from noise are not expected.</p> <p>Noise from overhead lines is predominately determined by the conductor design, voltage and weather conditions. The overhead line will be designed using a relatively quiet conductor that meets the design specification required, and operational noise is not likely to be significant at nearby sensitive receptors under any weather conditions. Pylon fittings, such as insulators, dampers, spacers, and clamps, are also designed and procured in accordance with a series of National Grid Technical Specifications to reduce the potential for audible noise and tones to occur from all</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>types of fittings. Where noise does occur, it is likely to be localised and of short duration. If this is due to a fault, action can be taken to rectify it. A technical note has been submitted as part of the application for development consent to support scoping out noise associated with overhead lines from the Environmental Statement (ES).</p> <p>In addition, we have undertaken a Landscape and Visual Impact Assessment (LVIA) for the Project. This includes an assessment on both landscape character and visual amenity. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13).</p> <p>The health and safety of the public, local communities and employees is central to everything that we do. The UK has a carefully thought-out set of policies for protecting us all against Electric and Magnetic Fields (EMFs), the main component of which is exposure guidelines. The exposure guidelines are set by independent scientific bodies and are based on decades-long studies into the effects of EMFs and ill health. After those decades of research, the weight of evidence is against there being any health risks of EMFs below the guideline limits. Our approach is to ensure that our network comply with those policies, which are set by Government on the advice of their independent advisors. The Project is designed to</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>ensure it is fully compliant with these policies and guidelines. This ensures that health concerns are properly and adequately addressed.</p> <p>Policies for both noise and EMF are incorporated into the decision-making process for development consent as set out in National Policy Statement (NPS) EN-5. It is National Grid's policy to ensure that all its equipment complies fully with those policies and guidelines. The application for a Development Consent Order (DCO) includes assessments against these policies, including both construction and operational noise and EMF.</p>				
9-4.103	Suggest that the Project should run in closer to / parallel to the existing overhead lines	<p>National Grid notes the potential for close paralleling existing overhead lines to reduce the level of effects that may arise from a new overhead line.</p> <p>However, where existing overhead lines are present along the proposed route, there are constraints and features that mean, overall, we consider close paralleling would lead to greater effects on receptors in the area and be less compliant with the Holford Rules or be less consistent with the policy to be economic and efficient. A summary of the Holford Rules is provided within Appendix I22 of this report. A number of residential properties are present in close proximity to the existing 400 kV overhead line meaning that if the overhead lines were close paralleled it would result in the properties having an overhead line close to both</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		sides. There are also some locations where the combination of existing physical and environmental features (road infrastructure, commercial and residential properties etc) present very substantial challenges to routeing and siting. As a result, whilst close paralleling may appear beneficial in some sections, overall, the increased environmental effects where the overhead lines have to converge and diverge, and those increased effects on properties with overhead lines on both sides are considered greater than those introduced by a new overhead line separated from existing 400 kV overhead lines. Whilst crossings and use of underground cable technology may be able to address various constrained locations, we consider the costs and environmental effects arising from the additional infrastructure required to be less compliant with our duties and relevant policies.				
9-4.104	Suggest that underground cables are used for the entirety of this section	<p>National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors.</p> <p>National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is 'that overhead lines should be the strong starting</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)'. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>impact terms), we do not consider this section in its entirety would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.</p> <p>Therefore, whilst undergrounding the whole of this section is not considered appropriate, our proposals do include underground cable within the Dedham Vale National Landscape (previously known as Area of Outstanding Natural Beauty (AONB)) in accordance with NPS EN-5. Prior to our 2023 non-statutory consultation we identified the need to extend the underground cable beyond the National Landscape boundary because of potential effects, we have further extended this section of underground cable following consideration of feedback on our 2023 non-statutory consultation and additional investigation into potential effects. We also identified an approximately 4 km section near Great Horkesley as meeting the particularly sensitive criteria where underground cable is also proposed. Additionally, underground cable is proposed at Fairstead for a 400 kV overhead line crossing.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-4.105	Suggest that underground cables are used in populated / residential areas	<p>National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors.</p> <p>National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is 'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)'. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at all populated or residential areas in this section would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
9-4.106	Suggest that either the existing overhead lines between Creting St Mary and Stowmarket are removed, or that the Project is routed elsewhere (e.g. to avoid overdevelopment in vicinity of this area)	Certain sections of the existing 33 kV and 132 kV overhead lattice pylons in this area must be replaced by underground cable to ensure safety clearances to the 400 kV infrastructure with a further section of the most westerly 132 kV also replaced by underground cable and from the north side of Middle Wood at Offton through to Bramford Substation to reduce effects including cumulative effects. In respect of the remaining lines, these cannot just be removed without provision of an alternative to maintain connectivity. Such			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		alternatives require replacement by underground cable or provision of equivalent connectivity through new grid supply point substations connected to the 400 kV network. Providing these alternative connections incurs additional costs and may lead to additional effects and have to be justified as being necessary to mitigate otherwise unacceptable effects. The assessments that we have undertaken conclude that these additional costs and effects cannot be justified as the mitigation is not considered to be essential for the scheme to be acceptable in terms of policy.				
9-4.107	Suggest that the Project follows railway lines in this section instead / Suggest that overhead lines for rail are upgraded instead	<p>There could be potential benefits from infrastructure being concentrated geographically, i.e. by routeing the Project near existing road infrastructure. However, there are constraints and features that mean that we do not consider close paralleling existing roads such as the A12 would reduce environmental effects or improve compliance with the Holford Rules or be more consistent with the policy requirement to be economic and efficient. A summary of the Holford Rules is provided within Appendix I22 of this report.</p> <p>Several residential properties, as well as hamlets, villages and towns, are present near the existing transport infrastructure necessitating multiple diversions of an overhead line. There are also some locations where the combination of existing physical and environmental features (railway and road</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		infrastructure, commercial and residential property, woodlands and orchards) presents very substantial challenges to routeing and siting. As a result, whilst close paralleling of transport infrastructure may appear beneficial in some short sections, overall, the increased environmental effects from multiple changes of direction are considered greater and less compliant with the Holford Rules than those that are associated with a new route alignment.				
9-4.108	Suggest that the Project includes more underground cables around the Stowmarket area	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is 'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)'. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at Stowmarket would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
9-4.109	Suggest that the Project should use underground cables at the Gipping Valley (e.g. as the Gipping	National Grid has carefully considered the feedback proposing the use of underground cable along the	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	Valley is an area with wildlife including barn owls and otters) / Suggest the use of underground cables between Pylons RG160 and RG167 (e.g. to mitigate impact on the Gipping Valley)	route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is 'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)'. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the

		consider the Project at Gislingham would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
9-4.111	Suggest that the Project uses underground cables at Battisford (e.g. to mitigate impact on the environment and wildlife)	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is 'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)'. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at Battisford would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.</p> <p>Impacts on wildlife due to the Project have also been assessed and presented in the ES Chapter 8: Ecology and Biodiversity (document reference 6.8).</p>				
9-4.112	Suggest relocating Pylon RG174 approximately 50 to 100 metres south, to place it closer to the field	National Grid notes the preference from certain landowners for pylons to be situated close to hedge			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	boundary and further from the road (e.g. to reduce impact on residents, and visual impact)	lines where possible to reduce the impact on agricultural activities and reduce land take. We have assessed requests from landowners on an individual basis and have moved pylons to the edges of fields where this can be achieved. We have reviewed the location of RG174 (now RG175), however moving this pylon further south along the alignment would require a height increase to both RG174 and RG173 (RG174) due to span lengths, which would then increase landscape and heritage effects to nearby properties and a listed building and could also introduce effects to Wattisham Flying Station. Therefore, we are not proposing a change to the location of RG174.				
9-4.113	Suggest that the proposed underground cables are extended to where the cables cross to mitigate impact on Wattisham Airfield (e.g. to mitigate risk to flight safety)	National Grid has appointed an independent aviation consultancy which has engaged with (with National Grid also present) Wattisham Flying Station. Following this and further assessment it has been determined, with the Project as currently proposed, that the airfield can continue to operate. In view of this assessment, committing to additional length of underground cable is not justified on the grounds of aviation impacts. We will continue to engage with nearby airfields as appropriate. Further information on the assessment of airfields can be found in the Environmental Statement (ES) (ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and ES			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2)).				
9-4.114	Suggest that Pylon RG118 is relocated away from residential property	National Grid has considered the respondent's feedback highlighting a preference for RG118 (now RG119) to be moved further away from residential properties. We have made a change to the alignment between RG113 and RG118 which would move the alignment further east towards the railway. Due to several constraints in this area including woodland and the preferred crossing of the railway, the location of RG118 is not proposed to be changed.			X	X
9-4.115	Suggest that Pylons RG143 and RG144 are relocated to mitigate impact on residents	National Grid has assessed a change to move the alignment to the east of Palgrave Farm and to the west of Cay Hill to utilise lower ground in the valley. This change would move the alignment closer to a greater			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		number of properties at Mendlesham Green; therefore, we are not proposing a change to the alignment at this location.				
9-4.116	Suggest that from Pylon RG154 the Project is taken across Church Road, past Stowupland Hall (Plain English), across Rendell Lane, along the valley and reconnects with Pylon RG141	The 2023 and 2024 Design Development Reports (available on the Project website) have both considered this alternative and concluded that it was less preferred because of restricted space between properties. A planning application to the north of Stowupland Hall would further restrict routeing. This was confirmed to not be Environmental Impact Assessment (EIA) development in November 2024. Environmental and other studies have not identified any further information to alter this previous conclusion, and no new evidence is provided by the respondent nor further decision-making factors identified. No change is proposed. The effects of the Project are assessed as part of the Environmental Impact Assessment (EIA) and presented in the Environmental Statement (ES), and this has identified any need for additional mitigation.			X	
9-4.117	Suggest that from Pylon RG146, the Project is rerouted over Old Hundred Lane, behind Palgrave Farm, to the side of the chicken farm, rejoining the original line at Pylon RG139	This proposed change was considered less preferred as reported in the 2024 Design Development Report in para 5.4.80 (available on the Project website). The change transferred and increased effects to other residential property offsetting the respondent's perceived benefits. Environmental and other studies have not identified any further information to alter this			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		previous conclusion, and no new evidence is provided by the respondent nor further decision-making factors identified. No change is proposed. The effects of the Project are assessed as part of the Environmental Impact Assessment (EIA) and presented in the Environmental Statement (ES), and this has identified any need for additional mitigation.				
9-4.118	Suggest that Pylon RG117 is relocated at least 500 metres further to the east to protect the spatial hierarchy of Gislingham (e.g. due to its siting within 500 metres of a Grade I Listed Church)	National Grid has considered the respondent's feedback and has made a change to the alignment between RG113 and RG118 (now RG113 to RG119) which would move RG117 approximately 190 m further east towards the railway. Due to several constraints in this area including woodland, properties to the east and the preferred crossing of the railway, we are not proposing to move the alignment 500 m further east at this location.			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)b	S42(1)(d) and S47	Resulted in Design Change
9-4.119	Suggest that the Project uses underground cables until it passes Palgrave (e.g. to mitigate visual impact)	<p>National Grid has considered the justification for the use of underground cable for the crossing of the Waveney Valley and on the matter of extending the use of underground cables until it passes Palgrave raised in the respondent's feedback. The starting presumption in National Policy Statement (NPS) EN-5 paragraph 2.9.20 in a location such as the Waveney Valley which, although valued is not designated, is that overhead line is the appropriate 400 kV connection technology. We have also considered whether the effects from the overhead line are at a level that engages other parts of NPS EN-5 (such as paragraph 2.9.23) to prompt consideration of whether the benefits of undergrounding outweigh any extra economic, social or environmental impacts. At the Waveney we conclude that the benefits from a change to underground cable, do not justify the additional cost that would be incurred. The use of underground cable would lead to a lowering of effects on the setting of the Grade I Listed St Remegius Church, albeit the effects of progressing with an overhead line are assessed as less than substantial harm and don't themselves require a change in technology.</p> <p>In terms of community effects, existing trees would provide some screening and filtering of views of an overhead line for those in residential areas and on recreational routes. A change from overhead line to underground cable would reduce these community effects but bring disbenefits, most notably increased ecological effects from installation within peaty soils and</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)b	S42(1)(d) and S47	Resulted in Design Change
		<p>increased technical risk to cable integrity from the WaLOR channel naturalisation and landscape recovery plans. Conversely there may be compromise to the WALOR project by measures to ensure cable integrity.</p> <p>After consideration of the decision making guidance at paragraph 2.9.25 of NPS EN-5, National Grid concludes that whilst effects from overhead lines to individual receptors may be significant in Environmental Impact Assessment (EIA) terms they do not justify the potential for compromise to the WALOR project, the effects on peaty soils which would arise with an underground cable design nor justify the expected cost of an underground cable design. On this basis, National Grid concludes that the use of an overhead line should be taken forward for the crossing of the Waveney Valley.</p> <p>Prior to making this decision we had considered whether requests to relocate the Cable Sealing End (CSE) compounds and extend the cable both to the north and the south may alter the decision making balance. Such extensions would bring benefits to various residential receptors but with the additional cost of longer length of cables. We conclude that given the absence of any designated status pertinent to NPS EN-5, and the extent to which some views from residential areas are filtered and screened and lower the level of adverse effects from the overhead line, we do not consider the additional cost associated with extending the underground cable would be justified.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)b	S42(1)(d) and S47	Resulted in Design Change
9-4.120	Suggest that the Project follows an alternative alignment (map provided by respondent) between Pylons RG96 and RG142 which follows existing powerlines and is located approx 150 m from the existing alignment of the Project (e.g. to open the opportunity for greater land take for ecological mitigation and biodiversity net gain)	In general terms, apart from the land under the pylons, National Grid does not acquire rights to land underneath the route to allow it to manage land in this way for Biodiversity Net Gain (BNG). More generally the close paralleling of existing overhead line infrastructure has been considered and reported in the 2022 Corridor and Preliminary Routing and Siting Study and the 2023 and 2024 Design Development Reports (available on the Project website). It has been further reviewed in respect of the section identified in the feedback. In the absence of new information or the identification of other factors the conclusions drawn previously remain valid that is less preferred. At locations such as Yaxley there is insufficient space without oversail of properties, effects where lines converge are increased, and multiple transpositions with outage requirements of alignment or use of multiple short sections of cable between Cable Sealing End (CSE) compounds are required at additional cost given the presence of homes, constraints and environmental features. When the Project alignment is not inconsistent with policy in National Policy Statement (NPS) EN-5 we do not consider the suggested change to be preferred, and no change is proposed.			X	
9-4.121	Suggest that the Project sift combinations of routes NB1 and NB2 are considered alongside alternative alignment in order to demonstrate the most appropriate alignment has been selected	This was undertaken with hybrid corridors considered as reported in the Corridor and Preliminary Routeing and Siting Study published in 2022 with further consideration back checking findings and considering further feedback			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)b	S42(1)(d) and S47	Resulted in Design Change
		presented in the 2023 and 2024 Design Development Reports (available on the Project website) and the 2025 Design Development Report (document reference 5.15). In the absence of new information or the identification of other factors the conclusions drawn previously remain valid and no change is proposed.				
9-4.122	Criticism of the changes to the Project between Gislingham and Mellis since the original consultation held in 2023 (e.g. which has resulted in a longer and therefore more impactful route)	National Grid proposed the change to the alignment between RG102 and RG117 (previously RG103 and RG116) to adopt the alignment of the existing 132 kV overhead line for approximately 2 km, to then realign south to the west of Burgate Road. This change was proposed due to the identification of historic assets that need to be avoided as well as impacts on Mellis Common and the opportunity to follow the route of existing pylons. In the absence of new information or evidence, we are therefore not proposing a further change to the alignment at this location.			X	
9-4.123	Suggest that the Project uses underground cables in the vicinity of Mellis, diverting from the existing alignment between Pylons RG102 and RG118 and using underground cables for 750 m to avoid a direct impact on the Mellis conservation area (plan provided by respondent)	National Grid proposed the change to the alignment between RG102 and RG117 (previously RG103 and RG116) to adopt the alignment of the existing 132 kV overhead line for approximately 2 km, to then realign south to the west of Burgate Road. This change was proposed due to the identification of historic assets that need to be avoided as well as impacts on Mellis Common and the opportunity to follow the route of existing pylons. In the absence of new information or evidence, we are therefore not proposing a further			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)b	S42(1)(d) and S47	Resulted in Design Change
		<p>change to the alignment at this location.</p> <p>National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or Area of Outstanding Natural Beauty)'</i>.</p> <p>Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line (paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)b	S42(1)(d) and S47	Resulted in Design Change
		visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at Mellis would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of NPS EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
9-4.124	Suggest that Pylon RG148 and its associated haul road are relocated 50 metres east (e.g. to mitigate the destruction of nearby tree / hedge line including mature trees and impact on Public Rights of Way, the King's Coronation Monument and residential property)	<p>National Grid has considered the respondent's feedback and has looked at moving the haul road to the east, however as moving to the east would still require the removal of trees and hedgerow and would also move it closer to properties, we are not proposing a change to the haul road at this location.</p> <p>Moving RG148 (RG149) further east would result in it becoming a larger angle pylon with a greater change of direction, which would be inconsistent with the Holford Rules, therefore we are not proposing a change to the location of this pylon. A summary of the Holford Rules is provided within Appendix I22 of this report.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)b	S42(1)(d) and S47	Resulted in Design Change
9-4.125	Suggest that the Project should run in closer to/parallel to the existing overhead lines at Beacon Hill	<p>National Grid note the potential for close paralleling to reduce the level of effects that may arise from a new overhead line. However, there are constraints and features adjacent to the existing overhead line that mean that overall, we consider close paralleling would lead to greater effects on receptors in the area and be less compliant with the Holford Rules or be less consistent with the policy to be economic and efficient. A summary of the Holford Rules is provided within Appendix I22 of this report.</p> <p>As a result, whilst close paralleling may appear beneficial, overall, the increased environmental effects where the lines must converge and diverge, and those increased effects on properties with overhead line to both sides are considered greater than those introduced by a new route alignment separated from existing 400 kV overhead lines. Whilst crossings and use of underground cable technology may be able to address the various constrained locations, we consider the costs and environmental effects arising from the additional infrastructure to be less compliant with our duties and relevant policies. In the absence of new evidence or new information no change is proposed.</p>			X	
9-4.126	Suggest that the Project is relocated 3 metres to the north within vicinity of / from Pylon RG196 (e.g. to mitigate impact on mature green plants, a very effective ditch and landowners, and to minimise	National Grid has considered the respondent's feedback, we have routed and sited the alignment in accordance with the Holford Rules where possible while also trying to balance effects on residential properties, minimise vegetation loss and effects on agricultural			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)b	S42(1)(d) and S47	Resulted in Design Change
	costs and permissions that would otherwise need to be sought by National Grid)	practices. A summary of the Holford Rules is provided within Appendix I22 of this report. To move RG196 north would introduce an additional angle pylon and transfer effects due to the subsequent changes to pylons on either side. We are therefore not proposing a change to the location of this pylon. We have undertaken an Environmental Impact Assessment (EIA) to assess the potential impact of the Project, including on trees and hedgerows and this has identified any need for additional mitigation. The results of this assessment are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application.				
9-4.127	Suggest that Pylon RG161 is relocated (e.g. to mitigate visual impact and heritage impact)	National Grid has considered the respondent's feedback and has reviewed the alignment in this area. It is not possible to move RG161 (now RG162) further south due to the space required to erect scaffolding during construction and maintenance which is needed to maintain safe conditions for road users and pedestrians. Therefore, we are not proposing a change to the location of this pylon.			X	
9-4.128	Criticism of the changes to the Project between Pylons RG92 and RG98, which places Pylons RG94 and RG95 only 125m from residential property / Suggest that the Project is reverted to its previous routing between RG92 and RG98	The respondent's preference is noted; however, the change has been made to respond to a range of different factors. These include reducing effects on proposed solar farm development, allowing continued flight activity at Brook Farm, reducing the magnitude of			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)b	S42(1)(d) and S47	Resulted in Design Change
		change and utilising existing tree lines to provide more filtering of residential views by adopting the alignment of the existing 132 kV overhead line. Pylon positioning was carefully considered to benefit from screening and filtering of views by farm buildings and existing trees at the properties concerned. In the absence of new information or identification of further factors no change is proposed. Further information on the assessment of airfields can be found in the Environmental Statement (ES), Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).				
9-4.129	Suggest that additional overhead lines are removed in the area surrounding Pylons RG167 to RG168 and RG172 to RG173 (e.g. to further reduce the impact of the Project on the countryside)	Certain sections of the existing 33 kV and 132 kV overhead lattice pylons in this area must be replaced by underground cable to ensure safety clearances to the 400 kV infrastructure with a further section of the most westerly 132 kV also replaced by underground cable and from the north side of Middle Wood at Offton through to Bramford to reduce effects including cumulative effects. In respect of the remaining lines, these cannot just be removed without provision of an alternative to maintain connectivity and their also needs to be justification for extending the proposed undergrounding further. Such extension or adoption of alternatives require replacement by underground cable or provision of equivalent connectivity through new grid supply point substations connected to the 400 kV			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)b	S42(1)(d) and S47	Resulted in Design Change
		network. These incur additional cost and may lead to additional effects and have to be justified as being necessary to mitigate otherwise unacceptable effects. The assessments that we have undertaken conclude that the remaining effects are not unacceptable in policy terms and therefore additional costs cannot be justified in these locations as the mitigation is not considered to be essential for the Project to be acceptable in terms of policy.				
9-4.130	Suggest the Project follow the proposed route between Pylons RG185 to RG197 and not the alternative route which passes between Willisham and Offton	<p>The alignment for the Project between RG185 and RG197 (now RG186 and RG197) is proposed to pass to the west of Middle Wood as published at the statutory consultation, there is no alternative route for the Project in this area.</p> <p>To the east of Middle Wood is the proposed route for the underground cable of the existing 132 kV pylons that we are proposing to remove.</p>			X	
9-4.131	Suggest the Project is rerouted to the west of Gislingham, Finningham and Bacton which swings back to the north of Stowmarket (e.g. to mitigate visual impacts on settlements and villages)	<p>National Grid has considered a change to the alignment to pass the west side of Gislingham. This would reduce residential amenity effects for a number of properties to the eastern and north-eastern edges of Gislingham. However, those residential amenity effects are transferred to residential properties to the western and southern edge of Gislingham and potentially to the north-eastern side of Finningham depending on route used to return to the 2024 preferred draft alignment. Additionally, any route to the west also has to pass</p>	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)b	S42(1)(d) and S47	Resulted in Design Change
		between properties less than 150 m apart whereas this is the minimum separation distance to the closest residential properties when routed to the east. As a result of this a western alternative route is less consistent with Holford Rule Supplementary Notes. A summary of the Holford Rules is provided within Appendix I22 of this report. On heritage assets, a route to the west would increase separation to the moat to the west of Mellis Common but require an alignment passing closer to a greater number of listed buildings, albeit overall there is considered to be no major difference in consistency with Holford Rule 2. However, the alternative to the west is considered less consistent with Holford Rule 3 being around 500 m longer with at least one more pylon. Overall, this requested change is considered to be less preferred and is therefore not proposed to be taken forward.				
9-4.132	Suggest the Project is rerouted to follow the A140 and cross the A14 down to Bramford Substation (plan provided by respondent)	While there could be potential benefits from infrastructure being concentrated geographically, i.e., by routing the Project in close proximity to existing road and rail infrastructure, such as the A140 as proposed as well as crossing the A14, National Grid does not consider these benefits arise for the whole route. Rail lines or roads potentially align (at least in part) with the general routeing of the Project. However, there are constraints and features that mean that we do not consider close paralleling would reduce environmental effects or improve compliance with the Holford Rules or			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)b	S42(1)(d) and S47	Resulted in Design Change
		be more consistent with the policy requirement to be economic and efficient. A summary of the Holford Rules is provided within Appendix I22 of this report. Several residential properties, as well as hamlets, villages and towns, are present in close proximity to the existing transport infrastructure necessitating multiple diversions of an overhead line. There are also some locations where the combination of existing physical and environmental features (railway and road infrastructure, commercial and residential property, woodlands and orchards) present very substantial challenges to routeing and siting. As a result, whilst close paralleling of transport infrastructure may appear beneficial in some short sections, overall, the increased environmental effects from multiple changes of direction are considered greater and less compliant with the Holford Rules than those that are associated with a new route alignment				
9-4.133	Suggest that the Draft Order Limits of the Project need to be clipped / altered at Pylons RG180 and RG181, as currently the Project is routed through the lakes	National Grid has made a slight amendment to the alignment at this location to move to the east to ensure that the lakes are outside of the Order Limits and are not impacted by the Project.			X	X
9-4.134	Suggest that the Project is relocated to be further west of respondent's farm, and then go south over farmland, avoiding the need to use underground cables in the Waveney Valley (e.g. mitigating the impact on residents and disruption resulting from construction activities)	National Grid has considered a variety of route options in this general area encompassing alternative routes to the east of Diss, further to the west of the Project alignment as well as a variety of localised amendments including that suggested by the respondent. The basis for selection of the route is as set out in the 2023, 2024			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)b	S42(1)(d) and S47	Resulted in Design Change
		Design Development Reports (available on the Project website). The 2025 Design Development Report (document reference 5.15) also sets out the decision making that leads to the Project progressing on the basis of overhead line. In the absence of new information or the identification of other factors no change in response to this feedback specifically is proposed, though the Project is progressing in a manner that avoids the construction effects that are of concern as it is now proposed to be overhead line rather than underground cable.				
9-4.135	Concern that the Project at Pylons RG117 and RG118 will impact birds including those on the British Trust for Ornithology (BTO) critically endangered red list / Suggest that Pylons RG117 and RG118 are relocated to mitigate impact on birds	Birds are considered through a series of assessments on both breeding and wintering behaviour in Chapter 8: Ecology and Biodiversity (document reference 6.8) of the Environmental Statement (ES). Where applicable appropriate mitigation to reduce bird collision risk has been included within the Outline Landscape Ecological Management Plan (LEMP) (document reference 7.4).			X	
9-4.136	Concern that Pylons RG114, RG118 and RG119 will impact local footpaths and may not be reinstated by National Grid	National Grid endeavours to reduce impacts on Public Rights of Way (PRoW), including reducing the duration of any closures, as far as practicable. The locations of PRoW affected by the Project, along with proposed diversion routes are set out in the Outline Public Rights of Way Management Plan (document reference 7.6) and shown in the Access, Rights of Way and Public Rights of Navigation Plans (document reference 2.5).	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)b	S42(1)(d) and S47	Resulted in Design Change
		<p>Impacts on PRow as a result of the construction and operation of the Project are assessed in Chapter 10: Health and Wellbeing (document reference 6.10), Chapter 13: Landscape and Visual (document reference 6.13), Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) and Chapter 16: Traffic and Transport (document reference 6.16) of the Environmental Statement (ES) (document reference Volume 6: Environmental Statement). The ES includes details about the level of impact created and the mitigation proposed in relation to the Project.</p> <p>The Outline PRow Management Plan sets out management measures and mitigation measures for each PRow affected by the construction activities and operation of the Project. The management of the PRow in the area around pylons RG114 to RG119. The PRow would be temporarily closed for the duration of the works with managed access, that is, allowing a safe passage throughout for the PRow users of footpath W-267/021/0 and bridleway W-267/014/0.</p> <p>As a result, the magnitude of impact on the PRow is considered negligible and the overall effect has been classified as not significant.</p>				
9-4.137	Concern that the Project between Pylons RG117 and RG122 will impact the Plateau Clayland (which includes an area of Ancient Organic Field Patterns, medieval buildings, hedges and hedge row trees)	National Grid has conducted comprehensive assessments, including site visits and extensive desk-based research, to thoroughly evaluate the setting of the heritage assets surrounding RG117 and RG122 (as in	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)b	S42(1)(d) and S47	Resulted in Design Change
		<p>between RG112 and RG123), understand its value, and mitigate identified impacts.</p> <p>Through routeing and siting National Grid has sought to and would continue to reduce as far as practicable potential impacts on the historic environment including those present within the Plateau Clayland. If potential impacts on the historic environment are identified, we would explore a range of mitigation measures to reduce impacts where possible.</p> <p>This is presented in Chapter 11: Historic Environment (document reference 6.11) of the Environmental Statement (ES) undertaken as part of the Environmental Impact Assessment (EIA) for the Project.</p> <p>We will continue to engage with Historic England and local planning authorities on aspects relating to heritage, including appropriate mitigation measures and techniques and will take their views into account as the Project continues to develop.</p>				
9-4.138	Suggest that Pylons RG116 and RG119 are relocated to mitigate impact on large residential area and Spring Farm (which is Grade II listed)	National Grid has considered the respondent's feedback, a change to the alignment between RG113 and RG118 (now RG112 and RG119) which moves the alignment further east towards the railway, away from Spring Farm has been taken forward.	X		X	X
9-4.139	Suggest that the Project between Pylons RG127 and RG136 is rerouted to be much further east and away from homes and historical properties in Cotton (e.g. moving the overhead lines east enables the assess	National Grid has considered the respondent's feedback. We previously made a change to the alignment in this area to move slightly further east away from Cotton. We are unable to move the alignment			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)b	S42(1)(d) and S47	Resulted in Design Change
	roads to be routed on the edge of fields not through the middle of fields, mitigating impact on farming operations)	<p>further east without transferring effects to other properties to the east and increasing the size of angle pylons.</p> <p>If there are any specific concerns relating to impacts to farming or compensation and how it would be assessed, please contact the Project lands team: Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.</p> <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD</p>				
9-4.140	Suggest that the Project uses underground cables at Cotton (e.g. to mitigate impact on landscape, business and property value)	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is ' <i>that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or Area of Outstanding Natural Beauty (AONB))</i> '. Where no such designations are present, nor is the area within the setting of such a designated area which may have			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)b	S42(1)(d) and S47	Resulted in Design Change
		<p>engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at Cotton would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of NPS EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.</p> <p>Where a landowner has a concern about property values they should contact the Project lands team:</p>

		<p>Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.</p> <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD</p>				
9-4.141	Criticism that National Grid have rerouted the overhead lines south of the Waveney Valley from the preferred 2023 route to avoid Brook Airstrip / Wortham Airstrip (e.g. the revised route of the Project has a far greater impact to local residents) / Suggest that National Grid return to the preferred 2023 route at Brook Airstrip / Wortham Airstrip	<p>The previous change of alignment in this location was made in response to a combination of requests and environmental information. A further change is also being taken forward as set out in the 2025 Design Development Report (document reference 5.15). Factors influencing the changes have included: reduced interaction with solar farm proposals with the eastwards movement being able to follow the boundary of a site rather than passing through another site; archaeological features identified to the north west of St John's; preference for reducing the magnitude of effects and reducing potential cumulative effects by adopting the alignment of an existing 132 kV lattice pylon connection; and, feedback to seek to support continued flight activity at Brook Farm airstrip. It is accepted that some effects are increased for some receptors but overall effects are reduced. Further information on the assessment of airfields can be found in the Environmental Statement (ES), Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).</p>	X		X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)b	S42(1)(d) and S47	Resulted in Design Change
9-4.142	Suggest that Pylon RG94 is relocated away from private residence / Concern about location of Pylon RG94 (e.g. due to construction compound across Lion Road, proximity to commuter route, and nearby heritage buildings / sites)	National Grid has considered the respondent's feedback. The alignment was moved to the east prior to the statutory consultation for a number of reasons including reducing effects on an airfield, reducing effects on a solar development and reducing effects on historic buildings. The location of RG94 is not able to be changed due to other constraints in this area including the road crossing, avoiding residential properties and reducing environmental effects. We have undertaken an Environmental Impact Assessment (EIA) which has assessed the impact of the Project and recommended mitigation where required. The results of this assessment are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application.			X	
9-4.143	Suggest that instead of using underground cables to replace the existing 132 kV overhead lines between Middle Wood Offton and Bramford, National Grid use underground cables for the pylons higher up the valley along their existing route (e.g. there is land along the existing pylons shown in National Grid's plans, tracking along the other side of Middle Wood - following this alignment would mitigate flooding issues)	The alignment has been carefully considered across all constraints and impacts to local stakeholders which dictates the crossing point of the existing overhead lines as opposed to the crossing point dictating the alignment. In National Grid's view the crossing proposed here would result in a less optimal alignment with greater impacts to the residential receptors located in Somersham.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)b	S42(1)(d) and S47	Resulted in Design Change
9-4.144	Suggest that the Project uses underground High Voltage Direct Current (HVDC) cables between Pylons RG128 and RG131	<p>National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or Area of Outstanding Natural Beauty (AONB))'</i>. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)b	S42(1)(d) and S47	Resulted in Design Change
		<p>must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project between RG128 and RG131 would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of NPS EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.</p> <p>National Grid is constantly looking into new innovations and investigating alternative technology types. These are explored and assessed for suitability. Alternative technologies were investigated for the Project, these included an offshore connection using Direct Current (DC) technology, and various onshore connection options including: increasing operational voltages on existing network to above 400 kV; Alternating Current (AC) overhead lines (established technology); alternative pylon types; AC underground technology; High Voltage Direct Current (HVDC) overhead line and underground cables; and Gas Insulated Line (GIL).</p> <p>HVDC is not normally used across land as converting AC to DC and back again would require converter stations so it can be used in the rest of transmission</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)b	S42(1)(d) and S47	Resulted in Design Change
		<p>network and the distribution network which is currently AC. These converter stations are a significant size and would be required at every interface with the wider AC network i.e. at Norwich, Bramford, East Anglia Connection Node (EACN) substation and Tilbury Substation, the cost of these converter stations outweighs the benefits offered.</p> <p>Currently, overhead lines offer the most economic and efficient solution to transmit electricity over long distances.</p>				
9-4.145	Suggest that the Project between Pylons RG128 and RG131 is rerouted to be moved further east where solar farming has already been applied	<p>National Grid notes the respondent's feedback. Moving the alignment east would position the two projects on the same land. This would reduce the potential for solar power generation and present greater construction and operational risks to both projects. The suggested realignment would also be less direct and therefore less consistent with Holford Rule 3 and overall is less preferred. A summary of the Holford Rules is provided within Appendix I22 of this report.</p> <p>Therefore, no change is proposed. An Environmental Impact Assessment (EIA) has been undertaken and the findings are presented in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement), which has identified any need for additional mitigation.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)b	S42(1)(d) and S47	Resulted in Design Change
9-4.146	Suggest that instead of the Project being routed from Pylon RG128 to RG131, the Mendlesham line is upgraded instead	The existing transmission network in the region has recently been upgraded to ensure the system is running at its most efficient performance – the pylons to the west of Mendlesham were upgraded as part of a refurbishment scheme completed earlier in 2024. The existing assets networks are not able to be upgraded further to cope with the new future demands expected on the network. As a result, new overhead lines and substations will be required to accommodate the changing demands on the network. The existing overhead lines cannot be further adapted safely and securely to enable them to carry more power or additional conductors (wires) added to take the amount of power being proposed in East Anglia.			X	
9-4.147	Suggest that Pylons RG123 and RG138 be moved further east (e.g. to lessen the damage to certain farms and residents in and around Cotton)	National Grid has considered the respondent's feedback. We previously made a change to the alignment in this area to move slightly further east away from Cotton. We are unable to move the alignment further east without transferring effects to other properties to the east and increasing the size of angle pylons. If there are any specific concerns requiring impacts to property, farming or compensation and how it would be assessed, please contact the Project lands team: Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)b	S42(1)(d) and S47	Resulted in Design Change
		Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD				
9-4.148	Suggest that underground cables should be used instead of Pylons RG116 to RG118, or, if this is not possible, then suggest that Pylons RG116 to RG118 should be moved east towards the railway line and then run parallel next to it (e.g. to mitigate impact on housing)	<p>National Grid has considered the respondent's feedback and made a change to the alignment between RG113 and RG118 (now RG112 and RG119) which moves the alignment further east towards the railway.</p> <p>National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is '<i>that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or Area of Outstanding Natural Beauty (AONB))</i>'. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)b	S42(1)(d) and S47	Resulted in Design Change
		<p>with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at RG116 to RG118 would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of NPS EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.</p> <p>In developing its onshore proposals, National Grid has considered the potential to parallel existing transport infrastructure such as the railway and consider them to be less preferred alternatives. Numerous properties (residential and commercial such as on Greenways), constraints and environmental features are present in close proximity to existing infrastructure and would be</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)b	S42(1)(d) and S47	Resulted in Design Change
		more adversely affected by close paralleling. Alternatively, if such an alternative was pursued the costs to avoid such effects (multiple direction changes for crossings of the existing overhead line or other infrastructure) would be much greater with additional limitations on the ability to achieve the necessary outages (to undertake the works safely) within the time available.				
9-4.149	Suggest that Pylon RG118 is moved east of the railway line and that two pylons are located in one field (e.g. to mitigate impact on views from village)	National Grid has considered the respondent's feedback and has made a change to the alignment between RG113 and RG118 (as in between RG112 and RG119) which would move the alignment further east towards the railway. Due to a number of constraints in this area including woodland, a campsite and venue to the east and the preferred crossing of the railway, we are not proposing to move the alignment east of the railway line.			X	X
9-4.150	Suggest that Pylons RG191 to RG196 are relocated (e.g. to mitigate impacts on farmland, historic sites, and flora and fauna), including the relocation of Pylon RG194 away from field (e.g. to minimise impact on farming operations)	National Grid has considered the respondent's feedback and has reviewed alternative alignments in this area. An alternative to the west or east would be a longer route with more angle pylons and would be less consistent with the Holford Rules. A summary of the Holford Rules is provided within Appendix I22 of this report. Moving pylons from some fields to other fields is considered to transfer effects from one landowner to another and therefore we are not proposing a change to the alignment in this location. We have undertaken an Environmental Impact Assessment (EIA) which has			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)b	S42(1)(d) and S47	Resulted in Design Change
		assessed the impacts of the Project (including heritage, soils and ecology) and recommended mitigation where required. The results of this assessment are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application.				
9-4.151	Suggest that the Project is moved further east of Cotton at Pylons RG123 to RG138 or beyond (e.g. mitigate impact on Hempnalls Hall, Cotton Lodge, impact on wildlife, trees; so that Pylons RG128 to RG130, and RG132 to RG139 do not impact farmers and their businesses (namely Wicks Farm, Old Farm/Hoggars Road and The Wimble))	The potential to divert the alignment to more closely parallel the existing overhead line infrastructure, particularly in this location where the existing and proposed lines come into close proximity, has been considered and reported in the 2022 Corridor and preliminary routeing and siting study and the 2023 and 2024 Design Development Reports (available on the Project website). It has been further reviewed in respect of the section identified in the feedback in the 2025 Design Development Report (document reference 5.15). In the absence of new information or the identification of other factors the conclusions drawn previously remain valid that it is less preferred. There are greater effects where lines converge and diverge with sharp direction changes to the north-west of Mendlesham and south-east of Mendlesham Green to connect with the remainder of the alignment. Other identified effects in the feedback are not removed but transferred to other receptors and overall adopting the change would provide an alignment with more angle pylons and be less direct and less consistent with Holford Rule 3. A summary of the Holford Rules is provided within Appendix I22 of this	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)b	S42(1)(d) and S47	Resulted in Design Change
		report. There are also increased maintenance and refurbishment risks especially to the west of Mendlesham where the large direction change on the existing line would require additional separation between parallel overhead lines to provide the appropriate space for future maintenance to be completed safely where there is limited space because of a listed residential property. Overall, a more parallel alignment is considered less consistent with Holford Rules and likely to increase effects. On this basis we do not consider the suggested change to be preferred, and it is not taken forward.				
9-4.152	Suggest that underground cables are used within a 2 km radius of Brook Farm Airfield to comply with CAP 793 (plan provided by respondent)	National Grid has considered this feedback with assistance from its independent technical aviation advisers who have reviewed the details of aircraft type, runway parameters etc in addition to considering CAP 793 guidance. In conjunction with other feedback a change is being taken forward with pylon RG96 and RG97 being moved to the east. It is assessed that these changes would enable aircraft to overfly the overhead line safely. This means that the alignment diverts directly south from RG95 to intercept then follow the alignment of the existing 132 kV overhead lattice pylon line that is to be replaced by underground cable from north of the A143. In view of the assessment conclusions, there is considered to be insufficient justification for the proposed use of underground cable in the vicinity of the airfield on grounds of aviation impacts. We will continue			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)b	S42(1)(d) and S47	Resulted in Design Change
		to engage with the airfield operator to confirm the acceptability of the changes. Further information on the assessment of airfields can be found in the Environmental Statement (ES), Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).				
9-4.153	Criticism that National Grid intend to convert existing overhead line which runs east and south of Brook Farm Airstrip to underground cables and construct the Project as overhead line above this, and suggest that the use of underground cables is extended to link with the proposed underground cables at the Waveney Valley to the west of Diss instead (e.g. given that the underground cable plant and machinery will available) (plan provided by respondent)	National Grid has considered the justification for the use of underground cable for the crossing of the Waveney Valley and on the matter of extending the use of underground cable further south from the Waveney Valley raised in the respondent's feedback. The starting presumption in National Policy Statement (NPS) EN-5 paragraph 2.9.20 in a location such as the Waveney Valley which, although valued is not designated, is that overhead line is the appropriate 400 kV connection technology. We have also considered whether the effects from the overhead line are at a level that engages other parts of NPS EN-5 (such as paragraph 2.9.23) to prompt consideration of whether the benefits of undergrounding outweigh any extra economic, social or environmental impacts. At the Waveney we conclude that the benefits from a change to underground cable, do not justify the additional cost that would be incurred. The use of underground cable would lead to a lowering of effects on the setting of the Grade I Listed St Remegius Church, albeit the effects of progressing with an overhead line are assessed as less than substantial			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)b	S42(1)(d) and S47	Resulted in Design Change
		<p>harm and don't themselves require a change in technology. In terms of community effects, existing trees would provide some screening and filtering of views of an overhead line for those in residential areas and on recreational routes. A change from overhead line to underground cable would reduce these community effects but bring disbenefits, most notably increased ecological effects from installation within peaty soils and increased technical risk to cable integrity from the WaLOR channel naturalisation and landscape recovery plans. Conversely there may be compromise to the WALOR project by measures to ensure cable integrity. After consideration of the decision making guidance at paragraph 2.9.25 of NPS EN-5, National Grid concludes that whilst effects from overhead lines to individual receptors may be significant in Environmental Impact Assessment (EIA) terms they do not justify the potential for compromise to the WALOR project, the effects on peaty soils which would arise with an underground cable design nor justify the expected cost of an underground cable design. On this basis, National Grid concludes that the use of an overhead line should be taken forward for the crossing of the Waveney Valley. Prior to making this decision we had considered whether requests to relocate the Cable Sealing End (CSE) compounds and extend the cable both to the north and the south may alter the decision making balance. Such extensions would bring benefits to various residential receptors but with the additional cost of longer length of cables. We</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)b	S42(1)(d) and S47	Resulted in Design Change
		<p>conclude that given the absence of any designated status pertinent to NPS EN-5, and the extent to which some views from residential areas are filtered and screened and lower the level of adverse effects from the overhead line, we do not consider the additional cost associated with extending the underground cable would be justified.</p> <p>A further change is also being taken forward as set out in the 2025 Design Development Report (document reference 5.15). Factors influencing the changes have included: feedback to reduce visual effects on residential properties by following the 132 kV alignment behind trees; preference for reducing the magnitude of effects and reducing potential cumulative effects by adopting the alignment of an existing 132 kV overhead line over a greater distance and extending the 132 kV replacement by underground cable to north of the A143; and technical advice on further change to support continued flight activity at Brook Farm airstrip. Further information on the assessment of airfields can be found in the Environmental Statement (ES), Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).</p>				
9-4.154	Suggest that the Project is realigned further east as it crosses the A143 so that it intersects the existing overhead line to the east of Brook Farm (plan provided by respondent)	National Grid has considered this feedback in conjunction with other feedback and has made a change in line with this request and further extended the 132 kV			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)b	S42(1)(d) and S47	Resulted in Design Change
		replacement by underground cable to start north of the A143.				
9-4.155	Suggest that the Project is rerouted to be further east and south from Brook Farm (e.g. to mitigate impact on air operations circuit) (plan provided by respondent)	National Grid has considered this feedback with assistance from its independent technical aviation advisers who have reviewed the details of aircraft type, runway parameters etc. In conjunction with other feedback a change is being taken forward that achieves the change sought with pylon RG96 and RG97 being moved to the east, such that aircraft can overfly the overhead line safely. This means that the alignment diverts directly south from RG95 to intercept then follow the alignment of the existing 132 kV overhead line that is to be replaced by underground cable from north of the A143. We will continue to engage with the airfield operator to confirm the acceptability of the changes. Further information on the assessment of airfields can be found in the Environmental Statement (ES), Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).			X	X
9-4.156	Suggest that the Project is routed from south of Diss to the West of Stowmarket to provide a more direct route south (plan provided by respondent)	More westerly corridors, such as this, were considered within the Corridor and Preliminary Routeing and Siting Study (CPRSS) (available on the Project website) in terms of a more direct connection to Tilbury. These were less preferred because when taken together with the need to connect additional customers the infrastructure and cost requirement was greater and less consistent			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)b	S42(1)(d) and S47	Resulted in Design Change
		with National Grid policies. As a localised change to continue the connection from Norwich to Bramford a route to the west of Stowmarket would be less direct and require around a 10% longer connection and therefore be less consistent with Holford Rules. A summary of the Holford Rules is provided within Appendix I22 of this report. It may remove effects at some locations but would transfer them to other locations noting for example that routeing immediately west of Stowmarket is constrained by homes and ancient woodland. No change is proposed.				
9-4.157	Suggest that the Project is routed away from Gislingham by crossing at the railway at a location near Mellis and removing the loop that crosses both Bergate and Mews roads (plan provided by respondent)	National Grid has considered the respondent's feedback, the alignment suggested would route through Mellis Common and would be closer to properties and would therefore be less preferred. Crossing the railway at the location suggested would result in the loss of a greater amount of woodland to the east of the railway. Therefore, we are not proposing a change to the alignment at this location.			X	
9-4.158	Suggest that the Project is routed west of the proposed route (e.g. shown as west of Westhorpe) (plan provided by respondent)	National Grid has considered the respondent's feedback and has reviewed the suggestion to route to the west of Gislingham. Moving to the opposite side of Gislingham would decrease impacts to the north and east of the village but would transfer these effects by increasing impacts to the town further south. A western alternative route would also be approximately 500 m longer in			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)b	S42(1)(d) and S47	Resulted in Design Change
		length with a similar number of angle pylons, there would also be an increased impacts on listed buildings. Further south, a western alternative would reach a pinch point on Back Street with only approximately 115 m between properties. A western alternative is therefore not preferred and has not been taken forward.				
9-4.159	Suggest that the Project is routed away from Wortham Airstrip and Gislingham via route to the west of the proposed route (plan provided by respondent)	National Grid has considered this feedback with assistance from its technical aviation advisors who have engaged with (with National Grid also present) Wortham airfield. Following discussion and further assessment a design change is being taken forward to re-route the overhead line further to the east of Wortham airfield (also known as Brook Farm), which is assessed to enable aircraft to overfly the overhead line safely. We are continuing to engage with the airfield operator. It is assessed that alternative re-routing to the west is not required for aviation safety. Further information on the assessment of airfields can be found in the Environmental Statement (ES), Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).			X	X
9-4.160	Criticism that the Project route deviates to the west towards Burgate and Little Green (Pylon RG102), and after running through Little Green Burgate it turns south (Pylon RG110) towards Gislingham, turning again at Pylons RG112 and RG116 to bring	The alignment diverts to the west at Mellis due to a number of factors including avoiding impacts on Mellis Common, avoiding heritage assets and therefore taking the opportunity to follow part of the route of the existing 132 kV overhead line which would then be replaced with			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)b	S42(1)(d) and S47	Resulted in Design Change
	the route back to its original north to south route through Gislingham, and suggest that a more direct route with no sharp changes in direction is taken instead / Criticism that the changes in direction of the Project at Pylons RG102, RG110, RG112 and RG116 are a breach of the Holford rules / Criticism that the Project does not take the most direct route at Burgate	underground cable. The route then deviates back to the east of Gislingham, an alternative alignment to the west of Gislingham would be longer and less direct, would transfer effects to the west and south of Gislingham and would have an unavoidable pinch point between properties on Back Street and was therefore less preferred. We are therefore not proposing a change to the route at this location.				
9-4.161	Concern about yellow hammers (on the UK Birds of Conservation Red List of endangered species) nesting in the hedges along the Burgate Road leading to Gislingham in the area where the Project crosses the road twice (between the sugar beet pad and the horse paddock), / Suggest that the Project should be rerouted to avoid the yellow hammer nest	<p>The alignment diverts to the west at Mellis and therefore crosses Burgate Road twice due to a number of factors including avoiding impacts on Mellis Common, avoiding heritage assets and therefore taking the opportunity to follow part of the route of the existing 132 kV overhead line which would then be replaced with underground cable. We are therefore not proposing a change to the alignment at this location.</p> <p>The presence of yellow hammer and other birds of conservation concern have been identified through a range of breeding bird surveys (see Appendix 8.7: Breeding Bird Report (document reference 6.8.A7) of the Environmental Statement (ES)). Appropriate mitigation has been specified within the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) on breeding birds to ensure no long-term significant impacts are encountered.</p>			X	
9-4.162	Suggest that underground cables are used for the Project at Mellis Common, given that it is a	National Grid has carefully considered the feedback proposing the use of underground cable along the route,			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)b	S42(1)(d) and S47	Resulted in Design Change
	conservation area (e.g. between Pylons RG92 and RG120)	the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or Area of Outstanding Natural Beauty (AONB))'</i> . Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact				

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)b	S42(1)(d) and S47	Resulted in Design Change
		Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at Mellis Common would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of NPS EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
9-4.163	Suggest that the Project should be as close as possible to the existing 400 kV circuit into Bramford from Mendlesham Green (e.g. to avoid bringing the Project through Saxham Street, Stowupland and the valley around the historic Badley Church; for less distribution network undergrounding and ground disturbance)	National Grid notes the potential for close paralleling to reduce the level of effects that may arise from a new overhead line. However, there are constraints and features adjacent to the existing overhead line that mean that overall, we consider close paralleling would lead to greater effects on receptors in the area and be less compliant with the Holford Rules or be less consistent with the policy to be economic and efficient. A summary of the Holford Rules is provided within Appendix I22 of this report. As a result, whilst close paralleling may appear beneficial, overall, the increased environmental effects where the lines must converge and diverge, and those increased effects on properties with overhead line to both sides are considered greater than those introduced by a new route alignment separated from existing 400 kV overhead lines. Whilst crossings and use of underground cable technology may be able to			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)b	S42(1)(d) and S47	Resulted in Design Change
		address the various constrained locations, we consider the costs and environmental effects arising from the additional infrastructure to be less compliant with our duties and relevant policies. In the absence of new evidence or new information no change is proposed.				
9-4.164	Suggest that Pylons RG137 and RG138 should be relocated away from residential property to be alongside the existing overhead line	<p>National Grid does not use standard minimum distances as a routing consideration. Applying an arbitrary distance may be too big or too small for the specific circumstances. We utilise the Holford Rules informed by feedback and professional judgement to define appropriate corridors and alignments that are consistent with the relevant policy framework and duties. A summary of the Holford Rules is provided within Appendix I22 of this report. In this location the alignment is constrained by a gas pipeline to the west and any localised change would also require additional angle pylons.</p> <p>National Grid notes the potential for close paralleling to reduce the level of effects that may arise from a new overhead line. However, there are constraints and features adjacent to the existing overhead line that mean that overall, we consider close paralleling would lead to greater effects on receptors in the area and be less compliant with the Holford Rules or be less consistent with the policy to be economic and efficient. As a result, whilst close paralleling may appear beneficial, overall, the increased environmental effects where the lines must converge and diverge, and those increased effects</p>			X

		on properties with overhead line to both sides are considered greater than those introduced by a new route alignment separated from existing 400 kV overhead lines. Whilst crossings and use of underground cable technology may be able to address the various constrained locations, we consider the costs and environmental effects arising from the additional infrastructure to be less compliant with our duties and relevant policies. In the absence of new evidence or new information no change is proposed.				
9-4.165	Suggest that the Project is rerouted to go north of Darrow Lane, Hall Lane and Ladys Lane open fields	National Grid has considered a variety of route options in this general area encompassing alternative routes to the east of Diss, further to the west of the Project alignment as well as a variety of localised amendments. The basis for selection of the route is as set out in the 2023, 2024 Design Development Reports (available on the Project website) and the 2025 Design Development Report (document reference 5.15) which also sets out the decision making that leads to the Project progressing on the basis of overhead line. The route proposed in this particular feedback is considered to increase effects to a greater number of residential properties along Bressingham Common Road and require many changes of direction to route around individual homes and farmsteads. Beyond the specific locations mentioned in the feedback, the feedback does not specify a route to reconnect with the Project alignment, but due to the extent of villages is likely to be to the west of Shelfanger			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)b	S42(1)(d) and S47	Resulted in Design Change
		and Winfarthing with a transfer of effects from one group of receptors to others. On this basis and in the absence of new information or the identification of other factors no change in response to this feedback is proposed.				
9-4.166	Criticism of the Project's alignment from the bend between Bressingham and Roydon, where it bends to the east / Suggest that instead the Project continues northbound towards the west of Winfarthing and Shelfanger and then on to the Carleton Rode area	National Grid has considered a variety of route options in this general area encompassing alternative routes to the east of Diss, further to the west of the Project alignment as well as a variety of localised amendments. The basis for selection of the route is set out in the 2023, 2024 Design Development Reports (available on the Project website) and the 2025 Design Development Report (document reference 5.15) which also sets out the decision making that leads to the project progressing on the basis of overhead line. The route proposed in this particular feedback is considered to increase effects to a greater number of residential properties along Bressingham Common Road and require many changes of direction to route around individual homes and farmsteads. Beyond the specific locations mentioned in the feedback, the feedback does not specify a route to reconnect with the Project alignment, but due to the extent of villages is likely to be to the west of Shelfanger and Winfarthing with a transfer of effects from one group of receptors to others. On this basis and in the absence of new information or the identification of other factors no change in response to this feedback is proposed.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)b	S42(1)(d) and S47	Resulted in Design Change
9-4.167	Criticism of the changes made to the 2023 draft alignment because of the potential effects on flight activities at Brook Airstrip / Suggest that the Project is reverted to the 2023 draft alignment at this location	The previous change of alignment in this location was made in response to a combination of requests and environmental information. A further change is also being taken forward as set out in the 2025 Design Development Report (document reference 5.15). Factors influencing the changes have included: reduced interaction with solar farm proposals with the eastwards movement being able to follow the boundary of a site rather than passing through another site; archaeological features identified to the north west of St John's; preference for reducing the magnitude of effects and reducing potential cumulative effects by adopting the alignment of an existing 132 kV lattice pylon connection; and, feedback to seek to support continued flight activity at Brook Farm airstrip. It is accepted that some effects are increased for some receptors but overall effects are reduced. Further information on the assessment of airfields can be found in the Environmental Statement (ES), Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).	X			
9-4.168	Suggest that Pylons RG118 and RG119 are relocated away from habitats of red listed species (list of species provided by respondent)	National Grid notes the respondent's feedback, pylons RG118 and RG119 are located for the preferred crossing of the railway. This crossing location keeps pylon heights lower as the railway is at grade rather than raised on an embankment. Crossing at other locations either further north or south are less preferred due to			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)b	S42(1)(d) and S47	Resulted in Design Change
		increasing the amount of woodland loss, transferring effects to other residential properties or increasing the number of angle pylons required. We are therefore not proposing a change to the location of these pylons. We have undertaken an Environmental Impact Assessment (EIA) to assess the potential impact of the Project, and this has identified any need for additional mitigation. The results of this assessment are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application.				
9-4.169	Suggest that the Project uses T-Pylons from Tacolneston to Shelfanger	<p>The latest independent report on the Comparison of Electricity Transmission Technologies: Costs and Characteristics (Institute of Engineering and Technology, 2025) confirms that whilst T-Pylons may in certain locations provide an alternative to conventional overhead lines with potential benefits in visual impact and reduced land-take, this is at a higher cost. The build cost is approximately 2 to 2.5 times that of an equivalently rated conventional overhead line, and the lifetime costs are around 1.6 to 1.7 times that of a conventional overhead line. The current arrangements for the oversight of funding by Ofgem requires that the lowest cost acceptable design is taken forward rather than a more expensive design even if that design is perceived to reduce the level of effect.</p> <p>As such consideration of their use follows after establishing a need to mitigate effects of the standard</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)b	S42(1)(d) and S47	Resulted in Design Change
		<p>lattice design and after considering the benefit of adopting a low height lattice pylon design. T pylons themselves are also less adaptable to varied terrains and require more substantial access infrastructure. Furthermore, their resilience and environmental impact are comparable to conventional overhead lines, but with increased carbon intensity due to construction materials. Attention also needs to be given to the transitions between pylon types. Given it is the surrounding context that drives the need for alternative design mitigation, where this is not required along the entire route, any visual break and transition in pylon design also needs to be carefully sited.</p> <p>Assessment findings have concluded that, where there is not a reversal of the presumption to use overhead lines, the use of lattice pylons (either standard or low height) is consistent with planning policy throughout the route. Whilst there may be some locations (for examples see appendix A of the 2024 Design Development Report) where there may be a design option for the use of T pylons, the need to mitigate for unacceptable effects from lattice pylons is not engaged. On this basis T pylons are not proposed for the Project.</p>				
9-4.170	Suggest that underground cables as part of the Waveney Valley Alternative (the underground option) are extended to Shelfanger Road from Wortham Ling	National Grid has considered the justification for the use of underground cable for the crossing of the Waveney Valley and on the matter of extending the underground cable to Shelfanger raised in the respondent's feedback. The starting presumption in National Policy Statement			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)b	S42(1)(d) and S47	Resulted in Design Change
		(NPS) EN-5 paragraph 2.9.20 in a location such as the Waveney Valley which, although valued is not designated, is that overhead line is the appropriate 400 kV connection technology. We have also considered whether the effects from the overhead line are at a level that engages other parts of NPS EN-5 (such as paragraph 2.9.23) to prompt consideration of whether the benefits of undergrounding outweigh any extra economic, social or environmental impacts. At the Waveney we conclude that the benefits from a change to underground cable, do not justify the additional cost that would be incurred. The use of underground cable would lead to a lowering of effects on the setting of the Grade I Listed St Remegius Church, albeit the effects of progressing with an overhead line are assessed as less than substantial harm and don't themselves require a change in technology. In terms of community effects, existing trees would provide some screening and filtering of views of an overhead line for those in residential areas and on recreational routes. A change from overhead line to underground cable would reduce these community effects but bring disbenefits, most notably increased ecological effects from installation within peaty soils and increased technical risk to cable integrity from the WaLOR channel naturalisation and landscape recovery plans. Conversely there may be compromise to the WALOR project by measures to ensure cable integrity. After consideration of the decision making guidance at paragraph 2.9.25 of NPS EN-5, National

	impact on the wildlife and their habitats and would also remove the screening that these trees would provide to the residents on the east of the village / Suggest that the haul road is rerouted	is a permanent access road to access pylon RG118 for future surveys and maintenance if required and would not be used for construction. We are not proposing to construct anything for this permanent access route therefore existing tracks and roads are being used where possible and we do not expect any tree loss due to the permanent access route. Arboriculture and ecology surveys have been undertaken to establish the baseline ahead of undertaking an impact assessment. The Environmental Statement (ES), Appendix 8.1: Habitat Report (document reference 6.8.A1) and Appendix 13.6: Arboricultural Impact Assessment (AIA) (document reference 6.13.A6) provides further information.				
9-4.172	Concern about the impact of Pylons RG117 and RG118 on the water meadows at what3words reference: hillsides.trades.patching / Request for National Grid to provide environmental surveys at this location / Criticism that landowner has not been provided with environmental surveys	The permanent land take from pylon footings is relatively small proportional to field sizes and temporary land take during construction would be reinstated to its previous land quality during operation, meaning land management (including water meadows) should remain the same. Appendix C: Outline Soil Resource Plan of the Outline Code of Construction Practice (CoCP) (document reference 7.2) provides details of soil handling during construction in line with good practice measures, to protect soil resources associated with water meadows. National Grid has made survey data and reports available to the public through the Environmental			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)b	S42(1)(d) and S47	Resulted in Design Change
		Statement (ES), submitted as part of the Development Consent Order (DCO) application.				
9-4.173	Suggest that the Project uses underground cables at Offton (e.g. to mitigate the impact of Pylon at RG185, south-west of Willisham Tye, between Pylons RG189 and RG190, west of Offton, between Pylons JC13 and JC18 near Ashbrook Street, and along the proposed cable route north-west of Stratford St Mary) / Suggest that the Project uses High Voltage Direct Current (HVDC) underground cables at Offton	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is ' <i>that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or Area of Outstanding Natural Beauty (AONB))</i> '. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)b	S42(1)(d) and S47	Resulted in Design Change
		2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at Offton would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of NPS EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
9-4.174	Suggest that the Project is routed further east between Pylons RG108 and RG123 to avoid Gislingham (plan provided by respondent)	National Grid has considered the respondent's feedback, the alignment diverts to the west at Mellis due to a number of factors including avoiding impacts on Mellis common, avoiding heritage assets and therefore taking the opportunity to follow part of the route of the existing 132 kV overhead line which would then be replaced with underground cable, we are therefore not proposing an alignment further east here. The route then deviates back to the east of Gislingham, following feedback we are proposing a change to the alignment between RG113 and RG118 (now between RG112 and RG119) which would move the alignment further east			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)b	S42(1)(d) and S47	Resulted in Design Change
		towards the railway. While the alignment cannot be routed exactly as requested we believe this change goes which goes someway to responding to the request.				
9-4.175	Suggest that Pylons RG162, RG163 and RG164 are relocated from the line of view of Creeting Hall to instead be routed to the west of the property where there is a warehouse depot and where the area is already being developed with substantial overhead lines	National Grid has considered the respondent's feedback and has reviewed alternatives to the west of Creeting Hall. Western alternatives would take the alignment closer to a greater number of properties at Stowmarket and Creeting St Peter and would have a larger number of angle pylons being less consistent with the Holford Rules. We are therefore not proposing a change to the alignment at this location. A summary of the Holford Rules is provided within Appendix I22 of this report.			X	
9-4.176	Suggest that the Project uses underground cables for the first few miles from Bramford (e.g. to mitigate impact on views and cumulative impact / over development) / Suggest the use of underground cables for the Project at Bramford (e.g. as there is an existing underground transmission scheme in this location, so use of underground cables has previously been considered appropriate at this location)	National grid has considered the potential for cumulative effects at Bramford and this has influenced the development of the alignment and has also considered the Bramford to Twinstead reinforcement. The potential for cumulative effects was recognised and has been responded to by replacing some of the existing 132 kV overhead lattice pylons near to the substation by underground cable. The environmental effects and additional cost to install 132 kV underground cable are lower than those associated with 400 kV connections and has therefore been considered as the preferred approach. To the north, around 8 km of the PI overhead line route is to be replaced by underground cable from north of middle wood near Offton through to Bramford, To the south around 1.2 km of the PLD overhead line			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)b	S42(1)(d) and S47	Resulted in Design Change
		route and around 2.8 km of the PHB overhead line route is to be replaced by underground cable. The effects of the Project are assessed and presented in the Environmental Statement (ES) and this has identified any need for additional mitigation that does not consider a technology change.				
9-4.177	Concern that Pylon RG137 is potentially too close to a horse riding arena and paddocks	National Grid has considered the respondent's feedback and is proposing a change to the alignment between RG135 and RG142 (as in between RG136 and RG143) which would move the alignment further to the west. This would therefore move RG137 further away from the horse riding arena and paddocks.			X	X
9-4.178	Concern about the impact of the highways compound for the Project on water meadow east of the old oak and tree lined avenue near Gislingham (e.g. on wildlife)	National Grid has considered the respondent's feedback and is proposing a change to the alignment between RG113 and RG118 which would move RG117 approximately 190 m further east towards the railway. This has also moved the haul road and highways compound further to the east. We have completed an Environmental Impact Assessment (EIA) which assessed the impacts of the Project including compounds, as well as any mitigation required. The results of this assessment are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application.			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)b	S42(1)(d) and S47	Resulted in Design Change
9-4.179	Suggest that the Project between Pylons RG118 and RG129 (especially Pylons RG118 and RG124) are relocated to mitigate impact on heritage property / Concern about the impact of Pylons RG118 to RG122, particularly RG120, on Starhouse Farm (e.g. impact on heritage)	National Grid has considered this feedback in terms of the extent to which potential heritage effects lead to a need for consideration of change as well as the effects that would arise from the potential changes. In respect of RG118 (now RG119) the 2023 and 2024 Design Development Reports (available on the Project website) considered alternative crossing locations and the 2025 Design Development Report (document reference 5.15) a route to the west of Gislingham and identified them to be less preferred including consideration of heritage effects. Alternative alignments at RG124 (now RG125) have also been considered in those Design Development Reports with alternatives further east and west considered including of potential heritage effects. In the absence of new information or identification of further factors no change is proposed. An Environmental Impact Assessment has been undertaken and the findings are presented in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement), which has identified any need for additional mitigation.			X	
9-4.180	Suggest that the Project follows the route of the existing overhead lines along the A140	Whilst there could be potential benefits from infrastructure being concentrated geographically, i.e., by routeing the Project in close proximity to existing road infrastructure such as the A140, there are constraints and features that mean that National Grid do not consider paralleling would reduce environmental effects, or improve compliance with the Holford Rules or be			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)b	S42(1)(d) and S47	Resulted in Design Change
		more consistent with the policy requirement to be economic and efficient. A summary of the Holford Rules is provided within Appendix I22 of this report. A number of residential properties, as well as hamlets, villages and towns, are present in close proximity to the existing transport infrastructure necessitating multiple diversions of an overhead line. There are also some locations where the combination of existing physical and environmental features (railway and road infrastructure, commercial and residential properties, woodlands etc) present very substantial challenges to routeing and siting. As a result, whilst paralleling of the A140 may appear beneficial in some short sections, overall, the increased environmental effects from multiple changes of direction are considered greater and less compliant with the Holford Rules than those that are associated with a new route alignment.				
9-4.181	Criticism that the Project between Pylons RG140 and RG150 is too close to homes, particularly from Cay Hill / Poplar Farm (postcode provided by respondent) to all homes in Saxham Street, including several listed houses	Neither UK law, National Policy Statements nor the Holford Rules prescribe minimum distances between overhead lines and homes, nonetheless routeing seeks to reduce effects where possible by considering, for example positioning the alignment midway between properties or positioning properties mid span all subject to the presence of other environmental features and constraints. In the absence of any specific request we do not consider the separation from residential properties to be inconsistent with policy. Any implications on landscape and visual receptors, residential amenity or			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)b	S42(1)(d) and S47	Resulted in Design Change
		from concerns about electromagnetic fields are robustly assessed as part of the Environmental Impact Assessment (EIA) and balanced as part of the decision making process. The results of this assessment are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application.				
9-4.182	Concern about the impact of the Project on Furze Way / Suggest that there is no need for scaffolding at this location (e.g. a stop and go system would be sufficient)	National Grid has considered the respondent's feedback and has removed the requirement for scaffolding at this location.			X	
9-4.183	Suggest that the Project follows the original route at the back of Long Wood	The reasons for making this change were presented in the 2024 Design Development Report (available on the Project website) in the section beginning at paragraph 5.4.64. In the absence of new information or the identification of further factors we continue to consider the justification for the change to be valid. An Environmental Impact Assessment (EIA) has been undertaken and the findings are presented in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement), which has identified any need for additional mitigation.			X	
9-4.184	Suggest the use of underground cables between Pylons RG112 and RG121	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)b	S42(1)(d) and S47	Resulted in Design Change
		<p>under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or Area of Outstanding Natural Beauty (AONB))'</i>. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)b	S42(1)(d) and S47	Resulted in Design Change
		effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at RG112 and RG121 would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of NPS EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
9-4.185	Suggest that the Project is relocated east (e.g. between Pylons RG102 and RG112 / between Pylons RG103 and RG111 / between Pylons RG95 and RG109) towards Mellis (e.g. as per pre-consultation plans; to mitigate impact on Burgate Little Green) / Suggest that Project is moved further east of Burgate and nearer Mellis Common between Pylons RG103 and RG111, so that the existing overhead line does not need to be replaced with underground cables and the Project can be accessed from the Mellis-Gislingham Road (e.g. to mitigate disruption to Burgate, Mellis and Gislingham) / Oppose the changes to the Project from the 2023 draft alignment and suggest that the Project is rerouted towards Mellis / Suggest that the Project is routed east of Burgate nearer Mellis Common on a route half way between the original route and currently proposed route	National Grid proposed the change to the alignment between RG102 and RG117 (previously RG103 and RG116) to adopt the alignment of the existing 132 kV overhead line for approximately 2 km, to then realign south to the west of Burgate Road. This change was proposed due to the identification of historic assets that need to be avoided as well as impacts on Mellis Common and the opportunity to follow the route of existing pylons. We are therefore not proposing a further change to the alignment back to the east at this location as suggested.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)b	S42(1)(d) and S47	Resulted in Design Change
9-4.186	Suggest that the Project is rerouted along the edge of the Mellis Conservation Area or parallel to the existing railway line between Pylons RG98 and RG116	National Grid proposed the change to the alignment between RG102 and RG117 (previously RG103 and RG116) to adopt the alignment of the existing 132 kV overhead line for approximately 2 km, to then realign south to the west of Burgate Road. This change was proposed due to the identification of historic assets that need to be avoided as well as impacts on Mellis Common and the opportunity to follow the route of existing pylons. It is not possible to follow the railway at this location. We are therefore not proposing a further change to the alignment at this location.			X	
9-4.187	Suggest relocation of Pylons RG162 to RG177 to mitigate environmental impact on the Gipping Valley Special Landscape Area and Hascott Hill in Battisford, avoid loss of future development potential through disruption to the millions of tonnes of commercially viable gravel deposits on the land at Creting Hall and Doves Hill, and reduce impact on residents (e.g. leisure, landscape, property and business value) / Suggest that the Project is rerouted between Pylons RG160 and RG167 to mitigate the impact on the Gipping Valley	National Grid has considered the respondent's feedback and has reviewed alternatives to the west of Creting Hall. Western alternatives would take the alignment closer to a greater number of properties at Stowmarket and Creting St Peter and would have a larger number of angle pylons being less consistent with the Holford Rules. We are therefore not taking forward a change to the alignment at this location. A summary of the Holford Rules is provided within Appendix I22 of this report. We have taken account of existing, and approved development and sites with some status in the current minerals plan. No such sites have been identified in this area. We have not taken into account wider resource areas where there is potential for extraction but which have no planning status. Similarly we have taken into account other development projects applying the same		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)b	S42(1)(d) and S47	Resulted in Design Change
		<p>approach to considering those with some status in the planning system as set out in the 2024 Design Development Report (available on the Project website).</p> <p>Where a landowner has a concern about property values they should contact the Project lands team: Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.</p> <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD</p>				
9-4.188	<p>Concern about use of the B1070 for the Project and request for information in relation to this, including: information regarding construction of the Project (e.g. mitigation and safety measures for the Holton St Mary and damaged verges such as from construction traffic; up-to-date research on impact and safety / risk assessments for cyclists / horse riders / pedestrians / drivers; protection measures and compensation plans for building damage caused; details on road closures for transporting cabling; clarity on how long peak build will be; the total number of vehicles that will be needed to build the haul road); criticism that National Grid have suggested that no cars park along the B1070 and request for information on what this finding is based on (given that cars do park on the B1070 as there is no car park in Holton St Mary); concern about the</p>	<p>National Grid has carefully considered the feedback received during the statutory consultation for this Primary Access Route for construction vehicles and has identified an opportunity to utilise an offline temporary haul road located east of Holton St Mary from the B1070 to the construction corridor. It is proposed that this route would act as a bypass for Holton St Mary during construction.</p> <p>Through this process, National Grid has also considered alternative routes for this bypass, including the use of the historic railway alignment. These alternatives were discounted through assessment and identification of constraints and requirements.</p>	X			X

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)b	S42(1)(d) and S47	Resulted in Design Change
	impact of construction traffic for the Project on the access to Holton St Mary and to the school in East Bergholt due to lack of footpaths and the narrowness of B1070 which provides the only access (e.g. access to Doctors, Chemists, Shops, Manningtree Railway Station, Post Office; concern about safety). With this, suggest that National Grid use an alternative primary access route for construction of the Project using the dismantled railway line running from the A12 at the Capel St Mary slip road between Junctions 32A and 32B / the route north of the dismantled railway line to the Cable Sealing End (CSE) compound as the haul road instead of B1070 (plans provided by respondent showing alternative haul road locations)					
9-4.189	Suggest that the Project is routed further east over farmland at Little Green Burgate	National Grid proposed the change to the alignment, between RG102 and RG117 (previously RG103 and RG116), to adopt the alignment of the existing 132 kV overhead line for approximately 2 km, to then realign south to the west of Burgate Road. This change was proposed due to the identification of historic assets that need to be avoided as well as impacts on Mellis Common and the opportunity to follow the route of existing pylons. We are therefore not proposing a further change to the alignment back further east at Litte Green Burgate as suggested.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)b	S42(1)(d) and S47	Resulted in Design Change
9-4.190	<p>Suggest that the Cable Sealing End (CSE) compound is moved further north to Pylon JC6 (e.g. to improve safety for airplanes approaching Raydon Wings Aerodrome) and, with this, suggest that the construction compound JC-CC0 is also relocated further north to align with a new access road, the CSE and construction compound JC-CC0 (perhaps combining both construction compounds). If this is not possible, suggest that construction compound JC-CC0 is relocated near to the Notley Enterprise Park / to the dismantled railway line further north (plan provided by respondent) (e.g. to mitigate impact on Holton St Mary)</p>	<p>National Grid has considered the respondent's feedback highlighting a preference for an alternative position of the Cable Sealing End (CSE) compound away from Raydon Airfield. We have appointed an independent aviation consultancy who has engaged (with National Grid also present) with the operators of Raydon Airfield to inform their impact assessment. It is assessed that whilst the overhead line (including the CSE compound) represents a new obstacle in the vicinity of the aerodrome, it is sufficiently distanced from the runway, take-off and landing paths, and flight circuits to the north to enable operations to continue safely, although minor changes to operational procedures may be undertaken by the operator. We will continue to engage with them to confirm the acceptability of the design. Further information on the assessment of airfields can be found in the Environmental Statement (ES), Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).</p> <p>National Grid has carefully considered the feedback received during the statutory consultation for this Primary Access Route for construction vehicles and has identified an opportunity to utilise an offline temporary haul road located east of Holton St Mary from the B1070 to the construction corridor. It is proposed that this route would act as a bypass for Holton St Mary during construction.</p>	X			X

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)b	S42(1)(d) and S47	Resulted in Design Change
		<p>Through this process, National Grid has also considered alternative routes for this bypass, including the use of the historic railway alignment. These alternatives were discounted through assessment and identification of constraints and requirements.</p> <p>National Grid has also carefully considered the feedback received during the statutory consultation for this construction compound.</p> <p>The proposed compound between Raydon and Holton St Mary serves underground cabling works between the proposed CSE compound north of the Notley Enterprise Park and the River Stour. Moving the proposed compound to land adjacent to Notley Enterprise Park would increase the distance that construction vehicles must travel from the Primary Access Route by approximately 1.5-1.8 km. Approximately two thirds of the cable section served by this compound is to the south of the current compound position, therefore moving the compound would also significantly increase construction vehicle movements from the compound to work sites along the cable alignment.</p>				
9-4.191	Suggest that 30 m T-pylons should be used for the Project near Mellis and Burgate (e.g. to mitigate visual impact)	The latest independent report on the Comparison of Electricity Transmission Technologies: Costs and Characteristics (Institute of Engineering and Technology, 2025) confirms that whilst T-Pylons may in certain locations provide an alternative to conventional overhead lines with potential benefits in visual impact and reduced land-take, this is at a higher cost. The build			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)b	S42(1)(d) and S47	Resulted in Design Change
		<p>cost is approximately 2 to 2.5 times that of an equivalently rated conventional overhead line, and the lifetime costs are around 1.6 to 1.7 times that of a conventional overhead line. The current arrangements for the oversight of funding by Ofgem requires that the lowest cost acceptable design is taken forward rather than a more expensive design even if that design is perceived to reduce the level of effect.</p> <p>As such consideration of their use follows after establishing a need to mitigate effects of the standard lattice design and after considering the benefit of adopting a low height lattice pylon design. T pylons themselves are also less adaptable to varied terrains and require more substantial access infrastructure. Furthermore, their resilience and environmental impact are comparable to conventional overhead lines, but with increased carbon intensity due to construction materials. Attention also needs to be given to the transitions between pylon types. Given it is the surrounding context that drives the need for alternative design mitigation, where this is not required along the entire route, any visual break and transition in pylon design also needs to be carefully sited.</p> <p>Assessment findings have concluded that, where there is not a reversal of the presumption to use overhead lines, the use of lattice pylons (either standard or low height) is consistent with planning policy throughout the route. Whilst there may be some locations (for examples see appendix A of the 2024 Design Development Report</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)b	S42(1)(d) and S47	Resulted in Design Change
		found on the Project website) where there may be a design option for the use of T pylons, the need to mitigate for unacceptable effects from lattice pylons is not engaged. On this basis T pylons are not proposed for the Project.				
9-4.192	Suggest that underground cables are used for the Project from Burstall Lane between Cherwell House and Hill Farm House, notably from Burstall Lane between Cherwell House and Hill Farm House	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or Area of Outstanding Natural Beauty (AONB))'</i> . Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)b	S42(1)(d) and S47	Resulted in Design Change
		significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project from the south of Bramford Substation from Burstall Lane, would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of NPS EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
9-4.193	Suggest that underground cable should be used for the Project to the west of Needham Market and east of Badley (e.g. to mitigate impact on heritage and Needham Market)	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)b	S42(1)(d) and S47	Resulted in Design Change
		<p>is 'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or Area of Outstanding Natural Beauty (AONB))'. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project west of</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)b	S42(1)(d) and S47	Resulted in Design Change
		Needham Market and east of Badley would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
9-4.194	Concern that the construction zone required to install Pylons RG99 to RG103 impacts the respondent	Construction work areas have been designed to ensure there is adequate space for the construction teams to safely carry out their operations. Reducing works areas can have a significant impact on safety due to plant movement and material storage/assembly. If you have specific concerns regarding the impact on your property or land, we encourage you to seek third party advice. Alternatively contact the lands team, Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.			X	
9-4.195	Oppose the replacement of the existing overhead line with underground cables (adjacent to Pylons RG99 to RG108) for the Project (e.g. due to impact on wildlife)	The alignment of the existing UK Power Network 132 kV PKF route has been identified as the preferred corridor for the proposed 400 kV Norwich to Tilbury overhead line. The two overhead lines cannot co-exist within this same corridor identified due to the need to maintain adequate falling clearance distances thus necessitating the removal of a section of the PKF overhead line. The undergrounding of a 132 kV circuit is much less impactful than undergrounding a 400 kV circuit with the required land-take and construction area significantly reduced in comparison. More information on 132 kV			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)b	S42(1)(d) and S47	Resulted in Design Change
		<p>underground cable installation can be found on the UK Power Network website.</p> <p>The 132 kV underground cables have been routed to avoid the most ecologically sensitive habitats and key protected species, based on a range of ecology surveys undertaken in the area between 2023-2025. National Grid would make every effort to minimise disruption to wildlife from the installation of underground cabling during the temporary construction, with construction phase mitigation measures proposed within the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and Outline Code of Construction Practice (CoCP) (document reference 7.2).</p>				
9-4.196	Suggest that the underground cables, which are proposed to replace the existing 132 kV overhead lines near Offton as part of the Project, should be rerouted higher up the valley rather than in the floodplain next to The Channel (e.g. to mitigate impact on St Mary's Church Offton and disruption the fluvial geomorphology of The Channel)	<p>National Grid has a mandate to be economic and efficient in its spend and so consideration of longer and more circuitous underground cable routes must be carefully considered against this mandate. In this case no fluvial geomorphology impacts are anticipated to St Marys Church and so the drivers to amend the underground cable route on this basis are considered insufficient.</p> <p>Further detail on UK Power Network 132 kV underground cable installation methodology can be found on the UK Power Network website.</p>			X	
9-4.197	Suggest that underground cables are used between Pylons RG183 and RG200 (e.g. to mitigate impact on Offton, listed buildings, the Site of Special	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant			X
