10-30.5	Concern about the impact of Pylon RG136 (previously presented as Pylon RG135) if the Suffolk 3 change is adopted (e.g. if it was to become an angle pylon)	National Grid notes the respondent's feedback. An Environmental Statement (ES) (document reference: Volume 6: Environmental Statement) has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 ('the Infrastructure EIA Regulations'). The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation (and maintenance) of the Project and recommends appropriate mitigation to reduce effects. In terms of landscape and visual effects the Environmental Implications of Change for Suffolk 3 reported that there would be no change to the type or significance of landscape and visual effects as a result			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>of the proposed change, when compared to the design and PEIR presented at statutory consultation.</p> <p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the EIA and reported in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13). The LVIA sets out the potential landscape and visual effects, which includes consideration of visual amenity of visual receptor areas (including, for example, people in communities and using public rights of way). ES Chapter 13: Landscape and Visual (document reference 6.13) is supported by ES Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3). This appendix sets out the assessment for visual receptor areas including B4 Finningham and Gisligham and B5 Wickham Skeith which are relevant to this feedback relating to the section of the Project containing pylon RG136.</p> <p>Proposed pylon RG135 falls within the Plateau Claylands Landscape Character Type (LCT). The landscape assessment within Appendix 13.2: Landscape Baseline and Assessment (document reference 6.13.A2) of the Environmental Statement (ES) contains detail on the assessment of effects of the Project on landscape character.</p>				
10-30.6	Suggest pylons RG131 to RG135 are moved further north, closer towards the field boundaries / Criticism	National Grid notes the respondent's feedback. It is not possible to move RG131 to RG135 all to field boundaries as this would require increased tree removal.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	that this change this has not been included in the Targeted Consultation	That said we have sought to reposition some pylons close to field boundaries and repositioned the haul road around field edges where possible. We are not proposing a further change to the alignment in this location. If you have specific concerns regarding the impact on your land, we encourage you to seek third party advice. Alternatively contact the Lands team, Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.				
10-30.7	Concern over pylons RG138 and RG139 due to their impact on ancient Wimble building and surrounding habitat, due to the pylons being less than 100m from the property. Suggest the pylons are moved further west and come round the back of 'The Thickett' ancient woodland before they then run parallel to One Hundred Lane bridleway	National Grid notes the benefit of change from the respondent's perspective, pushing the pylons further to the side of the main southerly aspect, but also note that the nearest pylon is at about 150 m separation from the property (which may be reduced by 20 m to 30 m through limits of deviation) and that there is no specific minimum separation to be achieved. However, if implemented the change would transfer effects to other receptors and is considered less preferred compared with the alignment. Routeing to the west of 'The Thickett' is constrained by the route of a high pressure gas pipeline that guides the position of the angle pylon further to the west. This then requires an alignment and pylon positions that are closer to a greater number of listed buildings and is also a slightly longer alignment with a similar number of angle pylons reducing consistency with Holford Rules in both cases (a summary of the Holford Rules is included in Appendix I22 of this report). On that basis no change is proposed.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-30.8	Suggest that the Project is routed 10 miles further west, in Elmstead, if the Suffolk 3 change is adopted (i.e. where National Grid hosted the Statutory Consultation even in the Village Hall)	National Grid notes the respondent's suggestion to deviate to Elmstead, but in the absence of evidence or the identification of new factors to justify such an extensive diversion continue to prefer the project alignment. Section 4.3 of the 2022 Corridor and Preliminary Routeing and Siting Study (available on the Project website) considered such wider diversions but concluded that there was no justification for the adoption of fundamentally longer routes such as that proposed in this case given the greater environmental and socio-economic effects typically associated with much longer routes.			X	
10-30.9	Suggest extending Pylon RG143 north-west in a straight line that follows One Hundred Lane, going behind the woodland known as "The Thickett", as well as extending RG136 south-west in a straight line, joining the two with an angled pylon (i.e. follow the same route as the high pressure gas line before turning south east and going behind 'The Thickett', then be using Eldens Lane and One Hundred Lane as backdrops to help blend the pylons into the landscape)	National Grid notes the benefit of change from the respondent's perspective, pushing the pylons further to the west beyond Eldens Lane / One Hundred Lane. However, if implemented the change would transfer effects to other receptors and is considered less preferred compared with the alignment. Routeing to the west of 'The Thickett' is constrained by the route of a high pressure gas pipeline that guides to the position of the angle pylon relatively more to the west. This then requires an alignment and pylon positions that are closer to a greater number of listed buildings and is also a slightly longer alignment with a similar number of angle pylons reducing consistency with Holford Rules in both cases. In respect of blending in better this is influenced from the perspective of the observer with benefits to			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		some offset by disbenefits for others. For these reasons no change is proposed.				
10-30.10	Suggest that the Project between RG136 and RG137 is relocated as per the attached plans (e.g. to minimise disruption to farming operations and reduce compensation payments due to the landowner, there is already an existing track in place)	<p>The impact of permanent pylon footings on agricultural land is assessed in Chapter 6: Agriculture and Soils (document reference 6.6) of the Environmental Statement (ES). Design has sought to minimise impacts on farming activities when considering pylon locations, including RG136 and RG137. The pylon footings cover a relatively small area of land proportional to field sizes; therefore, the impact on farming activities and agricultural yields should be small.</p> <p>Should a landowner feel that they are owed compensation or would like to discuss how or when compensation is payable, they should contact the Projects Land team to discuss: Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.</p> <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD.</p> <p>Landowners can also refer to the National Grid Land Rights Strategy or the compensation code for further information.</p>			X	

Suffolk 4 Change feedback (Targeted Consultation)

Table 10-31 Summary of consultee comments and National Grid's response

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Design Change (CR)						
10-31.1	Oppose the proposed change - Suffolk 4 (generally)	National Grid notes the respondent's feedback.			X	
10-31.2	Support the proposed change - Suffolk 4 (generally)	National Grid notes the respondent's feedback.		X	X	
Health, Safety & Wellbeing						
10-31.3	Concern about public health impacts deriving from the positioning and use of the construction compound, that have not been considered in the PEIR	Environmental Statement (ES) Chapter 10: Health and Wellbeing (document reference 6.10) includes an assessment of the impacts of the Project on health and wellbeing, including a focus on construction impacts as they relate to the wider determinants of health such as air quality, noise and visual impacts. Reference has been made in the assessment to relevant mitigation measures as they relate to these aspects (for example reference to dust mitigation measures as set out in ES Chapter 7: Air Quality (document reference 6.7)). The Outline Code of Construction Practice (document reference 7.2) also contains reference to relevant mitigation measures, particularly in relation to noise and air quality.		X	X	

Suffolk 5 Change feedback (Targeted Consultation)

Table 10-32 Summary of consultee comments and National Grid's response

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Consultation						
10-32.1	Criticism of consultation materials on this change (Suffolk 5) (please summarise specific criticism in details sheet)	National Grid notes the respondent's feedback. For each of our targeted consultations we developed an overview leaflet and Environmental Implication of Change (EIC) document. These were sent to properties within the bespoke consultation zone for the relevant change. We also published a consultation strategy and overview map. All these documents remain available on the Project website. The information provided at the Targeted consultations was considered proportionate to the changes being consulted upon. The removal of the existing 132 kV overhead line is not being considered as part of this proposed change so details of this were not included in the maps or documents produced to support this consultation.		X	X	
Design Change (CR)						
10-32.2	Support the proposed change - Suffolk 5 (generally)	National Grid notes the respondent's feedback.		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Heritage						
10-32.3	Concern that the undergrounding of the 132 kV line has the potential to cause changes to groundwater levels, which could lead to the de-watering if important archaeology, such as preserved organic remains, peat deposits and organic silt deposits which may exist. Suggest there should be provision to assess these impacts	<p>The groundwater risk assessment included as Appendix 9.3: Groundwater Baseline and Qualitative Groundwater Risk Assessment of the Environmental Statement (ES) (document reference 6.9.A3) concludes that within the majority of the areas of the Project, groundwater is unlikely to be encountered and that dewatering (requiring lowering of the groundwater levels rather than incidental pumping out of surface water ingress into excavations) within the Project is generally unlikely to be required for the majority of the elements of the Project and therefore there are unlikely to be changes to groundwater levels. If dewatering is anticipated or found to be required following detailed design, a Hydrogeological Risk Assessment will be undertaken in accordance with Commitment GH11 in the Outline Code of Construction Practice (document reference 7.2) to ensure that there are no impacts to surrounding groundwater receptors.</p> <p>The Chapter 11: Historic Environment of the ES (document reference 6.11) details the assessment of the potential residual effects of the Project on the Historic Environment. This chapter covers, among other things, the direct physical effects on archaeology during construction (including from movement of contaminants or pollutants and permanent changes to groundwater flows as a result of underground cabling).</p>		X	X	

Suffolk 5 Change feedback (Targeted Consultation)

Table 10-33 Summary of consultee comments and National Grid's response

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Construction impacts						
10-33.1	Concern about the interaction of the Project with low overhead power lines and underground water pipelines along Sandpits Lane / Concern that no measures have been proposed to protect these low overhead power lines and underground water pipelines or to provide alternative routes / supplies	<p>National Grid is working and consulting with all third party statutory utility owners including UK Power Network, BT Openreach and Anglian Water. Where required, appropriate mitigations would be agreed in order to negotiate such existing infrastructure.</p> <p>At Sandpits Lane mitigation measures have been included to uplift the existing UK Power Network asset to allow safe vehicular access. Working in proximity to existing utility assets (both above ground and buried is common practice for National Grid and their contractors. National Grid and their contractors shall adhere to relevant Health and Safety Executive (HSE) and National Grid specific legislation, policy and guidance when constructing, operating and maintaining the Project.</p> <p>In planning the Project, National Grid considers all existing utilities and agree interface and mitigation arrangements (where required) with their owners. We also consider any such future installations where planning applications are in the system and visible and likewise as part of the consultation process, we contact all third-party utility providers in the area. This would be</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>reviewed as the Project progresses through the Development Consent Order (DCO) application submission.</p> <p>An Outline Code of Construction Practice (CoCP) (document reference 7.2) and an Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) has been prepared and submitted with the DCO application. These documents provide commitments to reduce construction impacts together with a framework for detailed management plans to be prepared at detailed design stage in order to reduce and mitigate potential impacts and/or disruptions that may arise during the construction phase.</p>				
10-33.2	Criticism that National Grid are planning to undertake construction activities between 7am-7pm on weekdays, and 8am-5pm at weekends and bank holidays. Request that National Grid shorten working days working day to 9am-5pm, and do not work at the weekends	<p>National Grid acknowledges the concerns raised regarding the proposed construction working hours and the request for a shorter working day with no weekend working.</p> <p>As set out in the Outline Code of Construction Practice (CoCP) (document reference 7.2), the assumed core working hours for the project are:</p> <p>Mondays to Fridays: 07:00–19:00</p> <p>Saturdays, Sundays and Bank Holidays and other public holidays : 07:00–17:00</p> <p>These hours have been identified to support the delivery of a large, complex linear infrastructure project that involves multiple construction sites across a distance of approximately 184 km. The proposed</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>working hours provide the flexibility needed to manage the logistics and sequencing of works efficiently and to avoid unnecessary delays that could extend the overall construction programme.</p> <p>We recognise the importance of minimising disruption to local communities. Any out-of-hours or weekend working would be undertaken only where required and would be subject to consultation with the relevant local planning authorities. In addition, construction activities likely to result in higher levels of noise or disruption would be managed carefully and may be subject to further controls or restrictions, including potential agreements under Section 61 of the Control of Pollution Act 1974, where appropriate.</p> <p>National Grid remains committed to ongoing engagement with local authorities and communities and will seek to balance the need for efficient delivery with sensitivity to local impacts.</p>				
Consultation						
10-33.3	Criticism of consultation materials on this change (Suffolk 6) (please summarise specific criticism in details sheet)	National Grid notes the respondent's feedback. For each of our targeted consultations we developed an overview leaflet and Environmental Implication of Change (EIC) document, including a section on 'Ecology and Biodiversity', agriculture, and mitigations, alongside other environmental considerations. These were sent to properties within the bespoke consultation zone for the relevant change. We also published a	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>consultation strategy and overview map. All these documents remain available on the Project website.</p> <p>The maps we produced were sent to residents as part of an A4 leaflet but we did provide larger maps at A3 size to several residents on request where they struggled with the small copy. We also had a dedicated phonenumber and email address if people had any questions about the documents or proposed changes.</p> <p>The maps we produced used data from the latest OS mapping software, however we are aware that some more recent developments might not be fully shown on these maps. We use a wide range of sources when developing our proposals to ensure a thorough knowledge of the local area and how our proposals might impact communities. We apologise for any confusion caused by data shown on the maps and had a dedicated phonenumber and email address if anyone had questions about the documents produced or the proposed changes.</p>				
10-33.4	Criticism that National Grid have relied on advice from their aviation consultants but not considered the concerns of the Raydon Wings Aerodrome	<p>National Grid has appointed an independent aviation consultancy which has consulted with Raydon Wings aerodrome (with National Grid also present) to prepare and inform its aviation impact assessment, and to enable the operator's feedback to be considered during the development of the Project's design, with design changes implemented to minimise aviation impacts. National Grid considers its approach to be consistent with the instructions and guidance of the Overarching National Policy Statement (NPS) for Energy (EN-1) as</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		well as with engagement undertaken with other aerodromes potentially impacted by the Project. National Grid has consulted the aerodrome throughout the pre-application process, including at each consultation. The feedback received has been considered, reported on and responded to within each consultation feedback report. Further information on the assessment of airfields can be found in the Environmental Statement (ES) Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).				
10-33.5	Criticism that National Grid have not provided Raydon Wings aerodrome with the Airport Services Association (ASA) report	During National Grid's recent engagement with Raydon Wings a summary of the key findings of the aviation impact assessment has been shared to enable the operator's review of the acceptability of the Project design. Further information on the assessment of airfields can be found in the Environmental Statement (ES) Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).			X	
10-33.6	Criticism that the ASAs position in relation to obstacle safeguarding at unlicensed aerodromes (such as Raydon Wings) contradicts the position of the CAA who recommended engagement with Raydon Wings / Criticism that National Grid have not meaningfully engaged with Raydon Wings	National Grid has appointed an independent aviation consultancy which has consulted with Raydon Wings aerodrome (with National Grid also present) to prepare and inform its aviation impact assessment, and to enable the operator's feedback to be considered during the development of the Project's design, with design			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	aerodrome and that the concerns of the aerodrome seem to have been dismissed at an early stage on the basis that Raydon Wings is an unlicensed aerodrome	<p>changes implemented to minimise aviation impacts. National Grid considers its approach to be consistent with the instructions and guidance of the Overarching National Policy Statement (NPS) for Energy (EN-1) as well as with engagement undertaken with other aerodromes potentially impacted by the Project.</p> <p>National Grid engaged and consulted the aerodrome at each consultation and received feedback from the aerodrome at each consultation. Meetings have also been held throughout the pre-application period. The feedback received at each stage has been responded to through published consultation feedback reports. We have considered the feedback throughout the pre-application process. Further information on the assessment of airfields can be found in the Environmental Statement (ES) Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).</p>				
10-33.7	Criticism that consultation leaflet states that feedback asked National Grid to reduce construction impacts on residential areas and farmland, but the response to shift the damage from the B1070 to agricultural fields does not resolve the problem	An Environmental Statement (ES) (document reference: Volume 6: Environmental Statement) has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 ('the Infrastructure EIA Regulations'). The ES identifies and assesses the likely significant effects on the environment resulting from the construction of the Project and recommends appropriate mitigation to reduce effects.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		The access road diverting construction traffic around Holton St Mary is temporary. Land used temporarily will be reinstated where practicable to its pre-construction condition and use (or a condition discussed with the landowner). Soil disturbance as a result of the temporary access road would be effectively mitigated following good practice soil handling measures, as outlined in Appendix C: Outline Soil Resource Plan of the Outline Code of Construction Practice (document reference 7.2).				
10-33.8	The current consultation must be delayed until residents of Holton St Mary and Raydon are consulted on alternatives options to Suffolk 6 and to the Project, and until National Grid are in a position to provide more accurate reference materials	<p>National Grid held several rounds of targeted consultation in Norfolk, Suffolk, Essex and Thurrock in the first half of 2025. The options we consulted on were alternatives to our 2024 preferred draft alignment. These changes were not final and we continued to develop our proposals following the feedback we received at targeted consultations.</p> <p>We have assessed and considered alternatives to our wider proposals as we've developed our plans. In doing so we have concluded that there is no alternative that can meet the requirements placed on us as a regulated business and be delivered on time. As a result, we did not consult on alternative proposals which would not meet the requirements placed on us. Further information on how we considered these alternatives is available in our 2025 Strategic Options Backcheck and Review (SOBR) (document reference 7.17) which is submitted as part of our application for Development Consent.</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		The materials we produced to support the targeted consultations included a consultation leaflet, Environmental Impacts of Change document, and maps of the proposed change. These included the relevant information for members of the public to make informed feedback on the proposals.				
10-33.9	The respondent considers that the additional noise, dust and disruption the new temporary access road will cause to those residents living to the north of the B1070 in Holton St Mary, is unreasonable and at unsafe noise / dust levels, and requests for the studies conducted by National Grid to demonstrate that the proposed temporary construction access road is a safe solution from a noise, dust, disturbance and light pollution perspective to be provided	<p>National Grid has undertaken an Environmental Impact Assessment (EIA) which assesses potential construction impacts of the Project and is presented in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement).</p> <p>Assessments of construction noise, vibration and traffic noise are presented in Environmental Statement (ES) Chapter 14 Noise and Vibration (document reference 6.14). In Holton St Mary, the assessments show:</p> <p>one location with potential for significant construction noise effects, without mitigation; and</p> <p>three locations with potential for significant construction vibration effects, without mitigation.</p> <p>Mitigation in the form of best practicable means (BPM) will be used. With BPM the assessment shows residual impacts to be negligible or minor. Detailed construction noise and vibration assessments will be undertaken by the contractor prior to starting works and specific mitigation measures will be identified and implemented.</p> <p>The construction traffic noise assessment is presented in Appendix 14.2: Construction Traffic Noise</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Assessment of the Environmental Statement (ES) (document reference 6.14.A2). The assessment indicates that significant adverse effects from construction traffic noise are not expected in or around Holton St Mary. Environmental Statement (ES) Chapter 7: Air Quality (document reference 6.7) presents an assessment of the potential impacts from the construction of the Project on air quality. During construction, mitigation would be implemented to reduce the impact of dust generation and construction vehicle emissions. Mitigation measures are outlined in Environmental Statement (ES) Chapter 7: Air Quality (document reference 6.7), and the Outline Code of Construction Practice (CoCP) (document reference 7.2). The dust-emitting activities can be greatly reduced or eliminated by applying the site-specific mitigation measures for high risk sites following measures recommendations in the Institute of Air Quality Management (IAQM) guidance (IAQM, 2024). The IAQM guidance states that with the implementation of effective site-specific mitigation measures, the environmental effect would not be significant in most cases.</p> <p>The air quality construction traffic assessment is presented in Appendix 7.3: Air Quality Assessment Results of the Environmental Statement (document reference 6.7.A3). The nearest human receptor in this area is HR_20, located adjacent to B1070. Predicted</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>pollutant concentrations at this location are well below the relevant air quality standards. The assessment concludes that significant adverse effects from construction traffic emissions are not expected in or around Holton St Mary.</p> <p>Construction lighting will be of the lowest luminosity to safely perform each task and include motion sensors or be switched off when not in use where it is safe and efficient to do so lighting to reduce the potential for effects of concern. Task-specific lighting will be assessed and considered by all necessary specialists to also so far as is reasonably practicable be directed to reduce intrusion. Further details regarding the use of lighting during construction are provided in Environmental Statement (ES) Chapter 4: Project Description (document reference 6.4). Mitigation details relating to lighting are presented in the Outline Code of Construction Practice (CoCP) (document reference 7.2).</p> <p>Any operational lighting associated with the permanent assets such as Cable Sealing End (CSE) compounds have been considered within the EIA. Night-time effects on designated landscapes, landscape character and visual amenity during construction and operation are assessed in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13).</p>				
10-33.10	Concern that the A12 / B1070 junction as a major conduit for significant numbers of large construction	National Grid has carefully considered the feedback received during the statutory consultation for this	X		X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>lorries is completely unsuitable for the following reasons:</p> <ul style="list-style-type: none"> - National Grid propose lengthening the northbound entry slip onto the A12. This two-way slip road from the A12 northbound to the B1070 is only 5.5 metres wide and is sub-standard as it does not allow two HGVs to pass without mounting the kerb. National Grid propose in their earlier documentation that eight metres is required for a Haul Road, so it cannot safely be suggested that the current 5.5 metre two-way slip road is sufficient to accommodate their construction traffic. - It would also be difficult (maybe impossible) to widen the junction as there are properties on either side of the road (e.g. Four Sisters Cottage on one side and Gateway Cottage on the other side). - Siting the A12 Construction Compound at this junction will only increase the intensity of heavy traffic and potentially cause major delays, even accidents. <p>As such, the respondent requests to see National Grid's full safety and feasibility studies for the plans at this junction. The respondent also needs to see the response from Suffolk Highways to this proposal, and the respondent advises that the proposal for the A12 slip road is currently wholly unsafe and unsuitable.</p>	<p>Primary Access Route for construction vehicles; this included the use of the historic railway alignment and access through Notley Enterprise Park. These alternatives were discounted through assessment and identification of constraints. The consultation has identified an opportunity to utilise an offline temporary haul road located east of Holton St Mary from the B1070 to the construction corridor. It is proposed that this route will act as a bypass for Holton St Mary during construction.</p> <p>National Grid has carefully considered any necessary works along the Primary Access Routes for construction as part of the Project proposals.</p> <p>Due to the junction arrangement, it is proposed that only the northbound side of Junction 31 of the A12 is used for construction access. Our preliminary designs include for upgrades to this junction as part of the Project works to improve the northbound acceleration lane (towards the A12 northbound). National Grid is consulting with National Highways to develop this proposal as a permanent upgrade.</p> <p>Our vehicle tracking of the slip lane off the A12 to the junction of the B1070 has not indicated there is any concern with the road width, nor through our consultation with National Highways has it been raised as a concern.</p> <p>The proposed haul road off the B1070 has a typical cross section of 8 m which is required to allow AILs and HGVs to pass in two directions. It also allows for</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>HGVs to pass each other without slowing down. 5.5 m is the minimum safe distance for two HGVs passing each other whilst one vehicle gives way to the other.</p> <p>The design of the access off the B1070 onto the haul road has been designed in accordance with DMRB; it has undergone a road safety audit which it has passed. The contractor will be provided with route information on how to access each bellmouth as well as guidance around any potential hazards along a specific primary access route.</p> <p>The proposed improvements of the junction of the B1070 with the A12 consist of extending the northbound acceleration lane to make it DMRB compliant. There are no plans to undertake any works around the Four Sisters Cottage or Gateway Cottage.</p> <p>In order to complete these highways improvements, a Contractor's compound is proposed to be located at the junction with the A12; this compound will only be required for these specific works and the compound will not be used for the main construction works.</p> <p>National Grid has undertaken an assessment of the potential effects of the Project on traffic and transport and has identified appropriate mitigation to reduce potential effects (see the Environmental Statement (ES), Chapter 16: Traffic and Transport (document reference 6.16) for further detail).</p> <p>A summary of all Road Safety Audits undertaken for proposed accesses and highway works can be found</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		within the Transport Assessment (document reference 7.11), Details of correspondence with the Local Highways Authorities on the B1070/A12 junction can be found with Outline Construction Traffic Management Plan (document reference 7.3).				
DESIGN CHANGE (CR)						
10-33.11	Oppose the proposed change - Suffolk 6 (generally)	National Grid notes the respondent's feedback.	X		X	
10-33.12	Support the proposed change - Suffolk 6 (generally)	National Grid notes the respondent's feedback.	X	X	X	
10-33.13	Oppose the new temporary construction access road which would turn off the B1070 to the east of Holton St Mary, but if it does proceed then it should follow the headland (as per plan provided by respondent). Crossing points would be required to access other fields and bridleway users will need access across (as indicated on respondent's plan). Additionally, National Grid will need to accommodate respondent's irrigation system which will need to cross the haul road (e.g. potentially via a culvert under the road)	The haul road has been amended to follow headland and crossing points will be provided as required. The respondent's irrigation system will be protected where the haul road crosses it. An Outline Public Rights of Way (PRoW) Management Plan (document reference 7.6) has been submitted as part of this Development Consent Order (DCO) and sets out management and mitigation measures for each PRoW affected by the construction activities and operation of the Project. The bridleway that crosses the temporary construction access road will be temporarily closed with managed access.			X	X
10-33.14	Oppose the Project pushing out of the order limits around woodland to the south-west of Holton St Mary (plan provided by respondent)	National Grid notes the respondent's feedback. The diversion of the underground cable to the south-west of Holton St Mary avoids impact on an area of irreplaceable ancient woodland. This woodland (The Coombs) has been found to support a range of			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		protected species including three barbastelle maternity roosts (amongst other bat roosts) and badger setts. Therefore, the proposed diversion reduces the negative significant impacts on ecological features. Therefore we have not proposed a change to the underground cable alignment or Order Limits.				
10-33.15	Oppose the change in direction of travel of the underground cables (to the east) at the Cable Sealing End (CSE) compound (e.g. as this is a longer route, is more expensive, may impact a greater number of fields and different occupiers, may impact historic assets, may impact drainage to this field indefinitely, and will prevent planning development including development ambitions at DC/24/02708 and DC/24/02709) / Suggest reverting to the 2024 alignment at this location with the angle tower to the east of the CSE being removed and the Project re-located to lower land north of Brimlin Wood near Chattisham (as suggested by Savills in their previous report to National Grid in 2024)	<p>National Grid notes the respondent's feedback. National Grid has considered a wide range of alternatives for routeing in this location including routeing to the north of Brimlin Wood but starts by establishing if there is a policy-based imperative for a change. With the pylon separation having been previously increased to around 1500 m it is not considered that any remaining effects on the heritage assets around Little Wenham justify the transfer of effects to other receptors. In particular routeing to the north of Brimlin Woods would move the alignment to require routeing between for example Charit Farm and The Birches where there is around a 150 m gap between properties. On this basis we do not consider that change is required.</p> <p>The change results in the underground cables passing to the east of Wenham Grove and allows for more extensive screening of the Cable Sealing End compound (CSE) through more effective planting. The change lessens the impact on agricultural activity by reducing the number of fields affected by construction, compared to the previous proposal. It would also include moving the underground cabling at the south-</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>east of Raydon to reduce effects on residential properties, we are therefore not proposing to move the underground cable route back to the west. The area through which the cable is routed is not the subject of the planning applications listed. We do take account of developments with some status in planning but cannot take account of all areas where there is aspiration for development as is the case where the pylons are routed.</p> <p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the Environmental Impact Assessment (EIA). The LVIA includes an assessment on both landscape character and visual amenity and sets out the potential landscape and visual effects of the Project, including consideration of mitigation and screening of Cable Sealing End (CSE) compounds. The LVIA is presented in the Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13).</p> <p>National Grid has worked to minimise potential impacts on the historic environment and its setting, through strategic routeing and siting measures. Statutory consultation feedback and the results of archaeological fieldwork have been used to inform design development to reduce impacts to archaeological remains in this area as far as practicable.</p> <p>It has been concluded that the proposed change would move the underground cabling works closer to the complex of designated assets at Little Wenham</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>including the Grade I Wenham Castle (Little Wenham Hall) (1033405), although this would be at sufficient distance that the proposed change would be unlikely to change the effect.</p> <p>The assessment concludes that the setting of this asset does not extend to the Order Limits, so, there would be no potential for impact resulting from the Project.</p>				
10-33.16	Criticism of National Grids assertion at the Suffolk 6 webinar that English Heritage support the change in the 2025 alignment (e.g. as English Heritage have a statutory duty to protect Grade I listed Little Wenham Hall) / Criticism that Suffolk 6 contradicts English Heritage policy	<p>National Grid has worked to minimise potential impacts on the historic environment and its setting, through strategic routeing and siting measures. Statutory consultation feedback and the results of archaeological fieldwork have been used to inform design development to reduce impacts to archaeological remains in this area as far as practicable.</p> <p>It has been concluded that the proposed change would move the underground cabling works closer to the complex of designated assets at Little Wenham including the Grade I Wenham Castle (Little Wenham Hall) (1033405), although this would be at sufficient distance that the proposed change would be unlikely to change the effect.</p> <p>The potential effect of the Project on the group of assets at Little Wenham were discussed with Historic England who did not raise any concerns.</p> <p>The assessment concludes that the setting of this asset does not extend to the Order Limits, so, there</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		would be no potential for impact resulting from the Project.				
10-33.17	<p>"Oppose the Project at Raydon Wings Aerodrome on the following grounds:</p> <ul style="list-style-type: none"> - The proposed Cable Sealing End (CSE) compound is situated too close to the runway and presents a hazard to safe flight - The pylons situated close to the north of the aerodrome will create air turbulence when the wind is in the north-west or north-east creating a potential hazard to aircraft on approach to land - The pylons situated close to the north of the aerodrome penetrate the aerodromes published safeguarding slopes (which were shared with National Grid / ASA) and will present a hazard to aircraft flying a circuit to the north of the aerodrome and will prevent the development of instrument approaches - The underground cables may interfere with magnetic compasses and other sensitive electro-magnetic navigation equipment 	<p>National Grid has appointed an independent aviation consultancy which has engaged with Raydon Wings aerodrome (with National Grid also present) to inform their aviation impact assessment. A primary function of the assessment is to evaluate risks of collision, predominantly during take-off and approaches and including forced landing risks, with the proposed overhead line alignment (including the proposed Cable Sealing End (CSE) compound) representing a new obstacle within proximity of the aerodrome. Operational safety impacts arising from potential increases to risks of bird strike, wind turbulence and electromagnetic forces from the overhead line and underground cables as a result of the Project have also been considered.</p> <p>The conclusions of the impact assessment include that the proximity of the overhead line to the aerodrome flight path on take-off or approach is not a safety concern and that the aerodrome's existing circuits can continue to be used, including to the north, overflying the overhead line at a safe height. Whilst the area defined within the aerodrome's safeguarding plan would be penetrated by the proposed alignment, the major Obstacle Limitation Surface (OLS) requirements of the Civil Aviation Authority's CAP168 (Licensing of Aerodromes) publication are met. Further information on the assessment of airfields can be found in the Environmental Statement (ES Chapter 15: Socio-</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>- The underground cables cut through the aerodromes only runway and are bordered by a wide swathe of land which National Grid indicate is required to support the construction</p> <p>- The aerodrome have previously stated that they would work with National Grid to facilitate any required works, but that would require National Grid would need to interact with the aerodrome in order to ensure that the Project minimises, to the greatest extent possible, any disruption to aerodrome operations and any loss of amenity arising "</p>	<p>Economics, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).</p> <p>The locations of pylons and other structures associated with the overhead line are assessed to be sufficiently distanced from take-off and approach paths for aircraft not to be impacted by any wind turbulence effects. Furthermore it is assessed that electromagnetic fields produced by the underground cables will not be disruptive to aircraft instrumentation.</p> <p>National Grid recognises that disruption to Raydon Wings aerodrome during construction of the underground cable route is likely. National Grid is engaging with the operator to explore the potential for adjustments to the Project design within the Order Limits to reduce temporary impacts on aviation operations. Construction practices to manage access and further reduce disruption are also subject to discussion.</p> <p>National Grid anticipates electro magnetic fields of between 77-111 microteslas at 1 metre above ground may be produced by underground cables proposed in the vicinity of at Raydon Wings airfield runway. In the absence of standards establishing specifying maximum electromagnetic field strengths in the vicinity of aircraft for aviation, National Grid has previously performed testing involving aircraft taxiing over operational cables at a comparable aerodrome and determined that AC cable interference did not impact aircraft avionics in</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		that instance. Magnetic compasses are unaffected by AC fields. AC Alternating current operates at 50 hertz while aviation electrical supply electronics, when not direct current (DC) typically operates around 400 hertz and aviation communication operates in the megahertz range, so no interference is possible likely by that mechanism. Also, electromagnetic field interference on radio altimeters, which operate in the gigahertz range, is not expected from power transmission sources.				
10-33.18	Concern that the A12 slip road is unsuitable at 5.5 meters wide, and the proposed bellmouth at the B1070 will cause confusion and likely be dangerous with lorries having to turn right twice in close proximity / Suggest a more suitable route from the existing A12 slip road between junctions 32A and 32B using the route of the old railway line to the temporary haul road in Raydon, with the construction compound remaining as previously proposed, adjacent to Notley Enterprise Park	<p>National Grid has carefully considered the feedback received during the statutory consultation for this Primary Access Route (PAR) for construction vehicles this included the use of the historic railway alignment and access through Notley Enterprise Park. These alternatives were discounted through assessment and identification of constraints. The consultation has identified an opportunity to utilise an offline temporary haul road located east of Holton St Mary from the B1070 to the construction corridor. It is proposed that this route will act as a bypass for Holton St Mary during construction.</p> <p>National Grid has carefully considered any necessary works along the PAR's for construction as part of the Project proposals.</p> <p>Due to the junction arrangement, it is proposed that only the northbound side of Junction 31 of the A12 is used for construction access. Our preliminary designs include for upgrades to this junction as part of the Project works to improve the northbound acceleration</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>lane. National Grid is consulting with National Highways to develop this proposal and are considering the opportunity for this improvement to be maintained as a permanent upgrade.</p> <p>Our vehicle tracking of the slip lane off the A12 to the junction of the B1070 has not indicated there is any concern with the road width, nor through our consultation with National Highways has it been raised as a concern.</p> <p>The design of the access off the B1070 onto the haul road has been designed in accordance with DMRB, it has undergone a road safety audit which it has passed. The contractor will be provided route formation on how to access each bellmouth as well as guidance around any potential hazards along a specific primary access route.</p> <p>In addition, National Grid has undertaken an assessment of the potential effects of the Project on traffic and transport and recommends appropriate mitigation to reduce potential effects (see the Environmental Statement (ES), Chapter 16: Traffic and Transport (document reference 6.16) for further detail)</p>				
10-33.19	Suggest that the underground cables are routed away from respondent's property at Sandpits Lane (e.g. to mitigate potential structural impacts on property, impact on the environment, and impact on residents)	National Grid has considered the respondent's feedback, as the alignment is to the east of Sandpits Lane currently, we have assessed alternatives to the west, these alternatives would result in greater woodland loss in the National Landscape and would be			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		a longer and less direct route. We are therefore not proposing a change to the alignment at this location.				
10-33.20	Suggest that Pylons RG112 to RG117 should carry on straight across the railway line to the north of the bridge, where there is little to no embankment, then be routed in a straight line to join up with RG121 (e.g. this would mean there would be no need for the short haul road to the south west of the bridge and construction traffic coming from the north would not need to go on the highway, and from the south there would only need to be a straight road crossing east of the bridge to get to the single pylon that would be location south east of RG117)	National Grid has considered the respondent's feedback. We previously proposed a change to the alignment between RG113 and RG118 (now RG119) which would move RG115, RG116, RG117 and RG118 further east away from Gislingham. RG117 would also then be positioned on the other side of a copse. Crossing the railway at the location suggested would result in the loss of a greater amount of woodland to the east of the railway and would be closer to a campsite and venue to the east. Therefore, we are not proposing a change to cross the railway at this location. We have undertaken an Environmental Impact Assessment (EIA) which assesses the impacts on the Project. The findings of the assessment are presented in the Environmental Statement (ES) (document reference volume 6: Environmental Statement) which accompanies our application for development consent.			X	
10-33.21	Suggest that the haul road from the north/northwest should terminate at Pylon RG118, whilst the traffic for RG119 should come in from a southerly direction (e.g., for financial, ecological and highway safety benefits)	National Grid notes the respondent's feedback. However, all proposed temporary pylons must be accessed by the proposed haul road route in order for the construction of the pylon. The haul road comes from the cross over bellmouth location north-east of RG119 and to the pylon which is then a dead end as the railway is a physical blocker to the continued haul road.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>A short section of the public highway is then used as a primary access route linking the haul road to the west of the railway to the continued haul road to the east of the railway to access pylon RG120 and so on south towards Wickham Road.</p> <p>Additionally, RG118 cannot be accessed only from the northern side, as the bellmouth off Thornham Lane connects the haul road with the Primary Access Route (PAR), so it is necessary to maintain a continuous haul road further north towards Old Bury Road</p>				
10-33.22	Suggest the Project is re-routed to the north of Brimlin Wood to mitigate impact on Grade I Listed scheduled monument, Little Wenham Castle, Grade I listed church, Grade II* Listed Hall and a number of Grade II listed traditional buildings	National Grid has considered a wide range of alternatives for routeing in this location including routeing to the north of Brimlin Wood but starts by establishing if there is a policy-based imperative for a change. With the pylon separation having been previously increased to around 1500m it is not considered that any remaining effects on the heritage assets around Little Wenham justify the transfer of effects to other receptors. In particular routeing to the north of Brimlin Woods would move the alignment to require routeing between for example Charit Farm and The Birches where there is around a 150 m gap between properties. On this basis we do not consider that change is required.			X	
10-33.23	Criticism of Project underground route near Raydon near the B1070 which encroaches on gardens at Rectory Gardens residential area / Suggest moving work compound 300 meters north (or north-east) to	<p>National Grid has noted the respondent's feedback and has reviewed alternative locations for JC-CC02.</p> <p>The proposed compound between Raydon and Holton St Mary serves underground cabling works between</p>			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	mitigate the disruption while maintaining construction efficiency	<p>the proposed Cable Sealing End (CSE) compound north of the Notley Enterprise Park and the River Stour. Moving the proposed compound to land adjacent to Notley Enterprise Park will increase the distance that construction vehicles must travel from the primary access route by approximately 1.5-1.8 km. Approximately two thirds of the underground cable section served by this compound is to the south of the current compound position, therefore moving the compound would also significantly increase construction vehicle movements from the compound to work sites along the underground cable alignment.</p> <p>In response to various pieces of feedback during the statutory consultation, National Grid has proposed the construction of a separate construction haul road to the north of Holton St Mary, to remove construction traffic from the majority of the B1070.</p>				
10-33.24	<p>Concern that the attenuation basin proposed to be east of Sandpit Lane will drain continually for the duration of works, and concern around how this will be decontaminated before draining onto respondents' land with impacts on the ecology in the area / Suggest that the drainage attenuation pond is situated closer to Lark Hall to prevent drainage onto respondents' land, saving costs by eliminating the need to drill under Sandpit Lane. Alternatively, suggest that a monitoring system is set up for the water that flows onto the</p>	<p>National Grid notes the respondent's feedback, all drainage features have been sized to suit drainage design criteria agreed with the relevant Lead Local Flood Authorities (in this case, with Suffolk County Council).</p> <p>Site run off would be held in an attenuation pond before being released into the water course. This would allow solid contaminants to settle out. Where other contaminants are expected, further measures would be introduced to ensure that effluent released into water courses does not impact on water quality. These measures are highlighted in the Flood Risk</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	respondents' land, using the land closer to the bridleway to prevent the impact on productive land	<p>Assessment (FRA) (document reference 7.9) and the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) submitted with the Development Consent Order (DCO) application. The discharge rate has been agreed with the Lead Local Flood Authority and relevant stakeholders, available data indicates a watercourse flowing out of the outfall location due west. The available LiDAR information also indicates the natural surface water runoff is due west.</p> <p>With regards to concerns about flooding, an FRA has been prepared for the Project to support and inform the Environmental Impact Assessment. The ES includes consideration of potential impacts on flood risk from all relevant sources, both temporary and permanent impacts.</p>				
10-33.25	Suggest the Project takes the B1068 route from A12 to Sandpits Lane to avoid Holton St Mary	<p>National Grid has carefully considered the feedback received during the statutory consultation for this Primary Access Route for construction vehicles this included the use of the B1068, this alternative was discounted as the entire length of the B1068 would be required to be widened and upgraded for the duration of the Project and then removed at the end of the Project. Resulting in vegetation and tree loss.</p> <p>The consultation has identified an opportunity to utilise an offline temporary haul road located east of Holton St Mary from the B1070 to the construction corridor. It is</p>			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>proposed that this route would act as a bypass for Holton St Mary during construction.</p> <p>It is proposed that only the northbound side of Junction 31 of the A12 is used for construction access. National Grid's preliminary designs include upgrades to this junction as part of the Project works to improve the northbound acceleration lane.</p>				
10-33.26	Suggest constructing a temporary haul road along the old dismantled railway near Capel St Mary to minimise the impact to residential properties. A junction onto the A12 at Capel St Mary is viable and preferable to creating a new road	<p>National Grid has carefully considered the feedback received during the statutory consultation for this Primary Access Route for construction vehicles. The suggestion to follow the dismantled railway for the haul road is not considered to be a viable solution given the proximity to the preceding junction and the cost of the works. In this case more limited works and a shorter additional haul road distance over and above the cable corridor are provided by the use of the existing access near Holton St Mary and this remains preferred.</p> <p>National Grid has also considered a wide range of alternatives for moving the Cable Sealing End (CSE) compound location further north and alternative routes for the underground cable. This was set out in the 2024 Design Development Report (DDR) (available on the Project website) and most recently set out in the 2025 Design Development Report (document reference 5.15). Whilst noting the respondent's preference there is no specific evidence provided nor additional factors identified that either support the preference stated or justify a change from the Project. On this basis we continue to prefer the evidence-based decision making</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>set out in the 2025 DDR and do not consider that change is required.</p> <p>National Grid has undertaken an assessment of the potential effects of the Project on traffic and transport and recommends appropriate mitigation to reduce potential effects (see the Environmental Statement (ES), Chapter 16: Traffic and Transport of the Environmental Statement (ES) (document reference 6.16) for further detail)</p>				
10-33.27	Suggest that Holton St Mary must not be used as a primary access route for construction traffic, whether via the B1070 or a newly built road	The consultation has identified an opportunity to utilise an offline temporary haul road located east of Holton St Mary from the B1070 to the construction corridor. It is proposed that this route would act as a bypass for Holton St Mary during construction.			X	X
10-33.28	Suggest that the construction compound at the B1070 / Acacia Road junction is re-located further north at Notley Enterprise Park / Old Raydon Airfield (e.g. where there are existing industrial operations) / Suggest that the construction compound is re-located further north towards the Cable Sealing End (CSE) compound	<p>National Grid has noted the respondent's feedback and has reviewed alternative locations for JC-CC02.</p> <p>The proposed compound between Raydon and Holton St Mary serves underground cabling works between the proposed Cable Sealing End (CSE) compound north of the Notley Enterprise Park and the River Stour. Moving the proposed compound to land adjacent to Notley Enterprise Park will increase the distance that construction vehicles must travel from the primary access route by approximately 1.5-1.8 km. Approximately two thirds of the cable section served by this compound is to the south of the current compound position, therefore moving the compound would also significantly increase construction vehicle movements</p>	X		X	X

		<p>from the compound to work sites along the cable alignment. Moving the proposed compound south, would move it closer to the Dedham Vale National Landscape (previously known as an Area of Outstanding Natural Beauty (AONB)).</p> <p>In response to various pieces of feedback, National Grid has proposed the construction of a separate construction haul road to the north of Holton St Mary, to remove construction traffic from the majority of the B1070.</p>				
10-33.29	Suggest that the temporary construction access road north of Holton St Mary is re-located further north, ideally to the north of the dismantled railway line using the A12 Junction at Capel St Mary (e.g. to mitigate impact on residents, to tie-in better with the placement of the Cable Sealing End (CSE) compound, to provide large vehicles with a far better and wider access route off the A12, to allow construction traffic wishing to return south to easily do so at the Bentley roundabout, and to provide plenty of room to site the proposed A12 construction compound)	The suggestion to follow the dismantled railway for the haul road is not considered to be a viable solution given the proximity to the preceding junction and the cost of the works. In this case more limited works and a shorter additional haul road distance over and above the cable corridor are provided by the use of the existing access near Holton St Mary and this remains preferred. National Grid has also considered a wide range of alternatives for moving the Cable Sealing End (CSE) compound location further north and alternative routes for the underground cable. This was set out in the 2024 Design Development Report (available on the Project website) and most recently set out in the 2025 Design Development Report (document reference 5.15). Whilst noting the respondent's preference there is no specific evidence provided, nor additional factors identified that either support the preference stated or justify a change from the Project.	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>The design of the access off the B1070 onto the haul road has been designed in accordance with Design Manual for Roads and Bridges (DMRB) and has undergone a road safety audit which it has passed. The contractor will be provided route formation on how to access each bellmouth as well as guidance around any potential hazards along a specific primary access route.</p> <p>In addition, National Grid has undertaken an assessment of the potential effects of the Project on traffic and transport and recommends appropriate mitigation to reduce potential effects (see the Environmental Statement (ES), Chapter 16: Traffic and Transport (document reference 6.16) for further detail)</p>				
10-33.30	Suggest that the new Bellmouth on the B1070 is re-located further north (e.g. to mitigate impact on congestion and safety resulting from adding trips to an already unsafe junction)	<p>The design of the access off the B1070 onto the haul road has been designed in accordance with Design Manual for Roads and Bridges (DMRB) and it has undergone a road safety audit which it has passed. The contractor will be provided route formation on how to access each bellmouth as well as guidance around any potential hazards along a specific primary access route.</p> <p>In addition, National Grid has undertaken an assessment of the potential effects of the Project on traffic and transport and recommends appropriate mitigation to reduce potential effects (see the Environmental Statement (ES), Chapter 16: Traffic and Transport (document reference 6.16) for further detail)</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-33.31	Concern that the drainage of nearby field will be permanently negatively impacted by the Suffolk 6 change if adopted	Where the Project interacts with existing field drainage systems, commitment AS05 within the Outline Code of Construction Practice (CoCP) (document reference 7.2) secures that the efficiency of these systems will be maintained and that any land drains within the Order Limits, affected as a result of the Project, will be reinstated. This will seek to ensure that there would be no negative impacts on local land drainage infrastructure and regimes.			X	
10-33.32	"Suggest the following changes to Suffolk 6: - Suggest that the Cable Sealing End (CSE) compound is moved north - Suggest that the Project is routed towards Chattisham, and that the route should be screened and put in a dip - There should not be an angle pylon - The field south-east of CSE should not be impacted - Suggest that the bulge around the wood at Wenham Grove should be the other side of the wood area to Woodlands/Raydon. The alignment should be straight and would be 300 yards between the water pipe and the pylon route"	National Grid has considered a wide range of alternatives for routeing in this location including routeing closer to Chattisham, moving the Cable Sealing End (CSE) compound location further north and alternative routes for the underground cable. This was set out in the 2024 Design Development Report (DDR) (available on the Project website) and most recently set out in the 2025 Design Development Report (document reference 5.15). Whilst noting the respondent's preference there is no specific evidence provided, nor additional factors identified that either support the preference stated or justify a change from the Project. On this basis we continue to prefer the evidence-based decision making set out in the 2024 and 2025 DDRs and do not consider that change is required.			X	
10-33.33	Suggest that any major construction sites for the Project are relocated to an area of land well away from the B1070, such as the Old Raydon Airfield,	National Grid has noted the respondent's feedback and has reviewed alternative locations for JC-CC02.			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	and that the temporary road should be located further north of the Four Sisters and provides access to a revised construction site (e.g, this would prevent construction traffic from exiting the A12 slip road to the B1070 when travelling north)	<p>The proposed compound between Raydon and Holton St Mary serves underground cabling works between the proposed Cable Sealing End (CSE) compound north of the Notley Enterprise Park and the River Stour. Moving the proposed compound to land adjacent to Notley Enterprise Park will increase the distance that construction vehicles must travel from the primary access route by approximately 1.5-1.8km. Approximately two thirds of the cable section served by this compound is to the south of the current compound position, therefore moving the compound would also significantly increase construction vehicle movements from the compound to work sites along the cable alignment. Moving the proposed compound south, would move it closer to the Dedham Vale National Landscape (previously known as an Area of Outstanding Natural Beauty (AONB)).</p> <p>In response to various pieces of feedback, National Grid has proposed the construction of a separate construction haul road to the north of Holton St Mary, to remove construction traffic from the majority of the B1070.</p>				
10-33.34	Concern over the location of the construction compound due to issues with winter drainage on the B1070 and roads, as fields around the site of the compound are often flooded for long periods / Suggest moving the compound further up Acacia Road, at the entrance to Notley Industrial area and bring the proposed new A12 haul road further east	<p>National Grid has noted the respondent's feedback and has reviewed alternative locations for JC-CC02.</p> <p>The proposed compound between Raydon and Holton St Mary serves underground cabling works between the proposed Cable Sealing End (CSE) compound north of the Notley Enterprise Park and the River Stour. Moving the proposed compound to land</p>			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	to this new compound location, to mitigate the chance of flooding and impact on properties in the area	<p>adjacent to Notley Enterprise Park will increase the distance that construction vehicles must travel from the primary access route by approximately 1.5-1.8 km. Approximately two thirds of the cable section served by this compound is to the south of the current compound position, therefore moving the compound would also significantly increase construction vehicle movements from the compound to work sites along the cable alignment. Moving the proposed compound south, would move it closer to the Dedham Vale National Landscape (previously known as an Area of Outstanding Natural Beauty (AONB)).</p> <p>In response to various pieces of feedback, National Grid has proposed the construction of a separate construction haul road to the north of Holton St Mary, to remove construction traffic from the majority of the B1070.</p> <p>A Flood Risk Assessment (FRA) (document reference 7.9) and an Environmental Statement (ES) (document reference Volume 6: Environmental Statement) have been submitted with the Development Consent Order application. The surface water drainage design will continue to be updated as the design progresses. Available information on surface water flooding has been used to inform the design to date. Landowners are encouraged to provide as much information as early as possible in relation to any further details so these can be factored in at the detailed design stage of the Project ahead of construction starting on site.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Preparation of a Surface Water Management Plan will be secured through the DCO requirement in the draft DCO (document reference 3.1).				
10-33.35	Criticism of justification for Suffolk 6 change, as on the west side of Wenham Grove there is a water main, however there is enough land in this area to avoid the main (the water main needs a margin of 120 meters and there is at least 300 meters to use)	The water main is one of a number of factors that collectively provided the justification for the change. In terms of the distances referred to the available space is also influenced by turning radius for the cables and has to be mindful of reducing effects on other features including areas of woodland, homes and uses such as the airfield runway. In this case even if the water main was not present National Grid considers there is a clear basis for the change and no change back to the 2024 preferred draft alignment is proposed.			X	
10-33.36	Concern about the impact on the drainage of the field around Wenham Grove, disturbed soil, and negative impact on historic sites such as Little Wenham Hall if the Suffolk 6 change is adopted / Suggest that the 2024 route should be adopted	Soil disturbance would be effectively mitigated following good practice soil handling measures, as outlined in Appendix C: Outline Soil Resource Plan of the Outline Code of Construction Practice (CoCP) (document reference 7.2). Soil disturbance from the installation of the underground cable alignment would be temporary. Land used temporarily will be reinstated where practicable to its pre-construction condition and use (or a condition discussed with the landowner). Where the Project interacts with existing field drainage systems, such as those at Wenham Grove, commitment AS05 within the Outline Code of Construction Practice (CoCP) (document reference 7.2) secures that the efficiency of these systems will be maintained and that any land drains within the Order Limits, affected as a result of the Project, will be			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>reinstated. Preparation of a Surface Water Management Plan will be secured through a requirement in the draft DCO (document reference 3.1).</p> <p>National Grid has worked to minimise potential impacts on the historic environment and its setting, through strategic routeing and siting measures. Statutory consultation feedback and the results of archaeological fieldwork have been used to inform design development to reduce impacts to archaeological remains in this area as far as practicable.</p> <p>It has been concluded that the proposed change would move the underground cabling works closer to the complex of designated assets at Little Wenham including the Grade I Wenham Castle (Little Wenham Hall) (1033405), although this would be at sufficient distance that the proposed change would be unlikely to change the effect.</p> <p>The assessment concludes that the setting of this asset does not extend to the Order Limits, so, there would be no potential for impact resulting from the Project.</p>				
10-33.37	Concern about the impact on a number of Anglian Water assets impacted by the underground cable and haul road near Raydon and Holton St Mary	<p>National Grid is working with and consulting with Anglian Water. Where required, appropriate mitigations would be agreed in order to negotiate such existing infrastructure.</p> <p>In planning the Project, National Grid considers all existing utilities and agree interface and mitigation</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>arrangements (where required) with their owners. We also consider any such future installations where planning applications are in the system and visible and likewise as part of the consultation process we contact all third party utility providers in the area. This would be reviewed as the Project progresses through the Development Consent Order (DCO) application submission.</p> <p>An Outline Code of Construction Practice (CoCP) (document reference 7.2) and an Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) has been prepared and submitted with the DCO application. These documents provide commitments to reduce construction impacts together with a framework for detailed management plans to be prepared at detailed design stage in order to reduce and mitigate potential impacts and/or disruptions that may arise during the construction phase.</p>				
10-33.38	Suggest the extension of the haul road to the new construction site for the jointing compound building, to keep all HGVs clear of Holton and Raydon villages	The proposed cabling haul road is connected between the "jointing compound" (Cable Sealing End Compound) and the construction compound. This subsequently links to the offline haul road which bypasses the village of Holton St Mary. No HGVs are proposed to run on the roads through Holton or Raydon village.			X	
10-33.39	Oppose the proposal to site the construction compound at the Acacia Road / B1070 junction (e.g. due to the visual impact on Dedham Vale and	National Grid has noted the respondent's feedback and has reviewed alternative locations for JC-CC02.			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	disruption to traffic) / Suggest that the construction compound is relocated within the Old Raydon Airfield, adjacent to the Notley Enterprise Park (e.g. where there is existing infrastructure and screening) and that the northern end of the proposed temporary access road to divert traffic around Holton St Mary should be rerouted so that it would link directly with the existing access road into Notley Enterprise Park	<p>The proposed compound between Raydon and Holton St Mary serves underground cabling works between the proposed Cable Sealing End (CSE) compound north of the Notley Enterprise Park and the River Stour. Moving the proposed compound to land adjacent to Notley Enterprise Park will increase the distance that construction vehicles must travel from the primary access route by approximately 1.5-1.8km. Approximately two thirds of the cable section served by this compound is to the south of the current compound position, therefore moving the compound would also significantly increase construction vehicle movements from the compound to work sites along the cable alignment. Moving the proposed compound south, would move it closer to the Dedham Vale National Landscape (previously known as an Area of Outstanding Natural Beauty (AONB)).</p> <p>In response to various pieces of feedback, National Grid has proposed the construction of a separate construction haul road to the north of Holton St Mary, to remove construction traffic from the majority of the B1070.</p> <p>The Environmental Statement (Volume 6 of the Development Consent Order (DCO) application) provides an assessment of the Project which includes locations of temporary construction compounds.</p>				
10-33.40	Suggest that construction access to the Cable Sealing End Compound (CSEC) and works should either be along a haul road adjacent to the works	The construction access to the Cable Sealing End (CSE) compound is via the haul road and not via Woodlands Road or the existing airfield access. A	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	from Acacia Rd north to the CSEC or via the existing airfield access route off Acacia Road instead of via Woodlands Rd	permanent access for maintenance vans is proposed via Raydon Road from the east via a new bellmouth and access track.				
10-33.41	Suggest that the Cable Sealing End Compound and pylons are relocated further north, with access to them from a haul road connection running parallel to the railway line into the A12	The suggestion to follow the dismantled railway for the haul road (which would require a new acceleration lane which amounts to a new junction) is not considered to be a viable solution given the proximity to the preceding junction and the cost of the works. In this case more limited works and a shorter additional haul road distance over and above the cable corridor are provided by the use of the existing access near Holton St Mary and this remains preferred. National Grid has also considered a wide range of alternatives for moving the Cable Sealing End (CSE) compound location further north and alternative routes for the underground cable. This was most recently set out in the 2025 Design Development Report (DDR) (document reference 5.15). Whilst noting the respondent's preference there is no specific evidence provided, nor additional factors identified that either support the preference stated or justify a change from the Project. On this basis we continue to prefer the evidence-based decision making set out in the 2025 DDR and do not consider that change is required.	X		X	
10-33.42	Suggest an acceleration lane onto the A12 northbound is needed, as proposed under an earlier scheme	A permanent acceleration lane is proposed as part of these works, which will be handed to National Highways.	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-33.43	Suggest alternative access to the A12 adjacent / parallel to the disused railway, feeding directly to the CSEC (e.g to minimise impact on sensitive receptors, reduce impact of noise and dust)	The suggestion to follow the dismantled railway for the haul road and provide a new acceleration lane (which amounts to a new junction) is not considered to be a viable solution given the proximity to the preceding junction and the cost of the works. In this case more limited works and a shorter additional haul road distance over and above the cable corridor are provided by the use of the existing access near Holton St Mary and this remains preferred.			X	
10-33.44	Suggest that the Cable Sealing End Compound and Construction Compound (JC-CC02) are re-located further north to align with a new access road running north of the Dismantled Railway Line	The suggestion to follow the dismantled railway for the haul road is not considered to be a viable solution given the proximity to the preceding junction and the cost of the works. In this case more limited works and a shorter additional haul road distance over and above the cable corridor are provided by the use of the existing access near Holton St Mary and this remains preferred. National Grid has also considered a wide range of alternatives for moving the Cable Sealing End (CSE) compound location further north and alternative routes for the underground cable. This was most recently set out in the 2025 Design Development Report (DDR) (document reference 5.15). Whilst noting the respondent's preference there is no specific evidence provided, nor additional factors identified that either support the preference stated or justify a change from the Project. On this basis we continue to prefer the evidence-based decision making set out in the 2025 DDR and do not consider that change is required.	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-33.45	Suggest that the Cable Sealing End (CSE) Compound and Pylons near Raydon Wings are re-located further north to at least Pylon J0C26 in order to allow for a safe, clear approach to Raydon Wings Airfield from all directions. This would tie-in well with the new access route the respondent proposes via the dismantled railway line and would also affect fewer properties	<p>National Grid has appointed an independent aviation consultancy which has engaged with the operators of Raydon Wings airfield (with National Grid also present) to inform their impact assessment. The overhead line alignment (including the Cable Sealing End (CSE) compound is assessed to be at a sufficient distance to the north of the runway to ensure that overflight is not required on take-off or landing, and that approaches are therefore not impacted. Furthermore, the alignment need not impact existing flying circuits to the north as overflight is assessed to be at a safe distance. We will continue to engage with the airfield operators to confirm the acceptability of the design. Alternative locations for the CSE compound have been assessed, however the current location is preferred in terms of technical feasibility. In view of the assessment conclusions, the proposed relocation of the CSE compound further north, increasing the length of underground cable, cannot be justified on grounds of aviation safety.</p> <p>National Grid has carefully considered the feedback received during the statutory consultation for this Primary Access Route for construction vehicles The suggestion to follow the dismantled railway for the haul road is not considered to be a viable solution given the proximity to the preceding junction and the cost of the works. In this case more limited works and a shorter additional haul road distance over and above the cable</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>corridor are provided by the use of the existing access near Holton St Mary and this remains preferred.</p> <p>National Grid has undertaken an assessment of the potential effects of the Project on traffic and transport and recommends appropriate mitigation to reduce potential effects (see the Environmental Statement (ES), Chapter 16: Traffic and Transport (document reference 6.16) for further detail)</p>				
10-33.46	Suggest that the construction compound on the B1070 is re-located away from residential areas	<p>National Grid has noted the respondent's feedback and has reviewed alternative locations for JC-CC02.</p> <p>The proposed compound between Raydon and Holton St Mary serves underground cabling works between the proposed Cable Sealing End (CSE) compound north of the Notley Enterprise Park and the River Stour. Moving the proposed compound to land further from residential areas to a location such as adjacent to Notley Enterprise Park will increase the distance that construction vehicles must travel from the primary access route by approximately 1.5-1.8 km. Approximately two thirds of the cable section served by this compound is to the south of the current compound position, therefore moving the compound would also significantly increase construction vehicle movements from the compound to work sites along the cable alignment. Moving the proposed compound south, would move it closer to the Dedham Vale National Landscape (previously known as an Area of Outstanding Natural Beauty (AONB)).</p>			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		In response to various pieces of feedback, National Grid has proposed the construction of a separate construction haul road to the north of Holton St Mary, to remove construction traffic from the majority of the B1070.				
10-33.47	Suggest National Grid remove future right of way south-west of Holton St Mary, as access can be taken from field access closer to route (plan provided by respondent)	National Grid notes the respondent's feedback with regards to the permanent access route and also notes that the most appropriate route also varies in response to seasonal variation in land uses. As the Project progresses into the heads of terms and voluntary agreement stage there will be an opportunity to discuss and agree permanent access rights in more detail. No physical works are required for this permanent access route as part of the Project as this will not be used for construction. Access may be required in the future, for maintenance and surveys and therefore National Grid will look to agree the most suitable access route at that point, taking into account the landowner and National Grid's requirements.			X	
Health, Safety & Wellbeing						
10-33.48	Criticism that National Grid's health and wellbeing assessment is inadequate, dismissing the stress and disruption caused by increased HVG movements	Environmental Statement (ES) Chapter 10 Health and Wellbeing (document reference 6.10) contains an assessment of the impacts of the Project in relation to health and wellbeing. This includes an assessment of construction impacts as they relate to mental health and wellbeing, which includes impacts associated with stress and anxiety.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Environmental Statement Chapter 16: Traffic and Transport (document reference 6.16) describes embedded mitigation measures including use of haul roads designed to reduce construction traffic on the Local Road Network. Other standard mitigation measures include the use of effective construction logistics practices, activities, and techniques, that would be implemented during construction of the Project to limit effects through adherence to good site practices. An Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) will be produced prior to the defined 'commencement' of construction.				
Mitigation						
10-33.49	Controlling traffic at the location of works for the Project will be insufficient to mitigate the impact on residents as well as all the businesses in Hadleigh and those along the route and at the Notley Enterprise Park. There will need to be an active traffic management plan for light vehicles around the area which will not use the HGV diversions and will attempt to use narrow lanes as rat runs	Construction traffic will access the Project from Hadleigh Road from the B170 / A12 junction. National Grid has undertaken an assessment of the potential effects of the Project on traffic and transport and recommends appropriate mitigation to reduce potential effects (see the Environmental Statement (ES), Chapter 16: Traffic and Transport (document reference 6.16) for further detail). It was found that following mitigation the significance of effects would be slight adverse and not significant. Further details on the impact on the local highway network as a result of the Project can be found within the Transport Assessment (document reference 7.11). An Outline Construction Traffic Management Plan (document reference 7.3)	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		has been prepared and submitted with the Development Consent Order (DCO) application.				
National Landscape (AONB)						
10-33.50	Concern about the impact on Dedham Vale National Landscape if Suffolk 6 change if adopted	<p>The relevant National Policy Statement (NPS) is EN-5 which makes it clear that the Government considers overhead lines to be appropriate and acceptable in most instances, although it recognises that there may be, at particularly sensitive locations, potential adverse landscape and visual impacts of an overhead line that make it inconsistent with our duties and relevant planning policy.</p> <p>The Dedham Vale National Landscape (previously an Area of Outstanding Natural Beauty (AONB)) designation is one such location where underground cable technology is proposed with the extent of underground cabling extending beyond the designation boundary in response to the potential for the Project to affect the National Landscape. The proposals include a total of approximately 20 km of underground cable through and in the vicinity of the Dedham Vale National Landscape, to reduce the changes in views and setting of the National Landscape from within and adjacent to its designated boundary. The change would result in the underground cables passing to the east of Wenham Grove and allowing for more extensive screening of the Cable Sealing End compound' (CSE) through more effective planting.</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the Environmental Impact Assessment (EIA). The LVIA includes an assessment on both landscape character and visual amenity and sets out the potential landscape and visual effects of the Project, including consideration of effects on nationally designated landscapes. The LVIA is presented in the Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13). Environmental Statement (ES) Chapter 13 is supported by Appendix 13.5: National Landscape Assessment Study (document reference 6.13.A5) which presents the assessment of effects on Dedham Vale National Landscape.				
Primary Access Routes / Haul Road / Construction Compounds						
10-33.51	Support the new road which will allow traffic to bypass Holton St Mary when accessing the compound area adjacent to Pipers West	National Grid notes the respondent's feedback.			X	
Requests						
10-33.52	Request for the results of the surveys carried out for Suffolk 6 (e.g. bat, ecological, environmental, archaeological, etc)	National Grid has made survey data and reports available to the public through the Environmental Statement, as part of the Development Consent Order application.	X		X	

Babergh, Colchester and Tendring

Babergh, Colchester and Tendring feedback (Targeted Consultation)

Table 10-34 Summary of consultee comments and National Grid's response

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Agricultural Land						
10-34.1	Concern that the Project will take away valuable agricultural land / disrupt farming operations	<p>Agricultural land during the construction stage of the Project, there would be areas of agricultural land that would be temporarily disrupted. National Grid would only use land that is required as part of the Project and would seek to minimise the use of agricultural land where reasonable and safe to do so.</p> <p>National Grid is and would continue to work with all landowners including farmers who may be affected by the proposals to understand the impacts on their operations and to work with them as the Project progresses. We would seek to work with the farming community to limit disruption where practicable. This includes providing prior warning of works which may result in the need to move livestock. Compensation claims for disturbance are considered on a case-by-case basis, if negative impacts on farming operations can be proven. Particular agricultural matters can also be addressed through voluntary land agreements.</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-34.2	Concern that the Project will have a negative impact on agricultural livestock (e.g. type of livestock)	<p>National Grid is and would continue to work with all landowners, including farmers and equestrian facilities who may be affected by the proposals to understand the impacts on their operations and to work with them as the Project progresses. We would seek to work with the farming community to limit disruption where practicable. This includes providing prior warning of works which may result in the need to move livestock. Compensation claims for disturbance are considered on a case-by-case basis, if the negative impact on farming operations can be proven. Particular agricultural matters can also be written into voluntary land agreements. There would also be mitigation put in place where animal grazing may be affected.</p> <p>As well as possible effects on humans, possible effects of Electric and Magnetic Fields (EMFs) on various animals have been studied. No detectable effects of EMFs have been found on, for example, health, milk production, fertility, and behaviour. This is confirmed in National Policy Statement (NPS) EN-5 which states: <i>'There is little evidence that exposure of crops, farm animals or natural ecosystems to transmission line EMFs has any agriculturally significant consequences'</i>.</p>			X	
Airfields						
10-34.3	Concern about the impact of the Project on Boxted Airfield (Royal Air Force (RAF) Boxted) / Suggestion	<p>National Grid has appointed an independent aviation consultancy who has contacted Boxted Airfield. Following further assessment, it has been determined</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	that the Project is routed away from Boxted Airfield (RAF Boxted)	<p>that the airfield is deemed to be disused. It was last used for a one day fly in, in 2021 by the South Suffolk Strut who have advised that they no longer wish to use the airfield due to the condition of the runway.</p> <p>We will continue to engage with nearby airfields as appropriate.</p> <p>Further information on the assessment of airfields can be found in the Environmental Statement (ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).</p>				
10-34.4	Concern about the impact of the Project on Royal Air Force (RAF) Raydon Airfield / Suggestion that the Project is routed away from RAF Raydon Airfield	<p>For clarity this is not an operational RAF base albeit there is an active airstrip known as Raydon Wings.</p> <p>National Grid has appointed an independent aviation consultancy which has engaged with the operators of Raydon Wings airfield (with National Grid also present) to inform their impact assessment. This is in accordance with the requirements of the Overarching National Policy Statement (NPS) for Energy (EN-1) and the NPS for electricity networks infrastructure (EN-5), recognising potential impacts from electrical interference and turbulence amongst other risk factors, the principal being from the presence of an obstacle in the vicinity of the airfield. It is assessed that the proposed overhead alignment to the north of the airfield enables safe overflight and need not impact existing flying circuits, although minor changes to operational procedures may</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>be undertaken by the operator. We will continue to engage with them as appropriate.</p> <p>Further information on the assessment of airfields can be found in the Environmental Statement (ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).</p>				
Community / Social Impact						
10-34.5	Concern about impact of the Project on children / families / residents / communities	<p>National Grid recognises people may have concerns about the potential impacts of living close to an overhead line, and that the uncertainty whilst the proposals are developed may cause anxiety.</p> <p>We have sought to reduce potential effects on communities, residents – including children - through routeing and design. We have also sought to reduce concern or uncertainty about the proposals through making timely design decisions and engaging with people and stakeholders throughout the development of the Project. If the Project receives Development Consent, the Project team would continue to engage with people potentially affected during construction through regular communication including letters, phone calls and meetings, where necessary. We urge anyone with concerns to get in touch through the Norwich to Tilbury Freephone number, address or email, which would remain open throughout examination.</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>National Grid is committed to working with local suppliers, facilitated by supporting forums (such as the local Chambers), on electricity industry skills and workforce planning. National Grid is also committed to providing a coordinated regional approach to jobs and skills opportunities. This commitment is broader than the individual project and separate to any commitments under the proposed development consent order for this Project. The socio-economic effects of the project are assessed in Chapter 15 of the Environmental Statement (ES) (document reference 6.15). Post construction job opportunities are limited given the nature of the development however we will still work with Local Authorities (including facilitating local partners) to understand what is important to them around skills and employment to ensure we leave a lasting positive legacy in the communities where we operate. With regards to a delivery mechanism, the above measures will be delivered as part of our community benefit package, which will look at both local and regional initiatives. This will be delivered outside the development consent process and is not a material consideration in the decision on the proposed Project or a matter to be secured as part of the DCO, as per the Community Funds for Transmission Infrastructure: Guidance (DESNZ, 2025).</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-34.6	Concern about impact of the Project on school / educational facilities	<p>Through routeing and siting, National Grid has sought to avoid, as far as practicable, locations of education establishments.</p> <p>Environmental Statement (ES) Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) presents an assessment of the potential impacts on education facilities as a result of the Project. As part of the assessment, a range of measures are considered during the construction phase to reduce, where practicable, disruption to education establishments. These include traffic management, signage and routing measures to ensure access or partial access can be maintained where feasible. These are identified within ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15), the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) and the Outline Code of Construction Practice (CoCP) (document reference 7.2). The assessment concludes that there would be no significant effects on education facilities within the study area as a result of the construction and operation of the Project.</p>	X		X	
10-34.7	Concern about impact of the Project on leisure	<p>Through routeing and siting National Grid has sought to avoid, as far as practicable, locations that are important for leisure and tourism. Environmental Statement (ES) Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) presents an assessment of the potential impacts on sports clubs, recreational land</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>and recreational routes located within the Order Limits. As part of this assessment, a range of measures have been considered throughout the construction phase of the Project to minimise disruption on leisure and tourism. These include traffic management, signage and routeing measures. These are identified within ES Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15), the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).</p>				
10-34.8	<p>Concern about over development of area / other works in the area (e.g. cumulative impact)</p>	<p>A cumulative effects assessment has been undertaken in accordance with the Planning Inspectorate's Advice Note 17 'Cumulative Effects Assessment' and is presented in Environmental Statement (ES) Chapter 17: Cumulative Effects (document reference 6.17). The cumulative effects assessment has considered the effects of the Project in conjunction with other developments in line with guidance. As part of this process, National Grid has engaged with other developers who are proposing development in proximity of the Project to understand their requirements.</p> <p>The cumulative assessment has been undertaken in accordance with the overarching National Policy Statement (NPS) for Energy (EN-1)</p> <p>Paragraph 4.1.5 in EN-1 states:</p> <p><i>'In considering any proposed development, in particular when weighing its adverse impacts against its benefits,</i></p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p><i>the Secretary of State should take into account: ... its potential adverse impacts, including on the environment, and including any long-term and cumulative adverse impacts, as well as any measures to avoid, reduce, mitigate or compensate for any adverse impacts, following the mitigation hierarchy</i>’.</p> <p>Paragraph 4.2.12 in EN-1 states:</p> <p><i>‘The cumulative impacts of multiple developments with residual impacts should also be considered.’</i></p> <p>Paragraph 4.3.3 in EN-1 states:</p> <p><i>‘The Regulations require an assessment of the likely significant effects of the proposed project on the environment, covering the direct effects and any indirect, secondary, cumulative, transboundary, short, medium, and long-term, permanent and temporary, positive and negative effects at all stages of the project, and also of the measures envisaged for avoiding or mitigating significant adverse effects’.</i></p> <p>Paragraph 4.3.19 of EN-1 states:</p> <p><i>‘The Secretary of State should consider how the accumulation of, and interrelationship between, effects might affect the environment, economy, or community as a whole, even though they may be acceptable when considered on an individual basis with mitigation measures in place’.</i></p> <p>Paragraph 4.4.5 in EN-1 states:</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p><i>'The impacts of more than one development may affect people simultaneously, so the applicant should consider the cumulative impact on health in the ES where appropriate'.</i></p> <p>The long list and short list of other existing and, or approved developments considered for the Cumulative Effects Assessment is presented in ES Appendix 17.2: Long List and Short List of Other Developments (document reference 6.17.A2), detailing the other developments shortlisted for detailed assessment. The appendix provides details on other developments screened out of the assessment in accordance with the methodology presented in Chapter 17 of the ES (document reference 6.17). The detailed assessment of shortlisted other developments is presented in ES Appendix 17.3: Inter-Project Cumulative Effects Assessment (document reference 6.17.A3). Appendix 17.3 outlines the residual significance of cumulative effects for each development, for each environmental topic that has a Zone of Influence that overlaps with that development (i.e. socio-economic, recreation and tourism impacts).</p>				
10-34.9	Concern about the Project being in too close proximity to recently built housing developments / using land being considered for future development (including residential, commercial, infrastructural, and employment sites)	National Grid has obtained information on existing, under construction, consented but not built schemes as well as development proposals within the planning system. The Project design has responded to those that are confirmed through consideration of routeing. In the case of development proposals, some can be amended			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		to be designed around our proposed infrastructure but in other cases our proposals may need to be amended at a corridor level, or proposed developments factored into our detailed route design. Based on known information, and in light of changes made following consideration of feedback to the 2022 and 2023 non-statutory consultations, statutory consultation, targeted consultations, and landowner consultation, we consider our proposals are consistent with relevant policy and guidelines and the alignment designed such that they do not prevent proposed housing developments from being successfully progressed. UK law does not prescribe minimum distances between overhead lines and homes, but any implications on landscape and visual receptors, residential amenity or from concerns about electromagnetic fields are robustly assessed as part of the Environmental Impact Assessment (EIA) and balanced as part of the decision making process. We will continue to review planning applications and engage with developers as necessary.				
10-34.10	Concern about the Project causing communities to become encircled / surrounded by overhead lines	The alignment has been routed to achieve some separation from the existing 400 kV overhead line, such that villages are not encircled by overhead lines to both sides. Separation is inevitably reduced in certain locations due to the presence of constraints to routing and environmental features. Detailed assessment reported in the Environmental Impact Assessment (EIA) identifies any measures considered to be necessary to	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		reduce likely significant effects which would also consider the potential for effects potentially arising from close paralleling existing 132 kV overhead line and new 400 kV overhead line infrastructure.				
10-34.11	Concerned that the Project will have a negative impact on domestic horses / equestrian activities	<p>As well as possible effects on humans, the possible effects of Electric and Magnetic Fields (EMFs) on various animals have been studied. No proven effects of EMFs have been found in any species at levels below the guidelines. This is confirmed in National Policy Statement (NPS) EN-5 which states: "<i>There is little evidence that exposure of crops, farm animals or natural ecosystems to transmission line EMFs has any agriculturally significant consequences.</i>" Although horses are not directly mentioned, there is no evidence to suggest they are any different to other farm animals.</p> <p>As well as the possible direct biological or health effects addressed above, indirect effects such as microshocks can occur as a result of electric fields. Microshocks are small spark discharges which are similar to a static shock after walking across a nylon carpet for example. The Project would be designed in accordance with the principles of the Governments Code of Practice '<i>Power Lines: Control of Microshocks and other indirect effects of public exposure to electric fields</i>' to ensure these are mitigated, which include equestrian activities.</p>		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-34.12	Concern about the impact of the Project on emergency services / ambulances / hospitals / health service	<p>Through routeing and siting National Grid has sought to avoid and reduce as far as practicable effects on identified healthcare facilities.</p> <p>Environmental Statement (ES) Chapter 10: Health and Wellbeing (document reference 6.10) considers the potential impacts on, and access to, healthcare facilities, including emergency services, ambulances, hospitals and other NHS services associated with the construction of the Project, drawing on information from ES Chapter 16: Traffic and Transport (document reference 6.16). No health facilities are due to be directly impacted by the Project and where road diversions are required traffic management and mitigation measures would be in place to reduce impacts. These include traffic management, signage and routing measures to ensure access or partial access can be maintained where feasible. Further detail on proposed mitigation measures is presented in Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), which has been produced following engagement with stakeholders including the emergency services.</p>	X		X	
10-34.13	Criticism of surveys undertaken for the Project in this Section	There is a staged approach to the process of collection of environmental data as any major project develops. National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project. The assessment is informed by a suite of field surveys and desk studies and results are presented in an Environmental Statement (ES) (document reference Volume 6: Environmental	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Statement) that accompanies the application for development consent. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation (and maintenance) of the Project and recommends appropriate mitigation measures to reduce potential adverse impacts.</p> <p>The scope of the EIA is included in the Scoping Report (document reference 6.19) which was submitted to the Planning Inspectorate in November 2022 and their Scoping Opinion (document reference 6.20) received in December 2022. This provided the opportunity for statutory bodies to comment on the scope of the EIA which included our approach on study areas, data collection and baseline conditions for a range of environmental topics. We also discussed and agreed survey scope with stakeholders (including Statutory Environmental Bodies and Local Planning Authorities) following the Scoping Opinion (document reference 6.20) to ensure a robust baseline assessment.</p> <p>National Grid has prepared an Outline Code of Construction Practice (CoCP) (document reference 7.2) which sets out the required mitigation measures and environmental commitments that would be implemented during the construction phase of the Project to avoid or reduce potential effects of the Project on the environment, including commitments to undertake further surveys.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-34.14	Concern about the impact of the Project on water supply	<p>Environmental Statement (ES) Appendix 9.3: Groundwater Baseline and Qualitative Groundwater Risk Assessment (document reference 6.9.A3) is included to support ES Chapter 9: Contaminated Land, Geology and Hydrogeology (document reference 6.9) which provides an assessment of the potential effects on groundwater from the Project and includes impacts on groundwater receptors such as water supplies (both with regard to quantity and quality), as required.</p> <p>Where the Project constitutes overhead lines, interaction with underlying aquifers would be limited. Any piling activities e.g., for pylon foundations, would be undertaken in accordance with good practice, and informed by Project Ground Investigation data.</p> <p>Where the Project constitutes underground cable, further to the above a hydrogeological risk assessments would be undertaken.</p> <p>These measures are described in the Outline Code of Construction Practice (CoCP) (document reference 7.2) and would be secured through the Development Consent Order (DCO), if granted.</p>	X	X	X	
10-34.15	Criticism that substation is located in Ardleigh / Suggest that Ardleigh should receive mitigation for the level of infrastructure being hosted	National Grid has developed the Project with careful consideration of alternatives including those raised by feedback. Integral to the selection of the site for the East Anglia Connection Node (EACN) substation and the connections from it to Bramford and Tilbury has also been the requirement for the Project to be consistent	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>with relevant Planning Policy. Adopting mitigation to reduce effects, by extending the use of underground cable from Bramford through to the EACN substation, has been part of the process of achieving that consistency. The location outside a designated area and outwith the setting of the National Landscape leads to a starting presumption (see National Policy Statement (NPS) EN-5) that overhead line is not unacceptable. We have also considered whether the use of underground cable for the connection to Tilbury is supported by other parts of the NPS but concluded that neither the level of effect meets the thresholds, nor even if met would the additional cost of a change to underground cable be justified by the change in level of effects that would be achieved.</p> <p>A Landscape and Visual Impact Assessment (LVIA) amongst other assessments has been undertaken as part of the Environmental Impact Assessment (EIA). The LVIA includes an assessment on both landscape character and visual amenity and sets out the potential landscape and visual effects of the Project, including consideration of effects on nationally designated landscapes. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13).</p>				
10-34.16	Concern about the impact of the Project on the Essex Way	An Outline Public Rights of Way (PRoW) Management Plan (document reference 7.6) has been submitted as part of this Development Consent Order (DCO)			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>application, and sets out management measures and mitigation measures for each PRow affected by the construction activities and operation of the Project.</p> <p>The Outline PRow Management Plan has defined the management of the PRow, which includes PRow that shares path with Essex Way. These include Langham 3, Great Horkesley 31, Fordham 33, Fordham 35, Great Tey 36, Great Tey 42, White Notley 15, Great And Little Leighs 29 and Great And Little Leighs 40.</p> <p>Great Tey 36 would be temporary closed and diverted for an indicateive duration of two days.</p> <p>Great Tey 42, White Notley 15 and Great And Little Leighs 40 would be partly temporarily closed managed and partly temporarily closed with diversion.</p> <p>The other PRow would be temporarily closed with managed access, that is, allowing safe passage throughout of the PRow and Essex Way users.</p> <p>The impact on PRow (including Essex Way) from the construction and operation of the Project are presented in the Environmental Statement (ES), Chapter 16: Traffic and Transport (document reference 6.16) and ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15).</p>				
10-34.17	Concern about the impact of Pylons TB49, TB50, TB51, TB52, and TB53 and the construction laydown area (CLA) to the north of Pylon TB51 for the Project (e.g. on community woodland; on the Ford Street	National Grid has sought to reduce, as far as practicable, impacts on the environment / countryside through routeing and siting and an ongoing iterative design process which has taken on board feedback at	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	Conservation Area; Public Rights of Way (PRoWs) (including: the Essex Way; FP3 which runs east-west passing across the haul road between Pylons TB50 and TB51 to the edge of Fiddlers Wood; FP5 which runs north from New Road, about 100 m west of TB52; FP7); encirclement of village at Pylons TB52 and TB53; impact on views; impact on Church of St Margaret's and St Catherine's; impact on residents)	<p>different stages of the Project. The iterative design process sought to avoid areas of highest concern, for examples through changes to the alignment or changes to the method e.g. trenchless crossings. We have engaged with a range of stakeholders (including Statutory Environmental Bodies (SEBs) and relevant local planning authorities (LPAs)) throughout the development of the Project design and environmental assessment work.</p> <p>The concerns raised relate to pylons TB49-53 in the area between the northern edge of the Colne Valley near Fordham Bridge and to the west of Gallows Green. Here, the alignment crosses lower valley areas adjacent to the river, passing first through an area of trees that line the riverbed, then arable farmland and its associated field boundaries, before rising to cross the valley sides and the A1124 towards Gallows Green. It is unclear from the feedback what a preferred solution might be, other than not to have the alignment pass through this area. Paragraph 5.4.136 of the 2024 Design Development Report (available on the Project website) notes that an alternative alignment to the west of Fordstreet and Fordham was considered and sets out the reasoning why a western option was not preferred when compared to the alignment. The report summarises that 'Overall whilst noting some potential for a reduction in the number of residential properties with potential amenity effects if the western alternative was taken forward, this would be a longer less economic and efficient route with</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>more pylons and angle pylons. It would also potentially increase effects in respect of construction within a flood zone (but subject to micro-siting this difference may be avoided) and be likely to increase effects on heritage assets including a Grade I listed building and several moats associated with listed buildings. It is also noted that the 2023 preferred draft alignment is consistent with policy and overall, it is considered that there would be insufficient benefits from potentially reduced residential amenity and landscape effects of the western alternative to offset the technical concerns and additional infrastructure required for delivery it. On that basis the 2023 preferred draft alignment, subject to localised modifications, remains preferred and has been taken forward as the 2024 preferred draft alignment.</p> <p>Any larger shifts in the preferred alignment (east or west) would bring the alignment closer to either areas of settlement in Fordstreet and Fordham in the west, closer to areas of community woodland and to the Fordstreet Conservation Area in the west, or to the ancient woodland at Fiddlers Wood and the area of settlement at Gallows Green in the east. Due to the direction required to make the grid connection (the Project), a crossing of the river and of the Essex Way and associated network of public footpaths is required. Routeing has sought to minimise effects on these where possible, including at the construction phase, by avoiding the highest areas of environmental value, such as ancient woodland. As such, this alignment remained preferred and was</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>assessed as part of the Environmental Impact Assessment (EIA) for the Project.</p> <p>The results of this assessment are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation (and maintenance) of the Project and recommends appropriate mitigation measures to reduce potential effects. This includes a landscape and visual impact assessment (LVIA), which includes an assessment of landscape and visual effects. The LVIA is presented in the ES, Chapter 13: Landscape and Visual (document reference 6.13). The assessment concludes that there would be significant effects on views from the local community and Public Rights of Way (PRoW) network within Visual Receptor Areas (VRA) D5 Fordham, D6 West Bergholt, Fordham Heath and Eight Ash Green, and D7 Fordstreet and Aldham. Further detail is provided in the ES, Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3).</p> <p>An Outline PRoW Management Plan (document reference 7.6) has been submitted as part of this DCO application. This document sets out management measures and mitigation measures for each PRoW affected by the construction activities and operation of the Project. The Outline PRoW Management Plan has</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>defined the management of the PRow between TB49 and TB53. These include Fordham 33 (share the same path with Essex Way), Fordham 35 (shares the same path with Essex Way), Aldham 3 (noted as FP3 in the consultation response), Aldham 5 (noted as FP5 in the consultation response) and Aldham 7 (noted as FP7 in the consultation response).</p> <p>Fordham 33 (shares the same path with Essex Way), Fordham 35 (shares the same path with Essex Way), Aldham 5 and Aldham 7 would be temporarily closed with managed access, that is, allowing a safe passage throughout of the PRow and Essex Way users.</p> <p>Aldham 3 would be partly temporarily closed with managed access, and partly temporarily closed with diversion.</p> <p>National Grid, through the routeing and siting exercise, has sought to reduce the impact on the historic environment, including grade II listed buildings in this area.</p> <p>All listed buildings within 2 km of the Order Limits are considered in the historic environment assessment for the Project. The impacts of the Project on the historic environment are assessed in Chapter 11: Historic Environment (document reference 6.11) of the Environmental Statement (ES). The assessment considers the potential impact on historic buildings and includes assessment of potential for physical impact and impact through change to setting that affects the value of</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>a heritage asset. The assessment of listed buildings is supported by setting surveys, as documented in ES Appendix 11.1 Historic Environment Baseline Report (document reference 6.11.A1). The Project has engaged with Historic England and relevant planning authorities on aspects relating to heritage, including appropriate mitigation measures and techniques and to take their views into account during Project development.</p> <p>These actions have been documented and are presented in the Environmental Statement (ES), Chapter 11: Historic Environment (document reference 6.11), which forms an integral part of the Environmental Impact Assessment (EIA) for the Project. The approach to assessment and mitigation presented in ES Chapter 11: Historic Environment (document reference 6.11) have been discussed and agreed with key heritage stakeholders.</p> <p>The assessment of Fordstreet Conservation Area (CA9) concluded that the Project would have a significant effect on the setting of the asset during construction and operation phases.</p> <p>The assessment of Church Of St Margaret And St Catherine (1170063) concluded that the Project would have a not significant effect on the setting of the asset during construction and operation phases.</p>				
10-34.18	Concern about the impact of Pylons TB54, TB55, TB56, TB57, TB58, and / or TB59 (e.g. impact on St Margaret's Church and St Catherine's Church;	The impacts of pylons on agricultural land and soils are assessed in full in Chapter 6: Agriculture and Soils (document reference 6.6) of the Environmental	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	impact on listed buildings at Aldham Hall; impact on Public Rights of Way (PRoWs) (FP15 that links to Aldham Hall Wood; FP12; FP13); impact on Crapes Fruit Farm and associated wildlife; impact on views; impact on residences; impact on birds, including geese and swans)	<p>Statement (ES). It is considered that as the permanent land take of agricultural land from pylon footings is relatively small proportional to field sizes, agricultural operations, land quality and land management should remain the same. Standard mitigation would be implemented to reduce the impacts of construction on agricultural operations, as detailed in the Outline Code of Construction Practice (CoCP) (document reference 7.2), including maintaining access to agricultural land uses throughout the construction phase (or as agreed through landowner discussions) and providing alternative field access where field-to-field access points require alteration because of construction.</p> <p>In response to the wildlife/bird concerns, a range of protected species and other ecological surveys have been undertaken and the results are outlined in Chapter 8: Ecology and Biodiversity (document reference 6.8) and Appendices 8.1 to 8.16 (document reference 6.8.A1-6.8.A16) of the ES. This includes an assessment of impacts on wildlife/ecological receptors around Crapes Fruit Farm. Appropriate mitigation would be implemented where impacts are identified as agreed with Natural England and the Local Planning Authority (LPA) as relevant.</p> <p>The Socio-economics, Recreation and Tourism ES assessment covers the potential effects on PRoW, including footpaths, from the Project. An Outline Public Rights of Way (PRoW) Management Plan (document reference 7.6) is submitted as part of the Development</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Consent Order (DCO) application which details the proposed management of PRow during construction.</p> <p>The Outline PRow Management Plan has defined the management of the PRow for Aldham 12 (noted as FP12 in the consultation response) and Aldham 15 (noted as FP15 in the consultation response).</p> <p>Aldham 15 will be temporarily closed with managed access, that is, allowing a safe passage throughout for the PRow users during construction (current indicative duration of four years). Access to the PRow is anticipated to be reinstated during operation.</p> <p>Aldham 12 will be partly temporarily closed with managed access during construction (current indicative duration of four years) and partly with temporary closure with diversion. Access to the PRow is anticipated to be reinstated during operation.</p> <p>Aldham 13 (noted as FP13 in the consultation response) is located beyond the Order Limits. Hence, access disruption is not anticipated during construction and operation.</p> <p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the EIA. The LVIA includes as assessment of both landscape character and visual amenity and sets out the potential landscape and visual effects of the Project. The LVIA is presented in ES Chapter 13: Landscape and Visual (document reference 6.13). The ES is supported by Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3)</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>which provides an assessment of effects on visual receptors (people) within Visual Receptor Areas (VRA) during the construction and operation (and maintenance) of the Project. This includes pylons TB54 to 59 which are located near Aldham in Section D on the boundary of VRA D7 - Fordstreet and Aldham, and VRA D6 -West Bergholt, Fordham Heath and Eight Ash Green. The assessment concludes that there would be significant effects on views from the local community and PRow network within VRA D6 and VRA. D7.</p> <p>National Grid, through the routeing and siting exercise, has sought to reduce the impact on the historic environment, including grade II listed buildings in this area.</p> <p>All listed buildings within 2 km of the Order Limits are considered in the historic environment assessment for the Project. The impacts of the Project on the historic environment are assessed in Chapter 11: Historic Environment (document reference 6.11) (document reference 6.11) of the Environmental Statement (ES). The assessment considers the potential impact on historic buildings and includes assessment of potential for physical impact and impact through change to setting that affects the value of a heritage asset. The assessment of listed buildings is supported by setting surveys, as documented in ES Appendix 11.1 Historic Environment Baseline Report (document reference 6.11.A1). The Project has engaged with Historic England and relevant planning authorities on aspects relating to</p>

		<p>additional mitigation measures are proposed during the construction phase as any measures designed to lessen the visual impact of the Project would be of a scale that would visually adversely alter the setting of the asset.</p> <p>The assessment of Church Of St Margaret And St Catherine (1170063) concludes a temporary minor adverse significance of effect during construction and a direct, permanent moderate adverse significance of effect. This is due to changes within the setting of the asset that would impact its value. No additional mitigation measures are proposed as any measures designed to lessen the visual impact of the Project would be of a scale that would visually adversely alter the setting of the asset.</p>				
Construction Impacts						
10-34.19	Concern about disruption from construction	<p>An Environmental Statement (ES) (document reference: Volume 6: Environmental Statement) has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 ('the Infrastructure EIA Regulations'). The ES identifies and assesses the likely significant effects on the environment resulting from the construction of the Project and recommends appropriate mitigation to reduce effects.</p> <p>Environmental mitigation measures have been defined within each environmental topic chapter and set out in relevant management documents submitted with the</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Development Consent Order (DCO) application, including the Outline Code of Construction Practice (CoCP) (document reference 7.2), the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5).				
10-34.20	Concern about impact on traffic levels in local area caused by construction works	As part of the pre-application process National Grid has engaged with the relevant authorities, their highways teams and National Highways to understand and gain information on their road networks. This information has been used to inform and guide the drafting of the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) for the Project that accompanies the Development Consent Order (DCO) application. A strategy has been developed to manage the impact of construction vehicles on the public highway and sensitive receptors, using suitable Local Road Network connections from the Strategic Road Network called Primary Access Routes. In addition, temporary haul roads for construction vehicles are proposed along the Project alignment, further reducing the impact of construction traffic on the local road network. Further details of the strategy can be found	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>within the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).</p> <p>Environmental Statement (ES) Chapter 16: Traffic and Transport (document reference 6.16) includes the assessment of the potential impacts of the Project including changes in traffic flow, delays, road safety and impact on Walking, Cycling and Horse-Riding modes on the roads along the Primary Access Routes located in the Local Road Network.</p> <p>The Transport Assessment (document reference 7.11), submitted with the DCO application, examines capacity, safety, and operational efficiency of the network, identifying potential bottlenecks or safety concerns.</p> <p>Within the assessment of the ES and the Transport Assessment, mitigation measures are proposed to minimise likely adverse impacts</p>				
10-34.21	Concern about noise and other issues resulting from construction (e.g. mud on roads, dust)	<p>An Environmental Statement (ES) (document reference: Volume 6: Environmental Statement) has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 ('the Infrastructure EIA Regulations'). The ES identifies and assesses the likely significant effects on the environment resulting from the construction of the Project and recommends appropriate mitigation to reduce effects.</p> <p>Specifically, a Construction Noise and Vibration Impact Assessment has been undertaken and is reported in ES</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Chapter 14: Noise and Vibration (document reference 6.14). During construction, mitigation would be implemented to reduce noise and vibration impacts from construction activities and increased road traffic noise and vibration due to additional movement from construction traffic. Mitigation measures are outlined in ES Chapter 14: Noise and Vibration (document reference 6.14) and the Outline Code of Construction Practice (CoCP) (document reference 7.2). This includes the assumption that construction working would be undertaken within the agreed working hours, construction traffic would be managed through the Construction Traffic Management Plan (CTMP) (document reference 7.3), haul roads would be well maintained, and Best Practicable Means (BPM) would be employed to reduce construction noise and vibration.</p> <p>ES Chapter 7: Air Quality (document reference 6.7) presents an assessment of the potential impacts from the construction of the Project on air quality. During construction, mitigation would be implemented to reduce the impact of dust generation and construction vehicle emissions. Mitigation measures are outlined in ES Chapter 7: Air Quality (document reference 6.7), and the Outline CoCP (document reference 7.2). The dust-emitting activities can be greatly reduced or eliminated by applying the site-specific mitigation measures (see Outline CoCP (document reference 7.2)) for high risk sites following measures recommendations in the Institute of Air Quality Management (IAQM) guidance</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>(IAQM, 2024). The IAQM guidance states that with the implementation of effective site-specific mitigation measures, the environmental effect would not be significant in most cases.</p> <p>In addition, National Grid has prepared an Outline CoCP (document reference 7.2). The Outline CoCP (document reference 7.2) sets out the required mitigation measures and environmental commitments that would be implemented during the construction phase of the Project to avoid or reduce potential effects of the Project on the environment.</p>				
10-34.22	Concern that local road infrastructure is not suitable for heavy construction vehicles and machinery	<p>A strategy has been developed to manage the impact of construction vehicles on the public highway and sensitive receptors, using suitable Local Road Network connections from the Strategic Road Network called Primary Access Routes. In addition, temporary haul roads for construction vehicles are proposed along the Project alignment, further reducing the impact of construction traffic on the local road network. Further details of the strategy can be found within the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).</p> <p>The Project also requires the transportation of Abnormal Indivisible Loads (AIL). National Grid is developing specific routing proposals for AIL movements and is developing these through engagement with the relevant stakeholders including the Local Highway Authorities and National Highways. An AIL routing strategy</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		containing details about these movements are submitted in support of the Development Consent Order (DCO) application.				
10-34.23	Concern about vibrations from construction	<p>An assessment of construction vibration is presented in Environmental Statement Chapter 14 - Noise and Vibration (document reference 6.14).</p> <p>The assessment considers both the potential impact upon people within buildings (i.e. disturbance), and potential damage to buildings and structures.</p> <p>The assessment considers relatively worst-case construction methodologies and does not take account of potential mitigation. This is so that potential 'hot-spots' can be identified where there is the potential for significant adverse effects, without mitigation.</p> <p>The construction vibration assessment has identified 74 locations where there is potential disturbance to people within buildings from construction vibration. Of these, 72 relate to potential vibratory compaction activities which would be expected to be for a relatively short duration (i.e. less than day). The remaining two relate to potential piling activities for pylon foundation construction.</p> <p>With regards to potential damage to buildings and structures, the assessment highlights locations where there is a potential non-zero risk of damage. 14 locations have been identified, all of which relate to potential vibratory compaction activities.</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>In all cases, significant adverse effects, or potential structural damage, can be avoided with the use of best practicable means (BPM). This may include alternative methods, such as non-percussive/vibratory techniques.</p> <p>Additionally, prior to undertaking works, the Main Works Contractor(s) would conduct a detailed construction vibration assessment based on their specific methodologies and determine specific mitigation measures, where applicable.</p>				
10-34.24	<p>Concern that the trench and cables in Stratford St Mary will have to be left open for 3 years whilst the rest of the installation is completed so that it can all be tested prior to back filling. During this time there will be multiple flood weeks and days when the cables, equipment and excavation will be underwater and open to damage. Concern that during these 3 years there is also a considerable risk that the trench, cables and spoil will divert the water flow across the fields and cause additional flooding.</p>	<p>Trenches would be opened to allow for installation of ducts and structural surrounds. The majority of the trenches would be open for two to three months, depending on the construction schedule, and in most cases would be closed much sooner. The spoil removed from the excavations would be used to backfill over the cables and as such any bunding created by the spoil heaps would be in place for the same amount of time as the excavation.</p> <p>In certain locations (e.g., at joint bays and complex third party asset crossings) they may need to be open for longer, but for these isolated cases mitigation measures would be put in place to prevent flooding of the excavation and surrounding areas. A Flood Risk Assessment (FRA) (document reference 7.9) has been undertaken and is part of the Environmental Statement (ES) submitted with the Development Consent Order (DCO) application. The FRA would continue to be updated as the designs progress, through the use of</p>	X

		Flood Risk Activity Permitting (FRAP) with the Environment Agency.				
Consultation						
10-34.25	Comment supportive of engagement that has taken place / feel listened to	National Grid notes the respondent's feedback.			X	
10-34.26	Comment supportive of the Project in this section	National Grid notes the respondent's feedback.	X		X	
10-34.27	Criticism of consultation specific to this section	National Grid notes the respondent's feedback.	X		X	
Design Change						
10-34.28	Suggest that existing overhead lines in this section should be removed	<p>The existing electricity transmission network provides power, via the local distribution network, into the local area where it is used in homes and businesses. Such lines cannot just be removed as power supplies would not be maintained.</p> <p>The need case and funding for the Project is to deliver the new network reinforcement needed, rather than to remove existing overhead lines which would need to be replaced by another form of connection such as underground cables.</p> <p>Unless required for crossings or mitigation, undergrounding existing overhead lines on the transmission network would not be in accordance with National Policy Statement (NPS) EN-5 and would result in substantial cost to bill payers. There may also be significant environmental impacts due to the removal</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		works on sensitive ecological and archaeological receptors as well as constraints from either existing buildings or unsuitable ground conditions.				
10-34.29	Suggest that existing overhead lines in this section should be replaced by underground cables	<p>National Policy Statement (NPS) EN-5 establishes the position that the starting basis for new connections is a presumption on the acceptability of overhead lines but with this presumption reversed within designated landscapes and in certain other circumstances.</p> <p>The existing electricity transmission network provides power, via the local distribution network, into the local area where it is used in homes and businesses. The need case and funding for the Project is to deliver the new network reinforcement needed, rather than to remove existing overhead lines by undergrounding them.</p> <p>We have identified a number of locations where we are proposing to place existing overhead lines underground. These locations are where existing 132 kV and lower voltage lattice pylon lines are crossed by the proposed 400 kV overhead line and / or mitigation of the combination of effects are considered necessary. This includes locations such as at Mellis, between Offton and Bramford Substation, to the south of Bramford Substation and near Fuller Street.</p> <p>Unless required for mitigation, undergrounding existing overhead lines on the transmission network would not be in accordance with NPS EN-5 and would result in substantial cost to bill payers. There may also be</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		significant environmental impacts due to the removal works on sensitive ecological and archaeological receptors as well as constraints from either existing built form or unsuitable ground conditions.				
10-34.30	Suggest that the existing overhead lines in this section are reinforced / upgraded instead	The existing transmission network in the region was upgraded during 2022 and 2023 to ensure the system is running at its most efficient performance. The existing assets / networks are not able to be upgraded sufficiently to cope with the new future demands expected on the network. As a result, new lines and substations would be required to accommodate the changing demands on the network.			X	
10-34.31	Suggest that the Project is routed away from populated / residential areas	Deciding where and how to build new high voltage electricity lines is a complex issue and National Grid is mindful of the potential effects this infrastructure may have on local communities and the concerns these may bring. We recognise that people living near our transmission infrastructure, including high voltage overhead lines, may have concerns about audible noise and potential health impacts. It has sometimes been suggested that minimum distances between properties and overhead lines should be prescribed. We do not consider this appropriate since each instance must be dealt with on its merits. However, we have always sought to route new lines away from residential property on grounds of general amenity where possible.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>We have undertaken a noise and vibration assessment which can be found in the Environmental Statement (ES), Chapter 14: Noise and Vibration (document reference 6.14) that forms part of the Environmental Impact Assessment (EIA) for the Project. Noise levels and the effect on residential properties as well as other sensitive areas, such as hospitals and schools, are carefully considered during planning, assessed according to the appropriate UK standards, and mitigated where necessary. We set strict technical standards for the equipment we install on our network. These will apply to the proposed new East Anglia Connection Node (EACN) substation, and extensions required to the existing Norwich Main, Bramford, and Tilbury Substations. These standards include requirements to ensure the occurrence of audible noise is eliminated or reduced as far as practicable. Therefore, significant adverse effects from noise are not expected.</p> <p>Noise from overhead lines is predominately determined by the conductor design, voltage and weather conditions. The overhead line would be designed using a relatively quiet conductor that meets the design specification required, and operational noise is not likely to be significant at nearby sensitive receptors under any weather conditions. Pylon fittings, such as insulators, dampers, spacers, and clamps, are also designed and procured in accordance with a series of National Grid Technical Specifications to reduce the potential for audible noise and tones to occur from all types of</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>fittings. Where noise does occur, it is likely to be localised and of short duration. If this is due to a fault, action can be taken to rectify it. A technical note has been submitted as part of the application for development consent to support scoping out noise associated with overhead lines from the ES.</p> <p>In addition, we have undertaken a Landscape and Visual Impact Assessment (LVIA) for the Project. This includes an assessment on both landscape character and visual amenity. The LVIA is presented in the ES, Chapter 13: Landscape and Visual (document reference 6.13).</p> <p>The health and safety of the public, local communities and employees is central to everything that we do. The UK has a carefully thought-out set of policies for protecting us all against Electric and Magnetic Fields (EMFs), the main component of which is exposure guidelines. The exposure guidelines are set by independent scientific bodies and are based on decades-long studies into the effects of EMFs and ill health. After those decades of research, the weight of evidence is against there being any health risks of EMFs below the guideline limits. Our approach is to ensure that our network comply with those policies, which are set by Government on the advice of their independent advisors. The Project is designed to ensure it is fully compliant with these policies and guidelines. This ensures that health concerns are properly and adequately addressed.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Policies for both noise and EMF are incorporated into the decision-making process for development consent as set out in National Policy Statement (NPS) EN-5. It is National Grid's policy to ensure that all its equipment complies fully with those policies and guidelines. The application for a Development Consent Order (DCO) includes assessments against these policies, including both construction and operational noise and EMF.				
10-34.32	Suggest that the Project should run in closer to / parallel to the existing overhead lines	<p>National Grid notes the potential for close paralleling existing overhead lines to reduce the level of effects that may arise from a new overhead line.</p> <p>However, where existing overhead lines are present along the proposed route, there are constraints and features that mean, overall, we consider close paralleling would lead to greater effects on receptors in the area and be less compliant with the Holford Rules or be less consistent with the policy to be economic and efficient. A summary of the Holford Rules is provided within Appendix I22 of this report. A number of residential properties are present in close proximity to the existing 400 kV overhead line meaning that if the overhead lines were close paralleled it would result in the properties having an overhead line close to both sides. There are also some locations where the combination of existing physical and environmental features (road infrastructure, commercial and residential properties etc) presents very substantial challenges to routeing and siting. As a result, whilst close paralleling</p>		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		may appear beneficial in some sections, overall, the increased environmental effects where the overhead lines have to converge and diverge, and those increased effects on properties with overhead lines on both sides are considered greater than those introduced by a new overhead line separated from existing 400 kV overhead lines. Whilst crossings and use of underground cable technology may be able to address various constrained locations, we consider the costs and environmental effects arising from the additional infrastructure required to be less compliant with our duties and relevant policies.				
10-34.33	Suggest that underground cables are used for the entirety of this section	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or Area of Outstanding Natural Beauty (AONB))'</i> . Where no such designations are present, nor is the area within the setting of such a designated area which may have	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider this section in its entirety would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.</p> <p>Therefore, whilst undergrounding the whole of this section is not considered appropriate, our proposals do</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		include underground cable within the Dedham Vale National Landscape (previously known as Area of Outstanding Natural Beauty (AONB)) in accordance with NPS EN-5. Prior to our 2023 non-statutory consultation we identified the need to extend the underground cable beyond the National Landscape boundary because of potential effects, we have further extended this section of underground cable following consideration of feedback on our 2023 non-statutory consultation and additional investigation into potential effects. We also identified an approximately 4 km section near Great Horkesley as meeting the particularly sensitive criteria where underground cable is also proposed. Additionally, underground cable is proposed at Fairstead for a 400 kV overhead line crossing.				
10-34.34	Suggest that the Project should run adjacent to major roads	In developing the Project National Grid has considered the potential to parallel existing transport infrastructure such as major roads and consider them to be less preferred alternatives. Numerous properties (residential and commercial), constraints such as existing overhead lines and environmental features are present in close proximity to existing transport infrastructure and would be more adversely affected by close paralleling, therefore no change is proposed.			X	
10-34.35	Suggest that the Project uses brownfield sites closer to London such as Grain	National Grid has previously considered a number of alternative sites for the East Anglia Connection Node (EACN) substation during the initial siting work as set			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>out in the 2022 Corridor and Preliminary Routeing and Siting study (CPRSS) (available on the Project website), including brownfield sites and connections to sites such as Grain. The decision making about siting balances the environmental effects, technical consideration and cost arising from the substation and the connections to it for both National Grid and the three customer's infrastructure. The availability of a brownfield site will, in reality, have little influence on the preference for a strategic connection option. It does not for example negate the substantial cost differential for an offshore option. In respect of the EACN substation, we have reviewed this again and as set out in the 2025 Design Development Report (document reference 5.15) continue to consider the EACN substation, as proposed, to be the preferred location on the basis that an alternative further west presents multiple aspects of uncertainty and construction risk, reduces future flexibility, increases risks to programme for the customers and National Grid with potential for substantial constraint costs if programme is delayed.</p>				
10-34.36	Suggest the Project uses underground cables through Ardleigh	<p>There are technical and practical reasons for retaining overhead line for the immediate line entry to the East Anglia Connection Node (EACN) substation (equating to the last one or two overhead line spans). This is due to the very considerable risks presented by the complex and technically challenging crossing of multiple cables. There is also a potential need to retain overhead line</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>through to TB7 in order to reduce the interaction with a potential minerals site (subject to the outcome in respect of consultation on the Essex Minerals Plan (EMP) and whether the site is confirmed. On this basis a combination of one underground cable and one overhead line for the immediate line entry to the EACN substation is required. There are further technical challenges between TB15 and TB22, where the combination of the reservoir and multiple adjacent development proposals require the use of overhead line.</p> <p>National Grid has considered the potential for the use of underground cable between TB7 and TB15. To be consistent with policy the requirements set out in National Policy Statement (NPS) EN-5 paragraph 2.9.23 must be engaged and the Secretary of State of the view that the cost to reduce effects is justified. Assessments have concluded that nature conservation and heritage effects are not at a level to suggest a need to change from overhead line to underground cable. There are effects on community receptors from views of the alignment from residential properties and when traveling through the area on roads and public rights of way though these are not in themselves considered to meet the threshold within 2.9.23 of the NPS EN-5. There are also certain viewpoints within the National Landscape from which infrastructure outside the setting of the National Landscape can be seen, but these are not considered to be significant in Environmental Impact Assessment (EIA) terms. These effects are not</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		considered to be at a level to engage para 2.9.23, but even if they were, the additional cost of between approximately £80 m to £135 m depending on installation technique) for undergrounding the connection between around TB7 and TB15 is not considered to be justified. Whilst reducing some effects it would introduce effects resulting from the new Cable Sealing End (CSE) compounds (and potentially head houses if required). Taking all factors into account, National Grid considers that, on balance, the potential cost of adopting an underground cable solution is not justified for the level of benefit it provides.				
10-34.37	Suggest the Project is re-routed to the west of Fordham and Ford Street (e.g. to mitigate impact on villages, school, amenity land, and archaeological dig, and the landscape) as per plan provided by respondent	National Grid has considered alternative routes both to the west and to the east of the alignment published at statutory consultation. The reasons for these being less preferred were set out in the 2024 Design Development Report (DDR) from paragraph 5.4.136 (available on the Project website). The 2024 report identifies some potential for the alternative to the west to reduce effects (which we equate to the respondents phrasing 'to mitigate impacts') but fails to identify that there were also other factors on which the alternatives performed less well. National Grid must consider all factors and make a balanced decision informed by the policy context of National Policy Statement (NPS) EN-5 and routeing guidance such as the Holford Rules. In the absence of new evidence or the identification of new factors we remain of the view that such alternatives are less			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		preferred for the reasons set out in the 2024 DDR. We have undertaken an Environmental Impact Assessment (EIA) for the Project and the findings are presented in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that has been submitted with the Development Consent Order (DCO) application. The ES identifies and assesses the likely significant effects on the environment resulting from the construction of the Project and recommends appropriate mitigation to reduce effects.				
10-34.38	Suggest that the Colne Valley should be treated as an extension of the Dedham Vale National Landscape / Suggest that the Colne Valley should be protected in a similar way to the Dedham Vale National Landscape	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or Area of Outstanding Natural Beauty (AONB))'</i> . Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at the Colne Valley would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
10-34.39	Concern about the impact of the Project on Fordham Hall Estate (e.g. given that it is Eastern England's largest woodland creation site; it is a habitat for a	National Grid has worked to minimise potential impacts on the historic environment, including listed buildings such as Fordham Hall (1267740) and its setting, through			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	diverse range of wildlife; it is a valuable public amenity; part of the estate has also been designated as an "archaeological special area")	strategic routeing and siting measures. Statutory consultation feedback and the results of archaeological fieldwork have been used to inform design development to reduce as far as practicable impacts to archaeological remains in this area. As a result of this information pylon TB47 was moved north-east to avoid direct physical impact to the archaeological site in this area. The impacts of the Project on the historic environment are assessed in Chapter 11: Historic Environment (document reference 6.11) of the Environmental Statement (ES). The assessment considers the potential impact on archaeology, historic buildings and historic landscapes, including Fordham Hall, and includes assessment of potential for physical impact, impact through change to setting that affects the value of a heritage asset and impact through indirect factors such as change in hydromorphology. The assessment is supported by walkover, setting and geophysical surveys, as documented in ES Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1) and Appendix 11.4 Geophysical Survey Results Report (document reference 6.11.A4). In addition to the proposals in the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4), the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5) sets out appropriate mitigation for the historic environment.				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		In relation to biodiversity, a suite of ecological surveys supported by a desk-based assessment established a biodiversity baseline to inform impact assessment. Potential direct and indirect impacts on important ecological features have been considered within the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8) and any necessary mitigation detailed to ensure no significant residual effects.				
10-34.40	Criticism that five pylons are proposed in farmland (adjoining the Fordham Hall Estate) which is included as part of a countryside stewardship scheme, and is criss-crossed by rights of way	National Grid has considered alternative routes both to the west and to the east of the alignment published at statutory consultation in the location of the Fordham Hall Estate. The reasons for these being less preferred were set out in the 2024 Design Development Report (DDR) from paragraph 5.4.136 (available on the Project website). The respondent does indeed identify that the 2024 report identifies some potential reductions in some effects for the alternatives but fails to identify that there were also other factors on which the alternatives performed less well. National Grid must consider all factors and make a balanced decision informed by the policy context of National Policy Statement (NPS) EN-5 and routeing guidance such as the Holford Rules. In the absence of new evidence or the identification of new factors we remain of the view that such alternatives are less preferred for the reasons set out in the 2024 DDR. We have undertaken an Environmental Impact Assessment (EIA) for the Project and the findings are			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		presented in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that has been submitted with the Development Consent Order (DCO) Application. The ES identifies and assesses the likely significant effects on the environment resulting from the construction of the Project and recommends appropriate mitigation to reduce effects.				
10-34.41	Suggest the use of underground cables for the Project through the Colne Valley (e.g. in line with National Policy Statement (NPS) EN5, Section 2.9.23 and 2.9.3) / Suggest the use of underground cables for the Project through the Colne Valley and its tributaries	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or Area of Outstanding Natural Beauty (AONB))'</i> . Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at the Colne Valley would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.</p>				
10-34.42	<p>Concern that the Project will impact flooding / drainage at Stratford St Mary which is a high risk flood area / Suggest mitigation measures with regards to works on the floodplains and flood risk at Stratford St Mary / Concern that the chosen crossing</p>	<p>A Flood Risk Assessment (FRA) (document reference 7.9) has been prepared as part of the application for development consent. The assessment was scoped in consultation with key flood risk management authorities and demonstrates how flood risk would be managed</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	point on the river at Stratford St Mary is not a suitable location (e.g. the area is a very active floodplain with eight flood warnings issued over the last winter period, and soil disturbed for the use of underground cables is likely to be washed into the river by rainfall) / Suggest that the proposed underground cables should be rerouted away from this part of the river	during construction and operation of the Project, describing the measures that would be put in place to ensure no increase to flood risk, which is a key requirement of the National Policy Statement (NPS) for Energy Infrastructure. Where the Project crosses existing flood defence infrastructure, such as at the River Stour at Stratford St Mary, key crossing design principles have been agreed with the Environment Agency/Lead Local Flood Authority as applicable, and monitoring would be undertaken during construction of the crossing to ensure that the integrity of flood defences is maintained. In addition, the main works contractor would manage the Stratford St Mary worksite in accordance with a Flood Warning and Evacuation Plan (an outline of which is appended to the Outline Code of Construction Practice (CoCP) (document reference 7.2)) and as part of this plan, measures and protocols would be enacted to prevent pollution of the River Stour during adverse weather events.				
10-34.43	Request pylon TB69 is moved closer to the west of the hedge (as in original proposals) mitigating the visual impact on the public footpath network and Kings Arms Pub	National Grid notes the respondent's feedback. Due to long spans between pylons in this section, to move TB69 back to the west of the hedge would require taller pylons and therefore would increase visual impacts. Therefore, the current location of the pylon is preferred, and no change has been made. We have completed a Landscape and Visual Impact Assessment (LVIA) which assesses the visual impacts of the Project. The LVIA is presented in the Environmental Statement (ES), Chapter			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
10-34.44	Suggest that the additional feature added behind Greengage Close is relocated, any equipment or structure would obscure the views from properties in Greengage Close	National Grid notes the respondent's feedback. The area of the Order Limits behind Greengage Close is for environmental mitigation only. Proposals in this location will require short-term works below/at ground level and would not obscure views from properties.			X	
10-34.45	Suggest a direct line to Norwich, or Kings Lynn, to join into the Midlands infrastructure mitigating the need to transport large loads across land	It is not clear whether the respondent is referring to National Grid Infrastructure or connections from offshore windfarms. If the former, then the strategic optioneering process set out in the 2022 Corridor and Preliminary Routeing and Siting Study (CPRSS) (found on the Project website) and subsequent 2023 and 2024 Strategic Options Backcheck and Reviews (available on the Project website) and the 2025 Strategic Options Backcheck and Review (document reference 7.17) have considered different arrangements to achieve the reinforcement. All require new infrastructure to be constructed to both connect to transmission infrastructure in the midlands and to reinforce the movement of that power onwards. There would also still be a requirement to connect the three customers (North Falls, Five Estuaries and Tarchon). Overall the suggested change would transfer effects elsewhere and be expected to increase through a need for additional infrastructure, therefore no change has been made.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-34.46	Suggest alternative routing to access the EACN substation from the A120 to minimise the impact on Little Bromley. All construction work for the scheme must be done together to keep disruption and impact on residents and businesses to a minimum time frame	<p>National Grid has worked with the local highway authorities, National Highways and proposed North Falls and Five Estuaries (NFFE) projects to develop a coordinated shared access proposals for the Project.</p> <p>The proposed access arrangements for the Project is for construction traffic to avoid the village of Little Bromley and instead is proposed to be routed via a private access road between Bentley Road and Ardleigh Road.</p> <p>If our construction programme and the North Falls Five Estuaries programmes align, we have agreed that we would use part of their offline haul road within their cable swathe to provide temporary access to the proposed East Anglia Connection Node (EACN) substation. This is explained within the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).</p>			X	
10-34.47	Suggest that the windfarms and interconnector should use HVDC to industrial sites near market for power where converter stations should be built (e.g. to mitigate the impact on Little Bromley and other rural villages)	<p>Only the Tarchon project is utilising High Voltage Direct Current (HVDC) technology so there would be large additional costs for the two windfarm customers to utilise HVDC technology. That aside, generators of electrical power have to seek approval for the generation from National Energy System Operator (NESO) who also advise them on the point of connection to the Distribution or Transmission system. NESO (and Energy System Operator (ESO) its predecessor) have identified that the customers are to connect at a new substation. It is impractical and less efficient and less cost effective to allocate specific generation sources to connect to particular areas of demand when additional</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		resilience, efficiency and cost effectiveness can be achieved by integrating, potentially with reinforcement, into closer parts of the distribution and transmission network.				
10-34.48	Suggest Old Ipswich Road is used for construction traffic instead of Wick Lane as Old Ipswich Road is a two-lane carriageway which already has large haulage vehicles or Dead Lane as this is wide and less winding than Wick Lane	Old Ipswich Road is proposed as a Primary Access Route (PAR) to provide access to the construction haul road and the associated pylons. However, to ensure continued access along the haul road from two directions National Grid are required to cross the Ardleigh reservoir via a short section of Wick Lane to join up with the haul on the opposite side.			X	
10-34.49	Request underground cables are used in Fordham Valley	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or Area of Outstanding Natural Beauty (AONB))'</i> . Where no such designations are present, nor is the area within the setting of such a designated area which may have			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at Fordham Valley would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-34.50	Request underground cables are extended to Fordham Village	<p>National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or Area of Outstanding Natural Beauty (AONB))'</i>. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at Fordham Village would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
10-34.51	Concern about the impact on Pylons TB60 to TB64 and adjacent haul road for the Project (e.g. impact on the Gatehouse; impact on Public Rights of Way (PRoWs) (Bridleway 20; FP20; FP22; FP 8); impact on the environment; impact on the Roman River Corridor stretching from Great Tey to Marks Tey)	National Grid has sought to reduce, as far as practicable, impacts on the environment/countryside through routeing and siting and an ongoing iterative design process which has taken on board feedback at different stages of the Project. The iterative design process sought to avoid areas of highest concern, for examples through changes to the route alignment or changes to the method e.g. trenchless crossings. National Grid has engaged with a range of stakeholders (including Statutory Environmental Bodies (SEBs) and relevant local planning authorities (LPAs)) throughout the development of the Project design and environmental assessment work.	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>An Outline Public Rights of Way (PRoW) Management Plan (document reference 7.6) has been submitted as part of this Development Consent Order (DCO) application, and sets out management measures and mitigation measures for each PRoW affected by the construction activities and operation of the Project.</p> <p>The Outline PRoW Management Plan has defined the management of the PRoW, which includes PRoW that shares paths with the Essex Way. These include Bridleway 20; Footpath (FP)20; FP22; FP 8. These would be partly temporarily closed managed and partly temporarily closed with diversion.</p> <p>The concerns raised relate to pylons TB60-64 in the area between Church House Wood and Little Tey House, where the alignment crosses through an area of farmland and along the watercourse (the Roman River). It is unclear from the feedback what a preferred solution might be, other than not to have the alignment pass through this area. Any shifts in alignment here (north or south) would bring the alignment closer to either areas of settlement, or to the Site of Special Scientific Interest (SSSI) in the south, or the ancient woodland near Church House Farm in the north, or introduce angle pylons which differ in profile and can be visually detracting. As such, this alignment remained preferred and was assessed as part of the Environmental Impact Assessment (EIA) for the Project.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>The results of this assessment are provided in the Environmental Statement (ES) that accompanies the DCO application. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation (and maintenance) of the Project and recommends appropriate mitigation measures to reduce potential effects. This includes a Landscape and Visual Impact Assessment (LVIA), which includes an assessment of landscape and visual effects. The approach to the LVIA follows professional guidance as set out in Environmental Statement (ES) Appendix 13.1: Landscape and Visual Methodology (document reference 6.13.A1). This includes Guidelines for Landscape and Visual Impact Assessment Third Edition (GLVIA3), the 2013 third edition of the 'Guidelines for Landscape and Visual Impact Assessment' as prepared by the Landscape Institute and the Institute of Environmental Management and Assessment. The LVIA is presented in the ES, Chapter 13: Landscape and Visual (document reference 6.13). The methodology and approach have been agreed with relevant stakeholders and the assessment prepared by qualified and experienced landscape professionals.</p>				
10-34.52	Suggest that the CSE compound is re-located further north, at least as far as Pylon JC26 (e.g. to enable the safe operation of Raydon Wings Airfield), and that the underground cables and haul road also avoids all runways within the airfield	National Grid has appointed an independent aviation consultancy which has engaged with the operators of Raydon Wings airfield (with National Grid also present) to inform their impact assessment. The overhead line alignment (including the Cable Sealing End (CSE)			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		compound is assessed to be at a sufficient distance to the north of the runway to ensure that overflight is not required on take-off or landing, and that approaches are therefore not impacted. Furthermore, the alignment need not impact existing flying circuits to the north as overflight is assessed to be at a safe distance. We will continue to engage with the airfield operators to confirm the acceptability of the design. Alternative locations for the CSE compound have been assessed, however the current location is preferred in terms of technical feasibility. In view of the assessment conclusions, the proposed relocation of the CSE compound further north, increasing the length of underground cable, cannot be justified on grounds of aviation safety.				
10-34.53	Suggest that the angle pylon north of Little Wenham is removed, and diverted to Chattisham	National Grid notes the respondent's feedback. The angle pylon at JC26 (now JC27), is required in this location in order to avoid other constraints such as woodland and properties while continuing the route north to Bramford Substation. We are therefore not proposing a change to the location or removal of this pylon.			X	
10-34.54	Suggestion that the Project is routed away from / the Project should not be located at a specific location	Further assessment and technical appraisal has been undertaken following feedback received from the statutory consultation and subsequent targeted consultations which has resulted in several changes. Further details on these changes can be found in this report and in the 2025 Design Development Report	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		(document reference 5.15), published as part of the Development Consent Order (DCO) application.				
10-34.55	Suggestion that the Project is routed away from / the Project should not be located at Aldham	National Grid has considered the respondent's feedback highlighting a preference for an alternative moved away from Aldham. In the absence of a specific basis for the change or a proposed alternative alignment, we have considered this feedback by following the guidance in the Holford Rules in developing the alignment. Guidelines on overhead line routeing are known as the "Holford Rules" which remain a valuable tool in selecting and assessing potential overhead line route options as part of the options appraisal process. A summary of the Holford Rules is provided within Chapter 1 Appendix I22 of this report. We are therefore not proposing a change to the alignment at Aldham.	X		X	
10-34.56	Suggestion that the Project is routed away from / the Project should not be located at Holton St Mary	National Grid has considered the respondent's feedback highlighting a preference for an alternative moved away from Holton St Mary. In the absence of a specific basis for the change or a proposed alternative alignment, we have considered this feedback by following the guidance in the Holford Rules in developing the alignment. Guidelines on overhead line routeing are known as the "Holford Rules" which remain a valuable tool in selecting and assessing potential overhead line route options as part of the options appraisal process. A summary of the Holford Rules is provided within Appendix I22 of this			X

		report. We are therefore not proposing a change to the alignment at Stour Valley.				
10-34.66	Suggestion that the Project is routed away from / the Project should not be located at Ford Street	National Grid has considered the respondent's feedback highlighting a preference for an alternative moved away from Ford Street. In the absence of a specific basis for the change or a proposed alternative alignment, we have considered this feedback by following the guidance in the Holford Rules in developing the alignment. Guidelines on overhead line routeing are known as the "Holford Rules" which remain a valuable tool in selecting and assessing potential overhead line route options as part of the options appraisal process. A summary of the Holford Rules is provided within Appendix I22 of this report. We are therefore not proposing a change to the alignment at Ford Street.			X	
Economic / Employment Impact						
10-34.67	Concern about negative impact on businesses in the area	Through the routeing and siting exercise, National Grid has sought to reduce as far as practicable impacts to businesses. Impacts on local businesses within the Local Study Area (the Order Limits) and within the 3 km Study Area (where visual impact is likely to be an economic consideration) are assessed in Environmental Statement (ES) Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15). As part of this assessment, a range of mitigation measures have been	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		considered to reduce disruption to businesses and their users during the construction phase of the Project. These measures are identified in ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15), the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) which accompany the Development Consent Order (DCO) application.				
Environmental Impact						
10-34.68	Concern that the Project will impact SSSIs	Through routeing, siting and design development, National Grid has sought to reduce, as far as practicable, impacts on biodiversity and in particular features of high ecological value such as Sites of Special Scientific Interest (SSSI). The Project avoids all direct impacts on SSSIs, with no long-term negative impacts anticipated on any SSSIs as a result of the Project. Potential direct and indirect impacts on each SSSI within the study area have been considered within the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8) and any necessary mitigation detailed to ensure no significant residual effects.	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		National Grid will continue to engage with Natural England.				
10-34.69	Concern that the Project will impact ancient woodland	Through routeing, siting and detailed design, National Grid has sought to reduce, as far as practicable, impacts on biodiversity and in particular features of high ecological value, such as ancient woodland. A standard 15 m buffer from construction activities has been applied wherever practicable. Potential direct and indirect impacts on each block of ancient woodland within the study area have been considered within the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8) and any necessary mitigation detailed to ensure no significant residual effects. An Ancient Woodland and Veteran Tree Strategy is included as part of the Outline Landscape and Ecological Management Plan (LEMP) (see Appendix B of the Outline LEMP (document reference 7.4)). The Outline LEMP (document reference 7.4) has been developed in consultation with relevant stakeholders including Natural England and local planning authorities.			X	
10-34.70	Concern that the Project will impact nature reserve / RSPB reserve / Special Protection Area (SPA)	Through routeing, siting and design development, National Grid has sought to reduce, as far as practicable, impacts on biodiversity and in particular features of high ecological value, such as local wildlife sites (LWS), Royal Society for the Protection of Birds (RSPB) reserves and Special Protection Area (SPA's).	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Whist there are no impacts on RSPB reserves, potential direct and indirect impacts on LWS's and SPA's within the study area have been considered within the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8). SPA's and the associated impact on birds has also been considered within the Habitats Regulations Assessment Report (HRA) (document reference 5.3).				
10-34.71	Concern that the Project will impact Ramsar site	Through routeing, siting and design development, National Grid has sought to reduce, as far as practicable, impacts on biodiversity and in particular features of high ecological value, such as Ramsar sites. Although there are 13 Ramsar sites within the study area, current proposals avoid the majority of impacts, with no long-term negative impacts anticipated on any Ramsar site as a result of the Project. Potential direct and indirect impacts on each scoped in Ramsar site has been considered within the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8) and/or Habitats Regulations Assessment (HRA) depending on potential impact pathways. Any necessary mitigation has been detailed within the ES, HRA and the Outline Code of Construction Practice (CoCP) (document reference 7.2) to ensure no significant residual effects, as agreed with Natural England.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-34.72	Concern that the Project will result in a negative impact on the environment / countryside generally (no details given)	<p>National Grid has sought to reduce, as far as practicable, impacts on the environment / countryside through routing and siting and an ongoing iterative design process which has taken on board feedback at different stages of the Project. The iterative design process sought to avoid areas of highest concern, for example through changes to the route alignment or changes to the method e.g. trenchless crossings. National Grid has engaged with a range of stakeholders (including Statutory Environmental Bodies (SEBs) and relevant local planning authorities) throughout the development of the Project design and environmental assessment work.</p> <p>National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project. The results of this assessment are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation (and maintenance) of the Project and recommends appropriate mitigation measures to reduce potential effects.</p> <p>A number of mitigation measures have been incorporated into the Project design. Mitigation relevant to specific environmental topics (including Ecology and Biodiversity, Landscape and Visual and Historic</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Environment) are presented in the relevant ES chapters. The Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Code of Construction Practice (CoCP) (document reference 7.2) contain a list of relevant good practice measures to avoid or reduce risks to habitats and species.</p> <p>In addition to the EIA, National Grid has set itself a target of delivering 10% biodiversity net gain (BNG) with environmental and societal benefits on all construction projects, meaning that as a result of measures taken, the biodiversity rating of the area will be enhanced by 10% greater than prior to the construction of the Project. The BNG target for the Project is currently voluntary and aligned with our corporate sustainability commitment.</p>				
10-34.73	Suggest that areas other than the AONB should be protected / Criticism that only the AONB has been considered	<p>National Policy Statement (NPS) EN-5 states that the Government considers overhead lines to be appropriate and acceptable in most instances, although it recognises that there may be, at particularly sensitive locations, potential adverse landscape and visual impacts of overhead line infrastructure that make it inconsistent with our duties and relevant planning policy.</p> <p>The National Landscape designation is one such location where there is a presumption that underground cable technology is adopted with the extent of underground cabling extending beyond the boundary in response to the potential for the Project to affect National Landscapes. Our proposals include a total of</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>approximately 20 km of underground cable through and in the vicinity of the Dedham Vale National Landscape, including a section at Great Horkesley to reduce the changes in views and setting of the National Landscape from within and adjacent to its designated boundary.</p> <p>Underground cabling is also proposed for short sections near Fairstead and North Tilbury.</p> <p>The higher cost of underground cables to bill paying consumers, and the environmental implications of installing underground cables and maintaining them elsewhere, are not considered to be justifiable in the context of national policy or National Grid's statutory duties, which include the need to be economic and efficient.</p> <p>A Landscape and Visual Impact Assessment (LVIA), presented in ES Chapter 13: Landscape and Visual (document reference 6.13), has been undertaken as part of the Environmental Impact Assessment (EIA). The LVIA sets out potential effects on landscape and visual receptors.</p>				
10-34.74	Concern that the Project will impact conservation area	The potential for the Project to affect the setting and significance of Conservation Areas has been comprehensively assessed in accordance with established best practice and guidance such as Good Practice Advice Note 3: The Setting of Heritage Assets (Historic England, 2017) and other relevant policy and guidance such as Conservation Principles (Historic England, 2008) and relevant planning policies including	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>the Overarching National Policy Statement for Energy (EN-1).</p> <p>The assessment methodology and its application have been discussed with and agreed by key heritage stakeholders, including Historic England and relevant local planning authorities, through the Scoping process and subsequent thematic working group meetings. This collaborative approach has ensured that the assessment is robust, proportionate, and in line with expectations.</p> <p>Each Conservation Area potentially affected by the Project has been individually assessed for both direct and indirect effects, including impacts arising from change to setting. These assessments are presented in Chapter 11: Historic Environment of the Environmental Statement of the Environmental Statement (ES) (document reference 6.11), supported by detailed mapping and analysis in ES Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1). The methodology considers all relevant aspects of significance, including historical, architectural, and evidential values, as well as the contribution of setting to that significance.</p> <p>Where adverse effects on the setting of Conservation Areas have been identified, the Project has sought to reduce these through route refinement and design evolution. This includes, where appropriate, adjustments to pylon locations, alignment shifts, and the development of mitigation proposals in the Outline Archaeological</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5).</p> <p>We are therefore confident that the assessment of impacts on Conservation Areas has been carried out to a high standard and that appropriate measures have been taken to mitigate any identified adverse effects.</p>				
10-34.75	Concern about the impact of the Project on flooding	<p>A detailed Flood Risk Assessment (FRA) has been prepared (document reference 7.9). The FRA assesses flood risk to the Project and the impacts that the Project's construction and operation would have on flood risk from a wide range of sources. The assessment has been informed by a wide range of data sets, including the January and March 2025 data from the Environment Agency, and by engaging with the Environment Agency and all of the relevant Lead Local Flood Authorities and Drainage Boards. The FRA has identified a range of controls and mitigation measures to prevent flood risk impacts, which have been secured through a range of commitments set out in the Outline Code of Construction Practice (CoCP) (document reference 7.2). The FRA (document reference 7.9) also describes the measures and strategy that would be put in place to manage surface water runoff arising from Project construction worksites and operational infrastructure.</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Financial Compensation						
10-34.76	Concern that the Project will devalue property / impact on property value in this section	<p>National Grid acknowledges that its proposals may cause concern to landowners. Diminishment of property value known as 'injurious affection' and any other appropriate heads of claim would be considered on an individual basis in accordance with current legislation. We would pursue a voluntary agreement with affected landowners, acquiring rights in accordance with our Land Rights Strategy (the strategy is subject to review). If a voluntary agreement cannot be reached, then the Compulsory Purchase Code allows for a claim of compensation for the loss that property owners may have suffered as a direct result of the retained part of your property ownership being worth less as a direct result of the works.</p> <p>If there are any specific concerns about the devaluation of property, National Grid would advise seeking third party advice. or alternatively please contact the Project team:</p> <p>Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.</p> <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD.</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-34.77	Request for adequate financial compensation / Suggest that impacted individuals need to be compensated	<p>All affected landowners would be compensated for any temporary/permanent losses, and this would be dealt with on a case-by-case basis in line with the Compensation Code.</p> <p>If there are any specific concerns requiring compensation and how it would be assessed, please contact the Project team:</p> <p>Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.</p> <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD</p> <p>The Government has published its guidance on community funds for transmission infrastructure (DESNZ, 2025). National Grid is committed to working with Ofgem, industry partners, local communities and their representatives to ensure community benefits are delivered fairly and effectively, driving lasting, positive change for the people and places integral to our developing electricity network.</p> <p>Government has also announced its plans to introduce a bill discount scheme for households within 500 m of new infrastructure, which it proposes to introduce through the Planning and Infrastructure Bill. This is evolving government policy. Government expects this scheme to</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>be in place by 2026 and we would share further details as they emerge.</p> <p>National Grid is committed to providing a coordinated local and regional approach to community benefits. This would be delivered outside the development consent process, since this is not a material consideration in the decision on the proposed Project or a matter to be secured as part of the DCO, as per the Community Funds for Transmission Infrastructure: Guidance (DESNZ, 2025).</p>				
Health, Safety & Wellbeing						
10-34.78	Concern that the Project may result in a negative impact on mental health / wellbeing	<p>National Grid recognises people may have concerns about the health effects of living close to an overhead line, and that the uncertainty whilst the proposals are developed may cause anxiety.</p> <p>We have sought to reduce potential effects on communities and residents through routeing and design. We have also sought to reduce concern or uncertainty about the proposals through making timely design decisions and engaging with the people and stakeholders throughout the development of the Project.</p> <p>The Project team will continue to engage with people potentially affected during progress of the Project, through regular communication including letters, phone calls and meetings. This would enable concerns to be raised and discussed at an early opportunity and provide</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>a regular point of contact to respond to queries and concerns.</p> <p>We urge anyone with concerns to get in touch through the Norwich to Tilbury Freephone number, address or email throughout the progress of the Project:</p> <p>Call our Community Helpline: 0800 915 2497 (Lines are open Monday to Friday 9:00am – 5:30pm)</p> <p>Email us: contact@n-t.nationalgrid.com</p> <p>Write to us: FREEPOST N TO T (No stamp or further address details are required)</p> <p>The UK has a carefully thought-out set of policies for protecting us all against Electric and Magnetic Fields (EMFs), the main component of which is exposure guidelines. Those exposure guidelines are set by independent scientific bodies and are based on decades-long studies into the effects of EMFs and ill health. After those decades of research, the weight of evidence is against there being any health risks of EMFs below the guideline limits. These policies are incorporated into the decision-making process for Development Consent in National Policy Statement (NPS) EN-5. It is National Grid's policy to ensure that all of its equipment comply fully with those exposure limits.</p>				
10-34.79	Concern about health risks associated with the Project / physical health risks associated with the Project	Health considerations are given a high priority in the process by which we arrive at any proposals for new electricity circuits. Assessment of compliance with Electric and Magnetic Field (EMF) guidelines and	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>policies is key to National Grid's approach. The UK has a carefully thought-out set of policies for managing EMFs. There have been over four decades of research looking into whether EMF can cause health effects and there are no established effects below the exposure limits. When designing our overhead lines, substations and underground cables design criteria, we ensure they would not exceed those exposure limits, even when operating at 100% capacity. Additionally, the precautionary measures which the Government have adopted, are applied to the design which ensure the EMFs reduce as quickly with distance as possible. Evidence of that compliance is presented in the EMF compliance report (document reference 7.8) submitted as part of the Development Consent Order (DCO) application.</p> <p>National Grid takes this issue very seriously and looks to authoritative and independent scientific organisations such as the World Health Organisation (WHO) and in the UK Health Security Agency (UKHSA) to review the worldwide body of scientific evidence on health. Important decisions on health are taken independently of industry, and National Grid have followed the guidance and policies adopted by Government on advice from their scientific experts. Each of these organisations have comprehensive reviews of EMF research available to view on their websites.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-34.80	Concern that the Project poses a safety risk to aircraft (including balloons) in the area / Concern that the Project will impact airfields in this area	<p>National Grid recognises the need for the Project to be developed collaboratively alongside aviation stakeholders to identify, assess, and as appropriate mitigate, adverse impacts on aviation safety, in accordance with Government's Overarching National Policy Statement (NPS) EN-1.</p> <p>Our review of aerodromes potentially impacted by the Project identified 17 civil aerodromes (including two helipads) within 5 km of the preferred corridor and one military site (Wattisham Flying Station). We have also considered other airfields and flight activities where these have been identified through the 2022 and 2023 non-statutory, statutory consultation and targeted consultations including for ballooning and for model flying. As well as considering feedback, National Grid's aviation advisers (an independent aviation consultancy) have directly engaged with these parties (with National Grid present).</p> <p>A number of route alignment and pylon positioning changes have been made following consideration of feedback and in all but one case the assessment concludes that the airfields can continue to operate. In the remaining case of a private airstrip near Little Burstead, we continue to liaise with the operator to identify an appropriate solution.</p> <p>Specifically in respect of Wattisham Flying Station our proposals position the alignment onto relatively lower ground (to remove the potential for interference with</p>			X

		through change to setting that affects the value of a heritage asset and impact through indirect factors such as change in hydromorphology. The assessment is supported by walkover, setting and geophysical surveys, as documented in Environmental Statement (ES) Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1) and ES Appendix 11.4: Geophysical Survey Results Report (document reference 6.11.A4). In some areas archaeological trial trench evaluation has been undertaken and is reported in ES Appendix 11.5: Trial Trenching Results Report (document reference 6.11.A5). In addition to the proposals in the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4), the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5) sets out appropriate mitigation for the historic environment. The Project has engaged with Historic England and relevant planning authorities on aspects relating to heritage, including appropriate mitigation measures and techniques, and to take their views into account during Project development.				
10-34.83	Concern about the impact of the Project on Protected Lanes	The potential impact of the Project on Protected Lanes has been carefully considered throughout the routeing and siting process. National Grid has actively sought to reduce the impact on the historic environment, including Protected Lanes, as part of its commitment to preserving the cultural and historic character of the landscape.	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>The assessment of effects on Protected Lanes, where relevant as heritage assets or contributing to the setting of other designated or non-designated assets, has been undertaken in accordance with established best practice and guidance such as Historic England's Good Practice Advice Note 3: The Setting of Heritage Assets (2017) and national and local planning policies.</p> <p>The impacts of the Project on the historic environment are set out in Chapter 11: Historic Environment of the Environmental Statement (ES) (document reference 6.11), which includes an evaluation of potential physical impacts as well as impacts resulting from changes to setting. The assessment is informed by baseline data and site-specific investigations, including walkover surveys, geophysical survey results, and trial trenching where appropriate.</p> <p>In addition, management measures to minimise and mitigate impacts during construction and operation phases are detailed in Table 6.1 of the Environmental Statement and in the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5). These documents outline the approach to managing risks to heritage assets, including Protected Lanes, and reflect a commitment to adopting proportionate and appropriate mitigation based on the nature and sensitivity of the asset.</p> <p>We are therefore confident that Protected Lanes have been appropriately considered within a robust and</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-34.85	Criticism of routing the Project through the Dedham Vale National Landscape (previously known as the Dedham Vale Area of Outstanding Natural Beauty (AONB))	National Grid's consideration of corridor alternatives further to the west of the National Landscape (previously known as an Area of Outstanding Natural Beauty (AONB)) was published within the 2022 Corridor and Preliminary Routeing and Siting Study (CPRSS) (available on the Project website). We have continued to backcheck the strategic connection proposal and siting of the East Anglia Connection Node (EACN) substation, which is part of the holistic consideration of the most appropriate form of the Project. In the absence of further information or new factors we continue to consider alternatives west of the National Landscape to be less preferred. On balance, these were less preferred as they would be longer and therefore lead to effects over a much greater length to other receptors at greater cost than the route through the National Landscape. Undergrounding through the National Landscape is consistent with National Policy Statement (NPS) EN-5. The siting of Cable Sealing End (CSE) compounds (the transition sites between the overhead line and underground cable) has identified locations to reduce effects on the designation and consider the use of trenchless techniques – subject to ground conditions – to reduce certain construction effects.	X	X	X	
10-34.86	Concern about the visual impact of overhead lines on the Dedham Vale National Landscape (previously known as the Dedham Vale Area of Outstanding	The relevant National Policy Statement (NPS) is EN-5 which makes it clear that the Government considers overhead lines to be appropriate and acceptable in most	X	X	X

		<p>at particularly sensitive locations, potential adverse landscape and visual impacts of overhead line infrastructure that make it inconsistent with our duties and relevant planning policy.</p> <p>Dedham Vale National Landscape (previously known as an Area of Outstanding Natural Beauty (AONB)) designation is one such location where there is a presumption that underground cable technology is adopted with the extent of underground cabling extending beyond the boundary in response to the potential for the Project to affect the natural beauty of the National Landscape. National Grid's proposals include a total of approximately 20 km of underground cable through and in the vicinity of the Dedham Vale National Landscape, including a section at Great Horkesley to reduce the changes in views and setting of the National Landscape from within and adjacent to its designated boundary.</p> <p>National Grid has sought to reduce, as far as practicable, impacts of underground cables within Dedham Vale National Landscape through routeing and siting and an ongoing iterative design process which has taken on board feedback at different stages of the Project. The iterative design process sought to avoid areas of highest concern, for example through changes to the route alignment and proposals for trenchless crossing to minimise impacts.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>The installation of underground cabling is detailed in ES Chapter 4: Project Description (document reference 6.4) and would broadly adopt the following process: initially, the removal and storage of topsoil of a width sufficient to allow for construction machinery and the digging of the trenching required for underground cabling. Ducting is installed and trenches backfilled. The underground cables would then be pulled through the ducts. Hedgerows and shrubs reinstated where practicable. At this point, an appropriate grass seed mixture would be sown to encourage regrowth. In some locations trenchless techniques are expected to be adopted to reduce effects. It is anticipated that after a period of time following completion of the construction of the underground cabling and replanting of hedgerows and vegetation there would be minimal visibility of the works at ground level.</p> <p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the Environmental Impact Assessment (EIA). The LVIA includes an assessment of the Project, including the underground cabling, on landscape character and visual amenity and on the National Landscape and its special qualities. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13). ES Chapter 13 is supported by Appendix 13.5: National Landscape Assessment Study (document reference 6.13.A5) which presents the assessment of effects on Dedham Vale National Landscape. The assessment</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>concludes that there would be significant effects on the special qualities of the National Landscape during construction, as a result of the proposed underground cable. Once the Project is operational and the land has been restored, effects on the special qualities of the National Landscape would not be significant.</p> <p>Section 85 of the Countryside and Rights of Way (CRoW) Act (2000) specifies relevant authorities must seek to further the purpose of conserving and enhancing the natural beauty of National Landscapes (Areas of Outstanding Natural Beauty) when carrying out functions in relation to or affecting land within a National Landscape or its setting.</p> <p>National Landscapes – Duty to Seek to Further the Purposes Report (s85 Countryside and Rights of Way 2000) (document reference 5.10) sets out the current status of National Grid's consideration of its duty as a relevant authority, in relation to the Project, to seek to further the purpose of the National Landscape. The approach taken has been discussed with relevant stakeholders and follows the guidance published by Defra in December 2024 'Guidance for relevant authorities on seeking to further the purposes of Protected Landscapes.</p>				
10-34.88	Concern about the impact of the Project on the Dedham Vale National Landscape (previously known as the Dedham Vale Area of Outstanding Natural Beauty (AONB)) (generally)	The relevant National Policy Statement (NPS) is EN-5 which makes it clear that the Government considers overhead lines to be appropriate and acceptable in most instances, although it recognises that that there may be,	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>at particularly sensitive locations, potential adverse landscape and visual impacts of overhead line infrastructure that make it inconsistent with our duties and relevant planning policy.</p> <p>Dedham Vale National Landscape (previously known as an Area of Outstanding Natural Beauty (AONB)) designation is one such location where there is a presumption that underground cable technology is adopted with the extent of underground cabling extending beyond the boundary in response to the potential for the Project to affect the natural beauty of the National Landscape. National Grid's proposals include a total of approximately 20 km of underground cable through and in the vicinity of the Dedham Vale National Landscape, including a section at Great Horkesley to reduce the changes in views and setting of the National Landscape from within and adjacent to its designated boundary.</p> <p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the Environmental Impact Assessment (EIA). The LVIA includes an assessment of the Project, including the underground cabling, on landscape character and visual amenity and on the National Landscape and its special qualities. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13). ES Chapter 13 is supported by Appendix 13.5: National Landscape Assessment Study (document reference 6.13.A5) which presents the assessment of effects on</p>

	Landscape (previously known as the Dedham Vale Area of Outstanding Natural Beauty (AONB))					
Primary Access Routes / Haul Road / Construction Compounds						
10-34.90	Concern about the proposed haul road for the Project which connects to Mill Lane, Fordham (from Pylon TB49 to TB59) (e.g. safety concerns at junction due to the steep incline either side of Fordham Bridge and restricted visibility on the west side when descending from the south; required removal of trees in Fiddlers Wood for visibility; as it passes through a floodplain; impact on FP4 that passes north-south along the western boundary of Fiddlers Wood; proximity to the river and Ford Street Conservation Area; safety concerns at junction with the A1124 on Ford Street Hill; safety concerns at junction with Green Lane and associated construction works; impact on residents where the haul road is proposed to be sited to the west of the Project between Pylons TB54 and TB55; impact on listed buildings and residences at the Brook Road crossing between Aldham Hall and Brick Cottages)	<p>National Grid has been working with the local highway authorities and National Highways as we develop our access proposals for the Project. Our assessments have included visibility and highway geometry.</p> <p>As part of the design development of the Project, the proposed bellmouth junctions have undergone Road Safety Audits, and mitigation measures have been developed to include temporary traffic management measures such as speed limit reductions and/or temporary signals. The visibility splays have been reduced to 50 mph to minimise tree removal on Fiddlers Hill.</p> <p>The effects of works in proximity to watercourses and in floodplains have been assessed in the Environmental Statement (ES), Chapter 12: Hydrology, Land Drainage and Flood Risk] (document reference 6.12) and within the Flood Risk Assessment (document reference 7.9) and measures to mitigate any impacts are included within the Outline Code of Construction Practice (CoCP) (document reference 7.2).</p> <p>An Outline Public Rights of Way (PRoW) Management Plan (document reference 7.6) has been prepared and submitted with the application for development consent. Environmental Statement (ES) Chapter 16: Traffic and</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Transport (document reference 6.16) provides an assessment of the pedestrian, cyclist and horse-rider delays for the PRow if it is expected that there would be a temporary maximum increase in journey length/time for more than four weeks in any 12-month period. The Outline PRow Management Plan has defined the management of the PRow in the area around pylons TB49 to TB59.</p> <p>The PRow would be temporarily closed with managed access, that is, allowing a safe passage throughout for PRow users.</p> <p>Additionally, during certain types of works, some of the PRow would be temporarily closed and diverted following a similar alignment to the existing PRow. Footpath Aldham 3 and 12 would be temporarily diverted. As a result, no significant increase in journey time and trip length is expected. Therefore, the magnitude of impact on the PRow is considered negligible or minor and the overall effect has been classified as not significant.</p> <p>Environmental Statement (ES) Chapter 16: Traffic and Transport (document reference 6.16) and Transport Assessment (document reference 7.11) have included an analysis of the personal injury collision data along the full length of the links along Primary Access Routes (PARs) and junctions including A1124 Halstead Road to identify patterns in collision locations in order to establish any areas of safety concern. The analysis has</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>not identified collision clusters or other areas of safety concern. Furthermore, the expected maximum number of construction vehicles during the construction peak period (worst-case) peak hour is of 42 two-way Heavy Goods Vehicle (HGV) movements over a short duration of time e.g. 1 week.</p> <p>The overall effects on road user safety from the construction phase would be short-term minor adverse and not significant. Therefore, it is reasonable to conclude that the Project would have no substantial adverse impact on road safety along the A1124 Halstead Road.</p> <p>Conservation areas within 2 km of the Order Limits are considered in the historic environment assessment for the Project, Fordstreet Conservation Area is therefore included in the assessment, which considers both direct and indirect impacts. The impacts of the Project on the historic environment are assessed in Chapter 11: Historic Environment (document reference 6.11) of the Environmental Statement (ES). The assessment considers the potential impact on archaeology, historic buildings and historic landscapes and includes assessment of potential for physical impact and impact through change to setting that affects the value of a heritage asset. Regarding Fordstreet, both the construction and operation phase of the Project would have a significant impact on the conservation area. The assessment of conservation areas is supported by setting surveys, as documented in the ES Appendix</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		11.1: Historic Environment Baseline Report (document reference 6.11.A1). The Project has engaged with Historic England and relevant planning authorities on aspects relating to heritage, including appropriate mitigation measures and techniques and to take their views into account during Project development.				
Project Finance / Costs						
10-34.91	Suggest that the Secretary of State should weigh the cost-benefit of the use of underground cables in the Colne Valley, rather than National Grid, as per Section 2.9.24 of National Policy Statement (NPS) EN5 (e.g. even if determined that the relationship of the Colne Valley to the Dedham Vale is such that impacts do not also affect the National Landscape (formerly the Dedham Vale Area of Outstanding Natural Beauty (AONB))	In line with paragraph 2.9.24 of National Policy Statement (NPS) EN-5, as part of determining the application for development consent, the Secretary of State will consider undergrounding of cables only where the benefits, such as reduced visual or environmental impacts, clearly outweigh the additional costs and technical challenges.			X	
Public Rights of Way (PRoW)						
10-34.92	Concern about negative impact on Public Rights of Way (PRoW) / footpaths / cycle paths / bridleways	Through routeing and siting, National Grid has sought to reduce, as far as practicable, impacts and disruption to Public Rights of Way (PRoW). The iterative design process identified the existing PRoW network and their wider connectivity and sought where practicable to reduce and where possible remove impacts to PRoW.	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Effects on PRow would be mitigated where possible, maintaining access where practicable, with closures as a last resort. We will continue to engage with relevant stakeholders on the PRow network to enable feedback and input to be considered as the Project progresses. An Outline Public Rights of Way Management Plan (document reference 7.6) is submitted with the Development Consent Order (DCO) application.				
Requests						
10-34.93	Request for further impact surveys in this section	<p>National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project. The assessment is informed by a suite of field surveys and desk studies and results are presented in an Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the application for development consent. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation (and maintenance) of the Project and recommends appropriate mitigation measures to reduce potential adverse impacts.</p> <p>The scope of the EIA is included in the Scoping Report (document reference 6.19) which was submitted to the Planning Inspectorate in November 2022 and their Scoping Opinion (document reference 6.20) received in December 2022. This provided the opportunity for statutory bodies to comment on the scope of the EIA which included our approach on study areas, data</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>collection and baseline conditions for a range of environmental topics. We also discussed and agreed survey scope with stakeholders (including Statutory Environmental Bodies and Local Planning Authorities) following the Scoping Opinion (document reference 6.20) to ensure a robust baseline assessment.</p> <p>National Grid has prepared an Outline Code of Construction Practice (CoCP) (document reference 7.2) which sets out the required mitigation measures and environmental commitments that would be implemented during the construction phase of the Project to avoid or reduce potential effects of the Project on the environment, including commitments to undertake further surveys.</p>				
10-34.94	Request construction works do not impact unclassified roads such as widening or straightening the roads (e.g. Crabtree Lane access to CSE compound location TB35 and TB36)	<p>National Grid has carefully considered the feedback received during consultation for this Primary Access Route (PAR) for construction vehicles. Localised widening along some of the PARs is required to enable two-way construction traffic. This widening will only be temporary and would be removed post construction.</p> <p>In the example of Crabtree Lane, there is no proposed widening of the road. However, because the access to the Cable Sealing End (CSE) compound is permanent, the vehicle access bellmouth will require permanent clear visibility to ensure the junction is safe and compliant with the Design Manual for Roads and Bridges (DMRB). In order to do this, we will need to take</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		a small slither of field on the eastern side of Crabtree Lane to ensure clear visibility is maintained.				
10-34.95	Request that National Grid provide details on the total sized of land area to be used by the Project within the parish of Ardleigh (both during construction and in operation), including the following sections of the Project: - The area around the East Anglia Connection Node (EACN) substation; - Area under pylons and overhead cables; - Area above top of underground cable; - Haul roads/compounds and other construction	The area required to implement the Project and intended use (i.e. permanent or temporary works) is provided in Figure 4.1 - Proposed Project Design (document reference 6.4.F1), the Works Plans (document reference 2.3) and the Land Plans (document reference 2.2) submitted as part of the Development Consent Order (DCO). At this stage, the plans are subject to detailed design. This shows the draft proposed footprint and Limit of Deviation (LoD) for the East Anglia Connection Node (EACN) substation, access route, pylons, underground cables and temporary haul roads and compounds. Further information about asset footprints and layout is also provided in the illustrative drawings that can be found in the Design and Layout Plans - Subs & Cables (document reference 2.6.1), the Design and Layout Plans - Overhead Lines (document reference 2.6.2) and the Design and Layout Plans - Traffic & Transport (document reference 2.6.3).			X	
Substation						
10-34.96	Concern about the impact of the East Anglia Connection Node (EACN) substation / Suggest that the EACN substation should be relocated (generally, no location given)	National Grid has previously considered a number of alternative sites for the East Anglia Connection Node (EACN) substation during the initial siting work as set out in the 2022 Corridor and Preliminary Routeing and	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Siting Study (CPRSS) and in response to feedback as set out in the 2023 and 2024 Design Development Reports (available on the Project website) where we considered an alternative site for the EACN substation to the west of the A12. The decision making about siting of the EACN substation balances the environmental effects, technical consideration and cost arising from the substation as well as the connections to it for both National Grid and the three customer's infrastructure. We have reviewed this again and as set out in the 2025 Design Development Report (document reference 5.15), continue to consider the EACN substation, as proposed, to be the preferred location. Sites closer to the coast would reduce customer infrastructure but would increase effects from the double connection that would be required. National Policy Statement (NPS) EN-5 would guide to this being by two overhead lines given its position outside a designated area. Alternatives further west present multiple aspects of uncertainty and construction risk, reduces future flexibility, increases risks to programme for the customers and National Grid with potential for substantial constraint costs if programme is delayed. The EACN substation site to the east of Arleigh provides an appropriate location that balances the different interests, policy requirements and National Grid's statutory duties.</p>				
10-34.97	Request the EACN substation is relocated to brownfield land / Request all projects given	The identification of the site for the East Anglia Connection Node (EACN) substation has considered a	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	permission to connect to the substation are connected elsewhere	<p>number of other locations although no brownfield sites of sufficient size have been identified. The reinforcement need being met by the Project could potentially be met by a connection to Grain but as set out in the 2022 Corridor and Preliminary Routeing and Siting Study (CPRSS) (available on the Project website), and confirmed in subsequent back checks, would be at considerably increased costs and therefore, would be less economic and efficient and not preferred.</p> <p>Alternatives to make the EACN substation connections at Bradwell have been considered in the Design Development Reports in 2023 and 2024 (available on the Project website) but were considered less preferred. The overhead line from Bradwell has been operating at lower voltage (132 kV) and has not been used for a few years and is in generally poor condition. This overhead line would need to be rebuilt however this onward connection via Rayleigh to Tilbury is also constrained by urban development and further designations and some sections may need to be re-routed if connections were made at Bradwell. Additionally, any connection point also requires two points of connection to the National Electricity Transmission System (NETS) (to meet compliance standards) requiring either a double overhead line through the Bradwell peninsula and onwards to separate locations or a connection back to Bramford (in addition to one towards Tilbury). A connection to Bramford would require connections to cross the Special Protection Area (SPA) designated</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Blackwater Estuary (3 km to 7 km tunnel likely to be required at much greater cost) as well as interact with other Special Area of Conservation (SAC) and SPA designations. The existing network through Norfolk, Suffolk and Essex would also still need to be upgraded to transport the electricity due to come onto the network in the Norwich area and provide the necessary two points of connection to the NETS. Taken together a Bradwell or Grain point of connection requires a greater amount of new infrastructure and is therefore less economic and efficient and expected to be associated with greater environmental effects. No change is therefore proposed.				
Technology / Operations						
10-34.98	Concern that the substations, interconnectors and battery storage facility proposed for Ardleigh and its boarders with Little Bromley and Lawford are at risk of catching fire (i.e. local roads are not wide enough for emergency service vehicles)	National Grid is not responsible for the design and operation of the Battery Storage facilities and interconnectors and would refrain from commenting on these. Fire risks identified within the East Anglia Connection Node (EACN) substation would be documented within a site specific risk assessment to ensure only approved technologies are used on site and plans are in place to manage any failures. A private access road between Bentley Road and Ardleigh Road is proposed as well as widening of Bentley Road and Ardleigh Road which would provide access to the EACN substation.	X		X	

[illegible]

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-34.100	Concern about cumulative visual impact of the Project alongside existing overhead lines / concern about wirescape	<p>National Grid notes the feedback received and has taken it into consideration as part of the iterative design process. National Grid has liaised with UK Power Network to understand opportunities for 132 kV network rationalisation. The Project includes proposals to replace certain sections of 132 kV overhead line connection with underground cable and also to remove some sections of 132 kV overhead line to rationalise the network and reduce potential for cumulative wirescape effects.</p> <p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the Environmental Impact Assessment (EIA). Existing infrastructure (such as existing overhead lines) has formed part of the baseline environment for the Project to be assessed against, to identify if significant landscape and / or visual effects are likely to arise. The LVIA presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) sets out potential landscape and visual effects. The rationalisation of the existing 132 kV network in some areas forms part of the embedded landscape mitigation, as set out in Chapter 13.</p> <p>The findings and conclusions of the LVIA and other topics assessments have been considered within the Cumulative Impact Assessment, presented in ES Chapter 17: Cumulative Effects Assessment (document reference 6.17), lists the developments as part of the cumulative assessment. This chapter considers the landscape and visual effects of the Project cumulatively</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		with other proposed developments that are being progressed.				
10-34.101	Concern that the Project will be unsightly / visually intrusive (including overhead lines, CSE compounds and substations) / Concern that the Project will cause a negative impact on views	<p>National Policy Statement (NPS) EN-5 makes it clear that the Government considers overhead lines to be appropriate and acceptable in most instances, although it recognises that there may be, at particularly sensitive locations, potential adverse landscape and visual impacts of an overhead line that make it inconsistent with our duties and relevant planning policy.</p> <p>The Dedham Vale National Landscape (previously an Area of Outstanding Natural Beauty (AONB)) designation is one such location where underground cable technology is proposed with the extent of underground cabling extending beyond the boundary in response to the potential for the Project to affect the National Landscape. Our proposals include a total of approximately 20 km of underground cable through and in the vicinity of the Dedham Vale National Landscape, including a section at Great Horkesley to reduce the changes in views and setting of the National Landscape from within and adjacent to its designated boundary.</p> <p>Underground cabling is also proposed for a short section of 400 kV overhead line crossing near Fairstead.</p> <p>Cable Sealing End (CSE) compounds are required to facilitate sections of underground cable. The proposed East Anglia Connection Node (EACN) substation is required to connect customers and the proposed Tilbury North Substation is required to connect the Project into</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>the existing Tilbury Substation These components have been carefully sited taking into consideration Horlock Rules including the potential for landscape and visual effects.</p> <p>The higher cost of underground cables to bill paying consumers, and the environmental implications of installing underground cables and maintaining them at locations outside the Dedham Vale National Landscape, are not considered to be justifiable in the context of national policy or National Grid's statutory duties, which include the need to be economical and efficient.</p> <p>A Landscape and Visual Impact Assessment (LVIA), presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13), has been undertaken as part of the Environmental Impact Assessment (EIA). The LVIA includes an assessment on both landscape character and visual amenity.</p> <p>Landscape mitigation is proposed within Environmental Areas around substations and CSE compounds. The Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) includes details regarding the planting proposals.</p>				
10-34.102	Concern about the visual impact of the sealing end compound on Crabtree Lane and pylons TB35 / TB36 to TB45 on Highfields Farm and other listed	National Grid, through the routeing and siting exercise, has sought to reduce the impact on the historic environment, including grade II listed buildings in this area.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	buildings in the vicinity / Concern about the visual impact of angle pylon TB40 on Highfields Farm	<p>All listed buildings within 2 km of the Order Limits are considered in the historic environment assessment for the Project. The impacts of the Project on the historic environment are assessed in Chapter 11: Historic Environment (document reference 6.11) of the Environmental Statement (ES). The assessment considers the potential impact on historic buildings and includes assessment of potential for physical impact and impact through change to setting that affects the value of a heritage asset. The assessment of listed buildings is supported by setting surveys, as documented in ES Appendix 11.1 Historic Environment Baseline Report (document reference 6.11.A1). The Project has engaged with Historic England and relevant planning authorities on aspects relating to heritage, including appropriate mitigation measures and techniques and to take their views into account during Project development.</p> <p>Mitigation measures, such as pylon placement and screening for both new and existing structures, have been explored to mitigate identified impacts effectively. These actions have been documented and are presented in the Environmental Statement (ES), Chapter 11: Historic Environment (document reference 6.11), which forms an integral part of the Environmental Impact Assessment (EIA) for the Project. The approach to assessment and mitigation presented in ES Chapter 11: Historic Environment (document reference 6.11) have been discussed and agreed with key heritage stakeholders</p>

		(LEMP) (document reference 7.4) accompanying the Development Consent Order (DCO) application.				
10-34.105	Concern that the Project will result in a negative impact on species (protected status not specified)	Through routeing, siting and detailed design National Grid has sought to reduce, as far as practicable, potential impacts on biodiversity including protected species. The design process has taken account of existing biodiversity, the natural environment and, where practicable, has sought to reduce impacts on areas of ecological sensitivity including protected species and their associated habitats, through avoidance or mitigation. A comprehensive survey effort for a range of protected species was completed over the 2023 – 2025 period. Chapter 8: Ecology and Biodiversity of the Environmental Statement (ES) (document reference 6.8) assesses the effects on protected species based on this baseline information and where/if required appropriate mitigation measures are detailed. Suitable mitigation for protected species has been developed in consultation with Natural England to ensure legal compliance and best practice guidelines are adhered to. Where necessary, draft licence applications have been drafted and National Grid is in the process of agreeing the detail within the licence documents with Natural England, in order to obtain the relevant Letters of No Impediment (LoNI). Mitigation for non-licensable protected species has been included within the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4).	X		X

		deliver BNG and wider environmental benefits. This would require delivery of offsite Biodiversity Units via habitat creation or enhancement actions in strategic areas, and we will consider all offsite options that are available to us.				
10-34.110	Suggest ecological enhancements as part of the Project	<p>The Environment Act 2021 introduces a mandatory requirement for 10% Biodiversity Net Gain (BNG) for new Development Consent Order (DCO) developments (which is not yet in force and not expected until May 2026). National Grid has committed to delivering 10% BNG with environmental and societal benefits. The Net Gain target for the Project is currently voluntary and aligned with our corporate sustainability commitment.</p> <p>As well as seeking to avoid and minimise our impacts to nature the Project considers the land required for mitigation, compensation and enhancement that can deliver BNG and wider environmental benefits. This would require delivery of offsite Biodiversity Units via habitat creation or enhancement actions in strategic areas, and we would consider all offsite options that are available to us.</p>			X	
10-34.111	Criticism that a thorough and full analysis of the ecology and environment in the Stour Valley has not been carried out (e.g. given the that the conclusions within the ecology reports which state that the valley is an unsuitable habitat for otters and other endangered species and therefore no further	National Grid has undertaken further otter surveys in 2023 and 2024, which included an updated assessment of the River Stour and surrounding watercourse. Otter surveys were primarily looking to identify habitat with potential for otter holts with the presence of otters well documented across the Stour Valley. The report is	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	research has been done, but residents regularly see otters and have proof of their presence in the area)	included as Appendix 8.13: Otter and Water Vole Report (document reference 6.8.A13) of the Environmental Statement (ES).				
10-34.112	Concern that ecological assessments have not been carried out for the new route	A range of protected species and other ecological surveys have been undertaken across the Order Limits and the results are outlined in Chapter 8: Ecology and Biodiversity (document reference 6.8) and Appendices 8.1 to 8.16 (document reference 6.8.A1-6.8.A16) of the Environmental Statement (ES). This has included an assessment of the final proposed alignment. Appropriate mitigation would be implemented where impacts are identified as agreed with Natural England and the Local Planning Authority (LPA) as relevant.			X	
10-34.113	Concern National Grid is ignoring its duty to conserve and enhance the Dedham Vale Protected Landscape under the 2023 Levelling up and Regeneration Act	Section 245 (Protected Landscapes) of the Levelling-up and Regeneration Act 2023 (LURA) places a duty on 'relevant authorities', which in this context includes National Grid as a statutory undertaker, to seek to further the statutory purposes of protected landscapes (referred to as the 'seek to further' duty). In relation to National Landscapes (which includes the Dedham Vale National Landscape), this requirement has been incorporated into Section 85 of the Countryside and Rights of Way (CRoW) Act, which states: <i>'In exercising or performing any functions in relation to, or so as to affect, land in an area of outstanding natural beauty in England, a relevant authority other than a devolved Welsh authority must seek to further the</i>		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p><i>purpose of conserving and enhancing the natural beauty of the area of outstanding natural beauty'.</i></p> <p>The approach National Grid is taking to meet the 'seek to further' duty in relation to the Project has been detailed in National Landscapes – Duty to Seek to Further the Purposes Report (s85 Countryside and Rights of Way Act 2000) (document reference 5.10). The document details how the National Landscape and 'seek to further' duty has been taken into consideration during Project development and highlights potential further measures. The overall approach has been, and continues to be, discussed with relevant stakeholders (which includes but is not limited to the Dedham Vale National Landscape and Stour Valley Partnership) and follows the guidance published by Defra in December 2024 'Guidance for relevant authorities on seeking to further the purposes of Protected Landscapes' (Defra, 2024). It is intended the finalised measures would be secured by an appropriate mechanism as part pursuant to the DCO process.</p> <p>National Grid has committed to underground cables in areas of highest amenity value (including through and in the vicinity of the Dedham Vale National Landscape) which will further reduce the effects of the Project. A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the Environmental Impact Assessment (EIA). The LVIA includes an assessment on both landscape character and visual amenity and sets out the potential landscape and visual effects of the</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Project, including consideration of effects on nationally designated landscapes. The full assessment of the effects on the National Landscape can be found in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13) and supporting appendix (Appendix 13.5: National Landscape Assessment Study (document reference 6.13.A5).				
10-34.114	Concern about the impact of the Project on Gallows Green, as a Registered Village Green and County Wildlife Site, given that the Draft Order Limits extend a significant part of the Green (including a pond)	<p>While not formally designated as a County Wildlife Site, based on information obtained for the local records centre, it is noted that Gallows Green is considered a valuable green space for the village offering ecological value. Direct impacts on Gallows Green have been avoided</p> <p>National Grid has worked to minimise potential impacts on the historic environment, including non-designated asset such as Gallows Green (4212), through strategic routeing and siting measures. Statutory consultation feedback and the results of archaeological fieldwork have been used to inform design development to reduce as far as practicable impacts to archaeological remains in this area. The impacts of the Project on the historic environment are assessed in Chapter 11: Historic Environment (document reference 6.11) of the Environmental Statement (ES). The assessment considers the potential impact on archaeology, historic buildings and historic landscapes and includes assessment of potential for physical impact, impact through change to setting that affects the value of a</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>heritage asset and impact through indirect factors such as change in hydromorphology. The assessment is supported by walkover, setting and geophysical surveys, as documented in the ES Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1) and Appendix 11.4: Geophysical Survey Results Report (document reference 6.11.A4). In addition to the proposals in the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4), the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5) sets out appropriate mitigation for the historic environment.</p> <p>These actions have been documented and are presented in the ES, Chapter 11: Historic Environment, which forms an integral part of the Environmental Impact Assessment (EIA) for the Project. The approach to assessment and mitigation presented in ES Chapter 11: Historic Environment have been discussed and agreed with key heritage stakeholders</p> <p>The assessment of Gallows Green (4212) concludes that the asset would not be physically impacted by the Project. The setting of low value assets is not considered further as per agreed methodology.</p>				
10-34.115	Suggest that the mature chestnut trees on the west side of Brook Road should not be removed for the haul road for the Project (e.g. removal may be required to improve visibility)	The Project aims to minimise impacts to trees including those that may be impacted for visibility splays. As detailed in the Outline Landscape and Ecological Management Plan (LEMP (document reference 7.4),	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-34.116	Concern about the impact of the haul road and Draft Order Limits for the Project on Church House Wood (a Natural England Priority Habitat) and between Pylon TB59 and the Marks Tey to Sudbury Branch Line (e.g. as this may require the removal of two ancient oak trees)	<p>National Grid has committed to a 3:1 replacement for individual trees and individual trees within small groups. The Project will prioritise the replanting for individual trees and small groups of individual trees within the Order Limits, offsite provision may however be required.</p> <p>Details of the onsite tree planting will be provided in accordance with the final LEMP or the Reinstatement Planting Plan secured in the draft DCO (document reference 3.1). Offsite tree planting will be secured via a legal agreement.</p> <p>National Grid have completed an Arboricultural Impact Assessment (AIA) (document reference 6.13.A6) which has been submitted with the application for development consent.</p> <p>The Order Limits avoid Church House Wood and any recorded (Ancient Tree Inventory) or surveyed veteran trees in this area.</p>	X		X	

Essex 1 feedback (Targeted Consultation)

Table 10-35 Summary of consultee comments and National Grid's response

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Community / Social impact						
10-35.1	Concern about the impact of the Project on an underground drain that goes from the north-east of the respondent's home, emerging at the head of a ditch. This will result in the respondent losing the grey water disposal outfall as National Grid will not be reinstating the ditch as it is directly above the Project	<p>National Grid has reviewed the underground alignment in this location, the alignment has been moved further away from the properties, however it is still required to cross in the same location.</p> <p>National Grid would seek to reinstate the affected land where possible to the same state prior to any works (or a condition agreed with the landowner).</p> <p>Crossing of underground utilities (both public and private) is normal practice for underground cable installation. Underground cable installation can normally be conducted without compromise to existing utilities. Detailed site investigations would be undertaken prior to construction to determine the location and nature of existing utilities.</p> <p>Landowners are encouraged to provide as much information as early as possible in relation to any private supplies, drainage and irrigation systems on their land so these can be factored in at the detailed design stage of the Project ahead of construction starting on site.</p>			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-35.2	Concern that restrictive covenants over respondent's land in favour of Glebe House owners will be breached	<p>National Grid notes the respondent's feedback. As the Project is a Nationally Significant Infrastructure Project, if the Project was to obtain development consent the Development Consent Order (DCO) would not be bound by any restrictive covenants. If the respondent has any specific concerns about their restrictive covenant and how it may be affected, they should contact the Project lands team:</p> <p>Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.</p> <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD.</p>			X	
10-35.3	Concern that a high-pressure gas main on nearby land to the south of land parcel 5200 will not be turned off during National Grid's operations. Suggest that National Grid must do all that is technically necessary to ensure that the operation is carried out safely	<p>National Grid is aware of and the presence of the high-pressure gas main.</p> <p>An Outline Code of Construction Practice (CoCP) (document reference 7.2) has been prepared and submitted with the Development Consent Order (DCO) application. This document provides commitments to reduce construction impacts together with a framework for detailed management plans to be prepared at detailed design stage in order to reduce and mitigate potential impacts and/or disruptions that may arise during the construction phase. Pre-construction surveys would be undertaken to aid the detailed design development of the underground cable route, these would be completed prior to construction. National Grid</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>works and consults with all statutory utility owners as well as the local water and electricity companies. Where required, appropriate mitigations would be agreed in order to negotiate such existing infrastructure.</p> <p>In planning the Project, National Grid considers all existing utilities and agree interface and mitigation arrangements (where required) with their owners. We also consider any such future installations where planning applications are in the system and visible and likewise as part of the consultation process we contact all third party utility providers in the area. This will be reviewed as the Project progresses.</p> <p>National Grid complies with Construction (Design and Management) Regulations (CDM) 2015 (as amended) and adopts a Construction (Design and Management) Regulations (CDM) 2015 (as amended) approach to the management of health and safety reflecting industry best practice.</p>				
10-35.4	<p>Concern that the area of the respondents land over which National Grid require access encompasses the entire estate and extends to over 450 acres, and the Notice is for “non-intrusive” surveys, but the ‘List of Surveys’ includes descriptions of intrusive works like soil pits and the use of hand augers, neither of which can be considered “non-intrusive”</p> <p>Concern that National Grid's recent ‘Legal Notice</p>	National Grid notes the respondent's feedback. We seek to enter into voluntary agreements with landowners for survey access. Entering into a voluntary agreement would allow National Grid and the landowner to agree dates and times for surveys and access requirements. If we are unable to enter a voluntary agreement with a landowner, we have to reply on the use of statutory notices which are more			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	For Access...' does not provide specific dates, times or locations of when or where on the estate survey access will be required. The area (Drawing Ref: NATIONAL GRID-NT- 2024-02-JR-LIC-5479) includes arable land, farm tracks, hedgerows and woodlands, wetland, water meadows, willow plantations, horse paddocks, hacking tracks, trails and footpaths, grazing land, shooting grounds, the river, glamping sites and holiday lets. Access in many of these areas will need to be planned not least because we have so many activities taking place on the estate that might be impacted by the survey work	<p>general. If landowners would like to discuss surveys and access they should contact the Project lands team: Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.</p> <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD</p>				
Consultation						
10-35.5	Criticism of consultation materials on this change (Essex 1)	<p>National Grid notes the respondent's feedback. For each of our targeted consultations we developed an overview leaflet which explained why the change had been taken forwards and Environmental Implication of Change (EIC) document, which includes information on the potential ecological impacts of the proposed change alongside flooding and proposed mitigations. These were sent to properties within the bespoke consultation zone for the relevant change. More information on how we defined the consultation zones is available in this Consultation Report. We also published a consultation strategy and overview map. All these documents remain available on the Project website. The information provided at the Targeted</p>		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>consultations was considered proportionate to the changes being consulted upon.</p> <p>Our maps were annotated to explain the details of the change. We believe that all the relevant information required for the public to make informed decisions was available and do not believe that this impacted the feedback we received.</p> <p>The maps we produced used data from the latest OS mapping software, however we are aware that some more recent developments might not be fully shown on these maps. We use a wide range of sources when developing our proposals to ensure a thorough knowledge of the local area and how our proposals might impact communities. We apologise for any confusion caused by data shown on the maps and had a dedicated phonenumber and email address if anyone had questions on the documents produced or the proposed changes.</p> <p>We will publish our documents from our statutory and targeted consultations when we submit our application for Development Consent. Due to the time required to produce some of these documents after statutory consultation, they were not able to be published at targeted consultation. We do not believe this had an impact a respondent's ability to provide feedback on the proposed changes.</p>				
10-35.6	Criticism that most survey data has not been made public	National Grid has made survey data and reports available to the public through the Environmental			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Statement, as part of the Development Consent Order application.				
Design Change						
10-35.7	Oppose the proposed change - Essex 1 (generally)	National Grid notes the respondent's feedback.	X	X	X	
10-35.8	Support the proposed change - Essex 1 (generally)	National Grid notes the respondent's feedback.	X		X	
10-35.9	Suggest the Project is routed to the south, following the field headland e.g., to reduce the area severed during construction, moving the Project onto less productive land	National Grid has considered the respondent's feedback, following the field headland would require tight bending radii and additional underground cable length. This would further limit the available space in the field by increasing the land take required and by creating small unusable pockets of land in the corners of the field. The direct route through the field retains approximately a 100 m swathe to the south of the permanent cable easement. The direct route through the field although initially it severs the field, it would allow the opportunity for operational usage to commence following completion of the main construction works, with controlled access over the construction swathe and haul road. Detailed Agricultural Land Classification (ALC) surveys determined that the area within the Order Limits in this field is Grade 2. The proposed rerouting to the south along the headland, which is outside the Order Limits, is also likely to traverse Grade 2 land. While headlands are typically less productive due to their position and use patterns, other design considerations were considered to outweigh this when determining the			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>preferred route. If a landowner has concerns about impacts to their land they are encouraged to contact the Project lands team:</p> <p>Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.</p> <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD.</p>				
10-35.10	<p>Criticism that the construction site crosses Water Lane in two places, meaning the field immediately south of the respondent's home will be excavated, leaving a very narrow, insubstantial bank at some danger of collapse. Significant excavation would be needed in order to get down to the lane, in the process destroying the unique character of the lane and its protected status / Criticism that National Grid have not been to see the location to assess the access</p>	<p>National Grid notes the respondent's feedback. The crossing of Water Lane would be developed further during detailed design, impacts to the lane would be minimised where possible. The Environmental Statement (ES) (document reference Volume 6: Environmental Statement) submitted as part of the Development Consent Order (DCO) application, provides an assessment of the Project including temporary construction impacts and any permanent impacts. The detailed design for construction would consider the existing topography and would ensure a safe design is implemented to protect the bank from collapse. An Outline Code of Construction Practice (CoCP) (document reference 7.2) has been prepared and submitted with the DCO application. This document provides commitments to reduce construction impacts together with a framework for detailed management plans to be prepared at detailed design stage in order to reduce and mitigate potential impacts and/or disruptions that may arise during the</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		construction phase. National Grid would continue to work with all affected landowners, where possible adapting the Project design or agreeing relevant mitigation.				
10-35.11	Concern about the impact of the Essex 1 change, if adopted, on the farmland of the Langham Hall Estate including farming activities and crop yield	The Environmental Statement (ES) (document reference Volume 6: Environmental Statement) submitted as part of the Development Consent Order (DCO) application, provides an assessment of the Project, including the impact on soils. National Grid is aware of the possible impacts on farmland, farming activities and the Langham Hall Estate, and is in communication with representatives of the estate. National Grid will continue to work with all affected landowners, and where possible agree relevant mitigation and /or compensation.		X	X	
10-35.12	Request red line boundary does not use the end of respondents back garden and is moved away from respondent's front garden to mitigate impact on family health and to minimise the microTesla dosage	National Grid notes the respondent's feedback, the red line boundary has been amended and no longer impacts the respondent's garden.			X	X
10-35.13	Concern that a heat exchange could be installed next to respondents home resulting in loud noise due to the heater needing to run 24/7	National Grid notes the respondent's feedback, there are no heat exchanges proposed as part of this Project.			X	
10-35.14	Concern that if the south of Water Lane is blocked during construction they would be unable to access Dedham Road, with cable laying blocking the exit from Docura's Farm Road the respondent's home	The proposed approach for road closures and management is set out in the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) submitted as part of the Development Consent			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	will only be able to be access via the northern part of Water Lane	Order (DCO) application. It is anticipated that roads would only be closed where this is required for safe working. Temporary closures may be required for works including the construction of bellmouth junctions, highway mitigation, installation of buried cabling. If no suitable existing alternative access provision is available, a temporary alternative access would be provided.				
10-35.15	Concern the new route will worsen the impacts to Dedham Vale Protected Landscape and surrounding areas	<p>The Environmental Implication Change (EIC) document prepared for the targeted consultation confirmed that there would be no change to the type or significance of landscape and visual effects as a result of the new route as proposed in Essex 1 when compared to the design and Preliminary Environmental Information Report (PEIR) presented at statutory consultation in 2024.</p> <p>The relevant National Policy Statement (NPS) is EN-5 which makes it clear that the Government considers overhead lines to be appropriate and acceptable in most instances although it recognises that there may be, at particularly sensitive locations, potential adverse landscape and visual impacts of overhead line infrastructure that make it inconsistent with our duties and relevant planning policy.</p> <p>Dedham Vale National Landscape designation is one such location where there is a presumption that underground cable technology is adopted with the extent of underground cabling extending beyond the boundary in response to the potential for the Project to</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>affect the natural beauty of the National Landscape. National Grid's proposals include a total of approximately 20 km of underground cable through and in the vicinity of the Dedham Vale National Landscape, including a section at Great Horkesley to reduce the changes in views and setting of the National Landscape from within and adjacent to its designated boundary.</p> <p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the Environmental Impact Assessment (EIA). The LVIA includes an assessment of the Project, including the underground cabling, on landscape character and visual amenity and on the National Landscape and its special qualities. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13). Specifically, ES Appendix 13.5: National Landscape Assessment Study (document reference 6.13.A5) presents the assessment of effects on Dedham Vale National Landscape.</p>				
10-35.16	Suggest the haul road is relocated as it crosses the respondents farm, reducing the crossing of three access drives to one crossing south of the respondent's farmyard (e.g. to reduce interference with utilities, negate damage to TPO protected trees, and deflect and dilute disturbances caused by heavy traffic during construction)	National Grid notes the respondent's feedback and has amended the haul road as suggested in this area.			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-35.17	Suggest that Black Brook, to the south of Dedham Road, should be afforded the same level of protection as Dedham Vale National Landscape due to the proximity and contribution to the richness of the landscape	<p>National Grid notes the respondent's feedback. National Grid has sought to reduce, as far as practicable, impacts on Dedham Vale National Landscape through routeing and siting and an ongoing iterative design process which has taken on board feedback at different stages of the Project. The iterative design process sought to avoid areas of highest concern, for examples through careful siting of Cable Sealing End (CSE) compounds, changes to the route alignment and proposals for trenchless crossings.</p> <p>The relevant National Policy Statement (NPS) EN-5 makes it clear that the Government considers overhead lines to be appropriate and acceptable in most instances, although it recognises that that there may be, at particularly sensitive locations, potential adverse landscape and visual impacts of overhead line infrastructure that make it inconsistent with our duties and relevant planning policy.</p> <p>Dedham Vale National Landscape (previously known as Area of Outstanding Natural Beauty (AONB)) designation is one such location where there is a presumption that underground cable technology is adopted with the extent of underground cabling extending beyond the boundary in response to the potential for the Project to affect the natural beauty of the National Landscape. National Grid's proposals include a total of approximately 20 km of underground cable through and in the vicinity of the Dedham Vale</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>National Landscape including south of the National Landscape down to Black Brook and beyond and also a section at Great Horkesley, to reduce the changes in views and setting of the National Landscape from within and adjacent to its designated boundary.</p> <p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the Environmental Impact Assessment (EIA). The LVIA includes an assessment of the Project on landscape character and visual amenity including the consideration of Dedham Vale National Landscape. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and is supported by Appendix 13.5: National Landscape Assessment Study (document reference 6.13.A5) which considers impacts on the National Landscape and its special qualities. The landscape down to Black Brook is judged to form part of the setting of Dedham Vale National Landscape as set out in Annex A of ES Appendix 13.5: National Landscape Assessment Study (document reference 6.13.A5).</p> <p>The Black Brook south of Dedham Road is within the Stour River Valley Slopes Landscape Character Area (LCA), Sub Area A7b. As set out in ES Appendix 13.2: Landscape Baseline and Assessment (document reference 6.13.A2) LCA A7b is considered to be of high sensitivity. The assessment concludes that there would be significant effects on the LCA during construction and at operation.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Black Brook is also a receptor that has been assessed for the potential to impact on its hydrological attributes in Chapter 12: Hydrology, Land Drainage and Flood Risk (document reference 6.12) of the Environmental Statement (ES). It is also considered within the Flood Risk Assessment (document reference 7.9). These assessments conclude that there would be no likely significant residual impacts on the Brook following implementation of the embedded design and good practice measures that would be adopted, as described in the Outline Code of Construction Practice (CoCP) (document reference 7.2).				
10-35.18	<p>Concern about the impact of the wide band of trenched cables running across parcel 5200 on access to the respondent's property / Suggest that National Grid evaluate the possibility of reinstating the 'split corridor arrangement' at parcel 5200, providing the respondent with all studies, reports and calculations on the subject of trenchless cabling versus trenched cabling across the Blackbrook Stream. Studies should include:</p> <ul style="list-style-type: none"> - an evaluation of the loss of habitat, including important woodland which will be lost and can never be replaced; - the effect on wildlife, the environment and local ecology; - the potential for pollution and impact on water quality in the area; - the potential for change of water table and 	<p>National Grid notes the respondent's feedback, the change from trenchless technique to a trenched installation was included in our 2024 preferred draft alignment and was consulted upon at the statutory consultation.</p> <p>The design for the split crossing at Black Brook has been removed to avoid encircling a property. Note that the split corridor has been found to be unsuitable for trenchless installation via Horizontal Directional Drilling (HDD) (based on current assumptions and unknowns).</p> <p>Trenchless installation via HDD is taken as a baseline across the Project – at present, and allowing for variability in site conditions, there is insufficient space to install using this method at Black Brook. Therefore trenchless installation would rely on alternative</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>consequential flooding;</p> <ul style="list-style-type: none"> - the feasibility of trenched cabling through the Blackbrook including the fact that the Boxted sewage works discharges into the stream; - the necessary diversion of the Blackbrook while the operation is taking place; - the fact that parcel 5200 is swampy/water-logged at its eastern end with thick growths of bullrushes and an abundance of aquatic species. National Grid must consider whether it is possible at all to install trenched cables under this area; - the considerable undulations/changes of level of the site from the land to the north of the Blackbrook to the land to the south of parcel 5200 through which runs a high pressure trunk gas main; <p>To be clear about the undulations/changes of level of the site being parcel 5200 and the land to the north and south of it, these are (from north to south):</p> <ul style="list-style-type: none"> - the hill to the north down to Blackbrook; - the Blackbrook itself; - the sharp increase in height due to parcel 5200 having had the level heightened by about 2.4 metres nearly 40 years ago for the construction of our drive; - the sharp lowering of level at the south side of parcel 5200 into the field to the south; - the high pressure gas main under the field to the south which a National Grid representative has 	<p>trenchless methods, which are more expensive than HDD.</p> <p>The impact on habitats, wildlife and ecology have been assessed by a team of specialists, who have inputted into the decision-making process.</p> <p>A detailed habitat survey on the woodland and grassland habitats either side of Black Brook and the brook itself has been undertaken. An assessment of impact on the habitats in this area as a result of the open cut cabling have been included within Chapter 8: Ecology and Biodiversity (document reference 6.8) and Appendices 8.1 to 8.16 (document reference 6.8.A1-6.8.A16) of the Environmental Statement (ES).</p> <p>Black Brook would be over-pumped during construction, minimising the impact on water flows, and a suite of measures would be put in place (detailed in the Outline Code of Construction Practice (CoCP) (document reference 7.2)) to prevent pollution and detriment to water quality, as well as changes in the water table and local land drainage regime to avoid increases in flood risk.</p> <p>National Grid is aware of land level differences and the presence of the high-pressure gas main. The Outline CoCP (document reference 7.2) provides commitments to reduce construction impacts together with a framework for detailed management plans to be prepared at detailed design stage in order to reduce and mitigate potential impacts and/or disruptions that may arise during the construction phase. Pre-</p>

	said at one of National Grid's presentations will have to have the cables laid under it	<p>construction surveys would be undertaken to aid the detailed design development of the cable route, these would be completed prior to construction. National Grid works and consults with all third party statutory utility owners as well as the local water and electricity companies. Where required, appropriate mitigations would be agreed in order to negotiate such existing infrastructure.</p> <p>The crossing would be developed further during detailed design, impacts to the bank would be minimised where possible. The Environmental Statement (ES) (document reference Volume 6: Environmental Statement) of the DCO application provides an assessment of the Project including temporary construction impacts and any permanent impacts. The detailed design for construction would consider the existing topography and would ensure a safe design is implemented to protect the bank. National Grid would continue to work with all affected landowners, where possible adapting the Project design or agreeing relevant mitigation. National Grid would seek to reinstate the affected land where possible to the same state prior to any works (or a condition agreed with the landowner).</p>				
10-35.19	Suggest that if National Grid proceed by way of trenched cabling, that the swathe through land parcel 5200, should be narrower than currently proposed, thereby saving a number of trees	The underground cable swathe required is calculated to ensure the 18 cables are sufficiently spaced to provide the required heat dissipation as overheating of the underground cables would lead to an inefficient power system. The typical temporary construction			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>swathe is 120 m wide to provide the suitable work area for access, excavation and installation. This is inclusive of the typical permanent cable corridor is 50.6 m wide made up of six trenches and 18 cables.</p> <p>The standard underground cable cross section is intended to reflect typical installation conditions. In areas where other constraints exist, the trench spacing may vary or the construction methodology may change (e.g.: use of vertical excavations rather than battered excavations). The preferred approach for this Project is to use ducting, ducting is proposed as per the typical underground cable cross section. Where spoil is unsuitable for backfill it would be removed from site. National Grid would seek to reinstate the affected land where possible to the same state prior to any works (or a condition agreed with the landowner). Hedgerows, bushes and shrubs can be reinstated above the underground cables but trees cannot be planted over the top or within 10 m of underground cables. Mitigation planting would be included within the Project where trees need to be removed.</p> <p>National Grid and their contractors would make every effort to ensure that the existing trees are minimally impacted by the works.</p>				
10-35.20	Concern that the alignment presented during the targeted consultation will negatively affect the respondent's property (near Dedham Road, Langham) more than the alignment shown at the statutory consultation due to workings closer to the	National Grid notes the respondent's feedback. The alignment for the permanent private access was changed due to landowner feedback. We have undertaken an Environmental Impact Assessment (EIA) which includes an assessment of the impacts of			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	property and access to the property being disrupted as well as the ability to access Boxted Straight Road, Rectory Road and Boxted Church Street	<p>this access road. The assessment can be found in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) which forms part of the Development Consent Order (DCO) submission. Access to the property and to Boxted Straight Road, Rectory Road and Boxted Church Street would remain unaffected.</p> <p>Temporary traffic management measures would be in place at vehicle crossover points where the construction haul road and public highway intersect, such as speed limit reductions and/or temporary signals. More details can be found within the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).</p>				
10-35.21	Suggest that the haul road east of respondent's property (and between Glebe House and Glebe Farm) is re-routed to instead pass between Glebe Farm and Ewens Farm	National Grid notes the respondent's feedback. The haul road at this location has been amended and no longer passes between Glebe House and Glebe Farm.			X	X
Environmental Impact						
10-35.22	Suggests the is mature tree and/or vegetation in the vicinity of Dacorus Farm Road and Rectory Road which will be considered in the access design to minimise impacts from construction and junction visibility splays	<p>National Grid notes the respondent's feedback. In order to provide a compliant access crossing the public highway visibility splays are required. This would mean retaining and cutting back vegetation in the vicinity of the crossing as well as some removals. National Grid has sought to reduce, as far as practicable, impacts on the environment / countryside through routeing and siting and an ongoing iterative</p>			X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-35.26	Criticism that the undergrounding length within Dedham Vale National Landscape is increasing by 3X, compared to 2X for the area outside	National Grid notes the respondent's feedback. The section of underground cable within the National Landscape is slightly longer than proposed at statutory consultation. This alternative cable alignment is preferred as it avoids impacts to sections of woodland where there are important protected species, moves further from the Grade I Listed Church of St Mary and also avoids routeing through a narrow pinchpoint between properties. Whilst slightly longer the cost and technical risk associated with a trenchless crossing under the woodland noted above is not required. We have completed an Environmental Impact Assessment (EIA) which assesses the impacts of the Project including within the National Landscape. The results of this assessment are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application.	X		X	
10-35.27	Concern that the location of the Substation close to Dedham Vale National Landscape is dictating the location of a further 2-3 substations that will also be within close proximity to the National Landscape	The siting of the National Grid substation took into account the potential for customer substations to be located in close proximity as set out in the 2022 Corridor and Preliminary Routeing and Siting Study (CPRSS) available on the Project website, though whether this is actually the case is for the individual project developers to determine. Siting also took into account the implications of other locations and in particular the different connection requirements for the different projects. Technical assessments have confirmed that the location is not within the setting of			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-35.29	Concern that neither Essex 1 change nor the original 2024 route adhere to the recently enhanced Section 85 of the CROW act	<p>Section 245 (Protected Landscapes) of the Levelling-up and Regeneration Act 2023 (LURA) places a duty on 'relevant authorities', which in this context includes National Grid as a statutory undertaker, to seek to further the statutory purposes of protected landscapes (referred to as the 'seek to further' duty). In relation to National Landscapes (which includes the Dedham Vale National Landscape), this requirement has been incorporated into Section 85 of the Countryside and Rights of Way (CRoW) Act, which states:</p> <p><i>'In exercising or performing any functions in relation to, or so as to affect, land in an area of outstanding natural beauty in England, a relevant authority other than a devolved Welsh authority must seek to further the purpose of conserving and enhancing the natural beauty of the area of outstanding natural beauty'.</i></p> <p>The approach National Grid is taking to meet the 'seek to further' duty in relation to the Project has been detailed in National Landscapes – Duty to Seek to Further the Purposes Report (s85 Countryside and Rights of Way Act 2000) (document reference 5.10). The document details how the National Landscape and 'seek to further' duty has been taken into consideration during Project development and highlights potential further measures. The overall approach has been, and continues to be, discussed with relevant stakeholders (which includes but is not limited to the Dedham Vale National Landscape and Stour Valley Partnership) and follows the guidance published by Defra in December</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		2024 'Guidance for relevant authorities on seeking to further the purposes of Protected Landscapes' (Defra, 2024). It is intended the finalised measures would be secured by an appropriate mechanism as part pursuant to the Development Consent Order (DCO) process.				
Requests						
10-35.30	<p>Request for further information on Essex 1 proposed changes around respondent's property:</p> <ul style="list-style-type: none"> - The 40 – 65 m swathes to be dug out for underground cables and to cut 100 m - Are there going to be joining bays around respondents' property? If so, does that impact on the maintenance afterwards? - Query how long will it take for the construction from Docuras farm to the Dedham Road which lies just beyond respondent's cottage? - Will the high bank around respondent's front garden, which protects from flooding, be removed / eroded to incorporate access by heavy vehicles? - Respondents' mains water pipe is also located in the field to the front of the garden. Will that be affected? - A clear, run-off from our septic tanks ends up in a ditch and stream, located in the field just behind us and to the right by the willow trees. How will that be impacted? - Will respondents commute be affected? 	<p>The underground cable swathe required is calculated to ensure the 18 cables are sufficiently spaced to provide the required heat dissipation as overheating of the underground cables would lead to an inefficient power system. The typical temporary construction swathe is 120 m wide to provide the suitable work area for access, excavation and installation. This is inclusive of the typical permanent underground cable corridor is 50.6 m wide made up of six trenches and 18 cables. Jointing bays are required approximately every 800 m to 1 km along the underground cable route. Access onto the cable swathe has been identified, using existing field accesses and gates where possible. The access proposed is for future survey and maintenance access only and would not be used for construction purposes for the Project.</p> <p>Trenches would be opened to allow for installation of ducts and structural surrounds. The majority of the trenches would be open for two to three months, depending on the construction schedule, and in most cases would be closed much sooner. The spoil</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>removed from the excavations would be used to backfill over the cables and as such any bunding created by the spoil heaps would be in place for the same amount of time as the excavation. The haul road along the construction swathe would remain operational for the duration of the Project.</p> <p>The crossing would be developed further during detailed design, impacts to the bank would be minimised where possible. The Environmental Statement (ES) (document reference Volume 6: Environmental Statement) submitted as part of the Development Consent Order (DCO) application, provides an assessment of the Project including temporary construction impacts and any permanent impacts. The detailed design for construction would consider the existing topography and would ensure a safe design is implemented to protect the bank. An Outline Code of Construction Practice (CoCP) (document reference 7.2) has been prepared and submitted with the DCO application. This document provides commitments to reduce construction impacts together with a framework for detailed management plans to be prepared at detailed design stage in order to reduce and mitigate potential impacts and/or disruptions that may arise during the construction phase. National Grid would continue to work with all affected landowners, where possible adapting the Project design or agreeing relevant mitigation. National Grid would seek to reinstate the affected land where</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>possible to the same state prior to any works (or a condition agreed with the landowner).</p> <p>National Grid works and consults with all third party statutory utility owners as well as the local water and electricity companies. Where required, appropriate mitigations would be agreed in order to negotiate such existing infrastructure.</p> <p>Locating existing water and electricity supplies is important to us; you may have knowledge of supply locations which we would be grateful if you could share with us. Having this information allows us to reduce the effects on your property and our Project.</p> <p>If we interrupt or accidentally damage any water supplies or other services in the land (including the runoff from the septic tank), we would repair the damage and/or provide an adequate alternative as soon as reasonably practicable.</p> <p>A Flood Risk Assessment (FRA) (document reference 7.9) has been undertaken, drawing on a range of data sources and informed by engagement with key flood risk management authorities. The FRA identifies the flood risk management and control measures that need to be put in place during construction and operation to manage surface water runoff and prevent increases in flood risk from a range of sources. If the runoff from the septic tank is intercepted this would also be considered. These measures would be integrated into the Project design at detailed design stage (e.g., runoff capture and attenuation features) and secured within</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>the Outline CoCP (document reference 7.2) and would be implemented by the appointed contractor(s), or through the use of Flood Risk Activity Permitting (FRAP) with the Environment Agency.</p> <p>National Grid and their contractors would make every effort to ensure that access to properties is minimally impacted by the works and would consult with and inform any residents that may be affected.</p>				
10-35.31	Requests to understand why there is a 'twin route' which crosses the River Stour and why the point has been chosen for entry and exit	<p>The siting of the crossing of the River Stour needs to take into account the alignment to the north and south as well as the characteristics of the crossing site so it cannot easily be moved.</p> <p>The crossing of the River Stour is constrained by various existing features and conditions. This includes a gas main to the east of the eastern corridor, a source protection zone 1 within the western corridor and various waterbodies and bends in the River Stour between the two proposed corridors. These constraints mean that there is not sufficient width in either corridor for a typical Horizontal Directional Drilling (HDD) installation of the proposed underground cables. Therefore, at statutory consultation, two corridors were presented, with the expectation that one cable circuit (nine cables) would use the western route and the other would use the eastern route. In response to feedback, National Grid has undertaken further review of options and assessment of site conditions, with the aim of reducing the works to one corridor only at this location. The results of these investigations currently</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>does not provide a conclusive solution through either corridor individually (most notably because of ground conditions that appear unsuitable for HDD on the western corridor); however, a viable solution exists by combining both corridors. Therefore, both corridors are retained, with the intent that either one or other is taken forward at detailed design stage.</p> <p>When utilising HDD the underground cables need to be installed at a greater depth to provide adequate protection against inadvertent excavation strikes as this method doesn't allow us to install warning tapes/tiles above the cables. Furthermore, local constraint features that interface with the route such as water courses or other buried infrastructure may require the cables to be installed deeper to avoid clashes. The deeper the underground cables are installed, the wider they need to be spaced to allow for suitable thermal dissipation (avoiding overheating) and so a wider below ground asset corridor needs to be present to allow for the permanent underground cable corridor, this can be quite difficult to ascertain.</p> <p>We fully assess the underground cable routes in detail considering the route incumbent features and potential effects of installation by open trench method. Where such methodology is deemed not preferred then installation by HDD methods would also be assessed before deciding on where HDD would be used.</p> <p>Trenchless installation via HDD is taken as a baseline across the Project. Due to the constraints mentioned</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		above and the extra costs and complexities involved with increasing the length of the trenchless crossings. The crossing length is kept to a minimum with the launch and reception sites located either side of the river. As part of the design development of the Project each crossing has been refined taking into account the changes to the cable route to the north and south.				
10-35.32	Concern over National Grid consultation maps plotting of the property south of Martins Farm (TM 02476 33126), as the garden is larger than shown / Request National Grid investigate to ensure no loss of domestic land occurs	National Grid notes the respondent's feedback. The respondent's garden has been removed from the Order Limits.		X	X	X
Wildlife / Ecology impact						
10-35.33	Concern the new route will destroy an established wetland habitat within a protected landscape	Detailed habitat surveys have identified the presence of floodplain wetland mosaic and coastal floodplain grazing marsh, which is a habitat of principal importance, around the River Stour. While every effort has been made to avoid and minimise impacts on this wetland habitat, such as the use of trenchless techniques under the River Stour, due to a combination of technical limitations and challenging ground conditions some habitat impact would be unavoidable. This wetland habitat impact is identified within the Biodiversity Metric and would be mitigated through a combination of replacement planting and offsite habitat creation and enhancement in order to achieve 10% biodiversity net gain. Full details are provided within			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		the Biodiversity Net Gain (BNG) Report (document reference 7.1).				
10-35.34	Support the underground cable route proposed for Langham Hall estate as this will mitigate against a protected species of bat which commute or forage in this area	National Grid notes the respondent's feedback.			X	
10-35.35	Criticism over the order limits being wide at TM 03236 34580 to TM 03454 34528 / Suggest the order limits are narrower here to mitigate impact on tree loss along the riverbank, and visual impact on the Essex Way and Stour Valley/St Edmund Way long distance footpath	<p>The underground cable swathe required is calculated to ensure the 18 cables are sufficiently spaced to provide the required heat dissipation as overheating of the underground cables would lead to an inefficient power system. The typical temporary construction swathe is 120 m wide to provide the suitable work area for access, excavation and installation. This is inclusive of the typical permanent cable corridor which is 50.6 m wide made up of six trenches and 18 cables.</p> <p>As assessment of effects on visual receptors travelling on long distance walking routes including the Essex Way, Stour Valley Way and St Edmund Way is provided in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13), specifically Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3). This makes reference to tree loss as detailed in the ES Appendix 13.6: Arboricultural Impact Assessment (document reference 6.13.A6).</p> <p>The use of Public Rights of Way (PRoW), including bridleways, during construction, continued access would be facilitated where practical and feasible in</p>		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>order to minimise the number of diversions and temporary closures required. Where this is not feasible, the PRow would either be temporarily diverted, or if the route cannot be diverted, temporarily closed. Details are provided in the Outline Public Rights of Way Management Plan (document reference 7.6), which has been submitted as part of the application for development consent.</p> <p>The standard underground cable cross section is intended to reflect typical installation conditions. In areas where other constraints exist, the trench spacing may vary or the construction methodology may change (e.g.: use of vertical excavations rather than battered excavations). The preferred approach for this Project is to use ducting, ducting is proposed as per the typical underground cable cross section. Where spoil is unsuitable for backfill it would be removed from site. National Grid would seek to reinstate the affected land where possible to the same state prior to any works (or a condition agreed with the landowner). Hedgerows, bushes and shrubs can be reinstated above the underground cables but trees cannot be planted over the top or within 10 m of underground cables. Mitigation planting would be included within the Project where trees need to be removed.</p> <p>National Grid and their contractors would make every effort to ensure that the existing trees are minimally impacted by the works.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		A Sustainable Drainage System (SuDS) basin is proposed in this area to the east of the standard underground construction swathe. Linear features, such as swales or filter drains would capture and convey runoff, directing it towards the SuDS basin that would provide attenuation and treatment of runoff to ensure that flood risk and water quality impacts are managed.				

Essex 2 Change feedback (Targeted Consultation)

Table 10-36 Summary of consultee comments and National Grid's response

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Consultation						
10-36.1	Criticism of consultation materials on this change (Essex 2)	<p>National Grid notes the respondent's feedback. For each of our targeted consultations we developed an overview leaflet and Environmental Implication of Change (EIC) document. These were sent to properties within the bespoke consultation zone for the relevant change. We also published a consultation strategy and overview map. All these documents remain available on the Project website. The information provided at the targeted consultations was considered proportionate to the changes being consulted upon. We believe that all the relevant information required for the public to make informed decisions was available and do not believe that this impacted the feedback we received.</p> <p>For each targeted non-statutory consultation area (including Essex 2), we developed a bespoke consultation zone to include nearby properties which are likely to be affected. These were created following the principle that each consultation zone should be appropriate and proportionate in relation to the type and potential impact of the change.</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		For these targeted consultations, we have not included details of the wider Norwich to Tilbury proposals or of other projects such as North Falls and Five Estuaries as these do not form part of our Project and we are not gathering feedback on these. For information on these projects please visit the relevant websites.				
10-36.2	Criticism that Page 1943 of the PIER (Volume III - Technical Appendices - 3 of 4 April 2024) fails to acknowledge that the substation will be sited 10 metres away from the respondents Grade 2 listed property, including a concentration of the underground cable swathe coming in from the Dedham Vale, compounded by the pylons swathe running out from the substation towards Ardleigh	National Grid has undertaken a detailed routeing and siting exercise for all elements of the Project, including the new sub-station and associated cable corridors, with the aim of reducing potential effects on the historic environment including listed buildings such as Bounds Farmhouse (1147743). The options appraisal and iterative design process were informed by desk-based research, walkover and setting surveys, geophysical survey, trial-trenching, Historic Environment Record data and regular engagement with Historic England and the relevant local planning authorities through the Archaeology Working Group. The assessment methodology, set out in the Environmental Statement (ES), Chapter 11: Historic Environment (document reference 6.11) and Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1), follows national policy (National Planning Policy Framework (NPPF) 2023 and National Policy Statement (NPS) EN-1), Historic England's Good Practice Advice Note 3: The Setting of Heritage Assets (2017) and the Design Manual for Roads and Bridges LA 106 (2020). These documents were circulated in			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>draft, discussed and agreed in principle with heritage stakeholders prior to submission.</p> <p>Bounds Farmhouse and its setting have been assessed in full. The assessment has been undertaken in line with relevant policy and guidance, including the NPPF (2023), Historic England's Good Practice Advice Note 3: The Setting of Heritage Assets (2017), and the NPS EN-1. The methodology was discussed and agreed through regular engagement with key stakeholders, including Historic England and the relevant local planning authorities, as part of the Archaeological Working Group meetings. The assessment concludes a temporary moderate adverse significance of effect during construction (mid-range 'less than substantial harm' in NPPF terms), and a permanent moderate adverse significance of effect during operation.</p> <p>However, required mitigation measures are located within the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5), and further mitigation is set out in the Outline Code of Construction Practice (CoCP) (document reference 7.2). After application of these measures, the residual level of harm would remain less than substantial.</p>				
DESIGN CHANGE (CR)						
10-36.3	Oppose the proposed change - Essex 2 (generally)	National Grid notes the respondent's feedback.	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-36.4	Support the proposed change - Essex 2 (generally)	National Grid notes the respondent's feedback.			X	
10-36.5	Suggest that the Project is straightened between Pylon TB6 to TB10, TB7 is moved to the field margin, and TB9 is moved to the field corner (eliminating the need for TB8), to minimise the impact on respondents' land (i.e. ancient hedging, flora, and fauna)	The route for the overhead line in this section between TB6 and TB10 must respond to the presence of a number of residential properties, the location of transport infrastructure and clearance requirements (especially for electrified rail), the potential allocation of a site for silica sand abstraction, environmental features including veteran trees and seek to reduce socio-economic effects. It also needs to respond to the route of the underground cable connection through the National Landscape and meet construction requirements. In this location these factors mean that the line cannot be straightened in the manner suggested nor a pylon be removed. Some movement of the pylon position is possible but straightening and removing a pylon would be outside the scope of design standards. Further detail on routeing in this area can be found in the 2025 Design Development Report (document reference 5.15). ES Chapter 8: Ecology and Biodiversity (document reference 6.8) and Appendices 8.1 to 8.16 of the ES (document references 6.8.A1 to 6.8.A16) address the impact on vegetation and wildlife on the Project. This includes results from the full range of hedgerow surveys conducted on the Project (see ES Appendix 8.3: Hedgerows Regulations Report (document reference 6.8.A3)). Appropriate mitigation would be implemented where impacts are identified as agreed with Natural England and the Local Planning Authorities, as relevant.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Consideration of mitigation for potential habitat loss or fragmentation is also presented in the Outline Landscape and Ecological Management Plan (document reference 7.4).				
10-36.6	Suggest the planned storage areas on the edge of the haulage road proposed for the centre of Little Bromley should be relocated near the substations to reduce visual impact	<p>National Grid notes the respondent's feedback. The proposed area identified in this location is not a proposed material storage area for the purpose of the underground cable swathe or overhead line alignment, it is a construction compound area for the widening works along Bentley Road and the construction of the permanent access road between Bentley and Ardleigh Road.</p> <p>These elements of highways improvements would all be undertaken prior to the construction of the East Anglia Connection Node (EACN) substation as they are required to enable access to the EACN substation site.</p> <p>Therefore, we are unable to relocate the compound further away from this location as it would not be accessible.</p> <p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the Environmental Impact Assessment. The LVIA includes an assessment of potential effects of the Project on landscape character and visual amenity. The assessment covers effects during construction, including consideration of the introduction of temporary construction compounds, temporary and permanent access tracks, temporary drainage works, temporary road crossing protection and</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		construction laydown areas in this area. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13).				
10-36.7	Suggest that the span from TB10 to TB6 is straightened, then TB9 is moved to the field margin very near the corner of the field, giving more clearance over the railway line. TB7 would also be on the field margin and would reduce the distance to TB9 enough to remove TB8. Suggest that TB3 to TB5 are straightened so that there are only 2 changes of angle	National Grid notes the respondent's feedback. The route for the overhead line in this section between TB3 and TB10 must respond to the presence of a number of residential properties, the location of transport infrastructure and clearance requirements (especially for electrified rail), the potential allocation of a site for silica sand abstraction, environmental features including veteran trees and seek to reduce socio-economic effects. It also needs to respond to the route of the underground cable connection through the National Landscape and meet construction requirements. In this location these factors mean that the line cannot be straightened in the manner suggested nor a pylon be removed. Some movement of the pylon position is possible but straightening and removing a pylon would be outside the scope of design standards. The 2025 Design Development Report (document reference 5.15) does note that if the silica sand site proves to be unviable then a slight straightening of the overhead line may be possible as the underground cables could be repositioned to the south of Little Bromley Road. Therefore, no change is proposed.			X	
10-36.8	Concern about the impact of moving the draft Order Limits on Badliss Hall Cottages if the Essex 2 change is adopted	Badliss Hall Cottages are non-designated buildings and so are not included in the Historic Environment Assessment.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-36.9	Concern that the repositioning of Pylons TB5 and TB6 to the south of Little Bromley Road enlarges the arc in this section of the proposed pylon route around the village	<p>National Grid notes the respondent's feedback. The re-positioning referred to is in response to a potential site allocation, The position of TB5 and TB6 is closely related to the route of the underground cable that forms the connection through the Dedham Vale National Landscape to the East Anglia Connection Node (EACN) substation. Collectively the positioning of both connections is then influenced by other constraints, transport infrastructure, environmental features and residential properties and the potential for land to the south of Little Bromley Road to be allocated for silica sand extraction.</p> <p>The Project design allows for the overhead line to be routed to the south of Little Bromley Road (if the site is allocated) or to be routed to the north and the underground cables to the south if the silica sand extraction does not prove to be viable. The Order Limits respond to both scenarios of the cable position (to north or south of Little Bromley Road with potential to reduce them where overhead line is confirmed. This approach moves the pylons by up to around 100 m southwards. This is not considered to be a material change in terms of the assessment of effects for the nearest residential properties which are at around 800 m from the alignment.</p>	X		X	

Environmental impact

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-36.10	Suggests the is mature tree and/or vegetation near Ardleigh which will be considered in the access design to minimise impacts from construction and junction visibility splays	<p>National Grid notes the respondent's feedback.</p> <p>In order to provide a compliant access crossing the public highway visibility splays are required. This will mean retaining and cutting back vegetation in the vicinity of the crossing as well as some removals. National Grid has sought to reduce, as far as practicable, impacts on the environment / countryside through routeing and siting and an ongoing iterative design process which has taken on board feedback at different stages of the project. The iterative design process sought to avoid areas of highest concern. The proposed bellmouth junctions have undergone Road Safety Audits, and mitigation measures for road safety have been developed. This includes temporary traffic management measures such as speed limit reductions and/or temporary signals.</p> <p>Post construction the bellmouth will be removed and the vegetation reinstated.</p> <p>More details on the bellmouths can be found within the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).</p>			X	
Primary Access Routes / Haul Road / Construction Compounds						
10-36.11	Concern some of the haul road cross over narrow rural lanes which could cause issues with existing vehicles as they will have limited visibility when the haul road crossing is being used. This could result in	<p>National Grid notes the respondent's feedback.</p> <p>The proposed bellmouth junctions have undergone Road Safety Audits, and mitigation measures for road safety have been developed. This includes temporary</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	vehicles waiting on the rural lane either side of the crossing without the ability to pass each other. The haul road crossings which could be affected are Home Farm Lane and Morrow Lane	<p>traffic management measures such as speed limit reductions and/or temporary signals. Where visibility is limited or the public highway is narrow and vehicles cannot pass each other safely, vehicle passing places and waiting areas have been proposed to address the concerns raised.</p> <p>Post construction the bellmouth and mitigations will be removed and the vegetation reinstated.</p> <p>More details on the bellmouths can be found within the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).</p>				

Essex 3 Change feedback (Targeted Consultation)

Table 10-37 Summary of consultee comments and National Grid's response

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Consultation						
10-37.1	Criticism of consultation materials on this change (Essex 3)	National Grid notes the respondent's feedback. For each of our targeted consultations we developed an overview leaflet and Environmental Implication of Change (EIC) document. These were sent to properties within the bespoke consultation zone for the relevant change. More information on how we defined the consultation zones is available in this Consultation Report. We also published a consultation strategy and overview map. All these documents remain available on the Project website. The information provided at the Targeted consultations was considered proportionate to the changes being consulted upon. We believe that all the relevant information required for the public to make informed decisions was available and do not believe that this impacted the feedback we received.			X	
10-37.2	Criticism that the proposed haul road does not directly lead to the substation but instead is designed to avoid traffic passing through the village and reconnects to the highway. Criticism that National	We tried to make these documents easy to understand but had a dedicated phone line and email if people had any questions about the information or the proposed changes. All information on construction access and			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	Grid has prioritising the avoidance of occasional complaints from village residents over the long-term impact on landowners	temporary and permanent haul roads has been made available in our statutory consultation construction maps. Where there was a change to these following statutory consultation, we engaged with the relevant landowners and affected properties at targeted consultation.				
DESIGN CHANGE (CR)						
10-37.3	Oppose the proposed change - Essex 3 (generally)	National Grid notes the respondent's feedback.	X	X	X	
10-37.4	Support the proposed change - Essex 3 (generally)	National Grid notes the respondent's feedback.			X	
10-37.5	Criticism of the dog leg from the EACN that connects the Project east / Suggest that the RAF Boxted airfield site would avoid the need to come east and the extra construction required (e.g. it has no population settlements and the landmass would be more than ample to accommodate the EACN, the NF, FE and Tarchon Interconnector, with excellent links to the A12 for construction to reduce disruption to the public)	The development of the Project has considered whether other suitable sites were available for the siting of infrastructure. In general, such sites are few in number, of inappropriate size, have incompatible former uses (e.g. are made ground), are located remotely from the route such that for example they would require a diversion that would be less economic and efficient. National Grid has considered the use of the former airfield at Boxted for the siting of the East Anglia Connection Node (EACN) substation but ruled it out as explained in the 2025 Design Development Report (document reference 5.15). Amongst other factors, this was due to the greater impact on the National Landscape from multiple underground cables required to be routed through it and from reduced flexibility for future connections.		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-37.6	Suggest that the brownfield site of a redundant airfield at Boxted should be considered to site the permanent private access (e.g. to minimise impact on surrounding property, to allow access from major roads)	The development of the Project has considered whether other suitable sites were available for the siting of infrastructure. In general, such sites are few in number, of inappropriate size, have incompatible former uses (e.g. are made ground), are located remotely from the route such that for example they would require a diversion that would be less economic and efficient. National Grid have considered the use of the former airfield at Boxted for the siting of the East Anglia Connection Node (EACN) substation but ruled it out as explained in the 2025 Design Development Report (document reference 5.15). Amongst other factors, this was due to the greater impact on the National Landscape from multiple underground cables required to be routed through it and from reduced flexibility for future connections.	X		X	
10-37.7	Suggest that the compound located in Little Bromley should be relocated outside of the village close to the A120, with the access road planned and located away from the village (e.g. to reduce the impact on a war memorial and Little Bromley Church)	National Grid notes the respondent's feedback. The proposed highway construction compound is required for the widening works along Bentley Road and the construction of this permanent access road between Bentley and Ardleigh Road as well as the widening of Ardleigh. These elements of Highways improvements would be undertaken prior to the construction of the East Anglia Connection Node (EACN) substation as they are required to enable access to the EACN substation site. Relocating the compound next to the A120 would result in construction traffic for these elements tracking through			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Little Bromley to get to this proposed permanent access road and Ardleigh road. To reduce the impact a compound is proposed closer to those works.</p> <p>The Little Bromley War Memorial was only recently Grade II listed in June 2025. However, both that and the Church of St. Mary have been assessed within the Environmental Statement (ES), Chapter 11: Historic Environment (document reference 6.11) and the relevant supporting appendices including 11.1, 11.2 and 11.7 (document reference 6.11.A1, 6.11.A2 and 6.11.A7).</p> <p>The assessment noted only a minor adverse significance of effect (not significant) during construction for both assets. However, given the proximity of the war memorial to the Order Limits, text has been added to the Outline Code of Construction Practice (document reference 7.2) to ensure that protection measures are put in place during construction to negate the possibility of accidental physical damage.</p>				
10-37.8	Suggest that the haul road is removed altogether, and the public highway is used instead. However, if the road is to remain, suggest that the permanent haul road is relocated to the boundaries and straightened, with the new road following the existing track for dual use rather than having two separate roads (yellow route). Alternatively, suggest the road is moved to field edges (green route), with the third preference for the haul road being relocated to its original position as per the statutory consultation (red	A strategy has been developed to manage the impact of construction vehicles on the public highway and sensitive receptors, using suitable Local Road Network connections from the Strategic Road Network called Primary Access Routes. In addition, temporary haul roads for construction vehicles are proposed along the Project alignment, further reducing the impact of construction traffic on the local road network. Further details of the strategy can be found within the Outline			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	route) (e.g. to reduce impact on respondent's property at Slough Lane)	<p>Construction Traffic Management Plan (CTMP) (document reference 7.3).</p> <p>National Grid has assessed whether we can overlay the existing track however the junction with Ardleigh Road does not provide compliant 2-way visibility from the carriageway onto the track. In addition, we would need to remove a further 100 m of vegetation and trees on Ardleigh Road.</p> <p>National Grid notes the respondent's feedback and has reviewed the alternatives suggested. One suggestion to follow the eastern field boundary and the other to follow the northern field boundary adjacent to the properties within Little Bromley. Whilst potentially a reasonable option for very occasional Abnormal Indivisible Load (AIL) movements, the potential for this to be used for construction Heavy Goods Vehicle (HGV) movements until the substation haul road becomes available raises the level of environmental effect for residential occupants meaning this is considered less preferred. National Grid recognises that decision making is influenced to an extent by factors that are as yet uncertain, such as potential use by construction HGVs which depends on when North Falls or Five Estuaries commence their works. Whilst still to be confirmed, National Grid is aware of some calls from local planning authorities involved with the windfarm Development Consent Orders (DCOs) (North Falls and Five Estuaries) for restrictions to be imposed to prevent wind farm construction before the Project is consented and free</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		from judicial review risk. This increases the likelihood that the AIL route would be carrying construction HGVs. On this basis we propose to make no change at this stage to the route presented at the 2025 targeted consultations but we will continue to engage with the landowner(s) (as information continues to emerge) to either take forward the arrangements as proposed or, subject to necessary permissions being secured, may adopt one of the alternatives.				
10-37.9	Request proposed alignment at permanent hall road at Little Bromley is brought further south to mitigate impact on arable land and preventing farming inefficiencies with an awkward shape field corner (only impacting equine land to the south)	National Grid notes the respondent's feedback and has reviewed the alternatives suggested. National Grid recognises that decision making is influenced to an extent by factors that are as yet uncertain, such as potential use by construction Heavy Goods Vehicles (HGVs) which depends on when North Falls or Five Estuaries commence their works. Whilst still to be confirmed National Grid is aware of some calls from local planning authorities involved with the windfarm Development Consent Orders (DCOs) (North Falls and Five Estuaries) for restrictions to be imposed to prevent wind farm construction before the Project is consented and free from judicial review risk. This increases the likelihood that the Abnormal Indivisible Load (AIL) route would be carrying construction HGVs. On this basis we propose to make no change at this stage to the route presented at the 2025 targeted consultations but we will continue to engage with the landowner(s) (as information continues to emerge) to either take forward			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		the arrangements as proposed or, subject to necessary permissions being secured, may adopt one of the alternatives.				
10-37.10	Suggest the haul road from be built for from A120 from Hare Green roundabout or Park Road using farmland is used to access the substation sites to minimise impact on residents and avoid making changes to A120 carriageway at Pelhams Corner and Bentley Road or between Bentley Road and Horsley Cross using farmland	<p>National Grid notes the respondent's feedback.</p> <p>A strategy has been developed to manage the impact of construction vehicles on the public highway and sensitive receptors, using suitable Local Road Network connections from the Strategic Road Network called Primary Access Routes. In addition, temporary haul roads for construction vehicles are proposed along the Project alignment, further reducing the impact of construction traffic on the local road network. Further details of the strategy can be found within the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).</p> <p>Furthermore, it is considered the proposed alignment of the haul road/permanent access road would have lesser effects on properties/residents in Little Bromley compared to other alignment options considered.</p> <p>The permanent operational (and maintenance) and AIL access route has been identified as via the A120 / Bentley Road junction and Ardleigh Road. This route will be the allocated construction route if the opportunity to collaborate with North Falls and Five Estuaries is not an option. During the operational phase, the route would only be used by a limited number of vehicles.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-37.11	Request that the existing haul road is relocated to run in a straight line parallel to the respondent's farming operations	<p>National Grid notes the respondent's feedback and has reviewed the alternatives suggested. One suggestion to follow the eastern field boundary and the other to follow the northern field boundary adjacent to the properties within Little Bromley. Whilst potentially a reasonable option for very occasional Abnormal Indivisible Load (AIL) movements the potential for this to be used for construction Heavy Goods Vehicle (HGV) movements until the substation haul road becomes available raises the level of environmental effect for residential occupants meaning this is considered less preferred. National Grid recognises that decision making is influenced to an extent by factors that are as yet uncertain, such as potential use by construction HGVs which depends on when North Falls or Five Estuaries commence their works. Whilst still to be confirmed, National Grid is aware of some calls from local planning authorities involved with the windfarm Development Consent Orders (DCOs) (North Falls and Five Estuaries) for restrictions to be imposed to prevent wind farm construction before the Project is consented and free from judicial review risk. This increases the likelihood that the AIL route would be carrying construction HGVs. On this basis we propose to make no change at this stage to the route presented at the 2025 targeted consultations but we will continue to engage with the landowner(s) (as information continues to emerge) to either take forward the arrangements as proposed or,</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		subject to necessary permissions being secured, may adopt one of the alternatives.				
10-37.12	Suggest that the haul road and compound proposed for the Project at Little Bromley is moved away from the centre of the village	<p>National Grid notes the respondent's feedback. The proposed area identified in this location is not a proposed material storage area for the purpose of the underground cable swathe or overhead line, it is a construction compound area for the widening works along Bentely Road and the construction of the permanent access road between Bentley and Ardleigh Road.</p> <p>These elements of highways improvements would be undertaken prior to the construction of the East Anglia Connection Node (EACN) substation as they are required to enable access to the EACN substation site. Therefore, we are unable to relocate the compound further away from this location as it would not be accessible.</p> <p>A strategy has been developed to manage the impact of construction vehicles on the public highway and sensitive receptors, using suitable Local Road Network connections from the Strategic Road Network called Primary Access Routes. In addition, temporary haul roads for construction vehicles are proposed along the Project alignment, further reducing the impact of construction traffic on the local road network. Further details of the strategy can be found within the Outline</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Construction Traffic Management Plan (CTMP) (document reference 7.3).				
10-37.13	Suggest that RAF Boxted is considered as a potential site for a substation, which is in an unpopulated area and would avoid the need for the dog leg to come east to Little Bromley	The development of the Project has considered whether other suitable sites were available for the siting of infrastructure. In general, such sites are few in number, of inappropriate size, have incompatible former uses (e.g. are made ground), are located remotely from the route such that for example they would require a diversion that would be less economic and efficient. National Grid have considered the use of the former airfield at Boxted for the siting of the East Anglia Connection Node (EACN) substation but ruled it out as explained in the 2025 Design Development Report (document reference 5.15). Amongst other factors, this was due to the greater impact on the National Landscape from multiple underground cables required to be routed through it and from reduced flexibility for future connections.			X	
10-37.14	Concern that the alignment presented during the targeted consultation will negatively affect the respondent's property more than the alignment shown at the statutory consultation due to workings closer to the property and access to the property being disrupted as well as the ability to access Boxted Straight Road, Rectory Road and Boxted Church Street	National Grid notes the respondent's feedback. The alignment for the permanent private access was changed due to landowner feedback. We have undertaken an Environmental Impact Assessment (EIA) which includes an assessment of the impacts of this access road. The assessment can be found in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) and forms part of the Development Consent Order (DCO) submission.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Access to the property, Boxted Straight Road, Rectory Road and Boxted Church Street would remain.				
Health, Safety & Wellbeing						
10-37.15	Concern that if Pelhams Corner is changed to accommodate the scheme, this may reverse the positive impact previous changes to the junction have had by reducing serious and fatal accidents on this section of road	Noting the feedback, National Grid does not propose to reverse any of the safety upgrades already in existence on the A120 at the junction with Bentley Road. Vehicles would only be able to turn left from the A120 onto Bentley Road and Left out of Bentley Road onto the A120.			X	
National Landscape (AONB)						
10-37.16	Concern that there is no difference in impact from the 2024 statutory consultation from the haul road change outside Dedham Vale National Landscape	<p>As part of the targeted consultations in 2025, National Grid produced an Environmental Implications of Change (EIC) document for each of the proposed design changes to outline the potential environmental implications. The EIC confirmed that the proposed change would not materially change the conclusions that were reported within the Preliminary Environmental Information Report (PEIR) at the 2024 statutory consultation.</p> <p>The Development Consent Order (DCO) application is accompanied by an Environmental Statement (ES) (document reference Volume 6: Environmental Statement). The ES has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 ('the Infrastructure EIA Regulations') and identifies and assesses the likely</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		significant effects on the environment, resulting from the construction and operation (and maintenance) of the Project and recommends appropriate mitigation to reduce effects.				
Primary Access Routes / Haul Road / Construction Compounds						
10-37.17	Concern if Bentley Road is used for construction traffic to and from the substation build sites this will impact on the property which is located within 2.5 m of Bentley Road as well as the high level of HGV traffic with the suggested rate of 3 vehicles every 5 minutes between 7am - 7pm 6 days per week	<p>Within the Environmental Statement (ES), Chapter 16: Traffic and Transport (document reference 16.6) the construction route along Bentley Road was assessed for the likely impact on receptors resulting from the increase in construction traffic. Although the road link is considered non-sensitive, based on the type of receptors, it is recognised that there would be a notable increase in Heavy Goods Vehicle (HGV) movements resulting from the Project and through cumulative effects with the North Falls and Five Estuaries project. As such, embedded mitigation has been provided in the form of temporary off-carriageway shared cycle/footway along the eastern extent of Bentley Road, improvements to its junction with the A120 and widening in places. Further environmental assessment was undertaken for Bentley Road, and it was found that the likely effects are temporary and deemed not significant with mitigation in place.</p> <p>A construction traffic noise assessment is presented in the ES, Chapter 14: Noise and Vibration (document reference 6.14) and associated Appendix 14.2: Construction Traffic Noise Assessment (document</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		reference 6.14.A2). The assessment indicates that there is a potential significant adverse effect at this location, without mitigation, due to construction traffic noise. However, traffic flows would be considered low, and absolute noise levels are not expected to be significant at this location with mitigation in place in the form of best practicable means (BPM).				

Essex 4 Change feedback (Targeted Consultation)

Table 10.38 Summary of consultee comments and National Grid's response

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Consultation						
10-38.1	Criticism of consultation materials on this change (Essex 4)	For each targeted non-statutory consultation area (including Essex 4), National Grid developed a bespoke consultation zone to include nearby properties which are likely to be affected. These were created following the principle that each consultation zone should be appropriate and proportionate in relation to the type and potential impact of the change.			X	
DESIGN CHANGE (CR)						
10-38.2	Oppose the proposed change - Essex 4 (generally)	National Grid notes the respondent's feedback.	X		X	
10-38.3	Support the proposed change - Essex 4 (generally)	National Grid notes the respondent's feedback.	X		X	
10-38.4	Oppose the two runs of pylons which veer off from the main Project route, across to the substation near Ardleigh, with one now buried / Suggest that both the run to and run from Ardleigh are placed underground, utilising the same (wider) trench	There are technical and practical reasons for retaining overhead line for the immediate line entry to the East Anglia Connection Node (EACN) substation (equating to the last one or two overhead line spans). This is due to the very considerable risks presented by the complex and technically challenging crossing of multiple cables. There is also a potential need to retain overhead line			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>through to TB007 in order to reduce the interaction with a potential minerals site (subject to plan making outcome). On this basis a combination of one underground cable and one overhead line for the immediate line entry to the EACN substation is required. There are further technical challenges between TB15 and TB22, where the combination of the reservoir and multiple adjacent development proposals require the use of overhead line. For the intervening section National Grid have considered the potential for the use of underground cable between TB7 and TB15. To be consistent with policy the requirements set out in National Policy Statement (NPS) EN-5 paragraph 2.9.23 to 2.9.25 must be engaged and the Secretary of State of the view that the cost to reduce effects is justified. Assessments have concluded that nature conservation and heritage effects are not at a level to suggest a need to change from overhead line to underground cable. There are effects on community receptors from views of the alignment from residential properties and when travelling through the area on roads and Public Rights of Way though these are not in themselves considered to meet the threshold within 2.9.23 of the NPS EN-5. There are also certain viewpoints within the National Landscape from which infrastructure outside the setting of the National Landscape can be seen, but these are not considered to be significant in Environmental Impact Assessment (EIA) terms. These effects are not considered to be at a level to engage para 2.9.23, but</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		even if they were, the additional cost for undergrounding the connection between around TB7 and TB015 is not considered to be justified. Whilst reducing some effects it would introduce effects resulting from the new Cable Sealing End (CSE) compounds (and potentially head houses if required). Taking all factors into account, National Grid considers that, on balance, the potential cost of adopting an underground 400 kV cable solution for the TB7 to TB15 section is not justified for the level of benefit it provides. An EIA has been undertaken to assess the impact of the overhead line at this location and the results are presented in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) submitted as part of the Development Consent Order (DCO) application.				
10-38.5	Concern over impact of proposed pylons TB16 and TB17, the land here is used for growing root crops and is served by an irrigation system, however the amended haul road would prohibit any irrigation of the affected land, impacting respondents' ability to grow root crops on the field during the period of construction. Request the haul road is moved east to its original location and along the boundary of Fountain Farm, reducing impact on respondent and allowing continued farming on some of the field	<p>The haul road was re-located to correlate with the safe and suitable position of the bellmouth location for access off the public highway at Wick Lane.</p> <p>National Grid and their contractors would work with the respondent to identify and take every precaution to avoid damage to existing irrigation infrastructure during construction and minimise impact to current farming operations. Where this is unavoidable, temporary measures or compensation would be agreed.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Environmental impact						
10-38.6	Suggests the is mature tree and/or vegetation west of Ardleigh which will be considered in the access design to minimise impacts from construction and junction visibility splays	<p>National Grid notes the respondent's feedback.</p> <p>In order to provide a compliant access crossing the public highway, visibility splays are required. This would mean retaining and cutting back vegetation in the vicinity of the crossing as well as some removals. National Grid has sought to reduce, as far as practicable, impacts on the environment/countryside through routeing and siting and an ongoing iterative design process which has taken on board feedback at different stages of the Project. The iterative design process sought to avoid areas of highest concern. The proposed bellmouth junctions have undergone Road Safety Audits, and mitigation measures for road safety have been developed. This includes temporary traffic management measures such as speed limit reductions and/or temporary signals.</p> <p>Post construction the bellmouth would be removed and the vegetation reinstated.</p> <p>More details on the bellmouths can be found within the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).</p>			X	
Primary Access Routes / Haul Road / Construction Compounds						
10-38.7	Concern some of the haul road cross over narrow rural lanes which could cause issues with existing vehicles as they will have limited visibility when the haul road crossing is being used. This could result in	<p>National Grid notes the respondent's feedback.</p> <p>The proposed bellmouth junctions have undergone Stage 1 Road Safety Audits, and mitigation measures</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	vehicles waiting on the rural lane either side of the crossing without the ability to pass each other. The haul road crossings which could be affected are Wick Lane	<p>for road safety have been developed. This includes temporary traffic management measures such as speed limit reductions and/or temporary signals. Where visibility is limited or the public highway is narrow and vehicles cannot pass each other safely, vehicle passing places and waiting areas have been proposed to address the concerns raised.</p> <p>Post construction the bellmouth and mitigations would be removed and the vegetation reinstated.</p> <p>More details on the bellmouths can be found within the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).</p>				

Braintree

Braintree feedback (Targeted Consultation)

Table 10-39 Summary of consultee comments and National Grid's response

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Agricultural Land						
10-39.1	Concern that the Project will take away valuable agricultural land / disrupt farming operations	<p>Agricultural land during the construction stage of the Project, there would be areas of agricultural land that would be temporarily disrupted. National Grid would only use land that is required as part of the Project and would seek to minimise the use of agricultural land where reasonable and safe to do so.</p> <p>National Grid is and would continue to work with all landowners including farmers who may be affected by the proposals to understand the impacts on their operations and to work with them as the Project progresses. We would seek to work with the farming community to limit disruption where practicable. This includes providing prior warning of works which may result in the need to move livestock. Compensation claims for disturbance are considered on a case-by-case basis, if negative impacts on farming operations can be proven. Particular agricultural matters can also be addressed through voluntary land agreements.</p>		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Community / Social Impact						
10-39.2	Concern about impact of the Project on children / families / residents / communities	<p>National Grid recognises people may have concerns about the potential impacts of living close to an overhead line, and that the uncertainty whilst the proposals are developed may cause anxiety.</p> <p>We have sought to reduce potential effects on communities, residents – including children - through routeing and design. We have also sought to reduce concern or uncertainty about the proposals through making timely design decisions and engaging with people and stakeholders throughout the development of the Project. If the Project receives Development Consent, the Project team would continue to engage with people potentially affected during construction through regular communication including letters, phone calls and meetings, where necessary. We urge anyone with concerns to get in touch through the Norwich to Tilbury Freephone number, address or email, which would remain open throughout examination.</p> <p>National Grid is committed to working with local suppliers, facilitated by supporting forums (such as the local Chambers), on electricity industry skills and workforce planning. National Grid is also committed to providing a coordinated regional approach to jobs and skills opportunities. This commitment is broader than the individual project and separate to any commitments under the proposed development consent order for this Project. The socio-economic effects of the project are</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		assessed in Chapter 15: Socio-economics, Recreation and Tourism of the Environmental Statement (document reference 6.15). Post construction job opportunities are limited given the nature of the development however we will still work with Local Authorities (including facilitating local partners) to understand what is important to them around skills and employment to ensure we leave a lasting positive legacy in the communities where we operate. With regards to a delivery mechanism, the above measures will be delivered as part of our community benefit package, which will look at both local and regional initiatives. This will be delivered outside the development consent process and is not a material consideration in the decision on the proposed Project or a matter to be secured as part of the DCO, as per the Community Funds for Transmission Infrastructure: Guidance (DESNZ, 2025).				
10-39.3	Concern about over development of area / other works in the area (e.g. cumulative impact)	A cumulative effects assessment has been undertaken in accordance with the Planning Inspectorate's Advice Note 17 'Cumulative Effects Assessment' and is presented in Environmental Statement (ES) Chapter 17: Cumulative Effects (document reference 6.17). The cumulative effects assessment has considered the effects of the Project in conjunction with other developments in line with guidance. As part of this process, National Grid has engaged with other developers who are proposing development in proximity of the Project to understand their requirements.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>The cumulative assessment has been undertaken in accordance with the overarching National Policy Statement (NPS) for Energy (EN-1)</p> <p>Paragraph 4.1.5 in EN-1 states:</p> <p><i>'In considering any proposed development, in particular when weighing its adverse impacts against its benefits, the Secretary of State should take into account: ... its potential adverse impacts, including on the environment, and including any long-term and cumulative adverse impacts, as well as any measures to avoid, reduce, mitigate or compensate for any adverse impacts, following the mitigation hierarchy.'</i></p> <p>Paragraph 4.2.12 in EN-1 states:</p> <p><i>'The cumulative impacts of multiple developments with residual impacts should also be considered.'</i></p> <p>Paragraph 4.3.3 in EN-1 states:</p> <p><i>'The Regulations require an assessment of the likely significant effects of the proposed project on the environment, covering the direct effects and any indirect, secondary, cumulative, transboundary, short, medium, and long-term, permanent and temporary, positive and negative effects at all stages of the project, and also of the measures envisaged for avoiding or mitigating significant adverse effects.'</i></p> <p>Paragraph 4.3.19 of EN-1 states:</p> <p><i>'The Secretary of State should consider how the accumulation of, and interrelationship between, effects</i></p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p><i>might affect the environment, economy, or community as a whole, even though they may be acceptable when considered on an individual basis with mitigation measures in place</i>’.</p> <p>Paragraph 4.4.5 in EN-1 states:</p> <p><i>‘The impacts of more than one development may affect people simultaneously, so the applicant should consider the cumulative impact on health in the ES where appropriate’.</i> The long list and short list of other existing and, or approved developments considered for the Cumulative Effects Assessment is presented in Appendix 17.2: Long List and Short List of Other Developments (document reference 6.17.A2), detailing the other developments shortlisted for detailed assessment. The appendix provides details on other developments screened out of the assessment in accordance with the methodology presented in ES Chapter 17: Cumulative Effects (document reference 6.17). The detailed assessment of shortlisted other developments is presented in Appendix 17.3: Inter-Project Cumulative Effects Assessment (document reference 6.17.A3). Appendix 17.3 outlines the residual significance of cumulative effects for each development, for each environmental topic that has a Zone of Influence that overlaps with that development (i.e. socio-economics, recreation and tourism impacts).</p>				
10-39.4	Concern about the Project being in too close proximity to recently built housing developments /	National Grid has obtained information on existing, under construction, consented but not built schemes as			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	using land being considered for future development (including residential, commercial, infrastructural, and employment sites)	well as development proposals within the planning system. The Project design has responded to those that are confirmed through consideration of routeing. In the case of development proposals, some can be amended to be designed around our proposed infrastructure but in other cases our proposals may need to be amended at a corridor level, or proposed developments factored into our detailed route design. Based on known information, and in light of changes made following consideration of feedback to the 2022 and 2023 non-statutory consultations, statutory consultation, the targeted consultations, and landowner consultation, we consider our proposals are consistent with relevant policy and guidelines and the alignment designed such that they do not prevent proposed housing developments from being successfully progressed. UK law does not prescribe minimum distances between overhead lines and homes, but any implications on landscape and visual receptors, residential amenity or from concerns about electromagnetic fields are robustly assessed as part of the Environmental Impact Assessment (EIA) and balanced as part of the decision making process. We will continue to review planning applications and engage with developers as necessary.				
10-39.5	Concerned that the Project will have a negative impact on domestic horses / equestrian activities	As well as possible effects on humans, the possible effects of Electric and Magnetic Fields (EMFs) on various animals have been studied. No proven effects of EMFs have been found in any species at levels below			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>the guidelines. This is confirmed in National Policy Statement (NPS) EN-5 which states: "<i>There is little evidence that exposure of crops, farm animals or natural ecosystems to transmission line EMFs has any agriculturally significant consequences.</i>" Although horses are not directly mentioned, there is no evidence to suggest they are any different to other farm animals.</p> <p>As well as the possible direct biological or health effects addressed above, indirect effects such as microshocks can occur as a result of electric fields. Microshocks are small spark discharges which are similar to a static shock after walking across a nylon carpet for example. The Project would be designed in accordance with the principles of the Governments Code of Practice 'Power Lines: Control of Microshocks and other indirect effects of public exposure to electric fields' to ensure these are mitigated, which include equestrian activities.</p>				
10-39.6	Criticism of surveys undertaken for the Project in this Section	<p>There is a staged approach to the process of collection of environmental data as any major project develops. National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project. The assessment is informed by a suite of field surveys and desk studies and results are presented in an Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the application for development consent. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation (and maintenance)</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>of the Project and recommends appropriate mitigation measures to reduce potential adverse impacts.</p> <p>The scope of the EIA is included in the Scoping Report (document reference 6.19) which was submitted to the Planning Inspectorate in November 2022 and their Scoping Opinion (document reference 6.20) received in December 2022. This provided the opportunity for statutory bodies to comment on the scope of the EIA which included our approach on study areas, data collection and baseline conditions for a range of environmental topics. We also discussed and agreed survey scope with stakeholders (including Statutory Environmental Bodies and Local Planning Authorities) following the Scoping Opinion (document reference 6.20) to ensure a robust baseline assessment.</p> <p>National Grid has prepared an Outline Code of Construction Practice (CoCP) (document reference 7.2) which sets out the required mitigation measures and environmental commitments that would be implemented during the construction phase of the Project to avoid or reduce potential effects of the Project on the environment, including commitments to undertake further surveys.</p>				
10-39.7	Concern about the impact of the Project on water supply	ES Appendix 9.3: Groundwater Baseline and Qualitative Groundwater Risk Assessment (document reference 6.9.A3) is included to support ES Chapter 9: Contaminated Land, Geology and Hydrogeology (document reference 6.9) which provides an assessment	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>of the potential effects on groundwater from the Project and includes impacts on groundwater receptors such as water supplies (both with regard to quantity and quality), as required.</p> <p>Where the Project constitutes overhead lines, interaction with underlying aquifers would be limited. Any piling activities e.g., for pylon foundations, would be undertaken in accordance with good practice, and informed by Project Ground Investigation data.</p> <p>Where the Project constitutes underground cable, further to the above a hydrogeological risk assessments would be undertaken.</p> <p>These measures are described in the Outline Code of Construction Practice (CoCP) (document reference 7.2) and would be secured through the Development Consent Order (DCO), if granted.</p>				
10-39.8	Concern that the proximity of Pylon TB96 to the respondent's property means that no amount of screening and softening will reduce the impact to the landscape to an acceptable level (e.g. impact on property value, noise, traffic, quality)	<p>There is no minimum separation defined in policy between properties and electrical infrastructure beyond ensuring electrical safety and complying with Electric and Magnetic Fields (EMF) guidelines. National Grid follows the guidance in the Holford Rules in developing the alignment. Guidelines on overhead line routeing are known as the "Holford Rules" which remain a valuable tool in selecting and assessing potential overhead line route options as part of the options appraisal process. A summary of the Holford Rules is provided within Appendix I22 of this report. TB96 (now TB98) is in a section of overhead line positioned to be approximately</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		midway between residential properties to either side of the overhead line and also positioned to cross a road and railway and seek to be equidistant from other nearby residential properties. The nearest pylons are at around 200 m distance from residential properties with some benefit of screening and filtering views from existing buildings and vegetation including trees. It is considered that the alignment is consistent with relevant planning policy, therefore no change is proposed.				
Construction Impacts						
10-39.9	Concern about disruption from construction	<p>An Environmental Statement (ES) (document reference: Volume 6: Environmental Statement) has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 ('the Infrastructure EIA Regulations'). The ES identifies and assesses the likely significant effects on the environment resulting from the construction of the Project and recommends appropriate mitigation to reduce effects.</p> <p>Environmental mitigation measures have been defined within each environmental topic chapter and set out in relevant management documents submitted with the Development Consent Order (DCO) application, including the Outline Code of Construction Practice (CoCP) (document reference 7.2), the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), the Outline Landscape and</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5).				
10-39.10	Concern about impact on traffic levels in local area caused by construction works	<p>As part of the pre-application process National Grid has engaged with the relevant authorities, their highways teams and National Highways to understand and gain information on their road networks. This information has been used to inform and guide the drafting of the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) for the Project that accompanies the Development Consent Order (DCO) application.</p> <p>A strategy has been developed to manage the impact of construction vehicles on the public highway and sensitive receptors, using suitable Local Road Network connections from the Strategic Road Network called Primary Access Routes. In addition, temporary haul roads for construction vehicles are proposed along the Project alignment, further reducing the impact of construction traffic on the local road network. Further details of the strategy can be found within the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).</p> <p>Environmental Statement (ES) Chapter 16: Traffic and Transport (document reference 6.16) includes the assessment of the potential impacts of the Project including changes in traffic flow, delays, road safety and</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>impact on Walking, Cycling and Horse-Riding modes on the roads along the Primary Access Routes located in the Local Road Network.</p> <p>The Transport Assessment (document reference 7.11), submitted with the DCO application, examines capacity, safety, and operational efficiency of the network, identifying potential bottlenecks or safety concerns.</p> <p>Within the assessment of the ES and the Transport Assessment, mitigation measures are proposed to minimise likely adverse impacts</p>				
10-39.11	Concern about noise and other issues resulting from construction (e.g. mud on roads, dust)	<p>An Environmental Statement (ES) (document reference: Volume 6: Environmental Statement) has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 ('the Infrastructure EIA Regulations'). The ES identifies and assesses the likely significant effects on the environment resulting from the construction of the Project and recommends appropriate mitigation to reduce effects.</p> <p>Specifically, a Construction Noise and Vibration Impact Assessment has been undertaken and is reported in ES Chapter 14: Noise and Vibration (document reference 6.14). During construction, mitigation would be implemented to reduce noise and vibration impacts from construction activities and increased road traffic noise and vibration due to additional movement from construction traffic. Mitigation measures are outlined in ES Chapter 14: Noise and Vibration (document</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>reference 6.14) and the Outline Code of Construction Practice (CoCP) (document reference 7.2). This includes the assumption that construction working would be undertaken within the agreed working hours, construction traffic would be managed through the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), haul roads would be well maintained, and Best Practicable Means (BPM) would be employed to reduce construction noise and vibration.</p> <p>ES Chapter 7: Air Quality (document reference 6.7) presents an assessment of the potential impacts from the construction of the Project on air quality. During construction, mitigation would be implemented to reduce the impact of dust generation and construction vehicle emissions. Mitigation measures are outlined in ES Chapter 7: Air Quality (document reference 6.7), and the Outline CoCP (document reference 7.2). The dust-emitting activities can be greatly reduced or eliminated by applying the site-specific mitigation measures (see Outline CoCP) for high risk sites following measures recommendations in the Institute of Air Quality Management (IAQM) guidance (IAQM, 2024). The IAQM guidance states that with the implementation of effective site-specific mitigation measures, the environmental effect would not be significant in most cases.</p> <p>In addition, National Grid has prepared an Outline CoCP (document reference 7.2). The Outline CoCP (document reference 7.3) sets out the required mitigation measures and environmental commitments that would be</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		implemented during the construction phase of the Project to avoid or reduce potential effects of the Project on the environment.				
10-39.12	Concern about vibrations from construction	<p>An assessment of construction vibration is presented in Environmental Statement Chapter 14 - Noise and Vibration (document reference 6.14).</p> <p>The assessment considers both the potential impact upon people within buildings (i.e. disturbance), and potential damage to buildings and structures.</p> <p>The assessment considers relatively worst-case construction methodologies and does not take account of potential mitigation. This is so that potential 'hot-spots' can be identified where there is the potential for significant adverse effects, without mitigation.</p> <p>The construction vibration assessment has identified 74 locations where there is potential disturbance to people within buildings from construction vibration. Of these, 72 relate to potential vibratory compaction activities which would be expected to be for a relatively short duration (i.e. less than day). The remaining two relate to potential piling activities for pylon foundation construction.</p> <p>With regards to potential damage to buildings and structures, the assessment highlights locations where there is a potential non-zero risk of damage. 14 locations have been identified, all of which relate to potential vibratory compaction activities.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>In all cases, significant adverse effects, or potential structural damage, can be avoided with the use of best practicable means (BPM). This may include alternative methods, such as non-percussive/vibratory techniques.</p> <p>Additionally, prior to undertaking works, the Main Works Contractor(s) would conduct a detailed construction vibration assessment based on their specific methodologies and determine specific mitigation measures, where applicable.</p>				
10-39.13	Criticism that the project will impact White Notley Football Club during construction as well as temporary and permanent land acquisitions. These impacts would be in conflict with the National Planning Policy Framework 2023	<p>Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) of the Environmental Statement (ES) assesses the potential impact and effect on White Notley Football Club.</p> <p>Potential temporary impacts include temporary acquisition of land from one of the two main football pitches used by the football club for temporary overhead line construction. Mitigation measures set out in the Outline Code of Construction Practice (CoCP) (document reference 7.2), include maintaining access to the football club and football pitch with a period of disruption to the western football pitch. A separate discussion with the landowner would be undertaken prior and during construction to manage access and minimise disruption during the overhead line stringing work, with a not significant effect anticipated.</p> <p>There would be a permanent acquisition of rights of access at the southern section of one of the two main football pitches. However, no physical works are</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>proposed. Routine inspections and maintenance activities are not expected to occur frequently during operation, with a not significant effect anticipated.</p> <p>National Grid has also engaged with White Notley Football Club and Sport England (including the Essex Football Association) to explain the design of the Project.</p>				
Consultation						
10-39.14	Criticism of consultation specific to this section	National Grid notes the respondent's feedback.			X	
10-39.15	Criticism that two changes have not been consulted on: 1. Pylon TB92 moving south in response to a group of a trees outside the entrance of Rivenhall Place. 2. A minor amendment to order limits to allow permanent right of access for maintenance as residents in that area should be notified	<p>National Grid carried out targeted consultations on localised changes that would potentially alter the Order Limits for the Project where there were new or different impacts on landowners, communities and/or the environment. There were some further changes to our proposals, such as the movement of pylons within the Order Limits presented and minor amendments where it was considered that consultation was proportionate to the change suggested.</p> <p>The approach we took followed the latest guidance issued by the Government's Planning Inspectorate, which makes it clear that targeted consultation can be bespoke and proportionate to the type of change proposed.</p>		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Design Change						
10-39.16	Suggest that the Project is routed away from populated / residential areas	<p>Deciding where and how to build new high voltage electricity lines is a complex issue and National Grid is mindful of the potential effects this infrastructure may have on local communities and the concerns these may bring. We recognise that people living near our transmission infrastructure, including high voltage overhead lines, may have concerns about audible noise and potential health impacts. It has sometimes been suggested that minimum distances between properties and overhead lines should be prescribed.</p> <p>We do not consider this appropriate since each instance must be dealt with on its merits. However, we have always sought to route new lines away from residential property on grounds of general amenity where possible.</p> <p>We have undertaken a noise and vibration assessment which can be found in the Environmental Statement (ES), Chapter 14: Noise and Vibration (document reference 6.14) that forms part of the Environmental Impact Assessment (EIA) for the Project. Noise levels and the effect on residential properties as well as other sensitive areas, such as hospitals and schools, are carefully considered during planning, assessed according to the appropriate UK standards, and mitigated where necessary. We set strict technical standards for the equipment we install on our network.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>These will apply to the proposed new East Anglia Connection Node (EACN) substation, and extensions required to the existing Norwich Main, Bramford, and Tilbury Substations. These standards include requirements to ensure the occurrence of audible noise is eliminated or reduced as far as practicable. Therefore, significant adverse effects from noise are not expected.</p> <p>Noise from overhead lines is predominately determined by the conductor design, voltage and weather conditions. The overhead line would be designed using a relatively quiet conductor that meets the design specification required, and operational noise is not likely to be significant at nearby sensitive receptors under any weather conditions. Pylon fittings, such as insulators, dampers, spacers, and clamps, are also designed and procured in accordance with a series of National Grid Technical Specifications to reduce the potential for audible noise and tones to occur from all types of fittings. Where noise does occur, it is likely to be localised and of short duration. If this is due to a fault, action can be taken to rectify it. A technical note has been submitted as part of the application for development consent to support scoping out noise associated with overhead lines from the ES.</p> <p>In addition, we have undertaken a Landscape and Visual Impact Assessment (LVIA) for the Project. This includes an assessment on both landscape character and visual</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>amenity. The LVIA is presented in the ES Chapter 13: Landscape and Visual (document reference 6.13).</p> <p>The health and safety of the public, local communities and employees is central to everything that we do. The UK has a carefully thought-out set of policies for protecting us all against Electric and Magnetic Fields (EMFs), the main component of which is exposure guidelines. The exposure guidelines are set by independent scientific bodies and are based on decades-long studies into the effects of EMFs and ill health. After those decades of research, the weight of evidence is against there being any health risks of EMFs below the guideline limits. Our approach is to ensure that our network comply with those policies, which are set by Government on the advice of their independent advisors. The Project is designed to ensure it is fully compliant with these policies and guidelines. This ensures that health concerns are properly and adequately addressed.</p> <p>Policies for both noise and EMF are incorporated into the decision-making process for development consent as set out in National Policy Statement (NPS) EN-5. It is National Grid's policy to ensure that all its equipment complies fully with those policies and guidelines. The application for a Development Consent Order (DCO) includes assessments against these policies, including both construction and operational noise and EMF.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-39.17	Oppose that the Project is routed through respondent's sand and gravel reserves, near Kelvedon immediately south of Pantlings Lane / Oppose the placement of Pylon TB83 as this Pylon has been placed on top of surveyed sand and gravel deposits	National Grid adopts a consistent approach to development sites and in the case of minerals sites considers those that are allocated in the current plan. In this case the site is being consulted upon for potential inclusion in a future plan so may be confirmed at some stage or may not. In these cases we identify if an alternative alignment can be taken forward with widened Order Limits to allow for a modified alignment given that the sites inclusion may be confirmed in mid 2025. In the case of TB83 we have considered alignments deviated to the north but not progressed these due to heritage effects from routeing between related grade I and II* listed buildings as well as closer proximity and increased effects on residential properties (set out in the 2023 Design Development Report, available on the Project website). The 2023 Design Development Report also considered alternatives to the south. But these were less preferred due to greater effects on residential properties. On balance the preferred solution is to seek to reduce heritage and residential effects but with increased potential mineral sterilisation compensation. We are engaging with those promoting the site to seek to agree a statement of common ground, and route to discussing mitigation should the site actually come forwards.			X	
10-39.18	Suggest that the Pylon TB96 and the haul road are relocated north, removing any oversail or encroachment to the paddocks (plan provided by	National Grid notes the respondent's feedback. In order to change the location of TB95 to TB99 to the proposed alignment from the respondent, we would have to increase the length of the overhead line and increase			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	respondent; e.g. to mitigate the impact on paddocks and farming)	the number of angle pylons, which would be less consistent with the Holford Rules. We have therefore not proposed a change to the alignment in this location. We previously moved the location of pylon TB98 approximately 60 m to the west along the alignment to avoid the paddock at Whiteheads Farm.				
10-39.19	Suggestion that the Project is routed away from / the Project should not be located at a specific location	Further assessment and technical appraisal has been undertaken following feedback received from the statutory consultation and subsequent targeted consultations which has resulted in several changes to the alignment. Further details on these changes can be found in the 2025 Design Development Report (document reference 5.15), published as part of the Development Consent Order (DCO) application.			X	
10-39.20	Suggestion that the Project is routed away from / the Project should not be located at Skye Green	National Grid has considered the respondent's feedback highlighting a preference for an alternative moved away from Skye Green. In the absence of a specific basis for the change or a proposed alternative alignment, we have considered this feedback by following the guidance in the Holford Rules in developing the draft alignment. Guidelines on overhead line routeing are known as the "Holford Rules" which remain a valuable tool in selecting and assessing potential overhead line route options as part of the options appraisal process. A summary of the Holford Rules is provided within Appendix I22 of this report. We are therefore not proposing a change to the alignment at Skye Green.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-39.21	Suggestion that the Project is routed away from / the Project should not be located at Howe Street village	National Grid has considered the respondent's feedback highlighting a preference for an alternative moved away from Howe Street village. In the absence of a specific basis for the change or a proposed alternative alignment, we have considered this feedback by following the guidance in the Holford Rules in developing the draft alignment. Guidelines on overhead line routeing are known as the "Holford Rules" which remain a valuable tool in selecting and assessing potential overhead line route options as part of the options appraisal process. A summary of the Holford Rules is provided within Appendix I22 of this report. We are therefore not proposing a change to the alignment at Howe Street village.			X	
Economic / Employment Impact						
10-39.22	Concern about negative impact on businesses in the area	Through the routeing and siting exercise, National Grid has sought to reduce as far as practicable impacts to businesses. Impacts on local businesses within the Local Study Area (the Order Limits) and within the 3 km Study Area (where visual impact is likely to be an economic consideration) are assessed in Environmental Statement (ES) Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15). As part of this assessment, a range of mitigation measures have been considered to reduce disruption to businesses and their users during the construction phase of the Project.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		These measures are identified in ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15), the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) which accompany the Development Consent Order (DCO) application.				
Environmental Impact						
10-39.23	Concern that the Project will result in a negative impact on the environment / countryside generally (no details given)	<p>National Grid has sought to reduce, as far as practicable, impacts on the environment / countryside through routeing and siting and an ongoing iterative design process which has taken on board feedback at different stages of the Project. The iterative design process sought to avoid areas of highest concern, for example through changes to the route alignment or changes to the method e.g. trenchless crossings. National Grid has engaged with a range of stakeholders (including Statutory Environmental Bodies (SEBs) and relevant local planning authorities) throughout the development of the Project design and environmental assessment work.</p> <p>National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project. The results of this assessment are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application. The ES</p>		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>identifies and assesses the likely significant effects on the environment resulting from the construction and operation (and maintenance) of the Project and recommends appropriate mitigation measures to reduce potential effects.</p> <p>A number of mitigation measures have been incorporated into the Project design. Mitigation relevant to specific environmental topics (including Ecology and Biodiversity, Landscape and Visual and Historic Environment) are presented in the relevant ES chapters. The Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Code of Construction Practice (CoCP) (document reference 7.2) contain a list of relevant good practice measures to avoid or reduce risks to habitats and species.</p> <p>In addition to the EIA, National Grid has set itself a target of delivering 10% biodiversity net gain (BNG) with environmental and societal benefits on all construction projects, meaning that as a result of measures taken, the biodiversity rating of the area will be enhanced by 10% greater than prior to the construction of the Project. The BNG target for the Project is currently voluntary and aligned with our corporate sustainability commitment.</p>				
10-39.24	Concern about the impact of the Project on flooding	A detailed Flood Risk Assessment (FRA) has been prepared (document reference 7.9). The FRA (document reference 7.9) assesses flood risk to the Project and the impacts that the Project's construction and operation		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		would have on flood risk from a wide range of sources. The assessment has been informed by a wide range of data sets, including the January and March 2025 data from the Environment Agency, and by engaging with the Environment Agency and all of the relevant Lead Local Flood Authorities and Drainage Boards. The FRA has identified a range of controls and mitigation measures to prevent flood risk impacts, which have been secured through a range of commitments set out in the Outline Code of Construction Practice (document reference 7.2). The FRA (document reference 7.9) also describes the measures and strategy that would be put in place to manage surface water runoff arising from Project construction worksites and operational infrastructure.				
10-39.25	Concern that nesting birds and their nests will be disturbed by the construction of the new haul road.	Detailed breeding bird surveys have been undertaken across key locations over 2023-2025. Full details of these bird surveys and the associated impact assessment are outlined in ES Chapter 8: Ecology and Biodiversity (document reference 6.8) and Appendix 8.7 Breeding Bird Report (document reference 6.8.A7). Mitigation for nesting birds has been outlined within the Outline Landscape and Ecology Management Plan (LEMP) (document reference 7.4), which identifies that vegetation would be removed outside of the nesting bird period where at all possible. Where vegetation removal is unavoidable within March-August, a nesting bird check by a suitably experienced ecologist would be undertaken. This nesting bird check would be			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		undertaken no more than 24 hours before vegetation removal is undertaken, to ensure no impacts on an active bird nest.				
Financial Compensation						
10-39.26	Concern that the Project will devalue property / impact on property value in this section	<p>National Grid acknowledges that its proposals may cause concern to landowners. Diminishment of property value known as 'injurious affection' and any other appropriate heads of claim would be considered on an individual basis in accordance with current legislation. We would pursue a voluntary agreement with affected landowners, acquiring rights in accordance with our Land Rights Strategy (the strategy is subject to review). If a voluntary agreement cannot be reached, then the Compulsory Purchase Code allows for a claim of compensation for the loss that property owners may have suffered as a direct result of the retained part of your property ownership being worth less as a direct result of the works.</p> <p>If there are any specific concerns about the devaluation of property, National Grid would advise seeking third party advice. or alternatively please contact the Project team:</p> <p>Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.</p> <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD.				
10-39.27	Request for adequate financial compensation / Suggest that impacted individuals need to be compensated	<p>All affected landowners would be compensated for any temporary/permanent losses, and this would be dealt with on a case-by-case basis in line with the Compensation Code.</p> <p>If there are any specific concerns requiring compensation and how it would be assessed, please contact the Project team:</p> <p>Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.</p> <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD</p> <p>The Government has published its guidance on community funds for transmission infrastructure (DESNZ, 2025). National Grid is committed to working with Ofgem, industry partners, local communities and their representatives to ensure community benefits are delivered fairly and effectively, driving lasting, positive change for the people and places integral to our developing electricity network.</p> <p>Government has also announced its plans to introduce a bill discount scheme for households within 500 m of new infrastructure, which it proposes to introduce through the Planning and Infrastructure Bill. This is evolving</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>government policy. Government expects this scheme to be in place by 2026 and we would share further details as they emerge.</p> <p>National Grid is committed to providing a coordinated local and regional approach to community benefits. This would be delivered outside the development consent process, since this is not a material consideration in the decision on the proposed Project or a matter to be secured as part of the DCO, as per the Community Funds for Transmission Infrastructure: Guidance (DESNZ, 2025).</p>				
10-39.28	Request that should National Grid proceed with the proposed plan, they must bear the financial responsibility of the costs of building new stables, paddocks and arena at respondent's farm	<p>If the stables and arena can no longer be used temporarily or permanently as a direct result of the Project, then the affected landowner or business would be compensated or relevant mitigation put in place where possible. This may involve the temporary or permanent movement of facilities.</p> <p>If a property owner is concerned about the impact on their property, they should seek third party advice and/or contact the Project lands team to discuss: Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.</p> <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Health, Safety & Wellbeing						
10-39.29	Concern that the Project may result in a negative impact on mental health / wellbeing	<p>National Grid recognises people may have concerns about the health effects of living close to an overhead line, and that the uncertainty whilst the proposals are developed may cause anxiety.</p> <p>We have sought to reduce potential effects on communities and residents through routeing and design. We have also sought to reduce concern or uncertainty about the proposals through making timely design decisions and engaging with the people and stakeholders throughout the development of the Project.</p> <p>The Project team will continue to engage with people potentially affected during progress of the Project, through regular communication including letters, phone calls and meetings. This would enable concerns to be raised and discussed at an early opportunity and provide a regular point of contact to respond to queries and concerns.</p> <p>We urge anyone with concerns to get in touch through the Norwich to Tilbury Freephone number, address or email throughout the progress of the Project:</p> <p>Call our Community Helpline: 0800 915 2497 (Lines are open Monday to Friday 9:00am – 5:30pm)</p> <p>Email us: contact@n-t.nationalgrid.com</p> <p>Write to us: FREEPOST N TO T (No stamp or further address details are required)</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		The UK has a carefully thought-out set of policies for protecting us all against Electric and Magnetic Fields (EMFs), the main component of which is exposure guidelines. Those exposure guidelines are set by independent scientific bodies and are based on decades-long studies into the effects of EMFs and ill health. After those decades of research, the weight of evidence is against there being any health risks of EMFs below the guideline limits. These policies are incorporated into the decision-making process for Development Consent in National Policy Statement (NPS) EN-5. It is National Grid's policy to ensure that all of its equipment comply fully with those exposure limits.				
10-39.30	Concern about health risks associated with the Project / physical health risks associated with the Project	Health considerations are given a high priority in the process by which we arrive at any proposals for new electricity circuits. Assessment of compliance with Electric and Magnetic Field (EMF) guidelines and policies is key to National Grid's approach. The UK has a carefully thought-out set of policies for managing EMFs. There have been over four decades of research looking into whether EMF can cause health effects and there are no established effects below the exposure limits. When designing our overhead lines, substations and underground cables design criteria, we ensure they would not exceed those exposure limits, even when operating at 100% capacity. Additionally, the precautionary measures which the Government have adopted, are applied to the design which ensure the			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>EMFs reduce as quickly with distance as possible. Evidence of that compliance is presented in the Electric and Magnetic Field Compliance Report (document reference 7.8) submitted as part of the Development Consent Order (DCO) application.</p> <p>National Grid takes this issue very seriously and looks to authoritative and independent scientific organisations such as the World Health Organisation (WHO) and in the UK Health Security Agency (UKHSA) to review the worldwide body of scientific evidence on health. Important decisions on health are taken independently of industry, and National Grid have followed the guidance and policies adopted by Government on advice from their scientific experts. Each of these organisations have comprehensive reviews of EMF research available to view on their websites.</p>				
Heritage						
10-39.31	Concern about archaeological impacts	Through routeing and siting National Grid has sought to reduce as far as practicable potential impacts on the historic environment. The impacts of the Project on the historic environment are assessed in Chapter 11: Historic Environment of the Environmental Statement (ES) (document reference 6.11). The assessment considers the potential impact on archaeology, historic buildings and historic landscapes and includes assessment of potential for physical impact, impact through change to setting that affects the value of a		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		heritage asset and impact through indirect factors such as change in hydromorphology. The assessment is supported by walkover, setting and geophysical surveys, as documented in Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1) and Appendix 11.4: Geophysical Survey Results Report (document reference 6.11.A4). Archaeological trial trench evaluation has also been undertaken and is reported in Appendix 11.5: Trial Trenching Results Report (document reference 6.11.A5). In addition to the proposals in the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4), the Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5) sets out appropriate mitigation for the historic environment. The Project has engaged with Historic England and relevant planning authorities on aspects relating to heritage, including appropriate mitigation measures and techniques and to take their views into account during Project development which are detailed in ES Chapter 11: Historic Environment (document reference 6.11).				
10-39.32	Concern about negative impact on heritage / Suggest that the Project should be routed away from heritage buildings / listed buildings / historical site	Through routing and siting National Grid has sought to reduce as far as practicable potential impacts on the historic environment. The impacts of the Project on the historic environment are assessed in ES Chapter 11: Historic Environment (document reference 6.11) of the Environmental Statement (ES). The assessment		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>considers the potential impact on archaeology, historic buildings and historic landscapes and includes assessment of potential for physical impact, impact through change to setting that affects the value of a heritage asset and impact through indirect factors such as change in hydromorphology. The assessment is supported by walkover, setting and geophysical surveys, as documented in Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1) and Appendix 11.4: Geophysical Survey Results Report (document reference 6.11.A4). In some areas archaeological trial trench evaluation has been undertaken and is reported in Appendix 11.5: Trial Trenching Results Report (document reference 6.11.A5). In addition to the proposals in the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4), the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5) sets out appropriate mitigation for the historic environment. The Project has engaged with Historic England and relevant planning authorities on aspects relating to heritage, including appropriate mitigation measures and techniques. and to take their views into account during Project development.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Mitigation						
10-39.33	Suggest mitigation measures	<p>An Environmental Statement (ES) (document reference Volume 6: Environmental Statement) has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 ('the Infrastructure EIA Regulations'). The ES identifies and assesses the likely significant effects on the environment resulting from the construction, operation (and maintenance) of the Project and recommends appropriate mitigation to reduce effects.</p> <p>Environmental mitigation measures have been defined within each environmental topic chapter and set out in relevant management documents submitted with the Development Consent Order (DCO) application, including the Outline Code of Construction Practice (CoCP) (document reference 7.2), the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5).</p>	X	X	X	
PRoW (Public Rights of Way)						
10-39.34	Concern about negative impact on PRW / footpaths / cycle paths / bridleways	Through routeing and siting, National Grid has sought to reduce, as far as practicable, impacts and disruption to Public Rights of Way (PRoW).		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>The iterative design process identified the existing PRow network and their wider connectivity and sought where practicable to reduce and where possible remove impacts to PRow.</p> <p>Effects on PRow would be mitigated where possible, maintaining access where practicable, with closures as a last resort. We will continue to engage with relevant stakeholders on the PRow network to enable feedback and input to be considered as the Project progresses. An Outline Public Rights of Way Management Plan (document reference 7.6) is submitted with the Development Consent Order (DCO) application.</p>				
Requests						
10-39.35	Request for further impact surveys in this section	<p>National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project. The assessment is informed by a suite of field surveys and desk studies and results are presented in an Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the application for development consent. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation (and maintenance) of the Project and recommends appropriate mitigation measures to reduce potential adverse impacts.</p> <p>The scope of the EIA is included in the Scoping Report (document reference 6.19) which was submitted to the Planning Inspectorate in November 2022 and their</p>		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Scoping Opinion (document reference 6.20) received in December 2022. This provided the opportunity for statutory bodies to comment on the scope of the EIA which included our approach on study areas, data collection and baseline conditions for a range of environmental topics. We also discussed and agreed survey scope with stakeholders (including Statutory Environmental Bodies and Local Planning Authorities) following the Scoping Opinion (document reference 6.20) to ensure a robust baseline assessment.</p> <p>National Grid has prepared an Outline Code of Construction Practice (CoCP) (document reference 7.2) which sets out the required mitigation measures and environmental commitments that would be implemented during the construction phase of the Project to avoid or reduce potential effects of the Project on the environment, including commitments to undertake further surveys.</p>				
10-39.36	<p>The respondent understands that justification as to why some of their change requests were not taken forward will be provided with the DCO application, and will hold any further comments on the changes not taken forward until this document has been shared with them</p>	<p>National Grid notes the respondent's feedback. Reasons as to why certain changes requested in consultation feedback were not taken forward are included within this report.</p>		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Tourism						
10-39.37	Concern about impact of the Project on tourism	<p>Through routeing and siting, National Grid has sought to avoid, as far as practicable, locations important for leisure and tourism.</p> <p>Environmental Statement (ES) Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) presents an assessment on the potential impacts on tourism economy (during construction) and tourism assets (during construction and operation), including visitor accommodations. As part of this assessment, a range of measures have been considered throughout the construction phase of the Project to minimise disruption on tourism. These include traffic management, signage and routeing measures. These are identified within the ES Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15), the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).</p>			X	
Visual Impact						
10-39.38	Concern about cumulative visual impact of the Project alongside existing overhead lines / concern about wirescape	National Grid notes the feedback received and has taken it into consideration as part of the iterative design process. National Grid has liaised with UK Power Network to understand opportunities for 132 kV network rationalisation. The Project includes proposals to replace			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>certain sections of 132 kV overhead line connection with underground cable and also to remove some sections of 132 kV overhead line to rationalise the network and reduce potential for cumulative wirescape effects.</p> <p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the Environmental Impact Assessment (EIA). Existing infrastructure (such as existing overhead lines) has formed part of the baseline environment for the Project to be assessed against, to identify if significant landscape and / or visual effects are likely to arise. The LVIA presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) sets out potential landscape and visual effects. The rationalisation of the existing 132 kV network in some areas forms part of the embedded landscape mitigation, as set out in Chapter 13.</p> <p>The findings and conclusions of the LVIA and other topics assessments have been considered within the Cumulative Impact Assessment, presented in ES Chapter 17: Cumulative Effects Assessment (document reference 6.17), lists the developments as part of the cumulative assessment. This chapter considers the landscape and visual effects of the Project cumulatively with other proposed developments that are being progressed.</p>				
10-39.39	Concern that the Project will be unsightly / visually intrusive (including overhead lines, CSE compounds	National Policy Statement (NPS) EN-5 makes it clear that the Government considers overhead lines to be appropriate and acceptable in most instances, although		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	and substations) / Concern that the Project will cause a negative impact on views	<p>it recognises that that there may be, at particularly sensitive locations, potential adverse landscape and visual impacts of an overhead line that make it inconsistent with our duties and relevant planning policy.</p> <p>The Dedham Vale National Landscape (previously an Area of Outstanding Natural Beauty (AONB)) designation is one such location where underground cable technology is proposed with the extent of underground cabling extending beyond the boundary in response to the potential for the Project to affect the National Landscape. Our proposals include a total of approximately 20 km of underground cable through and in the vicinity of the Dedham Vale National Landscape, including a section at Great Horkesley to reduce the changes in views and setting of the National Landscape from within and adjacent to its designated boundary.</p> <p>Underground cabling is also proposed for a short section of 400 kV overhead line crossing near Fairstead.</p> <p>Cable Sealing End (CSE) compounds are required to facilitate sections of underground cable. The proposed East Anglia Connection Node (EACN) substation is required to connect customers and the proposed Tilbury North Substation is required to connect the Project into the existing Tilbury Substation These components have been carefully sited taking into consideration Horlock Rules including the potential for landscape and visual effects.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>The higher cost of underground cables to bill paying consumers, and the environmental implications of installing underground cables and maintaining them at locations outside the Dedham Vale National Landscape, are not considered to be justifiable in the context of national policy or National Grid's statutory duties, which include the need to be economical and efficient.</p> <p>A Landscape and Visual Impact Assessment (LVIA), presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13), has been undertaken as part of the Environmental Impact Assessment (EIA). The LVIA includes an assessment on both landscape character and visual amenity.</p> <p>Landscape mitigation is proposed within Environmental Areas around substations and CSE compounds. The Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) includes details regarding the planting proposals.</p>				
Wildlife / Ecology Impact						
10-39.40	Concern about impact of the Project on birds	Chapter 8: Ecology and Biodiversity of the Environmental Statement (ES) (document reference 6.8) considers potential impacts during the construction and operational phase of the Project on birds. Bird surveys have been undertaken across the route between 2022-2025 to determine an accurate baseline value, the scope of which has been agreed with Natural England and			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Local Planning Authorities. The potential for bird collision risk impact during the operational phase has been assessed within the ES and Habitats Regulations Assessment (HRA) Report (document reference 5.3) and agreed with Natural England. Survey results have identified no areas of significant bird collision risk across the Project.</p> <p>It is noted that birds are a mobile species, and it is likely that active nests for common and widespread species may be encountered during the construction phase. Precautionary working methods for breeding birds are included within the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the Outline Landscape Ecological Management Plan (LEMP) (document reference 7.4) accompanying the Development Consent Order (DCO) application.</p>				
10-39.41	Concern that the Project will result in a negative impact on species (protected status not specified)	Through routeing, siting and detailed design National Grid has sought to reduce, as far as practicable, potential impacts on biodiversity including protected species. The design process has taken account of existing biodiversity, the natural environment and, where practicable, has sought to reduce impacts on areas of ecological sensitivity including protected species and their associated habitats, through avoidance or mitigation. A comprehensive survey effort for a range of protected species was completed over the 2023 – 2025 period. Chapter 8: Ecology and Biodiversity of the Environmental Statement (ES) (document reference 6.8)			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		assesses the effects on protected species based on this baseline information and where/if required appropriate mitigation measures are detailed. Suitable mitigation for protected species has been developed in consultation with Natural England to ensure legal compliance and best practice guidelines are adhered to. Where necessary, draft licence applications have been drafted and National Grid is in the process of agreeing the detail within the licence documents with Natural England, in order to obtain the relevant Letters of No Impediment (LoNI). Mitigation for non-licensable protected species has been included within the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4).				
10-39.42	Concern that the Project will result in a negative impact on protected species	Through routeing, siting and detailed design, National Grid has sought to reduce, as far as practicable, potential impacts on biodiversity including protected species. The design process has taken account of existing biodiversity, the natural environment and, where practicable, has sought to reduce impacts on areas of ecological sensitivity including protected species and their associated habitats, through avoidance or mitigation. A comprehensive survey effort for a range of protected species was completed over the 2023 – 2025 period. Chapter 8: Ecology and Biodiversity of the Environmental Statement (ES) (document reference 6.8) assesses the effects on protected species based on this baseline information and where/if required appropriate			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		mitigation measures are detailed. Suitable mitigation for protected species has been developed in consultation with Natural England to ensure legal compliance and best practice guidelines are adhered to. Where necessary, draft licence applications have been drafted and National Grid is in the process of agreeing the detail within the licence documents with Natural England, in order to obtain the relevant Letters of No Impediment (LoNI). Mitigation for non-licensable protected species has been included within the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4).				
10-39.43	Concern that the Project will result in a negative impact on flora / plants / woodlands / hedgerows	<p>Through routeing, siting and detailed design, National Grid has sought to reduce, as far as practicable, potential impacts on biodiversity including priority grassland, wetland, woodland, and hedgerow habitats. The design process has taken account of existing biodiversity, the natural environment and, where practicable, seeks to reduce impacts on areas of ecological sensitivity, through avoidance or mitigation.</p> <p>Chapter 8: Ecology and Biodiversity of the Environmental Statement (ES) (document reference 6.8) assesses the effects on important ecological receptors (which includes protected plants, woodlands and hedgerows).</p> <p>As part of the Environmental Impact Assessment (EIA) process for the Project, a suite of ecological surveys has</p>		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>been to be undertaken. The findings of which inform the design and approach to mitigation.</p> <p>The Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Code of Construction Practice (CoCP) (document reference 7.2) contain a list of relevant good practice measures to avoid or reduce impacts on valuable habitats.</p> <p>The Environment Act 2021 introduces a mandatory requirement for 10% Biodiversity Net Gain (BNG) for new Development Consent Order (DCO) developments (which is not yet in force and not expected until May 2026). National Grid have committed to delivering 10% BNG with environmental and societal benefits on all construction projects. The BNG target for the Project is currently voluntary and aligned with our corporate sustainability commitment.</p> <p>As well as seeking to avoid and minimise impacts to nature, the Project considers the land required for mitigation, compensation and enhancement that can deliver BNG and wider environmental benefits. This will require delivery of offsite Biodiversity Units via habitat creation or enhancement actions in strategic areas, and we will consider all offsite options that are available to us.</p>				
10-39.44	Concern that the Project will result in a negative impact on rivers / other bodies of water	Through routeing, siting and detailed design National Grid has sought to reduce, as far as practicable, potential impacts on biodiversity including river ecology.		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>The design process has taken account of existing biodiversity, the natural environment and, where practicable, has sought to reduce impacts on areas of ecological sensitivity such as river corridor habitats, through avoidance or mitigation. The same approach has been taken to account for rivers and their floodplains, seeking to avoid or reduce the footprint of the Project within floodplains.</p> <p>As part of the Environmental Impact Assessment (EIA) process for the Project, a suite of ecological surveys has been undertaken, including along river corridors. The data has informed the assessment of effects on biodiversity, hydromorphology, water quality and flood risk presented in the Environmental Statement (ES), Chapter 8: Ecology and Biodiversity (document reference 6.8) and ES Chapter 12: Hydrology, Land Drainage and Flood Risk (document reference 6.12) and the Water Framework Directive Assessment (document reference 7.10).</p> <p>Further, the Project has engaged with Natural England, the Environment Agency and Local Planning Authorities on aspects relating to river ecology, water quality and flood risk, and appropriate mitigation measures and techniques have been secured, as detailed in the Outline Code of Construction Practice (CoCP) (document reference 7.2).</p> <p>The Environment Act 2021 introduces a mandatory requirement for 10% Biodiversity Net Gain (BNG) for</p>

Essex 5 feedback (Targeted Consultation)

Table 10-40 Summary of consultee comments and National Grid's response

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Design Change (CR)						
10-40.1	Oppose the proposed change - Essex 5 (generally)	National Grid notes the respondent's feedback.	X	X	X	
10-40.2	Support the proposed change - Essex 5 (generally)	National Grid notes the respondent's feedback.			X	
10-40.3	Request permanent access route to pylons TB73 and TB74 be taken off Old Road, close to where the haul road will pass during construction, following the field boundaries to mitigate impact on Cockerell's Farm and residential properties	National Grid notes the respondent's feedback. The permanent access route to TB74 has been removed at this location to remove the impacts mentioned through the farm.			X	
10-40.4	Concern that whilst the realignment of pylons TB71-TB75 will move 150 m further away from Surrex hamlet, the pylons will be closer to homes in Skyes Green and would require an additional angled pylon resulting in the overall pylons for the project to increase by one	National Grid notes the respondent's feedback. The change (Essex 5) was made following feedback and a balanced decision-making process. It was determined that the addition of a pylon as well as an additional angle pylon was preferred due to this facilitating a move of the alignment to be further away from Surrex as well as reducing impacts on horse paddocks by facilitating a change to the haul road. A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the level of effects from the Project. The LVIA is presented in the Environmental Statement (ES),		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation. We are therefore not proposing a further change to the alignment in this area.				
10-40.5	Concern that pylons TB71 is closer to the mature oak tree on the southern side of the road, respondent requests all steps are taken to retain the tree	<p>Vegetation beneath and adjacent to the overhead line would need to be removed or managed in line with the methodology as described in the Environmental Statement (ES), Chapter 4: Project Description (document reference 6.4).</p> <p>Please see the Trees and Hedgerows to be Removed and or Managed Plans (document reference 2.16) and the ES Appendix 13.6: Arboricultural Impact Assessment (document reference 6.13.A6) for the anticipated impacts to trees based on the Project as presented in the Development Consent Order (DCO) submission. Noting that the Project is subject to Limits of Deviation, the actual vegetation impacts would be confirmed pre-construction based on the final detailed design. Requirement 8 "Retention and removal of trees, woodland and hedgerows" of the draft DCO (document reference 3.1), ensures that <i>"Unless otherwise agreed with the relevant planning authority, no stage of the authorised development may commence until, for that stage, a plan showing the trees, groups of trees, woodlands and hedgerows to be retained and/or removed during that stage has been submitted to and approved by the relevant planning authority."</i></p>		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		The Outline Code of Construction Practice (CoCP) (document reference 7.2) and Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) also include mitigation and management measures to reduce the effects to trees.				
10-40.6	Request proposed pylon TB74 is placed on the edge of the fields further away from Cockerell's Farm House	National Grid has considered the respondent's request to move TB74 further from Cockerell's Farmhouse. TB74 is currently approximately midway between properties along Old Road, to move TB74 an additional angle pylon would be required, meaning it would be less consistent with the Holford Rules (see Appendix I22 of this report), and would move it closer to one property over another. We are therefore not proposing a change to the location of TB74.			X	
10-40.7	Whilst the respondent welcomes National Grid listening to feedback it is disappointed that the solution requires an additional pylon as this will add to concerns regarding the wirescape in this location. The respondent's queries whether a new solution can be found without the need for an additional pylon	<p>National Grid notes the respondent's feedback. In order to fulfil the request to realign the overhead line, we have had to introduce a new angle pylon as the overhead line length is increased. Span lengths are limited by terrain, pylon heights and pylon strength. Achieving this re-route would not be possible with fewer pylons.</p> <p>We have completed a Landscape and Visual Impact Assessment (LVIA) which assesses the visual impacts of the Project. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has not identified any need for additional mitigation.</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-40.8	Concern about the changes proposed as part of Essex 5, in particular the additional angle pylon, the substantial increase in the area under draft order limits which would now almost reach the respondents boundary, and also the relocation of the haul road / Suggest that National Grid underground the cables in sensitive locations, or adjust the route to place the Project further away from residential and listed buildings (e.g to minimise the impact on listed buildings, harm to the rural character and visual amenity, and reduce construction traffic and noise pollution)	<p>National Grid notes the respondent's feedback regarding the change to the alignment and subsequent relocation of the haul road to be close to the alignment, in particular the change to TB73 to an angle pylon. The Order Limits around TB73 are wider due to it being an angle pylon as space is temporarily required around angle pylons for pulling the overhead lines during construction.</p> <p>The change to the alignment at this location was proposed as it would remove the need for the haul road to cross the horse paddocks to the south of Surrex as well as amending the haul roads associated with these pylons so that they follow field boundaries where possible.</p> <p>National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)'</i>. Where no such designations are present, nor is the area within the setting of such a designated</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at Surrex would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>An assessment of construction noise is presented in the ES Chapter 14: Noise and Vibration (document reference 6.14).</p> <p>The assessment indicates that significant adverse effects from construction noise are not expected in the 'Essex 5' area where best practicable means are employed to reduce potential effects.</p> <p>With regards to undergrounding, this would not materially reduce potential effects of construction noise and construction traffic noise but may lead to additional impacts depending on the extent and locations of such works, compared to overhead line construction.</p> <p>The assessment of the construction traffic on the A120 Colchester Road that would access pylons TB71-TB75 is presented in Chapter 16: Traffic and Transport (document reference 6.16) of the ES. The assessment showed that no significant adverse effects are expected on the A120.</p> <p>National Grid recognises the respondent's concerns regarding the revised alignment at Essex 5, including the introduction of an additional angle pylon (now TB73), and to keep temporary haul routes as close as practicable to existing field boundaries. Heritage considerations, alongside engineering, environmental and land-use constraints, were an integral part of that exercise and were reviewed with Historic England and the relevant local planning authority through the Archaeology Working Group.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>A heritage assessment of Cockerell's Farmhouse and Bakehouse (1169484) is presented in Chapter 11: Historic Environment (document reference 6.11) of the ES and the ES Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1). That assessment was undertaken in accordance with the National Planning Policy Framework (2023), NPS EN-1 and Historic England's Good Practice Advice Note 3 (2017). It concludes that the revised overhead line alignment, including the angle pylon, would result in a temporary moderate adverse significance of effect (mid less than substantial harm) during construction. Once operational, the residual effect is assessed as permanent moderate adverse (mid less than substantial harm).</p> <p>Mitigation and the landscape measures secured through the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) was developed in consultation with heritage stakeholders and is secured via the Outline Code of Construction Practice (CoCP) (document reference 7.2) and Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (AMS-OWSI) (document reference 7.5). These measures would reduce the magnitude of harm as far as practicable.</p> <p>For information, no additional mitigation measures are proposed during the construction phase as any measures designed to lessen the visual impact of the</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Project would be of a scale that would visually adversely alter the setting of the asset.</p> <p>On heritage grounds, an overhead alignment remains the most balanced solution.</p>				
Environmental impact						
10-40.9	Suggests the is mature tree and/or vegetation in the vicinity of the Essex 5 change generally which will be considered in the access design to minimise impacts from construction and junction visibility splays	<p>National Grid notes the respondent's feedback.</p> <p>In order to provide a compliant access crossing the public highway visibility splays are required. This would mean retaining and cutting back vegetation in the vicinity of the crossing as well as some removals. National Grid has sought to reduce, as far as practicable, impacts on the environment / countryside through routeing and siting and an ongoing iterative design process which has taken on board feedback at different stages of the Project. The iterative design process sought to avoid areas of highest concern. The proposed bellmouth junctions have undergone Road Safety Audits, and mitigation measures for road safety have been developed. This includes temporary traffic management measures such as speed limit reductions and/or temporary signals.</p> <p>Post construction the bellmouth would be removed and the vegetation reinstated.</p> <p>More details on the bellmouths can be found within the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
National Landscape (AONB)						
10-40.10	Criticism that the changes provided as part of Essex 5 are too minor / too far away to have any meaningful impact on Dedham Vale National Landscape	National Grid notes the respondent's feedback.	X		X	
Visual impact						
10-40.11	Concern that whilst the alignment change would result in a minor improvement locally, this would be offset by the pylons moving closer to Cockerell's Farm and the need for an additional pylon	National Grid notes the respondent's feedback. The change (Essex 5) was made following feedback and a balanced decision making process. It was determined that the addition of a pylon as well as an additional angle pylon was preferred due to this facilitating a move of the alignment to be further away from Surrex as well as reducing impacts on horse paddocks by facilitating a change to the haul road. A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the level of effects from the Project. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation. We are therefore not proposing a further change to the alignment in this area.		X	X	
10-40.12	Request that additional potential effects on the settings of Cockerells farmhouse and The Old Cottage are presented as part of a revised version of	National Grid, through the routeing and siting exercise, has sought to reduce the impact on the historic environment, including listed buildings in this area.		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	the documentation relating to the impact on the historic environment within the Braintree District	<p>All listed buildings within 2 km of the Order Limits are considered in the Historic Environment Assessment for the Project. The impacts of the Project on the historic environment are assessed in Chapter 11: Historic Environment of the Environmental Statement (ES) (document reference 6.11). The assessment considers the potential impact on historic buildings and includes assessment of potential for physical impact and impact through change to setting that affects the value of a heritage asset. The assessment of listed buildings is supported by setting surveys, as documented in the ES Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1). The Project has engaged with Historic England and relevant planning authorities on aspects relating to heritage, including appropriate mitigation measures and techniques and to take their views into account during Project development.</p> <p>The assessment of Cockerell's Farmhouse and Bakehouse concludes a significant effect during construction and operation. The assessment of The Old Cottage concludes a significant effect during construction and a not significant effect during operation. No additional mitigation measures are proposed as any measures designed to lessen the visual impact of the Project would be of a scale that would visually adversely alter the setting of the asset.</p>				

Essex 6 Change feedback (Targeted Consultation)

Table 10-41 Summary of consultee comments and National Grid's response

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Consultation						
10-41.1	Criticism of consultation materials on this change (Essex 6)	<p>National Grid notes the respondent's feedback. For each of our targeted consultations we developed an overview leaflet and Environmental Implication of Change (EIC) document which we tried to make accessible and easy to understand. These documents included information on why the change was needed and what we were proposing to change and were sent to properties within the bespoke consultation zone for the relevant change. More information on how we defined the consultation zones is available in this Consultation Report. We also published a consultation strategy and overview map. All these documents remain available on the Project website. The information provided at the targeted consultations was considered proportionate to the changes being consulted upon. We believe that all the relevant information required for the public to make informed decisions was available and do not believe that this impacted the feedback we received.</p> <p>Through our routeing and siting process, we have tried to avoid communities and properties and do not oversail</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		individual properties. Throughout consultation, we had a dedicated phone line and email for people who had questions on our proposed changes and the information we produced on them. We also have a lands team for those whose property or land may be impacted. These lines remain open to the public.				
Design Change (CR)						
10-41.2	Oppose the proposed change - Essex 6 (generally)	National Grid notes the respondent's feedback.			X	
10-41.3	Support the proposed change - Essex 6 (generally)	National Grid notes the respondent's feedback.			X	
10-41.4	Suggest that the Project is relocated to cross the B1024 next to the sewage works to minimise the impact on respondent's property and surrounding properties	National Grid has considered the respondent's feedback, a more northern route would take the alignment closer to and between listed buildings at Feeringbury and Coggeshall which have a historic link. It would also take the alignment over a sewage treatment works which introduces a technical constraint, we are therefore not taking this change forward. A change to the alignment has been made which would move pylon TB77 (as in between TB75 and TB79) south of Mill Cottages and then reconnect with the alignment at TB80 (now TB82). This change goes some way to addressing the concerns by the respondent.			X	X
10-41.5	Concern about the impact of the proposed haul road if the Essex 6 change is adopted, as it impacts the links to respondent's farm irrigation, which could cause the irrigation to be unusable for a significant	National Grid is aware of the possible impacts the Project can have on farming practices and will continue to work with all affected landowners to agree suitable			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	amount of time. The haul road also risks dividing the farm in two making it difficult to conduct farming activities	<p>mitigation/compensation, or where possible adapt the design to lessen the impacts.</p> <p>The impacts of the Project on agricultural land are assessed in Chapter 6: Agriculture and Soils of the Environmental Statement (ES) (document reference 6.6). Haul roads may cause temporary disturbance to agricultural operations and soil during construction, but this would be effectively mitigated following good practice soil handling measures and implementing appropriate mitigation to maintain access to agricultural land throughout the construction phase, as outlined in Appendix C: Outline Soil Resource Plan of the Outline Code of Construction Practice (CoCP) (document reference 7.2). Land required temporarily for construction (including haul roads) would be returned to its former agricultural use/condition or a use/condition as discussed with the landowner, where practicable.</p> <p>Irrigation pipes would be avoided where possible or alternative supplies would be provided where temporary interactions are unavoidable, as outlined in the Outline CoCP (document reference 7.2).</p>				
10-41.6	Request haul road near pylon TB77 follow as close to the boundary with the public highway, routed so that it avoids crossing Old Mill Lane, to minimise the impact on soil structure, drainage and future agricultural operations. Request pylon TB77 relocated as close to the edge of the field boundary with Coggeshall	National Grid has considered the respondent's feedback, the location of TB77 as well as the haul road and crossing of Old Mill Lane and Coggeshall Road is positioned as such to minimise impacts to a proposed solar development to the east of Coggeshall Road. TB77 is positioned as close to the road/field boundary as possible while accounting for the scaffolding required			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		during construction. We are therefore not proposing a change to the location of this pylon. We have submitted an Environmental Statement (ES) (document reference Volume 6: Environmental Statement) which includes an assessment of impacts from the Project on soil and drainage, found in the ES Chapter 6: Agriculture and Soils (document reference 6.6) and ES Chapter 12: Hydrology, Land Drainage and Flood Risk (document reference 6.12).				
10-41.7	Concern that whilst moving TB92 south will save a group of trees and is a welcome change, this would conflict with an approved solar scheme in the area the pylon is being relocated to	<p>National Grid can confirm that this is the case with TB92 moved to the south (and now renamed as TB94). The decision was made in response to feedback and consideration of the potential effects on the trees which have a relationship to the historic entrance to the Grade II* Listed Rivenhall Place as well as the preference in terms of landscape and ecology for the retention of a substantial Oak Tree. Some micro-siting of the pylon to the south-west has potential to reduce the impact on the solar farm output.</p> <p>The impacts to the solar scheme located in proximity to TB92 (now TB94) are assessed in Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and Chapter 17: Cumulative Effects (document reference 6.17) of the Environmental Statement (ES). Taking into account mitigation measures set out in the Outline Code of Construction Practice (CoCP) (document reference 7.2) in relation to maintaining access to land proposed for development,</p>		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>potential severance to the solar scheme is anticipated to be mitigated during construction. The magnitude of impact on the scheme is considered to be very low. The residual construction effect would be temporary, short-term, negligible adverse and not significant.</p> <p>Should a third party feel that they are owed compensation or would like to discuss how or when compensation is payable, they should contact the Projects Land team to discuss: Norwich-Tilbury@fishergerman.co.uk or by calling on Freephone 0808 175 3314.</p> <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD.</p>				
10-41.8	Concern that whilst moving pylons TB77 and TB81 is welcomed to facilitate this change, an additional pylon would be needed which would have additional landscape impacts. Would prefer a solution is sought that means an additional pylon is not needed	<p>In order to fulfil the request to realign the overhead line, we've had to introduce a new angle pylon as the overhead line length is increased. Span lengths are limited by terrain, pylon heights and pylon strength. Achieving this re-route would not be possible with fewer pylons. The impact of the pylon on views in the area is captured by the Landscape and Visual Impact Assessment (LVIA) which is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13). The LVIA includes an assessment on both landscape character and visual amenity and sets out the potential landscape</p>		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		and visual effects and identifies areas for potential mitigation to reduce visual impacts to local receptors.				
Environmental impact						
10-41.9	Suggests the is mature tree and/or vegetation in the vicinity of the Essex 6 change generally which will be considered in the access design to minimise impacts from construction and junction visibility splays	<p>National Grid notes the respondent's feedback.</p> <p>In order to provide a compliant access crossing the public highway visibility splays are required. This would mean retaining and cutting back vegetation in the vicinity of the crossing as well as some removals. National Grid has sought to reduce, as far as practicable, impacts on the environment/countryside through routeing and siting and an ongoing iterative design process which has taken on board feedback at different stages of the Project. The iterative design process sought to avoid areas of highest concern. The proposed bellmouth junctions have undergone Road Safety Audits, and mitigation measures for road safety have been developed, this includes temporary traffic management measures such as speed limit reductions and/or temporary signals.</p> <p>Post construction the bellmouth would be removed and the vegetation reinstated.</p> <p>More details on the bellmouths can be found within the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Primary Access Routes / Haul Road / Construction Compounds						
10-41.10	Concern about the impact of proposed access route at Littlebury on traffic, disruption to residents and the existing track, which is currently in poor condition	<p>The haul roads located at Littlebury would be accessed from the proposed bellmouth junction located at the A120 Coggeshall Road, between Coggeshall and Feering. Therefore, the bellmouth junctions located in Coggeshall Road are crossover points.</p> <p>As identified in the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), no Heavy Goods Vehicle (HGV) construction traffic is proposed to use the crossover points to access (turn into or out of) the haul roads from the public highway under typical operation, and vice versa. As a result, an increase in baseline traffic along the public highway is not expected as they are crossover points to allow the construction vehicles to circulate along the proposed haul roads.</p> <p>Temporary traffic management measures would be in place to avoid delays at crossover points, with priority given to the flow of traffic on the public highway.</p> <p>Therefore, no significant impact is expected in Coggeshall Road and no further traffic and transport assessment has been considered.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Visual impact						
10-41.11	<p>The proposed changes to the Project will impact the listed buildings at Feeringbury Manor. Within the setting of Coggeshall Hall, the Project will be closer to the listed building compared to the previous consultation. The new proposal means that Pylons TB79, TB80 and TB81 will appear as an almost straight line within the northern outlook from the house, the angle of which is more acute than the previous iteration. The amendments are not anticipated to change the baseline impact on heritage assets compared with those previously identified in the PIER, however the baseline assessment should be updated to reflect the changes</p>	<p>National Grid, through the routing and siting exercise, has sought to reduce the impact on the historic environment, including listed buildings in this area.</p> <p>All listed buildings within 2 km of the Order Limits are considered in the Historic Environment Assessment for the Project. The impacts of the Project on the historic environment are assessed in Chapter 11: Historic Environment of the Environmental Statement (ES) (document reference 6.11). The assessment considers the potential impact on historic buildings and includes assessment of potential for physical impact and impact through change to setting that affects the value of a heritage asset. The assessment of listed buildings is supported by setting surveys, as documented in ES Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1). The Project has engaged with Historic England and relevant planning authorities on aspects relating to heritage, including appropriate mitigation measures and techniques and to take their views into account during Project development.</p> <p>The assessment of Feeringbury Manor, Ancillary Building 6 metres South East of Feeringbury Manor, Waterwheel And Mounting Approximately 23 Metres South West of Feeringbury Manor, and Barn of Feeringbury Farm, 60 Metres South East of Feeringbury Manor concludes a significant effect during construction and a not significant effect during operation. The</p>		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		assessment of Coggeshall Hall Farmhouse and Barn 20 Metres North West of Coggeshall Hall Farmhouse concludes a significant effect during construction and a not significant effect during operation. No additional mitigation measures are proposed as any measures designed to lessen the visual impact of the Project would be of a scale that would visually adversely alter the setting of the asset.				

Chelmsford

Chelmsford feedback (Targeted Consultation)

Table 10-42 Summary of consultee comments and National Grid's response

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Agricultural Land						
10-42.1	Concern that the Project will take away valuable agricultural land / disrupt farming operations	<p>Agricultural land during the construction stage of the Project, there would be areas of agricultural land that would be temporarily disrupted. National Grid would only use land that is required as part of the Project and would seek to minimise the use of agricultural land where reasonable and safe to do so.</p> <p>National Grid is and would continue to work with all landowners including farmers who may be affected by the proposals to understand the impacts on their operations and to work with them as the Project progresses. We would seek to work with the farming community to limit disruption where practicable. This includes providing prior warning of works which may result in the need to move livestock. Compensation claims for disturbance are considered on a case-by-case basis, if negative impacts on farming operations can be proven. Particular agricultural matters can also be addressed through voluntary land agreements.</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Airfields						
10-42.2	Concern about the impact of the Project on Broomfield Hospital (helipad) / Suggestion that the Project is routed away from Broomfield Hospital (helipad)	<p>National Grid has appointed an independent aviation consultancy which has engaged the principal air ambulance operator from Broomfield Hospital with regards to the helipad. Following discussion and assessment it has been determined, with the Project as currently proposed, that the helipad can continue to operate. Further details on aviation impacts can be found in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement).</p> <p>Further information on the assessment of airfields can be found in the Environmental Statement (ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).</p>	X		X	
Community / Social Impact						
10-42.3	Concern about impact of the Project on children / families / residents / communities	<p>National Grid recognises people may have concerns about the potential impacts of living close to an overhead line, and that the uncertainty whilst the proposals are developed may cause anxiety.</p> <p>We have sought to reduce potential effects on communities, residents – including children - through routeing and design. We have also sought to reduce concern or uncertainty about the proposals through making timely design decisions and engaging with people and stakeholders throughout the development of</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>the Project. If the Project receives Development Consent, the Project team would continue to engage with people potentially affected during construction through regular communication including letters, phone calls and meetings, where necessary. We urge anyone with concerns to get in touch through the Norwich to Tilbury Freephone number, address or email, which would remain open throughout examination.</p> <p>National Grid is committed to working with local suppliers, facilitated by supporting forums (such as the local Chambers), on electricity industry skills and workforce planning. National Grid is also committed to providing a coordinated regional approach to jobs and skills opportunities. This commitment is broader than the individual project and separate to any commitments under the proposed development consent order for this Project. The socio-economics effects of the project are assessed in Chapter 15 of the Environmental Statement (document reference 6.15). Post construction job opportunities are limited given the nature of the development however we will still work with Local Authorities (including facilitating local partners) to understand what is important to them around skills and employment to ensure we leave a lasting positive legacy in the communities where we operate. With regards to a delivery mechanism, the above measures will be delivered as part of our community benefit package, which will look at both local and regional initiatives. This will be delivered outside the development consent</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		process and is not a material consideration in the decision on the proposed Project or a matter to be secured as part of the DCO, as per the Community Funds for Transmission Infrastructure: Guidance (DESNZ, 2025).				
10-42.4	Concern about impact of the Project on school / educational facilities	<p>Through routeing and siting, National Grid has sought to avoid, as far as practicable, locations of education establishments.</p> <p>ES Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) presents an assessment of the potential impacts on education facilities as a result of the Project. As part of the assessment, a range of measures are considered during the construction phase to reduce, where practicable, disruption to education establishments. These include traffic management, signage and routing measures to ensure access or partial access can be maintained where feasible. These are identified within ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15), the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) and the Outline Code of Construction Practice (CoCP) (document reference 7.2). The assessment concludes that there would be no significant effects on education facilities within the study area as a result of the construction and operation of the Project.</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-42.5	Concern about impact of the Project on leisure	Through routeing and siting National Grid has sought to avoid, as far as practicable, locations that are important for leisure and tourism. Environmental Statement (ES) Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) presents an assessment of the potential impacts on sports clubs, recreational land and recreational routes located within the Order Limits. As part of this assessment, a range of measures have been considered throughout the construction phase of the Project to minimise disruption on leisure and tourism. These include traffic management, signage and routeing measures. These are identified within ES Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15), the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).	X		X	
10-42.6	Concern about over development of area / other works in the area (e.g. cumulative impact)	A cumulative effects assessment has been undertaken in accordance with the Planning Inspectorate's Advice Note 17 'Cumulative Effects Assessment' and is presented in Environmental Statement (ES) Chapter 17: Cumulative Effects (document reference 6.17). The cumulative effects assessment has considered the effects of the Project in conjunction with other developments in line with guidance. As part of this process, National Grid has engaged with other developers who are proposing development in proximity of the Project to understand their requirements.	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>The cumulative assessment has been undertaken in accordance with the overarching National Policy Statement (NPS) for Energy (EN-1)</p> <p>Paragraph 4.1.5 in EN-1 states:</p> <p><i>'In considering any proposed development, in particular when weighing its adverse impacts against its benefits, the Secretary of State should take into account: ... its potential adverse impacts, including on the environment, and including any long-term and cumulative adverse impacts, as well as any measures to avoid, reduce, mitigate or compensate for any adverse impacts, following the mitigation hierarchy'.</i></p> <p>Paragraph 4.2.12 in EN-1 states:</p> <p><i>'The cumulative impacts of multiple developments with residual impacts should also be considered.'</i></p> <p>Paragraph 4.3.3 in EN-1 states:</p> <p><i>'The Regulations require an assessment of the likely significant effects of the proposed project on the environment, covering the direct effects and any indirect, secondary, cumulative, transboundary, short, medium, and long-term, permanent and temporary, positive and negative effects at all stages of the project, and also of the measures envisaged for avoiding or mitigating significant adverse effects'.</i></p> <p>Paragraph 4.3.19 of EN-1 states:</p> <p><i>'The Secretary of State should consider how the accumulation of, and interrelationship between, effects</i></p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p><i>might affect the environment, economy, or community as a whole, even though they may be acceptable when considered on an individual basis with mitigation measures in place'.</i></p> <p>Paragraph 4.4.5 in EN-1 states:</p> <p><i>'The impacts of more than one development may affect people simultaneously, so the applicant should consider the cumulative impact on health in the ES where appropriate'.</i> The long list and short list of other existing and, or approved developments considered for the Cumulative Effects Assessment is presented in Appendix 17.2: Long List and Short List of Other Developments (document reference 6.17.A2), detailing the other developments shortlisted for detailed assessment. The appendix provides details on other developments screened out of the assessment in accordance with the methodology presented in ES Chapter 17 (document reference 6.17). The detailed assessment of shortlisted other developments is presented in Appendix 17.3: Inter-Project Cumulative Effects Assessment (document reference 6.17.A3). Appendix 17.3 outlines the residual significance of cumulative effects for each development, for each environmental topic that has a Zone of Influence that overlaps with that development (i.e. socio-economic, recreation and tourism impacts).</p>				
10-42.7	Concern about the Project being in too close proximity to recently built housing developments /	National Grid has obtained information on existing, under construction, consented but not built schemes as		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	using land being considered for future development (including residential, commercial, infrastructural, and employment sites)	well as development proposals within the planning system. The Project design has responded to those that are confirmed through consideration of routeing. In the case of development proposals, some can be amended to be designed around our proposed infrastructure but in other cases our proposals may need to be amended at a corridor level, or proposed developments factored into our detailed route design. Based on known information, and in light of changes made following consideration of feedback to the 2022 and 2023 non-statutory consultations, statutory consultation, targeted consultations, and landowner consultation, we consider our proposals are consistent with relevant policy and guidelines and the alignment designed such that they do not prevent proposed housing developments from being successfully progressed. UK law does not prescribe minimum distances between overhead lines and homes, but any implications on landscape and visual receptors, residential amenity or from concerns about electromagnetic fields are robustly assessed as part of the Environmental Impact Assessment (EIA) and balanced as part of the decision making process. We will continue to review planning applications and engage with developers as necessary.				
10-42.8	Concern about the Project causing communities to become encircled / surrounded by overhead lines	The alignment has been routed to achieve some separation from the existing 400 kV overhead line, such that villages are not encircled by overhead lines to both sides. Separation is inevitably reduced in certain	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		locations due to the presence of constraints to routing and environmental features. Detailed assessment reported in the Environmental Impact Assessment (EIA) identifies any measures considered to be necessary to reduce likely significant effects which would also consider the potential for effects potentially arising from close paralleling existing 132 kV overhead line and new 400 kV overhead line infrastructure.				
10-42.9	Concerned that the Project will have a negative impact on domestic horses / equestrian activities	<p>As well as possible effects on humans, the possible effects of Electric and Magnetic Fields (EMFs) on various animals have been studied. No proven effects of EMFs have been found in any species at levels below the guidelines. This is confirmed in National Policy Statement (NPS) EN-5 which states: "<i>There is little evidence that exposure of crops, farm animals or natural ecosystems to transmission line EMFs has any agriculturally significant consequences.</i>" Although horses are not directly mentioned, there is no evidence to suggest they are any different to other farm animals.</p> <p>As well as the possible direct biological or health effects addressed above, indirect effects such as microshocks can occur as a result of electric fields. Microshocks are small spark discharges which are similar to a static shock after walking across a nylon carpet for example. The Project would be designed in accordance with the principles of the Governments Code of Practice 'Power Lines: Control of Microshocks and other indirect effects</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		of public exposure to electric fields' to ensure these are mitigated, which include equestrian activities.				
10-42.10	Concern about the impact of the Project on emergency services / ambulances / hospitals / health service	<p>Through routeing and siting National Grid has sought to avoid and reduce as far as practicable effects on identified healthcare facilities.</p> <p>Environmental Statement (ES) Chapter 10: Health and Wellbeing (document reference 6.10) considers the potential impacts on, and access to, healthcare facilities, including emergency services, ambulances, hospitals and other NHS services associated with the construction of the Project, drawing on information from ES Chapter 16: Traffic and Transport (document reference 6.16). No health facilities are due to be directly impacted by the Project and where road diversions are required traffic management and mitigation measures would be in place to reduce impacts. These include: traffic management, signage and routing measures to ensure access or partial access can be maintained where feasible. Further detail on proposed mitigation measures are presented in the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), which has been produced following engagement with stakeholders including the emergency services.</p>	X		X	
10-42.11	Criticism of surveys undertaken for the Project in this Section	There is a staged approach to the process of collection of environmental data as any major project develops. National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project. The assessment is			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>informed by a suite of field surveys and desk studies and results are presented in an Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the application for development consent. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation (and maintenance) of the Project and recommends appropriate mitigation measures to reduce potential adverse impacts.</p> <p>The scope of the EIA is included in the Scoping Report (document reference 6.19) which was submitted to the Planning Inspectorate in November 2022 and their Scoping Opinion (document reference 6.20) received in December 2022. This provided the opportunity for statutory bodies to comment on the scope of the EIA which included our approach on study areas, data collection and baseline conditions for a range of environmental topics. We also discussed and agreed survey scope with stakeholders (including Statutory Environmental Bodies and Local Planning Authorities) following the Scoping Opinion (document reference 6.20) to ensure a robust baseline assessment.</p> <p>National Grid has prepared an Outline Code of Construction Practice (CoCP) (document reference 7.2) which sets out the required mitigation measures and environmental commitments that would be implemented during the construction phase of the Project to avoid or reduce potential effects of the Project on the</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		environment, including commitments to undertake further surveys.				
10-42.12	Concern about the impact of the Project on water supply	<p>Appendix 9.3: Groundwater Baseline and Qualitative Groundwater Risk Assessment (document reference 6.9.A3) is included to support Chapter 9: Contaminated Land, Geology and Hydrogeology (document reference 6.9) which provides an assessment of the potential effects on groundwater from the Project and includes impacts on groundwater receptors such as water supplies (both with regard to quantity and quality), as required.</p> <p>Where the Project constitutes overhead lines, interaction with underlying aquifers would be limited. Any piling activities e.g., for pylon foundations, would be undertaken in accordance with good practice, and informed by Project Ground Investigation data.</p> <p>Where the Project constitutes underground cable, further to the above a hydrogeological risk assessments would be undertaken.</p> <p>These measures are described in the Outline Code of Construction Practice (CoCP) (document reference 7.2) and would be secured through the Development Consent Order (DCO), if granted.</p>			X	
10-42.13	Concern the Project will divide the communities of Great and Little Waltham	National Grid has developed the Project in line with relevant planning guidance including National Policy Statement (NPS) EN-5 which refers to following the guidance in the Holford Rules in developing the			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		alignment. Guidelines on overhead line routeing are known as the "Holford Rules" which remain a valuable tool in selecting and assessing potential overhead line route options as part of the options appraisal process. A summary of the Holford Rules is provided within Appendix I22 of this report. Neither policy nor guidance makes specific reference to the preservation of perceived connections between nearby villages. Nonetheless we have factored in environmental effects that have influenced decision making in the context of the NPS and the Holford and Horlock Rules.				
10-42.14	Concern that establishing a visibility corridor on Cole Hill for the proposed haul road will destroy the area, environment and habitat immediately adjacent to respondents' home	In order to provide an access crossing the public highway, visibility splays are required. This would mean retaining and cutting back vegetation in the vicinity of the crossing as well as some removals. National Grid has sought to reduce, as far as practicable, impacts on the environment / countryside through routeing and siting and an ongoing iterative design process which has taken on board feedback at different stages of the Project. The iterative design process sought to avoid areas of highest concern.			X	
Construction Impacts						
10-42.15	Concern about disruption from construction	An Environmental Statement (ES) (document reference: Volume 6: Environmental Statement) has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 ('the Infrastructure EIA Regulations'). The ES	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>identifies and assesses the likely significant effects on the environment resulting from the construction of the Project and recommends appropriate mitigation to reduce effects.</p> <p>Environmental mitigation measures have been defined within each environmental topic chapter and set out in relevant management documents submitted with the Development Consent Order (DCO) application, including the Outline Code of Construction Practice (CoCP) (document reference 7.2), the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5).</p>				
10-42.16	Concern about impact on traffic levels in local area caused by construction works	<p>As part of the pre-application process National Grid has engaged with the relevant authorities, their highways teams and National Highways to understand and gain information on their road networks. This information has been used to inform and guide the drafting of the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) for the Project that accompanies the Development Consent Order (DCO) application.</p> <p>A strategy has been developed to manage the impact of construction vehicles on the public highway and sensitive receptors, using suitable Local Road Network</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>connections from the Strategic Road Network called Primary Access Routes. In addition, temporary haul roads for construction vehicles are proposed along the Project alignment, further reducing the impact of construction traffic on the local road network. Further details of the strategy can be found within the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).</p> <p>Environmental Statement (ES) Chapter 16: Traffic and Transport (document reference 6.16) includes the assessment of the potential impacts of the Project including changes in traffic flow, delays, road safety and impact on Walking, Cycling and Horse-Riding modes on the roads along the Primary Access Routes located in the Local Road Network.</p> <p>The Transport Assessment (document reference 7.11), submitted with the DCO application, examines capacity, safety, and operational efficiency of the network, identifying potential bottlenecks or safety concerns.</p> <p>Within the assessment of the ES and the Transport Assessment, mitigation measures are proposed to minimise likely adverse impacts</p>				
10-42.17	Concern about noise and other issues resulting from construction (e.g. mud on roads, dust)	An Environmental Statement (ES) (document reference: Volume 6: Environmental Statement) has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 ('the Infrastructure EIA Regulations'). The ES identifies and assesses the likely significant effects on	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>the environment resulting from the construction of the Project and recommends appropriate mitigation to reduce effects.</p> <p>Specifically, a Construction Noise and Vibration Impact Assessment has been undertaken and is reported in ES Chapter 14: Noise and Vibration (document reference 6.14). During construction, mitigation would be implemented to reduce noise and vibration impacts from construction activities and increased road traffic noise and vibration due to additional movement from construction traffic. Mitigation measures are outlined in ES Chapter 14: Noise and Vibration (document reference 6.14) and the Outline Code of Construction Practice (CoCP) (document reference 7.2). This includes the assumption that construction working would be undertaken within the agreed working hours, construction traffic would be managed through the Construction Traffic Management Plan (CTMP) (document reference 7.3), haul roads would be well maintained, and Best Practicable Means (BPM) would be employed to reduce construction noise and vibration.</p> <p>ES Chapter 7: Air Quality (document reference 6.7) presents an assessment of the potential impacts from the construction of the Project on air quality. During construction, mitigation would be implemented to reduce the impact of dust generation and construction vehicle emissions. Mitigation measures are outlined in ES Chapter 7: Air Quality (document reference 6.7), and the Outline CoCP (document reference 7.2). The dust-</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>emitting activities can be greatly reduced or eliminated by applying the site-specific mitigation measures (see Outline CoCP (document reference 7.2)) for high risk sites following measures recommendations in the Institute of Air Quality Management (IAQM) guidance (IAQM, 2024). The IAQM guidance states that with the implementation of effective site-specific mitigation measures, the environmental effect would not be significant in most cases.</p> <p>In addition, National Grid has prepared an Outline CoCP (document reference 7.2). The Outline CoCP (document reference 7.2) sets out the required mitigation measures and environmental commitments that would be implemented during the construction phase of the Project to avoid or reduce potential effects of the Project on the environment.</p>				
10-42.18	Concern that local road infrastructure is not suitable for heavy construction vehicles and machinery	A strategy has been developed to manage the impact of construction vehicles on the public highway and sensitive receptors, using suitable Local Road Network connections from the Strategic Road Network called Primary Access Routes. In addition, temporary haul roads for construction vehicles are proposed along the Project alignment, further reducing the impact of construction traffic on the local road network. Further details of the strategy can be found within the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		The Project also requires the transportation of Abnormal Indivisible Loads (AIL). National Grid is developing specific routing proposals for AIL movements and is developing these through engagement with the relevant stakeholders including the Local Highway Authorities and National Highways. An AIL routing strategy containing details about these movements are submitted in support of the Development Consent Order (DCO) application.				
10-42.19	Concern about the impact of National Grid obtaining permanent rights of way. Suggest that the default position should be that National Grid acquires rights for future access solely under the line of Pylons through the DCO process, with any additional rights of way to be agreed upon in the easement only	National Grid needs to ensure that all pylons can be accessed in the future for maintenance and inspection works. It is not reasonably practicable to only obtain access rights directly under the overhead line, as access would be needed from the public highway using existing gates. National Grid does seek to acquire access rights through the Development Consent Order (DCO). To use specific access routes, at the time access is required, the relevant landowner would be contacted, and if there is a more suitable access route, then this would be agreed.			X	
10-42.20	Request that consideration be given to options for accessing H30-A2, including whether traffic from the south can use the existing slip road on the A12 instead of routing through Margaretting, and whether access can be achieved from Writtle Road rather than using Ivy Barns Lane, which is unsuitable	National Grid has engaged with the bridge asset owner, Network Rail. As part of our assessment, we have considered the worst case scenario in terms of vehicles accessing the bridge. Appropriate mitigations have been agreed in principle with Network Rail conditional on a further condition		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		survey prior to use, ensuring the appropriate safe use of the bridge for access during construction. The discussions and studies to date do not reveal a need to strengthen the asset. This will be kept under review.				
10-42.21	Request that considerations be given to a worst-case assessment of the impacts on the highway network for the bridge strengthening works at F7, in the event of the works being undeliverable. There are concerns about the use of this route to access Pylons 186 to 201, the appropriateness of its use, and the implications on the remainder of the project or the need for alternative routes as a result	National Grid has engaged with the bridge asset owner, Network Rail. As part of our assessment, we have considered the worst case scenario in terms of vehicles accessing the bridge. Appropriate mitigations have been agreed in principle with Network Rail conditional on a further condition survey prior to use, ensuring the appropriate safe use of the bridge for access during construction. The discussions and studies to date do not reveal a need to strengthen the asset. This will be kept under review.		X	X	
Consultation						
10-42.22	Comment supportive of engagement that has taken place / feel listened to	National Grid notes the respondent's feedback.			X	
10-42.23	Criticism of consultation specific to this section	National Grid notes the respondent's feedback.	X	X	X	
10-42.24	Criticism of consultation events in this Section	To support the non-statutory targeted consultations on Essex 8 – Great Waltham and Little Waltham and Thurrock 2 – Bulphan, National Grid held three bookable sessions to view the updated 3D model. To support the			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>targeted statutory consultation Thurrock 3 – proposed changes to the connection at Tilbury, we also held two public information events where people could view the proposals, ask the Project team questions and view the updated 3D model.</p> <p>We had to balance a number of factors when booking the consultation venues, including availability and proximity to the proposed change. As part of our risk assessment of these venues, we made sure that they had full disabled access and bathroom facilities as well as adequate capacity for the expected number of people attending to be comfortably accommodated for.</p> <p>We also held a series of online webinars for each set of targeted consultations which explained the proposed changes and how people could take part in the consultations. These provided further opportunities for people to find out the same information and ask the Project team questions. The webinars were recorded and uploaded to the Project website.</p> <p>There were also opportunities to engage with the Project team via phone, email and freepost.</p>				
10-42.25	Criticism that National Grid have shown no evidence of investigating the West of Writtle route	National Grid is not required to present equivalent data for every possible routeing alternative. We do have to ensure the reasons behind decisions about the option we do prefer and why others are not preferred are set out. This has been reported in the 2022 Corridor and Preliminary Routeing and Siting Study (CPRSS) (found on the Project website) at a broader corridor level and at			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		route level within this report, the 2022 and 2023 Non-Statutory Consultation Feedback Reports and the 2023 and 2024 Design Development Reports (available on the Project website) and the 2025 Design Development Report (document reference 5.15). This provides the evidence, at a comparable level, for decision making.				
10-42.26	Criticism of the inadequate assessment of the impact of proposing full or lower height pylons on landscape character and visual amenity terms	As set out in the 2025 Design Development Report (document reference 5.15), consideration has been given to the use of low height pylons in circumstances where standard lattice pylons are considered to be inconsistent with policy. These low height design lattice pylons are useful where height is a strong consideration, however they also occupy a greater footprint and have a bulkier and denser profile. They can therefore provide visual benefits in some scenarios, for example where a reduction in pylon height means that views of the tops of pylons are screened by intervening woodland. In other scenarios they can increase adverse visual effects, for example where relatively close to visual receptors without intervening filtering vegetation where they are likely to appear more noticeable in views from residential receptors.		X	X	
10-42.27	Request that a full construction management plan be submitted as part of the Environmental Statement to ensure that the amenities of neighbouring residents are protected throughout the construction period. Additionally, the air quality impact assessment	An Outline Code of Construction Practice (CoCP) (document reference 7.2) has been submitted as part of the Development Consent Order (DCO) application. The Outline CoCP (document reference 7.2) provides the preliminary framework for the principles and procedures		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	indicates that it will be necessary for National Grid to develop and implement a dust management plan for construction-related activities	that the Main Works Contractor(s) must implement to minimise, manage and mitigate the potential environmental impacts of construction works associated with the Project. The Outline CoCP (document reference 7.2) will be fully developed based on detailed design information to be provided by the Main Works Contractor(s). The final version will be submitted for approval in accordance with the DCO requirement for construction management plans prior to commencement of development, secured through the DCO Schedule. Appendix D: Outline Dust Management Plan of the Outline Code of Construction Practice (CoCP) (document reference 7.2) has been submitted as part of the Development Consent Order (DCO) application.				
Design Change						
10-42.28	Suggest that existing overhead lines in this section should be removed	The existing electricity transmission network provides power, via the local distribution network, into the local area where it is used in homes and businesses. Such lines cannot just be removed as power supplies would not be maintained. The need case and funding for the Project is to deliver the new network reinforcement needed, rather than to remove existing overhead lines which would need to be replaced by another form of connection such as underground cables. Unless required for crossings or mitigation, undergrounding existing overhead lines on the		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		transmission network would not be in accordance with National Policy Statement (NPS) EN-5 and would result in substantial cost to bill payers. There may also be significant environmental impacts due to the removal works on sensitive ecological and archaeological receptors as well as constraints from either existing buildings or unsuitable ground conditions.				
10-42.29	Suggest that existing overhead lines in this section should be replaced by underground cables	<p>National Policy Statement (NPS) EN-5 establishes the position that the starting basis for new connections is a presumption on the acceptability of overhead lines but with this presumption reversed within designated landscapes and in certain other circumstances.</p> <p>The existing electricity transmission network provides power, via the local distribution network, into the local area where it is used in homes and businesses. The need case and funding for the Project is to deliver the new network reinforcement needed, rather than to remove existing overhead lines by undergrounding them.</p> <p>We have identified a number of locations where we are proposing to place existing overhead lines underground. These locations are where existing 132 kV and lower voltage lattice pylon lines are crossed by the proposed 400 kV overhead line and / or mitigation of the combination of effects are considered necessary. This includes locations such as at Mellis, between Offton and Bramford Substation, to the south of Bramford Substation and near Fuller Street.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Unless required for mitigation, undergrounding existing overhead lines on the transmission network would not be in accordance with NPSEN-5 and would result in substantial cost to bill payers. There may also be significant environmental impacts due to the removal works on sensitive ecological and archaeological receptors as well as constraints from either existing built form or unsuitable ground conditions.				
10-42.30	Suggest that the existing overhead lines in this section are reinforced / upgraded instead	The existing transmission network in the region was upgraded during 2022 and 2023 to ensure the system is running at its most efficient performance. The existing assets / networks are not able to be upgraded sufficiently to cope with the new future demands expected on the network. As a result, new lines and substations would be required to accommodate the changing demands on the network.	X		X	
10-42.31	Suggest that the Project is routed away from populated / residential areas	Deciding where and how to build new high voltage electricity lines is a complex issue and National Grid is mindful of the potential effects this infrastructure may have on local communities and the concerns these may bring. We recognise that people living near our transmission infrastructure, including high voltage overhead lines, may have concerns about audible noise and potential health impacts. It has sometimes been suggested that minimum distances between properties and overhead lines should be prescribed.	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>We do not consider this appropriate since each instance must be dealt with on its merits. However, we have always sought to route new lines away from residential property on grounds of general amenity where possible.</p> <p>We have undertaken a noise and vibration assessment which can be found in the Environmental Statement (ES), Chapter 14: Noise and Vibration (document reference 6.14) that forms part of the Environmental Impact Assessment (EIA) for the Project. Noise levels and the effect on residential properties as well as other sensitive areas, such as hospitals and schools, are carefully considered during planning, assessed according to the appropriate UK standards, and mitigated where necessary. We set strict technical standards for the equipment we install on our network. These will apply to the proposed new East Anglia Connection Node (EACN) substation, and extensions required to the existing Norwich Main, Bramford, and Tilbury Substations. These standards include requirements to ensure the occurrence of audible noise is eliminated or reduced as far as practicable. Therefore, significant adverse effects from noise are not expected.</p> <p>Noise from overhead lines is predominately determined by the conductor design, voltage and weather conditions. The overhead line would be designed using a relatively quiet conductor that meets the design specification required, and operational noise is not likely to be significant at nearby sensitive receptors under any weather conditions. Pylon fittings, such as insulators,</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>dampers, spacers, and clamps, are also designed and procured in accordance with a series of National Grid Technical Specifications to reduce the potential for audible noise and tones to occur from all types of fittings. Where noise does occur, it is likely to be localised and of short duration. If this is due to a fault, action can be taken to rectify it. A technical note has been submitted as part of the application for development consent to support scoping out noise associated with overhead lines from the ES.</p> <p>In addition, we have undertaken a Landscape and Visual Impact Assessment (LVIA) for the Project. This includes an assessment on both landscape character and visual amenity. The LVIA is presented in the ES, Chapter 13: Landscape and Visual (document reference 6.13).</p> <p>The health and safety of the public, local communities and employees is central to everything that we do. The UK has a carefully thought-out set of policies for protecting us all against Electric and Magnetic Fields (EMFs), the main component of which is exposure guidelines. The exposure guidelines are set by independent scientific bodies and are based on decades-long studies into the effects of EMFs and ill health. After those decades of research, the weight of evidence is against there being any health risks of EMFs below the guideline limits. Our approach is to ensure that our network comply with those policies, which are set by Government on the advice of their independent advisors. The Project is designed to ensure it is fully</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>compliant with these policies and guidelines. This ensures that health concerns are properly and adequately addressed.</p> <p>Policies for both noise and EMF are incorporated into the decision-making process for development consent as set out in National Policy Statement (NPS) EN-5. It is National Grid's policy to ensure that all its equipment complies fully with those policies and guidelines. The application for a Development Consent Order (DCO) includes assessments against these policies, including both construction and operational noise and EMF.</p>				
10-42.32	Suggest that underground cables are used for the entirety of this section	<p>National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or Area of Outstanding Natural Beauty (AONB))'</i>. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider this section in its entirety would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.</p> <p>Therefore, whilst undergrounding the whole of this section is not considered appropriate, our proposals do include underground cable within the Dedham Vale</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		National Landscape (previously known as Area of Outstanding Natural Beauty (AONB)) in accordance with NPS EN-5. Prior to our 2023 non-statutory consultation we identified the need to extend the underground cable beyond the National Landscape boundary because of potential effects, we have further extended this section of underground cable following consideration of feedback on our 2023 non-statutory consultation and additional investigation into potential effects. We also identified an approximately 4 km section near Great Horkesley as meeting the particularly sensitive criteria where underground cable is also proposed. Additionally, underground cable is proposed at Fairstead for a 400 kV overhead line crossing.				
10-42.33	Suggest that the Project is routed away from / the Project should not be located the Wid Valley / Concern about impact of the Project on the Wid Valley	<p>Whilst noting the preference for a route away from the Wid Valley, the reasons for a preference for the current alignment remain, which were to reduce effects on various heritage assets most notably the Grade I Listed Ingatestone Hall and Grade I Listed St Giles Church. In the absence of further evidence National Grid consider the alignment to be consistent with our duties and relevant policies and for this still to be preferred.</p> <p>We have undertaken an Environmental Impact Assessment (EIA) which has assessed the potential impacts of the Project and has identified any need for additional mitigation. The results of the EIA are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		accompanies the Development Consent Order (DCO) application.				
10-42.34	Suggest that the ditch near the B1800, leading towards Pylon TB135, will need to be piped and bridged to facilitate the installation of the haul road and crossing protection area (plan provided by respondent)	National Grid notes the respondent's feedback. All temporary access and construction requirements, including drain and ditch crossings would be detailed by the Contractor when they survey and finalise their access routes and construction methodology. The particulars of the crossing would also be subject to the anticipated traffic and loads.			X	
10-42.35	Suggest that the Project is rerouted from the Waltham Gap / Waltham Conservation Areas / Chelmer Valley crossing (e.g. to avoid the Ash Tree Corner Site) / Suggest that the Project is routed away from the Chelmer Valley between Pylons TB134 and TB141	In response to feedback received during the 2024 statutory consultation and the 2025 targeted consultations and landowner consultation, National Grid has considered alternative alignments (which includes that suggested by the respondent to re-route from the Waltham gap) to the east and west of Chelmsford, modifications to the alignment consulted upon along with the selection of pylon type as well as the justification for the use of underground cable. In the 2022 Corridor and Preliminary Routing and Siting Study (CPRSS) published as part of the 2022 non-statutory consultation and in the Design Development Report's, National Grid set out the challenges associated with routeing either further to the west or to the east of Chelmsford parallel to the existing 400 kV overhead line. Whilst noting the respondent's preference for one of these alternatives, no new factors have been identified nor new evidence provided nor identified to remove the basis for previous	X	X	X	X

		<p>of known archaeological sites such as the pre-Belgic Iron Age remains identified in the early 1970s, have informed the design process. The Environmental Statement (ES), Chapter 11: Historic Environment (document reference 6.11), provides a detailed assessment of potential effects on both designated and non-designated heritage assets, including those of archaeological interest. Where assets have been assessed as being of medium or high value and within the 250 m study area, their settings and potential for significant effects have been thoroughly considered in accordance with the agreed methodology.</p> <p>The revised alignment represents a considered response to consultation feedback, balancing the need to reduce heritage impacts with other environmental and technical constraints. The potential impact of the Project on heritage assets such as settlement site at Ash Tree Corner and the conservation areas of Great and Little Waltham has been fully assessed and details can be found the Historic Environment Baseline Report (document reference 6.11.A1) and Appendix 11.2: Historic Environment Assessment Tables. Other effects are assessed and presented in the EIA and this has identified any need for additional mitigation. The results of the EIA are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-42.36	Criticism that pylons TB142, TB143 and TB144 run close to Broads Green and that these pylons have not been proposed to be moved in the Targeted Consultation	National Grid has routed and sited the alignment in accordance with the Holford Rules. A summary of the Holford Rules is provided within Appendix I22 of this report. TB142 to TB144 are proposed to be approximately midway between properties along Lark's Lane, therefore, to move these pylons further away from one property would move them closer to another. To move TB139- TB142 (now TB140- TB144) further north would also move the alignment closer to properties along Chelmsford Road where we are currently crossing at an approximately equal distance between properties. We therefore are not proposing a change to the alignment in this location, and therefore no change was proposed at the targeted consultation.			X	
10-42.37	Request pylon T121 is routed away from respondent's home - it sits circa less than 100 meters from the respondent's home	TB121/TB122 (now TB123/TB124) are currently located approximately midway (noting the junction of Fuller Street and Cole Hill) between properties along Boreham Road / Cole Hill. For these reasons National Grid is not proposing a change to the alignment at this location.			X	
10-42.38	Request 'red-line corridor' is located away from respondent's property - currently takes up 8 meters of their garden including mature trees, landscaping, out-buildings and acoustic fencing worth in excess of £25k	National Grid notes the respondent's feedback. The Order Limits have been amended at this location to avoid the respondent's property.			X	X
10-42.39	Suggest a short run HVAC route through Essex 8 with CSE compound locations positioned in a way to	National Grid has carefully considered the feedback proposing the use of underground cable along the route,		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	not impact views from Langleys, Chelmsford Road or the Great Waltham Conservation Area	the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is ' <i>that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or Area of Outstanding Natural Beauty (AONB))</i> '. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at Little and Great Waltham would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
10-42.40	Suggest that National Grid re-examine the options for the line around Chelmsford. Introduction of undergrounding 132kV lines where needed to make way for the Project opens new opportunities for routing which were not fully considered in 202	In response to feedback received during the 2024 statutory consultation and the 2025 targeted consultations and landowner consultation, National Grid has considered alternative alignments (which includes that suggested by the respondent to go north of Great Waltham) to the east and west of Chelmsford, modifications to the alignment consulted upon along with the selection of pylon type as well as the justification for the use of underground cable. 		LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
10-42.43	Suggest that the Project should not consider the Deer Park at Langleys when deciding the route (e.g due to impact on Little Walham)	<p>The park and garden fall beyond the Order Limits and no accessibility impact is anticipated.</p> <p>National Grid has worked to minimise potential impacts on the historic environment, including conservation areas such as Little Waltham and its setting, through strategic routeing and siting measures. Statutory consultation feedback and the results of archaeological fieldwork have been used to inform design development to reduce as far as practicable impacts to archaeological remains in this area. The impacts of the Project on the historic environment are assessed in Chapter 11: Historic Environment (document reference 6.11) of the Environmental Statement (ES). The assessment considers the potential impact on archaeology, historic buildings and historic landscapes and includes assessment of potential for physical impact. The assessment is supported by walkover, setting and geophysical surveys, as documented in Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1) and Appendix 11.4: Geophysical Survey Results Report (document reference 6.11.A4). In addition to the proposals in the outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) the Outline Archaeological Mitigation</p>			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Strategy and Outline Written Scheme of Investigation (document reference 7.5) sets out appropriate mitigation for the historic environment.</p> <p>In response to feedback received during the statutory consultation, including comments from Historic England and other stakeholders, the alignment in this area was revised in March 2025 to reduce impacts on Little Waltham. Low height pylons are now used in this area, following discussions with heritage stakeholders, in order to reduce the visibility and visual impact on nearby designated assets. This design change significantly reduces views of pylons or the proportion of the structure visible from key viewpoints, including from within both conservation areas.</p> <p>Therefore, the overall magnitude of these impacts has been reduced. The assessment concludes that the harm resulting from the revised alignment would be 'less than substantial' in the context of National Policy Statement (NPS) EN-1.</p> <p>The current alignment and design therefore reflect a considered response to consultation feedback and a commitment to minimising impacts on the historic environment.</p>				
10-42.44	Suggest that the Project between the Essex Regiment Way and Pylon TB146 is rerouted to mitigate negative impact (including on heritage assets) / Criticism that the Preliminary Environmental Impact Assessment (PEIR) records 70 permanent	In response to feedback received during the 2024 statutory consultation and the 2025 targeted consultation and landowner consultation, National Grid has considered alternative alignments (which includes that suggested by the respondent to re-route from the			X	X

		<p>fieldwork have been used to inform design development to reduce as far as practicable impacts to archaeological remains in this area. The impacts of the Project on the historic environment are assessed in ES Chapter 11: Historic Environment (document reference 6.11) of the Environmental Statement (ES), which forms an integral part of the Environmental Impact Assessment (EIA) for the Project. The assessment considers the potential impact on archaeology, historic buildings and historic landscapes and includes assessment of potential for physical impact, impact through change to setting that affects the value of a heritage asset and impact through indirect factors such as change in hydromorphology. The assessment is supported by walkover, setting and geophysical surveys, as documented in Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1) and Appendix 11.4: Geophysical Survey Results Report (document reference 6.11.A4).</p> <p>Mitigation measures have been explored to mitigate identified impacts effectively. These actions have been documented and are presented in the ES, Chapter 11: Historic Environment. The approach to assessment and mitigation presented in the ES, Chapter 11: Historic Environment have been discussed and agreed with key heritage stakeholders. Also, the Outline Code of Construction Practice (CoCP) (document reference 7.2) sets out the required mitigation measures and environmental commitments that would be implemented during the construction phase of the Project.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		At Balls Farmhouse the heritage assessment concluded that there would be a temporary moderate adverse significance of effect on the asset during the construction phase and a permanent moderate adverse significance of effect during operation phase. During the construction phase, the implementation of standard construction mitigation would benefit the historic environment but would not reduce the change in setting enough to reduce the impact. During the operation phase, no operation phase mitigation is proposed as part of the Development Consent Order (DCO) application in this location.				
10-42.47	Suggest the use of underground cables for the Project to the west side of the Waltham pinch point, possibly adjacent to or overlapping the eastern edge of Langely Park to avoid the Ash Tree Corner site (the unsuitability of this pinch point has been recognised by National Grid in their 2024 Design Development Report)	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or Area of Outstanding Natural Beauty (AONB))'</i> . Where no such designations are present, nor is the area within the setting of such a designated area which may have	X		X

		Waltham towards Chignal Smealey. Whilst noting a reduction in some effects for this more western alternative, it would be a longer route by 2.5 km to 3 km with a degree of transfer of effects. Given that none of the effects arising for the alignment are considered to be at a level which is unacceptable in policy terms, National Grid continues to prefer the alignment and for the reasons stated the eastern and western alternatives are not progressed. An Environmental Impact Assessment has been undertaken and the findings are presented in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement), which has identified any need for additional mitigation.				
10-42.49	Suggest moving pylon TB153 closer to TB152 to mitigate the visual impact on the property in Chignal St James (Springwood)	<p>Through routeing and siting, National Grid has sought to reduce as far as practicable potential impacts on the landscape and on views and visual amenity, including careful siting of pylons and screening (both new and existing) to reduce impacts where possible.</p> <p>National Grid notes the respondent's feedback, alternative alignments in this area would either transfer effects to other properties or be longer and less direct which would be less consistent with the Holford Rules (see Appendix I22 of this report); therefore, we are not proposing a change to the locations of TB153 and TB152.</p> <p>A Residential Visual Amenity Assessment (RVAA) has been undertaken for the Project and is presented in the Environmental Statement (ES), Appendix 13.4:</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Residential Visual Amenity Assessment (document reference 6.13.A4). The property at Springwood forms part of assessment group F20, and a medium magnitude of change is identified.				
10-42.50	Request the project uses HDVC Undergrounding for the route which passes through Great Leighs, to mitigate the impact on character landscape features, proximity to dwellings, damage to the setting of area and the arable farmland	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or Area of Outstanding Natural Beauty (AONB))'</i> . Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at Great Leighs would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
10-42.51	Request lower height pylons are used in the Great and Little Leighs area to mitigate impact on landscape and the settings of other residential properties close to the route	As set out in the 2025 Design Development Report (document reference 5.15), consideration has been given to the use of low height pylons in circumstances where standard lattice pylons are considered to be inconsistent with policy. These low height design lattice pylons are useful where height is a strong consideration, however they also occupy a greater footprint and have a bulkier and denser profile. They can therefore provide visual benefits in some scenarios, for example where a	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>reduction in pylon height means that views of the tops of pylons are screened by intervening woodland. In other scenarios they can increase adverse visual effects, for example where relatively close to visual receptors without intervening filtering vegetation where they are likely to appear more noticeable in views from residential receptors.</p> <p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the EIA and reported in ES Chapter 13: Landscape and Visual (document reference 6.13). The LVIA sets out the potential landscape and visual effects, which includes consideration of visual amenity of visual receptor areas (including, for example, people in communities and using public rights of way). Chapter 13 is supported by Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3). This appendix sets out the assessment for visual receptor areas including F1 Great Leighs and F2 Peverel's Farm which are relevant to this feedback relating to the section of the Project near Great and Little Leighs.</p> <p>Within the Great and Little Leighs area the Project falls within the Glacial Till Plateau Landscape Character Type (LCT). The landscape assessment within Appendix 13.2: Landscape Baseline and Assessment (document reference 6.13.A2) contains detail on the assessment of effects of the Project on landscape character.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-42.52	Suggest that Pylon TB141 (previously presented as Pylon TB139) is relocated, from its position as presented in the summer 2024 statutory consultation, to mitigate impact on ancient village site / iron age settlements, which would otherwise be destroyed / Concern about the impact of Pylon TB141 on the remains of ancient settlements at Ash Tree Corner, Little Waltham and Listed Buildings / Suggest that archaeological digging and preservation works will be required in the area around Pylon TB141	In response to feedback received during the 2024 statutory consultation and the 2025 targeted consultations and landowner consultation, National Grid has considered alternative alignments (which includes that suggested by the respondent to go north of Great Waltham) to the east and west of Chelmsford, modifications to the alignment consulted upon along with the selection of pylon type as well as the justification for the use of underground cable. In the Corridor and Preliminary Routing and Siting Study (CPRSS) published as part of the 2022 non-statutory consultation and in the Design Development Report's, National Grid set out the challenges associated with routeing either further to the west or to the east of Chelmsford parallel to the existing 400 kV overhead line. Whilst noting the respondent's preference for one of these alternatives, no new factors have been identified nor new evidence provided nor identified to remove the basis for previous decision making. Firstly it is noted that our assessments of the alignment are that it is not unacceptable in policy terms and there is no specific need therefore to change, nonetheless we have reviewed other route alternatives. The eastern route around Chelmsford remains less preferred and no change to the fundamental constraints to successful routeing have been identified or proposed. We have also previously reviewed a more westerly alignment which would be routed away from Little Waltham diverting from the south of Great Leighs towards Pleshey and then southwards past Great	X	X	X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Waltham towards Chignal Smealey. Whilst noting a reduction in some effects for this more western alternative, it would be a longer route by 2.5 km to 3 km with a degree of transfer of effects. Given that none of the effects arising for the Project alignment are considered to be at a level which is unacceptable in policy terms, National Grid continues to prefer the Project alignment and for the reasons stated the eastern and western alternatives are not progressed. Effects are assessed and presented in the EIA and this has identified any need for additional mitigation. The results of the EIA are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application.</p> <p>National Grid has worked to minimise potential impacts on the historic environment through strategic routeing and siting measures. The results of archaeological fieldwork and heritage assessments, including a review of known archaeological sites such as the pre-Belgic Iron Age remains identified in the early 1970s, have informed the design process. The Environmental Statement (ES), Chapter 11: Historic Environment (document reference 6.11), provides a detailed assessment of potential effects on both designated and non-designated heritage assets, including those of archaeological interest. Where assets have been assessed as being of medium or high value and within the 250 m study area, their settings and potential for</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>significant effects have been thoroughly considered in accordance with the agreed methodology.</p> <p>The revised alignment represents a considered response to consultation feedback, balancing the need to reduce heritage impacts with other environmental and technical constraints. The potential impact of the Project on heritage assets such as settlement site at Ash Tree Corner and the conservation areas of Great and Little Waltham has been fully assessed and details can be found the Historic Environment Baseline Report (document reference 6.11.A1) and Appendix 11.2: Historic Environment Assessment Tables. Other effects are assessed and presented in the EIA and this has identified any need for additional mitigation. The results of the EIA are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application.</p>				
10-42.53	<p>Suggest that Pylons TB139, TB140 and TB141 (previously presented as TB137, TB138 and TB139) are moved away from Little Waltham (as from its position as presented in the summer 2024 statutory consultation) (e.g. in particular suggest that Pylon TB140 is moved 300 – 400 metres into or near to the wood where it would be screened from Little Waltham and from the houses on the Chelmsford Road and Chatham Hall Lane) / Concern about the impact of Pylons TB139, TB140 TB141 and TB142</p>	<p>A thorough review of alternative routeing options has been completed which is explained within the Corridor and Preliminary Routeing and Siting Study (CPRSS) and the 2023 and 2024 Design Development Reports (available on the Project website) and the 2025 Design Development Report (document reference 5.15). This has concluded that the alignment between Great Waltham and Little Waltham is preferred.</p> <p>In terms of the specific alignment changes suggested, the change proposed to move 300 m to 400 m into the</p>	X		X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	(previously presented as TB137, TB138 TB139 and TB140) on Little Waltham and Great Waltham (e.g. impact on archaeology; visual impact of Pylon TB137 on the White Hart Pub and Taylor's Park; Pylons TB140, TB141, B142 (previously presented as TB138, TB139 and TB140) are located within Drury's 500 m archaeologically sensitive zone)	<p>wood would move the alignment to a position where it would be within the Grade II registered park and garden at Langleys and would lead to direct loss of some trees. This is considered to be in conflict with the relevant policy in the National Planning Policy Framework as it would be expected to be potentially considered as substantial harm. As such no change is proposed.</p> <p>Pylons south of the river (TB140, TB141 and TB142) have been modified to respond to the feedback. The change is a repositioning of TB140 to the west slightly further away from the river and a change from a low height design to a standard pylon design and the replacement of low height design TB141 and TB142 with a single standard pylon approximately midway between TB141 and TB142 set further back from the road. Low height design pylons to the north are retained to reduce heritage effects. An Environmental Impact Assessment has been undertaken and the findings are presented in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement), which has identified any need for additional mitigation that does not consider a technology change.</p>				
10-42.54	Suggest that Pylons TB140 and TB141 (previously presented as TB138 and TB139) are shortened to 35m or less to minimise the impact on Little Waltham village, from their design and position as presented in the summer 2024 statutory consultation (like TB137, TB138 and TB139 (previously presented as	The respondent may have misunderstood the most recent plans in the 2025 targeted consultations because pylons TB140 and TB141 were of a low height design. Whilst their particular positioning allowed the height to be kept down, they were not as low as 35 m.	X		X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	TB135, TB136 and TB137) were proposed in the summer 2024 statutory consultation)	<p>In response to feedback however the pylons south of the river (TB140, TB141 and TB142) have been modified. The change is a repositioning of TB140 to the west slightly further away from the river and a change from a low height design to a standard pylon design and the replacement of low height design TB141 and TB142 with a single standard pylon approximately mid-way between TB141 and TB142 set further back from the road.</p> <p>The main reason for considering the change of pylon type to a low height design was to reduce the visibility of pylons from the Grade I Listed Langleys house, in particular from the rear of the house down a designed avenue and reduce effects on the Grade II registered park and garden. Whilst noting that the effects arising from an overhead line using standard lattice pylons on heritage assets comprise less than substantial harm, it was noted that for the Grade II registered park and garden at Langleys the effects that could overall be considered to be in the higher range of less than substantial harm. With the use of low height lattice pylons the effects were reduced into lower range of less than substantial harm.</p> <p>When considering lower height pylons, whilst as noted above they can bring some advantages they also bring disadvantages particularly in close views resulting from their generally bulkier and more dense profile. In this case feedback from residential property occupants alongside Chelmsford Road and also feedback about the proximity of the pylon to the south of Chelmsford</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Road from those travelling along the road presented a preference for pylons set further back from the road and further from the residential property. This can only be achieved by the use of standard height lattice pylons allowing one pylon to be removed with slight realignment as noted above.</p> <p>Overall, there is no ecology reason in policy terms, to trigger the need to change the route from the 2024 preferred draft alignment nor adopt a different pylon design. Overall whilst there is no positive benefit in landscape and visual terms, the weight in policy terms given to heritage assets leads to a conclusion that the use of a section of low height pylons is preferred for the north of the river which includes. This includes TB138 from the statutory consultation. Feedback also leads to the conclusion that pylons south of the river including TB139 from the statutory consultation are more appropriate as standard lattice to reduce visual effects for those in nearby properties and travelling between the villages.</p>				
10-42.55	<p>Suggest the following changes to the Project / Criticism that National Grid have not considered the following changes:</p> <ul style="list-style-type: none"> a. Haul road - put on existing farm tracks b. Draft order area - some changes to widen it c. Pylon positioning - put on edges of fields not in the middle of the farm d. Access points - across the haul road to enable 	<p>National Grid notes the respondent's feedback. All changes requested were requested at statutory consultation and have been considered by the Project team and have been responded to within this report.</p> <p>National Grid has carefully considered the alternative routes proposed and acknowledges some improved compliance with some aspects of the Holford Rules in some cases but has also identified aspects where there</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>entry to respondents house, offices and farming land</p> <p>e. Health & Safety - during construction to respondents tenants and employees</p> <p>f. Proposed new route - suggested a new route west of Writtle Road</p> <p>g. Go underground</p> <p>h. Local visual eyesore for miles around as one of the highest points in Essex</p>	<p>is reduced compliance for those routes. A summary of the Holford Rules is provided within Appendix I22 of this report. Most notably and through discussion with Natural England are the potential effects on ancient woodland. Whilst noting that some parts have been coppiced, the advice received is that more regular coppicing (as required to maintain clearances) would be incompatible with the retention of the habitat as ancient woodland through change of regime. Further detail on the reasons are set out in the Design Development Report (DDR) published in 2023 (paragraph 5.5.129) and in the DDR published in 2024 (paragraph 5.4.196) (available on the Project website).</p> <p>In light of the feedback from Natural England there was no justification for completing surveys on an alternative route that was not able to be taken forwards. On the other points we have to balance the potential for effects on a range of factors. In this case the route is approximately mid-way between properties and a change around TB175 to TB176 to follow field boundaries would position the line much closer to a number of residential properties potentially oversailing gardens with increased vegetation loss and the pylons would still be within fields slightly away from the field edge to avoid construction works within gardens if possible. This may actually lead to increased effects on farming compared with a more midfield position. Temporary construction access is routed in the main along the alignment and usually set back from</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>hedgelines to protect any tree root zones, as otherwise route length and effects are increased by the need for additional spurs out to pylon works locations.</p> <p>Through routeing and siting, National Grid has sought to avoid, as far as practicable, locations of businesses.</p> <p>The Development Consent Order (DCO) application is accompanied by an Environmental Statement (ES) prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 ('the Infrastructure EIA Regulations'). The ES identifies and assesses the likely significant effects on the environment, resulting from the construction and operation of the Scheme and recommends appropriate mitigation to reduce effects.</p> <p>ES Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) presents an assessment on the potential impacts on businesses (e.g. Furness Farm House) where visual impact would be an economic concern as a result of the Project within the study area. As part of the assessment, a range of measures are considered throughout the construction phase of the Project to reduce, where practicable, disruption on businesses. These include: traffic management, signage and routing measures to ensure access or partial access could be maintained where feasible. These are identified within the ES, Chapter 15: Socio-economics, Recreation and Tourism, the Outline Code of Construction Practice (CoCP) (document</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>reference 7.2) and the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).</p> <p>A landscape and visual impact assessment (LVIA) has been undertaken as part of the EIA and reported in ES Chapter 13: Landscape and Visual (document reference 6.13). The LVIA sets out the potential landscape and visual effects, which includes consideration of visual amenity of visual receptor areas (including, for example, people in communities and using public rights of way). Chapter 13 is supported by Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3). This appendix sets out the assessment for visual receptor areas including F9 Edney Common and F10 Hylands Park which are relevant to this feedback relating to the section of the Project near Margaretting.</p> <p>Within this area the Project falls within the Brentwood Hills Landscape Character Area (LCA). The landscape assessment within Appendix 13.2: Landscape Baseline and Assessment (document reference 6.13.A2) contains detail on the assessment of effects of the Project on landscape character.</p> <p>Any landscape softening that does not remove or reduce a significant residual effect but seeks to off-set the effect is classed as landscape compensation. Such landscape compensation measures (e.g. creating or enhancing natural landscape features outside of the Order Limits) are considered in relation to the mitigation hierarchy but there is no requirement under policy to compensate for</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>all residual effects. The residual effects that remain following the application of the mitigation hierarchy and any compensation provided then falls to the Planning Balance.</p> <p>ES Chapter 6: Agriculture and Soils (document reference 6.6) presents an assessment on the potential impacts on agricultural landholdings (e.g. Furness Farm), where potential effects on agricultural operations include disturbance (where livestock are present), fragmentation, access restrictions or disruption to water supplies or land drainage. The Outline Code of Construction Practice (CoCP) (document reference 7.2) sets out the commitments to minimise the effects on agricultural landholdings, including maintaining access throughout construction. Potential effects on land drainage and water environment features are covered in ES Chapter 12: Hydrology and Land Drainage (document reference 6.12).</p> <p>Security is a key consideration in the planning and delivery of the Project. All construction sites will be subject to site-specific security assessments, and proportionate measures will be implemented to deter unauthorised access and theft. Where works require the temporary removal or alteration of existing gates, fences or other boundary features, arrangements will be made to maintain appropriate site security for the duration of the works. This may include temporary fencing, secure</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>gates, or other agreed measures to ensure the property remains protected.</p> <p>National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or Area of Outstanding Natural Beauty (AONB))'</i>. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at the respondent's farm would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
10-42.56	Suggest the use of underground cables for the Project at the Chelmer Valley Crossing (Stat Con - CH371)	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated</i>			X

		"Holford Rules" which remain a valuable tool in selecting and assessing potential overhead line route options as part of the options appraisal process. A summary of the Holford Rules is provided within Appendix I22 of this report. We are therefore not proposing a change to the alignment at Margaretting.				
10-42.62	Suggestion that the Project is routed away from / the Project should not be located at Writtle	National Grid has considered the respondent's feedback highlighting a preference for an alternative moved away from Writtle. In the absence of a specific basis for the change or a proposed alternative alignment, we have considered this feedback by following the guidance in the Holford Rules in developing the alignment. Guidelines on overhead line routeing are known as the "Holford Rules" which remain a valuable tool in selecting and assessing potential overhead line route options as part of the options appraisal process. A summary of the Holford Rules is provided within Appendix I22 of this report. We are therefore not proposing a change to the alignment at Writtle.	X		X	
10-42.63	Suggestion that the Project is routed away from / the Project should not be located at Broomfield	National Grid has considered the respondent's feedback highlighting a preference for an alternative moved away from Broomfield. In the absence of a specific basis for the change or a proposed alternative alignment, we have considered this feedback by following the guidance in the Holford Rules in developing the alignment. Guidelines on overhead line routeing are known as the "Holford Rules" which remain a valuable tool in selecting	X		X

		and assessing potential overhead line route options as part of the options appraisal process. A summary of the Holford Rules is provided within Appendix I22 of this report. We are therefore not proposing a change to the alignment at Broomfield.				
10-42.64	Suggestion that the Project is routed away from / the Project should not be located at Great Waltham	National Grid has considered the respondent's feedback highlighting a preference for an alternative moved away from Great Waltham. In the absence of a specific basis for the change or a proposed alternative alignment, we have considered this feedback by following the guidance in the Holford Rules in developing the alignment. Guidelines on overhead line routeing are known as the "Holford Rules" which remain a valuable tool in selecting and assessing potential overhead line route options as part of the options appraisal process. A summary of the Holford Rules is provided within Appendix I22 of this report. We are therefore not proposing a change to the alignment at Great Waltham.	X		X	
10-42.65	Suggestion that the Project is routed away from / the Project should not be located at Minnow End	National Grid has considered the respondent's feedback highlighting a preference for an alternative moved away from Minnow End. In the absence of a specific basis for the change or a proposed alternative alignment, we have considered this feedback by following the guidance in the Holford Rules in developing the alignment. Guidelines on overhead line routeing are known as the "Holford Rules" which remain a valuable tool in selecting and assessing potential overhead line route options as			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		part of the options appraisal process. A summary of the Holford Rules is provided within Appendix I22 of this report. We are therefore not proposing a change to the alignment at Minnow End.				
Economic / Employment Impact						
10-42.66	Concern about negative impact on businesses in the area	<p>Through the routeing and siting exercise, National Grid has sought to reduce as far as practicable impacts to businesses.</p> <p>Impacts on local businesses within the Local Study Area (the Order Limits) and within the 3 km Study Area (where visual impact is likely to be an economic consideration) are assessed in Environmental Statement (ES) Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15). As part of this assessment, a range of mitigation measures have been considered to reduce disruption to businesses and their users during the construction phase of the Project. These measures are identified in ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15), the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) which accompany the Development Consent Order (DCO) application.</p>	X		X	

Environmental Impact						
10-42.67	Concern that the Project will impact ancient woodland	Through routeing, siting and detailed design, National Grid has sought to reduce, as far as practicable, impacts on biodiversity and in particular features of high ecological value, such as ancient woodland. A standard 15 m buffer from construction activities has been applied wherever practicable. Potential direct and indirect impacts on each block of ancient woodland within the study area have been considered within the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8) and any necessary mitigation detailed to ensure no significant residual effects. An Ancient Woodland and Veteran Tree Strategy is included as part of the Outline Landscape and Ecological Management Plan (LEMP) (see Appendix B of the Outline LEMP (document reference 7.4)). The Outline LEMP (document reference 7.4) has been developed in consultation with relevant stakeholders including Natural England and local planning authorities.		X	X	
10-42.68	Concern that the Project will impact nature reserve / RSPB reserve / Special Protection Area (SPA)	Through routeing, siting and design development, National Grid has sought to reduce, as far as practicable, impacts on biodiversity and in particular features of high ecological value, such as local wildlife sites (LWS), Royal Society for the Protection of Birds (RSPB) reserves and Special Protection Area (SPA's). Whilst there are no impacts on RSPB reserves, potential direct and indirect impacts on LWS's and SPA's within the study area have been considered within the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8). SPA's and the associated impact on birds has also been considered within the Habitats Regulations Assessment (HRA) (document reference 5.3).	X		X	

10-42.69	Concern that the Project will result in a negative impact on the environment / countryside generally (no details given)	<p>National Grid has sought to reduce, as far as practicable, impacts on the environment / countryside through routeing and siting and an ongoing iterative design process which has taken on board feedback at different stages of the Project. The iterative design process sought to avoid areas of highest concern, for example through changes to the route alignment or changes to the method e.g. trenchless crossings. National Grid has engaged with a range of stakeholders (including Statutory Environmental Bodies (SEBs) and relevant local planning authorities) throughout the development of the Project design and environmental assessment work.</p> <p>National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project. The results of this assessment are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation (and maintenance) of the Project and recommends appropriate mitigation measures to reduce potential effects.</p> <p>A number of mitigation measures have been incorporated into the Project design. Mitigation relevant to specific environmental topics (including Ecology and Biodiversity, Landscape and Visual and Historic Environment) are presented in the relevant ES chapters. The Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Code of Construction Practice (CoCP) (document reference 7.2) contain a list of relevant good practice measures to avoid or reduce risks to habitats and species.</p> <p>In addition to the EIA, National Grid has set itself a target of delivering 10% biodiversity net gain (BNG) with</p>	X	X	X	
----------	---	--	---	---	---	--

		<p>environmental and societal benefits on all construction projects, meaning that as a result of measures taken, the biodiversity rating of the area will be enhanced by 10% greater than prior to the construction of the Project. The BNG target for the Project is currently voluntary and aligned with our corporate sustainability commitment.</p>				
10-42.70	Concern that the Project will impact conservation area	<p>The potential for the Project to affect the setting and significance of Conservation Areas has been comprehensively assessed in accordance with established best practice and guidance such as Good Practice Advice Note 3: The Setting of Heritage Assets (Historic England, 2017) and other relevant policy and guidance such as Conservation Principles (Historic England, 2008) and relevant planning policies including the Overarching National Policy Statement for Energy (EN-1).</p> <p>The assessment methodology and its application have been discussed with and agreed by key heritage stakeholders, including Historic England and relevant local planning authorities, through the Scoping process and subsequent thematic working group meetings. This collaborative approach has ensured that the assessment is robust, proportionate, and in line with expectations.</p> <p>Each Conservation Area potentially affected by the Project has been individually assessed for both direct and indirect effects, including impacts arising from change to setting. These assessments are presented in ES Chapter 11: Historic Environment of the Environmental Statement (document reference 6.11), supported by detailed mapping and analysis in the Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1). The methodology considers all relevant aspects of significance, including historical, architectural, and evidential values, as well as the contribution of setting to that significance.</p> <p>Where adverse effects on the setting of Conservation Areas have been identified, the Project has sought to</p>	X	X	X	

		<p>reduce these through route refinement and design evolution. This includes, where appropriate, adjustments to pylon locations, alignment shifts, and the development of mitigation proposals in the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5).</p> <p>We are therefore confident that the assessment of impacts on Conservation Areas has been carried out to a high standard and that appropriate measures have been taken to mitigate any identified adverse effects.</p>				
10-42.71	Concern about the impact of the Project on flooding	<p>A detailed Flood Risk Assessment (FRA) has been prepared (document reference 7.9). The FRA assesses flood risk to the Project and the impacts that the Project's construction and operation would have on flood risk from a wide range of sources. The assessment has been informed by a wide range of data sets, including the January and March 2025 data from the Environment Agency, and by engaging with the Environment Agency and all of the relevant Lead Local Flood Authorities and Drainage Boards. The FRA has identified a range of controls and mitigation measures to prevent flood risk impacts, which have been secured through a range of commitments set out in the Outline Code of Construction Practice (document reference 7.2). The FRA (document reference 7.9) also describes the measures and strategy that would be put in place to manage surface water runoff arising from Project construction worksites and operational infrastructure.</p>	X	X	X	
10-42.72	Concern for the permanent significant impacts identified at this location, affecting any Conservation Area or Registered Parks and Gardens, as it is the only location on the entire 184 km route where such impacts are identified	<p>National Grid has sought to reduce, as far as practicable, impacts on the environment through routeing and siting and an ongoing iterative design process which has taken on board feedback at different stages of the project. We have engaged with a range of stakeholders (including Statutory Environmental Bodies (SEBs) and relevant Local Planning Authorities)</p>		X	X	

<p>throughout the development of the Project design and environmental assessment work.</p> <p>National Grid acknowledges the concern regarding the permanent significant effects identified in the Chelmsford area, notably in relation to designated heritage assets such as Conservation Areas and Registered Parks and Gardens. These effects have been carefully considered through the assessment process in line with established methodology, which has been developed in accordance with relevant policy and guidance, including the National Planning Policy Framework and the Overarching National Policy Statement for Energy (EN-1).</p> <p>Our assessment is supported by a programme of field surveys, including geophysical and archaeological trial trenching, and appropriate mitigation measures are detailed in Table 6.1 of the Environmental Statement (ES) and in the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5). We are confident that the methodology applied is robust, proportionate, and has given appropriate weight to the potential impacts of the Project. Details of this assessment can be found in the Historic Environment Baseline Report (document reference 6.11.A1) and Appendix 11.2: Historic Environment Assessment Tables (document reference 6.11.A2).</p> <p>This methodology has been subject to consultation and agreement with stakeholders during regular archaeological and heritage meetings.</p> <p>In addition, a Landscape and Visual Impact Assessment (LVIA) has been carried out as part of the ES and reported in Chapter 13: Landscape and Visual (document reference 6.13). Conservation areas and registered parks and gardens are identified as part of baseline studies and taken into consideration when establishing the level and significance of landscape and visual effects. The approach to the LVIA follows</p>				
---	--	--	--	--

		professional guidance as set out in Appendix 6.13: Landscape and Visual Methodology (Document Reference 6.13.A1), which includes the 3rd Edition Guidelines on Landscape and Visual Impact Assessment (GLVIA3).				
Financial Compensation						
10-42.73	Concern that the Project will devalue property / impact on property value in this section	<p>National Grid acknowledges that its proposals may cause concern to landowners. Diminishment of property value known as 'injurious affection' and any other appropriate heads of claim would be considered on an individual basis in accordance with current legislation. We would pursue a voluntary agreement with affected landowners, acquiring rights in accordance with our Land Rights Strategy (the strategy is subject to review). If a voluntary agreement cannot be reached, then the Compulsory Purchase Code allows for a claim of compensation for the loss that property owners may have suffered as a direct result of the retained part of your property ownership being worth less as a direct result of the works.</p> <p>If there are any specific concerns about the devaluation of property, National Grid would advise seeking third party advice. or alternatively please contact the Project team:</p> <p>Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.</p> <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD.</p>	X		X	
10-42.74	Request for adequate financial compensation / Suggest that impacted individuals need to be compensated	All affected landowners would be compensated for any temporary/permanent losses, and this would be dealt with on a case-by-case basis in line with the Compensation Code.		X	X	

		<p>If there are any specific concerns requiring compensation and how it would be assessed, please contact the Project team: Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.</p> <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD</p> <p>The Government has published its guidance on community funds for transmission infrastructure (DESNZ, 2025). National Grid is committed to working with Ofgem, industry partners, local communities and their representatives to ensure community benefits are delivered fairly and effectively, driving lasting, positive change for the people and places integral to our developing electricity network.</p> <p>Government has also announced its plans to introduce a bill discount scheme for households within 500 m of new infrastructure, which it proposes to introduce through the Planning and Infrastructure Bill. This is evolving government policy. Government expects this scheme to be in place by 2026 and we would share further details as they emerge.</p> <p>National Grid is committed to providing a coordinated local and regional approach to community benefits. This would be delivered outside the development consent process, since this is not a material consideration in the decision on the proposed Project or a matter to be secured as part of the DCO, as per the Community Funds for Transmission Infrastructure: Guidance (DESNZ, 2025).</p>				
10-42.75	Request that National Grid purchase respondent's property / business	<p>National Grid is not required to purchase any properties or businesses as part of the Project.</p> <p>National Grid compensates landowners in line with the compensation code and any other relevant legislation.</p>			X	

Health, Safety and Wellbeing						
10-42.76	Concern that the Project may result in a negative impact on mental health / wellbeing	<p>National Grid recognises people may have concerns about the health effects of living close to an overhead line, and that the uncertainty whilst the proposals are developed may cause anxiety.</p> <p>We have sought to reduce potential effects on communities and residents through routeing and design. We have also sought to reduce concern or uncertainty about the proposals through making timely design decisions and engaging with the people and stakeholders throughout the development of the Project.</p> <p>The Project team will continue to engage with people potentially affected during progress of the Project, through regular communication including letters, phone calls and meetings. This would enable concerns to be raised and discussed at an early opportunity and provide a regular point of contact to respond to queries and concerns.</p> <p>We urge anyone with concerns to get in touch through the Norwich to Tilbury Freephone number, address or email throughout the progress of the Project:</p> <p>Call our Community Helpline: 0800 915 2497 (Lines are open Monday to Friday 9:00am – 5:30pm)</p> <p>Email us: contact@n-t.nationalgrid.com</p> <p>Write to us: FREEPOST N TO T (No stamp or further address details are required)</p> <p>The UK has a carefully thought-out set of policies for protecting us all against Electric and Magnetic Fields (EMFs), the main component of which is exposure guidelines. Those exposure guidelines are set by independent scientific bodies and are based on decades-long studies into the effects of EMFs and ill health. After those decades of research, the weight of evidence is against there being any health risks of EMFs below the guideline limits. These policies are</p>	X	X	X	

		incorporated into the decision-making process for Development Consent in National Policy Statement (NPS) EN-5. It is National Grid's policy to ensure that all of its equipment comply fully with those exposure limits.				
10-42.77	Concern about health risks associated with the Project / physical health risks associated with the Project	<p>Health considerations are given a high priority in the process by which we arrive at any proposals for new electricity circuits. Assessment of compliance with Electric and Magnetic Field (EMF) guidelines and policies is key to National Grid's approach. The UK has a carefully thought-out set of policies for managing EMFs. There have been over four decades of research looking into whether EMF can cause health effects and there are no established effects below the exposure limits. When designing our overhead lines, substations and underground cables design criteria, we ensure they would not exceed those exposure limits, even when operating at 100% capacity. Additionally, the precautionary measures which the Government have adopted, are applied to the design which ensure the EMFs reduce as quickly with distance as possible. Evidence of that compliance is presented in the EMF compliance report (document reference 7.8) submitted as part of the Development Consent Order (DCO) application.</p> <p>National Grid takes this issue very seriously and looks to authoritative and independent scientific organisations such as the World Health Organisation (WHO) and in the UK Health Security Agency (UKHSA) to review the worldwide body of scientific evidence on health. Important decisions on health are taken independently of industry, and National Grid have followed the guidance and policies adopted by Government on advice from their scientific experts. Each of these organisations have comprehensive reviews of EMF research available to view on their websites.</p>	X	X	X	

Heritage						
10-42.78	Concern about archaeological impacts	Through routeing and siting National Grid has sought to reduce as far as practicable potential impacts on the historic environment. The impacts of the Project on the historic environment are assessed in Chapter 11: Historic Environment of the Environmental Statement (ES) (document reference 6.11). The assessment considers the potential impact on archaeology, historic buildings and historic landscapes and includes assessment of potential for physical impact, impact through change to setting that affects the value of a heritage asset and impact through indirect factors such as change in hydromorphology. The assessment is supported by walkover, setting and geophysical surveys, as documented in Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1) and Appendix 11.4: Geophysical Survey Results Report (document reference 6.11.A4). Archaeological trial trench evaluation has also been undertaken and is reported in Appendix 11.5: Trial Trenching Results Report (document reference 6.11.A5). In addition to the proposals in the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4), the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5) sets out appropriate mitigation for the historic environment. The Project has engaged with Historic England and relevant planning authorities on aspects relating to heritage, including appropriate mitigation measures and techniques and to take their views into account during Project development which are detailed in ES Chapter 11: Historic Environment (document reference 6.11).	X		X	
10-42.79	Concern about negative impact on heritage / Suggest that the Project should be routed away from heritage buildings / listed buildings / historical site	Through routeing and siting National Grid has sought to reduce as far as practicable potential impacts on the historic environment. The impacts of the Project on the	X	X	X	

		<p>historic environment are assessed in Chapter 11: Historic Environment (document reference 6.11) of the Environmental Statement (ES). The assessment considers the potential impact on archaeology, historic buildings and historic landscapes and includes assessment of potential for physical impact, impact through change to setting that affects the value of a heritage asset and impact through indirect factors such as change in hydromorphology. The assessment is supported by walkover, setting and geophysical surveys, as documented in Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1) and Appendix 11.4: Geophysical Survey Results Report (document reference 6.11.A4). In some areas archaeological trial trench evaluation has been undertaken and is reported in Appendix 11.5: Trial Trenching Results Report (document reference 6.11.A5). In addition to the proposals in the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4), the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5) sets out appropriate mitigation for the historic environment. The Project has engaged with Historic England and relevant planning authorities on aspects relating to heritage, including appropriate mitigation measures and techniques. and to take their views into account during Project development.</p>				
10-42.80	Concern about the impact of the Project on Protected Lanes	<p>The potential impact of the Project on Protected Lanes has been carefully considered throughout the routeing and siting process. National Grid has actively sought to reduce the impact on the historic environment, including Protected Lanes, as part of its commitment to preserving the cultural and historic character of the landscape.</p> <p>The assessment of effects on Protected Lanes, where relevant as heritage assets or contributing to the setting of other designated or non-designated assets, has been</p>	X	X	X	

		<p>undertaken in accordance with established best practice and guidance such as Historic England's Good Practice Advice Note 3: The Setting of Heritage Assets (2017) and national and local planning policies.</p> <p>The impacts of the Project on the historic environment are set out in Chapter 11: Historic Environment of the Environmental Statement (document reference 6.11), which includes an evaluation of potential physical impacts as well as impacts resulting from changes to setting. The assessment is informed by baseline data and site-specific investigations, including walkover surveys, geophysical survey results, and trial trenching where appropriate.</p> <p>In addition, management measures to minimise and mitigate impacts during construction and operation phases are detailed in Table 6.1 of the Environmental Statement and in the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5). These documents outline the approach to managing risks to heritage assets, including Protected Lanes, and reflect a commitment to adopting proportionate and appropriate mitigation based on the nature and sensitivity of the asset.</p> <p>We are therefore confident that Protected Lanes have been appropriately considered within a robust and proportionate heritage assessment, supported by consultation with relevant stakeholders and in accordance with national guidance.</p>				
10-42.81	Request that the two Waltham villages, Langleys, the woodlands, farmland and ancient monument are considered as one historic landscape and not in a piecemeal fashion	The methodology and approach used for the assessment of heritage assets, including the criteria for scoping in or out assets for detailed consideration, have been discussed and agreed with relevant stakeholders, including Historic England and local planning authorities, through formal scoping and ongoing engagement via thematic working group meetings. The assessment has been undertaken in accordance with established guidance, including the Design Manual for Roads and			X	

		<p>Bridges (DMRB) LA 104 Environmental Assessment and Monitoring and LA 106 Cultural Heritage Assessment (National Highways, 2020), and informed by Historic England's Conservation Principles (2008), the Guidance on Heritage Impact Assessments for Cultural World Heritage Properties (International Council on Monuments and Site (ICOMOS), 2011), and the Guidance and Toolkit for Impact Assessment in a World Heritage Context (United National Educational, Scientific and Cultural Organisation (UNESCO), International Centre for the Study of the Preservation and Restoration of Cultural Property (ICCROM), ICOMOS, International Union for Conservation of Nature (IUCN), 2022). This methodology was agreed as part of the Preliminary Environmental Information Report (PEIR) and remains consistent throughout the Environmental Statement (ES) (document reference Volume 6: Environmental Statement). The assessment has drawn upon a robust evidence base, including historical and archaeological records, site visits, and professional judgment. National Grid are therefore confident in the appropriateness and robustness of the approach used to assess the value and significance of the heritage assets affected by the Project.</p>				
Mitigation						
10-42.82	Suggest mitigation measures	<p>An Environmental Statement (ES) (document reference Volume 6: Environmental Statement) has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 ('the Infrastructure EIA Regulations'). The ES identifies and assesses the likely significant effects on the environment resulting from the construction, operation (and maintenance) of the Project and recommends appropriate mitigation to reduce effects. Environmental mitigation measures have been defined within each environmental topic chapter and set out in</p>	X	X	X	

		relevant management documents submitted with the Development Consent Order (DCO) application, including the Outline Code of Construction Practice (CoCP) (document reference 7.2), the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5).				
Primary Access Routes / Haul Road / Construction Compounds						
10-42.83	Concern that bridge strengthening works at F7 will impact access to pylons 186 to 201	<p>National Grid has engaged with the bridge asset owner, Network Rail. As part of our assessment we have considered the worst case scenario in terms of vehicles accessing the bridge.</p> <p>Appropriate mitigations have been agreed in principle with Network Rail conditional on a further condition survey prior to use, ensuring the appropriate safe use of the bridge for access during construction.</p> <p>The discussions and studies to date do not reveal a need to strengthen the asset. This will be kept under review.</p>		X	X	
Public Rights of Way (PRoW)						
10-42.84	Concern about negative impact on PRoW / footpaths / cycle paths / bridleways	<p>Through routeing and siting, National Grid has sought to reduce, as far as practicable, impacts and disruption to Public Rights of Way (PRoW).</p> <p>The iterative design process identified the existing PRoW network and their wider connectivity and sought where practicable to reduce and where possible remove impacts to PRoW.</p> <p>Effects on PRoW would be mitigated where possible, maintaining access where practicable, with closures as a last resort. We will continue to engage with relevant stakeholders on the PRoW network to enable feedback</p>	X	X	X	

		and input to be considered as the Project progresses. An Outline Public Rights of Way Management Plan (document reference 7.6) is submitted with the Development Consent Order (DCO) application.				
Requests						
10-42.85	Request for further impact surveys in this section	<p>National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project. The assessment is informed by a suite of field surveys and desk studies and results are presented in an Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the application for development consent. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation (and maintenance) of the Project and recommends appropriate mitigation measures to reduce potential adverse impacts.</p> <p>The scope of the EIA is included in the Scoping Report (document reference 6.19) which was submitted to the Planning Inspectorate in November 2022 and their Scoping Opinion (document reference 6.20) received in December 2022. This provided the opportunity for statutory bodies to comment on the scope of the EIA which included our approach on study areas, data collection and baseline conditions for a range of environmental topics. We also discussed and agreed survey scope with stakeholders (including Statutory Environmental Bodies and Local Planning Authorities) following the Scoping Opinion (document reference 6.20) to ensure a robust baseline assessment.</p> <p>National Grid has prepared an Outline Code of Construction Practice (CoCP) (document reference 7.2) which sets out the required mitigation measures and environmental commitments that would be implemented during the construction phase of the Project to avoid or reduce potential effects of the Project on the</p>	X	X	X	

		environment, including commitments to undertake further surveys.				
Tourism						
10-42.86	Concern about impact of the Project on tourism	<p>Through routeing and siting, National Grid has sought to avoid, as far as practicable, locations important for leisure and tourism.</p> <p>Environmental Statement (ES) Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) presents an assessment on the potential impacts on tourism economy (during construction) and tourism assets (during construction and operation), including visitor accommodations. As part of this assessment, a range of measures have been considered throughout the construction phase of the Project to minimise disruption on tourism. These include: traffic management, signage and routeing measures. These are identified within the ES Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15), the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).</p>	X		X	
Visual Impact						
10-42.87	Concern about cumulative visual impact of the Project alongside existing overhead lines / concern about wirescape	<p>National Grid notes the feedback received and has taken it into consideration as part of the iterative design process. National Grid has liaised with UK Power Network to understand opportunities for 132 kV network rationalisation. The Project includes proposals to replace certain sections of 132 kV overhead line connection with underground cable and also to remove some sections of 132 kV overhead line to rationalise the network and reduce potential for cumulative wirescape effects.</p> <p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the Environmental Impact Assessment (EIA). Existing infrastructure (such as</p>	X		X	

		<p>existing overhead lines) has formed part of the baseline environment for the Project to be assessed against, to identify if significant landscape and / or visual effects are likely to arise. The LVIA presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) sets out potential landscape and visual effects. The rationalisation of the existing 132 kV network in some areas forms part of the embedded landscape mitigation, as set out in Chapter 13.</p> <p>The findings and conclusions of the LVIA and other topics assessments have been considered within the Cumulative Impact Assessment, presented in ES Chapter 17: Cumulative Effects Assessment (document reference 6.17), lists the developments as part of the cumulative assessment. This chapter considers the landscape and visual effects of the Project cumulatively with other proposed developments that are being progressed.</p>				
10-42.88	Concern that the Project will be unsightly / visually intrusive (including overhead lines, CSECs and substations) / Concern that the Project will cause a negative impact on views	<p>National Policy Statement (NPS) EN-5 makes it clear that the Government considers overhead lines to be appropriate and acceptable in most instances, although it recognises that there may be, at particularly sensitive locations, potential adverse landscape and visual impacts of an overhead line that make it inconsistent with our duties and relevant planning policy.</p> <p>The Dedham Vale National Landscape (previously an Area of Outstanding Natural Beauty (AONB)) designation is one such location where underground cable technology is proposed with the extent of underground cabling extending beyond the boundary in response to the potential for the Project to affect the National Landscape. Our proposals include a total of approximately 20 km of underground cable through and in the vicinity of the Dedham Vale National Landscape, including a section at Great Horkesley to reduce the changes in views and setting of the National Landscape from within and adjacent to its designated boundary.</p>	X	X	X	

		<p>Underground cabling is also proposed for a short section of 400 kV overhead line crossing near Fairstead.</p> <p>Cable Sealing End (CSE) compounds are required to facilitate sections of underground cable. The proposed East Anglia Connection Node (EACN) substation is required to connect customers and the proposed Tilbury North Substation is required to connect the Project into the existing Tilbury Substation. These components have been carefully sited taking into consideration Horlock Rules including the potential for landscape and visual effects.</p> <p>The higher cost of underground cables to bill paying consumers, and the environmental implications of installing underground cables and maintaining them at locations outside the Dedham Vale National Landscape, are not considered to be justifiable in the context of national policy or National Grid's statutory duties, which include the need to be economical and efficient.</p> <p>A Landscape and Visual Impact Assessment (LVIA), presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13), has been undertaken as part of the Environmental Impact Assessment (EIA). The LVIA includes an assessment on both landscape character and visual amenity.</p> <p>Landscape mitigation is proposed within Environmental Areas around substations and CSE compounds. The Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) includes details regarding the planting proposals.</p>				
10-42.89	Criticism of the assessment of the visual impact of the 'Alternative Western Route' at Chelmsford	<p>The Design Development Reports (2023 and 2024) can be found on the Project website and the 2025 Design Development Report (document reference 5.15) submitted as part of the Development Consent Order (DCO) application have all considered this alternative and set out the main reasons for decision making. As</p>	X		X	

		<p>such, they do not provide detail on all environmental topics nor in the depth set out in the Environmental Statement (document reference Volume 6: Environmental Statement). In this case the 2024 Design Development Report identified that a change to the western alternative would not mean that the visual effects of the Project disappear but would be transferred, to at least some degree, to other visual receptors. The 2024 Design Development Report at paragraph 5.4.185 notes the western alternative would have a beneficial effect on residential amenity but also that on balance and due to other factors, the change is not taken forwards. Whilst the respondent may have a different perception of the visual impact (though the detail of this is not specified) we do not consider, even if there was a greater beneficial change, that this would outweigh the other factors counting against the western alternative.</p>				
10-42.90	<p>Criticism of National Grid's claim (within the 2024 Design Development Report) that the bypass and the screening from trees would reduce potential effects on Little Waltham</p>	<p>Paragraph 5.4.182 of the 2024 Design Development Report (found on the Project website) notes that the 2023 preferred draft alignment routes between conservation areas and past the eastern edge of the Langleys Registered Park and Garden, though screening by the bypass and from trees would reduce potential effects on Little Waltham. In addition, the trees in the extensive parkland would provide filtering of views at Great Waltham and to direct views from the Grade I Listed Langleys.</p> <p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the Environmental Impact Assessment (EIA). The LVIA sets out the potential landscape and visual effects, including consideration of visual amenity of people in and around settlements such as Little Waltham and Great Waltham, and also impacts on landscape character. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13). The assessment notes that existing vegetation along the eastern edge of</p>	X		X	

		Langleys registered park and garden, and existing vegetation along field and road boundaries to the west of Little Waltham would provide some filtering of views towards the Project. Significant visual effects are identified during construction and operation for people in Visual Receptor Area (VRA) F4 Little Waltham.				
10-42.91	Criticism of National Grid's argument that trees will mitigate the impact (e.g. by offering a permanent and reliable barrier) of the Project on Little Waltham and Great Waltham	<p>National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project. The results of this assessment are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation (and maintenance) of the Project and recommends appropriate mitigation measures to reduce potential effects.</p> <p>Paragraph 5.4.182 of the 2024 Design Development Report (found on the Project website) notes that 'The 2023 preferred draft alignment routes between conservation areas and past the eastern edge of the Langleys Registered Park and Garden, though screening by the bypass and from trees would reduce potential effects on Little Waltham. In addition, the trees in the extensive parkland would provide filtering of views at Great Waltham and to direct views from the Grade I Listed Langleys.'</p> <p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the EIA. The LVIA sets out the potential landscape and visual effects, including consideration of visual amenity of people in and around settlements such as Little Waltham and Great Waltham, and also impacts on landscape character. The LVIA is presented in the ES, Chapter 13: Landscape and Visual (document reference 6.13). The assessment notes that existing vegetation along the eastern edge of Langleys registered park and garden, and existing vegetation</p>	X		X	X

<p>along field and road boundaries to the west of Little Waltham would provide some filtering of views towards the Project. Significant visual effects are identified during construction and operation for people in Visual Receptor Area (VRA) F4 Little Waltham.</p> <p>Whilst National Grid does not have direct control of the existing vegetation that would provide the screening mentioned above, much of the vegetation lies within the conservation areas of Little Waltham and Great Waltham, and within the Langleys registered park and garden, both of which afford greater protection to trees and vegetation.</p> <p>National Grid has worked to minimise potential impacts on the historic environment, including conservation areas such as Little Waltham and Great Waltham as well as their setting, through strategic routeing and siting measures. Statutory consultation feedback and the results of archaeological fieldwork have been used to inform design development to reduce as far as practicable impacts to archaeological remains in this area.</p> <p>The impacts of the Project on the historic environment are assessed in Chapter 11: Historic Environment (document reference 6.11) of the Environmental Statement (ES). The assessment considers the potential impact on archaeology, historic buildings and historic landscapes and includes assessment of potential for physical impact, impact through change to setting that affects the value of a heritage asset and impact through indirect factors. The assessment is supported by walkover, setting and geophysical surveys, as documented in Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1) and Appendix 11.4: Geophysical Survey Results Report (document reference 6.11.A4). In addition to the proposals in the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) the Outline Archaeological Mitigation Strategy and Outline</p>				
---	--	--	--	--

		<p>Written Scheme of Investigation (document reference 7.5) sets out appropriate mitigation for the historic environment.</p> <p>In response to feedback received during the statutory consultation, including comments from Historic England and other stakeholders, the alignment in this area was revised in March 2025 to reduce impacts on Little Waltham. Low height pylons are now used in this area, following discussions with heritage stakeholders, in order to reduce the visibility and visual impact on nearby designated assets. This design change significantly reduces views of pylons or the proportion of the structure visible from key viewpoints, including from within both conservation areas.</p> <p>Therefore, the overall magnitude of these impacts has been reduced. The assessment concludes that the harm resulting from the revised alignment is 'less than substantial' in the context of National Policy Statement (NPS) EN-1. Any remaining harm has been, and continues to be, weighed against the wider public benefits of the Project in accordance with national planning policy.</p> <p>The alignment and design therefore reflect a considered response to consultation feedback and a commitment to minimising impacts on the historic environment.</p>				
Wildlife / Ecology Impact						
10-42.92	Concern about impact of the Project on birds	<p>Chapter 8: Ecology and Biodiversity of the Environmental Statement (ES) (document reference 6.8) considers potential impacts during the construction and operational phase of the Project on birds. Bird surveys have been undertaken across the route between 2022-2025 to determine an accurate baseline value, the scope of which has been agreed with Natural England and Local Planning Authorities. The potential for bird collision risk impact during the operational phase has been assessed within the ES and Habitat Regulations</p>	X		X	

		<p>Assessment (HRA) (document reference 5.3) and agreed with Natural England. Survey results have identified no areas of significant bird collision risk across the Project.</p> <p>It is noted that birds are a mobile species, and it is likely that active nests for common and widespread species may be encountered during the construction phase. Precautionary working methods for breeding birds are included within the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the Outline Landscape Ecological Management Plan (LEMP) (document reference 7.4) accompanying the Development Consent Order (DCO) application.</p>				
10-42.93	Concern that the Project will result in a negative impact on species (protected status not specified)	<p>Through routeing, siting and detailed design National Grid has sought to reduce, as far as practicable, potential impacts on biodiversity including protected species. The design process has taken account of existing biodiversity, the natural environment and, where practicable, has sought to reduce impacts on areas of ecological sensitivity including protected species and their associated habitats, through avoidance or mitigation. A comprehensive survey effort for a range of protected species was completed over the 2023 – 2025 period. Chapter 8: Ecology and Biodiversity of the Environmental Statement (ES) (document reference 6.8) assesses the effects on protected species based on this baseline information and where/if required appropriate mitigation measures are detailed. Suitable mitigation for protected species has been developed in consultation with Natural England to ensure legal compliance and best practice guidelines are adhered to. Where necessary, draft licence applications have been drafted and National Grid is in the process of agreeing the detail within the licence documents with Natural England, in order to obtain the relevant Letters of No Impediment (LoNI). Mitigation for non-licensable protected species has been included within the Outline Landscape and</p>	X	X	X	

		Ecological Management Plan (LEMP) (document reference 7.4).				
10-42.94	Concern that the Project will result in a negative impact on protected species	Through routing, siting and detailed design, National Grid has sought to reduce, as far as practicable, potential impacts on biodiversity including protected species. The design process has taken account of existing biodiversity, the natural environment and, where practicable, has sought to reduce impacts on areas of ecological sensitivity including protected species and their associated habitats, through avoidance or mitigation. A comprehensive survey effort for a range of protected species was completed over the 2023 – 2025 period. Chapter 8: Ecology and Biodiversity of the Environmental Statement (ES) (document reference 6.8) assesses the effects on protected species based on this baseline information and where/if required appropriate mitigation measures are detailed. Suitable mitigation for protected species has been developed in consultation with Natural England to ensure legal compliance and best practice guidelines are adhered to. Where necessary, draft licence applications have been drafted and National Grid is in the process of agreeing the detail within the licence documents with Natural England, in order to obtain the relevant Letters of No Impediment (LoNI). Mitigation for non-licensable protected species has been included within the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4).	X	X	X	
10-42.95	Concern that the Project will have a negative impact on bees / Bees will be unable to navigate under high voltage overhead lines	As well as possible effects on humans, possible effects of Electric and Magnetic Fields (EMFs) on various animals have been studied a number of times. No proven effects of EMFs have been found in any species at levels below the guidelines. This is confirmed in National Policy Statement (NPS) EN-5 which states: 'There is little evidence that exposure of crops, farm	X		X	

		<p>animals or natural ecosystems to transmission line EMFs has any agriculturally significant consequences.'</p> <p>Beehives can become charged if directly under an overhead line because of the electric field it produces. For existing overhead lines, this can be eliminated by screening or earthing the hive, but for new overhead lines, embedded design measures and careful routeing would avoid any potential effects. There does not seem to be evidence of EMFs adversely affecting bees directly. In the United States of America, the strip of land along power lines has been shown to be particularly attractive to bees, with these areas being utilised by commercial bee farms. Additionally, National Grid has worked with the British Beekeeping Association to establish hives around our sites, including high voltage substations, which have thrived.</p>				
10-42.96	Concern that the Project will result in a negative impact on flora / plants / woodlands / hedgerows	<p>Through routeing, siting and detailed design, National Grid has sought to reduce, as far as practicable, potential impacts on biodiversity including priority grassland, wetland, woodland, and hedgerow habitats. The design process has taken account of existing biodiversity, the natural environment and, where practicable, seeks to reduce impacts on areas of ecological sensitivity, through avoidance or mitigation.</p> <p>Chapter 8: Ecology and Biodiversity of the Environmental Statement (ES) (document reference 6.8) assesses the effects on important ecological receptors (which includes protected plants, woodlands and hedgerows).</p> <p>As part of the Environmental Impact Assessment (EIA) process for the Project, a suite of ecological surveys has been to be undertaken. The findings of which inform the design and approach to mitigation.</p> <p>The Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Code of Construction Practice (CoCP) (document</p>	X	X	X	

		<p>reference 7.2) contain a list of relevant good practice measures to avoid or reduce impacts on valuable habitats.</p> <p>The Environment Act 2021 introduces a mandatory requirement for 10% Biodiversity Net Gain (BNG) for new Development Consent Order (DCO) developments (which is not yet in force and not expected until May 2026). National Grid have committed to delivering 10% BNG with environmental and societal benefits on all construction projects. The BNG target for the Project is currently voluntary and aligned with our corporate sustainability commitment.</p> <p>As well as seeking to avoid and minimise impacts to nature, the Project considers the land required for mitigation, compensation and enhancement that can deliver BNG and wider environmental benefits. This will require delivery of offsite Biodiversity Units via habitat creation or enhancement actions in strategic areas, and we will consider all offsite options that are available to us.</p>				
10-42.97	Concern that the Project will result in a negative impact on rivers / other bodies of water	<p>Through routeing, siting and detailed design National Grid has sought to reduce, as far as practicable, potential impacts on biodiversity including river ecology. The design process has taken account of existing biodiversity, the natural environment and, where practicable, has sought to reduce impacts on areas of ecological sensitivity such as river corridor habitats, through avoidance or mitigation. The same approach has been taken to account for rivers and their floodplains, seeking to avoid or reduce the footprint of the Project within floodplains.</p> <p>As part of the Environmental Impact Assessment (EIA) process for the Project, a suite of ecological surveys has been undertaken, including along river corridors. The data has informed the assessment of effects on biodiversity, hydromorphology, water quality and flood risk presented in the Environmental Statement (ES),</p>	X		X	

		<p>Chapter 8: Ecology and Biodiversity (document reference 6.8) and ES Chapter 12: Hydrology, Land Drainage and Flood Risk (document reference 6.12) and the Water Framework Directive Assessment (document reference 7.10).</p> <p>Further, the Project has engaged with Natural England, the Environment Agency and Local Planning Authorities on aspects relating to river ecology, water quality and flood risk, and appropriate mitigation measures and techniques have been secured, as detailed in the Outline Code of Construction Practice (CoCP) (document reference 7.2).</p> <p>The Environment Act 2021 introduces a mandatory requirement for 10% Biodiversity Net Gain (BNG) for new Development Consent Order (DCO) developments (which is not yet in force and not expected until May 2026). National Grid has committed to delivering 10% BNG with environmental and societal benefits on all construction projects including for river ecology. The BNG target for the Project is currently voluntary and aligned with National Grid's corporate sustainability commitment.</p> <p>As well as seeking to avoid and minimise our impacts on nature, the Project includes enhancement of watercourse habitats as part of BNG mitigation.</p>				
10-42.98	Concern that the Project will result in a negative impact on wildlife / biodiversity / ecology (generally)	<p>Through routeing, siting and detailed design National Grid has sought to reduce, as far as practicable, potential impacts on biodiversity. The design process has taken account of existing biodiversity, the natural environment and, where practicable, has sought to reduce impacts on areas of ecological sensitivity, through avoidance or mitigation.</p> <p>Chapter 8: Ecology and Biodiversity of the Environmental Statement (ES) (Document Reference 6.8) assesses the effects on important ecological receptors. As part of the Environmental Impact</p>	X	X	X	

		<p>Assessment (EIA) process for the Project, a suite of ecological surveys has been to be undertaken over the 2022-2025 period. The findings of which inform the design and approach to mitigation.</p> <p>The Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Code of Construction Practice (CoCP) (document reference 7.2) contain a list of relevant good practice measures to avoid or reduce impacts on valuable habitats and species. The Environment Act 2021 introduces a mandatory requirement for 10% Biodiversity Net Gain (BNG) for new Development Consent Order (DCO) developments (which is not yet in force and not expected until May 2026). National Grid has committed to delivering 10% Biodiversity Net Gain (BNG) with environmental and societal benefits. The Net Gain target for the Project is currently voluntary and aligned with our corporate sustainability commitment.</p> <p>As well as seeking to avoid and minimise impacts to nature, the Project considers the land required for mitigation, compensation and enhancement that can deliver BNG and wider environmental benefits. This would require delivery of offsite Biodiversity Units via habitat creation or enhancement actions in strategic areas, and we will consider all offsite options that are available to us.</p>				
10-42.99	Concern that the Project will impact trees covered by Tree Preservation Orders / Tree Protection Orders	<p>The Project has carefully considered the impact on trees covered by Tree Preservation Orders (TPOs). The Environmental Statement Appendix 13.6: Arboricultural Impact Assessment (AIA) (document reference 6.13.A6) provides details of the TPOs impacted by the scheme together with Schedule 14: Trees Subject to TPOs of the draft Development Consent Order.</p> <p>Arboricultural mitigation measures including trees with TPOs are set out within the Outline Code of Construction Practice (CoCP) (document reference 7.2)</p>		X	X	

	<p>and in the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4).</p> <p>The Arboricultural Clerk of Works will monitor works conducted by a suitably qualified and experienced arborist to trees / within proximity to all retained trees, including trees under Tree Preservation Orders and veteran trees, to ensure relevant control measures are in place to protect retained trees.</p> <p>National Grid has committed to a 3:1 replacement for individual trees and individual trees within small groups. The Project will prioritise the replanting for individual trees and small groups of individual trees within the Order Limits, offsite provision may however be required. Details of the onsite tree planting will be provided in accordance with the final LEMP or the Reinstatement Planting Plan secured in the draft DCO (document reference 3.1).</p>

Essex 7 Change feedback (Targeted Consultation)

Table 10-43 Summary of consultee comments and National Grid's response

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Consultation						
10-43.1	Criticism of consultation materials on this change (Essex 7)	<p>National Grid notes the respondent's feedback. For each of our targeted consultations we developed an overview leaflet and Environmental Implication of Change (EIC) document which included a section on 'Landscape and Visual' changes compared to our proposals at statutory consultation. These were sent to properties within the bespoke consultation zone for the relevant change. More information on how we defined the consultation zones is available in this Consultation Report. We also published a consultation strategy and overview map. All these documents remain available on the Project website. The information provided at the targeted consultations was considered proportionate to the changes being consulted upon.</p> <p>We believe that all the relevant information required for the public to make informed decisions was available and do not believe that this impacted the feedback we received.</p>		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-43.2	Request that a review be undertaken of the alternative alignment to assess Public Health impacts within Essex 7	For each of the targeted consultations, including Essex 7, an Environmental Implications of Change document was prepared which compared the changes to our proposals at statutory consultation for each environmental topic, including health and wellbeing. The assessment for health and wellbeing concluded that, for the alternative alignment proposed, there would be no change to the type or significance of health and wellbeing effects, when compared to the design and Preliminary Environmental Information Report (PEIR) presented at statutory consultation.		X	X	
10-43.3	Request within Essex 7, that consideration be given to any interaction between pylons TB130 to TB132 and Phase 2 of the Chelmsford Northeast Bypass, which has planning permission	National Grid notes the respondent's feedback, and we can confirm that we have designed the pylon locations and conductor electrical clearances to account for the Chelmsford Northeast Bypass. Coordination between the two projects would be required during construction phases, should they overlap, to safely facilitate delivery of both projects. With this in mind we have shown within the Order Limits an additional area of land from which temporary access for construction can be taken for Norwich to Tilbury from the new roundabout created by the Chelmsford Northeast Bypass should that project be developed first.		X	X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Design Change						
10-43.4	Oppose the proposed change - Essex 7 (generally)	National Grid notes the respondent's feedback.		X	X	
10-43.5	Support the proposed change - Essex 7 (generally)	National Grid notes the respondent's feedback.			X	
10-43.6	Oppose the proposed Essex 7 alignment, instead, suggest that the original route is maintained, without any eastward deviation to prevent significant and unacceptable impacts on heritage assets and property values at Long Lane	<p>National Grid notes the respondent's feedback that the original route is preferred over the potential alignment should mineral resource abstraction plans come to fruition.</p> <p>Minerals resources have to be abstracted where they are found. In this case the potential to reposition the pylons to reduce the extent of minerals sterilisation is a reasonable response and coincides, to at least some extent, with expected stand offs from other features (including ancient woodland). The pylons may be relocated, and this may increase effects experienced at some residential properties and listed buildings, though much of this is a transfer from other properties that see a broadly equivalent reduction in effect. The effects are reported in the Environmental Statement (document reference Volume 6: Environmental Statement).</p>			X	
10-43.7	Request alternative options for accessing H30-A2, including using the existing A12 slip road and Writtle Road instead of routing through Margretting and Ivy Barns Lane	Following comments received at consultation, including feedback from the Local Highway Authority, National Grid has reviewed this proposed Primary Access Route (PAR). Our assessments take into account the preferable traffic and transport perspective which is to use the full junction on the A12 at J15, thus routing through Margareting.		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>This route would be the worst-case scenario and has the greatest number of sensitive receptors. We have assessed this option to ensure it is feasible if the slip road off existing A12 J14 (which has reduced receptors) is inaccessible. The option to use J14 slip road will remain.</p> <p>Access from Ivy Barns Lane is preferred over Writtle Road because Ivy Barns Lane directly intersects the haul road whereas Writtle Road is located over half a kilometer away and would require and additional haul road to connect the public highway and the haul together, impacting more landowners.</p>				
Environmental Impact						
10-43.8	Concern that the Project will result in increased flood risk around the respondents' properties at Long Lane due to disruption to natural and engineered field drainage, if Essex 7 change is adopted	Where the Project interacts with existing field drainage systems, such as those at Long Lane, commitment AS05 within the Outline Code of Construction Practice (CoCP) (document reference 7.2) details that engagement with affected landowners would be carried out to investigate the current extent of land drainage. A scheme of pre-construction land drainage would be designed with the intent of maintaining the efficiency of the existing known land drainage systems and to assist in maintaining the integrity of the working area during construction. The Main Works Contractor(s) would also ensure any land drains, within the Order Limits, affected as a result of the Project, would be reinstated to their former condition, where agreed with the landowner. Any			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		installed pre-construction land drainage to replace existing land drains affected by permanent infrastructure, as well as any drainage improvements resulting from the Project, would be retained. This would ensure that any temporary disruption is managed and that there would be no increase to flood risk.				

Essex 8 Change feedback (Targeted Consultation)

Table 10-44 Summary of consultee comments and National Grid's response

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Consultation						
10-44.3	Criticism of consultation materials on this change (Essex 8)	<p>National Grid notes the respondent's feedback. For each of our targeted consultations we developed an overview leaflet and Environmental Implication of Change (EIC) document which included information on ecological and environmental impacts of the change. These were sent to properties within the bespoke consultation zone for the relevant change. More information on how we defined the consultation zones is available in this Consultation Report (document reference 5.1). We also published a consultation strategy and overview map. All these documents remain available on the Project website. The information provided at the targeted consultations was considered proportionate to the changes being consulted upon.</p> <p>We believe that all the relevant information required for the public to make informed decisions was available and do not believe that this impacted the feedback we received.</p> <p>The information in the consultation leaflet for Essex 8 stated: <i>'We are proposing to use lower height pylons</i></p>		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>between TB136 to TB142' to reflect that all pylons in this line have been included as part of the proposed change.</p> <p>Alternative technologies, such as low height pylons, were presented at Essex 8 due to the nature of the landscape and feedback we received at statutory consultation and would not be suitable for use throughout the proposed route, where standard lattice pylons are considered to be more appropriate.</p>				
10-44.26	Criticism that the lack of consultation on undergrounding the Chelmer Valley crossing or using subsea cables is contrary to National Policy Statement EN-5 para 2.9.14	<p>There is no fully offshore solution to connect offshore wind to the Grid. We have to bring the power onshore somewhere. National Grid's job is to carefully consider the most feasible options and present proposals for public consultation, which go as far as possible to address impacts on local communities and the environment and also deliver for electricity consumers.</p> <p>National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or Area of</i></p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p><i>Outstanding Natural Beauty (AONB))</i>'. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at the Chelmer Valley crossing would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		(document reference 6.13) and this has identified any need for additional mitigation.				
10-44.32	Request that an in-depth review and balancing exercise be undertaken to assess the impact of proposing full or lower height pylons (respondent is opposed to the Essex 8 change; e.g. on the historic environment, public health, visual impact). With this, request further review of the type, spacing and nature of the pylons, and suggest that where harm is unavoidable, mitigation and heritage compensatory measures including funding should be delivered	<p>Request that an in-depth review and balancing exercise be undertaken to assess the impact of proposing full or lower height pylons (respondent is opposed to the Essex 8 change, e.g. on the historic environment, public health, visual impact). With this, request further review of the type, spacing and nature of the pylons, and suggest that where harm is unavoidable, mitigation and heritage compensatory measures including funding should be delivered.</p> <p>We have considered pylon type and localised alignment variations responding to feedback from Historic England and other stakeholders. This includes the stakeholder feedback in this case opposed to the Essex 8 change. We do consider that a low height lattice pylon will be beneficial for a section of the route north of the River Chelmer. This is a revision aimed specifically to reduce impacts on nearby designated heritage assets, including Little and Great Waltham Conservation Areas and a designed garden avenue view from the Grade I Langleys listed building. As part of this refinement, the alignment has been adjusted in combination with some use of lower-profile pylons to reduce visibility and reduce the impact of the infrastructure on the historic landscape and its setting. To the south of the river we have considered feedback on arrangements including standard lattice pylons (requires two pylons) as well as</p>		X	X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>arrangements with low height lattice pylons (which requires three pylons). The latter positions a pylon close to Chelmsford Road and a relatively direct view from a home and for these reasons is less preferred. The Project, subject to confirming certain technical details, will progress using the defined LoD with the use of two standard pylons between TB143 and the river with four low height pylons to the north of the river in place of three low height pylons shown on the works plans. This revised alignment and reversion to conventional lattice pylons south of the River Chelmer but retention of 4 low height lattice pylons north of the river represents a considered response to consultation feedback, balancing the need to reduce heritage impacts with other environmental and technical constraints. The potential impact of the Project on heritage assets such as settlement site at Ash Tree Corner and the conservation areas of Great and Little Waltham has been fully assessed and details can be found the ES Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1) and ES Appendix 11.2: Historic Environment Assessment Tables (document reference 6.11.A2).</p>				
10-44.33	Suggest that Pylon TB141 is relocated away from Windmill House (e.g. to reduce visual and heritage impact)	In response to feedback and subject to confirming certain technical aspects three low height pylons south of the river (as shown on the works plans) are expected to be replaced by two standard pylons. This moves the nearest pylon (TB141) further from Windmill House than presented in the 2025 targeted consultation.		X	X	X

Design Change						
10-44.1	Oppose the proposed change - Essex 8 (generally)	National Grid notes the respondent's feedback.	X		X	
10-44.2	Support the proposed change - Essex 8 (generally)	National Grid notes the respondent's feedback.		X	X	
10-44.4	Criticism that the use of low height pylons between the Waltham is insufficient / Suggest that underground cables are used to mitigate the impact of the Project on the Walthams (e.g. to mitigate impact on conservation areas, heritage assets, archaeological remains, ecology, residential amenity, the landscape, etc)	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is ' <i>that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or Area of Outstanding Natural Beauty (AONB))</i> '. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at the Walthams would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.</p> <p>In addition, a separate assessment of effects on residential visual amenity is presented in ES Appendix 13.4: Residential Visual Amenity Assessment (RVAA) (document reference 6.13.A4). This describes the change in views likely to be experienced by residents at the closest residential properties to the permanent overground above ground elements of the Project (within approximately 200 m). Use of underground cables as an alternative to low height pylons would have</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>a greater impact on ecological features within and around the Walthams. Installation of underground cables requires up to 120 m swathe of impact on vegetation and associated protected species.</p> <p>National Grid, through the routing and siting exercise, has sought to reduce the impact on the historic environment, including the designated assets in this area. All designated assets within 2 km of the Order Limits are considered in the Historic Environment Assessment for the Project. The impacts of the Project on the historic environment are assessed in ES Chapter 11: Historic Environment (document reference 6.11). The assessment considers the potential impact on designated assets and includes assessment of potential for physical impact and impact through change to setting that affects the value of a heritage asset. The assessment of designated assets is supported by setting surveys, as documented in the ES Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1). The Project has engaged with Historic England and relevant planning authorities on aspects relating to heritage, including appropriate mitigation measures and techniques and to take their views into account during Project development.</p> <p>The assessment of Waltham Conservation Areas and associated listed buildings concludes a not significant effect during construction and operation. The assessment of Langleys registered park and garden concludes a significant effect during construction and</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		operation due to pylon TB136 being included within a prescribed view from the asset. No additional mitigation measures are proposed as any measures designed to lessen the visual impact of the Project would be of a scale that would visually adversely alter the setting of the asset. The use of underground cables as an alternative to low height pylons would have a greater impact on archaeological remains within and around the Walthams. Installation of underground cables requires up to 120 m swathe of impact on below ground archaeological assets, rather than the more limited footprint of the pylons and associated haul road.				
10-44.5	Suggest the Project is moved 200 m down Larks Lane to a location where there are no properties (e.g. to mitigate impact on residents)	National Grid notes the respondent's feedback. The alignment crosses Larks Lane at approximately midway between properties, (we are unsure at what location on Larks Lane the respondent is referring to that has no properties). Therefore moving the alignment 200 m further down the road would transfer effects to some properties over others. We are therefore not proposing a change to the alignment at this location.			X	
10-44.6	Oppose the proposals to relocate pylons closer to Little Waltham and its conservation area in order to improve the views from Langleys House and Garden	The small adjustment in alignment close to Little Waltham has been made in response to the identification of veteran trees and protected species interests. The alignment was not changed to improve the views from Langleys House and Gardens, nor as a consequence of heritage effects, albeit the heritage effects are a key factor in the change to the use of low			X

		height pylons to the north of the River Chelmer in this area.				
10-44.7	Suggest that the Alternative Route west of Great Waltham (shown in the Design Development Reports 2024 and 2025) is adopted (e.g. due to significantly lower adverse impact on both residential development and on the various sites of heritage value in the locality)	In response to feedback received during the 2024 statutory consultation and the 2025 targeted consultation and landowner consultation, National Grid has considered alternative alignments (which includes that suggested by the respondent to adopt the alternative route to the west of Great Waltham) to the east and west of Chelmsford, modifications to the alignment consulted upon along with the selection of pylon type as well as the justification for the use of underground cable. In the 2022 Corridor and Preliminary Routing and Siting Study (CPRSS), the 2023 and 2024 Design Development Report's which can be found on the Project website, and the 2025 Design Development Report (document reference 5.15), National Grid sets out the challenges associated with routeing either further to the west or to the east of Chelmsford parallel to the existing 400 kV overhead line. Whilst noting the respondent's preference for one of these alternatives, no new factors have been identified nor new evidence provided nor identified to remove the basis for previous decision making. Firstly it is noted that our assessments of the Project alignment are that it is not unacceptable in policy terms and there is no specific need therefore to change, nonetheless we have reviewed other route alternatives. The eastern route around Chelmsford remains less preferred and no change to the fundamental constraints to successful			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>routeing have been identified or proposed. We have also previously reviewed a more westerly alignment which would be routed away from Little Waltham diverting from the south of Great Leighs towards Pleshey and then southwards past to the west of Great Waltham towards Chignal Smealey. Whilst noting a reduction in some effects for this more western alternative, it would be a longer route by 2.5 km to 3 km with a degree of transfer of effects. Given that none of the effects arising for the Project alignment are considered to be at a level which is unacceptable in policy terms, National Grid continues to prefer the Project alignment and for the reasons stated the eastern and western alternatives are not progressed.</p> <p>An Environmental Impact Assessment has been undertaken and the findings are presented in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement), which has identified any need for additional mitigation.</p>				
10-44.8	Suggest the Project is routed north and west of Great Waltham, through the largely open arable land between Great Waltham and Pleshey (Figure 1) (e.g. to reduce impact on densely populated residential areas of Great and Little Waltham, the conservation area and numerous listed buildings including the respondents properties, to comply with Holford Rules to mitigate significant impacts at an additional cost) / Criticism that this route has not	In response to feedback received during the 2024 statutory consultation and the 2025 targeted consultation and landowner consultation, National Grid has considered alternative alignments (which includes that suggested by the respondent to go north and west of Great Waltham) to the east and west of Chelmsford, modifications to the alignment consulted upon along with the selection of pylon type as well as the justification for the use of underground cable. In the		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	been pursued due to the presence of the Wilderness Foundation charity, and that this consideration is disproportionate due to the possibility for relocation of the charity, where permanent heritage assets and residential receptors should take precedence	2022 Corridor and Preliminary Routing and Siting Study (CPRSS) and in the 2023 and 2024 Design Development Report's, which can be found on the Project website, and the 2025 Design Development Report (document reference 5.15), National Grid set out the challenges associated with routeing either further to the west or to the east of Chelmsford parallel to the existing 400 kV overhead line. Whilst noting the respondent's preference for one of these alternatives, no new factors have been identified nor new evidence provided nor identified to remove the basis for previous decision making. Firstly it is noted that our assessments of the Project alignment are that it is not unacceptable in policy terms and there is no specific need therefore to change, nonetheless we have reviewed other route alternatives. The eastern route around Chelmsford remains less preferred and no change to the fundamental constraints to successful routeing have been identified or proposed. We have also previously reviewed a more westerly alignment which would be routed away from Little Waltham diverting from the south of Great Leighs towards Pleshey and then southwards past Great Waltham towards Chignal Smealey. Whilst noting a reduction in some effects for this more western alternative, it would be a longer route by 2.5 km to 3 km with a degree of transfer of effects. We have previously noted the presence of the Wilderness school as a factor in decision making though have not indicated this to be a determinative factor. We				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>would reiterate that none of the effects arising for the Project alignment are considered to be at a level which is unacceptable in policy terms, National Grid continues to prefer the Project alignment and for the reasons stated the eastern and western alternatives are not progressed.</p> <p>An Environmental Impact Assessment has been undertaken and the findings are presented in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement), which has identified any need for additional mitigation.</p>				
10-44.9	Suggest that T-pylons are used for Pylons TB135 to TB142 (e.g. to reduce visual impact, reduce vegetation loss, and reduce impact on farming activities)	<p>The latest independent report on the Comparison of Electricity Transmission Technologies: Costs and Characteristics (Institute of Engineering and Technology, 2025) confirms that whilst T-Pylons may in certain locations provide an alternative to conventional overhead lines with potential benefits in visual impact and reduced land-take, this is at a higher cost. The build cost is approximately 2 to 2.5 times that of an equivalently rated conventional overhead line, and the lifetime costs are around 1.6 to 1.7 times that of a conventional overhead line. The current arrangements for the oversight of funding by Ofgem requires that the lowest cost acceptable design is taken forward rather than a more expensive design even if that design is perceived to reduce the level of effect.</p> <p>As such consideration of their use follows after establishing a need to mitigate effects of the standard</p>		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>lattice design and after considering the benefit of adopting a low height lattice pylon design. T pylons themselves are also less adaptable to varied terrains and require more substantial access infrastructure. Furthermore, their resilience and environmental impact are comparable to conventional overhead lines, but with increased carbon intensity due to construction materials. Attention also needs to be given to the transitions between pylon types. Given It is the surrounding context that drives the need for alternative design mitigation, where this is not required along the entire route, any visual break and transition in pylon design also needs to be carefully sited.</p> <p>Assessment findings have concluded that, where there is not a reversal of the presumption to use overhead lines, the use of lattice pylons (either standard or low height) is consistent with planning policy throughout the route. Whilst there may be some locations (for examples see appendix A of the 2024 Design Development Report (available on the Project website)) where there may be a design option for the use of T pylons, the need to mitigate for unacceptable effects from lattice pylons is not engaged. On this basis T pylons are not proposed for the Project.</p>				
10-44.10	Suggest that Pylons TB140 to TB143 are relocated away from respondents Grade III listed building (Figure 2)	National Grid has routed and sited the alignment in accordance with the Holford Rules. A summary of the Holford Rules is provided within Appendix I22 of this report. The impacts of the Project on the historic			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>environment are assessed in ES Chapter 11: Historic Environment (document reference 6.11). The assessment considers the potential impact on designated assets and includes assessment of potential for physical impact and impact through change to setting that affects the value of a heritage asset. The assessment of designated assets is supported by setting surveys, as documented in the ES Appendix 11.1 Historic Environment Baseline Report (document reference 6.11.A1). The Project has engaged with Historic England and relevant planning authorities on aspects relating to heritage, including appropriate mitigation measures and techniques and to take their views into account during Project development. The pylons in this section have been carefully sited to as far as possible be midway between residential properties, some of which are listed buildings. The angle pylon close to this property is partly screened by farm buildings and moving it would transfer effects to other residential property with marginal change in heritage effects given the limited change possible. Moving the alignment of these pylons north would also move the alignment closer to properties north along Chelmsford Road where we are currently crossing at an approximately equal distance between properties. Other crossing locations would be closer to scheduled monument and similarly transfer effects. We therefore are not proposing a change to the alignment in this location.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-44.11	Criticism that between Pylons TB134 and TB135, the haul road to access the compounds on the east side of the A131 has been moved to share the existing road used by the SRC to access their quarry. Criticism that this change was not highlighted in the targeted consultation documents, nor has any consultation taken place with the respondent, landowner, or SRC. SRC has over 30 vehicle movements a day on this road, sharing this will cause health and safety issues and disruption to operations. Suggest that National Grid should create their own and separate access	<p>National Grid notes the respondent's feedback. Following feedback received at the statutory consultation, Essex County Council Highways Authority have stated that the Project is required to use the existing bellmouth serving SRC due to safety concerns over other potential access points.</p> <p>ES Chapter 10: Health and Wellbeing (document reference 6.10) has considered the impacts on community safety from a traffic perspective during the construction period, noting that there is the potential for increases in traffic on the road network to increase risk to users of the roads (including pedestrians and cyclists). The assessment has reviewed locations (Primary Access Routes) where large or moderate effects have been identified in relation to changes in the volume of traffic as a result of Project construction and identified sensitive receptors in the vicinity of these links. The assessment has also considered measures contained in the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) such as provision of driver information packs to construction vehicle drivers. While a number of locations have been identified where potential impacts may occur, a combination of factors including the nature of routes identified, the location of sensitive receptors, the duration of potential impact relating to peak construction activity in any one location (i.e. a matter of days/ weeks) and mitigation set out in the Outline CTMP (document reference 7.3) suggests that the magnitude of effect is</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		likely to be low, resulting in a negligible (not significant) health effect.				
10-44.12	Suggest that the Project follows the 2025 proposed route, with fewer tall pylons along the route (e.g. this would provide benefits for residents in surrounding villages)	National Grid notes the respondent's preference but makes decisions based on a wide range of factors. Some of these factors are favoured by generally keeping pylon heights lower with an overall increase in pylon numbers, others are favoured by seeking to increase pylon heights with a reduction in overall pylon numbers. In all cases individual circumstances vary and it is on that basis that design decisions are progressed rather than setting a design standard that favours a particular design emphasis. Having considered all relevant factors and having assessed the effects of the pylons on all identified receptors, it is considered that the proposed pylon types provide the best overall balance and outcome. No changes are therefore proposed.			X	
10-44.13	Suggest the Project is routed further north of Sheepcotes Roundabout so as to then pass across open farmland, avoiding Little Waltham, Great Waltham, and Howe Street	In response to feedback received during the 2024 statutory consultation and the 2025 targeted consultation and landowner consultation, National Grid has considered alternative alignments (which includes that suggested by the respondent to route north of Sheepcotes roundabout to avoid Little Waltham and Great Waltham) to the east and west of Chelmsford, modifications to the alignment consulted upon along with the selection of pylon type as well as the justification for the use of underground cable. In the 2022 Corridor and Preliminary Routing and Siting Study			X

		<p>engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at the Walthams would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-44.20	Suggest an equidistant arrangement of pylons on both sides using shorter pylons or taller pylons further from Chelmsford Road	In response to feedback, National Grid has considered pylon type and localised alignment variations responding to feedback from Historic England and other stakeholders. This includes the stakeholder feedback in this case to position shorter pylons equidistant from the road or taller pylons further from the road. We do not consider that T pylons are an appropriate design selection, as in this where they would be viewed in most cases against vegetation and appear more stark than the alternative lower height lattice pylon. Following review we do consider that a low height lattice pylon would be beneficial for a section of the route north of the River Chelmer. This is a revision aimed specifically to reduce impacts on nearby designated heritage assets, including Little and Great Waltham Conservation Areas and a designed garden avenue view from the Grade I Langleys listed building. As part of this refinement, the alignment has been adjusted in combination with some use of lower-profile pylons to reduce visibility and reduce the impact of the infrastructure on the historic landscape and its setting. To the south of the river we have considered feedback on arrangements including standard lattice pylons (requires two pylons) as well as arrangements with low height lattice pylons (which requires three pylons). With the latter it is not possible to position a pylon mid span without imbalance of span length and a relatively direct view from a home and for these reasons is less preferred. The Project, subject to confirming certain technical details, would progress			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		using the defined Limits of Deviaton with the use of two standard pylons (more equidistant from the properties) between TB143 and the river in place of three low height pylons shown on the works plans. A Statement of Common Ground (SOCG) is being prepared.				
10-44.21	Suggest that the Project uses HVDC underground cables through the Waltham gap	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is ' <i>that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or Area of Outstanding Natural Beauty (AONB))</i> '. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at the Walthams would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
10-44.22	Suggest that pylons are placed equidistant from Chelmsford Road, Great Waltham if the Essex 8 change is adopted and shorter pylons were to be used	In response to feedback, National Grid has considered pylon type and localised alignment variations responding to feedback from Historic England and other stakeholders. This includes the stakeholder feedback in this case to position shorter pylons equidistant from the road or taller pylons further from the road. We do not consider that T pylons are an appropriate design selection, as in this where they would be viewed in most cases against vegetation and appear more stark than the alternative lower height lattice pylon. Following	X			X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		review we do consider that a low height lattice pylon would be beneficial for a section of the route north of the River Chelmer. This is a revision aimed specifically to reduce impacts on nearby designated heritage assets, including Little and Great Waltham Conservation Areas and a designed garden avenue view from the Grade I Langleys listed building. As part of this refinement, the alignment has been adjusted in combination with some use of lower-profile pylons to reduce visibility and reduce the impact of the infrastructure on the historic landscape and its setting. To the south of the river we have considered feedback on arrangements including standard lattice pylons (requires two pylons) as well as arrangements with low height lattice pylons (which requires three pylons). With the latter it is not possible to position a pylon mid span without imbalance of span length and a relatively direct view from a home and for these reasons is less preferred. The Project, subject to confirming certain technical details, would progress using the defined Limits of Deviation with the use of two standard pylons (more equidistant from the properties) between TB143 and the river in place of three low height pylons shown on the works plans. A Statement of Common Ground (SOCG) is being prepared.				
10-44.23	Suggest that Pylon TB141 should be equidistant from respondent's living area and that of The Red House, Larks Lane	In response to feedback and subject to confirming certain technical aspects, three low height pylons south of the river (as shown on the works plans) are expected to be replaced using Limits of Deviation by two standard pylons. Whilst this would not move the alignment further			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		towards The Red House, it does move the nearest pylon further from the property and achieving some of the outcome sought.				
10-44.25	Concern that the Essex 8 change, if adopted, will result in pylons being moved closer to some homes, especially Windmill House	In response to feedback and subject to confirming certain technical aspects three low height pylons south of the river (as shown on the works plans) are expected to be replaced by two standard pylons. This moves the nearest pylon further from Windmill House than presented in the 2025 targeted consultation.		X	X	
10-44.27	Concern that whilst pylon height has been reduced the number of pylons (which are wider) has been increased	National Grid has considered all the feedback provided and subject to confirming certain technical aspects is proposing to modify the Project in response. Whilst works plans show three low height pylons south of the river, the expectation is that these would be replaced within the Limits of Deviation (LoD) by two standard lattice pylons. There is a balance to be struck generally between fewer taller pylons or more but shorter pylons. Taking the feedback and all aspects into account, we propose this change south of the River Chelmer. This also positions the pylons more evenly to each side of the road though with a slightly greater separation from the property identified and road to the pylon to the north-east than is achieved for the pylon to the south-west.			X	X
10-44.29	Concern the pylons will now be nearer to resident's lanes	National Grid has considered all the feedback provided and subject to confirming certain technical aspects is proposing to modify the Project in response. Whilst works plans show three low height pylons south of the			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		river, the expectation is that these would be replaced within Order Limits by two standard lattice pylons. This positions the pylons more evenly to each side of the road though with a slightly greater separation from the road to the pylon to the north-east than is achieved for the pylon to the south-west. On this basis the pylons are not closer to Residents Lanes comparing the Project to the arrangement subject of the targeted consultation in 2025.				
10-44.31	Request an alternative route for the Project to the north of Great Waltham and Little Waltham. (Map provided by respondent on page 58, figure 5.13)	In response to feedback received during the 2024 statutory consultation and the 2025 targeted consultations and landowner consultation, National Grid has considered alternative alignments (which includes that suggested by the respondent to go north of Great Waltham and Little Waltham) to the east and west of Chelmsford, modifications to the alignment consulted upon along with the selection of pylon type as well as the justification for the use of underground cable. In the 2022 Corridor and Preliminary Routing and Siting Study (CPRSS) and in the 2023 and 2024 Design Development Report's, which can be found on the Project website, and the 2025 Design Development Report (document reference 5.15), National Grid set out the challenges associated with routeing either further to the west or to the east of Chelmsford parallel to the existing 400 kV overhead line. Whilst noting the respondent's preference for one of these alternatives, no new factors have been identified nor new evidence provided nor identified to remove the basis for previous		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>decision making. Firstly it is noted that our assessments of the Project alignment are that it is not unacceptable in policy terms and there is no specific need therefore to change, nonetheless we have reviewed other route alternatives. The eastern route around Chelmsford remains less preferred and no change to the fundamental constraints to successful routeing have been identified or proposed. We have also previously reviewed a more westerly alignment which would be routed away from Little Waltham diverting from the south of Great Leighs towards Pleshey and then southwards past Great Waltham towards Chignal Smealey. Whilst noting a reduction in some effects for this more western alternative, it would be a longer route by 2.5 km to 3 km with a degree of transfer of effects. Given that none of the effects arising for the Project alignment are considered to be at a level which is unacceptable in policy terms, National Grid continues to prefer the Project alignment and for the reasons stated the eastern and western alternatives are not progressed.</p> <p>An Environmental Impact Assessment has been undertaken and the findings are presented in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement), which has identified any need for additional mitigation.</p>				
10-44.34	Oppose the proposed Essex 8 change as it does not address the issues raised in the first consultation /	National Grid has also considered pylon type and localised alignment variations responding to feedback			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	Suggest that the position of pylons at the Waltham Gap should be reverted to the 2024 alignment	from Historic England and other stakeholders. This includes the stakeholder feedback in this case to revert to the 2024 pylon positions at the Waltham gap. We do not consider that T pylons are an appropriate design selection, as in this area they will be viewed in most cases against vegetation and appear more stark than the alternative lower height lattice pylon. We do however consider that a low height lattice pylon will be beneficial for a section of the route north of the River Chelmer. This is a revision aimed specifically to reduce impacts on nearby designated heritage assets, including Little and Great Waltham Conservation Areas and a designed garden avenue view from the Grade I Langleys listed building. As part of this refinement, the alignment has been adjusted in combination with some use of lower-profile pylons to reduce visibility and reduce the impact of the infrastructure on the historic landscape and its setting. To the south of the river we have considered feedback on arrangements including standard lattice pylons (requires two pylons) as well as arrangements with low height lattice pylons (which requires three pylons). The latter positions a pylon close to Chelmsford Road and a relatively direct view from a home and for these reasons is less preferred. The Project, subject to confirming certain technical details, would progress using the defined Limits of Deviation with the use of two standard pylons between TB143 and the river with four low height pylons to the north of the river in place of three low height pylons shown on the				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		works plans. This is close to the 2024 alignment as can be achieved whilst accommodating the adjustments to the north of the River.				
Environmental Impact						
10-44.24	Criticism that the design achieves 'less than substantial harm' in the context of Policy EN-1	With regard to the historic environment, the Project's level of harm has been assessed in Environmental Statement (ES) Appendix 11.7: Assessment of Harm to Designated Heritage Assets (document reference 6.11.A7). The assessment concludes that the Project would have less than substantial harm on the historic environment. The relevant guidance and methodology explaining the term 'less than substantial harm' is also explained in ES Appendix 11.7: Assessment of Harm to Designated Heritage Assets (document reference 6.11.A7).	X		X	
Requests						
10-44.28	Requests to understand the implication for the footpath running across the fields where the pylons will be situated	Through routeing and siting, National Grid has sought to and will continue to reduce, as far as practicable, impacts and disruption to Public Rights of Way (PRoW). The iterative process of route design has identified the existing PRoW network and their wider connectivity and sought where practicable to reduce and where possible remove impacts to PRoW, Mitigation identified, include the temporary closure of PRoW during the construction phase, and where possible a diversion to allow for the			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>continued use and movement of the wider PRow network.</p> <p>The effects on existing PRow would be mitigated where possible, maintaining access where practicable, with temporary closures as a last resort.</p> <p>An Outline Public Rights of Way Management Plan (document reference 7.6) has been prepared and submitted with the application for development consent.</p>				
Visual Impact						
10-44.18	Oppose locating pylons adjacent to Chelmsford Road due to visual impacts for drivers and walkers as this is the main route into Chelmsford	<p>The location of the proposed pylons adjacent to Chelmsford Road would not impede forward visibility for drivers on the road or for walkers on any Public Rights of Way (PRow). No additional road safety audits are required along Chelmsford Road.</p> <p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the Environmental Impact Assessment (EIA). The LVIA includes an assessment on both landscape character and visual amenity and sets out the potential landscape and visual effects of the Project. The LVIA is presented in the Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13). Chelmsford Road is located within Visual Receptor Area (VRA) F3 Great Waltham and VRA F4 Little Waltham. Significant effects on visual receptors, including road users on Chelmsford Road, are identified.</p>		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-44.19	Concern about the visual impact lower height pylons (e.g. wider and more dominant when up close)	In response to feedback National Grid has also considered pylon type and localised alignment variations responding to feedback from Historic England and other stakeholders. This includes the stakeholder feedback in this case regarding the visual appearance close up of the lower height pylon design. We do not consider that T pylons are an appropriate design selection, as in this where they would be viewed in most cases against vegetation and appear more stark than the alternative lower height lattice pylon. We do however consider that a low height lattice pylon would be beneficial for a section of the route north of the River Chelmer. This is a revision aimed specifically to reduce impacts on nearby designated heritage assets, including Little and Great Waltham Conservation Areas and a designed garden avenue view from the Grade I Langleys listed building. As part of this refinement, the alignment has been adjusted in combination with some use of lower-profile pylons to reduce visibility and reduce the impact of the infrastructure on the historic landscape and its setting. To the south of the river we have considered feedback on arrangements including standard lattice pylons (requires two pylons) as well as arrangements with low height lattice pylons (which requires three pylons). The latter positions a pylon close to Chelmsford Road and a relatively direct view from a home and for these reasons is less preferred. The Project, subject to confirming certain technical details, would progress using the defined Limits of Deviation		X	X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>with the use of two standard pylons between TB143 and the river with four low height pylons to the north of the river in place of three low height pylons shown on the works plans. Further details are presented in the 2025 Design Development Report (document reference 5.15).</p> <p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the Environmental Impact Assessment (EIA). The LVIA includes an assessment on both landscape character and visual amenity and sets out the potential landscape and visual effects of the Project. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual.</p> <p>ES Chapter 13: Landscape and Visual is supported by Appendix 6.13: Visual Baseline and Assessment (document reference 6.13.A3) which provides an assessment of effects on visual receptors within Visual Receptor Areas (VRAs) during construction and operation (and maintenance) of the Project. The visual assessment relating to this area can be found in VRA F3 Great Waltham and VRA F4 Little Waltham. It notes that the use of low height pylons in this area has some benefits for more distant visual receptors within VRA F3 and F4, whose views are already partially screened by intervening vegetation and landform, since the lower height would further reduce the likely visibility of the proposed overhead line in these views. In views from the closest visual receptors where there is limited or no intervening screening or landform, low height lattice pylons are likely to be more noticeable due their wider</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		stature, use of thicker steel lattice sections and therefore bulkier appearance. The width requirement for removal of existing vegetation beneath the proposed overhead line is slightly greater for low height pylons than for standard lattice pylons. The resultant effects on views for visual receptors within VRA F3 and F4 has been taken into account throughout the assessment.				
Wildlife / Ecology Impact						
10-44.30	Concern that lower height pylons requires more vegetation clearance (compared to T-pylons)	<p>The increased width of the structure of low height pylons would mean a greater level of vegetation clearance would be required, subject to pylon positioning. Chapter 4: Project Description (document reference 6.4) of the Environmental Statement (ES) provides details of the assumed approach for vegetation clearance for the overhead lines proposed.</p> <p>A review of potential vegetation clearance has been undertaken to identify relevant mitigation. Consideration has been given to veteran trees, other high quality trees and areas such as Ancient Woodland that have been identified through arboricultural surveys and a desk study. Further details are outlined in ES Appendix 13.6: Arboricultural Impact Assessment (document reference 6.13.A6) and the Outline Code of Construction Practice (CoCP) (document reference 7.2). In addition, the Trees and Hedgerows to be Removed and or Managed Plans (document reference 2.16) present the generalised</p>		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>approach for vegetation clearance together with where it has been refined to reduce effects to sensitive features.</p> <p>The Outline CoCP (document reference 7.2) includes a commitment that following detailed design and prior to construction, (of relevant parts of the Project), relevant surveys would be undertaken of arboricultural features that may be impacted or need to be removed to ensure any tree/ hedgerow removal is reduced as far as practicable.</p>				

Essex 9 Change feedback (Targeted Consultation)

Table 10-45 Summary of consultee comments and National Grid's response

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Consultation						
10-45.1	Criticism of consultation materials on this change (Essex 9)	<p>National Grid notes the respondent's feedback. For each of our targeted consultations we developed an overview leaflet and Environmental Implication of Change (EIC) document which includes a section on 'Traffic and transport'. All changes to construction laydown areas and highways in our proposed changes were communicated with the relevant landowners and local properties where necessary. These were sent to properties within the bespoke consultation zone for the relevant change. More information on how we defined the consultation zones is available in this Consultation Report. We also published a consultation strategy and overview map. All these documents remain available on the Project website. The information provided at the targeted consultations was considered proportionate to the changes being consulted upon.</p> <p>We believe that all the relevant information required for the public to make informed decisions was available and do not believe that this impacted the feedback we received.</p>		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Design Change						
10-45.2	Oppose the proposed change - Essex 9 (generally)	National Grid notes the respondent's feedback.			X	
10-45.3	Support the proposed change - Essex 9 (generally)	National Grid notes the respondent's feedback.		X	X	
Requests						
10-45.4	Request to understand what the highways construction compound will be used for and whether it is temporary or permanent	<p>The highways construction compound will be an area where vehicles, welfare units and construction related equipment and materials will be located for use in the construction of the widening work of Ivy Barns Lane.</p> <p>All highways mitigation works (e.g. widening) along the Primary Access Routes (PAR) will be required to be completed prior to any construction traffic for the construction of the pylon alignment utilising said PAR. Therefore this compound on Ivy Barns Lane will be in place at the start of the Project for a few weeks.</p> <p>Once the highways mitigation works are complete the compound will no longer be required until the end of the Project during demobilisation. At which point the land will be used again as a construction compound to remove all works within the public highway and reinstate the lane as it was found.</p>		X	X	
10-45.5	Request that the wider concerns of the Highway Authorities relating to the effects of construction upon nearby Three Mile Hill be considered	National Grid has considered the concerns of the Highways Authorities which have been address within		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		the Environmental Statement (ES) Chapter 16: Traffic and Transport (document reference 6.16).				
Wildlife/ Ecology Impact						
10-45.6	Requests mitigation to be employed to avoid impacts to James's Spring LWS as well as appropriate mitigation for any work required to the mature trees along the access track to the laydown area	<p>While James's Spring Local Wildlife Site (LWS) is located adjacent to the Order Limits, the closest element of construction is a haul route required for future maintenance, this is a right of access route only which follows an existing track for the majority of its length. There will be no direct impact on the LWS. The construction laydown area is located over 30 m from the edge of the LWS and will therefore have no direct impact on the LWS.</p> <p>Measures for protection of retained woodland and trees have been set out within the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4). The Arboricultural Impacts Plans in Appendix A of the Outline LEMP (document reference 7.4) shows the locations where tree and hedgerows will be removed.</p> <p>The overarching aim will be to retain vegetation wherever practicable in accordance with good practice measures as outlined within the Outline Code of Construction Practice (CoCP) (document reference 7.2). Where reasonably practicable, construction elements will be kept to the strict minimum required and micro-sited to avoid impacts on ecologically important features.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		The Project Arboricultural Clerk of Works will demarcate sensitive habitats to ensure contractors protect as much vegetation as possible.				

Basildon and Brentwood

Basildon and Brentwood feedback (Targeted Consultation)

Table 10-46 Summary of consultee comments and National Grid's response

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Agricultural Land						
10-46.1	Concern that the Project will take away valuable agricultural land / disrupt farming operations	<p>Agricultural land during the construction stage of the Project, there would be areas of agricultural land that would be temporarily disrupted. National Grid would only use land that is required as part of the Project and would seek to minimise the use of agricultural land where reasonable and safe to do so.</p> <p>National Grid is and would continue to work with all landowners including farmers who may be affected by the proposals to understand the impacts on their operations and to work with them as the Project progresses. We would seek to work with the farming community to limit disruption where practicable. This includes providing prior warning of works which may result in the need to move livestock. Compensation claims for disturbance are considered on a case-by-case basis, if negative impacts on farming operations can be proven. Particular agricultural matters can also be addressed through voluntary land agreements.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Airfields						
10-46.2	Concern about the impact of the Project on Chase Farm Airstrip / Suggestion that the Project is routed away from Chase Farm Airstrip	National Grid has appointed an independent aviation consultancy which has engaged with the operators of this Airstrip (with National Grid also present). Following discussion and further assessment of alternatives it is not possible to route the alignment away from the airstrip at a distance that allows the continued safe use of the airstrip at its current position. We are engaging and will continue to engage with the owner of the airstrip to find an appropriate solution. Further information on the assessment of airfields can be found in the Environmental Statement (ES) Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).			X	
Community / Social Impact						
10-46.3	Concern about impact of the Project on children / families / residents / communities	National Grid recognises people may have concerns about the potential impacts of living close to an overhead line, and that the uncertainty whilst the proposals are developed may cause anxiety. We have sought to reduce potential effects on communities, residents – including children - through routeing and design. We have also sought to reduce concern or uncertainty about the proposals through making timely design decisions and engaging with people and stakeholders throughout the development of the Project. If the Project receives Development Consent, the Project team would continue to engage		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>with people potentially affected during construction through regular communication including letters, phone calls and meetings, where necessary. We urge anyone with concerns to get in touch through the Norwich to Tilbury Freephone number, address or email, which would remain open throughout examination.</p> <p>National Grid is committed to working with local suppliers, facilitated by supporting forums (such as the local Chambers), on electricity industry skills and workforce planning. National Grid is also committed to providing a coordinated regional approach to jobs and skills opportunities. This commitment is broader than the individual project and separate to any commitments under the proposed development consent order for this Project. The socio-economic effects of the project are assessed in Chapter 15: Socio-economics, Recreation and Tourism of the Environmental Statement (ES) (document reference 6.15). Post construction job opportunities are limited given the nature of the development however we will still work with Local Authorities (including facilitating local partners) to understand what is important to them around skills and employment to ensure we leave a lasting positive legacy in the communities where we operate. With regards to a delivery mechanism, the above measures will be delivered as part of our community benefit package, which will look at both local and regional initiatives. This will be delivered outside the development consent process and is not a material</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		consideration in the decision on the proposed Project or a matter to be secured as part of the DCO, as per the Community Funds for Transmission Infrastructure: Guidance (DESNZ, 2025).				
10-46.4	Concern about impact of the Project on school / educational facilities	<p>Through routeing and siting, National Grid has sought to avoid, as far as practicable, locations of education establishments.</p> <p>ES Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) presents an assessment of the potential impacts on education facilities as a result of the Project. As part of the assessment, a range of measures are considered during the construction phase to reduce, where practicable, disruption to education establishments. These include traffic management, signage and routing measures to ensure access or partial access can be maintained where feasible. These are identified within ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15), the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) and the Outline Code of Construction Practice (CoCP) (document reference 7.2). The assessment concludes that there would be no significant effects on education facilities within the study area as a result of the construction and operation of the Project.</p>			X	
10-46.5	Concern about impact of the Project on leisure	Through routeing and siting National Grid has sought to avoid, as far as practicable, locations that are			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		important for leisure and tourism. Environmental Statement (ES) Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) presents an assessment of the potential impacts on sports clubs, recreational land and recreational routes located within the Order Limits. As part of this assessment, a range of measures have been considered throughout the construction phase of the Project to minimise disruption on leisure and tourism. These include traffic management, signage and routeing measures. These are identified within ES Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15), the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).				
10-46.6	Concern about over development of area / other works in the area (e.g. cumulative impact)	A cumulative effects assessment has been undertaken in accordance with the Planning Inspectorate's Advice Note 17 'Cumulative Effects Assessment' and is presented in Environmental Statement (ES) Chapter 17: Cumulative Effects (document reference 6.17). The cumulative effects assessment has considered the effects of the Project in conjunction with other developments in line with guidance. As part of this process, National Grid has engaged with other developers who are proposing development in proximity of the Project to understand their requirements.		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>The cumulative assessment has been undertaken in accordance with the overarching National Policy Statement (NPS) for Energy (EN-1)</p> <p>Paragraph 4.1.5 in EN-1 states:</p> <p><i>'In considering any proposed development, in particular when weighing its adverse impacts against its benefits, the Secretary of State should take into account: ... its potential adverse impacts, including on the environment, and including any long-term and cumulative adverse impacts, as well as any measures to avoid, reduce, mitigate or compensate for any adverse impacts, following the mitigation hierarchy'.</i></p> <p>Paragraph 4.2.12 in EN-1 states:</p> <p><i>'The cumulative impacts of multiple developments with residual impacts should also be considered.'</i></p> <p>Paragraph 4.3.3 in EN-1 states:</p> <p><i>'The Regulations require an assessment of the likely significant effects of the proposed project on the environment, covering the direct effects and any indirect, secondary, cumulative, transboundary, short, medium, and long-term, permanent and temporary, positive and negative effects at all stages of the project, and also of the measures envisaged for avoiding or mitigating significant adverse effects'.</i></p> <p>Paragraph 4.3.19 of EN-1 states:</p> <p><i>'The Secretary of State should consider how the accumulation of, and interrelationship between, effects might affect the environment, economy, or community</i></p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p><i>as a whole, even though they may be acceptable when considered on an individual basis with mitigation measures in place'.</i></p> <p>Paragraph 4.4.5 in EN-1 states:</p> <p><i>'The impacts of more than one development may affect people simultaneously, so the applicant should consider the cumulative impact on health in the ES where appropriate'.</i></p> <p>The long list and short list of other existing and, or approved developments considered for the Cumulative Effects Assessment is presented in ES Appendix 17.2: Long List and Short List of Other Developments (document reference 6.17.A2), detailing the other developments shortlisted for detailed assessment. The appendix provides details on other developments screened out of the assessment in accordance with the methodology presented in Chapter 17: Cumulative Effects (document reference 6.17) of the ES. The detailed assessment of shortlisted other developments is presented in ES Appendix 17.3: Inter-Project Cumulative Effects Assessment (document reference 6.17.A3). Appendix 17.3 outlines the residual significance of cumulative effects for each development, for each environmental topic that has a Zone of Influence that overlaps with that development (i.e. socio-economic, recreation and tourism impacts).</p>				
10-46.7	Concern about the Project being in too close proximity to recently built housing developments /	National Grid has obtained information on existing, under construction, consented but not built schemes as		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	using land being considered for future development (including residential, commercial, infrastructural, and employment sites)	well as development proposals within the planning system. The Project design has responded to those that are confirmed through consideration of routeing. In the case of development proposals, some can be amended to be designed around our proposed infrastructure but in other cases our proposals may need to be amended at a corridor level, or proposed developments factored into our detailed route design. Based on known information, and in light of changes made following consideration of feedback to the 2022 and 2023 non-statutory consultations, statutory consultation and targeted consultations, we consider our proposals are consistent with relevant policy and guidelines and the alignment designed such that they do not prevent proposed housing developments from being successfully progressed. UK law does not prescribe minimum distances between overhead lines and homes, but any implications on landscape and visual receptors, residential amenity or from concerns about electromagnetic fields are robustly assessed and presented in the Environmental Statement (ES) and balanced as part of the decision making process. We will continue to review planning applications and engage with developers as necessary.				
10-46.8	Concern about the Project causing communities to become encircled / surrounded by overhead lines	The alignment has been routed to achieve some separation from the existing 400 kV overhead line, such that villages are not encircled by overhead lines to both sides. Separation is inevitably reduced in certain locations due to the presence of constraints to		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		routeing and environmental features. Detailed assessment reported in the Environmental Statement (ES) identifies any measures considered to be necessary to reduce likely significant effects which would also consider the potential for effects potentially arising from close paralleling existing 132 kV overhead line and new 400 kV overhead line infrastructure.				
10-46.9	Concerned that the Project will have a negative impact on domestic horses / equestrian activities	<p>As well as possible effects on humans, the possible effects of Electric and Magnetic Fields (EMFs) on various animals have been studied. No proven effects of EMFs have been found in any species at levels below the guidelines. This is confirmed in National Policy Statement (NPS) EN-5 which states: "<i>There is little evidence that exposure of crops, farm animals or natural ecosystems to transmission line EMFs has any agriculturally significant consequences.</i>" Although horses are not directly mentioned, there is no evidence to suggest they are any different to other farm animals.</p> <p>As well as the possible direct biological or health effects addressed above, indirect effects such as microshocks can occur as a result of electric fields. Microshocks are small spark discharges which are similar to a static shock after walking across a nylon carpet for example. The Project would be designed in accordance with the principles of the Governments Code of Practice 'Power Lines: Control of Microshocks and other indirect effects of public exposure to electric fields' to ensure these are mitigated, which include equestrian activities.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-46.10	Criticism of surveys undertaken for the Project in this Section	<p>There is a staged approach to the process of collection of environmental data as any major project develops. National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project. The assessment is informed by a suite of field surveys and desk studies and results are presented in an Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the application for development consent. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation (and maintenance) of the Project and recommends appropriate mitigation measures to reduce potential adverse impacts.</p> <p>The scope of the EIA is included in the Scoping Report (document reference 6.19) which was submitted to the Planning Inspectorate in November 2022 and their Scoping Opinion (document reference 6.20) received in December 2022. This provided the opportunity for statutory bodies to comment on the scope of the EIA which included our approach on study areas, data collection and baseline conditions for a range of environmental topics. We also discussed and agreed survey scope with stakeholders (including Statutory Environmental Bodies and Local Planning Authorities) following the Scoping Opinion (document reference 6.20) to ensure a robust baseline assessment.</p> <p>National Grid has prepared an Outline Code of Construction Practice (CoCP) (document reference</p>		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		7.2) which sets out the required mitigation measures and environmental commitments that would be implemented during the construction phase of the Project to avoid or reduce potential effects of the Project on the environment, including commitments to undertake further surveys.				
10-46.11	Criticism of the lack of baseline assessment undertaken in relation to the visual, heritage, amenity and land value impacts of overhead line and pylon technology at Dunton Hills Garden Village (DHGV) and the lack of application of the mitigation hierarchy, including compensation to the likely significant effects from those impacts to the principles of the Garden Village and viability of this strategic housing allocation, including its supporting infrastructure. Criticism of the lack of assessment undertaken in relation to the cumulative impacts of the construction and operation of the Norwich to Tilbury project in combination with the build out of DHGV (and the wider Brentwood Southern Growth Corridor)	Assessment of the historic environment is presented in Environmental Statement (ES) Chapter 11: Historic Environment (document reference 6.11) and its appendices, in particular Appendix 11.1 Historic Environment Baseline Report (document reference 6.11. A1), Appendix 11.2 Historic Environment Assessment Tables (document reference 6.11. A2) and Appendix 11.7 Assessment of Harm to Designated Heritage Assets (document reference 6.11.A7). The methodology for assessment follows best practice guidance and is in accordance with relevant legislation and policy, including the NPS (EN-1), and was agreed through the scoping process and during subsequent thematic group meetings with heritage stakeholders. Relevant mitigation for the historic environment is proposed and secured through the Outline CoCP (document reference 7.2), the Outline LEMP (document reference 7.4) and the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5). The assessment of landscape and visual effects is presented in the ES Chapter 13: Landscape and Visual (document reference 6.13). In this chapter DHGV is		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>identified as part of the future baseline which notes that DHGV is assessed as part of the cumulative assessment. The landscape assessment is presented in ES Appendix 13.2: Landscape Baseline and Assessment (document reference 6.13.A2). DHGV lies within the Brentwood Hills landscape character area (LCA), and just within the Wooded Hills and Ridges LCA. The assessment of landscape effects resulting from the introduction of the Project during construction and operation reported major adverse and significant effects within 0.5km of the Project on these landscapes, and also moderate adverse and significant effects at distances from 0.5-1.5km from the Project. The visual assessment is presented in Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3) of the ES. DHGV lies within Visual Receptor Area (VRA) G4: Ingrave and Herongate and just falls within VRA G6: Basildon. Within VRA G4 and VRA G6, the assessment of visual effects resulting from the introduction of the Project reported major adverse and significant effects during construction and operation within 0.5km of the Project, and moderate adverse and significant effects at distances from 0.5-1.5km from the Project. Viewpoint 7.08 Dunton Hills Farm (Dunton Garden Village) (Figure 7.12.F190) (document reference 7.12) reported major adverse and significant visual effects during construction and operation. DHGV is considered in ES Chapter 17: Cumulative Effects (document reference 6.17), since, assuming detailed planning applications are approved and</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>commenced before construction of the Project, residents in the Garden Village would be future visual receptors with potential views of the Project. It was reported that for DHGV (A3 (BrBC) and BR2) in the south of the LCA during construction and operation, landscape effects would be moderate adverse and significant within a localised area in the south of the Brentwood Hills LCA. Moderate adverse significant effects were also reported on a neighbouring LCA 13: Dunton Settled Farmlands due to indirect effects of the inter-project effects resulting from the Project and DHGV.</p> <p>Potential impact on property prices is not a material planning consideration for the purposes of a Development Consent Order (DCO) application. Separate to this point, the Secretary of State has asked that the DCO application include an assessment of the likely significant environmental effects in the form of potential impacts on property prices. The ES contains an assessment on this. It concluded that there is no evidence of any significant environmental effects on house prices as a result of the Project. Although not part of the Environmental Impact Assessment (EIA) process it is relevant to observe that any impact of the Project on residential properties is potentially capable of being dealt with through statutory nuisance or compulsory purchase compensation regimes (subject to the requisite criteria being met).</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		ES Chapter 15: Socio-economics, Recreation and Tourism assessed the potential effect on planning applications and planning allocations, including Dunton Hills Garden Village. The Project has considered the allocation in the design in order to manage interactions, by routing along the gas pipeline and within a corridor formed by the Building Proximity Distance (BPD). Therefore, a not significant residual effect has been anticipated during construction and operation (and maintenance).				
10-46.12	Criticism of the lack of assessment undertaken to consider alternatives to the proposed Project routing around Haverings Grove, with a view to reducing the detrimental impacts to the host community in this locality	Alternative strategic options and alternative corridors were considered as set out in the 2022 Corridor and Preliminary Routeing and Siting Study (available on the Project website). We have continued to verify this earlier decision making through backchecks and careful consideration of new information gathered during surveys or provided during feedback. We have also considered other more localised suggested routes, including slightly to the west as set out in the 2025 Design Development Report (document reference 5.15) but consider them less preferred due, amongst other factors, to greater levels of effects on more residential properties. We also modified the Project after statutory consultation to reduce community effects including replacing a section of 132 kV overhead line with 132 kV underground cables. We have undertaken an Environmental Impact Assessment (document reference Volume 6: Environmental Statement) to assess the potential		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		impact of the Project and this has identified any need for additional mitigation. No change to the Project as requested in the feedback is proposed.				
10-46.13	Request that National Grid to positively respond to the issue of social value and community benefits with regard to the Governments recently published Community Funds for Transmission Infrastructure	<p>The Government has published its guidance on community funds for transmission infrastructure (DESNZ, 2025). National Grid is committed to working with Ofgem, industry partners, local communities and their representatives to ensure community benefits are delivered fairly and effectively, driving lasting, positive change for the people and places integral to our developing electricity network.</p> <p>Government has also announced its plans to introduce a bill discount scheme for households within 500 metres of new infrastructure, which it proposes to introduce through the Planning and Infrastructure Bill. This is evolving government policy. Government expects this scheme to be in place by 2026 and we will share further details as they emerge.</p> <p>National Grid is committed to providing a coordinated local and regional approach to community benefits. This will be delivered outside the development consent process, since this is not a material consideration in the decision on the proposed Project or a matter to be secured as part of the Development Consent Order (DCO), as per the Community Funds for Transmission Infrastructure: Guidance (DESNZ, 2025).</p>		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Construction Impacts						
10-46.14	Concern about disruption from construction	<p>An Environmental Statement (ES) (document reference: Volume 6: Environmental Statement) has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 ('the Infrastructure EIA Regulations'). The ES identifies and assesses the likely significant effects on the environment resulting from the construction of the Project and recommends appropriate mitigation to reduce effects.</p> <p>Environmental mitigation measures have been defined within each environmental topic chapter and set out in relevant management documents submitted with the Development Consent Order (DCO) application, including the Outline Code of Construction Practice (CoCP) (document reference 7.2), the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5).</p>			X	
10-46.15	Concern about impact on traffic levels in local area caused by construction works	As part of the pre-application process National Grid has engaged with the relevant authorities, their highways teams and National Highways to understand and gain information on their road networks. This information has been used to inform and guide the drafting of the Outline Construction Traffic			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Management Plan (CTMP) (document reference 7.3) for the Project that accompanies the Development Consent Order (DCO) application. The Outline CTMP (document reference 7.3) provides details about the proposed construction access strategy that has been developed to manage the impact of construction vehicles on the Public Highway and sensitive receptors, using a combination of more suitable Local Road Network connections from the Strategic Road Network, and temporary haul roads for access along the proposed alignment. The Outline CTMP highlights any measures to reduce impacts to other road users from construction traffic related to the Project.</p> <p>Environmental Statement (ES) Chapter 16: Traffic and Transport (document reference 6.16) includes the assessment of the potential impacts of the Project including changes in traffic flow, delays, road safety and impact on Walking, Cycling and Horse-Riding modes on the roads along the Primary Access Routes located in the Local Road Network.</p> <p>The Transport Assessment (document reference 7.11), submitted with the DCO application, examines capacity, safety, and operational efficiency of the network, identifying potential bottlenecks or safety concerns.</p> <p>Within the assessment of the ES and the Transport Assessment, mitigation measures are proposed to minimise likely adverse impacts.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-46.16	Concern about noise and other issues resulting from construction (e.g. mud on roads, dust)	<p>An Environmental Statement (ES) (document reference Volume 6: Environmental Statement) has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 ('the Infrastructure EIA Regulations'). The ES identifies and assesses the likely significant effects on the environment resulting from the construction of the Project and recommends appropriate mitigation to reduce effects.</p> <p>Specifically, a Construction Noise and Vibration Impact Assessment has been undertaken and is reported in ES Chapter 14: Noise and Vibration (document reference 6.14). During construction, mitigation would be implemented to reduce noise and vibration impacts from construction activities and increased road traffic noise and vibration due to additional movement from construction traffic. Mitigation measures are outlined in ES Chapter 14: Noise and Vibration (document reference 6.14) and the Outline Code of Construction Practice (CoCP) (document reference 7.2). This includes the assumption that construction working would be undertaken within the agreed working hours, construction traffic would be managed through the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), haul roads would be well maintained, and Best Practicable Means (BPM) would be employed to reduce construction noise and vibration.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>ES Chapter 7: Air Quality (document reference 6.7) presents an assessment of the potential impacts from the construction of the Project on air quality. During construction, mitigation would be implemented to reduce the impact of dust generation and construction vehicle emissions. Mitigation measures are outlined in ES Chapter 7: Air Quality (document reference 6.7), and the Outline CoCP (document reference 7.2). The dust-emitting activities can be greatly reduced or eliminated by applying the site-specific mitigation measures (see Outline CoCP) for high risk sites following measures recommendations in the Institute of Air Quality Management (IAQM) guidance (IAQM, 2024). The IAQM guidance states that with the implementation of effective site-specific mitigation measures, the environmental effect would not be significant in most cases.</p> <p>In addition, National Grid has prepared an Outline CoCP (document reference 7.2). The Outline CoCP (document reference 7.2) sets out the required mitigation measures and environmental commitments that would be implemented during the construction phase of the Project to avoid or reduce potential effects of the Project on the environment.</p>				
10-46.17	Concern that local road infrastructure is not suitable for heavy construction vehicles and machinery	A strategy has been developed to manage the impact of construction vehicles on the public highway and sensitive receptors, using suitable Local Road Network connections from the Strategic Road Network called Primary Access Routes. In addition, temporary haul		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>roads for construction vehicles are proposed along the Project alignment, further reducing the impact of construction traffic on the local road network. Further details of the strategy can be found within the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).</p> <p>The Project also requires the transportation of Abnormal Indivisible Loads (AIL). National Grid is developing specific routing proposals for AIL movements and is developing these through engagement with the relevant stakeholders including the Local Highway Authorities and National Highways. An AIL routing strategy containing details about these movements are submitted in support of the Development Consent Order (DCO) application.</p>				
10-46.18	Suggest that traffic and transport impacts are fully assessed and mitigated, especially as regards construction traffic impacts on the strategic and rural road network. Request to further understand how careful consideration has been given to the removal and decommissioning of temporary haul roads, with assurances the land will be restored to its former condition (much of the affected land being designated Green Belt)	<p>A traffic and transport assessment of the construction phase on the local and strategic road network has been included in the Environmental Statement (ES) Chapter 16: Traffic and Transport (document reference 6.16) and in the Transport Assessment (document reference 7.11).</p> <p>Commitment GG07 of the Outline Code of Construction Practice (CoCP) (document reference 7.2) states that land used temporarily will be reinstated where practicable to its pre-construction condition and use (or a condition discussed with the landowner), in line with the Outline LEMP (document reference 7.4). Hedgerows, fences, and walls (including associated earthworks and boundary features) will be reinstated to</p>		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		a similar variety to those that were removed, in discussion with the landowner and to the satisfaction of National Grid.				
Consultation						
10-46.19	Criticism of consultation specific to this section	National Grid notes the respondent's feedback.		X	X	
Design Change						
10-46.20	Suggest that existing overhead lines in this section should be replaced by underground cables	<p>National Policy Statement (NPS) EN-5 establishes the position that the starting basis for new connections is a presumption on the acceptability of overhead lines but with this presumption reversed within designated landscapes and in certain other circumstances.</p> <p>The existing electricity transmission network provides power, via the local distribution network, into the local area where it is used in homes and businesses. The need case and funding for the Project is to deliver the new network reinforcement needed, rather than to remove existing overhead lines by undergrounding them.</p> <p>We have identified a number of locations where we are proposing to place existing overhead lines underground. These locations are where existing 132 kV and lower voltage lattice pylon lines are crossed by the proposed 400 kV overhead line and / or mitigation of the combination of effects are considered necessary. This includes locations such as at Mellis, between Offton and Bramford Substation, to the south of Bramford Substation and near Fuller Street.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Unless required for mitigation, undergrounding existing overhead lines on the transmission network would not be in accordance with NPS EN-5 and would result in substantial cost to bill payers. There may also be significant environmental impacts due to the removal works on sensitive ecological and archaeological receptors as well as constraints from either existing built form or unsuitable ground conditions.				
10-46.21	Suggest that the existing overhead lines in this section are reinforced / upgraded instead	The existing transmission network in the region was upgraded during 2022 and 2023 to ensure the system is running at its most efficient performance. The existing assets / networks are not able to be upgraded sufficiently to cope with the new future demands expected on the network. As a result, new lines and substations would be required to accommodate the changing demands on the network.			X	
10-46.22	Suggest that underground cables are used for the entirety of this section	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Park,</i>		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p><i>The Broads, or Area of Outstanding Natural Beauty</i>)'. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider this section in its entirety would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>and Visual (document reference 6.13) and this has identified any need for additional mitigation.</p> <p>Therefore, whilst undergrounding the whole of this section is not considered appropriate, our proposals do include underground cable within the Dedham Vale National Landscape (previously known as Area of Outstanding Natural Beauty (AONB)) in accordance with NPS EN-5. Prior to our 2023 non-statutory consultation we identified the need to extend the underground cable beyond the National Landscape boundary because of potential effects, we have further extended this section of underground cable following consideration of feedback on our 2023 non-statutory consultation and additional investigation into potential effects. We also identified an approximately 4 km section near Great Horkesley as meeting the particularly sensitive criteria where underground cable is also proposed. Additionally, underground cable is proposed at Fairstead for a 400 kV overhead line crossing.</p>				
10-46.23	Suggest that Pylons TB220 and TB221 are moved further west so that the Project runs along the tree line rather than through respondent's property and garden (plan provided by respondent; e.g. to mitigate impact on views, and given that the alternative route proposed by the respondent would not impact trees), and criticism that National Grid has not relocated the Project as far into the field as agreed with the respondent during a visit by a	The Project routeing is heavily constrained in this area and has been aligned to follow a safety corridor around a high pressure gas pipeline. Moving the alignment substantially further west to avoid oversail of the field is not possible due to the constraint of working area around the gas pipeline and other properties and woodland (including some Ancient Woodland) to the west and the implications of a now constructed solar farm to the north of TB224. However, movement within			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	surveyor for the Project in April 2024 (e.g. the Project has only been relocated by 20 yards rather than to the tree line)	the Limits of Deviation could be utilised to reduce the oversail to the extent possible. A commitment has been included within the Development Consent Order (DCO) to seek to minimise the oversail by looking to position the pylon at TB224 and the alignment and pylons to the south of TB224 as far west within the Limits of Deviation as possible. Where possible this positioning should: minimise the offset to the gas pipeline; minimise the offset to the solar panels (the need for temporary removal is accepted but aim to avoid direct permanent loss of solar panel production area); avoid the need for tree management to the woodland south of the Southend Arterial Road and minimise vegetation removal at the western end of the respondents field.				
10-46.24	Suggestion that the Project is routed away from / the Project should not be located at Haverings Grove	National Grid has considered the respondent's feedback highlighting a preference for an alternative moved away from Havering's Grove. In the absence of a specific basis for the change or a proposed alternative alignment, we have considered this feedback by following the guidance in the Holford Rules in developing the alignment. Guidelines on overhead line routeing are known as the "Holford Rules" which remain a valuable tool in selecting and assessing potential overhead line route options as part of the options appraisal process. A summary of the Holford Rules is provided within Appendix I22 of this report. We are therefore not proposing a change to the alignment at Havering's Grove.		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-46.25	Suggestion that the Project is routed away from / the Project should not be located at Hutton	National Grid has considered the respondent's feedback highlighting a preference for an alternative moved away from Hutton. In the absence of a specific basis for the change or a proposed alternative alignment, we have considered this feedback by following the guidance in the Holford Rules in developing the draft alignment. Guidelines on overhead line routeing are known as the "Holford Rules" which remain a valuable tool in selecting and assessing potential overhead line route options as part of the options appraisal process. A summary of the Holford Rules is provided within Appendix I22 of this report. We are therefore not proposing a change to the alignment at Hutton.			X	
10-46.26	Suggestion that the Project is routed away from / the Project should not be located at Dunton Hills Garden Village	National Grid has considered the respondent's feedback highlighting a preference for an alternative moved away from Dunton Hills Garden Village. In the absence of a specific basis for the change or a proposed alternative alignment, we have considered this feedback by following the guidance in the Holford Rules in developing the draft alignment. Guidelines on overhead line routeing are known as the "Holford Rules" which remain a valuable tool in selecting and assessing potential overhead line route options as part of the options appraisal process. A summary of the Holford Rules is provided within Appendix I22 of this report. We are therefore not proposing a change to the alignment at Dunton Hills Garden Village.		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Economic / Employment Impact						
10-46.27	Concern about negative impact on businesses in the area	<p>Through the routeing and siting exercise, National Grid has sought to reduce as far as practicable impacts to businesses.</p> <p>Impacts on local businesses within the Local Study Area (the Order Limits) and within the 3 km Study Area (where visual impact is likely to be an economic consideration) are assessed in Environmental Statement (ES) Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15). As part of this assessment, a range of mitigation measures have been considered to reduce disruption to businesses and their users during the construction phase of the Project. These measures are identified in ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15), the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) which accompany the Development Consent Order (DCO) application.</p>			X	
Environmental Impact						
10-46.28	Concern about negative impact of the Project on the Green Belt(s)	To facilitate the Project, it would be necessary to route through the Metropolitan Green Belt. National Grid has considered the effects on the Green Belt and all of the options connecting into Tilbury identified in the Corridor and Preliminary Routeing and Siting Study (CPRSS)			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>would result in new and upgraded infrastructure in the Green Belt.</p> <p>The National Electricity Transmission System (NETS) transports energy from where it is generated to where it is used, in homes, schools, hospitals, businesses, and factories. Electricity networks are an established feature in our landscapes, taking energy across open countryside to towns and cities where it is needed. To ensure the national electricity network can transport energy efficiently there are numerous electricity transmission connections crossing Green Belts. Many of these connections are by way of overhead lines. By their nature, electricity transmission infrastructure (overhead lines) within the Green Belt is inevitable due to the need to transport energy around the country and the need to avoid the most built-up areas around our towns and cities (Holford Rule Supplementary Note 1 - A summary of the Holford Rules is provided within Appendix I22 of this report).</p> <p>Some electricity infrastructure such as overhead lines, are considered to be engineering operations. By the nature of their design, and the sensitive siting, some of this infrastructure such as pylons and conductors may not be considered inappropriate development in the Green Belt as they do not conflict with Green Belt purposes and preserve openness. Although overhead lines may occupy long corridors within Green Belt, they involve little physical change to the land through which they pass and leave a large majority of the land</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>beneath them free from development and therefore open.</p> <p>The Planning Statement (document reference 5.6), submitted with the application for development consent, includes an assessment of the Project against Green Belt planning policy (as contained in National Policy Statement EN-1 and the National Planning Policy Framework).</p>				
10-46.29	Concern that the Project will impact ancient woodland	<p>Through routeing, siting and detailed design, National Grid has sought to reduce, as far as practicable, impacts on biodiversity and in particular features of high ecological value, such as ancient woodland. A standard 15 m buffer from construction activities has been applied wherever practicable. Potential direct and indirect impacts on each block of ancient woodland within the study area have been considered within the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8) and any necessary mitigation detailed to ensure no significant residual effects. An Ancient Woodland and Veteran Tree Strategy is included as part of the Outline Landscape and Ecological Management Plan (LEMP) (see Appendix B of the Outline LEMP (document reference 7.4)). The Outline LEMP has been developed in consultation with relevant stakeholders including Natural England and local planning authorities.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-46.30	Concern that the Project will impact nature reserve / RSPB reserve / Special Protection Area (SPA)	Through routeing, siting and design development, National Grid has sought to reduce, as far as practicable, impacts on biodiversity and in particular features of high ecological value, such as local wildlife sites (LWS), Royal Society for the Protection of Birds (RSPB) reserves and Special Protection Area (SPA's). Whist there are no impacts on RSPB reserves, potential direct and indirect impacts on LWS's and SPA's within the study area have been considered within the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8). SPA's and the associated impact on birds has also been considered within the Habitats Regulations Assessment Report (HRA) (document reference 5.3).		X	X	
10-46.31	Concern that the Project will result in a negative impact on the environment / countryside generally	National Grid has sought to reduce, as far as practicable, impacts on the environment / countryside through routeing and siting and an ongoing iterative design process which has taken on board feedback at different stages of the Project. The iterative design process sought to avoid areas of highest concern, for example through changes to the route alignment or changes to the method e.g. trenchless crossings. National Grid has engaged with a range of stakeholders (including Statutory Environmental Bodies (SEBs) and relevant local planning authorities) throughout the development of the Project design and environmental assessment work.		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project. The results of this assessment are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation (and maintenance) of the Project and recommends appropriate mitigation measures to reduce potential effects.</p> <p>A number of mitigation measures have been incorporated into the Project design. Mitigation relevant to specific environmental topics (including Ecology and Biodiversity, Landscape and Visual and Historic Environment) are presented in the relevant ES chapters. The Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Code of Construction Practice (CoCP) (document reference 7.2) contain a list of relevant good practice measures to avoid or reduce risks to habitats and species.</p> <p>In addition to the EIA, National Grid has set itself a target of delivering 10% biodiversity net gain (BNG) with environmental and societal benefits on all construction projects, meaning that as a result of measures taken, the biodiversity rating of the area will be enhanced by 10% greater than prior to the construction of the Project. The BNG target for the</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Project is currently voluntary and aligned with our corporate sustainability commitment.				
10-46.32	Concern that the Project will impact conservation area	<p>The potential for the Project to affect the setting and significance of Conservation Areas has been comprehensively assessed in accordance with established best practice and guidance such as Good Practice Advice Note 3: The Setting of Heritage Assets (Historic England, 2017) and other relevant policy and guidance such as Conservation Principles (Historic England, 2008) and relevant planning policies including the Overarching National Policy Statement for Energy (EN-1).</p> <p>The assessment methodology and its application have been discussed with and agreed by key heritage stakeholders, including Historic England and relevant local planning authorities, through the Scoping process and subsequent thematic working group meetings. This collaborative approach has ensured that the assessment is robust, proportionate, and in line with expectations.</p> <p>Each Conservation Area potentially affected by the Project has been individually assessed for both direct and indirect effects, including impacts arising from change to setting. These assessments are presented in Chapter 11: Historic Environment of the Environmental Statement (document reference 6.11), supported by detailed mapping and analysis in the Historic Environment Baseline Report (Appendix 11.1, document reference 6.11.A1). The methodology</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>considers all relevant aspects of significance, including historical, architectural, and evidential values, as well as the contribution of setting to that significance.</p> <p>Where adverse effects on the setting of Conservation Areas have been identified, the Project has sought to reduce these through route refinement and design evolution. This includes, where appropriate, adjustments to pylon locations, alignment shifts, and the development of mitigation proposals in the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5).</p> <p>We are therefore confident that the assessment of impacts on Conservation Areas has been carried out to a high standard and that appropriate measures have been taken to mitigate any identified adverse effects.</p>				
10-46.33	Concern about the impact of the Project on flooding	<p>A detailed Flood Risk Assessment (FRA) has been prepared (document reference 7.9). The FRA assesses flood risk to the Project and the impacts that the Project's construction and operation would have on flood risk from a wide range of sources. The assessment has been informed by a wide range of data sets, including the January and March 2025 data from the Environment Agency, and by engaging with the Environment Agency and all of the relevant Lead Local Flood Authorities and Drainage Boards. The FRA (document reference 7.9) has identified a range of controls and mitigation measures to prevent flood risk impacts, which have been secured through a range of commitments set out in the Outline Code of</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Construction Practice (document reference 7.2). The FRA (document reference 7.9) also describes the measures and strategy that would be put in place to manage surface water runoff arising from Project construction worksites and operational infrastructure.				
Financial Compensation						
10-46.34	Concern that the Project will devalue property / impact on property value in this section	<p>National Grid acknowledges that its proposals may cause concern to landowners. Diminishment of property value known as 'injurious affection' and any other appropriate heads of claim would be considered on an individual basis in accordance with current legislation. We would pursue a voluntary agreement with affected landowners, acquiring rights in accordance with our Land Rights Strategy (the strategy is subject to review). If a voluntary agreement cannot be reached, then the Compulsory Purchase Code allows for a claim of compensation for the loss that property owners may have suffered as a direct result of the retained part of your property ownership being worth less as a direct result of the works.</p> <p>If there are any specific concerns about the devaluation of property, National Grid would advise seeking third party advice. or alternatively please contact the Project team:</p> <p>Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.</p> <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business</p>		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-46.35	Request for adequate financial compensation / Suggest that impacted individuals need to be compensated	<p>Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD.</p> <p>All affected landowners would be compensated for any temporary/permanent losses, and this would be dealt with on a case-by-case basis in line with the Compensation Code.</p> <p>If there are any specific concerns requiring compensation and how it would be assessed, please contact the Project team:</p> <p>Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.</p> <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD</p> <p>The Government has published its guidance on community funds for transmission infrastructure (DESNZ, 2025). National Grid is committed to working with Ofgem, industry partners, local communities and their representatives to ensure community benefits are delivered fairly and effectively, driving lasting, positive change for the people and places integral to our developing electricity network.</p> <p>Government has also announced its plans to introduce a bill discount scheme for households within 500 m of new infrastructure, which it proposes to introduce through the Planning and Infrastructure Bill. This is evolving government policy. Government expects this</p>		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>scheme to be in place by 2026 and we would share further details as they emerge.</p> <p>National Grid is committed to providing a coordinated local and regional approach to community benefits. This would be delivered outside the development consent process, since this is not a material consideration in the decision on the proposed Project or a matter to be secured as part of the DCO, as per the Community Funds for Transmission Infrastructure: Guidance (DESNZ, 2025).</p>				
Health, Safety and Wellbeing						
10-46.36	Concern that the Project may result in a negative impact on mental health / wellbeing	<p>National Grid recognises people may have concerns about the health effects of living close to an overhead line, and that the uncertainty whilst the proposals are developed may cause anxiety.</p> <p>We have sought to reduce potential effects on communities and residents through routeing and design. We have also sought to reduce concern or uncertainty about the proposals through making timely design decisions and engaging with the people and stakeholders throughout the development of the Project.</p> <p>The Project team will continue to engage with people potentially affected during progress of the Project, through regular communication including letters, phone calls and meetings. This would enable concerns to be raised and discussed at an early opportunity and</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>provide a regular point of contact to respond to queries and concerns.</p> <p>We urge anyone with concerns to get in touch through the Norwich to Tilbury Freephone number, address or email throughout the progress of the Project:</p> <p>Call our Community Helpline: 0800 915 2497 (Lines are open Monday to Friday 9:00am – 5:30pm)</p> <p>Email us: contact@n-t.nationalgrid.com</p> <p>Write to us: FREEPOST N TO T (No stamp or further address details are required)</p> <p>The UK has a carefully thought-out set of policies for protecting us all against Electric and Magnetic Fields (EMFs), the main component of which is exposure guidelines. Those exposure guidelines are set by independent scientific bodies and are based on decades-long studies into the effects of EMFs and ill health. After those decades of research, the weight of evidence is against there being any health risks of EMFs below the guideline limits. These policies are incorporated into the decision-making process for Development Consent in National Policy Statement (NPS) EN-5. It is National Grid's policy to ensure that all of its equipment comply fully with those exposure limits.</p>				
10-46.37	Concern about health risks associated with the Project / physical health risks associated with the Project	Health considerations are given a high priority in the process by which we arrive at any proposals for new electricity circuits. Assessment of compliance with Electric and Magnetic Field (EMF) guidelines and			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>policies is key to National Grid's approach. The UK has a carefully thought-out set of policies for managing EMFs. There have been over four decades of research looking into whether EMF can cause health effects and there are no established effects below the exposure limits. When designing our overhead lines, substations and underground cables design criteria, we ensure they would not exceed those exposure limits, even when operating at 100% capacity. Additionally, the precautionary measures which the Government have adopted, are applied to the design which ensure the EMFs reduce as quickly with distance as possible. Evidence of that compliance is presented in the Electric and Magnetic Field Compliance Report (document reference 7.8) submitted as part of the Development Consent Order (DCO) application.</p> <p>National Grid takes this issue very seriously and looks to authoritative and independent scientific organisations such as the World Health Organisation (WHO) and in the UK Health Security Agency (UKHSA) to review the worldwide body of scientific evidence on health. Important decisions on health are taken independently of industry, and National Grid has followed the guidance and policies adopted by Government on advice from their scientific experts. Each of these organisations have comprehensive reviews of EMF research available to view on their websites.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Heritage						
10-46.38	Concern about negative impact on heritage / Suggest that the Project should be routed away from heritage buildings / listed buildings / historical site	Through routeing and siting National Grid has sought to reduce as far as practicable potential impacts on the historic environment. The impacts of the Project on the historic environment are assessed in Chapter 11: Historic Environment (document reference 6.11) of the Environmental Statement (ES). The assessment considers the potential impact on archaeology, historic buildings and historic landscapes and includes assessment of potential for physical impact, impact through change to setting that affects the value of a heritage asset and impact through indirect factors such as change in hydromorphology. The assessment is supported by walkover, setting and geophysical surveys, as documented in ES Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1) and Appendix 11.4: Geophysical Survey Results Report (document reference 6.11.A4). In some areas archaeological trial trench evaluation has been undertaken and is reported in Appendix 11.5: Trial Trenching Results Report of the ES (document reference 6.11.A5). In addition to the proposals in the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4), the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5) sets out appropriate mitigation for the historic environment. The Project has engaged with Historic England and relevant planning authorities on aspects relating to		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		heritage, including appropriate mitigation measures and techniques. and to take their views into account during Project development.				
Mitigation						
10-46.39	Suggest mitigation measures	<p>An Environmental Statement (ES) (document reference Volume 6: Environmental Statement) has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 ('the Infrastructure EIA Regulations'). The ES identifies and assesses the likely significant effects on the environment resulting from the construction, operation (and maintenance) of the Project and recommends appropriate mitigation to reduce effects.</p> <p>Environmental mitigation measures have been defined within each environmental topic chapter and set out in relevant management documents submitted with the Development Consent Order (DCO) application, including the Outline Code of Construction Practice (CoCP) (document reference 7.2), the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5).</p>		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Public Rights of Way (PRoW)						
10-46.40	Concern about negative impact on PRoW / footpaths / cycle paths / bridleways	<p>Through routeing and siting, National Grid has sought to reduce, as far as practicable, impacts and disruption to Public Rights of Way (PRoW).</p> <p>The iterative design process identified the existing PRoW network and their wider connectivity and sought where practicable to reduce and where possible remove impacts to PRoW.</p> <p>Effects on PRoW would be mitigated where possible, maintaining access where practicable, with closures as a last resort. We will continue to engage with relevant stakeholders on the PRoW network to enable feedback and input to be considered as the Project progresses. An Outline Public Rights of Way Management Plan (document reference 7.6) is submitted with the Development Consent Order (DCO) application.</p>		X	X	
Requests						
10-46.41	Request for further impact surveys in this section	National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project. The assessment is informed by a suite of field surveys and desk studies and results are presented in an Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the application for development consent. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation (and maintenance) of the Project and		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>recommends appropriate mitigation measures to reduce potential adverse impacts.</p> <p>The scope of the EIA is included in the Scoping Report (document reference 6.19) which was submitted to the Planning Inspectorate in November 2022 and their Scoping Opinion (document reference 6.20) received in December 2022. This provided the opportunity for statutory bodies to comment on the scope of the EIA which included our approach on study areas, data collection and baseline conditions for a range of environmental topics. We also discussed and agreed survey scope with stakeholders (including Statutory Environmental Bodies and Local Planning Authorities) following the Scoping Opinion (document reference 6.20) to ensure a robust baseline assessment.</p> <p>National Grid has prepared an Outline Code of Construction Practice (CoCP) (document reference 7.2) which sets out the required mitigation measures and environmental commitments that would be implemented during the construction phase of the Project to avoid or reduce potential effects of the Project on the environment, including commitments to undertake further surveys.</p>				
Visual Impact						
10-46.42	Concern that the Project will be unsightly / visually intrusive (including overhead lines, CSE compounds and substations) / Concern that the Project will cause a negative impact on views	National Policy Statement (NPS) EN-5 makes it clear that the Government considers overhead lines to be appropriate and acceptable in most instances, although it recognises that that there may be, at		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>particularly sensitive locations, potential adverse landscape and visual impacts of an overhead line that make it inconsistent with our duties and relevant planning policy.</p> <p>The Dedham Vale National Landscape (previously an Area of Outstanding Natural Beauty (AONB)) designation is one such location where underground cable technology is proposed with the extent of underground cabling extending beyond the boundary in response to the potential for the Project to affect the National Landscape. Our proposals include a total of approximately 20 km of underground cable through and in the vicinity of the Dedham Vale National Landscape, including a section at Great Horkesley to reduce the changes in views and setting of the National Landscape from within and adjacent to its designated boundary.</p> <p>Underground cabling is also proposed for a short section of 400 kV overhead line crossing near Fairstead.</p> <p>Cable Sealing End (CSE) compounds are required to facilitate sections of underground cable. The proposed East Anglia Connection Node (EACN) substation is required to connect customers, and the proposed Tilbury North Substation is required to connect the Project into the existing Tilbury Substation. These components have been carefully sited taking into consideration Horlock Rules including the potential for landscape and visual effects.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>The higher cost of underground cables to bill paying consumers, and the environmental implications of installing underground cables and maintaining them at locations outside the Dedham Vale National Landscape, are not considered to be justifiable in the context of national policy or National Grid's statutory duties, which include the need to be economical and efficient.</p> <p>A Landscape and Visual Impact Assessment (LVIA), presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13), has been undertaken as part of the Environmental Impact Assessment (EIA). The LVIA includes an assessment on both landscape character and visual amenity.</p> <p>Landscape mitigation is proposed within Environmental Areas around substations and CSE compounds. The Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) includes details regarding the planting proposals.</p>				
Wildlife / Ecology Impact						
10-46.43	Concern about impact of the Project on birds	Chapter 8: Ecology and Biodiversity of the Environmental Statement (ES) (document reference 6.8) considers potential impacts during the construction and operational phase of the Project on birds. Bird surveys have been undertaken across the route between 2022-2025 to determine an accurate baseline value, the scope of which has been agreed with			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Natural England and Local Planning Authorities. The potential for bird collision risk impact during the operational phase has been assessed within the ES and Habitat Regulations Assessment Report (HRA) (document reference 5.3) and agreed with Natural England. Survey results have identified no areas of significant bird collision risk across the Project.</p> <p>It is noted that birds are a mobile species, and it is likely that active nests for common and widespread species may be encountered during the construction phase. Precautionary working methods for breeding birds are included within the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the Outline Landscape Ecological Management Plan (LEMP) (document reference 7.4) accompanying the Development Consent Order (DCO) application.</p>				
10-46.44	Concern that the Project will result in a negative impact on species (protected status not specified)	Through routeing, siting and detailed design National Grid has sought to reduce, as far as practicable, potential impacts on biodiversity including protected species. The design process has taken account of existing biodiversity, the natural environment and, where practicable, has sought to reduce impacts on areas of ecological sensitivity including protected species and their associated habitats, through avoidance or mitigation. A comprehensive survey effort for a range of protected species was completed over the 2023 – 2025 period. Chapter 8: Ecology and Biodiversity of the Environmental Statement (ES)			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		(document reference 6.8) assesses the effects on protected species based on this baseline information and where/if required appropriate mitigation measures are detailed. Suitable mitigation for protected species has been developed in consultation with Natural England to ensure legal compliance and best practice guidelines are adhered to. Where necessary, draft licence applications have been drafted and National Grid is in the process of agreeing the detail within the licence documents with Natural England, in order to obtain the relevant Letters of No Impediment (LoNI). Mitigation for non-licensable protected species has been included within the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4).				
10-46.45	Concern that the Project will result in a negative impact on rivers / other bodies of water	Through routeing, siting and detailed design National Grid has sought to reduce, as far as practicable, potential impacts on biodiversity including river ecology. The design process has taken account of existing biodiversity, the natural environment and, where practicable, has sought to reduce impacts on areas of ecological sensitivity such as river corridor habitats, through avoidance or mitigation. The same approach has been taken to account for rivers and their floodplains, seeking to avoid or reduce the footprint of the Project within floodplains. As part of the Environmental Impact Assessment (EIA) process for the Project, a suite of ecological surveys has been undertaken, including along river corridors.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>The data has informed the assessment of effects on biodiversity, hydromorphology, water quality and flood risk presented in the Environmental Statement (ES), Chapter 8: Ecology and Biodiversity (document reference 6.8) and ES Chapter 12: Hydrology, Land Drainage and Flood Risk (document reference 6.12) and the Water Framework Directive Assessment (document reference 7.10).</p> <p>Further, the Project has engaged with Natural England, the Environment Agency and Local Planning Authorities on aspects relating to river ecology, water quality and flood risk, and appropriate mitigation measures and techniques have been secured, as detailed in the Outline Code of Construction Practice (CoCP) (document reference 7.2).</p> <p>The Environment Act 2021 introduces a mandatory requirement for 10% Biodiversity Net Gain (BNG) for new Development Consent Order (DCO) developments (which is not yet in force and not expected until May 2026). National Grid has committed to delivering 10% BNG with environmental and societal benefits on all construction projects including for river ecology. The BNG target for the Project is currently voluntary and aligned with National Grid's corporate sustainability commitment.</p> <p>As well as seeking to avoid and minimise our impacts on nature, the Project includes enhancement of watercourse habitats as part of BNG mitigation.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-46.46	Concern that the Project will result in a negative impact on wildlife / biodiversity / ecology (generally)	<p>Through routeing, siting and detailed design National Grid has sought to reduce, as far as practicable, potential impacts on biodiversity. The design process has taken account of existing biodiversity, the natural environment and, where practicable, has sought to reduce impacts on areas of ecological sensitivity, through avoidance or mitigation.</p> <p>Chapter 8: Ecology and Biodiversity of the Environmental Statement (ES) (Document Reference 6.8) assesses the effects on important ecological receptors. As part of the Environmental Impact Assessment (EIA) process for the Project, a suite of ecological surveys has been to be undertaken over the 2022-2025 period. The findings of which inform the design and approach to mitigation.</p> <p>The Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Code of Construction Practice (CoCP) (document reference 7.2) contain a list of relevant good practice measures to avoid or reduce impacts on valuable habitats and species. The Environment Act 2021 introduces a mandatory requirement for 10% Biodiversity Net Gain (BNG) for new Development Consent Order (DCO) developments (which is not yet in force and not expected until May 2026). National Grid has committed to delivering 10% Biodiversity Net Gain (BNG) with environmental and societal benefits. The Net Gain target for the Project is currently</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>voluntary and aligned with our corporate sustainability commitment.</p> <p>As well as seeking to avoid and minimise impacts to nature, the Project considers the land required for mitigation, compensation and enhancement that can deliver BNG and wider environmental benefits. This would require delivery of offsite Biodiversity Units via habitat creation or enhancement actions in strategic areas, and we will consider all offsite options that are available to us.</p>				

Essex 10 Change feedback (Targeted Consultation)

Table 10-47 Summary of consultee comments and National Grid's response

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Consultation						
10-47.1	Criticism of consultation materials on this change (Essex 10)	<p>National Grid notes the respondent's feedback. For each of our targeted consultations we developed an overview leaflet which included an annotated map explaining the specific changes to pylons, access roads, and compounds. We also produced an Environmental Implication of Change (EIC) document for each proposed change. These were sent to properties within the bespoke consultation zone for the relevant change. More information on how we defined the consultation zones is available in this Consultation Report. We also published a consultation strategy and overview map. All these documents remain available on the Project website. The information provided at the targeted consultations was considered proportionate to the changes being consulted upon.</p> <p>We believe that all the relevant information required for the public to make informed decisions was available and do not believe that this impacted the feedback we received.</p>		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		We included details of haul roads and access in our targeted consultation documents where relevant however as we were not consulting on the wider route at this stage, other access points and haul roads which had not changed following statutory consultation were not included for comment. We have discussed all haul roads, compounds, and access points with the relevant landowners.				
Design Change						
10-47.2	Oppose the proposed change - Essex 10 (generally)	National Grid notes the respondent's feedback.			X	
10-47.3	Support the proposed change - Essex 10 (generally)	National Grid notes the respondent's feedback.		X	X	
10-47.4	Suggest the Project uses underground cables instead of the proposed Essex 10 change (e.g. this will be cheaper due to the need to excavate for the existing cables, so could excavate for 400kV cables too)	<p>National Grid notes the respondent's feedback. We are proposing to place the existing 132 kV overhead line underground at Havering's Grove. The space required for the separation of the cables from a thermal perspective means that the 132 kV and the 400 kV would need separate cable swathes and therefore would not constitute a cost saving.</p> <p>National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position</p>		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>is 'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Park, The Broads, or Area of Outstanding Natural Beauty)'. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Havering's Grove would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.</p>				
10-47.5	<p>Suggest that Pylons TB206 to TB211 are relocated to the east, aligning them with the field boundaries (e.g straightening the route to reduce the need for an additional pylon). Alternatively, suggest that the Project uses underground cables from Pylons TB206 to TB211</p>	<p>National Grid notes the respondent's feedback to move TB206 to TB211 to the east. It is not possible to move these pylons further east as this would move the alignment closer to properties at Havering's Grove, transferring effects. To the east there would also be impacts to a pond, woodland and a gas pipeline and would therefore be less preferred. We have therefore not proposed a change at this location.</p> <p>National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is '<i>that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)</i>'. Where no such designations are present,</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at TB206 to TB211 would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-47.6	Suggest that the use of underground cables for the replacement of the existing 132 kV overhead line proposed as part of the Essex 10 change is extended further south by an additional pylon, with the next existing pylon south upgraded to a cable sealing end (CSE) compound in an area of bare land or scrub for the transfer from underground cable to overhead line instead (e.g. to mitigate impact on arable field, including severing a corner; to mitigate impact on landowner's business)	<p>National Grid notes the respondent's feedback. We are utilising underground cable for the Project in certain areas where this is justified in policy. We are also proposing to place existing overhead lines underground where the alignment needs to cross them or whether the combination of effects from the existing overhead line and the alignment mean that a reduction of effects is necessary.</p> <p>In this instance, we do not feel that there is a sufficient driver nor benefit to the Project, to justify the additional costs of extending the undergrounded section to the next pylon, however we are proposing to remove existing pylon PUB41 (located in the middle of the field) and to position the new cable sealing end platform pylon to the western edge of the field to minimise impacts.</p> <p>National Grid will work with the respondent to take every precaution to try and minimise impact to current farming operations. Where this is unavoidable, temporary measures or compensation would be agreed.</p>			X	
10-47.7	Criticism that underground cables are being used but pylons are still being erected	National Grid notes the respondent's feedback. We are utilising underground cable for the Project in certain areas where this is justified in policy. We are also proposing to place existing overhead lines underground where the alignment needs to cross them or whether the combination of effects from the existing overhead line and the alignment mean that a reduction of effects is necessary.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Where overhead lines are to be undergrounded, they require terminations. At overhead line terminations, terminal pylons that can withstand the conductor loads must be erected to connect the overhead line to the underground cables.</p> <p>Furthermore, it is necessary to erect temporary pylons in order to construct a temporary bypass overhead line so that the portion in question can be safely worked on while disconnected from the system. Once the underground cable has been energised, the temporary pylons will be removed.</p>				
10-47.8	Suggestion that National Grid should consider tunnelling/boring cables (like in London) instead of using pylons to carry electricity/ National Grid is changing pylons to tunnel due to the Visual Impact Provision Scheme	<p>National Grid has carefully considered the feedback proposing the use of underground cable across the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)'</i>. NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified. Therefore, the starting presumption for the Project is overhead line. In line with the policy in EN-5</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		(paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) (document reference 6.13) has been undertaken which assesses the level of effects from the Project.				
10-47.9	Suggestion that 400 volt line should link up with the existing 132 volt line behind the properties at Oakleigh Farm and accommodate the 132 volt line on to the 400 volt pylon to mitigate visual impacts for the properties to the east	The Project is proposing a double circuit pylon design, therefore there is no capability or existing design to allow the addition of a third circuit. In addition, the 132 kV overhead line is owned, operated and maintained by the local distribution network operator under their licensed agreement.			X	
10-47.10	Suggest that the Project is rerouted between TB206 and TB211 (e.g. to follow a more direct route; plan provided by respondent) with pylons relocated to field boundaries (e.g. to mitigate impact on farming)	National Grid notes the respondent's feedback. In some cases the desired positioning of pylons to field boundaries would lead to excessive span lengths and taken as a whole it is not possible to support such a sequence of relatively long span lengths as it would not meet technical standards. Additionally, this change would reverse a change made after receiving previous feedback and would increase effects to a residential			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		property replacing the nearest pylon with an angle pylon compared with a suspension pylon that is less visually intrusive. National Grid also considered other routes in this area further to the east between TB200 and TB211 but these route much closer to a greater number of residential properties and are considered less consistent with Holford Rule supplementary notes. No change is therefore proposed.				
10-47.11	Suggest that the existing UK Power Network line should remain, and the newly proposed line be placed underground (e.g to reduce costs, decrease disruption, minimise losses for landowners and reduce environmental impact)	<p>National Grid notes the respondent's feedback. We are proposing to place the existing 132 kV overhead line underground at Havering's Grove. It is preferable to underground the 132 kV overhead line in this area and not the 400 kV as the space required for the separation of the cables from a thermal perspective is less, and therefore less space is required for the cables. Undergrounding the alignment instead of the 132 kV overhead line as suggested would be more costly, disruptive and would increase environmental effects.</p> <p>Undergrounding the existing 132 kV overhead line also enables enough space to be created for the alignment to be routed further from receptors.</p> <p>National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)'</i>. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		impact terms), we do not consider the Project at Havering's Grove would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
10-47.12	Suggest that Pylon TB209 is relocated to its original position (e.g to reduce the impact on agricultural land)	<p>National Grid notes the respondent's feedback. The movement of the alignment (and TB209) to the west was preferred as it reduces impacts on residential properties to the east and is possible due to the existing 132 kV overhead line being placed underground in this area, meaning the Project can use a similar alignment. We are therefore not proposing a further change to the alignment in this area. National Grid's lands team will continue to work with landowners and appointed agents to answer any questions or concerns. If you have further questions or need additional details, please do not hesitate to contact the Project lands team to discuss: Norwich-Tilbury@fishergerman.co.uk or by calling on Freephone 0808 175 3314.</p> <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD.</p>			X	
10-47.13	Suggest the proposed DNO termination tower is relocated as per the respondent's plan, as this will	National Grid notes the respondent's feedback. We are utilising underground cable for the Project in certain			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	help to preserve the future development potential of the respondents land.	<p>areas where this is justified in policy. We are also proposing to place existing lower voltage overhead lines underground where the Project alignment needs to cross them or where the combination of effects from the existing overhead line and the alignment mean that a reduction of effects is necessary.</p> <p>In this instance, when the proposed development does not have a granted planning consent in place we do not consider that there is a sufficient driver nor benefit to the Project, to justify the additional costs of extending the undergrounded section towards the next pylon.</p> <p>However if the landowner / developer engages directly with the Distribution Network Operator (DNO) to secure and fund this further change, then National Grid will work with the respondent and DNO to coordinate the development accordingly and support the respondents aims.</p>				
10-47.14	Request haul road is moved to the headland of the respondent's land and the construction compound is relocated from neighbouring land and onto the respondent's land, to move the compound away from residential properties	<p>National Grid notes the respondent's feedback. We have amended the location of the compound as suggested by the respondent.</p> <p>The suggested alternative route for the haul road was considered. The haul road is required to be as close to the alignment as possible for construction of the proposed assets. We are therefore not proposing the change to the haul road at this location as suggested by the respondent as it would move it too far away from the alignment.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-47.15	Suggest that the Project uses underground cables between Pylons TB205 and TB213, or that the existing pylons at this location are upgraded instead (e.g to mitigate impact on respondent's property, visual impact, animals, wildlife, and listed buildings)	<p>National Grid notes the respondent's feedback. We are proposing to replace sections of the 132 kV overhead line connection with underground cables from north of Bushwood Farm to south of Creasey's Farmhouse.</p> <p>In addition, National Grid has carefully considered the feedback proposing the use of underground cable from pylons TB205 to TB213, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 states that the Government considers overhead lines to be appropriate and acceptable in most instances, although it recognises that that there may be, at particularly sensitive locations, potential adverse landscape and visual impacts of overhead line infrastructure that make it inconsistent with our duties and relevant planning policy. No such designations are present from pylons TB205 to TB213, nor is this area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified. Therefore the starting presumption for the Project here is an overhead line.</p> <p>An Environmental Statement (ES) (document reference: Volume 6: Environmental Statement) has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations</p>			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>2017 ('the Infrastructure EIA Regulations'). The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation (and maintenance) of the Project and recommends appropriate mitigation to reduce effects. Specifically, the potential impacts on the historic environment is presented in ES Chapter 11: Historic Environment (document reference 6.11), wildlife is presented in ES Chapter 8: Ecology and Biodiversity (document reference 6.8) and a landscape and visual impact assessment is presented in ES Chapter 13: Landscape and Visual (document reference 6.13).</p> <p>The assessment of listed buildings is supported by setting surveys, as documented in ES Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1). The Project has engaged with Historic England and relevant planning authorities on aspects relating to heritage, including appropriate mitigation measures and techniques and to take their views into account during Project development.</p> <p>The assessment of Ellices concludes a significant effect during construction and a not significant effect during operation. The assessment of Hutton House and Stable and Coach House at Hutton House concludes a significant effect during construction and a not significant effect during operation. No additional mitigation measures are proposed as any measures designed to lessen the visual impact of the Project would be of a</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		scale that would visually adversely alter the setting of the asset.				
10-47.16	<p>Suggest the following in order to reduce the impact on respondents property: Relocate Pylons TB200 to TB214 to keep a straight line and avoid the farm, either above or below ground. Alternatively on the proposed route suggest relocating pylons to field edges, keeping 4-6m from the hedge/ditches for maintenance access. Suggest relocating Pylon TB206 south to shorten the distance to TB208. Suggest removing Pylon TB207 and moving Pylon TB208 north to anywhere between the edge of the woodland and the field boundary (the small area of land between the woodland and field boundary is no longer commercially farmed so can be used to house the pylon) Suggest relocating Pylon TB209 to field boundary (N) Suggest relocating Pylon TB210 to the edge of field (NW)</p>	<p>In terms of alternative routes and pylon positions it is not possible to route directly from TB200 to TB214 due to the presence of residential properties in Havering's Grove as well as properties closely positioned on the road to the west, so a change as suggested would both transfer and increase effects to other residential properties. The removal of a pylon is not possible as the span lengths would exceed technical limits, though some micro-siting of TB207 may be possible. The change to other pylon positions transfers effects to other residential properties and overall the Project alignment is preferred. There is potential flexibility to relocate the haul road to the west of the corridor which can be dealt with in detailed design.</p> <p>The impacts of permanent pylon footings on agricultural land is assessed in Chapter 6: Agriculture and Soils (document reference 6.6) of the Environmental Statement (ES). Design sought to minimise impacts on farming activities when considering pylon locations, including TB200 to TB214. The pylon footings cover a relatively small area of land proportional to field sizes; therefore, the impacts on farming activities and agricultural yields should be small.</p> <p>Should a landowner feel that they are owed compensation or would like to discuss how or when compensation is payable, they should contact the</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Projects Land team to discuss: Norwich-Tilbury@fishergerman.co.uk or by calling on Freephone 0808 175 3314.</p> <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD.</p> <p>Landowners can also refer to the National Grid Land Rights Strategy or the Compensation Code for further information.</p>				
Primary Access Routes / Haul Road / Construction Compounds						
10-47.17	Criticism no haul road was shown to the repositioned temporary laydown near Humes Farm	National Grid notes the respondent's feedback. The temporary laydown area is required to temporarily store materials for the construction of the haul road. As described in the consultation material, the laydown area will be accessed from the same location as previously proposed at statutory consultation. i.e., via the haul road and working area at pylon TB208.			X	
Requests						
10-47.18	Concern that the access routes proposed around Havering's Grove have the potential to harm local operations to an unacceptable degree. Request for reassurance as to the assessment and suitability of these access locations	Environmental Statement (ES) Chapter 16: Traffic and Transport (document reference 6.16), submitted as part of the Development Consent Order (DCO) application, includes the assessment of the delays during peak construction activity (worst-case) on the A129 London Road that provides access to Havering's Grove, due to		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		construction traffic. The expected total 12hr weekday (07:00-19:00 hrs) increase in traffic from the future baseline year is 2%, which includes predicted committed development flows. Based on the Transport Assessment (document reference 7.11) during the peak hours, only 15 construction vehicles are expected on the A129 London Road (seven in each direction), which equates to one additional vehicle every 4 minutes. Therefore, no significant effects are expected as a result of the Project construction activity.				

Essex 11 Change feedback (Targeted Consultation)

Table 10-48 Summary of consultee comments and National Grid's response

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Consultation						
10-48.1	Criticism of consultation materials on this change (Essex 11)	National Grid notes the respondent's feedback. For each of our targeted consultations we developed an overview leaflet and Environmental Implication of Change (EIC) document which included information on the potential impacts of the proposed change. The EIC produced for Essex 11 includes references to Botney Hill road in reference to 'Ecology and Biodiversity' and also includes other potential impacts on Dunton Hill which were considered. These documents were sent to properties within the bespoke consultation zone for the relevant change. More information on how we defined the consultation zones is available in this Consultation Report. We also published a consultation strategy and overview map. All these documents remain available on the Project website. The information provided at the targeted consultations was considered proportionate to the changes being consulted upon. We believe that all the relevant information required for the public to make informed decisions was available and do not believe that this impacted the feedback we received.		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		We have a dedicated lands team who worked with affected landowners to discuss issues relating to acquisition. We did not include this information in our consultation documents as it would not be relevant to everyone contacted. Potentially affected landowners were contacted directly by our lands agents, Fisher German.				
Design Change						
10-48.2	Oppose the proposed change - Essex 11 (generally)	National Grid notes the respondent's feedback.			X	
10-48.3	Support the proposed change - Essex 11 (generally)	National Grid notes the respondent's feedback.			X	
10-48.4	Suggest that Pylon TB219 is relocated west of the Heron Country Club or placed underground (e.g due to a safety risk to Chase Farm Airfield and potential closure)	National Grid has appointed an independent aviation consultancy which has engaged with the operators of this Airfield (with National Grid also present). In accordance with the requirements of the Overarching National Policy Statement for Energy (NPS EN-1), the Project has been designed, where possible, to minimise adverse impacts on the operation and safety of aerodromes. Following consultation and further assessment of alternatives it has been determined that it is not possible to further re-route the alignment away from Chase Farm airfield at a distance that allows continued safe use of the runway at its current position. Regarding the use of underground cables, National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is that <i>'overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Park, The Broads, or Area of Outstanding Natural Beauty)'</i>. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at Chase Farm would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.</p> <p>Residual impacts are recognised, but there is insufficient justification for the use of underground cables in this location on the grounds of aviation impact mitigation alone. Routes further to the west of Heron Country Club are not feasible without transferring effects onto other receptors.</p> <p>Engagement with the operator has explored whether the potential reorientation or relocation of the airfield runway could provide a reasonable mitigation to aviation impacts. Engagement is continuing and is also seeking the agreement of a Statement of Common Ground.</p> <p>Further information on the assessment of airfields can be found in the Environmental Statement (ES Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).</p>				

Essex 12 Change feedback (Targeted Consultation)

Table 10-49 Summary of consultee comments and National Grid's response

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Consultation						
10-49.1	Criticism that the Environmental Implications of Change report appears to be incomplete, where the key is not visible following paragraph 1.1.2	National Grid notes the respondent's feedback. For each of our targeted consultations we developed an overview leaflet and Environmental Implication of Change (EIC) document which included information on the potential impacts of the proposed change. The information provided at the targeted consultations was considered proportionate to the changes being consulted upon. We believe that all the relevant information required for the public to make informed decisions was available and do not believe that this impacted the feedback we received.		X	X	
Design Change						
10-49.2	Oppose the proposed change - Essex 12 (generally)	National Grid notes the respondent's feedback.			X	
10-49.3	Support the proposed change - Essex 12 (generally)	National Grid notes the respondent's feedback			X	
10-49.4	Suggest that the Project is routed further down the respondent's field - this will have no impact on the lines going over the A127, it will not interfere with	The Project routing is heavily constrained in this area and has been aligned to follow a safety corridor around a high pressure gas pipeline. Moving the alignment substantially further west to avoid oversail of the field is			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	any gas lines and undergrounding will still be possible where the 4000 homes are being built	not possible due to the constraint of working area around the gas pipeline and other properties and woodland (including some ancient woodland) to the west and the implications of a now constructed solar farm to the north of TB224. However, movement within the Limits of Deviation could be utilised to reduce the oversail to the extent possible. A commitment has been included within the Development Consent Order (DCO) to seek to minimise the oversail by looking to position the pylon at TB224 and the alignment and pylons to the south of TB224 as far west within the Limits of Deviation as possible. Where possible this positioning should: minimise the offset to the gas pipeline; minimise the offset to the solar panels (the need for temporary removal is accepted but aim to avoid direct permanent loss of solar panel production area); avoid the need for tree management to the woodland south of the Southend Arterial Road and minimise vegetation removal at the western end of the respondents field.				
10-49.5	Request that construction access and activities are relocated to the west of the gas pipeline on land that forms part of the Dunton Hills Garden Village site in Brentwood	The respondent's feedback is noted however this would transfer the effects to another landowner where accesses would be increased in length and further complicated by the need to integrate with the first phase of the Dunton Hills development to access the nearest highway. In the absence of any evidence identifying the unacceptability of the Project in its current position, no change is proposed.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-49.6	Concern about the impact of the Project on proposals for housing and employment in the Essex 12 area, and that the proposed works for the Project would delay significant social and economic benefits that arise from housing, affordable housing and economic growth in the area, counter to National Government objectives	National Grid has engaged with the potential developers in this area and concludes that direct effects on future development will not occur due to the routeing within an existing safety corridor separate to the Project, restricting construction of occupied property within approximately 80 m of the existing high pressure gas pipeline. Engagement will take place between National Grid, its Main Works Contractor(s) and developers of other planning applications within the Order Limits. Engagement will occur throughout the pre-construction and construction phase of the Project to understand the construction programme of relevant planning applications where available. On this basis we conclude that the Project will not delay significant social and economic benefits. No change is proposed.			X	
10-49.7	Support the newly proposed construction compound as part of the Essex 12 and oppose the laydown location shown on plan provided by respondent	National Grid notes the respondent's feedback however there is some confusion over the plans. The areas hatched are construction laydown areas and not compounds. In this area two haul roads and construction laydown areas presented to provide alternative scenarios should the Crest Nicholson housing development progress ahead of the Project. Both scenarios would not be constructed.			X	

Economic / Employment Impact					
10-49.8	Concern about the impact of the Essex 12 arrangements for construction access and laydown provision would prejudice the delivery of employment and the proposed road link until after the Project has been complete. The proposed works would delay significant social and economic benefits that arise from housing, affordable housing and economic growth in the area, counter to National Government objectives	National Grid has engaged with the potential developers in this area and concludes that direct effects on future development will not occur due to the routeing within an existing safety corridor (extending to approximately 80 m from the pipeline free from construction of occupied built development) associated with the existing high pressure gas pipeline. Standard working practice whereby interfacing contractors have detailed discussions to establish local arrangements would be adopted and on this basis we conclude that the Project would not delay significant social and economic benefits. We have also been in discussion with the relevant developer about the proposed link road and have agreed that whist the Development Consent Order (DCO) submission will show two alternative combinations, National Grid will drop its interest in the northern combination and take forward the southern combination that integrates with the link road proposals. No change is proposed.			X
Environmental Impact					
10-49.9	Suggests the is mature tree and/or vegetation in the vicinity of south of Dunton Wayletts which will be considered in the access design to minimise impacts from construction and junction visibility splays	National Grid notes the respondent's feedback. In order to provide a compliant access crossing the public highway visibility splays are required. This will mean retaining and cutting back vegetation in the vicinity of the crossing as well as some removals. National Grid has sought to reduce, as far as practicable, impacts on the environment / countryside through routeing and siting and an ongoing iterative design process which has taken on board feedback at different stages of the Project. The iterative design process sought to avoid areas of highest concern. The proposed bellmouth junctions have undergone Road Safety Audits, and mitigation measures for road safety have been developed. This includes temporary traffic management			X

	<p>measures such as speed limit reductions and/or temporary signals.</p> <p>Post construction the bellmouth would be removed and the vegetation reinstated.</p> <p>More details on the bellmouths can be found within the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).</p>				
--	---	--	--	--	--

Essex 13 Change feedback (Targeted Consultation)

Table 10-50 Summary of consultee comments and National Grid's response

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Agricultural Land						
10-50.1	Concern that the red line boundary for access for Pylons TB230 and TB231 show the access being close to the property and yard at Sheddings Farm, which will cause biosecurity impacts as turkeys and livestock are kept at Sheddings Farm. With this, further concern that the access route passes through meadows used for grazing cattle, causing both biosecurity and health and safety issues, depending on access required	<p>National Grid and our Main Work Contractor will work with the landowner to implement necessary biosecurity and health and safety mitigations as required during construction.</p> <p>However, the specific access route referred to in the feedback is a future operational access right over land, to be used for surveys and minor maintenance. Ahead of any future operational site access the National Grid lands team will liaise with landowners in advance regards any upcoming surveys or works. Any site-specific requirements for access (including biosecurity measures) will be agreed and implemented as required at the time of survey.</p>			X	
Consultation						
10-50.2	Criticism of consultation materials on this change (Essex 13)	National Grid notes the respondent's feedback. For each of our targeted consultations we developed an overview leaflet and Environmental Implication of Change (EIC) document. These were sent to properties within the bespoke consultation zone for the relevant change.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>More information on how we defined the consultation zones is available in this Consultation Report. We also published a consultation strategy and overview map. All these documents remain available on the Project website. The information provided at the targeted consultations was considered proportionate to the changes being consulted upon.</p> <p>We believe that all the relevant information required for the public to make informed decisions was available and do not believe that this impacted the feedback we received.</p>				
10-50.3	<p>Criticism that the proposals are contrary to Policy R01: Dunton Hills Strategic Allocation in the Brentwood Local Plan 2016 - 2033 / Criticism that the 2024 alignment undermines the local plan-making process in Basildon, Brentwood and Thurrock in terms of housing and infrastructure delivery / Request the strategic importance of the Dunton Hills Garden Village for housing delivery is acknowledged and evidenced in the DCO submission to demonstrate how this has informed the Project design</p>	<p>National Grid has identified an alignment which closely follows an existing gas pipeline through and in the vicinity of Dunton Hills Garden Village (DHGV) proposals. Whilst gas pipelines provide a constraint in terms of construction works not generally being able to progress immediately above the pipeline (within around 10 m) and a preference to seek to reduce the number of crossings, the corridor also provides an opportunity for routeing, in this case the presence of the gas pipeline creates a corridor free from built development due to the required safety standards.</p> <p>It is National Grid's position that National Planning Statement (NPS) EN-5 confirms that the routeing of overhead lines near to residential property is not, as a point of principle, unacceptable. It is also noted that there are detailed design opportunities (including as outlined in National Grid's 'Sense of Place' publication</p>		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>on existing examples of housing in close proximity to overhead lines) with the potential to reduce amenity effects that can be effective in maximising outcomes, particularly in circumstances such as Dunton Hills Garden Village where detailed design is to be completed. On this basis it is considered that requests to use underground cable past this development are not justified by policy.</p> <p>National Grid has considered alternative routes to the east and west of DHGV. The circumstances considered that supported previous decision making have been reviewed and confirmed to remain valid. These were first set out in 2023 (see paragraph 5.5.144 of the 2023 Design Development Report available on the Project website). To the east, the extent of the existing urban area means there are no alternative routes available without directly impacting properties (without the excessive cost of a tunnel). An alternative to the west would be less direct, transfer effects to other receptors and would be much closer to Thurrock airfield and likely to require underground cables to allow continued flight activity. Weighing up all factors including cost, engineering/technical feasibility, and environmental/community impacts a balanced judgment has been formed that this route is less preferential and that the proposed route provides the best overall outcome and therefore no change is proposed. National Grid has carefully considered the feedback proposing the use of underground cable along the route, the</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. NPS EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Park, The Broads, or Area of Outstanding Natural Beauty)'</i>. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in NPS EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at DHGV would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy NPS EN5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has not identified any need for additional mitigation.				
Design Change						
10-50.4	Oppose the proposed change - Essex 13 (generally)	National Grid notes the respondent's feedback.			X	
10-50.5	Support the proposed change - Essex 13 (generally)	National Grid notes the respondent's feedback.			X	
10-50.6	Request the route is moved east to physically and visually avoid the Dunton Hills Garden Village (DHGV) scheme / Request the route also uses underground cables to reduce compensation for the reduction of the value of land for the DHGV	National Grid has considered alternative routes to the east and west of Dunton Hills Garden Village (DHGV). The circumstances considered that supported previous decision making have been reviewed and confirmed to remain valid. These were first set out in 2023 (see paragraph 5.5.144 of the 2023 Design Development Report available on the Project website). To the east, the extent of the existing urban area means there are no alternative routes available without directly impacting properties (without the excessive cost of a tunnel). An alternative to the west would be less direct, transfer effects to other receptors and would be much closer to			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Thurrock airfield and likely to require underground cables to allow continued flight activity. Weighing up all factors including cost, engineering/technical feasibility, environmental/community impacts a balanced judgment has been formed that this route is less preferential and that the proposed route provides the best overall outcome and therefore no change is proposed. National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Park, The Broads, or Area of Outstanding Natural Beauty)'</i>. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at DHGV would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
10-50.7	Request the construction compound (near Friern Manor and Pylon TB227) is relocated to be in closer proximity to TB227 beyond Crest's landholding by the borough boundary/gas pipeline or if this is not feasible on land identified as open space (shaded green - Figure 1) in Crest's masterplan	Through discussion with the developer, National Grid understands the respondent's position and has previously introduced an alternative laydown area and access arrangement but is keen to retain the flexibility to use either arrangement subject to circumstances at the time of construction. The extent of any interaction with the development depends on the timing of development. Should such timings overlap National Grid would			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		relinquish its interest in the original laydown area and will agree this in a statement of common ground.				
10-50.8	Suggest an alternative access route (plan provided by respondent), which will avoid the need for any biosecurity or health and safety measures to be put in place when access is being used. This will also significantly reduce the impact on the value of residential property at Sheddings Farm and the impact on the ongoing business operated from the property	<p>National Grid notes the respondent's feedback with regards to the permanent access route and also notes that the most appropriate route also varies in response to seasonal variation in land uses. As the Project progresses in to the heads of terms and voluntary agreement stage there will be an opportunity to discuss and agree permanent access rights in more detail. No physical works are required for this permanent access route as part of the Project as this will not be used for construction. Access may be required in the future, for maintenance and surveys and therefore National Grid will look to agree the most suitable access route at that point, taking in to account the landowner and National Grid's requirements.</p> <p>Biosecurity mitigation requirements will be discussed and implemented in consultation with the landowner.</p>				
10-50.9	The proposed changes on the Haul Road appear to reduce the land and rights required on the site however, the respondents concerns remain. Whilst the targeted consultation plans only provide a snapshot of part the scheme through part of the respondents development it appears to propose that the previous Haul Road design (to access the overhead route from the Tilbury Road which utilised the existing access road to the Dunton Hill Family	Proposed access during construction and operation will only be from Lower Dunton Road, the access previously shown from the west, from Tilbury Road through the Dunton Hill Family Golf Centre has been removed from the Project.			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>Golf Centre, which also provides access to four cottages), has been removed. However, without seeing a wider extent of the plan proposals confirming such, the respondent still object to the use of this road as a haul road and object to the use of the amended haul road as their previous questions still remain unanswered.</p> <p>Are National Grid proposing to acquire the Haul Road land permanently or temporarily? If temporarily, are they seeking exclusive possession of the Haul road?</p> <p>In addition to those able to use the road for access purposes now, it is essential that the respondent and their contractors are allowed to utilise this access route to the Site. Denying this access would result in a delay to the start of the construction of the Dunton Hills Garden Village and as this would be a direct result of the Project, any losses incurred with this would have to be compensated for by National Grid in accordance with the Compensation Code</p>					
10-50.10	Suggest that the Project is rerouted as per plan provided by respondent to reduce impact on respondent's fishing business, and locate a pylon on an area of ground where there is an existing 132 kV pylon	National Grid notes the respondent's feedback and has considered the route requested. The alternative route would impact a greater area of proposed development at Dunton Hills Garden Village. We have undertaken an Environmental Impact Assessment (EIA) which includes an assessment of access to recreation business in			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) and a significant adverse effect has been identified. National Grid will continue to engage with the landowner.				
10-50.11	Concern about amendments to DCO limits to bring the permanent access for Pylon TB228 away from an established field boundary onto a track that passes within a few metres of residential property and passes through the middle of a farmyard that houses cattle and turkeys. With this, concern that the ability to manage their property in a biosecure manner has the potential to be affected / Suggest that the access road to Pylon TB228 is rerouted as per plan provided by respondent, as this would reduce risk to business, and compensation payable	<p>National Grid notes the respondent's feedback with regards to the permanent access route and also notes that the most appropriate route also varies in response to seasonal variation in land uses. As the Project progresses in to the heads of terms and voluntary agreement stage there will be an opportunity to discuss and agree permanent access rights in more detail. No physical works are required for this permanent access route as part of the Project as this will not be used for construction. Access may be required in the future, for maintenance and surveys and therefore National Grid will look to agree the most suitable access route at that point, taking into account the landowner and National Grid's requirements.</p> <p>Biosecurity mitigation requirements will be discussed and implemented in consultation with the landowner.</p>			X	
10-50.12	Request the section of the route through the Dunton Hills Garden Village uses underground cables	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Park, The Broads, or Area of Outstanding Natural Beauty)'</i>. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		impact terms), we do not consider the Project at Dunton Hills Garden Village (DHGV) would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
10-50.13	Suggest underground cables are used around Dunton Hills Garden Village (DHGV) to reduce adverse impacts to land value and harmful effects to housing and infrastructure delivery in Brentwood	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Park, The Broads, or Area of Outstanding Natural Beauty)'</i> . Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23)		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at Dunton Hills Garden Village (DHGV) would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
Requests						
10-50.14	Request the following in relation to the respondent's business: That an external consultant evaluates the losses to be caused to respondent's solar site and	National Grid would compensate all landowners or businesses in line with the Compensation Code and where losses are caused as a direct result of the Project. Landowners and businesses are advised to take their			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>corresponding compensation is issued to the respondent's business, both from construction stage (dust and other disturbance to operation) and operational stage (shadowing losses);</p> <p>That the hazard from the underground services in the vicinity of pylon TB229 are taken into account for construction and that an insurance policy for damages and loss of revenue is contracted by National Grid to the benefit of the respondent's business during construction;</p> <p>That where the underground cables are crossed by construction roads, a reinforced section of the road would be required to be installed to prevent damage to underground services; and</p> <p>Indicate any modifications on the overall project during/after the consultation process</p>	<p>own third-party advice and / or appoint a land agent to represent them and advise on where a compensation claim should be sought.</p> <p>During construction, National Grid's Main Works Contractor will carry out applicable surveys and take every reasonable precaution to avoid damage to buried third-party assets. Damage will be covered by standard construction insurances.</p> <p>Haul road crossings of buried assets will be designed by the Main Works Contractor to withstand expected surface loads and prevent damage to the assets. This will be done in collaboration with the asset owner.</p> <p>The proposed Project design will be published publicly with the Development Consent Order (DCO) submission.</p>				
Visual Impact						
10-50.15	<p>Concern about the location of Pylon TB226, which will profoundly impede upon the intentional view corridor as specified in the Dunton Hills Garden Village Supplementary Planning Document (SPD). Suggest that this is resolved through effective collaboration between NGET, Historic England and the Council</p>	<p>National Grid, through the routing and siting exercise, has sought to reduce the impact on the historic environment, including listed buildings in this area. All listed buildings within 2 km of the Order Limits are considered in the Historic Environment Assessment for the Project. The impacts of the Project on the historic environment are assessed in Environmental Statement (ES) Chapter 11: Historic Environment (document reference 6.11). The assessment considers the potential impact on historic buildings and includes assessment of</p>		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>potential for physical impact and impact through change to setting that affects the value of a heritage asset. The assessment of listed buildings is supported by setting surveys, as documented in ES Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1). The Project has engaged with Historic England and relevant planning authorities on aspects relating to heritage, including appropriate mitigation measures and techniques and to take their views into account during Project development.</p> <p>Church of St Mary: The assessment concludes that due to changes within the setting of this asset there would be significant effects during construction and operation. No additional mitigation measures are proposed as any measures designed to lessen the visual impact of the Project would be of a scale that would visually adversely alter the setting of the asset.</p> <p>Church of All Saints: The assessment concludes that the setting of this asset does not extend to the Order Limits due to the division of the landscape with transport infrastructure and the screening provided by its wooded surroundings.</p> <p>The assessment of landscape and visual effects is presented in the ES Chapter 13: Landscape and Visual (document reference 6.13). DHGV is identified as part of the future baseline, which relates to known or anticipated changes to the current baseline in the future.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>The visual assessment is presented in ES Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3). DHGV lies within Visual Receptor Area (VRA) G4: Ingrave and Herongate, and just falls within VRA G6: Basildon. Within VRA G4 and VRA G6, the assessment of visual effects resulting from the introduction of the Project reported major adverse and significant effects during construction and operation within 0.5 km of the Project, and moderate adverse and significant effects at distances from 0.5-1.5 km from the Project. Viewpoint 7.08 Dunton Hills Farm (Dunton Garden Village) (Figure 7.12.F190) (document reference 7.12) reported major adverse and significant visual effects during construction and operation. This viewpoint was requested by stakeholders and represents views from the east of Dunton Hills Farm.</p> <p>DHGV was also considered in Table 13.8: Effects on Visual Receptors at Viewpoints in relation to Flexibility within the LoD. The assessment identified that a change to the Project within the Limits of Deviation (LoD) would be perceptible but there would be no change to the magnitude or level or significance of effect.</p>				

Thurrock

Thurrock feedback (Targeted Consultation)

Table 10-51 Summary of consultee comments and National Grid's response

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Agricultural Land						
10-51.1	Concern that the Project will take away valuable agricultural land / disrupt farming operations	<p>Agricultural land during the construction stage of the Project, there would be areas of agricultural land that would be temporarily disrupted. National Grid would only use land that is required as part of the Project and would seek to minimise the use of agricultural land where reasonable and safe to do so.</p> <p>National Grid is and would continue to work with all landowners including farmers who may be affected by the proposals to understand the impacts on their operations and to work with them as the Project progresses. We would seek to work with the farming community to limit disruption where practicable. This includes providing prior warning of works which may result in the need to move livestock. Compensation claims for disturbance are considered on a case-by-case basis, if negative impacts on farming operations can be proven. Particular agricultural matters can also be addressed through voluntary land agreements.</p>		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Community/ Social Impact						
10-51.2	Concern about impact of the Project on children / families / residents / communities	<p>National Grid recognises people may have concerns about the potential impacts of living close to an overhead line, and that the uncertainty whilst the proposals are developed may cause anxiety.</p> <p>We have sought to reduce potential effects on communities, residents – including children - through routeing and design. We have also sought to reduce concern or uncertainty about the proposals through making timely design decisions and engaging with people and stakeholders throughout the development of the Project. If the Project receives Development Consent, the Project team would continue to engage with people potentially affected during construction through regular communication including letters, phone calls and meetings, where necessary. We urge anyone with concerns to get in touch through the Norwich to Tilbury Freephone number, address or email, which would remain open throughout examination.</p> <p>National Grid is committed to working with local suppliers, facilitated by supporting forums (such as the local Chambers), on electricity industry skills and workforce planning. National Grid is also committed to providing a coordinated regional approach to jobs and skills opportunities. This commitment is broader than the individual project and separate to any commitments under the proposed development consent order for this Project. The socio-economic effects of the project are</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		assessed in Chapter 15: Socio-Economics, Recreation and Tourism of the Environmental Statement (ES) (document reference 6.15). Post construction job opportunities are limited given the nature of the development however we will still work with Local Authorities (including facilitating local partners) to understand what is important to them around skills and employment to ensure we leave a lasting positive legacy in the communities where we operate. With regards to a delivery mechanism, the above measures will be delivered as part of our community benefit package, which will look at both local and regional initiatives. This will be delivered outside the development consent process and is not a material consideration in the decision on the proposed Project or a matter to be secured as part of the DCO, as per the Community Funds for Transmission Infrastructure: Guidance (DESNZ, 2025).				
10-51.3	Concern about impact of the Project on school / educational facilities	<p>Through routeing and siting, National Grid has sought to avoid, as far as practicable, locations of education establishments.</p> <p>Environmental Statement (ES) Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) presents an assessment of the potential impacts on education facilities as a result of the Project. As part of the assessment, a range of measures are considered during the construction phase to reduce, where practicable, disruption to education</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		establishments. These include traffic management, signage and routing measures to ensure access or partial access can be maintained where feasible. These are identified within Environmental Statement (ES) Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15), the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) and the Outline Code of Construction Practice (CoCP) (document reference 7.2). The assessment concludes that there would be no significant effects on education facilities within the study area as a result of the construction and operation of the Project.				
10-51.4	Concern about impact of the Project on leisure	Through routeing and siting National Grid has sought to avoid, as far as practicable, locations that are important for leisure and tourism. Environmental Statement (ES) Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) presents an assessment of the potential impacts on sports clubs, recreational land and recreational routes located within the Order Limits. As part of this assessment, a range of measures have been considered throughout the construction phase of the Project to minimise disruption on leisure and tourism. These include traffic management, signage and routeing measures. These are identified within Environmental Statement (ES) Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15), the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the Outline Construction		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Traffic Management Plan (CTMP) (document reference 7.3).				
10-51.5	Concern about over development of area / other works in the area (e.g. cumulative impact)	<p>A cumulative effects assessment has been undertaken in accordance with the Planning Inspectorate's Advice Note 17 'Cumulative Effects Assessment' and is presented in Environmental Statement (ES) Chapter 17: Cumulative Effects (document reference 6.17). The cumulative effects assessment has considered the effects of the Project in conjunction with other developments in line with guidance. As part of this process, National Grid has engaged with other developers who are proposing development in proximity of the Project to understand their requirements.</p> <p>The cumulative assessment has been undertaken in accordance with the overarching National Policy Statement (NPS) for Energy (EN-1)</p> <p>Paragraph 4.1.5 in EN-1 states:</p> <p><i>'In considering any proposed development, in particular when weighing its adverse impacts against its benefits, the Secretary of State should take into account: ... its potential adverse impacts, including on the environment, and including any long-term and cumulative adverse impacts, as well as any measures to avoid, reduce, mitigate or compensate for any adverse impacts, following the mitigation hierarchy'.</i></p> <p>Paragraph 4.2.12 in EN-1 states:</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p><i>'The cumulative impacts of multiple developments with residual impacts should also be considered.'</i></p> <p>Paragraph 4.3.3 in EN-1 states:</p> <p><i>'The Regulations require an assessment of the likely significant effects of the proposed project on the environment, covering the direct effects and any indirect, secondary, cumulative, transboundary, short, medium, and long-term, permanent and temporary, positive and negative effects at all stages of the project, and also of the measures envisaged for avoiding or mitigating significant adverse effects'.</i></p> <p>Paragraph 4.3.19 of EN-1 states:</p> <p><i>'The Secretary of State should consider how the accumulation of, and interrelationship between, effects might affect the environment, economy, or community as a whole, even though they may be acceptable when considered on an individual basis with mitigation measures in place'.</i></p> <p>Paragraph 4.4.5 in EN-1 states:</p> <p><i>'The impacts of more than one development may affect people simultaneously, so the applicant should consider the cumulative impact on health in the ES where appropriate'.</i></p> <p>The long list and short list of other existing and, or approved developments considered for the Cumulative Effects Assessment is presented in Environmental Statement (ES) Appendix 17.2: Long List and Short List</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		of Other Developments (document reference 6.17.A2), detailing the other developments shortlisted for detailed assessment. The appendix provides details on other developments screened out of the assessment in accordance with the methodology presented in Chapter 17: Cumulative Effects of the Environmental Statement (ES) (document reference 6.17). The detailed assessment of shortlisted other developments is presented in Environmental Statement (ES) Appendix 17.3: Inter-Project Cumulative Effects Assessment (document reference 6.17.A3). Appendix 17.3 Inter-Project Cumulative Effects Assessment (document reference 6.17.A3) outlines the residual significance of cumulative effects for each development, for each environmental topic that has a Zone of Influence that overlaps with that development (i.e. socio-economic, recreation and tourism impacts).				
10-51.6	Concerned that the Project will have a negative impact on domestic horses / equestrian activities	As well as possible effects on humans, the possible effects of Electric and Magnetic Fields (EMFs) on various animals have been studied. No proven effects of EMFs have been found in any species at levels below the guidelines. This is confirmed in National Policy Statement (NPS) EN-5 which states: " <i>There is little evidence that exposure of crops, farm animals or natural ecosystems to transmission line EMFs has any agriculturally significant consequences.</i> " Although horses are not directly mentioned, there is no evidence to suggest they are any different to other farm animals.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		As well as the possible direct biological or health effects addressed above, indirect effects such as microshocks can occur as a result of electric fields. Microshocks are small spark discharges which are similar to a static shock after walking across a nylon carpet for example. The Project would be designed in accordance with the principles of the Governments Code of Practice 'Power Lines: Control of Microshocks and other indirect effects of public exposure to electric fields' to ensure these are mitigated, which include equestrian activities.				
10-51.7	Request for National Grid to confirm if there are opportunities to get funds for maintenance of defibrillators in Tilbury, as well as training residents in "how to access health provision" and health living e.g., noting that Tilbury's health provision is near worst in the country	<p>The Government has published its guidance on community funds for transmission infrastructure (DESNZ, 2025). National Grid is committed to working with Ofgem, industry partners, local communities and their representatives to ensure community benefits are delivered fairly and effectively, driving lasting, positive change for the people and places integral to our developing electricity network.</p> <p>Government has also announced its plans to introduce a bill discount scheme for households within 500 metres of new infrastructure, which it proposes to introduce through the Planning and Infrastructure Bill. This is evolving government policy. Government expects this scheme to be in place by 2026 and we will share further details as they emerge.</p> <p>National Grid is committed to providing a coordinated local and regional approach to community benefits. This will be delivered outside the development consent</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		process, since this is not a material consideration in the decision on the proposed Project or a matter to be secured as part of the Development Consent Order (DCO), as per the Community Funds for Transmission Infrastructure: Guidance (DESNZ, 2025).				
Construction Impacts						
10-51.8	Concern about disruption from construction	<p>An Environmental Statement (ES) (document reference: Volume 6: Environmental Statement) has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 ('the Infrastructure EIA Regulations'). The ES identifies and assesses the likely significant effects on the environment resulting from the construction of the Project and recommends appropriate mitigation to reduce effects.</p> <p>Environmental mitigation measures have been defined within each environmental topic chapter and set out in relevant management documents submitted with the Development Consent Order (DCO) application, including the Outline Code of Construction Practice (CoCP) (document reference 7.2), the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5).</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-51.9	Concern about impact on traffic levels in local area caused by construction works	<p>As part of the pre-application process National Grid has engaged with the relevant authorities, their highways teams and National Highways to understand and gain information on their road networks. This information has been used to inform and guide the drafting of the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) for the Project that accompanies the Development Consent Order (DCO) application.</p> <p>A strategy has been developed to manage the impact of construction vehicles on the public highway and sensitive receptors, using suitable Local Road Network connections from the Strategic Road Network called Primary Access Routes. In addition, temporary haul roads for construction vehicles are proposed along the Project alignment, further reducing the impact of construction traffic on the local road network. Further details of the strategy can be found within the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).</p> <p>Environmental Statement (ES) Chapter 16: Traffic and Transport (document reference 6.16) includes the assessment of the potential impacts of the Project including changes in traffic flow, delays, road safety and impact on Walking, Cycling and Horse-Riding modes on the roads along the Primary Access Routes located in the Local Road Network.</p>		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-51.10	Concern about noise and other issues resulting from construction (e.g. mud on roads, dust)	<p>The Transport Assessment (document reference 7.11), submitted with the DCO application, examines capacity, safety, and operational efficiency of the network, identifying potential bottlenecks or safety concerns.</p> <p>Within the assessment of the ES and the Transport Assessment, mitigation measures are proposed to minimise likely adverse impacts.</p> <p>An Environmental Statement (ES) (document reference: Volume 6: Environmental Statement) has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 ('the Infrastructure EIA Regulations'). The ES identifies and assesses the likely significant effects on the environment resulting from the construction of the Project and recommends appropriate mitigation to reduce effects.</p> <p>Specifically, a Construction Noise and Vibration Impact Assessment has been undertaken and is reported in ES Chapter 14: Noise and Vibration (document reference 6.14). During construction, mitigation would be implemented to reduce noise and vibration impacts from construction activities and increased road traffic noise and vibration due to additional movement from construction traffic. Mitigation measures are outlined in ES Chapter 14: Noise and Vibration (document reference 6.14) and the Outline Code of Construction Practice (CoCP) (document reference 7.2). This includes the assumption that construction working would be</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>undertaken within the agreed working hours, construction traffic would be managed through the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), haul roads would be well maintained, and Best Practicable Means (BPM) would be employed to reduce construction noise and vibration.</p> <p>ES Chapter 7: Air Quality (document reference 6.7) presents an assessment of the potential impacts from the construction of the Project on air quality. During construction, mitigation would be implemented to reduce the impact of dust generation and construction vehicle emissions. Mitigation measures are outlined in Environmental Statement Chapter 7: Air Quality (document reference 6.7), and the Outline CoCP (document reference 7.2). The dust-emitting activities can be greatly reduced or eliminated by applying the site-specific mitigation measures (see Outline CoCP, document reference 7.2) for high risk sites following measures recommendations in the Institute of Air Quality Management (IAQM) guidance (IAQM, 2024). The IAQM guidance states that with the implementation of effective site-specific mitigation measures, the environmental effect would not be significant in most cases.</p> <p>In addition, National Grid has prepared an Outline CoCP (document reference 7.2). The Outline CoCP (document reference 7.2) sets out the required mitigation measures and environmental commitments that would be implemented during the construction phase of the</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Project to avoid or reduce potential effects of the Project on the environment.				
Consultation						
10-51.11	Comment supportive of engagement that has taken place / feel listened to	National Grid notes the respondent's feedback.	X		X	
10-51.12	Criticism of consultation specific to this section	National Grid notes the respondent's feedback.		X	X	
10-51.13	Concern that the optioneering process for the Project was not in accordance with the Infrastructure Planning (Environmental Impact Assessment) Regulations 2017 as the Preliminary Environmental Information Report (PEIR) did not assess the impact of temporary land take and severance and the associated socio-economic impact of the Project on farm businesses (including respondent's farm in Thurrock), and suggest that an assessment of the socio-economic impact of temporary land take must now be undertaken to inform the route of the Project	<p>As per the Scoping Report (document reference 6.20), the impacts on agricultural operations were considered to be limited during the operational phase of the Project as any maintenance or repair works required which would result in disturbance to agricultural operations would be undertaken in accordance with standard practice. Disturbance to agricultural operations during the construction phase are assessed in full in Chapter 6: Agriculture and Soils (document reference 6.6) of the Environmental Statement (ES).</p> <p>The financial effects on individual businesses are being addressed through separate discussions/negotiations which lie outside the scope of the ES (as agreed in the Scoping Opinion (document reference 6.20)). Therefore, the financial effects on individual businesses have not been assessed in Chapter 6: Agriculture and Soils of the ES (document reference 6.6) or Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15).</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Should a landowner feel that they are owed compensation or would like to discuss how or when compensation is payable, they should contact the Projects Land team to discuss: Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.</p> <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD.</p> <p>Landowners can also refer to the National Grid Land Rights Strategy or the compensation code for further information.</p>				
10-51.14	Request that the pressing need for waste management capacity in the Thurrock Area be acknowledged, following the Secretary of State's granting of the Lower Thames Crossing (LTC) DCO on 24th March 2025. This capacity is essential to assist in the delivery of the c.£9 billion scheme and to realise the Government's sustainable transportation aims to unlock traffic congestion and enhance nature conservation in the south-east of England. It is noteworthy that Rainbow Shaw Quarry lies within the LTC DCO Order Limits to provide essential drainage and ecological infrastructure and is capable of providing 'non-road based access' to the construction corridor for waste management and other construction phase purposes	National Grid has been engaging closely with the operator of the aggregate recycling facility who undertake their activities at Rainbow Shaw Quarry. The importance of the facility has been a factor taken into account when considering alternative proposals for the alignment. We have identified a design for the necessary 132 kV diversion works that minimises the interaction and constraints on the main processing part of the site. We are also progressing discussions to identify an access solution that: minimises interference with on-site operational activities; provides a co-ordinated and mutually beneficial solution to construction stage access requirements of both National Grid and Lower Thames Crossing (LTC); and can support the permanent operational stage access requirements of National Grid			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>and the longer term access requirements along Holford Road and onwards over the LTC corridor.</p> <p>In relation to waste management, National Grid has prepared an Outline Site Waste Management Plan (SWMP) (document reference 7.2, Appendix B), which has been submitted as part of the Development Consent Order (DCO) submission for the Project. The Outline SWMP sets out how the Project will seek to reduce the consumption of primary and raw materials and to encourage the use of secondary or recycled sources. The Outline SWMP also sets out how waste will be managed on the Project and follow the waste hierarchy. The Outline SWMP notes that the Project will not generate large quantities of waste for landfill, due to the nature of the waste anticipated (large proportions of which can be reused or recycled) and also due to the targets set by National Grid with regard to waste management. The Main Works Contractor(s) will be responsible for preparing a Final SWMP and implementing the measures contained within it.</p>				
Design Change						
10-51.15	Suggest re-routing the existing 132 kV overhead lines across Orsett Golf Course, so that the Project can use the existing 132 kV overhead line route around to the east, therefore negating the need to underground the 132 kV pylons and the underground cabling next to the golf course for the Project	National Grid has considered a range of design alternatives crossing over the end of Orsett Golf Course including diverting the existing 132 kV overhead line. In all case routeing across the back of the 17 th Tee or 16 th green either transfers impacts to adjacent land and would substantially impact an aggregate recycling facility			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		to the possible extent of closure or requires substantial shortening of the holes to facilitate pylon positioning and as such these options are not preferred. National Grid has continued to engage with Orsett Golf Course and, with the assistance of an independent golf course designer, has concluded that an overhead line crossing the golf course at a distance of around 240 m from the rear of the 16th and 17th Tees that does not interfere with play is the preferred basis for the Project. A change has been made to the alignment on this basis.				
10-51.16	Suggest that Pylons TB234 and TB233 are relocated to the west side of the existing pylons (e.g. to increase the distance from residential properties)	National Grid notes the respondent's feedback. The alignment is proposed to follow close to the eastern side of the existing 132 kV overhead line. Crossing to the west of the existing overhead line would require part of it to be placed underground, as well as introducing additional angle pylons which would be less consistent with the Holford Rules (see Appendix I22 of this report). Crossing to the west of the 132 kV overhead line would also take the alignment too close to Thurrock Airfield to maintain a distance to enable continued operation. A Landscape and Visual Impact Assessment has been completed for the Project and can be seen within the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13). The effects from the alignment in this area are not assessed to be at a level to justify replacing the 132 kV overhead line with underground cable.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-51.17	Suggest alternative route for the Project between Pylons TB240 and TB244 (e.g. to mitigate impact on respondent's oil recycling business), with Pylon TB44 becoming the turning point. With this, suggest an alternative access route using the lane between the B188 and Black Bush Lane	The alignment of TB240 to TB244 has been modified in this area with the principle influence being establishing an arrangement to allow for continued flight activity at Thurrock airfield. The Project alignment also meets previously expressed preferences for a parallel arrangement with existing overhead line to reduce landscape effects. Further engagement with the respondent has proposed specific arrangements which allow for continued use of the majority of the landholding for the business activity subject to specific arrangements to deal with limited periods when restrictions may be required. National Grid is continuing to develop the detail of the arrangements with the landowner. An amendment to access arrangements has been incorporated.			X	X
10-51.18	Concern that if the alignment moving to the west of respondent's home will result in land being able to be compulsory purchased. CPO of the land was previously restricted due to the proximity of the power lines	To ensure that the Project can be built National Grid would apply for compulsory purchase powers as part of the Development Consent Order (DCO). National Grid, in line with the Planning Act will only seek to acquire land / land rights, that are required for the construction, permanent apparatus and ongoing future maintenance. The respondent's property lies mostly outside the Order Limits which means National Grid would not be able to compulsory purchase this land.			X	
10-51.19	Concern that if lines are buried to the north of the respondent's home, the woodland would be at risk of being compulsory purchased	To ensure that the Project can be built National Grid would apply for compulsory purchase powers as part of the Development Consent Order (DCO). National Grid, in line with the Planning Act will only seek to acquire			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		land / land rights, that are required for the construction, permanent apparatus and ongoing future maintenance. The woodland referred to by the respondent lies mostly outside the Order Limits and therefore cannot be compulsory purchased by the Project.				
10-51.20	Concern over proximity of pylons TB249 & TB253 due to its proximity to residential property and the visual impact the Grade II Listed Farmhouse / Request pylons TB249 to TB253 are realigned to the north or the south and further east	<p>National Grid has reviewed the suggestion for the alignment to be moved further from the Grade II listed farmhouse. Alternatives are either to follow the 132 kV overhead line, or alternatively, to pass to the western side of Saffron Gardens, In the absence of new evidence or the identification of further factors, the reasons for not preferring a route close to or adopting the 132 kV overhead line, as set out in the 2023 and 2024 Design Development Reports (available on the Porject website) remain valid. There is insufficient space between residential properties as well as constraints from previous minerals and landfill workings and the routeing of a gas pipeline. Routeing closer to Cholley's Farm increases heritage effects and transfers community impacts to other residential properties. For these reasons no change is proposed.</p> <p>Through routeing and siting, National Grid has sought to reduce as far as practical the potential impacts on the historic environment including listed buildings such as Linstead Farm Cottages (1119792). The pylons could not be moved further north, south or east as this would lessen the distance between other listed buildings and</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		the pylons, which would have increased the impacts to them.				
10-51.21	Concern about pylons TB257 and TB258 impact on Maple Park and development of a vineyard	National Grid notes the respondent's feedback. The position of TB257 and TB258 would not have an impact on the use of Maple Park for recreation. At present National Grid is not aware of any planning applications in place to change the use of the site. If the landowner progresses with the development of the site into a vineyard, National Grid will continue to work with the landowner in regard to mitigation and possible impacts. Vineyards and overhead lines can coexist, and if a landowner would like to understand more about developing around overhead lines, they should refer to the National Grid document ' <i>Design guidelines for developing near pylons and high voltage overhead power lines</i> ' A copy of which is available on the Project website.			X	
10-51.22	Suggestion that the Project is routed away from / the Project should not be located at a specific location	Further assessment and technical appraisal has been undertaken following feedback received from the statutory consultation and subsequent targeted consultations which has resulted in several changes. Further details on these changes can be found in this report and in the 2025 Design Development Report (document reference 5.15), published as part of the Development Consent Order (DCO) application.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Economic/ Employment Impact						
10-51.23	Concern about negative impact on businesses in the area	<p>Through the routeing and siting exercise, National Grid has sought to reduce as far as practicable impacts to businesses.</p> <p>Impacts on local businesses within the Local Study Area (the Order Limits) and within the 3 km Study Area (where visual impact is likely to be an economic consideration) are assessed in Environmental Statement (ES) Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15). As part of this assessment, a range of mitigation measures have been considered to reduce disruption to businesses and their users during the construction phase of the Project. These measures are identified in ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15), the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) which accompany the Development Consent Order (DCO) application.</p>	X	X	X	
Environmental Impact						
10-51.24	Concern about negative impact of the Project on the Green Belt(s)	To facilitate the Project, it would be necessary to route through the Metropolitan Green Belt. National Grid has considered the effects on the Green Belt and all of the options connecting into Tilbury identified in the Corridor and Preliminary Routeing and Siting Study (CPRSS)			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>would result in new and upgraded infrastructure in the Green Belt.</p> <p>The National Electricity Transmission System (NETS) transports energy from where it is generated to where it is used, in homes, schools, hospitals, businesses, and factories. Electricity networks are an established feature in our landscapes, taking energy across open countryside to towns and cities where it is needed. To ensure the national electricity network can transport energy efficiently there are numerous electricity transmission connections crossing Green Belts. Many of these connections are by way of overhead lines. By their nature, electricity transmission infrastructure (overhead lines) within the Green Belt is inevitable due to the need to transport energy around the country and the need to avoid the most built-up areas around our towns and cities (Holford Rule Supplementary Note 1 - A summary of the Holford Rules is provided within Appendix I22 of this report).</p> <p>Some electricity infrastructure such as overhead lines, are considered to be engineering operations. By the nature of their design, and the sensitive siting, some of this infrastructure such as pylons and conductors may not be considered inappropriate development in the Green Belt as they do not conflict with Green Belt purposes and preserve openness. Although overhead lines may occupy long corridors within Green Belt, they involve little physical change to the land through which</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>they pass and leave a large majority of the land beneath them free from development and therefore open.</p> <p>The Planning Statement (document reference 5.6), submitted with the application for development consent, includes an assessment of the Project against Green Belt planning policy (as contained in National Policy Statement EN-1 and the National Planning Policy Framework).</p>				
10-51.25	Concern that the Project will impact SSSIs	<p>Through routeing, siting and design development, National Grid has sought to reduce, as far as practicable, impacts on biodiversity and in particular features of high ecological value such as Sites of Special Scientific Interest (SSSI). The Project avoids all direct impacts on SSSIs, with no long-term negative impacts anticipated on any SSSIs as a result of the Project. Potential direct and indirect impacts on each SSSI within the study area have been considered within the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8) and any necessary mitigation detailed to ensure no significant residual effects.</p> <p>National Grid will continue to engage with Natural England.</p>			X	
10-51.26	Concern that the Project will impact ancient woodland	Through routeing, siting and detailed design, National Grid has sought to reduce, as far as practicable, impacts on biodiversity and in particular features of high ecological value, such as ancient woodland. A standard		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		15 m buffer from construction activities has been applied wherever practicable. Potential direct and indirect impacts on each block of ancient woodland within the study area have been considered within the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8) and any necessary mitigation detailed to ensure no significant residual effects. An Ancient Woodland and Veteran Tree Strategy is included as part of the Outline Landscape and Ecological Management Plan (LEMP) (see Appendix B of the Outline LEMP (document reference 7.4)). The Outline LEMP (document reference 7.4) has been developed in consultation with relevant stakeholders including Natural England and local planning authorities.				
10-51.27	Concern that the Project will impact nature reserve / RSPB reserve / Special Protection Area (SPA)	Through routeing, siting and design development, National Grid has sought to reduce, as far as practicable, impacts on biodiversity and in particular features of high ecological value, such as local wildlife sites (LWS), Royal Society for the Protection of Birds (RSPB) reserves and Special Protection Area (SPA's). Whist there are no impacts on RSPB reserves, potential direct and indirect impacts on LWS's and SPA's within the study area have been considered within the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8). SPA's and the associated impact on birds has also been considered		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		within the Habitats Regulations Assessment Report (HRA) (document reference 5.3).				
10-51.28	Concern that the Project will result in a negative impact on the environment / countryside generally (no details given)	<p>National Grid has sought to reduce, as far as practicable, impacts on the environment / countryside through routeing and siting and an ongoing iterative design process which has taken on board feedback at different stages of the Project. The iterative design process sought to avoid areas of highest concern, for example through changes to the route alignment or changes to the method e.g. trenchless crossings. National Grid has engaged with a range of stakeholders (including Statutory Environmental Bodies (SEBs) and relevant local planning authorities) throughout the development of the Project design and environmental assessment work.</p> <p>National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project. The results of this assessment are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation (and maintenance) of the Project and recommends appropriate mitigation measures to reduce potential effects.</p> <p>A number of mitigation measures have been incorporated into the Project design. Mitigation relevant</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>to specific environmental topics (including Ecology and Biodiversity, Landscape and Visual and Historic Environment) are presented in the relevant ES chapters. The Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Code of Construction Practice (CoCP) (document reference 7.2) contain a list of relevant good practice measures to avoid or reduce risks to habitats and species.</p> <p>In addition to the EIA, National Grid has set itself a target of delivering 10% biodiversity net gain (BNG) with environmental and societal benefits on all construction projects, meaning that as a result of measures taken, the biodiversity rating of the area will be enhanced by 10% greater than prior to the construction of the Project. The BNG target for the Project is currently voluntary and aligned with our corporate sustainability commitment.</p>				
10-51.29	Concern that the Project will impact conservation area	The potential for the Project to affect the setting and significance of Conservation Areas has been comprehensively assessed in accordance with established best practice and guidance such as Good Practice Advice Note 3: The Setting of Heritage Assets (Historic England, 2017) and other relevant policy and guidance such as Conservation Principles (Historic England, 2008) and relevant planning policies including the Overarching National Policy Statement for Energy (EN-1).	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>The assessment methodology and its application have been discussed with and agreed by key heritage stakeholders, including Historic England and relevant local planning authorities, through the Scoping process and subsequent thematic working group meetings. This collaborative approach has ensured that the assessment is robust, proportionate, and in line with expectations.</p> <p>Each Conservation Area potentially affected by the Project has been individually assessed for both direct and indirect effects, including impacts arising from change to setting. These assessments are presented in Chapter 11: Historic Environment of the Environmental Statement (ES) (document reference 6.11), supported by detailed mapping and analysis in the Historic Environment Baseline Report (Appendix 11.1, document reference 6.11.A1). The methodology considers all relevant aspects of significance, including historical, architectural, and evidential values, as well as the contribution of setting to that significance.</p> <p>Where adverse effects on the setting of Conservation Areas have been identified, the Project has sought to reduce these through route refinement and design evolution. This includes, where appropriate, adjustments to pylon locations, alignment shifts, and the development of mitigation proposals in the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5).</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		We are therefore confident that the assessment of impacts on Conservation Areas has been carried out to a high standard and that appropriate measures have been taken to mitigate any identified adverse effects.				
Financial Compensation						
10-51.30	Concern that the Project will devalue property / impact on property value in this section	<p>National Grid acknowledges that its proposals may cause concern to landowners. Diminishment of property value known as 'injurious affection' and any other appropriate heads of claim would be considered on an individual basis in accordance with current legislation. We would pursue a voluntary agreement with affected landowners, acquiring rights in accordance with our Land Rights Strategy (the strategy is subject to review). If a voluntary agreement cannot be reached, then the Compulsory Purchase Code allows for a claim of compensation for the loss that property owners may have suffered as a direct result of the retained part of your property ownership being worth less as a direct result of the works.</p> <p>If there are any specific concerns about the devaluation of property, National Grid would advise seeking third party advice. or alternatively please contact the Project team:</p> <p>Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.</p> <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD.				
10-51.31	Request for adequate financial compensation / Suggest that impacted individuals need to be compensated	<p>All affected landowners would be compensated for any temporary/permanent losses, and this would be dealt with on a case-by-case basis in line with the Compensation Code.</p> <p>If there are any specific concerns requiring compensation and how it would be assessed, please contact the Project team: Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.</p> <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD</p> <p>The Government has published its guidance on community funds for transmission infrastructure (DESNZ, 2025). National Grid is committed to working with Ofgem, industry partners, local communities and their representatives to ensure community benefits are delivered fairly and effectively, driving lasting, positive change for the people and places integral to our developing electricity network.</p> <p>Government has also announced its plans to introduce a bill discount scheme for households within 500 m of new infrastructure, which it proposes to introduce through the Planning and Infrastructure Bill. This is evolving</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>government policy. Government expects this scheme to be in place by 2026 and we would share further details as they emerge.</p> <p>National Grid is committed to providing a coordinated local and regional approach to community benefits. This would be delivered outside the development consent process, since this is not a material consideration in the decision on the proposed Project or a matter to be secured as part of the DCO, as per the Community Funds for Transmission Infrastructure: Guidance (DESNZ, 2025).</p>				
10-51.32	Request that National Grid purchase respondent's property / business	<p>National Grid is not required to purchase any properties or businesses as part of the Project.</p> <p>National Grid compensates landowners in line with the Compensation Code and any other relevant legislation.</p>			X	
Health, Safety and Wellbeing						
10-51.33	Concern about health risks associated with the Project / physical health risks associated with the Project	<p>Health considerations are given a high priority in the process by which we arrive at any proposals for new electricity circuits. Assessment of compliance with Electric and Magnetic Field (EMF) guidelines and policies is key to National Grid's approach. The UK has a carefully thought-out set of policies for managing EMFs. There have been over four decades of research looking into whether EMF can cause health effects and there are no established effects below the exposure limits. When designing our overhead lines, substations and underground cables design criteria, we ensure they</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>would not exceed those exposure limits, even when operating at 100% capacity. Additionally, the precautionary measures which the Government have adopted, are applied to the design which ensure the EMFs reduce as quickly with distance as possible. Evidence of that compliance is presented in the Electric and Magnetic Field Compliance Report (document reference 7.8) submitted as part of the Development Consent Order (DCO) application.</p> <p>National Grid takes this issue very seriously and looks to authoritative and independent scientific organisations such as the World Health Organisation (WHO) and in the UK Health Security Agency (UKHSA) to review the worldwide body of scientific evidence on health. Important decisions on health are taken independently of industry, and National Grid has followed the guidance and policies adopted by Government on advice from their scientific experts. Each of these organisations have comprehensive reviews of EMF research available to view on their websites.</p>				
Heritage						
10-51.34	Concern about archaeological impacts	Through routeing and siting National Grid has sought to reduce as far as practicable potential impacts on the historic environment. The impacts of the Project on the historic environment are assessed in Chapter 11: Historic Environment of the Environmental Statement (ES) (document reference 6.11). The assessment		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>considers the potential impact on archaeology, historic buildings and historic landscapes and includes assessment of potential for physical impact, impact through change to setting that affects the value of a heritage asset and impact through indirect factors such as change in hydromorphology. The assessment is supported by walkover, setting and geophysical surveys, as documented in Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1) and Appendix 11.4: Geophysical Survey Results Report (document reference 6.11.A4). Archaeological trial trench evaluation has also been undertaken and is reported in Appendix 11.5: Trial Trenching Results Report (document reference 6.11.A5). In addition to the proposals in the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4), the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5) sets out appropriate mitigation for the historic environment. The Project has engaged with Historic England and relevant planning authorities on aspects relating to heritage, including appropriate mitigation measures and techniques and to take their views into account during Project development which are detailed in ES Chapter 11: Historic Environment (document reference 6.11).</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-51.35	Concern about negative impact on heritage / Suggest that the Project should be routed away from heritage buildings / listed buildings / historical site	Through routeing and siting National Grid has sought to reduce as far as practicable potential impacts on the historic environment. The impacts of the Project on the historic environment are assessed in Chapter 11: Historic Environment (document reference 6.11) of the Environmental Statement (ES). The assessment considers the potential impact on archaeology, historic buildings and historic landscapes and includes assessment of potential for physical impact, impact through change to setting that affects the value of a heritage asset and impact through indirect factors such as change in hydromorphology. The assessment is supported by walkover, setting and geophysical surveys, as documented in Environmental Statement (ES) Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1) and Appendix 11.4: Geophysical Survey Results Report (document reference 6.11.A4). In some areas archaeological trial trench evaluation has been undertaken and is reported in Environmental Statement (ES) Appendix 11.5: Trial Trenching Results Report (document reference 6.11.A5). In addition to the proposals in the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4), the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5) sets out appropriate mitigation for the historic environment. The Project has engaged with Historic England and relevant planning authorities on aspects relating to heritage,	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		including appropriate mitigation measures and techniques. and to take their views into account during Project development.				
Mitigation						
10-51.36	Suggest mitigation measures	An Environmental Statement (ES) (document reference Volume 6: Environmental Statement) has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 ('the Infrastructure EIA Regulations'). The ES identifies and assesses the likely significant effects on the environment resulting from the construction, operation (and maintenance) of the Project and recommends appropriate mitigation to reduce effects. Environmental mitigation measures have been defined within each environmental topic chapter and set out in relevant management documents submitted with the Development Consent Order (DCO) application, including the Outline Code of Construction Practice (CoCP) (document reference 7.2), the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5).	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Public Rights of Way (PRoW)						
10-51.37	Concern about negative impact on PROW / footpaths / cycle paths / bridleways	<p>Through routeing and siting, National Grid has sought to reduce, as far as practicable, impacts and disruption to Public Rights of Way (PRoW).</p> <p>The iterative design process identified the existing PRoW network and their wider connectivity and sought where practicable to reduce and where possible remove impacts to PRoW.</p> <p>Effects on PRoW would be mitigated where possible, maintaining access where practicable, with closures as a last resort. We will continue to engage with relevant stakeholders on the PRoW network to enable feedback and input to be considered as the Project progresses. An Outline Public Rights of Way Management Plan (document reference 7.6) is submitted with the Development Consent Order (DCO) application.</p>		X	X	
Requests						
10-51.38	Request for further impact surveys in this section	National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project. The assessment is informed by a suite of field surveys and desk studies and results are presented in an Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the application for development consent. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation (and maintenance)	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>of the Project and recommends appropriate mitigation measures to reduce potential adverse impacts.</p> <p>The scope of the EIA is included in the Scoping Report (document reference 6.19) which was submitted to the Planning Inspectorate in November 2022 and their Scoping Opinion (document reference 6.20) received in December 2022. This provided the opportunity for statutory bodies to comment on the scope of the EIA which included our approach on study areas, data collection and baseline conditions for a range of environmental topics. We also discussed and agreed survey scope with stakeholders (including Statutory Environmental Bodies and Local Planning Authorities) following the Scoping Opinion (document reference 6.20) to ensure a robust baseline assessment. National Grid has prepared an Outline Code of Construction Practice (CoCP) (document reference 7.2) which sets out the required mitigation measures and environmental commitments that would be implemented during the construction phase of the Project to avoid or reduce potential effects of the Project on the environment, including commitments to undertake further surveys.</p>				
10-51.39	Request to understand why Orsett Golf Club was not included in the change	Orsett Golf Club was included in our targeted statutory consultation Thurrock 3 – proposed changes to connection at Tilbury which ran from 18 March 2025 to 17 April.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Tourism						
10-51.40	Concern about impact of the Project on tourism	<p>Through routeing and siting, National Grid has sought to avoid, as far as practicable, locations important for leisure and tourism.</p> <p>Environmental Statement (ES) Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) presents an assessment on the potential impacts on tourism economy (during construction) and tourism assets (during construction and operation), including visitor accommodations. As part of this assessment, a range of measures have been considered throughout the construction phase of the Project to minimise disruption on tourism. These include: traffic management, signage and routeing measures. These are identified within the ES Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15), the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).</p>		X	X	
Visual Impact						
10-51.41	Concern that the Project will be unsightly / visually intrusive (including overhead lines, CSE compounds and substations) / Concern that the Project will cause a negative impact on views	National Policy Statement (NPS) EN-5 makes it clear that the Government considers overhead lines to be appropriate and acceptable in most instances, although it recognises that there may be, at particularly sensitive locations, potential adverse landscape and	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>visual impacts of an overhead line that make it inconsistent with our duties and relevant planning policy.</p> <p>The Dedham Vale National Landscape (previously an Area of Outstanding Natural Beauty (AONB)) designation is one such location where underground cable technology is proposed with the extent of underground cabling extending beyond the boundary in response to the potential for the Project to affect the National Landscape. Our proposals include a total of approximately 20 km of underground cable through and in the vicinity of the Dedham Vale National Landscape, including a section at Great Horkesley to reduce the changes in views and setting of the National Landscape from within and adjacent to its designated boundary.</p> <p>Underground cabling is also proposed for a short section of 400 kV overhead line crossing near Fairstead.</p> <p>Cable Sealing End (CSE) compounds are required to facilitate sections of underground cable. The proposed East Anglia Connection Node (EACN) substation is required to connect customers and the proposed Tilbury North Substation is required to connect the Project into the existing Tilbury Substation These components have been carefully sited taking into consideration Horlock Rules including the potential for landscape and visual effects.</p> <p>The higher cost of underground cables to bill paying consumers, and the environmental implications of installing underground cables and maintaining them at</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>locations outside the Dedham Vale National Landscape, are not considered to be justifiable in the context of national policy or National Grid's statutory duties, which include the need to be economical and efficient.</p> <p>A Landscape and Visual Impact Assessment (LVIA), presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13), has been undertaken as part of the Environmental Impact Assessment (EIA). The LVIA includes an assessment on both landscape character and visual amenity.</p> <p>Landscape mitigation is proposed within Environmental Areas around substations and CSE compounds. The Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) includes details regarding the planting proposals.</p>				
Wildlife / Ecology Impact						
10-51.42	Concern that the Project will result in a negative impact on flora / plants / woodlands / hedgerows	<p>Through routeing, siting and detailed design, National Grid has sought to reduce, as far as practicable, potential impacts on biodiversity including priority grassland, wetland, woodland, and hedgerow habitats. The design process has taken account of existing biodiversity, the natural environment and, where practicable, seeks to reduce impacts on areas of ecological sensitivity, through avoidance or mitigation.</p> <p>Chapter 8: Ecology and Biodiversity of the Environmental Statement (ES) (document reference 6.8)</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>assesses the effects on important ecological receptors (which includes protected plants, woodlands and hedgerows).</p> <p>As part of the Environmental Impact Assessment (EIA) process for the Project, a suite of ecological surveys has been to be undertaken. The findings of which inform the design and approach to mitigation.</p> <p>The Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Code of Construction Practice (CoCP) (document reference 7.2) contain a list of relevant good practice measures to avoid or reduce impacts on valuable habitats.</p> <p>The Environment Act 2021 introduces a mandatory requirement for 10% Biodiversity Net Gain (BNG) for new Development Consent Order (DCO) developments (which is not yet in force and not expected until May 2026). National Grid has committed to delivering 10% BNG with environmental and societal benefits on all construction projects. The BNG target for the Project is currently voluntary and aligned with our corporate sustainability commitment.</p> <p>As well as seeking to avoid and minimise impacts to nature, the Project considers the land required for mitigation, compensation and enhancement that can deliver BNG and wider environmental benefits. This will require delivery of offsite Biodiversity Units via habitat creation or enhancement actions in strategic areas, and</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		we will consider all offsite options that are available to us.				
10-51.43	Concern that the Project will result in a negative impact on rivers / other bodies of water	<p>Through routeing, siting and detailed design National Grid has sought to reduce, as far as practicable, potential impacts on biodiversity including river ecology. The design process has taken account of existing biodiversity, the natural environment and, where practicable, has sought to reduce impacts on areas of ecological sensitivity such as river corridor habitats, through avoidance or mitigation. The same approach has been taken to account for rivers and their floodplains, seeking to avoid or reduce the footprint of the Project within floodplains.</p> <p>As part of the Environmental Impact Assessment (EIA) process for the Project, a suite of ecological surveys has been undertaken, including along river corridors. The data has informed the assessment of effects on biodiversity, hydromorphology, water quality and flood risk presented in the Environmental Statement (ES), Chapter 8: Ecology and Biodiversity (document reference 6.8) and ES Chapter 12: Hydrology, Land Drainage and Flood Risk (document reference 6.12) and the Water Framework Directive Assessment (document reference 7.10).</p> <p>Further, the Project has engaged with Natural England, the Environment Agency and Local Planning Authorities on aspects relating to river ecology, water quality and flood risk, and appropriate mitigation measures and</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>techniques have been secured, as detailed in the Outline Code of Construction Practice (CoCP) (document reference 7.2).</p> <p>The Environment Act 2021 introduces a mandatory requirement for 10% Biodiversity Net Gain (BNG) for new Development Consent Order (DCO) developments (which is not yet in force and not expected until May 2026). National Grid has committed to delivering 10% BNG with environmental and societal benefits on all construction projects including for river ecology. The BNG target for the Project is currently voluntary and aligned with National Grid's corporate sustainability commitment.</p> <p>As well as seeking to avoid and minimise our impacts on nature, the Project includes enhancement of watercourse habitats as part of BNG mitigation.</p>				
10-51.44	Suggest ecological enhancements as part of the Project	<p>The Environment Act 2021 introduces a mandatory requirement for 10% Biodiversity Net Gain (BNG) for new Development Consent Order (DCO) developments (which is not yet in force and not expected until May 2026). National Grid has committed to delivering 10% BNG with environmental and societal benefits. The Net Gain target for the Project is currently voluntary and aligned with our corporate sustainability commitment.</p> <p>As well as seeking to avoid and minimise our impacts to nature the Project considers the land required for mitigation, compensation and enhancement that can deliver BNG and wider environmental benefits. This</p>			X	

Thurrock 1 Change feedback (Targeted Consultation)

Table 10-52 Summary of consultee comments and National Grid's response

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Design Change						
10-52.1	Oppose the proposed change - Thurrock 1 (generally)	National Grid notes the respondent's feedback.			X	
10-52.2	Support the proposed change - Thurrock 1 (generally)	National Grid notes the respondent's feedback.			X	
10-52.3	Oppose the haul road route running west-east from the main haul route north south between pylons TB233 and TB234. Suggest that the haul road should be on the same route as the permanent access route	National Grid notes the respondent's feedback. The haul road is proposed at the southern edge of the field as the haul road is routed from south to north in this location so routing along the southern edge of the field to the temporary construction compound is the shortest most direct route and thus does not use the same route as the permanent access at this location. We are therefore not proposing a change to the haul road at this location.			X	

Thurrock 2 Change feedback (Targeted Consultation)

Table 10-53 Summary of consultee comments and National Grid's response

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Design Change						
10-53.1	Oppose the proposed change - Thurrock 2 (generally)	National Grid notes the respondent's feedback.			X	
10-53.2	Support the proposed change - Thurrock 2 (generally)	National Grid notes the respondent's feedback.			X	
10-53.3	Suggest that Pylon TB237 is relocated to the west of the existing pylons, increasing the distance from the respondent's property at Doesgate Lane by 100 m	National Grid notes the respondent's feedback. The alignment is proposed to follow close to the eastern side of the existing 132 kV overhead line. Crossing to the west of the existing overhead line would require part of it to be placed underground, as well as introducing additional angle pylons which would be less consistent with the Holford Rules (see Appendix I22 of this report). Crossing to the west of the 132 kV overhead line would also take the alignment too close to Thurrock Airfield to maintain a distance to enable continued operation. A Landscape and Visual Impact Assessment has been completed for the Project and can be found within the Environmental Statement (ES). The LVIA is presented in the Environmental Statement (ES), Chapter 13:			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation. The effects from the alignment in this area are not assessed to be at a level to justify replacing the 132 kV overhead line with underground cable.				
10-53.4	Request the route is relocated away and to the east of the respondent's property / Criticism that there is no clear justification for routing the Project through the respondent's property on aviation safety (or other) grounds	Routeing decisions are guided by the presence of homes, environmental features and constraints and informed by consideration of the Holford Rules (see Appendix I22 of this report). The routeing of the pylons over the respondent's farm has been modified in response to aviation risks, with those risks being reduced by the adoption of a low height pylon design and routeing parallel to the existing 132 kV lattice pylon. This has changed the route to oversail the respondent's farm. Following further engagement, National Grid are proposing to modify the detailed arrangements to reduce the interaction with the on-site water disposal. This can be achieved through removing the need for fencing within the field at this location and also moved the haul road alignment to more closely follow the edge of fields. In combination with some flexibility in working arrangements to utilise periods where no applications are being made, we do not expect any substantive constraint to the existing business. On this basis no further change to the alignment is proposed.			X	X
10-53.5	Request pylon TB244 is relocated to the north of its current location to (what.3.words location	National Grid notes the respondent's feedback. We have included a commitment within our Development Consent			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	///gums.invite.moving) on the boundary of the affected field to mitigate the visual impact on Wyfields Farmhouse and the agricultural operations in the field	Order (DCO) application (Outline Code of Construction Practice (CoCP) (document reference 7.2)) to move pylon TB244 (now TB245) north as close to the field boundary as possible.				
Visual Impact						
10-53.6	Concern the proposed change will result in extra 50 m pylons in the view of the respondent's property, whilst there are currently pylons in view they are not obstructing the view	<p>National Grid has sought to reduce, as far as practicable, impacts on the environment through routeing and siting and an ongoing iterative design process which has taken on board feedback at different stages of the Project. The iterative design process sought to avoid areas of highest concern, for examples through changes to the route alignment or changes to the method e.g. trenchless crossings.</p> <p>The Project would be located to the west of the respondent's property at a distance of approximately 0.4 km to the nearest pylon. The Project would be closer than the existing 132 kV overhead line which is present in baseline views.</p> <p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the Environmental Impact Assessment (EIA) and is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13). An assessment of effects on people's views is provided in the Environmental Statement (ES), Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3). The respondent's property is within Visual Receptor Area</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		(VRA) H2 Horndon on the Hill. The assessment concludes that there would be significant effects within VRA H2, up to a distance of approximately 1.5 km.				

Thurrock 3 Change feedback (Targeted Consultation)

Table 10-54 Summary of consultee comments and National Grid's response

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Construction Impacts						
10-54.1	Concern about the impact of Pylon TB257, the proposed haul road and scaffold construction area on Orsett Quarry (e.g. impacts on operational efficiency such as delays and temporary closures, ecology, future expansion of the quarry, financial implications, health and safety impacts given cumulative traffic volumes for the quarry and the Project), including impact on compound area (e.g. unable to rearrange infrastructure within the compound area to make space for National Grid traffic without significant impact)	<p>National Grid notes the respondent's feedback but thinks there may be some confusion over pylon numbering. Pylon TB257 is located approximately 250 m north of the quarry site. Pylon TB258 was previously located within Orsett Quarry compound area. However, in response to previous feedback, this has been moved north to fall outside of the quarry. However temporary works during construction would still be required in the quarry site. Due to the angle of the crossing of Buckingham Hill Road we would need to install crossing protection (scaffold and netting) across the road with the scaffold structure positioned within the quarry site. Additionally, the area direct to the east of the quarry compound site may be needed for the stringing of overhead line conductors.</p> <p>As National Grid and its appointed contractors develop the detailed design and construction methodology, we would continue to engage with the quarry to reduce impacts where possible. Where this is unavoidable, temporary measures or compensation would be agreed.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-54.2	Suggest that Lower Thames Crossing (LTC) reserve the right to for National Grid to install different or additional crossing protection to that shown to accord with the development of the LTC at National Grids expense / Suggest the siting of crossing protection inside of the LTCs Order Limit Boundary for the purpose of constructing Norwich to Tilbury is subject to agreement with the LTC	<p>National Grid acknowledges Lower Thames Crossing's (LTC) request that the installation of any crossing protection within LTC's order limit boundary for the purposes of constructing the Project should be subject to agreement with LTC, and that LTC reserves the right to require different or additional crossing protection where this is necessary to accord with the development of the LTC.</p> <p>National Grid agrees in principle to this approach and would continue to engage with LTC through technical discussions and programme coordination to ensure that crossing protection arrangements are appropriately planned, agreed and implemented. The scope and specification of any such protection, along with associated responsibilities, would be discussed and managed through this ongoing engagement.</p>	X		X	
10-54.3	Concern that Lower Thames Crossing (LTC) have consented provisions to divert existing utility networks between Muckingford Road and Long Lane that will need to be considered by National Grid in the developing designs or provide suitable provisions acceptable by the asset owner in consultation with LTC, to discuss any associated impacts as part of National Grid's Consent	<p>National Grid acknowledges Lower Thames Crossing's (LTC) concerns regarding consented provisions to divert existing utilities between Muckingford Road and Long Lane. All known existing utility assets and known utility asset diversions as part of the consented LTC Development Consent Order (DCO) have been accounted for in the design of the Project. Direct clashes have been avoided with the positioning of our proposed infrastructure.</p> <p>We are in consultation with the utility asset owners and would continue to coordinate our requirements with the consented and developing detailed designs of the LTC</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		project in order to reach satisfactorily working solutions for both projects with reference to permanent assets but also phasing of the works.				
Consultation						
10-54.4	Criticism of consultation materials on this change (Thurrock 3)	<p>National Grid notes the respondent's feedback. Thank you for making us aware of the inaccuracies in the mapping information relevant to Orsett Golf Course. However, the findings from the relevant assessments that are set out in the document remain accurate.</p> <p>As the Project proposals were being refined, we did not have finalised construction timelines to include in the consultation materials. Updated information about the construction of the Project is included within our Development Consent Order (DCO) submission.</p> <p>The proposed change at Thurrock 3 did not change the Project timeline provided in other materials and available on the Project website.</p> <p>Our consultation materials included information on how the Project would interact with the Lower Thames Crossing (LTC) in the area, should both projects be granted consent. During the targeted consultation, LTC was granted development consent by the Secretary of State. Updated information on interaction with LTC is included in our DCO submission.</p> <p>An indicative construction programme is presented in Chapter 4: Project Description (document reference 6.4)</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>of the Environmental Statement (ES). Should consent be granted, it is anticipated that construction of the Project would commence in 2027 and continue for four years through to 2031 (including demobilisation).</p> <p>Regular updates are undertaken to ensure the most up to date information on designated sites, including Sites of Special Scientific Interest (SSSI), is considered as part of our application. To our knowledge through extensive consultation with Natural England the information presented on SSSI's is the most up to date available. Full details on designated sites and specifically SSSI's are provided within the Environmental Statement (ES), Chapter 8: Ecology and Biodiversity (document reference 6.8).</p>				
10-54.5	Concern that the Project will have a detrimental impact on the delivery of the Lower Thames Crossing (LTC), due to lack of further detail about the construction programme and lack of guarantee that the Project will not affect LTC's Works	<p>National Grid acknowledges the concerns raised regarding the potential for the Project to impact on the delivery of the Lower Thames Crossing (LTC), particularly in relation to construction programme detail and interface management.</p> <p>Development of the construction programme for the Tilbury North substation works and associated reconfiguration of the ZB and YYJ overhead lines is progressing. Programme assumptions have informed the Environmental Impact Assessment (EIA), the targeted consultation materials, and the Construction Access Plans, and would continue to be refined through engagement with stakeholders, including LTC.</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		National Grid fully recognises the importance of effective coordination with LTC to avoid uncoordinated land occupation or construction overlaps. National Grid is planning a joint programme planning workshop with LTC to review current assumptions, identify key interface points, and support coordinated sequencing of construction activities. National Grid is committed to working constructively with LTC to ensure that both projects can be delivered concurrently without avoidable conflict and would continue to engage positively through programme discussions and the development of an agreed Statement of Common Ground.				
10-54.6	Suggest National Grid and Lower Thames Crossing (LTC) develop proposals together to ensure both projects can be delivered concurrently	<p>National Grid welcomes Lower Thames Crossing's (LTC's) proposal to work collaboratively to develop a coordinated approach to delivery of the Project and the LTC. National Grid fully supports the principle of ensuring that both projects can be delivered concurrently in a coordinated and efficient manner and is committed to working with LTC to achieve this.</p> <p>National Grid has held an initial joint workshop with LTC to support programme planning and sequencing discussions, and to identify and address key interface points between the two projects. National Grid would also ensure to continue to engage positively with LTC through programme coordination and the development of an agreed Statement of Common Ground to record and support this collaborative approach.</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-54.7	Request engagement with National Grid at the earliest opportunity regarding proposed protective provisions required to deliver Norwich to Tilbury that overlap, conflict or modify the proposals of Lower Thames Crossing (LTC) / Note that all modifications required to the LTC Development Consent Order (DCO) are to be developed, agreed and consented by National Grid as part of the Norwich to Tilbury DCO	National Grid acknowledges Lower Thames Crossing's (LTC's) request for early engagement regarding potential modifications to the LTC Development Consent Order (DCO) required to enable delivery of the Project. National Grid supports the principle that any such modifications would be developed in consultation with LTC and secured through the Norwich to Tilbury DCO. National Grid would continue to engage with LTC to ensure that any areas of overlap, potential conflict or required modifications are identified, discussed and managed in a coordinated manner. This would be supported through technical engagement, programme coordination, and the development of an agreed Statement of Common Ground and Protective Provisions.	X		X	
10-54.8	Request National Grid engage in joint discussions (partnering with Lower Thames Crossing (LTC)) with UK Power Networks, the owner of the PAB Route, to realise any opportunities that may exist to undertake works at the same time - as LTC requires works to UK Power Networks PAB Route (PAB12 through PAB19 – Work No OH5) and Norwich to Tilbury require works to PAB20 to PAB23	National Grid requires UK Power Networks to reconfigure their PAB route from PAB20 to PAB23. This would be delivered by UK Power Networks, and we expect that they would coordinate and optimise network access and works for both projects. National Grid will reach out to commence UK Power Networks engagement on these collaborative discussions. National Grid is committed to supporting this process with UK Power Networks wherever of benefit to the efficient delivery of both projects.	X		X	
10-54.9	Request further discussions regarding the areas around the proposed substation and Orsett Golf	National Grid acknowledges the request and has held a workshop with the Lower Thames Crossing (LTC)	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	Course to ensure proposals for 'environmental areas' promoted by National Grid align with commitments and requirements of the Lower Thames Crossing (LTC) DCO and achieve the intended function as promoted by LTC / Requests the Project determines mitigation of impacts where LTC's proposals cannot be delivered in accordance with National Grid's proposals	project team to resolve these matters. National Grid would continue to engage with the LTC project team to discuss and agree a way forward where the Project interacts with LTC's mitigation proposals.				
10-54.10	Request that the proposed permanent access route from Brentwood Road is coordinated with Lower Thames Crossing (LTC) to ensure a solution that affords the requirements of both projects and access to Brook Farm and gas infrastructure is maintained during construction and operation of both projects / Request National Grid consent any eventuality to which the parties agree	National Grid is continuing to coordinate with Lower Thames Crossing regarding the location of all access and crossover bellmouths to ensure that the designs are coordinated.	X		X	
10-54.11	Request that the proposed haul roads are coordinated with Lower Thames Crossing (LTC) (as they conflict with LTC's proposals) / Request to work with National Grid to come to a solution that benefits both projects and affords diversions of the same lines required by LTC (Work No OH6 as shown on sheets 24, 27, 28, 29, 33 and 34 of the works plans and OH7) and mitigate impacts to third party land, archaeology and the environment, associated with the haul roads	National Grid is continuing to coordinate with Lower Thames Crossing (LTC) regarding the location of all proposed access routes, site access points (bellmouths) and crossover points (bellmouths) where there is an interface between the two projects, to ensure that the designs are coordinated. National Grid is applying for Order Limits that would allow its proposed temporary haul roads to be coordinated with LTC.	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-54.12	Concern that proposals of Norwich to Tilbury as shown on Sheet D do not accord with the proposals of the Lower Thames Crossing (LTC) (2.6 Works Plans Sheets 28 & 29) within this region / Concern that the proposals at Sheet D do not reflect the site as proposed nor the rights and facilities that are to be afforded to National Grid as part of the LTC DCO by virtue of Work No OH6 and OH7	<p>National Grid has accounted for a “with” and “without” Lower Thames Crossing (LTC) scenario in the targeted consultation and Development Consent Order (DCO) submission materials. The design shown is based on the existing assets, however the Limits of Deviation (LoD), Order Limits, land rights and Schedule 1 of the draft DCO have been developed such that the Project can switch to the design that reflects the changes to the YYJ and ZB overhead lines as proposed in the consented LTC DCO.</p> <p>National Grid agrees in principle to work with LTC to ensure that these matters are appropriately addressed, and that any necessary adjustments or clarifications are identified through ongoing technical engagement and programme coordination. This would include ensuring that the proposals fully reflect and respect the rights and facilities afforded under the LTC DCO and that any potential discrepancies are resolved in coordination with LTC.</p>	X		X	
10-54.13	Request a coordinated approach with Lower Thames Crossing (LTC), to shared access areas (or those in proximity) to the Local Road Network (LRN), intended to be utilised by both the LTC and Norwich to Tilbury or in instances where works would impede other users of the LRN with an aim to mitigate impacts on the A1013 Stanford Road, Buckingham Hill Road, Hoford Road, Brentwood Road,	National Grid is continuing to coordinate with Lower Thames Crossing (LTC) regarding the location of all access and crossover bellmouths to ensure that the designs are coordinated and feasible.	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	Muckingford Road, Heath Road and Gammonsfield Way					
10-54.14	Request National Grid to attend the Traffic Management Forum which will be established as part of Lower Thames Crossing's (LTC) Control Plan, for any instances where both projects overlap	National Grid will review attendance of the Traffic Management Forum when traffic interfaces and arrangements are finalised. We acknowledge that close coordination is required where projects may overlap.	X		X	
10-54.15	Request National Grid engage and agree a landowner engagement strategy at the earliest opportunity, as Lower Thames Crossing (LTC) and Norwich to Tilbury have overlapping demands on third party land which may give rise to ambiguity for landowners	The Project's land project manager has met with the Lower Thames Crossing (LTC) lands team to have an initial discussion on a number of matters, which included the need to agree on a joint landowner engagement strategy. Further meetings are planned to agree on the details of the strategy and then implementation.	X		X	
Design Change						
10-54.16	Oppose the proposed change - Thurrock 3 (generally)	National Grid notes the respondent's feedback.	X		X	
10-54.17	Support the proposed change - Thurrock 3 (generally)	National Grid notes the respondent's feedback.	X		X	
10-54.18	Suggest that the Project is re-routed so that the pylons run parallel of the 17 th hole, and then across the back of the 17 th tee instead of in front (e.g. as National Grids proposal to move the pylons 100 yards further back is not sufficient as golfers could still hit the overhead lines as they would only be 240 yards away from the tee at Orsett Golf Course, and	There has been some misunderstanding by the respondent about constraints with ancient woodland being of more concern to routeing further to the south of the golf course and not being a factor around the course itself. Routeing across the back of the 17 th tee transfers impacts to adjacent land and would substantially impact an aggregate recycling facility to the possible extent of			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	the pylons would now only be 180 yards from the 16 th tee). Criticism that respondent has been told this is not possible due to ancient woodland, however the respondent questions this claim, stating it is not ancient woodland, an Orsett Golf Club offer to plant 10 trees elsewhere for every one that would need to be knocked down to do this	closure. National Grid has continued to engage with Orsett Golf Course and, with the assistance of an independent golf course designer, has reached a conclusion that an overhead line crossing the golf course at a distance of around 240 m from the rear of the 16 th and 17 th Tees that does not interfere with play is the preferred basis for the Project. This change would be made within the Limits of Deviation and Order Limits. National Grid hopes to agree a Statement of Common Ground with the golf course with discussions ongoing. A change has been made to the alignment on this basis.				
10-54.19	Suggest the Project is re-routed over the very end of Orsett Golf Course (e.g to reduce visual impact, reduce impact on golf activities)	National Grid has considered a range of design alternatives crossing over the end of Orsett Golf Course. Routeing across the back of the 17 th Tee or 16 th green either transfers impacts to adjacent land and would substantially impact an aggregate recycling facility to the possible extent of closure or requires substantial shortening of the holes to facilitate pylon positioning. National Grid has continued to engage with Orsett Golf Course and, with the assistance of an independent golf course designer, has reached a conclusion that an overhead line crossing the golf course at a distance of around 240 m from the rear of the 16 th and 17 th Tees that does not interfere with play is the preferred basis for the Project. A change has been made to the alignment on this basis.			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-54.20	Suggest that the power station at Tilbury should be re-constructed to generate the electricity on site at Tilbury	<p>It's important to note that National Grid Electricity Transmission operates as the transmission system operator for England and Wales, not as an electricity generator. We do not build, own or operate electricity generation facilities. The development of new power stations is undertaken by independent power generation companies within the competitive electricity market. Our role is to transport electricity efficiently and reliably from where it is generated to where it is needed across the country. Norwich to Tilbury Project specifically aims to:</p> <p>Connect new offshore wind generation from the East Anglian coast to the national transmission network.</p> <p>Reinforce the regional transmission system to accommodate increasing renewable energy capacity.</p> <p>Support the UK's net zero targets by enabling the integration of clean energy sources.</p>			X	
10-54.21	Suggest the Project uses underground cables from A127 south to the substation	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in</i>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p><i>general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or Area of Outstanding Natural Beauty (AONB)). Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project from the A127 to the substation would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy</i></p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
10-54.22	Request that underground cables are used or that the Project is re-routed to the north and east (e.g. to mitigate impact on the landscape, surrounding environment, and existing and proposed communities such as Chadwell St Mary)	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is ' <i>that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or Area of Outstanding Natural Beauty (AONB))</i> '. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at Chadwell St Mary would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.</p> <p>We do not consider re-routeing to be feasible either as a means to get to Tilbury Substation or to get to Tilbury North substation. Alternative routes to Tilbury Substation still encounter the same issue of traversing the freeport area so do not meet the need. Alternative routes to Tilbury North substation are restricted by the presence of residential areas and other existing infrastructure. On this basis no change is proposed.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-54.23	Concern that the temporary realignment of the YYJ line cuts through a significant cropmark complex. Suggest that the cropmark evidence should be used to design the temporary pylon locations so that the cropmark complexes are avoided	<p>National Grid's routing and siting process included a detailed review of all known and potential non-designated heritage assets within and immediately around the Order Limits, using Historic Environment Record data, historic mapping, aerial and LiDAR imagery, field-walking, geophysical survey and targeted trial trenching. The cropmark complex referred to has been recorded, mapped and evaluated through this programme. Our approach to screening, evaluating and, where necessary, scoping-in non-designated assets (including extensive cropmark landscapes) was set out in the Historic Environment Method Statement, discussed with Historic England and the relevant local planning authorities through the Archaeology Working Group, and agreed as an appropriate and proportionate methodology.</p> <p>Where temporary works, such as the YYJ diversion pylons, unavoidably intersect areas of archaeological potential, the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5) and the Outline Code of Construction Practice (CoCP) (document reference 7.2) sets out a programme of archaeological mitigation to ensure that any remains affected are fully investigated.</p> <p>On this basis we are confident that the potential effects on the cropmark complex have been properly considered and that suitable, agreed mitigation is in place to safeguard the archaeological interest of the site.</p>		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-54.24	<p>The changes to remove 4.5 km of underground cable, avoids the former proposed underground cable crossing the Tilbury Loop Line and a number of interfaces with the respondents rising mains that follow the same corridor that would have presented challenges when considering further detailed designs and technical assurance on the interface or the potential need for diversions of these assets. However, the amended red line boundary to incorporate the proposed amendments to restring YYJ and ZB overhead lines will include land with the respondent's underground assets including wastewater and surface water sewers. The new underground cable route for part of ZB overhead line and the associated cable sealing end compounds may directly interface with a surface water sewer and wastewater (foul) sewer, that would lead to diversions of the respondent's assets. The need for third party utilities diversions and/or modifications is noted in the Design Development Report (1.2.12) and Environmental Implications report (1.3.2 and 1.3.7)</p>	<p>National Grid notes the respondent's feedback and is aware of the wastewater and surface water sewers. Utilities information has been mapped for the Project, and these assets have been avoided as far as practicable. Where unavoidable, National Grid and their contractors would work with utility providers to ensure that services remain unaffected. In some cases, this may result in diversions.</p> <p>Crossing of underground utilities (both public and private) is normal practice for underground cable installation. Underground cable installation can normally be conducted without compromise to existing utilities. Detailed site investigations would be undertaken prior to construction to determine the location and nature of existing utilities.</p> <p>To facilitate the Project, National Grid does not anticipate a diversion to the asset near the southern Cable Sealing End (CSE) compound. From the available mapped utility information, the asset is located approximately 10 m from the corner of the CSE compound. Detailed site investigations would be undertaken prior to construction to determine the location and nature of existing utility to confirm if a diversion is required.</p> <p>Additionally, for the entire overhead line route of the Project, National Grid has positioned pylons such that they are adequately offset from known mapped underground assets. Any that are crossed by the</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>proposed access routes or working areas would be identified and protected in accordance with the relevant utilities requirements.</p> <p>In this particular, National Grid has also proposed both overhead line and underground assets in locations that do not clash with utilities diversions as proposed in the Lower Tames Crossing (LTC) Development Consent Order (DCO).</p> <p>National Grid would continue to engage and coordinate Project design and phasing with LTC and utility providers through examination, detailed design and construction of the Project.</p>				
10-54.25	<p>Suggest that the Project is straightened and remains on the west side of Buckingham Hill Road (e.g. this would be least disruptive and more cost effective). However, if it is deemed necessary to cross onto the east side of Buckingham Hill Road, suggest that the associated haul road and crossing protection area is relocated north, onto the land where Pylon TB258 is currently situated</p>	<p>National Grid has considered the respondent's feedback and we have reviewed multiple alternative alignments in this location. Due to the presence of Buckingham Hill Road landfill, which does not provide suitable ground conditions for pylon construction, we do not consider it possible to avoid a route to the east of the road. We do propose to progress with an extended Order Limit to the west to retain the potential to position a pylon on the household recycling site (which may not be made ground) but this would only progress if an alternative site for such a facility comes forward in an appropriate timescale and if the recycling site is confirmed to have suitable ground conditions.</p> <p>The crossing protection needs to be positioned where the overhead line conductors cross the public highway and thus is subject the final positioning of the overhead</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		line. Access to such areas is required to construct the crossing protection (scaffold).				
10-54.26	Suggest that either the Project line is straightened between Pylons TB255 and TB258, keeping the line to the west side of Buckingham Hill Road (as this land may be landfill), or that the line is straightened between Pylons TB255 and TB258, with the pylon situated on the hardcore yard on the west side of the road to avoid encroaching upon the Thames Estuary Site of Special Scientific Interest (SSSI) notification project area (e.g. potentially removing the need for an additional pylon, offering a potential cost-saving opportunity for National Grid; to eliminate the necessity for substantial disturbance compensation payments; to remove impact from Maple Park to the north, a valued public open space that is scarce in this part of Essex; to increase the distance from the gas pipe, reducing health and safety concerns)	National Grid has considered the respondent's feedback and we have reviewed multiple alternative alignments in this location. Due to the presence of Buckingham Hill Road landfill, which does not provide suitable ground conditions for pylon construction, we do not consider it possible to avoid a route to the east of the road. We do not consider that either the Sites of Special Scientific Interest (SSSI) possible notification, nor the use as a community space would be materially compromised by the routing.			X	
10-54.27	Criticism relating to the following Tilbury North substation locations that were rejected. - Locations 4 and 5 were rejected based on limited evidence or partly on impacts of lesser significance, such as the Southfields Opportunity Area which is not a preferred allocation in the Local Plan. - Locations 1 and 2 were disregarded due to the	Decision making has been made based on multiple factors which are set out in the 2025 Design Development Report (document reference 5.15). The respondent may disagree with the inclusion of certain factors but in the case of location 4 the removal of the Southfields Opportunity Area would not change the residual position that this would have greater effects or require additional undergrounding to connect into existing overhead lines so was less preferred. Likewise,			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	original scoping for the scheme being flawed and because the locations had not been surveyed, as opposed to being discounted due to performing less well	site 5 requires more connection infrastructure at considerable additional cost, Sites 1 and 2 do not meet the need case on delivery programme. For these reasons no change is proposed.				
10-54.28	Concern that when selecting the preferred location for the Tilbury North substation, National Grid has not fully assessed the alternative connection options that might limit impact on existing and expanded new communities at Chadwell St Mary / Suggest that National Grid assess using lower lying land further away, land in the Lower Thames Crossing (LTC) corridor that may be available, and/or using slightly longer sections of underground cables (e.g. to minimise localised significant long-term impacts on Chadwell St Mary)	In response to feedback National Grid has considered an alternative arrangement moving the Cable Sealing End (CSE) compounds closer together onto the YYJ route with it connecting to the substation as underground cable but which incurs greater cost. This reduces the interaction with the proposed housing at Chadwell St Mary and also reduces engineering risks arising from uncertainty over Lower Thames Crossing (LTC) programme with consequent outage challenges. As some aspects require further resolution, wider Order Limits are taken forward but with National Grid strongly favour the modified alternative which goes someway to meeting the feedback by reducing the direct impact on the development footprint from an estimated 8 Ha to 3 Ha (but subject to further design review). Avoidance of all effects is not possible because of the particular constraints and programme uncertainties. This is explained in Chapter 11 of the 2025 Design Development Report (document reference 5.15)			X	X
10-54.29	The Development Consent Order (DCO) boundary to the east of Chadwell St Mary is extensive and should be reviewed to ensure that it only includes land required for permanent or temporary works	The Order Limits have been defined to encompass the land required temporarily to build the Project and permanently to operate the Project. The Order Limits include the Limits of Deviation (LoD), which represent			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>the maximum deviation for permanent infrastructure, such as overhead line, pylons, underground cables and substations.</p> <p>The LoD and Order Limits have been widened at this location to account for the change to the existing YYJ and ZB overhead line routes as per the consented Lower Thames Crossing Development Consent Order (DCO) and to allow flexibility of the design should the ongoing coordination between overlapping DCOs identify a change is required.</p>				
10-54.30	Suggest that National Grid re-consider the undergrounding or moving the alignment / connection to YYJ further north or east of the existing route or to the north of the Lower Thames Crossing (LTC) route (e.g. this may also require a re-evaluation of location options other than location 3 for the Thurrock North Substation)	<p>In response to feedback National Grid has reviewed moving the Cable Sealing End (CSE) compounds north or east or to the north of Lower Thames Crossing (LTC). These either do not allow the creation of additional space to reduce the land take of housing as the same connection to the YYJ is required or cannot meet the need case requirement for programme delivery or are at additional cost without material benefit. We also considered an alternative arrangement moving the CSE compounds closer together onto the YYJ route with it connecting to the substation as underground cable but which incurs greater cost. This reduces the interaction with the proposed housing and also reduces engineering risks arising from uncertainty over LTC programme with consequent outage challenges. As some aspects require further resolution, wider Order Limits are taken forward but with National Grid strongly favouring the modified</p>			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		alternative which we consider goes someway to meeting the request.				
10-54.31	<p>Suggest that the Cable Sealing End (CSE) compounds are re-located further north or east away from Chadwell St Mary (e.g. to reduce the significant adverse landscape impacts and minimise impact on the development east of Chadwell St Mary).</p> <p>The Environmental Implications of Change Report notes that if the Lower Thames Crossing goes ahead then there is limited opportunity for screen planting around the CSE compounds. The Lower Thames Crossing (LTC) Development Consent Order (DCO) has since been granted and whilst there is no certainty regarding timings, given the limited opportunity for screening the CSE compounds, National Grid should consider alternative locations for these</p>	<p>In response to feedback National Grid has considered an alternative arrangement moving the Cable Sealing End (CSE) compounds closer together onto the YYJ route with it connecting to the substation as underground cable but which incurs greater cost. This reduces the interaction with the proposed housing and also allows for additional area for visual screening measures. It also reduces engineering risks arising from uncertainty over Lower Thames Crossing (LTC) programme with consequent outage challenges. As some aspects require further resolution, wider Order Limits are taken forward but with National Grid strongly favouring the modified alternative. Further detail of the decision making basis is set out in the Design Development Report (document reference 5.15)</p> <p>Significant adverse landscape effects resulting from the Project are reported in Appendix 13.2: Landscape Baseline and Assessment (document reference 6.13.A2) of the Environmental Statement (ES), in the East and West Tilbury Open Undulating Farmland Landscape Character Area (LCA), within which the CSE compounds are located, and through which the LTC development passes. Major landscape effects are reported within 0.5 km of the Project, reducing to moderate beyond 0.5 km, and minor (and not significant) beyond 1.5 km. It is likely that moving the CSE compounds to the north would</p>			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>transfer the localised landscape effects resulting from the CSE compounds elsewhere within the same LCA. Both options cross farmland and field boundary vegetation. Both options would therefore result in similar effects on landscape features and key characteristics, and therefore there would be no change to the significance of effects on landscape character.</p> <p>Whilst paragraph 1.3.17 of the Environmental Implications of Change (Proposed Changes to Connection at Tilbury) (available on the Project website) notes that opportunities for mitigation around the proposed CSE compounds would be limited if LTC is consented, mitigation would still be achievable.</p> <p>Mitigation around substations, substation extensions and CSE compounds is detailed in the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4). National Grid has committed to a 3:1 replacement for individual trees and individual trees within small groups. The tree planting strategy will prioritise replanting within the Order Limits, although offsite provision may be required. Further detail in relation to offsite planting is provided in the Outline LEMP. Additional planting may be considered within the Order Limits at detailed design stage, in locations such as around Tilbury North substation and the permanent access roads to the Tilbury North CSE compounds.</p>				
10-54.32	Concern that the Project is located on high exposed areas of land, resulting in visual impacts and	National Grid has undertaken an Environmental Impact Assessment (EIA) which considers the landscape and			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>potential mental health and wellbeing impacts for the community of Chadwell St Mary. The respondent has particular concerns regarding the views along the proposed east west new public open space corridor/linear park that is part of their proposals.</p> <p>Suggest that National Grid should work closely with the respondent to ensure that permanent assets are designed so that they are compatible with and do not compromise proposals for green and blue infrastructure associated with the proposed development at Chadwell St Mary, as per paragraph 5.1.11 of the Overarching National Policy Statement for Energy (EN-1)</p>	<p>visual, and mental health and wellbeing impacts of the Project. Details of this assessment are presented in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement).</p> <p>Chapter 10: Health and Wellbeing (document reference 6.10) of the Environmental Statement (ES), includes an assessment of the impact of the Project in terms of both physical and mental health and wellbeing. Operational impacts assessed include those relating to visual amenity, noting that community mental health and wellbeing can be impacted by changes to landscapes and the views that exist as a result of the permanent visual changes the Project would bring. The assessment draws on findings from the Landscape and Visual Impact Assessment (LVIA) and specifically the Residential Visual Amenity Assessment (document reference 6.13.A4). This identified around 50 properties/property groups which are expected to experience visual change of a high magnitude; no properties were identified as breaching the Residential Visual Amenity Threshold. While it is acknowledged that a small minority of the population may be affected by changes in visual amenity and that change in quality of life may be moderate, this is considered to result in a minor adverse (not significant) health effect and would depend on an individual's ability to accept or respond to changes in their physical environment.</p> <p>The LVIA, presented in Appendix 6.3: Visual Baseline and Assessment of the Environmental Statement (ES)</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>(document reference 6.13.A3), identifies likely effects on Visual Receptor Area (VRA) H5: Grays and Chadwell St Mary, in Section H. This VRA includes the area of settlement to the west of the proposed east/west linear corridor of open space that forms part of the proposals for another development.</p> <p>During construction, major and significant (adverse) effects are reported within 1.5 km of the Project, from the eastern edge of Chadwell St Mary, reducing to not significant within Chadwell St Mary and Grays.</p> <p>During operation year 1, within 1.5 km of the Project, moderate and significant (adverse) are reported from the eastern edge of Chadwell St Mary, reducing to negligible and not significant from further within Chadwell St Mary and Grays.</p> <p>During operation year 15, within 1.5 km of the Project, minor and not significant (adverse) are reported from the eastern edge of Chadwell St Mary, reducing to negligible and not significant from further within Chadwell St Mary and Grays.</p> <p>The neighbouring VRA H6: Southfields, (to the north of Chadwell St Mary) includes the proposed east/west linear corridor of open space that forms part of the proposals for another development.</p> <p>During construction, major and significant (adverse) effects are reported within 0.5 km of the Project, and moderate and significant (adverse) effects within 1.5 km</p>

		<p>moderate and significant (adverse) effects within 1.5 km of the Project, reducing to minor and not significant (adverse) from the south of the VRA and negligible and not significant from within Linford and to the east of Linford.</p> <p>During operation year 15, major and significant (adverse) effects, reducing to moderate and significant (adverse) around the CSE compounds and Tilbury North substation in the south, are reported within 0.5 km of the Project. Moderate and significant (adverse) effects within 1.5 km of the Project, reducing to minor and not significant (adverse) from the south of the VRA and negligible and not significant from within Linford and to the east of Linford.</p> <p>Mitigation around substations, substation extensions and CSE compounds is detailed in the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4). National Grid has committed to a 3:1 replacement for individual trees and individual trees within small groups. The tree planting strategy will prioritise replanting within the Order Limits, although offsite provision may be required. Offsite tree planting is considered to be landscape compensation. Further detail is provided in the Outline LEMP (document reference 7.4). Additional planting may be considered within the Order Limits at detailed design stage, in locations such as around Tilbury North substation and the permanent access roads to the East Anglia</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Connection Node (EACN) and Tilbury North CSE compounds.</p> <p>Appendix 13.6: Arboricultural Impact Assessment (AIA) (document reference 6.13.A6) submitted as part of the Environmental Statement (ES) provides details of the impacts to trees.</p> <p>In changing the connection arrangements, we have and will continue to engage with parties associated with the Chadwell St Mary development to reduce effects as far as possible. Those discussions have already identified an alternative solution that we have included within the Development Consent Order (DCO) application which we consider a preferred solution but this is subject to resolving certain technical aspects including with the Lower Thames Crossing project that is now consented.</p>				
10-54.33	National Grid should provide details of the alternative options considered and the weightings given to different impacts as part of the assessment process. Impact on local communities and new homes in an area with severe housing need should be given considerable weight. The respondent recognises that the 'Design Development Report, Addendum for Proposed Changes' sets out the alternative locations that were considered for the new substation as a result of the need to avoid the Freeport, and reference is made to the potential impact on the Chadwell St Mary housing allocation, but alternative	In response to feedback National Grid has considered an alternative arrangement moving the Cable Sealing End (CSE) compounds closer together onto the YYJ route with it connecting to the substation as underground cable but which incurs greater cost. This reduces the interaction with the proposed housing and also reduces engineering risks arising from uncertainty over Lower Thames Crossing (LTC) programme with consequent outage challenges. As some aspects require further resolution, wider Order Limits are taken forward but with National Grid strongly favouring the modified alternative. We have set out details of the reasons for decision making on alternative locations considered in Chapter 3:			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	options for the infrastructure in the vicinity of the substation should also be set out	Alternatives (document reference 6.3) of the Environmental Statement (ES) as well as in the Design Development Report (document reference 5.15). We are not required to present all the details of all theoretical options as it would be disingenuous to present options that we are not in a position to progress because of National Grid's statutory duties.				
10-54.34	Early and extensive landscaping in the vicinity of the new Tilbury North substation should be a priority	<p>Mitigation around substations, substation extensions and Cable Sealing End (CSE) compounds is detailed in the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4). National Grid has committed to a 3:1 replacement for individual trees and individual trees within small groups. The Project would prioritise replanting for individual trees and small groups of individual trees within the Order Limits, although offsite provision may be required.</p> <p>Additional planting may be considered within the Order Limits at detailed design stage, in locations such as around Tilbury North substation and the permanent access roads to the East Anglia Connection Node (EACN) and Tilbury North CSE compounds.</p> <p>A landscape planting schedule would be created by the relevant main works contractor(s) for each environmental area, which would identify where advanced planting/habitat enhancement works ahead of or during construction can take place and where planting would be undertaken on completion of construction works (before operational use). The landscape planting</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		schedule would take account of timings relevant to the Environmental Impact Assessment (EIA) where practicable and other seasonal restrictions.				
10-54.35	The permanent access road from Brentwood Road should be relocated to minimise effects on new community of Chadwell St Mary. This area is critical for early delivery of the northern residential access and therefore the haul route connection east to High House Lane should also be removed from the proposals	National Grid acknowledges the feedback and is continuing to engage with the stakeholder regarding the planned access routes for the works east of Brentwood Road. Proposals for the Project and the stakeholder's development are being coordinated to accommodate all parties' requirements. We would continue to work with the stakeholder and the appointed contractor would work closely to ensure programmes are coordinated and disruption to the surrounding area is kept to a minimum.			X	
10-54.36	Extensive areas of environmental works are proposed on the respondent's land around the Brentwood Road and east towards Hoford Road. These areas are required for residential development and associated green infrastructure and biodiversity net gain. They should be removed from the plans and located elsewhere	National Grid acknowledges the feedback and is continuing to engage with the stakeholder regarding the planned access routes for the works east of Brentwood Road. Proposals for the Project and the stakeholder's development are being coordinated to accommodate all parties' requirements. We will continue to work with the stakeholder.			X	
10-54.37	In relation to temporary assets and construction routes the respondent requests that: 1. National Grid consider the re-alignment of temporary overhead lines east of Brentwood Road to ensure that they are moved as far north and east as possible (e.g. to mitigate impact on Chadwell St Mary).	In response to feedback National Grid has considered an alternative arrangement moving the Cable Sealing End (CSE) compounds closer together onto the YYJ route with it connecting to the substation as underground cable but which incurs greater cost. This reduces the interaction with the proposed housing and also reduces engineering risks arising from uncertainty over Lower Thames Crossing (LTC) programme with consequent			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>2. The plans are modified, and ongoing discussions take place to ensure that the respondent is not in any way restricted from constructing its main Brentwood Road access or delivering homes because of the Project. The National Grid Construction Access Plan (with Lower Thames Crossing (LTC) indicates a number of crossover bellmouths (TN-B008A and B009A) that conflict with the respondent's primary access on Brentwood Road. This access will need to be constructed early on (likely in 2027 / 2028) so that a connecting route can be made between this northern access and the proposed southern access on Linford Road to the south. There may be alternative options for National Grid's access locations and haul routes. The respondent would welcome a discussion about this with National Grid to arrive at a solution that works for the respondent, National Grid and also LTC. For instance, if LTC is delayed, National Grid should consider a construction route from the north, minimising impact on the respondents proposed access at Brentwood Road. If timing aligns with LTC, there may be options to secure joint construction routes</p>	<p>outage challenges. As some aspects require further resolution, wider Order Limits are taken forward but with National Grid strongly favouring the modified alternative which would reduce the required land take.</p> <p>National Grid acknowledges the feedback on access arrangements and is continuing to engage with the stakeholder regarding the planned access routes for the works east of Brentwood Road. Proposals for Norwich to Tilbury and the stakeholder's development are being coordinated to accommodate all parties' requirements.</p>				
10-54.38	Suggest a site north of the A13 (i.e. Pylon TB253) would be a reasonable alternative for the substation while limiting impacts to the Lower Thames Crossing	National Grid notes the respondent's feedback. The suggested location north of the A13 would require two overhead lines to be constructed south to achieve the connection into Tilbury Substation. This would increase	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	(LTC) environmental proposals and still achieve the same need case	effects between TB253 and the proposed substation location and incur additional costs. It is therefore less preferred, and no change has been made.				
10-54.39	Request that the new overhead line is constructed in such a manner that future operation and maintenance of those networks does not impede the operation of the A122 (a catenary support system is assumed suffice and is typical for these instances elsewhere on the network)	National Grid acknowledges the request to ensure that the new overhead line is constructed in a manner that would not impede the operation of the A122 and understands that a catenary support system is typically used to achieve this in similar circumstances elsewhere on the network. National Grid supports this objective and confirms that it is the intention that the crossing of the A122 would be designed and constructed in such a way as to avoid impeding the future operation of the road. The specific crossing protection solution, including use of a catenary support system where appropriate, would be determined through detailed design and would be discussed with Lower Thames Crossing through ongoing technical engagement and programme coordination to ensure that a suitable solution is agreed.	X		X	
10-54.40	Support for proposed change – Thurrock 3, as this mitigates Fort Road being part of the order limits. Fort Road is the only access road to Tilbury Fort, a site of significant economic and cultural value to Thurrock, and so temporary blockages of this road would have significant detrimental economic impacts	National Grid acknowledges the complexities of the overlapping land rights required to deliver both projects. Further discussions need to take place between both parties to agree provisions and programming so that both projects can coexist and progress in the required time frames. National Grid will continue to work with Lower Thames Crossing to discuss and progress these points.		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-54.41	Support for proposed change – Thurrock 3, as this mitigates access to the London Cruise Terminal in Tilbury (as previously presented). As access to the London Cruise Terminal will no longer be impacted, the proposed changes have an economic benefit	National Grid notes the respondent's feedback.		X		
Environmental Impact						
10-54.42	The Environmental Implications report identifies that the Tilbury North substation will require drainage (1.3.11). If a connection to the respondent's wastewater (foul drainage) network is required for the substation, a pre-development enquiry should be submitted to their drainage team via their InFlow service. The respondent would expect surface water management to follow the surface water disposal hierarchy to ensure that it is either harvested and reused on site or managed via SuDS. It is noted that the continuity of overland surface water paths is also proposed (1.8.44). Given the proximity of the respondent's sewers to the CSEs, the respondent emphasises the need to avoid any surface water flows adversely impacting on their assets such as causing hydraulic overloading	In line with the commitments described in the Outline Code of Construction Practice (document reference 7.2), proposals for managing surface water drainage from North Tilbury substation include a range of Sustainable Drainage Systems (SuDS) suitable to local site conditions, with discharge rates attenuated to greenfield, to avoid overloading of local drainage networks. Further details are provided in the Flood Risk Assessment (document reference 7.9) that has been prepared. Any requirement for a connection to the foul drainage network to serve the substation would be confirmed by the main works contractor(s) via the appropriate pre-development enquiry service.	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Financial Compensation						
10-54.43	The respondent's requests that adequate compensation is given due to the heavy losses they will suffer if land is used for the proposed change route. The respondent also highlights that the change in route has lead to additional costs incurred to them such as consultant fees and will need to recover the monies from National Grid	National Grid would compensate affected landowners in line with the Compensation Code and on submission of a valid compensation claim. Reasonable and proportionate professional fees would be covered in line with the National Grid Land Rights Strategy.			X	
Health, Safety and Wellbeing						
10-54.44	Concern about the impact of the proposed haul road and crossing protection area on Ingrebourne Valley quarry compound area, significantly disrupting operations and creating health and safety risks	National Grid notes the respondent's feedback. Where the proposed haul road would interact with existing businesses, National Grid would continue to liaise with the relevant parties and seek to agree suitable mitigation and/or procedures, to lessen disruption and ensure safe working practices. The Outline Code of Construction Practice (CoCP) (document reference 7.2) controls how construction of the Project would be developed. The crossing protection (scaffold) is required to protect the highway during stringing of the overhead line conductors and is an essential element of safe working practices. National Grid's contractors would construct the Project in line with its relevant health and safety duties.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Mitigation						
10-54.45	Concern that the area of proposed environmental mitigation north of ZB17T Brentwood Road is the site of the proposed Lower Thames Crossing (LTC) Compound CA6 and will be occupied by LTC during construction of the LTC and will not be available for Norwich to Tilbury in accordance to the programme of works / Request to work with National Grid where practical and feasible - LTC cannot commit to a date to vacate the site at this design development stage	National Grid is continuing to coordinate with Lower Thames Crossing (LTC) regarding areas of overlap and programme.	X		X	
Primary Access Routes / Haul Road / Construction Compounds						
10-54.46	Concern that the proposed access at Brentwood Road for the proposed substation would conflict with Lower Thames Crossing's (LTC) Compound CA6 and the proposed Brentwood Road construction (Work No 6D) and alignment of utility diversions (Work No MU40 and MU41)	National Grid is continuing to coordinate with Lower Thames Crossing (LTC) regarding the location of all proposed site access points (bellmouths) and crossover points (bellmouths) where there is an interface between the two projects, to ensure that the designs are coordinated. National Grid is applying for Order Limits that would allow its proposed site access points (bellmouths) to be coordinated with LTC.	X		X	
10-54.47	Suggest Lower Thames Crossing (LTC) and Norwich to Tilbury are delivered at the same time to mitigate specific interfaces at Brentwood Road / Suggest a	National Grid is continuing to coordinate with Lower Thames Crossing (LTC) regarding the location of all	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	PAR via Brentwood Road is coordinated if LTC is delivered first, with modifications to the site from Brentwood Road	access and crossover bellmouths to ensure that the designs are coordinated.				
10-54.48	Request that National Grid reconsider the siting of ZB17T, in agreement with Lower Thames Crossing (LTC), to a site that mitigates the potential to impact the delivery of the A122 / Request that National Grid remove any temporary foundations and reinstate land to previously occupied condition that interface with or in proximity of the LTC's proposed alignment or ancillary works horizontally and vertically	<p>National Grid acknowledges the request regarding the siting of temporary pylon ZB17T and the importance of mitigating potential impacts on the delivery of the A122. National Grid is committed to working with Lower Thames Crossing (LTC) through programme coordination and technical engagement to ensure that the construction and removal of ZB17T is appropriately sequenced and coordinated with LTC's delivery requirements. This would form part of the joint work to develop a coordinated programme that supports the efficient delivery of both projects.</p> <p>National Grid also acknowledges the request to remove temporary foundations and reinstate land to previously occupied condition where such land interfaces with LTC's proposed alignment or ancillary works.</p> <p>National Grid would continue to engage positively with LTC to support coordinated delivery and effective interface management.</p>	X		X	
10-54.49	Concern that Crossover Bellmouth TN-B001 (North) on Long Lane conflicts with the proposed Lower Thames Crossing (LTC) relocated Gammonfields Traveller Site (LTC DCO Work No 7R as shown on 2.6 Works Plans Sheet 29) and requires amending	National Grid is continuing to coordinate with Lower Thames Crossing (LTC) regarding the relative timings of works. TN-B001A is an optional access point if the planned schedule for LTC's works in this area is behind Norwich to Tilbury program. If LTC's works require the relocation of the Traveller Site and these works are	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>scheduled ahead of the Norwich to Tilbury, then we have identified an alternative bellmouth access, TNB001B.</p> <p>Therefore, we propose to take both options forward as part of our Development Consent Order (DCO) submission.</p>				
10-54.50	Request coordination with Lower Thames Crossing (LTC) for routes across site from TN-B004A on Heath Road to Crossover Bellmouths TN-B005 and TN-B006 on Hornsby Lane due to the significant utility works required by the LTC around Hornsby Lane and ensure no impediment to the delivery of the LTC	National Grid is continuing to coordinate with Lower Thames Crossing (LTC) regarding the location of all access and crossover bellmouths to ensure that the designs are coordinated and feasible.	X		X	
10-54.51	Request coordination with Lower Thames Crossing (LTC) regarding the Primary Access Bellmouth TN-B014 on Buckingham Hill to mitigate any impediment to vehicle movements on Buckingham Hill Road	National Grid is continuing to coordinate with Lower Thames Crossing (LTC) regarding the location of all access and crossover bellmouths to ensure that the designs are coordinated and feasible.	X		X	
10-54.52	Request coordination with Lower Thames Crossing (LTC) regarding the Primary Access Bellmouth TN-B015 and TN-B016 on Muckingford Road due to conflicts with Work Nos 6B, MU35 and MU36 as shown on Sheet 24 of the LTC DCO Works Plans	National Grid is continuing to coordinate with Lower Thames Crossing (LTC) regarding the location of all access and crossover bellmouths to ensure that the designs are coordinated and feasible.	X		X	
Requests						
10-54.53	In relation to pollution prevention at Thurrock 3, request for National Grid to consider the	A range of pollution prevention and control measures applicable to the construction and operational phases of	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	environmental agency guidance to ensure that the measures proposed by National Grid provide suitable pollution prevention and, suggest that National Grid refer to the Environment Agency's guidance on water discharge permits. Additionally, suggest that a pollution incident response plan is put in place for the construction and operational phases of development (links to guidance provided by respondent)	the Project are set out within the Outline Code of Construction Practice (CoCP) (document reference 7.2). The measures have been set out with reference to good practice and Environment Agency guidance. Permits for water discharges, where these are required, would be obtained by the main works contractor(s) should the Development Consent Order (DCO) be granted.				
10-54.54	<p>Request for National Grid to consider the following in relation to risk to groundwater associated with Thurrock 3:</p> <ul style="list-style-type: none"> - Details of construction on the substation and its impacts to groundwater will need to be considered. - If piling is required for construction, a piling risk assessment will need to be undertaken. - Foundation depths and potential for intercepting shallow groundwater in the Thanet Sands Formation, a Secondary A aquifer will also require risk assessment and the potential for construction dewatering should also be considered at as early a date as possible in case an abstraction licence is required. - If the proposed substation is adjacent or within a historic landfill then the land contamination assessment will need reviewing 	A groundwater risk assessment has been undertaken and is included within Appendix 9.3: Groundwater Baseline and Qualitative Groundwater Risk Assessment of the Environmental Statement (document reference 6.9.A3) which includes an assessment of the substation locations. In accordance with Commitment GH02 within the Outline Code of Construction Practice (CoCP) (document reference 7.2) a foundation works risk assessment would be undertaken at all locations where piled foundations are required, which would include an assessment of the foundation depths and the potential for them to intercept groundwater along within appropriate techniques and mitigation to minimise and avoid the risk of the introduction of new contamination and create new contamination pathways. In addition, in accordance with Commitment GH11, if dewatering is required following the detailed design a hydrogeological risk assessment would be undertaken, which would	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		include the potential impact of existing contamination such as historical landfills.				
10-54.55	Request the production of a series of drawings showing NGET proposals overlaid on to the Lower Thames Crossing (LTC) Works Plans (2.6 and 2,17) and General Arrangements drawings (2.5) to ascertain the potential impacts of each other being delivered concurrently and to mitigate the potential of LTC undertaking abortive works / Request production of a series of drawings for consultation specific to the proposed amendments to the LTC DCO granted 25 March 2025 proposed by NGET	<p>National Grid acknowledges the request for overlay drawings to support coordinated interface management between the Project and the Lower Thames Crossing (LTC), and to mitigate the risk of abortive works.</p> <p>National Grid is liaising with LTC with regards to the provision of overlay drawings, prepared using available information on both projects, to support coordinated delivery. National Grid would engage with LTC to agree the scope and format of overlay drawings and would provide draft overlay information for discussion and joint review.</p> <p>National Grid is committed to working constructively with LTC to ensure that overlay information is used effectively to support coordinated delivery and would continue to engage positively through programme coordination and the development of an agreed Statement of Common Ground.</p>	X		X	
10-54.56	Request further information regarding Work No OH6 and Work No OH7 so Lower Thames Crossing (LTC) can assess the impacts / LTC welcomes an opportunity to work with National Grid to understand opportunities regarding programme sequencing or omission of abortive works - owing to restringing and conductor replacements proposed from towers ZB14 and YYJ124 and earthing works proposed at ZB13	<p>National Grid acknowledges the request for further information regarding the proposed works to the ZB and YYJ circuits and welcomes Lower Thames Crossing (LTC's) willingness to engage on programme sequencing and coordination to mitigate the risk of abortive works.</p> <p>To support coordinated delivery and ensure these interface points are fully understood, National Grid has</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	and YYJ125, including works which if done in accordance with the LTR DCO would result in abortive works	held an initial joint workshop on the 5 August 2025 and will continue to engage with LTC focused on programme planning and critical works sequencing, including the ZB and YYJ circuit works and associated conductor and earthing activities. This would allow both parties to share their current assumptions and constraints and explore opportunities for sequencing the respective works to avoid abortive activity where practicable.				
10-54.57	Request further information and to organise coordination regarding works to and on overhead lines from Horford Road west (which will interface multiple works for Lower Thames Crossing (LTC) including the diversion of other utility networks, construction of the A13/A1089/A122 junction and construction of the revised A1013 Stanford Road) and indirect impacts of works at Muckingford Road (overlapping at Coal Road and Linford Road)	<p>National Grid is continuing to coordinate with Lower Thames Crossing (LTC) regarding the location of access points and crossover bellmouths to ensure designs are feasible and compatible. In addition, these locations have been identified as key interface areas for programme coordination and would form part of the agenda for the joint programme planning workshop proposed between National Grid and LTC. This would provide an opportunity to review construction sequencing, access constraints and potential delivery conflicts, and ensure that both projects can be delivered efficiently and with minimal disruption. National Grid remains committed to ongoing engagement with LTC to manage these interfaces effectively.</p> <p>Regarding the overhead line and utility interactions, National Grid continue to engage with LTC to ensure that any areas of overlap, potential conflict or required modifications are identified, discussed and managed in a coordinated manner. This would be supported through technical engagement, programme coordination, and the</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		development of an agreed Statement of Common Ground.				
10-54.58	Request further information regarding construction and operation of lines YYJ123RC through YYJ123RA and YYJ124RB through YYJ124RD and how those proposals could impact the development of Lower Thames Crossing's (LTC) proposals, safe delivery and operation of its project / Request the two projects develop a construction programme that mitigates impacts for both parties as far as reasonably practical, including the undertaking of works in advance of a perceived logical sequence to return land to LTC for the construction of its project	<p>National Grid acknowledges the request for further information regarding the construction and operation of the YYJ circuit sections referenced (YYJ123RC through YYJ123RA and YYJ124RB through YYJ124RD) and welcomes Lower Thames Crossings (LTC) engagement on how the delivery of these elements of the Project may interact with the delivery and safe operation of the LTC.</p> <p>National Grid is in discussion with LTC about these interfaces, we will continue to work on these issues with LTC through ongoing engagement as programme development progresses. National Grid also supports the principle of working with LTC to develop a coordinated construction programme that mitigates impacts for both parties as far as reasonably practicable. This may include consideration of sequencing or other programme solutions, including the undertaking of works out of perceived logical sequence where such opportunities can be identified and agreed between the parties.</p> <p>National Grid remains committed to positive engagement with LTC through programme coordination and the development of an agreed Statement of Common Ground to support coordinated delivery and effective management of project interfaces.</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-54.59	Request for further details regarding the implications (such as protective covenants) of installing the ZB route underground (ZB13RB to ZB15RD) so Lower Thames Crossing (LTC) can develop construction, landscaping, planting and maintenance proposals accordingly	Rights to lay and maintain underground assets would be sought for any areas of undergrounding, in line with the class of rights, restrictions would prevent the Grantor growing any plant, bush, tree or similar vegetation on the Easement Strip. Following approval from National Grid and in line with the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) an exception to this restriction could be made. Hedgerows, bushes and shrubs can be reinstated above the underground cables but trees cannot be planted over the top or within 10 m of underground cables.	X		X	
10-54.60	Request if the proposed changes are taken forward, then additional baselines and assessments should be undertaken. Request the following to be included: <ul style="list-style-type: none"> • Additional viewpoint relating to point 18.70 "...increase the geographical spread of significant visual effects within Visual Receptor Area H5 (Chadwell St Mary)." • The use of mitigation beyond the red lined boundary especially relating to point 1.8.72 "...noting that opportunities for mitigation around the proposed Tilbury North substation would be limited due to space constraints." 	In response to the changes at Tilbury in Section H, additional visual baseline data and assessments have been incorporated into the Landscape and Visual Impact Assessment presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13). In relation to viewpoints, we have engaged with a range of stakeholders (including Statutory Environmental Bodies (SEBs) and relevant local planning authorities) throughout the development of the Project design and environmental assessment work, including the selection of viewpoint locations. The methodology detailing viewpoint selection is described in the Environmental Statement (ES), Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3). Viewpoint locations are shown on Figure 13.7 Visual Receptors and Viewpoints (document reference 6.13.F7) and the viewpoints are presented in Volume 7:		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Visualisations (document reference 7.12). Representative viewpoints have been used in places to inform the assessment. Visual Receptor Areas (VRA) were adjusted in response to the new proposals. The area previously occupied by VRA H5: Grays and Chadwell St Mary, has been divided and is now occupied by an additional two VRAs, VRA H6: Southfields, (to the north of Chadwell St Mary) and VRA H7: Linford (to the east of Chadwell St Mary). VRA H6 contains the representative viewpoints at VP8.05: Public Rights of Way east of Chadwell St Mary (No 78) (View Direction 142) and VP8.11: Public Rights of Way near Southfields (No 42). VRA H7 contains the representative viewpoint VP 8.12: Hoford Road, east of Chadwell St Mary. Visualisations do not form the basis of professional judgements made in terms of anticipated significant effects, but they are useful tools in conveying examples of likely changes in views from a selected number of locations. Site survey work and desk top analysis have also informed the assessment of effects in this area. This work has developed a greater understanding of the influence of the landscape on views in this area.</p> <p>Mitigation around substations, substation extensions and Cable Sealing End (CSE) compounds is detailed in the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4). National Grid has committed to a 3:1 replacement for individual trees and individual trees within small groups. The tree planting</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		strategy would prioritise replanting within the Order Limits, although offsite provision may be required. Offsite tree planting is considered to be landscape compensation. Any offsite tree planting would be secured via a legal agreement. Further detail is provided in the Outline LEMP (document reference 7.4). Additional planting may be considered within the Order Limits at detailed design stage, in locations such as around Tilbury North substation and the permanent access roads to the East Anglia Connection Node (EACN) and Tilbury North CSE compounds.				
10-54.61	Request a cumulative assessment and mitigation of the worst-case scenario to be part of the ES submission to mitigate the impact on the overlap between construction work areas and operational land management of other development propose within the proposed areas of change, i.e. the Lower Thames Crossing, and at least two large residential developments that have started the planning approval process	A cumulative effects assessment has been undertaken for the Project. The cumulative effects assessment can be found in the Environmental Statement (ES), Chapter 17: Cumulative Effects (document reference 6.17). The full assessment of inter-project cumulative effects of the Project with other developments can be found at Appendix 17.3: Inter-project Cumulative Effects Matrix (document reference 7.17.A3). The Inter-project Cumulative Effects Assessment considers the potential for cumulative impacts with the Lower Thames Crossing, as well as other developments.		X		
10-54.62	Concern that the Order Limits as shown at Buckingham Hill Road overlap with Lower Thames Crossing (LTC)'s proposed Work Nos E21 and E26 / Request further details regarding construction proposals and timings	National Grid is committed to working with Lower Thames Crossing (LTC) through programme coordination and ongoing engagement to support effective planning and sequencing of works in this area. This would include providing overlay information and	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		continuing to refine and share programme assumptions through the planned programme planning workshop and subsequent discussions. National Grid would also continue to engage with LTC through the development of an agreed Statement of Common Ground to support the coordinated delivery of both projects.				
10-54.63	Concern that the Order Limits as shown at Hoford Road overlap with Lower Thames Crossing's (LTC) proposed Work Nos E23 and E24 and E25 / Request further details regarding construction proposals and timings	National Grid is committed to working with Lower Thames Crossing (LTC) through programme coordination and ongoing engagement to support effective planning and sequencing of works in this area. This would include providing overlay information and continuing to refine and share programme assumptions through the planned programme planning workshop and subsequent discussions. National Grid would also continue to engage with LTC through the development of an agreed Statement of Common Ground to support the coordinated delivery of both projects.	X		X	
10-54.64	Concern that the site of the proposed Tilbury North Compound and other work areas which prevent the early establishment of environmental areas by the Lower Thames Crossing (LTC), which is in contrast to the DCO [REAC LV029] and gives rise to potential abortive works / Request detailed construction programme and overlay of working areas to plan works accordingly	National Grid is committed to working with Lower Thames Crossing (LTC) through programme coordination and ongoing engagement to support effective planning and sequencing of works in this area. This would include providing overlay information and continuing to refine and share programme assumptions through the planned programme planning workshop and subsequent discussions. National Grid would also continue to engage with LTC through the development	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		of an agreed Statement of Common Ground to support the coordinated delivery of both projects.				
10-54.65	Request further information in regard to Land and Property matters, including rights, CPO powers, proposals within overlapping land, rights for National Grid over land to be acquired by National Highways, and details regarding how those rights and provisions will be considered/managed where the two proposals are for differing needs and cannot co-exist (such as planting versus permanent infrastructure)	National Grid acknowledges the complexities of the overlapping land rights required to deliver both projects. Further discussions need to take place between both parties to agree provisions and programming so that both projects can coexist and progress in the required time frames. National Grid will continue to work with Lower Thames Crossing to discuss and progress these points.	X		X	
Visual Impact						
10-54.66	Criticism that Thurrock 3 is part justified due to reducing impact on free port despite such industrial area being preferred route under the Holford Rules which guide the design of new overhead lines	The Holford Rules form important guidance to routing decision making but also have to consider the wider duties that National Grid has to meet. In this case the risks and cost of seeking to secure a route past Freeport to Tilbury Substation were judged to either risk achieving the Need Case requirement or may incur substantially greater costs than other available alternatives. The appropriate balanced decision is therefore to change the means of connection as is proposed for the Project.	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		would require delivery of offsite Biodiversity Units via habitat creation or enhancement actions in strategic areas, and we would consider all offsite options that are available to us.				

10.10 Changes made following consultation

- 10.10.1 Following the close of the targeted consultations in April 2025, a number of design changes have been incorporated into the proposals in response to feedback received. Proposed design amendments were carefully considered in the context of environmental constraints and opportunities, engineering feasibility and cost, planning policy and other relevant considerations. Proposed design amendments were considered from the phases of consultation and continued design and development as well as through feedback and ongoing engagement with stakeholders and landowners.
- 10.10.2 The process of considering design changes comprised of an initial filter for benefit and feasibility, an assessment incorporating inputs from relevant technical experts, and further stages of additional study if required. The outcome of the consideration of potential design changes was either that a change was included in the Project design, or that the change was not made following balanced and informed consideration.

10.11 Ongoing engagement

- 10.11.1 **Appendix A** of this report provides an overview of engagement activities with stakeholders held prior to and during the 2022 and 2023 non-statutory consultations, the 2024 statutory consultation and 2025 targeted consultations.
- 10.11.2 A summary of headline issues raised through feedback received after the close of the 2025 targeted consultations (17 April 2025) up to 31 July 2025 is included in **Chapter 11** of this report.

10.12 Stakeholder Engagement and Statements of Common Ground (SoCG)

- 10.12.1 In addition to the non-statutory, statutory, targeted and scoping consultations, National Grid has undertaken ongoing stakeholder engagement throughout the development of the Project.
- 10.12.2 National Grid also developed a 'Host Authority Engagement Plan'. The plan was circulated by the project team to the host authorities on 22 December 2020 and iterations have been issued as the project progressed. The objective was to;
- Provide host authorities with a look ahead to when key planning and EIA activities were programmed to take place;
 - Set out an overarching protocol for engaging with host authorities on planning and EIA matters;
 - Assist the host authorities with resource planning for the project; and
 - Assist all parties in agreeing a Planning Performance Agreement (PPA).
- 10.12.3 As part of its engagement with local authorities, National Grid shared Draft DCO Requirements and Explanatory Memorandum with local authorities ahead of submission of the DCO application.

Statements of Common Ground (SoCGs)

- 10.12.4 A SoCG is a written statement jointly produced by the Applicant and another party to assist in examining the DCO application by providing an overview of the status of discussions and negotiations between the Applicant and the other party (or parties).
- 10.12.5 Draft SoCGs are being prepared with key interested parties, a list of draft SOCGs is contained in the Planning Statement (application document 5.6).

11. Further Landowner Consultation and Additional Engagement

11.1 Introduction

- 11.1.1 This chapter sets out the additional consultation which took place from June 2025 to the submission of the application for development consent.
- 11.1.2 As the following paragraphs explain, the further consultation was undertaken following certain localised amendments made to the design of the Project and also in light of ongoing diligent inquiry.
- 11.1.3 Following the close of targeted consultation in April, National Grid undertook further consultation with PILs between June and August 2025. This included both previously consulted PILs whose interests were affected differently due to design refinements, and newly identified PILs arising from changes in land ownership, the inclusion of new land parcels within the Order Limits, or the outcomes of ongoing diligent inquiry including site notices. These consultations were carried out under Section 42(1)(d). Targeted consultation with Category 1 and 2 PILs concluded on 18 July 2025, while Category 3 PILs concluded on 22 August 2025. National Grid has had regard to the consultation responses and reported on feedback received in this Consultation Report.
- 11.1.4 In line with the land referencing methodology (**Appendix J** of this report), ongoing land referencing has been carried out to identify changes in land ownership and other interests in land following the close of targeted consultation. Updates were requested from Land Registry and newly identified Persons with an Interest in Land (PILs) were issued with a land interest questionnaire (LIQ). Any new PILS identified following the June/July consultation mailouts have then been written to separately as explained in paragraph 11.3.15 below.

11.2 Additional Section 42 Consultation with Section 44 Parties-PILs

- 11.2.1 Section 42(1)(d) and Section 44 of the PA 2008 sets out how a project must consult with PILs, i.e. those who own, occupy, have an interest in, or are able to make certain claims for compensation in respect of, land affected by a project. Under Section 44, PILs are split into three categories:
- **Category 1:** Where the Applicant, after making diligent inquiry, knows that the person is an owner, lessee, tenant (whatever the tenancy period) or occupier of the land;
 - **Category 2:** Where the Applicant, after making diligent inquiry, knows that the person is interested in the land, or has power to sell and convey the land, or to release the land;

- **Category 3:** Where the Applicant thinks that, if the order sought by the proposed application were to be made and fully implemented, the person would or might be entitled to make a relevant claim:
 - As a result of the implementing of the order;
 - As a result of the order having been implemented; or
 - As a result of use of the land once the order has been implemented.
- 11.2.2 Additional consultation and engagement was undertaken by National Grid, their employed external land agents (Fisher German) with Category 1 and Category 2 previously consulted PILs, newly identified Category 1 and Category 2 PILs, and Category 3 PILs.
- 11.2.3 The additional consultation and engagement was undertaken in accordance with the principles and methods set out in the Statement of Community Consultation (SoCC).
- 11.2.4 This additional consultation and engagement included:
 - Consultation under Section 42(1)(d) of the Act with PILs that have been previously consulted but are now impacted differently; and
 - Consultation under Section 42(1)(d) of the Act with new PILs identified, which may have arisen from design changes having introduced new land parcels into the Order Limits; from changes in land ownership within the previous Order Limits; or from ongoing diligent inquiry identifying new interests. These PILs had not therefore been previously consulted on the proposals.
- 11.2.5 A total of 242 newly identified Category 1 and Category 2 PILs were sent an information pack on 5 June 2025 which notified of the consultation deadline which was by 11:59pm on 18 July 2025. The information pack contained:
 - Introduction letter to the project (as new PILs);
 - Voluntary negotiations letter from Fisher German;
 - Section 42 consultation notice;
 - Feedback questionnaire and prepaid envelope;
 - Land Right Strategy document;
 - Guide to Reading Plans document;
 - Data Privacy Notice document; and
 - Individual land plan.
- 11.2.6 A total of 1,740 Category 1 and Category 2 PILs who had been previously consulted were sent an updated information pack on 18 June 2025 which notified of the consultation deadline which was by 11:59pm on 18 July 2025. The information pack supplemented the information previously supplied and contained:
 - Section 42 Consultation Letter;
 - Voluntary negotiations letter from Fisher German;
 - Feedback questionnaire and prepaid envelope;

- Land Right Strategy document;
- Guide to Reading Plans document;
- Data Privacy Notice document; and
- Individual land plan.

- 11.2.7 Due to the identification of a processing error affecting the TB line only, a number of PILS were rewritten to, clarifying the position. On 17 July 2025, 405 letters were sent giving a supplemental correction to the Guide to Plans, for clarity on identifying likely proposed pylon locations. A further 37 were sent revised land plans with the likely proposed pylon locations marked up and were given an additional 14 days consultation time to provide further feedback if they deemed that necessary. Of these 37 parties almost half had already had meetings with Fisher German. No parties requested additional meetings as a response to these letters.
- 11.2.8 On 10 July 2025, a total of 1,038 Category 3 PILs were sent an information pack which notified of the consultation deadline which was by 11:59pm on 22 August 2025. The information pack contained:
- Cover letter to explain category 3
 - Section 42 Consultation letter;
 - Feedback questionnaire and prepaid envelope; and
 - Data Privacy Notice document.
- 11.2.9 A summary of how many PILs fell into each category is shown in **Table 11.1** of this report.

Table 11.1 Number of PILs Consulted

Date (w/c)	Category 1	Category 2	Category 3	Letters sent to Individual PILs*
5 June 2025	125	115	128	242
18 June 2025	1164	836	1322	1740
10 July 2025	0	0	1038	1,038
Total	1289	951	2488	3,012

**The number of letters sent are lower than the total of PILs in each row as some PILs had an interest in more than one Category of land. Where this was the case, PILs were only sent one letter that covered all interests.*

- 11.2.10 **Appendix L** of this report details the PILs consulted and contains a copy of the letter and feedback questionnaire that they received.
- 11.2.11 As a result of this consultation, 261 meetings were requested by PILs or their agents and all meeting requests were met by Fisher German.
- 11.2.12 The additional consultation and engagement activities, as described, encouraged PILs to provide their feedback directly to the Project team through face to face

meetings, email, or writing to National Grid. **Section 11.3** of this report outlines the feedback received as part of the additional activities.

11.3 Responses Received to the Further Consultation

- 11.3.1 Comments were recorded, reviewed and considered by the Project team on an ongoing basis throughout the additional engagement and consultation period.
- 11.3.2 PILs could provide feedback by calling the land team directly, emailing the Project email address or by sending a response directly to the Project's postal address:
- Telephone - 0800 915 2497;
 - Postal - FREEPOST N TO T; and
 - Email - contact@n-t.nationalgrid.com
- 11.3.3 Consultees could provide feedback by:
- Telephone - 0800 915 2497;
 - Postal - FREEPOST N TO T; and
 - Email - contact@n-t.nationalgrid.com
- 11.3.4 During the period of additional consultation and engagement which took place from June 2025 to the submission of the application for development consent, National Grid received 442 feedback submissions.
- 11.3.5 This section presents and discusses the feedback gathered via the open questions on the feedback questionnaire, or via other open formats provided by respondents (e.g., letters/emails).
- 11.3.6 Feedback has been collected and analysed together to accommodate the overlapping consultation periods, where responses were not directly related to a specific change, and to allow for responses to feedback to be presented together.
- 11.3.7 All responses, regardless of their origin (including those received after the consultation period), were analysed using the methodology as described in **Section 9.4** of this report.
- 11.3.8 **Table 11.2** to **Table 11.9** below contains a summary of the feedback raised during the further landowner consultations and how National Grid has considered or addressed this.
- 11.3.9 Each row of feedback and response contains a unique reference number, 'X' marks to indicate which stakeholder type the feedback came from (s42(1)(a), (b), (d) or s47), a 'Y'/'N' box that clearly demonstrates whether a change to the design has been made as well as reasons why changes have, or have not, been made.

Non-section specific feedback

Non-Section specific feedback (Further Landowner Consultation)

Table 11-2 Summary of consultee comments and National Grid's response

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
Agricultural Land			
11-2.1	Concern that the Project will take away valuable agricultural land / disrupt farming operations	<p>During the construction stage of the Project, there would be areas of agricultural land that would be temporarily disrupted. National grid would only use land that is required as part of the Project and would seek to minimise the use of agricultural land where reasonable and safe to do so.</p> <p>National Grid is and will continue to work with all landowners including farmers who may be affected by the proposals to understand the impacts on their operations and to work with them as the Project is developed. We would seek to work with the farming community to limit disruption where practicable. This includes providing prior warning of works which may result in the need to move livestock. Compensation claims for disturbance are considered on a case-by-case basis, if negative impact on farming operations can be proven. Particular agricultural matters can also be addressed through voluntary land agreements.</p>	
11-2.2	Concern that the Project will have a negative impact on agricultural livestock (e.g. type of livestock)	<p>National Grid is and will continue to work with all landowners including farmers and equestrian facilities who may be affected by the proposals to understand the impacts on their operations and to work with them as the Project progresses. We would seek to work with them to limit disruption where practicable. This includes providing prior warning of works which may result in the need to move livestock. Compensation claims for disturbance are considered on a case-by-case basis, if negative impact on operations can be proven. Particular agricultural and equestrian matters</p>	

Ref no. Summary of matters raised National Grid's response

can also be written into voluntary land agreements. There will also be mitigation put in place where animal grazing maybe affected.

As well as possible effects on humans, possible effects of Electric and Magnetic Fields (EMFs) on various animals have been studied. No detectable effects of EMFs have been found on, for example, health, milk production, fertility, and behaviour. This is confirmed in National Policy Statement (NPS) EN-5 which states: *"There is little evidence that exposure of crops, farm animals or natural ecosystems to transmission line EMFs has any agriculturally significant consequences."*

Airfields

11-2.3 Concern that National Grid have not consider guidelines / policy for aviation / Civil Aviation Publications (CAP)

In accordance with its responsibilities as an applicant as described within the Government's Overarching National Policy Statement for Energy (NPS) (EN-1) National Grid has appointed an independent aviation consultancy to develop a methodology to assess the potential impacts on airfields (licensed and unlicensed) in close proximity to the Project and consider appropriate mitigations. The assessment methodology enables risk-based site-specific assessment of a range of criteria, including but not limited to, lateral and vertical clearance margins, aircraft types, airfield operational activities and procedures, and the surrounding context. The approach is informed by Civil Aviation Authority regulations and guidance, including that relating to both licensed and unlicensed airfields, as well as ongoing consultation with airfield owners and operators to agree the acceptability of proposed mitigations in relation to their safeguarding responsibilities and operational activities. Further information on the assessment of airfields can be found in the Environmental Statement (ES) Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and ES Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).

Ref no.	Summary of matters raised	National Grid's response
11-2.4	Criticism that National Grid have not considered aviation safety as part of the Environmental Impact Assessment Scoping (e.g. the potential for a major disaster)	<p>National Grid considers that it has considered aviation safety appropriately. Including appointing an independent aviation consultancy to develop a methodology to assess the potential impacts on airfields (licensed and unlicensed) in close proximity to the Project and consider appropriate mitigations. National Grid submitted an EIA Scoping Report (document reference 6.19) to the Planning Inspectorate on 7 November 2022. The Planning Inspectorate (on behalf of the Secretary of State) formally adopted its Scoping Opinion (document reference 6.20) on 14 December 2022 which has informed the scope of the Environmental Impact Assessment for the Proposed Project.</p> <p>Information on the assessment of aviation impacts can be found in the Environmental Statement (ES) (ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and ES Appendix 15.2: Review of Aviation Impacts (document reference 6.15.A2)). The Appendix recognises that the principal aim of the assessment is to evaluate safety, operational and capability impacts arising as a result of the Project.</p>
Community / Social Impact		
11-2.5	Concern about impact of the Project on children / families / residents / communities	<p>National Grid recognises people may have concerns about the potential impacts of living close to an overhead line, and that the uncertainty whilst the proposals are developed may cause anxiety.</p> <p>We have sought to reduce potential effects on communities, residents – including children - through routeing and design. We have also sought to reduce concern or uncertainty about the proposals through making timely design decisions and engaging with people and stakeholders throughout the development of the Project. If the Project received Development Consent, the Project team would continue to engage with people</p>

Ref no.	Summary of matters raised	National Grid's response
		<p>potentially affected during construction, through regular communication including letters, phone calls and meetings, where necessary.</p> <p>We urge anyone with concerns to get in touch through the Norwich to Tilbury Freephone number, address or email, which will remain open throughout examination.</p> <p>National Grid is committed to working with local suppliers, facilitated by supporting forums (such as the local Chambers), on electricity industry skills and workforce planning. National Grid is also committed to providing a coordinated regional approach to jobs and skills opportunities. This commitment is broader than the individual project and separate to any commitments under the proposed development consent order for this Project. The socio-economic effects of the project are assessed in Chapter 15: Socio-economics, Recreation and Tourism of the Environmental Statement (ES) (document reference 6.15). Post construction job opportunities are limited given the nature of the development however we will still work with Local Authorities (including facilitating local partners) to understand what is important to them around skills and employment to ensure we leave a lasting positive legacy in the communities where we operate.</p> <p>With regards to a delivery mechanism, the above measures will be delivered as part of our community benefit package, which will look at both local and regional initiatives. This will be delivered outside the development consent process and is not a material consideration in the decision on the proposed Project or a matter to be secured as part of the DCO, as per the Community Funds for Transmission Infrastructure: Guidance (DESNZ, 2025).</p>
11-2.6	Concern about impact of the Project on leisure	Through routeing and siting National Grid has sought to avoid, as far as practicable, locations important for leisure and tourism. Environmental

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-2.7	Concern about over development of area / other works in the area	<p>Statement (ES) Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) presents an assessment of the potential impacts on sports clubs, recreational land and recreational routes located within the Order Limits. As part of this assessment, a range of measures have been considered throughout the construction phase of the Project to minimise disruption on leisure and tourism. These include: traffic management, signage and routeing measures. These are identified within ES Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15), the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).</p> <p>A cumulative effects assessment has been undertaken in accordance with the Planning Inspectorate's Advice Note 17 'Cumulative Effects Assessment' and is presented in Environmental Statement (ES) Chapter 17: Cumulative Effects (document reference 6.17). The cumulative effects assessment has considered the effects of the Project in conjunction with other existing and, or approved developments in line with guidance. As part of this process, National Grid has engaged with other developers who are proposing development in proximity of the Project to understand their requirements.</p> <p>The cumulative assessment has been undertaken in accordance with the overarching National Policy Statement (NPS) for Energy (EN-1) Paragraph 4.1.5 in EN-1 states:</p> <p><i>'In considering any proposed development, in particular when weighing its adverse impacts against its benefits, the Secretary of State should take into account: ... its potential adverse impacts, including on the environment, and including any long-term and cumulative adverse</i></p>	

Ref no.

Summary of matters raised

National Grid's response

impacts, as well as any measures to avoid, reduce, mitigate or compensate for any adverse impacts, following the mitigation hierarchy'.

Paragraph 4.2.12 in EN-1 states:

'The cumulative impacts of multiple developments with residual impacts should also be considered.'

Paragraph 4.3.3 in EN-1 states:

'The Regulations require an assessment of the likely significant effects of the proposed project on the environment, covering the direct effects and any indirect, secondary, cumulative, transboundary, short, medium, and long-term, permanent and temporary, positive and negative effects at all stages of the project, and also of the measures envisaged for avoiding or mitigating significant adverse effects'.

Paragraph 4.3.19 of EN-1 states:

'The Secretary of State should consider how the accumulation of, and interrelationship between, effects might affect the environment, economy, or community as a whole, even though they may be acceptable when considered on an individual basis with mitigation measures in place'.

Paragraph 4.4.5 in EN-1 states:

'The impacts of more than one development may affect people simultaneously, so the applicant should consider the cumulative impact on health in the ES where appropriate'.

The long list and short list of other existing and, or approved developments considered for the Cumulative Effects Assessment is presented in ES Appendix 17.2: Long List and Short List of Other Developments (document reference 6.17.A2), detailing the other developments shortlisted for detailed assessment. The appendix provides details on other developments screened out of the assessment in

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		<p>accordance with the methodology presented in ES Chapter 17: Cumulative Effects (document reference 6.17).</p> <p>The detailed assessment of shortlisted other developments is presented in ES Appendix 17.3: Inter-Project Cumulative Effects Assessment (document reference 6.17.A3). ES Appendix 17.3: Inter-Project Cumulative Effects Assessment (document reference 6.17.A3) outlines the residual significance of cumulative effects for each development, for each environmental topic that has a Zone of Influence that overlaps with that development (i.e. socio-economic, recreation and tourism impacts).</p>	
11-2.8	<p>Concern about the Project being in too close proximity to recently built housing developments / using land being considered for future development (including residential, commercial, infrastructural, and employment sites)</p>	<p>National Grid has obtained information on existing, under construction, consented but not built schemes as well as development proposals within the planning system and allocations for development including those being consulted upon. The Project design has responded to those that are confirmed to meet the defined criteria through consideration of routeing.</p> <p>In the case of development proposals, some can be amended to be designed around our proposed infrastructure but in other cases our proposals may need to be amended at a corridor level, or proposed developments factored into our detailed route design.</p> <p>Based on known information, and in light of changes made following consideration of feedback to the 2022 and 2023 non-statutory consultations, statutory consultation, targeted consultations, and landowner consultation, we consider our proposals are consistent with relevant policy and guidelines and the alignment designed such that they do not prevent proposed housing developments from being successfully progressed. UK law does not prescribe minimum distances between overhead lines and homes, but any implications on landscape and visual receptors, residential amenity or from concerns about electromagnetic fields are robustly assessed as part of the Environmental Impact</p>	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-2.9	Concerned that the Project will have a negative impact on domestic horses / equestrian activities (generally - no location given)	<p>Assessment (EIA) and balanced as part of the decision making process. We will continue to review planning applications and engage with developers as necessary.</p> <p>As well as possible effects on humans, the possible effects of Electric and Magnetic Fields (EMFs) on various animals have been studied. No proven effects of EMFs have been found in any species at levels below the guidelines. This is confirmed in National Policy Statement (NPS) EN-5 which states: <i>"There is little evidence that exposure of crops, farm animals or natural ecosystems to transmission line EMFs has any agriculturally significant consequences."</i> Although horses are not directly mentioned, there is no evidence to suggest they are any different to other farm animals.</p> <p>As well as the possible direct biological or health effects addressed above, indirect effects such as microshocks can occur as a result of electric fields. Microshocks are small spark discharges which are similar to a static shock after walking across a nylon carpet for example. The Project would be designed in accordance with the principles of the Governments Code of Practice 'Power Lines: Control of Microshocks and other indirect effects of public exposure to electric fields' to ensure these, which include equestrian activities, are mitigated.</p>	
11-2.10	Concern about the impact of the Project on emergency services / ambulances / hospitals / health service	<p>Through routeing and siting National Grid has sought to avoid and reduce as far as practicable effects on identified healthcare facilities.</p> <p>Environmental Statement (ES) Chapter 10: Health and Wellbeing (document reference 6.10) consider the potential impacts on, and access to, healthcare facilities, including emergency services, ambulances, hospitals and other NHS services associated with the construction of the Project, drawing on information from ES Chapter 16: Traffic and Transport (document reference 6.16). No health facilities are due to be directly</p>	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-2.11	Criticism of surveys undertaken for the Project in this Section	<p>impacted by the Project and where road diversions are required traffic management and mitigation measures would be in place to reduce impacts. These include traffic management, signage and routing measures to ensure access or partial access can be maintained where feasible. Further detail on proposed mitigation measures are presented in the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), which has been produced following engagement with stakeholders including the emergency services.</p> <p>There is a staged approach to the process of collection of environmental data as any major project develops. National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project. The assessment is informed by a suite of field surveys and desk studies and results are presented in an Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the application for development consent. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation (and maintenance) of the Project and recommends appropriate mitigation measures to reduce potential adverse impacts.</p> <p>The scope of the EIA is included in the Scoping Report (document reference 6.19) which was submitted to the Planning Inspectorate in November 2022 and their Scoping Opinion (document reference 6.20) received in December 2022. This provided the opportunity for statutory bodies to comment on the scope of the EIA which included our approach on study areas, data collection and baseline conditions for a range of environmental topics. We also discussed and agreed survey scope with stakeholders (including Statutory Environmental Bodies and Local Planning Authorities) following the Scoping Opinion (document reference 6.20) to ensure a robust baseline assessment.</p>	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		<p>National Grid has prepared an Outline Code of Construction Practice (CoCP) (document reference 7.2) which sets out the required mitigation measures and environmental commitments that would be implemented during the construction phase of the Project to avoid or reduce potential effects of the Project on the environment, including commitments to undertake further surveys.</p>	
11-2.12	Concern about the impact of the Project on water supply (generally - no location given)	<p>National Grid has conducted preliminary ground investigations in order to better understand the geology along the underground cable route, including ground water levels. This would be supplemented by more detailed investigations prior to construction should the Project obtain consent. National Grid would assess the impact of the works on all identified ground water sources, including public and private abstraction points, and take appropriate measures to avoid detriment to those water sources.</p> <p>Landowners are encouraged to provide as much information as early as possible in relation to any private supplies, drainage and irrigation systems on their land so these can be factored in at the detailed design stage of the project ahead of construction starting on site.</p> <p>As part of the development of the Project a Groundwater Baseline and Qualitative Groundwater Risk Assessment has been undertaken and forms part of the Environmental Statement (ES) (document reference 6.9.A3). This document provides an assessment of the potential effects of the Project on groundwater resources and includes an appraisal of the impacts on groundwater supplies. Mitigation measures have been included within the Outline Code of Construction Practice (CoCP) (document reference 7.2) regarding the prevention of groundwater pollution as well as measures specific to safeguarding groundwater fed water supplies. Commitments would include the safe and responsible storage of fuels, oils and chemicals, the monitoring of water quality prior to</p>	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-2.13	Concern that the Project could disrupt telecommunications / broadcast signals / electrical equipment / GPS	<p>construction to confirm a baseline for future tests during construction and additional hydrogeological risk assessment at specific locations where there is a potential for the Project to impact on groundwater.</p> <p>Radiofrequency emissions can interfere with electrical equipment, telecommunication, Wi-Fi and broadcast equipment. These emissions are limited from overhead lines by design set out in National Grid's Technical Specifications, which include the requirements of British Standards minimising the generation of radio interference. All the equipment used will meet the requirements in these standards, which are in place to prevent interference issues. These are the same good engineering practices that are applied to the existing transmission system assets, including existing 400 kV overhead lines, which cause no interference issues for electrical equipment, telecommunication, Wi-Fi and broadcast equipment under normal operating conditions. Therefore, we also expect no interference issues as a result of the Project.</p> <p>Global Positioning Systems (GPS) are increasingly being used to provide accurate position information such as in precision farming. It uses a radio receiver to receive the transmitted radio signals from a number of satellites orbiting the earth. Additional accuracy is used in differential GPS (DGPS) which involves the use of signals transmitted from a local fixed transmitter (or another satellite). Close to a pylon, there might be some degradation in GPS performance, just as there can be some degradation close to buildings and trees. The thickness of individual wires means that they do not cause a problem. Any radio interference emitted by the line is too small to have any effect. Other than that, there is no evidence of power lines interfering with GPS used in precision farming.</p>	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-2.14	Criticism that the Project only benefits those living elsewhere (e.g. London, exports to Europe)	<p>The Transmission System provides a network connecting generation sources with areas of demand responding to the variability of both to ensure supplies are maintained throughout the UK. As such whilst it connects individual points it operates as a network. Responding to a shift in generation sources and particularly offshore wind, there is a need to reinforce the existing high voltage electricity network in the East Anglia region. It does not currently have the capability needed to transport reliably and securely the electricity that will be generated and connected to the electricity transmission network by 2030, while working to the required standards. The Project would benefit the UK as a whole, including local communities, by enabling the connection of new sources of renewable energy and by contributing to our energy security in the future, helping the country to achieve the government's Net Zero target and ensuring that the national grid meets future power demands.</p>	
11-2.15	Request that benefits are contributed to communities that are impacted by the Project	<p>The Government has published its guidance on community funds for transmission infrastructure (DESNZ, 2025). National Grid is committed to working with Ofgem, industry partners, local communities and their representatives to ensure community benefits are delivered fairly and effectively, driving lasting, positive change for the people and places integral to our developing electricity network.</p> <p>Government has also announced its plans to introduce a bill discount scheme for households within 500 metres of new infrastructure, which it proposes to introduce through the Planning and Infrastructure Bill. This is evolving government policy. Government expects this scheme to be in place by 2026 and we will share further details as they emerge. National Grid is committed to providing a coordinated local and regional approach to community benefits. This will be delivered outside the development consent process, since this is not a material consideration in</p>	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-2.16	Suggest that local labour / contractors are used for the Project	<p>the decision on the proposed Project or a matter to be secured as part of the Development Consent Order (DCO), as per the Community Funds for Transmission Infrastructure: Guidance (DESNZ, 2025).</p> <p>National Grid sources suppliers through competitive tender to ensure the right requirements are met. National Grid promotes the use of local supply chain and small and medium enterprises (SMEs) through the main construction contractors they employ. We also work with schools and local authorities to encourage the next generation of engineers and help the unemployed to develop new skills.</p>	
Construction impacts			
11-2.17	Concern about disruption from construction	<p>An Environmental Statement (ES) (document reference: Volume 6: Environmental Statement) has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 ('the Infrastructure EIA Regulations'). The ES identifies and assesses the likely significant effects on the environment resulting from the construction of the Project and recommends appropriate mitigation to reduce effects.</p> <p>Environmental mitigation measures have been defined within each environmental topic chapter and set out in relevant management documents submitted with the Development Consent Order (DCO) application, including the Outline Code of Construction Practice (CoCP) (document reference 7.2), the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5).</p>	

Ref no.	Summary of matters raised	National Grid's response
11-2.18	Concern about impact on traffic levels in local area caused by construction works (generally - no location given)	<p>As part of the pre-application process National Grid has engaged with the relevant authorities, their highways teams and National Highways to understand and gain information on their road networks. This information has been used to inform and guide the drafting of the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) for the Project that accompanies the Development Consent Order (DCO) application. A strategy has been developed to manage the impact of construction vehicles on the public highway and sensitive receptors, using suitable Local Road Network connections from the Strategic Road Network called Primary Access Routes. In addition, temporary haul roads for construction vehicles are proposed along the Project alignment, further reducing the impact of construction traffic on the local road network. Further details of the strategy can be found within the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).</p> <p>Environmental Statement (ES) Chapter 16: Traffic and Transport (document reference 6.16) includes the assessment of the potential impacts of the Project including changes in traffic flow, delays, road safety and impact on Walking, Cycling and Horse-Riding modes on the roads along the Primary Access Routes located in the Local Road Network.</p> <p>The Transport Assessment (document reference 7.11), submitted with the DCO application, examines capacity, safety, and operational efficiency of the network, identifying potential bottlenecks or safety concerns.</p> <p>Within the assessment of the ES and the Transport Assessment, mitigation measures are proposed to minimise likely adverse impacts.</p>
11-2.19	Concern about noise and other issues resulting from construction (e.g. mud on roads, dust)	<p>An Environmental Statement (ES) (document reference: Volume 6: Environmental Statement) has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 ('the Infrastructure EIA Regulations'). The ES identifies</p>

Ref no.

Summary of matters raised

National Grid's response

and assesses the likely significant effects on the environment resulting from the construction of the Project and recommends appropriate mitigation to reduce effects.

Specifically, a Construction Noise and Vibration Impact Assessment has been undertaken and is reported in ES Chapter 14: Noise and Vibration (document reference 6.14). During construction, mitigation would be implemented to reduce noise and vibration impacts from construction activities and increased road traffic noise and vibration due to additional movement from construction traffic. Mitigation measures are outlined in ES Chapter 14: Noise and Vibration (document reference 6.14) and the Outline Code of Construction Practice (CoCP) (document reference 7.2). This includes the assumption that construction working would be undertaken within the agreed working hours, construction traffic would be managed through the Construction Traffic Management Plan (CTMP) (document reference 7.3), haul roads would be well maintained, and Best Practicable Means (BPM) would be employed to reduce construction noise and vibration.

ES Chapter 7: Air Quality (document reference 6.7) presents an assessment of the potential impacts from the construction of the Project on air quality. During construction, mitigation would be implemented to reduce the impact of dust generation and construction vehicle emissions. Mitigation measures are outlined in ES Chapter 7: Air Quality (document reference 6.7), and the Outline CoCP (document reference 7.2). The dust-emitting activities can be greatly reduced or eliminated by applying the site-specific mitigation measures (see Outline CoCP) for high risk sites following measures recommendations in the Institute of Air Quality Management (IAQM) guidance (IAQM, 2024). The IAQM guidance states that with the implementation of effective site-specific mitigation measures, the environmental effect would not be significant in most cases.

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		In addition, National Grid has prepared an Outline CoCP (document reference 7.2). The Outline CoCP sets out the required mitigation measures and environmental commitments that would be implemented during the construction phase of the Project to avoid or reduce potential effects of the Project on the environment.	
11-2.20	Concern that local road infrastructure is not suitable for heavy construction vehicles and machinery (generally - no location given) (including damage in relation to this, e.g. to buildings)	<p>A strategy has been developed to manage the impact of construction vehicles on the public highway and sensitive receptors, using suitable Local Road Network connections from the Strategic Road Network called Primary Access Routes. In addition, temporary haul roads for construction vehicles are proposed along the Project alignment, further reducing the impact of construction traffic on the local road network. Further details of the strategy can be found within the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).</p> <p>The Project also requires the transportation of Abnormal Indivisible Loads (AIL). National Grid is developing specific routing proposals for AIL movements and is developing these through engagement with the relevant stakeholders including the local highway authorities, police and National Highways. An AIL routing strategy containing details about these movements are submitted in support of the Development Consent Order (DCO) application.</p>	
11-2.21	Suggest that consideration is given to the carbon footprint of the Project during construction (e.g. construction methods, materials, transport, concrete, steel) / Concern about carbon footprint of the Project (including survey work)	<p>National Grid has set challenging targets to reduce the carbon emissions of our organisation, including a specific commitment to deliver carbon neutral construction by 2025/26. Key to the delivery of this commitment is to measure the carbon footprint of our projects through concept, detailed design and into delivery and construction using a range of best practice carbon tools and data sets.</p> <p>Prior to construction, and as part of our procurement process, carbon management and carbon reduction forms a key award criteria for all</p>	

Ref no.

Summary of matters raised

National Grid's response

projects. At tender stage, we require all contractors to calculate a detailed carbon footprint of the project using our Carbon Interface Tool (CIT), this provides a Capital Carbon baseline in Tonnes of CO₂e* from which the contractors are then incentivised (via Key Performance Indicators) and quarterly reviews to reduce the Carbon Footprint of the Project during construction. Contractors are contractually required to provide carbon data on a quarterly basis to demonstrate performance against carbon reduction commitments agreed at contract award.

We also have a range of Net Zero working groups within National Grid Electricity Transmission (NGET) that explore low carbon innovations and approaches. These groups bring together our contractors and our supply chain to help to reduce the carbon footprint of the materials and resources required to deliver our projects. These groups are: Low-carbon concrete, Low-carbon steel and aluminium, Net Zero construction and Low Carbon cables. These working groups all report progress to an overarching Net Zero forum.

The carbon calculations derived from the CIT are used to inform progress against our overall strategic commitments to reducing carbon emissions across its portfolio of projects and meeting its Net Zero targets for construction projects'.

*CO₂e/ Carbon Dioxide equivalent: is the number of metric tons of CO₂ emissions with the same global warming potential as one metric ton of another greenhouse gas.

In addition, National Grid has prepared a Greenhouse Gas (GHG) Assessment (see ES Appendix 4.1: Greenhouse Gas Assessment (document reference 6.4.A1)). The assessment provides a simple estimate of the greenhouse gas emissions associated with the construction phase of the Project, comparing this against UK emissions to

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		<p>determine if the Project is likely to have a material impact on the ability of the Government to meet its carbon reduction targets.</p> <p>Alongside the GHG Assessment, Appendix H: Outline Greenhouse Gas Reduction Strategy of the Outline Code of Construction Practice (document reference 7.2) presents how National Grid should effectively manage GHG emissions throughout the Proposed Project lifecycle in line with National Grid's net zero goals. This strategy encourages early consideration of GHG emissions and creation of appropriate governance structures and processes.</p> <p>This approach is in accordance with the Environment Impact Assessment (EIA) Scoping Report (document reference 6.19) and Scoping Opinion (document reference 6.20).</p>	
11-2.22	Criticism that National Grid have already started / commenced works in preparation for constructing the Project / Suggest that National Grid pause works until the consultation is complete	<p>National Grid has not started any construction work for Norwich to Tilbury. We have been carrying out various ground investigations, environmental surveys including archaeological surveys along the route of the Project to inform the design and environmental assessments. National Grid is carrying out several other developments in the area that are undergoing construction work such as the Bramford to Twinstead Reinforcement and works at our Norwich Main Substation.</p> <p>These projects have been consented and are being developed separately to our proposals for Norwich to Tilbury and are part of the wider Great Grid Upgrade to connect new sources of renewable energy into the grid.</p>	
Consultation			
11-2.23	Comment supportive of engagement that has taken place / feel listened to	National Grid notes the respondent's feedback.	
11-2.24	Comment supportive of the Project (generally - no location given)	National Grid notes the respondent's feedback.	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-2.25	Criticism of consultation (generally - no location given)	National Grid notes the respondent's feedback.	
11-2.26	Criticism of consultation events (generally - no location given)	National Grid notes the respondent's feedback.	
11-2.27	Comment supportive of the Projects aims (e.g. investment in offshore / nuclear / low carbon energy)	National Grid notes the respondent's feedback.	
11-2.28	Criticism of the government / local government / the Prime Minister (PM)	This comment is noted. This is not a matter for National Grid.	
11-2.29	Criticism of National Grid	National Grid notes all comments and feedback. We are progressing with our proposals in line with our duties and relevant policies.	
11-2.30	Criticism that National Grid have misled respondents	<p>National Grid disagrees that consultation or its content has been misleading to respondents and we believe we have been clear about the Project, the rationale behind it and how we've developed the design. This information is set out within materials presented at both the 2022, 2023 non-statutory consultations, statutory consultation and targeted consultations, as well as the landowner consultations in 2025. We believe that all the relevant information required for the public to provide informed feedback on the proposals was made available. Feedback arising from all consultations has also been carefully considered and responded to within this report and the predecessor feedback reports published at the start of the 2023 non-statutory consultation and the statutory consultation.</p> <p>National Grid is not biased towards any particular technology solution but operates within clear policy and funding guidance. How these have been factored in can be found within the consultation materials published in 2022, and 2023 non-statutory consultation and at the statutory consultation and the Development Consent Order (DCO) application.</p> <p>In terms of capturing specific feedback, we have captured all comments and feedback received at all consultations irrespective of how an</p>

		individual submits it. Comments via the website questionnaire are treated in the same way as an email, letter or hard copy feedback form.	
11-2.31	Criticism that consultation is biased towards what National Grid want	<p>National Grid disagrees that consultation or its content has been biased towards what it wants and we believe we have been clear about the Project, the rationale behind it and how we've developed the design. In line with consultation requirements National Grid presents its proposals and explains alternatives considered and the reason for the selection made. Feedback arising from all consultations has also been carefully considered and responded to within this report and the predecessor feedback reports published at the start of the 2023 non-statutory consultation and the statutory consultation.</p> <p>National Grid is not biased towards any particular technology solution but operates within clear policy and funding guidance. How these have been factored in can be found within the consultation materials published in 2022, and 2023 non-statutory consultation and at the statutory consultation and the Development Consent Order (DCO) application. In terms of capturing specific feedback, we have captured all comments and feedback received at all consultations irrespective of how an individual submits it. Comments via the website questionnaire are treated in the same way as an email, letter or hard copy feedback form.</p>	
11-2.32	Criticism of consultation team	<p>The National Grid Project team has been and continues to be available to engage with both the public and stakeholders about the Project. The members of the Project team have developed the proposals and are therefore well placed to answer questions that may arise. We encourage anyone with any concerns or questions to contact us directly.</p>	
11-2.33	Criticism of previous consultations (Norwich to Tilbury Non-Statutory Consultation / East Anglia GREEN	<p>This Project comprises a proposed overhead line connection over 2 km in length and therefore it is classified as a Nationally Significant Infrastructure Project (NSIP). Therefore, the Project would require consent</p>	

Ref no.

Summary of matters raised

National Grid's response

(EAG) consultation / Statutory Consultation / Targeted Consultations)

under the Planning Act 2008. An NSIP application is submitted to the Planning Inspectorate and examined by an independent panel of inspectors. The Planning Inspectorate will decide if our consultation has been adequate and will measure it against statutory guidance and other legal requirements. This will include an assessment on the extent to which National Grid has carried out consultation in accordance with the Gunning Principles (to the extent applicable). National Grid considers that we have developed our proposals and carried out consultation in accordance with the Gunning Principles where applicable. The Gunning Principles set out four principles for consultation as follows:

1. Consultation must be at a point when proposals are still at a formative stage. A final decision has not yet been made, or predetermined, by the decision makers. All of our consultations on the Project (non-statutory consultations in 2022 and 2023, our statutory consultation in 2024, the targeted consultations in 2025 and landowner consultation in 2025) were held at a formative stage where final decisions on the proposals were still to be made and we took on board feedback on our proposals at each stage.
2. There is sufficient information to give 'intelligent consideration'. The information provided must relate to the consultation and must be available, accessible, and easily interpretable for consultees to provide an informed response. We have published a considerable amount of information to support both non-statutory consultations and statutory consultation. For the targeted consultations this included a summary of the proposed changes, maps showing the 2024 proposals and the proposed changes, and accompanying environmental information for each proposed change of significance. This information was available in various forms including online and in paper copy at our public information events

Ref no.

Summary of matters raised

National Grid's response

during consultation and upon request and remains available on the Project website.

3. There is adequate time for consideration and response. There must be sufficient opportunity for consultees to participate in the consultation. Our statutory consultation ran for a period of 15 weeks, our targeted consultations ran for a period of at least 30 days each. When considering the smaller scale of changes we were consulting on, this was a proportionate and appropriate timeframe for consultation. This gave sufficient time for people to review the information provided, attend a face-to-face event, webinar, or contact the Project team with any questions to enable them to provide an informed response. We follow advice and guidance provided in relation to consultation for a Project of this nature and are confident we go over and above any statutory requirements to engage fully with all stakeholders.
4. Conscientious consideration must be given to the consultation responses before a decision is made. Decision makers should be able to provide evidence that they took consultation responses into account. In response to the statutory consultation, we received over 13,000 responses, and we received over 700 pieces in response to the targeted consultations. Responses were received from members of the public, elected members, Local Planning Authorities and technical stakeholders. All responses received have been carefully read and considered by the Project team. Information from the feedback has been considered and changes have been made as we have developed the alignment.

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-2.34	Criticism that National Grid has not considered feedback from previous consultations (including verbal feedback)	<p>Evidence of how we carefully considered the feedback submitted during the 2022 and 2023 non-statutory consultations is detailed in our previous consultation feedback reports, which are available on the Project website.</p> <p>Evidence of how we carefully considered the feedback submitted during the 2022 and 2023 non-statutory consultations is detailed in our previous consultation feedback reports, which are available on the Project website. Many of the changes presented at the statutory consultation and targeted consultations were as a direct result of the information and feedback we received at previous consultations.</p> <p>National Grid has continued to have regard to all feedback received. During the consultations, we asked for feedback on the draft alignment, including pylon positions, the locations of underground cables, Cable Sealing End (CSE) compounds, the East Anglia Connection Node (EACN) substation and the changes that were made to the route since the last consultation alongside issues of access and permanent and temporary haul roads.</p> <p>We also wanted to know about any concerns or questions about the proposals, or if there were any local factors that should be considered. The feedback received through this consultation has informed how the proposals have been developed. How feedback has influenced the changes which have been made is set out in this report and in the 2025 Design Development Report (document reference 5.15).</p>	
11-2.35	Criticism that consultation will not make a difference (e.g. respondent's feedback will not be listened to)	<p>Feedback does make a difference. Many of the changes presented at the landowner consultation were as a direct result of the information and feedback we received at previous consultations.</p> <p>National Grid has continued to have regard to all feedback received. During the consultations, we asked for feedback on the draft alignment, including pylon positions, the locations of underground cables, Cable Sealing End (CSE) compounds, the East Anglia Connection Node (EACN)</p>

		<p>substation and the changes that were made to the route since the last consultation alongside issues of access and permanent and temporary haul roads.</p> <p>We also wanted to know about any concerns or questions about the proposals, or if there were any local factors that should be considered. The feedback received through this consultation has informed how the proposals have been developed. How feedback has influenced the changes which have been made is set out in this report and in the 2025 Design Development Report (document reference 5.15).</p>	
11-2.36	Suggest that feedback is listened to	<p>National Grid listens to all the feedback we receive, and it does make a difference. Many of the changes presented at the landowner consultation were as a direct result of the information and feedback we received at previous consultations.</p> <p>National Grid has continued to have regard to all feedback received during the consultations, and the feedback received through the targeted consultations has informed how the proposals have developed. How feedback has influenced the changes which have been made is set out in this report and in the 2025 Design Development Report (document reference 5.15) and we also explain in the Consultation report why we may not make changes in response to feedback.</p>	
11-2.37	Criticism that there was not enough time to consider the proposals	<p>Consultees for the landowner consultation were given at least 30 days to respond. This was a proportionate and appropriate timeframe for consultation when considering the smaller scale of changes being proposed. We continued to have regard to feedback beyond the end of each consultation.</p>	
11-2.38	Criticism of when the consultation was held (e.g. time of year)	<p>National Grid held landowner consultations between June and August 2025. This was a proportionate and appropriate timeframe for consultation when considering the smaller scale of changes being proposed.</p>	

Ref no.	Summary of matters raised	National Grid's response
11-2.39	Criticism that Gunning Principles have not been considered	<p>This Project comprises a proposed overhead line connection over 2 km in length and therefore it is classified as a Nationally Significant Infrastructure Project (NSIP). Therefore, the Project would require consent under the Planning Act 2008. An NSIP application is submitted to the Planning Inspectorate and examined by an independent panel of inspectors. The Planning Inspectorate will decide if our consultation has been adequate and will measure it against statutory guidance and other legal requirements. This will include an assessment on the extent to which National Grid has carried out consultation in accordance with the Gunning Principles (to the extent applicable). National Grid considers that we have developed our proposals and carried out consultation in accordance with the Gunning Principles where applicable. The Gunning Principles set out four principles for consultation as follows:</p> <ol style="list-style-type: none"> 1. Consultation must be at a point when proposals are still at a formative stage. A final decision has not yet been made, or predetermined, by the decision makers. All of our consultations on the Project (non-statutory consultations in 2022 and 2023, our statutory consultation in 2024, the targeted consultations and landowner consultations in 2025) were held at a formative stage where final decisions on the proposals were still to be made and we took on board feedback on our proposals at each stage. 2. There is sufficient information to give 'intelligent consideration'. The information provided must relate to the consultation and must be available, accessible, and easily interpretable for consultees to provide an informed response. We have published a considerable amount of information to support both non-statutory consultations and statutory consultation. For the targeted consultations this included a summary of the proposed changes, maps showing the

		<p>pieces in response to the targeted consultations. Responses were received from members of the public, elected members, Local Planning Authorities and technical stakeholders. All responses received have been carefully read and considered by the Project team. Information from the feedback has been considered and changes have been made as we have developed the alignment.</p> <p>Evidence of how we carefully considered the feedback submitted during the 2022 and 2023 non-statutory consultations is detailed in our previous consultation feedback reports, which are available on the Project website.</p>	
11-2.40	Criticism that Holford Rules have not been considered	<p>National Grid disagrees that the Holford Rules have not been considered. The Corridor and Preliminary Routeing and Siting Study (CPRSS) published in 2022, and the Design Development Reports (DDR) published as part of the 2023 non-statutory consultation, 2024 statutory consultation and with the Development Consent Order (DCO) submission, all set out how the Holford Rules informed decision making. A summary of the Holford Rules is provided within Appendix I22 of this report. We use the Environmental Impact Assessment (EIA) process to inform the balance and define our proposals that we take forward, and which are also informed by feedback. We would note that application of the Holford Rules typically involves balancing alternative solutions which can present conflicting Holford Rule compliance. For example, routeing over relatively higher ground rather than in an adjacent valley may conflict with Rule 4 and 5 but may be appropriate if the valley contains extensive areas of unavoidable ancient woodland, effects on which would conflict with Rule 2. A balanced decision is taken which is not the same as not considering the Holford Rules.</p>	

Ref no.	Summary of matters raised	National Grid's response
11-2.41	Criticism that the National Planning Policy Framework (NPPF) has not been considered / Criticism that the Project does not abide with the NPPF	<p>The National Planning Policy Framework (NPPF) (Department of Levelling Up, Housing and Communities, 2025) sets out the Government's planning policies for England and how these are expected to be applied. The weight of the NPPF relating to Nationally Significant Infrastructure Project (NSIP) is clarified in paragraph 5 of the NPPF, which states: 'The Framework does not contain specific policies for nationally significant infrastructure projects. These are determined in accordance with the decision-making framework in the Planning Act 2008 (as amended) and relevant national policy statements for major infrastructure, as well as any other matters that are relevant (which may include the National Planning Policy Framework). National policy statements form part of the overall framework of national planning policy, and may be a material consideration in preparing plans and making decisions on planning applications.'</p> <p>National Grid considers that the NPPF is, therefore, capable of being an important and relevant consideration in decision making for NSIP but the prime documents to be considered and given appropriate weight are the Overarching National Policy Statement for Energy (EN-1) (2023) and the National Policy Statement for Electricity Networks Infrastructure (EN-5) (2023). However, National Grid has taken the NPPF into consideration and demonstrates how the Project is in general accordance with the policies of the NPPF within the Planning Statement (document reference 5.6) and Policy Compliance Document (document reference 5.7).</p>
11-2.42	Suggest that the Project should follow the HM Treasury Green Book / Criticism that HM Treasury Green Book has not been followed	National Grid is confident that the process we follow to identify and then assess potential strategic options is robust and the most appropriate. This has been tried and tested through numerous previous projects, the formal examination process and ultimately decided by the relevant Secretary of

Ref no.

Summary of matters raised

National Grid's response

		<p>State.</p> <p>The Treasury Green Book provides guidance on the interpretation by public servants of public spending, assets and resources for projects, policies and spend from the public purse. That is not relevant for National Grid Electricity Transmission (NGET).</p> <p>There is no requirement in the Planning Act 2008 for developers to have to submit a Treasury Green Book assessment as part of a Development Consent Order (DCO) application.</p> <p>NGET is an Ofgem regulated business, with obligations to consider customer, environmental and other considerations as outlined in the Electricity Act 1989 and in its licence commitments. Consideration of the costs of a project and the funding it should receive via the regulatory settlement is the subject of a separate regulatory process, and it is not appropriate for the Planning Inspectorate, Examining Authority or the Secretary of State in their remit under the Planning Act to seek to duplicate other regimes.</p>	
11-2.43	Suggest that there is need for further consultation (generally)	<p>National Grid held two non-statutory consultations in 2022 and 2023, a statutory consultation in 2024 and a series of targeted consultations and landowner consultation in 2025 where we presented our proposals for the Project. At each stage of consultation, we reviewed all the feedback we received and amended the Project, where feasible, in response to this. In response to feedback received during statutory consultation and the results of surveys and assessments, we held targeted and landowner consultations with directly affected properties where the alignment or access proposals have changed. We believe that this is adequate for a project of this size to allow the public time to carefully consider and engage with the proposals and leave meaningful feedback.</p>	
11-2.44	Criticism of meetings held with landowners	<p>All affected landowners and their land agents were offered a meeting with Fisher German as part of the landowner consultations. At these meetings</p>	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		information / plans were shown to landowners, and the opportunity was given to provide feedback / change requests to be assessed by the Project team. If a landowner had any further questions following this meeting they were able to send these to Fisher German or the Project communications team who then responded.	
11-2.45	Criticism of the way landowners were contacted for the consultation (e.g. respondents were contacted via a letter rather than an in-person visit by National Grid; respondent found out about consultation via an information pole in a hedge of their property than an in-person visit by National Grid)	Each affected landowner was sent a letter notifying them of the consultation along with further information and contact details should they have any questions. A bespoke letter was sent to properties which included a plan showing their land interest and the Project proposals within it. A meeting with Fisher German to discuss the proposals was offered in that letter. All meeting requests were fulfilled. In some instances the ownership of parcels of land is not readily identifiable from land registry sources requiring a particular process to be followed to establish ownership. In these instances site notices are erected as close as possible to the land in question, but in places of visibility to passing general public, to raise awareness of the consultation and to come forward with ownership information. Any new landowner identified in this way is then offered a meeting, information provided on the project and their contact details taken for inclusion in future communications.	
11-2.46	Criticism that it was difficult to find the consultation / feedback form / information on the Project	National Grid will continue to look at how we can optimise the user experience and make the website easy to navigate. Wherever possible we looked to signpost how to submit feedback and find information. All our consultation materials provided this information on where to find out more about the proposed changes and how to submit feedback. Our materials also provided details to contact us directly via our hotline number, email, or Freepost. All our consultation information remains available in the document library on the Project website.	

Ref no.	Summary of matters raised	National Grid's response
11-2.47	Criticism that there was not enough information available for the consultation	National Grid notes the respondent's feedback. A bespoke letter was sent to properties which included a plan showing their land interest and the Project proposals within it. A meeting with Fisher German to discuss the proposals was offered in that letter. All meeting requests were fulfilled. More information on how we undertook the landowner consultation is available in this Consultation Report. The information provided at the landowner consultation was considered proportionate to the changes being consulted upon. We believe that all the relevant information required for respondents to make informed decisions was available and do not believe that this impacted the feedback we received.
11-2.48	Criticism that the consultation letter was not received / Criticism that respondent was not contacted directly by National Grid / Criticism that residents near the Project did not receive Project documentation / Criticism that the consultation letter was received too late	<p>National Grid notes the respondent's feedback. A bespoke letter was sent to properties which included a plan showing their land interest and the Project proposals within it. A meeting with Fisher German to discuss the proposals was offered in that letter. All meeting requests were fulfilled. More information on how we undertook the landowner consultation is available in this Consultation Report. The information provided at the landowner consultation was considered proportionate to the changes being consulted upon. We believe that all the relevant information required for respondents to make informed decisions was available and do not believe that this impacted the feedback we received.</p> <p>We tried to make these documents easy to understand but had a dedicated phone line and email if people had any questions about the information or the proposed changes in addition to offering meetings to all potentially affected landowners.</p> <p>If a landowner believes they did not receive the consultation letter they should contact the Project lands team: Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314. Alternatively, you can write to Norwich to Tilbury Land Team, Fisher</p>

		German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD.	
11-2.49	Comment supportive of consultation materials (e.g. easy to understand)	National Grid notes the respondent's feedback.	
11-2.50	Criticism of consultation materials (generally - not change specific)	<p>National Grid notes the respondent's feedback. A bespoke letter was sent to properties which included a plan showing their land interest and the Project proposals within it. A meeting with Fisher German to discuss the proposals was offered in that letter. All meeting requests were fulfilled. More information on how we undertook the landowner consultation is available in this Consultation Report. The information provided at the landowner consultation was considered proportionate to the changes being consulted upon. We believe that all the relevant information required for respondents to make informed decisions was available and do not believe that this impacted the feedback we received.</p> <p>We tried to make these documents easy to understand but had a dedicated phone line and email if people had any questions about the information or the proposed changes in addition to offering meetings to all potentially affected landowners</p>	
11-2.51	Criticism of Project Background Document / Design Development Report	<p>All comments and feedback are welcomed and noted and National Grid will bear this in mind when developing documents for future projects. All our documents were available in alternative formats by request.</p> <p>Before the start of the 2024 statutory consultation, National Grid prepared a Statement of Community Consultation (SOCC). This document set out how we were planning to consult on the Project, including the materials to be presented.</p> <p>We aim to make consultations as accessible as possible and offer a range of materials to enable this, including an overarching introduction to the Project and the consultation (the 2024 Project Background Document), an</p>	

Ref no.	Summary of matters raised	National Grid's response
		<p>interactive map and more technical information. We also offer ways to contact the Project team should someone need more information, or information in a different format.</p> <p>We will continue to assess how best to present information in an accessible way and format, but always recommend people contact the team directly via our hotline or email address if they have questions or concerns.</p> <p>We believe that all the relevant information required for the public to make informed decisions on the proposals was made available throughout the consultation period. This information remains available on the Project website.</p>
11-2.52	Criticism of consultation maps (generally)	<p>National Grid notes the concerns about the mapping.</p> <p>The maps we produced used data from the latest OS mapping software.</p> <p>We use a wide range of sources when developing our proposals to ensure a thorough knowledge of the local area and how our proposals might impact communities. We apologise for any confusion caused by data shown on the maps and had a dedicated phonenumber and email address if anyone had questions on the documents produced or the proposed changes.</p> <p>The interactive map was not updated for the targeted consultations or landowner consultation as we were consulting on a small number of changes in order to refine and finalise the route. The interactive map has now been updated to reflect our finalised route and is available on the Project website.</p> <p>We believe that all the relevant information, including the maps, required for the public to make informed decisions on the proposals was made available throughout the consultation period.</p>

Ref no.	Summary of matters raised	National Grid's response
11-2.53	Criticism of imagery / photography / visualisations used for consultation materials	<p>The consultation materials, including the newsletter and Project Background Document, showed a mix of photographs including images of infrastructure such as pylons. The photography showed pylons located in the UK, including 50 m pylons and other infrastructure such as Cable Sealing End (CSE) compounds and substations. Photographs of infrastructure both in construction and operation were also available including images of underground cable construction.</p> <p>At the statutory and targeted consultation public information events, we had a 3D visualisation tool available which showed a visualisation of the proposals from any post code within a 2.5 km distance from the alignment. The model was intended to be illustrative of the proposals and it was advised that it should be viewed in conjunction with the published consultation materials.</p> <p>The 3D visualisation tool was only available at events and not online as the programme used a large amount of data and would therefore not be compatible being hosted on the Project website.</p> <p>In terms of data used for the 3D visualisation tool, The National Tree Map dataset was used to identify tree locations. The data set is limited to vegetation over three metres in height and does not record exact tree species. Regionally appropriate assumptions for typical tree species and structure were used.</p> <p>The 3D tool could be set to winter and summer seasons. Buildings, including domestic properties, were presented to illustrate their spatial location and footprint, rather than specific architecture. Building height shown was to eaves.</p> <p>Wireline visualisations were also developed as part of the Preliminary Environmental Information Report (PEIR), which showed what the</p>

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-2.54	Criticism of the financial cost and environmental impact of printing and posting consultation materials / Request for National Grid to provide information on the financial cost and environmental impact of printing and posting consultation materials	<p>overhead line would look like in certain locations along the alignment. These visualisations were available on the Project website.</p> <p>Ahead of the targeted consultations, National Grid developed and consulted on a Targeted Consultation Strategy and a Targeted Non-Statutory Consultation Strategy with the potentially affected Local Planning Authorities. The strategy documents set out how we intended to consult. When planning the targeted consultations, we reflected on our own learnings from previous consultations, including the 2024 statutory consultation, as well as the feedback we received and the input from Local Planning Authorities. We tried to strike the right balance between the consultation channels and methods of engaging to ensure everyone could take part in the method of their choice.</p> <p>Although more costly than digital methods, newsletters and targeted consultation materials were sent by post so those without internet access or who prefer to read hard-copy documents could respond to the consultation. For the landowner consultation a bespoke letter was sent to properties which included a plan showing their land interest and the Project proposals within it.</p> <p>Furthermore, we used recycled paper during the targeted consultations and the landowner consultation to reduce impacts on the environment from printing. The paper used had the specifications below:</p> <ul style="list-style-type: none"> • FSC® 100% Recycled • EU-Ecolabel • PCF - Process Chlorine Free • ISO 14001 	
11-2.55	Criticism that alternatives (e.g. offshore / underground cables / alternative routes) have not been presented	National Grid has considered a wide range of alternative means for the Project and set these out in the Corridor and Preliminary Routeing and	

Ref no.	Summary of matters raised	National Grid's response
	for consultation / consulted on / Concern that National Grid have not considered / consulted on alternatives to the Project	<p>Siting Study (CPRSS) (available of the Project website), published in support of the 2022 non-statutory consultation, and the 2023 and 2024 Strategic Options Backcheck and Reviews (SOBR) (available on the Project website), published in support of the 2023 non-statutory consultation and statutory consultation (available on the Project website) and the 2025 Strategic Options Backcheck and Review (document reference 7.17). This information remained available on the project website throughout the targeted consultations. We have also considered feedback relating to suggested alternatives and set out responses within the 2022 and 2023 non-statutory consultation Feedback Report's (see Appendix B and C of this report) and elsewhere within this report.</p> <p>Our job is to carefully consider the most feasible options and present proposals for public consultation. National Grid cannot present an alternative for consultation that would not meet the requirements placed on us by the government and our regulator Ofgem.</p>
11-2.56	Criticism that National Grid contradict their actions elsewhere (e.g. use of undersea cables / underground cables for other Projects) / Criticism that the Project uses overhead lines, when these are being removed elsewhere in the UK / Criticism that the approach taken to the Great Grid Upgrade is piecemeal	National Grid establish the design details of their projects on a case-by-case basis, taking into consideration various factors such as the technical requirement for a particular level of power transfer, feasibility, cost, environmental impact, statutory duties and regulatory requirements. Each project is evaluated independently, and decisions are made based on the specific circumstances and needs of that project. While National Grid may use undersea cables or underground cables for certain projects, it does not necessarily mean that the same approach will be taken for all projects. The selection of technology type depends on a range of factors, including the specific requirements and constraints of each project.
11-2.57	Criticism of public notices for the Project (e.g. number of notices / creating litter)	At the statutory consultation stage of a Nationally Significant Infrastructure Project (NSIP) National Grid needs to ensure that landowners / persons with an interest in a piece of land are aware of the consultation and can

Ref no.	Summary of matters raised	National Grid's response
		<p>give feedback on the proposals.</p> <p>As part of this National Grid is required to put up notices in areas of unregistered land, and then monitor them for the duration of the consultation period. Due to the fact these notices need to stay in place for several months they are made using waterproof materials.</p> <p>Also, where surveys are taking place and voluntary agreement to take access has not been reached, access notices will also be installed on site advising landowners that notice has been served and that access will be taken from a particular date.</p> <p>Once notices are no longer required, they will be collected from site and disposed of appropriately. If a member of the public has concerns that a notice is no longer attached to its original location, then please make contact with the Project's lands team to discuss: Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.</p> <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD.</p>
11-2.58	Criticism of the time taken by National Grid to respond to queries / Criticism that National Grid did not respond to queries / Criticism of responses received from National Grid to respondent's queries	National Grid endeavours to respond to all enquiries within a reasonable time frame. However, in periods of high volume or when requiring technical information, it can take longer to respond to enquiries.
11-2.59	Criticism that the National Policy Statement (NPS) for electricity networks infrastructure (EN-1, EN-5 and / or EN-3) has not been considered	National Grid disagrees with this response and notes for example that in Section 3 of the Corridor and Preliminary Routeing and Siting Study (CPRSS) (available on the Project website) the policy context set out and informing the development included EN-1, EN-5 (2011) with this position being updated in the 2025 Design Development Report (document reference 5.15) to respond to the updated NPS EN-1, EN-3 and EN-5). The current position and explanation of how policy has guided Project

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		design is set out in the 2025 Design Development Report (document reference 5.15).	
11-2.60	Suggest that the consultation process is restarted	National Grid held two non-statutory consultations in 2022 and 2023, a statutory consultation in 2024 and a series of targeted consultations and landowner consultation in 2025 where we presented our proposals for the Project. At each stage of consultation, we reviewed all the feedback we received and amended the Project, where feasible, in response to this. In response to feedback received during statutory consultation and the results of surveys and assessments, we held targeted and landowner consultations with directly affected properties where the alignment or access proposals have changed. We believe that this is adequate for a project of this size to allow the public time to carefully consider and engage with the proposals and leave meaningful feedback.	
11-2.61	Criticism that the interactive map has not been updated for the PILs consultation	The interactive map was not updated for the landowner consultation as we were consulting on a small number of changes to allow us to refine and finalise the route. A bespoke letter was sent to properties which included a plan showing their land interest and the Project proposals within it. The interactive map has now been updated and is available on the Project website. A disclaimer was placed on the interactive map during and after the consultation to provide an explanation that it had not been updated and to direct to where the relevant information could be found.	
11-2.62	Threat of further legal action against the Project (e.g. judicial review)	National Grid notes the respondent's feedback. If the Project is accepted for Examination, the Planning Inspectorate and the Secretary of State will need to consider whether the Project has been developed in accordance with the requirements of the Planning Act 2008. It is these considerations and decisions of the Planning Inspectorate and the Secretary of State that can be considered by any judicial review.	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-2.63	Threat of action against the Project (e.g. physical action)	<p>These bodies are independent, and National Grid cannot influence their work.</p> <p>National Grid have, as part of the development of the Project, considered the security measures required to ensure construction can be completed safely.</p> <p>Temporary construction compounds, including offices, will be secured to protect the public and prevent unauthorised entry to site.</p> <p>Access to temporary construction compounds will be limited to specific entry points and personnel entries/exits will be recorded and monitored for both security and health and safety purposes.</p> <p>Security fencing and gates are proposed for all site access Point to secure the works area, the construction corridor and haul roads.</p> <p>In the event that a haul road is blocked, resulting in a site location becoming inaccessible from a site access point, an alternative access shall be facilitated from a suitable crossover point.</p> <p>In the event of any incident occurring which impacts on the safe and efficient operation of the road network, additional mitigation measures will be considered, which could include contingency routes. Contingency routes will be provided by pre-established traffic diversions and diversions as set out by National Highways, the relevant highway authorities and the police.</p>	
11-2.64	<p>Concern that it is unclear which properties are classed as 'significant' / Request clarity in writing as to whether the respondent's property is 'significant' or not /</p> <p>Concern that residents have been instructed to get legal advice regarding their land interests at their own expense</p>	<p>National Grid notes the respondent's feedback. Any properties that fall within the Order Limits as well as any properties that may potentially be impacted by the Project by falling outside of the Order Limits were contacted and consulted with as part of the Project development process.</p>	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-2.65	Criticism that Section 85 of the Countryside and Rights of Way Act 2000 (as amend by the Levelling Up and Regeneration Act 2023) has not been adhered to	<p>National Grid has not instructed landowners to obtain legal advice. National Grid would cover expenses for land agent fees when provided with a valid claim.</p> <p>Section 245 (Protected Landscapes) of the Levelling-up and Regeneration Act 2023 (LURA) places a duty on 'relevant authorities', which in this context includes National Grid as a statutory undertaker, to seek to further the statutory purposes of protected landscapes (referred to as the 'seek to further' duty). In relation to National Landscapes (which includes the Dedham Vale National Landscape), this requirement has been incorporated into Section 85 of the Countryside and Rights of Way (CRoW) Act, which states:</p> <p>'In exercising or performing any functions in relation to, or so as to affect, land in an area of outstanding natural beauty in England, a relevant authority other than a devolved Welsh authority must seek to further the purpose of conserving and enhancing the natural beauty of the area of outstanding natural beauty'.</p> <p>The approach National Grid is taking to meet the 'seek to further' duty in relation to the Project has been detailed in National Landscapes - Duty to Seek to Further the Purposes Report (s85 Countryside and Rights of Way Act 2000) (document reference 5.10). The document details how the National Landscape and 'seek to further' duty has been taken into consideration during Project development and highlights potential further measures. The overall approach has been, and continues to be, discussed with relevant stakeholders (which includes but is not limited to the Dedham Vale National Landscape and Stour Valley Partnership) and follows the guidance published by Defra in December 2024 'Guidance for relevant authorities on seeking to further the purposes of Protected Landscapes' (Defra, 2024). It is intended the finalised measures would be</p>	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-2.66	Criticism that the lack of published feedback following the 2024 statutory consultation makes it difficult to assess how National Grid has considered stakeholder responses or justified its decisions / Criticism that due to the lack of published feedback following the 2024 statutory consultation, National Grid have not evidenced that the consultation process has managed to capture or reflect the concerns of communities most directly affected by the Project (e.g. especially those in north-western Tendring)	<p>secured by an appropriate mechanism as part pursuant to the Development Consent Order (DCO) process</p> <p>In line with statutory guidance set out in 'Planning Act 2008: Pre-application stage for Nationally Significant Infrastructure Projects', applicants are required under section 37 of the Planning Act to produce a consultation report alongside their application, which details how they have complied with the consultation requirements set out in the Planning Act and how the proposed application has been shaped as a result. This Consultation Report provides a description of how the proposed application has been informed and influenced by taking account of the relevant consultation responses.</p>	
11-2.67	Criticism that non-material amendments were not included within the targeted consultation (e.g. while these changes may be minor in engineering terms, these changes may have significant perceived or actual impacts for residents living close to the affected areas, and the cumulative Impact of numerous “non-material” changes can be significant)”	<p>In line with statutory guidance set out in 'Planning Act 2008: Pre-application stage for Nationally Significant Infrastructure Projects' once applicants have completed the consultation process set out in their statement of community consultation, where a proposed application is amended in the light of responses to consultation then, unless those amendments materially and substantially change the proposed application or materially changes its effects as a whole, the amendments themselves should not trigger a need for further consultation. The amendments can be reported as part of the consultation report submitted with the application. Considering the guidance further, a series of targeted community consultations on proposed changes were undertaken where it was considered appropriate to do so, and further consultation undertaken with affected landowners. When forming a view on whether further targeted community consultation would be appropriate, consideration was given to where more than one change was being proposed in the same geographical area.</p>	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-2.68	Statement refusing National Grid access to land for the Project (e.g. for construction, surveys, access, etc)	National Grid notes the respondent's feedback. We will continue to try and work with landowners to address their concerns about the Project. We look to enter into voluntary agreements for survey access and land rights. Where these cannot be agreed, we may need to rely on compulsory acquisition powers which allow us to obtain land access and land rights.	
11-2.69	Criticism that the Statement of Common Ground needs corrections / Criticism that the section headed 'Aviation Assessment' is similar to a separate document headed 'Airfield Assessment' which contains numerous errors in the section and as a result produces invalid recommendations / Request for a revised copy to be provided to the respondent	National Grid has engaged with aerodromes potentially impacted by the Project, sharing draft Statements of Common Ground (SoCG) to clarify matters outstanding, and seeking agreement of positions where possible. National Grid has requested receiving parties review the draft statements and provide comments on the matters raised. The SoCG process is ongoing with some aerodrome owners and operators. Further information on the assessment of aviation impacts can be found in the Environmental Statement (ES) (ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and ES Appendix 15.2: Review of Aviation Impacts (document reference 6.15.A2)).	
11-2.70	Criticism that National Grid have breached their licence agreement and need to share all survey data completed to date with the licensor	National Grid does not believe we are in breach of any survey licences. National Grid has made survey data and reports available to the public through the Environmental Statement, part of the Development Consent Order application.	
11-2.71	Suggest an easy and direct chain of communication between residents and the contractors so that day to day issues can be resolved during construction	How we propose to contact residents and stakeholders during construction and the complaints procedure we propose to follow is detailed in the Outline Code of Construction Practice (CoCP) (document reference 7.2).	
11-2.72	Suggest survey data is shared with landowners / Concern that National Grid have not replied to previous requests for survey data to be shared with landowners	National Grid has made survey data and reports available to the public through the Environmental Statement, part of the Development Consent Order application.	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-2.73	Comment that the respondent does not own / no longer owns the land parcel identified in their letter	National Grid notes the respondent's feedback.	
11-2.74	Criticism of the amount of letters / consultation materials sent to the respondent	National Grid acknowledges the high volume of materials that have been sent out to respondents. As part of consulting parties that may have an interest in the Project, National Grid is required to send out materials that allow the recipient to understand how they may or may not be affected by the Project and in turn allow the recipient to provide informed feedback.	
11-2.75	Request for Tarmac Aggregates to be consulted by National Grid in relation to the potential impact of the Project on waste permit for vehicles transitioning over the site (e.g. location not provided)	National Grid notes the respondent's feedback. We encourage any landowner or business owner with concerns to contact the Project lands team: Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314. Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD.	
Design Change (CR)			
11-2.76	Oppose the use of underground cables (generally - no location given) / Concern about the use of underground cables (e.g. due to impact of construction)	National Grid has carefully considered the feedback received during the 2022 and 2023 non-statutory consultations, the statutory consultation, targeted consultations, and landowner consultation, the alternatives available, and other factors including our duties and obligations. These duties include balancing the need to be economic and efficient, which includes keeping costs down in the interests of the bill-paying consumers, with a duty to have regard to preserving amenity, which includes the natural environment, cultural heritage, landscape and visual quality, National Policy Statement (NPS) EN-5 makes clear that <i>'the government's position that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments would cross part of a nationally designated</i>	

Ref no.	Summary of matters raised	National Grid's response
		<p><i>landscape (i.e. National Parks, The Broads, or Area of Outstanding Natural Beauty (AONB))'. The NPS also confirms that widespread and significant adverse landscape and/or visual impacts in other locations may also justify the use of undergrounding. We may also adopt underground cables in other circumstances such as to cross existing 400 kV overhead line infrastructure.</i></p> <p>Where the installation of underground cables is required in lieu of overhead lines, the design of the Project has incorporated suitable consideration of the existing environment, ecology and site ground conditions based on site specific survey data. We have undertaken an Environmental Impact Assessment (EIA) which includes a baseline of the existing environment as well as site specific information and survey data.</p>
11-2.77	Suggest that existing overhead lines should be replaced by underground cables (generally - no location given)	<p>National Policy Statement (NPS) EN-5 establishes the position that the starting basis for new connections is a presumption on the acceptability of overhead lines but with this presumption reversed within designated landscapes and in certain other circumstances.</p> <p>The existing electricity transmission network provides power, via the local distribution network, into the local area where it is used in homes and businesses. The need case and funding for the Project is to deliver the new network reinforcement needed, rather than to remove existing overhead lines by undergrounding them.</p> <p>We have identified a number of locations where we are proposing to place existing overhead lines underground. These locations are where existing 132 kV and lower voltage lattice pylon lines are crossed by the proposed 400 kV overhead line and / or mitigation of effects are considered necessary. This includes locations such as at Mellis, between Offton and Bramford Substation, to the south of Bramford Substation and near Fuller Street.</p>

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		Unless required for mitigation, undergrounding existing overhead lines on the transmission network would not be in accordance with NPS EN-5 and would result in substantial cost to bill payers. There may also be significant environmental impacts due to the removal works on sensitive ecological and archaeological receptors as well as constraints from either existing built form or unsuitable ground conditions.	
11-2.78	Suggest that the existing overhead lines are reinforced / upgraded instead (generally - no location given)	The existing transmission network in the region was upgraded during 2022 and 2023 to ensure the system is running at its most efficient performance. The existing assets / networks are not able to be upgraded sufficiently to cope with the new future demands expected on the network. As a result, new lines and substations would be required to accommodate the changing demands on the network.	
11-2.79	Suggest that the Project is routed away from populated / residential areas (generally - no location given)	<p>Deciding where and how to build new high voltage electricity lines is a complex issue and National Grid is mindful of the potential effects this infrastructure may have on local communities and the concerns these may bring. We recognise that people living near our transmission infrastructure, including high voltage overhead lines, may have concerns about audible noise and potential health impacts. It has sometimes been suggested that minimum distances between properties and overhead lines should be prescribed.</p> <p>We do not consider this appropriate since each instance must be dealt with on its merits. However, we have always sought to route new lines away from residential property on grounds of general amenity where possible.</p> <p>We have undertaken a noise and vibration assessment which can be found in the Environmental Statement (ES), Chapter 14: Noise and Vibration (document reference 6.14) that forms part of the Environmental Impact Assessment (EIA) for the Project. Noise levels and the effect on</p>	

Ref no.

Summary of matters raised

National Grid's response

residential properties as well as other sensitive areas, such as hospitals and schools, are carefully considered during planning, assessed according to the appropriate UK standards, and mitigated where necessary. We set strict technical standards for the equipment we install on our network. These will apply to the proposed new East Anglia Connection Node (EACN) substation, and extensions required to the existing Norwich Main, Bramford, and Tilbury Substations. These standards include requirements to ensure the occurrence of audible noise is eliminated or reduced as far as practicable. Therefore, significant adverse effects from noise are not expected.

Noise from overhead lines is predominately determined by the conductor design, voltage and weather conditions. The overhead line would be designed using a relatively quiet conductor that meets the design specification required, and operational noise is not likely to be significant at nearby sensitive receptors under any weather conditions. Pylon fittings, such as insulators, dampers, spacers, and clamps, are also designed and procured in accordance with a series of National Grid Technical Specifications to reduce the potential for audible noise and tones to occur from all types of fittings. Where noise does occur, it is likely to be localised and of short duration. If this is due to a fault, action can be taken to rectify it. A technical note has been submitted as part of the application for development consent to support scoping out noise associated with overhead lines from the ES.

In addition, we have undertaken a Landscape and Visual Impact Assessment (LVIA) for the Project.

Ref no.	Summary of matters raised	National Grid's response
		<p>This includes an assessment on both landscape character and visual amenity. The LVIA is presented in the ES, Chapter 13: Landscape and Visual (document reference 6.13).</p> <p>The health and safety of the public, local communities and employees is central to everything that we do. The UK has a carefully thought-out set of policies for protecting us all against Electric and Magnetic Fields (EMFs), the main component of which is exposure guidelines. The exposure guidelines are set by independent scientific bodies and are based on decades-long studies into the effects of EMFs and ill health. After those decades of research, the weight of evidence is against there being any health risks of EMFs below the guideline limits. Our approach is to ensure that our network comply with those policies, which are set by Government on the advice of their independent advisors. The Project is designed to ensure it is fully compliant with these policies and guidelines. This ensures that health concerns are properly and adequately addressed.</p> <p>Policies for both noise and EMF are incorporated into the decision-making process for development consent as set out in National Policy Statement (NPS) EN-5. It is National Grid's policy to ensure that all its equipment complies fully with those policies and guidelines. The application for a Development Consent Order (DCO) includes assessments against these policies, including both construction and operational noise and EMF.</p>
11-2.80	Suggest that the Project should run in closer to / parallel to the existing overhead lines (generally - no location given)	<p>National Grid notes the potential for close paralleling existing overhead lines to reduce the level of effects that may arise from a new overhead line.</p> <p>However, where existing overhead lines are present along the proposed route, there are constraints and features that mean, overall, we consider close paralleling would lead to greater effects on receptors in the area and be less compliant with the Holford Rules or be less consistent with the</p>

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-2.81	Suggest that underground cables are used (generally / for entire of the Project)	<p>policy to be economic and efficient. A summary of the Holford Rules is provided within Appendix I22 of this report. A number of residential properties are present in close proximity to the existing 400 kV overhead line meaning that if the overhead lines were close paralleled it would result in the properties having an overhead line close to both sides. There are also some locations where the combination of existing physical and environmental features (road infrastructure, commercial and residential properties etc) present very substantial challenges to routeing and siting. As a result, whilst close paralleling may appear beneficial in some sections, overall, the increased environmental effects where the overhead lines have to converge and diverge, and those increased effects on properties with overhead lines on both sides are considered greater than those introduced by a new overhead line separated from existing 400 kV overhead lines. Whilst crossings and use of underground cable technology may be able to address various constrained locations, we consider the costs and environmental effects arising from the additional infrastructure required to be less compliant with our duties and relevant policies.</p> <p>National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors.</p> <p>National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is '<i>that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or Area of Outstanding Beauty (AONB))</i>'. Where no such designations are</p>	

Ref no.

Summary of matters raised

National Grid's response

present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified. Therefore the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider this section in its entirety would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.

Therefore, whilst undergrounding the whole of this section is not considered appropriate, our proposals do include underground cable within the Dedham Vale National Landscape (previously known as Area of Outstanding Natural Beauty (AONB)) in accordance with NPS EN-5. Prior to our 2023 non-statutory consultation we identified the need to extend the underground cable beyond the National Landscape boundary because of potential effects, we have further extended this section of underground cable following consideration of feedback on our 2023 non-statutory

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-2.82	Suggest that underground cables are used in populated / residential areas (generally - no location given)	<p>consultation and additional investigation into potential effects. We also identified an approximately 4 km section near Great Horkesley as meeting the particularly sensitive criteria where underground cable is also proposed. Additionally, underground cable is proposed at Fairstead for a 400 kV overhead line crossing.</p> <p>National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors.</p> <p>National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is '<i>that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or Area of Outstanding Natural Beauty (AONB))</i>'. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA)</p>	

Ref no. Summary of matters raised National Grid's response

has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at all populated or residential areas in this section would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.

11-2.83 Suggest that the Project should run adjacent to major roads (generally - no location given)

While there could be potential benefits from infrastructure being concentrated geographically, i.e., by routeing the Project in close proximity to existing road infrastructure, National Grid do not consider these benefits arise for the whole route. Roads such as the M11, A12, M25, A14, A11, A13 and A130 potentially align (at least in part) with the general routeing of the Project. However, there are constraints and features that mean that we do not consider close paralleling the roads would reduce environmental effects or improve compliance with the Holford Rules or be more consistent with the policy requirement to be economic and efficient. A summary of the Holford Rules is provided within Appendix I22 of this report.

A number of residential properties, as well as hamlets, villages and towns, are present in close proximity to the existing transport infrastructure necessitating multiple diversions of an overhead line. There are also some locations where the combination of existing physical and environmental features (railway and road infrastructure, commercial and residential property, woodlands and orchards) present very substantial challenges to routeing and siting. As a result, whilst close paralleling of transport infrastructure may appear beneficial in some short sections, overall, the increased environmental effects from multiple changes of direction are

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-2.84	Suggest that the Project should use lower height pylons	<p>considered greater and less compliant with the Holford Rules than those that are associated with a new route alignment.</p> <p>Consideration has been given to the use of low height pylons in circumstances where standard lattice pylons are considered to be inconsistent with policy. These low height design lattice pylons are useful where height is a strong consideration, however they also occupy a greater footprint and have a bulkier and denser profile. They can therefore provide visual benefits in some scenarios, for example where a reduction in pylon height means that views of the tops of pylons are screened by intervening woodland. In other scenarios they can increase adverse visual effects, for example where relatively close to visual receptors without intervening filtering vegetation where they are likely to appear more noticeable in views from residential receptors. Low height lattice pylons have been proposed as necessary to reduce effects in two locations, to the north-west of Little Waltham and to the east of Thurrock airfield.</p>	
11-2.85	Suggest that the Project should use T-pylons	<p>The latest independent report on the Comparison of Electricity Transmission Technologies: Costs and Characteristics (Institute of Engineering and Technology, 2025) confirms that whilst T-Pylons may in certain locations provide an alternative to conventional overhead lines with potential benefits in visual impact and reduced land-take, this is at a higher cost. The build cost is approximately 2 to 2.5 times that of an equivalently rated conventional overhead line, and the lifetime costs are around 1.6 to 1.7 times that of a conventional overhead line. The current arrangements for the oversight of funding by Ofgem requires that the lowest cost acceptable design is taken forward rather than a more expensive design even if that design is perceived to reduce the level of effect.</p> <p>As such consideration of their use follows after establishing a need to mitigate effects of the standard lattice design and after considering the</p>	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		<p>benefit of adopting a low height lattice pylon design. T pylons themselves are also less adaptable to varied terrains and require more substantial access infrastructure. Furthermore, their resilience and environmental impact are comparable to conventional overhead lines, but with increased carbon intensity due to construction materials. Attention also needs to be given to the transitions between pylon types. Given It is the surrounding context that drives the need for alternative design mitigation, where this is not required along the entire route, any visual break and transition in pylon design also needs to be carefully sited.</p> <p>Assessment findings have concluded that, where there is not a reversal of the presumption to use overhead lines, the use of lattice pylons (either standard or low height) is consistent with planning policy throughout the route. Whilst there may be some locations (for examples see appendix A of the 2024 Design Development Report) where there may be a design option for the use of T pylons, the need to mitigate for unacceptable effects from lattice pylons is not engaged. On this basis T pylons are not proposed for the Project.</p>	
11-2.86	Suggest that the Project should be offshore / Suggest an offshore grid is used instead (including partial offshore option)	<p>The Government has set a target that by 2050 the UK will have net zero carbon emissions. In order to achieve this, and hit the targets along the way, such as connecting 40 GW of offshore wind by 2030, new infrastructure will be needed to deliver the increased energy production. This will include new overhead lines, underground cables, Cable Sealing End (CSE) compounds (where underground cables meet overhead lines) and substations.</p> <p>Offshore solutions were considered as part of our strategic proposal to upgrade the network in East Anglia. The Corridor and Preliminary Routeing and Siting Study (CPRSS) (available on the Project website) examines several strategic options that were considered for the Project that might achieve the required reinforcement including offshore and</p>	

Ref no.

Summary of matters raised

National Grid's response

subsea options. These options were not taken forward as they did not fully address technical or physical/geographical constraints or enable the network to operate to the required standards.

A subsea connection would have a third of the capacity of the proposed overhead line connection and therefore to transfer the anticipated levels of power generation, three subsea connections would be required including associated infrastructure such as convertor stations. This would make the connection significantly more costly to energy bill payers.

In addition, an offshore option would still require development of onshore infrastructure. This would include onshore connections from Norwich, Bramford and Tilbury respectively to the coast. The onshore work is required to reinforce the existing onshore transmission network and ensure that National Grid can continue to operate the transmission network safely and securely with the increase of generation connecting into the East Anglia area.

The National Electricity System Operator (NESO (formerly ESO) leads an annual process looking at how the electricity transmission network might need to adapt to likely changes to where the electricity we all use will come from. That starts with stakeholder discussions and analysis about potential Future Energy Scenarios (FES) which are published each summer. NESO takes those different scenarios and looks at what that might mean for the transmission network over the next ten years, publishing an Electricity Ten Year Statement (ETYS) each November. The transmission network owners, including National Grid, respond to the issues outlined in the ETYS with suggestions as to how those can be addressed. Then in January each year, NESO publishes a document known as the Network Options Assessment (NOA), which outlines their recommendations as to which reinforcement projects should be taken forward during the coming year to meet the future network requirements. A need was identified to resolve electrical boundary issues in East Anglia.

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		<p>There are three onshore power boundaries where additional system flexibility is required to ensure that power generated in the area from offshore wind farms and nuclear generation has more ways to flow into the wider transmission network during maintenance or faults on the system.</p> <p>In addition, two new offshore wind farms off the Suffolk/Essex coast are currently proposed to be connected to the transmission network to transport the low carbon energy they will produce to the homes and businesses where it will be used along with an interconnector from the European continent.</p> <p>The NOA 2021 identified need for an upgrade to the existing line in East Anglia in all FES and this was confirmed in NOA 22.</p>	
11-2.87	Suggest that the Project should run adjacent to existing transport infrastructure generally	<p>While there could be potential benefits from infrastructure being concentrated geographically, i.e., by routeing the Project in close proximity to existing road and rail infrastructure, National Grid does not consider these benefits arise for the whole route. Rail lines or roads potentially align (at least in part) with the general routeing of the Project. However, there are constraints and features that mean that we do not consider close paralleling will reduce environmental effects or improve compliance with the Holford Rules or be more consistent with the policy requirement to be economic and efficient. A summary of the Holford Rules is provided within Appendix I22 of this report.</p> <p>A number of residential properties, as well as hamlets, villages and towns, are present in close proximity to the existing transport infrastructure necessitating multiple diversions of an overhead line. There are also some locations where the combination of existing physical and environmental features (railway and road infrastructure, commercial and residential property, woodlands and orchards) present very substantial challenges to routeing and siting. As a result, whilst close paralleling of transport</p>	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-2.88	Suggest the use of High Voltage Direct Current (HVDC) cables for the Project / Suggest that HVDC cables are used as opposed to Alternating Current (AC) cables	<p>infrastructure may appear beneficial in some short sections, overall, the increased environmental effects from multiple changes of direction are considered greater and less compliant with the Holford Rules than those that are associated with a new route alignment.</p> <p>The transmission network already used Direct Current (DC) cables as part of its system to transmit power over long distances – Scotland to southern England or from England to the continent. The use of DC cables within the more local transmission network however creates constraints and increases costs due to the technology that is required to convert the DC to Alternating Current (AC) for domestic transmission and household use. AC power is also easier to balance and distribute (especially with fluctuating power flows like from wind farms and solar).</p> <p>National Grid is constantly looking into new innovations and investigating alternative technology types. These are explored and assessed for suitability. Alternative technologies were investigated for the Project, these included an offshore connection using DC technology, and various onshore connection options including: increasing operational voltages on existing network to above 400 kV; AC overhead lines (established technology); alternative pylon types; AC underground technology; High Voltage Direct Current (HVDC) overhead line and underground cables; and Gas Insulated Line (GIL).</p> <p>Currently, overhead lines offer the most economic and efficient solution to transmit electricity over long distances.</p>	
11-2.89	Suggest that the Project should utilise existing (disused) infrastructure at Bradwell	<p>In respect of connecting at the old Bradwell power station, there is an existing overhead line connection to the Bradwell B site. This has been operating at lower voltage (132 kV) and has not been used for a few years and is in generally poor condition. This overhead line would need to be rebuilt, however, this onward connection via Rayleigh to Tilbury is also</p>	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		<p>constrained by urban development and further designations and some sections may need to be re-routed if connections were made at Bradwell. Additionally, any connection point also requires two points of connection to the National Electricity Transmission System (NETS) (to meet compliance standards) requiring either a double overhead line through the Bradwell peninsula and onwards to separate locations or a connection back to Bramford (in addition to one towards Tilbury). A connection to Bramford would require connections to cross the Special Protection Area (SPA) designated Blackwater Estuary (3 km to 7 km tunnel likely to be required at much greater cost) as well as interact with other Special Area of Conservation (SAC) and SPA designations.</p> <p>The existing network through Norfolk, Suffolk and Essex would also still need to be upgraded to transport the electricity due to come onto the network in the Norwich area and provide the necessary two points of connection to the NETS. Taken together a Bradwell point of connection requires a greater amount of new infrastructure and is therefore less economic and efficient and expected to be associated with greater environmental effects.</p>	
11-2.90	Suggest that the Project uses brownfield sites / brownfield land	<p>The development of the Project has considered whether suitable brownfield sites were available for the siting of infrastructure. In general, such sites are few in number, of inappropriate size, have incompatible former uses (e.g are made ground), are located remotely from the route such that for example they any diversion considered would be less economic and efficient. For example, we have considered the use of former airfields (such as Bosted) for the siting of the East Anglia Connection Node (EACN) substation but ruled it out as explained in the 2025 Design Development Report (document reference 5.15). This was due to the greater impact on the National Landscape from multiple underground corridors.</p>	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-2.91	Suggest the offshore cable route is combined with a tidal barrage for non-nuclear and consistent energy generation	National Grid is legally obliged (under our Transmission Owner Licence) to provide capacity at the dates formally agreed in contracts with energy generators (or customers). National Grid does not determine or implement policies that influence the form of energy developments. Our role is to respond to the connection requirements for projects that are developed in line with Government policy to integrate them into the National Transmission System. Consequently, a tidal barrage with an offshore cable route is not a Project that can be currently considered by National Grid, and we are not aware of any third parties developing such schemes in relevant geographies.	
11-2.92	Suggest the pylons at 1 and 2 White Tyrells are moved to the west to sit in the adjoining field and avoid impact on the cottages	National Grid notes the respondent's feedback. A change has been made in this location to respond to the respondent's feedback and also to requests to reposition pylons to either side of Buttsbury Church and to reduce visual effects. TB190 and TB191 have been replaced by three pylons (now TB192 to TB194). The additional pylon allows heights to be slightly reduced, pylons to be positioned to either side of Buttsbury Church and the visual effects to the residential properties to be reduced. This has been achieved by moving the alignment to the west and placing the nearest pylon to the south of the road and less prominently in views as well as placing as close to field boundaries as possible.	
11-2.93	Suggestion that overhead lines through respondent's property be replaced with underground cabling (land reference provided by respondent)	National Grid notes the respondent's feedback. We have included the removal or undergrounding of third party infrastructure that is necessary for the delivery of the Project. Any removal or undergrounding beyond this could be discussed between the landowner, National Grid and the provider at the time of construction.	
11-2.94	Suggest haul road is made permanent by National Grid / Request the haul road also becomes a shared road	National Grid is applying for a temporary haul road that is to be removed with the land reinstated following completion of the works. However it is also willing to work with landowners who wish to secure the appropriate	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
	for farming operations and capable of accommodating two-way traffic (location not provided)	approvals (if needed) to either retain the material for use elsewhere on their holding or to retain such elements in situ. Shared use with landowners would be possible in some circumstances and is a matter for landowners to discuss with contractors or capture as part of voluntary agreements.	
Economic/employment impact			
11-2.95	Concern about negative impact on businesses	<p>Through the routeing and siting exercise, National Grid has sought to reduce as far as practicable impacts to businesses.</p> <p>Impacts on local businesses within the Local Study Area (the Order Limits) and within the 3 km Study Area (where visual impact is likely to be an economic consideration) are assessed in Environmental Statement (ES) Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15). As part of this assessment, a range of mitigation measures have been considered to reduce disruption to businesses and their users during the construction phase of the Project. These measures are identified in ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15), the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) which accompany the Development Consent Order (DCO) application.</p>	
11-2.96	Suggest that job / employment opportunities should be offered as part of the Project	National Grid is committed to working with local suppliers, facilitated by supporting forums (such as the local Chambers), on electricity industry skills and workforce planning. National Grid is also committed to providing a coordinated regional approach to jobs and skills opportunities. This commitment is broader than the individual project and separate to any commitments under the proposed development consent order for this Project. The socio-economic effects of the project are assessed in Chapter 15: Socio-economics, Recreation and Tourism of the	

Ref no.

Summary of matters raised

National Grid's response

Environmental Statement (document reference 6.15). Post construction job opportunities are limited given the nature of the development however we will still work with Local Authorities (including facilitating local partners) to understand what is important to them around skills and employment to ensure we leave a lasting positive legacy in the communities where we operate. With regards to a delivery mechanism, the above measures will be delivered as part of our community benefit package, which will look at both local and regional initiatives. This will be delivered outside the development consent process and is not a material consideration in the decision on the proposed Project or a matter to be secured as part of the DCO, as per the Community Funds for Transmission Infrastructure: Guidance (DESNZ, 2025).

Environmental impact

11-2.97

Concern about negative impact of the Project on the Green Belt(s) (generally - no location given)

To facilitate the Project, it would be necessary to route through the Metropolitan Green Belt. National Grid has considered the effects on the Green Belt and all of the options connecting into Tilbury identified in the Corridor and Preliminary Routeing and Siting Study (CPRSS) would result in new and upgraded infrastructure in the Green Belt.

The National Electricity Transmission System (NETS) transports energy from where it is generated to where it is used, in homes, schools, hospitals, businesses, and factories. Electricity networks are an established feature in our landscapes, taking energy across open countryside to towns and cities where it is needed. To ensure the national electricity network can transport energy efficiently there are numerous electricity transmission connections crossing Green Belts. Many of these connections are by way of overhead lines. By their nature, electricity transmission infrastructure (overhead lines) within the Green Belt is inevitable due to the need to transport energy around the country and the

Ref no.	Summary of matters raised	National Grid's response
		<p>need to avoid the most built-up areas around our towns and cities (Holford Rule Supplementary Note 1 - A summary of the Holford Rules is provided within Appendix I22 of this report).</p> <p>Some electricity infrastructure such as overhead lines, are considered to be engineering operations. By the nature of their design, and the sensitive siting, some of this infrastructure such as pylons and conductors may not be considered inappropriate development in the Green Belt as they do not conflict with Green Belt purposes and preserve openness. Although overhead lines may occupy long corridors within Green Belt, they involve little physical change to the land through which they pass and leave a large majority of the land beneath them free from development and therefore open.</p> <p>The Planning Statement (document reference 5.6), submitted with the application for development consent, includes an assessment of the Project against Green Belt planning policy (as contained in National Policy Statement EN-1 and the National Planning Policy Framework).</p>
11-2.98	Concern that the Project will impact ancient woodland (generally - no location given)	<p>Through routeing, siting and detailed design, National Grid has sought to reduce, as far as practicable, impacts on biodiversity and in particular features of high ecological value, such as ancient woodland. A standard 15 m buffer from construction activities has been applied where practicable. Potential direct and indirect impacts on each block of ancient woodland within the study area have been considered within the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8) and any necessary mitigation detailed to ensure no significant residual effects. An Ancient Woodland and Veteran Tree Strategy is included as part of the Outline Landscape and Ecological Management Plan (LEMP) (see Appendix B of the Outline LEMP (document reference 7.4)). The Outline LEMP (document reference 7.4)</p>

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-2.99	Concern that the Project will impact nature reserve / RSPB reserve / Special Protection Area (SPA)	<p>has been developed in consultation with relevant stakeholders including Natural England and local planning authorities.</p> <p>Through routeing, siting and design development, National Grid has sought to reduce, as far as practicable, impacts on biodiversity and in particular features of high ecological value, such as local wildlife sites (LWS), Royal Society for the Protection of Birds (RSPB) reserves and Special Protection Area (SPA's).</p> <p>Whilst there are no impacts on RSPB reserves, potential direct and indirect impacts on LWS's and SPA's within the study area have been considered within the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8). SPA's and the associated impact on birds has also been considered within the Habitats Regulations Assessment (HRA) Report (document reference 5.3).</p>	
11-2.100	Concern that the Project will result in a negative impact on the environment / countryside generally (generally - no location given)	<p>National Grid has sought to reduce, as far as practicable, impacts on the environment / countryside through routeing and siting and an ongoing iterative design process which has taken on board feedback at different stages of the Project. The iterative design process sought to avoid areas of highest concern, for examples through changes to the route alignment or changes to the method e.g. trenchless crossings. National Grid have engaged with a range of stakeholders (including Statutory Environmental Bodies (SEBs) and relevant local planning authorities) throughout the development of the Project design and environmental assessment work.</p> <p>National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project. The results of this assessment are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and</p>	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		<p>operation (and maintenance) of the Project and recommends appropriate mitigation measures to reduce potential effects.</p> <p>A number of mitigation measures have been incorporated into the Project design. Mitigation relevant to specific environmental topics (including Ecology and Biodiversity, Landscape and Visual and Historic Environment) are presented in the relevant ES chapters. The Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Code of Construction Practice (CoCP) (document reference 7.2) contain a list of relevant good practice measures to avoid or reduce risks to habitats and species.</p> <p>In addition to the EIA, National Grid has set itself a target of delivering 10% biodiversity net gain (BNG) with environmental and societal benefits on all construction projects, meaning that as a result of measures taken, the biodiversity rating of the area will be enhanced by 10% greater than prior to the construction of the Project. The BNG target for the Project is currently voluntary and aligned with our corporate sustainability commitment.</p>	
11-2.101	Concern about the impact of the Project on flooding (generally - no location given)	<p>A detailed Flood Risk Assessment (FRA) has been prepared (document reference 7.9) in addition to a flood warning and evacuation plan that details actions for flooding emergency during Project construction, as an appendix to the Outline Code of Construction Practice (CoCP) (document reference 7.2). The FRA has assessed a range of sources of flooding to the Project and arising from the Project, and a range of measures, including those embedded within the design, and good practice, have been secured to ensure that the Project is resilient to flooding, and does not contribute to an increase in flood risk from any source.</p>	
11-2.102	Concern about the impact of the Project on soils	<p>The impact of the Project on soil resources and agricultural land is assessed in full in Chapter 6: Agriculture and Soils of the Environmental</p>	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		Statement (ES) (document reference 6.6). Appendix C: Outline Soil Resource Plan of the Outline Code of Construction Practice (CoCP) (document reference 7.2) provides details of the approach to soil handling which would be adopted during construction by the Main Works Contractor(s) (a requirement in the draft Development Consent Order (DCO) (document reference 3.1)) for compliance with the CoCP(s) to protect and avoid damage to soil resources in line with the Defra Code and other good practice guidance.	
11-2.103	Concern about the impact of the project on drainage systems	The impact of the Project, during its construction and operation, on existing land drainage systems has been assessed within Chapter 12: Hydrology, Land Drainage and Flood Risk of the Environmental Statement (ES) (document reference 6.12) and within the Project's Flood Risk Assessment (document reference 7.9). These assessments have identified a range of control and management measures to prevent negative impacts on these systems, and local surface water flood risk. The measures have been developed in consultation with the Environment Agency and the Lead Local Flood Authority and are secured through inclusion within the Outline Code of Construction Practice (document reference 7.2).	
11-2.104	Concern about drainage issues due to the construction phase of the Project	The impact of the Project, during its construction, on existing land drainage systems has been assessed within Chapter 12: Hydrology, Land Drainage and Flood Risk of the Environmental Statement (ES) (document reference 6.12) and within the Project's Flood Risk Assessment (document reference 7.9). These assessments have identified a range of control and management measures to prevent negative impacts of drainage and local surface water flood risk. The measures have been developed in consultation with the Environment Agency and the Lead Local Flood Authority and are secured through inclusion within the Outline Code of Construction Practice (document reference 7.2). They include, for	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		example, commitments to managing runoff from construction work sites using a range of suitable Sustainable Drainage techniques and to reinstating existing land drainage features where these are impacted by the Project.	
11-2.105	Request that a soil consultant be appointed to undertake a soil analysis before and after construction	As stated in Appendix C: Outline Soil Resource Plan of the Outline Code of Construction Practice (document reference 7.2), the Main Works Contractor(s) will appoint a technical soil specialist who will be responsible for the provision of expert and technical soils advice throughout the earthworks and the subsequent site restoration activities. The Outline SRP will be evolved and subsequently further developed into the SRP considering, for example, detailed construction approaches. The SRP will be informed by both detailed Agricultural Land Classification (ALC) surveys undertaken to support the Environmental Impact Assessment (EIA), and soil resource surveys undertaken prior to commencement of development in areas which were not covered by the detailed ALC surveys.	
11-2.106	Request for information about how plans for biodiversity net gain will affect landowners	Although not currently mandatory for Nationally Significant Infrastructure Project (NSIP) applications, National Grid is committed to delivering 10% Biodiversity Net Gain (BNG) with wider environmental and societal benefits. The mitigation hierarchy is being adhered to with onsite mitigation incorporated into the Project Order Limits where practicable. In real terms this includes insitu replacement planting of baseline habitats, which will then be returned to the landowner. National Grid will undertake 5 years of post-planting monitoring for hedgerow and tree habitats as outlined within the Outline Landscape and Environmental Management Plan (LEMP) (document reference 7.4). Additional habitat creation and enhancement will only be undertaken at key 'Environmental Areas',	

Ref no.

Summary of matters raised

National Grid's response

around substation and cable sealing end compounds, that will be owned by National Grid in the long-term.

Any deficit in BNG units will then be delivered off-site alongside trusted providers. Off-site locations will be chosen based on National Grid's carefully considered selection criteria. The selection criteria will take into account the habitat type and condition required, the location in proximity to the Order Limits, the delivery partner's credibility and proven experience in delivery, cost per unit, timeframes and will also consider sites that provide added value in the form of additional societal and environmental benefits. Full details on the proposed BNG assessment and mitigation and enhancement approach are included within the Biodiversity Net Gain Report (document reference 7.1).

Financial compensation

11-2.107

Concern that the Project will devalue property / impact on property value (generally - no location given)

National Grid acknowledges that its proposals may cause concern to landowners. Diminishment of property value known as 'injurious affection' and any other appropriate heads of claim would be considered on an individual basis in accordance with current legislation. We would pursue a voluntary agreement with affected landowners, acquiring rights in accordance with our Land Rights Strategy (the strategy is subject to review). If a voluntary agreement cannot be reached, then the Compulsory Purchase Code allows for a claim of compensation for the loss that property owners may have suffered as a direct result of the retained part of your property ownership being worth less as a direct result of the works.

If there are any specific concerns about the devaluation of property, National Grid would advise seeking third party advice. or alternatively please contact the Project team:

Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-2.108	Request for adequate financial compensation for property value loss / Suggest that impacted individuals need to be compensated	<p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD.</p> <p>All affected landowners would be compensated for any temporary/permanent losses, and this would be dealt with on a case-by-case basis in line with the Compensation Code.</p> <p>If there are any specific concerns requiring compensation and how it would be assessed, please contact the Project team: Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.</p> <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD</p> <p>The Government has published its guidance on community funds for transmission infrastructure (DESNZ, 2025). National Grid is committed to working with Ofgem, industry partners, local communities and their representatives to ensure community benefits are delivered fairly and effectively, driving lasting, positive change for the people and places integral to our developing electricity network.</p> <p>Government has also announced its plans to introduce a bill discount scheme for households within 500 m of new infrastructure, which it proposes to introduce through the Planning and Infrastructure Bill. This is evolving government policy. Government expects this scheme to be in place by 2026 and we would share further details as they emerge.</p> <p>National Grid is committed to providing a coordinated local and regional approach to community benefits. This would be delivered outside the</p>	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-2.109	Request that National Grid purchase respondent's property / business (generally - no location given)	<p>development consent process, since this is not a material consideration in the decision on the proposed Project or a matter to be secured as part of the DCO, as per the Community Funds for Transmission Infrastructure: Guidance (DESNZ, 2025).</p> <p>National Grid is not required to purchase any properties or businesses as part of the Project.</p> <p>National Grid compensates landowners in line with the Compensation Code and any other relevant legislation.</p>	
Health, Safety & Wellbeing			
11-2.110	Concern that the Project may result in a negative impact on mental health / wellbeing	<p>National Grid recognises people may have concerns about the health effects of living close to an overhead line, and that the uncertainty whilst the proposals are developed may cause anxiety.</p> <p>We have sought to reduce potential effects on communities and residents through routeing and design. We have also sought to reduce concern or uncertainty about the proposals through making timely design decisions and engaging with the people and stakeholders throughout the development of the Project.</p> <p>The Project team will continue to engage with people potentially affected during progress of the Project, through regular communication including letters, phone calls and meetings. This would enable concerns to be raised and discussed at an early opportunity and provide a regular point of contact to respond to queries and concerns.</p> <p>We urge anyone with concerns to get in touch through the Norwich to Tilbury Freephone number, address or email throughout the progress of the Project:</p>	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-2.111	Concern about health risks associated with the Project / physical health risks associated with the Project	<p>Call our Community Helpline: 0800 915 2497 (Lines are open Monday to Friday 9:00am – 5:30pm)</p> <p>Email us: contact@n-t.nationalgrid.com</p> <p>Write to us: FREEPOST N TO T (No stamp or further address details are required)</p> <p>The UK has a carefully thought-out set of policies for protecting us all against Electric and Magnetic Fields (EMFs), the main component of which is exposure guidelines. Those exposure guidelines are set by independent scientific bodies and are based on decades-long studies into the effects of EMFs and ill health. After those decades of research, the weight of evidence is against there being any health risks of EMFs below the guideline limits. These policies are incorporated into the decision-making process for Development Consent in National Policy Statement (NPS) EN-5. It is National Grid's policy to ensure that all of its equipment comply fully with those exposure limits.</p> <p>Health considerations are given a high priority in the process by which we arrive at any proposals for new electricity circuits. Assessment of compliance with Electric and Magnetic Field (EMF) guidelines and policies is key to National Grid's approach. The UK has a carefully thought-out set of policies for managing EMFs. There have been over four decades of research looking into whether EMF can cause health effects and there are no established effects below the exposure limits. When designing our overhead lines, substations and underground cables design criteria, we ensure they would not exceed those exposure limits, even when operating at 100% capacity. Additionally, the precautionary measures which the Government have adopted, are applied to the design which ensure the EMFs reduce as quickly with distance as possible. Evidence of that compliance is presented in the Electric and Magnetic Field Compliance</p>	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-2.112	Concern that the Project poses a safety risk to aircraft (including balloons) / Concern that the Project will impact airfields (generally - no location given)	<p>Report (document reference 7.8) submitted as part of the Development Consent Order (DCO) application.</p> <p>National Grid takes this issue very seriously and look to authoritative and independent scientific organisations such as the World Health Organisation (WHO) and in the UK Health Security Agency (UKHSA) to review the worldwide body of scientific evidence on health. Important decisions on health are taken independently of industry, and National Grid have followed the guidance and policies adopted by Government on advice from their scientific experts. Each of these organisations have comprehensive reviews of EMF research available to view on their websites.</p> <p>National Grid recognises the need for the Project to be developed collaboratively alongside aviation stakeholders to identify, assess, and as appropriate mitigate, adverse impacts on aviation safety, in accordance with Government's Overarching National Policy Statement (NPS) EN-1.</p> <p>Our review of aerodromes potentially impacted by the Project identified 17 civil aerodromes (including two helipads) within 5 km of the preferred corridor and one military site (Wattisham Flying Station). We have also considered other airfields and flight activities where these have been identified through the 2022 and 2023 non-statutory, statutory consultation and targeted consultations including for ballooning and for model flying. As well as considering feedback, National Grid's aviation advisers (an independent aviation consultancy) have directly engaged with these parties (with National Grid present).</p> <p>A number of route alignment and pylon positioning changes have been made following consideration of feedback and in all but one case the assessment concludes that the airfields can continue to operate. In the</p>	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		<p>remaining case of a private airstrip near Little Burstead, we continue to liaise with the operator to identify an appropriate solution.</p> <p>Specifically in respect of Wattisham Flying Station our proposals position the alignment onto relatively lower ground (to remove the potential for interference with Instrument Landing System (ILS) radar) and adopt an alignment closer to the existing 132 kV overhead line and include replacing part of the 132 kV line south of Offton by underground cable to avoid a new overhead line corridor being introduced.</p> <p>We will continue to engage with relevant parties as appropriate.</p> <p>Further information on the assessment of airfields can be found in the Environmental Statement (ES) Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and ES Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).</p>	
11-2.113	Concern about construction and maintenance of the Project for health and safety of workers / operatives	Any form of construction has built in risk associated with different activities. All National Grid contractors undertake risk assessments and follow safe systems of work as per the specific Method Statement, regardless of technology type being constructed, which in turn will be independently reviewed and monitored by National Grid. This Risk Assessment and Method Statement (RAMS) will follow industry standard practice.	
Heritage			
11-2.114	Concern about archaeological impacts (generally - no location given)	Through routeing and siting National Grid has sought to reduce as far as practicable potential impacts on the historic environment. The impacts of the Project on the historic environment are assessed in Chapter 11: Historic Environment of the Environmental Statement (ES) (document reference 6.11). The assessment considers the potential impact on archaeology, historic buildings and historic landscapes and includes	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-2.115	Concern about negative impact on heritage / Suggest that the Project should be routed away from heritage buildings / listed buildings / historical site (generally - no location given)	<p>assessment of potential for physical impact, impact through change to setting that affects the value of a heritage asset and impact through indirect factors such as change in hydromorphology. The assessment is supported by walkover, setting and geophysical surveys, as documented in ES Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1) and ES Appendix 11.4: Geophysical Survey Results Report (document reference 6.11.A4).</p> <p>Archaeological trial trench evaluation has also been undertaken and is reported in ES Appendix 11.5: Trial Trenching Results Report (document reference 6.11.A5). In addition to the proposals in the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4), the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5) sets out appropriate mitigation for the historic environment. The Project has engaged with Historic England and relevant planning authorities on aspects relating to heritage, including appropriate mitigation measures and techniques and to take their views into account during Project development which are detailed in ES Chapter 11: Historic Environment (document reference 6.11).</p> <p>Through routeing and siting National Grid has sought to reduce as far as practicable potential impacts on the historic environment. The impacts of the Project on the historic environment are assessed in Environmental Statement (ES) Chapter 11: Historic Environment (document reference 6.11). The assessment considers the potential impact on archaeology, historic buildings and historic landscapes and includes assessment of potential for physical impact, impact through change to setting that affects the value of a heritage asset and impact through indirect factors such as change in hydromorphology. The assessment is supported by walkover, setting and geophysical surveys, as documented in ES Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1) and</p>	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		<p>ES Appendix 11.4: Geophysical Survey Results Report (document reference 6.11.A4). Archaeological trial trench evaluation has also been undertaken and is reported in ES Appendix 11.5: Trial Trenching Results Report (document reference 6.11.A5). In addition to the proposals in the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4), the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5) sets out appropriate mitigation for the historic environment. The Project has engaged with Historic England and relevant planning authorities on aspects relating to heritage, including appropriate mitigation measures and techniques and to take their views into account during Project development.</p>	
11-2.116	Criticism that archaeological trenches are not deep enough to reveal archaeological evidence	<p>The methodology and scope of the archaeological fieldwork has been set out in an Overarching Written Scheme of Investigation and then again at a site-specific level in several Site Specific WSIs. These documents were created and agreed in consultation with relevant stakeholders, including the Local Authority Planning Archaeologists. The depth of the trenches can vary from site to site, but all mechanical excavations are governed by the same principle: Mechanical excavation will cease when either natural geological deposits or the first archaeological horizon is exposed. Thereafter, hand excavation, as required, will commence.</p>	
Mitigation			
11-2.117	Suggest mitigation measures (generally - no location given)	<p>An Environmental Statement (ES) (document reference Volume 6: Environmental Statement) has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 ('the Infrastructure EIA Regulations'). The ES identifies and assesses the likely significant effects on the environment resulting</p>	

Ref no.	Summary of matters raised	National Grid's response
		<p>from the construction, operation and maintenance of the Project and recommends appropriate mitigation to reduce effects.</p> <p>Environmental mitigation measures have been defined within each environmental topic chapter and set out in relevant management documents submitted with the Development Consent Order (DCO) application, including the Outline Code of Construction Practice (CoCP) (document reference 7.2), the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5).</p>
11-2.118	Criticism of mitigation plans / measures (e.g. mitigation is not enough)	<p>An Environmental Statement (ES) (document reference Volume 6: Environmental Statement) has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 ('the Infrastructure EIA Regulations'). The ES identifies and assesses the likely significant effects on the environment resulting from the construction, operation (and maintenance) of the Project and recommends appropriate mitigation to reduce effects.</p> <p>In line with the approach set out in Environmental Statement (ES) Chapter 5: EIA Approach and Method (document reference 6.5) and in accordance with National Policy Statement EN-1 and EN-5 (Department for Energy Security and Net Zero, 2024) the mitigation hierarchy has been applied during the iterative design process to, in the first instance, avoid creating adverse effects, prevent, reduce and finally, where appropriate, offset adverse effects.</p> <p>Environmental appraisal has been an integral part of the Project design process since conception, which has meant that the Project has been able to avoid environmentally sensitive features as far as reasonably</p>

Ref no.

Summary of matters raised

National Grid's response

practicable. National Grid has also embedded mitigation measures into the design of the Project to avoid or reduce significant effects that may otherwise be experienced during construction and operation (and maintenance) of the Project. Embedded mitigation measures are those that are intrinsic to and built into the design of the Project. ES Chapter 4: Project Description (document reference 6.4) provides information on the key embedded mitigation measures included.

Standard measures, comprising management activities and techniques, would be implemented throughout construction of the Project to limit effects through adherence to good site practices. These are included in the Outline Code of Construction Practice (CoCP) (document reference 7.2). Each mitigation measure has been assigned a specific reference, and these are referenced in each environmental topic chapter (Chapters 6 to 16 (document references 6.1 - 6.16)).

Additional mitigation comprises measures over and above embedded and standard mitigation measures to reduce environmental effects. This includes, but is not limited to, mitigation required for protected species. Where applicable, additional mitigation measures are identified within Section 6 of each environmental topic chapter (Chapters 6 to 16 (document references 6.1 - 6.16)) within the ES (Volume 6 of the DCO application) and replicated in the Outline CoCP (document reference 7.2) which is secured through a Requirement in the draft DCO (document reference 3.1).

Mitigation measures are also set out in the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5). These

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		<p>management plans are secured through the draft DCO (document reference 3.1).</p> <p>Although not a statutory requirement for Development Consent Order projects submitted to the Planning Inspectorate prior to May 2026, National Grid has committed to deliver 10% Biodiversity Net Gain (BNG) with wider environmental and societal benefits on all construction projects requiring formal planning or consent, including Norwich to Tilbury. Further information is provided in the BNG Report (document reference 7.1).</p>	
Needs case			
11-2.119	Criticism of government green agenda / policy	<p>The UK Government is committed to achieving clean electricity by 2030 as set out in the Clean Power 2030 Action Plan (DESNZ, 2024). Clean Power 2030 is considered key to accelerating and reaching net zero by 2050. This represents the latest Government policy and position on clean energy.</p> <p>Under its transmission licence, National Grid has a statutory duty to respond to generation customers wanting to connect to the transmission network, whether this be for wind, solar, nuclear, tidal or from other forms of generation.</p>	
11-2.120	Criticism of needs case for the Project	<p>National Grid has a statutory duty to facilitate new connections and maintain a safe National Electricity Transmission System (NETS). The Project would facilitate the connection agreements that are in place with two offshore wind farm projects and an interconnector project based on their connection into a new East Anglia Connection Node (EACN) substation. The Project would also reinforce the local transmission network which currently does not have the capacity needed to reliably and securely transport all the energy that is likely to be connected in the future – driven by the Government's plan to increase offshore wind from the current 8.5 GW to 50 GW by 2030 to meet the increased demand.</p>	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-2.121	Oppose the Project as currently proposed (e.g. use of overhead lines and / or underground cables generally)	<p>The needs case has been reviewed at each stage of the Project's development.</p> <p>The UK Government is committed to achieving clean electricity by 2030 as set out in the Clean Power 2030 Action Plan (DESNZ, 2024). In November 2024, National Energy System Operator (NESO) published its independent analysis on how the Government can achieve its ambitious clean power goal. The report identifies the Project as critical to delivering a network which supports the clean power pathways.</p> <p>The technical need for the Project is included in the Strategic Options Backcheck Review (document reference 7.17) and a statement on need in relation to policy is included in the Planning Statement (document reference 5.6), both documents have been submitted with the application for development consent.</p> <p>National Grid notes the respondent's feedback. Strategic alternatives for the Project, including underground cables and offshore cables, have been considered and are set out in the published 2023 and 2024 Strategic Options Backcheck and Reviews (SOBR) (available on the Project website) and the 2025 Strategic Options Backcheck and Review (document reference 7.17). This sets out the need case for the Project and the reasoning why an onshore solution (including a mix of overhead lines and underground cable) has been taken forward.</p> <p>National Grid has a statutory duty to facilitate new connections and maintain a safe National Electricity Transmission System (NETS). The Project would facilitate the connection agreements that are in place with two offshore wind farm projects and an interconnector project based on their connection into a new East Anglia Connection Node (EACN) substation. The Project would also reinforce the local transmission network which currently does not have the capacity needed to reliably and securely transport all the energy that is likely to be connected in the future</p>	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		<p>– driven by the Government's plan to increase offshore wind from the current 8.5 GW to 50 GW by 2030 to meet the increased demand. This ambition has been emphasised in the National Energy System Operator's (NESO) Clean Power 2030 report published in November 2024. The needs case is reviewed at each critical stage of the Project's development and without a robust demonstrable need the Project would be revised or fall away. Currently, the contracted generation shows a clear need for the Project.</p>	
Primary Access Routes / Haul Road / Construction Compounds			
11-2.122	Concern about the location of the haul roads close to property leading to possible safety risks from theft and damage	National Grid notes the respondent's concerns around safety and security. Each of the access points and haul roads will be fenced and gated to prevent access. Details of this can be found on the detailed drawings within the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).	
11-2.123	Suggestion that steel track matting be used for haul roads instead of aggregate	National Grid notes the respondents feedback around the use of steel track matting for the haul roads instead of aggregates. This option has been considered as part of the project and where appropriate it has been proposed. However, due to the amount which would be required/available its use along the entire haul road was ruled out. It does remain an option which the contractor can use depending on the phasing of the works and ground conditions.	
11-2.124	Concern about the robustness of the membrane being used under aggregate for haul roads	National Grid notes the respondents feedback around the robustness of the membrane proposed. The specification of the membrane will be determined during detailed design by the contractor. They are required to select a project which is fit for the purpose. At the end of the Project, they will also be required to remove the membrane and stone haul road.	

Ref no.	Summary of matters raised	National Grid's response
11-2.125	Suggestion that aggregate used for haul roads should be new to avoid recycled aggregate bringing waste onto site	<p>National Grid notes the respondents feedback about using virgin aggregate. The Development Consent Order (DCO) proposes this approach.</p> <p>An Outline Site Waste Management Plan (SWMP) is appended to the Outline Code of Construction Practice (CoCP) (document reference 7.2) and provides the preliminary framework for the principles, standards and procedures that the Main Works Contractor(s) must implement to minimise and manage the potential environmental impacts of construction activities associated with the Project.</p> <p>Appendix B: Outline SWMP (see the Outline Code of Construction Practice (CoCP) (document reference 7.2)) sets out how the Project will seek to reduce the consumption of primary and raw materials and to encourage the use of secondary or recycled sources. It also sets out how the Project will follow the waste hierarchy by reducing waste produced first before considering alternatives such as reuse, recycling and repurposing.</p>
Project Finance/ Costs		
11-2.126	Criticism of using financial compensation to go ahead with the Project / Criticism of National Grid for using compulsory purchase orders / Criticism that insufficient evidence has been provided by National Grid to justify using compulsory purchase orders	<p>Compensation is available where prescribed by statute. Those directly affected by the Compulsory Acquisition or Temporary Possession Powers in the Order (i.e. the ordinarily landowners and those with other interests in the land required for the Project) would in principle be entitled to statutory compensation in accordance with the statutes known as 'the Compensation Code'.</p> <p>National Grid may have to rely on compulsory purchase powers as a last resort, if voluntary agreements for land rights cannot be reached with landowners. We will continue discussions with landowners and try to acquire land and rights over land through voluntary agreements with landowners. When submitting the Development Consent Order (DCO) application, National Grid will also apply for compulsory purchase powers.</p>

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-2.127	Criticism that too much weight has been given to keeping the cost of the Project low / Criticism that National Grid have gone with the cheapest option (e.g. initial costs) / Criticism that the project only benefits National Grid's bottom line / shareholders	<p>This would ensure that, if the DCO is granted, National Grid would be able to obtain all land rights needed to construct and subsequently operate the new electricity transmission assets in a reasonable timescale where voluntary acquisition of land or rights is ultimately unsuccessful.</p> <p>National Grid notes the respondent's feedback. Cost is one of the factors that needs to be considered in making decisions on the Project as guided by our duties under the Electricity Act 1989. The relevant National Policy Statement (NPS) EN-5 makes it clear that the Government considers overhead lines to be appropriate and acceptable in most instances. However, the Government is aware that overhead lines may not be appropriate in particularly sensitive areas. The process of appraising different identified options is undertaken using guidance (National Grid's Approach to Consenting). Its aim is to ensure that decisions regarding the project's design (route, location, or technology option) are based on a full understanding and balance of the technical, socio-economic, environmental, and cost implications of each option. Once all identified options have been appraised, the option or options that best meet National Grid's statutory duties and obligations are selected as the preferred option or options. These duties include balancing the need to be economic and efficient, which includes keeping costs down in the interests of the bill-paying consumers to whom the costs are eventually passed, with a duty to have regard to preserving amenity, which includes the natural environment, cultural heritage, landscape, and visual quality. The consideration of cost within the decision-making process is therefore one of our statutory duties and is not something that we could make representation to the Office of Gas and Electricity Markets (Ofgem) to waive.</p>	
11-2.128	Criticism of the costings provided by National Grid for the Project and alternative options / Criticism that the	National Grid notes the respondent's feedback. Construction costs are included in the overall estimated costs of each strategic option. This is set	

Ref no.	Summary of matters raised	National Grid's response
	cost savings for alternative options (e.g. an integrated offshore ring main / use of High Voltage Direct Current (HVDC) underground cables) has not been considered / Criticism that there are cheaper alternatives to the Project that National Grid has not considered	<p>out in the 2025 Strategic Options Backcheck Report (SOBR) (document reference 7.17). This document takes account of any new cost or technology information, for instance along with any other changes in the planning and regulatory framework. Where the cost of more minor elements of each strategic option are unlikely to distinguish between options, these are not necessarily included. We will continue to engage with the government and our regulators regarding policy and costs for new infrastructure and will adjust our approach if necessary.</p> <p>National Grid is constantly looking into new innovations and investigating alternative technology types. These are explored and assessed for suitability. Alternative technologies were investigated for the Project and are contained within the 2025 SOBR. These alternative technologies included an offshore connection using Direct Current (DC) technology, and various onshore connection options including: increasing operational voltages on existing network to above 400 kV; Alternating Current (AC) overhead lines (established technology); alternative pylon types; AC underground technology; High Voltage Direct Current (HVDC) overhead line and underground cables; and Gas Insulated Line (GIL).</p> <p>Currently, overhead lines offer the most economic and efficient solution to transmit electricity over long distances.</p>
11-2.129	Request for transparent costings for Project and alternative options / Criticism that transparent costings for the Project and alternative options have not been provided	<p>National Grid notes the respondent's feedback. Construction costs are included in the overall estimated costs of each strategic option. This was set out in the 2024 Strategic Options Backcheck and Review (SOBR) (available on the Project website) and is set out in the 2025 Strategic Options Backcheck and Review (document reference 7.17). This document takes account of any new cost or technology information, for instance along with any other changes in the planning and regulatory framework. Where the cost of more minor elements of each strategic option are unlikely to distinguish between options, these are not</p>

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-2.130	Criticism that impact on property value / private loss has not been included in the costings provided for different options by National Grid for the consultation / Criticism that National Grid have not provided analysis on the impact of the Project and alternatives on house prices	<p>necessarily included. We will continue to engage with the government and our regulators regarding policy and costs for new infrastructure and will adjust our approach if necessary.</p> <p>Potential impact on property prices is not a material planning consideration for the purposes of a DCO application. Separate to this point, the Secretary of State has asked that the DCO application include an assessment of the likely significant environmental effects in the form of potential impacts on property prices. The ES contains an assessment on this. It concluded that there is no evidence of any significant environmental effects on house prices as a result of the Project. Although not part of the Environmental Impact Assessment process it is relevant to observe that any impact of the Project on residential properties are potentially capable of being dealt with through statutory nuisance or compulsory purchase compensation regimes (subject to the requisite criteria being met).</p>	
11-2.131	Concern about the cost to the consumer for financing the Project / Request for information on the cost of Project for consumers	National Grid is funded by a price control mechanism which is agreed with and set by the Office of Gas and Electricity Markets (Ofgem). We pay up front the cost to build a new power transmission line. The cost is then gradually passed on to customers through their electricity bills over the next 40 years or so. The funding for these up-front costs comes from our shareholders and the institutions that lend us money. Across all our investments in our vital infrastructure, this amounts to many billions of pounds. They invest in us because they expect that we will make a sufficient profit to provide an appropriate return on their investment and eventually pay them back. This brings a major benefit to electricity bill payers as it allows the recovery of the cost of our investment to be spread out over many years, rather than having a spike in electricity bills when we	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-2.132	Criticism that impact of the Project (e.g. impact on the environment, impact on residents, impact on traffic, impact on tourism, impact on health/mental health, impact on businesses) has not been included in the costings provided for different options by National Grid for the consultation / Suggest that impact of the Project (e.g. impact on the environment, impact on residents, impact on traffic, impact on tourism, impact on health/mental health, impact on businesses) is included in the costings	<p>build a large new transmission connection.</p> <p>In response to a request by Essex County Council on behalf of all host Local Planning Authorities, we agreed to fund an independent review of cost options. This review has been completed and can be found on the Project website.</p> <p>The factors listed have, where practicable, been considered by the Project. The figures National Grid have presented as expected costings for the Project are reflective of the final costs for other similar projects which included wider costs and impacts of proposals such as impacts of traffic and tourism.</p> <p>As we developed our proposals, we considered how to mitigate any potential impacts that our proposals might have and welcomed feedback on this at our consultation. Where necessary, we have amended our proposals in light of this feedback. Within the Environmental Statement (ES) (document reference Volume 6: Environmental Statement), we have outlined potential environmental, social economic, and health impacts as well as mitigation.</p>	
11-2.133	Criticism that too much money is being / has been spent on consultation	<p>Public consultation is important to inform people of the proposals and to allow stakeholders an opportunity to provide feedback and influence the plans.</p> <p>National Grid ensured that its consultation was as informative as possible to provide local residents with accurate and representative information on our proposals. This included having our documents, interactive map, and 3D visualisation tools available at all of our Public Information Events. This meant that people could interact with our Project and have a full understanding of what we are proposing. We also provided both digital and printed materials to allow people the choice of how to interact with the consultation.</p>	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-2.134	Request payment for LIQs (£150 per LIQ completed)	<p>National Grid does make a one off payment for the returning of a completed Land Interest Question (LIQ) form. If a landowner believes that they have not received payment for a completed form, they should make contact with the Projects lands team:</p> <p>Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.</p> <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD</p>	
11-2.135	Concern that certain mortgage lenders refuse to consider properties within approximately 100 m of pylons or high-voltage lines	<p>Potential impact on property prices is not a material planning consideration for the purposes of a DCO application. Separate to this point, the Secretary of State has asked that the DCO application include an assessment of the likely significant environmental effects in the form of potential impacts on property prices. The ES contains an assessment on this. It concluded that there is no evidence of any significant environmental effects on house prices as a result of the Project. Although not part of the Environmental Impact Assessment process it is relevant to observe that any impact of the Project on residential properties are potentially capable of being dealt with through statutory nuisance or compulsory purchase compensation regimes (subject to the requisite criteria being met).</p>	
11-2.136	Concern that the Project will increase insurance premiums for local residents	<p>National Grid notes the respondent's feedback. If there are any specific concerns requiring compensation and how it would be assessed, please contact the Project lands team:</p> <p>Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.</p>	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD	
Project History			
11-2.137	Concern about impact of the Project on future generations / Suggest that National Grid need to consider the sustainability / legacy of the Project for the future	<p>In terms of the benefits to future generations, sustainability and the legacy of the Project, the need case refers to the British Energy Security Strategy which sets targets for the connection of up to 50 GW of offshore wind by 2030 and is a key part of a strategy for secure, clean and affordable British energy for the long term. The key role of National Grid's transmission system is to connect where energy is generated to where it is needed. This means that more homes and businesses can be powered by renewable and sustainable energy sources to meet the needs of present and future generations.</p> <p>National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project. The results of this assessment are provided in the Environmental Statement (ES) (Volume 6) that accompanies the application for development consent. The ES identifies and assesses the likely significant effects on the environment resulting from the Project and recommends appropriate mitigation measures (in consultation with relevant stakeholders) to reduce potential effects.</p>	
Requests			
11-2.138	Request for further impact surveys in this section (generally - no location given)	National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project. The assessment is informed by a suite of field surveys and desk studies and results are presented in an Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the application for development consent. The ES identifies and assesses the likely significant effects on the environment resulting	

Ref no. Summary of matters raised National Grid's response

from the construction and operation (and maintenance) of the Project and recommends appropriate mitigation measures to reduce potential adverse impacts.

The scope of the EIA is included in the Scoping Report (document reference 6.19) which was submitted to the Planning Inspectorate in November 2022 and their Scoping Opinion (document reference 6.20) received in December 2022. This provided the opportunity for statutory bodies to comment on the scope of the EIA which included our approach on study areas, data collection and baseline conditions for a range of environmental topics. We also discussed and agreed survey scope with stakeholders (including Statutory Environmental Bodies and Local Planning Authorities) following the Scoping Opinion (document reference 6.20) to ensure a robust baseline assessment.

National Grid has prepared an Outline Code of Construction Practice (CoCP) (document reference 7.2) which sets out the required mitigation measures and environmental commitments that would be implemented during the construction phase of the Project to avoid or reduce potential effects of the Project on the environment, including commitments to undertake further surveys.

11-2.139 Request for further impact surveys

There is a staged approach to the process of collection of environmental data as any major project develops. National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project. The assessment is informed by a suite of field surveys and desk studies and results are presented in an Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the application for development consent. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation

Ref no.	Summary of matters raised	National Grid's response
		<p>of the Project and recommends appropriate mitigation measures to reduce potential adverse impacts.</p> <p>The scope of the EIA is included in the Scoping Report (document reference 6.19) which was submitted to the Planning Inspectorate in November 2022 and their Scoping Opinion (document reference 6.20) received in December 2022. This provided the opportunity for statutory bodies to comment on the scope of the EIA which included our approach on study areas, data collection and baseline conditions for a range of environmental topics. We also discussed and agreed survey scope with stakeholders (including Statutory Environmental Bodies and Local Planning Authorities) following the Scoping Opinion (document reference 6.20) to ensure a robust baseline assessment.</p> <p>National Grid has prepared an Outline Code of Construction Practice (CoCP) (document reference 7.2) which sets out the required mitigation measures and environmental commitments that will be implemented during the construction phase of the Project to avoid or reduce potential effects of the Project on the environment, including commitments to undertake further surveys.</p>
11-2.140	Request for further information / Question about the Project	National Grid notes the respondent's feedback. All information about the Project can be found on the Project website. We will keep the public updated throughout the Development Consent Order (DCO) process.
11-2.141	Concern regarding the source of construction materials for the Project / Request for National Grid to confirm the source of construction materials for the Project (e.g. are all of the construction materials being sourced from the UK)	National Grid and its delivery partners would comply with procurement laws and the required process to secure materials. The suppliers would be selected across a number of deciding factors such as market availability and cost. There will be no commitment to only source materials from the UK on this Project.

Ref no. Summary of matters raised National Grid's response

Technology/ Operations

11-2.142	Concern about ongoing maintenance for the Project (e.g. disruption / cost)	<p>National Grid has thousands of kilometers of overhead lines, underground cable and supporting infrastructure such as Cable Sealing End (CSE) compounds. We have well established and standardised practices to undertake maintenance works on these assets. By the implementation and adherence to such practices, cost and time efficiencies across the network have been identified and maximised where possible.</p> <p>The typical lifespan of an overhead line and the underground cable elements of a project would be approximately 40 years, depending on use and location.</p> <p>Maintenance inspections of overhead line routes are typically undertaken on an annual basis by ground based operatives walking through the route identifying and recording any faults or defects. In addition a helicopter or small aircraft / drone equipped with a high definition camera is used to monitor their condition on a regular basis.</p> <p>Additionally, thermal images are taken every six to eight years, which capture high-definition imagery of high resistance joints or defects on each pylon.</p> <p>To supplement the aerial photography and inspections, routine ground level walking inspections are also undertaken.</p> <p>The CSE compounds would contain equipment that can be accessed remotely to monitor the condition of the underground cabling.</p>
11-2.143	Concern that overhead lines are vulnerable to malicious activities (e.g. terrorism / warfare / sabotage)	<p>Each pylon on the National Grid Transmission System is risk assessed in relation to vulnerability of unauthorised access. To reduce unauthorised access/sabotage from the ground as far as practicable, we install anti-climb measures such as barb-wiring to the bases of pylons in order to prevent access by members of the public. Clear signage is installed warning of the dangers of high voltages and regular inspections are</p>

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-2.144	Concern that overhead lines are vulnerable to weather events	<p>undertaken depending of the level of vulnerability. However, the possibility of interference remains as pylons are typically situated in isolated locations where constant surveillance is impractical.</p> <p>We also undertake regular inspections of the overhead line using thermal imaging to assess damage to the overhead line from weather or other causes. This means low level damage caused would be identified and repaired prior to failure of the line.</p> <p>National Grid's 400 kV overhead lines are designed to remain robust and operational in the worst weather conditions in the UK. Although overhead lines are more susceptible to disruption from lightning and high winds, they are also comparatively easy and cost-effective to repair and maintain compared to underground cables.</p> <p>The majority of the existing National Grid transmission network is constructed from overhead lines, these are a demonstrated and reliable form of electricity transmission in the UK. They are designed to meet current design and safety standards and to operate in a range of typical and abnormal weather conditions found in the UK. Standards are regularly reviewed and any adjustments to these standards (for example with regards to climate change) would need to be applied to the entire network. At this stage no known changes are required for a new overhead line Project.</p> <p>Unforeseen events of sufficient severity to cause damage to infrastructure are very rare in the UK but do occur. Overhead lines could be subject to adverse weather conditions such as high wind speeds and lightning strikes.</p> <p>In the unlikely event an overhead line was to be damaged, a network wide monitoring system would detect the fault almost immediately and the circuit would be tripped, and the live current stopped.</p> <p>At the point of repairing any damage, overhead lines are comparatively</p>	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-2.145	Criticism that pylons / overhead lines are an outdated / inefficient technology	<p>easier and more cost-effective to repair and maintain than alternative transmission technology.</p> <p>We also undertake regular ground based inspections of the overhead line using thermal imaging to assess damage to the overhead line and utilise helicopters and drones equipment with high definition and thermal imaging cameras to assess damage to the overhead line from weather or other causes. This means low level damage caused would be identified and repaired prior to failure of the line.</p> <p>The respondent's view is noted, however National Grid must work within the confines of the relevant policy which is the current National Policy Statement (NPS) EN-5, this policy makes clear that 'the Government's position that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or Area of Outstanding Beauty (AONB))'.</p> <p>The majority of the existing National Grid transmission network is constructed from pylons and overhead lines, these are a demonstrated and reliable form of electricity transmission in the UK. They are designed to meet current design and safety standards and to operate in a range of typical and abnormal weather conditions found in the UK. Standards are regularly reviewed and any adjustments to these standards (for example with regards to climate change) would need to be applied to the entire network.</p> <p>National Grid is constantly looking into new innovations and investigating alternative technology types. These are explored and assessed for suitability. Alternative technologies were investigated for the Project, these included an offshore connection using Direct Current (DC) technology, and various onshore connection options including: increasing operational</p>	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		<p>voltages on existing network to above 400 kV; Alternating Current (AC) overhead lines (established technology); alternative pylon types; AC underground technology; High Voltage Direct Current (HVDC) overhead line and underground cables; and Gas Insulated Line (GIL). Currently, overhead lines offer the most economic and efficient solution to transmit electricity over long distances.</p>	
11-2.146	<p>Criticism that overhead lines are noisy in operation / Concern about noise impacts from overhead lines/Concern about vibration from overhead lines</p>	<p>National Grid has completed the Environmental Impact Assessment (EIA) for the Project. The results of this assessment are provided in the Environmental Statement (ES) that accompanies the Development Consent Order (DCO) application. The ES identifies and assesses the likely significant effects from the Project and recommends appropriate mitigation measures (in consultation with relevant stakeholders) to reduce potential effects.</p> <p>Operational noise from overhead lines is scoped out of the ES (Volume 6 of the DCO application), in accordance with the Scoping Opinion (document reference 6.20), on the basis that a low noise conductor system is proposed. However, information on noise from overhead lines is provided in ES Appendix 14.5: Operational Noise from Overhead Lines (Informative) (document reference 6.14.A5), which shows that overhead line noise screens out from further assessment at the first tier.</p> <p>The proposed overhead line conductor design is a relatively quiet conductor that National Grid uses for overhead lines operating at 400 kV. The proposed 'overhead line design ensures that the electrical stresses on the conductors/wires remain as low as practicable. Pylon fittings, such as insulators, dampers, spacers, and clamps, are designed and procured in accordance with a series of National Grid Technical Specifications to reduce the potential for audible noise and wind-induced noise to occur. Operational noise is not likely to be significant at nearby sensitive receptors under any weather conditions.</p>	

Ref no.	Summary of matters raised	National Grid's response
11-2.147	Concern that the proposed cables can catch fire in temperatures over 30 degrees (not specified celcius or fahrenheit)	<p>The designed operating temperature for the All Aluminium Alloy Conductor (AAAC) on the Norwich – Tilbury overhead line is 75 degrees Celsius.</p> <p>A maximum continuous operating temperature of this conductor type is 90 degrees Celsius. Therefore, the risk of overhead line cables catching fire due to high temperatures is deemed to be very low.</p>
11-2.148	<p>Criticism of the SoundPlan software used to model noise impact as it does not account for resonant amplification that is associated with pylon construction (e.g. this can increase noise levels by 10-20dB or more) / Criticism of the lack of indication that this specific implementation the SoundPlan model has been configured to account for the increased transmissibility of sound as a function of the height of the pylon, meaning the SOAEL distances quoted for certain of the activities listed in tables A14.1.3 of the 2024 PEIR are likely to be significantly understated as are the buffer distances around each pylon indicated in figure 14.2 of the 2024 PEIR / Suggest this information is reviewed and corrected and the cost of additional mitigation measures quantified / Criticism that the 2024 PEIR is flawed in that it takes no account of the noise generated from specific ancillary construction such as the scaffolding towers required to support cables at road crossings as these are significantly closer to properties than the pylons themselves / Suggest any analysis of</p>	<p>Construction noise has not been modelled in SoundPlan but has been calculated following the methodology described in British Standard 5228:2009+A1:2014 Code of practice for noise and vibration control on construction and open sites – Part 1: Noise.</p> <p>The assessment presented in the Preliminary Environmental Information Assessment Report (PEIR) and in the ES Chapter 14: Noise and Vibration (document reference 6.14) and ES Figure 14.2 Construction Noise Assessment Outputs (document reference 6.14.F2) considers the worst-case activities (presented in associated ES Appendix 14.1 Construction Noise and Vibration Data (document reference 6.14.A1).</p> <p>With regards to pylon construction, the worst-case activity is from potential piling activities associated with pylon foundation construction. The assessment presented in Chapter 14: Noise and Vibration of the ES (document reference 6.14) also considers potential noise impacts from the construction of crossing protection. No significant adverse effects are expected from these activities where Best Practicable Means (BPM) are employed to reduce potential effects.</p> <p>With regards to pylon and scaffolding assembly, there is potential for 'metal on metal' sound during construction. However, this will be minimised through the use of good handling techniques as part of BPM detailed in the Outline Noise and Vibration Management Plan (NVMP) which is appended to the Outline Code of Construction Practice (CoCP)</p>

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
	the noise produced in construction of these scaffolding towers also takes into account the high degree of resonant amplification in such structures and the additional cost of extra mitigation measures are quantified	(document reference 7.2). Specific construction noise mitigation measures, including those in relation to proposed scaffolding towards for crossing protection locations, will be determined by the Main Works Contractor(s) following their detailed assessment, and the NVMP will be updated accordingly.	
11-2.149	Suggest the Project uses TS Conductors (e.g to allow for the tripling of capacity and halving the line loss on existing pylons)	National Grid is monitoring how this technology develops in the future, but for the moment it is not a deployable technology that could be considered for any current projects. Superconductor technology remains in its infancy and has only been trialled in a limited number of circumstances globally. The technology is not at a level of development maturity where it can provide the capacity, voltage level or distance required for this Project.	
Tourism			
11-2.150	Concern about impact of the Project on tourism (generally - no location given)	<p>Through routeing and siting, National Grid has sought to avoid, as far as practicable, locations important for leisure and tourism.</p> <p>Environmental Statement (ES) Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) presents an assessment on the potential impacts on tourism economy (during construction) and tourism assets (during construction and operation), including visitor accommodations. As part of this assessment, a range of measures have been considered throughout the construction phase of the Project to minimise disruption on</p> <p>tourism. These include: traffic management, signage and routeing measures. These are identified within the ES Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15), the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).</p>	

Ref no.	Summary of matters raised	National Grid's response	
Visual impact			
11-2.151	Concern about cumulative visual impact of the Project alongside existing overhead lines / concern about wirescape (generally - no location given)	<p>National Grid notes the feedback received and has taken it into consideration as part of the iterative design process.</p> <p>National Grid has liaised with UK Power Networks to understand opportunities for 132 kV network rationalisation. The Project includes proposals to replace certain sections of 132 kV overhead line connection with underground cable to rationalise the network and reduce potential for cumulative wirescape effects.</p> <p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the Environmental Impact Assessment (EIA). Existing infrastructure (such as existing overhead lines) has formed part of the baseline environment for the Project to be assessed against, to identify if significant landscape and / or visual effects are likely to arise. The LVIA presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) sets out potential landscape and visual effects. The rationalisation of the existing 132 kV network in some areas forms part of the embedded landscape mitigation, as set out in Chapter 13.</p> <p>The findings and conclusions of the LVIA and other topics assessments have been considered within the Cumulative Impact Assessment, presented in ES Chapter 17: Cumulative Effects (document reference 6.17), lists the developments as part of the cumulative assessment. This chapter considers the landscape and visual effects of the Project cumulatively with other proposed developments that are being progressed.</p>	
11-2.152	Concern that the Project will be unsightly / visually intrusive (including overhead lines, CSE compounds and substations) / Concern that the Project will cause a	National Policy Statement (NPS) EN-5 makes it clear that the Government considers overhead lines to be appropriate and acceptable in most instances, although it recognises that there may be, at particularly	

Ref no.

Summary of matters raised

National Grid's response

negative impact on views (generally - no location given)

sensitive locations, potential adverse landscape and visual impacts of an overhead line that make it inconsistent with our duties and relevant planning policy.

The Dedham Vale National Landscape (previously an Area of Outstanding Natural Beauty (AONB)) designation is one such location where underground cable technology is proposed with the extent of underground cabling extending beyond the boundary in response to the potential for the Project to affect the National Landscape. Our proposals include a total of approximately 20 km of underground cable through and in the vicinity of the Dedham Vale National Landscape, including a section at Great Horkesley to reduce the changes in views and setting of the National Landscape from within and adjacent to its designated boundary.

Underground cabling is also proposed for a short section of 400 kV overhead line crossing near Fairstead.

Cable Sealing End (CSE) compounds are required to facilitate sections of underground cable, and the proposed East Anglia Connection Node (EACN) substation is required to connect customers and the proposed Tilbury North Substation is required to connect the Project into the existing Tilbury Substation. These components have been carefully sited taking into consideration Horlock Rules including the potential for landscape and visual effects.

The higher cost of underground cables to bill paying consumers, and the environmental implications of installing underground cables and maintaining them

at locations outside the Dedham Vale National Landscape, are not considered to be justifiable in the context of national policy or National Grid's statutory duties, which include the need to be economical and efficient.

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		A Landscape and Visual Impact Assessment (LVIA), presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13), has been undertaken as part of the Environmental Impact Assessment (EIA). The LVIA includes an assessment on both landscape character and visual amenity and identifies areas for potential mitigation planting around substations and CSE compounds to reduce visual impacts to local receptors. The Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) includes details regarding the planting proposals.	
Wildlife/ Ecology impact			
11-2.153	Concern about impact of the Project on flightpaths for birds (generally - no location given)	Chapter 8: Ecology and Biodiversity of the Environmental Statement (ES) (document reference 6.8) considers potential impacts during the construction and operational phase of the Project on birds. Bird surveys have been undertaken across the route between 2022-2024 to determine an accurate baseline value, the scope of which has been agreed with Natural England and Local Planning Authorities. The potential for bird collision risk impact during the operational phase has been assessed within the ES and Habitats Regulations Assessment (HRA) Report (document reference 5.3) and agreed with Natural England. Any adverse impacts identified have been minimised as far as possible, where practicable, and mitigation in the form of bird diverters proposed.	
11-2.154	Concern about impact of the Project on birds	Chapter 8: Ecology and Biodiversity of the Environmental Statement (ES) (document reference 6.8) considers potential impacts during the construction and operational phase of the Project on birds. Bird surveys have been undertaken across the route between 2022-2024 to determine an accurate baseline value, the scope of which has been agreed with Natural England and Local Planning Authorities. The potential for bird collision risk impact during the operational phase has been assessed

		<p>within the ES and Habitats Regulations Assessment (HRA) Report (document reference 5.3) and agreed with Natural England. Any adverse impacts identified have been minimised as far as possible, where practicable, and mitigation in the form of bird diverters proposed.</p> <p>It is noted that birds are a mobile species, and it is likely that active nests for common and widespread species may be encountered during the construction phase. Precautionary working methods for breeding birds are included within the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the Outline Landscape Ecological Management Plan (LEMP) (document reference 7.4) accompanying the Development Consent Order (DCO) application.</p>
11-2.155	Concern that the Project will result in a negative impact on species (protected status not specified)	<p>Through routeing, siting and detailed design National Grid has sought to reduce, as far as practicable, potential impacts on biodiversity including protected species. The design process has taken account of existing biodiversity, the natural environment and, where practicable, has sought to reduce impacts on areas of ecological sensitivity including protected species and their associated habitats, through avoidance or mitigation. A comprehensive survey effort for a range of protected species was completed over the 2023 – 2024 period. Chapter 8: Ecology and Biodiversity of the Environmental Statement (ES) (document reference 6.8)</p> <p>assesses the effects on protected species based on this baseline information and where/if required appropriate mitigation measures are detailed. Suitable mitigation for protected species has been developed in consultation with Natural England to ensure legal compliance and best practice guidelines are adhered to. Where necessary, draft licence applications have been drafted and National Grid is in the process of agreeing the detail within the licence documents with Natural England, in order to obtain the relevant Letters of No Impediment (LoNI). Mitigation for</p>

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-2.156	Concern that the Project will result in a negative impact on protected species	<p>non-licensable protected species has been included within the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4).</p> <p>Through routeing, siting and detailed design, National Grid has sought to reduce, as far as practicable, potential impacts on biodiversity including protected species. The design process has taken account of existing biodiversity, the natural environment and, where practicable, has sought to reduce impacts on areas of ecological sensitivity including protected species and their associated habitats, through avoidance or mitigation. A comprehensive survey effort for a range of protected species was completed over the 2023 – 2024 period. Chapter 8: Ecology and Biodiversity of the Environmental Statement (ES) (document reference 6.8) assesses the effects on protected species based on this baseline information and where/if required appropriate mitigation measures are detailed. Suitable mitigation for protected species has been developed in consultation with Natural England to ensure legal compliance and best practice guidelines are adhered to. Where necessary, draft licence applications have been drafted and National Grid is in the process of agreeing the detail within the licence documents with Natural England, in order to obtain the relevant Letters of No Impediment (LoNI). Mitigation for non-licensable protected species has been included within the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4).</p>	
11-2.157	Concern that the Project will have a negative impact on bees / Bees will be unable to navigate under high voltage overhead lines	As well as possible effects on humans, possible effects of Electric and Magnetic Fields (EMFs) on various animals have been studied a number of times. No proven effects of EMFs have been found in any species at levels below the guidelines. This is confirmed in National Policy Statement (NPS) EN-5 which states: " <i>There is little evidence that exposure of crops,</i>	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-2.158	Concern that the Project will result in a negative impact on flora / plants / woodlands / hedgerows	<p><i>farm animals or natural ecosystems to transmission line EMFs has any agriculturally significant consequences."</i></p> <p>Beehives can become charged if directly under an overhead line because of the electric field it produces. For existing overhead lines, this can be eliminated by screening or earthing the hive, but for new overhead lines, embedded design measures and careful routeing will avoid any potential effects. There does not seem to be evidence of EMFs adversely affecting bees directly. In the United States of America, the strip of land along power lines has been shown to be particularly attractive to bees, with these areas being utilised by commercial bee farms. Additionally, National Grid has worked with the British Beekeeping Association to establish hives around our sites, including high voltage substations, which have thrived.</p> <p>Through routeing, siting and detailed design, National Grid has sought to reduce, as far as practicable, potential impacts on biodiversity including priority grassland, wetland, woodland, and hedgerow habitats. The design process has taken account of existing biodiversity, the natural environment and, where practicable, seeks to reduce impacts on areas of ecological sensitivity, through avoidance or mitigation.</p> <p>Chapter 8: Ecology and Biodiversity of the Environmental Statement (ES) (document reference 6.8) assesses the effects on important ecological receptors (which includes grasslands, wetlands, woodlands and hedgerows).</p> <p>As part of the Environmental Impact Assessment (EIA) process for the Project, a suite of ecological surveys has been to be undertaken. The findings of which inform the design and approach to mitigation.</p> <p>The Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Code of Construction Practice</p>	

Ref no.	Summary of matters raised	National Grid's response
		<p>(CoCP) (document reference 7.2) contain a list of relevant good practice measures to avoid or reduce impacts on valuable habitats.</p> <p>The Environment Act 2021 introduces a mandatory requirement for 10% Biodiversity Net Gain (BNG) for new Development Consent Order (DCO) developments (which is not yet in force and not expected until May 2026). National Grid</p> <p>have committed to delivering 10% BNG with environmental and societal benefits on all construction projects. The BNG target for the Project is currently voluntary and aligned with our corporate sustainability commitment.</p> <p>As well as seeking to avoid and minimise impacts to nature, the Project considers the land required for mitigation, compensation and enhancement that can deliver BNG and wider environmental benefits. This will require delivery of offsite Biodiversity Units via habitat creation or enhancement actions in strategic areas, and we will consider all offsite options that are available to us.</p>
11-2.159	Concern that the Project will result in a negative impact on rivers / other bodies of water	<p>Through routeing, siting and detailed design National Grid has sought to reduce, as far as practicable, potential impacts on biodiversity including river ecology. The design process has taken account of existing biodiversity, the natural environment and, where practicable, has sought to reduce impacts on areas of ecological sensitivity such as river corridor habitats, through avoidance or mitigation. The same approach has been taken to account for rivers and their floodplains, seeking to avoid or reduce the footprint of the Project within floodplains.</p> <p>As part of the Environmental Impact Assessment (EIA) process for the Project, a suite of ecological surveys has been undertaken, including along river corridors. The data has informed the assessment of effects on biodiversity, hydromorphology, water quality and flood risk presented in</p>

Ref no.	Summary of matters raised	National Grid's response
		<p>the Environmental Statement (ES), Chapter 8: Ecology and Biodiversity (document reference 6.8) and ES Chapter 12: Hydrology, Land Drainage and Flood Risk (document reference 6.12) and the Water Framework Directive Assessment (document reference 7.10).</p> <p>Further, the Project has engaged with Natural England, the Environment Agency and Local Planning Authorities on aspects relating to river ecology, water quality and flood risk, and appropriate mitigation measures and techniques have been secured, as detailed in the Outline Code of Construction Practice (CoCP) (document reference 7.2).</p> <p>The Environment Act 2021 introduces a mandatory requirement for 10% Biodiversity Net Gain (BNG) for new Development Consent Order developments (which is not yet in force and expected May 2026). National Grid have committed to deliver 10% BNG with environmental and societal benefits on all construction projects including for river ecology. The BNG target for the Project is currently voluntary and aligned with National Grid's corporate sustainability commitment.</p> <p>As well as seeking to avoid and minimise our impacts on nature, the Project includes enhancement of watercourse habitats as part of BNG mitigation.</p>
11-2.160	Concern that the Project will result in a negative impact on wildlife / biodiversity / ecology (generally)	<p>Through routeing, siting and detailed design National Grid has sought to reduce, as far as practicable, potential impacts on biodiversity. The design process has taken account of existing biodiversity, the natural environment and, where practicable, has sought to reduce impacts on areas of ecological sensitivity, through avoidance or mitigation.</p> <p>Chapter 8: Ecology and Biodiversity of the Environmental Statement (ES) (Document Reference 6.8) assesses the effects on important ecological receptors.</p>

Ref no.	Summary of matters raised	National Grid's response
		<p>As part of the Environmental Impact Assessment (EIA) process for the Project, a suite of ecological surveys has been to be undertaken over the 2022-2024 period. The findings of which inform the design and approach to mitigation.</p> <p>The Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Code of Construction Practice (CoCP) (document reference 7.2) contain a list of relevant good practice measures to avoid or reduce impacts on valuable habitats and species.</p> <p>The Environment Act 2021 introduces a mandatory requirement for 10% Biodiversity Net Gain (BNG) for new Development Consent Order (DCO) developments (which is not yet in force and expected May 2026). National Grid have committed to deliver 10% BNG with environmental and societal benefits on all construction projects. The 10% BNG target for the Project is currently voluntary and aligned with our corporate sustainability commitment.</p> <p>As well as seeking to avoid and minimise impacts to nature, the Project considers the land required for mitigation, compensation and enhancement that can deliver BNG and wider environmental benefits. 11-2.161	Suggest ecological enhancements as part of the Project	<p>The Environment Act 2021 introduces a mandatory requirement for 10% Biodiversity Net Gain (BNG) for new DCO developments (which is not yet in force and expected May 2026). National Grid has committed to deliver 10% BNG with environmental and societal benefits on all construction projects. The 10% BNG target for the Project is currently voluntary and aligned with our corporate sustainability commitment.</p>

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		As well as seeking to avoid and minimise our impacts to nature the Project considers the land required for mitigation, compensation and enhancement that can deliver BNG and wider environmental and societal benefits. This would require delivery of offsite Biodiversity Units via habitat creation or enhancement actions in strategic areas, and we would consider all offsite options that are available to us.	
11-2.162	Concern that the Project will impact trees covered by Tree Preservation Orders / Tree Protection Orders (generally - no location given)	During pre-application National Grid asked relevant planning authorities to share information on Tree Preservation Orders (TPOs). Impacts to trees covered by a TPO from the Project are presented in ES Appendix 13.6: Arboricultural Impact Assessment (AIA) report (document reference 6.13.A6).	
11-2.163	Request a distance of 3.5 m from existing trees when planting new trees	<p>An Arboricultural survey has been completed, details of which are presented in ES Appendix 13.6: Arboricultural Impact Assessment (AIA) (document reference 6.13.A6). The document references the best practice guidance set out in British Standards Institute, BS 5837: 2012 Trees in relation to design, demolition and construction – Recommendations. Surveys have been undertaken across the whole route and the results have been used to inform design.</p> <p>A pre-commencement arboricultural survey will also be undertaken post consent prior to works starting and the results will be used to inform detailed design. Further to this, an Arboricultural Method Statement detailing tree protection will be developed during detailed design.</p> <p>Minimum planting distances, to ensure for example that newly planted trees can grow to maturity, or to protect the root zone of an existing tree, are determined by factors such as tree species, root development space, and crown development. This will be dealt with on a case by case basis. As detailed in the Outline Landscape and Ecological Management Plan (LEMP), National Grid has committed to a 3:1 replacement for individual</p>	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
	<p>trees and individual trees within small groups. The Project will prioritise the replanting for individual trees and small groups of individual trees within the Order Limits, offsite provision may however be required.</p> <p>Compliance with all relevant British Standard guidance will form an integral part of future works, including BS8545:2014, Trees: From nursery to independence in the landscape.</p>		

South Norfolk feedback

South Norfolk specific feedback (Further Landowner Consultation)

Table 11-3 Summary of consultee comments and National Grid's response

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
Agricultural Land			
11-3.1	Concern that the Project will take away valuable agricultural land / disrupt farming operations	<p>During the construction stage of the Project, there would be areas of agricultural land that would be temporarily disrupted. National Grid would only use land that is required as part of the Project and would seek to minimise the use of agricultural land where reasonable and safe to do so.</p> <p>National Grid is and will continue to work with all landowners including farmers who may be affected by the proposals to understand the impacts on their operations and to work with them as the Project is developed. We would seek to work with the farming community to limit disruption where practicable. This includes providing prior warning of works which may result in the need to move livestock. Compensation claims for disturbance are considered on a case-by-case basis, if negative impact on farming operations can be proven. Particular agricultural matters can also be addressed through voluntary land agreements.</p>	
Airfields			
11-3.2	Concern about the impact of the Project on Tibenham Airfield / Suggestion that the Project is routed away from Tibenham Airfield	National Grid has appointed an independent aviation consultancy which has engaged with Tibenham Airfield (with National Grid also present) to inform their impact assessment. Following consultation with the operators,	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		<p>it has been assessed that, with the Project as currently proposed, operations (including gliding) can continue at the airfield.</p> <p>We are continuing to engage with the operator to enable their review of the acceptability of the Project design and support their consideration of whether reasonable changes to operational procedures are required. Further information on the assessment of airfields can be found in the Environmental Statement (ES) (see ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and ES Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2)).</p>	
11-3.3	Concern about the impact of the Project on Priory Farm Airfield / Suggestion that the Project is routed away from Priory Farm Airfield	<p>National Grid has appointed an independent aviation consultancy which has engaged with (with National Grid also present) Priory Farm Airfield. Following discussion and further assessment it has been determined, with the Project as currently proposed, that the airfield can continue to operate. We are continuing to engage with the operator to enable their review of the acceptability of the Project design and support their consideration of whether reasonable changes to operational procedures are required. Further information on the assessment of airfields can be found in the Environmental Statement (ES) (see ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and ES Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2)).</p>	
11-3.4	Criticism of Alan Stratford Associates (ASA) opinion that the Project posed an acceptable increase in aviation safety risk to Tibenham Airfield and Priory Farm Airfield (the respondent feels that no increase is acceptable) / Criticism that only the aerodrome operator can assess aviation safety risk with regard to obstacles (e.g. Norfolk Gliding Club)	<p>The Overarching National Policy Statement for Energy (EN-1), together with the National Policy Statement for Electricity Networks Infrastructure (EN-5) are the primary determining policies for the Project. EN-1 recognises the responsibility of aerodrome operators for safeguarding. In accordance with EN-1, National Grid's approach has involved consulting with and considering the feedback of the operators at Tibenham and Priory Farm aerodromes to inform impact assessments.</p>	

Ref no. Summary of matters raised National Grid's response

		<p>The conclusions of the assessments are that, with the Project as currently proposed, the aerodromes can continue to operate. We are continuing to engage with the operators to enable their review of the acceptability of the Project design and support their consideration of whether reasonable changes to operational procedures are required.</p> <p>The Design Development Report, published in April 2024 to inform the Statutory Consultation, refers to feedback proposing changes to the 2023 Preferred Draft Alignment to reduce effects on Tibenham and Priory Farm aerodromes. It notes that the feedback was reviewed, as well as consideration that flight activities will be able to continue at both aerodromes.</p> <p>National Grid, together with its appointed aviation consultants, met with representatives of both Tibenham and Priory Farm aerodromes during the Statutory Consultation period regarding the 2024 Preferred Draft Alignment. Engagement has since continued with an additional meeting. Further information on the assessment of aviation impacts can be found in Environmental Statement (ES) Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and ES Appendix 15.2: Review of Aviation Impacts (document reference 6.15.A2).</p>	
11-3.5	Criticism that guidance from the highly experienced CAA, the BGA and the GAAC has been provided to National Grid and ignored in favour of the Alan Stratford Associates (ASA)	National Grid carefully considered feedback from the BGA and CAA AAT and the guidance to assessment that they have provided. National Grid considers the assessments completed by its advisors to be appropriate and balanced. The conclusions vary by airfield with some adjustments made to the Project in some circumstances (route alteration and change of pylon type) with small adjustments to airfield operations in other cases.	
11-3.6	Criticism that National Grid ask for information on current operations, yet the CAA AAT advised National	National Grid considers it appropriate to use current activities as a starting point for assessment but also recognises the potential for future change.	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
	Grid some time ago that they should not base their presumptions on current data (e.g. this advice wasn't followed by Alan Stratford Associates (ASA) in the preparation of the Aerodrome Assessment and therefore any such information is not relevant)	We would note that any such future change must be realistic and, as with other development, would be expected to be defined in terms that were capable of assessment.	
Community / Social Impact			
11-3.7	Concern about impact of the Project on children / families / residents / communities	<p>National Grid recognises people may have concerns about the potential impacts of living close to an overhead line, and that the uncertainty whilst the proposals are developed may cause anxiety.</p> <p>We have sought to reduce potential effects on communities, residents – including children - through routeing and design. We have also sought to reduce concern or uncertainty about the proposals through making timely design decisions and engaging with people and stakeholders throughout the development of the Project. If the Project received Development Consent, the Project team would continue to engage with people potentially affected during construction, through regular communication including letters, phone calls and meetings, where necessary.</p> <p>We urge anyone with concerns to get in touch through the Norwich to Tilbury Freephone number, address or email, which will remain open throughout examination.</p> <p>National Grid is committed to working with local suppliers, facilitated by supporting forums (such as the local Chambers), on electricity industry skills and workforce planning. National Grid is also committed to providing a coordinated regional approach to jobs and skills opportunities. This commitment is broader than the individual project and separate to any commitments under the proposed development consent order for this Project. The socio-economic effects of the project are assessed in Chapter</p>	

Ref no.

Summary of matters raised

National Grid’s response

15: Socio-economics, Recreation and Tourism of the Environmental Statement (ES) (document reference 6.15). Post construction job opportunities are limited given the nature of the development however we will still work with Local Authorities (including facilitating local partners) to understand what is important to them around skills and employment to ensure we leave a lasting positive legacy in the communities where we operate.

With regards to a delivery mechanism, the above measures will be delivered as part of our community benefit package, which will look at both local and regional initiatives. This will be delivered outside the development consent process and is not a material consideration in the decision on the proposed Project or a matter to be secured as part of the DCO, as per the Community Funds for Transmission Infrastructure: Guidance (DESNZ, 2025).

11-3.8

Concern about impact of the Project on leisure

Through routeing and siting National Grid has sought to avoid, as far as practicable, locations important for leisure and tourism. Environmental Statement (ES) Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) presents an assessment of the potential impacts on sports clubs, recreational land and recreational routes located within the Order Limits. As part of this assessment, a range of measures have been considered throughout the construction phase of the Project to minimise disruption on leisure and tourism. These include: traffic management, signage and routeing measures. These are identified within ES Chapter 15: Socio-economics, Recreation and Tourism, the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).

Ref no. Summary of matters raised National Grid's response

11-3.9	Concern about the Project being in too close proximity to recently built housing developments / using land being considered for future development (including residential, commercial, infrastructural, and employment sites)	<p>National Grid has obtained information on existing, under construction, consented but not built schemes as well as development proposals within the planning system. The Project design has responded to those that are confirmed through consideration of routeing.</p> <p>In the case of development proposals, some can be amended to be designed around our proposed infrastructure but in other cases our proposals may need to be amended at a corridor level, or proposed developments factored into our detailed route design.</p> <p>Based on known information, and in light of changes made following consideration of feedback to the 2022 and 2023 non-statutory consultations, statutory consultation, targeted consultations, and landowner consultation, we consider our proposals are consistent with relevant policy and guidelines and the alignment designed such that they do not prevent proposed housing developments from being successfully progressed. UK law does not prescribe minimum distances between overhead lines and homes, but any implications on landscape and visual receptors, residential amenity or from concerns about electromagnetic fields are robustly assessed as part of the Environmental Impact Assessment (EIA) and balanced as part of the decision making process. We will continue to review planning applications and engage with developers as necessary.</p>	
11-3.10	Concern about the Project causing communities to become encircled / surrounded by overhead lines	<p>The alignment has been routed to achieve some separation from the existing 400 kV overhead line, such that villages are not encircled by overhead lines to both sides. Separation is inevitably reduced in certain locations due to the presence of constraints to routeing and environmental features. Detailed assessment reported in the Environmental Impact Assessment (EIA) identifies any measures considered to be necessary to reduce likely significant effects which would also consider the potential for</p>	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-3.11	Concerned that the Project will have a negative impact on domestic horses / equestrian activities	<p>effects potentially arising from close paralleling existing 132 kV overhead line and new 400 kV overhead line infrastructure.</p> <p>As well as possible effects on humans, the possible effects of Electric and Magnetic Fields (EMFs) on various animals have been studied. No proven effects of EMFs have been found in any species at levels below the guidelines. This is confirmed in National Policy Statement (NPS) EN-5 which states: <i>"There is little evidence that exposure of crops, farm animals or natural ecosystems to transmission line EMFs has any agriculturally significant consequences."</i> Although horses are not directly mentioned, there is no evidence to suggest they are any different to other farm animals.</p> <p>As well as the possible direct biological or health effects addressed above, indirect effects such as microshocks can occur as a result of electric fields. Microshocks are small spark discharges which are similar to a static shock after walking across a nylon carpet for example. The Project would be designed in accordance with the principles of the Governments Code of Practice 'Power Lines: Control of Microshocks and other indirect effects of public exposure to electric fields' to ensure these are mitigated, which include equestrian activities.</p>	
11-3.12	Concern about the impact of the Project on emergency services / ambulances / hospitals / health service	<p>Through routeing and siting National Grid has sought to avoid and reduce as far as practicable effects on identified healthcare facilities.</p> <p>Environmental Statement (ES) Chapter 10: Health and Wellbeing (document reference 6.10) consider the potential impacts on, and access to, healthcare facilities, including emergency services, ambulances, hospitals and other NHS services associated with the construction of the Project, drawing on information from ES Chapter 16: Traffic and Transport</p>	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-3.13	Criticism of surveys undertaken for the Project in this Section	<p>(document reference 6.16). No health facilities are due to be directly impacted by the Project and where road diversions are required traffic management and mitigation measures would be in place to reduce impacts. These include: traffic management, signage and routing measures to ensure access or partial access can be maintained where feasible. Further detail on proposed mitigation measures are presented in the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), which has been produced following engagement with stakeholders including the emergency services.</p> <p>There is a staged approach to the process of collection of environmental data as any major project develops. National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project. The assessment is informed by a suite of field surveys and desk studies and results are presented in an Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the application for development consent. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation (and maintenance) of the Project and recommends appropriate mitigation measures to reduce potential adverse impacts.</p> <p>The scope of the EIA is included in the Scoping Report (document reference 6.19) which was submitted to the Planning Inspectorate in November 2022 and their Scoping Opinion (document reference 6.20) received in December 2022. This provided the opportunity for statutory bodies to comment on the scope of the EIA which included our approach on study areas, data collection and baseline conditions for a range of environmental topics. We also discussed and agreed survey scope with stakeholders (including Statutory Environmental Bodies and Local Planning</p>	

Ref no. Summary of matters raised National Grid's response

Authorities) following the Scoping Opinion (document reference 6.20) to ensure a robust baseline assessment.

National Grid has prepared an Outline Code of Construction Practice (CoCP) (document reference 7.2) which sets out the required mitigation measures and environmental commitments that would be implemented during the construction phase of the Project to avoid or reduce potential effects of the Project on the environment, including commitments to undertake further surveys.

Construction Impacts

11-3.14	Concern about disruption from construction	<p>An Environmental Statement (ES) (document reference: Volume 6: Environmental Statement) has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 ('the Infrastructure EIA Regulations'). The ES identifies and assesses the likely significant effects on the environment resulting from the construction of the Project and recommends appropriate mitigation to reduce effects.</p> <p>Environmental mitigation measures have been defined within each environmental topic chapter and set out in relevant management documents submitted with the Development Consent Order (DCO) application, including the Outline Code of Construction Practice (CoCP) (document reference 7.2), the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5).</p>
---------	--	--

Ref no.	Summary of matters raised	National Grid's response
11-3.15	Concern about impact on traffic levels in local area caused by construction works	<p>As part of the pre-application process National Grid has engaged with the relevant authorities, their highways teams and National Highways to understand and gain information on their road networks. This information has been used to inform and guide the drafting of the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) for the Project that accompanies the Development Consent Order (DCO) application.</p> <p>A strategy has been developed to manage the impact of construction vehicles on the public highway and sensitive receptors, using suitable Local Road Network connections from the Strategic Road Network called Primary Access Routes. In addition, temporary haul roads for construction vehicles are proposed along the Project alignment, further reducing the impact of construction traffic on the local road network. Further details of the strategy can be found within the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).</p> <p>Environmental Statement (ES) Chapter 16: Traffic and Transport (document reference 6.16) includes the assessment of the potential impacts of the Project including changes in traffic flow, delays, road safety and impact on Walking, Cycling and Horse-Riding modes on the roads along the Primary Access Routes located in the Local Road Network.</p> <p>The Transport Assessment (document reference 7.11), submitted with the DCO application, examines capacity, safety, and operational efficiency of the network, identifying potential bottlenecks or safety concerns.</p> <p>Within the assessment of the ES and the Transport Assessment, mitigation measures are proposed to minimise likely adverse impacts</p>
11-3.16	Concern about noise and other issues resulting from construction (e.g. mud on roads, dust)	<p>An Environmental Statement (ES) (document reference: Volume 6: Environmental Statement) has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA)</p>

Ref no.	Summary of matters raised	National Grid’s response
		<p>Regulations 2017 (‘the Infrastructure EIA Regulations’). The ES identifies and assesses the likely significant effects on the environment resulting from the construction of the Project and recommends appropriate mitigation to reduce effects.</p> <p>Specifically, a Construction Noise and Vibration Impact Assessment has been undertaken and is reported in ES Chapter 14: Noise and Vibration (document reference 6.14). During construction, mitigation would be implemented to reduce noise and vibration impacts from construction activities and increased road traffic noise and vibration due to additional movement from construction traffic. Mitigation measures are outlined in ES Chapter 14: Noise and Vibration (document reference 6.14) and the Outline Code of Construction Practice (CoCP) (document reference 7.2). This includes the assumption that construction working would be undertaken within the agreed working hours, construction traffic would be managed through the Construction Traffic Management Plan (CTMP) (document reference 7.3), haul roads would be well maintained, and Best Practicable Means (BPM) would be employed to reduce construction noise and vibration.</p> <p>ES Chapter 7: Air Quality (document reference 6.7) presents an assessment of the potential impacts from the construction of the Project on air quality. During construction, mitigation would be implemented to reduce the impact of dust generation and construction vehicle emissions. Mitigation measures are outlined in ES Chapter 7: Air Quality (document reference 6.7), and the Outline CoCP (document reference 7.2). The dust-emitting activities can be greatly reduced or eliminated by applying the site-specific mitigation measures (see Outline CoCP (document reference 7.2)) for high risk sites following measures recommendations in the Institute of Air Quality Management (IAQM) guidance (IAQM, 2024). The IAQM guidance states that with the implementation of effective site-specific</p>

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		<p>mitigation measures, the environmental effect would not be significant in most cases.</p> <p>In addition, National Grid has prepared an Outline CoCP (document reference 7.2). The Outline CoCP (document reference 7.2) sets out the required mitigation measures and environmental commitments that would be implemented during the construction phase of the Project to avoid or reduce potential effects of the Project on the environment.</p>	
11-3.17	Concern that local road infrastructure is not suitable for heavy construction vehicles and machinery	<p>A strategy has been developed to manage the impact of construction vehicles on the public highway and sensitive receptors, using suitable Local Road Network connections from the Strategic Road Network called Primary Access Routes. In addition, temporary haul roads for construction vehicles are proposed along the Project alignment, further reducing the impact of construction traffic on the local road network. Further details of the strategy can be found within the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).</p> <p>The Project also requires the transportation of Abnormal Indivisible Loads (AIL). National Grid is developing specific routing proposals for AIL movements and is developing these through engagement with the relevant stakeholders including the local highway authorities and National Highways. An AIL routing strategy containing details about these movements are submitted in support of the Development Consent Order (DCO) application.</p>	
Consultation			
11-3.18	Criticism of consultation specific to this section	National Grid notes the respondent's feedback.	

Ref no. Summary of matters raised National Grid's response

Design Change (CR)

11-3.19	Suggest that existing overhead lines in this section should be replaced by underground cables	<p>National Policy Statement (NPS) EN-5 establishes the position that the starting basis for new connections is a presumption on the acceptability of overhead lines but with this presumption reversed within designated landscapes and in certain other circumstances.</p> <p>The existing electricity transmission network provides power, via the local distribution network, into the local area where it is used in homes and businesses. The need case and funding for the Project is to deliver the new network reinforcement needed, rather than to remove existing overhead lines by undergrounding them.</p> <p>We have identified a number of locations where we are proposing to place existing overhead lines underground. These locations are where existing 132 kV and lower voltage lattice pylon lines are crossed by the proposed 400 kV overhead line and / or mitigation of effects are considered necessary. This includes locations such as at Mellis, between Offton and Bramford Substation, to the south of Bramford Substation and near Fuller Street.</p> <p>Unless required for mitigation, undergrounding existing overhead lines on the transmission network would not be in accordance with NPS EN-5 and would result in substantial cost to bill payers. There may also be significant environmental impacts due to the removal works on sensitive ecological and archaeological receptors as well as constraints from either existing built form or unsuitable ground conditions.</p>	
11-3.20	Suggest that the Project is routed away from populated / residential areas	Deciding where and how to build new high voltage electricity lines is a complex issue and National Grid is mindful of the potential effects this infrastructure may have on local communities and the concerns these may	

Ref no.	Summary of matters raised	National Grid's response
---------	---------------------------	--------------------------

		<p>bring. We recognise that people living near our transmission infrastructure, including high voltage overhead lines, may have concerns about audible noise and potential health impacts. It has sometimes been suggested that minimum distances between properties and overhead lines should be prescribed.</p> <p>We do not consider this appropriate since each instance must be dealt with on its merits. However, we have always sought to route new lines away from residential property on grounds of general amenity where possible.</p> <p>We have undertaken a noise and vibration assessment which can be found in the Environmental Statement (ES), Chapter 14: Noise and Vibration (document reference 6.14) that forms part of the Environmental Impact Assessment (EIA) for the Project. Noise levels and the effect on residential properties as well as other sensitive areas, such as hospitals and schools, are carefully considered during planning, assessed according to the appropriate UK standards, and mitigated where necessary. We set strict technical standards for the equipment we install on our network. These will apply to the proposed new East Anglia Connection Node (EACN) substation, and extensions required to the existing Norwich Main, Bramford, and Tilbury Substations. These standards include requirements to ensure the occurrence of audible noise is eliminated or reduced as far as practicable. Therefore, significant adverse effects from noise are not expected.</p> <p>Noise from overhead lines is predominately determined by the conductor design, voltage and weather conditions. The overhead line would be designed using a relatively quiet conductor that meets the design specification required, and operational noise is not likely to be significant at nearby sensitive receptors under any weather conditions. Pylon fittings, such as insulators, dampers, spacers, and clamps, are also designed and</p>
--	--	--

Ref no. Summary of matters raised National Grid's response

procured in accordance with a series of National Grid Technical Specifications to reduce the potential for audible noise and tones to occur from all types of fittings. Where noise does occur, it is likely to be localised and of short duration. If this is due to a fault, action can be taken to rectify it. A technical note has been submitted as part of the application for development consent to support scoping out noise associated with overhead lines from the ES.

11-3.21 Suggest that underground cables are used for the entirety of this section

National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors.

National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is 'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or Area of Outstanding Natural Beauty (AONB))'. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant

Ref no.	Summary of matters raised	National Grid's response
		<p>adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider this section in its entirety would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.</p> <p>Therefore, whilst undergrounding the whole of this section is not considered appropriate, our proposals do include underground cable within the Dedham Vale National Landscape (previously known as Area of Outstanding Natural Beauty (AONB)) in accordance with NPS EN-5. Prior to our 2023 non-statutory consultation we identified the need to extend the underground cable beyond the National Landscape boundary because of potential effects, we have further extended this section of underground cable following consideration of feedback on our 2023 non-statutory consultation and additional investigation into potential effects. We also identified an approximately 4 km section near Great Horkesley as meeting the particularly sensitive criteria where underground cable is also proposed. Additionally, underground cable is proposed at Fairstead for a 400 kV overhead line crossing.</p>
11-3.22	Suggest placing the pylons in a north to south orientation either across the grassland meadow or through the 'previously cleared woodland' to reduce ecological damage in Bunwell Hill	National Grid proposed a slight change to the alignment and haul road between RG46 and RG51 which takes the alignment to the west and avoids the County Wildlife site and veteran tree, as this alignment is preferred due to avoiding these assets we are not proposing to change the

Ref no.

Summary of matters raised

National Grid's response

		<p>alignment at this location. The haul road was also moved to be closer to the alignment and utilise an area of woodland which is less mature. We have also narrowed the haul road and proposed the use of trackway to reduce impacts to trees in the woodland where possible.</p> <p>National Grid has submitted an Environmental Statement (ES) (document reference: Volume 6: Environmental Statement) which has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation of the Project and recommends appropriate mitigation to reduce effects. Specifically, ES Chapter 8: Ecology and Biodiversity (document reference 6.8) considers the effects on designations, habitats and species during construction and operation of the Project.</p>	
11-3.23	Suggest that towers are placed in the corners of fields to reduce impact, especially pylon RG17	National Grid notes the preference from certain landowners for pylons to be situated along hedge lines where possible to reduce the impact on agricultural activities and reduce land take. We have assessed requests from landowners on an individual basis. We have positioned RG17 as close to the field boundary as possible while allowing space for scaffolding required for crossing protection during construction.	
11-3.24	Suggest two alternative route for pylons RG18 to RG24 following the edge of two ownerships but mostly within one property (purple line on respondents plan) and a route that interacts with the woods to the north (blue line on respondents plan) this is to reduce impact on dwellings, avoid bisecting a farm, evenly sharing the route across two landowners, route pylons on the edge of fields and provide natural screening for the pylons	National Grid has considered the respondent's feedback and has reviewed a number of alternative alignments in this location including the two suggested by the respondent. Alternatives to the north would impact more woodland and would also increase the impact on a proposed solar farm development, alternatives would also be longer and require additional angle pylons and would be therefore less consistent with the Holford Rules. We are therefore not proposing a change to the alignment in this location. A summary of the Holford Rules is provided within Appendix I22 of this	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-3.25	Suggest that the Project is routed in a north to south direction near Bunwell to avoid Bunwell Wood / Criticism that National Grid said their 2024 consultation (e.g. in their Feedback Response Document) and the proposed 2024 route that Bunwell Wood would be avoided, but the 2025 route does not avoid Bunwell Woodland	<p>report. The effects of the Project are assessed as part of the Environmental Impact Assessment (EIA) and presented in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement), this has identified any need for additional mitigation.</p> <p>National Grid proposed a slight change to the alignment and haul road between RG46 and RG51 which takes the alignment to the west and avoids the County Wildlife Site and veteran tree, as this alignment is preferred due to avoiding these assets we are not proposing to change the alignment at this location. The haul road was also moved to be closer to the alignment and utilise an area of woodland which is less mature. We have also narrowed the haul road and proposed the use of trackway to reduce impacts to trees in the woodland where possible.</p> <p>National Grid has submitted an Environmental Statement (ES) (document reference: Volume 6: Environmental Statement) which has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation of the Project and recommends appropriate mitigation to reduce effects. Specifically, ES Chapter 8: Ecology and Biodiversity (document reference 6.8) considers the effects on designations, habitats and species during construction and operation of the Project.</p>	
11-3.26	Suggest rerouting the pylons into the field along the western edge of The Vale so that consultation and consent would need to be obtained from one landowner rather than 37	The Order Limits are drawn as such in this location to allow for the undergrounding of an existing 11 kV overhead line from the field to the east of The Vale where it crosses the Project. The design for this section of undergrounding has been developed in collaboration with UK Power Networks as per their recommended design solution to suit their network requirements. At detailed design National Grid and UK Power Networks	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		would confirm the exact location, installation and reinstatement methods. Additionally should the Project be consented we would continue to engage with affected persons leading up to the works and access would be maintained at all times.	
11-3.27	Suggestion that the haul road from Mellisash Road be rerouted to follow the existing field boundary close to RG102 to avoid dividing an arable cropping enclosure	National Grid notes the respondent's feedback regarding the location of the haul road within the field. Reviewing the alternative location would result in an islanded section of field which would remain inaccessible as it would site between the haul road on the boundary and the red line boundary of the main works. In its proposed location the section of arable field remains accessible and not enclosed.	
11-3.28	Suggestion that pylon RG081 be relocated closer to field boundary to reduce impacts on farm	National Grid notes the respondent's feedback, RG81 cannot be moved closer to the field boundary as it is an angle pylon and therefore a change in either direction would impact the overhead alignment to the north and south. Notably the alignment towards the south is such that the overhead line remains approximately midway between residential properties at Snow Street and Bressingham Common. Additionally, space is required around the pylon for pulling the conductors during construction. Therefore we have not made a change to the location of this pylon.	
11-3.29	Suggestion that pylons RG100 and RG102 be relocated back to previous positions presented at 2024 statutory consultation close to adjoining field boundaries and watercourse to minimise sterilising land	National Grid notes the respondent's feedback to position RG100 and RG102 back to their previous positions on the field boundaries. Whilst the preference is noted, the revised alignment has been made responding to various elements of feedback to reduce the level of change by following the 132 kV alignment, positioning to benefit from more tree screening and maintaining flight activity at Brook Farm airstrip. There was also a need identified to pick an alignment to impact minimally on the woodland. We have therefore not proposed a change to the positions of these pylons.	

Ref no. Summary of matters raised National Grid's response

11-3.30	Suggest that the Project is re-routed further west in this section (e.g. closer to Thetford)	National Grid has considered alternative routes closer to Thetford at various scales. In the 2022 Corridor and Preliminary Routeing and Siting Study (available on the Project website) a more westerly route was considered both in terms of connections from Norwich Main Substation as well as from Necton Substation. They were less preferred by being longer connections (i.e. less consistent with Holford Rule 3 (see Appendix I22 of this report)) but were also likely to create conflict with Special Areas of Conservation (SAC) which are more concentrated around Thetford than the alignment of the Project. More localised alternative alignments, remaining to the east of the SACs closer to Thetford have also been considered but were less preferred because they transfer effects and comprise longer routes and thus are less consistent with Holford Rule 3 and National Grid duties under the Electricity Act.
11-3.31	Suggest that the Project is re-routed further east from Pylon RG61 to RG69, as per plan provided by respondent and previous requests made by respondent (e.g. to mitigate impact on respondent and community, to save National Grid costs in compensation, and to benefit from the revised route which would move the Pylons behind existing woodland and hedge lines and in the corner of arable fields, reducing landscape, agronomic and environmental impacts) Criticism that National Grid haven't accepted this change to date, despite the respondent being currently set to take the burden of 10% of the Pylons as part of the Project in the county of Norfolk, and criticism that National Grid will not accept a marginal repositioning of Pylons to utilise natural screening and reduce the	National Grid has considered the respondent's feedback, to move RG61 to RG69 further to the east. A more eastern alignment would move the alignment from relatively equidistant between properties to closer to properties and listed buildings to the east. The suggested location of pylons would also have a greater impact to the environment. National Grid has submitted an Environmental Statement (ES) (document reference: Volume 6: Environmental Statement) which has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation of the Project and recommends appropriate mitigation to reduce effects.

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-3.32	<p>agronomic impact by siting them in field boundaries and corners despite National Grid making other changes to the Project to support landowners (e.g. like to mitigate the impact on Brook Farm Airstrip)</p> <p>Suggest that the Project is re-routed either closer to Wortham, or to the west of Wortham</p>	<p>National Grid notes the respondent's feedback but also notes that it has previously considered a number of alternatives meeting these suggestions in the development of the Project. The reasons for them being less preferred are set out in the 2023 and 2024 Design Development Reports (available on the Project website). The 2022 consultation corridor passed to the west of Wortham but was less preferred, notably including greater effects on the Grade I Listed St Mary's Church at Wortham. An alignment further west has also been considered passing to the west of Bressingham Church, the main reasons for this alternative being less favoured were ecological effects. Other alternatives between Wortham and the alignment have also been considered, however the alignment is preferred due to reduced effects on an airfield, reduced interface with solar developments and reduced visual effects. In the absence of new information or further factors being identified no change is proposed.</p>	
11-3.33	<p>Suggestion that the Project is routed away from / the Project should not be located at a specific location (e.g. a house / farm / postcode)</p>	<p>Further assessment and technical appraisal has been undertaken following feedback received from the statutory consultation and subsequent targeted consultations which has resulted in several changes. Further details on these changes can be found in this report and in the 2025 Design Development Report, published as part of the Development Consent Order (DCO) application.</p>	
11-3.34	<p>Suggestion that the Project is routed away from / the Project should not be located at Roydon</p>	<p>National Grid has considered the respondent's feedback highlighting a preference for an alternative moved away from Roydon. In the absence of a specific basis for the change or a proposed alternative alignment, we</p>	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		have considered this feedback by following the guidance in the Holford Rules in developing the alignment. Guidelines on overhead line routeing are known as the "Holford Rules" which remain a valuable tool in selecting and assessing potential overhead line route options as part of the options appraisal process. A summary of the Holford Rules is provided within Appendix I22 of this report. We are therefore not proposing a change to the alignment at Roydon.	
11-3.35	Suggestion that the Project is routed away from / the Project should not be located at Bunwell	National Grid has considered the respondent's feedback highlighting a preference for an alternative moved away from Bunwell. In the absence of a specific basis for the change or a proposed alternative alignment, we have considered this feedback by following the guidance in the Holford Rules in developing the alignment. Guidelines on overhead line routeing are known as the "Holford Rules" which remain a valuable tool in selecting and assessing potential overhead line route options as part of the options appraisal process. A summary of the Holford Rules is provided within Appendix I22 of this report. We are therefore not proposing a change to the alignment at Bunwell.	
11-3.36	Suggestion that the Project is routed away from / the Project should not be located at Winfarthing	National Grid has considered the respondent's feedback highlighting a preference for an alternative moved away from Winfarthing. In the absence of a specific basis for the change or a proposed alternative alignment, we have considered this feedback by following the guidance in the Holford Rules in developing the alignment. Guidelines on overhead line routeing are known as the "Holford Rules" which remain a valuable tool in selecting and assessing potential overhead line route options as part of the options appraisal process. A summary of the Holford Rules is provided within Appendix I22. We are therefore not proposing a change to the alignment at Winfarthing.	

Ref no. Summary of matters raised National Grid's response

11-3.37	Suggestion that the Project is routed away from / the Project should not be located at Bunwell Hill	National Grid has considered the respondent's feedback highlighting a preference for an alternative moved away from Bunwell Hill. In the absence of a specific basis for the change or a proposed alternative alignment, we have considered this feedback by following the guidance in the Holford Rules in developing the alignment. Guidelines on overhead line routeing are known as the "Holford Rules" which remain a valuable tool in selecting and assessing potential overhead line route options as part of the options appraisal process. A summary of the Holford Rules is provided within Appendix I22. We are therefore not proposing a change to the alignment at Bunwell Hill.
---------	---	---

Economic/Employment impact

11-3.38	Concern about negative impact on businesses in the area	<p>Through the routeing and siting exercise, National Grid has sought to reduce as far as practicable impacts to businesses.</p> <p>Impacts on local businesses within the Local Study Area (the Order Limits) and within the 3 km Study Area (where visual impact is likely to be an economic consideration) are assessed in Environmental Statement (ES) Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15). As part of this assessment, a range of mitigation measures have been considered to reduce disruption to businesses and their users during the construction phase of the Project. These measures are identified in ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15), the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) which accompany the Development Consent Order (DCO) application.</p>

Ref no. **Summary of matters raised** **National Grid's response**

Environmental impact

11-3.39	Concern that the Project will impact ancient woodland	Through routeing, siting and detailed design, National Grid has sought to reduce, as far as practicable, impacts on biodiversity and in particular features of high ecological value, such as ancient woodland. A standard 15 m buffer from construction activities has been applied where practicable. Potential direct and indirect impacts on each block of ancient woodland within the study area have been considered within the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8) and any necessary mitigation detailed to ensure no significant residual effects. An Ancient Woodland and Veteran Tree Strategy is included as part of the Outline Landscape and Ecological Management Plan (see Appendix B of the Outline LEMP (document reference 7.4)). The Outline LEMP (document reference 7.4) has been developed in consultation with relevant stakeholders including Natural England and local planning authorities.
11-3.40	Concern that the Project will result in a negative impact on the environment / countryside generally (no details given)	National Grid has sought to reduce, as far as practicable, impacts on the environment / countryside through routeing and siting and an ongoing iterative design process which has taken on board feedback at different stages of the Project. The iterative design process sought to avoid areas of highest concern, for examples through changes to the route alignment or changes to the method e.g. trenchless crossings. National Grid have engaged with a range of stakeholders (including Statutory Environmental Bodies (SEBs) and relevant local planning authorities) throughout the development of the Project design and environmental assessment work. National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project. The results of this assessment are provided in the Environmental Statement (ES) (document reference Volume 6:

Ref no. Summary of matters raised National Grid's response

Environmental Statement) that accompanies the Development Consent Order (DCO) application. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation (and maintenance) of the Project and recommends appropriate mitigation measures to reduce potential effects.

A number of mitigation measures have been incorporated into the Project design. Mitigation relevant to specific environmental topics (including Ecology and Biodiversity, Landscape and Visual and Historic Environment) are presented in the relevant ES chapters. The Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Code of Construction Practice (CoCP) (document reference 7.2) contain a list of relevant good practice measures to avoid or reduce risks to habitats and species.

In addition to the EIA, National Grid has set itself a target of delivering 10% biodiversity net gain (BNG) with environmental and societal benefits on all construction projects, meaning that as a result of measures taken, the biodiversity rating of the area will be enhanced by 10% greater than prior to the construction of the Project. The BNG target for the Project is currently voluntary and aligned with our corporate sustainability commitment.

11-3.41 Concern about the impact of the Project on flooding

A Flood Risk Assessment (FRA) has been prepared (document reference 7.9) in addition to a flood warning and evacuation plan that details actions for flooding emergency during Project construction, as an appendix to the Outline Code of Construction Practice (CoCP) (document reference 7.2). The FRA (document reference 7.9) has assessed a range of sources of flooding to the Project and arising from the Project, and a range of measures, including those embedded within the design, and good practice, have been secured to ensure that the Project is resilient to flooding, and does not contribute to an increase in flood risk from any source.

Ref no. Summary of matters raised National Grid's response

Financial compensation

11-3.42	Concern that the Project will devalue property / impact on property value in this section / Concern that the project will impact on being able to sell property	<p>National Grid acknowledges that its proposals may cause concern to landowners. Diminishment of property value known as 'injurious affection' and any other appropriate heads of claim would be considered on an individual basis in accordance with current legislation. We would pursue a voluntary agreement with affected landowners, acquiring rights in accordance with our Land Rights Strategy (the strategy is subject to review). If a voluntary agreement cannot be reached, then the Compulsory Purchase Code allows for a claim of compensation for the loss that property owners may have suffered as a direct result of the retained part of your property ownership being worth less as a direct result of the works.</p> <p>If there are any specific concerns about the devaluation of property, National Grid would advise seeking third party advice. or alternatively please contact the Project team:</p> <p>Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.</p> <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD.</p>
11-3.43	Request for adequate financial compensation / Suggest that impacted individuals need to be compensated	<p>All affected landowners would be compensated for any temporary/permanent losses, and this would be dealt with on a case-by-case basis in line with the Compensation Code.</p> <p>If there are any specific concerns requiring compensation and how it would be assessed, please contact the Project team:</p> <p>Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.</p>

Ref no. Summary of matters raised National Grid's response

Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD

The Government has published its guidance on community funds for transmission infrastructure (DESNZ, 2025). National Grid is committed to working with Ofgem, industry partners, local communities and their representatives to ensure community benefits are delivered fairly and effectively, driving lasting, positive change for the people and places integral to our developing electricity network.

Government has also announced its plans to introduce a bill discount scheme for households within 500 m of new infrastructure, which it proposes to introduce through the Planning and Infrastructure Bill. This is evolving government policy. Government expects this scheme to be in place by 2026 and we would share further details as they emerge.

National Grid is committed to providing a coordinated local and regional approach to community benefits. This would be delivered outside the development consent process, since this is not a material consideration in the decision on the proposed Project or a matter

to be secured as part of the DCO, as per the Community Funds for Transmission Infrastructure: Guidance (DESNZ, 2025).

11-3.44 Request that National Grid purchase respondent's property / business

National Grid is not required to purchase any properties or businesses as part of the Project.

National Grid compensates landowners in line with the Compensation Code and any other relevant legislation.

Ref no. Summary of matters raised National Grid's response

Health, Safety & Wellbeing

11-3.45	Concern that the Project may result in a negative impact on mental health / wellbeing	<p>National Grid recognises people may have concerns about the health effects of living close to an overhead line, and that the uncertainty whilst the proposals are developed may cause anxiety.</p> <p>We have sought to reduce potential effects on communities and residents through routeing and design. We have also sought to reduce concern or uncertainty about the proposals through making timely design decisions and engaging with the people and stakeholders throughout the development of the Project.</p> <p>The Project team will continue to engage with people potentially affected during progress of the Project, through regular communication including letters, phone calls and meetings. This would enable concerns to be raised and discussed at an early opportunity and provide a regular point of contact to respond to queries and concerns.</p> <p>We urge anyone with concerns to get in touch through the Norwich to Tilbury Freephone number, address or email throughout the progress of the Project:</p> <p>Call our Community Helpline: 0800 915 2497 (Lines are open Monday to Friday 9:00am – 5:30pm)</p> <p>Email us: contact@n-t.nationalgrid.com</p> <p>Write to us: FREEPOST N TO T (No stamp or further address details are required)</p> <p>The UK has a carefully thought-out set of policies for protecting us all against Electric and Magnetic Fields (EMFs), the main component of which is exposure guidelines. Those exposure guidelines are set by independent scientific bodies and are based on decades-long studies into the effects of</p>
---------	---	--

Ref no. Summary of matters raised National Grid's response

EMFs and ill health. After those decades of research, the weight of evidence is against there being any health risks of EMFs below the guideline limits. These policies are incorporated into the decision-making process for Development Consent in National Policy Statement (NPS) EN-5. It is National Grid's policy to ensure that all of its equipment comply fully with those exposure limits.

11-3.46 Concern about health risks associated with the Project / physical health risks associated with the Project

Health considerations are given a high priority in the process by which we arrive at any proposals for new electricity circuits. Assessment of compliance with Electric and Magnetic Field (EMF) guidelines and policies is key to National Grid's approach. The UK has a carefully thought-out set of policies for managing EMFs. There have been over four decades of research looking into whether EMF can cause health effects and there are no established effects below the exposure limits. When designing our overhead lines, substations and underground cables design criteria, we ensure they would not exceed those exposure limits, even when operating at 100% capacity. Additionally, the precautionary measures which the Government have adopted, are applied to the design which ensure the EMFs reduce as quickly with distance as possible. Evidence of that compliance is presented in the Electric and Magnetic Field Compliance Report (document reference 7.8) submitted as part of the Development Consent Order (DCO) application.

National Grid takes this issue very seriously and look to authoritative and independent scientific organisations such as the World Health Organisation (WHO) and in the UK Health Security Agency (UKHSA) to review the worldwide body of scientific evidence on health. Important decisions on health are taken independently of industry, and National Grid have followed the guidance and policies adopted by Government on advice from their

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-3.47	Concern that the Project poses a safety risk to aircraft (including balloons) in the area / Concern that the Project will impact airfields in this area	<p>scientific experts. Each of these organisations have comprehensive reviews of EMF research available to view on their websites.</p> <p>National Grid recognises the need for the Project to be developed collaboratively alongside aviation stakeholders to identify, assess, and as appropriate mitigate, adverse impacts on aviation safety, in accordance with Government's Overarching National Policy Statement (NPS) EN-1. Our review of aerodromes potentially impacted by the Project identified 17 civil aerodromes (including two helipads) within 5 km of the preferred corridor and one military site (Wattisham Flying Station). We have also considered other airfields and flight activities where these have been identified through the 2022 and 2023 non-statutory consultations, statutory consultation, targeted consultations, and landowner consultation, including for ballooning and for model flying. As well as considering feedback, National Grid's aviation advisers (an independent aviation consultancy) have directly engaged with these parties (with National Grid present).</p> <p>A number of route alignment and pylon positioning changes have been made following consideration of feedback and in all but one case the assessment concludes that the airfields can continue to operate. In the remaining case of a private airstrip near Little Burstead, we continue to liaise with the operator to identify an appropriate solution.</p> <p>Specifically in respect of Wattisham Flying Station our proposals position the alignment onto relatively lower ground (to remove the potential for interference with Instrument Landing System (ILS) radar) and adopt an alignment closer to the existing 132 kV overhead line and include replacing part of the 132 kV line south of Offton by underground cable to avoid a new overhead line corridor being introduced.</p> <p>We will continue to engage with relevant parties as appropriate.</p>	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-3.48	Concerns that the proposed Project would leave the respondent's currently gated area open, which will be a security risk for the respondent (e.g. theft of machinery may occur)	<p>Further information on the assessment of airfields can be found in Environmental Statement (ES) Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and ES Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).</p> <p>National Grid acknowledges the concern that the proposed works could require access through an existing gated area, creating a potential security risk for the landowner, such as theft of machinery. Security is a key consideration in the planning and delivery of the Project. Where works require the temporary removal or opening of existing gates, fences or other boundary features, arrangements would be made to maintain appropriate site security for the duration of the works. This may include temporary fencing, secure gates, or other agreed measures to ensure the property remains protected.</p> <p>All construction sites would be subject to site-specific security assessments, and proportionate mitigation would be implemented to deter unauthorised access and theft. National Grid's Corporate Security team supports the Project by identifying areas of higher risk and advising on appropriate measures. A Site Security Plan would set out how security would be implemented, monitored, and adapted if required.</p>	
Heritage			
11-3.49	Concern about negative impact on heritage / Suggest that the Project should be routed away from heritage buildings / listed buildings / historical site	Through routeing and siting National Grid has sought to reduce as far as practicable potential impacts on the historic environment. The impacts of the Project on the historic environment are assessed in Environmental Statement (ES) Chapter 11: Historic Environment (document reference 6.11). The assessment considers the potential impact on archaeology, historic buildings and historic landscapes and includes assessment of potential for physical impact, impact through change to setting that affects	

Ref no. Summary of matters raised National Grid's response

the value of a heritage asset and impact through indirect factors such as change in hydromorphology. The assessment is supported by walkover, setting and geophysical surveys, as documented in ES Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1) and ES Appendix 11.4: Geophysical Survey Results Report (document reference 6.11.A4). Archaeological trial trench evaluation has also been undertaken and is reported in ES Appendix 11.5: Trial Trenching Results Report (document reference 6.11.A5). In addition to the proposals in the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4), the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5) sets out appropriate mitigation for the historic environment. The Project has engaged with Historic England and relevant planning authorities on aspects relating to heritage, including appropriate mitigation measures and techniques and to take their views into account during Project development.

Mitigation

11-3.50 Suggest mitigation measures

An Environmental Statement (ES) (document reference Volume 6: Environmental Statement) has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 ('the Infrastructure EIA Regulations'). The ES identifies and assesses the likely significant effects on the environment resulting from the construction, operation and maintenance of the Project and recommends appropriate mitigation to reduce effects.

Environmental mitigation measures have been defined within each environmental topic chapter and set out in relevant management documents submitted with the Development Consent Order (DCO)

Ref no. Summary of matters raised National Grid's response

application, including the Outline Code of Construction Practice (CoCP) (document reference 7.2), the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5).

Primary Access Route / Haul Road / Construction Compounds

- | | | |
|---------|---|--|
| 11-3.51 | Suggest the proposed haul road between pylons RG15 and RG16 runs parallel to the proposed overhead line | The haul road is not routed parallel to the overhead line in the vicinity of RG14 to RG15 in order to route to the south of an existing solar farm to reduce impacts to this existing generating station. Consequently, the haul road is positioned to the south of RG15 and to avoid additional impacts to additional vegetation on the boundary line between RG15 and RG16 it stays to the south of the overhead line. Additionally, this route ensures the haul road stays to the south of the proposed conductor stringing work area. |
| 11-3.52 | Concern that the proposed haul road does not mitigate impacts on continued use of the land and increases the likelihood of land being severed resulting in the remainder of the field not being viable to crop / Suggest the haul road follow the periphery of the field (blue hatch in respondent's plan) / Suggest pylon access routes using existing tracks, access points and following cropping directions. (as per respondent's plan) | National Grid notes the respondent's concern but need to balance the reduced cost of a straighter road alignment with greater compensation for agricultural effects against the greater cost of a longer haul road with spurs to pylon bases but reduced agricultural compensation. On balance we favour a more direct haul road to reduce the quantity of roadstone material required, reducing impacts on land due to roads. The use of existing access is considered but often they are not suitable in terms of construction, or the use by others may create increased risks or programme delay to construction. On balance the creation of temporary dedicated access is generally preferred, and no change is proposed. |

Ref no. **Summary of matters raised** **National Grid's response**

PRoW (Public Rights of Way)

11-3.53	Concern about negative impact on PRoW / footpaths / cycle paths / bridleways	<p>Through routeing and siting, National Grid has sought to reduce, as far as practicable, impacts and disruption to Public Rights of Way (PRoW).</p> <p>The iterative design process identified the existing PRoW network and their wider connectivity and sought where practicable to reduce and where possible remove impacts to PRoW.</p> <p>Effects on PRoW would be mitigated where possible, maintaining access where practicable, with closures as a last resort. We will continue to engage with relevant stakeholders on the PRoW network to enable feedback and input to be considered as the Project progresses. An Outline Public Rights of Way Management Plan (document reference 7.6) is submitted with the Development Consent Order (DCO) application.</p>
---------	--	--

Requests

11-3.54	Request for further impact surveys in this section	<p>National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project. The assessment is informed by a suite of field surveys and desk studies and results are presented in an Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the application for development consent. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation (and maintenance) of the Project and recommends appropriate mitigation measures to reduce potential adverse impacts.</p> <p>The scope of the EIA is included in the Scoping Report (document reference 6.19) which was submitted to the Planning Inspectorate in November 2022 and their Scoping Opinion (document reference 6.20) received in December 2022. This provided the opportunity for statutory</p>
---------	--	--

Ref no. Summary of matters raised National Grid's response

		<p>bodies to comment on the scope of the EIA which included our approach on study areas, data collection and baseline conditions for a range of environmental topics. We also discussed and agreed survey scope with stakeholders (including Statutory Environmental Bodies and Local Planning Authorities) following the Scoping Opinion (document reference 6.20) to ensure a robust baseline assessment.</p> <p>National Grid has prepared an Outline Code of Construction Practice (CoCP) (document reference 7.2) which sets out the required mitigation measures and environmental commitments that would be implemented during the construction phase of the Project to avoid or reduce potential effects of the Project on the environment, including commitments to undertake further surveys.</p>	
11-3.55	<p>Criticism of plan provided by National Grid (attached by respondent) which seems inaccurate and appears to include half the Highway carriageway and verge / Request for National Grid to confirm why driveway access is required, and also therefore the accuracy of the original plan</p>	<p>The Order Limits are drawn as such in this location to allow for the undergrounding of an existing 11 kV overhead line from the field to the north-west where it crosses the Project. The design for this section of undergrounding has been developed in collaboration with UK Power Networks and identified an existing cable joint in the highway or verge in the location as described by the respondent. At detailed design National Grid and UK Power Networks would confirm the exact location of the cable joint and the detailed design of the cable diversion. If the joint is determined to be in the carriageway to the south as expected, it is unlikely that any works would be required on the drive.</p>	
11-3.56	<p>Request the Project does not interfere with easements on the respondent's property and cable infrastructure is afforded full protection throughout construction, operation and maintenance / Request in writing that no part of the Project will damage, prevent or obstruct the</p>	<p>National Grid's position is that full protection throughout the duration of any construction, operational or maintenance activities within the Project cannot be accepted on the basis that: National Grid also require access and egress to the haul road and the access route, and this must be 24/7 to allow for construction activities.</p>	

Ref no.

Summary of matters raised

National Grid's response

installation or operation of the cable, require the cable to be removed, diverted, or relocated or impede access to the cable for maintenance or operational purposes

Should Pivoted Power require any access for maintenance or operation past the initial construction phase, National Grid would work with Pivoted Power to adopt a solution that suits both parties as highlighted in the Deed of Grant.

National Grid's understanding is that the works will be completed out of normal working hours, so it does not impact activities.

National Grid's expectation is that this will be completed in advance of the Norwich to Tilbury works taking place on site.

Due to the expectation that Pivoted Power will undertake the cable installation works in advance of Norwich to Tilbury, there should not be any interface between parties that would cause any perceived obstruction or potential damage to Pivoted Power's cable installation.

At present, there are regular, ongoing coordination meetings between National Grid (Customer connections) and customers to ensure that the interests of both scopes are delivered.

National Grid is committed to further discussions to agree further protective provision or to entering into a side agreement. National Grid has made contact to the representatives of the project with no response thus far.

National Grid is awaiting a confirmation for a meeting and look forward to a discussion with the project team.

A Statement of Common Ground is currently being drafted between both parties.

Ref no. **Summary of matters raised** **National Grid's response**

Visual Impact

11-3.57	Concern about cumulative visual impact of the Project alongside existing overhead lines / Concern about wirescape	<p>National Grid notes the feedback received and has taken it into consideration as part of the iterative design process.</p> <p>National Grid has liaised with UK Power Networks to understand opportunities for 132 kV network rationalisation. The Project includes proposals to replace certain sections of 132 kV overhead line connection with underground cable to rationalise the network and reduce potential for cumulative wirescape effects.</p> <p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the Environmental Impact Assessment (EIA). Existing infrastructure (such as existing overhead lines) has formed part of the baseline environment for the Project to be assessed against, to identify if significant landscape and / or visual effects are likely to arise. The LVIA presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) sets out potential landscape and visual effects. The rationalisation of the existing 132 kV network in some areas forms part of the embedded landscape mitigation, as set out in Chapter 13.</p> <p>The findings and conclusions of the LVIA and other topics assessments have been considered within the Cumulative Impact Assessment, presented in ES Chapter 17: Cumulative Effects (document reference 6.17), lists the developments as part of the cumulative assessment. This chapter considers the landscape and visual effects of the Project cumulatively with other proposed developments that are being progressed.</p>
11-3.58	Concern that the Project will be unsightly / visually intrusive (including overhead lines, Cable Sealing End	National Policy Statement (NPS) EN-5 makes it clear that the Government considers overhead lines to be appropriate and acceptable in most

Ref no. Summary of matters raised National Grid's response

(CSE) compounds and substations) / Concern that the Project will cause a negative impact on views

instances, although it recognises that that there may be, at particularly sensitive locations, potential adverse landscape and visual impacts of an overhead line that make it inconsistent with our duties and relevant planning policy.

The Dedham Vale National Landscape (previously an Area of Outstanding Natural Beauty (AONB)) designation is one such location where underground cable technology is proposed with the extent of underground cabling extending beyond the boundary in response to the potential for the Project to affect the National Landscape. Our proposals include a total of approximately 20 km of underground cable through and in the vicinity of the Dedham Vale National Landscape, including a section at Great Horkesley to reduce the changes in views and setting of the National Landscape from within and adjacent to its designated boundary.

Underground cabling is also proposed for a short section of 400 kV overhead line crossing near Fairstead.

Cable Sealing End (CSE) compounds are required to facilitate sections of underground cable, and the proposed East Anglia Connection Node (EACN) substation is required to connect customers and the proposed Tilbury North Substation is required to connect the Project into the existing Tilbury Substation. These components have been carefully sited taking into consideration Horlock Rules including the potential for landscape and visual effects.

The higher cost of underground cables to bill paying consumers, and the environmental implications of installing underground cables and maintaining them

at locations outside the Dedham Vale National Landscape, are not considered to be justifiable in the context of national policy or National

Ref no.	Summary of matters raised	National Grid's response
		<p>Grid's statutory duties, which include the need to be economical and efficient.</p> <p>A Landscape and Visual Impact Assessment (LVIA), presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13), has been undertaken as part of the Environmental Impact Assessment (EIA). The LVIA includes an assessment on both landscape character and visual amenity and identifies areas for potential mitigation planting around substations and CSE compounds to reduce visual impacts to local receptors. The Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) includes details regarding the planting proposals.</p>
11-3.59	Concern that pylons RG20 to RG23 (especially RG21 and RG22) are highly visible from rear of Flordan Hall (grade II listed building) impacting the setting, horizon and character of Historically Important property, including the associated Grade II listed farm buildings (as per respondent's plan)	<p>National Grid has considered the respondent's feedback and has reviewed a number of alternative alignments in this location. Alternatives to the north would impact more woodland and would also increase the impact on a proposed solar farm development, alternatives would also be longer and require additional angle pylons and would be therefore less consistent with the Holford Rules. We are therefore not proposing a change to the alignment in this location. A summary of the Holford Rules is provided within Appendix I22 of this report. The effects of the Project are assessed as part of the Environmental Impact Assessment (EIA) and presented in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement), this has identified any need for additional mitigation.</p> <p>The alternatives considered were preferred on heritage grounds. The impact assessment for Flordon Hall and associated listed buildings is presented in Environmental Statement (ES) Chapter 11: Historic Environment (document reference 6.11) and a viewpoint and visualisation have been produced to inform the assessment (see document reference</p>

Ref no.

Summary of matters raised

National Grid’s response

7.12). The assessment concludes a significant effect due to the change to the setting of Flordon Hall and associated listed buildings, and while additional mitigation was considered, there was not a suitable option that did not in itself increase the adverse impact to the listed building.

Wildlife / Ecology Impact

11-3.60

Concern that the Project will result in a negative impact on species

Through routeing, siting and detailed design National Grid has sought to reduce, as far as practicable, potential impacts on biodiversity including protected species. The design process has taken account of existing biodiversity, the natural environment and, where practicable, has sought to reduce impacts on areas of ecological sensitivity including protected species and their associated habitats, through avoidance or mitigation. A comprehensive survey effort for a range of protected species was completed over the 2023 – 2024 period. Chapter 8: Ecology and Biodiversity of the Environmental Statement (ES) (document reference 6.8) assesses the effects on protected species based on this baseline information and where/if required appropriate mitigation measures are detailed. Suitable mitigation for protected species has been developed in consultation with Natural England to ensure legal compliance and best practice guidelines are adhered to. Where necessary, draft licence applications have been drafted and National Grid is in the process of agreeing the detail within the licence documents with Natural England, in order to obtain the relevant Letters of No Impediment (LoNI). Mitigation for non-licensable protected species has been included within the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4).

Ref no.	Summary of matters raised	National Grid's response
11-3.61	Concern that the Project will result in a negative impact on flora / plants / woodlands / hedgerows	<p>Through routeing, siting and detailed design, National Grid has sought to reduce, as far as practicable, potential impacts on biodiversity including priority grassland, wetland, woodland, and hedgerow habitats. The design process has taken account of existing biodiversity, the natural environment and, where practicable, seeks to reduce impacts on areas of ecological sensitivity, through avoidance or mitigation.</p> <p>Chapter 8: Ecology and Biodiversity of the Environmental Statement (ES) (document reference 6.8) assesses the effects on important ecological receptors (which includes grasslands, wetlands, woodlands and hedgerows).</p> <p>As part of the Environmental Impact Assessment (EIA) process for the Project, a suite of ecological surveys has been to be undertaken. The findings of which inform the design and approach to mitigation.</p> <p>The Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Code of Construction Practice (CoCP) (document reference 7.2) contain a list of relevant good practice measures to avoid or reduce impacts on valuable habitats.</p> <p>The Environment Act 2021 introduces a mandatory requirement for 10% Biodiversity Net Gain (BNG) for new Development Consent Order (DCO) developments (which is not yet in force and not expected until May 2026). National Grid</p> <p>have committed to delivering 10% BNG with environmental and societal benefits on all construction projects. The BNG target for the Project is currently voluntary and aligned with our corporate sustainability commitment.</p> <p>As well as seeking to avoid and minimise impacts to nature, the Project considers the land required for mitigation, compensation and enhancement</p>

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-3.62	Concern that the Project will result in a negative impact on wildlife / biodiversity / ecology (generally)	<p>that can deliver BNG and wider environmental benefits. This will require delivery of offsite Biodiversity Units via habitat creation or enhancement actions in strategic areas, and we will consider all offsite options that are available to us.</p> <p>Through routeing, siting and detailed design National Grid has sought to reduce, as far as practicable, potential impacts on biodiversity. Table 11-4 Summary of consultee comments and National Grid's response

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
Agricultural Land			
11-4.1	Concern that the Project will take away valuable agricultural land / disrupt farming operations	<p>During the construction stage of the Project, there would be areas of agricultural land that would be temporarily disrupted. National grid would only use land that is required as part of the Project and would seek to minimise the use of agricultural land where reasonable and safe to do so.</p> <p>National Grid is and will continue to work with all landowners including farmers who may be affected by the proposals to understand the impacts on their operations and to work with them as the Project is developed. We would seek to work with the farming community to limit disruption where practicable. This includes providing prior warning of works which may result in the need to move livestock. Compensation claims for disturbance are considered on a case-by-case basis, if negative impact on farming operations can be proven. Particular agricultural matters can also be addressed through voluntary land agreements.</p>	
11-4.2	Concern that the Project will have a negative impact on agricultural livestock (e.g. type of livestock)	<p>National Grid is and will continue to work with all landowners including farmers and equestrian facilities who may be affected by the proposals to understand the impacts on their operations and to work with them as the Project progresses. We would seek to work with the farming community to limit disruption where practicable. This includes providing prior warning of works which may result in the need to move livestock. Compensation claims for disturbance are considered on a case-by-case basis, if negative</p>	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		<p>impact on farming operations can be proven. Particular agricultural matters can also be written into voluntary land agreements. There will also be mitigation put in place where animal grazing maybe affected.</p> <p>As well as possible effects on humans, possible effects of Electric and Magnetic Fields (EMFs) on various animals have been studied. No detectable effects of EMFs have been found on, for example, health, milk production, fertility, and behaviour. This is confirmed in National Policy Statement (NPS) EN-5 which states: <i>"There is little evidence that exposure of crops, farm animals or natural ecosystems to transmission line EMFs has any agriculturally significant consequences."</i></p>	
Airfields			
11-4.3	Concern about the impact of the Project on Elmsett Airfield / Suggestion that the Project is routed away from Elmsett Airfield	<p>National Grid has appointed an independent aviation consultancy which has engaged with (with National Grid also present) Elmsett Airfield. Following discussion and further assessment it has been determined, with the Project as currently proposed, that the airfield can continue to operate. We would continue to engage with nearby airfields as appropriate.</p> <p>Further information on the assessment of airfields can be found in the Environmental Statement (ES) Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).</p>	
11-4.4	Concern about the impact of the Project on Wattisham Airfield / Suggestion that the Project is routed away from Wattisham Airfield	<p>National Grid has appointed an independent aviation consultancy which has engaged with (with National Grid also present) Wattisham Flying Station as well as the Ministry of Defence (MOD) Defence Infrastructure Organisation (DIO). Following this and further assessment it has been determined, with the Project as currently proposed, that the aerodrome can continue to operate.</p>	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		We would continue to engage with nearby airfields as appropriate. Further information on the assessment of airfields can be found in the Environmental Statement (ES) Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).	
11-4.5	Concern about the impact of the Project on Raydon Wings / Suggestion that the Project is routed away from Raydon Wings	<p>National Grid has appointed an independent aviation consultancy which has engaged with Raydon Wings aerodrome (with National Grid also present) to inform their aviation impact assessment. Following consultation with the operator, it has been assessed that, with the Project as currently proposed, operations will be able to continue at the airfield once the Project is constructed and operational. It is recognised, however, that construction of the underground cable route is likely to temporarily disrupt the aerodrome. National Grid is engaging with the operator to enable their review of the acceptability of the design and explore potential mitigations to minimise temporary impacts on aviation operations.</p> <p>Further information on the assessment of airfields can be found in the Environmental Statement (ES) Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).</p>	
Community/Social Impact			
11-4.6	Concern about impact of the Project on children / families / residents / communities	<p>National Grid recognises people may have concerns about the potential impacts of living close to an overhead line, and that the uncertainty whilst the proposals are developed may cause anxiety.</p> <p>We have sought to reduce potential effects on communities, residents – including children - through routeing and design. We have also sought to reduce concern or uncertainty about the proposals through making timely design decisions and engaging with people and stakeholders throughout the development of the Project. If the Project received Development</p>	

Ref no.

Summary of matters raised

National Grid's response

Consent, the Project team would continue to engage with people potentially affected during construction, through regular communication including letters, phone calls and meetings, where necessary.

We urge anyone with concerns to get in touch through the Norwich to Tilbury Freephone number, address or email, which will remain open throughout examination.

National Grid is committed to working with local suppliers, facilitated by supporting forums (such as the local Chambers), on electricity industry skills and workforce planning. National Grid is also committed to providing a coordinated regional approach to jobs and skills opportunities. This commitment is broader than the individual Project and separate to any commitments under the proposed development consent order for this Project. The socio-economic effects of the project are assessed in Chapter 15: Socio-economics. Recreation and Tourism of the Environmental Statement (ES) (document reference 6.15). Post construction job opportunities are limited given the nature of the development however we will still work with Local Authorities (including facilitating local partners) to understand what is important to them around skills and employment to ensure we leave a lasting positive legacy in the communities where we operate.

With regards to a delivery mechanism, the above measures will be delivered as part of our community benefit package, which will look at both local and regional initiatives. This will be delivered outside the development consent process and is not a material consideration in the decision on the proposed Project or a matter to be secured as part of the DCO, as per the Community Funds for Transmission Infrastructure: Guidance (DESNZ, 2025).

Ref no.	Summary of matters raised	National Grid's response
11-4.7	Concern about the Project being in too close proximity to recently built housing developments / using land being considered for future development (including residential, commercial, infrastructural, and employment sites)	<p>National Grid has obtained information on existing, under construction, consented but not built schemes as well as development proposals within the planning system. The Project design has responded to those that are confirmed through consideration of routeing.</p> <p>In the case of development proposals, some can be amended to be designed around our proposed infrastructure but in other cases our proposals may need to be amended at a corridor level, or proposed developments factored into our detailed route design.</p> <p>Based on known information, and in light of changes made following consideration of feedback to the 2022 and 2023 non-statutory consultations, statutory consultation, targeted consultations, and landowner consultation, we consider our proposals are consistent with relevant policy and guidelines and the alignment designed such that they do not prevent proposed housing developments from being successfully progressed. UK law does not prescribe minimum distances between overhead lines and homes, but any implications on landscape and visual receptors, residential amenity or from concerns about electromagnetic fields are robustly assessed as part of the Environmental Impact Assessment (EIA) and balanced as part of the decision making process. We will continue to review planning applications and engage with developers as necessary.</p>
11-4.8	Concern about the Project causing communities to become encircled / surrounded by overhead lines	<p>The alignment has been routed to achieve some separation from the existing 400 kV overhead line, such that villages are not encircled by overhead lines to both sides. Separation is inevitably reduced in certain locations due to the presence of constraints to routeing and environmental features. Detailed assessment reported in the Environmental Impact Assessment (EIA) identifies any measures considered to be necessary to reduce likely significant effects which would also consider the potential for</p>

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-4.9	Concerned that the Project will have a negative impact on domestic horses / equestrian activities	<p>effects potentially arising from close paralleling existing 132 kV overhead line and new 400 kV overhead line infrastructure.</p> <p>As well as possible effects on humans, the possible effects of Electric and Magnetic Fields (EMFs) on various animals have been studied. No proven effects of EMFs have been found in any species at levels below the guidelines. This is confirmed in National Policy Statement (NPS) EN-5 which states: <i>'There is little evidence that exposure of crops, farm animals or natural ecosystems to transmission line EMFs has any agriculturally significant consequences.'</i> Although horses are not directly mentioned, there is no evidence to suggest they are any different to other farm animals.</p> <p>As well as the possible direct biological or health effects addressed above, indirect effects such as microshocks can occur as a result of electric fields. Microshocks are small spark discharges which are similar to a static shock after walking across a nylon carpet for example. The Project would be designed in accordance with the principles of the Governments Code of Practice <i>'Power Lines: Control of Microshocks and other indirect effects of public exposure to electric fields'</i> to ensure these are mitigated, which include equestrian activities.</p>	
11-4.10	Criticism of surveys undertaken for the Project in this Section	<p>There is a staged approach to the process of collection of environmental data as any major project develops. National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project. The assessment is informed by a suite of field surveys and desk studies and results are presented in an Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the application for development consent. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation</p>	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-4.11	Concern about the impact of the Project on water supply	<p>(and maintenance) of the Project and recommends appropriate mitigation measures to reduce potential adverse impacts.</p> <p>The scope of the EIA is included in the Scoping Report (document reference 6.19) which was submitted to the Planning Inspectorate in November 2022 and their Scoping Opinion (document reference 6.20) received in December 2022. This provided the opportunity for statutory bodies to comment on the scope of the EIA which included our approach on study areas, data collection and baseline conditions for a range of environmental topics. We also discussed and agreed survey scope with stakeholders (including Statutory Environmental Bodies and Local Planning Authorities) following the Scoping Opinion (document reference 6.20) to ensure a robust baseline assessment.</p> <p>National Grid has prepared an Outline Code of Construction Practice (CoCP) (document reference 7.2) which sets out the required mitigation measures and environmental commitments that would be implemented during the construction phase of the Project to avoid or reduce potential effects of the Project on the environment, including commitments to undertake further surveys.</p> <p>National Grid has conducted preliminary ground investigations in order to better understand the geology along the underground cable route, including ground water levels. This would be supplemented by more detailed investigations prior to construction should the Project obtain consent. National Grid would assess the impact of the works on all identified ground water sources, including public and private abstraction points, and take appropriate measures to avoid detriment to those water sources.</p> <p>Landowners are encouraged to provide as much information as early as possible in relation to any private supplies, drainage and irrigation systems on their land so these can be factored in at the detailed design</p>	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		<p>stage of the project ahead of construction starting on site.</p> <p>As part of the development of the Project a Groundwater Baseline and Qualitative Groundwater Risk Assessment has been undertaken and forms part of the Environmental Statement (ES) (document reference 6.9.A3). This document provides an assessment of the potential effects of the Project on groundwater resources and includes an appraisal of the impacts on groundwater supplies. Mitigation measures have been included within the Outline Code of Construction Practice (CoCP) (document reference 7.2) regarding the prevention of groundwater pollution as well as measures specific to safeguarding groundwater fed water supplies. Commitments would include the safe and responsible storage of fuels, oils and chemicals, the monitoring of water quality prior to construction to confirm a baseline for future tests during construction and additional hydrogeological risk assessment at specific locations where there is a potential for the Project to impact on groundwater.</p>	
11-4.12	Concern that the Project will impact respondents Countryside Stewardship schemes (near Granary, Lower Somersham) which will subject the respondent to financial penalties for non-compliance	National Grid will work with all landowners to try and mitigate any impacts the Project may have on any schemes they may be part of, such as the Countryside Stewardship scheme. Where mitigation cannot be put in place and there are financial implications caused as a direct effect of the Project, National Grid will compensate landowners accordingly.	
Construction impacts			
11-4.13	Concern about disruption from construction	<p>An Environmental Statement (ES) (document reference: Volume 6: Environmental Statement) has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 ('the Infrastructure EIA Regulations'). The ES identifies and assesses the likely significant effects on the environment resulting from the construction of the Project and recommends appropriate mitigation to reduce effects.</p>	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-4.14	Concern about impact on traffic levels in local area caused by construction works	<p>Environmental mitigation measures have been defined within each environmental topic chapter and set out in relevant management documents submitted with the Development Consent Order (DCO) application, including the Outline Code of Construction Practice (CoCP) (document reference 7.2), the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5).</p> <p>As part of the pre-application process National Grid has engaged with the relevant authorities, their highways teams and National Highways to understand and gain information on their road networks. This information has been used to inform and guide the drafting of the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) for the Project that accompanies the Development Consent Order (DCO) application.</p> <p>A strategy has been developed to manage the impact of construction vehicles on the public highway and sensitive receptors, using suitable Local Road Network connections from the Strategic Road Network called Primary Access Routes. In addition, temporary haul roads for construction vehicles are proposed along the Project alignment, further reducing the impact of construction traffic on the local road network. Further details of the strategy can be found within the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).</p> <p>Environmental Statement (ES) Chapter 16: Traffic and Transport (document reference 6.16) includes the assessment of the potential impacts of the Project including changes in traffic flow, delays, road safety</p>	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-4.15	Concern about noise and other issues resulting from construction (e.g. mud on roads, dust)	<p>and impact on Walking, Cycling and Horse-Riding modes on the roads along the Primary Access Routes located in the Local Road Network.</p> <p>The Transport Assessment (document reference 7.11), submitted with the DCO application, examines capacity, safety, and operational efficiency of the network, identifying potential bottlenecks or safety concerns.</p> <p>Within the assessment of the ES and the Transport Assessment, mitigation measures are proposed to minimise likely adverse impacts.</p> <p>An Environmental Statement (ES) (document reference: Volume 6: Environmental Statement) has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 ('the Infrastructure EIA Regulations'). The ES identifies and assesses the likely significant effects on the environment resulting from the construction of the Project and recommends appropriate mitigation to reduce effects.</p> <p>Specifically, a Construction Noise and Vibration Impact Assessment has been undertaken and is reported in ES Chapter 14: Noise and Vibration (document reference 6.14). During construction, mitigation would be implemented to reduce noise and vibration impacts from construction activities and increased road traffic noise and vibration due to additional movement from construction traffic. Mitigation measures are outlined in ES Chapter 14: Noise and Vibration (document reference 6.14) and the Outline Code of Construction Practice (CoCP) (document reference 7.2). This includes the assumption that construction working would be undertaken within the agreed working hours, construction traffic would be managed through the Construction Traffic Management Plan (CTMP) (document reference 7.3), haul roads would be well maintained, and Best Practicable Means (BPM) would be employed to reduce construction noise and vibration.</p>	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		<p>ES Chapter 7: Air Quality (document reference 6.7) presents an assessment of the potential impacts from the construction of the Project on air quality. During construction, mitigation would be implemented to reduce the impact of dust generation and construction vehicle emissions. Mitigation measures are outlined in ES Chapter 7: Air Quality (document reference 6.7), and the Outline CoCP (document reference 7.2). The dust-emitting activities can be greatly reduced or eliminated by applying the site-specific mitigation measures (see Outline CoCP (document reference 7.2)) for high risk sites following measures recommendations in the Institute of Air Quality Management (IAQM) guidance (IAQM, 2024). The IAQM guidance states that with the implementation of effective site-specific mitigation measures, the environmental effect would not be significant in most cases.</p> <p>In addition, National Grid has prepared an Outline CoCP (document reference 7.2). The Outline CoCP (document reference 7.2) sets out the required mitigation measures and environmental commitments that would be implemented during the construction phase of the Project to avoid or reduce potential effects of the Project on the environment.</p>	
11-4.16	Concern that local road infrastructure is not suitable for heavy construction vehicles and machinery	<p>A strategy has been developed to manage the impact of construction vehicles on the public highway and sensitive receptors, using suitable Local Road Network connections from the Strategic Road Network called Primary Access Routes. In addition, temporary haul roads for construction vehicles are proposed along the Project alignment, further reducing the impact of construction traffic on the local road network. Further details of the strategy can be found within the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).</p>	

Ref no.	Summary of matters raised	National Grid's response
11-4.17	Concern about vibrations from construction	<p>An assessment of construction vibration is presented in Environmental Statement (ES) Chapter 14 - Noise and Vibration (document reference 6.14).</p> <p>The assessment considers both the potential impact upon people within buildings (i.e. disturbance), and potential damage to buildings and structures.</p> <p>The assessment considers relatively worst-case construction methodologies and does not take account of potential mitigation. This is so that potential 'hot-spots' can be identified where there is the potential for significant adverse effects, without mitigation.</p> <p>The construction vibration assessment has identified 74 locations where there is potential disturbance to people within buildings from construction vibration. Of these, 72 relate to potential vibratory compaction activities which would be expected to be for a relatively short duration (i.e. less than day). The remaining two relate to potential piling activities for pylon foundation construction.</p> <p>With regards to potential damage to buildings and structures, the assessment highlights locations where there is a potential non-zero risk of damage. 14 locations have been identified, all of which relate to potential vibratory compaction activities.</p> <p>In all cases, significant adverse effects, or potential structural damage, can be avoided with the use of best practicable means (BPM). This may include alternative methods, such as non-percussive/vibratory techniques.</p> <p>Additionally, prior to undertaking works, the Main Works Contractor(s) would conduct a detailed construction vibration assessment based on their specific methodologies and determine specific mitigation measures, where applicable.</p>

Ref no.	Summary of matters raised	National Grid's response
11-4.18	Concern that information has not been provided on whether the UKPN 11 kV underground cables will be laid above or below an existing high pressure gas pipeline	<p>National Grid is aware of the high pressure gas main. The Outline Code of Construction Practice (CoCP) (document reference 7.2) provides commitments to reduce construction impacts together with a framework for detailed management plans to be prepared at detailed design stage in order to reduce and mitigate potential impacts and/or disruptions that may arise during the construction phase. Pre-construction surveys would be undertaken to aid the detailed design development of the cable route, these would be completed prior to construction. National Grid works and consults with all third party statutory utility owners as well as the local water and electricity companies. Where required, appropriate mitigation would be agreed in order to negotiate such existing infrastructure. The Order Limits are inclusive of the area required to deliver the UK Power Networks mitigation works required to deliver the Project. National Grid has coordinated with UK Power Networks to ensure the designs align with their best practices and system requirements. Working in proximity to existing utility assets (both above ground and buried) is common practice for National Grid and their contractors. National Grid and their contractors shall adhere to relevant Health and Safety Executive (HSE) and National Grid & UK Power Networks specific legislation, policy and guidance when constructing, operating and maintaining the Project. The high pressure gas pipeline crossing would be developed further during detailed design. The Environmental Statement (ES) (document reference Volume 6: Environmental Statement) of the Development Consent Order (DCO) application provides an assessment of the Project including temporary construction impacts and any permanent impacts.</p>
11-4.19	Concern that the Project includes underground cables near to respondents property on Blood Hill Road (e.g. it appears that the respondents land will suffer huge	<p>National grid has and will continue to engage with all landowners potentially affected by the proposed Project. National Grid has appointed Fisher German as their land agents, and they</p>

Ref no.	Summary of matters raised	National Grid's response
	<p>impact from the Project, no detail has been provided on proposed timings and duration of any works, the plans provided appear to show that the respondents holding will be divided into three completely separated areas by the works, no information has been provided to explain how the respondent will be able to access their land, no discussion has been had with the respondent on how the impact to the current horses that graze the land will be managed by National Grid, and there is believed to be a high-pressure gas pipeline located within the southern area)</p>	<p>will be happy to meet with affected landowners to discuss how the Project may effect their land. At this stage we may not be able to confirm exact timeframes for construction but will be able to discuss / agree how the land may or may not be affected and agree possible mitigation or compensation where applicable. If a landowner would like to arrange a meeting or discuss the Project they can contact the Project lands team: Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314. In addition to adhering to Regulation 15 of The Pipelines Safety Regulation 1996, National Grid would comply with the safe working requirements dictated by the asset operator when working within the vicinity of their high-pressure gas main.</p>
11-4.20	<p>Concern that access to the respondent's property on Bildeston Road (near Offton) will be impacted by Project</p>	<p>National Grid notes the respondent's feedback. Bildeston Road has not been identified as a primary access route for construction traffic, therefore the only construction vehicles expected to use this road are a crane and vehicles to enable the removal of UK Power Network pylons. These will be accessed via Castle Road. Short term closures of Bildeston Road will likely be required for certain construction activities, however access will be maintained either through traffic management or the provision of appropriate diversion routes. Further details can be found in the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).</p>
Consultation		
11-4.21	<p>Comment supportive of the Project in this section</p>	<p>National Grid notes the respondent's feedback.</p>
11-4.22	<p>Criticism of consultation specific to this section</p>	<p>National Grid notes the respondent's feedback.</p>
11-4.23	<p>Concern about the impact of the Project on respondents solar development (plan previously</p>	<p>National Grid had taken into account the potential effects on solar development in this location where adjacent solar farms restrict the ability</p>

Ref no.

Summary of matters raised

National Grid's response

provided to land agent by respondent ; e.g. considering the full extent of the red line boundary, the Project would impact the total capacity of the development) and request that National Grid share the final plans as discussed and agreed with respondent during a call that took place / Suggest that the Project is delivered in co-ordination with respondents development (e.g. to minimise compensation costs for National Grid) / Concern that National Grid have not provided feedback to the points raised by the respondent during the initial call that has taken place) and suggest a meeting is organised as soon as possible to facilitate co-ordination between the Project and the respondent's development in Palgrave

to avoid impacts by route amendments. As a result of further engagement, we have identified a number of local adjustments that can be incorporated within the Project that fully address the points raised in the feedback. We continue to work through the details of this with the developer and landowner and are progressing to an agreed Statement of Common Ground that resolves the points raised.

Design Change

11-4.24

Suggest that existing overhead lines in this section should be removed

The existing electricity transmission network provides power, via the local distribution network, into the local area where it is used in homes and businesses. Such lines cannot just be removed as power supplies would not be maintained.

The need case and funding for the Project is to deliver the new network reinforcement needed, rather than to remove existing overhead lines which would need to be replaced by another form of connection such as underground cables.

Unless required for crossings or mitigation, undergrounding existing overhead lines on the transmission network would not be in accordance with National Policy Statement (NPS) EN-5 and would result in substantial cost to bill payers. There may also be significant environmental impacts due to the removal works on sensitive ecological and archaeological

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-4.25	Suggest that existing overhead lines in this section should be replaced by underground cables	<p>receptors as well as constraints from either existing buildings or unsuitable ground conditions.</p> <p>National Policy Statement (NPS) EN-5 establishes the position that the starting basis for new connections is a presumption on the acceptability of overhead lines but with this presumption reversed within designated landscapes and in certain other circumstances.</p> <p>The existing electricity transmission network provides power, via the local distribution network, into the local area where it is used in homes and businesses. The need case and funding for the Project is to deliver the new network reinforcement needed, rather than to remove existing overhead lines by undergrounding them.</p> <p>We have identified a number of locations where we are proposing to place existing overhead lines underground. These locations are where existing 132 kV and lower voltage lattice pylon lines are crossed by the proposed 400 kV overhead line and / or mitigation of effects are considered necessary. This includes locations such as at Mellis, between Offton and Bramford Substation, to the south of Bramford Substation and near Fuller Street.</p> <p>Unless required for mitigation, undergrounding existing overhead lines on the transmission network would not be in accordance with NPS EN-5 and would result in substantial cost to bill payers. There may also be significant environmental impacts due to the removal works on sensitive ecological and archaeological receptors as well as constraints from either existing built form or unsuitable ground conditions.</p>	
11-4.26	Suggest that the Project is routed away from populated / residential areas	Deciding where and how to build new high voltage electricity lines is a complex issue and National Grid is mindful of the potential effects this infrastructure may have on local communities and the concerns these may bring. We recognise that people living near our transmission	

Ref no.

Summary of matters raised

National Grid's response

infrastructure, including high voltage overhead lines, may have concerns about audible noise and potential health impacts. It has sometimes been suggested that minimum distances between properties and overhead lines should be prescribed.

We do not consider this appropriate since each instance must be dealt with on its merits. However, we have always sought to route new lines away from residential property on grounds of general amenity where possible.

We have undertaken a noise and vibration assessment which can be found in the Environmental Statement (ES), Chapter 14: Noise and Vibration (document reference 6.14) that forms part of the Environmental Impact Assessment (EIA) for the Project. Noise levels and the effect on residential properties as well as other sensitive areas, such as hospitals and schools, are carefully considered during planning, assessed according to the appropriate UK standards, and mitigated where necessary. We set strict technical standards for the equipment we install on our network. These will apply to the proposed new East Anglia Connection Node (EACN) substation, and extensions required to the existing Norwich Main, Bramford, and Tilbury Substations. These standards include requirements to ensure the occurrence of audible noise is eliminated or reduced as far as practicable. Therefore, significant adverse effects from noise are not expected.

Noise from overhead lines is predominately determined by the conductor design, voltage and weather conditions. The overhead line would be designed using a relatively quiet conductor that meets the design specification required, and operational noise is not likely to be significant at nearby sensitive receptors under any weather conditions. Pylon fittings, such as insulators, dampers, spacers, and clamps, are also designed and procured in accordance with a series of National Grid Technical

Ref no.

Summary of matters raised

National Grid's response

Specifications to reduce the potential for audible noise and tones to occur from all types of fittings. Where noise does occur, it is likely to be localised and of short duration. If this is due to a fault, action can be taken to rectify it. A technical note has been submitted as part of the application for development consent to support scoping out noise associated with overhead lines from the ES.

In addition, we have undertaken a Landscape and Visual Impact Assessment (LVIA) for the Project.

This includes an assessment on both landscape character and visual amenity. The LVIA is presented in the ES, Chapter 13: Landscape and Visual (document reference 6.13).

The health and safety of the public, local communities and employees is central to everything that we do. The UK has a carefully thought-out set of policies for protecting us all against Electric and Magnetic Fields (EMFs), the main component of which is exposure guidelines. The exposure guidelines are set by independent scientific bodies and are based on decades-long studies into the effects of EMFs and ill health. After those decades of research, the weight of evidence is against there being any health risks of EMFs below the guideline limits. Our approach is to ensure that our network comply with those policies, which are set by Government on the advice of their independent advisors. The Project is designed to ensure it is fully compliant with these policies and guidelines. This ensures that health concerns are properly and adequately addressed.

Policies for both noise and EMF are incorporated into the decision-making process for development consent as set out in National Policy Statement (NPS) EN-5. It is National Grid's policy to ensure that all its equipment complies fully with those policies and guidelines. The application for a

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		Development Consent Order (DCO) includes assessments against these polices, including both construction and operational noise and EMF.	
11-4.27	Concern that the visibility splay of the proposed access routes along Old Bury Road will not be sufficient due to the respondents newly planted trees along the road frontage to enhance privacy / Suggest alternative access points (per the respondent's plan)	The newly planted trees along the road frontage will not be impacted by the visibility splay for the permanent access. Access to the compound and haul road is via a new bellmouth with associated visibility splays located on the A143 opposite the spur onto Old Bury Road approximately 1 km east of the access to Rookery Farm Ltd.	
11-4.28	Concern pylons RG136 and RG137 are too close to the gas main	National Grid notes the respondent's feedback and pylons RG136 and RG137 are located in close proximity to the National Gas Transmission (NGT) high pressure gas pipeline. The pylon centre points are approximately 42 m and 50 m to the west of the gas pipeline respectively. The final position of the pylons, foundation design and its zone of influence will be determined by our contractors at detailed design. Where works are within 3 m of NGT assets the actual position and depth of the asset must be established onsite with the presence of a NGT representative. A safe working method must be agreed with NGT prior to any work taking place in order to minimise the risk of damage and ensure the final depth of cover does not affect the integrity of the pipeline. Should the Project obtain consent, further details would be worked up by the Contractor at the construction stage through further engagement with NGT. National Grid is engaging with NGT's plant protection team to detail the extent of the proposed interactions and agree mitigation where required to.	
11-4.29	Suggest the pylon associated with the line to be removed as part of the Bramford to Twinstead project is also removed to reduce visual impact	The existing 4YL route overhead line pylons positioned to the north and west of Bramford Substation are to be removed as per the Bramford to Twinstead Development Consent Order. The RG route overhead line as proposed as part of the Project proposed a	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		similar terminal pylon (RG208) slightly south of existing 4YL002, this pylon is required to facilitate the connection of the overhead line to the two gantries (RG209 and RG210) positioned within Bramford Substation. Whilst noting the respondent's preference the connection requires this pylon as part of the Project. The visual impact is assessed and reported on within the LVIA presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.	
11-4.30	Suggestion to route construction traffic north of Capel St Mary via an existing 2-lane slip road and a temporary haul road along the old railway track, rather than via the B1070 junction and Holton St Mary	National Grid has carefully considered the feedback received during the statutory consultation for this Primary Access Route for construction vehicles. The suggestion to follow the dismantled railway for the haul road is not considered to be a viable solution given the proximity to the preceding junction and the cost of the works. In this case more limited works and a shorter additional haul road distance over are provided by the use of the existing access near Holton St Mary and this remains preferred. Whilst noting the respondent's preference there is no specific evidence provided nor additional factors identified that either support the preference stated or justify a change from the Project. National Grid has undertaken an assessment of the potential effects of the Project on traffic and transport and recommends appropriate mitigation to reduce potential effects (see Chapter 16: Traffic and Transport of the Environmental Statement (ES) (document reference 6.16) for further detail).	
11-4.31	Request that pylons RG133 to RG136 be relocated east to run parallel to the existing Bramford-Norwich 400 kV line	The potential to divert the alignment to more closely parallel the existing overhead line infrastructure, particularly in this location where the existing and proposed lines come into close proximity, has been considered and reported in the 2022 Corridor and preliminary routeing and siting study and the 2023 and 2024 Design Development Reports (available on the Project website). It has been further reviewed in respect of the section	

Ref no.	Summary of matters raised	National Grid's response
		<p>identified in the feedback in the 2025 Design Development Report (document reference 5.15).</p> <p>In the absence of new information or the identification of other factors the conclusions drawn previously remain valid that it is less preferred. There are greater effects where lines converge and diverge with sharp direction changes to the north-west of Mendlesham and south-east of Mendlesham Green to connect with the remainder of the alignment. Effects are not removed but transferred to other receptors and overall adopting the change would provide an alignment with more angle pylons and be less direct and less consistent with Holford Rule 3. A summary of the Holford Rules is provided within Appendix I22 of this report. There are also increased maintenance and refurbishment risks especially to the west of Mendlesham where the large direction change on the existing line would require additional separation between parallel overhead lines to provide the appropriate space for future maintenance to be completed safely where there is limited space because of a listed residential property.</p> <p>Overall, a more parallel alignment is considered less consistent with Holford Rules and likely to increase effects. On this basis we do not consider the suggested change to be preferred, and it is not taken forward.</p>
11-4.32	Suggestion that a straighter route between pylons RG196 and RG200 be considered	<p>National Grid notes the respondent's feedback. The alignment and siting of pylons, including RG195 to RG200, reflect a careful balance between environmental, technical in addition to heritage considerations. The change between RG195 and RG200 resulted in avoiding impacts on the equestrian business and it also moved the alignment further away from residential properties along Ipswich Road.</p> <p>An additional outcome of this change was that rather than having multiple crossings of the existing 132 kV overhead line we are now proposing to</p>

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-4.33	Suggestion that the construction access route from Blood Hill be moved west and make use of an existing hardcore track	<p>underground the section of 132 kV overhead line from the first point of crossing near Middle Wood through to the north of Bramford Substation which will reduce the potential effects. This change remains preferred over a straighter alignment and no further change is proposed.</p> <p>National Grid notes the respondent's feedback. The haul roads have been located to be close to the works that they are facilitating (in this instance the build of the overhead line pylons), to reduce route length and land take where possible. Importantly the haul roads must also tie in with the proposed public highway primary access points or crossing points (bellmouths) which have been positioned to adhere to highways safety requirements and where possible away from residential receptors. Due to these factors the haul road is positioned where it is, and no change is proposed.</p>	
11-4.34	Request that pylons RG143 to RG148 be relocated to reduce impacts on respondent's farm (plan provided by respondent)	National Grid notes the respondent's feedback. RG143 cannot be moved to the position suggested as this is an angle pylon and any changes would therefore impact the sections of overhead line to the north and south of this pylon. Specifically, at RG143, space is needed around the pylon for scaffold to protect the public highway during stringing of the conductors. If implemented as suggested the change to the positions of RG144 and RG145 would transfer effects to other receptors by moving it closer to properties to the west. Also, the proposed change to RG148 would add an additional angle pylon and would significantly lengthen the span to RG149, requiring much taller pylons and also bringing in additional receptors (landowners currently unaffected). For these reasons the change proposed is considered less preferred compared with the alignment.	
11-4.35	Request for permanent access routes to be amended (plan provided by respondent)	National Grid notes the respondent's feedback with regards to the permanent access route and also notes that the most appropriate route	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		<p>also varies in response to seasonal variation in land uses. As the Project progresses into the heads of terms and voluntary agreement stage there will be an opportunity to discuss and agree permanent access rights in more detail. No physical works are required for these permanent access routes as part of the Project as these will not be used for construction. Access may be required in the future, for maintenance and surveys and therefore National Grid will look to agree the most suitable access route at that point, taking into account the landowner and National Grid's requirements.</p>	
11-4.36	<p>Suggestion that Stour Valley Beagle Kennels land is not suitable for use during the construction or operation of the Project</p>	<p>National Grid notes the respondent's feedback. The respondent's property is within the Order Limits as the existing 132 kV pylon is planned to be used to enable the 132 kV alignment to the west to be put underground. If the respondent has any concerns about the works required, National Grid would encourage them to contact the Project lands team: Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.</p> <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD.</p>	
11-4.37	<p>Suggest access to pylon JC17 is from land parcel SK380302, the field where the pylon would be located, to reduce issues with third-party access rights</p>	<p>National Grid notes the respondent's feedback with regards to the permanent access route to JC17 and also notes that the most appropriate route also varies in response to seasonal variation in land uses. As the Project progresses into the heads of terms and voluntary agreement stage there will be an opportunity to discuss and agree permanent access rights in more detail. No physical works are required for these permanent access routes as part of the Project as these will not be used for construction. Access may be required in the future, for maintenance and surveys and therefore National Grid will look to agree the most suitable access route at</p>	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-4.38	Suggest that the Project at Pylon RG194 is re-routed west of Cottage Barn (e.g. to mitigate impact on 400 year old oak trees, great crested newts identified in the pond at cottage barn, skylark plots, other protected species, owl boxes, respondents driveway which is unsuitable and is not strong enough for heavy vehicles, and market garden) / Suggest that the Project is re-routed west of Cottage Barn (e.g. to mitigate impact on residents, farm, flora and fauna)	<p>that point, taking into account the landowner and National Grid's requirements.</p> <p>While the mature tree line to the north of Cottage Barn offers ecological value, arboricultural surveys have not identified these trees as veteran trees. However, impacts on the tree band have been minimised as far as practicable with the majority of trees likely retained.</p> <p>While there will be no direct loss of the pond at Cottage Barn, the potential temporary impact on Great Crested Newt (GCN) terrestrial habitat is acknowledged. It has been agreed with Natural England that a GCN District Level License (DLL) will be obtained for the full extent of the Project. This DLL will cover all potential impacts on GCN including those associated the pond at Cottage Barn. An alternative route to the west of Cottage Barn would not change the potential impacts on GCN.</p> <p>Ecological surveys have been undertaken for a range of other protected species including barn owl and farmland birds. The proposed alternative alignment to the west would not change the potential impact on these protected species.</p> <p>Full details can be found within Chapter 8: Ecology and Biodiversity (document reference 6.8) and Appendices 8.1 to 8.16 (document reference 6.8.A1-6.8.A16) of the Environmental Statement (ES).</p> <p>The alternative route suggested has the potential to reduce some effects however it transfers and increases effects by moving the alignment closer to two grade II listed properties and increasing effects at a residential property to the north east of Gunn's Farm by passing within around 60m. Effects on the market garden are reduced by restriction to oversail with the haul road repositioned to the northern edge. On this basis no change is proposed as any benefits are transferred and also increased for others. Noted regards the strength of the driveway, no physical works are proposed to this access route, alternative deconstruction methods exist if</p>	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		<p>driveway deemed impractical for mobile crane.</p> <p>Both the current and alternative route suggested may cause disruption to farm operations during construction, but any disturbance would be mitigated by maintaining access to affected land, or providing alternative access arrangements, as stated in the Outline Code of Construction Practice (CoCP) (document reference 7.2). Disturbance to agricultural operations during the construction phase are assessed in full in Chapter 6: Agriculture and Soils (document reference 6.6) of the ES. By the end of construction, all land required temporarily would be reinstated.</p>	
11-4.39	<p>Suggest slightly re-routing the Project, so that the Project crosses the railway at Pylon RG117 (as per plan provided by respondent), which would significantly mitigate impact on respondents holding and would further reduce the impact on Gislingham</p>	<p>National Grid has considered the respondent's feedback. We previously proposed a change to the alignment between RG113 and RG118 (now RG119) which would move RG115, RG116, RG117 and RG118 further east away from Gislingham. RG117 would also then be positioned on the other side of a copse. Crossing the railway at the location suggested would result in the loss of a greater amount of woodland to the east of the railway and would be closer to a campsite and venue to the east. Therefore, we are not proposing a change to cross the railway at this location.</p>	
11-4.40	<p>Suggest the haul road near pylons RG201 and RG202 is relocated slightly to the south-west to follow the existing hedgerows before crossing the field close to the pylon route / Suggest the hardcore material of the haul road is retained after Project completion as an underlay for a new farm driveway (per respondent's plan)</p>	<p>The haul road is offset from the existing 132 kV pylon work area and proposed 400 kV pylon work areas to avoid impact during construction. Per the Outline Code of Construction Practice (CoCP) (document reference 7.2), any impact to the land will be reinstated to at least meet the recorded pre-condition survey.</p> <p>National Grid is applying for a temporary haul road that is to be removed with the land reinstated following completion of the works. However, National Grid is also willing to work with landowners who wish to secure the appropriate approvals (if needed) to either retain the material for use elsewhere on their holding or to retain such elements in situ. This is a</p>	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-4.41	Request for underground cables to have a minimum depth of at least 1200 mm (e.g. to mitigate impact on respondents deep rooted crops and irrigation near Hadleigh Road, Holton St Mary)	<p>matter for landowners to discuss with contractors or capture as part of voluntary agreements.</p> <p>National Grid has a minimum depth to install cables, whilst we can install deeper the depth of the cable has an impact on its performance due the impact on its operating temperature and the ability to disperse the heat efficiently. Installing deeper cables also comes with programme, spatial and cost implications. If specific land uses require a greater depth of cable installation, these will need to be agreed when setting out the land agreements.</p> <p>Where a landowner has a concern, they should contact the Project lands team: Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.</p> <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD.</p>	
11-4.42	Suggest that the Project near Hadleigh Road, Holton St Mary is re-located to be closer to the field edge (as per plan provided by respondent)	National Grid has considered the respondent's feedback and has reviewed the alternative suggested. Moving the Order Limits in this location has been considered, however the alternative as suggested results in a greater loss of woodland (including veteran trees). The alignment has been straightened as far as practicable; the alignment now follows the western edge of the field more closely.	X
11-4.43	Suggest that attenuation basins near Hadleigh Road, Holton St Mary are not needed (as shown on plan provided by respondent)	National Grid notes the respondent's feedback. Drainage surveys would be carried out in advance of construction works and would include on-site assessments and engagement with affected landowners. The Project would manage surface water runoff using sustainable drainage systems techniques appropriate to local conditions. In this location, the drainage for temporary construction work is assumed to	

Ref no.

Summary of matters raised

National Grid's response

		<p>comprise an attenuation pond (or alternative feature) and outfall and an infiltration pond. As set out in the Flood Risk Assessment (document reference 7.9) the philosophy of the surface water drainage strategy is to replicate as closely as possible the natural runoff characteristics of the existing site.</p> <p>The FRA has identified good practice and additional mitigation measures that would be needed to ensure that flood risk to existing communities and infrastructure is not increased. These measures are described in the Outline Code of Construction Practice (CoCP) (document reference 7.2) and would be secured through the Development Consent Order (DCO), if granted. The Outline CoCP (document reference 7.2) also provide commitments to reduce construction impacts together with a framework for detailed management plans to be prepared at detailed design stage in order to reduce and mitigate potential impacts and/or disruptions that may arise during the construction phase. If practicable and feasible the indicated ponds may be removed as part of the detailed Project design. Landowners are encouraged to give the National Grid Lands team details of any private supply, drainage and irrigation systems as early as possible to ensure these can be assessed as part of the detailed Project design.</p>	
11-4.44	<p>Suggest that the Project is returned to it's pre-2024 alignment at Brook Farm Airstrip (e.g. to mitigate impact on community, and noting that Brook Farm Airstrip appears to be a privately owned, infrequently used, personal aerodrome), or suggest the following realignments which were requested by the respondent as of June 2024</p> <p>- RG92 to be re-located southwest to avoid area with planning permission for solar farm</p>	<p>National Grid notes the respondent's feedback. The alignment in this location has been positioned to partly take the alignment of the existing 132 kV overhead line, reduce impacts to a solar farm development and avoid impacts to Brook Farm Airstrip. We have not made a further change back to the 2024 preferred draft alignment at this location.</p> <p>RG92 is positioned as close to the field boundary as possible while allowing for space for construction. In order to move RG93 north, RG92, RG93 and RG94 would have to increase in height due to increased span lengths in order to ensure safe clearances over the road. This would increase the visual impacts of these pylons and would also increase</p>	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
	<ul style="list-style-type: none"> - RG93 to be re-located north to provide more natural screening from residential property - RG94 to be re-located west to reduce impact on agricultural operations (irrigation, spraying etc.) and future development of farm buildings 	<p>impacts to Brook Farm Airstrip as well as ecological impacts on the meadow. We are therefore not proposing a change to the location of this pylon.</p> <p>As RG94 is an angle pylon, space is required around the pylon for stringing the overhead lines through the conductors. We are therefore not able to move RG94 west to the field boundary without requiring the removal of the woodland to the west. We are therefore not proposing a change to the location of this pylon. If you have specific concerns regarding the impact on your land, we encourage you to seek third party advice. Alternatively contact the Lands team, Norwich- Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.</p>	
11-4.45	Suggestion that the Project is routed away from / the Project should not be located at a specific location	Further assessment and technical appraisal has been undertaken following feedback received from the statutory consultation and subsequent targeted consultations which has resulted in several changes. Further details on these changes can be found in this report and in the 2025 Design Development Report, published as part of the Development Consent Order (DCO) application.	
11-4.46	Suggestion that the Project is routed away from / the Project should not be located at Palgrave	National Grid has considered the respondent's feedback highlighting a preference for an alternative moved away from Palgrave. In the absence of a specific basis for the change or a proposed alternative alignment, we have considered this feedback by following the guidance in the Holford Rules in developing the alignment. Guidelines on overhead line routeing are known as the "Holford Rules" which remain a valuable tool in selecting and assessing potential overhead line route options as part of the options appraisal process. A summary of the Holford Rules is provided within Appendix I22 of this report. We are therefore not proposing a change to the alignment at Palgrave.	

Ref no.	Summary of matters raised	National Grid's response
Economic/ Employment impact		
11-4.47	Concern about negative impact on businesses in the area	<p>Through the routeing and siting exercise, National Grid has sought to reduce as far as practicable impacts to businesses.</p> <p>Impacts on local businesses within the Local Study Area (the Order Limits) and within the 3 km Study Area (where visual impact is likely to be an economic consideration) are assessed in Environmental Statement (ES) Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15). As part of this assessment, a range of mitigation measures have been considered to reduce disruption to businesses and their users during the construction phase of the Project. These measures are identified in ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15), the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) which accompany the Development Consent Order (DCO) application.</p>
Environmental impact		
11-4.48	Concern that the Project will impact ancient woodland	<p>Through routeing, siting and detailed design, National Grid has sought to reduce, as far as practicable, impacts on biodiversity and in particular features of high ecological value, such as ancient woodland. A standard 15 m buffer from construction activities has been applied where practicable. Potential direct and indirect impacts on each block of ancient woodland within the study area have been considered within the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8) and any necessary mitigation detailed to ensure no significant residual effects. An Ancient Woodland and Veteran Tree Strategy is included as part of the Outline Landscape and Ecological Management Plan (see Appendix B document reference 7.4). The Outline</p>

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		LEMP (document reference 7.4) has been developed in consultation with relevant stakeholders including Natural England and local planning authorities.	
11-4.49	Concern that the Project will impact nature reserve / RSPB reserve / Special Protection Area (SPA)	<p>Through routeing, siting and design development, National Grid has sought to reduce, as far as practicable, impacts on biodiversity and in particular features of high ecological value, such as local wildlife sites (LWS), Royal Society for the Protection of Birds (RSPB) reserves and Special Protection Area (SPA's).</p> <p>Whilst there are no impacts on RSPB reserves, potential direct and indirect impacts on LWS's and SPA's within the Study Area have been considered within the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8). SPA's and the associated impact on birds have also been considered within the Habitats Regulations Assessment Report (HRA) (document reference 5.3).</p>	
11-4.50	Concern that the Project will result in a negative impact on the environment / countryside generally	<p>National Grid has sought to reduce, as far as practicable, impacts on the environment / countryside through routeing and siting and an ongoing iterative design process which has taken on board feedback at different stages of the Project. The iterative design process sought to avoid areas of highest concern, for examples through changes to the route alignment or changes to the method e.g. trenchless crossings. National Grid has engaged with a range of stakeholders (including Statutory Environmental Bodies (SEBs) and relevant local planning authorities) throughout the development of the Project design and environmental assessment work.</p> <p>National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project. The results of this assessment are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application. The ES identifies and assesses the likely</p>	

Ref no.	Summary of matters raised	National Grid's response
		<p>significant effects on the environment resulting from the construction and operation (and maintenance) of the Project and recommends appropriate mitigation measures to reduce potential effects.</p> <p>A number of mitigation measures have been incorporated into the Project design. Mitigation relevant to specific environmental topics (including Ecology and Biodiversity, Landscape and Visual and Historic Environment) are presented in the relevant ES chapters. The Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Code of Construction Practice (CoCP) (document reference 7.2) contain a list of relevant good practice measures to avoid or reduce risks to habitats and species.</p> <p>In addition to the EIA, National Grid has set itself a target of delivering 10% biodiversity net gain (BNG) with environmental and societal benefits on all construction projects, meaning that as a result of measures taken, the biodiversity rating of the area will be enhanced by 10% greater than prior to the construction of the Project. The BNG target for the Project is currently voluntary and aligned with our corporate sustainability commitment.</p>
11-4.51	Concern about drainage issues due to the construction phase of the Project	<p>The potential for the Project to impact on land drainage and surface water flood risk has been assessed within the Flood Risk Assessment (FRA) (document reference 7.9). The FRA has identified several measures and controls to avoid impacts and mitigate effects, details of which are included in the Outline Code of Construction Practice (CoCP) (document reference 7.2). For example, W13 commits to suitable drainage provisions via appropriate sustainable drainage system (SuDS) that would provide attenuation and treatment of runoff from temporary compound sites and laydown areas, construction access roads and haul roads and areas</p>

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		where impermeable material will be installed where heavy equipment would be used.	
Financial compensation			
11-4.52	Concern that the Project will devalue property / impact on property value in this section	<p>National Grid acknowledges that its proposals may cause concern to landowners. Diminishment of property value known as 'injurious affection' and any other appropriate heads of claim would be considered on an individual basis in accordance with current legislation. We would pursue a voluntary agreement with affected landowners, acquiring rights in accordance with our Land Rights Strategy (the strategy is subject to review). If a voluntary agreement cannot be reached, then the Compulsory Purchase Code allows for a claim of compensation for the loss that property owners may have suffered as a direct result of the retained part of your property ownership being worth less as a direct result of the works.</p> <p>If there are any specific concerns about the devaluation of property, National Grid would advise seeking third party advice. or alternatively please contact the Project team:</p> <p>Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.</p> <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD.</p>	
11-4.53	Request for adequate financial compensation / Suggest that impacted individuals need to be compensated	<p>All affected landowners would be compensated for any temporary/permanent losses, and this would be dealt with on a case-by-case basis in line with the Compensation Code.</p> <p>If there are any specific concerns requiring compensation and how it would be assessed, please contact the Project team:</p>	

Ref no.	Summary of matters raised	National Grid's response
		<p>Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.</p> <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD</p> <p>The Government has published its guidance on community funds for transmission infrastructure (DESNZ, 2025). National Grid is committed to working with Ofgem, industry partners, local communities and their representatives to ensure community benefits are delivered fairly and effectively, driving lasting, positive change for the people and places integral to our developing electricity network.</p> <p>Government has also announced its plans to introduce a bill discount scheme for households within 500 m of new infrastructure, which it proposes to introduce through the Planning and Infrastructure Bill. This is evolving government policy. Government expects this scheme to be in place by 2026 and we would share further details as they emerge.</p> <p>National Grid is committed to providing a coordinated local and regional approach to community benefits. This would be delivered outside the development consent process, since this is not a material consideration in the decision on the proposed Project or a matter to be secured as part of the DCO, as per the Community Funds for Transmission Infrastructure: Guidance (DESNZ, 2025).</p>
11-4.54	Request that National Grid purchase respondent's property / business	<p>National Grid is not required to purchase properties or businesses as part of the Project.</p> <p>National Grid compensates landowners in line with the Compensation Code and any other relevant legislation.</p>

Ref no.	Summary of matters raised	National Grid's response
Health, Safety & Wellbeing		
11-4.55	Concern that the Project may result in a negative impact on mental health / wellbeing	<p>National Grid recognises people may have concerns about the health effects of living close to an overhead line, and that the uncertainty whilst the proposals are developed may cause anxiety.</p> <p>We have sought to reduce potential effects on communities and residents through routeing and design. We have also sought to reduce concern or uncertainty about the proposals through making timely design decisions and engaging with the people and stakeholders throughout the development of the Project.</p> <p>The Project team will continue to engage with people potentially affected during progress of the Project, through regular communication including letters, phone calls and meetings. This would enable concerns to be raised and discussed at an early opportunity and provide a regular point of contact to respond to queries and concerns.</p> <p>We urge anyone with concerns to get in touch through the Norwich to Tilbury Freephone number, address or email throughout the progress of the Project:</p> <p>Call our Community Helpline: 0800 915 2497 (Lines are open Monday to Friday 9:00am – 5:30pm)</p> <p>Email us: contact@n-t.nationalgrid.com</p> <p>Write to us: FREEPOST N TO T (No stamp or further address details are required)</p> <p>The UK has a carefully thought-out set of policies for protecting us all against Electric and Magnetic Fields (EMFs), the main component of which is exposure guidelines. Those exposure guidelines are set by independent scientific bodies and are based on decades-long studies into the effects of EMFs and ill health. After those decades of research, the</p>

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		weight of evidence is against there being any health risks of EMFs below the guideline limits. These policies are incorporated into the decision-making process for Development Consent in National Policy Statement (NPS) EN-5. It is National Grid's policy to ensure that all of its equipment comply fully with those exposure limits.	
11-4.56	Concern about health risks associated with the Project / physical health risks associated with the Project	<p>Health considerations are given a high priority in the process by which we arrive at any proposals for new electricity circuits. Assessment of compliance with Electric and Magnetic Field (EMF) guidelines and policies is key to National Grid's approach. The UK has a carefully thought-out set of policies for managing EMFs. There have been over four decades of research looking into whether EMF can cause health effects and there are no established effects below the exposure limits. When designing our overhead lines, substations and underground cables design criteria, we ensure they would not exceed those exposure limits, even when operating at 100% capacity. Additionally, the precautionary measures which the Government have adopted, are applied to the design which ensure the EMFs reduce as quickly with distance as possible. Evidence of that compliance is presented in the Electric and Magnetic Field Compliance Report (document reference 7.8) submitted as part of the Development Consent Order (DCO) application.</p> <p>National Grid takes this issue very seriously and looks to authoritative and independent scientific organisations such as the World Health Organisation (WHO) and the UK Health Security Agency (UKHSA) to review the worldwide body of scientific evidence on health. Important decisions on health are taken independently of industry, and National Grid has followed the guidance and policies adopted by Government on advice from their scientific experts. Each of these organisations have comprehensive reviews of EMF research available to view on their websites.</p>	

Ref no.	Summary of matters raised	National Grid's response
11-4.57	Concern that the Project poses a safety risk to aircraft (including balloons) in the area / Concern that the Project will impact airfields in this area	<p>National Grid recognises the need for the Project to be developed collaboratively alongside aviation stakeholders to identify, assess, and as appropriate mitigate, adverse impacts on aviation safety, in accordance with Government's Overarching National Policy Statement (NPS) EN-1.</p> <p>Our review of aerodromes potentially impacted by the Project identified 17 civil aerodromes (including two helipads) within 5 km of the preferred corridor and one military site (Wattisham Flying Station). We have also considered other airfields and flight activities where these have been identified through the 2022 and 2023 non-statutory, statutory consultation, targeted consultations, and landowner consultation, including for ballooning and for model flying. As well as considering feedback, National Grid's aviation advisers (an independent aviation consultancy) have directly engaged with these parties (with National Grid present).</p> <p>A number of route alignment and pylon positioning changes have been made following consideration of feedback and in all but one case the assessment concludes that the airfields can continue to operate. In the remaining case of a private airstrip near Little Burstead, we continue to liaise with the operator to identify an appropriate solution.</p> <p>Specifically in respect of Wattisham Flying Station our proposals position the alignment onto relatively lower ground (to remove the potential for interference with Instrument Landing System (ILS) radar) and adopt an alignment closer to the existing 132 kV overhead line and include replacing part of the 132 kV line south of Offton by underground cable to avoid a new overhead line corridor being introduced.</p> <p>We will continue to engage with relevant parties as appropriate.</p> <p>Further information on the assessment of airfields can be found in the Environmental Statement (ES) Chapter 15: Socio-Economics, Recreation</p>

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
Heritage		and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).	
11-4.58	Concern about archaeological impacts	<p>Through routeing and siting National Grid has sought to reduce as far as practicable potential impacts on the historic environment. The impacts of the Project on the historic environment are assessed in Chapter 11: Historic Environment (document reference 6.11) of the Environmental Statement (ES). The assessment considers the potential impact on archaeology, historic buildings and historic landscapes and includes assessment of potential for physical impact, impact through change to setting that affects the value of a heritage asset and impact through indirect factors such as change in hydromorphology. The assessment is supported by walkover, setting and geophysical surveys, as documented in ES Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1) and ES Appendix 11.4: Geophysical Survey Results Report (document reference 6.11.A4).</p> <p>Archaeological trial trench evaluation has also been undertaken and is reported in ES Appendix 11.5: Trial Trenching Results Report (document reference 6.11.A5). In addition to the proposals in the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4), the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5) sets out appropriate mitigation for the historic environment. The Project has engaged with Historic England and relevant planning authorities on aspects relating to heritage, including appropriate mitigation measures and techniques and to take their views into account during Project development which are detailed in ES Chapter 11: Historic Environment (document reference 6.11).</p>	

Ref no.	Summary of matters raised	National Grid's response
11-4.59	Concern about negative impact on heritage / Suggest that the Project should be routed away from heritage buildings / listed buildings / historical site	Through routeing and siting National Grid has sought to reduce as far as practicable potential impacts on the historic environment. The impacts of the Project on the historic environment are assessed in Chapter 11: Historic Environment (document reference 6.11) of the Environmental Statement (ES). The assessment considers the potential impact on archaeology, historic buildings and historic landscapes and includes assessment of potential for physical impact, impact through change to setting that affects the value of a heritage asset and impact through indirect factors such as change in hydromorphology. The assessment is supported by walkover, setting and geophysical surveys, as documented in ES Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1) and ES Appendix 11.4: Geophysical Survey Results Report (document reference 6.11.A4). Archaeological trial trench evaluation has also been undertaken and is reported in ES Appendix 11.5: Trial Trenching Results Report (document reference 6.11.A5). In addition to the proposals in the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4), the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5) sets out appropriate mitigation for the historic environment. The Project has engaged with Historic England and relevant planning authorities on aspects relating to heritage, including appropriate mitigation measures and techniques and to take their views into account during Project development.
Information		
11-4.60	There is a gas pipeline crossing respondents farm (near Granary, Lower Somersham) which as it currently stands is intersected by the Project	National Grid is aware of the medium pressure gas pipeline which intersect the alignment in the Somersham area at the proposed RG191, RG199 and RG201 pylon locations. National Grid is collaborating with pipeline asset owner to understand and agree safe working requirements

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		in line with both the Pipelines Safety Regulations 1996 and the owners recommended safe working practices.	
Mitigation			
11-4.61	Suggest mitigation measures	<p>An Environmental Statement (ES) (document reference Volume 6: Environmental Statement) has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 ('the Infrastructure EIA Regulations'). The ES identifies and assesses the likely significant effects on the environment resulting from the construction, operation and maintenance of the Project and recommends appropriate mitigation to reduce effects.</p> <p>Environmental mitigation measures have been defined within each environmental topic chapter and set out in relevant management documents submitted with the Development Consent Order (DCO) application, including the Outline Code of Construction Practice (CoCP) (document reference 7.2), the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5).</p>	
Primary Access Routes / Haul Road / Construction Compounds			
11-4.62	<p>Concern about the security of the proposed Construction Laydown Area at the south end of Eastlands Lane, near pylon RG124, due to past anti-social behaviours / Suggest adjacent land is used instead as it offers more secure facilities within the boundary of Land of Interest</p>	<p>National Grid notes the respondent's feedback. Temporary construction laydown areas are secured to protect the public and prevent unauthorised entry to site. Access to temporary laydown areas would be limited to specific entry points and personnel entries/exits would be recorded and monitored for both security and health and safety purposes.</p> <p>The position of the material laydown area has been selected adjacent to the haul road to minimise multiple access points and excessive land take.</p>	

Ref no.	Summary of matters raised	National Grid's response
11-4.63	Suggest access to pylons via pre-existing tracks that run parallel to the proposed pylon line / Suggest matting is laid to spread the weight of construction vehicles and allow quick set up and removal	National Grid notes the respondent's feedback. The haul roads have been located to be close to the works that they are facilitating (in this instance the build of the overhead line pylons), to reduce route length and land take where possible. Importantly the haul roads must also tie in with the proposed public highway primary access points of crossing points (bellmouths) which have been positioned to adhere to highways safety requirements and where possible away from residential receptors. Due to these factors the haul road is positioned where it is. The stone haul road has been proposed for the length of the haul road due to the requirements of the works involved to construct the pylons and overhead line in this particular section but also as the haul road section is required to facilitate the offline haul road for a much wider section of overhead line build. As the contractor develops their detailed design, subject to ground conditions and their method of work there might be some instances where they instead use track matting but the assumption at this point in time is that it will be a stone haul road.
11-4.64	Suggest the access road off the A1071 is made permanent	National Grid note the respondent's feedback. All proposed access points including off the A1071, are only proposed to be temporary and have been agreed with the local highways authority that they will not be adopted. As such it is not proposed to be made permanent. However, during the next stage of detailed design there is opportunity if the landowner wishes to enter into discussions with the Local Highways Authority to request that the access is made permanent.
11-4.65	Suggest access is agreed at the beginning of operation / Suggest access to pylon RG194 per the attached plan / Suggest access to UKPN pylons P127 and P128 from Castle Farm using the headland of that field	National Grid notes the respondent's feedback with regards to the permanent access routes and also notes that the most appropriate route also varies in response to seasonal variation in land uses. As the Project progresses into the heads of terms and voluntary agreement stage there will be an opportunity to discuss and agree permanent access rights in

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		<p>more detail. No physical works are required for these permanent access routes as part of the Project as these will not be used for construction. Access may be required in the future, for maintenance and surveys and therefore National Grid will look to agree the most suitable access route at that point, taking into account the landowner and National Grid's requirements.</p>	
11-4.66	<p>Request that the haul road and permanent access road for RG201 and RG202 is re-routed slightly to the south-west to follow the existing hedgeline (as per plans provided by respondent), which would be retained as a permanent access route which the respondents could use for farm access (e.g. to avoid damage to four mature oak trees, minimise damage within visibility splay to hedge along road, and improve residential amenity)</p>	<p>National Grid notes the respondent's feedback with regards to the permanent access route for RG201 and RG202 and also notes that the most appropriate route also varies in response to seasonal variation in land uses. As the Project progresses into the heads of terms and voluntary agreement stage there will be an opportunity to discuss and agree permanent access rights in more detail. No physical works are required for this permanent access route as part of the Project as this will not be used for construction. Access may be required in the future, for maintenance and surveys and therefore National Grid will look to agree the most suitable access route at that point, taking into account the landowner and National Grid's requirements.</p> <p>The haul road is offset from the existing 132 kV pylon work area and proposed 400 kV pylon work areas to avoid impact during construction. Per the Outline Code of Construction Practice (CoCP) (document reference 7.2), any impact to the land will be reinstated to at least meet the recorded pre-condition survey.</p>	
PRoW (Public Rights of Way)			
11-4.67	<p>Concern about negative impact on PRoW / footpaths / cycle paths / bridleways</p>	<p>Through routeing and siting, National Grid has sought to reduce, as far as practicable, impacts and disruption to Public Rights of Way (PRoW).</p> <p>The iterative design process identified the existing PRoW network and their wider connectivity and sought where practicable to reduce and where possible remove impacts to PRoW.</p>	

Ref no.

Summary of matters raised

National Grid's response

Effects on PRow would be mitigated where possible, maintaining access where practicable, with closures as a last resort. We will continue to engage with relevant stakeholders on the PRow network to enable feedback and input to be considered as the Project progresses. An Outline Public Rights of Way Management Plan (document reference 7.6) is submitted with the Development Consent Order (DCO) application.

Requests

11-4.68 Request for further impact surveys in this section

National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project. The assessment is informed by a suite of field surveys and desk studies and results are presented in an Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the application for development consent. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation (and maintenance) of the Project and recommends appropriate mitigation measures to reduce potential adverse impacts.

The scope of the EIA is included in the Scoping Report (document reference 6.19) which was submitted to the Planning Inspectorate in November 2022 and their Scoping Opinion (document reference 6.20) received in December 2022. This provided the opportunity for statutory bodies to comment on the scope of the EIA which included our approach on study areas, data collection and baseline conditions for a range of environmental topics. We also discussed and agreed survey scope with stakeholders (including Statutory Environmental Bodies and Local

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		<p>Planning Authorities) following the Scoping Opinion (document reference 6.20) to ensure a robust baseline assessment.</p> <p>National Grid has prepared an Outline Code of Construction Practice (CoCP) (document reference 7.2) which sets out the required mitigation measures and environmental commitments that would be implemented during the construction phase of the Project to avoid or reduce potential effects of the Project on the environment, including commitments to undertake further surveys.</p>	
11-4.69	<p>Concern that Great Crested Newts are present at the Cottage Barn pond (as confirmed by The Suffolk Wildlife Trust on behalf of District Level Licensing Restoration Scheme) which is very close to Pylon RG194 / Request for National Grid to confirm whether ecologists working for National Grid have surveyed these / Criticism that at the time of signing the agreements for access to respondents land for surveys, a copy of the various surveys / reports was requested, but the respondent is still awaiting these</p>	<p>It is acknowledged that Great Crested Newts (GCN) are present within ponds across the Project. National Grid has therefore obtained a GCN District Level Licence from Natural England for the Project. This licence covers the full extent of the construction works area and ensures an overall positive mitigation solution for GCN.</p>	
Visual impact			
11-4.70	<p>Concern about cumulative visual impact of the Project alongside existing overhead lines / concern about wirescape</p>	<p>National Grid notes the feedback received and has taken it into consideration as part of the iterative design process.</p> <p>National Grid has liaised with UK Power Networks to understand opportunities for 132 kV network rationalisation. The Project includes proposals to replace certain sections of 132 kV overhead line connection with underground cable to rationalise the network and reduce potential for cumulative wirescape effects.</p>	

Ref no.	Summary of matters raised	National Grid's response
		<p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the Environmental Impact Assessment (EIA). Existing infrastructure (such as existing overhead lines) has formed part of the baseline environment for the Project to be assessed against, to identify if significant landscape and / or visual effects are likely to arise. The LVIA presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) sets out potential landscape and visual effects. The rationalisation of the existing 132 kV network in some areas forms part of the embedded landscape mitigation, as set out in Chapter 13.</p> <p>The findings and conclusions of the LVIA and other topics assessments have been considered within the Cumulative Impact Assessment, presented in ES Chapter 17: Cumulative Effects Assessment (document reference 6.17), lists the developments as part of the cumulative assessment. This chapter considers the landscape and visual effects of the Project cumulatively with other proposed developments that are being progressed.</p>
11-4.71	Concern that the Project will be unsightly / visually intrusive (including overhead lines, CSE compounds and substations) / Concern that the Project will cause a negative impact on views	<p>National Policy Statement (NPS) EN-5 makes it clear that the Government considers overhead lines to be appropriate and acceptable in most instances, although it recognises that there may be, at particularly sensitive locations, potential adverse landscape and visual impacts of an overhead line that make it inconsistent with our duties and relevant planning policy.</p> <p>The Dedham Vale National Landscape (previously an Area of Outstanding Natural Beauty (AONB)) designation is one such location where underground cable technology is proposed with the extent of underground cabling extending beyond the boundary in response to the potential for the Project to affect the National Landscape. Our proposals include a total of approximately 20 km of underground cable through and in the vicinity of</p>

Ref no.

Summary of matters raised

National Grid's response

the Dedham Vale National Landscape, including a section at Great Horkesley to reduce the changes in views and setting of the National Landscape from within and adjacent to its designated boundary. Underground cabling is also proposed for a short section of 400 kV overhead line crossing near Fairstead.

Cable Sealing End (CSE) compounds are required to facilitate sections of underground cable, and the proposed East Anglia Connection Node (EACN) substation is required to connect customers and the proposed Tilbury North Substation is required to connect the Project into the existing Tilbury Substation. These components have been carefully sited taking into consideration Horlock Rules including the potential for landscape and visual effects.

The higher cost of underground cables to bill paying consumers, and the environmental implications of installing underground cables and maintaining them at locations outside the Dedham Vale National Landscape, are not considered to be justifiable in the context of national policy or National Grid's statutory duties, which include the need to be economical and efficient.

A Landscape and Visual Impact Assessment (LVIA), presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13), has been undertaken as part of the Environmental Impact Assessment (EIA). The LVIA includes an assessment on both landscape character and visual amenity and identifies areas for potential mitigation planting around substations and CSE compounds to reduce visual impacts to local receptors. The Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) includes details regarding the planting proposals.

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
Wildlife/ Ecology impact			
11-4.72	Concern about impact of the Project on flightpaths for birds	Chapter 8: Ecology and Biodiversity of the Environmental Statement (ES) (document reference 6.8) considers potential impacts during the construction and operational phase of the Project on birds. Bird surveys have been undertaken across the route between 2022-2024 to determine an accurate baseline value, the scope of which has been agreed with Natural England and Local Planning Authorities. The potential for bird collision risk impact during the operational phase has been assessed within the ES and Habitat Regulations Assessment Report (HRA) (document reference 5.3) and agreed with Natural England. Any adverse impacts identified have been minimised as far as possible, where practicable, and mitigation in the form of bird diverters proposed.	
11-4.73	Concern about impact of the Project on birds	Chapter 8: Ecology and Biodiversity of the Environmental Statement (ES) (document reference 6.8) considers potential impacts during the construction and operational phase of the Project on birds. Bird surveys have been undertaken across the route between 2022-2024 to determine an accurate baseline value, the scope of which has been agreed with Natural England and Local Planning Authorities. The potential for bird collision risk impact during the operational phase has been assessed within the ES and Habitat Regulations Assessment (HRA) (document reference 5.3) and agreed with Natural England. Any adverse impacts identified have been minimised as far as possible, where practicable, and mitigation in the form of bird diverters proposed. It is noted that birds are a mobile species, and it is likely that active nests for common and widespread species may be encountered during the construction phase. Precautionary working methods for breeding birds are included within the Outline Code of Construction Practice (CoCP)	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-4.74	Concern that the Project will result in a negative impact on species (protected status not specified)	<p>(document reference 7.2) and the Outline Landscape Ecological Management Plan (LEMP) (document reference 7.4). accompanying the Development Consent Order (DCO) application.</p> <p>Through routeing, siting and detailed design National Grid has sought to reduce, as far as practicable, potential impacts on biodiversity including protected species. The design process has taken account of existing biodiversity, the natural environment and, where practicable, has sought to reduce impacts on areas of ecological sensitivity including protected species and their associated habitats, through avoidance or mitigation.</p> <p>A comprehensive survey effort for a range of protected species was completed over the 2023 – 2024 period. Chapter 8: Ecology and Biodiversity of the Environmental Statement (ES) (document reference 6.8) assesses the effects on protected species based on this baseline information and where/if required appropriate mitigation measures are detailed. Suitable mitigation for protected species has been developed in consultation with Natural England to ensure legal compliance and best practice guidelines are adhered to. Where necessary, draft licence applications have been drafted and National Grid is in the process of agreeing the detail within the licence documents with Natural England, in order to obtain the relevant Letters of No Impediment (LoNI). Mitigation for non-licensable protected species has been included within the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4).</p>	
11-4.75	Concern that the Project will result in a negative impact on protected species	Through routeing, siting and detailed design, National Grid has sought to reduce, as far as practicable, potential impacts on biodiversity including protected species. Suitable mitigation for protected species has been developed in consultation with Natural England to ensure legal compliance and best practice guidelines are adhered to. Where necessary, draft licence applications have been drafted and National Grid is in the process of agreeing the detail within the licence documents with Natural England, in order to obtain the relevant Letters of No Impediment (LoNI). Mitigation for non-licensable protected species has been included within the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4).</p>	
11-4.76	<p>Concern that the Project will have a negative impact on bees / Bees will be unable to navigate under high voltage overhead lines</p>	<p>As well as possible effects on humans, possible effects of Electric and Magnetic Fields (EMFs) on various animals have been studied a number of times. No proven effects of EMFs have been found in any species at levels below the guidelines. This is confirmed in National Policy Statement (NPS) EN-5 which states: <i>'There is little evidence that exposure of crops, farm animals or natural ecosystems to transmission line EMFs has any agriculturally significant consequences.'</i></p> <p>Beehives can become charged if directly under an overhead line because of the electric field it produces. For existing overhead lines, this can be eliminated by screening or earthing the hive, but for new overhead lines, embedded design measures and careful routeing will avoid any potential effects. There does not seem to be evidence of EMFs adversely affecting bees directly. In the United States of America, the strip of land along power lines has been shown to be particularly attractive to bees, with</p>	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-4.77	Concern that the Project will result in a negative impact on flora / plants / woodlands / hedgerows	<p>these areas being utilised by commercial bee farms. Additionally, National Grid has worked with the British Beekeeping Association to establish hives around our sites, including high voltage substations, which have thrived.</p> <p>Through routeing, siting and detailed design, National Grid has sought to reduce, as far as practicable, potential impacts on biodiversity including priority grassland, wetland, woodland, and hedgerow habitats. The design process has taken account of existing biodiversity, the natural environment and, where practicable, seeks to reduce impacts on areas of ecological sensitivity, through avoidance or mitigation.</p> <p>Chapter 8: Ecology and Biodiversity of the Environmental Statement (ES) (document reference 6.8) assesses the effects on important ecological receptors (which includes grasslands, wetlands, woodlands and hedgerows).</p> <p>As part of the Environmental Impact Assessment (EIA) process for the Project, a suite of ecological surveys has been to be undertaken. The findings of which inform the design and approach to mitigation.</p> <p>The Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Code of Construction Practice (CoCP) (document reference 7.2) contain a list of relevant good practice measures to avoid or reduce impacts on valuable habitats.</p> <p>The Environment Act 2021 introduces a mandatory requirement for 10% Biodiversity Net Gain (BNG) for new Development Consent Order (DCO) developments (which is not yet in force and not expected until May 2026). National Grid has committed to delivering 10% BNG with environmental and societal benefits on all construction projects. The BNG target for the Project is currently voluntary and aligned with our corporate sustainability commitment.</p>	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-4.78	Concern that the Project will result in a negative impact on wildlife / biodiversity / ecology (generally)	<p>As well as seeking to avoid and minimise impacts to nature, the Project considers the land required for mitigation, compensation and enhancement that can deliver BNG and wider environmental benefits. This will require delivery of offsite Biodiversity Units via habitat creation or enhancement actions in strategic areas, and we will consider all offsite options that are available to us.</p> <p>Through routeing, siting and detailed design National Grid has sought to reduce, as far as practicable, potential impacts on biodiversity. The design process has taken account of existing biodiversity, the natural environment and, where practicable, has sought to reduce impacts on areas of ecological sensitivity, through avoidance or mitigation.</p> <p>Chapter 8: Ecology and Biodiversity of the Environmental Statement (ES) (Document Reference 6.8) assesses the effects on important ecological receptors.</p> <p>As part of the Environmental Impact Assessment (EIA) process for the Project, a suite of ecological surveys has been to be undertaken over the 2022-2024 period. Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		<p>is currently voluntary and aligned with our corporate sustainability commitment.</p> <p>As well as seeking to avoid and minimise impacts to nature, the Project considers the land required for mitigation, compensation and enhancement that can deliver BNG and wider environmental benefits. This would require delivery of offsite Biodiversity Units via habitat creation or enhancement actions in strategic areas, and we will consider all offsite options that are available to us.</p>	
11-4.79	Concern that the Project will impact trees covered by Tree Preservation Orders / Tree Protection Orders	<p>During pre-application National Grid asked relevant planning authorities to share information on Tree Preservation Orders (TPOs). Impacts to trees covered by a TPO from the Project are presented in Appendix 13.6: Arboricultural Impact Assessment (AIA) report (document reference 6.13.A6).</p>	

Babergh, Colchester and Tendring feedback

Babergh, Colchester and Tendring specific feedback (Further Landowner Consultation)

Table 11-5 Summary of consultee comments and National Grid's response

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
Agricultural Land			
11-5.1	Concern that the Project will take away valuable agricultural land / disrupt farming operations	<p>During the construction stage of the Project, there would be areas of agricultural land that would be temporarily disrupted. National Grid would only use land that is required as part of the Project and would seek to minimise the use of agricultural land where reasonable and safe to do so.</p> <p>National Grid is and will continue to work with all landowners including farmers who may be affected by the proposals to understand the impacts on their operations and to work with them as the Project is developed. We would seek to work with the farming community to limit disruption where practicable. This includes providing prior warning of works which may result in the need to move livestock. Compensation claims for disturbance are considered on a case-by-case basis, if negative impact on farming operations can be proven. Particular agricultural matters can also be addressed through voluntary land agreements.</p>	
11-5.2	Concern that the Project will have a negative impact on agricultural livestock (e.g. type of livestock)	<p>National Grid is and will continue to work with all landowners including farmers and equestrian facilities who may be affected by the proposals to understand the impacts on their operations and to work with them as the Project progresses. We would seek to work with the farming community to limit disruption where practicable. This includes providing prior warning of works which may result in the need to move livestock. Compensation claims for disturbance are considered on a case-by-case basis, if negative</p>	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		<p>impact on farming operations can be proven. Particular agricultural matters can also be written into voluntary land agreements. There will also be mitigation put in place where animal grazing maybe affected.</p> <p>As well as possible effects on humans, possible effects of Electric and Magnetic Fields (EMFs) on various animals have been studied. No detectable effects of EMFs have been found on, for example, health, milk production, fertility, and behaviour. This is confirmed in National Policy Statement (NPS) EN-5 which states: <i>"There is little evidence that exposure of crops, farm animals or natural ecosystems to transmission line EMFs has any agriculturally significant consequences."</i></p>	
Airfields			
11-5.3	Concern about the impact of the Project on Boxted Airfield (Royal Air Force (RAF) Boxted) / Suggestion that the Project is routed away from Boxted Airfield (RAF Boxted)	<p>National Grid has appointed an independent aviation consultancy who has contacted Boxted Airfield. Following further assessment it has been determined that the airfield is deemed to be disused. It was last used for a one day fly in, in 2021 by the South Suffolk Strut who have advised that they no longer wish to use the airfield due to the condition of the runway.</p> <p>We will continue to engage with nearby airfields as appropriate.</p> <p>Further information on the assessment of airfields can be found in the Environmental Statement (ES) Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).</p>	
11-5.4	Concern about the impact of the Project on Royal Air Force (RAF) Raydon Airfield / Suggestion that the Project is routed away from RAF Raydon Airfield	<p>For clarity this is not an operational Royal Air Force (RAF) base albeit there is an active airstrip known as Raydon Wings.</p> <p>National Grid has appointed an independent aviation consultancy which has engaged with the operators of Raydon Wings airfield (with National Grid also present) to inform the impact assessment. This is in accordance with the requirements of the Overarching National Policy Statement (NPS)</p>	

Ref no.

Summary of matters raised

National Grid's response

for Energy (EN-1) and the NPS for electricity networks infrastructure (EN-5), recognising potential impacts from electrical interference and turbulence amongst other risk factors, the principle being from the presence of an obstacle in the vicinity of the airfield. It is assessed that the proposed overhead alignment to the north of the airfield enables safe overflight and need not impact existing flying circuits, although minor changes to operational procedures may be undertaken by the operator. We will continue to engage with them as appropriate.

Further information on the assessment of airfields can be found in the Environmental Statement (ES) Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).

Community/ Social Impact

11-5.5

Concern about impact of the Project on children / families / residents / communities

National Grid recognises people may have concerns about the potential impacts of living close to an overhead line, and that the uncertainty whilst the proposals are developed may cause anxiety.

We have sought to reduce potential effects on communities, residents – including children - through routeing and design. We have also sought to reduce concern or uncertainty about the proposals through making timely design decisions and engaging with people and stakeholders throughout the development of the Project. If the Project received Development Consent, the Project team would continue to engage with people potentially affected during construction, through regular communication including letters, phone calls and meetings, where necessary.

We urge anyone with concerns to get in touch through the Norwich to Tilbury Freephone number, address or email, which will remain open throughout examination.

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-5.6	Concern about impact of the Project on school / educational facilities	<p>National Grid is committed to working with local suppliers, facilitated by supporting forums (such as the local Chambers), on electricity industry skills and workforce planning. National Grid is also committed to providing a coordinated regional approach to jobs and skills opportunities. This commitment is broader than the individual project and separate to any commitments under the proposed development consent order for this Project. The socio-economic effects of the project are assessed in Chapter 15 of the Environmental Statement (document reference 6.15). Post construction job opportunities are limited given the nature of the development however we will still work with Local Authorities (including facilitating local partners) to understand what is important to them around skills and employment to ensure we leave a lasting positive legacy in the communities where we operate.</p> <p>With regards to a delivery mechanism, the above measures will be delivered as part of our community benefit package, which will look at both local and regional initiatives. This will be delivered outside the development consent process and is not a material consideration in the decision on the proposed Project or a matter to be secured as part of the DCO, as per the Community Funds for Transmission Infrastructure: Guidance (DESNZ, 2025).</p> <p>Through routeing and siting, National Grid has sought to avoid, as far as practicable, locations of education establishments.</p> <p>Environmental Statement (ES) Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) presents an assessment on the potential impacts on education facilities as a result of the Project. As part of the assessment, a range of measures are considered throughout the construction phase of the Project to reduce, where practicable, disruption on education establishments. These include: traffic management, signage and routing measures to ensure access or partial access can be</p>	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		maintained where feasible. These are identified within the ES Chapter 15: Socio-Economics, Recreation and Tourism, the Outline Code of Construction Practice (CoCP) (document reference 7.2), the Outline Dust Management Plan (see Appendix D of the Outline CoCP (document reference 7.2)) and the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).	
11-5.7	Concern about impact of the Project on leisure	Through routeing and siting National Grid has sought to avoid, as far as practicable, locations important for leisure and tourism. Environmental Statement (ES) Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) presents an assessment of the potential impacts on sports clubs, recreational land and recreational routes located within the Order Limits. As part of this assessment, a range of measures have been considered throughout the construction phase of the Project to minimise disruption on leisure and tourism. These include: traffic management, signage and routeing measures. These are identified within ES Chapter 15: Socio-economics, Recreation and Tourism, the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).	
11-5.8	Concern about over development of area / other works in the area (e.g. cumulative impact)	A cumulative effects assessment has been undertaken in accordance with the Planning Inspectorate's Advice Note 17 'Cumulative Effects Assessment' and is presented in Environmental Statement (ES) Chapter 17: Cumulative Effects (document reference 6.17). The cumulative effects assessment has considered the effects of the Project in conjunction with other existing and, or approved developments in line with guidance. As part of this process, National Grid has engaged with other developers who are proposing development in proximity of the Project to understand their requirements.	

Ref no.

Summary of matters raised

National Grid's response

The cumulative assessment has been undertaken in accordance with the overarching National Policy Statement (NPS) for Energy (EN-1)
Paragraph 4.1.5 in EN-1 states:

'In considering any proposed development, in particular when weighing its adverse impacts against its benefits, the Secretary of State should take into account: ... its potential adverse impacts, including on the environment, and including any long-term and cumulative adverse impacts, as well as any measures to avoid, reduce, mitigate or compensate for any adverse impacts, following the mitigation hierarchy'.

Paragraph 4.2.12 in EN-1 states:

'The cumulative impacts of multiple developments with residual impacts should also be considered.'

Paragraph 4.3.3 in EN-1 states:

'The Regulations require an assessment of the likely significant effects of the proposed project on the environment, covering the direct effects and any indirect, secondary, cumulative, transboundary, short, medium, and long-term, permanent and temporary, positive and negative effects at all stages of the project, and also of the measures envisaged for avoiding or mitigating significant adverse effects'.

Paragraph 4.3.19 of EN-1 states:

'The Secretary of State should consider how the accumulation of, and interrelationship between, effects might affect the environment, economy, or community as a whole, even though they may be acceptable when considered on an individual basis with mitigation measures in place'.

Paragraph 4.4.5 in EN-1 states:

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-5.9	Concern about the Project being in too close proximity to recently built housing developments / using land being considered for future development (including residential, commercial, infrastructural, and employment sites)	<p><i>'The impacts of more than one development may affect people simultaneously, so the applicant should consider the cumulative impact on health in the ES where appropriate'.</i></p> <p>The long list and short list of other existing and, or approved developments considered for the Cumulative Effects Assessment is presented in ES Appendix 17.2: Long List and Short List of Other Developments (document reference 6.17.A2), detailing the other developments shortlisted for detailed assessment. The appendix provides details on other developments screened out of the assessment in accordance with the methodology presented in ES Chapter 17: Cumulative Effects (document reference 6.17). The detailed assessment of shortlisted other developments is presented in ES Appendix 17.3: Inter-Project Cumulative Effects Matrix (document reference 6.17.A3). Appendix 17.3: Inter-Project Cumulative Effects Matrix (document reference 6.17.A3) outlines the residual significance of cumulative effects for each development, for each environmental topic that has a Zone of Influence that overlaps with that development (i.e. socio-economic, recreation and tourism impacts).</p> <p>National Grid has obtained information on existing, under construction, consented but not built schemes as well as development proposals within the planning system. The Project design has responded to those that are confirmed through consideration of routing.</p> <p>In the case of development proposals, some can be amended to be designed around our proposed infrastructure but in other cases our proposals may need to be amended at a corridor level, or proposed developments factored into our detailed route design.</p> <p>Based on known information, and in light of changes made following consideration of feedback to the 2022 and 2023 non-statutory</p>	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		<p>consultations, statutory consultation and targeted consultations, we consider our proposals are consistent with relevant policy and guidelines and the alignment designed such that they do not prevent proposed housing developments from being successfully progressed. UK law does not prescribe minimum distances between overhead lines and homes, but any implications on landscape and visual receptors, residential amenity or from concerns about electromagnetic fields are robustly assessed as part of the Environmental Impact Assessment (EIA) and balanced as part of the decision making process. We will continue to review planning applications and engage with developers as necessary.</p>	
11-5.10	Concern about the Project causing communities to become encircled / surrounded by overhead lines	<p>The alignment has been routed to achieve some separation from the existing 400 kV overhead line, such that villages are not encircled by overhead lines to both sides. Separation is inevitably reduced in certain locations due to the presence of constraints to routeing and environmental features. Detailed assessment reported in the Environmental Impact Assessment (EIA) identifies any measures considered to be necessary to reduce likely significant effects which would also consider the potential for effects potentially arising from close paralleling existing 132 kV overhead line and new 400 kV overhead line infrastructure.</p>	
11-5.11	Concerned that the Project will have a negative impact on domestic horses / equestrian activities	<p>As well as possible effects on humans, the possible effects of Electric and Magnetic Fields (EMFs) on various animals have been studied. No proven effects of EMFs have been found in any species at levels below the guidelines. This is confirmed in National Policy Statement (NPS) EN-5 which states: <i>"There is little evidence that exposure of crops, farm animals or natural ecosystems to transmission line EMFs has any agriculturally significant consequences."</i> Although horses are not directly mentioned, there is no evidence to suggest they are any different to other farm animals.</p>	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-5.12	Concern about the impact of the Project on emergency services / ambulances / hospitals / health service	<p>As well as the possible direct biological or health effects addressed above, indirect effects such as microshocks can occur as a result of electric fields. Microshocks are small spark discharges which are similar to a static shock after walking across a nylon carpet for example. The Project would be designed in accordance with the principles of the Governments Code of Practice 'Power Lines: Control of Microshocks and other indirect effects of public exposure to electric fields' to ensure these are mitigated, which include equestrian activities.</p> <p>Through routeing and siting National Grid has sought to avoid and reduce as far as practicable effects on identified healthcare facilities.</p> <p>Environmental Statement (ES) Chapter 10: Health and Wellbeing (document reference 6.10) consider the potential impacts on, and access to, healthcare facilities, including emergency services, ambulances, hospitals and other NHS services associated with the construction of the Project, drawing on information from ES Chapter 16: Traffic and Transport (document reference 6.16). No health facilities are due to be directly impacted by the Project and where road diversions are required traffic management and mitigation measures would be in place to reduce impacts. These include traffic management, signage and routing measures to ensure access or partial access can be maintained where feasible. Further detail on proposed mitigation measures is presented in the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), which has been produced following engagement with stakeholders including the emergency services.</p>	
11-5.13	Criticism of surveys undertaken for the Project in this Section	<p>There is a staged approach to the process of collection of environmental data as any major project develops. National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project. The assessment is informed by a suite of field surveys and desk studies and results are</p>	

Ref no.	Summary of matters raised	National Grid's response
		<p>presented in an Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the application for development consent. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation (and maintenance) of the Project and recommends appropriate mitigation measures to reduce potential adverse impacts.</p> <p>The scope of the EIA is included in the Scoping Report (document reference 6.19) which was submitted to the Planning Inspectorate in November 2022 and their Scoping Opinion (document reference 6.20) received in December 2022. This provided the opportunity for statutory bodies to comment on the scope of the EIA which included our approach on study areas, data collection and baseline conditions for a range of environmental topics. We also discussed and agreed survey scope with stakeholders (including Statutory Environmental Bodies and Local Planning Authorities) following the Scoping Opinion (document reference 6.20) to ensure a robust baseline assessment.</p> <p>National Grid has prepared an Outline Code of Construction Practice (CoCP) (document reference 7.2) which sets out the required mitigation measures and environmental commitments that would be implemented during the construction phase of the Project to avoid or reduce potential effects of the Project on the environment, including commitments to undertake further surveys.</p>
11-5.14	Concern about the impact of the Project on water supply	<p>National Grid has conducted preliminary ground investigations in order to better understand the geology along the underground cable route, including ground water levels. This would be supplemented by more detailed investigations prior to construction should the Project obtain consent. National Grid would assess the impact of the works on all identified ground water sources, including public and private abstraction</p>

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		points, and take appropriate measures to avoid detriment to those water sources.	
Construction Impacts			
11-5.15	Concern about disruption from construction	<p>An Environmental Statement (ES) (document reference: Volume 6: Environmental Statement) has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 ('the Infrastructure EIA Regulations'). The ES identifies and assesses the likely significant effects on the environment resulting from the construction of the Project and recommends appropriate mitigation to reduce effects.</p> <p>Environmental mitigation measures have been defined within each environmental topic chapter and set out in relevant management documents submitted with the Development Consent Order (DCO) application, including the Outline Code of Construction Practice (CoCP) (document reference 7.2), the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5).</p>	
11-5.16	Concern about impact on traffic levels in local area caused by construction works	<p>As part of the pre-application process National Grid has engaged with the relevant authorities, their highways teams and National Highways to understand and gain information on their road networks. This information has been used to inform and guide the drafting of the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) for the Project that accompanies the Development Consent Order (DCO) application.</p> <p>A strategy has been developed to manage the impact of construction vehicles on the public highway and sensitive receptors, using suitable</p>	

Ref no.	Summary of matters raised	National Grid's response
		<p>Local Road Network connections from the Strategic Road Network called Primary Access Routes. In addition, temporary haul roads for construction vehicles are proposed along the Project alignment, further reducing the impact of construction traffic on the local road network. Further details of the strategy can be found within the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).</p> <p>Environmental Statement (ES) Chapter 16: Traffic and Transport (document reference 6.16) includes the assessment of the potential impacts of the Project including changes in traffic flow, delays, road safety and impact on Walking, Cycling and Horse-Riding modes on the roads along the Primary Access Routes located in the Local Road Network.</p> <p>The Transport Assessment (document reference 7.11), submitted with the DCO application, examines capacity, safety, and operational efficiency of the network, identifying potential bottlenecks or safety concerns.</p> <p>Within the assessment of the ES and the Transport Assessment, mitigation measures are proposed to minimise likely adverse impacts</p>
11-5.17	Concern about noise and other issues resulting from construction (e.g. mud on roads, dust)	<p>An Environmental Statement (ES) (document reference: Volume 6: Environmental Statement) has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 ('the Infrastructure EIA Regulations'). The ES identifies and assesses the likely significant effects on the environment resulting from the construction of the Project and recommends appropriate mitigation to reduce effects.</p> <p>Specifically, a Construction Noise and Vibration Impact Assessment has been undertaken and is reported in ES Chapter 14: Noise and Vibration (document reference 6.14). During construction, mitigation would be implemented to reduce noise and vibration impacts from construction activities and increased road traffic noise and vibration due to additional</p>

Ref no.	Summary of matters raised	National Grid's response
		<p>movement from construction traffic. Mitigation measures are outlined in ES Chapter 14: Noise and Vibration (document reference 6.14) and the Outline Code of Construction Practice (CoCP) (document reference 7.2). This includes the assumption that construction working would be undertaken within the agreed working hours, construction traffic would be managed through the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), haul roads would be well maintained, and Best Practicable Means (BPM) would be employed to reduce construction noise and vibration.</p> <p>ES Chapter 7: Air Quality (document reference 6.7) presents an assessment of the potential impacts from the construction of the Project on air quality. During construction, mitigation would be implemented to reduce the impact of dust generation and construction vehicle emissions. Mitigation measures are outlined in ES Chapter 7: Air Quality (document reference 6.7), and the Outline CoCP (document reference 7.2). The dust-emitting activities can be greatly reduced or eliminated by applying the site-specific mitigation measures (see Outline CoCP) for high risk sites following measures recommendations in the Institute of Air Quality Management (IAQM) guidance (IAQM, 2024). The IAQM guidance states that with the implementation of effective site-specific mitigation measures, the environmental effect would not be significant in most cases.</p> <p>In addition, National Grid has prepared an Outline CoCP (document reference 7.2). The Outline CoCP sets out the required mitigation measures and environmental commitments that would be implemented during the construction phase of the Project to avoid or reduce potential effects of the Project on the environment.</p>
11-5.18	Concern that local road infrastructure is not suitable for heavy construction vehicles and machinery	A strategy has been developed to manage the impact of construction vehicles on the public highway and sensitive receptors, using suitable Local Road Network connections from the Strategic Road Network called

Ref no.	Summary of matters raised	National Grid's response
		<p>Primary Access Routes. In addition, temporary haul roads for construction vehicles are proposed along the Project alignment, further reducing the impact of construction traffic on the local road network. Further details of the strategy can be found within the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).</p> <p>The Project also requires the transportation of Abnormal Indivisible Loads (AIL). National Grid is developing specific routing proposals for AIL movements and is developing these through engagement with the relevant stakeholders including the local highway authorities and National Highways. An AIL routing strategy containing details about these movements are submitted in support of the Development Consent Order (DCO) application.</p>
11-5.19	Concern about vibrations from construction	<p>An assessment of construction vibration is presented in Environmental Statement Chapter 14 - Noise and Vibration (document reference 6.14). The assessment considers both the potential impact upon people within buildings (i.e. disturbance), and potential damage to buildings and structures.</p> <p>The assessment considers relatively worst-case construction methodologies and does not take account of potential mitigation. This is so that potential 'hot-spots' can be identified where there is the potential for significant adverse effects, without mitigation.</p> <p>The construction vibration assessment has identified 74 locations where there is potential disturbance to people within buildings from construction vibration. Of these, 72 relate to potential vibratory compaction activities which would be expected to be for a relatively short duration (i.e. less than day). The remaining two relate to potential piling activities for pylon foundation construction.</p>

Ref no.

Summary of matters raised

National Grid's response

		<p>With regards to potential damage to buildings and structures, the assessment highlights locations where there is a potential non-zero risk of damage. 14 locations have been identified, all of which relate to potential vibratory compaction activities.</p> <p>In all cases, significant adverse effects, or potential structural damage, can be avoided with the use of best practicable means (BPM). This may include alternative methods, such as non-percussive/vibratory techniques.</p> <p>Additionally, prior to undertaking works, the Main Works Contractor(s) would conduct a detailed construction vibration assessment based on their specific methodologies and determine specific mitigation measures, where applicable.</p>	
11-5.20	Concern that the use of faraday cages to protect the high pressure gas pipeline in Chignal St James will cause disruption to landowners	<p>There is the potential, based on induced currents from the 400 kV overhead line, that alternating current mitigation measures may need to be installed to the ferrous pipeline operated by National Gas Transmission at Chignal St James however National Grid are not proposing to use Faraday Cages as part of these mitigation measures. The scope and extent of such mitigation measures will be dependent on the final design arrangements of the Project which will continue to evolve within the parameters of confirmed Limits of Deviation. Factors including crossing angle and clearance height, length of parallelism, site specific soil resistivity etc combine to define the requirement for mitigation. The mitigation itself is typically achieved by the installation, alongside the ferrous pipeline (in an area which is likely to have been previously disturbed during construction), of additional earthing which extends away from the crossing point. Consultation between National Grid and the relevant utility provider will confirm the requirement for installed mitigation, based on the final 400 kV design arrangements, which will be implemented by the relevant utility provider under their existing utility operation and maintenance provisions.</p>	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-5.21	<p>Concern that the Project is anticipated to have the following impacts on respondents landholding at Old Ipswich Road, Ardleigh:</p> <ul style="list-style-type: none"> - Restricted access for HGVs and delivery vehicles. - Disruption to 24-hour operations and workshop productivity. - Compromised site security from shared or external access. - Risk to on-site equipment, materials, and stored assets. - Health and safety implications due to overlapping construction and workshop activity. <p>The respondent requests a detailed impact statement outlining:</p> <ul style="list-style-type: none"> - The exact areas of their land to be accessed or used. - The intended purpose and duration of that access. - Any proposed site compounds, laydown areas, or haul routes (there are two large electrical sub-stations located in the current laydown area). - Dates and phasing plans for works near their boundaries. 	<p>Working in proximity to existing utility assets (both above ground and buried is common practice for National Grid and their contractors. National Grid and their contractors shall adhere to relevant Health and Safety Executive (HSE) and National Grid & UK Power Networks specific legislation, policy and guidance when constructing, operating and maintaining the Project.</p> <p>National Grid notes the respondent's concerns regarding their landholdings at Old Ipswich Road. There are a number of different developments to the north and south of Wick Lane that influence route development. An alignment has been proposed that we consider can be integrated with existing activities and proposals with additional Limits of Deviation provided to allow for potential modifications to the developments that are within the planning system at the time of writing that again facilitate both the Project and the other proposals.</p> <p>The proposed access and use of Old Ipswich Road has been assessed within the Environmental Statement (ES) Chapter 16: Traffic and Transport (document reference 6.16) and Transport Assessment (document reference 7.11). The assessment shows that there would be no restrictions to HGVs and delivery vehicles.</p> <p>The proposed haul roads and access points will be secured with fencing to prevent access and onsite equipment or stored assets, details of which can be found within the Chapter 16: Traffic and Transport (document reference 6.16).</p> <p>A Construction Noise and Vibration Impact Assessment has been undertaken and is reported in ES Chapter 14: Noise and Vibration (document reference 6.14). During construction, mitigation would be implemented to reduce noise and vibration impacts from construction activities and increased road traffic noise and vibration due to additional movement from construction traffic. Mitigation measures are outlined in</p>	

Ref no.	Summary of matters raised	National Grid's response	
	<p>- Traffic, noise, and access management during construction. This is required for the respondent to assess the true operational and financial impact on their business.</p>	<p>ES Chapter 14: Noise and Vibration (document reference 6.14) and the Outline Code of Construction Practice (CoCP) (document reference 7.2). This includes the assumption that construction working would be undertaken within the agreed working hours, construction traffic would be managed through the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), haul roads would be well maintained, and Best Practicable Means (BPM) would be employed to reduce construction noise and vibration.</p> <p>Any areas where there is an overlap between the proposed construction and existing workshop activities will be safely segregated to remove the health and safety concerns.</p> <p>If you have specific concerns regarding the impact on your land, we encourage you to contact the Lands team, Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.</p>	
11-5.22	<p>Concern that respondent requires 24 hour access to / from their property near Dedham Road, Langham, based on their occupation / Request for National Grid to confirm in writing and via a face to face discussion the mitigation plans for this and their other concerns</p>	<p>National Grid notes the concerns raised regarding 24 hour access to and from their property. The proposed scheme will not impede access. The Projects lands team will be able to meet with the respondent to discuss their concerns around access to / from their property. Mitigation can be agreed where possible and commitment given to the respondent. If they have any questions they are encouraged to speak to the Project lands team: Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.</p>	
11-5.23	<p>Concern that the easements that the respondent has over the water run off from their sewage system into the field to the east of the respondents property (near Water Lane, Langham) will be impacted by the Project, and request for National Grid to keep the respondent informed of any plans to change them (e.g. the</p>	<p>National Grid notes the respondent's feedback. Drainage surveys would be carried out in advance of construction works and would include on-site assessments and engagement with affected landowners. Existing drainage would be avoided where reasonably practicable. Where it cannot be avoided, it would be rerouted or temporary drainage would be installed for the construction period.</p>	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
	respondent has previously provided National Grid with detailed maps and information regarding other utilities that will be disrupted by the Project).	Working in proximity to existing utility assets (both above ground and buried is common practice for National Grid and their contractors. Landowners are encouraged to give the National Grid Lands team details of any private supply, drainage and irrigation systems as early as possible to ensure these can be assessed as part of the detailed Project design.	
11-5.24	Concern that the Project will impact respondents water treatment plant (near Brook Road, Aldham)	National Grid notes the respondent's feedback with regards to the permanent access route. As the Project progresses into the heads of terms and voluntary agreement stage there will be an opportunity to discuss and agree permanent access rights in more detail. No physical works are required for this permanent access route as part of the Project as these will not be used for construction. Access may be required in the future, for maintenance and surveys and therefore National Grid will look to agree the most suitable access route at that point, taking into account the landowner and National Grid's requirements. Therefore, no impact is anticipated to the water treatment plant.	
Consultation			
11-5.25	Criticism of consultation specific to this section	National Grid notes the respondent's feedback.	
11-5.26	Criticism that National Grid has not sufficiently engaged with the respondent (e.g. particularly regarding the site selection methodology, the rationale for siting the East Anglia Connection Node (EACN) in the Tendring peninsula, and the exclusion of alternative routes)	National Grid published our Corridor and Preliminary Routeing and Siting Study (CPRSS) in 2022. This set out the site selection methodology, the rationale for the siting of the East Anglia Connection Node (EACN) substation, and how we considered alternative routes. Alternative routes and sites were also considered in response to feedback, as set out in the 2023 and 2024 Design Development Reports. These documents remain available on the Project website. Throughout the development of our proposals, we have held three rounds of consultation which included information on our proposals for the EACN substation, in addition to further landowner engagement. During these	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		consultations we held a series of public information events, including an event at Lawford during our statutory consultation in 2024, where project team members were available to answer questions. We also had an email address, freephone number, and a Freepost address where people could contact the Project team with questions.	
11-5.27	Suggest National Grid share a construction timeline with landowners at the earliest opportunity once a contractor is onboarded to enable effective planning and mitigation of losses	<p>An indicative Project timeline was included in Section 3.2 of the Preliminary Environmental Information Report (PEIR) and provided an estimated construction period between 2027 and 2031. Further information regarding the construction programme is included in the Environmental Statement (ES), Chapter 4: Project Description (document reference 6.4).</p> <p>The detailed construction phasing and sequencing will be confirmed following the appointment of the main works contractor. National Grid will share relevant programme information with affected landowners at the earliest opportunity to support effective planning and coordination.</p> <p>Construction activities will be programmed and sequenced to reduce disruption to local surroundings, residents, businesses and road users as far as practicable. National Grid will continue to engage with landowners throughout the construction period to provide updates on timing and phasing as the programme is refined.</p>	
11-5.28	Criticism that the respondent has not received documentation for the land effected (near Newney Green) and is unable to fully consider the proposals or provide meaningful feedback within the consultation period / Request to submit further comments for consideration by National Grid as part of this consultation once the outstanding plans have been received	<p>National Grid notes the respondent's feedback. We encourage any landowners that have not received information about their land that they believe to be impacted by the Project they should contact the Project lands team: Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.</p> <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD.</p>	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		National Grid considers all feedback and comments received with regard to the Project.	
11-5.29	Criticism that the information requested about the impact of the proposals on the respondent's land at Normans Farm close to Little Bromley (respondent's business names provided in response) has not been provided / Suggest this information is needed to provide additional feedback	National Grid notes the respondent's feedback. If a landowner has concerns about impacts to their property they should contact the Project lands team to discuss: Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.	
11-5.30	Request discussion with National Grid, North Falls, Five Estuaries and Tarchon about how the projects are collaborating and will function together to minimise impacts on the respondent's property and business (land near Normans Farm and associated land)	National Grid is working with customers connecting into the East Anglia Connection Node (EACN) substation and will continue to assess opportunities to coordinate activities. We will also continue to work with landowners potentially affected by the Project, including arranging meetings if appropriate.	
11-5.31	Request further information about how the proposals will impact the respondent's property in Coggeshall (full address provided in response) / Request respondent is removed from correspondence as an impacted party if access to their property is not required / Request opportunity to consider mitigation works to minimise disruption should the respondent's property be impacted	National Grid notes the respondent's feedback. The respondent's property boundary is included in the Order Limits for the route of a replacement underground cable for an 11 kV overhead line which needs to be crossed for the Project. The underground cable is proposed to be routed down the pathway alongside the respondent's property, no impacts to the respondent's property are anticipated for these works	
11-5.32	Criticism that the Statement of Common Ground with Raydon Airfield has inaccurate information, especially regarding the lack of proper and early engagement from National Grid	National Grid has appointed an independent aviation consultancy which has consulted with Raydon Wings aerodrome (with National Grid also present) to prepare and inform its aviation impact assessment, and to enable the operator's feedback to be considered during the development of the Project's design, with design changes implemented to minimise aviation impacts. National Grid considers its approach to be consistent	

Ref no.

Summary of matters raised

National Grid's response

with the instructions and guidance of the Overarching National Policy Statement (NPS) for Energy (EN-1) as well as with engagement undertaken with other aerodromes potentially impacted by the Project. National Grid engaged and consulted the aerodrome at each consultation and received feedback from the aerodrome at each consultation. Meetings have also been held throughout the pre-application period. The feedback received at each stage has been responded to through published consultation feedback reports. We have considered the feedback throughout the pre-application process. National Grid is continuing to engage with the operator of Raydon Wings aerodrome to ensure the draft Statement of Common Ground (SoCG) provides an accurate record of consultation to date.

Design Change (CR)

11-5.33

Suggest a minimum distance that the Project should be sited from residential areas / residences

National Grid does not use standard minimum distances as a routeing consideration. Applying an arbitrary distance may be too big or too small for the specific circumstances. We utilise the Holford Rules (a description of the Holford Rules can be found in Appendix I22 of this report) informed by feedback and professional judgement to define appropriate corridors and alignments that are consistent with the relevant policy framework and duties. In response to feedback to the 2022 and 2023 non-statutory consultations, statutory consultation, and targeted consultations, we have modified the alignment in various locations to increase separation to properties where this is possible without undue deviation or transfer of effects to other similar properties or other receptors. A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the Environmental Impact Assessment (EIA). The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-5.34	Suggest that existing overhead lines in this section should be replaced by underground cables	<p>(document reference 6.13). This assesses the impact of the Project and identifies the need for additional mitigation if required.</p> <p>National Policy Statement (NPS) EN-5 establishes the position that the starting basis for new connections is a presumption on the acceptability of overhead lines but with this presumption reversed within designated landscapes and in certain other circumstances.</p> <p>The existing electricity transmission network provides power, via the local distribution network, into the local area where it is used in homes and businesses. The need case and funding for the Project is to deliver the new network reinforcement needed, rather than to remove existing overhead lines by undergrounding them.</p> <p>We have identified a number of locations where we are proposing to place existing overhead lines underground. These locations are where existing 132 kV and lower voltage lattice pylon lines are crossed by the proposed 400 kV overhead line and / or mitigation of effects are considered necessary. This includes locations such as at Mellis, between Offton and Bramford Substation, to the south of Bramford Substation and near Fuller Street.</p> <p>Unless required for mitigation, undergrounding existing overhead lines on the transmission network would not be in accordance with NPS EN-5 and would result in substantial cost to bill payers. There may also be significant environmental impacts due to the removal works on sensitive ecological and archaeological receptors as well as constraints from either existing built form or unsuitable ground conditions.</p>	
11-5.35	Suggest that the Project should run in closer to / parallel to the existing overhead lines	National Grid notes the potential for close paralleling existing overhead lines to reduce the level of effects that may arise from a new overhead line.	

Ref no.	Summary of matters raised	National Grid's response
		<p>However, where existing overhead lines are present along the proposed route, there are constraints and features that mean, overall, we consider close paralleling would lead to greater effects on receptors in the area and be less compliant with the Holford Rules or be less consistent with the policy to be economic and efficient. A summary of the Holford Rules is provided within Appendix I22 of this report. A number of residential properties are present in close proximity to the existing 400 kV overhead line meaning that if the overhead lines were close paralleled it would result in the properties having an overhead line close to both sides. There are also some locations where the combination of existing physical and environmental features (road infrastructure, commercial and residential properties etc) present very substantial challenges to routeing and siting. As a result, whilst close paralleling may appear beneficial in some sections, overall, the increased environmental effects where the overhead lines have to converge and diverge, and those increased effects on properties with overhead lines on both sides are considered greater than those introduced by a new overhead line separated from existing 400 kV overhead lines. Whilst crossings and use of underground cable technology may be able to address various constrained locations, we consider the costs and environmental effects arising from the additional infrastructure required to be less compliant with our duties and relevant policies.</p>
11-5.36	Suggest that underground cables are used in populated / residential areas	<p>National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors.</p> <p>National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is '<i>that overhead lines should be the strong</i></p>

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		<p><i>starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Park, The Broads, or Area of Outstanding Natural Beauty)'. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at all populated or residential areas in this section would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.</i></p>	
11-5.37	Suggest the alternate site proposed during the 2023 non-statutory consultation for the western Sealing End Compound near TB40 (now TB41/42 to TB43-45) is	The respondent's preference is noted and has been considered previously as set out in both the 2023 and 2024 Design Development Reports (available on the Project website). However National Grid considers that	

Ref no.

Summary of matters raised

National Grid's response

used, to reduce effects on the countryside and reduce the route length, instead of the currently planned location atop the ridge of the Great Horkesley Plateau / Suggest underground route turning to the south crossing Colchester Road (avoiding Crabtree Lane) then to the West of Pond Farm (reducing the route by 700m) to reduce visual effects on the Dedham Vale National Landscape

the suggested relocation in some cases transfers effects between receptors so whilst not crossing one road it would cross a different road. It proposes a change in respect of listed buildings which whilst potentially reducing effects, are reducing effects which are inherently low. The site level reduction would not substantially change the level of screening provided and we do not consider the low level of effects on the National Landscape as a compelling basis for change. The change would require a longer length of underground cable and we do not consider the limited change to justify the additional cost. In the absence of new evidence or the identification of further factors we continue to consider the proposed Cable Sealing End (CSE) compound site to the west of Great Horkesley to be preferred and no change is proposed. We have undertaken an Environmental Impact Assessment (EIA) to assess the potential impact of the Project.

A Landscape and Visual Impact Assessment (LVIA), presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13), has been undertaken as part of the Environmental Impact Assessment (EIA). The LVIA includes an assessment on both landscape character and visual amenity and sets out the potential landscape and visual effects. The Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) includes details regarding the indicative landscape design for the CSE compound areas.

11-5.38

Criticism that a western route around the Dedham Vale was rejected in the 2024 Strategic Options Backcheck & Review due to work on the current proposal

National Grid's consideration of corridor alternatives further to the west of the National Landscape (previously known as an Area of Outstanding Natural Beauty (AONB)) was published within the Corridor and Preliminary Routeing and Siting Study (CPRSS) as part of our 2022 non-statutory consultation (available on the Project website). We have continued to backcheck the strategic connection proposal and siting of the

Ref no.	Summary of matters raised	National Grid's response
		<p>East Anglia Connection Node (EACN) substation, which is part of the holistic consideration of the most appropriate form of the Project. In the absence of further information or new factors we continue to consider alternatives west of the National Landscape to be less preferred. The Design Development Report (document reference 5.15) sets out in chapter 2 the reasons. On balance, these were less preferred as they would be longer and therefore lead to effects over a much greater length to other receptors at greater cost than the route through the National Landscape. Undergrounding through the National Landscape is consistent with National Policy Statement (NPS) EN-5. The siting of Cable Sealing End (CSE) compounds (the transition sites between the overhead line and underground cable) has identified locations to reduce effects on the designation and consider the use of trenchless techniques – subject to ground conditions – to reduce certain construction effects.</p>
11-5.39	Suggest that the draft order limits are reduced to the west of the land parcel (per respondent's plan) to avoid disruption to the historic parish boundary (disruption such as; the creation of new entrances or removing vegetation)	<p>National Grid notes the respondent's feedback. The Order Limits to the west of the underground cable alignment are slightly wider here to account for the narrowing of the Order Limits to the south to avoid the woodland. Wider Order Limits here are to allow for the temporary storage of soil or other temporary works during construction. These are not anticipated to impact the historic parish boundary but removal of vegetation. As far as practicable we will look to avoid damage to the boundary feature / hedge to the east of the underground cable construction swathe.</p> <p>There is the requirement for a visibility splay for the crossing of the B1068 to ensure the crossing is safe for use during construction. Vegetation would only be removed where necessary.</p>

Ref no.	Summary of matters raised	National Grid's response
11-5.40	Suggest amended locations for pylons TB62, TB63 and TB64, to align with field corners and reduce the impact on arable farmland (as per respondent's plan)	National Grid notes the respondent's feedback and the preference from some landowners to position pylons on the boundaries and corners of fields. It is not possible to move TB62 and TB64 to field boundaries due to required span lengths as well as the subsequent movements to previous and following pylons as a result. The location for TB62 requested by the respondent would move it onto another landowners land (thus transferring effects) and would result in TB63 moving towards the current TB62 position. The movement of TB64 would move the pylon onto a different landowners land (thus transferring effects) and would result in TB63 moving further east away from the field boundary. We have therefore made no change to the locations of these pylons.
11-5.41	Suggest the order limits along the south-east field, align closely with the existing line and not extend unnecessarily into the field, to allow the field to be farmed, reducing losses (as per respondent's plan)	National Grid notes the respondent's feedback. The Order Limits in the south-east field near School Lane were clipped around the woodland and property boundaries on either side and then extend to the standard Order Limit width in between. Wider Order Limits ensure flexibility during construction and allows space for soil storage. We have not made a change to the Order Limits at this location.
11-5.42	Suggest the substation site is moved east by 300 metres / Suggest the use of a Gas Insulated Switchgear (GIS) substation (e.g. as proposed at the Tilbury North Substation site at Orsett Golf Course) to reduce the noise and area of the substation site / Suggest substantial earthworks and vegetation or fences to restrict the noise and reduce the impact of night-time lighting required at the substation site	National Grid has completed an assessment of the noise effects of the Project which is presented in the Environmental Statement in Chapter 14: Noise and Vibration (document reference 6.14). This does not identify a requirement to relocate the East Anglia Connection Node (EACN) substation further to the east. Any eastwards movement would also require the diversion (likely by underground cable) of an existing 132 kV overhead line at additional cost. The EACN substation will not be routinely lit, though motion activated and task lighting may be utilised. A Outline Landscape and Ecological Management Plan (document reference 7.4) has been developed and forms part of the submission and includes proposals for screening by various means including those indicated by the

Ref no.	Summary of matters raised	National Grid's response
		<p>respondent. Whilst proximity to the marine environment leads to consideration of GIS the particular circumstances (the closest part is a narrow estuary) lead to a conclusion that GIS is not required. It is considered that the AIS solution, despite taking a larger footprint would fit better into the surrounding landscape at the proposed site of the EACN substation, being easier to visually screen with vegetation compared to that of a 15 m high building approximately 130 m in length which would be required for a GIS solution. The cost differential between the two options is also considered to be substantial with the GIS solution estimated to be approximately 50% more expensive. Therefore as the AIS solution is deemed appropriate at this particular site, this additional cost for this substation is not justified.</p>
11-5.43	<p>Request that the existing haul road on respondent's land (near Normans Farm and associated land) is re-routed to follow a straight line parallel to the existing operational farming lines as it currently dissects the field on a diagonal line sterilising part of the field and impacts residential development plans as part of the emerging Tendering District Local Plan / Concern about access to the underground irrigation mail as a result of the haul road or construction compound and impact on adjoining land and high value root crop licences / Suggest this would not impact residential dwellings on Shop Road due to establish screening and infrequent use</p>	<p>National Grid notes the respondent's feedback and has reviewed the alternatives suggested. One being to follow the eastern field boundary and the other to follow the northern field boundary adjacent to the properties within Little Bromley. Whilst potentially a reasonable option for very occasional AIL movements the potential for this to be used for construction HGV movements until the substation haul road becomes available increases the level of environmental effect for residential occupants meaning this is considered less preferred. National Grid recognises that decision making is influenced to an extent by factors that are as yet uncertain, such as potential use by construction HGVs which depends on when North Falls or Five Estuaries commence their works. Whilst still to be confirmed National Grid is aware of some calls from LPAs involved with the windfarm DCOs (North Falls and Five Estuaries) for restrictions to be imposed to prevent wind farm construction before the Project is consented and free from judicial review risk. This increases the likelihood that the AIL route will be carrying construction HGVs because of later availability of the haul road alongside the cable corridor. On this</p>

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-5.44	Request further information on safety assessments for the UK Power Networks overhead lines / Request existing UK Power Networks overhead lines are undergrounded following land boundaries (if they will be undergrounded)	<p>basis we propose to make no change at this stage to the route presented at the 2025 targeted consultation but we will continue to engage with the landowner(s) (as information continues to emerge) to either take forward the arrangements as proposed or, subject to necessary permissions being secured, may adopt one of the alternatives.</p> <p>Landowners are encouraged to provide as much information as early as possible in relation to any private supplies, drainage and irrigation systems on their land so these can be factored in at the detailed design stage of the Project ahead of construction starting on site.</p> <p>National Grid has liaised with statutory undertakers (including UK Power Networks) regarding third-party services that would be affected by the proposed alignment. The Project includes proposals to replace certain sections of the existing LV kV, 11 kV, 33 kV and 132 kV infrastructure with underground cables.</p> <p>The Order Limits are inclusive of the area required to deliver the UK Power Networks mitigation works required to deliver the Project. National Grid has coordinated with UK Power Networks to ensure the designs align with their best practices and system requirements. The majority of UK Power Networks mitigations propose to route the underground cable routes around field edges where practicable. Although the possibility of routing the cables more directly along the route of the existing overhead line assets has also been included within the Project Order Limits.</p> <p>Working in proximity to existing utility assets (both above ground and buried) is common practice for National Grid and their contractors. National Grid and their contractors shall adhere to relevant Health and Safety Executive (HSE) and National Grid & UK Power Networks specific legislation, policy and guidance when constructing, operating and maintaining the Project.</p> <p>An Outline Code of Construction Practice (CoCP) (document reference</p>	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		7.2) has been prepared and submitted with the DCO application. This document provides commitments to reduce construction impacts together with a framework for detailed management plans to be prepared at detailed design stage in order to reduce and mitigate potential impacts and/or disruptions that may arise during the construction phase.	
11-5.45	Request that pylon TB30 is accessed directly from Straight Road via land within the same ownership which the pylon sits within / Criticism that access to the pylon goes through the respondent's residential property and several buildings (per the respondent's plan)	National Grid notes the respondent's feedback with regards to the permanent access route. As the Project progresses into the heads of terms and voluntary agreement stage there will be an opportunity to discuss and agree permanent access rights in more detail. No physical works are required for this permanent access route as part of the Project as these will not be used for construction. Access may be required in the future, for maintenance and surveys and therefore National Grid will look to agree the most suitable access route at that point, taking into account the landowner and National Grid's requirements.	
11-5.46	Suggestion that pylons TB46 and TB47 be located further south to avoid cables coming close to the reservoir and valley below	National Grid notes the respondent's feedback. These pylons are not directly impacting the embankment of the reservoir being around 100 m away. They have also been carefully sited to avoid archaeology identified during surveys. In order to move pylons TB46 and TB47 south, this would require either additional angle pylons (which would be less consistent with the Holford Rules (see Appendix I22 of this report) or removal of mature hedgerow boundaries and would introduce impacts to more trees. Therefore, we have not made a change to the location of these pylons. We would liaise with the respondent about the reservoir during detailed design and construction to avoid impact to reservoir and would keep works to the south of the Order Limits where practicable.	
11-5.47	Request that the woodland off Fairstead Road identified for biodiversity net gain be removed from the Order Limits	While the woodland indicated by the landowner is included within the Order Limits, no impact on the woodland is proposed. It is included as part of the Environmental Area only (details provided in Appendix D to the	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		Outline Landscape and Ecological Management Plan (document reference 7.4)), with the existing woodland offering existing landscape screening. Additional woodland planting is proposed immediately to the north of the existing woodland band which will enhance its value by providing a larger extent of woodland. The proposed woodland creation at the cable sealing end (CSE) compound will be managed in the long term by National Grid and will be used for landscape mitigation, as well as onsite Biodiversity Net Gain (BNG) units. The existing BNG value of the identified woodland band will not be double counted by the Project or be negatively affected.	
11-5.48	Request for pylon TB27 to be sited 100 metres south to reduce effects on nearby trees	National Grid has considered the respondent's feedback and has reviewed an alternative alignment that would move TB27 south as suggested. This alternative would introduce an angle pylon close to residential properties to the south and would oversail residential gardens either to the north or south of the alignment. We are therefore not proposing to take this change forward. We have submitted an Arboricultural Impact Assessment (AIA) (document reference 6.13.A6, Appendix 13.6) which includes an assessment of tree loss and includes details of mitigation where required.	
11-5.49	Request that pylons near the Chignals be located further to the west, remaining parallel to Fox Road/Mashbury Road to the west of Great Waltham before running south between Chignal Smealy and Mashbury	In response to feedback received during the 2024 statutory consultation and the 2025 targeted consultations and landowner consultation, National Grid has considered alternative alignments (which includes that suggested by the respondent to go west of Great Waltham then parallel to Mashbury Road and past Chignall Smealey), modifications to the alignment consulted upon along with the selection of pylon type as well as the justification for the use of underground cable. In the Corridor and Preliminary Routing and Siting Study (CPRSS) published as part of the 2022 non-statutory consultation and in the Design Development Report's, National Grid set out the challenges associated with routeing further to the	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-5.50	Request that the access road off Mashbury Road be located further away from residential properties and a new gateway be installed to the opposite field to make access simpler and safer	<p>west. Whilst noting the respondent's preference for this alternative, no new factors have been identified nor new evidence provided nor identified to remove the basis for previous decision making. Firstly it is noted that our assessments of the Project alignment are that it is not unacceptable in policy terms and there is no specific need therefore to change, nonetheless we have reviewed other route alternatives. The more westerly alignment would be routed away from Little Waltham diverting from the south of Great Leighs towards Pleshey and then southwards past Great Waltham towards Chignal Smealey. Whilst noting a reduction in some effects for this more western alternative, it would be a longer route by 2.5 km to 3 km with a degree of transfer of effects. Given that none of the effects arising for the Project alignment are considered to be at a level which is unacceptable in policy terms, National Grid continues to prefer the Project alignment and for the reasons stated the eastern and western alternatives are not progressed. Effects are assessed and presented in the EIA and this has identified any need for additional mitigation. The results of the EIA are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application</p> <p>National Grid notes the concerns around the proposed location of the temporary cross over bellmouths on Mashbury Road. The position of the haul road crossing point has been carefully selected to be as close to the main construction swathe as possible to reduce impact on additional land unnecessarily. Changing the location would mean impacting more land.</p> <p>Road safety audits have been undertaken on the proposed cross-over point, which can be found within the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3). The proposed</p>	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-5.51	Request that pylons TB116 and TB117 be located closer to field boundaries to reduce impacts on farming operations	<p>location has been identified as the most safe option and provides the required levels of visibility.</p> <p>National Grid notes the preference from landowners for pylons to be situated close to hedge lines where possible to reduce the impact on agricultural activities and reduce land take. We have assessed requests from landowners on an individual basis and have moved pylons to the edges of fields where this can be achieved. We have reviewed the pylons TB116 and TB117 remain along the field boundary as far as practicable. TB116 cannot be placed on a field boundary to the west due to required span lengths and the need to keep the alignment as straight as possible to be consistent with the Holford Rules. A summary of the Holford Rules is provided within Appendix I22 of this report. We are also unable to position pylons close to the southern edge of the field due to the need to maintain adequate distance to Hallhook Row Ancient Woodland.</p>	
11-5.52	Suggestion that access routes follow field boundaries and existing tracks (plan provided)	<p>National Grid notes the respondent's feedback with regards to the permanent access routes and also notes that the most appropriate route also varies in response to seasonal variation in land uses. As the Project progresses into the heads of terms and voluntary agreement stage there will be an opportunity to discuss and agree permanent access rights in more detail. No physical works are required for these permanent access routes as part of the Project as these will not be used for construction. Access may be required in the future, for maintenance and surveys and therefore National Grid will look to agree the most suitable access route at that point, taking into account the landowner and National Grid's requirements.</p>	
11-5.53	Criticism that the track location between JC19 and JC20 will be unsuitable (e.g. due to the ground being wet / unpassable for a lot of the year, the layout being	<p>National Grid notes the respondent's feedback with regards to the permanent access route between JC19 and JC20 and also notes that the most appropriate route also varies in response to seasonal variation in</p>	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
	complicated, the lower meadow ground being unsuitable for heavy vehicles, an oak tree in danger of being filled, and impact on farm and livelihoods)	land uses. As the Project progresses into the heads of terms and voluntary agreement stage there will be an opportunity to discuss and agree permanent access rights in more detail. No physical works are required for this permanent access route as part of the Project as these will not be used for construction. Access may be required in the future, for maintenance and surveys and therefore National Grid will look to agree the most suitable access route at that point, taking into account the landowner and National Grid's requirements.	
11-5.54	Suggest that construction traffic accesses the construction site near Perry Lane directly from the A12 (e.g. as per plan provided by respondent), instead of via Langham and narrow village roads (e.g. to mitigate impact on residents and save National Grid money by avoiding the need for Compulsory Purchase Orders (CPOs) and / or other compensation costs)	<p>The design proposals presented at statutory consultation did not propose a new direct access from the A12 in this location as this would not meet the National Highways criteria for an acceptable new direct access onto their Strategic Road Network and would be considered to represent a safety risk to a high speed road.</p> <p>National Grid has carefully developed the proposals for access for Perry Lane. Our suggested mitigation requirements at this stage are associated with the less frequent movements of cable drum vehicles, which are non-standard vehicles. In addition to being escorted, the anticipated mitigation works required at Perry Lane to allow for the movement of cable drums are limited to the temporary removal of a traffic island and traffic management.</p> <p>National Grid has explored opportunities to removing this access route from Perry Lane. However, an alternative is unavailable. Therefore, the Primary Access Route using Perry Lane is required to be maintained.</p>	
11-5.55	Suggest that the Project is re-routed to the eastern side of the fields near the Colchester Road / Crabtree Lane (as per plan provided by respondent) with the Cable Sealing End (CSE) compound moved as shown on plan provided by respondent (i.e. to mitigate significant safety concerns affecting resident, to reduce	National Grid notes the respondent's feedback and has reviewed the alternatives suggested. Movement of the western Great Horkesley Cable Sealing End (CSE) compound further east was considered but was less preferred due to the suggested location being more open and closer to other properties with less existing screening, The position would also increase impacts on the setting of the Dedham Vale National Landscape.	

Ref no.	Summary of matters raised	National Grid's response
	<p>the length of underground cables, to straighten the alignment, and to reduce the number of Category 1 affected parties)</p> <p>Should this not be implemented, then request that the haul road on the adjacent Land is moved to the eastern side of the route alignment so that it does not run along the boundary of the respondents property</p>	<p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the Environmental Impact Assessment (EIA). The LVIA includes an assessment of the Project on landscape character and visual amenity including the consideration of Dedham Vale National Landscape (previously known as an Area of Outstanding Natural Beauty (AONB)). The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13). The location and onwards alignment suggested by the respondent would transfer visual effects to a greater number of properties including passing closer to the residential property at the road junction of Crabtree Lane and Colchester Road</p> <p>The haul road at this location was previously moved to the western boundary following feedback from a landowner at the statutory consultation, It is deemed that there is sufficient screening to the respondent's property and therefore no change to the haul road has been made.</p> <p>Electric and Magnetic Fields (EMFs) are produced wherever electricity is used, and National Grid fully recognises people's concerns. We take this issue very seriously and look to authoritative and independent scientific organisations such as the World Health Organisation (WHO) and in the UK Health Security Agency (UKHSA) to review the worldwide body of scientific evidence on EMFs and health. We believe important decisions on health should be made independently of industry, as is the case in the UK.</p> <p>Health considerations are given a high priority in the process by which we arrive at any proposals for new electricity circuits. Assessment of compliance with national guidance and policies is key to our approach. The UK has a carefully thought-out set of policies for managing EMFs, which includes both numerical exposure guidelines to protect against established, acute effects of EMFs, and precautionary policies to provide</p>

Ref no.	Summary of matters raised	National Grid's response
		<p>appropriate protection against the possibility of chronic effects of EMFs at lower levels, including, specifically, the possibility of a risk for childhood leukaemia. These policies are incorporated into the decision-making process for development consent in National Policy Statement (NPS) EN-5.</p> <p>Our approach is to ensure that all our assets comply with those policies, which are set by Government on the advice of their independent advisors UKHSA. This ensures that health concerns are properly and adequately addressed. The evidence concerning compliance with these policies, including the numerical guidelines have been fully and publicly documented in an Electric and Magnetic Field Compliance Report (document reference 7.8) which is submitted as part of our Development Consent Order (DCO) application. Additionally, in developing a route for the connection National Grid sought to maximise the distance from schools as far as possible on the grounds of general amenity. Mental health and wellbeing, including the perceptions of impacts from EMFs arising from the Project are also assessed within the Environmental Statement (document reference Volume 6: Environmental Statement).</p>
11-5.56	Suggest combining the double railway crossing into a single crossing point to reduce overall land take, limit disruption and minimise the length of hedgerows and trees that would need to be removed (as per respondent's plan)	In developing the proposed arrangements National Grid needs to be mindful of construction and operational aspects so has developed arrangements where the alignments cross but the overhead line is not routed above the underground cable over an extended distance to ensure safe construction and future maintenance. There are also practical challenges associated with the space required to complete the trenchless crossing which can't interfere with the space for pylon construction. Once installed the land will be restored and hedgerow reinstated, noting however that there would not be expected to be removal of hedgerows alongside the railway due to the cables being installed below the line and no access being made across the railway.

Ref no.	Summary of matters raised	National Grid's response
11-5.57	Suggest pylons TB8 and TB9 are positioned to the fields edge to minimise land loss and farming operational disruption / Suggest micro-adjustments are agreed with the landowner so that the 36 m sprayer can operate efficiently, if moving the pylons is not feasible (as per respondent's plan)	National Grid notes the respondent's feedback. The route for the overhead line in this section between TB3 and TB10 must respond to the presence of a number of residential properties, the location of transport infrastructure and clearance requirements (especially for electrified rail), the potential allocation of a site for silica sand abstraction, environmental features including veteran trees and seek to reduce socio-economic effects. It also needs to respond to the route of the underground cable connection through the National Landscape and meet construction requirements. In this location these factors mean that pylons TB8 and TB9 cannot be positioned to field edges as requested.
11-5.58	Oppose any Proposals by National Grid to the acquisition of rights or land over / of respondent's property (which is shown as being required in relation to the proposed widening of Bentley Road in Little Bromley) until at least the additional information requested has been provided to the respondent	National Grid will continue to engage with all affected landowners along Bentley Road and provide further information as and when available. If a landowner feels they have requested further information regarding the Project and has not yet received the requested information or a response on when the information will be available, they should contact the Projects Lands team: Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.
11-5.59	Criticism that it was agreed with respondent that their ancient boundary would not be touched / required for the Project, yet it is now included within the zone for construction operation and maintenance (the pink area on NG-NT 2025 06 GF CON R3 4690) / Criticism that the shaded pink area on the plan seems excessive given that only a 100 metre working swathe should be required	National Grid notes the respondent's feedback. The Order Limits to the west of the underground cable alignment are slightly wider here to account for the narrowing of the Order Limits to the south to avoid the woodland. Wider Order Limits here are to allow for the temporary storage of soil or other temporary works during construction. These are not anticipated to impact the historic parish boundary but removal of vegetation. As far as practicable we will look to avoid damage to the boundary feature / hedge to the east of the underground cable construction swathe. There is the requirement for a visibility splay for the crossing of the B1068

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		to ensure the crossing is safe for use during construction. Vegetation would only be removed where necessary.	
11-5.60	Request that the Project is re-located out of respondent's garden (near The Causeway Great, Horkesley) and into field	National Grid notes the respondent's feedback. The respondent's property is included in the Order Limits as we are proposing to remove the existing 11 kV wood pole that is sited at the edge of their property. It is not anticipated that the removal of the wood pole would impact the respondent's property, however if they have any questions they are encouraged to speak to the Project lands team: Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.	
11-5.61	Concern that service road is proposed opposite respondent's property, which is a narrow road (only one vehicle width wide) / Suggest that this is re-routed further along where there are no dwellings	National Grid notes the respondent's feedback with regards to the permanent access route. As the Project progresses into the heads of terms and voluntary agreement stage there will be an opportunity to discuss and agree permanent access rights in more detail. No physical works are required for this permanent access route as part of the Project as these will not be used for construction. Access may be required in the future, for maintenance and surveys and therefore National Grid will look to agree the most suitable access route at that point, taking into account the landowner and National Grid's requirements.	
11-5.62	Suggest that near Brimlin Wood the Project is re-routed further north to follow the existing 132 kV overhead lines, which are proposed to be removed as part of the Bramford to Twinstead Project (as per brown route in plan provided by respondent), or should this not be viable suggest that the Project is re-routed immediately to the north of Brimlin Wood (as per yellow route in plan provided by respondent) The significant benefits of the brown route are as	The 2024 Design Development Report (available on the Project website) reviewed these amongst other alternatives as set out from paragraph 5.4.10 and no new information nor other factors are identified that changes the conclusions previously drawn. We have also considered the suggestion to follow the alignment of the 132 kV line being removed by the Bramford to Twinstead project but disagree over the conclusions drawn given that part of the rationale for its removal was to reduce the cumulative effects given the construction of a second 400 kV overhead line. It does not therefore follow that the degree of change is reduced	

Ref no.	Summary of matters raised	National Grid's response
	<p>follows:</p> <ul style="list-style-type: none"> - Increases the distance between the Project and Little Wenham Hall, reducing the visual intrusion of the structures on the Castle's outlook. - Reduces the need for more access tracks and an expansion of construction traffic across the area by co-ordinating the Project and Bramford to Twinstead. - Reduces the degree of change as a result of the Projects in the area. - Reduces the number of properties and residents that will be blighted by the Project. - Adopts an already established route that would have been formally scrutinised prior to its installation. <p>The yellow route should be considered for the following reasons:</p> <ul style="list-style-type: none"> - A reduced impact on Little Wenham Hall's heritage assets and setting as a result of using Brimlin Wood to provide some existing screening from one of the 4-storey tower's key viewpoints to the north. - Alignment to the north of the wood removes the dog-leg and sharp angle change that is required by following the route south of the wood. - Similarly has only one of crossing of the Chattisham Road to the current consultation route. - Less disturbance to public footpaths, particularly those connecting to Bottle Bridge Road. 	<p>given this would be a 3rd line in close proximity. It is also the case that the alignment is in excess of 1.4 km distance from various heritage assets at Little Wenham and given intervening screening from various woodland and buildings, National Grid does not consider the visual impact to be at a level that requires further mitigation in order to be consistent with Holford Rules and relevant policy. A summary of the Holford Rules is provided within Appendix I22 of this report. Additionally, the change proposed (to the north of Brimlin Wood, on lower ground) would transfer effects to other similar receptors in particular increasing effects to a scheduled moat and requiring the alignment to be routed close to a number of residential properties. We have completed a Landscape and Visual Impact Assessment (LVIA) (document reference 6.13) which includes an assessment of impacts at Little Wenham.</p>

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-5.63	<p>- Shorter and less new access tracks required across open farmland.</p> <p>Suggest that underground cables are extended to Pylon JC20 (with HVDC cables preferred)</p>	<p>National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Park, The Broads, or Area of Outstanding Natural Beauty)'</i>. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do</p>	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		<p>not consider the Project between Raydon and JC20 would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.</p> <p>Alternative locations for the Cable Sealing End (CSE) compound have been assessed, however the current location is preferred in terms of technical feasibility and there is no policy driver to move the CSE compound further north increasing the length of underground cable.</p>	
11-5.64	Request that the red line boundary of Project is moved slightly west to remove respondents' property (near Woodbridge Road, Ipswich) from the order limits (e.g. clipping only up to outer boundary)	<p>National Grid recognise the concerns raised regarding the extents of the red line boundary for the project at bullen lane and the proximity to their property.</p> <p>The extents shown have been based on OS mapping and assumes the extents of the Highways Ownership Boundary. We note that when viewed with ariel mapping the red line appears to sit over properties and within gardens. The extents will be pulled in and reduced as the design is developed at the next stage, once we have the exact coordinates of the Highways Ownership Boundary. We do not propose to undertake any works within your property's extents.</p>	
11-5.65	Suggestion that the Project is routed away from / the Project should not be located at a specific location	<p>Further assessment and technical appraisal has been undertaken following feedback received from the statutory consultation and subsequent targeted consultations which has resulted in several changes. Further details on these changes can be found in this report and in the 2025 Design Development Report (document reference 5.15), published as part of the Development Consent Order (DCO) application.</p>	
11-5.66	Suggestion that the Project is routed away from / the Project should not be located at Little Wenham	<p>National Grid has considered the respondent's feedback highlighting a preference for an alternative moved away from Great and Little Wenham. In the absence of a specific basis for the change or a proposed alternative</p>	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		alignment, we have considered this feedback by following the guidance in the Holford Rules in developing the alignment. Guidelines on overhead line routeing are known as the "Holford Rules" which remain a valuable tool in selecting and assessing potential overhead line route options as part of the options appraisal process. A summary of the Holford Rules is provided within Appendix I22 of this report. We are therefore not proposing a change to the alignment at Great and Little Wenham.	
11-5.67	Suggestion that the Project is routed away from / the Project should not be located at Little Horkesley	National Grid has considered the respondent's feedback highlighting a preference for an alternative moved away from Little Horkesley. In the absence of a specific basis for the change or a proposed alternative alignment, we have considered this feedback by following the guidance in the Holford Rules in developing the alignment. Guidelines on overhead line routeing are known as the "Holford Rules" which remain a valuable tool in selecting and assessing potential overhead line route options as part of the options appraisal process. A summary of the Holford Rules is provided within Appendix I22 of this report. We are therefore not proposing a change to the alignment at Little Horkesley.	
11-5.68	Suggest the sealing end compound near Raydon Airfield is moved 150 meters further north, to the north of the disused railway line where the ground level is significantly lower	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Park, The Broads, or Area of Outstanding Natural Beauty'</i> . Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1	

Ref no.

Summary of matters raised

National Grid's response

(paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project further north of Raydon Airfield would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.

Alternative locations for the Cable Sealing End (CSE) compound have been assessed, however the current location is preferred in terms of technical feasibility and there is no policy driver to move the CSE compound further north increasing the length of underground cable.

11-5.69

Suggest pylon JC18 is moved further south to the field boundary or onto the southern parcel of land

National Grid notes the respondent's feedback. JC18 (previously JC17) was previously moved to the north of Pigeon's Lane following feedback from a property to the east, we are therefore not proposing to move it back to the south of the road. JC18 is positioned as close to the road as

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		possible while allowing space for scaffolding to be used during construction for crossing protection.	
Economic/ Employment			
11-5.70	Concern about negative impact on businesses in the area	<p>Through the routeing and siting exercise, National Grid has sought to reduce as far as practicable impacts to businesses.</p> <p>Impacts on local businesses within the Local Study Area (the Order Limits) and within the 3 km Study Area (where visual impact is likely to be an economic consideration) are assessed in Environmental Statement (ES) Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15). As part of this assessment, a range of mitigation measures have been considered to reduce disruption to businesses and their users during the construction phase of the Project. These measures are identified in ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15), the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) which accompany the Development Consent Order (DCO) application.</p>	
Environmental Impacts			
11-5.71	Concern that the Project will impact ancient woodland	<p>Through routeing, siting and detailed design, National Grid has sought to reduce, as far as practicable, impacts on biodiversity and in particular features of high ecological value, such as ancient woodland. A standard 15 m buffer from construction activities has been applied where practicable. Potential direct and indirect impacts on each block of ancient woodland within the study area have been considered within the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8) and any necessary mitigation detailed to ensure no significant residual effects. An Ancient Woodland and Veteran Tree</p>	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		Strategy is included as part of the Outline Landscape and Ecological Management Plan (see Appendix B document reference 7.4, Appendix B). The Outline LEMP has been developed in consultation with relevant stakeholders including Natural England and local planning authorities.	
11-5.72	Concern that the Project will impact nature reserve / RSPB reserve / Special Protection Area (SPA)	Through routeing, siting and design development, National Grid has sought to reduce, as far as practicable, impacts on biodiversity and in particular features of high ecological value, such as local wildlife sites (LWS), Royal Society for the Protection of Birds (RSPB) reserves and Special Protection Area (SPA's).	
11-5.73	Concern that the Project will result in a negative impact on the environment / countryside generally	<p>National Grid has sought to reduce, as far as practicable, impacts on the environment / countryside through routeing and siting and an ongoing iterative design process which has taken on board feedback at different stages of the Project. The iterative design process sought to avoid areas of highest concern, for examples through changes to the route alignment or changes to the method e.g. trenchless crossings. National Grid has engaged with a range of stakeholders (including Statutory Environmental Bodies (SEBs) and relevant local planning authorities) throughout the development of the Project design and environmental assessment work.</p> <p>National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project. The results of this assessment are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation (and maintenance) of the Project and recommends appropriate mitigation measures to reduce potential effects.</p> <p>A number of mitigation measures have been incorporated into the Project design. Mitigation relevant to specific environmental topics (including</p>	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		<p>Ecology and Biodiversity, Landscape and Visual and Historic Environment) are presented in the relevant ES chapters. The Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Code of Construction Practice (CoCP) (document reference 7.2) contain a list of relevant good practice measures to avoid or reduce risks to habitats and species.</p> <p>In addition to the EIA, National Grid has set itself a target of delivering 10% biodiversity net gain (BNG) with environmental and societal benefits on all construction projects, meaning that as a result of measures taken, the biodiversity rating of the area will be enhanced by 10% greater than prior to the construction of the Project. The BNG target for the Project is currently voluntary and aligned with our corporate sustainability commitment.</p>	
11-5.74	Concern about the impact of the Project on flooding	<p>Whilst there are no impacts on RSPB reserves, potential direct and indirect impacts on LWS's and SPA's within the study area have been considered within the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8). SPA's and the associated impact on birds has also been considered within the Habitats Regulations Assessment (HRA) (document reference 5.3).</p>	
11-5.75	Criticism that proposals cut across the drainage channel that prevents flooding of the road and effects the sewage system and the main sewage system.	<p>National Grid has sought to reduce, as far as practicable, impacts on the environment / countryside through routeing and siting and an ongoing iterative design process which has taken on board feedback at different stages of the Project. The iterative design process sought to avoid areas of highest concern, for examples through changes to the route alignment or changes to the method e.g. trenchless crossings. National Grid has engaged with a range of stakeholders (including Statutory Environmental Bodies (SEBs) and relevant local planning authorities) throughout the development of the Project design and environmental assessment work.</p>	

Ref no.	Summary of matters raised	National Grid's response
		<p>National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project. The results of this assessment are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation (and maintenance) of the Project and recommends appropriate mitigation measures to reduce potential effects.</p> <p>A number of mitigation measures have been incorporated into the Project design. Mitigation relevant to specific environmental topics (including Ecology and Biodiversity, Landscape and Visual and Historic Environment) are presented in the relevant ES chapters. The Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Code of Construction Practice (CoCP) (document reference 7.2) contain a list of relevant good practice measures to avoid or reduce risks to habitats and species.</p> <p>In addition to the EIA, National Grid has set itself a target of delivering 10% biodiversity net gain (BNG) with environmental and societal benefits on all construction projects, meaning that as a result of measures taken, the biodiversity rating of the area will be enhanced by 10% greater than prior to the construction of the Project. The BNG target for the Project is currently voluntary and aligned with our corporate sustainability commitment.</p>
11-5.76	Concern that trenching or excavation activities will have an impact on the water table, borehole functionality and ground stability of the surrounding area / Request written confirmation that trenching, drainage or dewatering works will not alter water flow to the borehole on the respondent's property or	A detailed Flood Risk Assessment (FRA) has been prepared (document reference 7.9) in addition to Appendix G: Outline Flood Warning and Evacuation Plan of the Outline Code of Construction Practice (CoCP) (document reference 7.2). The FRA has assessed a range of sources of flooding to the Project and arising from the Project, and a range of measures, including those embedded within the design, and good

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
	groundwater movement on or near the respondent's property	practice, have been secured to ensure that the Project is resilient to flooding, and does not contribute to an increase in flood risk from any source.	
11-5.77	Concern about impacts on rights to minerals near the proposed underground cables near Holton St Mary / Concern that previously raised concerns about legal reviews and fees have not been addressed	Detailed habitat (including hedgerow surveys) and arboricultural surveys have been undertaken across the Project. Results of these surveys are presented within the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8) and Appendix 13.6: Arboricultural Impact Assessment (AIA) of the ES (document reference 6.13.A6). Every effort has been made to reduce the impacts on features of high ecological value including mature trees and native hedgerows. On completion of works all hedgerows will be replanted in-situ and replacement tree planting where practicable will also be in-situ.	
Financial Compensation			
11-5.78	Concern that the Project will devalue property / impact on property value in this section	National Grid acknowledges that its proposals may cause concern to landowners. Diminishment of property value known as 'injurious affection' and any other appropriate heads of claim would be considered on an individual basis in accordance with current legislation. We would pursue a voluntary agreement with affected landowners, acquiring rights in accordance with our Land Rights Strategy (the strategy is subject to review). If a voluntary agreement cannot be reached, then the Compulsory Purchase Code allows for a claim of compensation for the loss that property owners may have suffered as a direct result of the retained part of your property ownership being worth less as a direct result of the works. If there are any specific concerns about the devaluation of property, National Grid would advise seeking third party advice. or alternatively please contact the Project team: Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-5.79	Request for adequate financial compensation / Suggest that impacted individuals need to be compensated	<p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD.</p> <p>All affected landowners would be compensated for any temporary/permanent losses, and this would be dealt with on a case-by-case basis in line with the Compensation Code.</p> <p>If there are any specific concerns requiring compensation and how it would be assessed, please contact the Project team: Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.</p> <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD</p> <p>The Government has published its guidance on community funds for transmission infrastructure (DESNZ, 2025). National Grid is committed to working with Ofgem, industry partners, local communities and their representatives to ensure community benefits are delivered fairly and effectively, driving lasting, positive change for the people and places integral to our developing electricity network.</p> <p>Government has also announced its plans to introduce a bill discount scheme for households within 500 m of new infrastructure, which it proposes to introduce through the Planning and Infrastructure Bill. This is evolving government policy. Government expects this scheme to be in place by 2026 and we would share further details as they emerge.</p> <p>National Grid is committed to providing a coordinated local and regional approach to community benefits. This would be delivered outside the development consent process, since this is not a material consideration in the decision on the proposed Project or a matter</p>	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-5.80	Request that National Grid purchase respondent's property / business	<p>to be secured as part of the DCO, as per the Community Funds for Transmission Infrastructure: Guidance (DESNZ, 2025).</p> <p>National Grid is not required to purchase any properties or businesses as part of the Project.</p> <p>National Grid compensates landowners in line with the Compensation Code and any other relevant legislation.</p>	
Health, Safety and Wellbeing			
11-5.81	Concern that the Project may result in a negative impact on mental health / wellbeing	<p>National Grid recognises people may have concerns about the health effects of living close to an overhead line, and that the uncertainty whilst the proposals are developed may cause anxiety.</p> <p>We have sought to reduce potential effects on communities and residents through routeing and design. We have also sought to reduce concern or uncertainty about the proposals through making timely design decisions and engaging with the people and stakeholders throughout the development of the Project.</p> <p>The Project team will continue to engage with people potentially affected during progress of the Project, through regular communication including letters, phone calls and meetings. This would enable concerns to be raised and discussed at an early opportunity and provide a regular point of contact to respond to queries and concerns.</p> <p>We urge anyone with concerns to get in touch through the Norwich to Tilbury Freephone number, address or email throughout the progress of the Project:</p> <p>Call our Community Helpline: 0800 915 2497 (Lines are open Monday to Friday 9:00am – 5:30pm)</p> <p>Email us: contact@n-t.nationalgrid.com</p>	

Ref no. Summary of matters raised National Grid's response

		<p>Write to us: FREEPOST N TO T (No stamp or further address details are required)</p> <p>The UK has a carefully thought-out set of policies for protecting us all against Electric and Magnetic Fields (EMFs), the main component of which is exposure guidelines. Those exposure guidelines are set by independent scientific bodies and are based on decades-long studies into the effects of EMFs and ill health. After those decades of research, the weight of evidence is against there being any health risks of EMFs below the guideline limits. These policies are incorporated into the decision-making process for Development Consent in National Policy Statement (NPS) EN-5. It is National Grid's policy to ensure that all of its equipment comply fully with those exposure limits.</p>	
11-5.82	Concern about health risks associated with the Project / physical health risks associated with the Project	<p>Health considerations are given a high priority in the process by which we arrive at any proposals for new electricity circuits. Assessment of compliance with Electric and Magnetic Field (EMF) guidelines and policies is key to National Grid's approach. The UK has a carefully thought-out set of policies for managing EMFs. There have been over four decades of research looking into whether EMF can cause health effects and there are no established effects below the exposure limits. When designing our overhead lines, substations and underground cables design criteria, we ensure they would not exceed those exposure limits, even when operating at 100% capacity. Additionally, the precautionary measures which the Government have adopted, are applied to the design which ensure the EMFs reduce as quickly with distance as possible. Evidence of that compliance is presented in the EMF compliance report (document reference 7.8) submitted as part of the Development Consent Order (DCO) application.</p> <p>National Grid takes this issue very seriously and look to authoritative and independent scientific organisations such as the World Health</p>	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		Organisation (WHO) and in the UK Health Security Agency (UKHSA) to review the worldwide body of scientific evidence on health. Important decisions on health are taken independently of industry, and National Grid has followed the guidance and policies adopted by Government on advice from their scientific experts. Each of these organisations have comprehensive reviews of EMF research available to view on their websites.	
Heritage			
11-5.83	Concern about archaeological impacts	<p>Through routeing and siting National Grid has sought to reduce as far as practicable potential impacts on the historic environment. The impacts of the Project on the historic environment are assessed in Chapter 11: Historic Environment (document reference 6.11) of the Environmental Statement (ES). The assessment considers the potential impact on archaeology, historic buildings and historic landscapes and includes assessment of potential for physical impact, impact through change to setting that affects the value of a heritage asset and impact through indirect factors such as change in hydromorphology. The assessment is supported by walkover, setting and geophysical surveys, as documented in Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1) and Appendix 11.4: Geophysical Survey Results Report (document reference 6.11.A4).</p> <p>Archaeological trial trench evaluation has also been undertaken and is reported in Appendix 11.5: Trial Trenching Results Report (document reference 6.11.A5). In addition to the proposals in the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4), the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5) sets out appropriate mitigation for the historic environment. The Project has engaged with Historic England</p>	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-5.84	Concern about negative impact on heritage / Suggest that the Project should be routed away from heritage buildings / listed buildings / historical site	<p>and relevant planning authorities on aspects relating to heritage, including appropriate mitigation measures and techniques and to take their views into account during Project development which are detailed in ES Chapter 11: Historic Environment (document reference 6.11).</p> <p>Through routeing and siting National Grid has sought to reduce as far as practicable potential impacts on the historic environment. The impacts of the Project on the historic environment are assessed in Chapter 11: Historic Environment (document reference 6.11) of the Environmental Statement (ES). The assessment considers the potential impact on archaeology, historic buildings and historic landscapes and includes assessment of potential for physical impact, impact through change to setting that affects the value of a heritage asset and impact through indirect factors such as change in hydromorphology. The assessment is supported by walkover, setting and geophysical surveys, as documented in Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1) and Appendix 11.4: Geophysical Survey Results Report (document reference 6.11.A4). Archaeological trial trench evaluation has also been undertaken and is reported in Appendix 11.5: Trial Trenching Results Report (document reference 6.11.A5). In addition to the proposals in the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4), the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5) sets out appropriate mitigation for the historic environment. Ref no. Summary of matters raised National Grid's response

Mitigation		
11-5.85	Suggest mitigation measures	<p>An Environmental Statement (ES) (document reference Volume 6: Environmental Statement) has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 ('the Infrastructure EIA Regulations'). The ES identifies and assesses the likely significant effects on the environment resulting from the construction, operation and maintenance of the Project and recommends appropriate mitigation to reduce effects.</p> <p>Environmental mitigation measures have been defined within each environmental topic chapter and set out in relevant management documents submitted with the Development Consent Order (DCO) application, including the Outline Code of Construction Practice (CoCP) (document reference 7.2), the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5).</p>
National Landscape (AONB)		
11-5.86	Criticism of routing the Project through the Dedham Vale National Landscape (previously known as the Dedham Vale Area of Outstanding Natural Beauty (AONB))	<p>National Grid's consideration of corridor alternatives further to the west of the National Landscape (previously known as an Area of Outstanding Natural Beauty (AONB)) was published within the Corridor and Preliminary Routeing and Siting Study (CPRSS) as part of our 2022 non-statutory consultation (available on the Project website). We have continued to backcheck the strategic connection proposal and siting of the East Anglia Connection Node (EACN) substation, which is part of the holistic consideration of the most appropriate form of the Project. In the absence of further information or new factors we continue to consider alternatives west of the National Landscape to be less preferred. On</p>

Ref no.	Summary of matters raised	National Grid's response
		balance, these were less preferred as they would be longer and therefore lead to effects over a much greater length to other receptors at greater cost than the route through the National Landscape. Undergrounding through the National Landscape is consistent with National Policy Statement (NPS) EN-5. The siting of Cable Sealing End (CSE) compounds (the transition sites between the overhead line and underground cable) has identified locations to reduce effects on the designation and consider the use of trenchless techniques – subject to ground conditions – to reduce certain construction effects.
11-5.87	Concern about the visual impact of overhead lines on the Dedham Vale National Landscape (previously known as the Dedham Vale Area of Outstanding Natural Beauty (AONB)) / the Project will be seen from the Dedham Vale National Landscape / Concern about the impact on views of the Dedham Vale National Landscape, both from within and from outside	<p>The relevant National Policy Statement (NPS) is EN-5 which makes it clear that the Government considers overhead lines to be appropriate and acceptable in most instances, although it recognises that that there may be, at particularly sensitive locations, potential adverse landscape and visual impacts of overhead line infrastructure that make it inconsistent with our duties and relevant planning policy.</p> <p>Dedham Vale National Landscape (previously known as an Area of Outstanding Natural Beauty (AONB)) designation is one such location where there is a presumption that underground cable technology is adopted with the extent of underground cabling extending beyond the boundary in response to the potential for the Project to affect the natural beauty of the National Landscape. National Grid's proposals include a total of approximately 20 km of underground cable through and in the vicinity of the Dedham Vale National Landscape, including a section at Great Horkesley to reduce the changes in views and setting of the National Landscape from within and adjacent to its designated boundary.</p> <p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the Environmental Impact Assessment (EIA). The LVIA includes an assessment on both landscape character and visual amenity and sets out the potential landscape and visual effects of the Project, including</p>

Ref no.	Summary of matters raised	National Grid's response
		<p>consideration of effects on nationally designated landscapes. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13). 11-5.88	Concern about the use of underground cables in the Dedham Vale National Landscape (previously known as the Dedham Vale Area of Outstanding Natural Beauty (AONB))	The relevant National Policy Statement (NPS) is EN-5 which makes it clear that the Government considers overhead lines to be appropriate and acceptable in most instances, although it recognises that that there may be, at particularly sensitive locations, potential adverse landscape and visual impacts of overhead line infrastructure that make it inconsistent with our duties and relevant planning policy.

Ref no.

Summary of matters raised

National Grid's response

Dedham Vale National Landscape (previously known as an Area of Outstanding Natural Beauty (AONB)) is one such location where there is a presumption that underground cable technology is adopted with the extent of underground cabling extending beyond the boundary in response to the potential for the Project to affect the natural beauty of the National Landscape. National Grid's proposals include a total of approximately 20 km of underground cable through and in the vicinity of the Dedham Vale National Landscape, including a section at Great Horkesley to reduce the changes in views and setting of the National Landscape from within and adjacent to its designated boundary.

National Grid has sought to reduce, as far as practicable, impacts of underground cables within Dedham Vale National Landscape through routeing and siting and an ongoing iterative design process which has taken on board feedback at different stages of the Project. The iterative design process sought to avoid areas of highest concern, for examples through changes to the route alignment and proposals for trenchless crossing to minimise impacts.

The installation of underground cabling is detailed in ES Chapter 4: Project Description (document reference 6.4) and would broadly adopt the following process: initially, the removal and storage of topsoil of a width sufficient to allow for construction machinery and the digging of the trenching required for underground cabling. Ducting is installed and trenches backfilled. The underground cables would then be pulled through the ducts. Hedgerows and shrubs reinstated where practicable. At this point, an appropriate grass seed mixture would be sown to encourage regrowth. In some locations trenchless techniques are expected to be adopted to reduce effects.

Ref no.

Summary of matters raised

National Grid's response

It is anticipated that after a period of time following completion of the construction of the underground cabling, and replanting of hedgerows and vegetation there would be minimal visibility of the works at ground level.

A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the Environmental Impact Assessment (EIA). The LVIA includes an assessment of the Project, including the underground cabling, on landscape character and visual amenity and on the National Landscape and its special qualities. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13). ES Chapter 13: Landscape and Visual (document reference 6.13) is supported by Appendix 13.5: National Landscape Assessment Study (document reference 6.13.A5) which presents the assessment of effects on Dedham Vale National Landscape. The assessment concludes that there would be significant effects on the special qualities of the National Landscape during construction, as a result of the proposed underground cable. Once the Project is operational and the land has been restored, effects on the special qualities of the National Landscape would not be significant.

Section 85 of the Countryside and Rights of Way (CRoW) Act (2000) specifies relevant authorities must seek to further the purpose of conserving and enhancing the natural beauty of National Landscapes (Areas of Outstanding Natural Beauty) when carrying out functions in relation to or affecting land within a National Landscape or its setting.

National Landscapes - Duty to Seek to Further the Purposes Report (s85 Countryside and Rights of Way Act 2000) (document reference 5.10) sets out the current status of National Grid's consideration of its duty as a relevant authority, in relation to the Project, to seek to further the purpose of the National Landscape. The approach taken has been discussed with relevant stakeholders and follows the guidance published by Defra in

Summary of matters raised

National Grid's response

Non-Statutory Consultation Feedback Report, and table 13.1.10 within section 13.3 of the Preliminary Environmental Information Report Volume III – Technical Appendices – 4 of 4)

the Countryside and Rights of Way Act, to 'further the purposes' and concludes the route through the National Landscape remains preferred. The relevant National Policy Statement (NPS) is EN-5 which makes it clear that the Government considers overhead lines to be appropriate and acceptable in most instances, although it recognises that there may be, at particularly sensitive locations, potential adverse landscape and visual impacts of overhead line infrastructure that make it inconsistent with our duties and relevant planning policy. National Grid has sought to reduce, as far as practicable, impacts of underground cables within Dedham Vale National Landscape AONB through routeing and siting and an ongoing iterative design process which has taken on board feedback at different stages of the project. The iterative design process sought to avoid areas of highest concern, for examples through changes to the route alignment and proposals for trenchless crossing to minimise impacts. A landscape and visual impact assessment (LVIA) has been undertaken of the Project submitted for the Development Consent Order (DCO). The LVIA is presented in Environmental Statement Chapter 13: Landscape and Visual (document reference 6.13). It includes an assessment of the Project on landscape character and visual amenity. The LVIA also considers impacts on Dedham Vale National Landscape as set out in Appendix 13.5: National Landscape Assessment Study (document reference 6.13.A5). This appendix considers impacts on the National Landscape and its special qualities. Table 13.1.10 within section 13.3 of the Preliminary Environmental Information Report Volume III – Technical Appendices – 4 of 4) reported the potential for some significant effects on one of the special qualities of Dedham Vale National Landscape. The conclusion of the LVIA presented in the ES is that there would be significant effects on five of the special qualities of Dedham Vale National Landscape during construction. Effects on special qualities would however reduce to not significant during operation (and maintenance)

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		once the underground cables are covered over and land use and landcover reinstated as far as practicable. The approach National Grid is taking to meet the 'seek to further' duty in relation to the Project has been detailed in National Landscapes – Duty to Seek to Further the Purposes Report (s85 Countryside and Rights of Way Act 2000) (document reference 5.10). The document details how the National Landscape and 'seek to further' duty has been taken into consideration during Project development and highlights potential further measures. The overall approach has been, and continues to be, discussed with relevant stakeholders (which includes but is not limited to the Dedham Vale National Landscape and Stour Valley Partnership) and follows the guidance published by Defra in December 2024 'Guidance for relevant authorities on seeking to further the purposes of Protected Landscapes' (Defra, 2024). It is intended the finalised measures would be secured by an appropriate mechanism as part pursuant to the Development Consent Order (DCO) process.	
Primary Access Routes/ Haul Road/ Construction Compounds			
11-5.92	Suggest that the access track to the north on neighbouring land is used as a haul road instead of the proposed haul road by pylons TB23, TB24 and TB25, to reduce crop losses and increase cost-efficiency for National Grid	We note the respondent's feedback but adopting this change would not remove the need for access to the pylons identified whilst impacting land otherwise unaffected and as such there is a relatively limited reduction in the saving in road length with additional challenge by the creation of a number of spurs. On balance the more direct haul road arrangement is preferred to that proposed.	
11-5.93	Suggest that the permanent access route is removed due to impracticability and decrease in property values (as per respondent's plan)	National Grid notes the respondent's feedback with regards to the permanent access route and also notes that the most appropriate route also varies in response to seasonal variation in land uses. As the Project progresses into the heads of terms and voluntary agreement stage there will be an opportunity to discuss and agree permanent access rights in	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		more detail. No physical works are required for this permanent access routes as part of the Project as these will not be used for construction. Access may be required in the future, for maintenance and surveys and therefore National Grid will look to agree the most suitable access route at that point, taking in to account the landowner and National Grid's requirements.	
11-5.94	Suggest continued access along the existing track across the works, must be maintained to allow lorries to use the new turning area and access School Lane / Suggest that if the works impact the new turning area, National Grid must re-instate an equivalent facility elsewhere and restore the area to its original condition (as per respondent's plan)	National Grid note the respondent's comments. The access track and turning area highlighted on the plan off School Lane will be maintained. If the contractor does require the area where the turning area is located then they will agree an alternative location with the landowner.	
11-5.95	Suggest the permanent access to pylon TB30 takes a direct route to Straight Road, across agricultural land to reduce the impact on third party residential land	National Grid notes the respondent's feedback with regards to the permanent access route. As the Project progresses into the heads of terms and voluntary agreement stage there will be an opportunity to discuss and agree permanent access rights in more detail. No physical works are required for this permanent access routes as part of the Project as these will not be used for construction. Access may be required in the future, for maintenance and surveys and therefore National Grid will look to agree the most suitable access route at that point, taking into account the landowner and National Grid's requirements.	
11-5.96	Criticism of the siting of the EACN substation on Grade 1 arable land resulting in the proposed widening of Ardleigh Road and Bentley Road, proposed haul road and additional 3 substations or converter stations on or adjacent to the respondent's land at Normans Farm, close to Little Bromley / Suggest these proposals use	The identification of the site for the East Anglia Connection Node (EACN) substation has considered a number of other locations although no brownfield sites of sufficient size have been identified. This includes earlier consideration of whether the connections (North Falls, Five Estuaries and Tarchon) were as better made as an integral part of the project or by an alternative means. An integrated connection was	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
	brownfield land and the Project connect elsewhere instead of the proposed EACN substation	preferred. Siting has also included sites closer to the coast as well as sites to the west of the A12 with the siting subject to review as new information emerges, such as on reduced corridor widths for the wind farm connections. These findings are set down in the Corridor and Preliminary Routeing and Siting Study and the various Design Development Reports. We continue to consider that when considered in combination with the various connections that are required to be made to it (400 kV and customers) the EACN substation site to the east of Ardleigh remains preferred. Consideration of environmental effects and transport consequences formed part of the balanced decision making.	
11-5.97	Concern about the widening and additional traffic due to the proposals to widen Ardleigh Road - disruption to farming operations - accessibility to farms and increased traffic/ Request additional information in relation to highways safety assessments and safety measures to ensure the respondent (at Normans Farm) can safely access their land during and after construction / Request timings of works are coordinated to avoid this disruption at the busiest and most important farming times	National Grid notes the respondents' concerns relating to construction traffic on Ardleigh Road. Details of the change in traffic numbers and the associated impacts are detailed within the Environmental Statement (ES) Chapter 16: Traffic and Transport (document reference 6.16) and Transport Assessment (document reference 7.11). All copies of Road Safety Audits and proposed details of the construction programme and peak movements can be found within the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3	
11-5.98	Concern that a proposed construction compound near Gun Hill is partially located on a landfill site / Concern that the haul road access point near Gun Hill is located where water funnels into a stream and possible flooding risks (full address in response)	As part of ES Appendix 9.1: Baseline Information and Preliminary Contamination Risk Assessment (document reference 6.9.A1) the Environment Agency's dataset for permitted and historical landfills has been reviewed, as well as historical Ordnance Survey mapping for the area. This identified that within this area there is a historical gravel pit which has been previously infilled. The full extent of this pit is unknown at this time; however the Outline Code of Construction Practice (Document reference 7.2) includes commitments for suitable intrusive ground investigation to be undertaken prior to construction and appropriate	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		<p>geoenvironmental assessment.</p> <p>A detailed Flood Risk Assessment (FRA) (document reference 7.9). has been prepared for the Development Consent Order (DCO) application and describes baseline surface water flood risk, drawing on a range of data sources, including the recently published National Flood Risk Assessment 2 surface water flood map outputs, and assesses the potential for the Project to impact on flood risk from this source. The FRA (document reference 7.9) describes the control and management measures that would be secured through the DCO and which are described in the Outline Code of Construction Practice (CoCP) (document reference 7.2) to ensure no detriment to surface water and land drainage regimes.</p>	
PRoW (Public Rights of Way)			
11-5.99	Concern about negative impact on PROW / footpaths / cycle paths / bridleways	<p>Through routeing and siting, National Grid has sought to reduce, as far as practicable, impacts and disruption to Public Rights of Way (PRoW).</p> <p>The iterative design process identified the existing PRoW network and their wider connectivity and sought where practicable to reduce and where possible remove impacts to PRoW.</p> <p>Effects on PRoW would be mitigated where possible, maintaining access where practicable, with closures as a last resort. We will continue to engage with relevant stakeholders on the PRoW network to enable feedback and input to be considered as the Project progresses. An Outline Public Rights of Way Management Plan (document reference 7.6) is submitted with the Development Consent Order (DCO) application.</p>	
Requests			
11-5.100	Request for further impact surveys in this section	National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project. The assessment is informed by a suite of field surveys and desk studies and results are presented in an Environmental Statement	

Ref no.	Summary of matters raised	National Grid's response
		<p>(ES) (document reference Volume 6: Environmental Statement) that accompanies the application for development consent. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation (and maintenance) of the Project and recommends appropriate mitigation measures to reduce potential adverse impacts.</p> <p>The scope of the EIA is included in the Scoping Report (document reference 6.19) which was submitted to the Planning Inspectorate in November 2022 and their Scoping Opinion (document reference 6.20) received in December 2022. This provided the opportunity for statutory bodies to comment on the scope of the EIA which included our approach on study areas, data collection and baseline conditions for a range of environmental topics. We also discussed and agreed survey scope with stakeholders (including Statutory Environmental Bodies and Local Planning Authorities) following the Scoping Opinion (document reference 6.20) to ensure a robust baseline assessment.</p> <p>National Grid has prepared an Outline Code of Construction Practice (CoCP) (document reference 7.2) which sets out the required mitigation measures and environmental commitments that would be implemented during the construction phase of the Project to avoid or reduce potential effects of the Project on the environment, including commitments to undertake further surveys.</p>
11-5.101	Request for National Grid to clarify plans for the Project at respondent's land (on Fiddlers Farm, Fordham Heath) / Concern that respondents land consists of ancient woodland and would be unsuitable for the Project	The respondent's land referred to in the feedback abuts the very edge of a visibility splay required for the access to the haul road off Fiddlers Hill. There would not be any impact to the ancient woodland from the Project.

Ref no.	Summary of matters raised	National Grid's response
Visual Impact		
11-5.102	Concern that the Project will be unsightly / visually intrusive (including overhead lines, Cable Sealing End (CSE) compounds and substations) / Concern that the Project will cause a negative impact on views	<p>National Policy Statement (NPS) EN-5 makes it clear that the Government considers overhead lines to be appropriate and acceptable in most instances, although it recognises that there may be, at particularly sensitive locations, potential adverse landscape and visual impacts of an overhead line that make it inconsistent with our duties and relevant planning policy.</p> <p>The Dedham Vale National Landscape (previously an Area of Outstanding Natural Beauty (AONB)) designation is one such location where underground cable technology is proposed with the extent of underground cabling extending beyond the boundary in response to the potential for the Project to affect the National Landscape. Our proposals include a total of approximately 20 km of underground cable through and in the vicinity of the Dedham Vale National Landscape, including a section at Great Horkesley to reduce the changes in views and setting of the National Landscape from within and adjacent to its designated boundary.</p> <p>Underground cabling is also proposed for a short section of 400 kV overhead line crossing near Fairstead.</p> <p>Cable Sealing End (CSE) compounds are required to facilitate sections of underground cable, and the proposed East Anglia Connection Node (EACN) substation is required to connect customers and the proposed Tilbury North Substation is required to connect the Project into the existing Tilbury Substation. These components have been carefully sited taking into consideration Horlock Rules including the potential for landscape and visual effects.</p> <p>The higher cost of underground cables to bill paying consumers, and the environmental implications of installing underground cables and maintaining them at locations outside the Dedham Vale National</p>

Summary of matters raised

National Grid's response

Landscape, are not considered to be justifiable in the context of national policy or National Grid's statutory duties, which include the need to be economical and efficient.

A Landscape and Visual Impact Assessment (LVIA), presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13), has been undertaken as part of the Environmental Impact Assessment (EIA). The LVIA includes an assessment on both landscape character and visual amenity and identifies areas for potential mitigation planting around substations and CSE compounds to reduce visual impacts to local receptors. The Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) includes details regarding the planting proposals.

Wildlife/ Ecology Impact

11-5.103

Concern about impact of the Project on birds

Chapter 8: Ecology and Biodiversity of the Environmental Statement (ES) (document reference 6.8) considers potential impacts during the construction and operational phase of the Project on birds. Bird surveys have been undertaken across the route between 2022-2024 to determine an accurate baseline value, the scope of which has been agreed with Natural England and Local Planning Authorities. The potential for bird collision risk impact during the operational phase has been assessed within the ES and Habitat Regulations Assessment (HRA) (document reference 5.3) and agreed with Natural England. Any adverse impacts identified have been minimised as far as possible, where practicable, and mitigation in the form of bird diverters proposed.

It is noted that birds are a mobile species, and it is likely that active nests for common and widespread species may be encountered during the construction phase. Precautionary working methods for breeding birds are included within the Outline Code of Construction Practice (CoCP)

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-5.104	Concern that the Project will result in a negative impact on species (protected status not specified)	<p>(document reference 7.2) and the Outline Landscape Ecological Management Plan (LEMP) (document reference 7.4). accompanying the Development Consent Order (DCO) application.</p> <p>Through routeing, siting and detailed design National Grid has sought to reduce, as far as practicable, potential impacts on biodiversity including protected species. The design process has taken account of existing biodiversity, the natural environment and, where practicable, has sought to reduce impacts on areas of ecological sensitivity including protected species and their associated habitats, through avoidance or mitigation. A comprehensive survey effort for a range of protected species was completed over the 2023 – 2024 period. Chapter 8: Ecology and Biodiversity of the Environmental Statement (ES) (document reference 6.8) assesses the effects on protected species based on this baseline information and where/if required appropriate mitigation measures are detailed. Suitable mitigation for protected species has been developed in consultation with Natural England to ensure legal compliance and best practice guidelines are adhered to. Where necessary, draft licence applications have been drafted and National Grid is in the process of agreeing the detail within the licence documents with Natural England, in order to obtain the relevant Letters of No Impediment (LoNI). Mitigation for non-licensable protected species has been included within the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4).</p>	
11-5.105	Concern that the Project will have a negative impact on bees / Bees will be unable to navigate under high voltage overhead lines	As well as possible effects on humans, possible effects of Electric and Magnetic Fields (EMFs) on various animals have been studied a number of times. No proven effects of EMFs have been found in any species at levels below the guidelines. This is confirmed in National Policy Statement (NPS) EN-5 which states: " <i>There is little evidence that exposure of crops,</i>	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-5.106	Concern that the Project will result in a negative impact on flora / plants / woodlands / hedgerows	<p><i>farm animals or natural ecosystems to transmission line EMFs has any agriculturally significant consequences."</i></p> <p>Beehives can become charged if directly under an overhead line because of the electric field it produces. For existing overhead lines, this can be eliminated by screening or earthing the hive, but for new overhead lines, embedded design measures and careful routeing will avoid any potential effects. There does not seem to be evidence of EMFs adversely affecting bees directly. In the United States of America, the strip of land along power lines has been shown to be particularly attractive to bees, with these areas being utilised by commercial bee farms. Additionally, National Grid has worked with the British Beekeeping Association to establish hives around our sites, including high voltage substations, which have thrived.</p> <p>Through routeing, siting and detailed design, National Grid has sought to reduce, as far as practicable, potential impacts on biodiversity including priority grassland, wetland, woodland, and hedgerow habitats. The design process has taken account of existing biodiversity, the natural environment and, where practicable, seeks to reduce impacts on areas of ecological sensitivity, through avoidance or mitigation.</p> <p>Chapter 8: Ecology and Biodiversity of the Environmental Statement (ES) (document reference 6.8) assesses the effects on important ecological receptors (which includes grasslands, wetlands, woodlands and hedgerows).</p> <p>As part of the Environmental Impact Assessment (EIA) process for the Project, a suite of ecological surveys has been to be undertaken. Summary of matters raised

National Grid's response

with a framework for detailed management plans to be prepared at detailed design stage in order to reduce and mitigate potential impacts and/or disruptions that may arise during the construction phase. The trees to the south of the respondent's field are indicated as potentially affected, National Grid would seek to minimise the impact of these trees as far as practicable as detailed in the CoCP. Any landowners that are included within the Order Limits boundary would be eligible for compensation, this includes areas where either part or the whole of a land title is in the Order Limits. If a land or property owner is unsure if they are eligible for compensation, they should contact the Project lands team to discuss: Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314. Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD.

Braintree feedback

Braintree specific feedback

Table 11-6 Summary of consultee comments and National Grid's response

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
Agricultural Land			
11-6.1	Concern that the Project will take away valuable agricultural land / disrupt farming operations	<p>During the construction stage of the Project, there would be areas of agricultural land that would be temporarily disrupted. National Grid would only use land that is required as part of the Project and would seek to minimise the use of agricultural land where reasonable and safe to do so.</p> <p>National Grid is and will continue to work with all landowners including farmers who may be affected by the proposals to understand the impacts on their operations and to work with them as the Project is developed. We would seek to work with the farming community to limit disruption where practicable. This includes providing prior warning of works which may result in the need to move livestock. Compensation claims for disturbance are considered on a case-by-case basis, if negative impact on farming operations can be proven. Particular agricultural matters can also be addressed through voluntary land agreements.</p>	
Community/Social Impact			
11-6.2	Concern about impact of the Project on children / families / residents / communities	National Grid recognises people may have concerns about the potential impacts of living close to an overhead line, and that the uncertainty whilst the proposals are developed may cause anxiety.	

Ref no.

Summary of matters raised

National Grid's response

We have sought to reduce potential effects on communities, residents – including children - through routeing and design. We have also sought to reduce concern or uncertainty about the proposals through making timely design decisions and engaging with people and stakeholders throughout the development of the Project. If the Project received Development Consent, the Project team would continue to engage with people potentially affected during construction, through regular communication including letters, phone calls and meetings, where necessary.

We urge anyone with concerns to get in touch through the Norwich to Tilbury Freephone number, address or email, which will remain open throughout examination.

National Grid is committed to working with local suppliers, facilitated by supporting forums (such as the local Chambers), on electricity industry skills and workforce planning. National Grid is also committed to providing a coordinated regional approach to jobs and skills opportunities. This commitment is broader than the individual project and separate to any commitments under the proposed development consent order for this Project. The socio-economic effects of the project are assessed in Chapter 15: Socio-economics, Recreation and Tourism of the Environmental Statement (document reference 6.15). Post construction job opportunities are limited given the nature of the development however we will still work with Local Authorities (including facilitating local partners) to understand what is important to them around skills and employment to ensure we leave a lasting positive legacy in the communities where we operate.

With regards to a delivery mechanism, the above measures will be delivered as part of our community benefit package, which will look at both local and regional initiatives. This will be delivered outside the development consent process and is not a material consideration in the decision on the

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		proposed Project or a matter to be secured as part of the DCO, as per the Community Funds for Transmission Infrastructure: Guidance (DESNZ, 2025).	
11-6.3	Concern about impact of the Project on leisure	Through routeing and siting National Grid has sought to avoid, as far as practicable, locations important for leisure and tourism. Environmental Statement (ES) Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) presents an assessment of the potential impacts on sports clubs, recreational land and recreational routes located within the Order Limits. As part of this assessment, a range of measures have been considered throughout the construction phase of the Project to minimise disruption on leisure and tourism. These include: traffic management, signage and routeing measures. These are identified within ES Chapter 15: Socio-economics, Recreation and Tourism, the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).	
11-6.4	Concern about the Project being in too close proximity to recently built housing developments / using land being considered for future development (including residential, commercial, infrastructural, and employment sites)	<p>National Grid has obtained information on existing, under construction, consented but not built schemes as well as development proposals within the planning system. The Project design has responded to those that are confirmed through consideration of routeing.</p> <p>In the case of development proposals, some can be amended to be designed around our proposed infrastructure but in other cases our proposals may need to be amended at a corridor level, or proposed developments factored into our detailed route design.</p> <p>Based on known information, and in light of changes made following consideration of feedback to the 2022 and 2023 non-statutory consultations, statutory consultation and targeted consultations, we</p>	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		consider our proposals are consistent with relevant policy and guidelines and the alignment designed such that they do not prevent proposed housing developments from being successfully progressed. UK law does not prescribe minimum distances between overhead lines and homes, but any implications on landscape and visual receptors, residential amenity or from concerns about electromagnetic fields are robustly assessed as part of the Environmental Impact Assessment (EIA) and balanced as part of the decision making process. We will continue to review planning applications and engage with developers as necessary.	
11-6.5	Concern about the Project causing communities to become encircled / surrounded by overhead lines	The alignment has been routed to achieve some separation from the existing 400 kV overhead line, such that villages are not encircled by overhead lines to both sides. Separation is inevitably reduced in certain locations due to the presence of constraints to routeing and environmental features. Detailed assessment reported in the Environmental Impact Assessment (EIA) identifies any measures considered to be necessary to reduce likely significant effects which would also consider the potential for effects potentially arising from close paralleling existing 132 kV overhead line and new 400 kV overhead line infrastructure.	
11-6.6	Concerned that the Project will have a negative impact on domestic horses / equestrian activities	As well as possible effects on humans, the possible effects of Electric and Magnetic Fields (EMFs) on various animals have been studied. No proven effects of EMFs have been found in any species at levels below the guidelines. This is confirmed in National Policy Statement (NPS) EN-5 which states: <i>“There is little evidence that exposure of crops, farm animals or natural ecosystems to transmission line EMFs has any agriculturally significant consequences.”</i> Although horses are not directly mentioned, there is no evidence to suggest they are any different to other farm animals.	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-6.7	Criticism of surveys undertaken for the Project in this Section	<p>As well as the possible direct biological or health effects addressed above, indirect effects such as microshocks can occur as a result of electric fields. Microshocks are small spark discharges which are similar to a static shock after walking across a nylon carpet for example. The Project would be designed in accordance with the principles of the Governments Code of Practice 'Power Lines: Control of Microshocks and other indirect effects of public exposure to electric fields' to ensure these are mitigated, which include equestrian activities.</p> <p>There is a staged approach to the process of collection of environmental data as any major project develops. National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project. The assessment is informed by a suite of field surveys and desk studies and results are presented in an Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the application for development consent. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation (and maintenance) of the Project and recommends appropriate mitigation measures to reduce potential adverse impacts.</p> <p>The scope of the EIA is included in the Scoping Report (document reference 6.19) which was submitted to the Planning Inspectorate in November 2022 and their Scoping Opinion (document reference 6.20) received in December 2022. This provided the opportunity for statutory bodies to comment on the scope of the EIA which included our approach on study areas, data collection and baseline conditions for a range of environmental topics. We also discussed and agreed survey scope with stakeholders (including Statutory Environmental Bodies and Local Planning Authorities) following the Scoping Opinion (document reference 6.20) to ensure a robust baseline assessment.</p>	

Ref no. Summary of matters raised National Grid's response

		<p>National Grid has prepared an Outline Code of Construction Practice (CoCP) (document reference 7.2) which sets out the required mitigation measures and environmental commitments that would be implemented during the construction phase of the Project to avoid or reduce potential effects of the Project on the environment, including commitments to undertake further surveys.</p>	
11-6.8	Concern about the impact of the Project on water supply	<p>National Grid has conducted preliminary ground investigations in order to better understand the geology along the underground cable route, including ground water levels. This would be supplemented by more detailed investigations prior to construction should the Project obtain consent. National Grid would assess the impact of the works on all identified ground water sources, including public and private abstraction points, and take appropriate measures to avoid detriment to those water sources.</p> <p>Landowners are encouraged to provide as much information as early as possible in relation to any private supplies, drainage and irrigation systems on their land so these can be factored in at the detailed design stage of the project ahead of construction starting on site.</p> <p>As part of the development of the Project a Groundwater Baseline and Qualitative Groundwater Risk Assessment has been undertaken and forms part of the Environmental Statement (ES) (document reference 6.9.A3). This document provides an assessment of the potential effects of the Project on groundwater resources and includes an appraisal of the impacts on groundwater supplies. Mitigation measures have been included within the Outline Code of Construction Practice (CoCP) (document reference 7.2) regarding the prevention of groundwater pollution as well as measures specific to safeguarding groundwater fed water supplies. Commitments would include the safe and responsible storage of fuels, oils and chemicals, the monitoring of water quality prior to construction to confirm a baseline for</p>	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		future tests during construction and additional hydrogeological risk assessment at specific locations where there is a potential for the Project to impact on groundwater.	
Construction impacts			
11-6.9	Concern about disruption from construction	<p>An Environmental Statement (ES) (document reference: Volume 6: Environmental Statement) has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 ('the Infrastructure EIA Regulations'). The ES identifies and assesses the likely significant effects on the environment resulting from the construction of the Project and recommends appropriate mitigation to reduce effects.</p> <p>Environmental mitigation measures have been defined within each environmental topic chapter and set out in relevant management documents submitted with the Development Consent Order (DCO) application, including the Outline Code of Construction Practice (CoCP) (document reference 7.2), the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5).</p>	
11-6.10	Concern about impact on traffic levels in local area caused by construction works	<p>As part of the pre-application process National Grid has engaged with the relevant authorities, their highways teams and National Highways to understand and gain information on their road networks. This information has been used to inform and guide the drafting of the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) for the Project that accompanies the Development Consent Order (DCO) application. A</p>	

Ref no.	Summary of matters raised	National Grid's response
		<p>strategy has been developed to manage the impact of construction vehicles on the public highway and sensitive receptors, using suitable Local Road Network connections from the Strategic Road Network called Primary Access Routes. In addition, temporary haul roads for construction vehicles are proposed along the Project alignment, further reducing the impact of construction traffic on the local road network. Further details of the strategy can be found within the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).</p> <p>Environmental Statement (ES) Chapter 16: Traffic and Transport (document reference 6.16) includes the assessment of the potential impacts of the Project including changes in traffic flow, delays, road safety and impact on Walking, Cycling and Horse-Riding modes on the roads along the Primary Access Routes located in the Local Road Network.</p> <p>The Transport Assessment (document reference 7.11), submitted with the DCO application, examines capacity, safety, and operational efficiency of the network, identifying potential bottlenecks or safety concerns.</p> <p>Within the assessment of the ES and the Transport Assessment, mitigation measures are proposed to minimise likely adverse impacts</p>
11-6.11	Concern about noise and other issues resulting from construction (e.g. mud on roads, dust)	<p>An Environmental Statement (ES) (document reference: Volume 6: Environmental Statement) has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 ('the Infrastructure EIA Regulations'). The ES identifies and assesses the likely significant effects on the environment resulting from the construction of the Project and recommends appropriate mitigation to reduce effects.</p> <p>Specifically, a Construction Noise and Vibration Impact Assessment has been undertaken and is reported in ES Chapter 14: Noise and Vibration</p>

Ref no.

Summary of matters raised

National Grid’s response

(document reference 6.14). During construction, mitigation would be implemented to reduce noise and vibration impacts from construction activities and increased road traffic noise and vibration due to additional movement from construction traffic. Mitigation measures are outlined in ES Chapter 14: Noise and Vibration (document reference 6.14) and the Outline Code of Construction Practice (CoCP) (document reference 7.2). This includes the assumption that construction working would be undertaken within the agreed working hours, construction traffic would be managed through the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), haul roads would be well maintained, and Best Practicable Means (BPM) would be employed to reduce construction noise and vibration.

ES Chapter 7: Air Quality (document reference 6.7) presents an assessment of the potential impacts from the construction of the Project on air quality. During construction, mitigation would be implemented to reduce the impact of dust generation and construction vehicle emissions. Mitigation measures are outlined in ES Chapter 7: Air Quality (document reference 6.7), and the Outline CoCP (document reference 7.2). The dust-emitting activities can be greatly reduced or eliminated by applying the site-specific mitigation measures (see Outline CoCP) for high risk sites following measures recommendations in the Institute of Air Quality Management (IAQM) guidance (IAQM, 2024). The IAQM guidance states that with the implementation of effective site-specific mitigation measures, the environmental effect would not be significant in most cases.

In addition, National Grid has prepared an Outline CoCP (document reference 7.2). The Outline CoCP sets out the required mitigation measures and environmental commitments that would be implemented

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		during the construction phase of the Project to avoid or reduce potential effects of the Project on the environment.	
11-6.12	Concern that local road infrastructure is not suitable for heavy construction vehicles and machinery	<p>A strategy has been developed to manage the impact of construction vehicles on the public highway and sensitive receptors, using suitable Local Road Network connections from the Strategic Road Network called Primary Access Routes. In addition, temporary haul roads for construction vehicles are proposed along the Project alignment, further reducing the impact of construction traffic on the local road network. Further details of the strategy can be found within the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).</p> <p>The Project also requires the transportation of Abnormal Indivisible Loads (AIL). National Grid is developing specific routing proposals for AIL movements and is developing these through engagement with the relevant stakeholders including the local highway authorities and National Highways. An AIL routing strategy containing details about these movements are submitted in support of the Development Consent Order (DCO) application.</p>	
11-6.13	Concern about vibrations from construction	<p>An assessment of construction vibration is presented in Environmental Statement Chapter 14 - Noise and Vibration (document reference 6.14). The assessment considers both the potential impact upon people within buildings (i.e. disturbance), and potential damage to buildings and structures.</p> <p>The assessment considers relatively worst-case construction methodologies and does not take account of potential mitigation. This is so that potential 'hot-spots' can be identified where there is the potential for significant adverse effects, without mitigation.</p>	

Ref no. Summary of matters raised National Grid's response

The construction vibration assessment has identified 74 locations where there is potential disturbance to people within buildings from construction vibration. Of these, 72 relate to potential vibratory compaction activities which would be expected to be for a relatively short duration (i.e. less than day). The remaining two relate to potential piling activities for pylon foundation construction.

With regards to potential damage to buildings and structures, the assessment highlights locations where there is a potential non-zero risk of damage. 14 locations have been identified, all of which relate to potential vibratory compaction activities.

In all cases, significant adverse effects, or potential structural damage, can be avoided with the use of best practicable means (BPM). This may include alternative methods, such as non-percussive/vibratory techniques.

Additionally, prior to undertaking works, the Main Works Contractor(s) would conduct a detailed construction vibration assessment based on their specific methodologies and determine specific mitigation measures, where applicable.

11-6.14 Concern about the impact on respondent's property (on Fordham Road, West Bergholt; full address provided by respondent; e.g. impact on drainage and land; impact on access; noise; impact on garden and amenity areas; impact on use as an equestrian smallholding) / Concern that National Grid has not considered feedback raised at previous consultations for the Project in relation to the property and that ecological and wildlife surveys have not been completed / followed up

National Grid notes the respondent's feedback. We have considered all feedback received from previous consultation and responses to feedback are included in this report and the previous 2022 and 2023 Non-Statutory Consultation Feedback Reports (available on the Project website and appended to this report).

Construction traffic will access the associated haul road which runs along side the proposed Project alignment from two points 1) A134 Great Horkesley and 2) A1124 Aldham.

These routes are known as primary access routes (PARs) and a haul road runs between these two PARs, where the haul road intersects public rights

Ref no.

Summary of matters raised

National Grid's response

of ways (PRoWs), diversions or management plans are in place. Outlined within the Outline PRoW Management Plan (document reference 7.6) where the haul road intersects with a public highway, bellmouths are proposed with appropriate visibility splays and these accesses have been subject of a road safety audit. Details of which can be found within the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).

Access to the respondent's property will remain unaffected.

The site falls outside the Order Limits and the Local Study Area (i.e. Order Limits) for the businesses and recreation assets assessment, and has therefore been scoped out of Environmental Statement (ES) Chapter 6.15: Socio-economics, Recreation and Tourism (document reference 6.15) (i.e. no significant effect anticipated on land take or disruption to direct access).

Highfield Farm is located in Visual Receptor Area (VRA) D5: Fordham. The detailed assessment of visual effects on VRA D5 is provided in ES Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3). The assessment of VRA 5 Fordham concludes that, during construction, effects will be major and significant within 0.5 km, which is the area within which Highfield Farm is located. Once operational, the effects will be major and significant within 0.5 km at year 1 and year 15.

The assessment of VRA D5 includes consideration of the following viewpoint which lies to the south-west of Highfields Farm.

Viewpoint 4.14 Fordham Road, north-east of Fordham (Figure 7.12.F112) (document reference 7.12) – major adverse and significant visual effects during construction and operation.

Highfield Farm lies to the north of VRA D5, close to the neighbouring VRA D2: Little Horkesley and Wormingford. The following viewpoint lies to the

Ref no. Summary of matters raised

National Grid's response

north-east of the farm, just within VRA D2, and the following findings were reported in the assessment.

Viewpoint 4.27: B1508 Colchester Road, near Grove Lodge (Figure 7.12.F124) (document reference 7.12) – major adverse and significant visual effects during construction and operation.

Highfield Farm has not been assessed as part of the Residential Visual Amenity Assessment (RVAA) since the curtilage of the property sits more than 200 m from the proposed pylon locations which is outside of the study area for the RVAA.

In relation to ecology surveys, Highfields Farm and the associated land lies outside of the Order Limits and has therefore been subject to desk based ecological surveys only. Results of these ecology surveys are presented within ES Chapter 8: Ecology and Biodiversity (document reference 6.8).

The impacts of the Project on land drainage and flood risk have been subject to detailed assessment, reported in the Flood Risk Assessment (document reference 7.9) and land drainage systems will be subject to further surveys. As secured through commitment W14 in the Outline Code of Construction Practice (CoCP) (document reference 7.2) replacement drainage schemes will be installed where appropriate. A specialised drainage contractor(s) will review the drainage designs and the relevant Lead Local Flood Authority (LLFA) will be consulted on proposals. The specialist contractor(s) will provide advice to National Grid and the Main Works Contractor(s) during all relevant construction and reinstatement activities. Permanent records of the land drainage locations will be made and passed to the landowners/occupiers.

An assessment of noise impacts is presented in ES Chapter 14: Noise and Vibration (document reference 6.14). Highfield Farm is included in the study area for construction noise impacts. Significant adverse effects are

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		not expected at this location. The contractor will employ best practicable means (BPM) to reduce any potential effects of noise. This would include consideration of horses within equestrian facilities, taking account of guidance from the British Horse Society (BHS) for construction activities. Operational noise from the proposed overhead line is scoped out of the ES on the basis that a low noise 'triple Araucaria' conductor system is proposed. Significant adverse effects are not expected from operational noise, even directly underneath the line.	
11-6.15	The field which National Grid has sited their construction compound for the Project carries the respondents mains sewer (which was constructed three years ago and connects up to the Silver End to Rivenhall main sewer which then crosses the field with a buried manhole in the area of the existing telegraph pole in the South of the field) / Request for National Grid to confirm that this has been considered	<p>National Grid notes the respondent's feedback. We have considered all feedback received from previous consultation and responses to feedback are included in this report and the previous 2022 and 2023 Non-Statutory Consultation Feedback Reports (Appendix B and C of this report).</p> <p>Construction traffic will access the associated haul road which runs along side the proposed Project alignment from two points 1) A134 Great Horkesley and 2) A1124 Aldham.</p> <p>These routes are known as primary access routes (PARs) and a haul road runs between these two PARs, where the haul road intersects public rights of ways (PRoWs), diversions or management plans are in place. National Grid's response

therefore been scoped out of Environmental Statement (ES) Chapter 6.15: Socio-economics, Recreation and Tourism (document reference 6.15) (i.e. no significant effect anticipated on land take or disruption to direct access). Highfield Farm is located in Visual Receptor Area (VRA) D5: Fordham. The detailed assessment of visual effects on VRA D5 is provided in ES Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3). The assessment of VRA 5 Fordham concludes that, during construction, effects will be major and significant within 0.5 km, which is the area within which Highfield Farm is located. Once operational, the effects will be major and significant within 0.5 km at year 1 and year 15.

The assessment of VRA D5 includes consideration of the following viewpoint which lies to the south-west of Highfields Farm.

Viewpoint 4.14 Fordham Road, north-east of Fordham (Figure 7.12.F112) (document reference 7.12) – major adverse and significant visual effects during construction and operation.

Highfield Farm lies to the north of VRA D5, close to the neighbouring VRA D2: Little Horkesley and Wormingford. The following viewpoint lies to the north-east of the farm, just within VRA D2, and the following findings were reported in the assessment.

Viewpoint 4.27: B1508 Colchester Road, near Grove Lodge (Figure 7.12.F124) (document reference 7.12) – major adverse and significant visual effects during construction and operation.

Highfield Farm has not been assessed as part of the Residential Visual Amenity Assessment (RVAA) since the curtilage of the property sits more than 200 m from the proposed pylon locations which is outside of the study area for the RVAA.

Ref no.

Summary of matters raised

National Grid's response

In relation to ecology surveys, Highfields Farm and the associated land lies outside of the Order Limits and has therefore been subject to desk based ecological surveys only. Results of these ecology surveys are presented within ES Chapter 8: Ecology and Biodiversity (document reference 6.8).

The impacts of the Project on land drainage and flood risk have been subject to detailed assessment, reported in the Flood Risk Assessment (document reference 7.9) and land drainage systems will be subject to further surveys. As secured through commitment W14 in the Outline Code of Construction Practice (CoCP) (document reference 7.2) replacement drainage schemes will be installed where appropriate. A specialised drainage contractor(s) will review the drainage designs and the relevant Lead Local Flood Authority (LLFA) will be consulted on proposals. The specialist contractor(s) will provide advice to National Grid and the Main Works Contractor(s) during all relevant construction and reinstatement activities. Permanent records of the land drainage locations will be made and passed to the landowners/occupiers.

An assessment of noise impacts is presented in ES Chapter 14: Noise and Vibration (document reference 6.14). Highfield Farm is included in the study area for construction noise impacts. Significant adverse effects are not expected at this location. The contractor will employ best practicable means (BPM) to reduce any potential effects of noise. This would include consideration of horses within equestrian facilities, taking account of guidance from the British Horse Society (BHS) for construction activities. Operational noise from the proposed overhead line is scoped out of the ES on the basis that a low noise 'triple Araucaria' conductor system is proposed. Significant adverse effects are not expected from operational noise, even directly underneath the line.

Ref no. Summary of matters raised National Grid's response

Consultation			
11-6.16	Criticism of consultation specific to this section	National Grid notes the respondent's feedback.	
11-6.17	Concern that the respondent's property in Kelvedon is impacted by proposals on three sides (as per respondent's plan) / Concern that suggested realignment during previous consultation has not been considered	National Grid notes the respondent's feedback. The suggested realignment was looked at along with several other options. The temporary construction haul road has been routed through along the alignment of the existing 33 kV wood pole line that is proposed to be removed. This was chosen as the preferred location as it would involve no further woodland loss (as this area is already clear of trees) and would also mean that the area to the west of the property, which we believe to be a secured dog walking park, would only be impacted temporarily for a short period of time for stringing of the overhead line (including scaffold protection of the public highway), and would not have the haul road routed through it for the majority of the construction of the Project. The overhead line has not been moved as suggested as this would make the route longer and would add an angle pylon which would be less consistent with the Holford Rules (see Appendix I22 of this report). Following the non-statutory consultation in 2023 we moved the alignment as far west as possible without introducing interaction with the disused sewage treatment works to the west and trying to reduce woodland loss where possible.	
11-6.18	Criticism that respondent was not shown the most recent plans for the Project near their property at Rivenhall, yet their neighbours have been shown the plans and were invited to discuss the plans via a Microsoft Teams meeting	National Grid notes the respondent's feedback. The respondent's property is not directly impacted by the Project and therefore would not have been offered a meeting as these were offered to landowners with direct impacts to their properties. If the respondent has any questions or concerns about the plans near their property they are encouraged to contact the Project lands team: Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.	

Ref no. Summary of matters raised National Grid's response

Design Change

11-6.19	Suggest that existing overhead lines in this section should be replaced by underground cables	<p>National Policy Statement (NPS) EN-5 establishes the position that the starting basis for new connections is a presumption on the acceptability of overhead lines but with this presumption reversed within designated landscapes and in certain other circumstances.</p> <p>The existing electricity transmission network provides power, via the local distribution network, into the local area where it is used in homes and businesses. The need case and funding for the Project is to deliver the new network reinforcement needed, rather than to remove existing overhead lines by undergrounding them.</p> <p>We have identified a number of locations where we are proposing to place existing overhead lines underground. These locations are where existing 132 kV and lower voltage lattice pylon lines are crossed by the proposed 400 kV overhead line and / or mitigation of effects are considered necessary. This includes locations such as at Mellis, between Offton and Bramford Substation, to the south of Bramford Substation and near Fuller Street.</p> <p>Unless required for mitigation, undergrounding existing overhead lines on the transmission network would not be in accordance with NPS EN-5 and would result in substantial cost to bill payers. There may also be significant environmental impacts due to the removal works on sensitive ecological and archaeological receptors as well as constraints from either existing built form or unsuitable ground conditions.</p>	
11-6.20	Suggest that the Project is routed away from populated / residential areas	Deciding where and how to build new high voltage electricity lines is a complex issue and National Grid is mindful of the potential effects this infrastructure may have on local communities and the concerns these may	

Ref no.

Summary of matters raised

National Grid's response

bring. We recognise that people living near our transmission infrastructure, including high voltage overhead lines, may have concerns about audible noise and potential health impacts. It has sometimes been suggested that minimum distances between properties and overhead lines should be prescribed.

We do not consider this appropriate since each instance must be dealt with on its merits. However, we have always sought to route new lines away from residential property on grounds of general amenity where possible.

We have undertaken a noise and vibration assessment which can be found in the Environmental Statement (ES), Chapter 14: Noise and Vibration (document reference 6.14) that forms part of the Environmental Impact Assessment (EIA) for the Project. Noise levels and the effect on residential properties as well as other sensitive areas, such as hospitals and schools, are carefully considered during planning, assessed according to the appropriate UK standards, and mitigated where necessary. We set strict technical standards for the equipment we install on our network. These will apply to the proposed new East Anglia Connection Node (EACN) substation, and extensions required to the existing Norwich Main, Bramford, and Tilbury Substations. These standards include requirements to ensure the occurrence of audible noise is eliminated or reduced as far as practicable. Therefore, significant adverse effects from noise are not expected.

Noise from overhead lines is predominately determined by the conductor design, voltage and weather conditions. The overhead line would be designed using a relatively quiet conductor that meets the design specification required, and operational noise is not likely to be significant at nearby sensitive receptors under any weather conditions. Pylon fittings, such as insulators, dampers, spacers, and clamps, are also designed and

Ref no.

Summary of matters raised

National Grid’s response

procured in accordance with a series of National Grid Technical Specifications to reduce the potential for audible noise and tones to occur from all types of fittings. Where noise does occur, it is likely to be localised and of short duration. If this is due to a fault, action can be taken to rectify it. A technical note has been submitted as part of the application for development consent to support scoping out noise associated with overhead lines from the ES.

In addition, we have undertaken a Landscape and Visual Impact Assessment (LVIA) for the Project.

This includes an assessment on both landscape character and visual amenity. The LVIA is presented in the ES, Chapter 13: Landscape and Visual (document reference 6.13).

The health and safety of the public, local communities and employees is central to everything that we do. The UK has a carefully thought-out set of policies for protecting us all against Electric and Magnetic Fields (EMFs), the main component of which is exposure guidelines. The exposure guidelines are set by independent scientific bodies and are based on decades-long studies into the effects of EMFs and ill health. After those decades of research, the weight of evidence is against there being any health risks of EMFs below the guideline limits. Our approach is to ensure that our network comply with those policies, which are set by Government on the advice of their independent advisors. The Project is designed to ensure it is fully compliant with these policies and guidelines. This ensures that health concerns are properly and adequately addressed.

Policies for both noise and EMF are incorporated into the decision-making process for development consent as set out in National Policy Statement (NPS) EN-5. It is National Grid’s policy to ensure that all its equipment

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-6.21	Suggest that underground cables are used for the entirety of this section	<p>complies fully with those policies and guidelines. The application for a Development Consent Order (DCO) includes assessments against these policies, including both construction and operational noise and EMF.</p> <p>National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors.</p> <p>National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or Area of Outstanding Natural Beauty (AONB))'</i>. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual</p>	

Ref no.

Summary of matters raised

National Grid's response

effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider this section in its entirety would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.

Therefore, whilst undergrounding the whole of this section is not considered appropriate, our proposals do include underground cable within the Dedham Vale National Landscape (previously known as Area of Outstanding Natural Beauty (AONB)) in accordance with NPS EN-5. Prior to our 2023 non-statutory consultation we identified the need to extend the underground cable beyond the National Landscape boundary because of potential effects, we have further extended this section of underground cable following consideration of feedback on our 2023 non-statutory consultation and additional investigation into potential effects. We also identified an approximately 4 km section near Great Horkesley as meeting the particularly sensitive criteria where underground cable is also proposed. Additionally, underground cable is proposed at Fairstead for a 400 kV overhead line crossing.

11-6.22

Suggest route is realigned near respondent's land in Kelvedon according to respondent's plan (provided)

National Grid notes the respondent's feedback. The suggested realignment was looked at along with several other options. The temporary construction haul road has been routed through along the alignment of the existing 33 kV wood pole line that is proposed to be removed. This was chosen as the preferred location as it would involve no further woodland loss (as this area is already clear of trees) and would also mean that the area to the west of the property, which we believe to be a secured dog walking park, would only be impacted temporarily for a short period of time for stringing of the

Ref no. Summary of matters raised National Grid's response

overhead line (including scaffold protection of the public highway), and would not have the haul road routed through it for the majority of the construction of the Project. The overhead line has not been moved as suggested as this would make the route longer and would add an angle pylon which would be less consistent with the Holford Rules (see Appendix I22 of this report). Following the non-statutory consultation in 2023 we moved the alignment as far west as possible without introducing interaction with the disused sewage treatment works to the west and trying to reduce woodland loss where possible.

11-6.23 Suggest permanent access to TB74 be taken off Old Road and follow the field boundaries to the pylon, as this will be less disruptive to the respondent / Suggest the haul road follow as close to the boundary with the public highway in the field between the Reservoir and Coggeshall Road to minimise the impact on soil structure, drainage and future agricultural operations / Suggest pylon TB77 is located close to the edge of the field boundary with Coggeshall Road to reduce the area of land which will be sterilised (as per respondents plan)

National Grid notes the respondent's feedback with regards to the permanent access route to TB74. The permanent right of access from the south east is proposed to be removed and instead replaced with a permanent right of access from the north from Old Road. As the Project progresses into the heads of terms and voluntary agreement stage there will be an opportunity to discuss and agree permanent access rights in more detail. No physical works are required for this permanent access route as part of the Project as these will not be used for construction. Access may be required in the future, for maintenance and surveys and therefore National Grid will look to agree the most suitable access route at that point, taking into account the landowner and National Grid's requirements.

With regards to the haul road, this has been positioned as close to Coggeshall Road as possible while allowing for an adequate turning radius for vehicles as well as aligning to appropriate public highway crossing points. TB77 is positioned as close to the boundary as possible while allowing for scaffolding to be used during construction for crossing protection. We have therefore not made a change to the haul road or the position of TB77.

Ref no.	Summary of matters raised	National Grid's response
11-6.24	Suggestion for pylons TB92 to TB100 to be relocated south of Rivenhall Thicks to reduce impacts on listed properties, an ancient tree housing bats, and the local landscape	<p>A feasible alignment on the route proposed passing south of Rivenhall thicks, would have to divert from the south of Church Road and pass to the south of Rivenhall Thicks. This would increase the length of the route by around 600 m, with greater agricultural effects, at least one (and potentially two) additional pylons and would be expected to require an additional angle pylon (less consistent with Holford Rule 3). A summary of the Holford Rules is provided within Appendix I22 of this report.</p> <p>On balance the change is considered less preferred because any benefit arising from the change does not offset the additional effects caused by .it. Other route amendments are already considered to have responded to concerns about an ancient tree housing bats which is now avoided.</p> <p>A detailed assessment of the effects on the Landscape Character Areas (LCAs) noted is provided in ES Appendix 13.2: Landscape Baseline and Assessment (document reference 6.13.A2). Rivenhall Thicks sits within Landscape Character Area (LCA) B1: Central Essex Farmlands, within Area One (TB89-100). The assessment reported that there would be 'disturbance to farmland (mainly arable), and the loss of some field boundary hedgerows, hedgerow trees including along local lanes such as Church Road, Parkgate Road and Cressing Road, field trees, and areas of woodland, notably to the east of Waterfall Cottage as described in Appendix 13.6: Arboricultural Impact Assessment (document reference 6.13.A6). There would also be disturbance to the 'tranquil' character of the LCA in the vicinity of the construction activity. Ancient woodland at Rivenhall Thicks south of TB96 would be protected during construction and would not be directly affected.' The landscape effects would be major and significant within 0.5 km during construction, year 1 of operation and year 15 of operation. Between 0.5-1.5 km the effect will reduce to moderate and significant for all stages assessed. Beyond 1.5 km the effects will be minor-</p>

Ref no.	Summary of matters raised	National Grid's response
		<p>moderate and not significant during construction, and minor and not significant at year 1 and year 15 of operation.</p> <p>Relocating the alignment to the south of Rivenhall Thicks would result in a transfer of landscape effects to the new location, affecting a larger area due to the longer length of the alignment, and is unlikely to result in a reduction in the significance of landscape effects.</p> <p>The potential effects of the Project on the Historic Environment are reported in ES Chapter 11 and its appendices (document reference 6.11). The proposed alignment is assessed to result in not significant effects during construction and operation to the Grade II* listed Rivenhall Place to the north of the alignment and the Grade I listed Church of St Mary and All Saints, Grade II listed Rivenhall Hall and 1 and 2 Rivenhall Farm Cottages to the south of the alignment. If the alignment were moved further south it is possible these effects to the assets to the south of the proposed alignment could increase to significant given the open nature of the landscape in this area.</p> <p>Full ecology surveys including bat roosting and habitat surveys have been undertaken across the Project, including within the area between TB92 and TB100. An assessment of impacts on the habitats and trees with bat roosting potential has been undertaken and included within Chapter 8: Ecology and Biodiversity (document reference 6.8) and Appendices 8.1 to 8.16 (document reference 6.8.A1-6.8.A16) of the Environmental Statement (ES). Survey results were used to inform the design stage and consequently no trees with confirmed roosting bats currently identified with be lost (in this area) as a result of the Project.</p>
11-6.25	Suggestion that TB96 and associated haul road be relocated north to reduce impacts on the paddocks	National Grid notes the respondent's feedback. Moving TB96 (now TB98) north would add an angle pylon into the alignment which would be less consistent with the Holford Rules. A summary of the Holford Rules is

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change	
		provided within Appendix I22 of this report. The haul road at this location has been moved as far north as possible, a localised commitment during construction is likely to be able to avoid impacts to the horse paddock where possible. If you have specific concerns regarding the impact on your property, we encourage you to seek third party advice. Alternatively contact the Lands team, Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.		
11-6.26	Suggestion that the construction laydown area on B1018 Cressing Road be relocated to the north side of the haul road to reduce impacts to road safety	<p>National Grid notes the concerns raised around road safety on the B1018 Cressing Road. The location of the proposed material lay down area doesn't actually impact on road safety and relocating it north of the haul road would not improve things. The proposed bellmouth access from the B1018 has been road safety audited details of which can be found within the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).</p> <p>Furthermore, the decision to locate the material laydown area south of the haul road has been driven by feedback from the residence just north of the Haul Road.</p>		
11-6.27	<p>The following suggestions are made by the respondent such that the haul road down Grove Track can be abandoned, the haul road across Grove Ford and towards Hole Farm can be abandoned, and the haul road and crossing across the end of the football pitch and int Blueberry field can be abandoned:</p> <p>- Suggest that access to the East and West of Church Road (near Faulkbourne) is provided at Oak Farm, CM8 1SF via a new electric gate which would provide secure</p>	<p>National Grid notes the feedback from the respondent.</p> <p>Moving access to nearer Oak Farm on Church Hill for both works, east and west, has been assessed as not being practical, due to the location on an S-Bend, and would add significant length to the haul road, whilst impacting previously unaffected fields, to get to the works.</p>		

Ref no. Summary of matters raised National Grid's response

access and could remain at the end of the Project (e.g. given that the Faulbourne estate has 11 Pylons and underground cables, to avoid the very narrow passage to the East of the Estate) with the haul road then following the hedge line between the football club and football field (as per plan provided by respondent) or with the haul road turning east to follow the lower boundary of the football field (also shown on plan provided by respondent)

- Suggest that regarding the haul roads to the west of the Faulkbourne Estate, instead of creating a new entrance off of Church Road, that access is instead provided through the gate opposite Oak Farm Entrance (as per plan provided by respondent), with the haul road then travelling west along the existing track and past the Galleycroft field before joining Pink Lane. If necessary the haul road could be routed across Galleycroft. The haul road would then go west along the existing track and around Galleycroft field before joining Pink Lane. In every case, the haul road should not be routed through the Pinklands field (e.g. the largest squarest field in the estate). The haul road should continue along Pink Lane before turning right / north towards Pylon TB107, removing the need to have a haul road across Stawberry field.

- Suggest that if the haul road near Grove Track (near Faulkbourne) is progressed, that it should be routed by

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-6.28	<p>Grove Meadow, the pasture to the south, or as a worst case is moved 30 metres north into the field north of Grove Track, so that it does not go past the entrance of Grove Cottage or Grove House nor impact utilities, and to mitigate road safety concerns and impact on community (e.g. as per plan provided by respondent)</p> <p>Relating to the Faulkbourne Estate, suggest that the laydown areas are moved from Blueberry to football field (south of the clubhouse) between the edge of the hard pitch and the bottom of the silage clamp using the main gate to the west of Grain Store 1 (as shown by plan provided by respondent. If more space is needed, then suggest this could be extended further west or to Galleycroft (as per plan provided by respondent). Either approach will provide better security and access</p>	<p>National Grid notes the respondent's feedback. The position of the material laydown area has been selected adjacent to the haul road to minimise multiple access points and excessive land take.</p>	
11-6.29	<p>Relating to the Faulkbourne Estate, suggest that the Project is amended as per plan provided by respondent which would re-locate Pylon TB110 leaving the whole of the adjacent field Abbotsmarsh untouched</p>	<p>National Grid notes the respondent's feedback. Moving TB110 into the same field as the Cable Sealing End (CSE) compound would compromise the safe distance between the existing 400 kV overhead line, the gantry and the new tower. Moving or splitting the Cable Sealing End (CSE) compound wouldn't resolve this.</p> <p>Alternative locations for the CSE compound have been assessed, however the current location is preferred in terms of technical feasibility and safety and given that others required a longer length of cable between them is also at lower cost.</p>	

Ref no.

Summary of matters raised

National Grid's response

11-6.30	<p>Relating to the Faulkbourne Estate, suggest that the following smaller amendments are made as per plans provided by respondent:</p> <ul style="list-style-type: none"> - Pylon TB110 - move 100 m south-west into the same field as the compounds - Pylon TB108 - move west to the hedge line - Pylon TB106 - move north to the edge of Pink Lane track - Pylon TB105 - move to north-east to the hedge tri-corner junction of Blueberry, Galleycroft and Pinklands - Pylon TB104 - move south to hedge line - Pylon TB103 - move to north-east towards hedge line of Football and Bog - Pylon TB100 - move north-east to next triangular field between railway and road, or north-east to the edge of the railway or towards the corner at northern point of that field 	<p>National Grid notes the feedback from the respondent.</p> <p>Adjustments to the alignment as described would increase the number of angle pylons and be less direct and less consistent with Holford Rule 3, as well increasing the environmental impact and reducing constructability, specifically with pylons straddling land parcels, impacting drains, pond habitats & reducing rail clearance. A summary of the Holford Rules is included in Appendix I22 of this report.</p>	
11-6.31	<p>Suggest the permanent access route to pylon TB74 is routed off Old Road and follow the field boundaries to the pylon / Concern that the proposed access route adjacent to Cockerell's is not viable due to the fenced gardens of the newly converted residential dwellings and intended future use of part of the adjoining arable land / Suggest the second access route to the construction gantry is made shorter and routes from Old Road, from the existing field access close to the location</p>	<p>National Grid notes the respondent's feedback with regards to the permanent access route and also notes that the most appropriate route also varies in response to seasonal variation in land uses. As the Project progresses in to the heads of terms and voluntary agreement stage there will be an opportunity to discuss and agree permanent access rights in more detail. No physical works are required for this permanent access route as part of the Project as this will not be used for construction. Access may be required in the future, for maintenance and surveys and therefore</p>	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		National Grid will look to agree the most suitable access route at that point, taking in to account the landowner and National Grid's requirements Biosecurity mitigation requirements will be discussed and implemented in consultation with the landowner.	
11-6.32	Suggest the haul road follows the boundary with the public highway in the field between the Reservoir and Coggeshall Road to minimise impact on soil, drainage and agricultural operations / Suggest pylon TB77 is located close to the edge of the field boundary with Coggeshall Road to reduce land loss / Suggest haul road is routed to avoid crossing Old Mill Lane to minimise disruption to farming operations and residents (plan provided)	National Grid notes the respondent's feedback. With regards to the haul road, this has been positioned as close to Coggeshall Road as possible while allowing for an adequate turning radius for vehicles as well as aligning to appropriate public highway crossing points. TB77 is positioned as close to the boundary as possible while allowing for scaffolding to be used during construction for crossing protection. We have therefore not made a change to the haul road or the position of TB77.	
11-6.33	Suggestion that the Project is routed away from / the Project should not be located at a specific location	Further assessment and technical appraisal has been undertaken following feedback received from the statutory consultation and subsequent targeted consultations which has resulted in several changes to the alignment. Further details on these changes can be found in the 2025 Design Development Report (document reference 5.15), published as part of the Development Consent Order (DCO) application.	
11-6.34	Suggestion that the Project is routed away from / the Project should not be located at Faulkbourne	National Grid has considered the respondent's feedback highlighting a preference for an alternative moved away from Faulkbourne. In the absence of a specific basis for the change or a proposed alternative alignment, we have considered this feedback by following the guidance in the Holford Rules in developing the alignment. Guidelines on overhead line routeing are known as the "Holford Rules" which remain a valuable tool in selecting and assessing potential overhead line route options as part of the	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		options appraisal process. A summary of the Holford Rules is provided within Appendix I22 of this report. We are therefore not proposing a change to the alignment at Faulkbourne.	
11-6.35	Request that pylons TB116 and TB117 be located closer to field boundaries to reduce impacts on farming operations	National Grid notes the preference from landowners for pylons to be situated close to hedge lines where possible to reduce the impact on agricultural activities and reduce land take. We have assessed requests from landowners on an individual basis and have moved pylons to the edges of fields where this can be achieved. We have reviewed the pylons TB116 and TB117 remain along the field boundary as far as practicable. TB116 cannot be placed on a field boundary to the west due to required span lengths and the need to keep the alignment as straight as possible to be consistent with the Holford Rules. A summary of the Holford Rules is provided within Appendix I22 of this report. We are also unable to position pylons close to the southern edge of the field due to the need to maintain adequate distance to Hallhook Row Ancient Woodland.	
11-6.36	Suggestion that access routes follow field boundaries and existing tracks (plan provided)	National Grid notes the respondent's feedback with regards to the permanent access routes and also notes that the most appropriate route also varies in response to seasonal variation in land uses. As the Project progresses into the heads of terms and voluntary agreement stage there will be an opportunity to discuss and agree permanent access rights in more detail. No physical works are required for these permanent access routes as part of the Project as these will not be used for construction. Access may be required in the future, for maintenance and surveys and therefore National Grid will look to agree the most suitable access route at that point, taking into account the landowner and National Grid's requirements.	

Ref no. **Summary of matters raised** **National Grid's response**

Economic/ Employment impact

11-6.37	Concern about negative impact on businesses in the area	<p>Through the routeing and siting exercise, National Grid has sought to reduce as far as practicable impacts to businesses.</p> <p>Impacts on local businesses within the Local Study Area (the Order Limits) and within the 3 km Study Area (where visual impact is likely to be an economic consideration) are assessed in Environmental Statement (ES) Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15). As part of this assessment, a range of mitigation measures have been considered to reduce disruption to businesses and their users during the construction phase of the Project. These measures are identified in ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15), the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) which accompany the Development Consent Order (DCO) application.</p>
---------	---	---

Environmental impact

11-6.38	Concern that the Project will impact ancient woodland	<p>Through routeing, siting and detailed design, National Grid has sought to reduce, as far as practicable, impacts on biodiversity and in particular features of high ecological value, such as ancient woodland. A standard 15 m buffer from construction activities has been applied where practicable. Potential direct and indirect impacts on each block of ancient woodland within the study area have been considered within the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8) and any necessary mitigation detailed to ensure no significant residual effects. Appendix B: Ancient Woodland and Veteran Tree Strategy is included as part of the Outline Landscape and Ecological Management</p>
---------	---	---

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		Plan (see Appendix B of the Outline LEMP (document reference 7.4)). The Outline LEMP has been developed in consultation with relevant stakeholders including Natural England and local planning authorities.	
11-6.39	Concern that the Project will impact nature reserve / RSPB reserve / Special Protection Area (SPA)	<p>Through routeing, siting and design development, National Grid has sought to reduce, as far as practicable, impacts on biodiversity and in particular features of high ecological value, such as local wildlife sites (LWS), Royal Society for the Protection of Birds (RSPB) reserves and Special Protection Area (SPA's).</p> <p>Whilst there are no impacts on RSPB reserves, potential direct and indirect impacts on LWS's and SPA's within the study area have been considered within the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8). SPA's and the associated impact on birds has also been considered within the Habitats Regulations Assessment Report (HRA) (document reference 5.3).</p>	
11-6.40	Concern that the Project will result in a negative impact on the environment / countryside generally (no details given)	<p>National Grid has sought to reduce, as far as practicable, impacts on the environment / countryside through routeing and siting and an ongoing iterative design process which has taken on board feedback at different stages of the Project. The iterative design process sought to avoid areas of highest concern, for examples through changes to the route alignment or changes to the method e.g. trenchless crossings. National Grid has engaged with a range of stakeholders (including Statutory Environmental Bodies (SEBs) and relevant local planning authorities) throughout the development of the Project design and environmental assessment work.</p> <p>National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project. The results of this assessment are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent</p>	

Ref no.	Summary of matters raised	National Grid's response
		<p>Order (DCO) application. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation (and maintenance) of the Project and recommends appropriate mitigation measures to reduce potential effects.</p> <p>A number of mitigation measures have been incorporated into the Project design. Mitigation relevant to specific environmental topics (including Ecology and Biodiversity, Landscape and Visual and Historic Environment) are presented in the relevant ES chapters. The Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Code of Construction Practice (CoCP) (document reference 7.2) contain a list of relevant good practice measures to avoid or reduce risks to habitats and species.</p> <p>In addition to the EIA, National Grid has set itself a target of delivering 10% biodiversity net gain (BNG) with environmental and societal benefits on all construction projects, meaning that as a result of measures taken, the biodiversity rating of the area will be enhanced by 10% greater than prior to the construction of the Project. The BNG target for the Project is currently voluntary and aligned with our corporate sustainability commitment.</p>
11-6.41	Concern that proposals to site 2 or 3 towers and overhead cables on Monk's Farm will significantly prejudice the mineral reserve and mineral extraction activities	<p>National Grid adopts a consistent approach to development sites and in the case of minerals sites considers those that are allocated in the current plan. In this case the site is being consulted upon for potential inclusion in a future plan so may be confirmed at some stage or may not. In these cases we identify if an alternative alignment can be taken forward with widened Order Limits to allow for a modified alignment given that the sites inclusion may be confirmed in mid 2025. We have taken forward to DCO submission a scenario A (that shown on the works plans) and a scenario B with widened Order Limits that would support an alternative alignment (if the site is adopted into the minerals plan). In the alternative scenario B the position</p>

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		of pylons is modified slightly to cross closer to a north to south alignment with pylons repositioned to be just within the edge of the area. This reduces the required extent of retention of unexcavated ground compared with scenario A We have considered other alternative alignments deviated to the north but not progressed these due to heritage effects from routeing between related grade I and II* listed buildings as well as closer proximity and increased effects on residential properties (set out in the 2023 Design Development Report, available on the Project website).The 2023 Design Development Report also considered alternatives to the south. But these were less preferred due to greater effects on residential properties. We are engaging with those promoting the site to seek to agree a statement of common ground, and route to discussing mitigation should the site actually come forwards.	
11-6.42	Concern that proposed underground cables for the UK Power Networks infrastructure to the north-east of the reservoir will conflict with a proposed underground irrigation main which would connect the reservoir with other land and restrict access to the pipe in the event of a leak or emergency resulting in loss of time and funds for the respondent (plan provided)	<p>National Grid request the respondent provide detailed design drawings of the proposed irrigation main so that required vertical separation distances can be factored in.</p> <p>When working in close proximity to National Grid underground cable assets the respondent should adhere to HSG47 – Avoiding danger from underground services and National Grids Technical Guidance Note 287 - Third-party guidance for working near National Grid Electricity Transmission equipment.</p>	
11-6.43	Concern about impacts on rights to minerals (and other legal rights) near pylon TB101 / Concern that previously raised concerns about legal reviews and fees have not been addressed	In the development of the Project route, National Grid has sought to avoid sites either with consent for minerals extraction, that are allocated within the minerals plan or are the subject of consultation. In some cases avoidance is not possible due to other constraints to routeing however strategies to seek to reduce the effects would be progressed. In the area of TB101 there is no minerals planning status that would lead to the	

Ref no. Summary of matters raised National Grid's response

considerations set out. The presence of rights to minerals per-se (and such rights will be extensive) do not imply any certainty of value recovery nor certainty that planning approval would ever be secured. On this basis no change is proposed.

If the respondent has any questions over whether legal fees are recoverable, they are encouraged to speak to the Project lands team: Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.

Financial compensation

11-6.44 Concern that the Project will devalue property / impact on property value in this section

National Grid acknowledges that its proposals may cause concern to landowners. Diminishment of property value known as 'injurious affection' and any other appropriate heads of claim would be considered on an individual basis in accordance with current legislation. We would pursue a voluntary agreement with affected landowners, acquiring rights in accordance with our Land Rights Strategy (the strategy is subject to review). If a voluntary agreement cannot be reached, then the Compulsory Purchase Code allows for a claim of compensation for the loss that property owners may have suffered as a direct result of the retained part of your property ownership being worth less as a direct result of the works.

If there are any specific concerns about the devaluation of property, National Grid would advise seeking third party advice. or alternatively please contact the Project team:

Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-6.45	Request for adequate financial compensation / Suggest that impacted individuals need to be compensated	<p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD.</p> <p>All affected landowners would be compensated for any temporary/permanent losses, and this would be dealt with on a case-by-case basis in line with the Compensation Code.</p> <p>If there are any specific concerns requiring compensation and how it would be assessed, please contact the Project team: Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.</p> <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD.</p> <p>The Government has published its guidance on community funds for transmission infrastructure (DESNZ, 2025). National Grid is committed to working with Ofgem, industry partners, local communities and their representatives to ensure community benefits are delivered fairly and effectively, driving lasting, positive change for the people and places integral to our developing electricity network.</p> <p>Government has also announced its plans to introduce a bill discount scheme for households within 500 m of new infrastructure, which it proposes to introduce through the Planning and Infrastructure Bill. This is evolving government policy. Government expects this scheme to be in place by 2026 and we would share further details as they emerge.</p> <p>National Grid is committed to providing a coordinated local and regional approach to community benefits. This would be delivered outside the development consent process, since this is not a material consideration in</p>	

Ref no.

Summary of matters raised

National Grid’s response

the decision on the proposed Project or a matter to be secured as part of the DCO, as per the Community Funds for Transmission Infrastructure: Guidance (DESNZ, 2025).

Health, Safety & Wellbeing

11-6.46

Concern that the Project may result in a negative impact on mental health / wellbeing

National Grid recognises people may have concerns about the health effects of living close to an overhead line, and that the uncertainty whilst the proposals are developed may cause anxiety.

We have sought to reduce potential effects on communities and residents through routeing and design. We have also sought to reduce concern or uncertainty about the proposals through making timely design decisions and engaging with the people and stakeholders throughout the development of the Project.

The Project team will continue to engage with people potentially affected during progress of the Project, through regular communication including letters, phone calls and meetings. This would enable concerns to be raised and discussed at an early opportunity and provide a regular point of contact to respond to queries and concerns.

We urge anyone with concerns to get in touch through the Norwich to Tilbury Freephone number, address or email throughout the progress of the Project:

Call our Community Helpline: 0800 915 2497 (Lines are open Monday to Friday 9:00am – 5:30pm)

Email us: contact@n-t.nationalgrid.com

Write to us: FREEPOST N TO T (No stamp or further address details are required)

Ref no.

Summary of matters raised

National Grid's response

11-6.47

Concern about health risks associated with the Project / physical health risks associated with the Project

The UK has a carefully thought-out set of policies for protecting us all against Electric and Magnetic Fields (EMFs), the main component of which is exposure guidelines. Those exposure guidelines are set by independent scientific bodies and are based on decades-long studies into the effects of EMFs and ill health. After those decades of research, the weight of evidence is against there being any health risks of EMFs below the guideline limits. These policies are incorporated into the decision-making process for Development Consent in National Policy Statement (NPS) EN-5. It is National Grid's policy to ensure that all of its equipment comply fully with those exposure limits.

Health considerations are given a high priority in the process by which we arrive at any proposals for new electricity circuits. Assessment of compliance with Electric and Magnetic Field (EMF) guidelines and policies is key to National Grid's approach. The UK has a carefully thought-out set of policies for managing EMFs. There have been over four decades of research looking into whether EMF can cause health effects and there are no established effects below the exposure limits. When designing our overhead lines, substations and underground cables design criteria, we ensure they would not exceed those exposure limits, even when operating at 100% capacity. Additionally, the precautionary measures which the Government have adopted, are applied to the design which ensure the EMFs reduce as quickly with distance as possible. Evidence of that compliance is presented in the Electric and Magnetic Field Compliance Report (document reference 7.8) submitted as part of the Development Consent Order (DCO) application.

National Grid takes this issue very seriously and look to authoritative and independent scientific organisations such as the World Health Organisation (WHO) and in the UK Health Security Agency (UKHSA) to review the

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
Heritage			
11-6.58	Concern about negative impact on heritage / Suggest that the Project should be routed away from heritage buildings / listed buildings / historical site	<p>worldwide body of scientific evidence on health. Important decisions on health are taken independently of industry, and National Grid has followed the guidance and policies adopted by Government on advice from their scientific experts. Each of these organisations have comprehensive reviews of EMF research available to view on their websites.</p> <p>Through routeing and siting National Grid has sought to reduce as far as practicable potential impacts on the historic environment. The impacts of the Project on the historic environment are assessed in Chapter 11: Historic Environment (document reference 6.11) of the Environmental Statement (ES). The assessment considers the potential impact on archaeology, historic buildings and historic landscapes and includes assessment of potential for physical impact, impact through change to setting that affects the value of a heritage asset and impact through indirect factors such as change in hydromorphology. The assessment is supported by walkover, setting and geophysical surveys, as documented in ES Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1) and ES Appendix 11.4: Geophysical Survey Results Report (document reference 6.11.A4). Archaeological trial trench evaluation has also been undertaken and is reported in ES Appendix 11.5: Trial Trenching Results Report (document reference 6.11.A5). In addition to the proposals in the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4), the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5) sets out appropriate mitigation for the historic environment. The Project has engaged with Historic England and relevant planning authorities on aspects relating to heritage, including appropriate mitigation measures and</p>	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		techniques and to take their views into account during Project development.	
Mitigation			
11-6.49	Suggest mitigation measures	<p>An Environmental Statement (ES) (document reference Volume 6: Environmental Statement) has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 ('the Infrastructure EIA Regulations'). The ES identifies and assesses the likely significant effects on the environment resulting from the construction, operation and maintenance of the Project and recommends appropriate mitigation to reduce effects.</p> <p>Environmental mitigation measures have been defined within each environmental topic chapter and set out in relevant management documents submitted with the Development Consent Order (DCO) application, including the Outline Code of Construction Practice (CoCP) (document reference 7.2), the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5).</p>	
Primary Access Routes / Haul Road / Construction Compounds			
11-6.50	As evidenced in the provided mapping documentation and confirmed by National Grid's assessment, access via Western Lane (near Silver End) is unnecessary. Alternative access is readily available through the bend	National Grid notes the respondent's' concerns regarding access from Western Lane. The proposed access from this point is a permeant access. As the Project progresses into the heads of terms and voluntary agreement stage there will be an opportunity to discuss and agree permanent access rights in more detail. No physical works are required for this permanent access route as part of the Project as these will not be used for	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
	in the main road (as shown on plan provided by respondent)	construction. Access may be required in the future, for maintenance and surveys and therefore National Grid will look to agree the most suitable access route at that point, taking into account the landowner and National Grid's requirements. The general principal is to use existing footpaths public rights of ways to get a close to the pylons as possible before crossing farmland.	
11-6.51	Concern that National Grid has stated that the path, ground and garage beside the respondents garden is not registered, but the respondent has asked that this be corrected, and the respondent has confirmed that this is part of their property and has easements for their neighbours to use it to access the garages on foot / Concern that this path is not suitable for access by any construction vehicles or National Grid personnel, and the respondent would not grant permission for its use / Suggest that the field behind which is fully accessible from the roadside on two sides should be used instead	There may have been a misunderstanding about the activities proposed because the Project does not seem to interface with the respondent's landholding in the manner suggested. The nearest activity is the replacement of an existing lower voltage wood pole connection with underground cable routes within the adjacent agricultural field which we agree is best accessed from the roadside without need to cross the respondents land holding. No change is therefore proposed.	
PROW (Public Rights of Way)			
11-6.52	Concern about negative impact on PROW / footpaths / cycle paths / bridleways	Through routeing and siting, National Grid has sought to reduce, as far as practicable, impacts and disruption to Public Rights of Way (PROW). The iterative design process identified the existing PROW network and their wider connectivity and sought where practicable to reduce and where possible remove impacts to PROW. Effects on PROW would be mitigated where possible, maintaining access where practicable, with closures as a last resort. We will continue to engage with relevant stakeholders on the PROW network to enable	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		feedback and input to be considered as the Project progresses. An Outline Public Rights of Way Management Plan (document reference 7.6) is submitted with the Development Consent Order (DCO) application.	
Requests			
11-6.53	Request for further impact surveys in this section	<p>National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project. The assessment is informed by a suite of field surveys and desk studies and results are presented in an Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the application for development consent. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation (and maintenance) of the Project and recommends appropriate mitigation measures to reduce potential adverse impacts.</p> <p>The scope of the EIA is included in the Scoping Report (document reference 6.19) which was submitted to the Planning Inspectorate in November 2022 and their Scoping Opinion (document reference 6.20) received in December 2022. This provided the opportunity for statutory bodies to comment on the scope of the EIA which included our approach on study areas, data collection and baseline conditions for a range of environmental topics. We also discussed and agreed survey scope with stakeholders (including Statutory Environmental Bodies and Local Planning Authorities) following the Scoping Opinion (document reference 6.20) to ensure a robust baseline assessment.</p> <p>National Grid has prepared an Outline Code of Construction Practice (CoCP) (document reference 7.2) which sets out the required mitigation measures and environmental commitments that would be implemented during the construction phase of the Project to avoid or reduce potential</p>	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		effects of the Project on the environment, including commitments to undertake further surveys.	
Visual impact			
11-6.54	Concern that the Project will be unsightly / visually intrusive (including overhead lines, CSE compounds and substations) / Concern that the Project will cause a negative impact on views	<p>National Policy Statement (NPS) EN-5 makes it clear that the Government considers overhead lines to be appropriate and acceptable in most instances, although it recognises that there may be, at particularly sensitive locations, potential adverse landscape and visual impacts of an overhead line that make it inconsistent with our duties and relevant planning policy.</p> <p>The Dedham Vale National Landscape (previously an Area of Outstanding Natural Beauty (AONB)) designation is one such location where underground cable technology is proposed with the extent of underground cabling extending beyond the boundary in response to the potential for the Project to affect the National Landscape. Our proposals include a total of approximately 20 km of underground cable through and in the vicinity of the Dedham Vale National Landscape, including a section at Great Horkesley to reduce the changes in views and setting of the National Landscape from within and adjacent to its designated boundary.</p> <p>Underground cabling is also proposed for a short section of 400 kV overhead line crossing near Fairstead.</p> <p>Cable Sealing End (CSE) compounds are required to facilitate sections of underground cable, and the proposed East Anglia Connection Node (EACN) substation is required to connect customers and the proposed Tilbury North Substation is required to connect the Project into the existing Tilbury Substation. These components have been carefully sited taking into</p>	

Ref no. Summary of matters raised National Grid's response

consideration Horlock Rules including the potential for landscape and visual effects.

The higher cost of underground cables to bill paying consumers, and the environmental implications of installing underground cables and maintaining them at locations outside the Dedham Vale National Landscape, are not considered to be justifiable in the context of national policy or National Grid's statutory duties, which include the need to be economical and efficient.

A Landscape and Visual Impact Assessment (LVIA), presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13), has been undertaken as part of the Environmental Impact Assessment (EIA). The LVIA includes an assessment on both landscape character and visual amenity and identifies areas for potential mitigation planting around substations and CSE compounds to reduce visual impacts to local receptors. The Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) includes details regarding the planting proposals.

Wildlife/ Ecology impact

11-6.55	Concern that the Project will result in a negative impact on species (protected status not specified)	Through routeing, siting and detailed design National Grid has sought to reduce, as far as practicable, potential impacts on biodiversity including protected species. The design process has taken account of existing biodiversity, the natural environment and, where practicable, has sought to reduce impacts on areas of ecological sensitivity including protected species and their associated habitats, through avoidance or mitigation. A comprehensive survey effort for a range of protected species was completed over the 2023 – 2024 period. Chapter 8: Ecology and Biodiversity of the Environmental Statement (ES) (document reference 6.8)
---------	---	--

Ref no.	Summary of matters raised	National Grid’s response	
		assesses the effects on protected species based on this baseline information and where/if required appropriate mitigation measures are detailed. Suitable mitigation for protected species has been developed in consultation with Natural England to ensure legal compliance and best practice guidelines are adhered to. Where necessary, draft licence applications have been drafted and National Grid is in the process of agreeing the detail within the licence documents with Natural England, in order to obtain the relevant Letters of No Impediment (LoNI). Mitigation for non-licensable protected species has been included within the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4).	
11-6.56	Concern that the Project will result in a negative impact on protected species	Through routeing, siting and detailed design, National Grid has sought to reduce, as far as practicable, potential impacts on biodiversity including protected species. The design process has taken account of existing biodiversity, the natural environment and, where practicable, has sought to reduce impacts on areas of ecological sensitivity including protected species and their associated habitats, through avoidance or mitigation. A comprehensive survey effort for a range of protected species was completed over the 2023 – 2024 period. Chapter 8: Ecology and Biodiversity of the Environmental Statement (ES) (document reference 6.8) assesses the effects on protected species based on this baseline information and where/if required appropriate mitigation measures are detailed. Suitable mitigation for protected species has been developed in consultation with Natural England to ensure legal compliance and best practice guidelines are adhered to. Where necessary, draft licence applications have been drafted and National Grid is in the process of agreeing the detail within the licence documents with Natural England, in order to obtain the relevant Letters of No Impediment (LoNI). Mitigation for	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		non-licensable protected species has been included within the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4).	
11-6.57	Concern that the Project will result in a negative impact on flora / plants / woodlands / hedgerows	<p>Through routeing, siting and detailed design, National Grid has sought to reduce, as far as practicable, potential impacts on biodiversity including priority grassland, wetland, woodland, and hedgerow habitats. The design process has taken account of existing biodiversity, the natural environment and, where practicable, seeks to reduce impacts on areas of ecological sensitivity, through avoidance or mitigation.</p> <p>Chapter 8: Ecology and Biodiversity of the Environmental Statement (ES) (document reference 6.8) assesses the effects on important ecological receptors (which includes grasslands, wetlands, woodlands and hedgerows).</p> <p>As part of the Environmental Impact Assessment (EIA) process for the Project, a suite of ecological surveys has been to be undertaken. The findings of which inform the design and approach to mitigation.</p> <p>The Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Code of Construction Practice (CoCP) (document reference 7.2) contain a list of relevant good practice measures to avoid or reduce impacts on valuable habitats.</p> <p>The Environment Act 2021 introduces a mandatory requirement for 10% Biodiversity Net Gain (BNG) for new Development Consent Order (DCO) developments (which is not yet in force and not expected until May 2026). National Grid has committed to delivering 10% BNG with environmental and societal benefits on all construction projects. The BNG target for the Project is currently voluntary and aligned with our corporate sustainability commitment.</p>	

Ref no.

Summary of matters raised

National Grid's response

		<p>As well as seeking to avoid and minimise impacts to nature, the Project considers the land required for mitigation, compensation and enhancement that can deliver BNG and wider environmental benefits. This will require delivery of offsite Biodiversity Units via habitat creation or enhancement actions in strategic areas, and we will consider all offsite options that are available to us.</p>	
11-6.58	Concern that the Project will result in a negative impact on rivers / other bodies of water	<p>Through routing, siting and detailed design National Grid has sought to reduce, as far as practicable, potential impacts on biodiversity including river ecology. The design process has taken account of existing biodiversity, the natural environment and, where practicable, has sought to reduce impacts on areas of ecological sensitivity such as river corridor habitats, through avoidance or mitigation. The same approach has been taken to account for rivers and their floodplains, seeking to avoid or reduce the footprint of the Project within floodplains.</p> <p>As part of the Environmental Impact Assessment (EIA) process for the Project, a suite of ecological surveys has been undertaken, including along river corridors. The data has informed the assessment of effects on biodiversity, hydromorphology, water quality and flood risk presented in the Environmental Statement (ES), Chapter 8: Ecology and Biodiversity (document reference 6.8) and ES Chapter 12: Hydrology, Land Drainage and Flood Risk (document reference 6.12) and the Water Framework Directive Assessment (document reference 7.10).</p> <p>Further, the Project has engaged with Natural England, the Environment Agency and Local Planning Authorities on aspects relating to river ecology, water quality and flood risk, and appropriate mitigation measures and techniques have been secured in the Outline Code of Construction Practice (CoCP) (document reference 7.2).</p>	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-6.59	Concern that the Project will result in a negative impact on wildlife / biodiversity / ecology (generally)	<p>The Environment Act 2021 introduces a mandatory requirement for 10% Biodiversity Net Gain (BNG) for new Development Consent Order developments (which is not yet in force and expected May 2026). National Grid has committed to deliver 10% BNG with environmental and societal benefits on all construction projects including for river ecology. The BNG target for the Project is currently voluntary and aligned with National Grid's corporate sustainability commitment.</p> <p>As well as seeking to avoid and minimise our impacts on nature, the Project includes enhancement of watercourse habitats as part of BNG mitigation.</p> <p>Through routeing, siting and detailed design National Grid has sought to reduce, as far as practicable, potential impacts on biodiversity. The design process has taken account of existing biodiversity, the natural environment and, where practicable, has sought to reduce impacts on areas of ecological sensitivity, through avoidance or mitigation.</p> <p>Chapter 8: Ecology and Biodiversity of the Environmental Statement (ES) (Document Reference 6.8) assesses the effects on important ecological receptors.</p> <p>As part of the Environmental Impact Assessment (EIA) process for the Project, a suite of ecological surveys has been to be undertaken over the 2022-2024 period. The findings of which inform the design and approach to mitigation.</p> <p>The Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Code of Construction Practice (CoCP) (document reference 7.2) contain a list of relevant good practice measures to avoid or reduce impacts on valuable habitats and species.</p>	

Ref no.	Summary of matters raised	National Grid’s response	
		<p>The Environment Act 2021 introduces a mandatory requirement for 10% Biodiversity Net Gain (BNG) for new Development Consent Order (DCO) developments (which is not yet in force and expected May 2026). National Grid has committed to deliver 10% BNG with environmental and societal benefits on all construction projects. The 10% BNG target for the Project is currently voluntary and aligned with our corporate sustainability commitment.</p> <p>As well as seeking to avoid and minimise impacts to nature, the Project considers the land required for mitigation, compensation and enhancement that can deliver BNG and wider environmental benefits. This would require delivery of offsite Biodiversity Units via habitat creation or enhancement actions in strategic areas, and we will consider all offsite options that are available to us.</p>	
11-6.60	Concern that the Project will impact trees covered by Tree Preservation Orders / Tree Protection Orders	During pre-application National Grid asked relevant planning authorities to share information on Tree Preservation Orders (TPOs). Impacts to trees covered by a TPO from the Project are presented in Appendix 13.6: Arboricultural Impact Assessment (AIA) report (document reference 6.13.A6).	

Chelmsford feedback

Chelmsford Section specific feedback (Further Landowner Consultation)

Table 11-7 Summary of consultee comments and National Grid's response

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
Agricultural land			
11-7.1	Concern that the Project will take away valuable agricultural land / disrupt farming operations	<p>During the construction stage of the Project, there would be areas of agricultural land that would be temporarily disrupted. National grid would only use land that is required as part of the Project and would seek to minimise the use of agricultural land where reasonable and safe to do so. National Grid is and will continue to work with all landowners including farmers who may be affected by the proposals to understand the impacts on their operations and to work with them as the Project is developed. We would seek to work with the farming community to limit disruption where practicable. This includes providing prior warning of works which may result in the need to move livestock. Compensation claims for disturbance are considered on a case-by-case basis, if negative impact on farming operations can be proven. Particular agricultural matters can also be addressed through voluntary land agreements.</p>	
Airfields			
11-7.2	Concern about the impact of the Project on Broomfield Hospital (helipad) / Suggestion that the Project is routed away from Broomfield Hospital (helipad)	<p>National Grid has appointed an independent aviation consultancy which has engaged the principal air ambulance operator from Broomfield Hospital with regards to the helipad. Following discussion and assessment it has been determined, with the Project as currently proposed, that the helipad can continue to operate.</p> <p>Further information on the assessment of airfields can be found in the Environmental Statement (ES) Chapter 15: Socio-Economics, Recreation</p>	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).	
Community/Social Impact			
11-7.3	Concern about impact of the Project on children / families / residents / communities	<p>National Grid recognises people may have concerns about the potential impacts of living close to an overhead line, and that the uncertainty whilst the proposals are developed may cause anxiety.</p> <p>We have sought to reduce potential effects on communities, residents – including children - through routeing and design. We have also sought to reduce concern or uncertainty about the proposals through making timely design decisions and engaging with people and stakeholders throughout the development of the Project. If the Project received Development Consent, the Project team would continue to engage with people potentially affected during construction, through regular communication including letters, phone calls and meetings, where necessary.</p> <p>We urge anyone with concerns to get in touch through the Norwich to Tilbury Freephone number, address or email, which will remain open throughout examination.</p> <p>National Grid is committed to working with local suppliers, facilitated by supporting forums (such as the local Chambers), on electricity industry skills and workforce planning. National Grid is also committed to providing a coordinated regional approach to jobs and skills opportunities. This commitment is broader than the individual project and separate to any commitments under the proposed development consent order for this Project. The socio-economic effects of the Project are assessed in Chapter 15: Socio-economics, Recreation and Tourism of the Environmental Statement (document reference 6.15). Post construction job opportunities are limited given the nature of the development however we will still work with Local Authorities (including facilitating local partners)</p>	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		<p>to understand what is important to them around skills and employment to ensure we leave a lasting positive legacy in the communities where we operate.</p> <p>With regards to a delivery mechanism, the above measures will be delivered as part of our community benefit package, which will look at both local and regional initiatives. This will be delivered outside the development consent process and is not a material consideration in the decision on the proposed Project or a matter to be secured as part of the DCO, as per the Community Funds for Transmission Infrastructure: Guidance (DESNZ, 2025).</p>	
11-7.4	Concern about impact of the Project on school / educational facilities	<p>Through routeing and siting, National Grid has sought to avoid, as far as practicable, locations of education establishments.</p> <p>Environmental Statement (ES) Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) presents an assessment on the potential impacts on education facilities as a result of the Project. As part of the assessment, a range of measures are considered throughout the construction phase of the Project to reduce, where practicable, disruption on education establishments. These include traffic management, signage and routing measures to ensure access or partial access can be maintained where feasible. These are identified within the ES Chapter 15: Socio-Economics, Recreation and Tourism, the Outline Code of Construction Practice (CoCP) (document reference 7.2), the Outline Dust Management Plan (see Appendix D of the Outline CoCP (document reference 7.2)) and the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).</p>	
11-7.5	Concern about impact of the Project on leisure	<p>Through routeing and siting National Grid has sought to avoid, as far as practicable, locations important for leisure and tourism. Environmental Statement (ES) Chapter 15: Socio-economics, Recreation and Tourism</p>	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		<p>(document reference 6.15) presents an assessment of the potential impacts on sports clubs, recreational land and recreational routes located within the Order Limits. As part of this assessment, a range of measures have been considered throughout the construction phase of the Project to minimise disruption on leisure and tourism. These include traffic management, signage and routeing measures. These are identified within ES Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15), the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).</p>	
11-7.6	<p>Concern about the Project being in too close proximity to recently built housing developments / using land being considered for future development (including residential, commercial, infrastructural, and employment sites)</p>	<p>National Grid has obtained information on existing, under construction, consented but not built schemes as well as development proposals within the planning system. The Project design has responded to those that are confirmed through consideration of routeing.</p> <p>In the case of development proposals, some can be amended to be designed around our proposed infrastructure but in other cases our proposals may need to be amended at a corridor level, or proposed developments factored into our detailed route design.</p> <p>Based on known information, and in light of changes made following consideration of feedback to the 2022 and 2023 non-statutory consultations, statutory consultation and targeted consultations, we consider our proposals are consistent with relevant policy and guidelines and the alignment designed such that they do not prevent proposed housing developments from being successfully progressed. UK law does not prescribe minimum distances between overhead lines and homes, but any implications on landscape and visual receptors, residential amenity or from concerns about electromagnetic fields are robustly assessed as part of the Environmental Impact Assessment (EIA) and balanced as part of</p>	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-7.7	Criticism of surveys undertaken for the Project in this Section	<p>the decision making process. We will continue to review planning applications and engage with developers as necessary.</p> <p>There is a staged approach to the process of collection of environmental data as any major project develops. National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project. The assessment is informed by a suite of field surveys and desk studies and results are presented in an Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the application for development consent. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation (and maintenance) of the Project and recommends appropriate mitigation measures to reduce potential adverse impacts.</p> <p>The scope of the EIA is included in the Scoping Report (document reference 6.19) which was submitted to the Planning Inspectorate in November 2022 and their Scoping Opinion (document reference 6.20) received in December 2022. This provided the opportunity for statutory bodies to comment on the scope of the EIA which included our approach on study areas, data collection and baseline conditions for a range of environmental topics. We also discussed and agreed survey scope with stakeholders (including Statutory Environmental Bodies and Local Planning Authorities) following the Scoping Opinion (document reference 6.20) to ensure a robust baseline assessment.</p> <p>National Grid has prepared an Outline Code of Construction Practice (CoCP) (document reference 7.2) which sets out the required mitigation measures and environmental commitments that would be implemented during the construction phase of the Project to avoid or reduce potential effects of the Project on the environment, including commitments to undertake further surveys.</p>	

Ref no.	Summary of matters raised	National Grid's response
11-7.8	Concern about the impact of the Project on water supply	<p>National Grid has conducted preliminary ground investigations in order to better understand the geology along the underground cable route, including ground water levels. This would be supplemented by more detailed investigations prior to construction should the Project obtain consent. National Grid would assess the impact of the works on all identified ground water sources, including public and private abstraction points, and take appropriate measures to avoid detriment to those water sources.</p> <p>Landowners are encouraged to provide as much information as early as possible in relation to any private supplies, drainage and irrigation systems on their land so these can be factored in at the detailed design stage of the Project ahead of construction starting on site.</p> <p>As part of the development of the Project a Groundwater Baseline and Qualitative Groundwater Risk Assessment has been undertaken and forms part of the Environmental Statement (ES) (document reference 6.9.A3). This document provides an assessment of the potential effects of the Project on groundwater resources and includes an appraisal of the impacts on groundwater supplies. Mitigation measures have been included within the Outline Code of Construction Practice (CoCP) (document reference 7.2) regarding the prevention of groundwater pollution as well as measures specific to safeguarding groundwater fed water supplies. Commitments would include the safe and responsible storage of fuels, oils and chemicals, the monitoring of water quality prior to construction to confirm a baseline for future tests during construction and additional hydrogeological risk assessment at specific locations where there is a potential for the Project to impact on groundwater.</p>

Ref no. Summary of matters raised National Grid's response

Construction Impacts

11-7.9	Concern about disruption from construction	<p>An Environmental Statement (ES) (document reference: Volume 6: Environmental Statement) has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 ('the Infrastructure EIA Regulations'). The ES identifies and assesses the likely significant effects on the environment resulting from the construction of the Project and recommends appropriate mitigation to reduce effects.</p> <p>Environmental mitigation measures have been defined within each environmental topic chapter and set out in relevant management documents submitted with the Development Consent Order (DCO) application, including the Outline Code of Construction Practice (CoCP) (document reference 7.2), the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5).</p>
11-7.10	Concern about impact on traffic levels in local area caused by construction works	<p>As part of the pre-application process National Grid has engaged with the relevant authorities, their highways teams and National Highways to understand and gain information on their road networks. This information has been used to inform and guide the drafting of the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) for the Project that accompanies the Development Consent Order (DCO) application. A strategy has been developed to manage the impact of construction vehicles on the public highway and sensitive receptors, using suitable Local Road Network connections from the Strategic Road Network called Primary Access Routes. In addition, temporary haul roads for construction vehicles are proposed along the Project alignment, further</p>

Ref no.	Summary of matters raised	National Grid's response
		<p>reducing the impact of construction traffic on the local road network. Further details of the strategy can be found within the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).</p> <p>Environmental Statement (ES) Chapter 16: Traffic and Transport (document reference 6.16) includes the assessment of the potential impacts of the Project including changes in traffic flow, delays, road safety and impact on Walking, Cycling and Horse-Riding modes on the roads along the Primary Access Routes located in the Local Road Network.</p> <p>The Transport Assessment (document reference 7.11), submitted with the DCO application, examines capacity, safety, and operational efficiency of the network, identifying potential bottlenecks or safety concerns.</p> <p>Within the assessment of the ES and the Transport Assessment, mitigation measures are proposed to minimise likely adverse impacts.</p>
11-7.11	Concern about noise and other issues resulting from construction (e.g. mud on roads, dust)	<p>An Environmental Statement (ES) (document reference: Volume 6: Environmental Statement) has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 ('the Infrastructure EIA Regulations'). The ES identifies and assesses the likely significant effects on the environment resulting from the construction of the Project and recommends appropriate mitigation to reduce effects.</p> <p>Specifically, a Construction Noise and Vibration Impact Assessment has been undertaken and is reported in ES Chapter 14: Noise and Vibration (document reference 6.14). During construction, mitigation would be implemented to reduce noise and vibration impacts from construction activities and increased road traffic noise and vibration due to additional movement from construction traffic. Mitigation measures are outlined in ES Chapter 14: Noise and Vibration (document reference 6.14) and the Outline Code of Construction Practice (CoCP) (document reference 7.2).</p>

Ref no.

Summary of matters raised

National Grid's response

This includes the assumption that construction working would be undertaken within the agreed working hours, construction traffic would be managed through the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), haul roads would be well maintained, and Best Practicable Means (BPM) would be employed to reduce construction noise and vibration.

ES Chapter 7: Air Quality (document reference 6.7) presents an assessment of the potential impacts from the construction of the Project on air quality. During construction, mitigation would be implemented to reduce the impact of dust generation and construction vehicle emissions. Mitigation measures are outlined in ES Chapter 7: Air Quality (document reference 6.7), and the Outline CoCP (document reference 7.2). The dust-emitting activities can be greatly reduced or eliminated by applying the site-specific mitigation measures (see Outline CoCP) for high risk sites following measures recommendations in the Institute of Air Quality Management (IAQM) guidance (IAQM, 2024). The IAQM guidance states that with the implementation of effective site-specific mitigation measures, the environmental effect would not be significant in most cases.

In addition, National Grid has prepared an Outline CoCP (document reference 7.2). The Outline CoCP sets out the required mitigation measures and environmental commitments that would be implemented during the construction phase of the Project to avoid or reduce potential effects of the Project on the environment.

11-7.12

Concern that local road infrastructure is not suitable for heavy construction vehicles and machinery

A strategy has been developed to manage the impact of construction vehicles on the public highway and sensitive receptors, using suitable Local Road Network connections from the Strategic Road Network called Primary Access Routes. In addition, temporary haul roads for construction vehicles are proposed along the Project alignment, further reducing the impact of construction traffic on the local road network. Further details of

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		<p>the strategy can be found within the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).</p> <p>The Project also requires the transportation of Abnormal Indivisible Loads (AIL). National Grid is developing specific routing proposals for AIL movements and is developing these through engagement with the relevant stakeholders including the local highway authorities and National Highways. An AIL routing strategy containing details about these movements are submitted in support of the Development Consent Order (DCO) application.</p>	
11-7.13	Concern about vibrations from construction	<p>An assessment of construction vibration is presented in Environmental Statement Chapter 14 - Noise and Vibration (document reference 6.14). The assessment considers both the potential impact upon people within buildings (i.e. disturbance), and potential damage to buildings and structures.</p> <p>The assessment considers relatively worst-case construction methodologies and does not take account of potential mitigation. This is so that potential 'hot-spots' can be identified where there is the potential for significant adverse effects, without mitigation.</p> <p>The construction vibration assessment has identified 74 locations where there is potential disturbance to people within buildings from construction vibration. Of these, 72 relate to potential vibratory compaction activities which would be expected to be for a relatively short duration (i.e. less than day). The remaining two relate to potential piling activities for pylon foundation construction.</p> <p>With regards to potential damage to buildings and structures, the assessment highlight's locations where there is a potential non-zero risk of damage. 14 locations have been identified, all of which relate to potential vibratory compaction activities.</p>	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		In all cases, significant adverse effects, or potential structural damage, can be avoided with the use of best practicable means (BPM). This may include alternative methods, such as non-percussive/vibratory techniques. Additionally, prior to undertaking works, the Main Works Contractor(s) would conduct a detailed construction vibration assessment based on their specific methodologies and determine specific mitigation measures, where applicable.	
Consultation			
11-7.14	Criticism of consultation specific to this section	National Grid notes the respondent's feedback.	
11-7.15	Criticism of consultation events in this Section	National Grid notes the respondent's feedback.	
Design Change			
11-7.16	Suggest a minimum distance that the Project should be sited from residential areas / residences	National Grid does not use standard minimum distances as a routing consideration. Applying an arbitrary distance may be too big or too small for the specific circumstances. We utilise the Holford Rules (a description of the Holford Rules can be found in Appendix I22 of this report) informed by feedback and professional judgement to define appropriate corridors and alignments that are consistent with the relevant policy framework and duties. In response to feedback to the 2022 and 2023 non-statutory consultations, statutory consultation, and targeted consultations, we have modified the alignment in various locations to increase separation to properties where this is possible without undue deviation or transfer of effects to other similar properties or other receptors. A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the Environmental Impact Assessment (EIA). The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-7.17	Suggest that the existing overhead lines in this section are reinforced / upgraded instead	<p>(document reference 6.13). This assesses the impact of the Project and identifies the need for additional mitigation if required.</p> <p>The existing transmission network in the region was upgraded during 2022 and 2023 to ensure the system is running at its most efficient performance. The existing assets / networks are not able to be upgraded sufficiently to cope with the new future demands expected on the network. As a result, new lines and substations would be required to accommodate the changing demands on the network.</p>	
11-7.18	Suggest that underground cables are used for the entirety of this section	<p>National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors.</p> <p>National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is '<i>that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape i.e. National Park, The Broads, or Area of Outstanding Natural Beauty</i>'. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there</p>	

Ref no.

Summary of matters raised

National Grid's response

is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider this section in its entirety would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.

Therefore, whilst undergrounding the whole of this section is not considered appropriate, our proposals do include underground cable within the Dedham Vale National Landscape (previously known as Area of Outstanding Natural Beauty (AONB)) in accordance with NPS EN-5. Prior to our 2023 non-statutory consultation we identified the need to extend the underground cable beyond the National Landscape boundary because of potential effects, we have further extended this section of underground cable following consideration of feedback on our 2023 non-statutory consultation and additional investigation into potential effects. We also identified an approximately 4 km section near Great Horkesley as meeting the particularly sensitive criteria where underground cable is also proposed. Additionally, underground cable is proposed at Fairstead for a 400 kV overhead line crossing.

11-7.19

Criticism that alternative routes to the one proposed for the Scheme to the west of Chelmsford were dismissed without explanation and seemed to have less impact on residential and heritage assets (e.g. the Westerly

In response to feedback received during the 2024 statutory consultation and the 2025 targeted consultations, National Grid has considered alternative alignments to the east and west of Chelmsford, modifications to the alignment consulted upon along with the selection of pylon type as

Ref no.	Summary of matters raised	National Grid's response
	Alternative) / Criticism that the current proposed route causes wildlife, property and environmental risk interactions which are easily and cheaply mitigated by alternatives that either cross open countryside with less vegetation and habitation (e.g. the Westerly Alternative) or align with existing infrastructure such as the pylon route (e.g. to the east of Chelmsford)	well as the justification for the use of underground cable. In the Corridor and Preliminary Routing and Siting Study (CPRSS) published as part of the 2022 non-statutory consultation and in the Design Development Report's, National Grid set out the challenges associated with routeing either further to the west or to the east of Chelmsford parallel to the existing 400 kV overhead line. Whilst noting the respondent's preference for one of these alternatives, no new factors have been identified nor new evidence provided nor identified to remove the basis for previous decision making. Firstly, it is noted that our assessments of the Project alignment are that it is not unacceptable in policy terms and there is no specific need therefore to change, nonetheless we have reviewed other route alternatives. The eastern route around Chelmsford remains less preferred and no change to the fundamental constraints to successful routeing have been identified or proposed. We have also previously reviewed a more westerly alignment which would be routed away from Little Waltham diverting from the south of Great Leighs towards Pleshey and then southwards past Great Waltham towards Chignal Smealey. Whilst noting a reduction in some effects for this more western alternative, it would be a longer route by 2.5 km to 3 km with a degree of transfer of effects. Given that none of the effects arising for the alignment are considered to be at a level which is unacceptable in policy terms, National Grid continues to prefer the alignment and for the reasons stated the eastern and western alternatives are not progressed. Effects are assessed and presented in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application, and this has identified any need for additional mitigation.
11-7.20	Suggest TB154 is relocated to its previously proposed position	National Grid notes the respondent's feedback. TB154 has not changed position since the publication of the 2024 preferred draft alignment. A

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		change to the alignment was made following feedback received during the 2023 non-statutory consultation which straightened the alignment and removed an angle pylon (as described in the 2024 Non-Statutory Consultation Feedback Report and the 2024 Design Development Report (available on the Project website).	
11-7.21	Suggest TB192 is moved further south to meet with the existing field corner position and set off the existing boundary (as per respondent's plan) / Suggest permanent easement access to TB192 is moved to align with the existing gateway onto Ingatestone Road (as per respondent's plan)	National Grid notes the respondent's feedback with regards to the permanent access route at TB192 and also notes that the most appropriate route also varies in response to seasonal variation in land uses. As the Project progresses into the heads of terms and voluntary agreement stage there will be an opportunity to discuss and agree permanent access rights in more detail. No physical works are required for this permanent access route as part of the Project as these will not be used for construction. Access may be required in the future, for maintenance and surveys and therefore National Grid will look to agree the most suitable access route at that point, taking into account the landowner and National Grid's requirements. With regards to TB192, this pylon has been positioned to reduce impacts on views relating to St Marys Church, Buttsbury. We have also moved it further north following feedback from a property to the south; therefore we are not proposing a change to the location of this pylon.	
11-7.22	Concern that haul road access on the main farm onto the A1060 will be a safety risk to the public and financial loss for Boyton Hall as the fields are used to host large-scale events including concerts and the Essex Young Farmers Show and relocation is not possible due to proposed pylons on the alternative field/ Suggest construction activity is restricted to one area / Concern about security risks, such as trespassing and anti-social behaviour as there is no	National Grid notes the respondent's concerns regarding the security of the proposed haul road access at Boyton Hall. Any haul road access points will be appropriately managed, locked and secured when not in use, with the use of fencing and gates where required to prevent trespass and anti-social behaviour. These measures are set out in the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) and will be secured through the Construction Environmental Management Plan (CEMP) prepared by the appointed	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
	guarantee the haul road access will remain locked and secure / Suggest the haul road is moved back to the original route using the gas substation access road or directly cutting across the A1060 from Vicerage Road (as per respondent's plan)	Principal Contractor. We have investigated a number of alternative alignments in the area, but all would result in a longer route with more angle pylons, less consistent with the Holford Rules, and greater impact upon local receptors. If a land or property owner is unsure if they are eligible for compensation, they should seek independent third party advice, or contact the Project lands team to discuss: Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314. Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD.	
11-7.23	Suggest pylons TB159 to TB161 are diverted away from the scout field and Young Farmer Event field or use underground cables (as per respondent's plan)	In response to previous feedback National Grid has considered alternative connection routes but concluded that others are less preferred. This encompasses routes to the east of Chelmsford as well as localised variations to both the east and west of the Project alignment. In the absence of new information or further factors or change in the constraints that are present, National Grid remains of the view that the Project remains preferred for the reasons set out variously within the Corridor and Preliminary Routeing and Siting Study (CPRSS) (available on the Project website) and the various Design Development Reports published in 2023, 2024 (available on the Project website) and in 2025 (document reference 5.15). National Grid is of the view that the presence of overhead pylons is not incompatible with the events noted.	
11-7.24	Suggest all future access routes are removed, and access is taken under the pylon line or agreed with the landowner at the time (as per respondent's plan)	National Grid notes the respondent's feedback with regards to the permanent access routes and also notes that the most appropriate route also varies in response to seasonal variation in land uses. As the Project progresses into the heads of terms and voluntary agreement stage there will be an opportunity to discuss and agree permanent access rights in more detail. No physical works are required for this permanent access routes as part of the Project as this will not be used for construction.	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-7.25	Suggest that Pylon TB141 is re-located further south	<p>Access may be required in the future, for maintenance and surveys and therefore National Grid will look to agree the most suitable access route at that point, taking in to account the landowner and National Grid's requirements.</p> <p>Biosecurity mitigation requirements will be discussed and implemented in consultation with the landowner.</p> <p>In reviewing whether this pylon can be moved to the south we have considered the wider context. This is that we concluded that low height lattice pylons will be beneficial for a section of the route north of the River Chelmer. This is a revision aimed specifically to reduce impacts on nearby designated heritage assets, including Little and Great Waltham Conservation Areas and a designed garden avenue view from the Grade I Langleys listed building. As part of this refinement, the alignment has been adjusted in combination with some use of lower-profile pylons to reduce visibility and reduce the impact of the infrastructure on the historic landscape and its setting. To the south of the river, we have considered feedback on arrangements including standard lattice pylons (requires 2 pylons) as well as arrangements with low height lattice pylons (which requires three pylons). The latter positions a pylon close to Chelmsford Road and a relatively direct view from a home and for these reasons is less preferred. The Project, subject to confirming certain technical details, will progress using the defined LoD with the use of 2 standard pylons between TB143 and the river. On the basis that this change is achieved, then pylon TB141 would be replaced by a pylon around 70 m to the southwest of the location shared within the 2025 targeted consultation. Moving TB141 in isolation is much more restricted in the movement that can be achieved without transfer of the effects to other residential occupiers. In summary a change to the south and west has been made going some way to meeting the request raised.</p>	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-7.26	Criticism that the National Grid has not shown evidence of investigating route west of Writtle, despite saying this has been looked at	National Grid notes the respondent's feedback. We have investigated a number of alternative alignments in the area around Writtle including those further west as suggested. The alignment was carefully considered and, in this location, an oversail of the north-eastern corner of the college grounds was preferred over more western alternatives (for example an alignment directly north from TB164). The alternatives would have increased effects on residential amenity and lead to more woodland loss. We have reviewed this alignment and consider the decision making to remain appropriate and therefore no change is proposed. As is made clear within the Design Development Reports not every change is considered to be of a scale or level of wider interest to justify responding within the 2025 report (document reference 5.15). More localised changes, such as that raised by the respondent are reported on within the relevant geographic section within this Consultation Report. The 2024 Design Development Report, in figure 5.28, considered various wider west alignments and responses to previous consultations can be found in the 2024 Non-Statutory Consultation Feedback Report (Appendix C of this report).	
11-7.27	Suggest pylon TB190 is moved further north and/or west to be a further distance from the respondent's property / Suggest haul road is moved further west (as per respondent's plan)	National Grid notes the respondent's feedback. TB192 (previously TB190) was moved further north along the alignment following the 2024 statutory consultation as requested. The haul road cannot move further west as it needs to align with the public highway crossing point on Ingatestone Road that has been located to be close to the works and in a suitable position in line with relevant highway safety requirements.	
11-7.28	Suggestion that the Project is routed away from / the Project should not be located at a specific location	Further assessment and technical appraisal has been undertaken following feedback received from the statutory consultation and subsequent targeted consultations which has resulted in several changes. Further details on these changes can be found in this report and in the	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-7.29	Suggestion that the Project is routed away from / the Project should not be located at Broads Green	<p>2025 Design Development Report, published as part of the Development Consent Order (DCO) application.</p> <p>In response to feedback received during the 2024 statutory consultation, the 2025 targeted consultations and landowner consultation, National Grid has considered alternative alignments (which includes that suggested by the respondent to be route / located away from Broads Green i.e away from TB141 to TB150) to the east and west of Chelmsford, modifications to the alignment consulted upon along with the selection of pylon type as well as the justification for the use of underground cable. In the Corridor and Preliminary, Routing and Siting Study (CPRSS) published as part of the 2022 non-statutory consultation and in the 2023 and 2024 Design Development Reports published in subsequent consultations, found on the Project website, and the 2025 Design Development Report (document reference 5.15), National Grid set out the challenges associated with routeing either further to the west or to the east of Chelmsford parallel to the existing 400 kV overhead line. Whilst noting the respondent's preference for one of these alternatives, no new factors have been identified nor new evidence provided nor identified to remove the basis for previous decision making. Firstly, it is noted that our assessments of the Project alignment are that it is not unacceptable in policy terms and there is no specific need therefore to change, nonetheless we have reviewed other route alternatives. The eastern route around Chelmsford remains less preferred and no change to the fundamental constraints to successful routeing have been identified or proposed. We have also previously reviewed a more westerly alignment which would be routed away from Little Waltham diverting from the south of Great Leighs towards Pleshey and then southwards past Great Waltham towards Chignal Smealey. Whilst noting a reduction in some effects for this more western alternative, it would be a longer route by 2.5 km to 3 km with a degree of transfer of</p>

		line routeing are known as the "Holford Rules" which remain a valuable tool in selecting and assessing potential overhead line route options as part of the options appraisal process. A summary of the Holford Rules is provided within Appendix I22 of this report. We are therefore not proposing a change to the alignment at Chignall Smeally.	
11-7.33	Suggestion that the Project is routed away from / the Project should not be located at Little Waltham	In response to feedback received during the 2024 statutory consultation, the 2025 targeted consultation and landowner, National Grid has considered alternative alignments (which includes that suggested by the respondent to be routed away from Littlego north of Great Waltham) to the east and west of Chelmsford, modifications to the alignment consulted upon along with the selection of pylon type as well as the justification for the use of underground cable. In the Corridor and Preliminary Routing and Siting Study (CPRSS) published as part of the 2022 non-statutory consultation and in the 2023 and 2024 Design Development Reports published in subsequent consultations, found on the Project website, and the 2025 Design Development Report (document reference 5.15) submitted as part of the Development Consent Order (DCO) application, National Grid set out the challenges associated with routeing either further to the west or to the east of Chelmsford parallel to the existing 400 kV overhead line. Whilst noting the respondent's preference for one of these alternatives, no new factors have been identified nor new evidence provided nor identified to remove the basis for previous decision making. Firstly, it is noted that our assessments of the Project alignment are that it is not unacceptable in policy terms and there is no specific need therefore to change, nonetheless we have reviewed other route alternatives. The eastern route around Chelmsford remains less preferred and no change to the fundamental constraints to successful routeing have been identified or proposed. We have also previously reviewed a more westerly alignment which would be routed away from Little Waltham diverting from the south	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		<p>of Great Leighs towards Pleshey and then southwards past Great Waltham towards Chignal Smealey. Whilst noting a reduction in some effects for this more western alternative, it would be a longer route by 2.5 km to 3 km with a degree of transfer of effects. Given that none of the effects arising for the Project alignment are considered to be at a level which is unacceptable in policy terms, National Grid continues to prefer the Project alignment and for the reasons stated the eastern and western alternatives are not progressed. Effects are assessed and presented in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application, and this has identified any need for additional mitigation.</p>	
11-7.34	Suggestion that the Project is routed away from / the Project should not be located at Newney Green	<p>National Grid has considered the respondent's feedback highlighting a preference for an alternative moved away from Newney Green. In the absence of a specific basis for the change or a proposed alternative alignment, we have considered this feedback by following the guidance in the Holford Rules in developing the alignment. Guidelines on overhead line routeing are known as the "Holford Rules" which remain a valuable tool in selecting and assessing potential overhead line route options as part of the options appraisal process. A summary of the Holford Rules is provided within Appendix I22 of this report. We are therefore not proposing a change to the alignment at Newney Green.</p>	
11-7.35	Suggestion that the Project is routed away from / the Project should not be located at Margaretting	<p>National Grid has considered the respondent's feedback highlighting a preference for an alternative moved away from Margaretting. In the absence of a specific basis for the change or a proposed alternative alignment, we have considered this feedback by following the guidance in the Holford Rules in developing the alignment. Guidelines on overhead line routeing are known as the "Holford Rules" which remain a valuable tool in selecting and assessing potential overhead line route options as</p>

11-7.41	Suggestion that the Project is routed away from / the Project should not be located at Ingatestone	<p>preference for one of these alternatives, no new factors have been identified nor new evidence provided nor identified to remove the basis for previous decision making. Firstly it is noted that our assessments of the Project alignment are that it is not unacceptable in policy terms and there is no specific need therefore to change, nonetheless we have reviewed other route alternatives. The eastern route around Chelmsford remains less preferred and no change to the fundamental constraints to successful routeing have been identified or proposed. We have also previously reviewed a more westerly alignment which would be routed away from Little Waltham diverting from the south of Great Leighs towards Pleshey and then southwards past Great Waltham towards Chignal Smealey. Whilst noting a reduction in some effects for this more western alternative, it would be a longer route by 2.5 km to 3 km with a degree of transfer of effects. Given that none of the effects arising for the Project alignment are considered to be at a level which is unacceptable in policy terms, National Grid continues to prefer the Project alignment and for the reasons stated the eastern and western alternatives are not progressed. Effects are assessed and presented in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application, and this has identified any need for additional mitigation.</p> <p>National Grid has considered the respondent's feedback highlighting a preference for an alternative moved away from Ingatestone. In the absence of a specific basis for the change or a proposed alternative alignment, we have considered this feedback by following the guidance in the Holford Rules in developing the alignment. Guidelines on overhead line routeing are known as the "Holford Rules" which remain a valuable tool in selecting and assessing potential overhead line route options as part of the options appraisal process. A summary of the Holford Rules is</p>	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		provided within Appendix I22 of this report. We are therefore not proposing a change to the alignment at Ingatestone.	
11-7.42	Suggestion that the Project is routed away from / the Project should not be located at Buttsbury	National Grid has considered the respondent's feedback highlighting a preference for an alternative moved away from Buttsbury. In the absence of a specific basis for the change or a proposed alternative alignment, we have considered this feedback by following the guidance in the Holford Rules in developing the alignment. Guidelines on overhead line routeing are known as the "Holford Rules" which remain a valuable tool in selecting and assessing potential overhead line route options as part of the options appraisal process. A summary of the Holford Rules is provided within Appendix I22 of this report. We are therefore not proposing a change to the alignment at Buttsbury.	
11-7.43	Suggestion that the Project is routed away from / the Project should not be located at Fryerning	National Grid has considered the respondent's feedback highlighting a preference for an alternative moved away from Fryerning. In the absence of a specific basis for the change or a proposed alternative alignment, we have considered this feedback by following the guidance in the Holford Rules in developing the alignment. Guidelines on overhead line routeing are known as the "Holford Rules" which remain a valuable tool in selecting and assessing potential overhead line route options as part of the options appraisal process. A summary of the Holford Rules is provided within Appendix I22 of this report. We are therefore not proposing a change to the alignment at Fryerning.	
11-7.44	Suggestion that the Project is routed away from / the Project should not be located at Stock	National Grid has considered the respondent's feedback highlighting a preference for an alternative moved away from Stock. In the absence of a specific basis for the change or a proposed alternative alignment, we have considered this feedback by following the guidance in the Holford Rules in developing the alignment. Guidelines on overhead line routeing are known as the "Holford Rules" which remain a valuable tool in selecting and	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-7.45	Suggestion that the Project is routed away from / the Project should not be located at Minnow End	<p>assessing potential overhead line route options as part of the options appraisal process. A summary of the Holford Rules is provided within Appendix I22 of this report. We are therefore not proposing a change to the alignment at Stock.</p> <p>National Grid has considered the respondent's feedback highlighting a preference for an alternative moved away from Minnow End. In the absence of a specific basis for the change or a proposed alternative alignment, we have considered this feedback by following the guidance in the Holford Rules in developing the draft alignment. Guidelines on overhead line routeing are known as the "Holford Rules" which remain a valuable tool in selecting and assessing potential overhead line route options as part of the options appraisal process. A summary of the Holford Rules is provided within Appendix I22 of this report. We are therefore not proposing a change to the alignment at Minnow End.</p>	
Economic/ Employment Impact			
11-7.46	Concern about negative impact on businesses in the area	<p>Through the routeing and siting exercise, National Grid has sought to reduce as far as practicable impacts to businesses.</p> <p>Impacts on local businesses within the Local Study Area (the Order Limits) and within the 3 km Study Area (where visual impact is likely to be an economic consideration) are assessed in Environmental Statement (ES) Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15). As part of this assessment, a range of mitigation measures have been considered to reduce disruption to businesses and their users during the construction phase of the Project. These measures are identified in ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15), the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the Outline Construction</p>	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change	
		Traffic Management Plan (CTMP) (document reference 7.3) which accompany the Development Consent Order (DCO) application.		
Environmental Impact				
11-7.47	Concern that the Project will result in a negative impact on the environment / countryside generally (no details given)	<p>National Grid has sought to reduce, as far as practicable, impacts on the environment / countryside through routeing and siting and an ongoing iterative design process which has taken on board feedback at different stages of the Project. The iterative design process sought to avoid areas of highest concern, for examples through changes to the route alignment or changes to the method e.g. trenchless crossings. National Grid has engaged with a range of stakeholders (including Statutory Environmental Bodies (SEBs) and relevant local planning authorities) throughout the development of the Project design and environmental assessment work.</p> <p>National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project. The results of this assessment are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation (and maintenance) of the Project and recommends appropriate mitigation measures to reduce potential effects.</p> <p>A number of mitigation measures have been incorporated into the Project design. Mitigation relevant to specific environmental topics (including Ecology and Biodiversity, Landscape and Visual and Historic Environment) are presented in the relevant ES chapters. The Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Code of Construction Practice (CoCP) (document reference 7.2) contain a list of relevant good practice measures to avoid or reduce risks to habitats and species.</p>		

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		In addition to the EIA, National Grid has set itself a target of delivering 10% biodiversity net gain (BNG) with environmental and societal benefits on all construction projects, meaning that as a result of measures taken, the biodiversity rating of the area will be enhanced by 10% greater than prior to the construction of the Project. The BNG target for the Project is currently voluntary and aligned with our corporate sustainability commitment.	
11-7.48	Concern that the Project will impact conservation area	Through routeing and siting National Grid has sought to reduce as far as practicable potential impacts on the historic environment. The impacts of the Project on the historic environment are assessed in Chapter 11: Historic Environment of the Environmental Statement (ES) (document reference 6.11). The assessment considers the potential impact on conservation areas and includes assessment of potential for physical impact and impact through change to setting that affects the value of a heritage asset. The assessment is supported by walkover and setting surveys, as documented in Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1). The assessment concludes that some conservation areas would experience significant effects. In addition to the proposals in the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4), the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5) sets out appropriate mitigation for the historic environment. The Project has engaged with Historic England and relevant planning authorities on aspects relating to heritage, including appropriate mitigation measures and techniques and to take their views into account during Project development.	
11-7.49	Concern about the impact of the Project on flooding	A detailed Flood Risk Assessment (FRA) has been prepared (document reference 7.9) in addition to a flood warning and evacuation plan that	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		<p>details actions for flooding emergency during Project construction, as an appendix to the Outline Code of Construction Practice (CoCP) (document reference 7.2). The FRA has assessed a range of sources of flooding to the Project and arising from the Project, and a range of measures, including those embedded within the design, and good practice, have been secured to ensure that the Project is resilient to flooding, and does not contribute to an increase in flood risk from any source.</p>	
11-7.50	<p>Criticism that the Essex Mineral Plan has not been taken into account / Concern that proposals will need to be amended to avoid impacts on The Chignall mineral site</p>	<p>National Grid has taken account of the Essex Minerals Plan, but notes that a decision on which sites were being taken forward following consultation had not been made by end July 2025. We have taken forward with and without scenarios for all sites that were the subject of consultation. No Chignall minerals site was identified in the consultation that directly interfaces with the Project.</p>	
11-7.51	<p>Concern about impacts on rights to minerals near pylons TB154 to TB161 and the proposed underground cables near Holton St Mary / Concern that previously raised concerns about legal reviews and fees have not been addressed</p>	<p>In the development of the Project route, National Grid has sought to avoid sites either with consent for minerals extraction, that are allocated within the minerals plan or are the subject of consultation. In some cases, avoidance is not possible due to other constraints to routeing however strategies to seek to reduce the effects would be progressed. In neither the area of TB154 to TB161 nor near Holton St Mary, do the sites have a planning status that would lead to the considerations set out. The presence of rights to minerals per-se (and such rights will be extensive) do not imply any certainty of value recovery nor certainty that planning approval would ever be secured. On this basis no change is proposed.</p>	
Financial Compensation			
11-7.52	<p>Concern that the Project will devalue property / impact on property value in this section</p>	<p>National Grid acknowledges that its proposals may cause concern to landowners. Diminishment of property value known as 'injurious affection' and any other appropriate heads of claim would be considered on an</p>	

Ref no.	Summary of matters raised	National Grid's response
		<p>individual basis in accordance with current legislation. We would pursue a voluntary agreement with affected landowners, acquiring rights in accordance with our Land Rights Strategy (the strategy is subject to review). If a voluntary agreement cannot be reached, then the Compulsory Purchase Code allows for a claim of compensation for the loss that property owners may have suffered as a direct result of the retained part of your property ownership being worth less as a direct result of the works.</p> <p>If there are any specific concerns about the devaluation of property, National Grid would advise seeking third party advice. or alternatively please contact the Project team:</p> <p>Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.</p> <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD.</p>
11-7.53	Request for adequate financial compensation / Suggest that impacted individuals need to be compensated	<p>All affected landowners would be compensated for any temporary/permanent losses, and this would be dealt with on a case-by-case basis in line with the Compensation Code.</p> <p>If there are any specific concerns requiring compensation and how it would be assessed, please contact the Project team:</p> <p>Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.</p> <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD</p> <p>The Government has published its guidance on community funds for transmission infrastructure (DESNZ, 2025). National Grid is committed to</p>

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		<p>working with Ofgem, industry partners, local communities and their representatives to ensure community benefits are delivered fairly and effectively, driving lasting, positive change for the people and places integral to our developing electricity network.</p> <p>Government has also announced its plans to introduce a bill discount scheme for households within 500 m of new infrastructure, which it proposes to introduce through the Planning and Infrastructure Bill. This is evolving government policy. Government expects this scheme to be in place by 2026, and we would share further details as they emerge.</p> <p>National Grid is committed to providing a coordinated local and regional approach to community benefits. This would be delivered outside the development consent process, since this is not a material consideration in the decision on the proposed Project or a matter to be secured as part of the DCO, as per the Community Funds for Transmission Infrastructure: Guidance (DESNZ, 2025).</p>	
11-7.54	Request that National Grid purchases respondent's property / business	<p>National Grid is not required to purchase properties or businesses as part of the Project.</p> <p>National Grid compensates landowners in line with the Compensation Code and any other relevant legislation.</p>	
Health, Safety & Wellbeing			
11-7.55	Concern that the Project may result in a negative impact on mental health / wellbeing	<p>National Grid recognises people may have concerns about the health effects of living close to an overhead line, and that the uncertainty whilst the proposals are developed may cause anxiety.</p> <p>We have sought to reduce potential effects on communities and residents through routeing and design. We have also sought to reduce concern or uncertainty about the proposals through making timely design decisions</p>	

Ref no.	Summary of matters raised	National Grid's response
		<p>and engaging with the people and stakeholders throughout the development of the Project.</p> <p>The Project team will continue to engage with people potentially affected during progress of the Project, through regular communication including letters, phone calls and meetings. This would enable concerns to be raised and discussed at an early opportunity and provide a regular point of contact to respond to queries and concerns.</p> <p>We urge anyone with concerns to get in touch through the Norwich to Tilbury Freephone number, address or email throughout the progress of the Project:</p> <p>Call our Community Helpline: 0800 915 2497 (Lines are open Monday to Friday 9:00am – 5:30pm)</p> <p>Email us: contact@n-t.nationalgrid.com</p> <p>Write to us: FREEPOST N TO T (No stamp or further address details are required)</p> <p>The UK has a carefully thought-out set of policies for protecting us all against Electric and Magnetic Fields (EMFs), the main component of which is exposure guidelines. Those exposure guidelines are set by independent scientific bodies and are based on decades-long studies into the effects of EMFs and ill health. After those decades of research, the weight of evidence is against there being any health risks of EMFs below the guideline limits. These policies are incorporated into the decision-making process for Development Consent in National Policy Statement (NPS) EN-5. It is National Grid's policy to ensure that all of its equipment comply fully with those exposure limits.</p>
11-7.56	Concern about health risks associated with the Project / physical health risks associated with the Project	Health considerations are given a high priority in the process by which we arrive at any proposals for new electricity circuits. Assessment of compliance with Electric and Magnetic Field (EMF) guidelines and policies

Ref no.	Summary of matters raised	National Grid's response
		<p>is key to National Grid's approach. The UK has a carefully thought-out set of policies for managing EMFs. There have been over four decades of research looking into whether EMF can cause health effects and there are no established effects below the exposure limits. When designing our overhead lines, substations and underground cables design criteria, we ensure they would not exceed those exposure limits, even when operating at 100% capacity. Additionally, the precautionary measures which the Government have adopted, are applied to the design which ensure the EMFs reduce as quickly with distance as possible. Evidence of that compliance is presented in the Electric and Magnetic Field Compliance Report (document reference 7.8) submitted as part of the Development Consent Order (DCO) application.</p> <p>National Grid takes this issue very seriously and looks to authoritative and independent scientific organisations such as the World Health Organisation (WHO) and in the UK Health Security Agency (UKHSA) to review the worldwide body of scientific evidence on health. Important decisions on health are taken independently of industry, and National Grid has followed the guidance and policies adopted by Government on advice from their scientific experts. Each of these organisations have comprehensive reviews of EMF research available to view on their websites.</p>
11-7.57	Concern that poor maintenance of vegetation around pylons will lead to further wildfires in the area / Suggest the PEIR is updated to account for where the pylon route is adjacent to vegetation in areas of known fire risk and any additional mitigation costs are quantified and referenced against consequent local environmental impact on wildlife	National Grid notes the respondent's feedback. National Grid would manage vegetation under the alignment and pylon bases to ensure electrical clearance in line with well establishment maintenance procedures deployed across the network; one benefit of this maintenance process is it minimises and reduces fire risk from potential infringement.

Ref no.	Summary of matters raised	National Grid's response	
Heritage			
11-7.58	Concern about archaeological impacts	<p>Through routeing and siting National Grid has sought to reduce as far as practicable potential impacts on the historic environment. The impacts of the Project on the historic environment are assessed in Chapter 11: Historic Environment (document reference 6.11) of the Environmental Statement (ES). The assessment considers the potential impact on archaeology, historic buildings and historic landscapes and includes assessment of potential for physical impact, impact through change to setting that affects the value of a heritage asset and impact through indirect factors such as change in hydromorphology. The assessment is supported by walkover, setting and geophysical surveys, as documented in ES Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1) and ES Appendix 11.4: Geophysical Survey Results Report (document reference 6.11.A4).</p> <p>Archaeological trial trench evaluation has also been undertaken and is reported in ES Appendix 11.5: Trial Trenching Results Report (document reference 6.11.A5). In addition to the proposals in the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4), the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5) sets out appropriate mitigation for the historic environment. The Project has engaged with Historic England and relevant planning authorities on aspects relating to heritage, including appropriate mitigation measures and techniques and to take their views into account during Project development which are detailed in ES Chapter 11: Historic Environment (document reference 6.11).</p>	
11-7.59	Concern about negative impact on heritage / Suggest that the Project should be routed away from heritage buildings / listed buildings / historical site	Through routeing and siting National Grid has sought to reduce as far as practicable potential impacts on the historic environment. The impacts of the Project on the historic environment are assessed in Chapter 11:	

Ref no.

Summary of matters raised

National Grid's response

Historic Environment (document reference 6.11) of the Environmental Statement (ES). The assessment considers the potential impact on archaeology, historic buildings and historic landscapes and includes assessment of potential for physical impact, impact through change to setting that affects the value of a heritage asset and impact through indirect factors such as change in hydromorphology. The assessment is supported by walkover, setting and geophysical surveys, as documented in ES Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1) and ES Appendix 11.4: Geophysical Survey Results Report (document reference 6.11.A4). Archaeological trial trench evaluation has also been undertaken and is reported in ES Appendix 11.5: Trial Trenching Results Report (document reference 6.11.A5). In addition to the proposals in the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4), the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5) sets out appropriate mitigation for the historic environment. The Project has engaged with Historic England and relevant planning authorities on aspects relating to heritage, including appropriate mitigation measures and techniques and to take their views into account during Project development.

11-7.60

Concern about the impact of the Project on Protected Lanes

National Grid has sought to reduce, as far as practicable, impacts on protected lanes through routing and siting and an ongoing iterative design process which has taken on board feedback at different stages of the Project.

Further details on the impact of the Project on protected lanes can be found in Environmental Statement (ES) Chapter 11: Historic Environment (document reference 6.11) and ES Chapter 13: Landscape and Visual (Document Reference 6.13).

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		A Landscape and Visual Impact Assessment (LVIA) in ES Chapter 13: Landscape and Visual (Document Reference 6.13) sets out the potential landscape and visual effects, including consideration of visual amenity of people travelling along protected lanes and also impacts on landscape character which may for example be influenced by vegetation loss along protected lanes during construction.	
Mitigation			
11-7.61	Suggest mitigation measures	<p>An Environmental Statement (ES) (document reference Volume 6: Environmental Statement) has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 ('the Infrastructure EIA Regulations'). The ES identifies and assesses the likely significant effects on the environment resulting from the construction, operation and maintenance of the Project and recommends appropriate mitigation to reduce effects.</p> <p>Environmental mitigation measures have been defined within each environmental topic chapter and set out in relevant management documents submitted with the Development Consent Order (DCO) application, including the Outline Code of Construction Practice (CoCP) (document reference 7.2), the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5).</p>	
Primary Access Routes/ Haul Road/ Construction Compounds			
11-7.62	Concern that the location of the construction compound and construction laydown area intersects with an existing access haul road to import clay and	National Grid notes the respondents concerns regarding the location of the construction compound and construction laydown area which intersects with Sheepcotes Farm's activities. The proposed access for the	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
	export minerals at Sheepcotes Farm effecting the efficiency and safety of operations / Request a comprehensive safety assessment of the construction compound and 'construction lay down' area and confirmation of safety protocols that will be put in place to ensure safe interaction between haulage vehicles and construction of the Project	Project construction compound area will be shared with the new access from the A131 which serves the SRC Group site. The Contractor will work with the Quarry and with Sheepcotes Farm to ensure none of the existing operations are impacted and safe working practices are agreed.	
Public Rights of Way (PRoW)			
11-7.63	Concern about negative impact on Public Rights of Way (PRoW) / footpaths / cycle paths / bridleways	Through routeing and siting, National Grid has sought to reduce, as far as practicable, impacts and disruption to Public Rights of Way (PRoW). The iterative design process identified the existing PRoW network and their wider connectivity and sought where practicable to reduce and where possible remove impacts to PRoW. Effects on PRoW would be mitigated where possible, maintaining access where practicable, with closures as a last resort. We will continue to engage with relevant stakeholders on the PRoW network to enable feedback and input to be considered as the Project progresses. An Outline Public Rights of Way (PRoW) Management Plan (document reference 7.6) is submitted with the Development Consent Order (DCO) application.	
Requests			
11-7.64	Request for further impact surveys in this section	National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project. The assessment is informed by a suite of field surveys and desk studies and results are presented in an Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the application for development consent. The ES identifies	

Ref no. Summary of matters raised National Grid's response

and assesses the likely significant effects on the environment resulting from the construction and operation (and maintenance) of the Project and recommends appropriate mitigation measures to reduce potential adverse impacts.

The scope of the EIA is included in the Scoping Report (document reference 6.19) which was submitted to the Planning Inspectorate in November 2022 and their Scoping Opinion (document reference 6.20) received in December 2022. This provided the opportunity for statutory bodies to comment on the scope of the EIA which included our approach on study areas, data collection and baseline conditions for a range of environmental topics. We also discussed and agreed survey scope with stakeholders (including Statutory Environmental Bodies and Local Planning Authorities) following the Scoping Opinion (document reference 6.20) to ensure a robust baseline assessment.

National Grid has prepared an Outline Code of Construction Practice (CoCP) (document reference 7.2) which sets out the required mitigation measures and environmental commitments that would be implemented during the construction phase of the Project to avoid or reduce potential effects of the Project on the environment, including commitments to undertake further surveys.

Tourism

11-7.65 Concern about impact of the Project on tourism

Through routeing and siting, National Grid has sought to avoid, as far as practicable, locations important for leisure and tourism.

Environmental Statement (ES) Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) presents an assessment on the potential impacts on tourism economy (during construction) and tourism assets (during construction and operation), including visitor accommodations. As part of this assessment, a range of measures have

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		been considered throughout the construction phase of the Project to minimise disruption on tourism. These include traffic management, signage and routeing measures. These are identified within the ES Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15), the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).	
Visual Impact			
11-7.66	Concern that the Project will be unsightly / visually intrusive (including overhead lines, CSE compounds and substations) / Concern that the Project will cause a negative impact on views	<p>National Policy Statement (NPS) EN-5 makes it clear that the Government considers overhead lines to be appropriate and acceptable in most instances, although it recognises that that there may be, at particularly sensitive locations, potential adverse landscape and visual impacts of an overhead line that make it inconsistent with our duties and relevant planning policy.</p> <p>The Dedham Vale National Landscape (previously an Area of Outstanding Natural Beauty (AONB)) designation is one such location where underground cable technology is proposed with the extent of underground cabling extending beyond the boundary in response to the potential for the Project to affect the National Landscape. Our proposals include a total of approximately 20 km of underground cable through and in the vicinity of the Dedham Vale National Landscape, including a section at Great Horkesley to reduce the changes in views and setting of the National Landscape from within and adjacent to its designated boundary.</p> <p>Underground cabling is also proposed for a short section of 400 kV overhead line crossing near Fairstead.</p> <p>Cable Sealing End (CSE) compounds are required to facilitate sections of underground cable, and the proposed East Anglia Connection Node (EACN) substation is required to connect customers, and the proposed</p>	

Ref no.	Summary of matters raised	National Grid's response
		<p>Tilbury North Substation is required to connect the Project into the existing Tilbury Substation. These components have been carefully sited taking into consideration Horlock Rules including the potential for landscape and visual effects.</p> <p>The higher cost of underground cables to bill paying consumers, and the environmental implications of installing underground cables and maintaining them at locations outside the Dedham Vale National Landscape, are not considered to be justifiable in the context of national policy or National Grid's statutory duties, which include the need to be economical and efficient.</p> <p>A Landscape and Visual Impact Assessment (LVIA), presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13), has been undertaken as part of the Environmental Impact Assessment (EIA). The LVIA includes an assessment on both landscape character and visual amenity and identifies areas for potential mitigation planting around substations and CSE compounds to reduce visual impacts to local receptors. The Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) includes details regarding the planting proposals.</p>
Wildlife/ Ecology Impact		
11-7.67	Concern about impact of the Project on flightpaths for birds	<p>Chapter 8: Ecology and Biodiversity of the Environmental Statement (ES) (document reference 6.8) considers potential impacts during the construction and operational phase of the Project on birds. Bird surveys have been undertaken across the route between 2022-2024 to determine an accurate baseline value, the scope of which has been agreed with Natural England and Local Planning Authorities. The potential for bird collision risk impact during the operational phase has been assessed within the ES and Habitat Regulations Assessment (HRA) (document</p>

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-7.68	Concern about impact of the Project on birds	<p>reference 5.3) and agreed with Natural England. Any adverse impacts identified have been minimised as far as possible, where practicable, and mitigation in the form of bird diverters proposed.</p> <p>Chapter 8: Ecology and Biodiversity of the Environmental Statement (ES) (document reference 6.8) considers potential impacts during the construction and operational phase of the Project on birds. Bird surveys have been undertaken across the route between 2022-2024 to determine an accurate baseline value, the scope of which has been agreed with Natural England and Local Planning Authorities. The potential for bird collision risk impact during the operational phase has been assessed within the ES and Habitat Regulations Assessment (HRA) (document reference 5.3) and agreed with Natural England. Any adverse impacts identified have been minimised as far as possible, where practicable, and mitigation in the form of bird diverters proposed.</p> <p>It is noted that birds are a mobile species, and it is likely that active nests for common and widespread species may be encountered during the construction phase. Precautionary working methods for breeding birds are included within the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the Outline Landscape Ecological Management Plan (LEMP) (document reference 7.4). accompanying the Development Consent Order (DCO) application.</p>	
11-7.69	Concern that the Project will result in a negative impact on species (protected status not specified)	Through routeing, siting and detailed design National Grid has sought to reduce, as far as practicable, potential impacts on biodiversity including protected species. The design process has taken account of existing biodiversity, the natural environment and, where practicable, has sought to reduce impacts on areas of ecological sensitivity including protected species and their associated habitats, through avoidance or mitigation. A comprehensive survey effort for a range of protected species was	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		<p>completed over the 2023 – 2024 period. Chapter 8: Ecology and Biodiversity of the Environmental Statement (ES) (document reference 6.8)</p> <p>assesses the effects on protected species based on this baseline information and where/if required appropriate mitigation measures are detailed. Suitable mitigation for protected species has been developed in consultation with Natural England to ensure legal compliance and best practice guidelines are adhered to. Where necessary, draft licence applications have been drafted and National Grid is in the process of agreeing the detail within the licence documents with Natural England, in order to obtain the relevant Letters of No Impediment (LoNI). Mitigation for non-licensable protected species has been included within the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4).</p>	
11-7.70	Concern that the Project will result in a negative impact on protected species	<p>Through routeing, siting and detailed design, National Grid has sought to reduce, as far as practicable, potential impacts on biodiversity including protected species. The design process has taken account of existing biodiversity, the natural environment and, where practicable, has sought to reduce impacts on areas of ecological sensitivity including protected species and their associated habitats, through avoidance or mitigation. A comprehensive survey effort for a range of protected species was completed over the 2023 – 2024 period. Chapter 8: Ecology and Biodiversity of the Environmental Statement (ES) (document reference 6.8) assesses the effects on protected species based on this baseline information and where/if required appropriate mitigation measures are detailed. Suitable mitigation for protected species has been developed in consultation with Natural England to ensure legal compliance and best practice guidelines are adhered to. 		<p>agreeing the detail within the licence documents with Natural England, in order to obtain the relevant Letters of No Impediment (LoNI). Mitigation for non-licensable protected species has been included within the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4).</p>	
11-7.71	<p>Concern that the Project will result in a negative impact on flora / plants / woodlands / hedgerows</p>	<p>Through routeing, siting and detailed design, National Grid has sought to reduce, as far as practicable, potential impacts on biodiversity including priority grassland, wetland, woodland, and hedgerow habitats. The design process has taken account of existing biodiversity, the natural environment and, where practicable, seeks to reduce impacts on areas of ecological sensitivity, through avoidance or mitigation.</p> <p>Chapter 8: Ecology and Biodiversity of the Environmental Statement (ES) (document reference 6.8) assesses the effects on important ecological receptors (which includes grasslands, wetlands, woodlands and hedgerows).</p> <p>As part of the Environmental Impact Assessment (EIA) process for the Project, a suite of ecological surveys has been to be undertaken. The findings of which inform the design and approach to mitigation.</p> <p>The Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Code of Construction Practice (CoCP) (document reference 7.2) contain a list of relevant good practice measures to avoid or reduce impacts on valuable habitats.</p> <p>The Environment Act 2021 introduces a mandatory requirement for 10% Biodiversity Net Gain (BNG) for new Development Consent Order (DCO) developments (which is not yet in force and not expected until May 2026). National Grid</p> <p>has committed to delivering 10% BNG with environmental and societal benefits on all construction projects. The BNG target for the Project is</p>	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-7.72	Concern that the Project will result in a negative impact on rivers / other bodies of water	<p>currently voluntary and aligned with our corporate sustainability commitment.</p> <p>As well as seeking to avoid and minimise impacts to nature, the Project considers the land required for mitigation, compensation and enhancement that can deliver BNG and wider environmental benefits. This will require delivery of offsite Biodiversity Units via habitat creation or enhancement actions in strategic areas, and we will consider all offsite options that are available to us.</p> <p>Through routing, siting and detailed design National Grid has sought to reduce, as far as practicable, potential impacts on biodiversity including river ecology. The design process has taken account of existing biodiversity, the natural environment and, where practicable, has sought to reduce impacts on areas of ecological sensitivity such as river corridor habitats, through avoidance or mitigation. The same approach has been taken to account for rivers and their floodplains, seeking to avoid or reduce the footprint of the Project within floodplains.</p> <p>As part of the Environmental Impact Assessment (EIA) process for the Project, a suite of ecological surveys has been undertaken, including along river corridors. The data has informed the assessment of effects on biodiversity, hydromorphology, water quality and flood risk presented in the Environmental Statement (ES), Chapter 8: Ecology and Biodiversity (document reference 6.8) and ES Chapter 12: Hydrology, Land Drainage and Flood Risk (document reference 6.12) and the Water Framework Directive Assessment (document reference 7.10).</p> <p>Further, the Project has engaged with Natural England, the Environment Agency and Local Planning Authorities on aspects relating to river ecology, water quality and flood risk, and appropriate mitigation measures</p>	

Ref no.

Summary of matters raised

National Grid's response

		<p>and techniques have been secured in the Outline Code of Construction Practice (CoCP) (document reference 7.2).</p> <p>The Environment Act 2021 introduces a mandatory requirement for 10% Biodiversity Net Gain (BNG) for new Development Consent Order developments (which is not yet in force and expected May 2026). National Grid has committed to deliver 10% BNG with environmental and societal benefits on all construction projects including for river ecology. The BNG target for the Project is currently voluntary and aligned with National Grid's corporate sustainability commitment.</p> <p>As well as seeking to avoid and minimise our impacts on nature, the Project includes enhancement of watercourse habitats as part of BNG mitigation.</p>	
11-7.73	Concern that the Project will result in a negative impact on wildlife / biodiversity / ecology (generally)	<p>Through routeing, siting and detailed design National Grid has sought to reduce, as far as practicable, potential impacts on biodiversity. The design process has taken account of existing biodiversity, the natural environment and, where practicable, has sought to reduce impacts on areas of ecological sensitivity, through avoidance or mitigation.</p> <p>Chapter 8: Ecology and Biodiversity of the Environmental Statement (ES) (Document Reference 6.8) assesses the effects on important ecological receptors.</p> <p>As part of the Environmental Impact Assessment (EIA) process for the Project, a suite of ecological surveys has been to be undertaken over the 2022-2024 period. Basildon and Brentwood feedback

Basildon and Brentford specific feedback (Further Landowner Consultation)

Table 11-8 Summary of consultee comments and National Grid's response

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
Agricultural land			
11-8.1	Concern that the Project will take away valuable agricultural land / disrupt farming operations	<p>During the construction stage of the Project, there would be areas of agricultural land that would be temporarily disrupted. National grid would only use land that is required as part of the Project and would seek to minimise the use of agricultural land where reasonable and safe to do so.</p> <p>National Grid is and will continue to work with all landowners including farmers who may be affected by the proposals to understand the impacts on their operations and to work with them as the Project is developed. We would seek to work with the farming community to limit disruption where practicable. This includes providing prior warning of works which may result in the need to move livestock. Compensation claims for disturbance are considered on a case-by-case basis, if negative impact on farming operations can be proven. Particular agricultural matters can also be addressed through voluntary land agreements.</p>	
11-8.2	Concern that the Project will have a negative impact on agricultural livestock (e.g. type of livestock)	<p>National Grid is and will continue to work with all landowners including farmers and equestrian facilities who may be affected by the proposals to understand the impacts on their operations and to work with them as the Project progresses. We would seek to work with the farming community to limit disruption where practicable. This includes providing prior warning of works which may result in the need to move livestock. Compensation</p>	

Ref no. Summary of matters raised National Grid's response

claims for disturbance are considered on a case-by-case basis, if negative impact on farming operations can be proven. Particular agricultural matters can also be written into voluntary land agreements. There will also be mitigation put in place where animal grazing maybe affected.

As well as possible effects on humans, possible effects of Electric and Magnetic Fields (EMFs) on various animals have been studied. No detectable effects of EMFs have been found on, for example, health, milk production, fertility, and behaviour. This is confirmed in National Policy Statement (NPS) EN-5 which states: *"There is little evidence that exposure of crops, farm animals or natural ecosystems to transmission line EMFs has any agriculturally significant consequences."*

Airfields

11-8.3 Concern about the impact of the Project on Chase Farm Airstrip / Suggestion that the Project is routed away from Chase Farm Airstrip

National Grid has appointed an independent aviation consultancy which has engaged with the operators of this Airstrip (with National Grid also present). Following discussion and further assessment of alternatives it is not possible to route the alignment away from the airstrip at a distance that allows the continued safe use of the airstrip at its current position. We are engaging and will continue to engage with the owner of the airstrip to find an appropriate solution. Further information on the assessment of airfields can be found in the Environmental Statement (ES) Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).

Ref no. Summary of matters raised National Grid's response

Community / Social impact

11-8.4	Concern about impact of the Project on children / families / residents / communities	<p>National Grid recognises people may have concerns about the potential impacts of living close to an overhead line, and that the uncertainty whilst the proposals are developed may cause anxiety.</p> <p>We have sought to reduce potential effects on communities, residents – including children - through routeing and design. We have also sought to reduce concern or uncertainty about the proposals through making timely design decisions and engaging with people and stakeholders throughout the development of the Project. If the Project received Development Consent, the Project team would continue to engage with people potentially affected during construction, through regular communication including letters, phone calls and meetings, where necessary.</p> <p>We urge anyone with concerns to get in touch through the Norwich to Tilbury Freephone number, address or email, which will remain open throughout examination.</p> <p>National Grid is committed to working with local suppliers, facilitated by supporting forums (such as the local Chambers), on electricity industry skills and workforce planning. National Grid is also committed to providing a coordinated regional approach to jobs and skills opportunities. This commitment is broader than the individual project and separate to any commitments under the proposed development consent order for this Project. The socio-economic effects of the project are assessed in Chapter 15:Socio-economics, Recreation and Tourism of the Environmental Statement (ES) (document reference 6.15). Post construction job opportunities are limited given the nature of the development however we will still work with Local Authorities (including facilitating local partners) to understand what is important to them around skills and employment to</p>
--------	--	--

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		<p>ensure we leave a lasting positive legacy in the communities where we operate.</p> <p>With regards to a delivery mechanism, the above measures will be delivered as part of our community benefit package, which will look at both local and regional initiatives. This will be delivered outside the development consent process and is not a material consideration in the decision on the proposed Project or a matter to be secured as part of the DCO, as per the Community Funds for Transmission Infrastructure: Guidance (DESNZ, 2025).</p>	
11-8.5	Concern about impact of the Project on school / educational facilities	<p>Through routeing and siting, National Grid has sought to avoid, as far as practicable, locations of education establishments.</p> <p>Environmental Statement (ES) Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) presents an assessment on the potential impacts on education facilities as a result of the Project. As part of the assessment, a range of measures are considered throughout the construction phase of the Project to reduce, where practicable, disruption on education establishments. These include traffic management, signage and routing measures to ensure access or partial access can be maintained where feasible. These are identified within the Environmental Statement (ES) Chapter 15: Socio-economics, Recreation and Tourism, the Outline Code of Construction Practice (CoCP) (document reference 7.2), the Outline Dust Management Plan (document reference 7.2, Appendix D) and the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).</p>	
11-8.6	Concern about impact of the Project on leisure	<p>Through routeing and siting National Grid has sought to avoid, as far as practicable, locations important for leisure and tourism. Environmental Statement (ES) Chapter 15: Socio-economics, Recreation and Tourism</p>	

Ref no. Summary of matters raised National Grid's response

(document reference 6.15) presents an assessment of the potential impacts on sports clubs, recreational land and recreational routes located within the Order Limits. As part of this assessment, a range of measures have been considered throughout the construction phase of the Project to minimise disruption on leisure and tourism. These include: traffic management, signage and routeing measures. These are identified within Environmental Statement (ES) Chapter 15: Socio-economics, Recreation and Tourism, the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).

11-8.7 Concern about the Project being in too close proximity to recently built housing developments / using land being considered for future development (including residential, commercial, infrastructural, and employment sites)

National Grid has obtained information on existing, under construction, consented but not built schemes as well as development proposals within the planning system. The Project design has responded to those that are confirmed through consideration of routeing.

In the case of development proposals, some can be amended to be designed around our proposed infrastructure but in other cases our proposals may need to be amended at a corridor level, or proposed developments factored into our detailed route design.

Based on known information, and in light of changes made following consideration of feedback to the 2022 and 2023 non-statutory consultations, statutory consultation and targeted consultations, we consider our proposals are consistent with relevant policy and guidelines and the alignment designed such that they do not prevent proposed housing developments from being successfully progressed. UK law does not prescribe minimum distances between overhead lines and homes, but any implications on landscape and visual receptors, residential amenity or from concerns about electromagnetic fields are robustly assessed as part of the Environmental Impact Assessment (EIA) and balanced as part of the

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-8.8	Concern about the Project causing communities to become encircled / surrounded by overhead lines	<p>decision making process. We will continue to review planning applications and engage with developers as necessary.</p> <p>The alignment has been routed to achieve some separation from the existing 400 kV overhead line, such that villages are not encircled by overhead lines to both sides. Separation is inevitably reduced in certain locations due to the presence of constraints to routeing and environmental features. Detailed assessment reported in the Environmental Statement (ES) identifies any measures considered to be necessary to reduce likely significant effects which would also consider the potential for effects potentially arising from close paralleling existing 132 kV overhead line and new 400 kV overhead line infrastructure.</p>	
11-8.9	Concerned that the Project will have a negative impact on domestic horses / equestrian activities	<p>As well as possible effects on humans, the possible effects of Electric and Magnetic Fields (EMFs) on various animals have been studied. No proven effects of EMFs have been found in any species at levels below the guidelines. This is confirmed in National Policy Statement (NPS) EN-5 which states: <i>"There is little evidence that exposure of crops, farm animals or natural ecosystems to transmission line EMFs has any agriculturally significant consequences."</i> Although horses are not directly mentioned, there is no evidence to suggest they are any different to other farm animals.</p> <p>As well as the possible direct biological or health effects addressed above, indirect effects such as microshocks can occur as a result of electric fields. Microshocks are small spark discharges which are similar to a static shock after walking across a nylon carpet for example. The Project would be designed in accordance with the principles of the Governments Code of Practice <i>'Power Lines: Control of Microshocks and other indirect effects of</i></p>	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-8.10	Concern about the impact of the Project on emergency services / ambulances / hospitals / health service	<p><i>public exposure to electric fields'</i> to ensure these are mitigated, which include equestrian activities.</p> <p>Through routeing and siting National Grid has sought to avoid and reduce as far as practicable effects on identified healthcare facilities.</p> <p>Environmental Statement (ES) Chapter 10: Health and Wellbeing (document reference 6.10) consider the potential impacts on, and access to, healthcare facilities, including emergency services, ambulances, hospitals and other NHS services associated with the construction of the Project, drawing on information from Environmental Statement (ES) Chapter 16: Traffic and Transport (document reference 6.16). No health facilities are due to be directly impacted by the Project and where road diversions are required traffic management and mitigation measures would be in place to reduce impacts. These include traffic management, signage and routing measures to ensure access or partial access can be maintained where feasible. Further detail on proposed mitigation measures are presented in the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), which has been produced following engagement with stakeholders including the emergency services.</p>	
11-8.11	Criticism of surveys undertaken for the Project in this Section	<p>There is a staged approach to the process of collection of environmental data as any major project develops. National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project. The assessment is informed by a suite of field surveys and desk studies and results are presented in an Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the application for development consent. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation</p>	

Ref no. Summary of matters raised National Grid's response

(and maintenance) of the Project and recommends appropriate mitigation measures to reduce potential adverse impacts.

The scope of the EIA is included in the Scoping Report (document reference 6.19) which was submitted to the Planning Inspectorate in November 2022 and their Scoping Opinion (document reference 6.20) received in December 2022. This provided the opportunity for statutory bodies to comment on the scope of the EIA which included our approach on study areas, data collection and baseline conditions for a range of environmental topics. We also discussed and agreed survey scope with stakeholders (including Statutory Environmental Bodies and Local Planning Authorities) following the Scoping Opinion (document reference 6.20) to ensure a robust baseline assessment.

National Grid has prepared an Outline Code of Construction Practice (CoCP) (document reference 7.2) which sets out the required mitigation measures and environmental commitments that would be implemented during the construction phase of the Project to avoid or reduce potential effects of the Project on the environment, including commitments to undertake further surveys.

Construction impacts

11-8.12	Concern about disruption from construction	An Environmental Statement (ES) (document reference: Volume 6: Environmental Statement) has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 ('the Infrastructure EIA Regulations'). The ES identifies and assesses the likely significant effects on the environment resulting from the construction of the Project and recommends appropriate mitigation to reduce effects.
---------	--	--

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-8.13	Concern about noise and other issues resulting from construction (e.g. mud on roads, dust)	<p>Environmental mitigation measures have been defined within each environmental topic chapter and set out in relevant management documents submitted with the Development Consent Order (DCO) application, including the Outline Code of Construction Practice (CoCP) (document reference 7.2), the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5).</p> <p>An Environmental Statement (ES) (document reference: Volume 6: Environmental Statement) has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 ('the Infrastructure EIA Regulations'). The ES identifies and assesses the likely significant effects on the environment resulting from the construction of the Project and recommends appropriate mitigation to reduce effects.</p> <p>Specifically, a Construction Noise and Vibration Impact Assessment has been undertaken and is reported in Environmental Statement (ES) Chapter 14: Noise and Vibration (document reference 6.14). During construction, mitigation would be implemented to reduce noise and vibration impacts from construction activities and increased road traffic noise and vibration due to additional movement from construction traffic. Mitigation measures are outlined in Environmental Statement (ES) Chapter 14: Noise and Vibration (document reference 6.14) and the Outline Code of Construction Practice (CoCP) (document reference 7.2). This includes the assumption that construction working would be undertaken within the agreed working hours, construction traffic would be managed through the Construction Traffic Management Plan (CTMP) (document reference 7.3), haul roads</p>	

Ref no. Summary of matters raised National Grid’s response

would be well maintained, and Best Practicable Means (BPM) would be employed to reduce construction noise and vibration.

Environmental Statement (ES) Chapter 7: Air Quality (document reference 6.7) presents an assessment of the potential impacts from the construction of the Project on air quality. During construction, mitigation would be implemented to reduce the impact of dust generation and construction vehicle emissions. Mitigation measures are outlined in Environmental Statement (ES) Chapter 7: Air Quality (document reference 6.7), and the Outline CoCP (document reference 7.2). The dust-emitting activities can be greatly reduced or eliminated by applying the site-specific mitigation measures (see Outline CoCP) for high risk sites following measures recommendations in the Institute of Air Quality Management (IAQM) guidance (IAQM, 2024). The IAQM guidance states that with the implementation of effective site-specific mitigation measures, the environmental effect would not be significant in most cases.

In addition, National Grid has prepared an Outline Code of Construction Practice (CoCP) (document reference 7.2). The Outline CoCP sets out the required mitigation measures and environmental commitments that would be implemented during the construction phase of the Project to avoid or reduce potential effects of the Project on the environment.

11-8.14	Concern that local road infrastructure is not suitable for heavy construction vehicles and machinery	A strategy has been developed to manage the impact of construction vehicles on the public highway and sensitive receptors, using suitable Local Road Network connections from the Strategic Road Network called Primary Access Routes. In addition, temporary haul roads for construction vehicles are proposed along the Project alignment, further reducing the impact of construction traffic on the local road network. Further details of the strategy can be found within the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).
---------	--	---

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		The Project also requires the transportation of Abnormal Indivisible Loads (AIL). National Grid is developing specific routing proposals for AIL movements and is developing these through engagement with the relevant stakeholders including the local highway authorities and National Highways. An AIL routing strategy containing details about these movements are submitted in support of the Development Consent Order (DCO) application.	
Consultation			
11-8.15	Comment supportive of the Project in this section	National Grid notes the respondent's feedback.	
11-8.16	Criticism of consultation specific to this section	National Grid notes the respondent's feedback.	
11-8.17	Criticism of consultation events in this Section	National Grid notes the respondent's feedback.	
Design Change (CR)			
11-8.18	Suggest that the Project is routed away from populated / residential areas	<p>Deciding where and how to build new high voltage electricity lines is a complex issue and National Grid is mindful of the potential effects this infrastructure may have on local communities and the concerns these may bring. We recognise that people living near our transmission infrastructure, including high voltage overhead lines, may have concerns about audible noise and potential health impacts. It has sometimes been suggested that minimum distances between properties and overhead lines should be prescribed.</p> <p>We do not consider this appropriate since each instance must be dealt with on its merits. However, we have always sought to route new lines away from residential property on grounds of general amenity where possible.</p>	

Ref no. Summary of matters raised

National Grid's response

We have undertaken a noise and vibration assessment which can be found in the Environmental Statement (ES), Chapter 14: Noise and Vibration (document reference 6.14) that forms part of the Environmental Impact Assessment (EIA) for the Project. Noise levels and the effect on residential properties as well as other sensitive areas, such as hospitals and schools, are carefully considered during planning, assessed according to the appropriate UK standards, and mitigated where necessary. We set strict technical standards for the equipment we install on our network. These will apply to the proposed new East Anglia Connection Node (EACN) substation, and extensions required to the existing Norwich Main, Bramford, and Tilbury Substations. These standards include requirements to ensure the occurrence of audible noise is eliminated or reduced as far as practicable. Therefore, significant adverse effects from noise are not expected.

Noise from overhead lines is predominately determined by the conductor design, voltage and weather conditions. The overhead line would be designed using a relatively quiet conductor that meets the design specification required, and operational noise is not likely to be significant at nearby sensitive receptors under any weather conditions. Pylon fittings, such as insulators, dampers, spacers, and clamps, are also designed and procured in accordance with a series of National Grid Technical Specifications to reduce the potential for audible noise and tones to occur from all types of fittings. Where noise does occur, it is likely to be localised and of short duration. If this is due to a fault, action can be taken to rectify it. A technical note has been submitted as part of the application for development consent to support scoping out noise associated with overhead lines from the ES.

In addition, we have undertaken a Landscape and Visual Impact Assessment (LVIA) for the Project. This includes an assessment on both

Ref no.

Summary of matters raised

National Grid's response

landscape character and visual amenity. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13).

The health and safety of the public, local communities and employees is central to everything that we do. The UK has a carefully thought-out set of policies for protecting us all against Electric and Magnetic Fields (EMFs), the main component of which is exposure guidelines. The exposure guidelines are set by independent scientific bodies and are based on decades-long studies into the effects of EMFs and ill health. After those decades of research, the weight of evidence is against there being any health risks of EMFs below the guideline limits. Our approach is to ensure that our network comply with those policies, which are set by Government on the advice of their independent advisors. The Project is designed to ensure it is fully compliant with these policies and guidelines. This ensures that health concerns are properly and adequately addressed.

Policies for both noise and EMF are incorporated into the decision-making process for development consent as set out in National Policy Statement (NPS) EN-5. It is National Grid's policy to ensure that all its equipment complies fully with those policies and guidelines. The application for a Development Consent Order (DCO) includes assessments against these policies, including both construction and operational noise and EMF.

11-8.19

Suggest that underground cables are used for the entirety of this section

National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors.

National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is *'that overhead lines should be the strong*

Ref no. Summary of matters raised

National Grid's response

starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or Area of Outstanding Natural Beauty (AONB))'. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider this section in its entirety would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.

Therefore, whilst undergrounding the whole of this section is not considered appropriate, our proposals do include underground cable within the Dedham Vale National Landscape (previously known as Area of Outstanding Natural Beauty (AONB)) in accordance with NPS EN-5. Prior

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-8.20	Suggest that underground cables are used in populated / residential areas	<p>to our 2023 non-statutory consultation we identified the need to extend the underground cable beyond the National Landscape boundary because of potential effects, we have further extended this section of underground cable following consideration of feedback on our 2023 non-statutory consultation and additional investigation into potential effects. We also identified an approximately 4 km section near Great Horkesley as meeting the particularly sensitive criteria where underground cable is also proposed. Additionally, underground cable is proposed at Fairstead for a 400 kV overhead line crossing.</p> <p>National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors.</p> <p>National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or Area of Outstanding Natural Beauty (AONB))'</i>. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and</p>

National Grid's response

benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at all populated or residential areas in this section would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.

11-8.21

Criticism that the Project impacts site H11 / Lynton, Lower Dunton Road, which is land designated for residential development in the Basildon Council draft Local Plan (e.g. the Project fails to observe best practice of mitigating the impact of infrastructure by routing all networks as close as possible and parallel to site boundaries) / Suggest the Project is re-routed to the southern end of the site, running alongside the railway embankment, as the least developable and lowest value part of the designated site, yet offers the most direct route for any underground infrastructure

This feedback proposes amendments to the alignment of a 132 kV underground cable that is being diverted to enable electrical clearance to be achieved for the alignment. The proposed route has been developed in conjunction with UK Power Networks and has sought to follow land boundaries and respond to available detail from planning applications to propose an alignment that reduces effects on housing developments. The alignment of these works within the Development Consent Order (DCO) application (assuming the Project is granted the DCO) provides certainty to delivery. However there remains further opportunities to modify these arrangements which would be covered by Permitted Development rights subject to appropriate land rights being secured. Given the beneficial nature of change for respective landowners it is reasonable to assume that further modification will reduce effects further.

Ref no.	Summary of matters raised	National Grid's response
11-8.22	Suggest pylon alignment is moved further west to avoid Wid Valley (as per respondents plan) and suggest proposed haul road is routed through the field to the west of the track and cross below the gas substation, to avoid widening the residential land and reduce traffic past homes / Suggest that existing track is not widened or trees or vegetation removed to mitigate challenges faced by the community (such as fly-tipping and trespassing) (as per respondents plan)	National Grid has considered a wide range of alternative overhead line alignment options to the west, including that preferred by the respondent. Relatively localized changes, whilst beneficial for the respondent, lead to greater effects on the Grade I St Giles' Church that are not acceptable in terms of heritage policy and less consistent with Holford Rule 2 and also (depending on detailed route design) on irreplaceable Ancient Woodland habitat. Other alternatives (closer to Ingatestone) are less direct, affect a different grade I listed building (Ingatestone Hall) and transfer effects. On this basis no change is proposed. Whilst our proposals allow for a temporary haul road within the field, this may create greater effects and a more open access than may be desirable to avoid the concerns raised. At detailed design, National Grid and its contractors will confirm the exact location, installation and reinstatement methods of the haul road informed by decisions on detailed construction method and access requirement.
11-8.23	Suggest pylon TB123 is moved further north and/or west to be a further distance from respondent's property (as per respondent's plan) / Suggest permanent access rights to the pylon through the industrial yard is removed due to health and safety concerns and access the pylon through neighbouring fields instead	<p>National Grid notes the respondent's feedback with regards to the permanent access route and also notes that the most appropriate route also varies in response to seasonal variation in land uses. As the Project progresses into the heads of terms and voluntary agreement stage there will be an opportunity to discuss and agree permanent access rights in more detail. No physical works are required for this permanent access route as part of the Project as these will not be used for construction. Access may be required in the future, for maintenance and surveys and therefore National Grid will look to agree the most suitable access route at that point, taking into account the landowner and National Grid's requirements.</p> <p>With regards to TB234, to move this pylon further north would require an increase to the span lengths and thus require taller pylons. Moving the pylon to the west is restricted by the existing UK Power Networks overhead</p>

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-8.24	Suggest that the Project is re-routed at Dunton to follow Church Road and continue along the western boundary of the neighbouring property as per suggestion previously made by respondent and as shown on the plan provided by respondent (e.g. following an existing road, avoiding passing within 20m of a private residence, mitigating security and biosecurity concerns, making it easier to obtain access in the future, and saving National Grid money)	line and would add an additional angle pylon which would be less consistent with the Holford Rules (see Appendix I22 of this report) and would therefore be less preferred. We have therefore not made a change to the location of this pylon.	
11-8.25	Suggest that the Project (including Pylon TB228) is re-routed near Church Road, Dunton (as per plan provided by respondent) to significantly reduce the impact on fishery and farming enterprise, and use an area of ground where there is an existing 132kv pylon (the respondent is aware of the restriction of the gas pipe in this area, however the proposed amendment to the design avoids this)	National Grid notes the respondent's feedback with regards to the permanent access route and also notes that the most appropriate route also varies in response to seasonal variation in land uses. As the Project progresses into the heads of terms and voluntary agreement stage there will be an opportunity to discuss and agree permanent access rights in more detail. No physical works are required for this permanent access route as part of the Project as this will not be used for construction. Access may be required in the future, for maintenance and surveys and therefore National Grid will look to agree the most suitable access route at that point, taking in to account the landowner and National Grid's requirements. Biosecurity mitigation requirements will be discussed and implemented in consultation with the landowner.	
11-8.26	Suggest that the Project is re-routed further west near Buttsbury (as per plan provided by respondent) so that	National Grid notes the respondent's feedback and has considered the route requested. The alternative route would impact a greater area of	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
	the Project would run in a straight line over fields rather than near residential property, or if this is not possible then suggest that the Project is re-routed as per respondents second plan (both plans provided by respondent)	proposed development at Dunton Hills Garden Village. We have undertaken an Environmental Impact Assessment which includes an assessment of access to recreation business presented in Environmental Statement (ES) Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) and a significant adverse effect has been identified. National Grid will continue to engage with the landowner.	
11-8.27	Suggestion that the Project is routed away from / the Project should not be located at a specific location	Further assessment and technical appraisal has been undertaken following feedback received from the statutory consultation and subsequent targeted consultations which has resulted in several changes. Further details on these changes can be found in this report and in the 2025 Design Development Report (document reference 5.15), published as part of the Development Consent Order (DCO) application.	
11-8.28	Suggestion that the Project is routed away from / the Project should not be located at Ingatestone Hall and Hylands House	National Grid has considered the respondent's feedback highlighting a preference for an alternative moved away from Ingatestone Hall and Hylands House In the absence of a specific basis for the change or a proposed alternative alignment, we have considered this feedback by following the guidance in the Holford Rules in developing the alignment. Guidelines on overhead line routeing are known as the "Holford Rules" which remain a valuable tool in selecting and assessing potential overhead line route options as part of the options appraisal process. A summary of the Holford Rules is provided within Appendix I22 of this report. We are therefore not proposing a change to the alignment at Ingatestone Hall and Hylands House.	
11-8.29	Suggestion that the Project is routed away from / the Project should not be located at Buckwyns Chase	National Grid notes the respondent's feedback. We have routed and sited the alignment in accordance with the Holford Rules (see Appendix I22 of this report) as well as balancing multiple environmental factors such as heritage as well as technological feasibility. The route near Buckwyns	

Ref no. Summary of matters raised National Grid's response

Chase has been influenced by the presence of Grade I Listed Ingatestone Hall and St Giles Church to the west meaning that the alignment needed to be routed further east. In the absence of any further evidence or alternative suggested, no change has been made to the alignment at this location.

Economic / Employment impact

11-8.30 Concern about negative impact on businesses in the area

Through the routeing and siting exercise, National Grid has sought to reduce as far as practicable impacts to businesses.

Impacts on local businesses within the Local Study Area (the Order Limits) and within the 3 km Study Area (where visual impact is likely to be an economic consideration) are assessed in Environmental Statement (ES) Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15). As part of this assessment, a range of mitigation measures have been considered to reduce disruption to businesses and their users during the construction phase of the Project. These measures are identified in ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15), the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) which accompany the Development Consent Order (DCO) application.

Environmental impact

11-8.31 Concern about the impact of the Project on flooding

A detailed Flood Risk Assessment (FRA) has been prepared (document reference 7.9) in addition to a flood warning and evacuation plan that details actions for flooding emergency during Project construction, as Appendix G to the Outline Code of Construction Practice (CoCP) (document reference 7.2). The FRA has assessed a range of sources of flooding to the Project and arising from the Project, and a range of

Ref no. Summary of matters raised National Grid's response

measures, including those embedded within the design, and good practice, have been secured to ensure that the Project is resilient to flooding, and does not contribute to an increase in flood risk from any source.

Financial compensation

11-8.32 Concern that the Project will devalue property / impact on property value in this section

National Grid acknowledges that its proposals may cause concern to landowners. Diminishment of property value known as 'injurious affection' and any other appropriate heads of claim would be considered on an individual basis in accordance with current legislation. We would pursue a voluntary agreement with affected landowners, acquiring rights in accordance with our Land Rights Strategy (the strategy is subject to review). If a voluntary agreement cannot be reached, then the Compulsory Purchase Code allows for a claim of compensation for the loss that property owners may have suffered as a direct result of the retained part of your property ownership being worth less as a direct result of the works.

If there are any specific concerns about the devaluation of property, National Grid would advise seeking third party advice. or alternatively please contact the Project team:

Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.

Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD.

11-8.33 Request for adequate financial compensation / Suggest that impacted individuals need to be compensated

All affected landowners would be compensated for any temporary/permanent losses, and this would be dealt with on a case-by-case basis in line with the Compensation Code.

Ref no.	Summary of matters raised	National Grid's response
		<p>If there are any specific concerns requiring compensation and how it would be assessed, please contact the Project team: Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.</p> <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD</p> <p>The Government has published its guidance on community funds for transmission infrastructure (DESNZ, 2025). National Grid is committed to working with Ofgem, industry partners, local communities and their representatives to ensure community benefits are delivered fairly and effectively, driving lasting, positive change for the people and places integral to our developing electricity network.</p> <p>Government has also announced its plans to introduce a bill discount scheme for households within 500 m of new infrastructure, which it proposes to introduce through the Planning and Infrastructure Bill. This is evolving government policy. Government expects this scheme to be in place by 2026 and we would share further details as they emerge.</p> <p>National Grid is committed to providing a coordinated local and regional approach to community benefits. This would be delivered outside the development consent process, since this is not a material consideration in the decision on the proposed Project or a matter to be secured as part of the DCO, as per the Community Funds for Transmission Infrastructure: Guidance (DESNZ, 2025).</p>
11-8.34	Request that National Grid purchase respondent's property / business	National Grid is not required to purchase any properties or businesses as part of the Project.

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		National Grid compensates landowners in line with the Compensation Code and any other relevant legislation.	
Health, Safety & Wellbeing			
11-8.35	Concern that the Project may result in a negative impact on mental health / wellbeing	<p>National Grid recognises people may have concerns about the health effects of living close to an overhead line, and that the uncertainty whilst the proposals are developed may cause anxiety.</p> <p>We have sought to reduce potential effects on communities and residents through routeing and design. We have also sought to reduce concern or uncertainty about the proposals through making timely design decisions and engaging with the people and stakeholders throughout the development of the Project.</p> <p>The Project team will continue to engage with people potentially affected during progress of the Project, through regular communication including letters, phone calls and meetings. This would enable concerns to be raised and discussed at an early opportunity and provide a regular point of contact to respond to queries and concerns.</p> <p>We urge anyone with concerns to get in touch through the Norwich to Tilbury Freephone number, address or email throughout the progress of the Project:</p> <ul style="list-style-type: none">• Call our Community Helpline: 0800 915 2497 (Lines are open Monday to Friday 9:00am – 5:30pm)• Email us: contact@n-t.nationalgrid.com• Write to us: FREEPOST N TO T (No stamp or further address details are required) <p>The UK has a carefully thought-out set of policies for protecting us all against Electric and Magnetic Fields (EMFs), the main component of which</p>	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-8.36	Concern about health risks associated with the Project / physical health risks associated with the Project	<p>is exposure guidelines. Those exposure guidelines are set by independent scientific bodies and are based on decades-long studies into the effects of EMFs and ill health. After those decades of research, the weight of evidence is against there being any health risks of EMFs below the guideline limits. These policies are incorporated into the decision-making process for Development Consent in National Policy Statement (NPS) EN-5. It is National Grid's policy to ensure that all of its equipment comply fully with those exposure limits.</p> <p>Health considerations are given a high priority in the process by which we arrive at any proposals for new electricity circuits. Assessment of compliance with Electric and Magnetic Field (EMF) guidelines and policies is key to National Grid's approach. The UK has a carefully thought-out set of policies for managing EMFs. There have been over four decades of research looking into whether EMF can cause health effects and there are no established effects below the exposure limits. When designing our overhead lines, substations and underground cables design criteria, we ensure they would not exceed those exposure limits, even when operating at 100% capacity. Additionally, the precautionary measures which the Government have adopted, are applied to the design which ensure the EMFs reduce as quickly with distance as possible. Evidence of that compliance is presented in the Electric and Magnetic Field Compliance Report (document reference 7.8) submitted as part of the Development Consent Order (DCO) application.</p> <p>National Grid takes this issue very seriously and look to authoritative and independent scientific organisations such as the World Health Organisation (WHO) and in the UK Health Security Agency (UKHSA) to review the worldwide body of scientific evidence on health. Important decisions on health are taken independently of industry, and National Grid has followed</p>	

Ref no. Summary of matters raised National Grid's response

the guidance and policies adopted by Government on advice from their scientific experts. Each of these organisations have comprehensive reviews of EMF research available to view on their websites.

Heritage

11-8.37 Concern about negative impact on heritage / Suggest that the Project should be routed away from heritage buildings / listed buildings / historical site

Through routeing and siting National Grid has sought to reduce as far as practicable potential impacts on the historic environment. The impacts of the Project on the historic environment are assessed in Chapter 11: Historic Environment (document reference 6.11) of the Environmental Statement (ES). The assessment considers the potential impact on archaeology, historic buildings and historic landscapes and includes assessment of potential for physical impact, impact through change to setting that affects the value of a heritage asset and impact through indirect factors such as change in hydromorphology. The assessment is supported by walkover, setting and geophysical surveys, as documented in Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1) and Appendix 11.4: Geophysical Survey Results Report (document reference 6.11.A4). Archaeological trial trench evaluation has also been undertaken and is reported in Appendix 11.5: Trial Trenching Results Report (document reference 6.11.A5). In addition to the proposals in the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4), the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5) sets out appropriate mitigation for the historic environment. The Project has engaged with Historic England and relevant planning authorities on aspects relating to heritage, including appropriate mitigation measures and techniques and to take their views into account during Project development.

Ref no. Summary of matters raised National Grid's response

Mitigation

11-8.38	Suggest mitigation measures	<p>An Environmental Statement (ES) (document reference Volume 6: Environmental Statement) has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 ('the Infrastructure EIA Regulations'). The ES identifies and assesses the likely significant effects on the environment resulting from the construction, operation and maintenance of the Project and recommends appropriate mitigation to reduce effects.</p> <p>Environmental mitigation measures have been defined within each environmental topic chapter and set out in relevant management documents submitted with the Development Consent Order (DCO) application, including the Outline Code of Construction Practice (CoCP) (document reference 7.2), the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5).</p>
---------	-----------------------------	--

Primary Access Routes / Haul Road / Construction Compounds

11-8.39	Suggest future access through the field containing a pylon from Mountnessing Road and suggest access for the respondent via the National Grid gas substation entrance and concrete road (as per respondent's plan)	<p>National Grid notes the respondent's feedback with regards to the permanent access route and also notes that the most appropriate route also varies in response to seasonal variation in land uses. As the Project progresses into the heads of terms and voluntary agreement stage there will be an opportunity to discuss and agree permanent access rights in more detail. No physical works are required for this permanent access route as part of the Project as these will not be used for construction. Access may be required in the future, for maintenance and surveys and</p>
---------	--	--

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		therefore National Grid will look to agree the most suitable access route at that point, taking into account the landowner and National Grid's requirements.	
11-8.40	Suggest the haul road near Lower Dunton Road be moved further west to mitigate noise, dust and visual impact from the respondent's property (as per respondent's plan)	National Grid notes the respondent's feedback. We are unable to move the haul road further west (near TB234) as there is an existing 132 kV overhead line and gas pipeline to the west. Construction mitigation, including for noise and dust is detailed in the Outline Code of Construction Practice (CoCP) (document reference 7.2).	
Requests			
11-8.41	Request for further impact surveys in this section	<p>National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project. The assessment is informed by a suite of field surveys and desk studies and results are presented in an Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the application for development consent. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation (and maintenance) of the Project and recommends appropriate mitigation measures to reduce potential adverse impacts.</p> <p>The scope of the EIA is included in the Scoping Report (document reference 6.19) which was submitted to the Planning Inspectorate in November 2022 and their Scoping Opinion (document reference 6.20) received in December 2022. This provided the opportunity for statutory bodies to comment on the scope of the EIA which included our approach on study areas, data collection and baseline conditions for a range of environmental topics. We also discussed and agreed survey scope with stakeholders (including Statutory Environmental Bodies and Local Planning</p>	

Ref no. Summary of matters raised National Grid's response

Authorities) following the Scoping Opinion (document reference 6.20) to ensure a robust baseline assessment.

National Grid has prepared an Outline Code of Construction Practice (CoCP) (document reference 7.2) which sets out the required mitigation measures and environmental commitments that would be implemented during the construction phase of the Project to avoid or reduce potential effects of the Project on the environment, including commitments to undertake further surveys.

Visual impact

11-8.42 Concern that the Project will be unsightly / visually intrusive (including overhead lines, CSE compounds and substations) / Concern that the Project will cause a negative impact on views

National Policy Statement (NPS) EN-5 makes it clear that the Government considers overhead lines to be appropriate and acceptable in most instances, although it recognises that there may be, at particularly sensitive locations, potential adverse landscape and visual impacts of an overhead line that make it inconsistent with our duties and relevant planning policy.

The Dedham Vale National Landscape (previously an Area of Outstanding Natural Beauty (AONB)) designation is one such location where underground cable technology is proposed with the extent of underground cabling extending beyond the boundary in response to the potential for the Project to affect the National Landscape. Our proposals include a total of approximately 20 km of underground cable through and in the vicinity of the Dedham Vale National Landscape, including a section at Great Horkesley to reduce the changes in views and setting of the National Landscape from within and adjacent to its designated boundary.

Underground cabling is also proposed for a short section of 400 kV overhead line crossing near Fairstead.

Ref no. Summary of matters raised National Grid's response

Cable Sealing End (CSE) compounds are required to facilitate sections of underground cable, and the proposed East Anglia Connection Node (EACN) substation is required to connect customers and the proposed Tilbury North Substation is required to connect the Project into the existing Tilbury Substation. These components have been carefully sited taking into consideration Horlock Rules including the potential for landscape and visual effects.

The higher cost of underground cables to bill paying consumers, and the environmental implications of installing underground cables and maintaining them

at locations outside the Dedham Vale National Landscape, are not considered to be justifiable in the context of national policy or National Grid's statutory duties, which include the need to be economical and efficient.

A Landscape and Visual Impact Assessment (LVIA), presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13), has been undertaken as part of the Environmental Impact Assessment (EIA). The LVIA includes an assessment on both landscape character and visual amenity and identifies areas for potential mitigation planting around substations and CSE compounds to reduce visual impacts to local receptors. The Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) includes details regarding the planting proposals.

Wildlife / Ecology impact

11-8.43 Concern about impact of the Project on birds

Chapter 8: Ecology and Biodiversity of the Environmental Statement (ES) (document reference 6.8) considers potential impacts during the construction and operational phase of the Project on birds. Bird surveys

Ref no.

Summary of matters raised

National Grid's response

have been undertaken across the route between 2022-2024 to determine an accurate baseline value, the scope of which has been agreed with Natural England and Local Planning Authorities. The potential for bird collision risk impact during the operational phase has been assessed within the ES and Habitat Regulations Assessment Report (HRA) (document reference 5.3) and agreed with Natural England. Any adverse impacts identified have been minimised as far as possible, where practicable, and mitigation in the form of bird diverters proposed.

It is noted that birds are a mobile species, and it is likely that active nests for common and widespread species may be encountered during the construction phase. Precautionary working methods for breeding birds are included within the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the Outline Landscape Ecological Management Plan (LEMP) (document reference 7.4). accompanying the Development Consent Order (DCO) application.

11-8.44

Concern that the Project will result in a negative impact on species (protected status not specified)

Through routeing, siting and detailed design National Grid has sought to reduce, as far as practicable, potential impacts on biodiversity including protected species. The design process has taken account of existing biodiversity, the natural environment and, where practicable, has sought to reduce impacts on areas of ecological sensitivity including protected species and their associated habitats, through avoidance or mitigation. A comprehensive survey effort for a range of protected species was completed over the 2023 – 2024 period. Chapter 8: Ecology and Biodiversity of the Environmental Statement (ES) (document reference 6.8) assesses the effects on protected species based on this baseline information and where/if required appropriate mitigation measures are detailed. Suitable mitigation for protected species has been developed in consultation with Natural England to ensure legal compliance and best

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-8.45	Concern that the Project will have a negative impact on bees / Bees will be unable to navigate under high voltage overhead lines	<p>practice guidelines are adhered to. Where necessary, draft licence applications have been drafted and National Grid is in the process of agreeing the detail within the licence documents with Natural England, in order to obtain the relevant Letters of No Impediment (LoNI). Mitigation for non-licensable protected species has been included within the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4).</p> <p>As well as possible effects on humans, possible effects of Electric and Magnetic Fields (EMFs) on various animals have been studied a number of times. No proven effects of EMFs have been found in any species at levels below the guidelines. This is confirmed in National Policy Statement (NPS) EN-5 which states: <i>"There is little evidence that exposure of crops, farm animals or natural ecosystems to transmission line EMFs has any agriculturally significant consequences."</i></p> <p>Beehives can become charged if directly under an overhead line because of the electric field it produces. For existing overhead lines, this can be eliminated by screening or earthing the hive, but for new overhead lines, embedded design measures and careful routeing will avoid any potential effects. There does not seem to be evidence of EMFs adversely affecting bees directly. In the United States of America, the strip of land along power lines has been shown to be particularly attractive to bees, with these areas being utilised by commercial bee farms. Additionally, National Grid has worked with the British Beekeeping Association to establish hives around our sites, including high voltage substations, which have thrived.</p>	
11-8.46	Concern that the Project will result in a negative impact on flora / plants / woodlands / hedgerows	Through routeing, siting and detailed design, National Grid has sought to reduce, as far as practicable, potential impacts on biodiversity including priority grassland, wetland, woodland, and hedgerow habitats. The design	

Ref no.	Summary of matters raised	National Grid's response
		<p>process has taken account of existing biodiversity, the natural environment and, where practicable, seeks to reduce impacts on areas of ecological sensitivity, through avoidance or mitigation.</p> <p>Chapter 8: Ecology and Biodiversity of the Environmental Statement (ES) (document reference 6.8) assesses the effects on important ecological receptors (which includes grasslands, wetlands, woodlands and hedgerows).</p> <p>As part of the Environmental Impact Assessment (EIA) process for the Project, a suite of ecological surveys has been to be undertaken. The findings of which inform the design and approach to mitigation.</p> <p>The Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Code of Construction Practice (CoCP) (document reference 7.2) contain a list of relevant good practice measures to avoid or reduce impacts on valuable habitats.</p> <p>The Environment Act 2021 introduces a mandatory requirement for 10% Biodiversity Net Gain (BNG) for new Development Consent Order (DCO) developments (which is not yet in force and not expected until May 2026).</p> <p>National Grid</p> <p>have committed to delivering 10% BNG with environmental and societal benefits on all construction projects. The BNG target for the Project is currently voluntary and aligned with our corporate sustainability commitment.</p> <p>As well as seeking to avoid and minimise impacts to nature, the Project considers the land required for mitigation, compensation and enhancement that can deliver BNG and wider environmental benefits. This will require delivery of offsite Biodiversity Units via habitat creation or enhancement</p>

Ref no. Summary of matters raised National Grid's response

		actions in strategic areas, and we will consider all offsite options that are available to us.	
11-8.47	Concern that the Project will result in a negative impact on rivers / other bodies of water	<p>Through routeing, siting and detailed design National Grid has sought to reduce, as far as practicable, potential impacts on biodiversity including river ecology. The design process has taken account of existing biodiversity, the natural environment and, where practicable, has sought to reduce impacts on areas of ecological sensitivity such as river corridor habitats, through avoidance or mitigation. The same approach has been taken to account for rivers and their floodplains, seeking to avoid or reduce the footprint of the Project within floodplains.</p> <p>As part of the Environmental Impact Assessment (EIA) process for the Project, a suite of ecological surveys has been undertaken, including along river corridors. The data has informed the assessment of effects on biodiversity, hydromorphology, water quality and flood risk presented in the Environmental Statement (ES), Chapter 8: Ecology and Biodiversity (document reference 6.8) and ES Chapter 12: Hydrology, Land Drainage and Flood Risk (document reference 6.12) and the Water Framework Directive Assessment (document reference 7.10).</p> <p>Further, the Project has engaged with Natural England, the Environment Agency and Local Planning Authorities on aspects relating to river ecology, water quality and flood risk, and appropriate mitigation measures and techniques have been secured, as detailed in the Outline Code of Construction Practice (CoCP) (document reference 7.2).</p> <p>The Environment Act 2021 introduces a mandatory requirement for 10% Biodiversity Net Gain (BNG) for new Development Consent Order developments (which is not yet in force and expected May 2026). National Grid has committed to deliver 10% BNG with environmental and societal benefits on all construction projects including for river ecology. The BNG</p>	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-8.48	Concern that the Project will impact trees covered by Tree Preservation Orders / Tree Protection Orders	<p>target for the Project is currently voluntary and aligned with National Grid's corporate sustainability commitment.</p> <p>As well as seeking to avoid and minimise our impacts on nature, the Project includes enhancement of watercourse habitats as part of BNG mitigation.</p> <p>During pre-application National Grid asked relevant planning authorities to share information on Tree Preservation Orders (TPOs). Impacts to trees covered by a TPO from the Project are presented in Appendix 13.6: Arboricultural Impact Assessment (AIA) (Document Reference 6.13.A6).</p>	

Thurrock feedback

Thurrock specific feedback (Further Landowner Consultation)

Table 11-9 Summary of consultee comments and National Grid's response

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
Agricultural Land			
11-9.1	Concern that the Project will take away valuable agricultural land / disrupt farming operations	<p>During the construction stage of the Project, there would be areas of agricultural land that would be temporarily disrupted. National Grid would only use land that is required as part of the Project and would seek to minimise the use of agricultural land where reasonable and safe to do so.</p> <p>National Grid is and will continue to work with all landowners including farmers who may be affected by the proposals to understand the impacts on their operations and to work with them as the Project is developed. We would seek to work with the farming community to limit disruption where practicable. This includes providing prior warning of works which may result in the need to move livestock. Compensation claims for disturbance are considered on a case-by-case basis, if negative impact on farming operations can be proven. Particular agricultural matters can also be addressed through voluntary land agreements.</p>	
Community / Social Impact			
11-9.2	Concern about impact of the Project on children / families / residents / communities	<p>National Grid recognises people may have concerns about the potential impacts of living close to an overhead line, and that the uncertainty whilst the proposals are developed may cause anxiety.</p> <p>We have sought to reduce potential effects on communities, residents – including children - through routeing and design. We have also sought to</p>	

Ref no.

Summary of matters raised

National Grid's response

reduce concern or uncertainty about the proposals through making timely design decisions and engaging with people and stakeholders throughout the development of the Project. If the Project received development consent, the Project team would continue to engage with people potentially affected during construction, through regular communication including letters, phone calls and meetings, where necessary.

We urge anyone with concerns to get in touch through the Norwich to Tilbury Freephone number, address or email, which will remain open throughout examination.

National Grid is committed to working with local suppliers, facilitated by supporting forums (such as the local Chambers), on electricity industry skills and workforce planning. National Grid is also committed to providing a coordinated regional approach to jobs and skills opportunities. This commitment is broader than the individual Project and separate to any commitments under the proposed development consent order for this Project. The socio-economic effects of the Project are assessed in Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) of the Environmental Statement. Post construction job opportunities are limited given the nature of the development however we would still work with local authorities (including facilitating local partners) to understand what is important to them around skills and employment to ensure we leave a lasting positive legacy in the communities where we operate.

With regards to a delivery mechanism, the above measures would be delivered as part of our community benefit package, which would look at both local and regional initiatives. This would be delivered outside the development consent process and is not a material consideration in the decision on the proposed Project or a matter to be secured as part of the

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-9.3	Concern about impact of the Project on leisure	<p>Development Consent Order (DCO), as per the Community Funds for Transmission Infrastructure: Guidance (DESNZ, 2025).</p> <p>Through routeing and siting National Grid has sought to avoid, as far as practicable, locations important for leisure and tourism. The Environmental Statement (ES), Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15), presents an assessment of the potential impacts on sports clubs, recreational land and recreational routes located within the Order Limits. As part of this assessment, a range of measures have been considered throughout the construction phase of the Project to minimise disruption on leisure and tourism. These include traffic management, signage and routeing measures. These are identified within ES Chapter 15: Socio-economics, Recreation and Tourism, the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).</p>	
11-9.4	Concern about the Project being in too close proximity to recently built housing developments / using land being considered for future development (including residential, commercial, infrastructural, and employment sites)	<p>National Grid has obtained information on existing, under construction, consented but not built schemes as well as development proposals within the planning system. The Project design has responded to those that are confirmed through consideration of routeing.</p> <p>In the case of development proposals, some can be amended to be designed around our proposed infrastructure but in other cases our proposals may need to be amended at a corridor level, or proposed developments factored into our detailed route design.</p> <p>Based on known information, and in light of changes made following consideration of feedback to the 2022 and 2023 non-statutory consultations, statutory consultation and targeted consultations, we consider our proposals are consistent with relevant policy and guidelines and the alignment designed such that they do not prevent proposed</p>	

Ref no.	Summary of matters raised	National Grid's response	
		housing developments from being successfully progressed. UK law does not prescribe minimum distances between overhead lines and homes, but any implications on landscape and visual receptors, residential amenity or from concerns about electromagnetic fields are robustly assessed as part of the Environmental Impact Assessment (EIA) and balanced as part of the decision making process. We will continue to review planning applications and engage with developers as necessary.	
11-9.5	Concerned that the Project will have a negative impact on domestic horses / equestrian activities	<p>As well as possible effects on humans, the possible effects of Electric and Magnetic Fields (EMFs) on various animals have been studied. No proven effects of EMFs have been found in any species at levels below the guidelines. This is confirmed in National Policy Statement (NPS) EN-5 which states: "<i>There is little evidence that exposure of crops, farm animals or natural ecosystems to transmission line EMFs has any agriculturally significant consequences.</i>" Although horses are not directly mentioned, there is no evidence to suggest they are any different to other farm animals.</p> <p>As well as the possible direct biological or health effects addressed above, indirect effects such as microshocks can occur as a result of electric fields. Microshocks are small spark discharges which are similar to a static shock after walking across a nylon carpet for example. The Project would be designed in accordance with the principles of the Governments Code of Practice 'Power Lines: Control of Microshocks and other indirect effects of public exposure to electric fields' to ensure these are mitigated, which include equestrian activities.</p>	
11-9.6	Concern about the impact of the Project on emergency services / ambulances / hospitals / health service	<p>Through routeing and siting National Grid has sought to avoid and reduce as far as practicable effects on identified healthcare facilities.</p> <p>The Environmental Statement (ES), Chapter 10: Health and Wellbeing (document reference 6.10), considers the potential impacts on, and</p>	

Ref no.

Summary of matters raised

National Grid's response

access to, healthcare facilities, including emergency services, ambulances, hospitals and other NHS services associated with the construction of the Project, drawing on information from Environmental Statement (ES) Chapter 16: Traffic and Transport (document reference 6.16). No health facilities are due to be directly impacted by the Project and where road diversions are required traffic management and mitigation measures would be in place to reduce impacts. These include traffic management, signage and routing measures to ensure access or partial access can be maintained where feasible. Further detail on proposed mitigation measures are presented in the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), which has been produced following engagement with stakeholders including the emergency services.

Construction Impacts

11-9.7

Concern about disruption from construction

An Environmental Statement (ES) (document reference: Volume 6: Environmental Statement) has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 ('the Infrastructure EIA Regulations'). The ES identifies and assesses the likely significant effects on the environment resulting from the construction of the Project and recommends appropriate mitigation to reduce effects.

Environmental mitigation measures have been defined within each environmental topic chapter and set out in relevant management documents submitted with the Development Consent Order (DCO) application, including the Outline Code of Construction Practice (CoCP) (document reference 7.2), the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the

Ref no.	Summary of matters raised	National Grid's response
11-9.8	Concern about noise and other issues resulting from construction (e.g. mud on roads, dust)	<p>Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5).</p> <p>An Environmental Statement (ES) (document reference: Volume 6: Environmental Statement) has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 ('the Infrastructure EIA Regulations'). The ES identifies and assesses the likely significant effects on the environment resulting from the construction of the Project and recommends appropriate mitigation to reduce effects.</p> <p>Specifically, a Construction Noise and Vibration Impact Assessment has been undertaken and is reported in the Environmental Statement (ES), Chapter 14: Noise and Vibration (document reference 6.14). During construction, mitigation would be implemented to reduce noise and vibration impacts from construction activities and increased road traffic noise and vibration due to additional movement from construction traffic. Mitigation measures are outlined in the Environmental Statement (ES), Chapter 14: Noise and Vibration (document reference 6.14) and the Outline Code of Construction Practice (CoCP) (document reference 7.2). This includes the assumption that construction working would be undertaken within the agreed working hours, construction traffic would be managed through the Construction Traffic Management Plan (CTMP) (document reference 7.3), haul roads would be well maintained, and Best Practicable Means (BPM) would be employed to reduce construction noise and vibration.</p> <p>Chapter 7: Air Quality (document reference 6.7) of the Environmental Statement (ES) presents an assessment of the potential impacts from the construction of the Project on air quality. During construction, mitigation would be implemented to reduce the impact of dust generation and construction vehicle emissions. Mitigation measures are outlined in the</p>

Ref no. Summary of matters raised National Grid's response

		<p>ES, Chapter 7: Air Quality, and the Outline Code of Construction Practice (CoCP) (document reference 7.2). The dust-emitting activities can be greatly reduced or eliminated by applying the site-specific mitigation measures (see Outline CoCP) for high-risk sites following measures recommendations in the Institute of Air Quality Management (IAQM) guidance (IAQM, 2024). The IAQM guidance states that with the implementation of effective site-specific mitigation measures, the environmental effect would not be significant in most cases.</p> <p>In addition, National Grid has prepared an Outline CoCP which sets out the required mitigation measures and environmental commitments that would be implemented during the construction phase of the Project to avoid or reduce potential effects of the Project on the environment.</p>
11-9.9	Concern that local road infrastructure is not suitable for heavy construction vehicles and machinery	<p>A strategy has been developed to manage the impact of construction vehicles on the public highway and sensitive receptors, using suitable Local Road Network connections from the Strategic Road Network called Primary Access Routes. In addition, temporary haul roads for construction vehicles are proposed along the Project alignment, further reducing the impact of construction traffic on the local road network. Further details of the strategy can be found within the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).</p> <p>The Project also requires the transportation of Abnormal Indivisible Loads (AIL). National Grid is developing specific routing proposals for AIL movements and is developing these through engagement with the relevant stakeholders including the local highway authorities and National Highways. Appendix A: AIL Access Strategy found in the Outline CTMP (document reference 7.3) contains details about these movements and is submitted in support of the Development Consent Order (DCO) application.</p>

Ref no.	Summary of matters raised	National Grid's response
11-9.10	Concern about vibrations from construction	<p>An assessment of construction vibration is presented in the Environmental Statement (ES), Chapter 14: Noise and Vibration (document reference 6.14).</p> <p>The assessment considers both the potential impact upon people within buildings (i.e. disturbance), and potential damage to buildings and structures.</p> <p>The assessment considers relatively worst-case construction methodologies and does not take account of potential mitigation. This is so that potential 'hot-spots' can be identified where there is the potential for significant adverse effects, without mitigation.</p> <p>The construction vibration assessment has identified 74 locations where there is potential disturbance to people within buildings from construction vibration. Of these, 72 relate to potential vibratory compaction activities which would be expected to be for a relatively short duration (i.e. less than day). The remaining two relate to potential piling activities for pylon foundation construction.</p> <p>With regards to potential damage to buildings and structures, the assessment highlights locations where there is a potential non-zero risk of damage. 14 locations have been identified, all of which relate to potential vibratory compaction activities.</p> <p>In all cases, significant adverse effects, or potential structural damage, can be avoided with the use of Best Practicable Means (BPM). This may include alternative methods, such as non-percussive/vibratory techniques.</p> <p>Additionally, prior to undertaking works, the Main Works Contractor(s) would conduct a detailed construction vibration assessment based on their specific methodologies and determine specific mitigation measures, where applicable.</p>

Ref no. Summary of matters raised National Grid's response

Consultation		
11-9.11	Criticism of consultation specific to this section	National Grid notes the respondent's feedback.
Design Change		
11-9.12	Suggest that underground cables are used for the entirety of this section	<p>National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors.</p> <p>National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is '<i>that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Park, The Broads, or Area of Outstanding Natural Beauty)</i>'. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the</p>

Ref no.	Summary of matters raised	National Grid's response
11-9.13	Concern that the construction laydown area off Lower Dunton Road does not have direct access from the main road, meaning that construction vehicles would need to access the site via respondent's property (e.g. shown on plan provided by respondent) / Request for National Grid to find an alternative access route	<p>Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider this section in its entirety would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of NPS EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.</p> <p>Therefore, whilst undergrounding the whole of this section is not considered appropriate, our proposals do include underground cable within the Dedham Vale National Landscape (previously known as Area of Outstanding Natural Beauty (AONB)) in accordance with NPS EN-5. Prior to our 2023 non-statutory consultation we identified the need to extend the underground cable beyond the National Landscape boundary because of potential effects, we have further extended this section of underground cable following consideration of feedback on our 2023 non-statutory consultation and additional investigation into potential effects. We also identified an approximately 4 km section near Great Horkesley as meeting the particularly sensitive criteria where underground cable is also proposed. Additionally, underground cable is proposed at Fairstead for a 400 kV overhead line crossing.</p> <p>National Grid notes the respondent's concerns regarding access through their land. The proposed access would be for the modification of the UK Power Network overhead lines as well as a permanent access to the proposed pylon TB234.</p> <p>As the Project progresses into the heads of terms and voluntary agreement stage there will be an opportunity to discuss and agree permanent access rights in more detail. No physical works are required for this access route as part of the Project. Access may be required in the future, for maintenance and surveys and therefore National Grid would</p>

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-9.14	Suggestion that the Project is routed away from / the Project should not be located at a specific location	<p>look to agree the most suitable access route at that point, taking into account the landowner and National Grid's requirements.</p> <p>The proposed construction compound would be accessed via the construction haul road which connects to the A128 Brentwood Road, just south of the junction with the B188 Conway's Road. No access to the compound would be from Lower Dunton Road.</p> <p>Further assessment and technical appraisal has been undertaken following feedback received from the statutory consultation and subsequent consultations which has resulted in several changes. Further details on these changes can be found in this report and in the 2025 Design Development Report (document reference 5.15), published as part of the Development Consent Order (DCO) application.</p>	
Economic / Employment impact			
11-9.15	Concern about negative impact on businesses in the area	<p>Through the routeing and siting exercise, National Grid has sought to reduce as far as practicable impacts to businesses.</p> <p>Impacts on local businesses within the local study area (the Order Limits) and within the 3 km study area (where visual impact is likely to be an economic consideration) are assessed in the Environmental Statement (ES), Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15). As part of this assessment, a range of mitigation measures have been considered to reduce disruption to businesses and their users during the construction phase of the Project. These measures are identified in the ES, Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15), the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) which accompany the Development Consent Order (DCO) application.</p>	

Ref no. Summary of matters raised National Grid's response

Environmental Impact		
11-9.16	Concern that the Project will impact Sites of Special Scientific Interest (SSSIs)	Through routeing, siting and design development, National Grid has sought to reduce, as far as practicable, impacts on biodiversity and in particular features of high ecological value such as Sites of Special Scientific Interest (SSSI). The Project avoids all direct impacts on SSSIs, with no long-term negative impacts anticipated on any SSSIs as a result of the Project. Potential direct and indirect impacts on each SSSI within the study area have been considered within the Environmental Statement (ES), Chapter 8: Ecology and Biodiversity (document reference 6.8) and any necessary mitigation detailed to ensure no significant residual effects. National Grid will continue to engage with Natural England.
11-9.17	Concern that the Project will impact nature reserve / RSPB reserve / Special Protection Area (SPA)	Through routeing, siting and design development, National Grid has sought to reduce, as far as practicable, impacts on biodiversity and in particular features of high ecological value, such as Local Wildlife Sites (LWS), Royal Society for the Protection of Birds (RSPB) reserves and Special Protection Area (SPA's). Whilst there are no impacts on RSPB reserves, potential direct and indirect impacts on LWS's and SPA's within the study area have been considered within the Environmental Statement (ES), Chapter 8: Ecology and Biodiversity (document reference 6.8). SPA's and the associated impact on birds has also been considered within the Habitats Regulations Assessment (HRA) Report (document reference 5.3).
11-9.18	Concern that the Project will result in a negative impact on the environment / countryside generally	National Grid has sought to reduce, as far as practicable, impacts on the environment / countryside through routeing and siting and an ongoing iterative design process which has taken on board feedback at different stages of the Project. The iterative design process sought to avoid areas of highest concern, for examples through changes to the route alignment or changes to the method e.g. trenchless crossings. National Grid has

Ref no.	Summary of matters raised	National Grid's response
11-9.19	Concern about the impact of the Project on flooding	<p>engaged with a range of stakeholders (including Statutory Environmental Bodies (SEBs) and relevant local planning authorities) throughout the development of the Project design and environmental assessment work. National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project. The results of this assessment are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation (and maintenance) of the Project and recommends appropriate mitigation measures to reduce potential effects.</p> <p>A number of mitigation measures have been incorporated into the Project design. Mitigation relevant to specific environmental topics (including Ecology and Biodiversity, Landscape and Visual and Historic Environment) are presented in the relevant ES chapters. The Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Code of Construction Practice (CoCP) (document reference 7.2) contain a list of relevant good practice measures to avoid or reduce risks to habitats and species.</p> <p>In addition to the EIA, National Grid has set itself a target of delivering 10% biodiversity net gain (BNG) with environmental and societal benefits on all construction projects, meaning that as a result of measures taken, the biodiversity rating of the area would be enhanced by 10% greater than prior to the construction of the Project. The BNG target for the Project is currently voluntary and aligned with our corporate sustainability commitment.</p> <p>A detailed Flood Risk Assessment (FRA) (document reference 7.9) has been prepared in addition to a flood warning and evacuation plan that</p>

Ref no.

Summary of matters raised

National Grid's response

details actions for flooding emergency during Project construction, as Appendix G: Outline Flood Warning and Evacuation Plan to the Outline Code of Construction Practice (CoCP) (document reference 7.2). The FRA has assessed a range of sources of flooding to the Project and arising from the Project, and a range of measures, including those embedded within the design, and good practice, have been secured to ensure that the Project is resilient to flooding, and does not contribute to an increase in flood risk from any source.

Financial compensation

11-9.20

Request for adequate financial compensation /
Suggest that impacted individuals need to be
compensated

All affected landowners would be compensated for any temporary/permanent losses, and this would be dealt with on a case-by-case basis in line with the Compensation Code.

If there are any specific concerns requiring compensation and how it would be assessed, please contact the Project team:
Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.

Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD

The Government has published its guidance on Community Funds for Transmission Infrastructure (DESNZ, 2025). National Grid is committed to working with Ofgem, industry partners, local communities and their representatives to ensure community benefits are delivered fairly and effectively, driving lasting, positive change for the people and places integral to our developing electricity network.

Government has also announced its plans to introduce a bill discount scheme for households within 500 m of new infrastructure, which it

Ref no. Summary of matters raised National Grid's response

proposes to introduce through the Planning and Infrastructure Bill. This is evolving government policy. Government expects this scheme to be in place by 2026 and we would share further details as they emerge.

National Grid is committed to providing a coordinated local and regional approach to community benefits. This would be delivered outside the development consent process, since this is not a material consideration in the decision on the proposed Project or a matter to be secured as part of the Development Consent Order (DCO), as per the Community Funds for Transmission Infrastructure: Guidance (DESNZ, 2025).

11-9.21 Request that National Grid purchase respondent's property / business

National Grid is not required to purchase properties or businesses as part of the Project.

National Grid compensates landowners in line with the Compensation Code and any other relevant legislation.

Health, Safety and Wellbeing

11-9.22 Concern that the Project may result in a negative impact on mental health / wellbeing

National Grid recognises people may have concerns about the health effects of living close to an overhead line, and that the uncertainty whilst the proposals are developed may cause anxiety.

We have sought to reduce potential effects on communities and residents through routeing and design. We have also sought to reduce concern or uncertainty about the proposals through making timely design decisions and engaging with the people and stakeholders throughout the development of the Project.

The Project team will continue to engage with people potentially affected during progress of the Project, through regular communication including letters, phone calls and meetings. This would enable concerns to be raised and discussed at an early opportunity and provide a regular point of contact to respond to queries and concerns.

Ref no.	Summary of matters raised	National Grid's response
		<p>We urge anyone with concerns to get in touch through the Norwich to Tilbury Freephone number, address or email throughout the progress of the Project:</p> <p>Call our Community Helpline: 0800 915 2497 (Lines are open Monday to Friday 9:00am – 5:30pm)</p> <p>Email us: contact@n-t.nationalgrid.com</p> <p>Write to us: FREEPOST N TO T (No stamp or further address details are required)</p> <p>The UK has a carefully thought-out set of policies for protecting us all against Electric and Magnetic Fields (EMFs), the main component of which is exposure guidelines. Those exposure guidelines are set by independent scientific bodies and are based on decades-long studies into the effects of EMFs and ill health. After those decades of research, the weight of evidence is against there being any health risks of EMFs below the guideline limits. These policies are incorporated into the decision-making process for development consent in National Policy Statement (NPS) EN-5. It is National Grid's policy to ensure that all of its equipment comply fully with those exposure limits.</p>
Heritage		
11-9.23	Concern about archaeological impacts	<p>Through routeing and siting National Grid has sought to reduce as far as practicable potential impacts on the historic environment. The impacts of the Project on the historic environment are assessed in Chapter 11: Historic Environment (document reference 6.11) of the Environmental Statement (ES). The assessment considers the potential impact on archaeology, historic buildings and historic landscapes and includes assessment of potential for physical impact, impact through change to setting that affects the value of a heritage asset and impact through indirect factors such as change in hydromorphology. The assessment is</p>

Ref no.	Summary of matters raised	National Grid's response
11-9.24	Concern about negative impact on heritage / Suggest that the Project should be routed away from heritage buildings / listed buildings / historical site	<p>supported by walkover, setting and geophysical surveys, as documented in Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1) and Appendix 11.4: Geophysical Survey Results Report (document reference 6.11.A4).</p> <p>Archaeological trial trench evaluation has also been undertaken and is reported in Appendix 11.5: Trial Trenching Results Report (document reference 6.11.A5). In addition to the proposals in the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4), the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5) sets out appropriate mitigation for the historic environment. The Project has engaged with Historic England and relevant planning authorities on aspects relating to heritage, including appropriate mitigation measures and techniques and to take their views into account during Project development which are detailed in ES Chapter 11: Historic Environment (document reference 6.11).</p> <p>Through routeing and siting National Grid has sought to reduce as far as practicable potential impacts on the historic environment. The impacts of the Project on the historic environment are assessed in Chapter 11: Historic Environment (document reference 6.11) of the Environmental Statement (ES). The assessment considers the potential impact on archaeology, historic buildings and historic landscapes and includes assessment of potential for physical impact, impact through change to setting that affects the value of a heritage asset and impact through indirect factors such as change in hydromorphology. The assessment is supported by walkover, setting and geophysical surveys, as documented in Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1) and Appendix 11.4: Geophysical Survey Results Report (document reference 6.11.A4). Archaeological trial trench evaluation has also been undertaken and is reported in Appendix 11.5:</p>

Trial Trenching Results Report (document reference 6.11.A5). In addition to the proposals in the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4), the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5) sets out appropriate mitigation for the historic environment. The Project has engaged with Historic England and relevant planning authorities on aspects relating to heritage, including appropriate mitigation measures and techniques and to take their views into account during Project development.

Public Rights of Way (PRoW)

11-9.25 Concern about negative impact on Public Rights of Way (PRoW) / footpaths / cycle paths / bridleways

Through routeing and siting, National Grid has sought to reduce, as far as practicable, impacts and disruption to Public Rights of Way (PRoW). The iterative design process identified the existing PRoW network and their wider connectivity and sought where practicable to reduce and where possible remove impacts to PRoW. Effects on PRoW would be mitigated where possible, maintaining access where practicable, with closures as a last resort. We will continue to engage with relevant stakeholders on the PRoW network to enable feedback and input to be considered as the Project progresses. An Outline Public Rights of Way Management Plan (document reference 7.6) is submitted with the Development Consent Order (DCO) application.

Requests

11-9.26 Request for further impact surveys in this section

National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project. The assessment is informed by a suite of field surveys and desk studies and results are presented in an Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the application for development consent. The ES identifies

Ref no.	Summary of matters raised	National Grid's response
		<p>and assesses the likely significant effects on the environment resulting from the construction and operation (and maintenance) of the Project and recommends appropriate mitigation measures to reduce potential adverse impacts.</p> <p>The scope of the EIA is included in the Scoping Report (document reference 6.19) which was submitted to the Planning Inspectorate in November 2022 and their Scoping Opinion (document reference 6.20) received in December 2022. This provided the opportunity for statutory bodies to comment on the scope of the EIA which included our approach on study areas, data collection and baseline conditions for a range of environmental topics. We also discussed and agreed survey scope with stakeholders (including Statutory Environmental Bodies and Local Planning Authorities) following the Scoping Opinion (document reference 6.20) to ensure a robust baseline assessment.</p> <p>National Grid has prepared an Outline Code of Construction Practice (CoCP) (document reference 7.2) which sets out the required mitigation measures and environmental commitments that would be implemented during the construction phase of the Project to avoid or reduce potential effects of the Project on the environment, including commitments to undertake further surveys.</p>
Visual Impact		
11-9.27	Concern that the Project will be unsightly / visually intrusive (including overhead lines, CSE compounds and substations) / Concern that the Project will cause a negative impact on views	National Policy Statement (NPS) EN-5 makes it clear that the Government considers overhead lines to be appropriate and acceptable in most instances, although it recognises that there may be, at particularly sensitive locations, potential adverse landscape and visual impacts of an overhead line that make it inconsistent with our duties and relevant planning policy.

Ref no.

Summary of matters raised

National Grid's response

The Dedham Vale National Landscape (previously an Area of Outstanding Natural Beauty (AONB)) designation is one such location where underground cable technology is proposed with the extent of underground cabling extending beyond the boundary in response to the potential for the Project to affect the National Landscape. Our proposals include a total of approximately 20 km of underground cable through and in the vicinity of the Dedham Vale National Landscape, including a section at Great Horkesley to reduce the changes in views and setting of the National Landscape from within and adjacent to its designated boundary.

Underground cabling is also proposed for a short section of 400 kV overhead line crossing near Fairstead.

Cable Sealing End (CSE) compounds are required to facilitate sections of underground cable, and the proposed East Anglia Connection Node (EACN) substation is required to connect customers and the proposed Tilbury North substation is required to connect the Project into the existing Tilbury Substation. These components have been carefully sited taking into consideration Horlock Rules including the potential for landscape and visual effects.

The higher cost of underground cables to bill paying consumers, and the environmental implications of installing underground cables and maintaining them at locations outside the Dedham Vale National Landscape, are not considered to be justifiable in the context of national policy or National Grid's statutory duties, which include the need to be economical and efficient.

A Landscape and Visual Impact Assessment (LVIA), presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13), has been undertaken as part of the Environmental Impact Assessment (EIA). The LVIA includes an assessment on both landscape character and visual amenity and

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		identifies areas for potential mitigation planting around substations and CSE compounds to reduce visual impacts to local receptors. The Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) includes details regarding the planting proposals.	
Wildlife / Ecology Impact			
11-9.28	Concern that the Project will result in a negative impact on protected species	Through routeing, siting and detailed design, National Grid has sought to reduce, as far as practicable, potential impacts on biodiversity including protected species. The design process has taken account of existing biodiversity, the natural environment and, where practicable, has sought to reduce impacts on areas of ecological sensitivity including protected species and their associated habitats, through avoidance or mitigation. A comprehensive survey effort for a range of protected species was completed over the 2023 – 2024 period. Chapter 8: Ecology and Biodiversity (document reference 6.8) of the Environmental Statement (ES) assesses the effects on protected species based on this baseline information and where/if required appropriate mitigation measures are detailed. Suitable mitigation for protected species has been developed in consultation with Natural England to ensure legal compliance and best practice guidelines are adhered to. Where necessary, draft licence applications have been drafted and National Grid is in the process of agreeing the detail within the licence documents with Natural England, in order to obtain the relevant Letters of No Impediment (LoNI). Mitigation for non-licensable protected species has been included within the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4).	
11-9.29	Concern that the Project will result in a negative impact on flora / plants / woodlands / hedgerows	Through routeing, siting and detailed design, National Grid has sought to reduce, as far as practicable, potential impacts on biodiversity including priority grassland, wetland, woodland, and hedgerow habitats. The design	

Ref no.

Summary of matters raised

National Grid's response

process has taken account of existing biodiversity, the natural environment and, where practicable, seeks to reduce impacts on areas of ecological sensitivity, through avoidance or mitigation.

Chapter 8: Ecology and Biodiversity (document reference 6.8) of the Environmental Statement (ES) assesses the effects on important ecological receptors (which includes grasslands, wetlands, woodlands and hedgerows).

As part of the Environmental Impact Assessment (EIA) process for the Project, a suite of ecological surveys has been to be undertaken. The findings of which inform the design and approach to mitigation.

The Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Code of Construction Practice (CoCP) (document reference 7.2) contain a list of relevant good practice measures to avoid or reduce impacts on valuable habitats.

The Environment Act 2021 introduces a mandatory requirement for 10% Biodiversity Net Gain (BNG) for new Development Consent Order (DCO) developments (which is not yet in force and not expected until May 2026). National Grid has committed to delivering 10% BNG with environmental and societal benefits on all construction projects. The BNG target for the Project is currently voluntary and aligned with our corporate sustainability commitment.

As well as seeking to avoid and minimise impacts to nature, the Project considers the land required for mitigation, compensation and enhancement that can deliver BNG and wider environmental benefits. This would require delivery of offsite Biodiversity Units via habitat creation or enhancement actions in strategic areas, and we would consider all offsite options that are available to us.

Ref no.	Summary of matters raised	National Grid's response
11-9.30	Concern that the Project will result in a negative impact on wildlife / biodiversity / ecology (generally)	<p>Through routeing, siting and detailed design National Grid has sought to reduce, as far as practicable, potential impacts on biodiversity. Targeted change feedback (Further Landowner Consultation)

Table 11-10 Summary of feedback received during the landowner consultation relating to targeted consultations and National Grid's response

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
Norfolk 1			
11-10.1	Support the proposed change - Norfolk 1 (generally)	National Grid notes the respondent's feedback.	
Norfolk 2			
11-10.2	Oppose the proposed change - Norfolk 2 (generally)	National Grid notes the respondent's feedback.	
11-10.3	Support the proposed change - Norfolk 2 (generally)	National Grid notes the respondent's feedback.	
Norfolk 3			
11-10.4	Oppose the proposed change - Norfolk 3 (generally)	National Grid notes the respondent's feedback.	
11-10.5	Support the proposed change - Norfolk 3 (generally)	National Grid notes the respondent's feedback.	
11-10.6	Suggest the route is moved further east to go across open land to avoid non-designated ancient woodland on Brick Kiln Lane	National Grid proposed a slight change to the alignment and haul road between RG46 and RG51 which takes the alignment to the west and avoids a County Wildlife site and veteran tree. The haul road was also moved to be closer to the alignment and utilises an area of woodland which is less mature. We have also narrowed the haul road and proposed the use	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		of trackway to reduce impacts to trees in the woodland where possible. We are therefore not proposing a further change in this area.	
Norfolk 4			
11-10.7	Support the proposed change - Norfolk 4 (generally)	National Grid notes the respondent's feedback.	
Suffolk 1			
11-10.8	Oppose the proposed change - Suffolk 1 (generally)	National Grid notes the respondent's feedback.	
11-10.9	Support the proposed change - Suffolk 1 (generally)	National Grid notes the respondent's feedback.	
11-10.10	Criticism of consultation materials on this change (Suffolk 1)	National Grid notes the respondent's feedback. For each of our targeted consultations we developed an overview leaflet and Environmental Implication of Change (EIC) document. These were sent to properties within the bespoke consultation zone for the relevant change. We also published a consultation strategy and overview map. All these documents remain available on the Project website. The information provided at the Targeted consultations was considered proportionate to the changes being consulted upon.	
Suffolk 2			
11-10.11	Oppose the proposed change - Suffolk 2 (generally)	National Grid notes the respondent's feedback.	
11-10.12	Support the proposed change - Suffolk 2 (generally)	National Grid notes the respondent's feedback.	

Ref no. Summary of matters raised National Grid's response

Suffolk 3			
11-10.13	Support the proposed change - Suffolk 3 (generally)	National Grid notes the respondent's feedback.	
Suffolk 4			
11-10.14	Support the proposed change - Suffolk 4 (generally)	National Grid notes the respondent's feedback.	
Suffolk 5			
11-10.15	Support the proposed change - Suffolk 5 (generally)	National Grid notes the respondent's feedback.	
Suffolk 6			
11-10.16	Oppose the proposed change - Suffolk 6 (generally)	National Grid notes the respondent's feedback.	
11-10.17	Support the proposed change - Suffolk 6 (generally)	National Grid notes the respondent's feedback.	
11-10.18	Suggest the underground cable corridor route is returned to the previous route and exit west from the compound sealing end which must be sufficiently screened to mitigate harm to the setting of the Little Wenham Hall Estate (shown in blue as per the respondent's plan)	<p>National Grid notes the respondent's feedback. The previous change resulting in the underground cables passing to the east of Wenham Grove allows for more extensive screening of the Cable Sealing End (CSE) compound through more effective planting. The change lessens the impact on agricultural activity by reducing the number of fields affected by construction, compared to the previous proposal. It would also include moving the underground cabling at the south- east of Raydon to reduce effects on residential properties, we are therefore not proposing to move the underground cable route back to the west.</p> <p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the Environmental Impact Assessment (EIA). The LVIA includes an assessment on both landscape character and visual amenity and sets</p>	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-10.19	Request that overhead pylons are routed to the north of Brimlin Wood to provide additional screening from the assets at Little Wenham Hall, remove the need for the angle pylon north of Little Wenham and mitigate harm to a nationally significant scheduled monument (shown in yellow as per the respondent's plan)	<p>out the potential landscape and visual effects of the Project, including consideration of mitigation and screening of Cable Sealing End (CSE) compounds. The LVIA is presented in the Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13).</p> <p>National Grid has worked to minimise potential impacts on the historic environment and its setting, through strategic routeing and siting measures. Statutory consultation feedback and the results of archaeological fieldwork have been used to inform design development to reduce impacts to archaeological remains in this area as far as practicable.</p> <p>It has been concluded that the proposed change would move the underground cabling works closer to the complex of designated assets at Little Wenham including the Grade I Wenham Castle (Little Wenham Hall) (1033405), although this would be at sufficient distance that the proposed change would be unlikely to change the effect.</p> <p>The assessment concludes that the setting of this asset does not extend to the Order Limits, so, there would be no potential for impact resulting from the Project.</p>	

Ref no. Summary of matters raised National Grid's response

Essex 1

11-10.20 Oppose the proposed change - Essex 1 (generally) National Grid notes the respondent's feedback.

11-10.21 Support the proposed change - Essex 1 (generally) National Grid notes the respondent's feedback.

11-10.22 Concern about the impact of the wide band of trenched cables running across parcel 5200 on access to the respondent's property / Suggest that National Grid evaluates the possibility of reinstating the 'split corridor arrangement' at parcel 5200, providing the respondent with all studies, reports and calculations on the subject of trenchless cabling versus trenched cabling across the Blackbrook Stream. Studies should include:

- an evaluation of the loss of habitat, including important woodland which will be lost and can never be replaced;
- the effect on wildlife, the environment and local ecology;
- the potential for pollution and impact on water quality in the area;
- the potential for change of water table and consequential flooding;
- the feasibility of trenched cabling through the Blackbrook including the fact that the Boxted sewage works discharges into the stream;
- the necessary diversion of the Blackbrook while the operation is taking place;
- the fact that parcel 5200 is swampy/water-logged at its

The pylon positions have not moved relative to Rayleigh Road. It is possible that the respondent has not realised that the change removes a number of existing pylons. Rather than an arrangement of the existing 132 kV lattice pylon line alongside the new 400 kV overhead line, the change proposed is to replace the existing 132 kV connection with a short section of underground 132 kV cable. This allows the alignment to be generally moved further from the properties in Havering's Grove though the pylon immediately south of Rayleigh Road is unchanged. No change is proposed.

Ref no. Summary of matters raised National Grid's response

eastern end with thick growths of bullrushes and an abundance of aquatic species. National Grid must consider whether it is possible at all to install trenched cables under this area;

- the considerable undulations/changes of level of the site from the land to the north of the Blackbrook to the land to the south of parcel 5200 through which runs a high pressure trunk gas main.

To be clear about the undulations/changes of level of the site being parcel 5200 and the land to the north and south of it, these are (from north to south):

- the hill to the north down to Blackbrook;
- the Blackbrook itself;
- the sharp increase in height due to parcel 5200 having had the level heightened by about 2.4 metres nearly 40 years ago for the construction of our drive;
- the sharp lowering of level at the south side of parcel 5200 into the field to the south;
- the high pressure gas main under the field to the south which a National Grid representative has said at one of National Grid's presentations will have to have the cables laid under it

11-10.23

Suggest that if National Grid proceeds by way of trenched cabling, that the swathe through land parcel 5200, should be narrower than currently proposed, thereby saving a number of trees

The underground cable swathe required is calculated to ensure the 18 cables are sufficiently spaced to provide the required heat dissipation as overheating of the underground cables would lead to an inefficient power system. The typical temporary construction swathe is 120 m wide to provide the suitable work area for access, excavation and installation. This

Ref no. Summary of matters raised National Grid's response

is inclusive of the typical permanent cable corridor is 50.6 m wide made up of six trenches and 18 cables.

The standard underground cable cross section is intended to reflect typical installation conditions. In areas where other constraints exist, the trench spacing may vary or the construction methodology may change (e.g.: use of vertical excavations rather than battered excavations). The preferred approach for this Project is to use ducting, ducting is proposed as per the typical underground cable cross section. Where spoil is unsuitable for backfill, it would be removed from site. National Grid would seek to reinstate the affected land where possible to the same state prior to any works (or a condition agreed with the landowner). Hedgerows, bushes and shrubs can be reinstated above the underground cables, but trees cannot be planted over the top or within 10 m of underground cables. Mitigation planting would be included within the Project where trees need to be removed.

National Grid and their contractors would make every effort to ensure that the existing trees are minimally impacted by the works.

11-10.24 Concern that a high-pressure gas main on nearby land to the south of land parcel 5200 will not be turned off during National Grid's operations. Suggest that National Grid must do all that is technically necessary to ensure that the operation is carried out safely

National Grid would not request an outage on the gas main unless deemed necessary by the pipeline operator.

Essex 2

11-10.25 Oppose the proposed change - Essex 2 (generally)

In addition to adhering to Regulation 15 of The Pipelines Safety Regulation 1996, National Grid would comply with the safe working requirements as

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		agreed with Cadent Gas as the asset operator when working within the vicinity of their high pressure gas main.	
11-10.26	Support the proposed change - Essex 2 (generally)	National Grid notes the respondent's feedback.	
Essex 3			
11-10.27	Support the proposed change - Essex 3 (generally)	National Grid notes the respondent's feedback.	
Essex 4			
11-10.28	Support the proposed change - Essex 4 (generally)	National Grid notes the respondent's feedback.	
11-10.29	Criticism of the consultation zone relating to this change (Essex 4)	For each targeted non-statutory consultation area (including Essex 4), National Grid developed a bespoke consultation zone to include nearby properties which are likely to be affected. These were created following the principle that each consultation zone should be appropriate and proportionate in relation to the type and potential impact of the change.	
Essex 5			
11-10.30	Oppose the proposed change - Essex 5 (generally)	National Grid notes the respondent's feedback.	
11-10.31	Support the proposed change - Essex 5 (generally)	National Grid notes the respondent's feedback.	
11-10.32	Criticism of consultation materials on this change (Essex 5)	National Grid notes the respondent's feedback. For each of our targeted consultations we developed an overview leaflet which explained why the change had been taken forwards and Environmental Implication of Change (EIC) document which includes information on the potential ecological impacts of the proposed change alongside flooding and proposed	

Ref no.

Summary of matters raised

National Grid's response

mitigations. These were sent to properties within the bespoke consultation zone for the relevant change. More information on how we defined the consultation zones is available in this Consultation Report. We also published a consultation strategy and overview map. All these documents remain available on the Project website. The information provided at the Targeted consultations was considered proportionate to the changes being consulted upon. We believe that all the relevant information required for the public to make informed decisions was available and do not believe that this impacted the feedback we received.

Essex 6

11-10.33

Support the proposed change - Essex 6 (generally)

National Grid notes the respondent's feedback.

Essex 7

11-10.34

Support the proposed change - Essex 7 (generally)

National Grid notes the respondent's feedback.

Essex 8

11-10.35

Oppose the proposed change - Essex 8 (generally)

National Grid notes the respondent's feedback.

11-10.36

Support the proposed change - Essex 8 (generally)

National Grid notes the respondent's feedback.

11-10.37

Suggest underground cables are used at The Waltham Gap or use the original alternative route to the north-west of The Walthams, bypassing the Walthams and the area around Writtle to avoid impact on the Chelmer Valley

National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is *that*

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-10.38	Suggest the proposed position of pylon TB141 is changed to the 2024 proposed position or placed at an	<p><i>overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Park, The Broads, or Area of Outstanding Natural Beauty (AONB)).</i> Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at the Walthams would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.</p> <p>National Grid has considered pylon type and localised alignment and pylon position variations responding to feedback from Historic England and other</p>	

Ref no.

Summary of matters raised

National Grid's response

equidistant position from the respondent's property and Larks Lane due to increased impacts on heritage, conservation zones, visual amenity, footpaths, wildlife and the view of non-listed heritage asset Windmill House

stakeholders. This includes the stakeholder feedback in this case to re-position TB141 to that presented in 2024 or equidistant between the respondent's property and Lark's Lane. This change is considered in a wider context that includes considering that T pylons are not an appropriate design selection, compared with low height lattice pylons. We do however consider that a low height lattice pylon will be beneficial for a section of the route north of the River Chelmer. As part of this refinement, the alignment has been adjusted in response to protected species and a number of veteran trees, To the south of the river we have considered feedback on arrangements including standard lattice pylons (requires two pylons) as well as arrangements with low height lattice pylons (which requires three pylons). The latter positions a pylon close to Chelmsford Road and a relatively direct view from the property raised by the respondent and for these reasons is less preferred. The Project, subject to confirming certain technical details, will progress using the defined Limits of Deviation (LoD) with the use of two standard pylons between TB143 and the river with four low height pylons to the north of the river in place of three low height pylons shown on the works plans.

11-10.39

Concern that the change in position of pylon TB140 (previously pylon TB139) closer to the River Chelmer will require trees along the riverbank to be removed damaging the river habitat, increasing flood risk and damage to crops and wildlife

National Grid notes the respondent's feedback. No construction works are expected up to the riverbank. The requirement for tree management of some form occurs with any of the Project alignments where they would cross the watercourse. This would be expected to be greater for a low height pylon than if one or both pylons were the standard lattice pylon as a result of the wider cross arm width of the low height pylon. Following the feedback, and subject to some technical considerations, there is a preference for a change to a standard height pylon to the south of the river which would reduce the vegetation loss somewhat, the method of

X

Ref no. Summary of matters raised National Grid's response

		management would be developed to reduce the potential for effects, and we would not expect this to lead to the types of damage referred to.	
11-10.40	Concern about the lack of natural screening for the new pylon alignment for pylons TB135 to pylon TB143	<p>The pylon alignment from TB135 to TB143 crosses between Great Waltham and Little Waltham, to the east of Langley's Registered Park and Garden.</p> <p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the Environmental Impact Assessment (EIA). The LVIA sets out the potential landscape and visual effects, including consideration of visual amenity of people in and around settlements such as Little Waltham and Great Waltham, and also impacts on landscape character. The approach to the LVIA follows professional guidance as set out in Environmental Statement (ES) Appendix 6.13: Landscape and Visual Methodology (document reference 6.13.A1), which includes the 3rd Edition Guidelines on Landscape and Visual Impact Assessment (GLVIA3). The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13). Chapter 13 is supported by Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3). This appendix sets out the assessment for visual receptor areas (VRA) including VRA F3: Great Waltham and VRA F4: Little Waltham, which are relevant to this feedback. The assessment notes that there would be close and sometimes open views of the Project near these pylon locations (near the B1008, Chatham Hall Lane and Chelmsford Road). At greater distances from the pylons at this location, the assessment notes views are more likely to be screened or filtered due to existing strips of riparian vegetation along the watercourses, woodland strips and tree lines on the edge of the Registered Park and Garden and therefore reduce visual effects on receptors.</p>	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-10.41	Concerns of the safety of agricultural machinery passing beneath the wires of lower height pylons	<p>Whilst National Grid does not have direct control of the existing vegetation that would provide the screening mentioned above, much of the vegetation lies within the conservation areas of Little Waltham and Great Waltham, and within the Langleys Registered Park and Garden, both of which afford greater protection to trees and vegetation.</p> <p>The clearances required for a low height pylon are the same as a typical pylon.</p> <p>Safe systems of work are expected to be implemented by third parties whenever they are near overhead lines to protect equipment and to protect all persons and animals in the area of the lines.</p> <p>Third parties may refer to:</p> <p>HSE's specific agriculture information sheet Working safely near overhead electricity power lines AIS8.</p> <p>HSE general guidance HSE GS6 (and Look Up, Look Out).</p> <p>NGET general guidance TGN287.</p> <p>Statutory clearances guidance in Electricity Networks Association ENA TS 43-08. Including, but not limited to, guidance that <i>"irrigators, slurry guns and high-pressure hoses, or similar, should be 30m from electrical conductors."</i></p>	
11-10.42	Suggest the removal of the proposed right of way at Bells Farm (as per respondent's plan) / Request access around the edge of the property and use existing access at TB137	National Grid notes the respondent's feedback with regards to the permanent access route at Bells Farm and also notes that the most appropriate route also varies in response to seasonal variation in land uses. As the Project progresses into the heads of terms and voluntary agreement stage there will be an opportunity to discuss and agree permanent access rights in more detail. No physical works are required for this permanent access route as part of the Project as these will not be used	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		for construction. Access may be required in the future, for maintenance and surveys and therefore National Grid will look to agree the most suitable access route at that point, taking into account the landowner and National Grid's requirements.	
11-10.43	Suggest that the numerous small, irregular shortland areas proposed along the route are used for Biodiversity Net Gain or move the area to the southern boundary of the proposed field around the base of pylon TB135, rather than the centre of the proposed field in an awkward triangular shape which takes away farmable land apart from the small area of shortland created around the base of TB135	The Environmental Area at TB135 is not proposed for specific habitat creation/enhancement for Biodiversity Net Gain (BNG) purposes. The area has been identified for other potential ecological mitigation that may be required following detailed design. Every effort will be made to remove/reduce impacts on the arable land in this area. The Project will deliver at least 10% BNG with wider environmental and societal benefits and is detailed within the Biodiversity Net Gain Report (document reference 7.1).	
Essex 9			
11-10.44	Oppose the proposed change - Essex 9 (generally)	National Grid notes the respondent's feedback.	
11-10.45	Support the proposed change - Essex 9 (generally)	National Grid notes the respondent's feedback.	
11-10.46	Criticism of consultation materials on this change (Essex 9)	National Grid notes the respondent's feedback. For each of our targeted consultations we developed an overview leaflet and Environmental Implication of Change (EIC) document. These were sent to properties within the bespoke consultation zone for the relevant change. We also published a consultation strategy and overview map. All these documents remain available on the Project website. The information provided at the targeted consultations was considered proportionate to the changes being consulted upon.	
Essex 10			

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-10.47	Oppose the proposed change - Essex 10 (generally)	National Grid notes the respondent's feedback.	
11-10.48	Support the proposed change - Essex 10 (generally)	National Grid notes the respondent's feedback.	
11-10.49	Suggest proposal is reverted to the original proposal whereby the pylon was on the other side of Rayleigh Road	The Project pylon positions have not moved relative to Rayleigh Road. It is possible that the respondent has not realised that the change removes a number of existing pylons. Rather than an arrangement of the existing 132 kV lattice pylon line alongside the new 400 kV overhead line, the change proposed is to replace the existing 132 kV connection with a short section of underground 132 kV cable. This allows the alignment to be generally moved further from the properties in Havering's Grove though the pylon immediately south of Rayleigh Road is unchanged. No change is proposed.	
Essex 11			
11-10.50	Oppose the proposed change - Essex 11 (generally)	National Grid notes the respondent's feedback.	
11-10.51	Support the proposed change - Essex 11 (generally)	National Grid notes the respondent's feedback.	
Essex 12			
11-10.52	Oppose the proposed change - Essex 12 (generally)	National Grid notes the respondent's feedback.	
11-10.53	Support the proposed change - Essex 12 (generally)	National Grid notes the respondent's feedback.	
Essex 13			

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-10.54	Oppose the proposed change - Essex 13 (generally)	National Grid notes the respondent's feedback.	
11-10.55	Support the proposed change - Essex 13 (generally)	National Grid notes the respondent's feedback.	
Thurrock 1			
11-10.56	Support the proposed change - Thurrock 1 (generally)	National Grid notes the respondent's feedback.	
Thurrock 2			
11-10.57	Support the proposed change - Thurrock 2 (generally)	National Grid notes the respondent's feedback.	
Thurrock 3			
11-10.58	Support the proposed change - Thurrock 3 (generally)	National Grid notes the respondent's feedback.	
11-10.59	Suggest that the Project is straightened and remains on the west side of Buckingham Hill Road (e.g. this would be least disruptive and more cost effective). However, if it is deemed necessary to cross onto the east side of Buckingham Hill Road, suggest that the associated haul road and crossing protection area is relocated north, onto the land where Pylon TB258 is currently situated	<p>National Grid has considered the respondent's feedback, and we have reviewed multiple alternative alignments in this location. Due to the presence of Buckingham Hill Road landfill, which does not provide suitable ground conditions for pylon construction, we do not consider it possible to avoid a route to the east of the road. We do propose to progress with an extended Order Limit to the west to retain the potential to position a pylon on the household recycling site (which may not be made ground) but this would only progress if an alternative site for such a facility comes forward in an appropriate timescale and if the recycling site is confirmed to have suitable ground conditions.</p> <p>The crossing protection needs to be positioned where the overhead line conductors cross the public highway and thus is subject the final positioning of the overhead line. Access to such areas is required to construct the crossing protection (scaffold).</p>	

Ref no.	Summary of matters raised	National Grid's response
11-10.60	Suggest that either the Project line is straightened between Pylons TB255 and TB258, keeping the line to the west side of Buckingham Hill Road (as this land may be landfill), or that the line is straightened between Pylons TB255 and TB258, with the pylon situated on the hardcore yard on the west side of the road to avoid encroaching upon the Thames Estuary Site of Special Scientific Interest (SSSI) notification project area (e.g. potentially removing the need for an additional pylon, offering a potential cost-saving opportunity for National Grid; to eliminate the necessity for substantial disturbance compensation payments; to remove impact from Maple Park to the north, a valued public open space that is scarce in this part of Essex; to increase the distance from the gas pipe, reducing health and safety concerns)	National Grid has considered the respondent's feedback, and we have reviewed multiple alternative alignments in this location. Due to the presence of Buckingham Hill Road landfill, which does not provide suitable ground conditions for pylon construction, we do not consider it possible to avoid a route to the east of the road. We do not consider that either the Sites of Special Scientific Interest (SSSI) possible notification, nor the use as a community space would be materially compromised by the routeing.
11-10.61	Concern about the impact of Pylon TB257, the proposed haul road and scaffold construction area on Orsett Quarry (e.g. impacts on operational efficiency such as delays and temporary closures, ecology, future expansion of the quarry, financial implications, health and safety impacts given cumulative traffic volumes for the quarry and the Project), including impact on compound area (e.g. unable to rearrange infrastructure within the compound area to make space for National Grid traffic without significant impact)	National Grid notes the respondent's feedback but thinks there may be some confusion over pylon numbering. Pylon TB257 is located approximately 250 m north of the quarry site. Pylon TB258 was previously located within Orsett Quarry compound area. However, in response to previous feedback, this has been moved north to fall outside of the quarry. However temporary works during construction would still be required in the quarry site. Due to the angle of the crossing of Buckingham Hill Road we would need to install crossing protection (scaffold and netting) across the road with the scaffold structure positioned within the quarry site. Additionally, the area direct to the east of the quarry compound site may be needed for the stringing of overhead line conductors. As National Grid and its appointed contractors develop the detailed design and construction

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		methodology, we would continue to engage with the quarry to reduce impacts where possible, where this is unavoidable, temporary measures or compensation would be agreed.	
11-10.62	Criticism that rejection of alternative TNS locations 4 and 5 is based on limited evidence or partly on impacts of lesser significance (e.g. the Southfields Opportunity Area which is not a preferred allocation in the Local Plan)	National Grid disagrees with the respondents view and notes that in the Design Development Report (DDR) addendum to the Thurrock 3 targeted consultation it described determinative differences that allowed decision making to progress without the need to present other comparisons which were not determinative. Alternative sites 4 and 5 were primarily considered less favoured as a result of the additional environmental effects and costs. For site 4 the site still requires connection to the existing YYJ line. This connection is at least twice the length of that proposed for the Project. It is also required for two double circuits requiring either two overhead line crossings of Orsett golf course or 36 underground cables. For site 5 the diversion requirements of the YYJ have the additional effects and costs of a Cable Sealing End (CSE) compound and underground cables from south of Orsett golf course to site 5. For these reasons we continue to consider site 3 to be preferred and no change is proposed. We have also responded to other feedback and subject to various uncertainties relating to other developments prefer a scenario B arrangement which further favours site 3 by reducing the interface with housing proposals to the same as site 5 which is at considerable additional cost. No change is proposed.	
11-10.63	Suggest proposals use underground cables or move the pylon alignment/connection to YYJ further north or east of the existing route or to the north of the LTC route	In response to feedback National Grid has considered an alternative arrangement moving the Cable Sealing End (CSE) compounds closer together onto the YYJ route with it connecting to the substation as underground cable but which incurs greater cost. This Scenario B reduces the interaction with the proposed housing and also reduces engineering risks arising from uncertainty over Lower Thames Crossing (LTC)	X

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
11-10.64	Suggest the cable sealing end is moved further north or east away from Chadwell St Mary	<p>programme with consequent outage challenges. As some aspects require further resolution, wider order limits are taken forward but with National Grid strongly favouring the modified Scenario B alternative which would reduce the required land take.</p> <p>It is not feasible to move all of the modification works to the north of the LTC route as for the Project needs to configure a connection to the existing transmission network. This is facilitated by a connection from Tilbury North substation to either the existing ZB or YYJ overhead lines that are positioned to the south of the proposed LTC road.</p> <p>It is not feasible to move all of the modification works away from Chadwell St Mary or move them to the north as the Project needs to configure a connection to the existing transmission network. This is facilitated by a connection from Tilbury North substation to either the existing ZB or YYJ overhead lines that are positioned to the south of the proposed Lower Thames Crossing (LTC) road.</p> <p>The 2025 Design Development Report (document reference 5.15) sets out consideration of other sites. Sites 1 and 4 were further north. Site 1 cannot meet the requirements of the needs case. Site 4 is considered less favoured as a result of the additional environmental effects and costs required to make the connection to the existing YYJ line. This connection is at least twice the length of that proposed for the Project. It is also required for two double circuits requiring either two overhead line crossings of Orsett golf course or 36 underground cables. Likewise, site 5 which is slightly to the east requires the additional effects and costs of a CSE and cables from south of Orsett golf course to site 5. On this basis no change is proposed.</p> <p>In response to feedback National Grid has considered an alternative arrangement moving the Cable Sealing End (CSE) compounds closer together onto the YYJ route but fundamentally based around site 3 which is</p>	

Ref no.	Summary of matters raised	National Grid's response	Resulted in Design Change
		the arrangement proposed for the Project. This is connecting the YYJ line to the substation as underground cable. This Scenario B reduces the interaction with the proposed housing and also reduces engineering risks arising from uncertainty over LTC programme with consequent outage challenges. As some aspects require further resolution, wider order limits are taken forward but with National Grid strongly favouring the modified Scenario B alternative which would reduce the required land take.	

- 11.3.10 **Table 9-10** of this report provides a summary of the headline issues raised during the additional consultation and engagement period and how National Grid has considered or addressed these.
- 11.3.11 Ongoing engagement with PILs has been sought throughout the duration of the Project. It has facilitated two-way communication which has served to better inform individuals on the rationale behind the proposals, as well as shape them.
- 11.3.12 National Grid will also give due consideration to any representations from PILs after 22 August 2025 which are made before, and if appropriate, during the course of the examination.

Additional Landowner Engagement

- 11.3.13 In accordance with paragraph 024 of the PA2008 Pre-application stage of guidance for NSIPs (April 2024), any new PILs identified after June/July consultation mailouts have been written to separately. This letter includes details about the project, where further information can be found, how to get in touch with National Grid and to explain how there will be an opportunity to provide comments to the Planning Inspectorate (PINs) once the Development Consent Order (DCO) application has been submitted. A copy of this letter and a list of PILs identified and notified can be found in the **Appendix L** of this Report.
- 11.3.14 The land referencing process, carried out in accordance with the methodology within **Appendix J** of this report, was ongoing throughout the pre-application period and in recent instances diligent inquiries led to new interests being identified. New interests arose for a number of reasons such as changes in ownership or occupancy, delays from Land Registry and the ongoing responses to requests for information and site notices. National Grid will continue the land referencing process moving forward with the application and will engage with all newly identified interests throughout the DCO examination process should the DCO application be accepted to ensure that all relevant landowners understand their opportunity to participate in the examination of the application.

12. EIA Consultation

12.1 Introduction

- 12.1.1 The consultation required under The Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 (“EIA Regulations 2017”) is separate from that required under the Planning Act 2008 which is the primary focus of this report. This chapter outlines the consultation undertaken by and on behalf of National Grid to satisfy the requirements of the EIA Regulations. Documents within the ES and appendices explain in further detail how regard has been had to the comments received from the EIA scoping consultation.
- 12.1.2 Full details of compliance with the EIA Regulations 2017, in terms of the EIA itself, are detailed within **Section 4.6** of this report as well as within the Environmental Statement (ES) Chapter 1: Introduction (application document 6.1).

12.2 EIA Scoping

- 12.2.1 A Regulation 8(1)(b) (of the EIA Regulations 2017) notification was submitted to the Secretary of State for Energy Security and Net Zero (SoS) on [17 October 2022]. The letter included a request for a Scoping Opinion under Regulation 10 of the EIA Regulations 2017 and confirmed that the Applicant intended to submit a Development Consent Order (DCO) Application. A copy of this letter is contained in **Appendix D** of this report.
- 12.2.2 National Grid submitted a Scoping Report (SR) to the Planning Inspectorate (PINs) on 4 November 2022 in accordance with the EIA Regulations 2017. The SR was prepared in accordance with Advice Note Seven (PINs, 2020).
- 12.2.3 The SoS adopted the Scoping Opinion on 14 December 2022 having consulted with the relevant consultation bodies in accordance with Regulation 10(6) of the EIA Regulations 2017. The Scoping Report (document reference 6.19), Scoping Opinion (document reference 6.20), and relevant consultation bodies responses (document reference 6.5.A1) have been submitted as part of the DCO application.
- 12.2.4 The following consultation bodies provided responses to PINs on the SR:
- | | |
|--|--------------------------------|
| • Affinity Water | • Braintree District Council |
| • Aldham Parish Council | • Brentwood Borough Council |

- Winfarthing Parish Council
- Wortham and Burgate Parish Council

12.3 Section 48- Planning Act 2008

- 12.3.1 Regulation 13 of the EIA Regulations 2017 states that where the proposed application for an order granting development consent is an application for EIA development, the Applicant must, at the same time as publishing notice of the proposed application under Section 48(1) of the PA 2008, send a copy of that notice to the consultation bodies (as defined in Regulation 3(1) of the EIA Regulations 2017) and to any person notified to the Applicant by PINs in accordance with Regulation 11(1)(c).
- 12.3.2 In accordance with Regulation 13, National Grid sent a Section 48 notice to the consultation bodies on 10 April 2024. The consultation was extended by a period of five weeks as detailed in **Section 3.4.1** of this report and the Section 48 notice was reissued detailing the consultation extension on 12 June 2024.
- 12.3.3 Copies of the notice and the letters issued are provided in **Appendix F** of this report.

12.4 Consulting on PEI

- 12.4.1 As per the provisions of Regulation 12(1) of the EIA Regulations 2017, the SoCC must set out (a) whether the Project is EIA development, and (b), if the Project is EIA development, how the Applicant intends to publicise and consult on the preliminary environmental information.
- 12.4.2 The SoCC makes clear that it was produced pursuant to Section 47(1) of the PA 2008 and Regulation 12 of the EIA Regulations 2017. It also makes clear that likely significant environmental effects of the Project will be consulted on, alongside potential environmental mitigation identified to reduce likely significant environmental effects. The SoCC states that an ES would be prepared as part of the application for development consent.
- 12.4.3 The SoCC further states that preliminary environmental information (in the form of a Preliminary Environmental Information Report (PEIR)) will form part of the consultation materials, stating that the full PEIR will be made available including on the project website and in paper form, and that the PEIR will also outline any limitations to the current assessments. The SoCC is therefore clear that a PEIR was to be prepared and consulted on, and how National Grid intended to publicise and consult on this document.

- 12.4.4 A copy of the SoCC can be found in **Appendix E** of this report. The PEIR was produced and consulted on during the statutory consultation between 10 April 2024 and 26 July 2024. The PEIR provides a snapshot of the environmental information available at the relevant time, in the case of the Project at the statutory consultation stage.
- 12.4.5 The role of the PEIR is to provide information reasonably required to enable members of the public (including local communities), LPAs, statutory bodies and people whose land or interests would potentially be affected to understand the likely significant environmental effects of the Project so that they may provide meaningful feedback.
- 12.4.6 The PEIR was available to download from the Project website, to view at the inspection locations and available on request. Significant feedback was received from stakeholders and members of the public on the content of PEIR, and the preliminary environmental information and the ongoing process of EIA more widely informed a large part of the feedback received.
- 12.4.7 **Section 9.6** of this report details the response to consultation feedback and has been produced to support the application for development consent and the accompanying ES under the PA 2008. It contains a summary of the consultation and engagement held with the relevant statutory consultees in relation to the respective environmental topics relevant to the EIA and how these have been considered on the Project.

13. Adequacy of Consultation

- 13.1.1 In accordance with the Guidance, National Grid consulted with the host and neighbouring Local Planning Authorities (LPAs) about the adequacy of consultation undertaken by National Grid, as set out in the Statement of Community Consultation (SoCC).
- 13.1.2 On 14 April 2025 National Grid sent a letter via email to the LPAs requesting their feedback on the adequacy of consultation, requesting receipt of this by 5 May 2025. The letter included a table which set out the commitments made in the SoCC and how National Grid had complied with them in the delivery of the statutory consultation and any subsequent consultation. The letter is available in **Appendix M** of this report.
- 13.1.3 On 14 April 2025 a further email was sent to the LPAs detailing an extension to the feedback deadline, due to the May Bank Holiday (5 May). The new deadline date was 6 May 2025. A copy of the email sent is available in **Appendix M** of this report.
- 13.1.4 The following host LPAs were consulted with on the adequacy of consultation:
- Basildon Borough Council;
 - Braintree District Council;
 - Brentwood Borough Council;
 - Chelmsford City Council;
 - Colchester City Council;
 - Essex County Council;
 - Mid Suffolk and Babergh District Council;
 - Norfolk County Council;
 - South Norfolk Council;
 - Suffolk County Council;
 - Tendring District Council; and
 - Thurrock Council.
- 13.1.5 The following neighbouring LPAs were consulted with on the adequacy of consultation:
- Breckland Council;
 - Broadland District Council;
 - Cambridgeshire County Council;
 - Castle Point Borough Council;
 - Dartford Borough Council;

- East Suffolk Council;
- Ebbsfleet Development Corporation;
- Enfield Council;
- Epping Forest District Council;
- Gravesham Borough Council;
- Greater London Authority;
- Great Yarmouth Borough Council;
- Hertfordshire County Council;
- Ipswich Borough Council;
- Kent County Council;
- King's Lynn and West Norfolk Borough Council;
- Lincolnshire County Council;
- London Borough of Bexley;
- London Borough of Havering;
- London Borough of Redbridge;
- Maldon District Council;
- Medway Council;
- North Norfolk Council;
- Norwich City Council;
- Rochford District Council;
- Southend-on-Sea City Council;
- The Broads Authority;
- Waltham Forest;
- West Suffolk Council; and
- Uttlesford District Council.

13.1.6 Feedback on the adequacy of consultation undertaken by National Grid was received from all host LPAs and two neighbouring LPAs:

- Basildon Borough Council;
- Braintree District Council;
- Brentwood Borough Council;
- Chelmsford City Council;
- Colchester City Council;

- Essex County Council;
- King's Lynn and West Norfolk Borough Council (neighbouring LPA);
- London Borough of Redbridge (neighbouring LPA);
- Mid Suffolk and Babergh District Council;
- Norfolk County Council;
- South Norfolk Council;
- Suffolk County Council;
- Tendring District Council; and
- Thurrock Council.

13.1.7 **Table 13.1** of this report summarises the feedback received from LPAs with regards to National Grid's compliance with the statutory section provisions of the Planning Act (PA) 2008, namely Section 42, Section 47 and Section 48, and in accordance with the agreed SoCC. Other comments raised by LPAs are presented in **Appendix M** of this report.

13.1.8 National Grid responded to the feedback received from LPAs on the adequacy of consultation. Letters were sent on 6 June 2025 to all LPAs who had provided feedback (see paragraph 13.4.6 of this chapter). Copies of the letters are available in **Appendix M** of this report.

Table 13.1 LPA feedback with regards to National Grid's compliance with the statutory provisions of the PA 2008.

LPA	Response received (Y/N)	Comments on legislative compliance	National Grid response
Basildon Borough Council	Yes	Basildon Borough Council believed that National Grid had correctly identified the parties to be consulted, complied with their duty to consult all relevant parties and carried out consultation events in line with the SoCC.	Noted
Braintree District Council	Yes	Braintree District Council was satisfied that National Grid has complied with the duties required by Section 42, Section 47, and Section 48 of the Planning Act 2008.	Noted
Brentwood Borough Council	Yes	Brentwood Borough Council stated that it considered that National Grid had carried out sufficient pre-application	Noted

LPA	Response received (Y/N)	Comments on legislative compliance	National Grid response
		consultation in accordance with the SoCC and in line with Sections 42, 47 and 48 of the PA 2008.	
Chelmsford City Council	Yes	Chelmsford City Council said it was aware that National Grid have a duty to comply with the following sections under the Planning Act 2008 –Section 42, Section 47, Section 48. Chelmsford City Council stated it will provide a full response as to whether NG has complied with these sections of the Planning Act in its Adequacy of Consultation response to the Planning Inspectorate (PINs).	Noted
Colchester City Council	Yes	Colchester City Council stated that National Grid had carried out adequate pre-application consultation on the Project in accordance with the agreed SoCC and in line with Sections 42, 47 and 48 of the PA 2008.	Noted
Essex County Council	Yes	Essex County Council confirmed, subject to the review of the Consultation Report, that National Grid carried out sufficient pre-application consultation on the Project in accordance with the agreed SoCC and in line with Section 42, 47 and 48 of the PA 2008.	Noted
King's Lynn and West Norfolk Borough Council	Yes	King's Lynn and West Norfolk Borough Council stated it was satisfied that National Grid had met its obligations in relation to the adequacy of consultation undertaken to date.	Noted
London Borough of Redbridge	Yes	London Borough of Redbridge confirmed it had been adequately consulted to date and had not commented on the proposals as	Noted

LPA	Response received (Y/N)	Comments on legislative compliance	National Grid response
		the Project is too far away to impact them.	
Mid Suffolk and Babergh District Council	Yes	Mid Suffolk and Babergh District Council confirmed it was satisfied that consultation had been carried out in accordance with the SoCC.	Noted
Norfolk County Council	Yes	Norfolk County Council said it was content that the Norwich to Tilbury team at National Grid have met their consultation requirements for the SoCC.	Noted
South Norfolk Council	Yes	South Norfolk Council confirmed that consultations undertaken reflect the commitments set out in the SoCC as required by Section 42, 47 and 48, specifically in relation to the delivery of the SoCC.	Noted
Suffolk County Council	Yes	Suffolk County Council stated it was satisfied that National Grid had correctly identified the parties to be consulted as required by Section 42 and had complied with the duty to consult those parties. The Council stated it was satisfied that consultation was undertaken in accordance with the published SoCC and complied with duties set out in Section 47 of the PA 2008. The Council also said it had “no reason to doubt” that National Grid had published the required notices and complied with Section 48 of the PA 2008.	Noted. See National Grid’s response in Appendix M of this report.
Tendring District Council	Yes	Tendring District Council was satisfied that the statutory duty under Section 42 had been met. It also accepted that National Grid complied with the duty to publicise the consultation under Section 48. The Council considered that while National Grid asserted it had	Noted. See National Grid’s response in Appendix M of this report.

LPA	Response received (Y/N)	Comments on legislative compliance	National Grid response
		fulfilled its obligations under Section 47, the Council remains concerned that consultation failed to deliver effective and meaningful engagement.	
Thurrock Council	Yes	Thurrock Council agreed that the 2023 and 2024 consultations had been carried out in line with the SoCC, as described by National Grid.	Noted. See National Grid's response in Appendix M of this report.

- 13.1.9 National Grid prepared an Adequacy of Consultation Milestone (AoCM) report which detailed how statutory consultation and subsequent consultations had been carried out in accordance with the components set out in the Programme Document and the SoCC.
- 13.1.10 The AoCM was submitted to the PINs on 13 June 2025 and is available to view on the PINs website.

14. Conclusion

14.1 Summary of Changes

- 14.1.1 National Grid has adopted a multi-phased consultation approach, comprising of non-statutory consultations, statutory consultation and targeted consultation. This approach has sought consultation feedback throughout the development of the Project and on all aspects of the proposed development, enabling feedback to influence the design evolution.
- 14.1.2 Over the course of the consultations undertaken since 2022, numerous changes to the design were proposed by respondents through consultation feedback. Further potential changes arose as a result of ongoing environmental and engineering assessment work as the design progressed. The proposed amendments were considered by the Project team and as a result, the design evolved iteratively to include key changes as identified below:

Changes made between statutory consultation and targeted consultations:

Sustainable Drainage Systems (SuDS)/Attenuation ponds

- Surface water mapping highlighted a high risk of surface water flooding at TB113, which has therefore been moved slightly west.
- Updated surface water mapping data resulted in the movement of multiple SuDS ponds out of flood zones or surface water zones.

Ecology

- Further surveys raised a risk of impacting badger setts in various locations, now avoided by changes to the Order Limits.
- Further surveys raised a risk of impacting veteran trees in various locations, resulting in changes to the alignment, pylon positions or the Order Limits.
- Due to a risk of impacting an otter holt, the alignment and haul road have been moved south-east.
- To avoid Wortham Ling Site of Special Scientific Interest (SSSI), the construction compound near RG90 has been moved further east.

Landscape

- Landscape assessments highlighted locations on the route to protect vegetation close to residential properties, which have therefore been removed from the Order Limits to retain vegetation to retain filtered views.
- To reduce the impact on The Hare Public House, the construction compound has been relocated to the east.

UK Power Networks (UKPN) 132kV

- Updates of UKPN cable routes has allowed a reduced underground cable swathe for the 132 kV undergrounding.

Planning applications e.g. solar farms

- Various changes to alignment and Limits of Deviation to avoid impacts with other utilities and planning applications.

Heritage

- Geophysical surveys raised a risk of impacting geophysical anomalies along the alignment, resulting in changes to the alignment or temporary construction features.

Transport – Bellmouths, vis splays, Public Rights of Way (PRoW)

- Various changes to Primary Access Routes (PARs) following road safety audits.
- A change to the Order Limits has been implemented for the crossing bellmouth construction areas along the route.
- An alternative access provision Chelmsford Bypass Phase 2 has resulted in a relocation of the construction compound with an extension of the Order Limits to incorporate the roundabout with existing access.
- Various changes to visibility splays, bellmouth positions and PRoW diversions following road safety audits.

General Engineering

- Various reductions to the Order Limits to remove areas of residential property.
- Following new design criteria, a review of all drainage designs along the route have been established with new Limits of Deviation (LoD) around drainage ponds.
- A diversion of the haul road at Norwich Main Substation to remove clash with substation extension plan, by routing through the 3 m gap between the substation wall and spoil heap.
- A change to the Order Limits along the route has been implemented to allow for permanent access to underground cables.

Changes following targeted consultations from further engagement and survey work:

Hydrology

- An update to the Environment Agency (EA) Flood Zone data, a request was raised by hydrology to move the Little Wenham CSE compound out of Flood Zone 3, which has been moved slightly south.

Planning applications e.g. solar farms

- An increase to the underground cable route LoD to allow for scenario of 50 MW battery storage proposal at Lawford Substation.

Ecology

- Further surveys raised a risk of impacting badger setts in various locations, resulting in changes to the alignment and Order Limits.
- Due to a risk of impacting an otter holts in various locations, the alignment and construction access road have been realigned.
- A repositioning of the compound and laydown area in the undergrounding section north of Bramford to reduce impact on Functionally Linked Land (FLL) with respect to birds which are part of the Stour and Orwell Estuaries Special Protection Areas (SPAs) / Ramsar waterbird assemblage.

Transport – Bellmouths, vis splays, PRow.

- A requirement for three additional crossovers in the vicinity of Raydon have been added to the design in the undergrounding cable swathe.

Lands

- A clip to the Red Line Boundary to avoid Orsett Heath Academy

14.2 Compliance with the Planning Act 2008 and EIA Regulations

- 14.2.1 This Consultation Report sets out the consultation activities which have been undertaken under Section 42, Section 47, Section 48 and Section 49 of the PA 2008. National Grid developed the approach to statutory consultation in line with the requirements of the Planning Act (PA) 2008 (and the APFP Regulations 2009 and EIA Regulations 2017), as well as Department for Communities and Local Government's (DCLG) Guidance and Planning Inspectorate's (PINs) Advice Note Fourteen as set out in **Chapter 4** of this report.
- 14.2.2 **Chapter 4** provides detail of how each requirement from the legislation, regulations, as well as the guidance and advice notes, have been met as part of this consultation. Compliance with the PA 2008 can be summarised as follows:
- Consultation was undertaken in accordance with Section 47 of the PA 2008, as identified in **Chapter 7** of this report. This included consultation on the SoCC with

local authorities, publication of the SoCC notice, making the SoCC available for inspection and undertaking consultation as set out in the SoCC;

- Consultation was undertaken in accordance with Section 42 of the PA 2008, as identified in **Chapter 8** of this report. This included consultation with all relevant consultees under Section 42(1)(a), Section 42(1)(b) and Section 42(1)(d). Section 42(1)(aa) and Section 42(1)(c) are not relevant to the Project (however, National Grid consulted the MMO and the GLA on a precautionary basis as the organisation was identified in the Scoping Opinion);
- The Secretary of State for Energy Security and Net Zero (SoS) was notified of the proposed application in accordance with Section 46 of the PA 2008, as identified in **Chapter 8** of this report;
- The EIA Regulations 2017 also include a requirement to prepare and consult on preliminary environmental information. A Preliminary Environmental Information Report (PEIR) was therefore produced for statutory consultation (undertaken between 10 April 2024 and 26 July 2024);
- The consultation was publicised in accordance with Section 48 of the PA 2008, as identified in **Chapter 8** of this report. This included the publication of the Section 48 notice in three local newspapers (East Anglian Daily Times, Eastern Daily Press and Essex Chronicle), The London Gazette and The Guardian, see **Appendix H** of this report for copies of the original and extended consultation notices. This also included notification to consultation bodies in line with the Environmental Impact Assessment (EIA) Regulations 2017;
- National Grid has complied with Section 49 of the PA 2008 by demonstrating in **Chapter 9** of this report that it has had regard to all of the responses received at statutory consultation and the comments raised;
- This Consultation Report shows how feedback received has influenced National Grid's proposal, design, analysis and methods of delivery for this major infrastructure project; and
- This Consultation Report has been prepared in fulfilment of Section 37(3)(c) of the PA 2008. This requires the Development Consent Order (DCO) application to be accompanied by a consultation report giving details of the matters specified in Section 37(7).

Abbreviations

Acronym	Definition
AAT	Airfield Advisory Team
AC Interference	Alternating Current
ACoW	Archaeological Clerk of Works
AGI	Above Ground Installation
AIA	Arboricultural Impact Assessment
AIL	Abnormal Indivisible Load
ALC	Agricultural Land Classification
AMS-OWSI	The Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation
AONB	Area of Outstanding Natural Beauty
APFP	Applications: Prescribed Forms and Procedure
ATT	Archaeological Trial Trenching
BCT	Bat Conservation Trust
BDC	Braintree District Council
BMV	Best and most versatile
BNG	Biodiversity Net Gain
BPA	British Pipeline Association
BPM	Best Practicable Means
BS	British Standard
CA	Conservation Area
CAA	Civil Aviation Authority
CAP	Civil Aviation Publication
CoCP	Code of Construction Practice
CDM	Construction, Design and Management [Regulations]
CP	Cathodic Protection
CPO	Compulsory Purchase Order

CPRSS	Corridor and Preliminary Routeing and Siting Study
CSE	Cable Sealing End
CSEC	Cable Sealing End Compound
CTMP	Construction Traffic Management Plan
CWS	County Wildlife Site
DBA	Desk-based assessment
DC	Direct Current
DCO	Development Consent Order
DNO	Distribution Network Operator
DCLG	Department of Communities and Local Government
DEFRA	Department for Environment, Food & Rural Affairs
DESNZ	Department for Energy Security and Net Zero
DHGV	Dunton Hills Garden Village
DMRB	The Design Manual for Roads and Bridges
DOL	Draft Order Limits
EACN	East Anglia Connection Node
ECC	East Coast Cluster
EGL	Eastern Green Links
EMF	Electric and Magnetic Field
EIA	Environmental Impact Assessment
EPS	European Protected Species
ES	Environmental Statement
FE	Five Estuaries
FRA	Flood Risk Assessment
GIL	Gas Insulated Line
GLA	Greater London Authority
GLVIA3	Guidelines on Landscape and Visual Impact Assessment
GCN	Great Crested Newt
GHG	Greenhouse Gas

GPA3	Good Practice Advice in Planning Note 3
GSP	Galvanized Steel Pipe
HEA	Historic Environment Assessment
HGV	Heavy Goods Vehicles
HIA	Health Impact Assessment
HIA	Heritage Impact Assessment
HDD	Horizontal Directional Drilling
HEBR	[The] Historic Environment Baseline Report
HER	Historic Environment Records
HND	Holistic Network Design
HRA	Habitats Regulations Assessment
HSE	Health and Safety Executive
HVDC	High Voltage Direct Current
IACPC	Impact Assessment and Conservation Payment Certificate
IAQM	Institute of Air Quality Management
ICCROM	International Centre for the Study of the Preservation and Restoration of Cultural Property
ICOMOS	International Council on Monuments and Sites
IEMA	Institute of Environmental Management and Assessment
IHBC	Institute of Historic Buildings Conservation
ILS	Instrument Landing System
IUCN	International Union for Conservation of Nature
LCA	Landscape Character Area
LCT	Landscape Character Type
LEMP	Landscape and Ecology Management Plan
LiDAR	Light Detection and Ranging
LIQ	Land Interest Questionnaire
LVIA	Landscape and Visual Impact Assessment
LMI	Labour Market Information

LOAEL	Lowest observed adverse effect level
LoD	Level of Development
LoD	Limits of Deviation
LoNI	Letters of No Impediment
LPA	Local Planning Authority/ies
LPP	Local Planning Policy
LRN	Local Road Network
LTC	Lower Thames Crossing
LVIA	Landscape and Visual Impact Assessment
LWS	Local Wildlife Sites
MHCLG	Ministry of Housing, Communities and Local Government
MLSOAs	Middle Layer Super Output Areas
MRN	Major Road Network
MITS	Main Interconnected Transmission System
MSA	Minerals Safeguarding Area
NCN	National Cycle Network
NCR	National Cycle Route
NDHAs	Non-designated heritage assets
NESO	National Energy System Operator
NETS	National Electricity Transmission System
NF	North Falls
NG	National Grid
NGET	National Grid Electricity Transmission
NGT	National Gas Transmission
NLS	National Library of Scotland
NPPF	National Planning Policy Framework
NPS	National Planning Statement
NPS	National Policy Statement
NRMM	Non-road mobile machinery

NSIPs	Nationally Significant Infrastructure Projects
NSRs	National Schedule of Rates
NTEM	National Trip End Model
OFGEM	Office of Gas and Electricity Markets
OHL	Overhead Line
OLEMP	Outline Landscape and Ecology Management Plan
PAR	Primary Access Routes
PA 2008	The Planning Act 2008
PAS	Portable Antiquities Scheme
PCZ	Primary Consultation Zone
PEIR	Preliminary Environmental Information Report
PiL/PIL	Person with an Interest in Land
PINS	[The] Planning Inspectorate
PRoW	Public Rights of Way
RPG	Registered Park and Garden
RVAA	Residential Visual Amenity Assessment
SAC	Special Areas of Conservation
SBIS	Suffolk Biodiversity Information Service
SCC	Suffolk County Council
SCZ	Secondary Consultation Zone
SEBs	Statutory Environmental Bodies
SoCG	Statement of Common Ground
SOR	Statement of Requirements
SoS	Secretary of State
SSSI	Site of Special Scientific Interest
SuDS	Sustainable Drainage Systems
SPA	Special Protection Areas
SPD	Supplementary Planning Document
SRN	Strategic Road Network

SRP	Soils Resource Plan
SSSI	Sites of Special Scientific Interest
SQSS	Security and Quality of Supply Standard
TEMPro	Trip End Model Presentation Program
TEC	Transmission Entry Capacity
TPO	Tree Preservation Order
UKPN	UK Power Network
UNESCO	United National Educational, Scientific and Cultural Organisation
UXO	Unexploded Ordnance
VRA	Visual Receptor Area
VP	Viewpoint
WaLOR	Waveney and Little Ouse Recovery
WHIASU	Wales Health Impact Assessment Support Unit
WSI	Written Scheme of Investigation
WVA	Waveney Valley Alternative
WWA	Water Wye Associates
ZTV	Zone of Theoretical Visibility
