Consultation Report Guidance	1
Executive Summary	13
1. Introduction	15
1.1 About National Grid Electricity Transmission	15
1.2 About the Project	16
1.3 Summary of Project Development	17
1.4 Legislation and National Policy Context	18
2. About the Consultation Report	22
2.1 Background to the Consultation Report	22
2.2 Purpose of the Report	23
2.3 Structure of the Report	23
3. Consultation Approach	26
3.1 Approach to Public Consultation and Engagement	26
3.2 Summary of the 2022 Non-Statutory Consultation	31
3.3 Summary of the 2023 Non-Statutory Consultation	33
3.4 Summary of the 2024 Statutory Consultation	35
3.5 Summary of the Targeted Consultations	38
3.6 Summary of the further Landowner Consultations	41
4. Legislative Compliance	44
4.1 Introduction	44
4.2 Compliance with PA 2008: Guidance on the pre-application process	44
4.3 Compliance with PA 2008 pre-application stage for Nationally Significant Infrastructure Projects (April 2024)	74
4.4 Compliance with the Statutory Section Provisions of the PA 2008	110
4.5 Compliance with The Infrastructure Planning (Applications: Prescribed Forms and Procedure) (APFP) Regulations 2009 (as amended)	119
4.6 Compliance with The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017	126
4.7 Compliance with PINs Guidance on Nationally Significant Infrastructure Projects: Advice on the Consultation Report	128
4.8 Compliance with guidance on Adequacy of Consultation Prospectus	143
5. 2022 Non-Statutory Consultation	151

5.1	Introduction	151
5.2	2022 Non-Statutory Consultation Summary	151
5.3	Who National Grid Consulted	153
5.4	How National Grid Consulted	153
5.5	Responses Received to the 2022 Non-Statutory Consultation	160
5.6	Changes Made	161
5.7	Ongoing Engagement Between Consultations	162
6.	2023 Non-Statutory Consultation	163
6.1	Introduction	163
6.2	2023 Non-Statutory Consultation Summary	163
6.3	Who National Grid Consulted	164
6.4	How National Grid Consulted	165
6.5	Responses Received to the 2023 Non-Statutory Consultation	171
6.6	Changes Made	172
6.7	Ongoing Engagement Between Consultations	182
7.	Preparation for Statutory Consultation	302
7.1	Introduction	302
7.2	Developing the SoCC	302
7.3	Consulting Local Planning Authorities on the SoCC	302
7.4	Publication of the SoCC	305
8.	Statutory Consultation	307
8.1	Introduction	307
8.2	Statutory Consultation Approach	308
8.3	What National Grid Consulted on	308
8.4	Consulting Prescribed Consultees Under Section 42(1)(a)	309
8.5	Consulting Prescribed Consultees Under Section 42(1)(b) and Section 43	310
8.6	Consulting Prescribed Consultees Under Section 42(1)(c)	314
8.7	Consulting PILs Under Section 42(1)(d) and Section 44	314
8.8	Notifying the Secretary of State Under Section 46	318
8.9	Consulting the Local Community Under Section 47	318
8.10	Adhering to the Commitments in the SoCC	320
8.11	Publicising Pursuant to Section 48	350
8.12	Making Information Available and Enquiry Channels	353
	Engaging Seldom Heard Groups and Key Stakeholders	363
9.	Responses to Statutory Consultation	367
9.1	Introduction	367
9.2	Responses Received	368

9.3	Feedback Questionnaire	368
9.4	Analysing Responses to the Statutory Consultation	369
9.5	Responses to Questions	370
9.6	Findings from the Statutory Consultation	382
9.7	Summary of Changes made Following Feedback Received from Statutory Consultation	400
9.8	Ongoing engagement	411
10.	Targeted Consultations	478
10.1	Introduction	478
10.2	Targeted Consultations Approach	479
10.3	'Targeted Consultation Strategy' document	480
10.4	'Targeted Statutory Consultation Strategy' document	480
10.5	Norfolk and Suffolk Targeted Consultations	481
10.6	Essex and Thurrock Targeted Consultations	488
10.7	Thurrock 3 Targeted Statutory Consultation	495
10.8	Responses Received to the 2025 Targeted Consultation	504
10.9	Findings from the targeted consultations	511
10.10	Changes made following consultation	554
10.11	Ongoing engagement	554
10.12	Stakeholder Engagement and Statements of Common Ground (SoCG)	554
11.	Further Landowner Consultation and Additional Engagement	556
11.1	Introduction	556
11.2	Additional Section 42 Consultation with Section 44 Parties- PILs	556
11.3	Responses Received to the Further Consultation	559
	Additional Landowner Engagement	576
12.	EIA Consultation	577
12.1	Introduction	577
12.2	EIA Scoping	577
12.3	Section 48- Planning Act 2008	579
12.4	Consulting on PEI	579
13.	Adequacy of Consultation	581
14.	Conclusion	587
14.1	Summary of Changes	587
14.2	Compliance with the Planning Act 2008 and EIA Regulations	589

Consultation Report Guidance

This Consultation Report has been designed to enable the local community and consultees to find headline issues and information easily within structured chapters and geographical sections of the Project:

For the purposes of the report, the geographical sections of the Project have been abbreviated where relevant as follows:

- No specific location (X)
- South Norfolk (SN)
- Mid Suffolk (MS)
- Babergh, Tendring and Colchester (BTC)
- Braintree (BR)
- Chelmsford (CH)
- Basildon and Brentwood (BB)
- Thurrock (TH)

Responses to feedback from the 2024 statutory consultation can be found in Section 9.6 of the Report.

Responses have been grouped into tables relating to each geographic area (e.g. feedback relating to South Norfolk is in **Table 9.3**, Mid Suffolk is in **Table 9.4**).

Responses have been grouped into headline issues in each geographic area for ease of finding specific items (e.g. feedback relating to agricultural impacts in South Norfolk can be found in **Table 9.3** from reference **9.3.1** to **9.3.4**).

The table below details where you can find information about each headline issue raised during the 2024 statutory consultation.

Headline issues raised at 2024 statutory consultation	Reference numbers relating to each geographical section							
	X	SN	MS	BTC	BR	CH	BB	TH
Agricultural impacts	9-2.1 to 9-2.16	9-3.1 to 9-3.4	9-4.1 to 9-4.2	9-5.1 to 9-5.9	9-6.1 to 9-6.3	9-7.1 to 9-7.2	9-8.1 to 9-8.2	9-9.1 to 9-9.2
Airfields	9-2.17 to 9-2.34	9-3.5 to 9-3.13	9-4.3 to 9-4.10	9-5.10 to 9-5.21	9-6.4 to 9-6.5	9-7.3 to 9-7.5	9-8.3 to 9-8.8	9-9.3

Headline issues raised at 2024 statutory consultation	Reference numbers relating to each geographical section							
	X	SN	MS	BTC	BR	CH	BB	TH
Community / Social impact	9-2.35 to 9-2.86	9-3.14 to 9-3.29	9-4.11 to 9-4.28	9-5.22 to 9-5.53	9-6.6 to 9-6.20	9-7.6 to 9-7.26	9-8.9 to 9-8.20	9-9.4 to 9-9.13
Consultation	9-2.245 to 9-2.723	9-3.41 to 9-3.59	9-4.62 to 9-4.96	9-5.110 to 9-5.144	9-6.39 to 9-6.42	9-7.60 to 9-7.83	9-8.39 to 9-8.51	9-9.24 to 9-9.72
Design changes	9-2.724 to 9-2.837	9-3.60 to 9-3.245	9-4.97 to 9-4.286	9-5.145 to 9-5.514	9-6.43 to 9-6.141	9-7.84 to 9-7.281	9-8.52 to 9-8.136	9-9.73 to 9-9.137
Economic / Employment impact	9-2.838 to 9-2.846	9-3.246	9-4.287 to 9-4.288	9-5.516 to 9-5.517	9-6.142 to 9-6.144	9-7.282 to 9-7.284	9-8.137 to 9-8.138	9-9.138 to 9-9.142
Environmental impact	9-2.847 to 9-2.939	9-3.247 to 9-3.263	9-4.289 to 9-4.311	9-5.518 to 9-5.546	9-6.145 to 9-6.157	9-7.285 to 9-7.305	9-8.139 to 9-8.151	9-9.143 to 9-9.150
Financial compensation	9-2.940 to 9-2.963	9-3.264 to 9-3.267	9-4.312 to 9-4.314	9-5.547 to 9-5.551	9-6.158 to 9-6.160	9-7.306 to 9-7.309	9-8.152 to 9-8.154	9-9.151 to 9-9.153
Health, safety & wellbeing	9-2.964 to 9-2.1021	9-3.268 to 9-3.272	9-4.315 to 9-4.319	9-5.552 to 9-5.560	9-6.161 to 9-6.163	9-7.310 to 9-7.317	9-8.155 to 9-8.157	9-9.154 to 9-9.160
Heritage	9-2.1022 to 9-2.1156	9-3.273 to 9-3.275	9-4.320 to 9-4.334	9-5.561 to 9-5.575	9-6.164 to 9-6.168	9-7.318 to 9-7.335	9-8.158 to 9-8.160	9-9.161 to 9-9.163
Mitigation	9-2.1159 to 9-2.1174	9-3.279 to 9-3.280	9-4.340 to 9-4.342	9-5.580 to 9-5.585	9-6.170 to 9-6.173	9-7.337 to 9-7.338	9-8.162 to 9-8.164	9-9.164
PROW (Public Rights of Way)	9-2.1260 to 9-2.1272	9-3.282 to 9-3.283	9-4.344 to 9-4.349	9-5.632 to 9-5.636	9-6.176 to 9-6.177	9-7.344	9-8.166	9-9.167

Headline issues raised at 2024 statutory consultation	Reference numbers relating to each geographical section							
	X	SN	MS	BTC	BR	CH	BB	TH
Requests	9-2.1274 to 9-2.1467	9-3.284 to 9-3.292	9-4.350 to 9-4.352	9-5.637 to 9-5.652	9-6.178 to 9-6.183	9-7.345 to 9-7.349	9-8.167 to 9-8.171	9-9.168 to 9-9.171
Tourism	9-2.1505 to 9-2.1506	9-3.294	9-4.354	9-5.658	9-6.184	9-7.350	9-8.172	9-9.172
Visual Impact	9-2.1507 to 9-2.1631	9-3.295 to 9-3.299	9-4.355 to 9-4.360	9-5.659 to 9-5.672	9-6.185 to 9-6.188	9-7.351 to 9-7.365	9-8.173 to 9-8.175	9-9.173 to 9-9.174
Wildlife / Ecology impact	9-2.1636 to 9-2.1762	9-3.345 to 9-3.364	9-4.376 to 9-4.403	9-5.673 to 9-5.712	9-6.189 to 9-6.200	9-7.366 to 9-7.383	9-8.176 to 9-8.186	9-9.175 to 9-9.186

Responses to feedback from the 2025 targeted consultations can be found in Section 10.9 of this report.

Responses have been grouped into tables relating to each geographic area (e.g. feedback relating to South Norfolk is in **Table 10.22**, Mid Suffolk is in **Table 10.27**) and also into each location reference (e.g. feedback relating to Norfolk 1 can be found in **Table 10.23**, Norfolk 2 is in **Table 10.24**).

Responses have been grouped into headline issues in each geographic area for ease of finding specific items (e.g. feedback relating to airfields in South Norfolk can be found in **Table 10.22** from reference 10-22.2 to 10-22.16).

The table below details where you can find information about each headline issue raised during the 2025 targeted consultations.

Headline issues raised at 2025 targeted consultations	Reference numbers relating to each geographical section							
	X	SN	MS	BTC	BR	CH	BB	TH
Agricultural impacts	10-21.1 to 10-21.2	10-22.1	10-27.1	10-34.1 to 10-34.2	10-39.1	10-42.1	10-46.1	10-51.1
Airfields	10-21.3 to 10-21.5	10-22.2 to	10-27.2 to	10-34.3 to 10-34.4	None	10-42.2	10-46.2	None

Headline issues raised at 2025 targeted consultations	Reference numbers relating to each geographical section							
	X	SN	MS	BTC	BR	CH	BB	TH
		10-22.16	10-27.3

Responses to feedback from the 2025 additional landowner consultation can be found in **Section 11.3** of this report.

Responses have been grouped into tables relating to each geographic area (e.g. feedback relating to South Norfolk is in **Table 11.3**, Mid Suffolk is in **Table 11.4**).

Responses have been grouped into headline issues in each geographic area for ease of finding specific items (e.g. feedback relating to airfields in South Norfolk can be found in **Table 11.3** from reference 11-3.2 to 11-3.6).

The table below details where you can find information about each headline issue raised during the 2025 landowner consultations.

Consultation

This Consultation Report provides an overview of the non-statutory, statutory, targeted and further landowner consultations undertaken by National Grid in support of the Project.

The table below outlines the consultation periods and who National Grid consulted.

Consultation	Date	Summary	Who National Grid consulted
2022 non-statutory consultation	21 April 2022 to 16 June 2022	Route-wide non-statutory consultation which introduced the Project, explained how National Grid had developed the proposals and sought the views of the public and stakeholders.	<ul style="list-style-type: none"> Local community Persons with an Interest in Land (PILs) Parish Councils MPs Elected representatives in Local Planning Authorities (LPAs) Seldom heard groups Local interest groups <p>More information is provided in Section 5.3 of this report.</p>

Consultation	Date	Summary	Who National Grid consulted
2023 non-statutory consultation	27 June 2023 to 21 August 2023	Route-wide non-statutory consultation which presented a preferred draft alignment which showed potential positions for overhead lines and associated pylons, a centreline for the underground cable sections, Cable Sealing End (CSE) compounds and connection substations. Changes to the Project following feedback from the 2022 non-statutory consultation was presented as part of this.	<ul style="list-style-type: none"> • Local community • Persons with an Interest in Land (PILs) • Parish Councils • MPs • Elected representatives in Local Planning Authorities (LPAs) • Seldom heard groups • Local interest groups <p>More information is provided in Section 6.3 of this report.</p>
2024 statutory consultation	10 April 2024 to 26 July 2024	Route-wide statutory consultation which sought views and feedback on the proposed draft Project both as a whole and its elements including the preferred draft alignment, new CSE compounds, a new East Anglia Connection Node (EACN) substation, an alternative design at Waveney Valley, substation extension works, and temporary works.	<ul style="list-style-type: none"> • Prescribed consultees under Section 42(1)(a) and Section 42(1)(aa). More information is provided in Section 8.4 of this report. • Prescribed consultees under Section 42(1)(b) and Section 43. More information is provided in Section 8.5 of this report. • Prescribed consultees under Section 42(1)(d). More information is provided in Section 8.6 of this report. • Persons with an Interest in Land (PILs) under Section 42(1)(d) and Section 44, including Category 1, Category 2 & Category 3 PILs. More information is provided in Section 8.7 of this report. • Secretary of State under Section 46. More information is provided in Section 8.8 of this report.

Consultation	Date	Summary	Who National Grid consulted
			<ul style="list-style-type: none"> Local community under Section 47. More information is provided in Section 8.9 of this report.
2025 targeted consultation	30 January 2025 to 3 March 2025 Norfolk and Suffolk targeted non-statutory consultation	Targeted non-statutory consultation which sought feedback on proposed changes to the proposals in Norfolk and Suffolk.	<ul style="list-style-type: none"> Local community – bespoke consultation zones were established in Norfolk and Suffolk. More information is provided in Section 10.5 of this report. Persons with an interest in land within the draft order limits of the relevant bespoke consultation zones Parish councils MPs Elected representatives in LPAs Seldom heard groups Local interest groups <p>More information is provided in Section 10.5 of this report.</p>
	25 February 2025 to 27 March 2025 Essex and Thurrock targeted non-statutory consultation	Targeted non-statutory consultation which sought feedback on proposed changes to the proposals in Essex and Thurrock.	<ul style="list-style-type: none"> Local community – bespoke consultation zones were established in Essex and Thurrock. More information is provided in Section 10.6 of this report. Persons with an interest in land within the draft order limits of the relevant bespoke consultation zones Parish councils MPs Elected representatives in LPAs Seldom heard groups Local interest groups <p>More information is provided in Section 10.6 of this report.</p>
	18 March 2025 to 17 April 2025	Targeted statutory consultation which sought feedback on proposed changes to	<ul style="list-style-type: none"> Prescribed consultees under Section 42(1)(a) and Section 42(1)(aa).

Consultation	Date	Summary	Who National Grid consulted
	Thurrock 3 statutory consultation	the proposals in Thurrock 3.	<ul style="list-style-type: none"> • Prescribed consultees under Section 42(1)(b) and Section 43. • Prescribed consultees under Section 42(1)(d). • Persons with an Interest in Land (PILs) under Section 42(1)(d) and Section 44, including Cat 1 & 2 PILs. • Secretary of State under Section 46. • Local community under Section 47. <p>More information is available in Section 10.7 of this report.</p>
2025 Further landowner consultation	5 June 2025 to 18 July 2025	Further targeted consultation with PILs following certain localised amendments to the design of the Project and in light of ongoing diligent inquiry	<p>PILs under Section 42(1)(d) and Section 44:</p> <ul style="list-style-type: none"> • Newly identified Category 1 PILs • Newly identified Category 2 PILs <p>More information is available in Section 11.2 of this report.</p>
	18 June 2025 to 18 July 2025	Further targeted consultation with PILs following certain localised amendments to the design of the Project and in light of ongoing diligent inquiry	<p>PILs under Section 42(1)(d) and Section 44:</p> <ul style="list-style-type: none"> • Category 1 PILs previously impacted but now impacted differently • Category 2 PILs previously impacted but now impacted differently <p>More information is available in Section 11.2 of this report.</p>
	10 July 2025 to 22 August 2025	Further targeted consultation with PILs following certain localised amendments to the design of the	<p>PILs under Section 42(1)(d) and Section 44:</p> <ul style="list-style-type: none"> • Category 3 PILs

Structure

At the beginning of this report is the Contents page that helps the reader to familiarise themselves with the structure of the report and directs them to chapters or sections that are relevant to them. The contents table includes chapters, headings, subheadings, and lists of tables, figures and appendices.

Layout

The chapters of this Consultation Report are ordered chronologically which ensures that the information is presented in a logical sequence, making it easy for users to follow the pre-application process.

Headings and subheadings have been used within each chapter to break these down into manageable sections. The hierarchical structure (e.g: 1.1, 1.2, 1.3) allows readers to navigate the content and locate the section they require easily in conjunction with the contents page.

These headings, sub-headings and paragraphs are cross-referenced where required throughout the report. Other documents that form part of the Development Consent Order (DCO) application have also been cross-referenced and links to websites have been kept to a minimum.

Bullet point lists and tables have been used to break up large blocks of text and present information in a logical and structured way. Graphs and maps are used to summarise key data and information in a visual manner.

Formatting

Each chapter and appendix has been given a meaningful title and 'Arial' in size 12 has been used to support readability. Clear and simple language has been used to increase the accessibility of this Consultation Report. Where technical terms, abbreviations or acronyms have been used, these have been written and explained in full the first time they have been used in each chapter. There is also a glossary page that explains all acronyms used throughout the report.

Search

This Consultation Report and appendices are available to view online as a PDF document, which can be viewed within web browsers. To find specific issues easily, readers can search keywords, phrases, or locations by using the 'Search' function without having to read through the whole document.

Appendices

The appendices contain supplementary material that supports the main text of this Consultation Report. These are structured chronologically, and readers should refer to these for more in-depth information.

Executive Summary

National Grid Electricity Transmission, referred to as 'National Grid' within this report, is developing proposals to upgrade the electricity transmission system in East Anglian between Norwich and Tilbury.

As part of this, National Grid is developing plans comprising a new 400 kilovolt electricity transmission connection to approximately 180 km overall length from Norwich Main Substation to Tilbury Substation via Bramford Substation, a new East Anglia Connection Node (EACN) substation and a new Tilbury North substation.

The Project is defined as a Nationally Significant Infrastructure Project (NSIP), under s14(1)(b) and s16 of the Planning Act (PA) 2008, and as amended by the PA 2008 (Nationally Significant Infrastructure Projects) (Electric Lines) Order 2013, as it involves the installation of a new electric line above ground of more than 2 km, which would operate at 400 kV in England.

The statutory pre-application consultation for this Project and the development of this report have been carried out in accordance with the requirements of the Planning Act (PA) 2008, the Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2009 (APFP Regulations) and the Infrastructure Planning (Environmental Impact Assessment) Regulations 2017 (EIA Regulations). The non-statutory consultation was also undertaken having regard to these principles

The design of the Project has followed a structured project development process that has integrated technical assessment with stakeholder engagement. Consideration of the feedback received through consultation and wider stakeholder engagement has been a major contributing factor in the development of the Project.

This report details all pre-application consultation for the Project, including both statutory and non-statutory consultation for submission as part of an application for a Development Consent Order (DCO) for the Project.

National Grid undertook ongoing engagement activities with stakeholders throughout the development of the proposed Project including outside of the non-statutory, statutory and targeted consultation periods. This informal or non-statutory engagement was undertaken through various mechanisms to keep key stakeholders informed about the progress of the proposed Project, inform the ongoing design of the proposed Project and enable timely discussions on opportunities and concerns identified.

Chapter 5 of this report provides details of the 2022 non-statutory consultation held from 21 April 2022 to 16 June 2022, including details of the consultation activities undertaken, representation received and National Grid's response to these representations.

Chapter 6 of this report provides details of the 2023 non-statutory consultation held between 27 June 2023 to 21 August 2023, including details of the consultation activities undertaken, representation received and National Grid's response to these representations.

Chapters 7-9 of this report provide details of the statutory consultation held between 10 April to 26 July 2024, including details of the consultation activities undertaken, representation received and National Grid's response to these representations. A total of 12,996 feedback submissions were received during the consultation period from community stakeholders and consultees,

along with members of the local community. This comprised of 2,310 feedback questionnaires (433 paper copies and 1,877 submitted online), 6,499 emails sent to the Project inbox, and 4,187 letters (including 4,099 slips of the same feedback).

This report also provides details on the targeted consultations which took place between January 2025 and April 2025, and the further landowner consultation took place between June 2025 and August 2025. A total of 900 feedback submissions were received across the targeted consultation periods from local communities, stakeholders and other consultees. A total of 442 feedback submissions were received from landowners during the further landowner consultation. This report provides details on the ongoing engagement with landowners.

Over the course of the consultations undertaken since 2022, numerous changes to the design were proposed by respondents through consultation feedback. Further potential changes arose as a result of ongoing environmental and engineering assessment work as the design progressed. The proposed amendments were considered by the Project team and as a result, the design evolved iteratively.

This report explains how National Grid has had regard to the consultation responses received in preparing this application.

1. Introduction

1.1 About National Grid Electricity Transmission

- 1.1.1 National Grid Electricity Transmission plc sits within the wider National Grid Group; within the Group there are distinctly separate legal entities, each with their individual responsibilities and roles. National Grid Group sit at the heart of Great Britain's energy system, connecting millions of people and businesses to the energy they use every day. The Project is being promoted by National Grid Electricity Transmission.
- 1.1.2 Note that in this Consultation Report, except when referring specifically to other National Grid Group entities below, the term 'National Grid' is used to refer to National Grid Electricity Transmission.

National Grid Electricity Transmission (National Grid)

- 1.1.3 National Grid holds the Transmission Licence for England and Wales, and its statutory duty is to develop and maintain an efficient, coordinated and economical system of electricity transmission and to facilitate competition in the generation and supply of electricity, as set out in the Electricity Act 1989.
- 1.1.4 National Grid, as the regulated provider of electricity transmission services in England and Wales, is regulated by the Office of Gas and Electricity Markets (Ofgem). Transmission services include maintaining reliable electricity supplies and offering to construct new transmission system assets for new connections to the National Electricity Transmission System (NETS).
- 1.1.5 In accordance with Transmission Licence requirements, National Grid ensures that the transmission system in England and Wales meets the requirements in respect of transmission system security and quality of service at all times. As part of this requirement, National Grid must ensure that sufficient transmission system capability is provided to meet demand and generator customer requirements and wider transmission system needs that exist and/or are expected.
- 1.1.6 When planning changes to the transmission system, National Grid must be efficient, co-ordinated and economical and have regard to the desirability of preserving amenity, in line with the duties under s9 and s38 of the Electricity Act 1989.

National Energy System Operator (NESO)

- 1.1.7 The National Energy System Operator (NESO) is the electricity system operator for Great Britain. NESO ensures electricity is always where it is needed, and the transmission network remains stable and secure in its operation.
- 1.1.8 As of 1 October 2024, NESO became a public body owned by the Department for Energy Security and Net Zero. It was formerly part of National Grid plc and called the Electricity System Operator (ESO).

- 1.1.9 NESO has been established to act as the independent organisation responsible for planning Great Britain's energy system, looking after and operating the electricity and gas networks while also offering expert advice to the sector's decision-makers.
- 1.1.10 The National Grid ESO (as it was named) published the Holistic Network Design (HND) report in July 2022 (ESO, 2022a), accompanied by a 'Network Options Assessment (NOA) Refresh' document (ESO, 2022b). The HND sets out a single integrated transmission network design that supports the large-scale delivery of electricity generated from offshore wind, with the NOA Refresh indicating which options are 'HND critical'.
- 1.1.11 Ofgem (Ofgem, 2022) has subsequently published the Accelerated Strategic Transmission Investment (ASTI) decision, which aims to facilitate the achievement of government targets by streamlining the regulatory approval for the HND critical projects.

1.2 About the Project

- 1.2.1 The Project is a proposal by National Grid to upgrade the electricity transmission system in East Anglia between Norwich and Tilbury, comprising:
- A new 400 kilovolt (kV) electricity transmission connection of approximately 180 km overall length from Norwich Main Substation to Tilbury Substation via Bramford Substation, a new East Anglia Connection Node (EACN) Substation and a new Tilbury North Substation, including:
 - Approximately 159 km of new overhead line supported on approximately 509 pylons, either standard steel lattice pylons (approximately 50 m in height) or low height steel lattice pylons (approximately 40 m in height) and some of which would be gantries (typically up to 15 m in height) within proposed Cable Sealing End (CSE) compounds or existing or proposed substations
 - Approximately 21 km of 400 kV underground cabling, some of which would be located through the Dedham Vale National Landscape (an Area of Outstanding Natural Beauty (AONB)¹)
 - Up to seven new CSE compounds (with permanent access) to connect the overhead lines to the underground cables
 - Modification works to connect into the existing Norwich Main Substation and a substation extension at the existing Bramford Substation
 - A new 400 kV substation on the Tendring Peninsula, referred to as the EACN Substation (with a new permanent access). This is proposed to be an Air Insulated Switchgear (AIS) substation
 - A new 400 kV substation to the south of Orsett Golf Course in Essex, referred to as the Tilbury North Substation (with a new permanent access). This is proposed to be a Gas Insulated Switchgear (GIS) substation

¹ National Landscape is the rebranded name of an Area of Outstanding Natural Beauty (AONB) from 22 November 2023

- Modifications to the existing National Grid Electricity Transmission overhead lines to facilitate the connection of the existing network into the new Tilbury North Substation to provide connection to the Tilbury Substation
- Ancillary and/or temporary works associated with the construction of the Project.

- 1.2.2 In addition, third party utilities diversions and/or modifications would be required to facilitate the construction of the Project. There would also be land required for environmental mitigation and Biodiversity Net Gain (BNG).
- 1.2.3 As well as the permanent infrastructure, land would also be required temporarily for construction activities including, for example, working areas for construction equipment and machinery, site offices, welfare, storage and temporary construction access.
- 1.2.4 The Project would be designed, constructed and operated in accordance with applicable health and safety legislation. The Project will need to comply with design safety standards including the Security and Quality of Supply Standard (SQSS), which sets out the criteria and methodology for planning and operating the National Electricity Transmission System (NETS). This informs a suite of National Grid policies and processes, which contain details on design standards required to be met when designing, constructing and operating assets such as those proposed for the Project.

1.3 Summary of Project Development

- 1.3.1 The design of the Project has followed a structured project development process that has integrated technical assessment with stakeholder engagement. The key stages with the associated key design outcomes and main outputs that forms the design evolution process is set out below.
- 1.3.2 An indication of the Project timelines through to operation (including the pre-application community consultation) is provided in **Figure 1.1** of this report.

Figure 1.1 Proposed Project Timeline

1.4 Legislation and National Policy Context

Planning Act 2008

- 1.4.1 The Project is defined as a Nationally Significant Infrastructure Project (NSIP), under s14(1)(b) and s16 of the Planning Act (PA) 2008, and as amended by the PA 2008 (Nationally Significant Infrastructure Projects) (Electric Lines) Order 2013, as it involves the installation of a new electric line above ground of more than 2 km, which would operate at 400 kV in England.
- 1.4.2 For an NSIP, the grant of development consent is required by the making of a DCO under the PA 2008. A DCO may include a range of consents and powers.
- 1.4.3 The proposed new above ground electricity line would be an NSIP by virtue of the definitions in the PA 2008. Other development, such as underground cables, may be granted development consent as associated development within the meaning of s115 of the PA 2008.
- 1.4.4 S104(2) of the PA 2008 provides that, in deciding applications for development consent, the Secretary of State (Angela Rayner, July 2024) must have regard to the relevant National Policy Statements (NPSs).
- 1.4.5 The PA 2008 was amended through the adoption of the Localism Act 2011. Under the Localism Act 2011, the Planning Inspectorate is responsible for the NSIP planning process. The Planning Inspectorate will allocate a panel of examiners (known as the 'Examining Authority') which will examine the DCO application for the Project and make a recommendation to the Secretary of State to either grant or refuse consent.

Electricity Act 1989

- 1.4.6 Section 9(2) of the Electricity Act 1989 places general duties on National Grid as a licence holder 'to develop and maintain an efficient, co-ordinated and economical system of electricity transmission...'. In addition, s38 and Schedule 9 of the Electricity Act 1989 require National Grid, when formulating proposals for new lines and other works, to:

'...have regard to the desirability of preserving natural beauty, of conserving flora, fauna and geological or physiographical features of special interest and of protecting sites, buildings and objects of architectural, historic or archaeological interest; and shall do what [it] reasonably can to mitigate any effect which the proposals would have on the natural beauty of the countryside or on any such flora, fauna, features, sites, buildings or objects'.
- 1.4.7 National Grid's Stakeholder, Community and Amenity Policy (National Grid, 2016) sets out how the company will meet the Schedule 9 duty placed upon it by the legislation.
- 1.4.8 National Grid duties are also determined by the terms of its Transmission Licence. As part of National Grid's Transmission Licence requirements, the transmission infrastructure needs to be capable of providing and maintaining a minimum level of security and quality of supply and of transporting electricity from and to customers. National Grid is required to ensure that the transmission system remains capable as

customer requirements change. The transmission system must accommodate changes in demand, generation, and interconnectors.

- 1.4.9 National Grid must comply with Standard Condition D3 (Transmission system security standard and quality of service) of its Transmission Licence. This means that where the boundary capacity of the Main Interconnected Transmission System (MITS) is exceeded against the standards, National Grid must resolve the capacity shortfall under the terms of its Transmission Licence. The standards against which National Grid assesses these shortfalls are set out in the 'Design of the Main Interconnected Transmission System' section of the National Electricity Transmission System Security and Quality of Supply Standard (NETS SQSS).
- 1.4.10 The NETS SQSS also sets out in 'Generation Connection Criteria Applicable to the Onshore Transmission System' that connections to the transmission system must be secured to meet the identified requirements. Where the SQSS applies, the generator(s) are considered part of a 'generation group' for assessment against these criteria.
- 1.4.11 Generators apply to the National Energy System Operator (NESO) for connections to the NETS in Great Britain. NESO ensures the relevant onshore or offshore transmission owner undertakes generation connection process studies via the relevant process and makes a connection offer to the customer for a connection point and identifies the relevant infrastructure work needed to make the connection. Once this offer is signed the connection is recorded on the Transmission Entry Capacity (TEC) Register and forms a contractually binding connection location and timescale within which the transmission owner, such as National Grid, is required to connect the generation customer or undertake the works to facilitate their connection.

The Planning and Infrastructure Bill

- 1.4.12 The Planning and Infrastructure Bill is central to the government's plan to get Britain building again and deliver economic growth. The Bill will speed up and streamline the delivery of new homes and critical infrastructure, supporting delivery of the government's Plan for Change milestones of building 1.5 million safe and decent homes in England and fast-tracking 150 planning decisions on major economic infrastructure projects by the end of this Parliament. It will also support delivery of the government's Clean Power 2030 target by ensuring that key clean energy projects are built as quickly as possible.

National Planning Policy

- 1.4.13 NPSs are produced by the government through a parliamentary approval process, and they present the planning policy framework for all decision making for NSIPs. They also include the government's objectives for the development of NSIPs and are produced for different types of infrastructure development.
- 1.4.14 In deciding an application for development consent, s104 of the Planning Act 2008 requires the Secretary of State to determine the application in accordance with any relevant NPS. The following NPSs which came into force on 17 January 2024 are relevant to the Project:

- Overarching National Policy Statement for Energy (EN-1) (Department for Energy Security and Net Zero (DESNZ), 2024a)
 - National Policy Statement for Electricity Networks Infrastructure (EN-5) (DESNZ, 2024b)
 - National Policy Statement for Renewable Energy Infrastructure (EN-3) (DESNZ, 2024c)
- 1.4.15 The Overarching National Policy Statement for Energy (EN-1) (DESNZ, 2024a) sets out national policy for energy infrastructure in combination with the relevant technology-specific NPS which in this case is National Policy Statement for Electricity Networks Infrastructure (EN-5). EN-1 (DESNZ, 2024a) emphasises the need for new energy projects to contribute to a secure, diverse, reliable and affordable energy supply.
- 1.4.16 The National Policy Statement for Electricity Networks Infrastructure (EN-5) (DESNZ, 2024b) sets out the government's policy for nationally significant electricity transmission networks and, together with EN-1, identifies the information that should be provided alongside any application for development consent to satisfy their requirements.
- 1.4.17 The National Policy Statement for Renewable Energy Infrastructure (EN-3) (DESNZ, 2024c) is also relevant in so far as the NPS includes support for the onshore infrastructure required to deliver new offshore wind developments.
- 1.4.18 A more detailed review of the policies contained within the NPSs is set out in the Planning Statement (document reference 5.6) and the Policy Compliance Document (document reference 5.7).

2025 Revisions to National Policy Statements

- 1.4.19 In April 2025, the government launched a consultation on proposed changes to EN-1, EN-3 and EN-5 that ended on 29 May 2025. The consultation covers updates to all three NPSs for new energy infrastructure:
- Draft: Overarching National Policy Statement for Energy (EN-1) (DESNZ, 2025a)
 - Draft: National Policy Statement for Electricity Networks Infrastructure (EN-5) (DESNZ, 2025b)
 - Draft: National Policy Statement for Renewable Energy Infrastructure (EN-3) (DESNZ, 2025c)
- 1.4.20 Changes consulted upon in the draft 2025 updates to the energy infrastructure NPSs include alignment with Clean Power 2030 targets and endorsement of the Centralised Strategic Network Plan. The 2025 revisions have strengthened the process for delivering major new infrastructure, reinforcing the government's ambition to deliver clean power by 2030.
- 1.4.21 The transitional provisions on the status of the 2025 revisions say:
- 'While the review is undertaken, the current suite of energy NPS remain relevant government policy and EN-1 to EN-5 have effect for the purposes of the PA 2008. The Secretary of State has decided that for any application accepted for examination before amending the energy NPSs, the current suite of energy NPS, published in*

2024, should have effect. The amended energy NPSs will therefore only have effect in relation to those applications for development consent accepted for examination after the publication of the final amended energy NPSs. However, any emerging draft energy NPSs (or those amended but not having effect) are potentially capable of being important and relevant considerations in the decision-making process. The extent to which they are relevant is a matter for the relevant Secretary of State to consider within the framework of the PA 2008 and with regard to the specific circumstances of each development consent order application’.

- 1.4.22 At the point of submission of the Project, the NPSs designated in January 2024 were government policy. The application for development consent is accompanied by an Environmental Statement (ES) (document reference 6.1 to 6.18) which provides the final assessment of the likely significant effects, associated with the Project during its construction and operation (including maintenance), after the mitigation hierarchy has been applied. The ES was prepared in accordance with the relevant requirements of National Policy Statements EN-1 and EN-5 in force as of 01st April 2025.
- 1.4.23 The emerging draft of the Overarching National Policy Statement for Energy (EN-1) reinforces the approach taken in the ES. The draft revised EN-1 and EN-5 reiterate the government's commitment to the Clean Power Action Plan 2030, which aims for at least 95% of the UK's electricity generation to come from clean sources by 2030 and emphasises the urgency and critical national priority (CNP) of developing low-carbon infrastructure, thereby supporting the need case established in the ES.
- 1.4.24 The draft revised EN-1 and EN-5 maintain the assessment principles and generic impact considerations outlined in the current EN-1 and EN-5, ensuring continuity in evaluating environmental effects. They also introduce enhanced guidance on biodiversity, flood risk, and climate resilience and the mitigation hierarchy. The ES is considered to be in compliance with these emerging draft NPSs.
- 1.4.25 If the revised NPSs are designated prior to a decision being made on the application for development consent, the Environmental Statement and Planning Statement will be reviewed for consistency with the newly-designated NPSs, and any additional requirements would be captured within an errata document post submission. It was confirmed in Section 51 advice received from the Planning Inspectorate that if the new NPSs are adopted after the application has been submitted, the Examining Authority can issue procedural decisions to ask all parties for views on the impacts of new NPSs.

National Planning Policy Framework (NPPF) (2024)

- 1.4.26 Paragraph 5 of NPPF (MHCLG, 2024) states:
‘The Framework does not contain specific policies for nationally significant infrastructure projects. These are determined in accordance with the decision-making framework in the PA 2008 (as amended) and relevant national policy statements for major infrastructure, as well as any other matters that are relevant (which may include the National Planning Policy Framework)’.
- 1.4.27 While the NPSs remain the primary decision-making documents, regard must also be had to any other matters of importance and relevance, which may include relevant policies in the NPPF.

2. About the Consultation Report

2.1 Background to the Consultation Report

2.1.1 Norwich to Tilbury is a Nationally Significant Infrastructure Project (NSIP) and requires consent from the Secretary of State for Energy Security and Net Zero (SoS) via a Development Consent Order (DCO).

2.1.2 The statutory pre-application consultation for this Project and the development of this report have been carried out in accordance with the requirements of the Planning Act (PA) 2008, the Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2009 (APFP Regulations) and the Infrastructure Planning (Environmental Impact Assessment) Regulations 2017 (EIA Regulations). The non-statutory consultation was also undertaken having regard to these principles.

2.1.3 The following guidance has also been taken into account:

- Planning Act (PA) 2008: Guidance on the pre-application process (March 2015), Department for Communities and Local Government's (DCLG) (Ref. 1.4)* [**Table 4.1** of this report];

**National Grid acknowledges that the above guidance was withdrawn on the 30 April 2024, however as statutory consultation had commenced on 10 April, prior to the new guidance coming into force, this consultation was planned in accordance with DCLG guidance as detailed in Section 4.2.*

- PA 2008: Pre-application stage for Nationally Significant Infrastructure Projects (April 2024)** [**Table 4.2** of this report];

***New guidance was published on 30 April 2024. The transitional arrangements are set out in the Introduction to the National Infrastructure Planning Guidance:*

'There may be occasions when guidance is revised when Applicants have already commenced their statutory pre-application consultation or after an NSIP application has been submitted for acceptance or is in pre-examination or examination. It is not the intention for revisions to guidance to compromise the preparation or progress of applications which are already well underway'

*Nonetheless, National Grid complied with the 2024 amendments and as detailed in **Table 4-2** of this report.*

- Statutory requirements of the PA 2008 [**Table 4.3** of this report];
- The Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2009 (as amended) (Ref. 1) [**Table 4.4** of this report];
- The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017 [**Table 4.5** of this report];
- The Planning Inspectorate's Nationally Significant Infrastructure Projects: Advice on the Consultation Report (August 2024)* [**Table 4.6** of this report];

**National Grid note that this advice was updated on 24 March 2025.*

- The Planning Inspectorate’s Guidance on Nationally Significant Infrastructure Projects: 2024 Pre-application Prospectus [**Table 4.7** of this report. See also **Appendix M** for Adequacy of Consultation Milestone (AoCM)];
- Nationally Significant Infrastructure Projects: Advice on EIA Notification and Consultation (September 2024) (Updated March 2025); and
- Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land (September 2013) (Department for Communities and Local Government (DCLG) ((DCLG) D. f., 2013).

2.1.4 The 2022 and 2023 non-statutory consultations and the targeted (non-statutory) consultations in 2025 were also undertaken having regard to these principles.

2.2 Purpose of the Report

2.2.1 This Consultation Report is National Grid’s report on all pre-application consultation for the Project, including both statutory and non-statutory consultation for submission as part of an application for a DCO for the Project.

2.2.2 The requirement to submit a consultation report as part of the application for development consent is set out in Section 37(3)(c) of the PA 2008. Section 37(7) confirms that the consultation report is to provide details of:

- How National Grid has carried out consultation in compliance with Section 42, Section 47 and Section 48 of the PA 2008 in relation to the proposed application;
- Any relevant responses (within the meaning of Section 49(3) of the PA 2008); and
- How National Grid has had regard to any relevant responses (as per Section 49 of the PA 2008).

2.2.3 Accordingly, this report provides a detailed account of the pre-application consultation activities carried out by National Grid prior to the submission of the DCO application. It demonstrates that National Grid has complied with the statutory requirements and explains how relevant responses received were taken account of prior to the DCO application being submitted.

2.3 Structure of the Report

2.3.1 The Report is structured into the following chapters:

- **Chapter 1** of this report: Provides an overview of National Grid, including its role and statutory duties, and introduces the Project, including an overview of project development to date;
- **Chapter 2** of this report: Introduces the Consultation Report and its structure;
- **Chapter 3** of this report: Provides a summary of National Grid’s approach to Statutory Consultation and provides an overview of the non-statutory, statutory and targeted consultation, and ongoing stakeholder engagement for the Project;
- **Chapter 4** of this report: Details how National Grid has complied with statutory requirements and other guidance;

- **Chapter 5** of this report: Provides an account of the 2022 non-statutory consultation held from 21 April 2022 to 16 June 2022 detailing consultation activities undertaken, representations received and National Grid's response to these representations;
- **Chapter 6** of this report: Provides an account of the 2023 non-statutory consultation held from 27 June 2023 and 21 August 2023 detailing consultation activities undertaken, representations received and National Grid's response to these representations;
- **Chapter 7** of this report: Provides an overview of activities undertaken in advance of and to support the statutory consultation, including the development of the Statement of Community Consultation (SoCC);
- **Chapter 8** of this report: Provides an overview of the Statutory Consultation approach undertaken from 10 April until 26 July 2024, including the proposals, the engagement to the prescribed consultees under Section 42(1)(a), Section 42(1)(b), Section 43, Section 42(1)(d) and Section 44. As well as the notification letters and publicity of these;
- **Chapter 9** of this report: Summarises the responses received to the Statutory Consultation and the changes made as a result;
- **Chapter 10** of this report: Provides an overview of the community and landowner Targeted Consultations undertaken between 30 January 2025 and 17 April 2025. This chapter also summarises the responses received to the Targeted Consultations and the changes made as a result;
- **Chapter 11** Provides details of the further landowner consultation undertaken between 18 June 2025 and 22 August 2025 and ongoing engagement. This chapter also summarises the responses received to the further landowner consultation;
- **Chapter 12** of this report: Provides an overview of the consultation held as part of the Environmental Impact Assessment (EIA) process;
- **Chapter 13** of this report: Provides an overview of the adequacy of consultation milestone, including feedback received from Local Planning Authorities (LPAs); and
- **Chapter 14** of this report: Sets out the conclusions of the Report.

2.3.2 **Appendices:** Provide supporting evidence.

- **Appendix A** of this report: Meetings and correspondence with stakeholders, including regard had to advice received under Section 51.
- **Appendix B** of this report: 2022 non-statutory consultation
- **Appendix C** of this report: 2023 non-statutory consultation
- **Appendix D** of this report: Infrastructure planning (EIA regulations) 2017 regulation 8 letter to the inspectorate and acknowledgement (Section 46)
- **Appendix E** of this report: Statement of Community Consultation (SoCC) and supporting evidence

- **Appendix F** of this report: List of prescribed consultees identified and consulted during statutory consultation and Section 42(1) letter sent
- **Appendix G** of this report: Section 42(1)(d) consultees and supporting information
- **Appendix H** of this report: Section 47 and Section 48 notices
- **Appendix I** of this report: Section 47 Consultation Materials
- **Appendix J** of this report: Land referencing methodology
- **Appendix K** of this report: Targeted consultation 2025
- **Appendix L** of this report: Further landowner consultation June 2025
- **Appendix M** of this report: Adequacy of Consultation Milestone
- **Appendix N** of this report: Legal Opinions

2.3.3 This Consultation Report is available to view online as a PDF document, which can be viewed within your web browser. To find specific issues easily, you can search keywords, phrases, or locations by using the 'Search' function.

3. Consultation Approach

3.1 Approach to Public Consultation and Engagement

Policy, guidance and approach

3.1.1 National Grid is committed to engaging those communities considered to be affected by its activities. National Grid's Stakeholder, Community and Amenity Policy² incorporates National Grid's Schedule 9 Statement relating to the preservation of amenity and makes the following commitments to consultation when undertaking electricity works:

- National Grid will promote genuine and meaningful stakeholder and community engagement; and
- National Grid will meet and, where appropriate, exceed the statutory requirements for consultation or engagement, and will adopt the following principles to help National Grid meet this commitment:
 - Seek to identify and understand the views and opinions of all the stakeholders and communities who may be affected by National Grid's works;
 - Provide opportunities for engagement from the early stages of the process where options and alternatives are being considered and there is the greatest scope to influence the design of the works;
 - Endeavour to enable constructive debate to take place, creating open and two-way communication processes;
 - Ensure that benefits, constraints and adverse impacts of proposed works are communicated openly for meaningful stakeholder and community comment and discussion. National Grid will be clear about any aspects of the works that cannot be altered;
 - Utilise appropriate methods and effort in engaging stakeholders and communities, proportionate to the scale and impact of the works; and
 - Provide feedback on how views expressed have been considered and the outcomes of any engagement process or activity.

3.1.2 These principles informed the approach to consultation/engagement at each stage of the Project, the Statement of Community Consultation (SoCC) and the way in which representations received have been dealt with by the Project team. During the development of new infrastructure in the UK, it has been necessary for National Grid to develop procedures and expertise in how to effectively communicate, engage and

² National Grid's commitments when undertaking works in the UK, Our stakeholder, community and amenity policy (December 2016) <https://www.nationalgrid.com/document/356286/download>

consult with stakeholders as part of the Project development, in line with National Grid's commitments discussed above.

- 3.1.3 National Grid's consultation experience extends from its development of new gas and electricity transmission projects both prior to and since the introduction of the Planning Act (PA) 2008. From this experience, the Project has been able to draw upon effective, tried and tested methods of consultation and engagement and has been able to adapt these to suit the needs of the local area.

Stakeholder engagement

- 3.1.4 National Grid developed and refined the consultation strategy for each round of consultation alongside productive dialogue with the Local Planning Authorities (LPAs). Engagement was held to ensure a collaborative approach was taken to planning the consultation.
- 3.1.5 Prior to the 2022 and 2023 non-statutory consultations, National Grid undertook LPA briefings, sought feedback on the draft consultation strategies and undertook draft consultation strategy workshops. More information about this approach is detailed in the 2022 Non-statutory Consultation Report (Appendix B2 of this report) and 2023 Non-statutory Consultation Feedback Report (Appendix C2 of this report).
- 3.1.6 Similarly, prior to the 2024 statutory consultation, National Grid consulted with LPAs on the proposed content of the SoCC. Information about LPA consultation on the SoCC is detailed in **Chapter 7** of this report.
- 3.1.7 National Grid also consulted LPAs on the draft targeted consultation strategies, detailed in **Chapter 10** of this report.
- 3.1.8 In accordance with the Adequacy of Consultation Milestone (AoCM) guidance, National Grid consulted LPAs on the adequacy of consultation for the Project, which is detailed in **Chapter 13** of this report.
- 3.1.9 Feedback on the adequacy of consultation was received from the Essex Suffolk Norfolk Pylons Action Group who appointed Charles Banner KC to provide his legal opinions on the 2022 and 2023 non-statutory consultations, and again on the 2024 statutory consultation. These opinions raise legal points on the adequacy of consultation based on the application of the Gunning Principles. Parliament had the Gunning Principles well in mind in framing the statutory consultation requirements for DCO applications. National Grid have complied fully with the specific statutory requirements and the relevant guidance on consultation applicable to DCO applications which embody the Gunning Principles. These legal opinions along with National Grid's response prepared by Russell Harris KC has been included in Appendix N of this report.
- 3.1.10 National Grid has sought to engage thoroughly with affected stakeholders throughout the Project development, whether these stakeholders are individuals, organisations or prescribed consultees. National Grid has built upon its own knowledge and experience of consultation by agreeing strategies and methods of engagement with affected LPAs in advance of formal consultation. More information about ongoing engagement with LPAs is included in Appendix A of this report.
- 3.1.11 Consideration of the feedback received through consultation and wider stakeholder engagement has been a major contributing factor in the development of the Project.

Consultation has been completed at an early stage in the development of proposals to allow consultees to have a real opportunity to influence the Project.

- 3.1.12 National Grid undertook ongoing engagement activities with stakeholders throughout the development of the proposed Project including outside of the non-statutory, statutory and targeted consultation periods. This informal or non-statutory engagement was undertaken through various mechanisms to keep key stakeholders informed about the progress of the proposed Project, inform the ongoing design of the proposed Project and enable timely discussions on opportunities and concerns identified.

Meetings with Action Groups

- 3.1.13 National Grid undertook ongoing engagement with Essex Suffolk Norfolk Pylons (also known as Pylons East Anglia). This included interactions during public information events and responding to email queries. National Grid also met with Essex Suffolk Norfolk Pylons on 1 September and 15 September 2022. Matters discussed included the Project programme, land access and surveys, and the action group's position and suggestions. National Grid will continue to engage with the action groups as required.

Overview of Consultation

- 3.1.14 National Grid's approach to engagement in support of the Project has been to carry out non-statutory, statutory, and targeted consultation.
- 3.1.15 Undertaking consultation at a series of Project stages ensured a balance between consulting early, whilst also having the necessary detail for consultees to provide meaningful feedback. To support this, at each stage of the consultation process, clear parameters were set out to explain to consultees the information presented and how feedback can influence the Project during each specific stage of consultation.
- 3.1.16 An indication of the Project timelines through to operation (including the pre-application community consultation) is provided in **Figure 3.1** of this report.

Figure 3.1 Proposed Project Timeline

- 3.1.17 National Grid undertook consultation as follows:
- The first non-statutory consultation was held between 21 April 2022 and 16 June 2022.
 - The second non-statutory consultation was held between Tuesday 27 June 2023 and Monday 21 August 2023
 - A statutory consultation was held between 10 April 2024 and 26 July 2024.
 - Targeted consultations were held, as follows:
 - Norfolk and Suffolk targeted non-statutory consultation was held between 30 January 2025 and 3 March 2025;
 - Essex and Thurrock targeted non-statutory consultation was held between 25 February 2025 and 27 March 2025; and
 - Thurrock 3 targeted statutory consultation was held between 18 March 2025 and 17 April 2025.
 - Further landowner consultation was held between 5 June 2025 and 22 August 2025.
- 3.1.18 At the 2022 non-statutory consultation, National Grid presented information on how the Project was evolving from the evaluation of strategic options to a preliminary preferred graduated swathe within which new infrastructure (pylons and underground cables) could be located as well as a proposed new substation site on the Tendring Peninsula. Following the conclusion of this consultation, National Grid analysed the feedback received and, along with further technical studies and design work, developed the Project design ahead of the 2023 non-statutory consultation.
- 3.1.19 At the 2023 non-statutory consultation, National Grid presented a preferred draft alignment showing pylon positions, underground cables, Cable Sealing End (CSE) compounds and connection substations. The feedback received at this consultation was considered alongside the findings of our ongoing environmental assessments and technical studies to help identify the proposals presented at statutory consultation.
- 3.1.20 At the 2024 statutory consultation, National Grid presented a preferred draft alignment showing potential pylon positions, underground cables, new CSE compounds and new connection substations. The feedback received at this consultation was considered alongside the findings of environmental and engineering studies to help identify the proposals presented at targeted consultation.
- 3.1.21 At the 2025 targeted consultations, National Grid presented proposed changes to the proposals in specific areas. At the Norfolk and Suffolk non-statutory targeted consultation, National Grid presented proposed changes to the location of temporary construction laydown areas, minor changes to the Order Limits, and a new temporary construction compound. At the Essex and Thurrock non-statutory targeted consultation, National Grid presented proposed minor changes to the Order Limits and changes to the location of temporary construction compounds and laydown areas. At the Thurrock 3 statutory targeted consultation, National Grid presented proposed changes to the substation connection point at the southern end of the route, including proposals to construct a new substation. Each round of targeted

consultation included proportionate and appropriate information on the environmental implications of any changes. The feedback received during each targeted consultation has been considered to help refine the Project before submission. Changes made as a result of this feedback are detailed in this report which is being submitted as part of the DCO Application.

- 3.1.22 At the 2025 further landowner consultation, National Grid undertook additional consultation and engagement with PILs on certain localised amendments made to the design of the Project and as a result of new information identified during ongoing diligent inquiry. The feedback received during the further landowner consultation has been considered and changes made as a result of feedback are detailed in this report.
- 3.1.23 At the non-statutory, statutory, and targeted consultations National Grid sought to identify and understand the views and opinions of all the stakeholders and communities who may be affected by the works. National Grid consulted with stakeholders at an early stage to ensure technical advice and local knowledge was taken into account in the early development of the Project. These stakeholders included local councils, elected representatives, local residents, PILs, hard-to-reach groups, and local interest groups.
- 3.1.24 National Grid gave stakeholders and members of the public digital and non-digital opportunities to engage with the proposals through a dedicated website, public events and webinar events as well as via email, phone and Freepost.
- 3.1.25 At the further landowner consultation, National Grid sought to understand the views of PILs who had been previously consulted during the non-statutory, statutory and targeted consultations, but were impacted differently due to certain localised amendments made to the design of the Project. During this consultation, National Grid also sought to identify and understand the views of PILs which had been newly identified due to design changes, changes in land ownership or from ongoing diligent inquiry.
- 3.1.26 Summaries of the non-statutory, statutory, targeted and further landowner consultations can be found in **Sections 3.2- 3.6** of this report.
- 3.1.27 More in-depth information on both 2022 and 2023 non-statutory consultations and how the feedback received at both consultations helped influence and shape the proposals to date can be found in the 2022 Non-Statutory Consultation Feedback Report and the 2023 Non-Statutory Consultation Feedback Report. These are available on the Project website and **Appendix B** and **Appendix C** respectively.
- 3.1.28 More in-depth information on the 2024 statutory consultation and how the feedback received has helped influence and shape the proposals to date can be found in **Chapters 8** and **9** of this report.
- 3.1.29 More in-depth information on the 2025 targeted consultations and how the feedback received has helped influence and shape the proposals to date can be found in **Chapter 10** of this report.
- 3.1.30 More in-depth information on the 2025 further landowner consultations and how feedback received has helped influence and shape the proposals to date can be found in **Chapter 11** of this report.

Scope for consultation

- 3.1.31 For both the non-statutory and statutory consultations, National Grid identified a Primary Consultation Zone (PCZ) for the Project, which was based on a 1 km buffer from the draft Order Limits. The PCZ was updated for each round of non-statutory and statutory consultation. At the launch of each stage of the non-statutory and statutory consultation, National Grid wrote to all homes within the PCZ and placed adverts in local papers and on social media. For each round of non-statutory consultation, the PCZ contained approximately 50,000 addresses. For the statutory consultation, the PCZ was updated to reflect the Project's evolution and contained approximately 77,000 addresses. Paper copies of the key consultation documents were also placed at inspection points in publicly accessible venues – libraries and, where possible, council offices – along the route. Alternative formats of the documents were available on request.
- 3.1.32 National Grid also identified a Secondary Consultation Zone (SCZ) for the non-statutory and statutory consultations, which extended to 4 km from the edge of the proposals. The purpose of the SCZ was to identify stakeholders who were less likely to be directly affected by the proposed Project but may still be impacted, for instance by construction traffic and long-distance views. The SCZ was used to identify the relevant newspapers in circulation in the SCZ for the purpose of advertising the consultation. The SCZ was also used to identify Members of Parliament (MPs) to consult with for the Project, who's constituencies lay all or partially within the SCZ.
- 3.1.33 For the targeted non-statutory consultations, National Grid identified bespoke consultation zones for each targeted consultation location to include nearby properties likely to be affected. These were created following the principle that each consultation zone should be appropriate and proportionate in relation to the type and potential impact of the change. Where it was appropriate, potential changes were grouped with a single consultation zone covering the grouped changes.
- 3.1.34 For the targeted statutory consultation, National Grid identified a consultation zone which included people and businesses with property postcodes within 1 km of the proposed new substation location, permanent assets and changes to the overhead lines. The zone also included postcodes 250 m from the proposed Order Limits for the modifications to the existing overhead lines, and postcodes 250 m from primary access routes (PARs).
- 3.1.35 For the further landowner consultation, National Grid identified PILs who had been previously consulted but were impacted differently and identified new PILs, which may have arisen from design changes, changes in land ownership or from ongoing diligent inquiry. More information on the ongoing diligent inquiry can be found in **Section 8.7** of this report.

3.2 Summary of the 2022 Non-Statutory Consultation

- 3.2.1 In Spring 2022, a non-statutory public consultation was held for a period of eight weeks, between 21 April 2022 and 16 June 2022. This consultation introduced the Project, explained how National Grid had developed its proposals, and sought the views of the public and stakeholders.

- 3.2.2 The selected preferred route corridor and graduated swathe were presented at the 2022 non-statutory consultation. This indicated where an alignment had good potential to be routed, with darker shaded areas where we considered an alignment is more likely to be located than those areas in the lighter parts of the swathe, based on the information available to us at that time. This was indicative and subject to further assessment work, and the feedback we received at consultation. The choice of technology and other routing matters also remained open to further consideration.
- 3.2.3 The feedback received during the 2022 non-statutory consultation was carefully reviewed and considered, alongside ongoing environmental and engineering studies. We also backchecked and reviewed our previous studies. No final decision as to the means of reinforcement was made at this stage.
- 3.2.4 In summary, changes made as a result of feedback from the 2022 non-statutory consultation included:
- Alternative corridor diverting from the crossing of the A1066 to pass to the east of Wortham Ling;
 - Alternative corridor diverting to the east at the south of Offton, then paralleling the existing 132 kV overhead line route to the east of Flowton and connecting into Bramford Substation;
 - Alternative corridor to connect the underground cable route through the Dedham Vale National Landscape (an Area of Outstanding Natural Beauty (AONB)) to the proposed CSE compound to the south of Notley Enterprise Park;
 - Alternative corridor further east of Ingatestone; proposal to amend the graduated swathe to the south of Bramford Substation to facilitate an alignment to the east of the preferred corridor;
 - Proposal to continue the underground cable through the National Landscape to the East Anglia Connection Node (EACN) substation;
 - Proposal to adopt underground cable technology in the vicinity of Great Horkesley for a distance of around 5.3 km;
 - Amendment to the corridor to the west of Writtle;
 - Proposal to restrict the graduated swathe and alignment to the eastern edge of the preferred corridor to reduce interaction with the Dunton Hills Garden Village (DHGV) development proposal;
 - Proposal to adopt underground cable technology from the north of the Lower Thames Crossing (LTC) proposals within the western corridor through into Tilbury Substation;
 - Proposal to amend the graduated swathe to facilitate an alignment to the north of Fairstead; and
 - Proposal to amend the graduated swathe to pass to the east of Bushey Wood to increase distance from properties on Woodhall Hill.
- 3.2.5 **Table 3.1** of this report provides an overview of key activities during the 2022 non-statutory consultation. Further information can be found in **Chapter 5** and full details

are provided in the 2022 Non-Statutory Consultation Feedback Report in **Appendix B** of this report.

Table 3.1 Summary of 2022 Non-Statutory Consultation Activities

Date	Activity	Details
28 April 2022 to 28 May 2022	Public information events	12 public information events were held at suitable locations along the proposed route. The events were held at various times and dates within this period.
22 April 2022 to 9 June 2022	Public webinars	12 public webinars held at various times and dates within this period. There were five general overview webinars and one section specific webinar for each area.
During the 2022 non-statutory consultation	Telephone / video appointments	13 sessions were held, as requested, to provide the opportunity to speak one-to-one with technical experts across the Project.
During the 2022 non-statutory consultation	Inspection points	Project documents were made available at 13 locations within the 2022 consultation zone at various points with stock levels regularly being checked and replenished during the consultation period.
14 April 2022 to 5 July 2022*	Presentations to district/ county/ borough councils, parish councils and seven MPs	26 sessions were held to explain the proposals, support stakeholder and consultee relationships and to promote the 2022 non-statutory consultation.

**Three briefings had to be re-scheduled and were held after the close of the 2022 non-statutory consultation.*

3.3 Summary of the 2023 Non-Statutory Consultation

- 3.3.1 In summer 2023, additional non-statutory public consultation was held for a period of eight weeks, between 27 June 2023 and 21 August 2023. The feedback received from the 2022 non-statutory consultation helped to shape and guide the development of the proposals presented at the 2023 non-statutory consultation. The 2023 non-statutory consultation presented a preferred draft alignment which showed potential positions for overhead lines and associated pylons, a centreline for the underground cable sections, CSE compounds and connection substations. Changes to the Project, both inside and outside of the 2022 preferred draft corridor were presented as part of this.

- 3.3.2 The feedback received during the 2022 and 2023 non-statutory consultations was carefully reviewed and considered, alongside the findings of environmental and engineering studies. We also backchecked and reviewed previous studies. No final decisions as to the means of reinforcement were made.
- 3.3.3 In summary, changes made as a result of feedback from the 2023 non-statutory consultation included:
- South of Norwich Main Substation between RG1 and RG7;
 - Around 2 km in the Waveney Valley between approximately RG84 and RG90 (potential for the use of underground cable on a slightly modified alignment referred to as the Waveney Valley Alternative);
 - East of Wortham near Brook Farm Airstrip between RG90 and RG100;
 - North and west of Mellis Common between RG103 and RG116;
 - South of Offton between RG191 to RG200; to the north of the National Landscape (an AONB) between approximately JC26 to JC34, moving the CSE compound to the north of Raydon airstrip;
 - Moving the western CSE compound at Fairstead to the east; and
 - Adoption of the existing gas pipeline corridor at Dunton Hills for the overhead line alignment.
- 3.3.4 **Table 3.2** provides an overview of key activities during the 2023 non-statutory consultation. Further information can be found in **Chapter 6** of this report and full details are provided in the 2023 Non-Statutory Consultation Feedback Report in **Appendix C** of this report.

Table 3.2 Summary of 2023 Non-Statutory Consultation Activities

Date	Activity	Details
6 July 2023 to 21 July 2023	Public information events	12 public information events were held at suitable locations along the proposed route. The events were held at various times and dates within this period.
5 July 2023 to 17 August 2023	Public webinars	Four online public webinars held at various times and dates within this period.
27 June 2023 to 21 August 2023	Inspection point Locations	Paper copies of Project documents were made available at 13 locations within the consultation zone throughout the 2023 non-statutory consultation with stock levels regularly being checked and replenished during the consultation period.
27 June 2023 to 21 August 2023	Briefings to district/ county/ borough councils, parish councils and MPs	Briefings were offered to 12 councils, 205 parish councils and 15 MPs with constituencies within the vicinity of the Project. Briefings provided an overview and background to the Project; the proposals and

Date	Activity	Details
		information about the 2023 non-statutory consultation.
29 June 2023 to 30 June 2023	Promotional Activity – press and social media, direct mailing	<p>Nine advertisements in local and regional newspapers, online media and social media providing information about the 2023 non-statutory consultation and how to get involved.</p> <p>Direct mailings to the PCZ – community newsletter and Project contact details to within 1 km edge of the preferred corridor;</p>

3.4 Summary of the 2024 Statutory Consultation

- 3.4.1 In summer 2024, a statutory consultation was held for a period of 15 weeks, between 10 April 2024 and 26 July 2024. This period includes a five-week extension to the consultation following the announcement of the General Election. The extension provided people with additional time to have their say and provide their feedback on the proposals after the General Election, which was held on Thursday 4 July 2024.
- 3.4.2 The feedback received during the statutory consultation (along with the 2022 and 2023 non-statutory consultations) was carefully reviewed and considered, alongside the findings of environmental and engineering studies.
- 3.4.3 In summary, design changes since the 2024 statutory consultation include:
- In Swardeston, changes to the location of the temporary construction laydown areas on the land around Norwich Main Substation and related haul roads, as well as minor amendments to the draft Order Limits.
 - In Fornsett St Mary, changes to the location of pylons to reduce the impact on the site used for flying model aircraft along with other minor amendments to the draft Order Limits.
 - In Cargate Common, repositioning of pylons between Tibenham and Bunwell Hill. There were also several changes to the temporary and permanent accesses and haul road. A section of the existing lower voltage electricity overhead line would be replaced with underground cables which would minimise the need for tree removal.
 - Relocating temporary construction laydown area near Winfarthing and minor amendments to the draft Order Limits.
 - Repositioning of the line of pylons between Palgrave and Mellis, including the removal of 2 km of existing overhead line which would be replaced with underground cable. This would reduce visual impacts on nearby properties and allow flight activity at the nearby airstrip to continue. Amendments to temporary and permanent access arrangements.
 - Repositioning of the alignment further away from the village of Gislingham and to the west of the railway track. The construction compound would also be

repositioned, allowing for better screening, reducing potential impacts on veteran trees.

- In Mendlesham, moving the alignment near Cat Hill, increasing the distance to properties. Relocating temporary access arrangements and haul road.
- Adding a temporary 132 kV construction compound near Needham Market, facilitating the undergrounding of the existing UK Power Networks (UKPN) 132 kV overhead line.
- Repositioning of the route for 132 kV underground cables near Offton, as well as near Raydon, and repositioning the temporary works access and compound near Holton St Mary.
- Repositioning of the underground cable route near Langham to the west of the previous alignment proposed at statutory consultation and diverting the alignment west after crossing the River Stour, avoiding parts of the Langham Hall Estate.
- Repositioning the underground cable and overhead line alignments before they enter the EACN substation east of Ardleigh.
- In Little Bromley, repositioning a section of permanent private access to the south of the location proposed at statutory consultation.
- In Surrex, repositioning the alignment to the east of the position presented at statutory consultation.
- Moving the alignment further southeast in Feering.
- Extending the draft Order Limits south of Great Leighs, between pylons TB128 and TB133.
- In Great and Little Waltham changing the alignment as well as changing the pylon design from full height lattice pylons to lower height lattice pylons.
- In Margaretting, moving the temporary construction laydown area from a site close to Ivy Barns Lane to the north-west of the location proposed at statutory consultation, in response to feedback from nearby residents.
- Taking down a section of the existing 132 kV overhead line in Havering's Grove and replacing it with underground cable.
- Near Little Burstead, moving the alignment to the east of the alignment proposed at statutory consultation
- Repositioning the temporary construction access and laydown area location near Dunton Wayletts to the south of its location presented at statutory consultation.
- In Dunton, repositioning the existing UK Power Networks (UKPN) 132 kV overhead line close to Lower Dunton Road. minor amendments to the draft Order Limits.
- Repositioning the alignment near Bulphan to allow the close paralleling of the existing 132 kV overhead line near Langdon Hills Golf Club as well as using lower height lattice pylons from TB238 to TB243 (previously presented at statutory consultation as TB235 to TB242) to reduce the impacts on Thurrock Airfield.

- Changing the substation connection point at the southern end of the route. Rather than connecting at the existing Tilbury Substation, building a new Tilbury North substation 5 km to the north, close to Orsett and between the villages of Linford and Chadwell St Mary. The substation would be located where we had previously proposed to build a CSE compound.

3.4.4 **Table 3.3** of this report provides an overview of key activities during the 2024 statutory consultation. Further information can be found in **Chapter 8** of this report.

Table 3.3 Summary of 2024 Statutory Consultation Activities

Date	Activity	Details
24 April 2024 - 17 May 2024	Public information events	14 public information events were held at suitable locations along the proposed route. The events were held at various times and dates within this period.
17 April 2024 - 18 July 2024	Public webinars	Six online public webinars held at various times and dates within this period.
10 April 2024 – 26 July 2024	Inspection point Locations	Paper copies of Project documents were made available at 24 locations within the consultation zone throughout the 2024 statutory consultation with stock levels regularly being checked and replenished during the consultation period.
10 April 2024 - 15 July 2024	Briefings to district/ county/ borough councils, parish councils and MPs	Briefings were offered to 16 councils and five Members of Parliament with constituencies within the vicinity of the Project. Briefings provided an overview and background to the Project; the proposals and information about the statutory consultation and how to provide feedback.
10 April 2024 - 20 June 2024	Promotional Activity – press and social media, direct mailing	Advertisements in local and regional newspapers, online media and social media providing information about the 2024 statutory consultation and how to get involved. Direct mailing to the PCZ – community newsletter and Project contact details to within 1 km edge of the preferred corridor.

3.4.5 The feedback from the 2024 statutory consultation has been used (along with the feedback from the non-statutory consultations, targeted consultations and ongoing stakeholder engagement) to inform the final designs put forward in the application for development consent.

3.5 Summary of the Targeted Consultations

- 3.5.1 National Grid held further targeted consultations to provide stakeholders, the public and Persons with an Interest in Land (PILs) the opportunity to provide feedback on proposed changes to the proposals in specific areas.
- 3.5.2 As the proposed changes would not fundamentally change the Project as a whole, a targeted consultation approach was used in line with guidance in paragraph 20 of the PA 2008: Pre-application stage for Nationally Significant Infrastructure Projects (NSIPs) issued in April 2024 by the Department for Levelling Up, Housing and Communities (now Ministry of Housing, Communities and Local Government).
- 3.5.3 National Grid took a combined approach of statutory and non-statutory targeted consultations as follows:
- Norfolk and Suffolk targeted non-statutory community consultation and consultation of PILs: Thursday 30 January to Monday 3 March 2025;
 - Essex and Thurrock targeted non-statutory community consultation and consultation of PILs: Tuesday 25 February to Thursday 27 March 2025; and
 - Thurrock 3 targeted statutory community consultation and consultation of PILs: Tuesday 18 March to Thursday 17 April 2025.
- 3.5.4 A targeted statutory consultation for Thurrock 3 was decided as the proposed changes to existing overhead lines and primary access routes (PARs) in Tilbury could affect new communities, residents and landowners in the area.
- 3.5.5 The targeted statutory consultation was conducted in accordance with the principles of the PA 2008 and in line with the principles and methods set out in the SoCC. This provided stakeholders, the public and PILs the opportunity to provide feedback on proposed changes to the Project in specific areas, before finalising the Project for submission.
- 3.5.6 The feedback received during the targeted consultations (along with the 2022 and 2023 non-statutory consultations and the 2024 statutory consultation) was carefully reviewed and considered.
- 3.5.7 In summary, design changes as a result of the 2025 targeted consultations include:
- Amended pylon locations and heights at the Walthams
 - Amended pylon locations at the crossing of Orsett Golf Course
 - Change to UKPN undergrounding route to reduce impacts to solar development substation
 - Changes to UKPN / arrangements around Tilbury North substation
 - Movement of the CSE compound north of Raydon to avoid flood zone
 - Other haul road, compound, pylon movements within the Order Limits / to be done through commitments within the Limits of Deviation (LoD)
- 3.5.8 **Table 3.4** provides an overview of key activities during the 2025 targeted consultations. Further information can be found in **Chapter 10** of this report.

Table 3.4 Summary of 2025 Targeted Consultation Activities

Date	Activity	Details
Norfolk and Suffolk targeted non-statutory community consultation and consultation of PILs		
28 January 2025 to 3 February 2025	A s42(1)(d) consultation letter was mailed to PILs to inform them of the targeted consultations.	233 PILs were written to in letters posted in the week commencing 28 January 2025. Three newly identified PILs were written to in letters posted in the week commencing 3 February 2025.
11 February 2025 to 13 February	Three public webinars held at various times within this period.	In total 49 stakeholders and members of the public attended the webinars.
30 January 2025	Advertisements were placed in local and regional newspapers to promote the targeted consultations.	Advertisements were placed in the following newspapers: Eastern Daily Press; and East Anglian Daily Times.
During the targeted consultation (30 January 2025 to 17 April 2025)	The Project website was updated to publish information on the Project along with consultation materials and historical Project information.	During the targeted consultation period the Project website received 17,319 views.
During the targeted consultation	Briefings were offered to all district and unitary councils.	Briefings took place with five councils and three parish councils.
Essex and Thurrock targeted non-statutory community consultation and consultation of PILs		
24 February 2025 to 10 March 2025	A s42(1)(d) consultation letter was mailed to PILs to inform them of the targeted consultations.	302 PILs were written to in letters posted in the week commencing 24 February 2025. Five newly identified PILs were written to in letters posted in the week commencing 3 March 2025. One newly identified PIL was written to in a letter posted in the week

Date	Activity	Details
		commencing 10 March 2025.
17 March 2025 and 18 March 2025	Three public webinars held at various times within this period.	In total 46 stakeholders and members of the public attended the webinars.
12 March 2025 to 15 March 2025	Bookable in-person sessions were held to provide an opportunity to view 3D visualisations of proposed changes to pylons and the impact on the landscape. Three sessions were held at various times within this period.	In total 77 stakeholders and members of the public attended the sessions.
25 February 2025	Advertisements were placed in local and regional newspapers to promote the targeted consultations.	Advertisements were placed in the following newspapers: <ul style="list-style-type: none"> • Eastern Daily Press; • East Anglian Daily Times.
During the targeted consultation (30 January 2025 to 17 April 2025)	The Project website was updated to publish information on the Project along with consultation materials and historical Project information.	During the targeted consultation period the Project website received 17,319 views.
During the targeted consultation	Briefings to district/ county/ borough councils, parish councils and MPs	Briefings took place with seven councils, and one parish council.
Thurrock 3 targeted statutory community consultation and consultation of PILs		
14 March 2025	A s42(1)(d) consultation letter was mailed to PILs to inform them of the targeted consultation.	70 PILs were written to in letters posted in the week commencing 14 March 2025.
2 April 2025 and 8 April 2025	Two public webinars held on these dates	In total eight stakeholders and members of the public attended the webinars.
25 March 2025 and 27 March 2025	Two public information events were held on these dates, providing the opportunity to view materials and speak to members of the Project team.	In total 25 stakeholders and members of the public attended the public information events.
During the targeted consultation	Paper copies of the targeted consultation materials were made available at public inspection points.	Materials were made available at three public inspection points, including: <ul style="list-style-type: none"> • Tilbury Library;

Date	Activity	Details
		<ul style="list-style-type: none"> Chadwell Library; and East Tilbury Library.
18 March 2025 and 20 March 2025	Advertisements were placed in local and regional newspapers	<p>Advertisements were placed in the following newspapers:</p> <ul style="list-style-type: none"> Eastern Daily Press; East Anglian Daily Times; and Essex Chronicle.
During the targeted consultation (30 January 2025 to 17 April 2025)	The Project website was updated to publish information on the Project along with consultation materials and historical Project information.	During the targeted consultation period the Project website received 17,319 views.
During the targeted consultation	Briefings to district/ county/ borough councils, parish councils and Members of Parliament (MPs)	One briefing took place with Thurrock Council on 24 March 2025.

- 3.5.9 The feedback from the 2025 targeted consultations has been used (along with the feedback from the non-statutory consultations, statutory consultation and ongoing stakeholder engagement) to inform the final designs put forward in the application for development consent.

3.6 Summary of the further Landowner Consultations

- 3.6.1 National Grid held further landowner consultations to provide previously consulted PILs and newly identified PILs the opportunity to provide feedback on certain localised amendments made to the design of the Project.
- 3.6.2 This further landowner consultation and engagement included:
- Consultation under Section 42(1)(d) with PILs that have been previously consulted but were impacted differently; and
 - Consultation under Section 42(1)(d) with new PILs identified after the close of the targeted consultation, which may have arisen from design changes having introduced new land parcels into the Order Limits; from changes in land ownership within the previous Order Limits; or from ongoing diligent inquiry identifying new land interests. More information about the ongoing diligent inquiry is available in **Section 8.7** of this report.
- 3.6.3 Consultation with PILs took place as follows:
- Newly identified Category 1 and Category 2 PILs: 5 June 2025 to 18 July 2025;
 - Previously consulted Category 1 and Category 2 PILs: 18 June 2025 to 18 July 2025; and

- Category 3 PILs: 10 July 2025 to 22 August 2025.

3.6.4 **Table 3.5** provides an overview of key activities during the 2025 further landowner consultations. Further information can be found in **Chapter 10** of this report.

Table 3.5 Summary of 2025 further Landowner Consultation Activities

Date	Activity	Details
5 June 2025 to 18 July 2025	<p>An information pack was mailed to PILs to inform them of the consultation deadline. The information pack contained:</p> <ul style="list-style-type: none"> • Introduction letter about the Project; • Section 42 consultation letter; • Voluntary negotiations letter from Fisher German; • Feedback questionnaire and prepaid envelope; • Land Right Strategy document; • Guide to Reading Plans document; • Data Privacy Notice document; and • Individual land plan. 	242 newly identified Category 1 and Category 2 PILs were written to in letters posted in the week commencing 2 June 2025.
18 June 2025 to 18 July 2025	<p>An information pack was mailed to PILs to inform them of the consultation deadline. The information pack contained:</p> <ul style="list-style-type: none"> • Section 42 consultation letter; • Voluntary negotiations letter from Fisher German; • Feedback questionnaire and prepaid envelope; • Land Right Strategy document; • Guide to Reading Plans document; • Data Privacy Notice document; and • Individual land plan. 	1,740 Category 1 and Category 2 PILs were written to in letters posted in the week commencing 16 June 2025.
10 July 2025 to 22 August 2025	<p>An information pack was mailed to PILs to inform them of the consultation deadline. The information pack contained:</p>	1,038 Category 3 PILs were written to in letters posted in the week commencing 7 July 2025.

Date	Activity	Details
	<ul style="list-style-type: none"> • Cover letter explaining Category 3 interests • Section 42 consultation letter; • Feedback questionnaire and prepaid envelope; and • Data Privacy Notice document. 	
During the further landowner consultation	The Project website was available with published information on the Project.	

3.6.5 The feedback received during the further landowner consultations was carefully reviewed and considered.

4. Legislative Compliance

4.1 Introduction

- 4.1.1 The Planning Act (PA) 2008 introduced a new consenting procedure for Nationally Significant Infrastructure Projects (NSIPs). NSIPs are projects of certain types, over a certain size, which are considered by the Government to be of national importance, hence permission to build them needs to be given at a national level, by the relevant Secretary of State (SoS) (in this case the Secretary of State for Energy Security and Net Zero).
- 4.1.2 Under Section 14(1)(b) and Section 16 of the PA 2008 and the Planning Act (Electric Lines) Order 2013 a project that involves the installation of an electric line above ground of more than 2 km, which will operate at 400 kV in England, is classified as an NSIP.
- 4.1.3 The Project meets the threshold of an NSIP, as defined under Part 3 of the PA 2008, hence National Grid requires a Development Consent Order (DCO) to authorise the delivery of the Project.
- 4.1.4 Section 104 of the PA 2008 states at (2)(a) that the Secretary of State must have regard to any National Policy Statement (NPS) which has effect in relation to development of the description to which the application relates.
- 4.1.5 This Consultation Report has been produced to satisfy Section 37(3) and Section 37(7) of the PA 2008 and accompanies National Grid's DCO application. In accordance with Section 37(7)(a) of the Planning Act 2008, this Consultation Report and its associated appendices demonstrate that National Grid has complied with the relevant sections of the Planning Act 2008 relating to pre-submission consultation. This section of the report details how National Grid has complied with the statutory pre-application consultation requirements set down in the PA 2008, specifically:
- consult with prescribed consultees (Section 42);
 - consult with the community (Section 47);
 - publicise the proposed application (Section 48);
 - have regard to consultation responses (Section 48) and
 - have regard to the government's guidance on the pre-application stage (Section 50)

4.2 Compliance with PA 2008: Guidance on the pre-application process

- 4.2.1 **Table 4.1** of this report sets out how National Grid has complied with the guidance, PA 2008: Guidance on the pre-application process, published by the Department of

Communities and Local Government (DCLG) (now known as the Ministry of Housing, Communities and Local Government (MHCLG)).

4.2.2 National Grid acknowledges that the guidance was withdrawn on the 30 April 2024, however as statutory consultation had commenced on 10 April 2024, prior to the new guidance coming into force, this consultation was planned in accordance with DCLG guidance as detailed in **Table 4.1** of this report.

4.2.3 The transitional arrangements are set out in the Introduction to National Infrastructure Planning Guidance:

‘There may be occasions when guidance is revised when Applicants have already commenced their statutory pre-application consultation or after an NSIP application has been submitted for acceptance or is in pre-examination or examination. It is not the intention for revisions to guidance to compromise the preparation or progress of applications which are already well underway’

4.2.4 Nonetheless, National Grid complied with the 2024 amendments. Table **4.2** of this report sets out how National Grid has complied with the guidance PA 2008: Pre-application stage for Nationally Significant Infrastructure Projects (April 2024).

Table 4.1 How National Grid has Complied with the Guidance set out by the DCLG on the Pre-Application Process

Para	Guidance	Comment
The pre-application consultation process		
17	When circulating consultation documents, developers should be clear about their status, for example ensuring it is clear to the public if a document is purely for purposes of consultation.	<p>The materials produced for the purposes of statutory consultation consisted of:</p> <ul style="list-style-type: none"> • Project Background Document; • Community newsletter; • Design Development Report; • Consultation banners; • Consultation notices; • SoCC; and • Feedback Questionnaire. <p>Each of these documents provided details about the consultation and stated the closing date when responses were required by.</p> <p>Other materials produced for statutory consultation include the Preliminary Environmental Information Report (PEIR), Strategic Options Backcheck and Review, 2023 Non-Statutory Consultation Feedback Report, Project maps, interactive Project map, and Guide to interacting with our consultation plans.</p>

Para	Guidance	Comment
		<p>To make it clear about a documents' status, all those listed above were located in the 'Statutory consultation 2024 documents' section within the document library of the project website.</p> <p>A copy of the consultation materials can be found in the Appendix I of this report.</p>
18	Early involvement of local communities, local authorities and statutory consultees can bring about significant benefits for all parties.	<p>The local communities, Local Planning Authorities (LPAs) and statutory consultees have been engaged throughout the development of this project, since the first stage of non-statutory consultation was held in 2022 and second stage in 2023. Further details about the engagement with communities during the statutory consultation can be found in Chapter 9 of this report.</p>
19	<p>The pre-application consultation process is crucial to the effectiveness of the major infrastructure consenting regime. A thorough process can give the SoS confidence that issues that will arise during the six-month examination period have been identified, considered, and – as far as possible – that Applicants have sought to reach agreement on those issues. Without adequate consultation, the subsequent application will not be accepted when it is submitted. If the SoS determines that the consultation is inadequate, he or she can recommend that the Applicant carries out further consultation activity before the application can be accepted.</p>	<p>The consultation was undertaken (two non-statutory, one statutory, targeted consultation and further landowner consultation described in Chapters 5, 6, 8, 9, 10 and 11 of this report) during the pre-application stage to ensure that issues arising were considered and taken into account.</p> <p>The LPAs have been engaged throughout the pre-application period and were consulted on the SoCC. National Grid developed a Host Authority Engagement Plan which was circulated by the project team to the host authorities on 1 December 2023 and iterations have been issued as the project progressed.</p>
20	<p>Experience suggests that to be of most value, consultation should be:</p> <ul style="list-style-type: none"> • based on accurate information that gives consultees a clear view of what is proposed including any options; • shared at an early enough stage so that the proposal can still be influenced, while being sufficiently developed to provide some detail on what is being proposed; and 	<p>The consultation banners, Project Background document, feedback questionnaire, interactive Project map, infographics website set out the proposals to give consultees a clear view of what was proposed including any optionality.</p> <p>The feedback questionnaire reflected the Project Background document to help</p>

Para	Guidance	Comment
	<ul style="list-style-type: none"> engaging and accessible in style, encouraging consultees to react and offer their views. 	<p>consultees in providing feedback to National Grid.</p> <p>Copies of the consultation materials can be found in Appendix I of this report.</p> <p>The statutory consultation undertaken between 10 April 2024 and 26 July 2024 allowed consultees to engage face-to-face with National Grid, through public information events in June 2024 and attend webinars. The statutory consultation took place early enough to allow for proposals to be influenced by consultee feedback.</p> <p>The Project website contained the consultation documentation and the ability to submit feedback via the online feedback questionnaire.</p> <p>Responses could also be sent as hard copy feedback questionnaires, letters, and emails to dedicated project addresses.</p> <p>All materials were produced to be accessible and easy to understand. The Project website was compatible with assistive technology such as screen readers to ensure accessibility for all members of the public engaging with the consultation.</p>
21	Where an Applicant has not been able to follow this guidance they should set out why this is the case, in the consultation report.	National Grid complied with the guidance in the undertaking of the statutory consultation.
23	<p>In brief, during the pre-application stage Applicants are required to:</p> <ul style="list-style-type: none"> notify the SoS of the proposed application; identify whether the project requires an Environmental Impact Assessment (EIA); 	<p>The Section 46 letter was issued on 8 April 2024 and a copy can be found in Appendix D of this report.</p> <p>National Grid identified that the Project requires an EIA during the pre-application stage and submitted a Scoping Report to the Planning Inspectorate (PINs) on 4 November 2022. A scoping opinion for the Project was adopted by PINs on 14 December 2022. See Appendix E of this report.</p> <p>Paragraph 5.2.4 of the SoCC also confirms that the project is an EIA development and confirms publicity and</p>

Para	Guidance	Comment
		consultation activities regarding the Preliminary Environmental Information.
	<ul style="list-style-type: none"> where it does, confirm that they will be submitting an Environmental Statement (ES) along with the application, or that they will be seeking a screening opinion ahead of submitting the application; 	An ES is provided in Volume 6 (application documents 6.1 to 6.21) of the DCO application.
	<ul style="list-style-type: none"> produce a SoCC, in consultation with the relevant local authority or authorities, which describes how the Applicant proposes to consult the local community about their Project and then carry out consultation in accordance with that Statement; 	<p>A draft SoCC was provided to 13 LPAs on 1 December for informal review. The informal period of consultation on the SoCC started on 2 December 2023 until 5 January 2024. And the formal period from 2 March 2024 and 2 April 2024. The SoCC was published on the Project website. The statutory consultation was compliant with the SoCC.</p> <p>A copy of the SoCC is available in Appendix E of this report.</p>
	<ul style="list-style-type: none"> make the SoCC available for inspection by the public in a way that is reasonably convenient for people living in the vicinity of the land where the development is proposed, as required by Section 47 of the PA 2008 and Regulations; 	<p>A hard copy of the SoCC was available at 24 inspection points located throughout the proposed route.</p> <p>A list of inspection points can be found in Chapter 8 of this report.</p>
	<ul style="list-style-type: none"> identify and consult statutory consultees as required by Section 42 of the PA 2008 and Regulations; 	National Grid identified and consulted as required by Section 42 of the PA 2008.
	<ul style="list-style-type: none"> publicise the proposed application in accordance with Regulations; 	<p>The Section 48 notice was published in three local newspapers for two consecutive weeks, a national paper for one week and the London Gazette for one week.</p> <p>The consultation was extended by a period of five weeks as detailed in Section 3.4.1 and the Section 48 notice was republished detailing the consultation extension in the same newspapers.</p> <p>See Appendix H of this report for details.</p>

Para	Guidance	Comment
	<ul style="list-style-type: none"> set a deadline for consultation responses of not less than 28 days from the day after receipt/last publication; 	Statutory consultation was held between 10 April 2024 until 26 July 2024 for a period of 15 weeks. During the General Election, the consultation period was extended five weeks to allow the public to have time to respond to the consultation.
	<ul style="list-style-type: none"> have regard to relevant responses to publicity and consultation; and 	<p>National Grid's response to publicity and consultation for the 2022 non-statutory consultation can be found in Chapter 5 of this report and in Appendix B of this report.</p> <p>National Grid's response to publicity and consultation for the 2023 non-statutory consultation can be found in Chapter 6 of this report.</p> <p>National Grid's response to publicity and consultation for the statutory consultation can be found in Chapter 9 of this report.</p> <p>National Grid's response to publicity and consultation for the targeted consultations can be found in Chapter 10 of this report.</p> <p>National Grid's response to publicity and consultation for the further landowner consultations can be found in Chapter 11 of this report.</p>
	<ul style="list-style-type: none"> prepare a consultation report and submit it to the SoS. 	This Consultation Report (application document 5.1) is submitted as part of the application for development consent.
24	The aim should be to ensure that consultation is appropriate to the scale and nature of the project and where its impacts will be experienced.	<p>National Grid provided a range of engagement methods and communication channels to promote the Project and ensure that consultation was appropriate to the scale and nature of the Project and where its impacts will be experienced.</p> <p>These included the Project website, online webinars, public information events, inspection points and targeted stakeholder meetings to support and promote the consultation along the proposed route. Further details of these methods can be found in Chapter 8 of this report.</p>

Para	Guidance	Comment
25	Consultation should be thorough, effective and proportionate.	<p>National Grid conducted a thorough, effective and proportionate consultation. The period provided to comment for consultation under Section 42, Section 47 and Section 48 of the PA 2008 was greater than the required 28 calendar days.</p> <p>The 2022 non-statutory consultation ran for eight weeks between 21 April 2022 until 16 June 2022.</p> <p>The 2023 non-statutory consultation ran for eight weeks between 27 June 2023 until 21 August 2023.</p> <p>The statutory consultation ran for 15 weeks between 10 April 2024 and 26 July 2024 to provide a sufficient period of time for responses.</p> <p>These were all in excess of the 28 day minimum consultation period.</p> <p>This allowed;</p> <p>Consultees to engage with National Grid one or more times;</p> <p>Consultees to visit an information event (face-to-face or webinar);</p> <p>Facilitation of invitation requests to attend community events; and</p> <p>Consultees time to complete the response form</p> <p>Targeted consultation took place over three stages, as follows:</p> <p>Norfolk and Suffolk targeted non-statutory community consultation and consultation of PILs ran for 32 days between 30 January and 3 March 2025.</p> <p>Essex and Thurrock targeted non-statutory community consultation and consultation of PILs ran for 30 days between 25 February and 27 March 2025.</p> <p>Thurrock 3 targeted statutory community consultation and consultation of PILs ran for 30 days between 18 March and 17 April 2025.</p> <p>The targeted non-statutory community consultations were conducted in</p>

Para	Guidance	Comment
		<p>accordance with the principles of the PA 2008. The targeted statutory community consultation and consultation of PILs (at each stage) was conducted in accordance with the requirements of the of the PA 2008 and in accordance with the SoCC and PA 2008: Pre-application stage for Nationally Significant Infrastructure Projects (April 2024).</p> <p>Further landowner consultation took place between 5 June and 22 August 2025 as follows:</p> <p>Newly identified Category 1 and Category 2 PILs consultation ran for 43 days between 5 June and 18 July 2025</p> <p>Previously consulted Category 1 and Category 2 PILs consultation ran for 30 days between 18 June and 18 July 2025</p> <p>Category 3 PILs consultation ran for 43 days between 10 July and 22 August 2025.</p>
Who should be consulted?		
26	<p>The PA 2008 requires certain bodies and groups of people to be consulted at the pre-application stage but allows for flexibility in the precise form that consultation may take depending on local circumstances and the needs of the project itself.</p>	<p>National Grid engaged with all parties during the statutory consultation, as required by the PA 2008. In addition, National Grid consulted the local community within the vicinity of the proposals, as set out under Section 47 of the PA 2008. More information of the Primary Consultation Zone (PCZ) and Secondary Consultation Zone (SCZ) can be found in Chapter 8 of this report.</p>
27	<p>The PA 2008 and Regulations set out the statutory consultees and prescribed people who must be consulted during the pre-application process. ...In addition, there will be a range of national and other interest groups who could make an important contribution during consultation. Applicants are therefore encouraged to consult widely on project proposals.</p>	<p>The full list of prescribed consultees as set out in Schedule 1 of the Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2009 (as amended) is provided in Appendix F of this report.</p> <p>This table sets out where National Grid departed from the list of Schedule 1 prescribed consultees and the appropriate reasons for doing so.</p> <p>Chapter 8 of this report also details consultation with the relevant LPAs, as statutory consultees.</p>

Para	Guidance	Comment
		<p>In April 2024, The Infrastructure Planning (Miscellaneous Provisions) Regulations 2024 detailed amendments to the prescribed list of consultees in Schedule 1 of the Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2009.</p> <p>The transitional provisions in the Infrastructure Planning (Miscellaneous Provisions) Regulations 2024 state that the amendments to the list of prescribed consultees do not apply where the Applicant has started to consult under Section 42 of the PA 2008 before 30 April 2024.</p> <p>As the Norwich to Tilbury statutory consultation commenced on 10 April 2024, the amendments to the prescribed list of consultees did not apply.</p> <p>Nonetheless, the 2024 amendments were followed. Additional applicable prescribed bodies were consulted in line with the April 2024 amendments. See Section 8.4 for further details.</p> <p>National Grid also consulted with a range of stakeholders with national and other interest groups- more information can be found in Chapter 8 of this report.</p> <p>The feedback received during statutory consultation and the explanation of how National Grid has regard to it, can be found in Chapter 9 of this report.</p>
28	<p>From time to time a body may cease to exist but, for legislative timetabling reasons, may still be listed as a statutory consultee. In such situations the SoS will not expect strict compliance with the statutory requirements.</p> <p>Applicants should identify any successor body and consult with them in the same manner as they would have with the original body. Where there is no obvious successor, Applicants should seek the advice of the Inspectorate, who may be able to identify an appropriate alternative consultee. Whether or not an alternative is identified, the consultation report should briefly note any</p>	<p>The list of prescribed consultees as set out in Schedule 1 of the Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2009 (as amended) is provided in Appendix F of this report. This table sets out where National Grid departed from the list of Schedule 1 prescribed consultees and the appropriate reasons for doing so.</p> <p>The transitional provisions in the Infrastructure Planning (Miscellaneous Provisions) Regulations 2024 state that the amendments to the list of prescribed consultees do not apply where the</p>

Para	Guidance	Comment
	cases where compliance with statutory requirements was impossible and the reasons why.	<p>Applicant has started to consult under Section 42 of the PA 2008 before 30 April 2024.</p> <p>As the Norwich to Tilbury statutory consultation commenced on 10 April 2024, the amendments to the prescribed list of consultees did not apply. Nonetheless, the 2024 amendments were followed, detailed in Section 8.4 of this report.</p>
29	Applicants will often need detailed technical input from expert bodies to assist with identifying and mitigating the social, environmental, design and economic impacts of projects, and other important matters. Technical expert input will often be needed in advance of formal compliance with the pre-application requirements. Early engagement with these bodies can help avoid necessary delays and the costs of having to make changes at later stages of the process. It is equally important that statutory consultees respond to a request for technical input in a timely manner. Applicants are therefore advised to discuss and agree a timetable with consultees for the provision of such inputs.	The Project proposals have developed through consultation with local communities, landowners and businesses. National Grid sought technical input from relevant expert bodies throughout pre-consultation and consultation stages. More information about engagement with technical bodies can be found in Section 10.11 of this report, and also in Appendix A .
35	The Applicant has a duty under Section 47 of the PA 2008 to prepare a SoCC, and then to conduct its consultation in line with that statement. Before doing so, the Applicant must consult on its SoCC with each local authority in whose area the proposed development is situated.	<p>National Grid consulted the SoCC with 13 host authorities</p> <ul style="list-style-type: none"> • Babergh District Council; • Basildon Borough Council; • Braintree District Council; • Brentwood Borough Council; • Chelmsford City Council; • Colchester City Council; • Essex County Council; • Mid Suffolk District Council; • Norfolk County Council; • South Norfolk District Council; • Suffolk County Council; • Tendring District Council; and • Thurrock Council. <p>An informal SoCC consultation notification was sent on the 1 December</p>

Para	Guidance	Comment
		<p>2023 along with a copy of the draft SoCC. The period to respond was between 2 of December 2023 until Friday 5 January 2024. See Appendix E of this report for information.</p> <p>A formal SoCC consultation notification was sent on 1 March 2024 along with a draft copy of the SoCC. The period to respond was between 2 March 2024 until 2 April 2024. See Appendix E of this report for information.</p> <p>Appendix E of this report provide details on how National Grid had regard to the comments made by the host authorities in developing the SoCC.</p>
36	Where an Applicant decides to consult people living in a wider area who could be affected by the project (e.g., through visual or environmental impacts, or through increased traffic flow), that intention should be reflected in the SoCC.	<p>National Grid decided to consult people living in a wider area who could be directly affected by the Project through the use of two different consultation mailing zones. These zones are referred as the PCZ and the SCZ:</p> <ul style="list-style-type: none"> • The PCZ, which extended 1 km from the Order Limits, captured stakeholders who may be most affected by the proposals; and • The SCZ, which extended to 4 km from the Order Limits, included stakeholders who were less likely to be directly affected <p>Further details about these consultation zones can be found in Chapter 8 of this report. Section 5.3 of the SoCC: 'Who will be consulted?' provides an overview of the range of groups and organisations consulted, including the PCZ and SCZ. The SoCC can be found in Appendix E of this report.</p>
Local authorities		
37	Prior to submitting their draft SoCC Applicants may wish to seek to resolve any disagreements or clarifications about the public consultation design. An Applicant is therefore likely to need to engage in discussions with local authorities over a	<p>National Grid entered informal consultation on the SoCC with the 13 host authorities on the 2 December 2023, ahead of formal consultation that started on the 2 March 2024. See Appendix E of this report.</p>

Para	Guidance	Comment
	longer period than the minimum requirements set out in the PA 2008.	
41	Where a local authority raises an issue or concern on the SoCC which the Applicant feels unable to address, the Applicant is advised to explain in their consultation report their course of action to the SoS when they submit their application.	<p>National Grid entered informal consultation on the draft SoCC with the 13 host authorities on the 2 December 2023, ahead of formal consultation that started on the 2 March 2024.</p> <p>National Grid were able to address all issues and concerns that were raised from both informal and formal consultations on the draft SoCC.</p> <p>Chapter 7 of this report provides details about how the SoCC was developed. Amendments to the draft SoCC further to informal and formal consultations are recorded in documents titled 'Regard had to informal/formal comments on proposed SoCC' (both provided at Appendix E of this report).</p>
42	Where a local authority decides that it does not wish to respond to a consultation request on the SoCC, the Applicant should make reasonable efforts to ensure that all affected communities are consulted.	<p>All 13 host authorities were consulted and 11 responded with comments. Babergh and Mid Suffolk District Councils submitted a joint response. 'Regard had to SoCC Responses' in Appendix E of this report provides a summary of the comments received from LPAs on the formal SoCC.</p> <p>South Norfolk and Broadland District Council and Suffolk County Council did not respond to the formal SoCC consultation however did provide feedback to the informal SoCC consultation. Further details can be found in Section 7.3.3 of this report.</p> <p>A variety of techniques were used to ensure a reasonable approach to consultation on the Project. These are as follows:</p> <ul style="list-style-type: none"> Materials produced: Project Background Document, Community Newsletter 2024, PEIR, 2024 Design Development Report, 2024 Strategic options Backcheck and Review, 2023 Non-Statutory Consultation Feedback Report, Interactive Project Map, Consultation notices, Statement of

Para	Guidance	Comment
		<p>Community Consultation (SoCC), Feedback Questionnaire;</p> <ul style="list-style-type: none"> • Project website; • Online webinars and in person events; • Inspection points; • PCZ and SCZ; • Advertising in Local Newspaper and National Newspaper; and • Social Media advertising.
43	Local authorities are also themselves statutory consultees for any proposed major infrastructure project which is in or adjacent to their area. Applicants should engage with them as early as possible to ensure that the impacts of the development on the local area are understood and considered prior to the application being submitted to the SoS.	<p>Prior to the first non-statutory consultation during 2022, National Grid undertook:</p> <ul style="list-style-type: none"> • a series of LPA briefings in September and December 2021; • launched the Project website in January 2022; • provided a draft consultation strategy in February 2022; and • undertook further LPA briefings and draft consultation strategy workshops in March 2022. <p>National Grid then engaged with LPAs during and after the non-statutory consultations and the statutory consultation. National Grid has continued this ongoing engagement, commencing in 2022 and including non-statutory, statutory and targeted consultations. More information in Chapters 5, 6, 8 and 10 of this report.</p>
48	Agreements reached between an Applicant and relevant local authorities can be documented in a Statement of Common Ground (SoCG). This will contain agreed factual information about the application and can accompany the application. The SoCG can also set out matters where agreement has not been reached.	Draft SoCGs have been prepared with the key interested parties, including individual SoCGs for each LPA. More information about the SoCGs can be found in Section 10.11 of this report.
Persons with an Interest in Land (PILs)		
49	Applicants will also need to identify and consult people who own, occupy or have another interest in the land in question, or	Section 42(1)(d) consultees were identified through diligent inquiry as having interest following the land

Para	Guidance	Comment
	who could be affected by a project in such a way that they may be able to make a claim for compensation.	referencing methodology in Appendix J of this report.
50	It is the Applicant's responsibility to demonstrate at submission of the application that due diligence has been undertaken in identifying all land interests and Applicants should make every reasonable effort to ensure that the Book of Reference (which records and categorises those land interests) is up to date at the time of submission.	<p>National Grid ensured due diligence has been undertaken in identifying all land interests. All known land interests were consulted under Section 42(1)(d) of the PA 2008 and National Grid has made all reasonable effort to ensure the Book of Reference (application document 4.3) is up to date at the point of submission.</p> <p>Further details on how National Grid has demonstrated diligent inquiry is detailed in Section 8.7 of this report.</p>
51	However, it is understood that land interests change over time and that new or additional interests may emerge after an Applicant has concluded statutory consultation but just before an application is submitted. In such a situation, the Applicant should provide a proportionate opportunity to any new person identified with a land interest to make their views known on the application. Where new interests in land are identified very shortly before the intended submission of an application, despite diligent efforts earlier in the process it may be difficult at that stage for Applicants to consult and take account of any responses from those new interests before submitting their application as intended. If this situation arises Applicants should be proactive and helpful in ensuring that the person understands how they can, if they so wish, engage with the process if the application is accepted for examination.	<p>After the conclusion of the statutory consultation in June 2024, National Grid continued to engage with PILs through targeted consultation and engagement activities.</p> <p>Chapter 10 of this report highlights the engagement with PILs and feedback received from the targeted consultations undertaken between January – April 2025. The targeted consultations provided PILs the opportunity to provide feedback on proposed changes to the proposals in specific areas in Norfolk, Suffolk, Essex and Thurrock.</p> <p>Chapter 11 of this report highlights the further landowner consultations undertaken in June – August 2025 after the targeted consultations had concluded. The further landowner consultation provided previously consulted PILs the opportunity to provide feedback on certain localised amendments to the design of the Project and identified and consulted new PILs which had been identified due to design changes, changes in land ownership or from ongoing diligent inquiry.</p> <p>Any newly identified or affected PILs were written to with:</p> <ul style="list-style-type: none"> • details of the Project;

Para	Guidance	Comment
		<ul style="list-style-type: none"> • where further information could be found; • an offer for a meeting with Fisher German (for Category 1 and 2 PILs); • a feedback form and a prepaid envelope with guidance on how to submit their comments; • Lands Right Strategy; • Guide to reading the plans; • Land Plan showing their land interest. <p>National Grid has been proactive and helpful in ensuring PILs identified in the very latter stages prior to DCO submission may understand how they can, if they so wish, engage with the process if the application is accepted for examination.</p>
52	Applicants should explain in the consultation report how they have dealt with any new interests in land emerging after conclusion of their statutory consultation having regard to their duties to consult and take account of any responses.	<p>Alongside, or independently of, the work carried out to identify new PILs as a result of minor amendments to the Order Limits described above, National Grid took steps to ensure that the Book of Reference (document reference 4.3) as a whole would be up to date at the time of submission, in accordance with Government guidance (Planning Act 2008: Guidance on Pre-application Process, March 2015).</p> <p>National Grid wrote to any new interests in land of the commencement of statutory consultation at the earliest opportunity. More information is available in Section 8.7 of this report.</p> <p>Additional targeted consultations were held over three stages from 30 January 2025 to 17 April 2025. This provided an opportunity for PILs to submit further feedback on proposed changes to the proposals in specific areas in Norfolk, Suffolk, Essex and Thurrock. The PILs consulted are summarised in Appendix K of this report. Details on the targeted consultations are in Chapter 10 of this report.</p>

Para	Guidance	Comment
		<p>Chapter 11 of this report summarises the further landowner consultation and engagement undertaken in June to August 2025, after the targeted consultation had concluded. The further landowner consultation provided previously consulted PILs the opportunity to provide feedback on certain localised amendments to the design of the Project and identified and consulted new PILs which had been identified due to design changes, changes in land ownership or from ongoing diligent inquiry.</p> <p>National Grid will continue to undertake due diligence to identify new interests in line with the Land Referencing Methodology (see Appendix J of this report). More information about the ongoing diligent inquiry is available in Section 8.7 of this report.</p> <p>Any newly identified or affected PILs were written to with:</p> <ul style="list-style-type: none"> details of the Project; where further information could be found; an offer for a meeting with Fisher German (for Category 1 and 2 PILs); a feedback form and a prepaid envelope with guidance on how to submit their comments; Lands Right Strategy; Guide to reading the plans; and Land Plan showing their land interest. <p>National Grid has been proactive and helpful in ensuring PILs identified in the very latter stages prior to DCO submission may understand how they can, if they so wish, engage with the process if the application is accepted for examination.</p>
Local communities		
53	Local people have a vital role to play at the pre-application stage. People should have as much influence as is realistic and possible over decisions which shape their lives and	The local communities, LPAs and statutory consultees have all been engaged in the proposals since the first

Para	Guidance	Comment
	communities. It is therefore critical that they are engaged with project proposals at an early stage.	<p>stage of non-statutory consultation in 2022.</p> <p>More details about the engagement with communities during the 2022 and 2023 non-statutory consultations can be found in Chapters 5 and 6 of this report. Information about statutory consultation activities can be found in Chapter 8 of this report, and information about targeted consultation activities can be found in Chapter 10 of this report.</p> <p>Appendix A of this report contains details about engagement that has been held outside of consultation periods.</p>
54	In consulting on project proposals, an inclusive approach is needed to ensure that different groups have the opportunity to participate and are not disadvantaged in the process. Applicants should use a range of methods and techniques to ensure that they access all sections of the community in question. Local authorities will be able to provide advice on what works best in terms of consulting their local communities given their experience of carrying out consultations in their area.	<p>A variety of techniques were used to ensure an inclusive approach to consultation on the proposals. These are as follows:</p> <ul style="list-style-type: none"> • Materials produced: Project Background Document, Community Newsletter 2024, PEIR, 2024 Design Development Report, 2024 Strategic options Backcheck and Review, 2023 Non-Statutory Consultation Feedback Report, Interactive Project Map, Consultation notices, SoCC, Feedback Questionnaire; • Project website; • Online webinars and in person events; • Inspection points; • PCZ and SCZ; • Advertising in Local Newspaper and National Newspaper; and • Social Media advertising.
55	Applicants must set out clearly what is being consulted on. They must be careful to make it clear to local communities what is settled and why, and what remains to be decided, so that expectations of local communities are properly managed. Applicants could prepare a short document specifically for local communities, summarising the project proposals and outlining the matters on which the view of the local community is sought.	<p>The consultation banners which were used on the website and at the public information events, provided a comprehensive overview of the Project proposals, describing the core elements of the Project and potential benefits.</p> <p>The feedback questionnaire was designed to help direct consultees to the section areas they wish to focus on. The</p>

Para	Guidance	Comment
	This can describe core elements of the project and explain what the potential benefits and impacts may be. Such documents should be written in clear, accessible, and non-technical language. Applicants should consider making it available in formats appropriate to the needs of people with disabilities if requested.	<p>response form comprised of open questions to allow the consultee to use free form text. A copy of feedback questionnaire can be found in Appendix I of this report.</p> <p>A Project Background Document providing a comprehensive overview of the Project details was also included as part of the public consultation materials. Information events provided a comprehensive overview of the Project proposals, describing the core elements of the project and potential benefits.</p> <p>National Grid made available the materials in additional formats on request and one online webinar was available in British Sign Language (BSL) interpretation which was recorded and published on the Project website.</p>
56	Applicants are required to set out in their Statement of Community Consultation how they propose to consult those living in the vicinity of the land. They are encouraged to consider consulting beyond this where they think doing so may provide more information on the impacts of their proposals.	<p>Section 5.5 of the SoCC provides information on promoting the consultation to those residents, local businesses and community organisation within the PCZ. This promotion included press release, newspaper advertisements, emails and letters, statutory notices, information posters and social media.</p> <p>A copy of the SoCC can be found in Appendix E of this report.</p>
57	The Statement of Community Consultation should act as a framework for the community consultation generally, for example, setting out where details and dates of any events will be published. The Statement of Community Consultation should be made available online, at any exhibitions or other events held by Applicants. It should be placed at appropriate local inspection points (e.g. libraries, council offices) and sent to local community groups as appropriate.	<p>The SoCC included dates and location details for the six public webinar events (see Table 8.9 of this report).</p> <p>The SoCC was available both online and at the exhibitions. The SoCC remains available on the project website.</p> <p>The SoCC listed, and was displayed at, 14 inspection points that were located within or in close proximity to the preferred corridor of the Project. In addition to the 14 inspection points outlined in the SoCC, the Project team made the documents available in an additional 10 other locations. This decision was made in response to requests from the public and</p>

Para	Guidance	Comment
		<p>stakeholders. A list of inspection points can be found in Chapter 8 of this report. The SoCC was available:</p> <ul style="list-style-type: none"> • to download in the document library of the Project website; • as a paper copy upon request; • at the inspection locations listed in Table 8.11; and • at public information events listed in Table 8.10Table 8-10.
58	Where possible, the first of the two required local newspaper advertisements (Section 48 notices) should coincide approximately with the beginning of the consultation with communities.	National Grid advertised the proposed application under Section 48 of the PA 2008 to coincide with the start of Section 42 and Section 47 consultations. Details of the published notices can be found in Table 8.5 and Table 8.6 of this report. Copies of the newspaper notices are provided in Appendix H of this report.
When should consultation take place and how much is enough?		
68	To realise the benefits of consultation on a project, it must take place at a sufficiently early stage to allow consultees a real opportunity to influence the proposals. At the same time, consultees will need sufficient information on a project to be able to recognise and understand the impacts.	<p>Chapters 5 and 6 of this report provides an overview of the pre-application consultations. Throughout the lifetime of the project, our proposals have developed through consultation with local communities, landowners and businesses and stakeholders.</p> <p>Consultations commenced well in advance of the proposed DCO application date, allowing time for consultees to understand and meaningfully contribute to the design of the Project. The consultations held between 2022 and 2025 provided consultees with the opportunity to influence the Project.</p> <p>Commencing consultation early has allowed the Project to be informed by the public and all consultees throughout the design process, while being sufficiently developed to provide some detail on what is being proposed. More details of the consultation process can be found in Chapter 3 of this report.</p>

Para	Guidance	Comment
		<p>At statutory consultation, the Project information was available online and in hard copy to support the consultation (information is still available on the project website in the document library). These included the Project Background Document, Community Newsletter 2024, PEIR, 2024 Design Development Report, 2024 Strategic options Backcheck and Review, 2023 Non-Statutory Consultation Feedback Report, Interactive Project Map, Consultation notices, SoCC, Feedback Questionnaire, Section 47 and Section 48 notices.</p>
69	<p>Applicants will often also require detailed technical advice from consultees, and it is likely that their input will be of the greatest value if they are consulted when project proposals are fluid, followed up by confirmation of the approach as proposals become firmer. In principle, therefore, Applicants should undertake initial consultation as soon as there is sufficient detail to allow consultees to understand the nature of the project properly.</p>	<p>Consultation with key stakeholders began at an early stage of the Project development when there was sufficient time to allow consultees to understand the nature of the Project properly, including during the 2022 non-statutory consultation for the proposed draft Project where information on the proposed Project's evolution was presented. The published material was extensive and allowed consultees to understand the evolution of the proposed Project and to provide feedback to help shape it before any decisions were taken.</p> <p>Stakeholders were also engaged at an early stage of the process to discuss points raised in the Scoping Opinion and to reach an agreement on these matters and further comments received.</p> <p>Local communities, local authorities, statutory consultees and other stakeholders were engaged throughout the development of this Project. Since the first non-statutory consultation held in 2022, a second non-statutory consultation was held in 2023 which demonstrated how the Project had developed. More information about the non-statutory consultations can be found in Chapters 5 and 6 of this report.</p> <p>Further details about the engagement with communities during the 2024</p>

Para	Guidance	Comment
		<p>statutory consultation can be found in Chapter 9 of this report, and 2025 targeted consultations in Chapter 10 of this report.</p> <p>More information about consultation and engagement with landowners during the 2025 further landowner consultation can be found in Chapter 11 of this report.</p> <p>A full list of the consultation carried out with key stakeholders to date and a summary of the matters discussed in relation to the ES is provided within the ES Appendix (application documents 6.5.A1).</p>
70	<p>To manage the tension between consulting early but also having project proposals that are firm enough to enable consultees to comment, Applicants are encouraged to consider an iterative, phased consultation consisting of two (or more) stages, especially for large projects with long development periods.</p>	<p>National Grid held a non-statutory consultation between 21 April 2022 until 16 June 2022, the report is provided in Appendix B of this report.</p> <p>National Grid held another non-statutory consultation between 27 June 2023 until 21 August 2023, the report is provided in Appendix C of this report.</p> <p>Statutory consultation was held between 10 April and 26 July 2024. More information can be found in Chapter 8 of this report.</p> <p>Three targeted consultations were held in 2025:</p> <ul style="list-style-type: none"> • Norfolk and Suffolk (non-statutory) between 30 January 2025 until 3 March 2025; • Essex and Thurrock (non-statutory) between 25 February until 27 March 2025; and • Thurrock 3 (statutory) between 18 March until 17 April 2025. <p>More information about the 2025 targeted consultations can be found in Chapter 10 of this report.</p> <p>National Grid also undertook further landowner consultation between 5 June and 22 August 2025. More information can be found in Chapter 11 of this report.</p>

Para	Guidance	Comment
71	Where an iterative consultation is intended, it may be advisable for Applicants to carry out the final stage of consultation with persons who have an interest in the land once they have worked up their project proposals in sufficient detail to identify affected land interests.	<p>Following the conclusion of each consultation National Grid continued to develop the Project and identified amendments to the draft Order Limits. National Grid undertook targeted consultations in January to March 2025 with affected Section 42(1)(d) consultees as required due to the changes to the draft Order Limits and where interests in land were identified after the conclusion of consultation. See Chapter 10 of this report for more information.</p> <p>National Grid also undertook further landowner consultation from 5 June to 22 August 2025 with affected Section 42(1)(d) consultees. See Chapter 11 of this report for more information.</p>
72	Applicants should therefore set consultation deadlines that are realistic and proportionate to the proposed project.	The statutory consultation ran for 15 weeks from 10 April 2024 to 26 July 2024, allowing adequate time for consultees to respond to the statutory consultation.
73	Applicants are not expected to repeat consultation rounds set out in their Statement of Community Consultation unless the project proposals have changed very substantially.	The project did not change very substantially following the statutory consultation so, it was not necessary to repeat the community wide statutory consultation under Section 47 of the PA 2008 and as set out in the statutory consultation SoCC.
75	If the application only changes to a small degree, or if the change only affects part of the development, then it is not necessary for an Applicant to undertake a full re-consultation. Instead, the Applicant should ensure that all affected statutory consultees and local communities are informed of the changes.	<p>Chapter 10 of this report describes the targeted consultations that took place in 2025 as follows:</p> <ul style="list-style-type: none"> • Norfolk and Suffolk (non-statutory) between 30 January 2025 until 3 March 2025; • Essex and Thurrock (non-statutory) between 25 February until 27 March 2025; and • Thurrock 3 (statutory) between 18 March until 17 April 2025. <p>The Section 47 notice was republished for the statutory Thurrock 3 targeted consultation.</p> <p>Chapter 11 of this report describes the further landowner consultation</p>

Para	Guidance	Comment
		undertaken in June to August 2025 after targeted consultation.
74	Where a proposed application changes to such a large degree that the proposals could be considered a new application, the legitimacy of the consultation already carried out could be questioned.	This is not applicable.
76	In circumstances where a particular issue has arisen during the pre-application consultation, or where it is localised in nature, it may be appropriate to hold a non-statutory, targeted consultation. A developer's Statement of Community Consultation should be drafted so that it does not preclude this approach. A more bespoke approach can be adopted, which may allow developers to respond with more agility to the issue at hand. If adopting this approach, the emphasis should be on ensuring that relevant individuals and organisations are included.	<p>The SoCC included the following statement in Section 6.3.1 Further Consultation;</p> <p>'6.3.1 If, following the statutory consultation, National Grid considers it is necessary to undertake further statutory consultation, this would be undertaken, so far as relevant, practicable and proportionate, in accordance with the principles and methods set out in this SoCC or any update to it.'</p>
77	Consultation should also be fair and reasonable for Applicants as well as communities. To ensure that consultation is fair to all parties, Applicants should be able to demonstrate that the consultation process is proportionate to the impacts of the project in the area that it affects, takes account of the anticipated level of local interest, and takes account of the views of the relevant local authorities.	<p>Prior to each non-statutory and statutory consultation periods, a consultation zone was agreed with the relevant LPAs, to ensure that the consultation process was proportionate to potential impacts of the Project in the relevant areas.</p> <p>National Grid made communities aware of the statutory consultation through methods detailed in Chapter 8 of this report. The variety of methods carried out were proportionate and were able to accommodate anticipated levels of interest in the project.</p> <p>Chapter 8 of this report also details consultation with the relevant LPAs, as statutory consultees. All feedback received to the consultation, including that from the LPAs, has been analysed and the headline issues are presented in Chapter 9 of this report.</p>

Para	Guidance	Comment
The consultation report and responding to consultees		
78	Applicants are required under Section 37 of the PA 2008 to produce a consultation report alongside their application, which details how they have complied with the consultation requirements set out in the PA 2008.	<p>This Consultation Report has been prepared in fulfilment of s37(3)(c) of the PA 2008.</p> <p>The 2022 Non-Statutory Consultation Report is available in Appendix B of this report and the 2023 Non-Statutory Consultation Report is available in Appendix C of this report.</p>
80	<p>The consultation report should:</p> <p>provide a general description of the consultation process undertaken, which can helpfully include a timeline;</p> <p>set out specifically what the Applicant has done in compliance with the requirements of the PA 2008, relevant secondary legislation, this guidance, and any relevant policies, guidance or advice published by Government or the Inspectorate;</p> <p>set out how the Applicant has taken account of any response to consultation with local authorities on what should be in the Applicant's Statement of Community Consultation;</p> <p>set out a summary of relevant responses to consultation (but not a complete list of responses);</p> <p>provide a description of how the application was informed and influenced by those responses, outlining any changes made as a result and showing how significant relevant responses will be addressed;</p> <p>provide an explanation as to why responses advising on major changes to a project were not followed, including advice from statutory consultees on impacts;</p>	<p>Chapter 1 of this report provides the overview of the process for consultation, including the timeline.</p> <p>Chapter 4 of this report provide details of compliance with legislation, guidance and relevant policies.</p> <p>Appendix E of this report sets out the regard National Grid had to comments on both informal and formal consultation for the SoCC.</p> <p>Responses have been thematically presented within this report with National Grid's response to those matters raised. See Chapter 9 of this report.</p> <p>Chapters 5, 6, 9 and 10 of this report describe how the proposals developed following the non-statutory consultations and how these were taken into consideration for statutory consultation.</p> <p>Chapters 9 and 10 of this report describe how the proposals developed including changes made following statutory and targeted consultations and how these were taken into consideration.</p> <p>Chapters 9 and 10 of this report also provide an overview of National Grid's responses to issues raised as part of the statutory and targeted consultations. It sets out details of all change requests</p>

Para	Guidance	Comment
		including reasons why changes have, or have not, been made.
	where the Applicant has not followed the advice of the local authority or not complied with this guidance or any relevant Advice Note published by the Inspectorate, provide an explanation for the action taken or not taken; and	National Grid complied with the advice of the LPAs in the development of the SoCC and that of the relevant Advice Note.
	be expressed in terms sufficient to enable the Secretary of State to understand fully how the consultation process has been undertaken and significant effects addressed. However, it need not include full technical explanations of these matters.	This Consultation Report details how consultations (non-statutory and statutory) and engagement have shaped the Project pre-submission.
81	It is good practice that those who have contributed to the consultation are informed of the results of the consultation exercise; how the information received by Applicants has been used to shape and influence the project; and how any outstanding issues will be addressed before an application is submitted to the Inspectorate.	<p>Following the 2022 non-statutory consultation, National Grid sent a Project update newsletter in February 2023 setting out headline findings from the consultation. The Project update newsletter is available on the Project website.</p> <p>Following the 2023 non-statutory consultation, National Grid published a Post Consultation Update in December 2023 setting out headline findings from the consultation. The Post Consultation Update is available on the Project website.</p> <p>Following the 2024 statutory consultation, National Grid sent a Community Newsletter in January 2025 setting out headline findings from the consultation. The Community Newsletter is available on the Project website and in Appendix I of this report.</p> <p>A consultation feedback report was also published for each of the non-statutory consultations. The reports are available on the Project website and in Appendix B and Appendix C of this report.</p>
82	As with the consultation itself, it is likely that different audiences will require different levels of information. The local community may be particularly interested in what the collective view of the community is and how this has	The consultation materials were produced to reflect the audiences with whom National Grid was consulting. A number of documents were published at the launch of the statutory consultation,

Para	Guidance	Comment
	<p>been taken into account. Consultees with highly technical interests may seek more detailed information on what impacts and risks have been mitigated or managed.</p>	<p>including technical reports (describing the process undertaken and decision made during the design of the project), and consultation materials.</p> <p>National Grid ensured that the content of the materials was sufficient information available to ensure people and organisations understand and can comment on any aspect of the Project's development and design.</p> <p>For consultees requiring more technical information the PEIR and Non-technical Summary (NTS) of the PEIR provided a snapshot of the environmental survey work and assessment work that had taken place to date.</p> <p>Within this report, feedback from the community and statutory stakeholders has been grouped into the geographical sections (from the feedback questionnaire) and headline issues and reported on that basis (See Chapter 9 of this report).</p>
83	<p>The consultation report may not be the most appropriate format in which to respond to the points raised by various consultee groups and bodies. Applicants should therefore consider producing a summary note in plain English for the local community setting out headline findings and how they have been addressed, together with a link to the full consultation report for those interested. If helpful, this could be supplemented by events in the local area.</p>	<p>Following the 2022 non-statutory consultation, National Grid sent a Project update newsletter in February 2023 setting out headline findings from the consultation. The Project update newsletter is available on the Project website.</p> <p>Following the 2023 non-statutory consultation, National Grid published a Post Consultation Update in December 2023 setting out headline findings from the consultation. The Post Consultation Update is available on the Project website.</p> <p>Following the 2024 statutory consultation, National Grid sent a Community Newsletter in January 2025 setting out headline findings from the consultation. The Community Newsletter is available on the Project website and in Appendix I of this report.</p> <p>A consultation feedback report was also published for each of the 2022 and 2023</p>

Para	Guidance	Comment
		<p>non-statutory consultations. Both reports are available in Appendix B of this report and Appendix C of this report.</p> <p>This report has been designed to enable the local community and consultees to find the headlines within each geographical section of the Project, and how they have been addressed. A summary of how this has been done is included at the beginning of this report in the Consultation Report Guidance section,</p> <p>Chapter 9 of this report details responses to feedback from the Statutory Consultation. The feedback has been grouped into locations along the Project.</p> <p>Responses have also been grouped into headline issues for ease of finding specific items (such as Agricultural, Construction, Environmental, etc).</p> <p>Each row of feedback and response contains a unique reference number, 'X' marks to indicate which stakeholder type the feedback came from, a 'Y'/'N' box that clearly demonstrates whether a change to the design has been made and reasons why changes have, or have not, been made.</p>
84	<p>A response to points raised by consultees with technical information is likely to need to focus on the specific impacts for which the body has expertise. The Applicant should make a judgement as to whether the consultation report provides sufficient detail on the relevant impacts, or whether a targeted response would be more appropriate. Applicants are also likely to have identified a number of key additional bodies for consultation and may need to continue engagement with these bodies on an individual basis.</p>	<p>As part of the design process and assessment of effects, all feedback received during the consultation stages has been carefully considered. Where feedback has been technical in nature, additional engagement has been undertaken and has informed the project design and content of the ES (or other documents as appropriate). This report explains how feedback received has been taken into account, cross-referring to further information contained in other documents such as the ES Appendix (application document 6.5.A1) where appropriate.</p> <p>The consultee responses received did not identify any bodies or organisations</p>

Para	Guidance	Comment
		that were not already consulted during the statutory consultation.
Environmental Impact Assessment (EIA)		
90	At an early stage the Applicant needs to either inform the Secretary of State of their intention to submit an environmental statement along with its application, or where the developer is unsure whether an environmental statement is needed, that they intend to seek a screening opinion.	<p>The Project is an ‘EIA Development’. On 4 November 2022, National Grid submitted a Scoping Report to the SoS for Business, Energy and Industrial Strategy, to inform the EIA for the Project.</p> <p>Within the Scoping Report, National Grid gave formal written notification under Regulation 8(1)(b) of the EIA Regulations 2017 that it considers the Project will require (and that National Grid will in due course provide) an ES in respect of the Project and it is considered to be an ‘EIA Development’. A scoping opinion for the Project was adopted by the PINs (on behalf of the SoS) on 14 December 2022 having consulted with the relevant consultation bodies in accordance with Regulation 10(6) of the EIA Regulations 2017.</p> <p>The Section 48 notice (included with the Section 46 notification) confirmed an ES would be prepared and submitted as part of the submission of an application for development consent.</p> <p>PINs were aware at an early stage that National Grid intended to submit an ES along with the DCO application.</p>
91	<p>The applicable EIA regulations prescribe as follows:</p> <ul style="list-style-type: none"> Regulation 10 requires that the Applicant’s Statement of Community Consultation must state whether the project falls within the scope of the Directive, and, if it does, how the Applicant intends to publicise and consult on the preliminary environmental information (see paragraphs 93 and 94) for requirements in relation to preliminary environmental information); and 	<p>Paragraph 1.1.2 of the SoCC states: ‘1.1.2 National Grid expects the proposed Project to be classified as a Nationally Significant Infrastructure Project (“NSIP”) and requires consent from the Secretary of State for Energy Security and Net Zero (the “SoS”) via a Development Consent Order (“DCO”). This document has been prepared in line with Section 47(1) of the Planning Act 2008 (“the Planning Act”), which requires Applicants to prepare a statement explaining how they will consult with people living in the vicinity of the land</p>

Para	Guidance	Comment
		<p>where the Project is proposed to be located, from here called “the local community” about the proposed application, and to carry out pre-application consultation in accordance with this statement. As the proposed Project is an Environmental Impact Assessment (“EIA”) development, this SoCC therefore also sets out how National Grid intends to publicise and consult on the preliminary environmental information, in accordance with regulation 12 of the Infrastructure Planning (Environmental Impact Assessment) Regulations 2017 (“the EIA Regulations”).’</p>
	<ul style="list-style-type: none"> Regulation 11 requires that publicity of project proposals under Section 48 of the PA 2008 must also encompass the requirements of the EIA process and at the time of publishing the proposed application, Applicants must notify all environmental consultation bodies. 	<p>National Grid consulted environmental consultees as required by Section 42(1)(a). In line with Advice Note Seven (PINs), National Grid published a PEIR alongside the consultation material. This presented the likely significant effects of the Project to enable consultees to develop an informed view of the Project and its effects so that they could provide detailed comments on the design and mitigation of the Project.</p>
92	<p>To ensure consultation is meaningful, the pre-application consultation process for major infrastructure projects encourages Applicants to give consultees as much information as possible on the characteristics of the proposed project. However, it may not be possible for Applicants to share their environmental statements during the consultation process. It may also not be the most appropriate way to present the potential environmental impacts and mitigation steps.</p>	<p>National Grid included a PEIR and NTS of the PEIR in the documents published for the purposes of the statutory consultation to give consultees as much information as possible on the characteristics of the Project.</p>
Preliminary Environmental Information (PEI)		
93	<p>For the pre-application consultation process, Applicants are advised to include sufficient preliminary environmental information to enable consultees to develop an informed view of the project. The information required may be different for different types and sizes</p>	<p>National Grid produced a PEIR which was prepared in accordance with The Planning Inspectorate’s Advice Note 7: Environmental Impact Assessment: Process, Preliminary Environmental Information and Environmental</p>

Para	Guidance	Comment
	of projects. It may also vary depending on the audience of a particular consultation. The preliminary environmental information is not expected to replicate or be a draft of the environmental statement. However, if the Applicant considers this to be appropriate (and more cost-effective), it can be presented in this way. The key issue is that the information presented must provide clarity to all consultees. Applicants should be careful not to assume that non-specialist consultees would not be interested in any technical environmental information. It is therefore advisable to ensure access to such information is provided during all consultations.	<p>Statements (Planning Inspectorate, 2020). The purpose of the PEIR was to give consultees an understanding of the potential likely significant effects (positive or negative) to enable them to prepare well-informed responses to the statutory consultation.</p> <p>The PEIR provided the available environmental information and the results of the preliminary assessments of any likely significant effects of the Project.</p> <p>Each technical chapter of the PEIR has a section called 'Preliminary Assessment Key Parameters and Assumptions' which set out the assumptions. It is then followed by 'Further Assessment' which said what else would be done as part of the ES.</p> <p>A NTS of the PEIR was also produced. The PEIR and NTS of the PEIR were available:</p> <ul style="list-style-type: none"> to download in the document library of the Project website; as a paper copy upon request; at the inspection locations listed in Table 8.11 of this report; and at public information events listed in Table 8.10 of this report.
95	When considering whether a project has the potential to significantly affect the integrity of certain European protected wildlife sites, the Applicant must provide a report which should include the site(s) that may be affected, together with sufficient information to enable the Secretary of State, as decision maker, to conclude whether an appropriate assessment is required, and, if so, to undertake such an assessment.	National Grid has prepared a Habitats Regulations Assessment (HRA) Report which is included within the application for development consent (application document 5.3). This provides the information required for the SoS to undertake an appropriate assessment.
96	It is the Applicant's responsibility to consult with the relevant statutory bodies and, if they consider it necessary, with any relevant non-statutory nature conservation bodies, in order to gather evidence for such a report (to support a Habitats Regulations Assessment).	National Grid consulted with Natural England on the preparation of the HRA Report (application document 5.3) and provided Natural England with a draft HRA Report. The HRA Report identifies the other organisations that were

Para	Guidance	Comment
	This consultation should take place as early as possible in the pre-application process. One way of doing this is for an Applicant to agree an evidence plan. The Planning Inspectorate can also comment on the Applicant's draft report in advance of formal submission of the application if it is provided in good time. Further advice on Habitats Regulations Assessments for major infrastructure projects is available from the Inspectorate's Advice Note 10.	consulted when gathering data and evidence to produce the assessment.

4.3 Compliance with PA 2008 pre-application stage for Nationally Significant Infrastructure Projects (April 2024)

- 4.3.1 New guidance was published on 30 April 2024, however as statutory consultation had commenced on 10 April prior to the new guidance coming into force, National Grid complied with the 2024 amendments. **Table 4.2** of this report sets out how National Grid has complied with the guidance PA 2008: Pre-application stage for Nationally Significant Infrastructure Projects (April 2024).

Table 4.2 How National Grid has Complied with PA 2008 pre-application stage for Nationally Significant Infrastructure Projects (April 2024)

Para	Guidance	Comment
	What is the purpose of the pre-application stage?	
004	The overriding objective of this guidance is to encourage a pre-application process which is effective and proportionate to the nature of the proposed project. This must ensure that the legal requirements of the Planning Act and the EIA Regulations 2017 are met, particularly involving consultation stages and the early consideration of alternatives. At the same time, pre-application processes should not be unnecessarily time-consuming and burdensome for the Applicant, consultees and communities affected by the proposal.	<p>National Grid provided a range of engagement methods and communication channels to promote the Project and ensure that consultation was appropriate to the scale and nature of the Project and where its impacts will be experienced.</p> <p>These included the Project website, online webinars, public information events, inspection points and targeted stakeholder meetings to support and promote the consultation along the proposed route. Further details of these methods can be found in Chapter 8 of this report.</p> <p>National Grid conducted a thorough, effective and proportionate consultation. The period provided to comment for consultation under Section 42, Section 47 and Section 48 of the</p>

	<p>PA 2008 was greater than the required 28 calendar days.</p> <p>The 2022 non-statutory consultation ran for eight weeks between 21 April 2022 until 16 June 2022.</p> <p>The 2023 non-statutory consultation ran for eight weeks between 27 June 2023 until 21 August 2023.</p> <p>The statutory consultation ran for 15 weeks between 10 April 2024 and 26 July 2024 to provide a sufficient period of time for responses.</p> <p>Targeted consultation took place over three stages, as follows:</p> <p>Norfolk and Suffolk targeted non-statutory community consultation and consultation of PILs ran for 32 days between 30 January and 3 March 2025.</p> <p>Essex and Thurrock targeted non-statutory community consultation and consultation of PILs ran for 30 days between 25 February and 27 March 2025.</p> <p>Thurrock 3 targeted statutory community consultation and consultation of PILs ran for 30 days between 18 March and 17 April 2025.</p> <p>The targeted non-statutory community consultations were conducted in accordance with the principles of the PA 2008. The targeted statutory community consultation and consultation of PILs (at each targeted consultation stage) was conducted in accordance with the requirements of the of the PA 2008 and in accordance with the SoCC and PA 2008: Pre-application stage for Nationally Significant Infrastructure Projects (April 2024).</p> <p>Further landowner consultation took place as follows:</p> <p>Consultation with newly identified Category 1 and 2 PILs took place between 5 June and 18 July 2025, for 43 days;</p> <p>Consultation with previously consulted Category 1 and 2 PILs took place between 18 June and 18 July 2025, for 30 days; and</p>

Para	Guidance	Comment
		<p>Consultation with Category 3 PILs took place between 10 July and 22 August 2025, for 43 days.</p> <p>Further landowner consultation was conducted in accordance with the requirements of the PA 2008 and PA 2008: Pre-application stage for Nationally Significant Infrastructure Projects April 2024).</p> <p>Each round of consultation was in excess of the 28 day minimum consultation period.</p> <p>This allowed;</p> <p>Consultees to engage with National Grid one or more times;</p> <p>Consultees to visit an information event (face-to-face or webinar);</p> <p>Facilitation of invitation requests to attend community events (where applicable); and</p> <p>Consultees time to complete the response form.</p>

How is the pre-application stage structured?

005	<p>The pre-application stage includes work that an Applicant will undertake to prepare their application through to its submission to the Planning Inspectorate. Key statutory milestones during pre-application include:</p> <ul style="list-style-type: none"> • consultation on, and publication of, a Statement of Community Consultation (SoCC); • where applicable, preparation of a screening opinion, scoping opinion and preliminary environmental information associated with any Environmental Statement to be submitted as part of the application; • notification of the proposed application to the Planning Inspectorate acting on behalf of the Secretary of State; • statutory consultation with specified bodies, any persons with interests in the affected land, and communities; • preparation of a consultation report; and 	<p>National Grid prepared, consulted on, and published a SoCC which set out how it proposed to consult the community in accordance with Section 47 of the PA 2008. LPAs were consulted on the SoCC during an informal consultation period from 2 December 2024 and 5 January 2024 and during a formal consultation period between 2 March 2024 and 2 April 2024. The final SoCC was made available online on the Project website at the start of statutory consultation on 10 April 2024.</p> <p>National Grid prepared a scoping opinion, which was adopted by the SoS on 14 December 2022, a PEIR which was consulted on as part of the 2024 statutory consultation, and an ES.</p> <p>National Grid notified the PINs under Section 46 of the PA 2008 of the Project.</p> <p>Statutory consultation took place between 10 April 2024 and 26 July 2024. Specified bodies, PILs and communities were consulted in accordance with Section 42 and Section 47 of the PA 2008.</p>

	<ul style="list-style-type: none"> prepare a consultation report showing how the Applicant has met the consultation requirements of sections 42, 47 and 48 of the Planning Act and how the proposed application has been amended to take account of the relevant responses; 	This Consultation Report (application document 5.1) is submitted as part of the application for development consent.
	<ul style="list-style-type: none"> meet the requirements of Section 37 of the Planning Act by submitting this consultation report to the Planning Inspectorate acting on behalf of the Secretary of State with the application for development consent for consideration in the decision whether the application is accepted for examination; and 	
	<ul style="list-style-type: none"> have regard to this guidance as required by Section 50 of the Planning Act. 	National Grid has complied with Section 50 of the PA 2008 guidance on pre-application consultation, evidenced in this table.

What is the timescale for pre-application and when does it start?

007	<p>Applicants will normally carry out preparatory work of project development, including informal early engagement with local communities, local authorities and statutory consultees prior to the formal start of the pre-application stage of the NSIP consenting process.</p> <p>There is no prescribed period of time for the pre-application stage. The amount of work involved in preparation and consultation will vary, driven by the complexity of the proposed NSIP, the time necessary to address issues raised in the preparation of the application, and other factors including any surveys necessary for an environmental impact assessment.</p>	<p>Chapters 5 and 6 of this report provides an overview of the pre-application consultations. Throughout the lifetime of the Project, our proposals have developed through consultation with local communities, landowners and businesses and stakeholders.</p> <p>Consultations commenced well in advance of the proposed DCO application date, allowing time for consultees to understand and meaningfully contribute to the design of the proposals. The four stages held between 2022 and 2025 provided consultees with the opportunity to influence the Project.</p> <p>Commencing consultation early has allowed the Project to be informed by the public and all consultees throughout the design process, while being sufficiently developed to provide some detail on what is being proposed. More details of the consultation process can be found in Chapter 3 of this report.</p> <p>At statutory consultation, the Project information was available online and in hard copy to support the consultation (information</p>

	<p>is still available on the project website in the document library).</p> <p>These included the Project Background Document, Community Newsletter 2024, PEIR, 2024 Design Development Report, 2024 Strategic options Backcheck and Review, 2023 Non-Statutory Consultation Feedback Report, Interactive Project Map, Consultation notices, SoCC, Feedback Questionnaire, Section 47 and Section 48 notices.</p>	
Environmental Impact Assessment		
011	<p>Major infrastructure projects will normally be of a size, scale and nature that they will constitute Environmental Impact Assessment (EIA) development described within the terms of the EIA Regulations 2017. An Applicant cannot begin to carry out statutory consultation under Section 42 of the Planning Act until they have taken the necessary steps under Regulation 8 of the EIA Regulations 2017 to establish whether an EIA is required. Where the proposed development is determined to be EIA development, an Applicant will need to submit an Environmental Statement along with their application. Although it is not mandatory, an Applicant can request the Planning Inspectorate on behalf of the Secretary of State to provide an opinion on the scope of the Environmental Statement (the 'scoping opinion') i.e. what the assessment does, and does not, need to consider. Such a request must be accompanied by the information provided by the Applicant required by Regulation 10 of the EIA Regulations 2017 in order that the Planning Inspectorate can make a fully informed view and respond within 42 days</p>	<p>The Project is an 'EIA Development'. On 4 November 2022, National Grid submitted a Scoping Report to the SoS for Business, Energy and Industrial Strategy, to inform the EIA for the Project.</p> <p>Within the Scoping Report, National Grid gave formal written notification under Regulation 8(1)(b) of the EIA Regulations 2017 that it considers the Project will require (and that National Grid will in due course provide) an ES in respect of the Project and it is considered to be an 'EIA Development'. A scoping opinion for the Project was adopted by PINs (on behalf of the SoS) on 14 December 2022 having consulted with the relevant consultation bodies in accordance with Regulation 10(6) of the EIA Regulations 2017.</p> <p>The Section 48 notice (included with the Section 46 notification) confirmed an ES would be prepared and submitted as part of the submission of an application for development consent.</p> <p>PINs were aware at an early stage that National Grid intended to submit an ES along with the DCO application.</p>
011	<p>Regulations 11 to 13 of the EIA Regulations 2017 set out the pre-application publicity and consultation requirements for the EIA process pursuant to sections 47 and 48 of the</p>	<p>Noted – comments on regulations 11 to 13 in rows that follow.</p>

Para Guidance	Comment
<p>Planning Act. Where there are obligations upon the Secretary of State, these are carried out by the Planning Inspectorate:</p>	
<p>Regulation 11 of the EIA Regulations 2017 requires the Secretary of State to notify the prescribed consultation bodies of their duty to consult with the Applicant and make any information relevant to the preparation of the Environmental Statement available to the Applicant (if requested to do so by the Applicant). It also requires the Secretary of State to provide the Applicant with a list of those notified consultation bodies;</p>	<p>National Grid was provided with a list of those notified consultation bodies. The full list is available in Chapter 12 of this report.</p>
<p>Regulation 12 of the EIA Regulations 2017 requires that the Applicant's SoCC must state whether the project constitutes EIA development and, if it does, how the Applicant intends to publicise and consult on preliminary environmental information (PEI); and</p>	<p>Paragraph 1.1.2 of the SoCC states:</p> <p><i>'1.1.2 National Grid expects the proposed Project to be classified as a Nationally Significant Infrastructure Project ("NSIP") and requires consent from the Secretary of State for Energy Security and Net Zero (the "SoS") via a Development Consent Order ("DCO"). This document has been prepared in line with Section 47(1) of the Planning Act 2008 ("the Planning Act"), which requires Applicants to prepare a statement explaining how they will consult with people living in the vicinity of the land where the Project is proposed to be located, from here called "the local community" about the proposed application, and to carry out pre-application consultation in accordance with this statement. As the proposed Project is an Environmental Impact Assessment ("EIA") development, this SoCC therefore also sets out how National Grid intends to publicise and consult on the preliminary environmental information, in accordance with regulation 12 of the Infrastructure Planning (Environmental Impact Assessment) Regulations 2017 ("the EIA Regulations").'</i></p>

Para	Guidance	Comment
	Regulation 13 of the EIA Regulations 2017 requires that publicity of project proposals under Section 48 of the Planning Act must also encompass the requirements of the EIA process and at the time of publishing the proposed application, Applicants must notify all the notified consultation bodies.	National Grid consulted environmental consultees as required by Section 42(1)(a). In line with Advice Note Seven (PINs), National Grid published a PEIR alongside the consultation material. This presented the likely significant effects of the Project to enable consultees to develop an informed view of the Project and its effects so that they could provide detailed comments on the design and mitigation of the project.
	Applicants need to give consultation bodies sufficient information about the characteristics of the proposed NSIP in order to enable them to respond in an effective and timely way about the likely environmental effects and avoid unnecessary delay. Applicants should discuss providing digital material where possible with relevant statutory consultees.	National Grid included a PEIR and NTS of the PEIR in the documents published for the purposes of the statutory consultation to give consultees as much information as possible on the characteristics of the Project.
	Part 6 of the Levelling-up and Regeneration Act 2023 contains provisions to replace the current Strategic Environmental Assessment (SEA) and EIA requirements with a new regime of Environmental Outcome Reports (EOR). Until the EOR regulations are in place to commence this new regime, the existing arrangements for environmental assessment remain in place and this guidance should be followed accordingly.	The PEIR details the environmental information and the results of the preliminary assessments of any likely significant environmental effects of the Project. Each technical chapter has a section called 'Preliminary Assessment Key Parameters and Assumptions' which sets out the assumptions. It is then followed by 'Further Assessment' which says what else will be done as part of the ES. The PEIR was available to download from the Project website, to view at the inspection locations and available on request.

Preliminary Environmental Information (PEI)

012	Where an NSIP is determined to be EIA development in line with Regulation 8 of the EIA Regulations 2017 the Applicant is required by Regulation 12 of the EIA Regulations 2017 to publish sufficient Preliminary Environmental Information (PEI) to enable consultees to develop an informed view of the likely significant environmental effects of the proposed development. The information required will be different for different types and sizes of projects and it may also vary	National Grid produced a PEIR which was prepared in accordance with The Planning Inspectorate's Advice Note 7: Environmental Impact Assessment: Process, Preliminary Environmental Information and Environmental Statements (Planning Inspectorate, 2020). The purpose of the PEIR was to give consultees an understanding of the potential likely significant effects (positive or negative) to enable them to prepare well-informed responses to the statutory consultation.
-----	--	--

Para	Guidance	Comment
	<p>depending on the audience of a particular consultation.</p> <p>Applicants are advised to consult any relevant existing environmental assessments or survey information, in the first instance to get an idea of what environmental effects could arise. The key issue is that the information presented must be clear to all consultees, even if it is of specialised technical nature. As required by Schedule 4 of the EIA Regulations 2017 any difficulties or areas of uncertainty such as in data collection, forecasting methods or scientific knowledge must be identified and acknowledged.</p> <p>There is no prescribed format for PEI. However, depending on the availability of material, Applicants are encouraged to prepare this as an early draft of the Environmental Statement and include it as such as part of the statutory consultation under sections 42, 47 and 48 of the Planning Act. If Applicants decide to take a different approach, they should be clear with consultees about the status of the PEI.</p> <p>In any event, Applicants will need to maintain close dialogue with statutory consultees throughout the pre-application period. The provision of PEI can help statutory consultees to understand the environmental effects of the development and may assist in the identification and addressing of potential issues at an early stage in the pre-application process.</p>	<p>The PEIR provides the available environmental information and the results of the preliminary assessments of any likely significant effects of the Project.</p> <p>Each technical chapter has a section called '<i>Preliminary Assessment Key Parameters and Assumptions</i>' which sets out the assumptions. It is then followed by '<i>Further Assessment</i>' which said what else would be done as part of the ES.</p> <p>A NTS of the PEIR was also produced.</p> <p>The PEIR and NTS were available:</p> <ul style="list-style-type: none"> • to download in the document library of the Project website; • as a paper copy upon request; • at the inspection locations listed in Table 8.11; and • at public information events listed in Table 8.10.

Habitat Regulations Assessment (HRA)

013	<p>The Habitats Regulations provide for the designation of sites for the protection of certain species and habitats. When considering whether a proposed NSIP has the potential to significantly affect the integrity of such sites, the Applicant must provide a report as required by Regulation 5(2)(g) of the APFP Regulations 2009.</p>	<p>National Grid has prepared a Habitats Regulations Assessment (HRA) Report which is included within the application for development consent (application document 5.3). This provides the information required for the SoS to undertake an appropriate assessment.</p>
-----	--	--

Para	Guidance	Comment
	<p>This must include the site(s) that may be affected, together with sufficient information to enable the relevant Secretary of State, as decision maker, to conclude whether an appropriate assessment is required under the Habitats Regulations, and, if so, to undertake such an assessment.</p>	
013	<p>As NPSs reiterate, it is the Applicant's responsibility to provide all the material and evidence as part of the application to enable the Secretary of State to carry out their statutory obligations. Where the Applicant is of the view that there are no likely significant effects, this is best presented in the form of a report which contains all the material necessary to justify the conclusions reached, and evidence of the extent of agreement with statutory nature conservation bodies (SNCBs). One way of doing this is for an Applicant to agree an evidence plan with the SNCBs to support a HRA where there are extensive or complex issues.</p> <p>The Planning Inspectorate can also comment on the Applicant's draft HRA report if agreed as part of the pre-application service in advance of formal submission of the application. Applicants must therefore build in sufficient time during the pre-application stage to consult with the SNCBs and, if they consider it appropriate, with any relevant non-statutory nature conservation bodies, in order to gather the necessary evidence and material.</p>	<p>National Grid has consulted with Natural England on the preparation of the HRA Report (application document 5.3). The HRA Report identifies the other organisations that were consulted when gathering data and evidence to produce the assessment.</p>
016	<p>The strong expectation is that Applicants of proposed NSIPs will act reasonably in engaging with landowners, and likewise landowners will cooperate with Applicants to provide them with the information that they need and facilitate access to their land as required, even if they object to the principle of the development. Such cooperation does not preclude, remove or reduce any of the landowner's rights to participate in the consultation on an</p>	<p>National Grid consulted with landowners and all persons identified under Section 44, being PILs affected by the Project.</p> <p>The Applicant sent a letter informing of the consultation to the Section 42(1)(d) and Section 44 consultees. The letter was sent to 5,016 PILs in the week commencing 8 April 2024.</p>

Para Guidance	Comment
<p>application or make representations about it during the examination.</p>	<p>As new PILs were identified, they were written to. More information available in Section 8.7 of this report.</p> <p>The consultation was extended by five weeks following the announcement of the General Election. A letter detailing the extension, including the new consultation deadline was sent to the Section 42(1)(d) and Section 44 consultees on the week commencing 10 June 2024. The letter was sent to 5,108 PILs.</p> <p>As new PILs were identified, they were written to. More information available in Section 8.7 of this report.</p> <p>A summary of the numbers of PILs consulted overall and how many fell into each of the categories set out in Section 44 can be found in Table 8.2 of this report.</p> <p>National Grid undertook consultation with PILs as part of further targeted consultation, which took place over three stages, as follows:</p> <ul style="list-style-type: none"> • Norfolk and Suffolk targeted non-statutory community consultation and consultation of PILs between 30 January and 3 March 2025. • Essex and Thurrock targeted non-statutory community consultation and consultation of PILs between 25 February and 27 March 2025. • Thurrock 3 targeted statutory community consultation and consultation of PILs between 18 March and 17 April 2025. <p>More information is available in Chapter 10 of this report.</p> <p>Further landowner consultation took place as follows:</p> <ul style="list-style-type: none"> • Consultation with newly identified Category 1 and 2 PILs took place between 5 June and 18 July 2025; • Consultation with previously consulted Category 1 and 2 PILs took place between 18 June and 18 July 2025; and • Consultation with Category 3 PILs took place between 10 July and 22 August 2025.

Para Guidance	Comment
	More information is available in Chapter 11 of this report.
Marine Management Organisation (MMO)	
<p>018 Section 149A of the Planning Act provides that a DCO may include a marine licence deemed to have been issued under Part 4 of the Marine and Coastal Access Act 2009. Such marine licences are issued by the Marine Management Organisation (MMO), and where an Applicant intends to seek such a licence as part of the DCO it is essential that the MMO is consulted at the earliest opportunity to agree the content of the deemed marine licence (DML) and the range of conditions which will be applied. The MMO is responsible for enforcing these conditions, post-consent monitoring, and varying, suspending, or revoking any DML(s) included as part of a made DCO.</p>	<p>Although the application does not affect waters in or adjacent to England up to the seaward limits of the territorial sea, National Grid consulted the Marine Management Organisation under Section 42(1)(a) of the Planning Act 2008 on a precautionary basis as the organisation was identified in the Scoping Opinion.</p> <p>National Grid consulted the Marine Management Organisation as part of the statutory consultation held between 10 April 2024 and 26 July 2024. A copy of the letter sent to Section 42(1)(a) persons prescribed is provided in Appendix F of this report. As detailed in Section 3.4.1 of this report the statutory consultation was extended by five weeks following the announcement of the General Election. A letter detailing the extension was sent to Section 42(1)(a) persons prescribed on 5 June 2024. A copy of the letter is provided in Appendix F of this report.</p> <p>The Marine Management Organisation was also consulted as a Section 42(1)(a) prescribed persons during the targeted consultations held in 2025. A summary of the targeted consultation is provided in Chapter 10 of this report. Copies of the letters sent in relation to the targeted consultations is provided in Appendix K of this report.</p>
How can pre-application consultation shape proposals and help prepare applications that are accepted for examination?	
<p>019 Applicants are responsible for consulting on proposed applications for DCOs. Applicants are specifically required to undertake statutory pre-application consultation activities as stipulated in the following legislation:</p> <p>section 42 of the Planning Act, together with the provisions of sections 43 and 44 of the Planning Act, requires Applicants to consult certain persons, including</p>	<p>Section 42(1)(a)</p> <p>National Grid consulted all persons prescribed under Section 42(1)(a) of the PA 2008.</p> <p>On 10 April 2024, the Applicant sent a consultation letter to the Section 42(1)(a) consultees, along with a copy of the community newsletter and Section 48 notice. An email containing the letter and Section 48</p>

	<p>Following the announcement of the General Election, the consultation was extended by a period of five weeks. The Section 48 notice was republished in the following newspapers:</p> <ul style="list-style-type: none"> • East Anglian Daily Times – 12 June 2024 and 19 June 2024 • Eastern Daily Press – 12 June 2024 and 19 June 2024 • London Gazette – 12 June 2024 • The Guardian – 12 June 2024 • Essex Chronicle – 13 June 2024 and 20 June 2024 <p>A copy of the newspaper notices can be found in Appendix H of this report.</p> <p>The Section 48 notice included the consultation deadline of 11:59pm Tuesday 18 June 2024.</p> <p>The republished Section 48 notice (detailing the five week extension following the announcement of the General Election) included the new consultation deadline of 11:59pm Friday 26 July.</p>
<ul style="list-style-type: none"> • the EIA Regulations 2017 set out requirements for preparing Environmental Statements prior to the submission of a DCO application, including engaging with statutory consultees and local authorities prior to formal pre-application activities under Section 42 of the Planning Act. 	<p>The SoCC made clear that it was produced pursuant to Section 47(1) of the PA 2008 and Regulation 12 of the EIA Regulations 2017. It also makes clear that likely significant environmental effects of the Project would be consulted on, alongside potential environmental mitigation identified to reduce likely significant environmental effects. The SoCC states that an ES would be prepared as part of the application for development consent.</p> <p>The SoCC further stated that preliminary environmental information (in the form of a PEIR) will form part of the consultation materials, stating that the full PEIR will be made available including on the Project website and in paper form, and that the PEIR will also outline any limitations to the current assessments. The SoCC is therefore clear that a PEIR is to be prepared and consulted on, and how National Grid intends to publicise and consult on this document.</p>

Para Guidance	Comment
	<p>A copy of the SoCC can be found in Appendix E of this report.</p> <p>The PEIR was produced and consulted on during the statutory consultation between 10 April 2024 and 26 July 2024. The PEIR provided a snapshot of the environmental information available at the relevant time, in the case of the Project at the statutory consultation stage.</p>
<p>Early involvement of local communities, local authorities and statutory consultees during the pre-application stage, both through consultation and other forms of engagement, can bring about significant benefits for all parties</p>	<p>The local communities, LPAs and statutory consultees have been engaged throughout the development of the Project, since the first staged non-statutory consultation was held in 2022 and second in 2023. Further details about the engagement with communities during the statutory consultation can be found in Chapter 9 of this report.</p>
<p>Without adequate pre-application consultation in line with the legislation, the subsequent application when it is submitted to the Planning Inspectorate will not be accepted to proceed to examination. The Planning Inspectorate takes into account the responses received from local authorities during the acceptance period to determine on behalf of the Secretary of State whether the consultation is adequate.</p> <p>The Planning Inspectorate can either accept or decline to accept the application for examination. Where during the acceptance stage the Planning Inspectorate considers that the application is not satisfactory, it may advise the Applicant to withdraw the application, and if appropriate can also recommend that the Applicant carries out further consultation activity or engagement before the application is resubmitted.</p>	<p>The consultation was undertaken (two non-statutory, and one statutory consultation described in Chapters 5, 6, 8, 9 and 10 of this report) during the pre-application stage to ensure that issues arising were considered and taken into account.</p> <p>The LPAs have been engaged throughout the pre-application period and were consulted on the SoCC. National Grid developed a Host Authority Engagement Plan which was circulated by the Project team to the host authorities on 1 December 2023 and iterations have been issued as the Project progressed.</p>
<p>Effective pre-application consultation is key to developing well-prepared applications that are understood by the public. Consultation on development proposals allows consultees and local communities to influence how infrastructure that meets a national need</p>	<p>Consultation with key stakeholders began in 2022 and has been ongoing. Stakeholders have been engaged at an early stage of the process to discuss points raised in the Scoping Opinion and to reach an agreement on these matters and further comments received.</p>

Para Guidance	Comment
<p>can be accommodated in their area, and enables Applicants to more effectively shape proposals.</p> <p>From a consultee's perspective, engaging in pre-application consultation, including for example offering constructive mitigations to reduce a scheme's impact on the local community and environment, does not undermine any submission on the principle of whether or not development consent should be granted.</p>	<p>Local communities, LPAs, statutory consultees and other stakeholders have also been engaged throughout the development of the Project, since the first staged non-statutory consultation was held in 2022 and second in 2023. Further details about the engagement with communities during the statutory consultation can be found in Chapter 9 of this report.</p> <p>A full list of the consultation carried out with key stakeholders to date and a summary of the matters discussed in relation to the ES is provided within the ES Appendix (application documents 6.5.A1).</p>
How can Applicants ensure consultation is proportionate?	
<p>020 The pre-application consultation undertaken should be proportionate to the scale and nature of the project and its effects. A 'one-size-fits-all' approach is not appropriate. For a straightforward and uncontroversial application, an Applicant may choose to discharge the obligations of sections 42, 47 and 48 of the Planning Act concurrently in a single round of consultation, or in separate stages. For more complex proposals, an Applicant may choose to conduct a non-statutory round of consultation (for example considering options) before undertaking a statutory round of consultation, or they may choose to run a multi-stage statutory consultation process.</p>	<p>National Grid held a non-statutory consultation between 21 April 2022 until 16 June 2022, the report is provided in Appendix B of this report.</p> <p>National Grid held another non-statutory consultation between 27 June 2023 until 21 August 2023, the report is provided in Appendix C of this report.</p> <p>Statutory consultation was held between 10 April and 26 July 2024.</p> <p>Three targeted consultations ran in 2025 to cover key Project changes:</p> <ul style="list-style-type: none"> • Norfolk and Suffolk (non-statutory) was held between 30 January 2025 until 3 March 2025; • Essex and Thurrock (non-statutory) was held between 25 February until 27 March 2025; and • Thurrock 3 (statutory) was held between 18 March until 17 April 2025.
<p>Some Applicants may have their own distinct approaches to consultation, perhaps drawing on their own or relevant sector experience, for example if there are industry protocols that can be adapted. Larger, more complex applications are likely to warrant going beyond the statutory 28-day minimum timescales for consultation laid down in the Planning Act</p>	<p>The statutory consultation ran for 15 weeks from 10 April 2024 to 26 July 2024, allowing adequate time for consultees to respond to the statutory consultation.</p>

Para Guidance	Comment
<p>to ensure enough time for consultees to understand project proposals and formulate a response.</p> <p>The timing and duration of consultation will be likely to vary from project to project, depending on size and complexity, and the range and scale of the effects. Applicants should therefore set consultation deadlines that are realistic and proportionate to the proposed project.</p>	
<p>Once Applicants have completed the consultation process set out in their SoCC, where a proposed application is amended in the light of responses to consultation then, unless those amendments materially and substantially change the proposed application or materially changes its effects as a whole, the amendments themselves should not trigger a need for further consultation. The amendments can be reported as part of the consultation report submitted with the application.</p>	<p>The Project did not change very substantially as a whole following the statutory consultation so, it was not necessary to repeat the community wide statutory consultation for the Project as a whole.</p> <p>Chapter 10 of this report describes the three targeted consultations that took place in 2025:</p> <ul style="list-style-type: none"> • Norfolk and Suffolk (non-statutory) between 30 January 2025 until 3 March 2025; • Essex and Thurrock (non-statutory) between 25 February until 27 March 2025; and • Thurrock 3 (statutory) between 18 March until 17 April 2025.
<p>Only where the project taken as a whole changes very significantly, and to such a large degree that what is being taken forward is fundamentally different from what was previously consulted on, should re-consultation on the proposed application as a whole be considered.</p> <p>In understanding whether there has been a material and substantial change, Applicants should take into account the following guiding factors:</p> <ul style="list-style-type: none"> • the degree of change as compared to the proposals previously consulted upon as a whole; • the number of materially worse environmental effects as compared to what has been the subject of previous consultations; and 	<p>A full re-consultation was considered unnecessary as the Project did not change to such a large degree that the proposals became fundamentally different from what was presented at the statutory consultation stage. However, following the 2024 statutory consultation a targeted consultation approach was used in line with the guidance. More information is detailed in Section 10.1 of this report.</p>

Para Guidance	Comment
<ul style="list-style-type: none"> the level of public interest, and the likelihood that such interest would merit further consideration in the context of that change. <p>For any material change to a part of the proposed application where the project as a whole is not fundamentally changed, for example in the case of linear aspects where new information leads to a new alignment for a particular section of the proposal, a bespoke and targeted approach to further consultation can be adopted, which can address the specific consultation obligations arising proportionately.</p> <p>Targeted consultation can be statutory or non-statutory or a combination of the two depending on whether new persons needing to be consulted under Section 42 of the Planning Act have been identified, but such targeted consultation will not require the production of PEI provided proportionate and appropriate information on environmental implications of any changes, where necessary, is provided.</p>	<p>The SoCC included the following statement in Section 6.3.1 Further Consultation;</p> <p><i>‘6.3.1 If, following the statutory consultation, National Grid considers it is necessary to undertake further statutory consultation, this would be undertaken, so far as relevant, practicable and proportionate, in accordance with the principles and methods set out in this SoCC or any update to it.’</i></p> <p>National Grid undertook targeted consultations to provide stakeholders and the public the opportunity feedback on proposed changes to the proposals in specific areas, before finalising proposals for submission.</p> <p>Each proposed change was reviewed by the project team to determine whether it would be appropriate to undertake further bespoke and targeted community consultation on the change, either individually or collectively if multiple proposed changes were grouped geographically. The locations where the project team judged that it would be appropriate to undertake additional targeted community consultation were due to the degree of change, potentially different environmental effects compared to those described in the PEIR and/or the likely level of public interest in relation to the proposed changes at those specific locations.</p> <p>The targeted consultations were undertaken as follows:</p> <ul style="list-style-type: none"> Norfolk and Suffolk (non-statutory) between 30 January 2025 until 3 March 2025; Essex and Thurrock (non-statutory) between 25 February until 27 March 2025; and Thurrock 3 (statutory) between 18 March until 17 April 2025.

Para	Guidance	Comment
		<p>Each targeted community consultation was accompanied by an Environmental Implications of Change (EIC) document, setting out the project team’s review of the proposed change and its likely environmental implications against the assessment reported in the Preliminary Environmental Information Report (PEIR) published as part of the 2024 route-wide statutory consultation.</p> <p>More information about the targeted consultations is detailed in Chapter 10 of this report.</p> <p>In addition to the areas identified for targeted community consultation, further landowner consultation was undertaken as detailed in Chapter 11 of this report.</p>
Who should be consulted?		
021	<p>Sections 42 to 44 of the Planning Act, Regulation 3 and Schedule 1 to the APFP Regulations 2009 set out details of who must be consulted, including statutory bodies, the Marine Management Organisation where appropriate, local authorities, and persons having an interest in the land to be developed. Section 47 of the Planning Act sets out the Applicant’s statutory duty to consult local communities. In addition, Applicants will want to consider the issues that may need to be addressed ahead of submission and may also wish to seek the views of other people who are not statutory consultees, but who may be significantly affected by the project.</p> <p>The Infrastructure Planning (Miscellaneous Provisions) Regulations 2024 amended the APFP Regulations 2009 by substituting a new table of persons prescribed for the purpose of Section 42(1)(a) of the Planning Act (duty to consult) and also section 56(2) of the Planning Act (notifying persons of an accepted applications) which is covered in the acceptance guidance. It is the Applicant’s responsibility to ensure all</p>	<p>National Grid engaged with all parties during the statutory consultation, as required by the PA 2008. In addition, National Grid consulted the local community within the vicinity of the proposals, as set out under Section 47 of the PA 2008. More information of the PCZ and SCZ can be found in Chapter 8 of this report.</p> <p>The full list of prescribed consultees as set out in Schedule 1 of the Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2009 (as amended) is provided in Appendix F in this report.</p> <p>This table sets out where National Grid departed from the list of Schedule 1 prescribed consultees and the appropriate reasons for doing so. Chapter 8 of this report also details consultation with the relevant LPAs, as statutory consultees.</p> <p>In April 2024, The Infrastructure Planning (Miscellaneous Provisions) Regulations 2024 detailed amendments to the prescribed list of consultees in Schedule 1 of the Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2009.</p> <p>The transitional provisions in the Infrastructure Planning (Miscellaneous Provisions) Regulations 2024 state that the</p>

	requirements was impossible and the reasons why.	<p>Provisions) Regulations 2024 state that the amendments to the list of prescribed consultees do not apply where the Applicant has started to consult under Section 42 of the PA 2008 before 30 April 2024.</p> <p>As the Norwich to Tilbury statutory consultation commenced on 10 April 2024, the amendments to the prescribed list of consultees did not apply. Nonetheless, the 2024 amendments were followed, as detailed in Section 8.4 of this report.</p> <p>For the targeted statutory consultation, National Grid consulted with all applicable prescribed bodies in accordance with the 2024 amendments to Schedule 1. More information is detailed in Section 10.7 of this report.</p>

Local communities

022	<p>It is good practice for Applicants to work with local stakeholders in the formative stages of the project, through early engagement. This can help inform the Programme Document that they later take to the Inception Meeting with the Planning Inspectorate. Early engagement with local authorities, parish and town councils can help Applicants to ensure they find the best approach to engage the relevant communities in the most effective and proportionate way.</p>	<p>The local communities, local authorities and statutory consultees have all been engaged in the proposals since the first stage of non-statutory consultation in 2022.</p> <p>More details about the engagement with communities during the 2022 and 2023 non-statutory consultations can be found in Chapters 5 and 6 of this report. Information about statutory consultation activities can be found in Chapter 8 of this report, and details about targeted consultation activities can be found in Chapter 10 of this report.</p> <p>Appendix A of this report contains details about engagement that has been held outside of consultation periods.</p>
	<p>Under Section 47 of the Planning Act, Applicants are required to produce a SoCC, setting out how they intend to consult the local community on the proposed application. Applicants should consider how they can engage communities in a way that supports them to understand the necessary issues at an appropriate stage to support preparation of their application, and how they will show how they have responded to their issues of concern.</p>	<p>Section 5.5 of the SoCC provides information on promoting the consultation to those residents, local businesses and community organisation within the PCZ. This promotion included press release, newspaper advertisements, emails and letters, statutory notices, information posters and social media.</p> <p>A copy of the SoCC can be found in Appendix E of this report.</p>

Para	Guidance	Comment
	Local communities may need support to help them to input to the NSIP consenting process. Independent community liaison chairs or forums can be used to provide support to local communities and non-statutory consultees to enable them to provide an effective input to the pre-application process. Applicants will want to consider whether these should be used, not least to assist an Applicant's own assessment of potential examination issues in preparing their Programme Document and SoCC.	<p>This new guidance was published on 30 April 2024, however as statutory consultation had commenced on 10 April prior to the new guidance coming into force, National Grid complied with the 2024 amendments. More information is detailed in Chapter 8 of this report.</p> <p>Whilst independent community liaison chairs or forums were not set up, National Grid was, and is, committed to ensuring that any consultation process and associated communication is made accessible to as many parts of the community as possible. National Grid's consultation activities included:</p> <p>Setting up a project specific website, email, and dedicated telephone information line;</p> <p>Mailing a consultation pack directly to properties in the PCZ within 1 km of the proposals;</p> <p>Producing materials to support consultation;</p> <p>Holding online and in person events- including webinars and telephone appointments;</p> <p>Making information and materials available at inspection locations in close proximity to the Project; and</p> <p>Media and social media promotional activity.</p> <p>Chapter 8 of this report summarises the Section 47 consultation with the local community (including non-prescribed organisations).</p>

How should Applicants engage statutory consultees and other relevant groups?

023	<p>Applicants must:</p> <ul style="list-style-type: none"> consult the prescribed bodies as appropriate under Regulation 3 and Schedule 1 to the APFP Regulations 2009, as well as the Marine Management Organisation in certain circumstances, under Section 42 of the Planning Act, giving the consultees at least 28 days to respond; 	<p>The Applicant consulted all persons prescribed under Section 42(1)(a) of the PA 2008. A full list of the bodies consulted under Section 42 (1)(a), as identified through Schedule 1 of the APFP Regulations can be found at Appendix F of this report.</p> <p>The Project does not require a marine licence. National Grid did not consult with the Marine Management Organisation.</p> <p>The Applicant consulted with each LPA identified in Section 43 under Section</p>

<p>means they have the information they need from Applicants to do so. It is essential therefore that Applicants arrange early engagement with statutory consultees to avoid unnecessary delays and the costs of having to make changes at later stages of the consenting process.</p>	<p>consultation) and 10 (targeted consultations) of this report provide details on activities undertaken during consultation.</p>
Persons with an Interest in Land (PILs)	
<p>024 Where an Applicant proposes to compulsorily acquire an interest or take temporary possession of land it does not own in order to implement a proposed NSIP, under Section 42 of the Planning Act they must identify and consult people, including those who own, occupy or have another interest in the land in question.</p>	<p>Section 42(1)(d) consultees were identified through diligent inquiry as having interest following the land referencing methodology in Appendix J of this report.</p>
<p>It is the Applicant's responsibility to demonstrate at submission of the application to the Planning Inspectorate that due diligence has been undertaken in identifying all land interests. Applicants must ensure that the Book of Reference (which records and categorises those land interests) is sufficiently up to date at the time of submission (acknowledging the timescales for preparing and updating it) and fully meets the requirements of Regulations 5 and 7 of the APFP Regulations 2009.</p>	<p>National Grid ensured due diligence has been undertaken in identifying all land interests. All known land interests were consulted under Section 42(1)(d) of the PA 2008 and National Grid has made all reasonable effort to ensure the Book of Reference (application document 4.3) is up to date at the point of submission.</p> <p>Further details on how National Grid has demonstrated diligent inquiry is detailed in Section 8.7 of this report).</p>
<p>Where appropriate, the Book of Reference should be supplemented by a Land and Rights Negotiation Tracker, submitted by the Applicant and updated during the examination, setting out the status of negotiations with landowners, Crown bodies and statutory undertakers affected by proposals for compulsory acquisition of land or rights and temporary possession.</p> <p>It should be noted that for an accepted application, the situation concerning compilation of land interests can continue to evolve during the examination as new information becomes available, and it is not uncommon for the Book of Reference</p>	<p>National Grid will continue to be proactive and helpful in ensuring PILs identified in the very latter stages prior to DCO submission may understand how they can, if they so wish, engage with the process if the application is accepted for examination.</p> <p>Any newly identified or affected PILs were written to with:</p> <ul style="list-style-type: none"> • details of the Project; • where further information could be found; • an offer for a meeting with Fisher German (for Category 1 and 2 PILs); • a feedback form and a prepaid envelope with guidance on how to submit their comments;

Para Guidance	Comment
<p>to be revised and resubmitted more than once. This is usually a substantial undertaking and Applicants should dedicate sufficient time and resource, particularly as in many cases there may be parcels of land where there is little information available. With this in mind, Applicants are advised to make maximum use of electronic data bases when compiling the Book of Reference to enable such changes to be made easily.</p> <p>In addition, land interests can change over time and new or additional interests may emerge after an Applicant has concluded statutory consultation but just before an application is submitted. In such a situation, the Applicant should provide a proportionate opportunity to any new person identified with a land interest to make their views known on the application. Where new interests in land are identified very shortly before the intended submission of an application, despite diligent efforts earlier in the process, it may be difficult at that stage for Applicants to consult and take account of any responses from those new interests before submitting their application as intended. If this situation arises Applicants should be proactive and helpful in ensuring that the person understands how they can, if they so wish, engage with the process if the application is accepted for examination.</p>	<ul style="list-style-type: none"> • Lands Right Strategy; • Guide to reading the plans; • Land Plan showing their land interest.
<p>Applicants should explain in the consultation report how they have dealt with any new interests in land emerging after conclusion of their statutory consultation having regard to their duties to consult and take account of any responses.</p>	<p>Alongside, or independently of, the work carried out to identify new PILs as a result of minor amendments to the draft Order Limits described above, National Grid took steps to ensure that the Book of Reference (application document 4.3) as a whole would be up to date at the time of submission, in accordance with Government guidance (Planning Act 2008: Guidance on Pre-application Process, March 2015).</p> <p>As new PILs were identified, they were written to. More information is available in Section 8.7 of this report.</p>

Para Guidance	Comment
	<p>An additional targeted consultation was held over three rounds from 30 January 2025 to 17 April 2025 (see Chapter 10 in this report). This provided an opportunity for new PILs within the draft order limits of these three areas not previously consulted, to submit their feedback. PILs invited to this consultation included those identified after 28 June 2024 and did not get chance to participate in the statutory consultation that concluded on 26 July 2024 as well as new interests identified through design changes. The PILs invited to this consultation are summarised in Appendix K of this report. Details on the three targeted consultation is in Chapter 10 of this report.</p> <p>Chapter 11 of this report summarises the additional engagement held after the targeted consultation, detailing representations received and National Grid's response to these representations.</p> <p>National Grid will continue to undertake due diligence to identify new interests in line with the Land Referencing Methodology (see Appendix J of this report).</p> <p>National Grid has been proactive and helpful in ensuring PILs identified in the very latter stages prior to DCO submission may understand how they can, if they so wish, engage with the process if the application is accepted for examination.</p> <p>To the extent there are any, newly identified or affected PILs were written to with:</p> <ul style="list-style-type: none"> • details of the Project; • where further information could be found; • how to get in touch with National Grid; and • to explain how there would be an opportunity to provide comments to the PINs once the DCO application has been submitted. • Offer of a meeting with Fisher German (Cat 1 and 2)

Para	Guidance	Comment
Adequacy of consultation milestone		
025	<p>This adequacy of consultation milestone should be early enough to enable Applicants to consider how to undertake any additional engagement that may be needed, but sufficiently towards the end of the pre-application stage to assess the adequacy of the consultation that has been done. It is likely therefore to be no later than around 3 months before the intended date of submission of the application.</p> <p>The adequacy of consultation milestone should be recorded by the Applicant and submitted to the Planning Inspectorate as a short statement of the elements of consultation which have been carried out compared with the components set out in the Programme Document and the SoCC. The statement should include the views and any relevant supporting material from local authorities if available.</p>	<p>The Applicant has prepared an Adequacy of Consultation Milestone (AoCM) report. The AoCM report has been prepared after the Applicant undertook the following consultations:</p> <ul style="list-style-type: none"> • Non-statutory consultation in 2022 • Non-statutory consultation in 2023 • Statutory consultation in 2024 • Targeted consultations between January and April 2025 <p>The Applicant has prepared an AoCM report which details the elements of consultation which have been carried out and how this compares to the components set out in the Programme Document and SoCC.</p> <p>The AoCM was submitted to PINs on 13 June 2025 and is available to view on the PINs website and in Appendix M.</p> <p>Chapter 13 and Appendix M of this report details how National Grid has had regard to comments received on the AoCM report from LPAs, statutory consultees and the PINs following submission of the AoCM report to the PINs on 13 June 2025.</p>
The consultation report and responding to consultees		
026	<p>Applicants are required under Section 37 of the Planning Act to produce a consultation report alongside their application, which details how they have complied with the consultation requirements set out in the Planning Act and how the proposed application has been shaped as a result.</p> <p>This report should not include an excessively detailed description of every element of the consultation programme. The main objective should be to provide clarity not just on what consultation has been done but, crucially, how the Applicant has taken it into account. It should therefore:</p>	<p>This Consultation Report has been prepared in fulfilment of s37(3)(c) of the PA 2008.</p> <p>Multiple rounds of consultation have been undertaken. The report details the changes made following feedback received at every consultation.</p> <p>Chapter 5 of this report provides a summary of the 2022 non-statutory consultation. Section 5.6 of this chapter highlight the changes made following the issues raised from this consultation.</p>

Para	Guidance	Comment
		<p>Chapter 6 of this report provides a summary of the 2023 non-statutory consultation.</p> <p>Section 6.6 of this chapter highlight the changes made following the issues raised from this consultation.</p> <p>Chapter 8 of this report provides a summary of the statutory consultation undertaken.</p> <p>Chapter 9 (Section 9.7) of this report highlights the changes made following the issues raised from the statutory consultation as well as National Grid's responses to the issues raised at statutory consultation.</p> <p>Chapter 10 of this report provides a summary of the three 2025 targeted consultations as well as National Grid's responses to the issues raised at the targeted consultation.</p>
	provide a general description of the consultation process undertaken including the timeline;	Chapter 1 of this report provides the overview of the process for consultation, including the timeline.
	set out specifically what the Applicant has done to comply with the statutory requirements of the Planning Act, including advice issued under Section 51 of the Planning Act, relevant secondary legislation and this guidance;	Chapter 4 of this report provide details of compliance with legislation, guidance and relevant policies.
	set out how the Applicant has complied with the requirements to consult local communities described in the SoCC;	Chapter 7 of this report outlines how National Grid carried out consultation in accordance with the SoCC.
	set out any relevant responses to consultation (but not a complete list of responses);	Responses have been thematically presented within this report with National Grid's response to those matters raised. See Chapter 9 of this report.
	provide a description of how the proposed application for submission has been informed and influenced by taking account of those responses, showing any significant changes made as a result;	Chapters 5, 6, 9 and 10 of this report describe how the proposals developed following the non-statutory consultations and how these were taken into consideration for statutory consultation.
	provide an explanation as to why any responses advising on changes to a proposed project, including advice from statutory consultees and local authorities on effects, were not followed; and	Chapter 9 of this report describes how the proposals developed including changes made following statutory consultation and how these were taken into consideration.

Para Guidance	Comment
<p>be expressed in terms sufficient to enable the Planning Inspectorate to understand fully how consultation has been undertaken, and how the issues raised through consultation have been addressed or responded to.</p>	<p>This Consultation Report details how consultations (non-statutory and statutory) and engagement have shaped the proposals pre-submission.</p>
<p>It is good practice that those who have contributed to the consultation are informed of the results. The consultation report may not be the most appropriate format in which to respond to the points raised by various consultee groups and bodies. Applicants should therefore consider producing a summary note in plain English for the local community setting out headline findings and how they have been addressed, together with a link to the full consultation report for those interested.</p>	<p>Following the 2022 non-statutory consultation, National Grid sent a Project update newsletter in February 2023 setting out headline findings from the consultation. The Project update newsletter is available on the Project website.</p> <p>Following the 2023 non-statutory consultation, National Grid published a Post Consultation Update in December 2023 setting out headline findings from the consultation. The Post Consultation Update is available on the Project website.</p> <p>Following the 2024 statutory consultation, National Grid sent a Community Newsletter in January 2025 setting out headline findings from the consultation. The Community Newsletter is available on the Project website.</p> <p>National Grid also published a consultation feedback report for each of the non-statutory consultations. The 2022 and 2023 Non-Statutory Consultation Reports are available on the Project website.</p> <p>The consultation materials were produced to reflect the audiences with whom National Grid was consulting. A number of documents were published at the launch of the statutory consultation, including technical reports (describing the process undertaken and decision made during the design of the Project), and consultation materials.</p> <p>National Grid ensured that the content of the materials was sufficient information available to ensure people and organisations to understand and comment on any aspect of the Project's development and design. For consultees requiring more technical information the PEIR and NTS provided a snapshot of the environmental survey work</p>

Para	Guidance	Comment
		<p>and assessment work that had taken place to date.</p> <p>Within this report, feedback from the community and statutory stakeholders has been grouped into the geographical sections (from the feedback questionnaire) and headline issues and reported on that basis (See Chapter 9 of this report).</p>
	<p>A response to points raised by consultees with technical information is likely to need to focus on the specific impacts for which the body has expertise. The Applicant should make a judgement as to whether the consultation report provides sufficient detail on the relevant effects, or whether a targeted response would be more appropriate.</p>	<p>As part of the design process and assessment of effects, all feedback received during the consultation stages has been carefully considered. Where feedback has been technical in nature, additional engagement has been undertaken and has informed the Project design and content of the ES (or other documents as appropriate). This report explains how feedback received has been taken into account, cross-referring to further information contained in other documents such as the ES Appendix (application document 6.5.A1) where appropriate.</p> <p>The consultee responses received did not identify any bodies or organisations that were not already consulted during the statutory consultation.</p>
030	<p>Statements of Common Ground (SoCG) can support this by providing a written statement (prepared by the Applicant and another party or parties), setting out matters on which they agree or disagree. Applicants are encouraged to submit SoCGs as part of the application documents, even if they are of a provisional or draft nature to be developed during the examination. It is therefore important that these are prepared during the pre-application period wherever possible, particularly with statutory consultees and affected local authorities.</p>	<p>The SoCGs have been prepared with the key interested parties, including individual SoCGs for each LPA. More information about the SoCGs can be found in Chapter 14 of this report.</p>
032	<p>Applicants are required to consult the local authority in whose area a proposed NSIP project lies (the 'host' local authority). They are also required to identify and consult the neighbouring local authorities under the requirements of</p>	<p>National Grid consulted on the SoCC with 13 host authorities</p> <ul style="list-style-type: none"> • Babergh District Council; • Basildon Borough Council;

Para	Guidance	Comment
	<p>Section 43(2) and (2A) of the Planning Act.</p> <p>If the boundaries of the proposed applications change, Applicants will need to consider whether there are any changes to the local authorities they need to consult.</p> <p>Where a combined authority or combined county authority is in place, Applicants are recommended to review whether the relevant legislation which established those authorities brings them within scope of the consultation requirements under the Planning Act.</p>	<ul style="list-style-type: none"> • Braintree District Council; • Brentwood Borough Council; • Chelmsford City Council; • Colchester City Council; • Essex County Council; • Mid Suffolk District Council; • Norfolk County Council; • South Norfolk District Council; • Suffolk County Council; • Tendring District Council; and • Thurrock Council.
034	<p>In preparing a SoCC under Section 47 of the Planning Act, Applicants may need to consult with a number of different local authorities. This may particularly be the case for long, linear projects.</p>	<p>An informal SoCC consultation notification was sent on the 1 December 2023 along with a copy of the draft SoCC. The period to respond was between 2 of December 2023 until Friday 5 January 2024. See Appendix E of this report for information.</p> <p>A formal SoCC consultation notification was sent on 1 March 2024 along with a draft copy of the SoCC. The period to respond was between 2 March 2024 until 2 April 2024. See Appendix E of this report for information.</p> <p>Appendix E of this report provide details on how National Grid had regard to the comments made by the host authorities in developing the SoCC.</p>
036	<p>Applicants have a statutory duty to consult any local authority in whose land a project is sited. So, where an offshore project also features land-based development such as an onshore cable route and substation, the Applicant should treat the local authority where the land-based development is located as the main consultee for the SoCC. The Applicant is also advised to consider seeking views on the SoCC from local authorities whose communities may be affected by the project, for example visually or through construction traffic, even if the project is in fact some distance from the area in question. In addition, Applicants may find it beneficial to discuss their SoCC with</p>	<p>National Grid entered informal consultation on the SoCC with the 13 host authorities on the 2 December 2023, ahead of formal consultation that started on the 2 March 2024.</p> <p>Chapter 7 of this report provides details about how the SoCC was developed. Amendments to the SoCC further to informal and formal consultations are recorded in documents titled 'Regard had to informal/formal comments on proposed SoCC' (both provided at Appendix E of this report).</p>

Para	Guidance	Comment
	any local authorities in the vicinity where there could be an effect on harbour facilities. Where a local authority raises an issue or concern about the draft SoCC which the Applicant feels unable to address, the Applicant is advised to work with the authority to find an appropriate way forward. Where this is not possible, they should explain the reasons for this and rationale for their course of action in the consultation report submitted as part of their application.	

4.4 Compliance with the Statutory Section Provisions of the PA 2008

- 4.4.1 **Table 4.3** of this report sets out how National Grid has complied with the statutory section provisions of the Planning Act 2008, namely:
- Section 42: Duty to consult;
 - Section 45: Timetable for consultation under Section 42;
 - Section 46: Duty to notify of proposed application;
 - Section 47: Duty to consult local community;
 - Section 48: Duty to publicise;
 - Section 49: Duty to take account of responses to consultation and publicity; and
 - Section 50: Guidance about pre-application procedure.

Table 4.3 How National Grid had complied with the Statutory requirement of the Planning Act 2008

Statutory Regulation	Activity Undertaken	Date Undertaken
Section 42: Duty to consult		
The Applicant must consult the following about the proposed application:		
Section 42(1)(a) such persons as may be prescribed.	Meetings were held with key statutory bodies affected throughout the pre-submission period of the DCO. All relevant prescribed consultees were notified of the commencement of the statutory consultation by letter along with	Appendix A1 provides details and dates of meetings held with key statutory bodies throughout the pre-

the categories set out in Section 44.	<p>commencement of the consultation. See Appendix G of this report.</p> <p>As new PILs were identified, they were written to. More information available in Section 8.7 of this report.</p> <p>As detailed in Section 3.4.1 of this report, the consultation was extended by five weeks.</p> <p>A total of 5,108 PILs were written to (informing them of the new consultation deadline) in letters posted week commencing 10 June 2024. See Appendix G of this report.</p> <p>The total number of letters issued for the second mailout is different to the initial mailout due to some unidentified PILs being issued a site notice instead of a letter. The difference in volume of PILs written to was likely affected by one or all of the following factors including properties being bought or sold, notifications of deceased owners and historic Land Registry records. As new PILs were identified, they were written to. More information available in Section 8.7 of this report.</p> <p>Duplicate sets of consultation materials were also provided to land agents instructed to act on behalf of identified PILs, with the addition of a cover letter to reference information sent to their client. See Appendix G of this report.</p> <p>All letters that were returned to sender were re-issued to alternative addresses. See Appendix G of this report.</p> <p>Further detail is in Chapter 8 of this report.</p> <p>The Book of Reference is provided at Volume 4 of the DCO application (application document 4.3).</p> <p>National Grid will continue to engage with existing PILs and also identify any new and additional interests within referencing limits throughout and after the conclusion of Section 42 consultation but before the application is submitted.</p>	<p>commencing 20 May 2024.</p> <p>Letters detailing the consultation launch were issued week commencing 10 June until the 28 June 2024 when at least 28 days remained of the consultation window.</p>

Statutory Regulation	Activity Undertaken	Date Undertaken
Section 45: Timetable for Section 42 consultation		
(1) The Applicant must, when consulting a person under Section 42, notify the person of the deadline for the receipt by the Applicant of the person's response to the consultation.	<p>Statutory consultation was a 15 week period, commencing on the 10 April 2024; the consultation deadline was the 26 July 2024.</p> <p>A total of 5,016 Persons with an Interest in Land (PILs) were written to (informing them of the consultation) in letters posted week commencing 8 April 2024. As new PILs were identified, they were written to. More information available in Section 8.7 of this report.</p> <p>As detailed in Section 3.4.1, the consultation was extended by five weeks of this report.</p> <p>A total of 5,108 PILs were written to (informing them of the new consultation deadline) in letters posted week commencing 10 June 2024.</p> <p>As new PILs were identified, they were written to. More information available in Section 8.7 of this report.</p>	<p>Initial consultation letters were issued week commencing 8 April to week commencing 20 May 2024.</p> <p>Letters detailing the consultation extension were issued week commencing 10 June until the 28 June 2024 when at least 28 days remained of the consultation window.</p>
(2) A deadline notified under subsection (1) must not be earlier than the end of the period of 28 days that begins with the day after the day on which the person receives the consultation documents.	<p>The 2024 Statutory Consultation took place from 10 April 2024 to 26 July 2024, providing a period of 107 days for responses. This exceeds the statutory minimum period of 28 days for statutory consultation specified by the PA 2008.</p> <p>The consultation deadline was extended for an additional five weeks (from 18 June 2024 to 26 July 2024) following the announcement of the General Election.</p>	10 April 2024 to 26 July 2024
3) In subsection (2) "the consultation documents" means the documents supplied to the person by the Applicant for the purpose of consulting the person.	<p>The consultation documents provided for the Section 42 consultation were published at the launch of the consultation. The consultation materials included:</p> <ul style="list-style-type: none"> • Project Background document • Community Newsletter 2024 • PEIR and NTS of the PEIR • 2024 Design Development Report • 2024 Strategic Options Back Check and Review 	Consultation documents were made available from the start of consultation on 10 April 2024.

Section 46: Duty to notify Secretary of State of proposed application

(1) The Applicant must supply the Secretary of State with such information in relation to the proposed application as the Applicant would supply to the Secretary of State for the purpose of complying with Section 42 if the Applicant were required by that section to consult the Secretary of State about the proposed application.	<p>The Applicant notified the PINs under Section 46 of the PA 2008 of the upcoming statutory consultation. The Applicant provided the following information:</p> <ul style="list-style-type: none"> • Letter sent to Section 42 consultees • Section 48 notice • Consultation feedback questionnaire 	8 April 2024
(2) The Applicant must comply with subsection (1) on or before commencing consultation under Section 42.	<p>The Applicant notified the PINs under Section 46 of the PA 2008 of the upcoming statutory consultation on 8 April 2024, before the date of the commencement of the statutory consultation under Section 42 on 10 April 2024.</p>	8 April 2024

Section 47: Duty to consult local community

(1) The Applicant must prepare a statement setting out how the Applicant proposes to consult, about the proposed application, people living in the vicinity of the land.	A SoCC was published as part of the consultation documentation.	The SoCC was published 10 April 2024
(2) Before preparing the statement, the Applicant must	Norfolk County Council; South Norfolk Council; Suffolk County Council; Mid	Initial discussions took place to inform

Statutory Regulation	Activity Undertaken	Date Undertaken
consult each local authority that is within Section 43(1) about what is to be in the statement.	Suffolk District Council; Babergh District Council; Essex County Council; Colchester City Council; Tendring District Council; Braintree District Council; Chelmsford City Council; Brentwood Borough Council; Thurrock Council; and Basildon Borough Council were all provided with a draft copy of the SoCC and were formally invited to comment.	drafting of the SoCC. Informal consultation took place from 2 December 2023 until 5 January 2024. Formal consultation on the SoCC took place between the 2 March 2024 and 2 April 2024 which was a period of more than 28 days.
(3) The deadline for the receipt by the Applicant of a local authority's response to consultation under subsection (2) is the end of the period of 28 days that begins with the day after the day on which the local authority receives the consultation documents.		
(4) In subsection (3) "the consultation documents" means the documents supplied to the local authority by the Applicant for the purpose of consulting the local authority under subsection (2).	The consultation documents supplied to the local authorities comprised of the draft SoCC and cover email.	Informal consultation took place from 2 December 2023 until 5 January 2024. Formal consultation on the SoCC took place between the 2 March 2024 and 2 April 2024.
(5) In preparing the statement, the Applicant must have regard to any response to consultation under subsection (2) that is received by the Applicant before the deadline imposed by subsection (3).	Comments were received from all 13 LPAs as consulted on the draft SoCCs and National Grid responded to the comments received (with Babergh and Mid Suffolk District Councils submitting a joint response). The draft SoCC was amended as appropriate prior to the formal SoCC being published. Regard to responses received to the SoCC are contained in Appendix E of this report.	Informal consultation took place from 2 December 2023 until 5 January 2024. Formal consultation on the SoCC took place between the 2 March 2024 and 2 April 2024.
(6) Once the Applicant has prepared the statement, the Applicant must— (a) make the statement available for inspection by the public in a way that is reasonably convenient for people living in	The SoCC was made available or inspection free of charge at 24 inspection points in the vicinity of the project for the duration of the statutory consultation. Appendix E of this report contains evidence of the SoCC on the project webpage.	The Section 47 notice was published between 10 and 17 April 2024.

Statutory Regulation	Activity Undertaken	Date Undertaken
the vicinity of the land, (b) publish, in a newspaper circulating in the vicinity of the land, a notice stating where and when the statement can be inspected, and (c) publish the statement in such manner as may be prescribed.	<p>The SoCC was available at the inspection points as listed in Table 8.11 of this report.</p> <p>The Section 47 notice was placed in the following three local newspapers: (see Appendix H of this report):</p> <ul style="list-style-type: none"> • East Anglian Daily Times; • Eastern Daily Press; and • Essex Chronicle. 	
(7) The Applicant must carry out consultation in accordance with the proposals set out in the statement.	National Grid promoted the consultation in line with the SoCC. Chapter 8 of this report provides further detail on how compliance was met.	SoCC compliant statutory consultation held between 10 April 2024 and 26 July 2024.

Section 48: Duty to publicise the proposed application

(1) The Applicant must publicise the proposed application in the prescribed manner.	<p>The Applicant prepared and published a Section 48 notice in accordance with Regulation 4(2) of the APFP Regulations in the following newspapers:</p> <ul style="list-style-type: none"> • East Anglian Daily Times – 10 April 2024 and 17 April 2024 • Eastern Daily Press – 10 April 2024 and 17 April 2024 • London Gazette – 10 April 2024 • The Guardian – 10 April 2024 (an incorrect version). The corrected version was published on 17 April 2024 • Essex Chronicle – 11 April 2024 and 18 April 2024 <p>Following the announcement of the General Election, the consultation was extended by a period of five weeks. The Section 48 notice was republished in the following newspapers:</p> <ul style="list-style-type: none"> • East Anglian Daily Times – 12 June 2024 and 19 June 2024 • Eastern Daily Press – 12 June 2024 and 19 June 2024 • London Gazette – 12 June 2024 • The Guardian – 12 June 2024 	Between 10 April 2024 and 20 June 2024

	<ul style="list-style-type: none"> Essex Chronicle – 13 June 2024 and 20 June 2024 <p>A copy of the newspaper notices can be found in Appendix H of this report.</p>	
(2) Regulations made for the purposes of subsection (1) must, in particular, make provision for publicity under subsection (1) to include a deadline for receipt by the Applicant of responses to the publicity.	<p>The Section 48 notice included the consultation deadline of 11:59pm Tuesday 18 June 2024.</p> <p>The republished Section 48 notice (detailing the five week extension following the announcement of the General Election) included the new consultation deadline of 11:59pm Friday 26 July.</p>	
Section 49: Duty to take account of responses to consultation and publicity		
<p>(1) Subsection (2) applies where the Applicant—</p> <p>(a) has complied with sections 42, 47 and 48, and</p> <p>(b) proposes to go ahead with making an application for an order granting development consent (whether or not in the same terms as the proposed application).</p>	<p>This Consultation Report details how the Applicant has had regard to responses received to consultation.</p> <p>Chapters 5 and 6 of this report detail how National Grid has taken into account feedback received during the non-statutory consultations.</p> <p>Chapter 9 of this report details how National Grid has taken account of responses received during the statutory consultation.</p> <p>Chapter 10 of this report details how National Grid had regard to responses received during the 2025 targeted consultations.</p> <p>Chapter 11 of this report details how National Grid has taken account of responses received to the 2025 further landowner consultations.</p>	<p>Non-statutory 1: Spring/Summer 2022.</p> <p>Non-statutory 2: Summer 2023.</p> <p>Statutory: Spring/Summer 2024.</p> <p>Targeted consultations:</p> <ul style="list-style-type: none"> Norfolk and Suffolk: Winter/Spring 2025 Essex and Thurrock: Winter/Spring 2025 Thurrock 3: Winter/Spring 2025 <p>Further landowner consultation: Summer 2025</p>
(2) The Applicant must, when deciding whether the application that the Applicant is actually to make should be in the same terms as the	<p>The Applicant has had regard to all relevant responses to consultation and publicity.</p> <p>Chapter 5 of this report details how the Applicant had regard to all responses</p>	

Statutory Regulation	Activity Undertaken	Date Undertaken
proposed application, have regard to any relevant responses.	<p>received to the 2022 non-statutory consultation. It is also detailed in the 2022 Non-statutory Consultation Feedback report included in Appendix B.</p> <p>Chapter 6 of this report details how the Applicant had regard to all responses received to the 2023 non-statutory consultation. It is also detailed in the 2023 Non-statutory Consultation Feedback report included in Appendix C.</p> <p>Chapter 9 of this report details how the Applicant had regard to all responses received to the 2024 statutory consultation.</p> <p>Chapter 10 of this report details how the Applicant had regard to all responses received to the 2025 targeted consultations.</p> <p>Chapter 11 of this report details how the Applicant had regard to all responses received to the 2025 further landowner consultations.</p>	
<p>(3) In subsection (2) “relevant response” means—</p> <p>(a) a response from a person consulted under Section 42 that is received by the Applicant before the deadline imposed by Section 45 in that person's case,</p> <p>(b) a response to consultation under Section 47(7) that is received by the Applicant before any applicable deadline imposed in accordance with the statement prepared under Section 47, or</p> <p>(c) a response to publicity under Section 48 that is received by the Applicant before the deadline imposed in accordance with Section 48(2) in relation to that publicity.</p>	Section 42, 47 and 48 responses are considered in Chapter 9 of this report.	

Statutory Regulation	Activity Undertaken	Date Undertaken
Section 50: Guidance about pre-application procedure		
(1) Guidance may be issued about how to comply with the requirements of this Chapter.	National Grid considers it has complied with the guidance as detailed in this report.	Ongoing
(2) Guidance under this section may be issued by the Secretary of State.		
(3) The Applicant must have regard to any guidance under this section.		

4.5 Compliance with The Infrastructure Planning (Applications: Prescribed Forms and Procedure) (APFP) Regulations 2009 (as amended)

4.5.1 **Table 4.4** of this report sets out how National Grid has complied with The Infrastructure Planning (APFP) Regulations 2009 (as amended), namely:

- Regulation 3: Prescribed Consultees
- Regulation 4: Publicising a proposed application

Table 4.4 How National Grid has complied with the Infrastructure Planning (APFP) Regulations 2009 (as amended)

Regulation	Activity	Date Undertaken
Regulation 3 Prescribed consultees		
The persons prescribed for the purposes of Section 42(a) (duty to consult) are those listed in column 1 of the table in Schedule 1 to these Regulations, who must be consulted in the circumstances specified in relation to each such person in column 2 of that table.	The Applicant consulted all persons prescribed under the Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2009 who were deemed to be relevant to this Applicant by the descriptions set out in column 2 of that table.	
Regulation 4 Publicising a proposed application		
(2) The Applicant must publish a notice, which must include the matters prescribed by paragraph (3)	A copy of the Section 48 notice and publications are in Appendix H of this report.	The Section 48 notice was published in various newspaper between

Regulation	Activity	Date Undertaken
of this regulation, of the proposed application—		<p>10 April 2024 to 18 April 2024.</p> <p>The consultation was extended by a period of five weeks as detailed in Section 3.4.1 of this report and the Section 48 notice was republished detailing the consultation extension in the same newspapers between 12 June 2024 to 20 June 2024.</p>
(a) for at least two successive weeks in one or more local newspapers circulating in the vicinity in which the Proposed Development would be situated;	<p>The Section 48 notice was placed in the following local newspapers (see Appendix H of this report):</p> <ul style="list-style-type: none"> • East Anglian Daily Times (10 and 17 April 2024; and 12 and 19 June 2024) • Eastern Daily Press (10 and 17 April 2024; and 12 and 19 June 2024) • Essex Chronicle (11 and 18 April 2024; and 13 and 20 June 2024) 	<p>The Section 48 notice was published in newspapers between 10 April 2024 to 18 April 2024.</p> <p>The consultation was extended by a period of five weeks as detailed in Section 3.4.1 of this report and the Section 48 notice was republished detailing the consultation extension in the same newspapers between 12 June 2024 to 20 June 2024.</p>

(h) details of how to respond to the publicity; and	<p>The Section 48 notice included the following:</p> <p>'Responses to the consultation can be submitted in the following ways:</p> <ul style="list-style-type: none"> • online via the Project website (http://www.nationalgrid.com/n-t) • scanning a paper copy of the Feedback questionnaire or submitting a free text letter or email • by post at Freepost N TO T • by email (contact@n-t.nationalgrid.com).' 	<p>The Section 48 notice was published in newspapers between 10 April 2024 to 18 April 2024.</p> <p>The consultation was extended by a period of five weeks as detailed in Section 3.4.1 of this report and the Section 48 notice was republished detailing the consultation extension in the same newspapers between 12 June 2024 to 20 June 2024.</p>
(i) a deadline for receipt of those responses by the Applicant, being not less than 28 days following the date when the notice is last published	<p>The republished Section 48 notice included the following:</p> <p>'National Grid must receive all responses by 11:59pm on Friday 26 July 2024 to ensure their consideration.'</p> <p>26 July 2024 was more than 28 days after the date on which the last newspaper notice was published.</p>	<p>The Section 48 notice was published in newspapers between 10 April 2024 to 18 April 2024.</p> <p>The consultation was extended by a period of five weeks as detailed in</p>

Regulation	Activity	Date Undertaken
		Section 3.4.1 of this report and the Section 48 notice was republished detailing the consultation extension in the same newspapers between 12 June 2024 to 20 June 2024.
Are there any observations in respect of the Section 48 notice provided above?	The Section 48 notice was incorrectly published by the newspaper team in the Guardian. This was corrected in later versions. The correct versions of these notices were published in all other newspapers and have been available on the Project website since the launch of the statutory consultation.	First published on 10 April 2024, corrected on 17 April.

4.6 Compliance with The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017

- 4.6.1 **Table 4.5** of this report sets out how National Grid has complied with The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017, namely:
- Regulation 6: Procedure for establishing whether environmental impact assessment is required
 - Regulation 12: Consultation statement requirements
 - Regulation 13: Pre-application publicity under Section 48 (duty to publicise)

Table 4.5 How National Grid has complied with The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017

Regulation	Activity	Date Undertaken
Regulation 8: Procedure for establishing whether environmental impact assessment is required		
(1) A person who proposes to make an application for an order granting development consent must, before carrying out consultation under Section 42 (duty to consult) either— (a) request the Secretary of State to adopt a screening	The Applicant submitted a Scoping Report to the PINs on 4 November 2022 in accordance with the EIA Regulations 2017. The Scoping Report was prepared in	4 November 2022

Regulation	Activity	Date Undertaken
opinion in respect of the development to which the application relates; or (b) notify the Secretary of State in writing that the person proposes to provide an environmental statement in respect of that development.	accordance with Advice Note Seven (PINs, 2020). The Applicant submitted a Regulation 8(1)(b) of the EIA Regulations 2017 notification to the SoS and confirmed that the Applicant intended to submit a DCO Application.	
3) A request or notification under paragraph (1) must be accompanied by— (a) a plan sufficient to identify the land; (b) a brief description of the nature and purpose of the development and of its possible effects on the environment; (c) such other information or representations as the person making the request may wish to provide or make	The Scoping Report included a plan sufficiently to identify the land, a description of the Project, and an explanation of the likely significant effects of the Project on the environment.	
Regulation 12 (EIA Regulations 2017): Consultation statement requirements		
The consultation statement prepared under Section 47 (duty to consult local community) must set out — (a) whether the development for which the Applicant proposes to make an application for an order granting development consent is EIA development; and (b) if that development is EIA development, how the Applicant intends to publicise and consult on the preliminary environmental information.	Paragraph 5.2.4 of the SoCC confirms that the Project is an EIA development and confirms publicity and consultation activities regarding the PEIR.	The SoCC was published 10 April 2024
Regulation 13 (EIA Regulations 2017): Pre-application publicity under Section 48 (duty to publicise)		
Where the proposed application for an order granting development consent is an application for EIA development, the Applicant must, at the same time as publishing notice of the proposed application under Section 48(1), send a copy of that notice to the consultation bodies and to any person notified to the Applicant in accordance with regulation 9(1)(c).	A copy of the Section 48 notice was sent to all EIA consultation bodies along with a consultation notification letter. The consultation was extended by a period of five weeks as detailed in Section 3.4.1 of the report and the Section 48 notice was resent to all EIA consultation bodies.	The Section 48 notice was sent 10 April 2024. The Section 48 notice detailing the consultation extension was sent 5 June 2024.

Regulation	Activity	Date Undertaken
	Please refer to Appendix H of the report.	

4.7 Compliance with PINs Guidance on Nationally Significant Infrastructure Projects: Advice on the Consultation Report

4.7.1 **Table 4.6** of this report sets out how National Grid (the Applicant) has complied with the guidance in PINs Nationally Significant Infrastructure Projects: Advice on the Consultation Report (August 2024).

Table 4.6 How National Grid has Complied with the Guidance set out in PINs Nationally Significant Infrastructure Projects: Advice on the Consultation Report

Guidance	Comment
Purpose of the consultation report	
The consultation report must explain how the Applicant has complied with the statutory pre-application consultation requirements set down in the Planning Act , 2008 specifically the requirements to:	Chapter 7 of this report summarises the preparation undertaken for the statutory consultation.
<ul style="list-style-type: none"> consult with prescribed consultees (Section 42) consult with the community (Section 47) publicise the proposed application (Section 48) have regard to consultation responses (Section 49) have regard to the government's guidance on the Pre-application stage (Section 50) 	<p>Chapter 8 (Sections 8.4-8.6) of this report summarises the Section 42 consultation with prescribed consultees, statutory undertakers and local authorities. Guidance	Comment
	well as National Grid's responses to the issues raised at the targeted consultations.
Introductory text	
<p>Introductory text should provide an overview including:</p> <ul style="list-style-type: none"> • a summary of the consultation activities undertaken • a table or timeline summarising both statutory and non-statutory consultation in chronological order 	<p>Chapter 3 of this report provides a summary, including a high-level timeline, of all activities undertaken for non-statutory, statutory and targeted consultations.</p>
<p>This section should explain the relationship between any initial strategic options stages of the project, any subsequent non-statutory consultation that may have taken place, and the statutory consultation carried out.</p>	<p>Section 1.2 of this report provides a summary about the Project and how the Project has been developed.</p> <p>Appendix A of this report details the key meetings that have been held prior to, during, and after each round of consultation.</p> <p>Chapter 5 of this report provides a summary of the 2022 non-statutory consultation and the changes made as a result.</p> <p>Chapter 6 of this report provides a summary of the 2023 non-statutory consultation and the changes made as a result.</p> <p>Section 6.7 of this report provides a summary of any ongoing engagement and consultation prior to and in-between non-statutory and statutory consultations.</p> <p>Chapter 8 of this report provides a summary of the 2024 statutory consultation and the changes made as a result.</p> <p>Chapter 10 of this report provides a summary of the 2025 targeted consultations and the changes made as a result.</p> <p>The East Anglia Green Energy Enablement (GREEN) Project Background Document published in April 2022 includes a summary of the strategic options process.</p>
<p>Many NSIPs evolve over an extended period with previous proposals, or elements of proposals, that may have been consulted on then abandoned. Where this is the case a brief description of any historic consultation activity, including any information available about the general content of the consultation and the</p>	<p>Chapters 1 of this report provides a background to the Project.</p> <p>Chapter 3 of this report provides an overview of historic consultation activities, including the general content of the consultation and summaries of design changes made as a result of feedback received.</p>

Guidance	Comment
<p>number of responses at that time, can be helpful. However, a detailed planning history of the site is not necessary.</p>	<p>Chapter 5 and Appendix B of this report provides details on historic consultation activities relating to the 2022 non-statutory consultation, including details on the general content of the consultation and the number of responses at that time.</p> <p>Chapter 6 and Appendix C of this report provides details on historic consultation activities relating to the 2023 non-statutory consultation, including details on the general content of the consultation and the number of responses at that time.</p>
Multi-stage consultations	
<p>It is helpful if each stage of non-statutory and statutory consultation is presented and explained chronologically in separate chapters or sections of the report. This can also include separate summary schedules of consultation responses for each round of consultation, which could be included as an appendix to the report.</p>	<p>Chapter 5 of this report provides a summary of the 2022 non-statutory consultation.</p> <p>Appendix B of this report includes the summary of matters raised and National Grid's response.</p> <p>Chapter 6 of this report provides a summary of the 2023 non-statutory consultation.</p> <p>Appendix C of this report includes the summary of matters raised and National Grid's response.</p> <p>Chapter 8 of this report provides a summary of the 2024 statutory consultation as well as the summary of matters raised and National Grid's response.</p> <p>Chapter 10 of this report provides a summary of the 2025 targeted consultation as well as the summary of matters raised and National Grid's response.</p>
Statutory consultation	
Duty to notify the Secretary of State (Section 46)	
<p>The report should include details of when the Applicant notified the Planning Inspectorate of their intention to submit a NSIP application and carry out statutory consultation. As required by Section 46 of the Planning Act the Applicant must notify the Planning Inspectorate before commencing consultation under Section 42. The report should confirm when the full suite of consultation documents was provided to the</p>	<p>Chapter 8 (Section 8.8) of this report highlights the details of when National Grid notified the PINs of the proposed application for development consent and intent to undertake statutory consultation.</p> <p>Section 8.8 of this report also details the consultation documents that were sent with the Section 46 notification letter.</p>

Guidance	Comment
Planning Inspectorate and include a list of those documents	Appendix D to this report exhibits the letter sent to the PINs and the acknowledgement received.
<i>Duty to consult (Section 42)</i>	
<p>The report should include a list of all persons and consultation bodies that were consulted. The Applicant should provide a sample of the letter sent to each type of consultee which includes the date it was sent, and the deadline given for responses. These can be included as an appendix. The Applicant should list the consultees in the order suggested below. For each type of consultee, the Applicant should include the dates they were consulted.</p>	<p>Section 42(1)(a) – Chapter 8 (Section 8.4) of this report describes the process for consulting prescribed consultees under Section 42(1)(a). Appendix F1 of this report provides the list of prescribed consultees and Appendix F3 of this report exhibits the letters sent.</p> <p>Section 42(1)(b) - Chapter 8 (Section 8.5) of this report describes the process for consulting prescribed consultees under Section 42(1)(b). Appendix F2 of this report provides the list of prescribed consultees and Appendix F3 of this report exhibits the letters sent.</p> <p>Section 42(1)(d) - Chapter 8 (Section 8.7) of this report describes the process for consulting PILs under Section 42(1)(d). Appendix G1 of this report provides the list of consultees and Appendix G2 of this report exhibits letters sent.</p> <p>Section 47/48 - Chapter 8 (Section 8.9) of this report describes the process for consulting the local community under Section 47. Appendix I10 of this report provides the list of non-prescribed consultees, Appendix I9 of this report exhibits the letters sent and Appendix H of this report includes the site notices.</p> <p>Section 42(1)(aa) consultees are not applicable for the Project as detailed in Chapter 8 of this report.</p>
<i>Prescribed consultees (Section 42(1)(a), (aa) and (c))</i>	
<p>The list of the prescribed consultees should follow the order they are presented in Schedule 1 of The Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2009 (the APFP Regulations 2009). Any variations between the Applicant's list of prescribed consultees and the list set out in Schedule 1 of the APFP Regulations 2009</p>	<p>Appendix F of this report provides a list of prescribed consultees in the same order as listed in the APFP regulations.</p>

Guidance	Comment
should be justified. Where relevant, the list of prescribed consultees should also include the Marine Management Organisation (Section 42(1)(aa)) and the Greater London Authority (Section 42(1)(c)).	
Relevant local authorities (Section 42(1)(b))	
The report should include a short description of how Section 43 of the Planning Act has been applied in identifying the relevant local authorities. This can be illustrated by a map showing the site and identifying the boundaries of the relevant local authorities.	This is set out in Table 8.1 of this report and a Project location map was included in the consultation materials - see Appendix I of this report and Figure 8.1 of this report.
Persons with an interest in land (Section 42(1)(d))	
The report should include the number of persons with an interest in the Order land who were consulted. This can be divided to show the numbers under each category set out in Section 44 of the Planning Act. It is not necessary to list the names of all individuals identified in the Book of Reference.	Chapters 8, 10 and 11 of this report detail how the PILs were consulted during statutory consultation, targeted consultation and additional engagement activities. Appendix G of this report provides the consultee list and letters sent to PILs.
The Applicant must demonstrate that diligent enquiry was undertaken to identify persons under Section 44 and to ensure that an up-to-date Book of Reference is submitted with the application. It should also set out the methodology for identifying persons in Category 3 (those who may make a relevant claim).	The Land Referencing Methodology is provided in Appendix J of this report.
<p>If changes to the red line boundary of the project were made during the pre-application stage, and as a result additional persons with an interest in land were identified and consulted, the Applicant should describe:</p> <ul style="list-style-type: none"> • how many additional persons with an interest in land were consulted • how and when they were consulted • what information they were provided with 	<p>Where changes to the Project alignment were made within the Project Order Limits of the targeted consultation areas, and new and existing PILs were identified, PILs were consulted as part of the three targeted consultation that ran from 30 January 2025 and 17 April 2025. Further details can be found in Chapter 10 of this report.</p> <p>Chapter 11 of this report provides details of further landowner consultation conducted in June and July 2025.</p>

Guidance	Comment
<p>The Applicant should explain how they have dealt with any new interests in land that have emerged after the statutory consultation has concluded.</p>	<p>Chapter 10 of this report highlights the engagement with PILs and feedback received from the three targeted consultations undertaken in 2025.</p> <p>Chapter 11 (Section 11.1) of this report highlights the additional PIL consultation undertaken after the targeted consultations were undertaken. Section 11.2 of this report summarises the feedback received from this.</p>
<p><i>Duty to consult the local community (Section 47)</i></p>	
<p>The Planning Inspectorate will need to be satisfied that the Applicant has complied with the SoCC preparation process. The report should include evidence which shows:</p>	
<ul style="list-style-type: none"> • which local authorities were consulted about the content of the draft SoCC • what the local authorities' comments were • confirmation that the local authorities were given 28 days to provide their comments • a description of how the Applicant had regard to the local authorities' comments. For example, where a local authority identified digitally disadvantaged groups the Applicant should explain what mitigation was put in place to allow those people to engage, such as providing a telephone helpline <p>where appropriate, an explanation of why the Applicant did not act on a response from a local authority</p>	<p>13 host authorities were consulted:</p> <ul style="list-style-type: none"> • Babergh District Council; • Basildon Borough Council; • Braintree District Council; • Brentwood Borough Council; • Chelmsford City Council; • Colchester City Council; • Essex County Council; • Mid Suffolk District Council; • Norfolk County Council; • South Norfolk District Council; • Suffolk County Council; • Tendring District Council; and • Thurrock Council. <p>Chapter 7 and Appendix E of this report detail the comments from the LPAs and regard made to those comments.</p> <p>Informal consultation on the SoCC took place between 2 December 2023 until 5 January 2024 which allowed the LPAs more than 28 days to provide their comments.</p> <p>Formal consultation on the SoCC took place between 2 March 2024 and 2 April 2024 which allowed the LPAs more than 28 days to provide their comments.</p> <p>Compliance with the SoCC is provided in Table 8.4 for this report.</p>

Guidance	Comment
<p>The Applicant should provide evidence that the SoCC:</p> <ul style="list-style-type: none"> • was available for inspection online, Evidence could include a screenshot of the relevant webpage showing the published SoCC and including the full website address, relevant telephone number for enquiries, and confirmation that the public could access the webpage free of charge • was published in the local press, Evidence should include a scanned copy of the published notice as it appeared, and details of the local newspapers it was published in and when 	<p>Appendix E of this report contains evidence of the SoCC on the relevant webpage. Appendix H of this report contains evidence of the SoCC notice in the local newspapers:</p> <ul style="list-style-type: none"> • East Anglian Daily Times; • Eastern Daily Press; and • Essex Chronicle. <p>Appendix H of this report also contains evidence of the SoCC in The Guardian and London Gazette.</p>
<p>Where it is not possible to provide a clear scanned copy of a notice the Applicant should provide the best available scanned copy and a document containing the text of the notice. If it was not possible to place the SoCC in a printed local newspaper the Applicant should provide a screenshot of the notice as it was published in an online local newspaper. The screenshot should include the full website address, relevant telephone number for enquiries and the date of publication.</p>	<p>Appendix H of this report contains a clear scanned copy of the notice. Evidence of the SoCC in a printed local newspaper is also shown here.</p>
<p>Where a SoCC was subject to one or more updates, the updated versions of each SOCC should be included. The report should explain why the SoCC was reviewed and updated from the previous version.</p>	<p>One SoCC was prepared for this application, see Appendix E of this report.</p>
<p>Where there are inconsistencies between the SoCC and the consultation carried out by the Applicant, this should be clearly explained and justified. For example, where additional consultation took place that was not included in the SoCC.</p>	<p>Details of the SoCC and compliance are provided in both Chapter 7 and Chapter 8 of this report and Appendix E of this report.</p>
<p><i>Duty to publicise (Section 48)</i></p>	
<p>The report should include a scanned copy of the Section 48 notice as it appeared in the local and national newspapers and journals. Where it is not possible to provide a clear scanned copy of the notice then the Applicant should provide the best available scanned copy and a document containing the text of the notice. The</p>	<p>Appendix H of this report contains evidence of the Section 48 notice in the local newspapers: East Anglian Daily Times, Eastern Daily Press and Essex Chronicle and national newspapers: the Guardian and London Gazette.</p>

Guidance	Comment
scanned copy of the notice should clearly show the publication's name and the date of publication.	The Section 48 notice was published at the start of consultation and republished when the consultation was extended. Full details of this can be found in Section 8.11 of this report.
Where it was not possible to place the notice in printed newspapers and journals, a screenshot of the notice as it was published in online publications should be provided. The screenshot should include the full website address, relevant telephone number for enquiries and the date of publication.	Appendix H of this report contains evidence of the Section 48 notice in the local newspapers: East Anglian Daily Times, Eastern Daily Press and Essex Chronicle and national newspapers: the Guardian and London Gazette.
The report should confirm where and when the notice was published, and the time period given for responses.	The Section 48 notice was published at the start of consultation and republished when the consultation was extended. Full details of this can be found in Section 8.11 of this report.
The report should confirm that the Section 48 notice was sent to the Environmental Impact Assessment (EIA) consultation bodies at the same time as it was published.	<p>A copy of the Section 48 notice was sent to all EIA consultation bodies along with a consultation notification letter.</p> <p>The consultation was extended by a period of five weeks as detailed in Section 3.4.1 of this report and the Section 48 notice was re-sent to all EIA consultation bodies.</p> <p>Please refer to Appendix H of this report for the Section 48 notices and Appendix F of this report for a copy of the letters as sent.</p>
<i>Duty to take account of responses to consultation (Section 49)</i>	
The report should provide evidence that the Applicant has had regard to the responses to consultations when preparing their application.	<p>Appendix B of this report contains a summary of responses received to the 2022 non-statutory consultation and National Grid's regard had to those comments.</p> <p>Appendix C of this report contains a summary of responses received to the 2023 non-statutory consultation and National Grid's regard had to those comments.</p> <p>Chapter 9 of this report consists of a summary of responses received to statutory consultation and National Grid's regard had to those comments. Chapter 10 of this report provides a summary of responses received to the three targeted consultations and National Grid's regard had to those comments.</p>

Guidance	Comment
Summary of responses	
<p>The Applicant should provide a summary of the individual responses received. The responses should be categorised in an appropriate way. It may be appropriate for the Applicant to group responses under headline issues. The Applicant must not present responses in a misleading way or out of context from the original views in the response.</p>	<p>The coding methodology followed for all consultations is summarised in Chapter 9 of this report.</p> <p>Summary tables are separated into sections of the Project as consulted on (such as ‘South Norfolk’ and ‘Mid Suffolk’), and within each table summaries are grouped into headline issues (such as ‘Agricultural land’ and ‘Community/Social Impact’)</p> <p>Grouping headline issues, statements and feedback enables a structured and organised report which is user-friendly. Throughout this process, the detail of comments is not lost in any way, with new code summaries added with each new piece of feedback.</p> <p>Appendix B of this report contains a summary of responses received to the 2022 non-statutory consultation and National Grid’s regard had to those comments.</p> <p>Appendix C contains a summary of responses received to the 2023 non-statutory consultation and National Grid’s regard had to those comments.</p> <p>Chapter 9 of this report consists of summary of responses received to statutory consultation and National Grid’s response issues raised.</p> <p>Chapter 10 of this report provides a summary of responses received to the three targeted consultations and National Grid’s regard had to those comments.</p>
<p>The Applicant should provide an explanation of the method used (coding) to group and organise responses, including any safeguarding and cross-checking processes.</p>	<p>The coding methodology is summarised in Chapter 9 of this report.</p>
<p>The summary of responses should identify:</p> <ul style="list-style-type: none"> • comments that are relevant (directly or indirectly) to changes made to the project during the pre-application stage. For example, changes to siting, route, design, or scale of the scheme itself, or to mitigation or compensatory measures proposed 	<p>Chapter 9 of this report contains details of all headline issues raised as well as change requests, including those which either were or were not taken forward. Details of late responses have also been summarised.</p> <p>Chapter 10 of this report consists of a summary of responses received to the three</p>

Guidance	Comment
<ul style="list-style-type: none"> comments that led to no change, including an explanation of why the Applicant considered that no change to the project was required comments that were received after deadlines set by the Applicant and the process used to deal with these 	targeted consultations and National Grid's regard had to those comments.
<i>Duty to have regard to the government's pre-application guidance (Section 50)</i>	
The report should provide evidence that demonstrates how the Applicant has had regard to the government's guidance on the Pre-application stage . The report should illustrate how the relevant guidance has been followed. If the Applicant has diverged from the guidance this should be explained and justified.	Table 4.2 in Chapter 4 (Section 4.2) of this report summarises how National Grid has complied with the guidance provided for the pre-application process.
Demonstrating regard to pre-application advice	
The Applicant's consultation report should include evidence which demonstrates how they have had regard to the Section 51 pre-application advice from the Planning Inspectorate and advice from the other statutory consultees which provide advice on behalf of the government.	Table 4.3 in Chapter 4 (Section 4.3) of this report summarises how National Grid has complied with the guidance set out by the PINs. Appendix A3 of this report details how the Applicant has had regard to advice received under Section 51.
<p>Provision of this evidence will:</p> <ul style="list-style-type: none"> support the Applicant's case to demonstrate that they have complied with the requirements of Part 5, Chapter 2 of the Planning Act give confidence to stakeholders that the Applicant has considered the statutory advice received and made all reasonable efforts to submit a well prepared application <p>There is no prescribed format for providing this evidence however it may be best presented in a table appended to the consultation report.</p>	Table 4-3 in Chapter 4 (Section 4.3) of this report summarises how National Grid has complied with the guidance set out by the PINs.
Reporting on the adequacy of consultation milestone	
<p>The adequacy of consultation milestone is a requirement established in the government's guidance on the Pre-application stage. The Planning Inspectorate's Pre-application Prospectus gives further details about the adequacy of consultation milestone procedure.</p>	National Grid prepared an AoCM report which detailed the consultation undertaken to date for the Project. The AoCM was submitted to PINs on 13 June 2025 and is available to view on the PINs website.

Guidance	Comment
<p>The Applicant should summarise how they have discharged the adequacy of consultation milestone procedure in the consultation report. This should include how the Applicant has had regard to any comments received from local authorities, statutory consultees and the Planning Inspectorate in relation to the adequacy of consultation milestone.</p>	<p>Chapter 13 of this report details how National Grid has had regard to comments received on the AoCM report from LPAs, statutory consultees and the PINs following submission of the AoCM report to the Planning Inspectorate on 13 June 2025.</p>
Non-statutory consultation and engagement	
<p>The Applicant may have undertaken early non-statutory consultation. For example, with statutory consultation bodies when identifying options, or in advance of statutory consultation. The Applicant may also have been engaged in non-statutory consultation after the statutory consultation. For example, when changes have been made to the project.</p>	<p>Pre-consultation activities are summarised in Chapter 1 of this report, and further detail is provided in Appendix A of this report.</p> <p>Chapter 10 of this report describes the three targeted consultations that took place between 30 January 2025 and 17 April 2025.</p>
<p>The Applicant should describe the non-statutory consultation that took place to the same level of detail as the statutory consultation. While it is not necessary for the Applicant to demonstrate how they have had regard to the non-statutory consultation comments, they should explain how comments received influenced the project.</p>	<p>Chapter 5 of this report summarises the non-statutory consultation undertaken in 2022.</p> <p>Section 5.6 of this report summarises how comments received influenced the project.</p> <p>Appendix B of this report exhibits the non-statutory consultation undertaken in 2022.</p> <p>Chapter 6 of this report summarises the non-statutory consultation undertaken in 2023.</p> <p>Section 6.6 summarises how comments received influenced the project.</p> <p>Appendix C of this report exhibits the non-statutory consultation undertaken in 2023.</p> <p>Chapter 10 of this report summarises the three targeted consultations that took place in 2025. Section 10.7 of this report summarises how comments received influenced the project.</p>
<p>The Applicant should explain the nature and purpose of any targeted non-statutory consultation. For example, if it was geographically focused what consultees were included and what was the rationale for the geographic extent of the consultation. If a reduced number of prescribed consultees were consulted, the Applicant should explain the rationale for the selection.</p>	<p>Chapter 10 of this report explains the three targeted consultations undertaken. This includes an explanation of the nature and purpose of the targeted consultations.</p>

Guidance	Comment
Where the Applicant has made changes to the project, whether material or non-material. They should explain which consultees were informed about the change, the approach taken to selecting consultees and an explanation of how and when they were consulted.	<p>Section 5.6 of this report includes the changes made as a result of the 2022 non-statutory consultation feedback.</p> <p>Section 6.6 of this report includes the changes made as a result of the 2023 non-statutory consultation feedback.</p> <p>Section 9.7 of this report includes a summary of the changes made as a result of the 2024 statutory consultation feedback. Chapter 9 of this report details the consultation and engagement that has taken place after statutory consultation.</p>

Consultation report appendices

<p>Appendices should be used to provide evidence that demonstrates compliance with the requirements of the Planning Act, government guidance and the advice of the Planning Inspectorate and other statutory consultees. The appendices should be clearly referenced in the report. The Applicant should use a referencing system that corresponds to the chapters or sections of the report. A chronological approach which demonstrates the journey through the consultation should be used.</p>	<p>The appendices have been used to provide supporting evidence to what has been detailed within this report to demonstrate compliance with the requirements of the PA 2008.</p> <p>Appendices are separated in a logical order which follows chronologically through from both non-statutory consultations, statutory consultation and targeted consultation.</p> <p>Information is grouped into different elements of the process. For example, Appendix E of this report contains the SoCC and all supporting information.</p> <p>The referencing system is clearly defined through the use of letters and numbers which are referenced within the body of the main report.</p>
<p>A separate appendix should be provided for each element of the Section 42 statutory consultation and the Section 48 publicity. For multi-stage statutory consultations, the appendices should be ordered chronologically with a separate appendix for each stage that is subdivided into the different elements of the consultation.</p>	<p>Appendix F and Appendix G of this report exhibit a list of each element of the Section 42 statutory consultation.</p> <p>Appendix H of this report exhibits each element of the Section 48 publicity notice.</p>
<p>Evidence of non-statutory consultation should be assembled chronologically in a separate appendix.</p>	<p>Appendices are separated in a logical order which follows chronologically through from both non-statutory consultations, statutory consultation and targeted consultation.</p>

Guidance	Comment
The summary of responses table for each stage of consultation can also be included as an appendix.	<p>Appendix B of this report shows the summary of responses table for the 2022 non-statutory consultation.</p> <p>Appendix C of this report shows the summary of responses table for the 2023 non-statutory consultation.</p>
Request for the Applicant to provide consultation responses	
During the acceptance stage the Planning Inspectorate may ask the Applicant to provide a copy of any, or all, of the statutory consultation responses they received. This may be requested when there is uncertainty about whether the duty to have regard to consultation responses has been met. The Applicant should prepare for this possibility during the pre-application stage so that they can provide the required information to the Planning Inspectorate at short notice during the 28 day acceptance stage.	National Grid is able to provide a copy of any statutory consultation responses on short notice.
The Applicant is responsible for ensuring that copies of consultation responses can be provided in a timely manner. They should consider any obligations they have under data protection legislation when preparing the responses. The acceptance stage cannot be suspended or extended pending the submission of the consultation responses. The consultation responses will not be published on the Find a National Infrastructure Project website .	National Grid is able to provide copies of consultation responses in a timely manner upon request. Private and protected information has been redacted and considered in the context of data protection legislation.
Data Protection and redaction guidelines	
The Applicant must ensure that the consultation report complies with data protection legislation and that the personal data of individuals is treated appropriately. This may include redaction of data and obtaining informed consent from the individuals concerned as appropriate.	National Grid is committed to protecting personal information. Whenever such information is provided, National Grid is legally obliged to use it in line with all applicable laws concerning the protection of personal data, including the UK General Data Protection Regulation (GDPR).
<p>The consultation report should not include the following items (if necessary, relevant information should be redacted by the Applicant):</p> <ul style="list-style-type: none"> private home addresses of individuals or information that could lead to the 	Under the terms of the UK GDPR, individuals retain certain rights over how their personal data is retained and used by National Grid. For more information, see National Grid's full Privacy Notice on the National Grid website.

Guidance	Comment
<ul style="list-style-type: none"> identification of the location of a private individual private email addresses and telephone numbers of individuals sensitive or special category data within the meaning of the Data Protection Act 2018 and UK General Data Protection Regulation written signatures photographs of the faces of individuals who have not given consent to have their image published, including images taken at consultation events information that could lead to the identification of a specific location of a protected species 	All responses have been fully redacted to ensure confidentiality of addresses and contact details.

4.8 Compliance with guidance on Adequacy of Consultation Prospectus

- 4.8.1 **Table 4-7** Table 4.7 How National Grid has complied with the guidance set out by the Planning Inspectorate on the Adequacy of Consultation Milestone in this report sets out how National Grid has complied with the following guidance on the Adequacy of Consultation Prospectus:
- PA 2008: Pre-application stage for Nationally Significant Infrastructure Projects ('the Guidance') (30 April 2024);
 - Nationally Significant Infrastructure Projects: 2024 Pre-application Prospectus* ('the Prospectus') (published 16 May 2024); and
 - Nationally Significant Infrastructure Projects: Advice on the Consultation Report (8 August 2024).

Table 4.7 How National Grid has complied with the guidance set out by the Planning Inspectorate on the Adequacy of Consultation Milestone

Ref	Guidance	Comment
PA 2008: Pre-application stage for National Significant Infrastructure Projects ('the Guidance') (30 April 2024)		
025	<p>What is the early adequacy of consultation milestone?</p> <p>The Programme Document will enable the Planning Inspectorate to determine at the Inception Meeting that the proposed consultation arrangements are adequate</p>	National Grid prepared a Programme Document in accordance with the Guidance which set out an anticipated timeline of activities proposed to ensure an effective pre-application process.

Ref	Guidance	Comment
	for the level of complexity of the proposed project. The Programme Document should also identify an appropriate milestone during the pre-application stage to enable the Planning Inspectorate to test the progress of the consultation.	The Programme Document is available on the Project website.
	This adequacy of consultation milestone should be early enough to enable Applicants to consider how to undertake any additional engagement that may be needed, but sufficiently towards the end of the pre-application stage to assess the adequacy of the consultation that has been done. It is likely therefore to be no later than around 3 months before the intended date of submission of the application.	<p>National Grid submitted an AoCM report to PINs on 13 June 2025.</p> <p>Prior to the submission of the AoCM report, National Grid had undertaken the following consultations:</p> <ul style="list-style-type: none"> • The 2022 non-statutory consultation which ran between 21 April 2022 until 16 June 2022. • The 2023 non-statutory consultation which ran between 27 June 2023 until 21 August 2023. • The 2024 statutory consultation which ran between 10 April 2024 and 26 July 2024. • The Norfolk and Suffolk targeted non-statutory consultation which between 30 January and 3 March 2025. • The Essex and Thurrock targeted non-statutory consultation which ran between 25 February and 27 March 2025. • The Thurrock 3 targeted statutory consultation which ran between 18 March and 17 April 2025.
	The adequacy of consultation milestone should be recorded by the Applicant and submitted to the Planning Inspectorate as a short statement of the elements of consultation which have been carried out compared with the components set out in the Programme Document and the SoCC. The statement should include the views and any relevant supporting material from local authorities if available.	<p>National Grid prepared an AoCM report which detailed how consultation had been carried out in accordance with the components set out in the Programme Document (Section 2.3 of the AoCM report) and the SoCC (Section 5.4 of the AoCM report).</p> <p>National Grid consulted with the 13 host and 30 neighbouring LPAs between 14 April 2025 and 6 May 2025 about the adequacy of consultation undertaken by National Grid to date, as set out in the SoCC.</p>

Ref	Guidance	Comment
		<p>Feedback on the adequacy of consultation was received from all 13 host LPAs and two neighbouring LPAs. More information about engagement with LPAs about the adequacy of consultation was set out in Chapter 8 of the AoCM report. This information is also detailed in Chapter 13 of this report.</p> <p>Copies of the feedback received from LPAs and National Grid's response to feedback was detailed in Appendix D and Appendix E of the AoCM report. This information is also detailed in Appendix M of this report.</p> <p>The AoCM was submitted to the Planning Inspectorate on 13 June 2025 and is available to view on the PINs website. The AoCM is also available in Appendix M of this report.</p>
	<p>The adequacy of consultation milestone is an informal but nonetheless important opportunity to check that the pre-application programme is on track, and if it is seriously adrift the Planning Inspectorate will advise the Applicant about the steps necessary to enable the application to be submitted having fulfilled the statutory requirements. Inevitably this could mean a renegotiation of the expected date of submission, with the objective of avoiding the prospect of an application not being accepted for examination.</p> <p>Under <u>section 55(4)(b) of the Planning Act</u>, at the acceptance stage the Planning Inspectorate will seek the formal views from local authorities about the adequacy of consultation.</p>	Noted
Nationally Significant Infrastructure Projects: 2024 Pre-application Prospectus* ('the Prospectus') (published 16 May 2024)		
009	<p>1. Programme Document</p> <p>The production and maintenance, by the applicant, of a pre-application Programme Document setting out the</p>	<p>National Grid prepared a pre-application Programme Document which sets out the timetable and describes the activities proposed to ensure an effective pre-application process,</p>

Ref	Guidance	Comment
	<p>main steps that the applicant anticipates taking during the preparation of the application. This document will be introduced by the applicant at the Inception Meeting and its development and maintenance monitored by the Inspectorate throughout the pre-application stage. A public version of the pre-application Programme Document must be published on the applicant's website.</p> <p>Updates to the pre-application Programme Document should be communicated by the applicant proactively, with a clear description of the potential impacts on the requested services of the Inspectorate, relevant statutory bodies, local authorities and other stakeholders provided. A reliable view of programmes across the NSIP portfolio is essential to enable these actors to resource and support the pre-application service effectively. In preparing and making updates to the pre-application Programme Document, we expect applicants to be responsive and reasonable in tailoring programmes to support the engagement of statutory bodies and local authorities where required.</p>	<p>including the level of pre-application service requested from PINs and consultation with various parties, as per the requirements set out in the Prospectus. The document has been updated at key milestones throughout the pre-application as Project has developed.</p> <p>A public version of the Programme Document is available on the Project website: https://www.nationalgrid.com/electricity-transmission/network-and-infrastructure/infrastructure-projects/norwich-to-tilbury/document-library#230548828-3459981353.L</p>
	<p>2. Issues Tracker and Potential Main Issues for the Examination</p> <p>The production and maintenance, by the applicant, of an Issues Tracker throughout the pre-application stage. The expectation is for applicants to be upfront about issues and who they affect. The Issues Tracker should be made available for regular review by the Inspectorate, affected statutory bodies and local authorities in order to encourage dialogue and, where possible, achieve resolution. The degree of risk associated with each issue identified in the tracker should be allocated a 'RAG' (red, amber, green) status. The Issues Tracker may be sustained into post-submission stages</p>	<p>National Grid has collaborated with host planning authorities, statutory bodies, and other stakeholders during the pre-application phase to inform the design, engineering solutions, environmental assessments, and mitigation, compensation, and enhancement measures.</p> <p>Throughout this process, National Grid has been tracking issues to document relevant areas of disagreement. This issue tracking has informed the Potential Main Issues for the Examination (PMIE), which has been submitted as part of the application (document reference 5.8).</p>

Ref	Guidance	Comment
	<p>subject to the discretion of the appointed Examining Authority.</p> <p>The issues tracking process will culminate in a list of Potential Main Issues for the Examination (PMIE) which will be entered into the examination as an application document. The PMIE should be a short document which, where possible, is agreed by relevant statutory bodies and local authorities. It is entirely separate from the later Initial Assessment of Principal Issues (IAP) developed by the appointed Examining Authority, but may, per any evidence within the application documentation, influence the content of the IAP. The function of the PMIE (along with PADSS) is to demonstrate that there are sufficiently few and uncomplex residual issues to potentially allow for a four-month examination to be timetabled (in Fast Track procedure cases) and/ or to facilitate more robust preparation for examination and a smoother and more proportionate examination experience for all parties. In the enhanced tier service, a multiparty meeting may be convened by the applicant to assist finalisation of the PMIE.</p>	
	<p>3. Advice Log</p> <p>Engagement in the Inspectorate's production of an Advice Log to replace meeting notes as a record of interactions between us and the applicant. Trials of the Advice Log approach have proved it to be an effective mechanism to streamline the way in which we record advice and free-up resources (both internal and external) to deal with other elements of the pre-application process which focus on improving the quality of the emerging application. The Advice Log is owned and maintained by the Inspectorate. After each meeting with the applicant, we will seek comments on drafting within the Advice Log from the applicant prior to publication on Find a</p>	<p>Appendix A3 of this report details how the Applicant has had regard to the Advice Log received under Section 51 from the Inspectorate.</p>

Ref	Guidance	Comment
	<p>National Infrastructure Project. The applicant will use the Advice Log as the basis for demonstrating regard to Section 51 advice within the application.</p>	
	<p>4. Adequacy of Consultation Milestone</p> <p>Engagement in a pre-submission Adequacy of Consultation Milestone (AoCM) intended to allow early consideration of the adequacy of consultation undertaken by the Applicant and minimise risk at the acceptance stage. The AoCM should be programmed to occur early enough to enable Applicants to consider how to undertake any additional engagement that may be needed, but sufficiently towards the end of the pre-application stage to assess the adequacy of the consultation that has been done.</p>	<p>National Grid prepared an AoCM report which detailed the consultation undertaken to date for the Project. The AoCM was submitted to the PINs on 13 June 2025 and is available to view on the PINs website. The AoCM is also available in Appendix M of this report.</p>
	<p>To inform the AoCM, the Applicant will make a written submission to the Inspectorate which establishes the consultation undertaken to date, confirms the approaches set out in the Statement of Community Consultation, and summarises the consultation responses and the way in which they are shaping the application.</p>	<p>The AoCM report detailed the consultation undertaken to date, including the way consultation responses had shaped the Project, as follows:</p> <ul style="list-style-type: none"> • The 2022 non-statutory consultation which ran between 21 April 2022 until 16 June 2022 (Chapter 3 of the AoCM report). • The 2023 non-statutory consultation which ran between 27 June 2023 until 21 August 2023 (Chapter 4 of the AoCM report). • The 2024 statutory consultation which ran between 10 April 2024 and 26 July 2024 (Chapter 6 of the AoCM report). • The Norfolk and Suffolk targeted non-statutory consultation which ran between 30 January and 3 March 2025 (Chapter 7 of the AoCM report). • The Essex and Thurrock targeted non-statutory consultation which ran between 25 February and 27 March

Ref	Guidance	Comment
		<p>2025 (Chapter 7 of the AoCM report).</p> <ul style="list-style-type: none"> The Thurrock 3 targeted statutory consultation which ran between 18 March and 17 April 2025 (Chapter 7 of the AoCM report). <p>Chapter 5 of the AoCM report also detailed how statutory consultation was undertaken in line with the SoCC.</p>
	<p>Importantly, it should include the views and any relevant supporting material from local authorities if available. The written submission will be published on the relevant project page on Find a National Infrastructure Project.</p>	<p>National Grid consulted with the 12 host and 30 neighbouring LPAs between 14 April 2025 and 6 May 2025 about the adequacy of consultation undertaken by National Grid to date, as set out in the SoCC.</p> <p>Feedback on the adequacy of consultation was received from all 13 host LPAs and two neighbouring LPAs. More information about engagement with LPAs about the adequacy of consultation was set out in Chapter 8 of the AoCM report. This information is also detailed in Chapter 13 of this report.</p> <p>Copies of the feedback received from LPAs and National Grid's response to feedback was detailed in Appendix D and Appendix E of the AoCM report. The information is also detailed in Appendix M of this report.</p>
	<p>The AoCM and associated activities will be established in the Applicant's pre-application Programme Document. In the enhanced tier service, where requested and required, an additional multiparty meeting, chaired/ facilitated by the Inspectorate, will be made available to discuss the AoCM submission including the views from local authorities.</p>	<p>National Grid prepared a Programme Document in accordance with the Guidance which set out an anticipated timeline of activities, including the AoCM report, proposed to ensure an effective pre-application process. The Programme Document is available on the Project website.</p>
009	<p>5. Demonstrating Regard to Advice</p> <p>The production of evidence, presented within the Consultation Report accompanying the submitted application, demonstrating the applicant's regard to the advice that the Inspectorate and</p>	<p>Appendix A3 of this report details how the Applicant has had regard to advice received under Section 51 from the Inspectorate.</p> <p>Chapter 7 of this report details the feedback received from LPAs on the</p>

Ref	Guidance	Comment
	<p>affected statutory bodies have issued during the pre-application stage. This should highlight amendments to the application arising from advice received, and similarly provide justification where advice received has not led to an amendment to the application. This new requirement is expected to give rise to better evidence to support the applicant's case for compliance with Part 5, Chapter 2 of the PA 2008, and give better confidence to the stakeholder system that the applicant has taken account of the statutory advice received and made reasonable efforts to submit an application that is in an optimised condition for post-submission stages, including the examination.</p>	<p>SoCC and how National Grid had regard to the feedback received.</p> <p>Chapter 13 of this report details consultation with LPAs on the adequacy of consultation undertaken by National Grid to date, as set out in the SoCC.</p> <p>Copies of the feedback received from LPAs and National Grid's response to feedback was detailed in Appendix D and Appendix E of the AoCM report. The information is also detailed in Appendix M of this report.</p>

Nationally Significant Infrastructure Projects: Advice on the Consultation Report (8 August 2024)

<p>Reporting on the adequacy of consultation milestone</p> <p>The adequacy of consultation milestone is a requirement established in the government's guidance on the Pre-application stage.</p> <p>The Planning Inspectorate's Pre-application Prospectus gives further details about the adequacy of consultation milestone procedure.</p> <p>The Applicant should summarise how they have discharged the adequacy of consultation milestone procedure in the consultation report. This should include how the Applicant has had regard to any comments received from local authorities, statutory consultees and the Planning Inspectorate in relation to the adequacy of consultation milestone.</p>	<p>Chapter 13 of this report details how National Grid has had regard to comments received on the AoCM report from LPAs, statutory consultees and the Planning Inspectorate following submission of the AoCM report to the PINs on 13 June 2025.</p>

5. 2022 Non-Statutory Consultation

5.1 Introduction

- 5.1.1 This chapter summarises the non-statutory consultation held by National Grid in 2022. It details the consultation period, who was consulted, and how. This chapter also details ways that stakeholders could respond, how many did, and also summarises the feedback received, and changes made as a result.
- 5.1.2 Full details about the 2022 non-statutory consultation are provided in the 2022 Non-Statutory Consultation Feedback Report in **Appendix B** of this report.

5.2 2022 Non-Statutory Consultation Summary

- 5.2.1 National Grid held a round of non-statutory consultation from 21 April 2022 until 16 June 2022. The 2022 non-statutory consultation had the following aims:
- Introduce and provide an overview of the Project to the public;
 - Explain the need to build the reinforcement;
 - Set out options considered and the reasons for preferring the corridor and graduated swathe;
 - Present and explain the graduated swathe and corridor which was preferred at that time;
 - Present and explain the substation site which was preferred at that time;
 - Ensure stakeholders and consultees had the opportunity to provide feedback in a meaningful and influential manner; and
 - Outline next steps and programme and how proposals would be developed further.
- 5.2.2 **Table 5.1** of this report provides an overview of the key activities conducted during the 2022 non-statutory consultation. Full details are provided in the 2022 Non-Statutory Consultation Feedback Report in **Appendix B** of this report.

Table 5.1 Summary of Activities During the 2022 Non-Statutory Consultation

Date	Activity	Details
28 April 2022 to 28 May 2022	Public information events	12 public information events were held at suitable locations along the proposed route. The events were held at various times and dates within this period.

Date	Activity	Details
22 April 2022 to 9 June 2022	Public webinars	12 public webinars held at various times and dates within this period. There were five general overview webinars and one section specific for each area.
During the 2022 non-statutory consultation	Telephone / video appointments	13 sessions were held, as requested, to provide the opportunity to speak one-to-one with technical experts across the Project.
During the 2022 non-statutory consultation	Inspection points	Project documents were made available at 13 locations within the 2022 consultation zone at various points with stock levels regularly being checked and replenished during the consultation period.
14 April 2022 to 5 July 2022*	Presentations to district/ county/ borough councils, parish councils and seven Members of Parliament (MPs)	26 sessions were held to explain the proposals, support stakeholder and consultee relationships and to promote the 2022 non-statutory consultation.

*Three briefings had to be re-scheduled and were held after the close of the 2022 non-statutory consultation.

- 5.2.3 A total of 3,787 feedback submissions were received during the consultation period from community stakeholder and consultees, along with members of the local community. This comprised of 496 paper response forms, 2,138 online response forms, 1,085 emails sent to the project inbox and 68 letters.
- 5.2.4 The approach to the consultation was set out in the draft consultation strategy, which was sent to all the host local planning authorities (LPAs) in February 2022, and feedback was discussed at briefing sessions on the 28 February 2022, 1 and 2 March 2022.
- 5.2.5 Further to these briefings, the LPAs were asked to provide feedback on the draft Public Consultation Strategy. All feedback was considered and where practicable taken on board by National Grid.
- 5.2.6 A final version of the Consultation Strategy was published as part of the 2022 non-statutory consultation and can be found in **Appendix B** of this report.

5.3 Who National Grid Consulted

- 5.3.1 The 2022 non-statutory consultation was open to anyone with an interest in the Project. A consultation zone was developed to assist engagement with the local community.
- 5.3.2 The Primary Consultation Zone (PCZ), which extended 1 km from the proposals, captured stakeholders who may be most affected by the Project. The PCZ was kept fully informed about the Project and were actively engaged on the proposals.
- 5.3.3 The Secondary Consultation Zone (SCZ), which extended to 4 km from the edge of the proposals, included stakeholders who were less likely to be directly affected by the Project but may be impacted by construction traffic and long-distance views. All members of the public, including those within the SCZ could register to receive all the Project information and engage as they wish. During the 2022 non-statutory consultation, the following groups and stakeholders were consulted with:
- Parish councils representing parishes within both consultation zones and in the immediate vicinity;
 - Members of Parliament (MPs) representing constituencies within and bordering both consultation zones;
 - Elected representatives in LPAs where the Project is situated, including dedicated briefings for lead members during the 2022 non-statutory consultation period as requested;
 - ‘Seldom heard groups’ within both consultation zones, representing people who are unlikely to respond to traditional consultation techniques and may need additional support to access materials; and
 - Local interest groups, such as residents’ associations, community groups and groups with particular specialisms, such as local heritage or wildlife.
- 5.3.4 **Appendix B** of this report contains the 2022 Non-Statutory Consultation Feedback Report and includes the full list of local interest groups and ‘seldom heard groups’ consulted with and the letter they were provided with.

5.4 How National Grid Consulted

- 5.4.1 National Grid was, and is, committed to ensuring that any consultation process and associated communication is made accessible to as many parts of the community as possible. National Grid’s consultation activities included:
- Setting up a Project specific website, email, and dedicated telephone information line;
 - Mailing a consultation pack directly to properties in the PCZ within 1 km of the proposals;
 - Producing materials to support consultation;
 - Holding online and in person events- including webinars and telephone appointments;

- Making information and materials available at inspection locations in close proximity to the Project; and
- Media and social media promotional activity.

Project Website, Email and Information Line

5.4.2 National Grid set up a website to publish information on the Project along with consultation materials as well as historical Project information. The website URL was:

www.nationalgrid.com/electricity-transmission/east-anglia-green

5.4.3 The website included links to additional resources along with Project videos, infographics and an interactive map. Project documents were laid out in a simple, visual and interactive format, with pointers and instructions throughout to aid easy navigation.

- A dedicated email and telephone information line were set up and publicised:
- Email: EastAngliaGREEN@nationalgrid.com
- Telephone: 0800 151 0992 (lines open Monday to Friday 9.00am – 5.30pm)
- During the consultation period the Project website received 72,725 views from 54,975 unique users.

Direct Mailing to the PCZ

5.4.4 The PCZ included stakeholders whose properties' postcodes lie within 1 km of the edge of the preferred corridor. Where appropriate, the PCZ was extended to include whole streets and postcodes rather than the 1 km boundary dissecting hamlets or neighbourhoods.

5.4.5 All relevant stakeholders within this area were consulted including contacting each residential and business address directly. A community newsletter was direct mailed to all properties within the PCZ.

5.4.6 The community newsletter included:

- An introduction to the Project and overview of the proposals;
- Details of the Project website, digital consultation and how people could discuss the proposals with the Project team through local public information events, live chats, location-based webinars, and telephone surgeries; and
- Information on how people could provide feedback online or request printed materials including feedback questionnaires and maps.

Materials Produced to Support Consultation

5.4.7 A range of consultation materials were provided as part of the consultation which included varying levels of technical detail. These include:

- Project background document 2022;
- CPRSS;

- Community newsletter;
- Exhibition banners;
- Posters;
- Maps of the proposal; and
- Feedback questionnaire.

5.4.8 Information about each document is included in the 2022 Non-Statutory Consultation Feedback Report which can be found in **Appendix B** of this report.

Consultation Activities

5.4.9 A hybrid programme of both in person events and online webinars provided stakeholders opportunities to find out more about the proposals and to provide feedback.

In-Person Events

5.4.10 12 public information events were organised to be accessible to as many people as possible and held at suitable community hubs along the proposed route. The in-person events provided the opportunity to speak to technical experts within the team and are detailed in **Table 5.2** of this report.

5.4.11 In total 2,821 attendees joined the team at the public events.

Table 5.2 Schedule of Public Information Events

Date and time	Venue	Attendees
12-6:30pm 28 April 2022	Ingatestone and Fryerning Community Centre, 7 High Street, Ingatestone, CM4 9ED	194
12-6:30pm 4 May 2022	Witham Public Hall, Collingwood Road, Witham, CM8 2DY	110
10-4pm 7 May 2022	West Bergholt Open Memorial Hall, 45-57 Lexden Road, West Bergholt, C06 3BG	441
12-7pm 9 May 2022	Chadwell Village Hall, Waterson Road, Chadwell St Mary, RM16 4NX	30
1-6:30pm 11 May 2022	Mulbarton Village Hall, The Common, Mulbarton, NR14 8AE	362
10-4pm 14 May 2022	Palgrave and District Community Centre, 10 Rose Lane, Palgrave IP22 1AP	377
12-7pm 17 May 2022	Holton St Mary Village Hall, Holton St Mary, Hadleigh, C07 6NW	277

Date and time	Venue	Attendees
12-7pm 18 May 2022	Burstall Village Memorial Hall, Burstall, Ipswich, IP8 3DR	131
1-6pm 21 May 2022	Laindon Community Centre, Aston Road, Laindon, SS15 6N	29
11-5:30pm 24 May 2022	Writtle Village Hall, 18 The Green, Writtle, Chelmsford, CM1 3DU	226
1-7pm 27 May 2022	Needham Market Community Centre, School Street, Needham Market, IP6 8BB	261
10-4pm 28 May 2022	Lawford Venture Centre, Bromley Road, Lawford, Manningtree, CO11 2JE	383

Webinars

- 5.4.12 Online webinars were organised to enable the Project team to present information about the Project to a large number of people and for them to be able to ask the team questions. Different webinars were organised to focus on specific geographical areas and the programme was widely advertised.
- 5.4.13 Members of the public were invited to register to attend a webinar via the Project website or by calling the Project telephone information line. They were then sent details through email of how to join the webinar via a desktop, tablet, or mobile device.
- 5.4.14 A total of 12 webinars were held during the consultation period. Five presented a general overview of the proposals, whilst seven area-specific webinars were held to focus on specific parts of the Project in the district council geographical areas. Details of these can be found in **Table 5.3** of this report.
- 5.4.15 In total 381 stakeholders and members of the public attended the webinars.

Table 5.3 Schedule of Online Webinars

Webinar	Topic	Attendees
2pm 22 April 2022	Overview of Project	20
10am 23 April 2022	Overview of Project	14
7pm 25 April 2022	Overview of Project	50
2pm 26 April 2022	Proposals in South Norfolk District	41
10am 6 May 2022	Proposals in Babergh Tendring and Colchester Districts	59
2pm 10 May 2022	Proposals in Chelmsford District	52

Webinar	Topic	Attendees
10am 13 May 2022	Proposals in Thurrock District	8
2pm 19 May 2022	Proposal in Mid Suffolk District (and Babergh District north of Bramford substation)	61
10am 20 May 2022	Proposals in Braintree District	23
2pm 25 May 2022	Proposals in Basildon and Brentwood Districts	12
2pm 8 June 2022	Overview of Project	23
7pm 9 June 2022	Overview of Project	18

Video or Telephone Appointments

- 5.4.16 The National Grid Project team contact information was published, including a freephone information line and an email address. Stakeholders were able to request a telephone call from a member of the Project team if they preferred to ask questions over the phone. This provided an alternative option for those who may have difficulty accessing other engagement channels or were less comfortable with online technology.
- 5.4.17 13 requests were made to speak with a member of the Project team on specific matters. In addition to holding both telephone and online meetings, stakeholders who requested meetings were also engaged directly at public events or at subsequent group meetings.

Inspection locations

- 5.4.18 Consultation documents were available to view at the following 13 locations from 21 April 2022 until the end of consultation:
- Diss Library, Church Street, Diss IP22 4DD;
 - Long Stratton Library, The Street, Long Stratton NR15 2XJ;
 - Stowmarket Library, Milton Road North, Stowmarket, IP14 1EX;
 - Capel St Mary, Village Hall, The Street, Capel St Mary, IP9 2EF;
 - Hadleigh Library, 29 High Street, Hadleigh, IP7 5A;
 - Ipswich County Library, Northgate Street, Ipswich, IP1 3DE;
 - Needham Market Library, 4 Teachers Close, Needham Market, IP6 8BB;
 - Suffolk County Council Offices, Endeavour House, 8 Russell Road, Ipswich, IP1 2BX;
 - South Norfolk County Council Offices, South Norfolk House, Swan Lane, Long Stratton, NR15 2XE;
 - Witham Library, 18 Newland Street, Witham, CM8 2AQ;
 - Brentwood Library, New Road, Brentwood CM14 4BP;

- Tilbury Library, Tilbury Hub, Civic Square, Tilbury, RM18 8AD; and
- Essex County Council Offices, County Hall, Market Road, Chelmsford, CM1 1QH.

Media and Social Media- Promotional Activity

5.4.19 The 2022 non-statutory consultation was promoted through a hybrid approach of online and in-person methods which comprised of:

- Placing advertisements in local and regional newspapers. See **Table 5.4** of this report for the schedule of adverts- adverts were generally quarter page prints, and contained information about the consultation, the engagement events and information on how to get involved;
- Providing Project documents at inspection points around the Project area for stakeholders to examine, the list of inspection points can be found in **Section 5.4.18**;
- Placing advertisements on social media to target different demographics and to include those who might not otherwise engage with the consultation- details of these campaigns are listed in Across Facebook and Twitter (now known as X), advert campaigns ran from 21 April 2022 – 16 June 2022. Each advert directed users to visit the Project website and engage with the consultation, with adverts targeted at communities living close to the indicative alignment of the project. The traffic generated from these campaigns is set out in **Table 5.5** of this report.
- Publishing full details of consultation and engagement events on the Project website; and
- Providing contact details for queries or to request paper copies of Project documents.

Table 5.4 Schedule of Newspaper Adverts

Publication	Paper copy / online	Date(s)
Colchester Gazette	Paper	21 April 2022
East Anglian Daily Times	Paper	21 April 2022
Eastern Daily Press	Paper	21 April 2022
Brentwood Gazette	Online	21 April 2022
Essex Chronicle	Paper and Online	21 April 2022
Halstead Gazette	Paper	21 April 2022
Thurrock Gazette	Paper	21 April 2022
Harwich and Manningtree Standard	Paper	21 April 2022
Braintree and Witham Times	Paper	22 April 2022

- 5.4.20 Digital promotion of the consultation was conducted through digital marketing campaigns hosted by online news providers (Essex Chronicle (Essex Live) and Brentwood Gazette) and via Facebook and Twitter (now known as X).
- 5.4.21 Across Facebook and Twitter (now known as X), advert campaigns ran from 21 April 2022 – 16 June 2022. Each advert directed users to visit the Project website and engage with the consultation, with adverts targeted at communities living close to the indicative alignment of the project. The traffic generated from these campaigns is set out in **Table 5.5** of this report.

Table 5.5 Social Media Campaign

Platform	Campaign dates	Total Impressions	Advert clicks
Facebook	21 April 2022 – 16 June 2022	639,654	6,150
Twitter (now known as X)	21 April 2022 – 16 June 2022	208,311	750

Additional Engagement Activities Undertaken

- 5.4.22 National Grid undertook several engagement activities leading up to and throughout the 2022 non-statutory consultation period.
- 5.4.23 Briefings were offered to 10 councils, 11 parish councils and 13 Members of Parliament with constituencies within the vicinity of the Project and were within the PCZ. 10 councils, 10 parish councils and seven MPs accepted the offer and details of these are provided in **Table 5.6** of this report.
- 5.4.24 These briefings were given to provide an introduction and background to the Project; context and need; the proposals and how they were developed; and information about the 2022 non-statutory consultation. There were also question and answers sessions at the end of each briefing.

Table 5.6 Briefings to Stakeholders

Dates	Council meetings (County/ District/ Parish)	Attendees
9.30am 14 April 2022	Mid Suffolk and Babergh District Councils briefing	11
11am 14 April 2022	Norfolk County Council briefing	14
2pm 14 April 2022	Suffolk County Council briefing	8
10am 20 April 2022	Braintree District Council briefing	10
12pm 20 April 2022	Tendring District Council briefing	2
4pm 20 April 2022	Basildon Borough Council briefing	9
6pm 20 April 2022	Colchester Borough Council briefing	5
2pm 21 April 2022	Chelmsford City Council briefing	9

Dates	Council meetings (County/ District/ Parish)	Attendees

7pm 23 May 2022	Chelmsford Parish Council briefing	2
7pm 25 May 2022	Rivenhall Parish Council briefing	2
8 June 2022	South Norfolk District Council briefing	13
28 June 2022	Priti Patel MP briefing	1
1 July 2022	Kemi Badenoch MP briefing	2
5 July 2022	John Baron MP briefing	1

5.5 Responses Received to the 2022 Non-Statutory Consultation

Response Methods

- 5.5.1 Consultees could respond to the 2022 non-statutory consultation by completing the feedback questionnaire (online and paper copies were available), through email to the Project email address or by sending a response directly to the Project postal address:
- **Email** via EastAngliaGREEN@nationalgrid.com; and
 - **Postal** Freepost EAST ANGLIA GREEN.
 - A dedicated freephone telephone information line 0800 151 0992 (lines were open Monday to Friday 9am – 5:30pm) was also set up for people to call if they had any queries.

Response Rate

- 5.5.2 A total of 3,787 feedback submissions were received during the consultation period from community stakeholders and consultees, along with members of the local community. This comprised of 496 paper response forms, 2,138 online response forms, 1,085 emails sent to the project inbox, and 68 letters (see **Table 5.7** of this report).

Table 5.7 Breakdown of responses received to the 2022 non-statutory consultation

Response Method	Number of Responses
Online feedback questionnaire	2,138
Paper feedback questionnaire (via post)	496
Free text response (letter)	68
Free text response (email)	1,085
	3,787

- 5.5.3 Although some feedback was received after the close of consultation, all responses received up to a month after the consultation closing (up to the 16 July 2022) were considered in the reporting of feedback received for that consultation. All feedback was considered in the reporting process for **Section 5.6** of this report.
- 5.5.4 A summary of matters raised, and National Grid's response can be found in the 2022 Non-Statutory Consultation Feedback Report in **Appendix B** of this report.
- 5.5.5 National Grid continued to review and consider all late feedback that was received after the close of the 2022 non-statutory consultation (16 July 2022). This feedback is summarised in **Section 5.7** of this report.

5.6 Changes Made

- 5.6.1 The feedback received from the 2022 non-statutory consultation helped to shape and guide the development of the proposals. As a result of consultation feedback, engagement with Persons with an Interest in Land (PILs), and further assessments that were carried out, changes to the Project were made.
- 5.6.2 A summary of changes which influenced the 2023 preferred draft alignment comprise of:
- Diverting to the east of Wortham Ling before re-joining the preferred corridor to the south-west of Diss. This change is referred to as 'East of Wortham Ling';
 - Diverting to the east, south of Offton, then running alongside the existing 132 kV overhead line to the north and east of Flowton to Bramford Substation. This change is referred to as 'North of Flowton';
 - An alternative route to the north and east of Notley Enterprise Park and at the northern edge of the Dedham Vale National Landscape (previously known as an

Area of Outstanding Natural Beauty (AONB)). This change is referred to as 'West of Great Wenham';

- Straightening the draft alignment slightly west of Writtle. This change is referred to as 'West of Writtle'; and
- An alternative route to the east of Ingatestone. This change is referred to as 'Further east at Ingatestone'.
- Broadly paralleling the existing 132 kV overhead line to the north-west of Barking and Barking Tye;
- Avoiding potential oversailing of properties and gardens at Aldham;
- An alignment further east within the corridor south of Bramford near Burstall;
- Increasing the extent of underground cables from south of the Dedham Vale AONB through to the East Anglia Connection Node (EACN) substation. This also allows for an adjustment of the overhead line alignment near Ardleigh;
- Change of technology from overhead line to underground cable near Great Horkesley for a distance of approximately 4 km;
- Change of technology from overhead line to underground cable to cross under the existing 400 kV overhead line north of Fairstead;
- Passing to the east of Bushy Wood to increase distance from properties;
- Reduced interaction with the Dunton Hills Garden Village development by restricting the alignment to the eastern edge of the proposed corridor; and
- Change of technology from overhead line to underground cable from the north of the Lower Thames Crossing proposals into Tilbury Substation.

5.7 Ongoing Engagement Between Consultations

- 5.7.1 **Appendix A** of this report provides an overview of engagement activities with stakeholders held prior to and during the 2022 and 2023 non-statutory and 2024 statutory consultations.
- 5.7.2 A summary of headline issues raised through feedback received after 16 July 2022 up to, and including, 1 January 2023 is included in the 2022 Non-Statutory Consultation Feedback Report in **Appendix B** of this report.
- 5.7.3 A summary of headline issues raised through feedback received after 1 January 2023 up to, and including 26 June 2023 (before the 2023 non-statutory consultation) is included in the 2023 Non-Statutory Consultation Feedback Report in **Appendix C** of this report.

6. 2023 Non-Statutory Consultation

6.1 Introduction

- 6.1.1 This chapter summarises the non-statutory consultation held by National Grid in 2023. It details the consultation period, who was consulted, and how. This chapter also details ways that stakeholders could respond, how many did, and also summarises the feedback received, and changes made as a result.
- 6.1.2 Full details about the 2023 non-statutory consultation are provided in the 2023 Non-Statutory Consultation Feedback Report in **Appendix C** of this report.

6.2 2023 Non-Statutory Consultation Summary

- 6.2.1 National Grid held a round of non-statutory consultation from 27 June 2023 until 21 August 2023. The 2023 non-statutory consultation had the following aims:
- Provide an overview of the updated proposals to the public;
 - Present the 2023 preferred draft alignment;
 - Explain where changes were made to the proposals since the 2022 non-statutory consultation;
 - Ensure all stakeholders and consultees have the opportunity to provide feedback on the work to date; and
 - Outline the next steps and the programme and how the proposals will be further developed and how feedback has been taken into account.
- 6.2.2 **Table 6.1** of this report provides an overview of the key activities conducted during the 2023 non-statutory consultation. Full details are provided in the 2023 Non-Statutory Consultation Feedback Report in **Appendix C** of this report.

Table 6.1 Key activities conducted during the 2023 Non-Statutory Consultation

Date	Activity	Details
6 July 2023 to 21 July 2023	Public information events	12 public information events were held at suitable locations along the proposed route. The events were held at various times and dates within this period.
5 July 2023 to 17 August 2023	Public webinars	Four online public webinars held at various times and dates within this period.
27 June 2023 to 21 August 2023	Inspection point Locations	Paper copies of Project documents were made available at 13 locations within the consultation zone throughout the 2023 non-statutory consultation with stock levels

Date	Activity	Details
		regularly being checked and replenished during the consultation period.
27 June 2023 to 21 August 2023	Briefings to district/ county/ borough councils, parish councils and Members of Parliament (MPs)	Briefings were offered to 12 councils, 205 parish councils and 15 Members of Parliament (MPs) with constituencies within the vicinity of the Project. Briefings provided an overview and background to the Project; the proposals and information about the 2023 non-statutory consultation.
29 June 2023 to 30 June 2023	Promotional Activity – press and social media, direct mailing	Nine advertisements in local and regional newspapers, online media and social media providing information about the 2023 non-statutory consultation and how to get involved. Direct mailing to the Primary Consultation Zone (PCZ) – community newsletter and the Project contact details to within 1 km of the edge of the preferred corridor.

- 6.2.3 A total of 4,167 feedback submissions were received during the consultation period from community stakeholder and consultees, along with members of the local community. This comprised of 138 paper response forms, 1,473 online response forms, 2,498 emails sent to the project inbox and 58 letters.
- 6.2.4 The approach to the consultation was set out in the draft 2023 Public Consultation Strategy, which was sent to all the host local planning authorities (LPAs) in April 2023, and feedback was discussed at briefing sessions on the 20 February 2023, and 3 April 2023.
- 6.2.5 Further to these briefings, the LPAs were asked to provide feedback on the draft 2023 Public Consultation Strategy. All feedback was considered and where practicable taken on board by National Grid.
- 6.2.6 A final version of the consultation strategy was published as part of the 2023 non-statutory consultation and can be found in **Appendix C** of this report.

6.3 Who National Grid Consulted

- 6.3.1 The 2023 non-statutory consultation was open to anyone with an interest in the Project. A consultation zone was developed to assist engagement with the local community.
- 6.3.2 The Primary Consultation Zone (PCZ), which extended 1 km from the proposals, captured stakeholders who may be most affected by the proposals. The PCZ was kept fully informed about the project and were actively engaged on the proposals.
- 6.3.3 The Secondary Consultation Zone (SCZ), which extended to 4 km from the edge of the proposals, included stakeholders who were less likely to be directly affected by

the Project but may be impacted by construction traffic and long-distance views. All members of the public, including those within the SCZ could register to receive all Project information and engage as they wish.

- 6.3.4 During the 2023 non-statutory consultation, the following groups and stakeholders were consulted with:
- Parish councils representing parishes within both consultation zones and in the immediate vicinity;
 - MPs representing constituencies within and bordering both consultation zones;
 - Elected representatives in LPAs where the project is situated, including dedicated briefings for lead members during the 2023 non-statutory consultation period as requested;
 - ‘Seldom heard groups’ within both consultation zones, representing people who are unlikely to respond to traditional consultation techniques and may need additional support to access materials; and
 - Local interest groups, such as residents’ associations, community groups and groups with particular specialisms, such as local heritage or wildlife.
- 6.3.5 **Appendix C** of this report contains the 2023 Non-Statutory Consultation Feedback Report and includes the full list of local interest groups and ‘seldom heard groups’ consulted with and the letter they were provided with.

6.4 How National Grid Consulted

- 6.4.1 National Grid is committed to ensuring that any consultation process and associated communication is made accessible to as many parts of the community as possible.
- 6.4.2 National Grid’s consultation activities included:
- Setting up a Project specific website, email, and dedicated telephone information line;
 - Mailing a consultation pack directly to properties in the PCZ within 1 km of the proposals;
 - Producing materials to support consultation;
 - Holding online and in person events- including webinars and telephone appointments;
 - Making information and materials available at inspection locations in close proximity to the Project; and
 - Media and social media promotional activity.

Project Website, Email and Information Line

- 6.4.3 National Grid set up a website to publish information on the Project along with consultation materials as well as historical Project information. The website URL was:

www.nationalgrid.com/electricity-transmission/network-and-infrastructure/infrastructure-projects/norwich-to-tilbury

- An interactive map to show more detail of the proposals. The map also included pointers to further information, which may contain images, text or signpost to a different page that expands on the subject;
- Public consultation pages – with details of dates and timings of public information events and webinars;
- FAQs;
- Event banners and community newsletters;
- Information for landowners;
- Feedback questionnaire; and
- Contact details.

6.4.4 A dedicated email and telephone information line were set up and publicised:

- **Email:** contact@n-t.nationalgrid.com; and
- **Telephone:** 0800 151 0992 (lines open Monday to Friday 9.00am – 5.30pm)

6.4.5 During the consultation period the Project website received 84,801 views from 67,352 unique users.

Direct Mailing to the PCZ

6.4.6 The PCZ included stakeholders whose properties' postcodes lie within 1 km of the edge of the preferred corridor. Where appropriate, the PCZ was extended to include whole streets and postcodes rather than the 1 km boundary dissecting hamlets or neighbourhoods.

6.4.7 All relevant stakeholders within this area were consulted including contacting each residential and business address directly. A community newsletter was direct mailed to all properties within the PCZ.

6.4.8 The community newsletter included:

- An overview of the Project and an explanation of what was being consulted on;
- Details of the Project website, public information events, public webinars and how stakeholders could leave their feedback on the proposals;
- Information on further Project materials and where those could be accessed;
- A map showing the 2023 preferred draft alignment; and
- An updated Project timeline.

Materials Produced to Support Consultation

6.4.9 A range of consultation materials were provided as part of the consultation which included varying levels of technical detail. These include:

- 2023 project background document ;
- 2023 strategic options backcheck and review ;
- Maps of proposals showing the 2023 preferred draft alignment;
- 2023 design development report;
- 2022 Non-Statutory Consultation Feedback Report including appendices;
- Community newsletter;
- Project website;
- Information event banner;
- 2023 non-statutory consultation feedback questionnaire and
- 2023 non-statutory public consultation strategy 2023.

6.4.10 Information about each material is included in the 2023 Non-Statutory Consultation Feedback Report which can be found in **Appendix C** of this report.

Consultation Activities

6.4.11 A hybrid programme of both in person events and online webinars provided stakeholders opportunities to find out more about the proposals and to provide feedback.

In-Person Events

6.4.12 12 public information events were organised to be accessible to as many people as possible and held at suitable community hubs along the proposed route. The in-person events provided the opportunity to speak to technical experts within the team and are detailed in Table 6.2 of this report.

6.4.13 In total 1,803 attendees joined the team at the public events.

Table 6.2 Schedule of Public Information Events

Date and time	Venue	Attendees
2pm-7pm Thursday 6 July 2023	The Brentwood Centre, Doddinghurst Road, Pilgrims Hatch, Brentwood, CM15 9NN	115
2pm-7pm Friday 7 July 2023	Diss Youth and Community Centre, Shelfanger Road, Diss, IP22 4EH	260
11am-4pm Saturday 8 July 2023	Lawford Venture Centre 2000, Bromley Road, Lawford, Manningtree CO11 2JE	76
1pm-6pm Monday 10 July 2023	Tibenham Community Hall, Pristow Green Lane, Tibenham, Norwich NR16 1PX	258
11am-4pm Tuesday 11 July 2023	Blackbourne Community Centre, 71 Blackbourne Road, Elmswell, Bury St Edmunds, IP30 9UH	64

Date and time	Venue	Attendees
2pm-7pm Wednesday 12 July 2023	Chelmsford City Racecourse, Chelmsford, CM3 1QP	214
2pm-7pm Thursday 13 July 2023	Langham Community Centre, School Road, Langham, Colchester, CO4 5PA	320
2pm-7pm Monday 17 July 2023	The Civic Hall, Blackshots Lane, Grays, RM16 2JU	18
1pm-6pm Tuesday 18 July 2023	Tasburgh Village Hall, Grove Lane, Tasburgh, NR15 1LR	157
2pm-7pm Wednesday 19 July 2023	Copdock Village Hall, Old London Road, Copdock, IP8 3JN	200
2pm-7pm Thursday 20 July 2023	Witham Public Hall, Collingwood Road, Witham, CM8 2DY	102
2pm-7pm Friday 21 July 2023	Basildon Sporting Village, Cranes Farm Road, Basildon, SS14 3GR	19
Total		1,803

Webinars

- 6.4.14 Online public webinars were organised to enable the Project team to present information about the Project to a large number of people and for them to be able to ask the team questions. Information included an overview and background to the Project, context and need; the proposals and how they were developed; and information about the 2023 non-statutory consultation.
- 6.4.15 Following this, members of the public could write questions to National Grid during the webinar for the Project team to answer.
- 6.4.16 Members of the public were invited to register to attend a webinar via the Project website or by calling the Project telephone information line. They were then sent details through email of how to join the webinar via a desktop, tablet, or mobile device.
- 6.4.17 During the public webinars, members of the Project team explained an overview of the Project and details related to the 2023 non-statutory consultation.
- 6.4.18 A total of four public webinars were held during the 2023 non-statutory consultation period.
- 6.4.19 Public webinars were held over a variety of times to provide morning, afternoon, and evening sessions throughout the 2023 non-statutory consultation period. For those who could not attend the live webinar sessions, a recording was made available on the Project website for playback.
- 6.4.20 A total of 118 stakeholders and members of the public attended the webinars. The attendance at each is set out in **Table 6.3** of this report.

Table 6.3 Schedule of Online Public Webinars

Date and Time	Attendees
1pm-2pm, Wednesday 5 July 2023	32
7pm-8pm, Tuesday 25 July 2023	23
10am-11am, Saturday 12 August 2023	22
10am-11am, Thursday 17 August 2023	41
Total	118

Inspection Point Locations

- 6.4.21 In addition to being available via the Project website and on request, paper copies of Project documents were made available at 13 locations within the consultation zone throughout the 2023 non-statutory consultation with stock levels regularly being checked and replenished during the consultation period.
- 6.4.22 Consultation materials available at the inspection point locations consisted of feedback questionnaires and the 2023 Project Background Document.
- 6.4.23 Inspection point locations consisted of:
- Long Stratton Library, The Street, Long Stratton, NR15 2XJ;
 - Diss Library, Church Street, Diss, IP22 4DD;
 - Stowmarket Library, Milton Road, Stowmarket, IP14 1EX;
 - Suffolk County Council, Endeavour House, 8 Russell Rd, Ipswich, IP1 2BX;
 - Capel Library, The Street, Capel St Mary, Ipswich, IP9 2EF;
 - Tendring District Council, 88-90 Pier Avenue, Clacton on Sea, Essex, CO15 1TN;
 - Colchester Library, Trinity Square, Colchester, CO1 1JB;
 - Coggeshall Library, 29 Stoneham Street, Coggeshall, Colchester, CO6 1UH;
 - Writtle Library, 45 The Green, Writtle, Chelmsford, CM1 3DT;
 - Chelmsford Central Library, County Hall, Market Road, Chelmsford, CM1 1QH;
 - Ingatestone Library, High Street, Ingatestone, CM4 9EU;
 - Brentwood Borough Council, Town Hall, Ingrave Road, Brentwood, CM15 8AY; and
 - Tilbury Library, Kanmore House, 16 Civic Square, Tilbury RM18 8AD.

Media and Social Media- Promotional Activity

- 6.4.24 The 2023 non-statutory consultation was promoted through a hybrid approach of online and in-person methods which comprised of:

- Placing advertisements in local and regional newspapers providing information about the 2023 non-statutory consultation and how to get involved. See **Table 6.4** of this report for the schedule of adverts and **Appendix C** of this report for copies of the adverts;
- Providing Project documents at inspection point locations around the Project area for public viewing. See **Section 6.4.23** of this report for a list of locations;
- Placing advertisements on social media to target different demographics and to include those who might not otherwise engage with the 2023 non-statutory consultation. See **Table 6.5** of this report for information about the social media campaigns;
- Publishing full details of the 2023 non-statutory consultation and public information events on the Project website; and
- Providing contact details for queries and how to request paper copies of the 2023 consultation materials.
- Digital promotion of the Project through digital marketing campaigns hosted by online news providers. Online adverts were placed in the Essex Chronicle (Essex Live) and Brentwood Gazette. Details of these adverts can be seen in **Table 6.4**.

Table 6.4 Newspaper adverts schedule

Publication	Paper copy / online	Date(s)
Eastern Daily Press	Paper	29 June 2023
Thurrock Gazette	Paper	29 June 2023
Braintree and Witham Times and Halstead Gazette*	Paper	29 June 2023
Colchester Gazette	Paper	29 June 2023
Harwich and Manningtree Standard	Paper	30 June 2023
East Anglian Daily Times	Paper	30 June 2023
Brentwood Gazette	Online	29 June – 12 July 2023
Essex Chronicle	Online	29 June – 16 July 2023

**Joint publication between Braintree and Witham Times and the Halstead Gazette*

6.4.25 Digital promotion of the consultation was conducted through digital marketing campaigns hosted by online news providers (Essex Chronicle (Essex Live) and Brentwood Gazette) and via Facebook.

- 6.4.26 Across the social media platform Facebook, an advertising campaign ran from 27 June 2023 – 21 August 2023. Each advert directed users to visit the Project website and engage with the 2023 non-statutory consultation, with adverts targeted at users living within the PCZ and SCZ and nearby communities. The traffic generated from this campaign is set out in **Table 6.5**.

Table 6.5 Social Media Campaign

Platform	Campaign dates	Total Impressions	Advert clicks
Facebook	27 June 2023 – 21 August 2023	1,680,956	6,980

Additional Engagement Activities Undertaken

- 6.4.27 National Grid undertook several engagement activities leading up to and throughout the 2023 non-statutory consultation period.
- 6.4.28 Briefings were offered to 12 councils, 205 parish councils and 15 MPs with constituencies within the vicinity of the Project.
- 6.4.29 These briefings were given to those who accepted the offer and provided an overview and background to the Project; context and need; the proposals and how they were developed; and information about the 2023 non-statutory consultation. There were also question and answers sessions at the end of each briefing.

6.5 Responses Received to the 2023 Non-Statutory Consultation

Response Methods

- 6.5.1 Consultees could respond to the 2023 non-statutory consultation by completing the feedback questionnaire (online and paper copies were available), through email to the Project email address or by sending a response directly to the Project postal address:
- **Email** via Email: contact@n-t.nationalgrid.com; and
 - **Postal** Freepost N TO T (no stamp or further address needed).
- 6.5.2 A dedicated freephone community telephone information line 0800 151 0992 (lines were open Monday to Friday 9am-5:30pm) was also set up for people to call if they had any queries.

Response Rate

- 6.5.3 A total of 4,167 feedback submissions were received during the 2023 non-statutory consultation period from local communities, stakeholders, and other consultees (including three late responses where an extension to the date for submission was requested by the consultee). This comprised of paper response forms, online response forms, emails, and letters as detailed in **Table 6.6**. Feedback sent directly

to National Grid in these formats has been accounted for in the relevant categories within this table. All feedback received by the 22 August 2023 (and the three responses received after that date referred to above) were considered in the reporting process for **Section 6.6** of this report which summarises the feedback received from the 2023 non-statutory consultation and the changes made in response to that feedback.

- 6.5.4 National Grid continued to review and consider all late feedback that was received after the close of the 2023 non-statutory consultation on 22 August 2023. This feedback is summarised in **Section 6.7** of this report, which summarises the matters raised and how National Grid has had regard to that feedback received in the period between close of the 2023 non statutory consultation and the start of the 2024 Statutory Consultation.

Table 6.6 Breakdown of Responses Received to the 2023 Non-Statutory Consultation

Response Method	Number of responses
Online feedback questionnaire	1,473
Paper feedback questionnaire (via post/events)	138
Free text response (letter)	58
Free text response (email)	2,498
Total	4,167

6.6 Changes Made

- 6.6.1 The feedback received from the 2023 non-statutory consultation helped to shape and guide the development of the proposals. As a result of consultation feedback, engagement with PILs, and further assessments that were carried out, changes to the Project were made. A summary of changes is provided in **Table 6.7** of this report.
- 6.6.2 Full details of the feedback received during the 2023 non-statutory consultation, and National Grid's responses are provided in the 2023 Non-Statutory Consultation Feedback Report in **Appendix C** of this report.

Table 6.7 Summary of Changes Identified in Responses to the 2023 Non-Statutory Consultation

Change Requested	Change Made
Concern about the impact on Bloy's Grove Solar Farm, suggestions to avoid archaeology site at RG012.	In the case of Bloy's Grove Solar Farm National Grid's 2023 preferred draft alignment avoided the positioning of pylons within the proposed development area. While we did envisage some oversail, we did not consider this should interfere with the solar farm operation. We moved the position of RG012 (now RG013) slightly north to

Change Requested	Change Made
	avoid the archaeological site identified at this location.
Suggest relocating pylon RG044 away from Hoggs Barn.	National Grid amended the location of RG044 along the draft alignment to move it out of / to the edge of the open view to the north-west from Hoggs Barn and also repositioned RG043 to also benefit further from screening. The pylons were moved so that they are both positioned to benefit from screening by some existing woodland though much depends on the viewing position and direction.
Suggest that an alternative project route would reduce effects on woodland including on a private nature reserve at Brick Kiln Lane, NR16 1SA - including by relocating pylons RG048 and RG049 away from small woodland.	National Grid made a change between RG046 and RG050, that moved the 2023 preferred draft alignment further east and therefore further away from the woodland and private nature reserve at Brick Kiln Lane, thus overall, reducing potential effects on woodland.
Suggest that the Project is routed away from Heywood Road. Including, moving pylons RG069 to RG074 to the west to avoid residential areas and reduce visual impacts.	National Grid made a change between RG070 and RG073 and removed the single angle pylon at RG072 (replacing it with two angle pylons but each with smaller direction changes) and moved the 2023 preferred draft alignment further west in this area.
Suggestions to underground the section of the Project where it crosses the Waveney Valley.	National Grid continued to investigate the development of the appropriate design solution in the vicinity of the Waveney Valley via a range of investigations. The baseline remained using the overhead lines as set out in the 2023 non-statutory consultation. However, for the 2024 statutory consultation we consulted on a Waveney Valley Alternative (WVA) which included a section of underground cable between approximately RG084 and RG090.
<p>Suggestions around relocating pylons RG090-RG096, specifically:</p> <ul style="list-style-type: none"> • Suggests pylons RG092, RG093 and RG094 are relocated away from residences; • Suggests RG090-RG093 and RG096 be moved 200 m east to reduce visual impact; • Suggests RG090 to RG093 be moved to the eastern boundary of Millway; and 	National Grid made a change between RG090 and RG100 (amended to RG099). This change was required due to the presence of Brook airstrip and solar farm developments. Further assessment on the potential impact of the Project on this airstrip identified a need to move the alignment further east. This change then moved pylons RG091, RG092, RG093 and RG094 further east, therefore going some way to achieving the changes requested to move further away from residences.

Change Requested	Change Made
<ul style="list-style-type: none"> Suggests a change in angle of the route so that pylons are sited in parallel through Millway Field North. 	
<p>Request to move pylons RG117 to RG132 to reduce impacts on agricultural activities. Suggestions to move individual pylons or combinations of pylons between RG127 to RG129 further from the Grade II Listed Hempnalls Hall (also residential) and nearby wildlife interests and a Roman site.</p>	<p>National Grid made a change between RG118 and RG123 (amended to RG119 and RG124) to move the alignment to the west to enable pylons to be positioned closer to field boundaries.</p> <p>We also changed the 2023 preferred draft alignment between RG123 and RG130 which moved the draft alignment further to the east, further away from Hempnalls Hall and the other features identified.</p>
<p>Suggest that pylons RG142 and RG143 are relocated in the valley.</p>	<p>National Grid didn't move the 2023 preferred draft alignment further east to the other side of a property to utilise lower ground in the valley. This change would have moved the draft alignment closer to a greater number of properties at Mendlesham Green. We did shift the pylon positions along the draft alignment at the crossing of the driveway of Palgrave Farm with the pylons then approximately equidistant to each side of the drive.</p>
<p>Suggestions around relocating pylons RG160 and RG161, specifically:</p> <ul style="list-style-type: none"> Suggest that pylon RG160 is moved 40 m south- east to the corner of the field, as close to the hedge as possible. If not possible, suggest that RG160 should be moved 10 m south, as close to the roadside as possible (plan provided by respondent); and Suggest that pylon RG161 is moved 40 m south-west of its original placement, into the dog leg area of land in the south-west of the field. If not possible, suggest that RG161 should be moved 20 m east, as close to the hedge boundary as possible for ease of farming usage to reduce limitations to farming operations (plan provided by respondent). 	<p>National Grid reviewed the 2023 preferred draft alignment in this area and moved RG161 (amended to RG162) to the south-west by approximately 50 m which met the requirement of the proposed change. It was not possible to move RG160 (amended to RG161) further south due to the space required to erect scaffolding during construction.</p>
<p>Suggestions that pylons RG174 and RG173 are relocated (to minimise impact on Hascot Hill). More specifically:</p>	<p>National Grid made a change to the pylon locations along the draft alignment in order to address this request. Pylons RG173 to RG176</p>

Change Requested	Change Made
<ul style="list-style-type: none"> Suggest that pylon RG174 is relocated approximately 50 -100 m from the centre of the field to the field's southern boundary (to minimise impact on Hascot Hill Valley); and Suggest that pylon RG174 is relocated a short way further south across the field (i.e., to mitigate impact on barn owls, visual impact). 	<p>(amended to RG177) were repositioned to lower ground in order to reduce the visual impacts. Through addressing this change, we also moved RG174 (amended to RG175) to be closer to a field boundary.</p>
<p>Request to realign RG191 - RG201 to avoid impact on equestrian business.</p> <p>Request to move the alignment further away from residential properties along Ipswich Road.</p>	<p>National Grid made a change to the 2023 preferred draft alignment from RG191 (amended to RG192) to RG200. The draft alignment continued south-east from RG191 before turning east crossing Blood Lane to then rejoin the 2023 preferred draft alignment at RG200. This change reduced potential impacts on the equestrian business at RG196 and moved the alignment further away from residential properties along Ipswich Road.</p> <p>An additional outcome of this change was that rather than having multiple crossings of the existing 132 kV overhead line we undergrounded the section of 132 kV overhead line from the first point of crossing near Middle Wood through to the north of Bramford Substation which reduced the potential effects.</p>
<p>Suggest that pylon JC016 is relocated away from Pigeons Lane and Spring Road.</p>	<p>National Grid assessed alternative alignments in this area to move JC016 further away from the property on the corner of Pigeon's Lane and Spring Lane. We are proposing a slight change to the 2023 preferred draft alignment which would move JC016 further to the west increasing the separation between the pylon and closest property from approximately 90 m to approximately 180 m.</p>
<p>Suggestions around relocating the Project in the Raydon/ Notley/ Great Wenham/ Little Wenham areas, specifically:</p> <ul style="list-style-type: none"> Suggest the use of underground cables between pylons JC018 and JC040; Suggest use of underground cables at Raydon; Suggest that underground cables are used between JC033 and JC035; 	<p>National Grid made a change to the siting of the CSE compound to the north of Raydon Airfield, extending the underground cable length by approximately 1.5 km. This change moved the 2023 preferred draft alignment from approximately JC026 to JC034 further north away from Little Wenham and Great Wenham.</p>

Change Requested	Change Made
<ul style="list-style-type: none"> • Suggest use of underground cables up to Raydon airfield (pylon JC034); • Suggestion that the Project is routed away from / the Project should not be located at Great Wenham and Little Wenham; • Suggest that the use of underground cables is extended from the National Landscape (previously known as an Area of Outstanding Natural Beauty (AONB)) further past Little Wenham and Great Wenham; • Suggest that the Cable Sealing End (CSE) compound should be closer to Notley Park and at a reduced level with full screening (e.g., not just palisade fencing); • Suggest that the CSE compound is sited such that it is supplied by pylon JC034, in an empty site directly south of pylon JC035; • Suggest that the CSE compound should be sited at the Raydon Road end of the Enterprise Park, within its boundary; • Concern that pylon JC030 is too far on a bend; • Suggest that pylon JC030 is relocated away from Little Wenham to minimise impact on heritage assets; • Suggest pylon JC035 is routed further east from its proposed location; • Suggest that pylons JC036, JC037 and JC038 are removed and that instead underground cables are routed farther from Pipers Went and other properties at the eastern end of Raydon; and • Suggest relocating pylons JC039, JC040 and CSE compound away from the Notley Enterprise Park (as a flying site for Raydon and District Model Aircraft Club). 	<p>National Grid moved JC021 and JC022 slightly further north-east which went some way to</p>

Change Requested	Change Made
<ul style="list-style-type: none"> Suggest that pylon JC021 is moved slightly north to prevent blocking farmers entry, fitting in the corner of the farmland; Suggest that pylons JC021 and JC022 are moved further apart to east and west respectively, as these pylons are much closer together than those on either side; and Suggest that pylon JC022 is moved north-west further from the badger set and public footpath. 	achieving the changes requested as this moved JC022 further away from the public footpath and JC021 away from the farmer's field entry point.
Suggest that the split section of underground cables (east of Great Horkesley) is routed away from Knowles Barn Farm.	National Grid reviewed the section of underground cable in this area and removed the split in the underground cable corridor by restricting the working area, though this was partly offset by a greater use of adjacent farmland for temporary soil storage. This moved the 2023 preferred draft alignment further south and therefore the proposed area of works no longer impacts the property and garden at Knowles Barn Farm.
Request to move alignment further away from residential properties at Aldham.	National Grid made a small change to the 2023 preferred draft alignment and associated pylon positions around TB054, TB055 and TB056 that moved the 2023 preferred draft alignment slightly further east and south-east from the properties at the edge of Aldham.
<p>Suggest that pylons TB090 and TB091 are relocated to the edge of the field to reduce visual impact on the landscape and listed building.</p> <p>Request to avoid impacts on dog walking business at Ruffian's Wood.</p>	National Grid made a change from pylon TB089 (amended to TB088) to TB092 (amended to TB091) which moved them to the western edge of the field as far as practicable which went some way to responding to this request. This change also moved the alignment further towards the western edge of Ruffian's Wood in an effort to reduce the impacts to the dog walking business, which was further addressed through the routing of the construction haul road.
Suggest that the TB093 is re-routed further south out of a field located south of properties.	National Grid made a change to the position of pylon TB093 along the 2023 preferred draft alignment in order to move out of direct views of the property to the north. Due to a planning application for a solar farm in the location of TB094 (amended to TB092) to TB096 (amended to TB094) it was not possible to move the draft alignment due to the preference to avoid placing

Change Requested	Change Made
	pylons within solar farms where practicable. We proposed wider Order Limits to allow further realignment should the solar farm not proceed.
Suggest that the Project is routed through the proposed mineral extraction area as opposed to routeing south towards residential properties.	National Grid made a change to straighten the 2023 preferred draft alignment through the proposed mineral extraction area. At the same time, we repositioned some pylons and progressed with widened Order Limits, to facilitate modifications to minimise the potential for sterilisation of mineral resources, should the planning status of the mineral site change.
Suggest that pylons TB112-TB116 are moved north to avoid game bird sporting area at farming business and so that the CSE compound is at a more easily accessible location from the road. Another suggestion that pylons TB112-TB116 are located at the edge of fields or in the centre of blocks of land on farm business.	National Grid moved the alignment further north with the CSE compounds located closer together within the same field. This reduced the amount of underground cable required for the crossing of the existing 400 kV overhead line and therefore reduced the impacts on the cricket bat willow trees. This option also reduced potential impacts on the game bird sporting area. With regards to TB112-TB116, we made a slight change to the 2023 preferred draft alignment which moved these pylons slightly further north and east, we also located pylons TB112 to TB117 to the edge of fields where practicable.
Reroute pylons TB130-TB133 to reduce impact on property and farm access.	National Grid made a change to the 2023 preferred draft alignment between TB130 and TB132 (amended to TB131 and TB133) which moved the alignment, including the angle pylon, further south away from the property.
Suggest that the Project is re-routed to follow a more direct route between pylons TB148 and TB153.	National Grid modified the 2023 preferred draft alignment that straightened the alignment between TB147 and TB153 and moved the alignment slightly further away from existing and proposed properties.
Suggest that pylons TB151, TB152 and TB153 are re-spaced to reduce impact on property value and views. Another suggestion that pylon TB152 should be moved west of Mashbury Road and out of the field to reduce visual impact on village.	National Grid changed the 2023 preferred draft alignment and pylon locations between TB147 (amended to TB148) and TB154 (amended to TB155), this change straightened the draft alignment and removed the angle pylon at TB150 and TB153. Due to restrictions on span lengths when crossing over the road it was not possible to move TB152 to the west of the road, however we moved TB152 to the north and east of its previous

Change Requested	Change Made
	location, thus moving it further away from properties on Mashbury Road.
Suggests TB174 should be moved south along the existing line to obscure pylons behind trees and reduce effects on views from residences.	National Grid moved TB174 slightly further south along the 2023 preferred draft alignment as requested.
Suggest that pylon TB180 is relocated as near to the southern boundary of the field as is feasible.	National Grid reviewed the alignment around TB180 and moved TB180 further towards the southern field boundary.
Relocate pylons TB192-TB198 as current positioning does not account for size of modern farm machinery with 30 m tramlines.	National Grid reviewed the 2023 preferred draft alignment in the area in light of feedback to move pylons to field boundaries or to account for the size of modern farm machinery. We changed the 2023 preferred draft alignment in this area to respond to the change requested to a degree. We were not able to move all pylons in this area to field boundaries due to span lengths but where not possible ensured appropriate space was left for equipment.
Suggest that pylons TB220 and TB221 should be moved westwards.	In response to feedback in this area we took forward an alignment moved further west in this location to route just to the east of a gas pipeline. This reduced effects on residential properties and listed buildings in the Dunton Wayletts area and reduced the potential to restrict development identified by Basildon District Council to meet housing need and proposed on land to the east of the proposed Dunton Hills Garden Village site, south of the A127. This led to some increased interaction with the proposed solar farm.
Suggest that pylon TB224 is relocated further north so that it is no longer located at 'pinch point' in Bellway's landholdings (so that the delivery of access between the two is not restricted).	National Grid amended the 2023 preferred alignment in this area due to the presence of several proposed developments. The location of TB224 was therefore moved slightly to the west of the location proposed at the 2023 non-statutory consultation. It was not possible to move TB224 further north due to routeing constraints around the gas pipeline crossing. Moving TB224 to the west into a more open area was considered to provide more flexibility for delivery of access.

- 6.6.3 Where it became available, new information was taken into consideration in the development of the Project. New information (such as business activities, planning applications, environmental findings, etc.) was obtained outside the 2023 non-statutory consultation through discussions with landowners and stakeholder discussions, and environmental or engineering studies and assessments. Any changes made as a result of ongoing engagement are summarised in **Table 6.8** of this report.

Table 6.8 Summary of Changes Made as a Result of New Information

Change Requested	Change Made
Concern about battery storage development which awaits planning agreements.	National Grid changed the 2023 preferred draft alignment between RG001 and RG007 (amended to RG001 and RG008) south of Norwich Main Substation in order to reduce potential impacts on a proposed battery storage development. The 2023 preferred draft alignment was moved to the west, which required an additional pylon, but reduced interaction with the proposed development.
<p>Movement of pylons RG025 and RG030 along alignment.</p> <p>Moving pylon RG025 north-east along alignment into corner of field or south-west along alignment further into field.</p> <p>Moving pylon RG030 North along alignment and West onto corner of dog-leg in field.</p> <p>Concern about potential impacts to South Norfolk Model Flying Club.</p>	<p>National Grid moved RG030 slightly further north to the corner of the field which also moved RG029 slightly further north. RG025 was also moved along the 2023 preferred draft alignment, however it was not possible to move this pylon into the corner of the field.</p> <p>National Grid also made a minor realignment to the west which increased the separation from South Norfolk Model Flying Club to approximately 200 m which went some way to reduce potential impacts.</p>
Concern about the interaction of RG093 to RG096 with solar farm.	National Grid made a change between RG090 and RG100. This change addressed potential closure of Brook airstrip and reduced interaction with solar farm development. This change also moved pylons RG093 and RG094 further east and reduced potential impacts on one planned solar farm but transferred them (at a lower level) to an adjacent solar farm due to the positioning of residential property and the airstrip influencing the alignment.
<p>Avoid impacts to setting of moat to east of RG112 identified by Historic England.</p> <p>Move further away from Mellis Common Conservation Area.</p>	National Grid made a change between RG103 (amended to RG102) and RG116 (amended to RG117) to adopt the alignment of the existing 13 2kV overhead line for approximately 2 km, to then realign south to the west of Burgate Road. This

Change Requested	Change Made
Move north of Great Wood to move further away from various listed buildings and residential properties to reduce visual impacts.	change reduced potential impacts on nearby historical assets. This change moved the draft alignment to the north of Great Wood and therefore further away from Mellis Common.
Movement of pylons RG135 and RG136 to reduce impact on agricultural operations.	National Grid moved RG135 (amended to RG136) slightly further south along the 2023 preferred draft alignment. We were unable to move RG136 (amended to RG137) further south due to the need to retain distance between the pylon and the road for protective scaffolding during construction and maintenance.
Suggestion to adjust location of pylons RG147-RG152.	National Grid changed the 2023 preferred draft alignment between RG147 (now RG148) and RG152 (now RG153) to adjust the alignment to move RG147 to RG150 further east into a field used as a paddock rather than a farmed field (at the time). This change led to a move of RG152 west into the neighbouring field.
Movement of number of pylons into field margins/hedgerows and changing location of angle pylon RG157 to increase distance from Grade II* listed property (RG153-RG161).	By moving the position of an angle pylon to the next pylon to the north, along with slight increase in the angle of direction change, the alignment was moved further from the Grade II* listed property.
Suggestion to cut corner of underground cable swathe to avoid trees (TB011/TB012).	National Grid restricted the underground cable construction swathe to avoid the trees at this location.
Underground section to the west of Bobbitts Hall – resident was concerned about the ‘protected boundary’ to west of their property and requested the cable working area be reduced to avoid impacts to it. Also had concerns about the road being impacted if trenchless method was going to be used (requested Horizontal Directional Drilling (HDD) here)	At Bobbitts Hall construction potentially cannot be restricted to the west side of an area of hedgerow albeit it may be possible subject to ground investigation. It may also be possible to work to either side to avoid direct effects to the hedgerow.
Concern about the impact of TB005 on Grade II listed building at Bounds Farm and of underground cable construction swathe on woodland to the south of the property. Concern about the impact on trees around TB010-TB011.	National Grid are narrowed the underground cable construction swathe in order to retain the woodland to the south of Bounds Farm. National Grid narrowed the underground cable construction swathe in order to retain these trees.

Change Requested	Change Made
TB041-TB045 would impact planning application for Fordham Reservoir. Planning application for a reservoir which is now being built which would be impacted by TB043.	National Grid made a slight change to the 2023 preferred draft alignment between TB041 (amended to TB040) and TB045 (amended to TB044) which moved the draft alignment slightly further east to avoid a new private reservoir and also removed the angle pylon at TB043 to reduce visual effects to some degree.
Concern about fishing activity under overhead lines at lake at TB004 and TB007.	National Grid changed the 2023 preferred draft alignment between TB004 and TB007 to move slightly further south to the southern edge of the fishing lake.
Concerns about clearance for take-off and landing at Thurrock Airstrip.	Following discussions with Thurrock Airfield we identified potential interaction with flight activities; we addressed this by adding a pylon which enabled us to keep pylon heights to a minimum at this location so as not to impact flight activity.

6.7 Ongoing Engagement Between Consultations

- 6.7.1 National Grid undertook ongoing engagement activities with stakeholders throughout the development of the proposed Project including outside of the non-statutory and statutory consultation periods. This informal or non-statutory engagement was undertaken through various mechanisms to keep key stakeholders informed about the progress of the proposed Project, inform the ongoing design of the proposed Project and enable timely discussions on opportunities and concerns identified
- 6.7.2 **Appendix A** of this report provides an overview of engagement activities with stakeholders held prior to and during the 2022 and 2023 non-statutory consultations and the 2024 statutory consultation.
- 6.7.3 **Table 6.9** provides a summary of the ongoing engagement activities undertaken with PILs prior to and during the 2022 and 2023 non-statutory consultations and the 2024 statutory consultation.

Table 6.9 Summary of Engagement Activities Undertaken with PILs prior to and during the 2022 and 2023 non-statutory consultations and the 2024 statutory consultation.

Date	Engagement activity undertaken with PILs
27 January 2022	Non-contact land referencing commenced
8 April 2022	National Grid mailed an information pack to PILs which included an introduction letter and invitation to meet the lands team

Date	Engagement activity undertaken with PILs
21 April 2022 to 16 June 2022 (2022 non-statutory consultation)	National Grid held various landowner meetings at events and on-site during the 2022 non-statutory consultation
15 August 2022 and 16 August 2022	National Grid commenced land agent briefing events
27 June 2023 to 21 August 2023 (2023 non-statutory consultation)	National Grid held various landowner meetings at events and on-site during the 2023 non-statutory consultation
16 October 2023	National Grid sent contact land referencing LIQs to PILs
12 January 2024	National Grid undertook pre-statutory consultation landowner engagement and sent an invitation to meet to 1,118 PILs.
5 February 2024 to 10 April 2024	National Grid undertook pre-statutory consultation meetings with PILs
March 2024	National Grid undertook landowner and agents briefings on the new/updated National Grid Land Rights Strategy
9 April 2024 to 17 July 2024	Unregistered land notices erected onsite and monitored
10 April 2024 to 16 July 2024 (2024 statutory consultation)	National Grid held various landowner meetings at events and on-site during the 2024 statutory consultation
5 July 2024	National Grid sent out intrusive survey licenses

6.7.4 A summary of headline issues raised through feedback received after the close of the 2023 non-statutory consultation (22 August 2023) up to and including the day before the 2024 statutory consultation (9 April 2024) is included in **Table 6.10** of this report. The table also details how National Grid's has had regard to the feedback received.

Table 6.10 Summary of Headline Issues Raised Between 22 August 2023 and 9 April 2024 and how National Grid have had regard to matters raised.

Headline Issue	Matters Raised	National Grid regard to matters raised
South Norfolk		
Agricultural land	Feedback concerning the removal of valuable agricultural land / disruption to farming operations	National Grid is and will continue to work with all landowners, including farmers, who may be affected by the proposals to understand the impacts on their operations and to work with them as the Project is developed. We will seek to work with the farming community to limit disruption where practicable. This includes providing prior warning of works which may result in the need to move livestock. Compensation claims for disturbance are considered on a case-by-case basis if negative impact on farming operations can be proven. Particular agricultural matters can also be addressed through voluntary land agreements
Community / Social impact	Feedback concerning the impact of the Project on children / families / residents / communities and becoming encircled by overhead lines	National Grid recognises people may have concerns about the potential impacts of living close to an overhead line, and that the uncertainty whilst the proposals are developed may cause anxiety. We have sought to reduce potential effects on communities, residents – including children – through routing and design. We have also sought to reduce concern or uncertainty about the proposals through making timely design decisions and engaging with people and stakeholders as part of the development of

Headline Issue	Matters Raised	National Grid regard to matters raised
		<p>the Project. If the Project received Development Consent, the Project team would continue to engage with people potentially affected during construction through regular communication including letters, phone calls and meetings, where necessary.</p> <p>National Grid is committed to working with local suppliers, facilitated by supporting forums (such as the local Chambers), on electricity industry skills and workforce planning. National Grid is also committed to providing a coordinated regional approach to jobs and skills opportunities. This commitment is broader than the individual project and separate to any commitments under the proposed development consent order for this Project. The socio-economic effects of the project are assessed in Chapter 15 of the Environmental Statement (document reference 6.15). Post construction job opportunities are limited given the nature of the development however we will still work with Local Authorities (including facilitating local partners) to understand what is important to them around skills and employment to ensure we leave a lasting positive legacy in the communities where we operate. With regards to a delivery mechanism, the above measures will be delivered as part of our community benefit package, which will look at both local and regional initiatives. This will be delivered outside the development</p>

Headline Issue	Matters Raised	National Grid regard to matters raised
	<p>Feedback concerning over-development of the area and cumulative impact with existing overhead lines, including other project developers</p>	<p>consent process and is not a material consideration in the decision on the proposed Project or a matter to be secured as part of the DCO, as per the Community Funds for Transmission Infrastructure: Guidance (DESNZ, 2025).</p> <p>With regards to multiple developments impacting specific areas and / or receptors, planning applications for each development would be considered on their own merit by the relevant determining authorities. Any such application would be considered in accordance with planning policy and considerations, such as scale, suitability, and need. Where there is certainty of a development (such as a new residential development, an offshore wind farm and its associated onshore equipment etc.) being constructed, and there is adequate information in the public domain to understand the impacts of that development on the receiving environment, these will be considered within the cumulative effects assessment of the Project. The cumulative effects assessment will follow the Planning Inspectorate's Advice Note 17 'Cumulative Effects Assessment' and will be presented in the Environmental Statement (ES). National Grid will continue to engage with other developers who are proposing development in proximity of the Project to understand their requirements.</p>

Headline Issue	Matters Raised	National Grid regard to matters raised
Construction impacts	Feedback concerning disruption from construction	<p>An Environmental Statement (ES) (document reference: Volume 6: Environmental Statement) has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 ('the Infrastructure EIA Regulations'). The ES identifies and assesses the likely significant effects on the environment resulting from the construction of the Project and recommends appropriate mitigation to reduce effects.</p> <p>Environmental mitigation measures have been defined within each environmental topic chapter and set out in relevant management documents submitted with the Development Consent Order (DCO) application, including the Outline Code of Construction Practice (CoCP) (document reference 7.2), the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Draft Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (WSI) (document reference 7.5).</p>
Consultation	Feedback criticising works at Wortham Ling Special Scientific Interest (SSSI), including the invasive nature, advance notice of works, site attendees and risk assessment and method statement (RAMS)	National Grid has considered the respondent's feedback highlighting a preference for an alternative moved away from Wortham Ling. Beyond alternatives set out in the Design Development Report (DDR) in this area, and in the absence of

Headline Issue	Matters Raised	National Grid regard to matters raised
	<p>Feedback concerning borehole drilling undertaken at Wortham Ling SSSI when it only accounts for 0.25% of the whole route</p>	<p>a specific basis for the change or a proposed alternative alignment, we have considered this feedback by following the guidance in the Holford Rules in developing the draft alignment. Guidelines on overhead line routeing are known as the 'Holford Rules' which remain a valuable tool in selecting and assessing potential overhead line route options as part of the options appraisal process.</p> <p>National Grid has carefully considered alternatives to the 2023 preferred draft alignment. This includes alternatives to the west of Diss as outlined by the respondent with consideration of overhead line only alternatives and alternatives combining overhead line with some sections of underground cable. Whilst this alternative avoids the cluster of residential properties at Roydon and Bressingham, compared with the 2023 preferred draft alignment, the closest residential properties are at approximately similar distances from the nearest pylon in both and we note that the majority of the properties in Bressingham, Roydon and Diss benefit from some screening of views by trees or intervening property. The crossing location is much closer to areas of ecological interest and where there is a greater extent of peat soils and where there is expected to be a greater focus for nature recovery areas. Overall National Grid considers that the option outlined by the respondent is less</p>

Headline Issue	Matters Raised	National Grid regard to matters raised
	<p>Criticism that the Project has been routed to avoid Bressingham Museum but not routed to avoid the village of Roydon</p>	<p>preferred to the 2023 preferred draft alignment on the basis of greater heritage, ecology and soils effects. We therefore are not currently proposing a change to the 2023 preferred draft alignment in this location. We will continue to make changes to the 2024 preferred draft alignment where practicable as we receive further feedback and as the Project develops.</p> <p>National Grid's route development decision making takes account of a range of factors including technical constraints, environmental and socio-economic feature. In many locations it is the combination of constraints that influence the route rather than a single element or feature meaning that the premise of the feedback being a local response of avoiding a single feature at the perceived expense of others is considered incorrect. In this case routeing is guided by opportunities to pass between homes and buildings and then influenced by other effects that may arise. The Design Development Report (document reference 5.15). sets out the reasons for preference for the project alignment over others further west and further east. It is pertinent to note that there is no guidance that specifies a minimum separation from residential property that suggests that routeing between Roydon and Bressingham is not appropriate. The</p>

Headline Issue	Matters Raised	National Grid regard to matters raised
		<p>implied alternative to oversail the Museum would generally not be favoured because of the additional pylon height required to achieve the appropriate safety clearances, additional heights that increases effects, including landscape, visual and heritage. further. Even if oversail of the museum was considered potentially to be acceptable there are other effects that count against this alternative arising from impacts on ecology and woodland.</p>
DESIGN CHANGE (CR)	<p>Suggest that the Project is routed away from / should not be located at Diss / Swardeston / Swainsthorpe / Roydon / residential properties / small private nature reserve in Bunwell, Norfolk</p> <p>Suggest that pylons RG36 to RG38 are located away from residential properties in Forncett St Peter</p>	<p>National Grid has considered the respondent's feedback highlighting a preference for an alternative moved away from the Diss, Swardeston, Swainsthorpe, Roydon and Bunwell. In the absence of a specific basis for the change or a proposed alternative alignment, we have considered this feedback by following the guidance in the Holford Rules in developing the draft alignment. Guidelines on overhead line routeing are known as the Holford Rules which remain a valuable tool in selecting and assessing potential overhead line route options as part of the options appraisal process.</p> <p>National Grid has routed and sited the 2023 preferred draft alignment in accordance with the Holford Rules. In order to move RG036 to RG040 further away from residential properties we would have to increase the length of the overhead line and increase the number of angle pylons, which would be less</p>

Headline Issue	Matters Raised	National Grid regard to matters raised
		<p>consistent with the Holford Rules. The alignment is also approximately midway between properties at RG038 so movement to benefit one property increases effects on another. For these reasons we are not currently proposing a change to the 2023 preferred draft alignment in this location in response to this request, however we will continue to make changes to the 2024 preferred draft alignment as we receive further feedback and as the Project develops.</p>
Environmental impact	Feedback concerning negative impact on the environment generally	<p>Through routeing and siting, National Grid has sought and will continue to reduce as far as practicable impacts on biodiversity and in particular features of high ecological value, such as Sites of Special Scientific Interest (SSSI), Special Protection Areas (SPAs), Ramsar sites and Ancient Woodland. The process of route design takes account of existing biodiversity, the natural environment and, where practicable, seeks to reduce potential impacts on areas of ecological sensitivity, through avoidance or mitigation. The Environmental Impact Assessment (EIA) for the Project will assess the effects on biodiversity (which includes receptors such as SSSIs, SPAs, Ramsar sites and Ancient Woodland) and where necessary will detail mitigation requirements. The assessment methodology has been discussed and agreed with Natural England and the</p>

Headline Issue	Matters Raised	National Grid regard to matters raised
		<p>assessment will be presented in the Environmental Statement (ES) or Habitats Regulations Assessment (HRA) depending on potential impact pathways. We will continue to engage with Natural England, the Royal Society for the Protection of Birds (RSPB) and other relevant stakeholders on aspects relating to biodiversity and the natural environment, including appropriate mitigation measures and techniques, and will take their views into account as the Project continues to develop.</p>
Financial compensation	Feedback concerning negative impact on property value	<p>National Grid acknowledges that its proposals may cause concern to landowners. Diminishment of property value known as ‘injurious affection’ and any other appropriate heads of claim would be considered on an individual basis in accordance with current legislation. We would pursue a voluntary agreement with affected landowners, acquiring rights in accordance with our Land Rights Strategy (the strategy is subject to review). If a voluntary agreement cannot be reached, then the Compulsory Purchase Code allows for a claim of compensation for the loss that property owners may have suffered as a direct result of the retained part of your property ownership being worth less as a direct result of the works.</p> <p>If there are any specific concerns about the devaluation of property, National Grid</p>

Headline Issue	Matters Raised	National Grid regard to matters raised
		<p>would advise seeking third party advice. or alternatively please contact the Project team:</p> <p><u>Norwich-Tilbury@fishergerman.co.uk</u> or by calling us on Freephone 0808 175 3314.</p> <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD.</p>
Health, Safety & Wellbeing	<p>Suggest that National Grid adheres to the Civil Aviation Authority (CAA) regulatory guidance CAP 738 which imposes specific requirements on developer's vertical structures (including pylons)</p> <p>Feedback concerning the siting of overhead lines as presenting a risk to light aircrafts in the area and that the project should be routed away from the clubs / airfields (e.g. South Norfolk Model Aircraft Flying Club)</p>	<p>National Grid has appointed an independent aviation consultancy which has engaged with (with National Grid also present) the relevant airfields potentially affected as part of the proposed route to inform their impact assessment. Following consultation with the operators, it has been assessed that, with the Project as it is proposed, operations of airfields will not be affected.</p> <p>National Grid understands the Civil Aviation Authority (CAA) regulatory guidance and will continue to engage with nearby airfields and associated stakeholders as appropriate. Further information on the assessment of airfields can be found in the Environmental Statement (ES Chapter 15: Socio-Economic, Recreating and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).</p>

Headline Issue	Matters Raised	National Grid regard to matters raised
Heritage	Feedback concerning negative impact on heritage/ listed buildings and historical sites, including suggestions to route away from such sites	Through routeing and siting National Grid has sought to and will continue to reduce as far as practicable potential impacts on the historic environment, including listed buildings and known heritage assets. If potential impacts on the historic environment are identified, we will explore a range of mitigation measures such as careful siting of pylons and screening (both new and existing) to reduce potential impacts where practicable. This will be presented within the Historic Environment Assessment which will be written up and will form part of the Environmental Impact Assessment (EIA) for the Project. We will continue to engage with Historic England and relevant Local Planning Authorities (LPAs) on aspects relating to heritage, including appropriate mitigation measures and techniques and will take their views into account as the Project continues to develop.
Public Rights of Way (PROWs)	Feedback concerning negative impact on PROWs, including Angles Way	Through routeing and siting, National Grid has sought to and will continue to reduce, as far as practicable, impacts and disruption to Public Rights of Way (PROW). The iterative process of route design has identified the existing PROW network and their wider connectivity and sought where practicable to reduce and where possible remove impacts to PROW. If mitigation is required, measures may include the temporary closure of PROW during the construction phase, and where

Headline Issue	Matters Raised	National Grid regard to matters raised
		<p>practicable a diversion to allow for the continued use and movement of the wider PRow network. Effects on PRow will be mitigated where possible, maintaining access where practicable, with closures as a last resort. We will continue to engage with relevant stakeholders on the PRow network to enable feedback and input to be considered as the Project develops. A PRow Management Strategy will be prepared as part of the Outline Code of Construction Practice (CoCP) and submitted with the Development Consent Order (DCO) application.</p>
Visual Impact	Feedback concerning negative impact on landscape / views	<p>The relevant National Policy Statement (NPS) is EN-5 which makes it clear that the Government considers overhead lines to be appropriate and acceptable in most instances, although it recognises that that there may be, at particularly sensitive locations, potential adverse landscape and visual impacts of an overhead line that make it inconsistent with our duties and relevant planning policy. National Grid through the routeing and siting exercise has sought to reduce the impact on landscape character and visual amenity. We will continue to consider both landscape character and amenity value as we develop our proposals and seek to reduce effects. Measures to reduce such effects have included the use of underground cables in the areas of highest amenity value such as the</p>

Headline Issue	Matters Raised	National Grid regard to matters raised
		<p>Dedham Vale Area of Outstanding Natural Beauty (AONB) and its setting and careful consideration of siting of infrastructure and pylons. Projects of this nature are required to assess the potential environmental impacts of the proposals, and report on those, and set out proposed mitigation, in an Environmental Statement (ES) in accordance with the relevant Environmental Impact Assessment (EIA) Regulations. The EIA starts early in the process, and, in that respect, a considerable amount of assessment work has been undertaken to allow preliminary judgements to be made about the design and routeing of the Project. This has been set out in various publications (The Corridor and Preliminary Routeing and Siting Study (CPRSS), published as part of the 2022 non-statutory consultation, the Design Development Report, 2022 Non-Statutory Consultation Feedback Report and Strategic Options Backcheck and Review, published as part of the 2023 non-statutory consultation) with feedback helping shape the preliminary proposals. Further detailed assessment work has been undertaken since the 2023 non-statutory consultation and is published in the Preliminary Environmental Information Report (PEIR) to accompany the statutory consultation stage of the Project. National Grid will be writing up its Landscape and Visual Impact Assessment (LVIA) that will, in addition to other topic specific</p>

Headline Issue	Matters Raised	National Grid regard to matters raised
		<p>assessments, form the latter part of the EIA for the Project. This will include a write-up of an assessment on both landscape character and visual amenity. Where likely significant effects are anticipated the LVIA will consider and identify areas where it may be necessary and appropriate to put forward potential mitigation such as screen planting and softening as part of an iterative design and assessment process</p>
Wildlife / Ecology impact	<p>Feedback concerning negative impact on habitats / flora / plants / woodlands / hedgerows and river ecology</p> <p>Feedback concerning impact of the Project (including overhead lines) on wildlife / birds (including otters, great crested newts, barn owls and bats) / protected species</p>	<p>Through routeing, siting and detailed design, National Grid has sought to reduce, as far as practicable, potential impacts on biodiversity including priority grassland, wetland, woodland, and hedgerow habitats. The design process has taken account of existing biodiversity, the natural environment and, where practicable, seeks to reduce impacts on areas of ecological sensitivity, through avoidance or mitigation.</p> <p>Chapter 8: Ecology and Biodiversity of the Environmental Statement (ES) (document reference 6.8) assesses the effects on important ecological receptors (which includes grasslands, wetlands, woodlands and hedgerows).</p> <p>As part of the Environmental Impact Assessment (EIA) process for the Project, a suite of ecological surveys has been to be undertaken. The findings of which inform the design and approach to mitigation.</p>

Queries were responded to by the community relations team.
Mid Suffolk		
Agricultural land	Feedback concerning the removal of valuable agricultural land / disruption to farming operations	National Grid is and will continue to work with all landowners, including farmers, who may be affected by the proposals to understand the impacts on their operations and to work with them as the Project is developed. We will seek to work with the farming community to limit disruption where practicable. This includes providing prior warning of works which may result in the need to move livestock. Compensation claims for disturbance are considered on a case-by-case basis if negative impact on farming operations can be proven. Particular agricultural matters can also be addressed through voluntary land agreements.
Community / Social impact	<p>Feedback concerning impact on leisure</p> <p>Feedback concerning impact of the Project on children / families / residents / communities</p>	National Grid recognises people may have concerns about the potential impacts of living close to an overhead line, and that the uncertainty whilst the proposals are developed may cause anxiety.

Headline Issue	Matters Raised	National Grid regard to matters raised
		<p>We have sought to reduce potential effects on communities, residents – including children - through routeing and design. We have also sought to reduce concern or uncertainty about the proposals through making timely design decisions and engaging with people and stakeholders throughout the development of the Project. If the Project received Development Consent, the Project team would continue to engage with people potentially affected during construction, through regular communication including letters, phone calls and meetings, where necessary. We urge anyone with concerns to get in touch through the Norwich to Tilbury Freephone number, address or email, which will remain open throughout examination.</p> <p>National Grid is committed to working with local suppliers, facilitated by supporting forums (such as the local Chambers), on electricity industry skills and workforce planning. National Grid is also committed to providing a coordinated regional approach to jobs and skills opportunities. This commitment is broader than the individual project and separate to any commitments under the proposed development consent order for this Project. The socio-economic effects of the project are assessed in Chapter 15 of the Environmental Statement (document reference 6.15). Post construction job opportunities are limited given the nature</p>

Headline Issue	Matters Raised	National Grid regard to matters raised
		<p>of the development however we will still work with Local Authorities (including facilitating local partners) to understand what is important to them around skills and employment to ensure we leave a lasting positive legacy in the communities where we operate. With regards to a delivery mechanism, the above measures will be delivered as part of our community benefit package, which will look at both local and regional initiatives. This will be delivered outside the development consent process and is not a material consideration in the decision on the proposed Project or a matter to be secured as part of the DCO, as per the Community Funds for Transmission Infrastructure: Guidance (DESNZ, 2025).</p>
DESIGN CHANGE (CR)	Suggest that additional underground cables should be used in this section and that the Project is underground between Mellis and Burston	<p>National Grid has carefully considered the feedback proposing the use of underground cable along the route in whole or in part, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is 'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed</p>

Headline Issue	Matters Raised	National Grid regard to matters raised
		<p>developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes'. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project between Mellis and</p>

Headline Issue	Matters Raised	National Grid regard to matters raised
		Burston meets the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.
	Suggest that the Project is routed away from Roydon Fen / Wortham Ling / the permanent gypsy and traveller site in Ipswich	National Grid has considered the respondent's feedback highlighting a preference for an alternative moved away from Roydon Fen. Beyond alternatives set out in the Design Development Report (DDR) in this area, and in the absence of a specific basis for the change or a proposed alternative alignment, we have considered this feedback by following the guidance in the Holford Rules in developing the draft alignment. Guidelines on overhead line routeing are known as the 'Holford Rules' which remain a valuable tool in selecting and assessing potential overhead line route options as part of the options appraisal process.
	Suggest a realignment of the route to the east of Diss and across the Waveney Valley, with a combination of overground and underground cable options	National Grid has reviewed routes passing to the west and east of Diss explaining its decision making during the development of the Project in the Design Development Reports in 2023, 2024 (which are available on the Project website) and in the 2025 (DDR) (document reference 5.15) and considering both overhead line and underground cable connection methods. In the absence of new information or the identification of further

Headline Issue	Matters Raised	National Grid regard to matters raised
	<p>Suggest that the Project is integrated with existing pylons (both 400 kV and 132 kV), or that existing pylons are upgraded instead</p>	<p>factors no change to the position set out in the 2025 DDR is proposed.</p> <p>As part of the identification of the most appropriate means of responding to the reinforcement need case, National Grid considered whether upgrades of the existing network would be sufficient. Some additional capability was provided by upgrading the existing connections such as the existing 400 kV overhead line from Norwich to Bramford which was fitted with new conductor bundles to almost double the capability. Even with such improvements (as set out in the CPRSS – see the Project Website) additional reinforcement was identified to be required to respond to the scale of new connection. Whilst noting the need to maintain the connection provided by existing 132 kV routes, opportunities to reduce the scale of change of effects through modification of the 132kV network have been reviewed. Firstly the existing 132kV pylons cannot be upgraded as they are not strong enough for the weight of conductor required. In some case the opportunity to run parallel with existing 132kV pylons have been taken, in other cases the 132kV has been replaced by underground cable to allow the 400kV to take the same alignment. Circumstances are considered on a case by case basis and there are also examples where there is insufficient clearance to allow the larger 400kV network to safely follow the same</p>

Headline Issue	Matters Raised	National Grid regard to matters raised
		<p>alignment. Overall it is considered that the existing networks have been modified to the extent possible whilst achieving an efficient basis to meet the reinforcement need.</p>
Environmental impact	<p>Feedback concerning impact on designated sites (e.g. SSSI, ancient woodland, an RSPB reserve, nature reserve)</p> <p>Feedback concerning negative impact on the environment generally</p>	<p>Through routeing and siting, National Grid has sought and will continue to reduce as far as practicable impacts on biodiversity and in particular features of high ecological value, such as Sites of Special Scientific Interest (SSSI), Special Protection Areas (SPAs), Ramsar sites and Ancient Woodland. The process of route design takes account of existing biodiversity, the natural environment and, where practicable, seeks to reduce potential impacts on areas of ecological sensitivity, through avoidance or mitigation. The Environmental Impact Assessment (EIA) for the Project will assess the effects on biodiversity (which includes receptors such as SSSIs, SPAs, Ramsar sites and Ancient Woodland) and where necessary will detail mitigation requirements. The assessment methodology has been discussed and agreed with Natural England and the assessment will be presented in the Environmental Statement (ES) or Habitats Regulations Assessment (HRA) depending on potential impact pathways. We will continue to engage with Natural England, the Royal Society for the Protection of Birds (RSPB) and other</p>

Headline Issue	Matters Raised	National Grid regard to matters raised
		<p>relevant stakeholders on aspects relating to biodiversity and the natural environment, including appropriate mitigation measures and techniques, and will take their views into account as the Project continues to develop</p>
Financial compensation	Feedback concerning negative impact on property value	<p>National Grid acknowledges that its proposals may cause concern to landowners. Diminishment of property value known as ‘injurious affection’ and any other appropriate heads of claim will be considered on an individual basis in accordance with current legislation. We will pursue a voluntary agreement with affected landowners, acquiring rights in accordance with our Land Rights Strategy (the strategy is subject to review). If a voluntary agreement cannot be reached, then the Compulsory Purchase Code allows for a claim of compensation for the loss that property owners may have suffered as a direct result of the retained part of your property ownership being worth less as a direct result of the works. If there are any specific concerns about the devaluation of property National Grid would advise seeking third party advice or alternatively, please contact the Project team: Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314. Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket</p>

Headline Issue	Matters Raised	National Grid regard to matters raised
		<p>Road, Risby, Bury St Edmunds, IP28 6RD. Health, Safety and Wellbeing 4.4.51</p> <p>Concern that the Project may result in a negative impact on mental health / health and wellbeing. National Grid recognises people may have concerns about the health effects of living close to an overhead line, and that the uncertainty whilst the proposals are developed may cause anxiety.</p>
Heritage	Feedback concerning impacts on archaeology and sites of significance	<p>Through routeing and siting National Grid has sought to reduce as far as practicable potential impacts on the historic environment. The impacts of the Project on the historic environment are assessed in Chapter 11: Historic Environment of the Environmental Statement (ES) (document reference 6.11). The assessment considers the potential impact on archaeology, historic buildings and historic landscapes and includes assessment of potential for physical impact, impact through change to setting that affects the value of a heritage asset and impact through indirect factors such as change in hydromorphology. The assessment is supported by walkover, setting and geophysical surveys, as documented in Appendix 11.1 Historic Environment Baseline Report (document reference 6.11.A1) and Appendix 11.4 Geophysical Survey Results Report (document reference 6.11.A4). Archaeological trial trench evaluation has also been</p>

Headline Issue	Matters Raised	National Grid regard to matters raised
		undertaken and is reported in Appendix 11.5 Trial Trenching Results Report (document reference 6.11.A5). In addition to the proposals in the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4), the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (AMS-OWSI) (document reference 7.5) sets out appropriate mitigation for the historic environment. The Project has engaged with Historic England and relevant planning authorities on aspects relating to heritage, including appropriate mitigation measures and techniques and to take their views into account during the development of the Project.
Visual Impact	<p>Feedback concerning negative impact on landscape, including at Aldham and Fordham and suggestions that an alternative route should be used</p> <p>Feedback concerning the Project will be unsightly / visually intrusive (e.g. overhead lines, CSE compounds and substations)</p>	<p>The relevant National Policy Statement (NPS) is EN-5 which makes it clear that the Government considers overhead lines to be appropriate and acceptable in most instances, although it recognises that that there may be, at particularly sensitive locations, potential adverse landscape and visual impacts of an overhead line that make it inconsistent with our duties and relevant planning policy. In such cases the use of 400 kV underground cable would be adopted between carefully sited Cable Sealing End (CSE) compounds noting that such structures themselves may give rise to visual effects. The proposed East Anglia Connection Node (EACN) substation siting has also considered the</p>

Headline Issue	Matters Raised	National Grid regard to matters raised
		<p>potential for landscape and visual effects and whether particular sites provide greater screening or potential for screening to reduce effects. Projects of this nature are required to assess the potential environmental impacts of the proposals, and report on those, and set out proposed mitigation, in an Environmental Statement (ES) in accordance with the relevant Environmental Impact Assessment (EIA) Regulations. The EIA starts early in the process and, in that respect, a considerable amount of assessment work has been undertaken to allow preliminary judgements to be made about the design and routeing of the Project. This has been set out in various publications (The Corridor and Preliminary Routeing and Siting Study (CPRSS), published as part of the 2022 non-statutory consultation, the Design Development Report, 2022 Non-Statutory Consultation Feedback Report and Strategic Options Backcheck and Review, published as part of the 2023 non-statutory consultation) with feedback helping shape the preliminary proposals. Further detailed assessment work has been undertaken since the 2023 non-statutory consultation and is published in the Preliminary Environmental Information Report (PEIR) to accompany the statutory consultation stage of the Project. National Grid will be writing up its Landscape and Visual Impact Assessment (LVIA) that will,</p>

Headline Issue	Matters Raised	National Grid regard to matters raised
		<p>in addition to other topic specific assessments, form the latter part of the EIA for the Project. This will include a write-up of an assessment on both landscape character and visual amenity. Where likely significant effects are anticipated the LVIA will consider and identify areas where it may be necessary and appropriate to put forward potential mitigation such as screen planting and softening as part of an iterative design and assessment process.</p>
Wildlife / Ecology impact	Feedback concerning negative impact of the Project (including overhead lines) on wildlife including birds and protected species	<p>Birds are being assessed in the biodiversity assessment which will form part of the Environmental Impact Assessment (EIA) following extensive desk study and field work. A bespoke survey scope specifically to assess collision risk with overhead lines has been agreed with Natural England targeting wintering / passage birds. Surveys commenced in September 2022 with the assessment to be included within the EIA. Should adverse impact be identified, they will be minimised as far as possible, where practicable. It is anticipated that a range of habitats within the land required for the construction of the Project would provide suitable habitat to support breeding birds and particularly those associated with farmland habitat. A survey scope for breeding birds is currently being discussed with Natural England ahead of the 2024 breeding season to identify key areas and</p>

Headline Issue	Matters Raised	National Grid regard to matters raised
	<p>Feedback concerning negative impact on habitats / flora / plants / woodlands / hedgerows</p>	<p>potential impact pathways. Any trees to be impacted will also be surveyed to determine their suitability to support barn owl. Following the completion of survey work, the subsequent assessment will be included within the EIA. The Biodiversity Net Gain (BNG) strategy will take into account protected/notable species such as those species mentioned. It is noted that birds are a mobile species, and it is likely that active nests may be encountered during the construction phase. Precautionary working methods for breeding birds will be included within the Outline Code of Construction Practice (CoCP) that will accompany the Development Consent Order (DCO) application.</p> <p>Through routeing and siting National Grid has sought to and will continue to reduce as far as practicable potential impacts on biodiversity including priority grassland, wetland, woodland, and hedgerow habitats. The process of route design takes account of existing biodiversity, the natural environment and, where practicable, seeks to reduce potential impacts on areas of ecological sensitivity, through avoidance or mitigation. The Environmental Impact Assessment (EIA) for the Project will assess the effects on important ecological receptors (which includes grasslands, wetlands, woodlands and hedgerows). As part of the EIA</p>

Headline Issue	Matters Raised	National Grid regard to matters raised
		<p>process for the Project, a suite of ecological surveys has been and will continue to be undertaken. The findings of which will inform the design and approach to mitigation. We will continue to engage with Natural England and Local Planning Authorities (LPAs) on aspects relating to biodiversity and the natural environment, including appropriate mitigation measures and techniques, and to take their views into account as the Project continues to develop. The Environment Act 2021 introduces a mandatory requirement for 10% Biodiversity Net Gain (BNG) for new Development Consent Order (DCO) developments (which is not yet in force). We have committed to deliver Net Gain of at least 10% or greater in environmental value (including BNG) on all construction projects. The Net Gain target for the Project is currently voluntary and aligned with our corporate sustainability commitment. As well as seeking to avoid and minimise impacts to nature, the Project will consider the land required for mitigation, compensation and enhancement that can deliver BNG and wider environmental benefits, which will be identified as the Project design develops. This may require delivery of offsite Biodiversity Units via habitat creation or enhancement actions in strategic areas, and we will consider all options that are available to us.</p>

Headline Issue	Matters Raised	National Grid regard to matters raised
Babergh, Colchester and Tendring		
Agricultural land	Feedback concerning the removal of valuable agricultural land / disruption to farming operations	National Grid is and will continue to work with all landowners, including farmers, who may be affected by the proposals to understand the impacts on their operations and to work with them as the Project is developed. We will seek to work with the farming community to limit disruption where practicable. This includes providing prior warning of works which may result in the need to move livestock. Compensation claims for disturbance are considered on a case-by-case basis if negative impact on farming operations can be proven. Particular agricultural matters can also be addressed through voluntary land agreements.
Community / Social impact	Feedback concerning negative impact on domestic horses / equestrian activities	As well as possible effects on humans, possible effects of Electric and Magnetic Fields (EMFs) on various animals have been studied a number of times. No proven effects of EMFs have been found in any species at levels below the guidelines. This is confirmed in National Policy Statement (NPS) EN-5 which states: 'There is little evidence that exposure of crops, farm animals or natural ecosystems to transmission line EMFs has any agriculturally significant consequences.' Although horses are not directly mentioned, there is no evidence to suggest they are any different to farm animals. As well as the possible direct biological or health effects addressed

Headline Issue	Matters Raised	National Grid regard to matters raised
	<p>Feedback concerning that Aldham village will be split in two by pylons</p>	<p>above, indirect effects such as microshocks can occur as a result of electric fields. Microshocks are small spark discharges which are similar to a static shock after walking across a nylon carpet for example. The Project will be designed in accordance with the principles of the Government's Code of Practice 'Power Lines: Control of Microshocks and other indirect effects of public exposure to electric fields' to ensure these are mitigated, with particular focus on equestrian activities.</p> <p>The 2023 preferred draft alignment is routed through available space between properties with what appears to be the main village to the north. Some isolated/clusters of properties may have an Aldham address and may be separated from the main village by the 2023 preferred draft alignment but alternative routes for the onward connection to Tilbury lead to greater effects as described in the 2022 Corridor and Preliminary Routeing and Siting Study (CPRSS) and the 2023 Design Development Report (DDR). Therefore, no change to the 2023 preferred draft alignment is currently proposed but we will continue to make changes to the 2024 preferred draft alignment where practicable as we receive further feedback and as the Project develops.</p>

Headline Issue	Matters Raised	National Grid regard to matters raised
Construction impacts	Feedback concerning disruption from construction and the cumulative impact with other works in the area (e.g. A12 / rail strikes)	With regards to multiple developments impacting specific areas and / or receptors, planning applications for each development would be considered on their own merit by the relevant determining authorities. Any such application would be considered in accordance with planning policy and considerations, such as scale, suitability, and need. Where there is certainty of a development (such as a new residential development, an offshore wind farm and its associated onshore equipment etc) being constructed, and there is adequate information in the public domain to understand the impacts of that development on the receiving environment, these will be considered within the cumulative effects assessment of the Project. The cumulative effects assessment will follow the Planning Inspectorate's Advice Note 17 'Cumulative Effects Assessment' and will be presented in the Environmental Statement (ES). National Grid will continue to engage with other developers who are proposing development in proximity of the Project to understand their requirements.
DESIGN CHANGE (CR)	Suggest that (additional) underground cables should be used in this section, in particular from Horkesley to the Fordham Valley and until a low contour in the land around Little Wenham Hall	In response to feedback, we have considered whether the Cable Sealing End (CSE) compound locations to the east and west of Great Horkesley should be moved to locations further from the Area of Outstanding Natural Beauty (AONB). In both cases National Grid concluded that

Headline Issue	Matters Raised	National Grid regard to matters raised
		the effects reported to drive a request for change did not, in the context of national policy or National Grid's statutory duties, justify the higher cost of underground cables to billpaying consumers, and the environmental implications of installing and maintaining them. Nevertheless, the Environmental Impact Assessment (EIA) will assess the impact of the Project and will identify any need for additional mitigation.
	Suggest that the Project is routed away from Ford Street in Aldham, properties in Ardleigh and Little Wenham Hall.	National Grid has carefully considered the feedback received during the 2023 non-statutory consultation and has assessed a number of alternative alignments in the vicinity of Aldham, details of which can be found in the Design Development Report (DDR) published as part of the 2024 statutory consultation.
	Suggest that the Project should be placed offshore, but if not possible, the substation at Ardleigh should be moved to the west of the A12	Identification of the appropriate site for the East Anglia Connection Node (EACN) substation considered a wide range of factors as set out in the Corridor and Preliminary Routeing and Siting Study (CPRSS) published as part of the 2022 non-statutory consultation. In response to feedback on the 2022 consultation, National Grid reviewed the previous work and considered other locations as reported on in the Design Development Report (DDR) published as part of the 2023 non-statutory consultation. When considered with other factors, the proposed site for the EACN substation

Headline Issue	Matters Raised	National Grid regard to matters raised
	Suggest that the Project proposals are integrated with the Sea Link proposals	<p>was identified to provide an appropriate balance. In the absence of new information our previous conclusions remain valid and other sites (greenfield and brownfield) remain less preferred compared with the site of the EACN substation for the reasons set out in the 2023 DDR. On this basis no change is currently proposed but we will continue to make changes to the 2024 preferred draft alignment where practicable as we receive further feedback and as the Project develops.</p> <p>The Sea Link project provides only a 2 GW capability whereas the Project Norwich to Tilbury reinforcement need is 6 GW. This would require additional reinforcement by multiple High Voltage Direct Current (HVDC) projects hence why National Grid concludes that an increased marine component is not the preferred option as the cost becomes disproportionately high for the power transfer achieved. No change is therefore proposed. It is also noted that the Offshore Co-ordination Support Scheme considered opportunities to integrate the customer connections with Sea-link but concluded that this was not the preferred approach.</p>
Environmental impact	Feedback concerning negative impact on the environment	National Grid has sought to reduce, as far as practicable, impacts on the

Headline Issue	Matters Raised	National Grid regard to matters raised
	<p>Feedback concerning the impact of the Project on Fordham Valley and the AONB</p>	<p>environment / countryside through routeing and siting and an ongoing iterative design process which has taken on board feedback at different stages of the Project. The iterative design process sought to avoid areas of highest concern, for examples through changes to the route alignment or changes to the method e.g. trenchless crossings. National Grid have engaged with a range of stakeholders (including Statutory Environmental Bodies (SEBs) and relevant Local Planning Authorities) throughout the development of the Project design and environmental assessment work.</p> <p>National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project. The results of this assessment are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation (and maintenance) of the Project and recommends appropriate mitigation measures to reduce potential effects.</p> <p>A number of mitigation measures have been incorporated into the Project design. Mitigation relevant to specific environmental topics (including Ecology</p>

		offsite Biodiversity Units via habitat creation or enhancement actions in strategic areas, and we will consider all offsite options that are available to us.
Request	<p>Requests for:</p> <ul style="list-style-type: none"> • further socioeconomic and environmental impact surveys • National Grid / Heritage Team visit the site at Little Wenham • confirmation of awareness of the archaeological sites either side of the Stour, and information about the impact / route 	National Grid has agreed a scope of surveys and assessment covering socio-economics and environmental topics with the Planning Inspectorate and relevant statutory bodies. The findings of desk studies, field surveys and various forms of investigation are reported in the Environmental Statement which also identified the need for any additional mitigation over and above any route refinement. No new information is provided to suggest this agreed approach is not appropriate. No change is proposed.
Braintree		
Community / Social impact	Feedback concerning the impact of the Project on children / families / residents / communities	National Grid recognises people may have concerns about the potential impacts of living close to an overhead line, and that the uncertainty whilst the proposals are developed may cause anxiety. We have sought to reduce potential effects on communities, residents – including children - through routeing and design. We have also sought to reduce concern or uncertainty about the proposals through making timely design decisions and engaging with people and stakeholders throughout the development of the Project. The Project team will continue to engage with people potentially affected during the development of the Project, through

Headline Issue	Matters Raised	National Grid regard to matters raised
		<p>regular communication including letters, phone calls and meetings. This will enable concerns to be raised and discussed at an early opportunity and provide a regular point of contact to respond to queries and concerns. We urge anyone with concerns to get in touch through the Norwich to Tilbury Freephone number, address or email throughout the development of the Project: • Call our Community Helpline: 0800 915 2497 (Lines are open Monday to Friday 9am-5:30pm) • Email us: contact@n-t.nationalgrid.com • Write to us: FREEPOST N TO T (No stamp or further address details are required)</p> <p>National Grid wants to leave a lasting positive impact where we build our projects, to help those areas and communities thrive and to support a sustainable future. Our Responsible Business Charter sets out our commitments and ensures that responsibility is woven through everything we do. It focusses on five key areas where we believe we can really make a difference: the environment, our communities, our people, the economy, and our governance. In addition, the Government recently ran a consultation seeking views on how community benefits should be delivered for communities that host onshore electricity transmission infrastructure. We will continue to work with the Government and regulator as they define the details of these schemes</p>

Headline Issue	Matters Raised	National Grid regard to matters raised
		emerging from the consultation and once published, will work to understand what this means for our projects.
Construction impacts	Concern about noise and other disturbances resulting from construction (e.g. mud on roads, dust)	National Grid is undertaking an Environmental Impact Assessment (EIA) for the Project. The results of this assessment, which covers noise and other potential effects such as air quality, will be provided in the Environmental Statement (ES) that will accompany the Development Consent Order (DCO) application. The ES will identify and assess the likely significant effects on the environment resulting from the construction of the Project and will recommend appropriate mitigation measures (in consultation with relevant stakeholders) to reduce potential effects. We will be writing up our noise and vibration assessment that will form part of the EIA. Noise levels and the effect on residential properties as well as other sensitive areas, such as hospitals and schools are carefully considered during Project development, assessed according to the appropriate UK standards, and mitigated where necessary. We set strict technical standards for the equipment we install on our network. These standards include requirements to ensure the occurrence of audible noise is eliminated or minimised as far as practicable. Therefore, with appropriate mitigation, significant adverse effects from noise are not expected. As part of the DCO

Headline Issue	Matters Raised	National Grid regard to matters raised
		<p>application, an Outline Code of Construction Practice (CoCP) and Outline Construction Traffic Management Plan (CTMP) will be submitted which will outline the good practice and standard control measures to reduce and mitigate potential impacts and / or disruptions that may arise during the construction phase. Many of the control measures will be based on the results from a Dust Risk Assessment (undertaken in accordance with Institute of Air Quality Management (IAQM) guidance) and will likely include wheel washing of vehicles and the correct and tidy management of works areas to reduce, as far as practicable, dust and mud entering the local road network in the form of ‘track-out’.</p>
DESIGN CHANGE (CR)	Suggest that the Project should not include land which does not have planning permission and /or is not an allocated site	<p>National Grid agrees with the respondent that a cut-off is necessary, but disagrees with the respondent at where this is drawn. It is considered reasonable to consider development proposals that are less advanced and use this as a prompt either to guide design change or allow flexibility to respond to other consent regimes. In some cases it may be appropriate to make changes where there is no material effect to other receptors, whereas in other cases incorporating some flexibility is appropriate (with wider Order Limits) to avoid the need for unnecessary challenge to 3rd party developments or prejudge their</p>

Headline Issue	Matters Raised	National Grid regard to matters raised
	<p>Suggest that the Project is routed away from properties in the area</p> <p>Suggest that pylon TB121 is re-routed away from three properties, the surrounding area and agricultural fields</p>	<p>acceptance or refusal. National Grid considers its approach to be proportionate and no change is proposed.</p> <p>National Grid has carefully considered the feedback received during the 2023 non-statutory consultation, the alternatives available, and other factors including our duties and obligations. These duties include balancing the need to be economic, efficient, and keep costs down in the interests of the bill-paying consumers, balanced against a duty to have regard to preserving amenity, the natural environment, cultural heritage, landscape, and visual quality. National Policy Statement (NPS) EN-5 makes clear that ‘the Government’s position that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e., National Parks, The Broads, or Areas of Outstanding Natural Beauty)’. The NPS also confirms that widespread and significant adverse landscape and/or visual impacts in other locations may also justify the use of undergrounding. We may also adopt underground cables in other circumstances such as to cross existing 400 kV overhead line infrastructure. No such designations or crossing locations have been identified in this section which</p>

Headline Issue	Matters Raised	National Grid regard to matters raised
		is therefore proposed as an overhead line at this stage. We are undertaking an Environmental Impact Assessment (EIA) to assess the potential impact of the Project, and this will identify any need for additional mitigation
Economic / Employment impact	Concern about negative impact on businesses	Through the routeing and siting exercise National Grid has sought and will continue to reduce as far as practicable impacts to businesses. To reduce potential impacts, we are identifying businesses and enterprises and their primary function, and also those that are likely to generate tourism such as private gardens and parks. These have been and will continue to be considered during the iterative design process. Impacts on local businesses will be presented within a Socio-economics, Recreation and Tourism assessment which is being undertaken and will be written up to form part of the Environmental Impact Assessment (EIA). As part of this assessment, a range of measures will be considered throughout the construction phase of the Project to minimise disruption to businesses and their users. These measures will be identified within the Environmental Statement (ES) that will accompany the Development Consent Order (DCO) application.
Environmental impact	Feedback concerning negative impact on the environment	Through routeing and siting, National Grid has sought and will continue to reduce as far as practicable impacts on the

Headline Issue	Matters Raised	National Grid regard to matters raised
		<p>environment. National Grid is undertaking an Environmental Impact Assessment (EIA) for the Project. The results of this assessment will be provided in the Environmental Statement (ES) that will accompany the Development Consent Order (DCO) application. The ES will identify and assess the likely significant effects on the environment resulting from the construction and operation (and maintenance) of the Project and will recommend appropriate mitigation measures to reduce potential effects. The scope of the EIA is included in the Scoping Report which was submitted to the Planning Inspectorate in November 2022. We will continue to engage with a range of stakeholders (including Statutory Environmental Bodies (SEBs) and relevant Local Planning Authorities (LPAs)) throughout the development of the Project design and environmental assessment work</p>
Heritage	Feedback concerning negative impact on heritage/ listed buildings and historical sites, including suggestions to route away from such sites, including the impact of pylons TB120 and TB121	<p>National Grid, through the routeing and siting exercise, has sought to reduce the impact on the historic environment, including all designated heritage assets. National Grid has considered the respondent's feedback, due to multiple constraints in this area such as woodland, residential properties and listed buildings, it is not possible to move the alignment between TB120 and TB121 (now TB122 and TB123) further away from historical</p>

Headline Issue	Matters Raised	National Grid regard to matters raised
		<p>sites in the area without transferring or increasing effects on other properties or increasing woodland loss. We are therefore not proposing a change to the alignment at this location but have extended the length of the 132kV lattice pylon alignment that is replaced with underground cable. Whilst focussed on reducing cumulative effects this also reduces some heritage effects. National Grid has completed the Environmental Impact Assessment (EIA) for the Project. The results of this assessment are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application. The ES identifies and assesses the likely significant effects on the environment resulting from the construction of the Project and recommends appropriate mitigation measures (in consultation with relevant stakeholders) to reduce potential effects.</p> <p>The impacts of the Project on the historic environment are assessed in Chapter 11: Historic Environment (document reference 6.11) of the ES. The assessment considers the potential impacts to heritage assets and includes assessment of potential for physical impact and impact through change to setting that affects the value of a heritage asset. The Project has engaged with Historic England and relevant planning authorities on aspects</p>

Headline Issue	Matters Raised	National Grid regard to matters raised
		relating to heritage, including appropriate mitigation measures and techniques and to take their views into account during Project development.
PROW	Feedback concerning negative impact on PROWs	Through routeing and siting, National Grid has sought to and will continue to reduce, as far as practicable, impacts and disruption to Public Rights of Way (PRoW). The iterative process of route design has identified the existing PRoW network and their wider connectivity and sought where practicable to reduce and where possible remove impacts to PRoW. If mitigation is required, measures may include the temporary closure of PRoW during the construction phase, and where practicable a diversion to allow for the continued use and movement of the wider PRoW network. Effects on PRoW will be mitigated where possible, maintaining access where practicable, with closures as a last resort. We will continue to engage with relevant stakeholders on the PRoW network to enable feedback and input to be considered as the Project develops. A PRoW Management Strategy will be prepared as part of the Outline Code of Construction Practice (CoCP) and submitted with the Development Consent Order (DCO) application.
Visual Impact	Feedback concerning negative impact on landscape / will be unsightly / visually intrusive (e.g. overhead lines, CSE compounds and substations)	The relevant National Policy Statement (NPS) is EN-5 which makes it clear that the Government considers overhead lines to be appropriate and acceptable in most

Headline Issue	Matters Raised	National Grid regard to matters raised
		<p>instances, although it recognises that that there may be, at particularly sensitive locations, potential adverse landscape and visual impacts of an overhead line that make it inconsistent with our duties and relevant planning policy. In such cases the use of 400 kV underground cable would be adopted between carefully sited Cable Sealing End (CSE) compounds noting that such structures themselves may give rise to visual effects. The proposed East Anglia Connection Node (EACN) substation siting has also considered the potential for landscape and visual effects and whether particular sites provide greater screening or potential for screening to reduce effects. Projects of this nature are required to assess the potential environmental impacts of the proposals, and report on those, and set out proposed mitigation, in an Environmental Statement (ES) in accordance with the relevant Environmental Impact Assessment (EIA) Regulations. The EIA starts early in the process and, in that respect, a considerable amount of assessment work has been undertaken to allow preliminary judgements to be made about the design and routeing of the Project. This has been set out in various publications (The Corridor and Preliminary Routeing and Siting Study (CPRSS), published as part of the 2022 non-statutory consultation, the Design Development Report, 2022 Non-</p>

Headline Issue	Matters Raised	National Grid regard to matters raised
		<p>Statutory Consultation Feedback Report and Strategic Options Backcheck and Review, published as part of the 2023 non-statutory consultation) with feedback helping shape the preliminary proposals. Further detailed assessment work has been undertaken since the 2023 non-statutory consultation and is published in the Preliminary Environmental Information Report (PEIR) to accompany the statutory consultation stage of the Project. National Grid will be writing up its Landscape and Visual Impact Assessment (LVIA) that will, in addition to other topic specific assessments, form the latter part of the EIA for the Project. This will include a write-up of an assessment on both landscape character and visual amenity. Where likely significant effects are anticipated the LVIA will consider and identify areas where it may be necessary and appropriate to put forward potential mitigation such as screen planting and softening as part of an iterative design and assessment process.</p>
Wildlife / Ecology impact	<p>Feedback concerning negative impact on flora / plants / woodlands / hedgerows</p> <p>Feedback concerning negative impact on protected species</p>	<p>Through routeing and siting National Grid has sought to and will continue to reduce as far as practicable potential impacts on biodiversity including priority grassland, wetland, woodland, and hedgerow habitats. The process of route design takes account of existing biodiversity, the natural environment and, where practicable, seeks to reduce potential</p>

Headline Issue	Matters Raised	National Grid regard to matters raised
		<p>impacts on areas of ecological sensitivity, through avoidance or mitigation. The Environmental Impact Assessment (EIA) for the Project will assess the effects on important ecological receptors (which includes grasslands, wetlands, woodlands and hedgerows). As part of the EIA process for the Project, a suite of ecological surveys has been and will continue to be undertaken. The findings of which will inform the design and approach to mitigation. We will continue to engage with Natural England and Local Planning Authorities (LPAs) on aspects relating to biodiversity and the natural environment, including appropriate mitigation measures and techniques, and to take their views into account as the Project continues to develop. The Environment Act 2021 introduces a mandatory requirement for 10% Biodiversity Net Gain (BNG) for new Development Consent Order (DCO) developments (which is not yet in force). We have committed to deliver Net Gain of at least 10% or greater in environmental value (including BNG) on all construction projects. The Net Gain target for the Project is currently voluntary and aligned with our corporate sustainability commitment. As well as seeking to avoid and minimise impacts to nature, the Project will consider the land required for mitigation, compensation and enhancement that can deliver BNG and wider environmental benefits, which will be</p>

Headline Issue	Matters Raised	National Grid regard to matters raised
		identified as the Project design develops. This may require delivery of offsite Biodiversity Units via habitat creation or enhancement actions in strategic areas, and we will consider all options that are available to us.
Chelmsford		
Community / Social impact	Feedback concerning the impact of the Project on children / families / residents / communities	National Grid recognises people may have concerns about the potential impacts of living close to an overhead line, and that the uncertainty whilst the proposals are developed may cause anxiety. We have sought to reduce potential effects on communities, residents – including children - through routeing and design. We have also sought to reduce concern or uncertainty about the proposals through making timely design decisions and engaging with people and stakeholders throughout the development of the Project. The Project team will continue to engage with people potentially affected during the development of the Project, through regular communication including letters, phone calls and meetings. This will enable concerns to be raised and discussed at an early opportunity and provide a regular point of contact to respond to queries and concerns. We urge anyone with concerns to get in touch through the Norwich to Tilbury Freephone number, address or email throughout the development of the Project: • Call our Community Helpline: 0800 915 2497 (Lines are open Monday to

Consultation	Feedback criticising that the heritage assessment undertaken for Little Waltham was inadequate	<p>National Grid has agreed a scope of surveys and assessment covering heritage with the Planning Inspectorate and Historic England along with heritage representatives from local planning authorities. The findings of desk studies, field surveys and various forms of investigation are reported in Environmental Statement (ES) Chapter 11: Historic Environment (document reference 6.11) which also identified the need for any additional mitigation over and above any route refinement. No new information is provided to suggest this agreed approach is not appropriate. Whilst the respondent may disagree with the findings we do not consider further change</p>

Headline Issue	Matters Raised	National Grid regard to matters raised
	Feedback criticising engagement with local history groups regarding a Late Iron Age / Romano-British archaeology site in Broomfield	<p>of the design at Little Wenham is required and no change is proposed</p> <p>National Grid has worked to minimise potential impacts on the historic environment through strategic routeing and siting measures. The results of archaeological fieldwork and heritage assessments, including a review of known archaeological sites such as the pre-Belgic Iron Age remains identified in the early 1970s near Little Waltham, have informed the design process. Information regarding heritage assets provided to the Project through consultation has been considered and included in ES Appendix 11.1 Historic Environment Baseline Report (document reference 6.11.A1). The Environmental Statement (ES), Chapter 11: Historic Environment (document reference 6.11), provides a detailed assessment of potential effects on both designated and non-designated heritage assets, including those of archaeological interest. Where non-designated assets have been assessed as being of medium or high value and within the 250 m study area, their settings and potential for significant effects have been thoroughly considered in accordance with the agreed methodology.</p>
	Suggest holding face-to-face meetings in parish halls and meeting rooms in the affected areas of Ingatestone and Haverings Grove	Before the start of the statutory consultation, National Grid discussed its approach with officers from the Local Planning Authorities and prepared a

Headline Issue	Matters Raised	National Grid regard to matters raised
		<p>Statement of Community Consultation (SOCC). This document set out how we were planning to consult on the project and is published on the Project website.</p> <p>To help ensure the consultation was accessible, we wrote to approximately 77,000 properties with details of our proposals and held 14 face-to-face events and six webinars. These events provided the opportunity for direct engagement with the project team that was requested in the feedback. Whilst events may not have been held in the specific locations they were held in close proximity at venues with suitable capacity. The webinars providing a further opportunity to ask questions and raise concerns.</p> <p>Information in the 2024 Project Background Document and website was written in non-technical language, supplemented with visual materials, to help explain the Project. National Grid also published the 2024 Guide to Interacting With Our Consultation Plans which provided guidance on what is shown on the plans.</p>
DESIGN CHANGE (CR)	Suggest that the Project is routed away from the Wid Valley near Ingatestone / farmland to the north and west of Little Waltham	<p>Whilst noting the preference for a route away from the Wid Valley, the reasons for a preference for the current alignment remain as set out in the Design Development Report (document reference 5.15 as well as the previous 2023 and 2024 versions available on the Project Website). These include to reduce effects</p>

Headline Issue	Matters Raised	National Grid regard to matters raised
		<p>on various heritage assets most notably the Grade I Listed Ingatestone Hall and Grade I Listed St Giles Church. In the absence of further evidence National Grid consider the alignment to be consistent with our duties and relevant policies and for this still to be preferred.</p> <p>In response to feedback received during the 2024 statutory consultation and the 2025 targeted consultation, National Grid has considered alternative alignments (which includes that suggested by the respondent to go west of Little Waltham) to the east and west of Chelmsford, modifications to the alignment consulted upon along with the selection of pylon type as well as the justification for the use of underground cable. In the Corridor and Preliminary Routing and Siting Study (CPRSS) published as part of the 2022 non-statutory consultation and in the Design Development Report's, National Grid set out the challenges associated with routeing either further to the west or to the east of Chelmsford parallel to the existing 400 kV overhead line. Whilst noting the respondent's preference for one of these alternatives, no new factors have been identified nor new evidence provided nor identified to remove the basis for previous decision making. Firstly, it is noted that our assessments of the Project alignment are that it is not unacceptable in policy terms and there is no specific need therefore to change, nonetheless we have</p>

Headline Issue	Matters Raised	National Grid regard to matters raised
	<p>Suggest that pylon TB146 is re-routed away from Romano-Celtic temple</p>	<p>reviewed other route alternatives. The eastern route around Chelmsford remains less preferred and no change to the fundamental constraints to successful routeing have been identified or proposed. We have also previously reviewed a more westerly alignment which would be routed away from Little Waltham diverting from the south of Great Leighs towards Pleshey and then southwards past Great Waltham towards Chignal Smealey. Whilst noting a reduction in some effects for this more western alternative, it would be a longer route by 2.5km to 3km with a degree of transfer of effects. Given that none of the effects arising for the Project alignment are considered to be at a level which is unacceptable in policy terms, National Grid continues to prefer the Project alignment and for the reasons stated the eastern and western alternatives are not progressed.</p> <p>We have undertaken an Environmental Impact Assessment (EIA) which has assessed the potential impacts of the Project and has identified any need for additional mitigation. The results of the EIA are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application.</p> <p>TB146 (now TB149) has been moved southwards in response to this feedback.</p>

Headline Issue	Matters Raised	National Grid regard to matters raised
	remains and the area of Late Iron Age and Roman finds, or that the area is fully excavated prior to construction	The Environmental Statement (ES), Chapter 11: Historic Environment (document reference 6.11), provides a detailed assessment of potential effects on both designated and non-designated heritage assets, including those of archaeological interest. Where assets have been assessed as being of medium or high value and within the 250 m study area, their settings and potential for significant effects have been thoroughly considered in accordance with the agreed methodology
	Suggest that underground cables are used through Little Waltham	National Grid has carefully considered the feedback received during the 2023 non-statutory consultation, the alternatives available, and other factors including our duties and obligations. These duties include balancing the need to be economic, efficient, and keep costs down in the interests of the bill-paying consumers, balanced against a duty to have regard to preserving amenity, the natural environment, cultural heritage, landscape, and visual quality. National Policy Statement (NPS) EN-5 makes clear that ‘the Government’s position that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or Areas of Outstanding Natural Beauty)’. The NPS

Headline Issue	Matters Raised	National Grid regard to matters raised
	<p>Detailed suggestions to re-route the Project in the area to the south of Chelmsford to minimise impact on Ingatestone and Margaretting</p>	<p>also confirms that widespread and significant adverse landscape and/or visual impacts in other locations may also justify the use of undergrounding. We may also adopt underground cables in other circumstances such as to cross existing 400 kV overhead line infrastructure. No such designations or crossing locations have been identified at Little and Great Waltham which is therefore proposed as an overhead line at this stage. We are undertaking an Environmental Impact Assessment (EIA) to assess the potential impact of the Project, and this will identify any need for additional mitigation.</p> <p>In the Corridor and Preliminary Routing and Siting Study (CPRSS) published as part of the 2022 non-statutory consultation and in the Design Development Report's published as part of the 2023 non-statutory and statutory consultations, which can be found on the Project website, and the 2025 Design Development Report (document reference 5.15), National Grid set out the challenges associated with routeing to the east and south of Chelmsford closely following the corridor with the existing 400 kV overhead line and the A12. Whilst noting the respondent's preference, no new factors have been identified nor new evidence provided nor identified to reduce the greater effects or address the constraints to routeing that are associated with</p>

Headline Issue	Matters Raised	National Grid regard to matters raised
		<p>following existing infrastructure. As such passing to the eastern or southern side of Chelmsford remains less preferred and no change has been proposed.</p>
Environmental impact	Feedback concerning the impact on designated sites (e.g. SSSI, ancient woodland, a RSPB reserve)	<p>Through routeing and siting, National Grid has sought and will continue to reduce as far as practicable impacts on biodiversity and in particular features of high ecological value, such as Sites of Special Scientific Interest (SSSI), Special Protection Areas (SPAs), Ramsar sites and Ancient Woodland. The process of route design takes account of existing biodiversity, the natural environment and, where practicable, seeks to reduce potential impacts on areas of ecological sensitivity, through avoidance or mitigation. The Environmental Impact Assessment (EIA) for the Project will assess the effects on biodiversity (which includes receptors such as SSSIs, SPAs, Ramsar sites and Ancient Woodland) and where necessary will detail mitigation requirements. The assessment methodology has been discussed and agreed with Natural England and the assessment will be presented in the Environmental Statement (ES) or Habitats Regulations Assessment (HRA) depending on potential impact pathways. We will continue to engage with Natural England, the Royal Society for the Protection of Birds (RSPB) and other relevant stakeholders on aspects relating</p>

Headline Issue	Matters Raised	National Grid regard to matters raised
		to biodiversity and the natural environment, including appropriate mitigation measures and techniques, and will take their views into account as the Project continues to develop.
Heritage	<p>Feedback concerning negative impact on heritage / listed buildings and historical sites, including suggestions to route away from such sites</p> <p>Feedback concerning impacts to archaeology and sites of significance</p>	Through routeing and siting National Grid has sought to and will continue to reduce as far as practicable potential impacts on the historic environment, including listed buildings and known heritage assets. If potential impacts on the historic environment are identified, we will explore a range of mitigation measures such as careful siting of pylons and screening (both new and existing) to reduce potential impacts where practicable. This will be presented within the Historic Environment Assessment which will be written up and will form part of the Environmental Impact Assessment (EIA) for the Project. We will continue to engage with Historic England and relevant Local Planning Authorities (LPAs) on aspects relating to heritage, including appropriate mitigation measures and techniques and will take their views into account as the Project continues to develop.

Headline Issue	Matters Raised	National Grid regard to matters raised
		<p>consideration of feedback on the 2023 non-statutory consultation and informed by additional study, we are now proposing to increase the extent of underground cabling by approximately 1.5 km to a total of approximately 20 km of underground cable at areas that are identified as of highest landscape value for example within the Dedham Vale AONB and within the vicinity of the AONB near Great Horkesley. Elsewhere along the 2024 preferred draft alignment, with the exception of the alignment near Diss, the higher cost of underground cables to bill-paying consumers, and the environmental implications of installing and maintaining them, are not considered to be justifiable in the context of national policy or National Grid's statutory duties. At Diss there remains an option to use underground cable but this is subject to consideration of the findings of ongoing investigations. Nevertheless, an Environmental Impact Assessment (EIA) will assess the impact of the Project and will identify any need for additional mitigation.</p>
Economic / Employment impact	Feedback concerning negative impact on businesses	<p>Through the routeing and siting exercise National Grid has sought and will continue to reduce as far as practicable impacts to businesses. To reduce potential impacts, we are identifying businesses and enterprises and their primary function, and also those that are likely to generate tourism such as private gardens and</p>

Headline Issue	Matters Raised	National Grid regard to matters raised
		<p>parks. These have been and will continue to be considered during the iterative design process. Impacts on local businesses will be presented within a Socio-economics, Recreation and Tourism assessment which is being undertaken and will be written up to form part of the Environmental Impact Assessment (EIA). As part of this assessment, a range of measures will be considered throughout the construction phase of the Project to minimise disruption to businesses and their users. These measures will be identified within the Environmental Statement (ES) that will accompany the Development Consent Order (DCO) application.</p>
Heritage	Feedback concerning negative impact on heritage/ listed buildings and historical sites, including suggestions to route away from such sites	<p>Through routeing and siting National Grid has sought to and will continue to reduce as far as practicable potential impacts on the historic environment, including listed buildings and known heritage assets. If potential impacts on the historic environment are identified, we will explore a range of mitigation measures such as careful siting of pylons and screening (both new and existing) to reduce potential impacts where practicable. This will be presented within the Historic Environment Assessment which will be written up and will form part of the Environmental Impact Assessment (EIA) for the Project. We will continue to engage with Historic England and relevant Local Planning Authorities</p>

Headline Issue	Matters Raised	National Grid regard to matters raised
		(LPAs) on aspects relating to heritage, including appropriate mitigation measures and techniques and will take their views into account as the Project continues to develop
Thurrock		
No responses		
No Location		
Agricultural land	Feedback concerning the removal of valuable agricultural land / disruption to farming operations	National Grid is and will continue to work with all landowners including farmers who may be affected by the proposals to understand the impacts on their operations and to work with them as the Project is developed. We will seek to work with the farming community to limit disruption where practicable. This includes providing prior warning of works which may result in the need to move livestock. Compensation claims for disturbance are considered on a case-by-case basis, if negative impact on farming operations can be proven. Particular agricultural matters can also be addressed through voluntary land agreements. There will also be mitigation put in place where animal grazing maybe affected. As well as possible effects on humans, possible effects of Electric and Magnetic Fields (EMFs) on various animals have been studied a number of times. No detectable effects of EMFs have been found on, for example, health, milk production, fertility, and behaviour. This is confirmed in

Headline Issue	Matters Raised	National Grid regard to matters raised
		National Policy Statement (NPS) EN-5 which states: 'There is little evidence that exposure of crops, farm animals or natural ecosystems to transmission line EMFs has any agriculturally significant consequences.'
Community / Social impact	Feedback concerning the impact of the Project on children / families / residents / communities and becoming encircled by overhead lines	Radiofrequency emissions can interfere with electrical equipment, telecommunication. WiFi and broadcast equipment. These emissions are limited from overhead lines by design set out in National Grid's Technical Specifications, which include the requirements of British standards minimising the generation of radio interference. All the equipment used will meet the requirements in these standards, which are in place to prevent interference issues. These are the same good engineering practices that are applied to the existing transmission system assets, including existing 400 kV overhead lines, which cause no interference issues for electrical equipment, telecommunication, WiFi and broadcast equipment under normal operating conditions. Therefore, we also expect no interference issues as a result of the Project. Global Positioning Systems (GPS) are increasingly being used to provide accurate position information such as in precision farming. It uses a radio receiver to receive the transmitted radio signals from a number of satellites orbiting the earth. Additional accuracy is used in

Headline Issue	Matters Raised	National Grid regard to matters raised
	Feedback concerning impact on leisure	<p>differential GPS (DGPS) which involves the use of signals transmitted from a local fixed transmitter (or another satellite). Close to a pylon, there might be some degradation in GPS performance, just as there can be some degradation close to buildings and trees. The individual wires of a power line are very thin, so they do not cause a problem. Any radio interference emitted by the line is too small to have any effect. Other than that, there is no evidence of power lines interfering with GPS used in precision farming.</p> <p>National Grid has a duty under the Electricity Act 1989 to have regard to the desirability of (amongst other things) preserving natural beauty, and to do what it reasonably can to mitigate the associated effects of new infrastructure. Through routeing and siting we have sought to avoid, as far as practicable, locations important for leisure and tourism. We will continue to consider these locations as we develop our proposals and seek to reduce effects, by implementing measures such as the use of underground cables in the areas of highest amenity value (Dedham Vale Area of Outstanding Natural Beauty (AONB)), and appropriately control construction related traffic movements during the construction phase to minimise disruption to local road users Where impacts on leisure and tourism are identified, these will be</p>

We note the comment and will keep this under review at the next stage of the Project</p> <p>Before the start of the 2023 non-statutory consultation, National Grid prepared a Consultation Strategy. This document sets out how we were planning to consult on the Project. We shared this in draft with the potentially affected Local Authorities who provided us with comments (see Appendix B of this report) based on their knowledge and experience of consultation in the area. We amended the Strategy based on feedback where practicable. The Public Consultation Strategy is available as Appendix A of this report and the consultation was undertaken in accordance with this. Feedback has been reviewed by the Project team and responses are published in this Feedback Report. Where feedback has influenced the design of the Project this has also been included. Before any further stage of consultation, we will update the Consultation Strategy and engage with Local Authorities for their views on how we should conduct the consultation.</p> <p>The feedback form provided as part of the consultation is only a guide to enable the consultees to provide feedback on our proposals. The feedback form included a number of open and closed questions. Free text boxes enabled people to provide</p>

Headline Issue	Matters Raised	National Grid regard to matters raised
	<p>from the previous 2022 and 2023 consultations</p> <p>Feedback criticising the consultation materials:</p> <ul style="list-style-type: none"> • use of the graduated swathe and google maps including suggestions to use CAA maps for airfields • cumbersome and misleading questionnaire • that alternatives were not presented for consideration in the 2022 or 2023 non-statutory consultations • consultation community newsletter containing out of date / inaccurate information • costs of producing the community newsletter • not enough information available for the consultation (including justification of the chosen route and for changes to previous routes) 	<p>any other feedback they wanted. Respondents were free to answer any questions they felt most relevant. National Grid have found in the past, that people find a feedback form useful in structuring their responses and that the form has been helpful. However, feedback can be provided in any way that the consultee wishes, either by using the feedback form template, by letter, email, or telephone. All feedback received from the 2023 non-statutory consultation has been read by the Project team and all feedback will continue to be considered as the Project develops. All feedback has been recorded and responded to in this report or in the Project documents supporting the 2024 statutory consultation.</p> <p>This Project comprises a proposed overhead line connection over 2 km in length and therefore it is currently expected to be classified as a Nationally Significant Infrastructure Project (NSIP). Therefore, the Project would require consent under the Planning Act 2008. The Planning Inspectorate publish guidance and advice on developing an NSIP for developers to follow. National Grid considers that we have developed our proposals and carried out consultation in accordance with the Gunning Principles. The Gunning Principles set out four principles for consultation as follows: Consultation must be at a point when proposals are still at a formative stage. A</p>

Headline Issue	Matters Raised	National Grid regard to matters raised
		<p>final decision has not yet been made, or predetermined, by the decision makers. The Project is still in the early stages. This was our second non-statutory consultation and there will be a statutory consultation in 2024. At this point no final decisions have been made. Both the 2022 and the 2023 non-statutory consultations have led us to make changes to our proposals as a result of consultation feedback. There is sufficient information to give ‘intelligent consideration’. The information provided must relate to the consultation and must be available, accessible, and easily interpretable for consultees to provide an informed response. We have published a considerable amount of information to support both non-statutory consultations. This information was available online and in paper copy at our public events during consultation and remains available on the Project website. The information published at the 2023 non-statutory consultation included the Design Development Report (DDR), the Strategic Backcheck Options and Review report (SOBR) and the Project Background Document (PBD), all available on our website. There is adequate time for consideration and response. There must be sufficient opportunity for consultees to participate in the consultation. We follow advice and guidance provided in relation to consultation for a project of this nature and are confident we go over and above any</p>

Headline Issue	Matters Raised	National Grid regard to matters raised
	<p>Feedback criticising that the Holford Rules / the Gunning Principles have not been considered</p>	<p>statutory requirements to engage fully with all stakeholders. Consideration must be given to the consultation responses before a decision is made. Decision makers should be able to provide evidence that they took consultation responses into account. In response to the consultation, we received over 4,000 responses. Responses were received from members of the public, elected members, local authorities and technical stakeholders. All responses received have been read and considered by the Project team. Information from the feedback has been considered and changes have been made as we have developed the 2024 preferred draft alignment and information is available on how feedback has influenced the Project within this report.</p> <p>National Grid disagrees that the Holford Rules have not been considered as these are referenced within the policy framework which is relevant to the Project. We would note that application of the Holford Rules typically involves balancing alternative solutions which can present conflicting Holford compliance and may from some perspectives appear to suggest an aspect has not been considered. The Design Development Report (DDR), published as part of the 2023 non-statutory consultation sets out how the Holford Rules informed decision making and the further DDR to be published as part of our 2024 statutory consultation does the same for changes to</p>

	Feedback criticising the consultation notification subscription process, including un-subscription, need to re-subscribe and requests to be informed about future consultations	<p>the 2023 preferred draft alignment. We use the Environmental Impact Assessment (EIA) process to inform the balance and define our proposals that we take forward, and which are also informed by feedback</p> <p>National Grid has a sign-up function for Project Updates via the website. These updates are issued by email at milestones, such as consultation launch. People can unsubscribe and re-subscribe depending on their preferences. We also notify people using other methods, including direct mail, advertising in local newspapers and on social media as well as outreach to community groups and organisations. We may also contact people directly in some circumstances, such as if they are a potentially affected landowner.</p>
	<p>Feedback criticising consultation events:</p> <ul style="list-style-type: none"> • only held during the daytime • only one consultation event held at the weekend • online events should have a Q&A with minutes published • independent experts and decision makers should be present at future consultation events 	<p>National Grid held 14 Public Information Events and six public webinars over a variety of days. Times and days for the events were dependent on availability of venues and three of the 14 Public Information Events and all webinars were open until 7 pm in the evening. Two of our Public Information Events were held on a Saturday to allow those who work in the week to attend. All events were attended by a large team of specialists covering routeing and design, land use matters, engineering and emf topics amongst others.</p>

Headline Issue	Matters Raised	National Grid regard to matters raised
		<p>The webinars held during statutory consultation were recorded and made available on the Project website. For GDPR reasons, we were not allowed to record the Q&A sections of the webinars where people's names and some personal information may have been shared. ¶If people had specific questions following our webinars, we had a dedicated community phonenumber and email available where we could provide answers.</p>
	Feedback criticising the promotion of LionLink cable routes in Suffolk	The LionLink project is not part of the Norwich to Tilbury project
	Feedback criticising that the Project goes against National Grid's and shareholder's Environmental Social and Governance (ESG) commitments	<p>National Grid is legally and ethically required to align its operations with relevant regulations and standards. This ensures that its activities adhere to environmental protection laws, social accountability frameworks, and governance principles. ESG reporting includes an environmental, social and governance (ESG) materiality assessment. However, this is reported on separately to meet wider legislation and corporate requirements. There is no statutory requirement for an application requiring development consent to apply ESG.</p>
	Feedback criticising National Grid generally / criticising that the Project is greenwashing	National Grid develops its projects in accordance with relevant policy, submitting its proposals as an application for Development Consent. There are effects that arise as a result of the proposals which are considered by the

Headline Issue	Matters Raised	National Grid regard to matters raised
	<p>Feedback criticising the government / local government and their green agenda / policy</p>	<p>determining authority and Secretary of State. We have undertaken an Environmental Impact Assessment (EIA) which has assessed the potential impacts of the Project and has identified any need for additional mitigation. The results of the EIA are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application</p> <p>The Government, in its Energy White Paper (EWP), states its ambition to achieve Net Zero emissions by 2050 whilst meeting a large increase in future demand (potentially doubling by 2050). To achieve this the EWP has outlined a plan to increase energy from offshore wind to 40 GW by 2030 (target increased to 50 GW in April 2022) although it is recognised that whilst a low cost, Net Zero consistent system is likely to be composed predominantly by wind and solar it also likely to require complementing intermittent renewables with technologies including nuclear and gas with carbon capture and storage. Under its transmission licence, National Grid has a statutory duty to respond to generation customers wanting to connect to the transmission network, whether this be for wind, solar, nuclear, tidal or from other forms of generation.</p>

Headline Issue	Matters Raised	National Grid regard to matters raised
	Feedback criticising the Critical National Priority policy and the legitimacy of it	National Grid develops its projects in accordance with relevant policy, submitting its proposals as an application for Development Consent. The points raised by the respondent are, in National Grid's opinion, matters considered by the determining authority and Secretary of State. No change is proposed.
	Criticism that HM Treasury Green Book has not been followed and suggest that it should follow the legal requirements and methodology	National Grid is confident that the process we follow to identify and then assess potential strategic options is robust and the most appropriate. This has been tried and tested through numerous previous projects, the formal examination process and ultimately decided by the relevant Secretary of State. The Treasury Green Book provides guidance on the interpretation by public servants of public spending, assets and resources for projects, policies and spend from the public purse. That is not relevant for National Grid Electricity Transmission (NGET). There is no requirement in the Planning Act 2008 for developers to have to submit a Treasury Green Book assessment as part of a Development Consent Order (DCO) application. NGET is an Office of Gas and Electricity Markets (Ofgem) regulated business, with obligations to consider customer, environmental and other considerations as outlined in the Electricity Act and in its licence commitments. Consideration of the costs of a project and the funding it should

Headline Issue	Matters Raised	National Grid regard to matters raised
	<p>Feedback criticising the Holistic Design Network, even though representations to the National Grid Electricity System Operator (ESO) consultation in 2020 were made</p>	<p>receive via the regulatory settlement is the subject of a separate regulatory process, and it is not appropriate for the Planning Inspectorate, Examining Authority or the Secretary of State in their remit under the Planning Act to seek to duplicate other regimes</p> <p>The National Energy System Operator (NESO) has produced a comprehensive cost breakdown of the onshore and offshore options. For further details refer to the report on East Anglia study National Energy System Operator (NESO.energy). This study assesses different ways to transfer electricity once it's landed from certain offshore windfarms off the coast of East Anglia to where it's needed. This was produced using the same metrics as set out within the Holistic Network Design, which includes: cost to consumers, deliverability and operability, impact on the environment and, impact on local communities. The study began on the 11 December 2023 and results were published on 12 March 2024. Alongside the report itself, NESO have published independent reports which have supported assessment by DNV and Jacobs.</p> <p>The scope of the Holistic Network Design (HND) was set by NESO (ESO at the time) and the Government. East Anglia was excluded from the HND as the generation projects were already progressed too far for it to be beneficial to</p>

Headline Issue	Matters Raised	National Grid regard to matters raised
	Feedback criticising that the Project is stated as ‘a greener future for East Anglia’ but it does not distribute energy to East Anglia and instead transports the energy produced south and out of East Anglia altogether	<p>consider alternate designs. Any change would delay their delivery which would adversely affect meeting climate change objectives. The HND did however acknowledge the planned and existing transmission infrastructure in East Anglia and avoid further connections coming into the region</p> <p>There is a need to reinforce the existing high voltage electricity network in the East Anglia region. It does not currently have the capability needed to transport reliably and securely the electricity that will be generated and connected to the electricity transmission network by 2030, while working to the required standards. The Project would benefit the UK as a whole, including local communities, by enabling the connection of new sources of renewable energy and by contributing to our energy security in the future, helping the country to achieve the government’s Net Zero target and ensuring that the national grid meets future power demands.</p>
DESIGN CHANGE (CR)	Suggest that the Project follows the alternative route set out in the National Grid Design Development Report of June 2023 page 58	In response to feedback received during the 2024 statutory consultation and the 2025 targeted consultation, National Grid has considered alternative alignments (which includes that suggested by the respondent to go north of Great Waltham) to the east and west of Chelmsford, modifications to the alignment consulted upon along with the selection of pylon type

Headline Issue	Matters Raised	National Grid regard to matters raised
		<p>as well as the justification for the use of underground cable. In the Corridor and Preliminary Routing and Siting Study (CPRSS) published as part of the 2022 non-statutory consultation and in the Design Development Report's, National Grid set out the challenges associated with routeing either further to the west or to the east of Chelmsford parallel to the existing 400 kV overhead line. Whilst noting the respondent's preference for one of these alternatives, no new factors have been identified nor new evidence provided nor identified to remove the basis for previous decision making. Firstly it is noted that our assessments of the Project alignment are that it is not unacceptable in policy terms and there is no specific need therefore to change, nonetheless we have reviewed other route alternatives. The eastern route around Chelmsford remains less preferred and no change to the fundamental constraints to successful routeing have been identified or proposed. We have also previously reviewed a more westerly alignment which would be routed away from Little Waltham diverting from the south of Great Leighs towards Pleshey and then southwards past Great Waltham towards Chignal Smealey. Whilst noting a reduction in some effects for this more western alternative, it would be a longer route by 2.5km to 3km with a degree of transfer of effects. Given that none of the effects arising for the Project alignment</p>

Headline Issue	Matters Raised	National Grid regard to matters raised
	<p>Feedback opposing the use of underground cables (e.g. due to environmental cost and underground cabling life expectancy)</p>	<p>are considered to be at a level which is unacceptable in policy terms, National Grid continues to prefer the Project alignment and for the reasons stated the eastern and western alternatives are not progressed. Effects are assessed and presented in the EIA and this has identified any need for additional mitigation. The results of the EIA are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application.</p> <p>National Grid understands the sentiment but is guided by Planning Policy in making decisions about the selection of technology. It has carefully considered the feedback received during the 2022 and 2023 non-statutory consultations, the statutory consultation and targeted consultations, the alternatives available, and other factors including our duties and obligations. These duties include balancing the need to be economic and efficient, which includes keeping costs down in the interests of the bill-paying consumers, with a duty to have regard to preserving amenity, which includes the natural environment, cultural heritage, landscape and visual quality, National Policy Statement (NPS) EN-5 makes clear that ‘the government’s position that overhead lines should be the strong starting presumption for electricity</p>

Headline Issue	Matters Raised	National Grid regard to matters raised
	Suggest adopting alternative, low impact pylon design or T-pylons	<p>networks developments in general, this presumption is reversed when proposed developments would cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)'. The NPS also confirms that widespread and significant adverse landscape and/or visual impacts in other locations may also justify the use of undergrounding. We may also adopt underground cables in other circumstances such as to cross existing 400 kV overhead line infrastructure.</p> <p>Where the installation of underground cables is required in lieu of overhead lines, the design of the Project has incorporated suitable consideration of the existing environment, ecology and site ground conditions based on site specific survey data. We have undertaken an Environmental Impact Assessment (EIA) which includes a baseline of the existing environment as well as site specific information and survey data. The results of the EIA are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application</p> <p>The latest independent report on the Comparison of Electricity Transmission Technologies: Costs and Characteristics (Institute of Engineering and Technology,</p>

Headline Issue	Matters Raised	National Grid regard to matters raised
		<p>2025) confirms that whilst T-Pylons may in certain locations provide an alternative to conventional overhead lines with potential benefits in visual impact and reduced land-take, this is at a higher cost. The build cost is approximately 2 to 2.5 times that of an equivalently rated conventional overhead line, and the lifetime costs are around 1.6 to 1.7 times that of a conventional overhead line. The current arrangements for the oversight of funding by Ofgem requires that the lowest cost acceptable design is taken forward rather than a more expensive design even if that design is perceived to reduce the level of effect.</p> <p>As such consideration of T pylon use follows after establishing a need to mitigate effects of the standard lattice design and after considering the benefit of adopting a low height lattice pylon design. T pylons themselves are also less adaptable to varied terrains and require more substantial access infrastructure. Furthermore, their resilience and environmental impact are comparable to conventional overhead lines, but with increased carbon intensity due to construction materials. Attention also needs to be given to the transitions between pylon types. Given It is the surrounding context that drives the need for alternative design mitigation, where this is not required along the entire route,</p>

Headline Issue	Matters Raised	National Grid regard to matters raised
	<p>Suggest that Sea Link is amended to include the connection to the Five Estuaries' and North Falls' wind farms so that this Project isn't needed</p>	<p>any visual break and transition in pylon design also needs to be carefully sited.</p> <p>Assessment findings have concluded that, where there is not a reversal of the presumption to use overhead lines, the use of lattice pylons (either standard or low height) is consistent with planning policy throughout the route. Whilst there may be some locations (for examples see appendix A of the 2024 Design Development Report) where there may be a design option for the use of T pylons, the need to mitigate for unacceptable effects from lattice pylons is not engaged. On this basis T pylons are not proposed for the Project.</p> <p>The Sea Link project provides only a 2 GW capability whereas the Project need is 6 GW. This would require additional reinforcement by multiple High Voltage Direct Current (HVDC) projects hence why National Grid concludes that an increased marine component is not the preferred option as the cost becomes disproportionately high for the power transfer achieved. No change is therefore proposed. It is also noted that the Offshore Co-ordination Support Scheme considered opportunities to integrate the customer connections with Sea-link but concluded that this was not the preferred approach.</p> <p>Even if the suggestion to connect the customers elsewhere was viable and was</p>

Headline Issue	Matters Raised	National Grid regard to matters raised
	<p>Suggest that energy is generated closer to where it is needed instead, e.g. wind power near Essex or nuclear power in London</p>	<p>taken forwards there would still be a need to reinforce the network between Norwich, Bramford and Tilbury. This was considered in the CPRSS (see the project website) and considered a less economic and efficient approach compared with integrating the connection of the customers with the reinforcement.</p> <p>The existing network in East Anglia was developed in the 1960s and has been successful in meeting demand to date. National Grid has duties to provide the network that moves electrical power at large scale between sources of generation and the Distribution Network Operators who connect to sources of demand in homes and businesses. National Grid does not identify the location of power sources, with the key influences being government policy and the support of the Network Energy System Operator (NESO) for particular projects and the establishment of connection agreements which National Grid must fulfil. Current government targets for renewable and low-carbon energy are driving a large amount of this generation to be from offshore wind farm schemes which require new connections to be established to connect to the Transmission system. There may be some potential for the generation approach raised by the respondent to be meet some of the need</p>

Headline Issue	Matters Raised	National Grid regard to matters raised
	Suggest that the Project is routed at least 1 km away from residential areas	<p>but this is ultimately for government to define.</p> <p>National Grid notes the respondent's feedback. There is no guidance that specifies that overhead pylons need to be at a specific distance from residential property. That said route development is informed by the Holford Rules, consideration of the environmental features, homes and constraints that are present with a balanced decision made. On this basis no change is proposed.</p> <p>An Environmental Impact Assessment (EIA) has been undertaken, and the findings are presented in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement), which has identified any need for additional mitigation.</p>
	Suggest that National Grid makes the assessment on the Project based on the good or harm to the UK	<p>National Grid notes the respondents preference but must follow the procedures laid down by the Planning Act 2008 and the methods and scope of environmental assessment agreed with the Planning Inspectorate and statutory bodies. This ensures that the Project is developed in line with relevant policies and in the context of what government considers to be acceptable levels of change. In deciding applications for development consent, the SoS must have regard to the relevant National Policy Statements (NPS). A planning policy appraisal against the relevant NPSs is provided in the</p>

Headline Issue	Matters Raised	National Grid regard to matters raised
	Suggest that underground cables are used for the entire Project	<p>Planning Statement (document reference 5.6) submitted as part of this application for development consent.</p> <p>National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is 'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes'. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified. Therefore the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and</p>

Headline Issue	Matters Raised	National Grid regard to matters raised
		<p>visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider this section in its entirety would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation. Therefore, whilst undergrounding the whole of this section is not considered appropriate, our proposals do include underground cable within the Dedham Vale National Landscape (previously known as Area of Outstanding Natural Beauty (AONB)) in accordance with NPS EN-5. Prior to our 2023 non-statutory consultation we identified the need to extend the</p>

Headline Issue	Matters Raised	National Grid regard to matters raised
	<p>Suggest that the Project is routed offshore until Bradwell, then uses the existing pylons along the route</p>	<p>underground cable beyond the National Landscape boundary because of potential effects, we have further extended this section of underground cable following consideration of feedback on our 2023 non-statutory consultation and additional investigation into potential effects. We also identified an approximately 4 km section near Great Horkesley as meeting the particularly sensitive criteria where underground cable is also proposed. Additionally, underground cable is proposed at Fairstead for a 400 kV overhead line crossing.</p> <p>The Project responds to a need for network reinforcement from Norwich via Bramford to Tilbury and to the need to connect a number of customers on the Tendring peninsula. National Grid has considered alternative strategic proposals (including offshore proposals) in the 2022 Corridor and Preliminary Routeing and Siting Study (CPRSS) and in subsequent Strategic Option Backcheck and Review documents published in 2023 and 2024 (found on the Project website) and also in the Design Development reports (document reference 5.15 and for 2023 and 2024 on the project website).</p> <p>In respect of connecting at the old Bradwell power station there needs to be consideration of the onward transmission. There is an existing overhead line connection to the Bradwell B site. This has</p>

Headline Issue	Matters Raised	National Grid regard to matters raised
		<p>been operating at lower voltage (132 kV) and has not been used for a few years and is in generally poor condition. This overhead line would need to be rebuilt however this onward connection via Rayleigh to Tilbury is also constrained by urban development and further designations and some sections may need to be rerouted if connections were made at Bradwell. Additionally, any connection point also requires two points of connection to the National Electricity Transmission System (NETS) (to meet compliance standards) requiring either a double overhead line through the Bradwell Peninsula and onwards to separate locations or a connection back to Bramford (in addition to one towards Tilbury). A connection to Bramford would require connections to cross the Special Protection Area (SPA) designated Blackwater Estuary (3 km to 7 km tunnel likely to be required at much greater cost) as well as interact with other Special Area of Conservation (SAC) and SPA designations. The existing network through Norfolk, Suffolk and Essex would also still need to be upgraded to transport the electricity due to come onto the network in the Norwich area and provide the necessary two points of connection to the NETS. Taken together a Bradwell point of connection requires a greater amount of new infrastructure and is therefore less economic and efficient and</p>

Headline Issue	Matters Raised	National Grid regard to matters raised
	<p>Suggest that the Project should be offshore, that an offshore grid is used instead (including partial offshore option), including the addition of sea defences to protect from erosion and save servicing costs</p> <p>Suggest that power from the Project is received offshore and converted to HVDC prior to transmitting under the sea to Tilbury</p>	<p>expected to be associated with greater environmental effects.</p> <p>The Government has set a target that by 2050 the UK will have net zero carbon emissions. In order to achieve this, and hit the targets along the way, such as connecting 40 GW of offshore wind by 2030, new infrastructure will be needed to deliver the increased energy production. This will include new overhead lines, underground cables, Cable Sealing End (CSE) compounds (where underground cables meet overhead lines) and substations.</p> <p>Offshore solutions were considered as part of our strategic proposal to upgrade the network in East Anglia. The Corridor and Preliminary Routeing and Siting Study (CPRSS) (available on the Project website) examines several strategic options that were considered for the Project that might achieve the required reinforcement including offshore and subsea options. These options were not taken forward as they did not fully address technical or physical/geographical constraints or enable the network to operate to the required standards.</p> <p>A subsea connection would have a third of the capacity of the proposed overhead line connection and therefore to transfer the anticipated levels of power generation, three subsea connections would be required including associated</p>

Headline Issue	Matters Raised	National Grid regard to matters raised
		<p>infrastructure such as convertor stations. This would make the connection significantly more costly to energy bill payers.</p> <p>In addition, an offshore option would still require development of onshore infrastructure. This would include onshore connections from Norwich, Bramford and Tilbury respectively to the coast. The onshore work is required to reinforce the existing onshore transmission network and ensure that National Grid can continue to operate the transmission network safely and securely with the increase of generation connecting into the East Anglia area.</p> <p>National Grid has continued to keep this under review both within the Design Development Reports (document reference 5.15 for the 2025 version or the Project website for earlier versions) and within the Strategic Options Backcheck and Review documents (document reference 7.17 and 7.19 for the 2023 version).</p>
Economic / Employment impact	Feedback concerning negative impact on businesses and the economy	<p>Through the routeing and siting exercise National Grid has sought and will continue to reduce as far as practicable impacts to businesses. To reduce potential impacts, we are identifying businesses and enterprises and their primary function, and also those that are likely to generate tourism such as private gardens and parks. These have been and will continue</p>

Headline Issue	Matters Raised	National Grid regard to matters raised
		<p>to be considered during the iterative design process. Impacts on local businesses will be presented within a Socio-economics, Recreation and Tourism assessment which is being undertaken and will be written up to form part of the Environmental Impact Assessment (EIA). As part of this assessment, a range of measures are being considered throughout the construction phase of the Project to minimise disruption to businesses and their users. These measures will be identified within the Environmental Statement (ES) that will accompany the Development Consent Order (DCO) application</p>
Environmental impact	<p>Feedback concerning negative impact on the environment and countryside including designated sites, SSSI, ancient woodland, and an RSPB reserve</p>	<p>Through routeing and siting, National Grid has sought and will continue to reduce as far as practicable impacts on biodiversity and in particular features of high ecological value, such as Sites of Special Scientific Interest (SSSI), Special Protection Areas (SPAs), Ramsar sites and Ancient Woodland. The process of route design takes account of existing biodiversity, the natural environment and, where practicable, seeks to reduce potential impacts on areas of ecological sensitivity, through avoidance or mitigation. The Environmental Impact Assessment (EIA) for the Project will assess the effects on biodiversity (which includes receptors such as SSSIs, SPAs, Ramsar sites and Ancient Woodland) and</p>

Headline Issue	Matters Raised	National Grid regard to matters raised
	<p>Suggest that areas other than the AONB should be protected / Criticism that only the AONB has been considered</p>	<p>where necessary will detail mitigation requirements. The assessment methodology has been discussed and agreed with Natural England and the assessment will be presented in the Environmental Statement (ES) or Habitats Regulations Assessment (HRA) depending on potential impact pathways. We will continue to engage with Natural England, the Royal Society for the Protection of Birds (RSPB) and other relevant stakeholders on aspects relating to biodiversity and the natural environment, including appropriate mitigation measures and techniques, and will take their views into account as the Project continues to develop.</p> <p>National Policy Statement (NPS) EN-5 states that the Government considers overhead lines to be appropriate and acceptable in most instances, although it recognises that there may be, at particularly sensitive locations, potential adverse landscape and visual impacts of overhead line infrastructure that make it inconsistent with our duties and relevant planning policy. The Area of Outstanding Natural Beauty (AONB) designation in this section is one such location where there is a presumption that underground cable technology is adopted with the extent of underground cabling extending beyond the boundary in response to the potential for the Project to affect the Natural Beauty</p>

Headline Issue	Matters Raised	National Grid regard to matters raised
		<p>of the AONB. Our current proposals include a total of approximately 20 km of underground cable through and in the vicinity of the Dedham Vale AONB, including a section at Great Horkesley to reduce the changes in views and setting of the AONB from within and adjacent to its designated boundary. Underground cabling is also proposed for short section for a 400 kV overhead line crossing near Fairstead and approximately 5 km from just north of the Lower Thames Crossing (LTC) through to Tilbury Substation. Projects of this nature are required to assess the potential environmental impacts of the proposals, and report on those, and set out proposed mitigation, in an Environmental Statement (ES) in accordance with the relevant Environmental Impact Assessment (EIA) Regulations. The EIA starts early in the process and, in that respect, a considerable amount of assessment work has been undertaken to allow preliminary judgements to be made about the design and routeing of the Project. This has been set out in various publications (The Corridor and Preliminary Routeing and Siting Study (CPRSS), published as part of the 2022 non-statutory consultation, the Design Development Report, 2022 Non-Statutory Consultation Feedback Report and Strategic Options Backcheck and Review, published as part of the 2023 non-statutory consultation) with feedback</p>

Headline Issue	Matters Raised	National Grid regard to matters raised
		<p>helping shape the preliminary proposals. Further detailed assessment work has been undertaken since the 2023 non-statutory consultation and is published in the Preliminary Environmental Information Report (PEIR) to accompany the statutory consultation stage of the Project. National Grid will be writing up its Landscape and Visual Impact Assessment (LVIA) that will, in addition to other topic specific assessments, form the latter part of the EIA for the Project. This will include a write-up of an assessment on both landscape character and visual amenity. Where likely significant effects are anticipated the LVIA will consider and identify areas where it may be necessary and appropriate to put forward potential mitigation as part of an iterative design and assessment process.</p>
Financial compensation	Feedback concerning negative impact on property value and request for adequate financial compensation for individuals	<p>National Grid acknowledges that its proposals may cause concern to landowners. Diminishment of property value known as ‘injurious affection’ and any other appropriate heads of claim will be considered on an individual basis in accordance with current legislation. We will pursue a voluntary agreement with affected landowners, acquiring rights in accordance with our Land Rights Strategy (the strategy is subject to review). If a voluntary agreement cannot be reached, then the Compulsory Purchase Code allows for a claim of compensation for the</p>

Headline Issue	Matters Raised	National Grid regard to matters raised
		<p>loss that property owners may have suffered as a direct result of the retained part of your property ownership being worth less as a direct result of the works. If there are any specific concerns about the devaluation of property National Grid would advise seeking third party advice or alternatively, please contact the Project team: Norwich- Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314. Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD.</p>
Health, Safety & Wellbeing	Feedback concerning potential negative impacts on mental health / health and wellbeing	<p>National Grid recognises people may have concerns about the health effects of living close to an overhead line, and that the uncertainty whilst the proposals are developed may cause anxiety. We have sought to reduce potential effects on communities and residents through routeing and design. We have also sought to reduce concern or uncertainty about the proposals through making timely design decisions and engaging with the people and stakeholders throughout the development of the Project. The Project team will continue to engage with people potentially affected during the development of the Project, through regular communication including letters, phone calls and meetings. This will enable</p>

Headline Issue	Matters Raised	National Grid regard to matters raised
	<p>Feedback concerning health risks associated with overhead lines (e.g. electromagnetic fields, cancer, physical health risks)</p>	<p>concerns to be raised and discussed at an early opportunity and provide a regular point of contact to respond to queries and concerns. We urge anyone with concerns to get in touch through the Norwich to Tilbury Freephone number, address or email throughout the development of the Project: • Call our Community Helpline: 0800 915 2497 (Lines are open Monday to Friday 9am-5:30pm) • Email us: contact@n-t.nationalgrid.com • Write to us: FREEPOST N TO T (No stamp or further address details are required)</p> <p>The UK has a carefully thought-out set of policies for protecting us all against Electric and Magnetic Fields (EMFs), the main component of which is exposure guidelines. Those exposure guidelines are set by independent scientific bodies and are based on decades-long studies into the effects of EMFs and ill health. After those decades of research, the weight of evidence is against there being any health risks of EMFs below the guideline limits. These policies are incorporated into the decision-making process for development consent in National Policy Statement (NPS) EN-5. All the equipment which forms part of this Project, will be fully compliant with these policies, set to protect everyone. This will be fully and publicly documented in the Development Consent Order (DCO) submission.</p>

Headline Issue	Matters Raised	National Grid regard to matters raised
Heritage	Feedback concerning negative impact on heritage/ listed buildings and historical sites, including suggestions to route away from such sites	Through routeing and siting National Grid has sought to and will continue to reduce as far as practicable potential impacts on the historic environment, including listed buildings and known heritage assets. If potential impacts on the historic environment are identified, we will explore a range of mitigation measures such as careful siting of pylons and screening (both new and existing) to reduce potential impacts where practicable. This will be presented within the Historic Environment Assessment which will be written up and will form part of the Environmental Impact Assessment (EIA) for the Project. We will continue to engage with Historic England and relevant Local Planning Authorities (LPAs) on aspects relating to heritage, including appropriate mitigation measures and techniques and will take their views into account as the Project continues to develop.
	Feedback concerning impacts to archaeology and sites of significance	Through routeing and siting National Grid has sought and will continue to reduce as far as practicable potential impacts on the historic environment. We will be writing up our Historic Environment Assessment which will form part of the Environmental Impact Assessment (EIA) and will identify likely significant effects on archaeological sites. To inform this assessment, we are undertaking desk-based assessment and a suite of archaeological surveys to understand the baseline historic

Headline Issue	Matters Raised	National Grid regard to matters raised
		<p>environment and refine the Project design further. We will continue to engage with Historic England and relevant Local Planning Authorities (LPAs) on aspects relating to heritage, including appropriate mitigation measures and techniques and to take their views into account as the Project continues to develop.</p>
<p>PROW</p>	<p>Feedback concerning negative impact on PROWs</p>	<p>Through routeing and siting, National Grid has sought to and will continue to reduce, as far as practicable, impacts and disruption to Public Rights of Way (PRoW). The iterative process of route design has identified the existing PRoW network and their wider connectivity and sought where practicable to reduce and where possible remove impacts to PRoW. If mitigation is required, measures may include the temporary closure of PRoW during the construction phase, and where practicable a diversion to allow for the continued use and movement of the wider PRoW network. Effects on PRoW will be mitigated where possible, maintaining access where practicable, with closures as a last resort. We will continue to engage with relevant stakeholders on the PRoW network to enable feedback and input to be considered as the Project develops. A PRoW Management Strategy will be prepared as part of the Outline Code of Construction Practice (CoCP) and submitted with the Development Consent Order (DCO) application.</p>

Headline Issue	Matters Raised	National Grid regard to matters raised
Tourism	Feedback relating to impact of the Project on tourism	<p>National Grid has a duty under the Electricity Act 1989 to have regard to the desirability of (amongst other things) preserving natural beauty, and to do what it reasonably can to mitigate the associated effects of new infrastructure.</p> <p>Through routeing and siting we have sought to avoid, as far as practicable, locations important for leisure and tourism. This includes taking forward a preferred draft route alignment which included changes to reduce effects on sites important for tourism such as Bressingham Steam Museum and Gardens.</p> <p>We will continue to consider these locations as we develop our proposals and seek to reduce effects, by implementing measures such as, the use of underground cables in the areas of highest amenity value (Dedham Vale Area of Outstanding Natural Beauty (AONB)), and appropriately control construction related traffic movements during the construction phase to minimise disruption to local road users.</p> <p>Potential impacts on leisure and tourism will be presented within a Socio-economics, Recreation and Tourism</p>

Headline Issue	Matters Raised	National Grid regard to matters raised
		<p>assessment which is being written up and will form part of the Environmental Impact Assessment (EIA). As part of this assessment, a range of measures are being considered throughout the construction phase of the Project to minimise disruption on leisure and tourism. These include traffic management, signage and routeing measures.</p> <p>These will be identified within the Environmental Statement (ES), the Outline Code of Construction Practice (CoCP) and the Outline Construction Traffic Management Plan (CTMP).</p>
Visual Impact	Feedback concerning negative impact on landscape / will be unsightly / visually intrusive (e.g. overhead lines, CSE compounds and substations)	<p>The relevant National Policy Statement (NPS) is EN-5 which makes it clear that the Government considers overhead lines to be appropriate and acceptable in most instances, although it recognises that that there may be, at particularly sensitive locations, potential adverse landscape and visual impacts of an overhead line that make it inconsistent with our duties and relevant planning policy. In such cases the use of 400 kV underground cable would be adopted between carefully sited Cable Sealing End (CSE) compounds noting that such structures themselves may give rise to visual effects. The proposed East Anglia</p>

Headline Issue	Matters Raised	National Grid regard to matters raised
		<p>Connection Node (EACN) substation siting has also considered the potential for landscape and visual effects and whether particular sites provide greater screening or potential for screening to reduce effects.</p> <p>Projects of this nature are required to assess the potential environmental impacts of the proposals, and report on those, and set out proposed mitigation, in an Environmental Statement (ES) in accordance with the relevant Environmental Impact Assessment (EIA) Regulations. The EIA starts early in the process and, in that respect, a considerable amount of assessment work has been undertaken to allow preliminary judgements to be made about the design and routeing of the Project. This has been set out in various publications (The Corridor and Preliminary Routeing and Siting Study (CPRSS), published as part of the 2022 non-statutory consultation, the Design Development Report, 2022 Non-Statutory Consultation Feedback Report and Strategic Options Backcheck and Review, published as part of the 2023 non-statutory consultation) with feedback helping shape the preliminary proposals. Further detailed assessment work has been undertaken since the 2023 non-statutory consultation and is</p>

Headline Issue	Matters Raised	National Grid regard to matters raised
		<p>published in the Preliminary Environmental Information Report (PEIR) to accompany the statutory consultation stage of the Project.</p> <p>National Grid will be writing up its Landscape and Visual Impact Assessment (LVIA) that will, in addition to other topic specific assessments, form the latter part of the EIA for the Project. This will include a write-up of an assessment on both landscape character and visual amenity. Where likely significant effects are anticipated the LVIA will consider and identify areas where it may be necessary and appropriate to put forward potential mitigation such as screen planting and softening as part of an iterative design and assessment process.</p>
Wildlife / Ecology impact	Feedback concerning negative impact on flora / plants / woodlands / hedgerows	<p>Through routeing and siting National Grid has sought to and will continue to reduce as far as practicable potential impacts on biodiversity including priority grassland, wetland, woodland, and hedgerow habitats. The process of route design takes account of existing biodiversity, the natural environment and, where practicable, seeks to reduce potential impacts on areas of ecological sensitivity, through avoidance or mitigation.</p>

Headline Issue	Matters Raised	National Grid regard to matters raised
		<p>The Environmental Impact Assessment (EIA) for the Project will assess the effects on important ecological receptors (which includes grasslands, wetlands, woodlands and hedgerows).</p> <p>As part of the EIA process for the Project, a suite of ecological surveys has been and will continue to be undertaken.</p> <p>The findings of which will inform the design and approach to mitigation.</p> <p>We will continue to engage with Natural England and Local Planning Authorities (LPAs) on aspects relating to biodiversity and the natural environment, including appropriate mitigation measures and techniques, and to take their views into account as the Project continues to develop. The Environment Act 2021 introduces a mandatory requirement for 10% Biodiversity Net Gain (BNG) for new Development Consent Order (DCO) developments (which is not yet in force). We have committed to deliver Net Gain of at least 10% or greater in environmental value (including BNG) on all construction projects. The Net Gain target for the Project is currently voluntary and aligned with our corporate sustainability commitment.</p>

Headline Issue	Matters Raised	National Grid regard to matters raised
		<p>As well as seeking to avoid and minimise impacts to nature, the Project will consider the land required for mitigation, compensation and enhancement that can deliver BNG and wider environmental benefits, which will be identified as the Project design develops. This may require delivery of offsite Biodiversity Units via habitat creation or enhancement actions in strategic areas, and we will consider all options that are available to us</p>
Request	<p>Requests for:</p> <ul style="list-style-type: none"> • further socioeconomic and environmental impact surveys to be carried out • thoughts, comments or support on costs / damage incurred through impact surveys undertaken • information relating to the current design of the 50m high 400kV steel lattice towers and the dimensions of the associated concrete base • further information on plans for aviation safety, including a list of all airfields being considered and digital route maps • an update on the proposed pylon route and visualisations • comment on the Moroccan cable under sea to the UK 	<p>There is a staged approach to the process of collection of environmental data as any major project develops. National Grid is undertaking an Environmental Impact Assessment (EIA) for the Project. The assessment will be informed by a suite of field surveys and desk studies and results will be presented in an Environmental Statement (ES) that will accompany the application for development consent. The ES will identify and assess the likely significant effects on the environment resulting from the construction and operation of the Project and will recommend appropriate mitigation measures to reduce potential adverse impacts. The scope of the EIA is included in the Scoping Report which was submitted to the Planning Inspectorate in November 2022 and their Scoping Opinion received in December 2022. This provided the opportunity for statutory bodies to</p>

Headline Issue	Matters Raised	National Grid regard to matters raised
	<ul style="list-style-type: none"> representatives from National Grid and / or a Government Minister visit pylon site and Project locations National Grid to respond to queries, contact stakeholders, organise meetings and provide a point of contact for local campaign groups deep and meaningful engagement about ESO proposals before commencing the statutory consultation 	<p>comment on the scope of the EIA which included our approach on Study Areas, data collection and baseline conditions for a range of environmental topics. We also discussed and agreed survey scope with stakeholders (including Statutory Environmental Bodies (SEBs) and relevant Local Planning Authorities (LPAs)) following the Scoping Opinion to ensure a robust baseline assessment. As part of the DCO process, we are required to prepare and publish preliminary environmental information referred to as the 'Preliminary Environmental Information Report' (PEIR) during the 'statutory consultation' period. The PEIR will provide details on the current potential effects of the Project and proposed mitigation measures. The statutory consultation period is expected to be held mid-2024 and during this we will welcome comments from stakeholders on the information presented in the PEIR (including our approach on data collection and baseline conditions).</p>

Needs case	Feedback opposing the Project generally	National Grid has a statutory duty to facilitate new connections and maintain a

Headline Issue	Matters Raised	National Grid regard to matters raised
	<p>Feedback criticising that there is no long-term Project strategy / National Grid is only thinking short term with the Project</p>	<p>safe National Electricity Transmission System (NETS). The Project would facilitate the connection agreements that are in place with two offshore wind farm projects and an interconnector project based on their connection into a new East Anglia Connection Node (EACN) substation. The Project will also reinforce the local transmission network which currently does not have the capacity needed to reliably and securely transport all the energy that is likely to be connected in the future – driven by the Government’s plan to increase offshore wind from the current 8.5 GW to 50 GW by 2030 to meet the increased demand. The needs case is reviewed at each critical stage of the Project and without a robust demonstrable need the Project would be revised or fall away. Currently the contracted generation supported by Future Energy Scenarios (FES) show a clear need for the Project.</p> <p>National Grid undertakes its activities within the scope of its Transmission Licence and as regulated by OFGEM. That defines the focus of the Project being on responding to identified need rather than responding to speculative aspiration. In defining the need this does look to the future based on connection agreement dates but again is based on firm commitments rather than speculation and aspiration.</p>

Headline Issue	Matters Raised	National Grid regard to matters raised
Project Finance / Costs	Feedback criticising the costings provided for different options by National Grid for the consultation and request for transparent costings, including for the offshore grid option	Construction costs are included in the overall estimated costs of each strategic option. This is set out in the Strategic Options Backcheck and Review (SOBR) document. This document is updated periodically and takes account any new cost or technology information, for instance along with any other changes in the planning and regulatory framework. Where the cost of more minor elements of each strategic option are unlikely to distinguish between options, these are not necessarily included.
	Request for a breakdown of the costs for the Project including costs for consultation, all infrastructure, whether compensation has been included, and how National Grid arrived at the published figure of £793m	The Strategic options backcheck and review provides the background to the cost breakdown as well as the comparative costs between options on a consistent basis. The costs will continue to evolve and be updated as the project develops
	Feedback criticising that too much weight has been given to keeping the cost of the Project low / National Grid has chosen the cheapest option Feedback criticising the use of financial compensation to go ahead with the Project	Cost is one of the factors that needs to be considered in making decisions on the Project as guided by our duties under the Electricity Act 1989. The relevant National Policy Statement (NPS) is EN-5 which makes it clear that the Government considers overhead lines to be appropriate and acceptable in most instances. However, the Government is aware that overhead lines may not be appropriate in particularly sensitive areas. The process of appraising different identified options is undertaken using guidance (National Grid's Approach to Consenting). Its aim is

Headline Issue	Matters Raised	National Grid regard to matters raised
		<p>to ensure that decisions regarding the scheme design (route, location, or technology option) are based on a full understanding and balance of the technical, socio-economic, environmental, and cost implications of each option. Once all identified options have been appraised, the option or options that best meet National Grid statutory duties and obligations are selected as the preferred option or options. These duties include balancing the need to be economic and efficient, which includes keeping costs down in the interests of the bill-paying consumers to whom the costs are eventually passed, with a duty to have regard to preserving amenity, which includes the natural environment, cultural heritage, landscape, and visual quality. The consideration of cost within the decision-making process is therefore one of our statutory duties and is not something that we could make representation to the Office of Gas and Electricity Markets (Ofgem) to waive.</p>
Project History	Suggest that National Grid needs to ensure that the Project is sustainable for future generations	<p>The Project is one of several essential network reinforcements needed to deliver on the UK's Net Zero target – without it, cleaner, greener energy generated offshore would not be able to be transported to homes and businesses across the country. To meet the predicted doubling in electricity demand by 2050 and the Government's 2050 Net Zero</p>

Headline Issue	Matters Raised	National Grid regard to matters raised
		<p>target, the Government's Energy White Paper (EWP), whilst not planning for a specific technology solution, predicts that 'a low cost, Net Zero consistent system is likely to be composed predominantly by wind and solar' but also complementing intermittent renewables with technologies including nuclear. This mix of energy production is considered to provide a more sustainable approach in line with the United Nations (UN) Sustainable Development Goals and would be facilitated by this Project.</p>

7. Preparation for Statutory Consultation

7.1 Introduction

- 7.1.1 This chapter describes the process undertaken to develop the Statement of Community Consultation (SoCC), including consultation on the draft SoCC, and how the SoCC was publicised. **Chapter 8** of this report provides details of the statutory consultation and **Table 8.4** of this report demonstrates how National Grid carried out consultation in accordance with the SoCC.

7.2 Developing the SoCC

- 7.2.1 Section 47 of the Planning Act (PA) 2008 requires developers to publish a SoCC that sets out how the Applicant proposes to consult people who may be impacted by the Project.
- 7.2.2 National Grid refined the engagement strategy and the SoCC alongside productive dialogue with the host local planning authorities (LPAs), which included both informal and formal consultation on the draft document.
- 7.2.3 **Appendix E** of this report contains information on how the approach to statutory consultation evolved from the informal (**Appendix E** of this report) and formal (**Appendix E** of this report) draft SoCCs, through to the formal SoCC (**Appendix E** of this report).
- 7.2.4 The final published SoCC is provided in **Appendix E** of this report and the Section 47 notice is in **Appendix H** of this report.

7.3 Consulting Local Planning Authorities on the SoCC

- 7.3.1 To support the preparation of the SoCC, National Grid consulted, under Section 47(2) of the PA 2008, with each of the host LPAs identified pursuant to Section 43(1) of the PA 2008, about the proposed content of the SoCC.
- 7.3.2 The following 13 host LPAs were consulted with on the SoCC:
- Babergh District Council;
 - Basildon Borough Council;
 - Braintree District Council;
 - Brentwood Borough Council;
 - Chelmsford City Council;
 - Colchester City Council;
 - Essex County Council;

- Mid Suffolk District Council;
- Norfolk County Council;
- South Norfolk and Broadland District Council;
- Suffolk County Council;
- Tendring District Council; and
- Thurrock Council.

Informal Consultation

- 7.3.3 Prior to formal consultation under Section 42(2), substantial engagement was held with the LPAs to ensure a productive and collaborative approach was taken to planning the statutory consultation.
- 7.3.4 The host LPAs were given a presentation on the draft SoCC on 23 November 2023, to give officers early sight of the consultation strategy.
- 7.3.5 An early draft SoCC (December 2023) was shared with host LPAs on 1 December 2023. Officers were invited to review and comment on the draft SoCC during an ‘informal’ 35 day consultation period, between 2 December 2023 until 5 January 2024.
- 7.3.6 Eight host authorities responded with comments (with Mid Suffolk and Babergh District Councils submitting a joint response). The host authorities that responded were:
- Babergh District Council;
 - Brentwood Borough Council;
 - Chelmsford City Council;
 - Colchester City Council;
 - Mid Suffolk District Council;
 - Norfolk County Council;
 - South Norfolk and Broadland District Council; and
 - Suffolk County Council.
- 7.3.7 Amongst the comments received, there was feedback from Brentwood Borough Council about the timing of the consultation and concerns about coinciding with the local elections in Spring/Summer 2024. Other comments related to the availability of the consultation materials and the need to make them available in libraries to increase capacity and reach a wider public audience. There were also additional requests for information events to run in Mid Suffolk and South Norfolk.
- 7.3.8 All comments were considered and changes to the initial draft of the SoCC were made. These amendments were recorded in a document titled ‘Regard had to informal comments on proposed SoCC’ (provided at **Appendix E4** of this report).

Formal Consultation

- 7.3.9 Following the informal engagement and consultation on the early draft SoCC (December 2023), the LPAs were sent a formal consultation notification on the 1 March 2024.
- 7.3.10 In accordance with Section 47(2) of the PA 2008, formal consultation on an updated draft SoCC (March 2024) took place between 2 March 2024 and 2 April 2024. Officers were invited to review and comment on the draft SoCC during the 'formal' 32 day consultation period.
- 7.3.11 The draft SoCC (March 2024) reflected the changes incorporated following informal consultation on the early draft SoCC (December 2023).
- 7.3.12 11 host LPAs responded with comments on the draft SoCC (with Mid Suffolk and Babergh District Councils submitting a joint response). The host LPAs that responded were:
- Babergh District Council;
 - Basildon Borough Council;
 - Braintree District Council;
 - Brentwood Borough Council;
 - Chelmsford City Council;
 - Colchester City Council;
 - Essex County Council;
 - Mid Suffolk District Council;
 - Norfolk County Council;
 - Tendring District Council; and
 - Thurrock Council.
- 7.3.13 South Norfolk and Broadland District Council and Suffolk County Council did not respond to the formal SoCC consultation however did provide feedback to the informal SoCC consultation. Further details can be found in **Section 7.3.3** of this report.
- 7.3.14 Amongst the comments received, there was feedback to:
- Ensure that the interactive mapping system is user-friendly, allowing postcode input for relevant information and provide detailed clear maps;
 - Provide opportunities for meaningful interaction with National Grid online or via telephone, allowing residents to submit queries and receive responses; and
 - Include where to find documents online, and clearly state locations and timings of community events with ample notice as well as a printable format of the questionnaire for public to send feedback by post.
- 7.3.15 All comments were considered, and several changes were made to the draft SoCC (such as providing additional information about National Grid and National Policy

Statements and increasing social media and press release scope. These amendments were captured in a document titled ‘Regard had to formal comments on proposed SoCC’ (provided at **Appendix E8** of this report).

7.4 Publication of the SoCC

- 7.4.1 In accordance with Section 47(6)(za) of the PA 2008, the SoCC was made available for inspection by the public in a way that is reasonably convenient for people likely to be impacted by the proposals. The SoCC was available for inspection:
- On the Project website for the start of consultation on 10 April 2024;
 - As reference copies at the inspection points (as consulted and agreed with local authorities) along the route and at public information events as detailed in **Table 7.1** below; and
 - As a printed or alternative format copy upon request

Table 7.1 Summary of Inspection Points and Public Information Events Where Printed Copies of the SoCC Were Available

Location		
Inspection points listed in the SoCC		
Long Stratton Library	Norwich Library	Prettygate Library
Tuckswood Library	Diss Library	Wivenhoe Library
Stowmarket Library	Capel St Mary Library	Stanway Library
Coggeshall Library	Chelmsford Central Library	Greenstead Library
Colchester Library	Tilbury Library	
Additional inspection points		
Manningtree Library	Basildon Library	Hatfield Peverel Library
Witham Library	Brentwood Library	Brentwood Town Council
Chadwell Library	Ingatestone Library	Writtle Library
Ipswich Library	East Tilbury Hub and Library	
Public information events		
Towngate Theatre	The Brentwood Centre	Chelmsford City Racecourse
Gislingham Village Hall	Copdock Village Hall	Needham Market Community Centre
Lawford Venture Centre 2000	The Civic Hall	Thorpe Hall
Tibenham Community Hall	Witham Public Hall	Diss Town Football Club

Location
Langham Community Centre Great Bromley Village Hall

- 7.4.2 The SoCC Section 47 notice was published in three local newspapers with a circulation area within the PCZ and SCZ, in accordance with Section 47(6)(a) of the PA 2008. It was also published in a national newspaper and the London Gazette. **Table 7.2** below summaries the newspapers in which the SoCC notice was published and the dates on which it was published.

Table 7.2 Newspapers Circulating in the Vicinity of the Proposed Development where the SoCC Section 47 Notice was Published

Newspaper	Dates
East Anglian Daily Times	10 April 2024
Eastern Daily Press	10 April 2024
London Gazette	10 April 2024
The Guardian	17 April 2024.
Essex Chronicle	11 April 2024

- 7.4.3 **Appendix H** of this report includes copies of the newspaper’s notices published which explained the project proposal, dates for the consultation, how feedback could be provided and details of locations where materials could be found, including on the Project website and at inspection points.
- 7.4.4 The Project has therefore complied with all of the enacted requirements of Section 47(6).

8. Statutory Consultation

8.1 Introduction

8.1.1 This chapter outlines the work undertaken by National Grid after the non-statutory consultation and introduces how requirements contained in Section 42 to Section 48 of the Planning Act (PA) 2008 were met. The purpose of this chapter is to provide detailed information about how the consultation was compliant with the Statement of Community Consultation (SoCC), the approach taken, and documents produced.

- **Section 8.2 Statutory Consultation Approach** of this chapter: outlines the approach taken for statutory consultation including a summary of activities conducted;
- **Section 8.3 What National Grid Consulted on** of this chapter: contains a summary of the proposals consulted on;
- **Section 8.4 Consulting Prescribed Consultees Under Section 42(1)(a)** of this chapter: contains a summary of how Section 42(1)(a) prescribed consultees were identified and consulted;
- **Section 8.5 Consulting Prescribed Consultees Under Sections 42(1)(b) and Section 43** of this chapter: contains a summary of the Section 42(1)(b) prescribed consultees were identified and consulted;
- **Section 8.6 Consulting Prescribed Consultees Under Sections 42(1)(c)** of this chapter: contains a summary of why Section 42(1)(c) prescribed consultees were not consulted;
- **Section 8.7 Consulting PILs Under Section 42(1)(d) and Section 44** of this chapter: contains a summary of how persons with an interest in land (PILs) were consulted;
- **Section 8.8 Notifying the Secretary of State Under Section 46** of this chapter: contains a summary of the process for notifying the Secretary of State for Energy Security and Net Zero (SoS) and supporting information and correspondence;
- **Section 8.9 Consulting the Local Community Under Section 47** of this chapter: sets out how National Grid has complied with its duty to consult;
- **Section 8.10 Adhering to the Commitments in the SoCC** of this chapter: sets out how National Grid carried out the commitments made in the SoCC;
- **Section 8.11 Publicising Pursuant to Section 48** of this chapter: sets out how National Grid has complied with Section 48 requirements;
- **Section 8.12 Making Information Available and Enquiry Channels** of this chapter: contains a summary of where project documentation was made available and contact information; and

- **Section 8.13 Engaging Seldom Heard Groups and key stakeholders** of this chapter: contains a summary of the engagement held with seldom heard groups and other key stakeholders.

8.2 Statutory Consultation Approach

- 8.2.1 National Grid held a statutory consultation between 10 April 2024 and 26 July 2024. The consultation period was extended for an additional five weeks, and five webinars were rescheduled to allow time for the public to provide feedback after the General Election period.
- 8.2.2 The statutory consultation was open to anyone who was interested in the Project. National Grid welcomed all views and has had regard to all comments and feedback when developing the design.
- 8.2.3 Under Section 47 of the PA 2008, National Grid has a duty to consult the local community. The SoCC detailed the approach to consultation. Two consultation zones were developed to assist engagement with the local community. These used the same buffers as the non-statutory consultation. The Primary Consultation Zone (PCZ) extended 1 km from the draft Order Limits and the Secondary Consultation Zone (SCZ) extended to at least 5 km from the draft Order Limits (and included the PCZ).
- 8.2.4 In addition to the local community, National Grid consulted with prescribed bodies and local authorities under Section 42(1)(a), (b) and (c) of the PA 2008. PILs, under Section 42(1)(d) and Section 44 were also consulted with and details are provided in **Appendix F** of this report.

8.3 What National Grid Consulted on

- 8.3.1 The statutory consultation sought views and feedback on the proposed Project both taken as a whole and its elements including:
 - The preferred draft alignment for a new 400 kV electricity transmission connection of around 184 km running from Norwich Main Substation to Tilbury Substation via Bramford Substation including approximately 159 km of new overhead line and approximately 25 km of underground cabling;
 - Six new Cable Sealing End (CSE) compounds (where high-voltage underground cables join onto an overhead line) and associated permanent accesses;
 - A new East Anglia Connection Node (EACN) substation, which would connect clean energy from offshore wind generation to the energy network so the energy can reach homes and businesses where it's needed;
 - An alternative design at Waveney Valley, substituting approximately 2 km of pylons with underground cabling;
 - Substation extension works at the existing Norwich Main, and Bramford substations and works within the existing Tilbury Substation; and
 - Temporary works including access roads, tracks, compounds and associated with the project's construction.

- 8.3.2 National Grid also consulted on the preliminary findings from our environmental studies and assessments as well as proposed mitigation for any potential impacts to the local environment, including animal habitats and the local landscape.

8.4 Consulting Prescribed Consultees Under Section 42(1)(a)

- 8.4.1 Section 42(1)(a) of the PA 2008 requires Applicants to consult with all applicable 'prescribed' bodies. Persons prescribed under Section 42(1)(a) are listed in column 1 of Schedule 1 of the Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2009 (as amended) (the "APFP Regulations").
- 8.4.2 In April 2024, The Infrastructure Planning (Miscellaneous Provisions) Regulations 2024 detailed amendments to Schedule 1. Transitional provisions in those regulations stated:
- 'The amendments in regulation 2 do not apply to any proposed application for an order granting development consent where the Applicant has started to consult under Section 42 of the Act before 30th April 2024.'*
- 8.4.3 The statutory consultation commenced on 10 April 2024 and therefore the amendments to Schedule 1 detailed in Infrastructure Planning (Miscellaneous Provisions) Regulations 2024 did not apply.
- 8.4.4 Nonetheless, the 2024 amendments were followed in full. The additional applicable prescribed body consulted in line with the April 2024 amendments was the East of England Ambulance Service.
- 8.4.5 A summary of compliance with Section 42(1)(a) of the PA 2008 is detailed in **Table 4.4** of this report.
- 8.4.6 A full list of the bodies consulted under Section 42(1)(a), as identified through Schedule 1 of the 2019 and 2024 APFP Regulations can be found at **Appendix F** of this report.
- 8.4.7 Section 42(1)(aa) requires consultation with the Marine Management Organisation (MMO). Although the application does not affect waters in or adjacent to England up to the seaward limits of the territorial sea, National Grid consulted the MMO under Section 42(1)(a) of the Planning Act 2008 on a precautionary basis as the organisation was identified in the Scoping Opinion.
- 8.4.8 On 10 April 2024 a consultation letter was sent to the Section 42(1)(a) consultees (see **Appendix F** of this report). Along with the letter, consultees were also sent a copy of the project community newsletter (see **Appendix I** of this report) and Section 48 notice (see **Appendix H** of this report).
- 8.4.9 An email containing the letter and Section 48 notice was also sent to the Section 42(1)(a) consultees on the 10 April 2024 (see **Appendix F** of this report).
- 8.4.10 As detailed in **Section 3.4.1**, the consultation was extended by five weeks. A letter detailing the extension, including the new consultation deadline was sent to the Section 42(1)(a) consultees on 5 June 2024 (see **Appendix F** of this report). Along with the letter, consultees were also sent a copy of the updated Section 48 notice (see **Appendix H** of this report).

- 8.4.11 An email containing the letter and Section 48 notice was also sent on the 5 June 2024 (see **Appendix F** of this report).
- 8.4.12 As detailed in **Section 8.4.2** of this report, in April 2024 an updated list of persons prescribed under Section 42(1)(a) was published. The 2024 statutory consultation for Norwich to Tilbury project had already commenced when this list was introduced, nonetheless, the 2024 amendments were followed in full.
- 8.4.13 On a precautionary basis, a letter (see **Appendix F** of this report) was sent on the 26 June 2024 to the East of England ambulance service as a newly identified stakeholder.
- 8.4.14 A full list of the bodies consulted under Section 42(1)(a), as identified through Schedule 1 of the 2019 and 2024 APFP Regulations can be found at **Appendix F** of this report.
- 8.4.15 The responses from Section 42(1)(a) consultees responses have been analysed and headline issues are presented in **Chapter 9** of this report.

8.5 Consulting Prescribed Consultees Under Section 42(1)(b) and Section 43

- 8.5.1 Section 42(1)(b) requires that each local authority (LPA) within Section 43 must be consulted. These are:
- A LPA is within this section if the land is in the authority's area;
 - A LPA A") is within this section if: (a) the land is in the area of another LPA("B"), (aa) B is a unitary council or a lower-tier district council, and (b) any part of the boundary of A's area is also a part of the boundary of B's area; and
 - If the land is in the area of an upper-tier county council ("C"), a LPA ("D") is within this section if: (a) D is not a lower-tier district council, and (b) any part of the boundary of D's area is also part of the boundary of C's area.
- 8.5.2 Section 42(1)(b) LPA are listed in **Table 8.1** in this report, **Appendix F** in this report and

- 8.5.3 **Figure 8.1** in this report shows the Section 42(1)(b) LPAs on a map.
- 8.5.4 On 10 April 2024 a consultation letter was sent to Section 42(1)(b) consultees (see **Appendix F** of this report). Along with the letter, consultees were also sent a copy of the project community newsletter (see **Appendix I** of this report) and Section 48 notice (see **Appendix H** of this report).
- 8.5.5 An email containing the letter and Section 48 notice was also sent to the Section 42(1)(b) consultees on the 10 April 2024 (see **Appendix F** of this report).
- 8.5.6 As detailed in **Section 3.4.1**, the consultation was extended by five weeks. A letter detailing the extension, including the new consultation deadline was sent to the Section 42(1)(b) consultees on 5 June 2024 (see **Appendix F** of this report). Along with the letter, consultees were also sent a copy of the updated Section 48 notice (see **Appendix H** of this report).
- 8.5.7 An email containing the letter and Section 48 notice was also sent on the 5 June 2024 (see **Appendix F** of this report).
- 8.5.8 The responses from Section 42(1)(b) consultees have been analysed and headline issues are presented in **Chapter 9** of this report.

Table 8.1 Section 42(1)(b) Local Authorities

Type	Local Authority	
“A” Section 43 consultees (lower-tier local authority, national park, London borough, etc. that shared a boundary with a “B” (host) authority)	The Broads Authority (National Park)	London Borough of Bexley
	Greater London Authority	Breckland Council
	London Borough of Havering	East Suffolk Council
	London Borough of Redbridge	West Suffolk Council
	Enfield London Borough Council	Norwich City Council
	London Borough of Waltham Forest	The Broads Authority
	Ebbsfleet Development Corporation	North Norfolk District Council
	Epping Forest District Council	East Cambridgeshire District
	South Cambridgeshire District	Ipswich Borough Council
	Gravesham Borough Council	Medway Council
	Great Yarmouth Borough Council	Maldon District Council
	Southend on Sea Borough Council	Rochford District Council
	Castle Point Borough Council	Norwich City Council

Type	Local Authority	
	Broadland District Council	Uttlesford District Council
	King's Lynn and West Norfolk	Dartford Borough Council
“B” Section 43 consultees (a lower-tier district council or a Unitary Council who is a host authority for the development and any associated development)	South Norfolk and Broadland District Council	Chelmsford City Council
	Mid Suffolk District Council	Thurrock Council
	Babergh District Council	Brentwood Borough Council
	Colchester City Council	Basildon Borough Council
	Tendring District Council	Braintree District Council
“C” Section 43 consultees (an upper-tier County Council who is a host authority)	Essex County Council	Suffolk County Council
	Norfolk County Council	
“D” Section 43 consultees (an authority which is not a lower-tier district council - e.g – a National park authority of a London borough – and which shared a boundary with a “C” authority)	Cambridgeshire County Council	Hertfordshire County Council
	Lincolnshire County Council	Kent County Council

Figure 8.1 Map of Section 42(1)(b) Local Authorities

8.6 Consulting Prescribed Consultees Under Section 42(1)(c)

- 8.6.1 Section 42(1)(c) requires consultation with the Greater London Authority (GLA) if the land is in Greater London.
- 8.6.2 The project is not within the GLA area and did not require consultation with the Section 42(1)(c) consultee. Nonetheless, the GLA was consulted in any case under Section 42(1)(b) on a precautionary basis.

8.7 Consulting PILs Under Section 42(1)(d) and Section 44

- 8.7.1 Section 42(1)(d) and Section 44 of the PA 2008 sets out how a project must consult with PILs, i.e. those who own, occupy, have an interest in, or are able to make certain claims for compensation in respect of, land affected by a project. Under Section 44, PILs are split into three categories:
- **Category 1:** Where the Applicant, after making diligent inquiry, knows that the person is an owner, lessee, tenant (whatever the tenancy period) or occupier of the land;
 - **Category 2:** Where the Applicant, after making diligent inquiry, knows that the person is interested in the land, or has power to sell and convey the land, or to release the land;
 - **Category 3:** Where the Applicant thinks that, if the order sought by the proposed application were to be made and fully implemented, the person would or might be entitled to make a relevant claim:
 - As a result of the implementing of the order;
 - As a result of the order having been implemented; or
 - As a result of use of the land once the order has been implemented.
- 8.7.2 A summary of the number of PILs consulted and how many fell into each category is shown in Table 8.2 of this report. The total number of letters sent to individual PILs is different to the total across the categories because where individual PILs fall under more than one category, they were only sent one letter. National Grid employed external land agents (Fisher German) to engage with landowners which has taken place throughout development of the Project and will continue to be done with the affected landowners directly or with their professional representative.
- 8.7.3 Fisher German and TerraQuest have been employed to assist in carrying out diligent inquiry to identify and consult with those with an interest in the affected land. Desktop referencing was undertaken through extraction of Land Registry data, requests for land interest information from landowners and other desktop activities to identify open spaces and rights of way.
- 8.7.4 The land interest questionnaires (LIQs) were posted to all parties identified as having an interest in the affected land to confirm their interest and request further information. The LIQs requested information about a recipient's own interests, associated third party interests and the spatial extent of the property. Included with the questionnaires were individual plans showing the extent of land ownership boundaries.

- 8.7.5 Site referencing was undertaken through site visits to understand the occupation details for properties (ownership, leases, tenants or occupiers) in addition to confirming details which had been gathered through desktop methods.

Land Referencing

- 8.7.6 Where land ownership information could not be ascertained through desktop or site referencing methods, the land referencing team erected notices on site requesting information. The notice showed the land ownership boundary in question and provided details of how to contact the land referencing team with any relevant information. These notices were checked regularly until the end of the consultation period (26 July 2024). More information about the land referencing methodology can be found in **Appendix J**.
- 8.7.7 To identify Category 3 parties associated with Part 1 claims ahead of the Section 42 consultation, technical specialists involved in preparing the EIA advised on the anticipated impacts of relevant environmental factors to inform where properties might have an adverse effect as a result of the operation of the project to check that those with a potential claim were included. At the point of statutory consultation, environmental assessments were still ongoing. Therefore, a precautionary approach was used to include all properties in the proximity of potential important noise effects based on previous project experience. More information about the land referencing methodology can be found in **Appendix J**.
- 8.7.8 Where a PIL had contacted National Grid to advise they are to be represented by a land agent, their land agent was advised by email that the LIQ was recently issued to their client(s) and if requested provided with a copy of the LIQ document. Land Agents were contacted to discuss the LIQ and request it be completed and returned unless their client had already provided the information.
- 8.7.9 Due to the length of the route, National Grid anticipated that the volumes of PILs written to was likely to alter due to many factors, including properties being bought or sold, notifications of deceased owners, and historic Land Registry records. Return to Senders at times resulted in an Unregistered Land Notice being erected on site rather than a new letter being sent. Additional land interests also came to light through the life of the project through return of LIQs. National Grid made all efforts to ensure that new data was captured through each mailout to keep the contact lists as accurate as possible. **Table 8.3** of the report includes issues that National Grid encountered during the PILs mailout and the resolutions.
- 8.7.10 A consultation letter was sent to Section 42(1)(d) and Section 44 consultees. A copy of the letter and a list of Section 42(1)(d) consultees can be found in **Appendix G**.
- 8.7.11 5,016 PILs were written to (informing them of the consultation) in letters posted week commencing 8 April 2024.
- 8.7.12 As new PILs were identified, they were written to:
- 24 letters were issued during the week commencing 6 May 2024;
 - 192 letters were issued during the week commencing 13 May 2024; and
 - 10 letters were issued week commencing 20 May 2024.

- 8.7.13 As detailed in **Section 3.4.1**, the consultation was extended by five weeks. A letter detailing the extension, including the new consultation deadline was sent to the Section 42(1)(d) and Section 44 consultees. A copy of the letter and a list of Section 42(1)(d) consultees can be found in **Appendix G**.
- 8.7.14 5,108 PILs were written to (informing them of the extended consultation deadline) in letters posted week commencing 10 June 2024.
- 8.7.15 As new PILs were identified, they were written to:
- 75 letters were issued during the week commencing 17 June 2024; and
 - 7 letters were issued during the week commencing 24 June 2024.
- 8.7.16 The total number of letters issued for the second mailout is different to the initial mailout due to some unidentified PILs being issued a site notice instead of a letter. The difference in volume of PILs written to was likely affected by one or all of the following factors including properties being bought or sold, notifications of deceased owners and historic Land Registry records.

Table 8.2 Number of PILs Consulted

Date (w/c)	Category 1	Category 2	Category 3	Statutory Undertaker	Letters sent to Individual PILs*

6 May 2024	16	0	21	0	24
13 May 2024	74	72	149	0	192
20 May 2024	1	3	10	1	10
Totals	2,384	983	4,541	13	5,242
The consultation was extended by a period of five weeks as detailed in Section 3.4.1 and newspaper adverts were republished with the new consultation deadline					
10 June 2024	2,314	944	4,433	11	5,108
17 June 2024	33	16	65	1	75
24 June 2024	3	1	7	1	7
Totals	2,350	961	4,505	13	5,190

*The number of letters sent are lower than the total of PILs in each row as some PILs had an interest in more than one Category of land. Where this was the case, PILs were only sent one letter that covered all interests.

Table 8.3 Issues and Resolutions with PILs Mailout

Issues encountered with mailout	Resolution
Royal Mail were unable to confirm the delivery status of 1,644 letters from the first mailout (week commencing 8 April 2024)	These letters were re-printed and re-issued through Yodel.
Letters were reported by the mailing service (Royal Mail or Yodel) as being delivered to neighbours	To ensure letters were re-delivered to the correct addresses, where practicable, letters were hand-delivered to addresses. Where not practicable, an alternative method was used by either a site notice or owner/occupier letter.
A batch of 31 letters was reported by the mailing service (Yodel) as water damaged and could not be delivered	Letters in this batch were re-printed and re-issued.
A batch of letters (across three postcodes in Diss) showed inaccurate proof of delivery photos so it was not clear whether letters in area were successfully delivered	Letters to the affected area were re-printed and re-issued.
Yodel could not deliver to six PO Boxes	Two letters were originally marked as delivered but were later recorded as 'Return to Sender' - see below for resolution. Three letters were hand-delivered to new addresses. One letter was no longer required following a Title Refresh.
Yodel could not deliver to a home with a locked entrance gate	The letter was re-printed and sent through Royal Mail Special Delivery.
It was reported (by the landowner) that 16 letters intended for their street were delivered to one house	The landowner was contacted to determine whether letters had been successfully delivered to street and the landowner confirmed they had distributed letters to the street.
Returns to sender received through National Grid London office	Addresses checked and letters re-issued (see Appendix G of this report).
Some areas had missing tracking information suspected due to poor signal, or where proof of delivery photographic evidence was unclear	Spot-check phone calls were conducted to evidence receipt/ identify issues in affected areas.
Four letters were marked as 'delivered' in original tracking information (including two letters from above that couldn't be delivered to PO boxes). The proof of delivery was later recorded as 'Return to Sender'. after the consultation period had finished.	Four PILs were Category 1 or Category 2 PILs, which were written to on 18 June 2025 with a Section 42 notice as part of the targeted consultation exercise.

- 8.7.17 Consultation responses from Section 42(1)(d) PILs were analysed and headline issues are presented in **Chapter 9** of this report.

8.8 Notifying the Secretary of State Under Section 46

- 8.8.1 Section 46 of the PA 2008 requires an Applicant to notify the SoS of the proposed application for development consent. This must be done on, or before, the commencement of the statutory consultation under Section 42, and the SoS must be supplied with the same information as is proposed to be used for the Section 42 consultation.
- 8.8.2 On 8 April 2024, National Grid notified the Planning Inspectorate (PINs) under Section 46 of the PA 2008 of the upcoming statutory consultation by email, formatted as a letter. Enclosed with the email (see **Appendix D** of this report) was the following information:
- Letters sent to Section 42 consultees;
 - Section 48 notice; and
 - Consultation feedback questionnaire.
- 8.8.3 Formal acknowledgement of the receipt of the Section 46 letter was issued by email to National Grid on 9 April 2024, as published on the PINs website (see **Appendix D** of this report).
- 8.8.4 Information regarding the Section 46 notice is available on the Inspectorate's own website and project pages. Available at: <https://national-infrastructure-consenting.planninginspectorate.gov.uk/projects/EN020027/documents> and can also be found in **Appendix D** of this report.

8.9 Consulting the Local Community Under Section 47

- 8.9.1 Section 47 of the PA 2008 sets out an Applicant's duty to consult the local community about a proposed application.
- 8.9.2 This was done in line with the SoCC, which was published on 10 April 2024. The Section 47 notice was published in three local newspapers between the 10 and 17 April 2024. See **Section 7.4** of this report for more details.
- 8.9.3 It could be accessed on the Project website at the start of statutory consultation on 10 April 2024. The SoCC can be found in **Appendix E** of this report.
- 8.9.4 Two consultation zones were developed to assist engagement with the local community:
- The PCZ included people and businesses with property postcodes within 1 km of the Project's draft Order Limits (representing the anticipated extent of land in which the Project may take place). The PCZ amounts to approximately 77,000 addresses. Where appropriate, the PCZ was extended to include whole streets and postcodes rather than the 1 km boundary dissecting hamlets or neighbourhoods; and

- The SCZ comprised a 4 km buffer around the draft Order Limits, whereby wider publicity of the Project took place, including the PCZ.

8.9.5 Maps of both the primary and secondary consultation zones are available in the SoCC which can be found in **Appendix E** of this report and in **Figure 8.2** in this chapter.

Figure 8.2 Primary and Secondary Consultation Zone Map

8.9.6 National Grid committed in the SoCC to consult the following groups and individuals:

- Members of Parliament (MPs) representing constituencies within and bordering both consultation zones;

- Elected representatives in local authorities where the project is situated, including dedicated briefings for lead members during the statutory consultation period as requested;
- ‘Seldom heard groups’ within both consultation zones who have been drawn to our attention, representing people who are unlikely to respond to traditional consultation techniques and may need additional support to access materials;
- Parish councils representing parishes within both consultation zones and in the immediate vicinity;
- Prescribed bodies and LPAs under Section 42(1)(a), (b) and (c) of the PA 2008; and
- PILs under Section 42(1)d and Section 44.

8.9.7 The SoCC is provided in **Appendix E** of this report and **Appendix I** of this report contains the full list of local interest groups and ‘seldom heard groups’ consulted with and the letter they were provided with. See **Appendix H** of this report for Section 47 notice as advertised in the newspapers.

8.10 Adhering to the Commitments in the SoCC

8.10.1 **Table 8.4** of this report outlines how the consultation was undertaken in accordance with the commitments outlined in the SoCC.

Table 8.4 How the Statutory Consultation was Undertaken in Accordance with the SoCC

Where in SoCC	Commitment as it appears in the SoCC	How National Grid fulfilled this commitment
3.1.1	National Grid is committed to engaging and consulting with communities and stakeholders at an early stage of the proposed Project, giving people the opportunity to provide feedback and insight at a formative stage ahead of more detailed design work being carried out.	<p>The local communities, LPAs and statutory consultees have been engaged throughout the development of this Project, since the first staged non-statutory consultation was held in 2022 and second in 2023. This was followed by the statutory consultation in 2024 and three targeted consultations in 2025.</p> <p>After each round of consultation, National Grid analysed the feedback received and, along with further technical studies and design work developed the Project design.</p>
3.1.2	National Grid's approach to engagement in support of the proposed Project is to carry out both non-statutory and statutory consultation guided by the requirements of the Planning Act.	<p>National Grid's approach to engagement contained both non-statutory and statutory consultations:</p> <p>Non-statutory 1: between 21 April 2022 until 16 June 2022.</p> <p>Non-statutory 2: between 27 June 2023 until 21 August 2023.</p> <p>Statutory: between 10 April 2024 until 26 July 2024.</p> <p>Targeted consultations:</p> <p>Norfolk and Suffolk (non-statutory) between 30 January 2025 until 3 March 2025;</p> <p>Essex and Thurrock (non-statutory) between 25 February until 27 March 2025; and</p> <p>Thurrock 3 (statutory) between 18 March until 17 April 2025.</p> <p>Further landowner consultation: between 5 June until 22 August 2025.</p>

Where in SoCC	Commitment as it appears in the SoCC	How National Grid fulfilled this commitment
		Chapter 4 of this report provides detail about how the consultation was guided by the requirements of the PA 2008.
3.1.8.	More information on both non-statutory consultations and how the feedback received at both non-statutory consultations helped influence and shape the proposals to date can be found in the 2022 Non-Statutory Consultation Feedback Report and the 2023 Non-Statutory Consultation Feedback Report. These are available on the Project website.	The 2022 and 2023 Non-Statutory Consultation Feedback Reports can be found in the 'Document Library' section on the Project website and in Appendix B and C .
5.1.1.	The statutory consultation (under Section 42 and Section 47 of the PA 2008) will run for 10 weeks.	The statutory consultation started on 12:00 noon on Wednesday 10 April 2024 and was scheduled until 11:59pm on Tuesday 18 June 2024, but the consultation period was extended for five weeks until 11:59pm on Friday 26 July 2024 to give people additional time to have their say and provide feedback on our proposals after the General Elections. The consultation was open for a total of 15 weeks.
5.2.2	Overall location plans will be used to describe sections of the proposed Project and will be provided during the statutory consultation, consistent with how the Project has previously been presented.	<p>In the same way as previous consultations, the location plans were split into geographical sections. Sections were divided as follows:</p> <ul style="list-style-type: none"> • Section A: South Norfolk • Section B: Mid Suffolk • Section C and D: Babergh, Tendring and Colchester • Section E: Braintree • Section F: Chelmsford • Section G: Basildon and Brentwood (and Chelmsford east of Ingatestone)

Where in SoCC	Commitment as it appears in the SoCC	How National Grid fulfilled this commitment
		<ul style="list-style-type: none"> Section H: Thurrock <p>Copies of the consultation plans can be found in Appendix I of this report.</p>
5.2.3.	<p>National Grid will consult on all aspects of the proposed development for the Project, including:</p> <ul style="list-style-type: none"> Approximately 159 km of new 400 kV overhead line supported on approximately 510 steel lattice pylons (approximately 50 m in height) some of which are gantries (typically up to 15 m in height) within proposed CSE compounds, or existing or proposed substations; Approximately 25 km of 400 kV underground cabling some of which is located through the Dedham Vale National Landscape (formerly known as Dedham Vale AONB); Six new CSE compounds, each with a permanent access, to connect the overhead lines to the underground cables; A new 400 kV East Anglia Connection Node (“EACN”) substation, with a new permanent access, on the Tendring Peninsula. This is proposed to be an Air Insulated Switchgear (“AIS”) substation; Substation extension works at the existing Norwich Main, and Bramford substations and works within the existing Tilbury Substation to connect and support operation of the new transmission connection; Temporary works associated with construction of the Project; and An alternative design at the Waveney Valley (referred to as the Waveney Valley Alternative) 	<p>The feedback questionnaire includes questions about each section of the route and there is also space to comment generally about the Project and this consultation, such as ‘<i>Do you have any further comments on our proposals in this section?</i>’. The feedback questionnaire can be found in Appendix I of this report.</p>

Where in SoCC	Commitment as it appears in the SoCC	How National Grid fulfilled this commitment
	<p>is also being considered and is the subject of consultation and ongoing assessment. This design alternative, if taken forward, would result in changes to those elements of the Project set out below. This would instead comprise:</p> <ul style="list-style-type: none"> - installation of approximately 157 km of new 400 kV overhead line; - installation of approximately 27 km of 400 kV underground cabling (some of which is located through the Dedham Vale National Landscape; and - eight new CSE compounds (each with a permanent access) to connect the overhead lines to the underground cables. 	
5.2.4.	<p>The Project as currently proposed is an EIA development and therefore we will also consult on preliminary environmental information as part of this statutory consultation in the form of a Preliminary Environmental Information Report ("PEIR"). We will make the PEIR available on the Project website during statutory consultation, as well as a non-technical summary of the PEIR. We will seek views on the information in those documents.</p>	<p>The PEIR is available in the document library on the project website. The Non-Technical Summary (NTS) of the PEIR was also available at the inspection points. A copy of the PEIR and the NTS can be found in Appendix I of this report.</p>
5.3.1.	<p>The consultation will be open to anyone who is interested in the proposed Project, and National Grid will have regard to all consultation responses received by the relevant deadline.</p>	<p>National Grid have had regard all the consultation responses received from anyone who was interested in the Project by the relevant deadline. A summary of consultation responses can be found in Chapter 9 of this report.</p>
5.3.2.	<p>Under Section 47 of the PA 2008, we have a duty to consult people living in the vicinity of the land, i.e., the local community. In consultation with the local authorities set out in Section 1.1.3 of the SoCC we</p>	<p>National Grid consulted the local community living in the vicinity of the Project. More information of the consultees and community newsletter can be found in Section 8 of this report.</p>

Where in SoCC	Commitment as it appears in the SoCC	How National Grid fulfilled this commitment
	have developed a PCZ for the distribution of our Community Newsletter, as shown in Appendix A of the SoCC.	
5.3.3.	The PCZ includes people and businesses with property postcodes within 1 km of the proposed Project's Order Limits (representing the anticipated extent of land in which the proposed Project may take place). The zone has changed since the last round of consultation as a result of feedback and environmental studies as well as the inclusion of information such as construction access, compounds, laydown areas and the traffic routes we propose to use during construction. This latest zone amounts to approximately 77,000 addresses. Where appropriate, the PCZ has been extended to include whole streets and postcodes rather than the 1 km boundary dissecting hamlets or neighbourhoods.	The PCZ was established as a result of the feedback and environmental studies. The PCZ consisted of people and businesses with property postcodes within 1 km of the Project's draft Order Limits, approximately 77,000 addresses.
5.3.4.	An additional wider Secondary Consultation Zone ("SCZ") has been developed, comprising a 4 km buffer around the Order Limits, whereby wider publicity of the proposed Project will take place. The SCZ can be found in Appendix A of the SoCC.	The SCZ was established to publicise the Project within 4 km of the Projects' draft Order Limits.
5.3.5.	Communities within the PCZ and SCZ will be notified about the consultation via methods outlined in Section 5.5 of the SoCC.	The local community was consulted within the PCZ and SCZ using the consultation methods listed in Section 8 of this report which were outlined in Section 5.5 of the SoCC.
5.3.6.	As well as properties and businesses within the PCZ, we will also consult with various groups and individuals including parish councils representing parishes within the PCZ and relevant host and	The groups and individuals representing parishes within the PCZ and relevant host and neighbouring local authorities were consulted within the PCZ and SCZ. The list of the local authorities defined under Section 43 can be found in Appendix F of this report.

Where in SoCC	Commitment as it appears in the SoCC	How National Grid fulfilled this commitment
	neighbouring local authorities defined under Section 43 of the PA 2008.	
5.3.7.	In addition to the local community, we will consult prescribed bodies and local authorities under Section 42(1)(a), (b) and Section 43 of the Planning Act. We will also consult persons who fall within Section 42(1)(d) and Section 44 of the PA 2008.	Prescribed Consultees were identified and consulted; these can be found in Appendix F of this report. A letter was sent to the Section 43 consultees on the 10 April 2024 with information about the Project, consultation dates, where to find documents, feedback questionnaire, and information about the events.
Table 5.1. Consultation materials	<p>Project Background Document:</p> <p>This document will provide a summary of the proposed Project including:</p> <ul style="list-style-type: none"> • The background to the Project; • Information about design changes as a result of the 2023 non-statutory consultation; • Information about potential benefits and impacts of the proposed Project; • How we might propose to mitigate any significant effects; • Signposts for readers to more detailed information reports and how to provide feedback on the Project. <p>Target Audience:</p> <p>All those interested in the consultation (see Section 5.3 of the SoCC for detail).</p> <p>This document will be published on the Project website, and available in paper copy on request and at inspection points listed in Table 5.2 of the SoCC and at public information events.</p>	<p>The Project Background Document contained the following chapters:</p> <ol style="list-style-type: none"> 1. The consultation 2. The need 3. Our proposals 4. Construction 5. Managing and mitigating effects 6. Other information 7. Next steps <p>These chapters contained information to cover all bullet points listed in the SoCC. The Project Background Document can be found in Appendix I of this report.</p> <p>The Project Background document was available:</p> <ul style="list-style-type: none"> • to download in the document library of the Project website; • as a paper copy upon request (92 requests were fulfilled during the consultation period); • at the inspection locations listed in Table 8.11 of this report; and

Where in SoCC	Commitment as it appears in the SoCC	How National Grid fulfilled this commitment
	National Grid will consider requests for copies of the document in alternative formats on a case-by-basis, taking into account individual circumstances	<ul style="list-style-type: none"> at public information events listed in Table 8.10 of this report. <p>No requests for alternative formats of the Project Background Document were made.</p>
Table 5.1. Consultation materials	<p>Community Newsletter 2024:</p> <p>The newsletter will set out the proposed Project information, details about the consultation, an overview map of the proposed Project area and how to provide feedback, along with a list of engagement activities throughout the consultation period.</p> <p>Target Audience:</p> <p>All residents and businesses with properties within the PCZ.</p> <p>The Community Newsletter will be posted to all properties within the PCZ. It will be published on the Project website, and available in paper copy on request and at inspection points listed in Table 5.2 of the SoCC and at public information events.</p> <p>National Grid will consider requests for copies of the document in alternative formats on a case-by-basis, taking into account individual circumstances.</p>	<p>The Community Newsletter was produced to communicate the Project proposals, the background and how to get involved in consultation.</p> <p>The Community Newsletter 2024 can be found in Appendix I of this report.</p> <p>The Community Newsletter was posted to all properties within the PCZ as detailed in Section 8.12.4 of this report.</p> <p>The Community Newsletter was also available:</p> <ul style="list-style-type: none"> to download in the document library of the Project website; as a paper copy upon request (27 requests were fulfilled during the consultation period); at the inspection locations listed in Table 8.11 of this report; and at public information events listed in Table 8.10 of this report. <p>No requests for alternative formats of the Community Newsletter were made.</p>

		<ul style="list-style-type: none"> at public information events listed in Table 8.10 Table 8-10 of this report.
5.4.2.	National Grid will consider requests for copies of select consultation materials identified in Table 5.1 of the SoCC in alternative formats on a case-by-basis, taking into account individual circumstances.	Document copies were available in alternative format upon request, however no requests were made.
5.4.3.	All consultation materials will also be available on the Project website. Information will be easy to access and will be presented in a variety of ways to suit user requirements.	The Project website contained all the consultation materials for statutory consultation and project materials relating to previous consultations.
Table 5.2. Methods to make consultation documents available	<p>Project website</p> <p>All consultation documents will be hosted on the Project website throughout the consultation period. We will provide the following local authorities with a link to all the consultation documents:</p> <ul style="list-style-type: none"> Norfolk County Council; Suffolk County Council; Essex County Council; Thurrock Council; South Norfolk District Council; Mid Suffolk District Council; Babergh District Council; Tendring District Council; Colchester City Council; Braintree District Council; Chelmsford City Council; Brentwood Borough Council; and Basildon Borough Council. 	<p>The project website contained the following digital materials. More information can be found in Section 8.12 of this report and Appendix I17 of this report.</p> <ul style="list-style-type: none"> Project background document 2024; Community newsletter 2024; PEIR and NTS; 2024 Design Development Report; 2024 Strategic Options Back Check and Review; 2023 Non-Statutory Consultation Feedback Report; Project maps; Consultation banners; Consultation notices; SoCC; Feedback questionnaire; and Guide to Interacting with our Consultation Plans. <p>The project website link was provided to the local authorities as described.</p>

Where in SoCC	Commitment as it appears in the SoCC	How National Grid fulfilled this commitment
	<p>Paper copies of selected consultation documents will also be available by request, free of charge. Paper copies of the PEIR can be provided on request. This may be subject to a charge to cover printing and postage fees.</p>	<p>Hard copy requests fulfilled include:</p> <ul style="list-style-type: none"> • Project background documents – 92 requests; • Feedback questionnaires – 286 requests; • Strategic Options Backcheck and Review – 19 requests; • Design Development Report – 19 requests; • Community newsletter – 27 requests; • 2023 consultation documents – four requests; • Response to Electricity System Operator (ESO) Report – two requests; • PEIR documents – 24 request – (including two requests for full printed copies of PEIR); • SoCC – two requests; and • Map – 82 requests.
Table 5.2. Methods to make consultation documents available	<p>Inspection points</p> <p>While no longer a statutory requirement, in addition to being available online, we will seek to ensure the Community Newsletter, Project Background Document, NTS of the PEIR, SoCC and feedback questionnaire are available to view at the following locations throughout the consultation period.</p> <ul style="list-style-type: none"> • Long Stratton Library: The Street, Long Stratton, NR15 2XJ; • Norwich Library: Unit 3, The Forum Millenium Plain, Norwich, NR2 1AW; • Tuckswood Library: Robin Hood Road, Eaton, NR4 6BX; • Diss Library: Church Street, Diss, IP22 4DD; 	<p>The Project information, the project background document, NTS of the PEIR, SoCC and feedback questionnaire, were also available to view in multiple inspection points accessible for the public.</p> <p>In addition to the 14 inspection points outlined in the SoCC, the Project team made the documents available in an additional 11 other locations. This decision was made in response to requests from the public and stakeholders. The full list of inspection points can be found in Table 8.11 of this report and Appendix I20 of this report.</p> <p>On 9 May 2024, contact was made with all the inspection points to ensure that stock levels of consultation documents were appropriate. The following requests were fulfilled by delivering</p>

Where in SoCC	Commitment as it appears in the SoCC	How National Grid fulfilled this commitment
	<ul style="list-style-type: none"> Stowmarket Library: Milton Road, Stowmarket, IP14 1EX; Capel St Mary Library: Village Hall, The Street, Capel St. Mary IP9 2EF; Coggeshall Library: The Friends Meeting House, Stoneham Street, Coggeshall CO6 1UH; Chelmsford Central Library: Market Road, Chelmsford CM1 1QH; Colchester Library: Trinity Square, Colchester CO1 1JB; Tilbury Library: Civic Square, Tilbury RM18 8AD; Greenstead Library: Hawthorn Avenue, Colchester CO4 3QE; Stanway Library: 10, Villa Road, Stanway CO3 0RH; Prettygate Library: Prettygate Road, Colchester CO3 4EQ; and Wivenhoe Library: 104/6 High Street, Wivenhoe CO7 9AB. <p>Prior to attending these locations, it is advised that opening hours are checked. We will check that consultation documentation remains at the inspection points throughout the consultation period. We will also try to use local websites to act as public inspection points, by requesting they host a link to the Project website. These may include the following:</p> <ul style="list-style-type: none"> local authority websites local library websites parish websites 	<p>additional consultation materials to the inspection points:</p> <ul style="list-style-type: none"> Stowmarket Library – 10 feedback questionnaires, 10 foldable maps, 10 community newsletters; Chelmsford Central Library – six feedback questionnaires, six foldable maps, six community newsletters; Ipswich Library – a full library consultation document pack; and Brentwood Library – five community newsletters.

	<ul style="list-style-type: none"> • Dunmow Broadcast; • East Anglian Daily Times; • Eastern Daily Press; • Essex Chronicle; • Essex Focus; • Essex Live; and • Thurrock Advertiser. <p>The circulation areas of these newspapers extend across both the PCZ and the SCZ, as well as further afield.</p>	<ul style="list-style-type: none"> • Essex Chronicle; • Essex Focus; • Essex Live; and • Thurrock Gazette (the Thurrock Advertiser is no longer in circulation so the Thurrock Gazette was chosen as a suitable alternative). <p>More information can be found in Section 8 of this report.</p>
Table 5.3: Promotion methods	<p>Newspaper advertisements:</p> <p>Two rounds of newspaper advertisements will be undertaken during the consultation. Advertisements will provide details of the consultation, where more information can be found, how to respond, and the dates of the engagement activities. Advertisements will be placed in both print and digital publications to ensure wider coverage within and beyond the PCZ and SCZ. We will place adverts in the following titles:</p> <ul style="list-style-type: none"> • East Anglian Daily Times; • Eastern Daily Press; and • Essex Chronicle. 	<p>Two rounds of full-page newspaper adverts were placed between 10 and 18 April 2024. The adverts were placed in the following newspapers:</p> <ul style="list-style-type: none"> • East Anglian Daily Times; • Eastern Daily Press; and • Essex Chronicle. <p>Two rounds of half-page newspaper adverts which provided details about the extension to the consultation (described in Section 3.4.1 of this report) were placed in the same newspapers between 12 and 20 June 2024.</p> <p>A copy of the newspaper advertisements can be found in Appendix H of this report.</p>
Table 5.3: Promotion methods	<p>Emails and letters:</p> <p>We will send, via email, letters about the consultation and how to get involved to the following:</p> <ul style="list-style-type: none"> • MPs, where all or part of their constituencies lie within either consultation zone; 	<p>National Grid sent emails and distributed letters that included information about the consultation and how to get involved. These were sent to MPs within PCZ and SCZ, and elected representatives within PCZ.</p> <p>National Grid also sent notification emails to those who had registered for email updates.</p>

Where in SoCC	Commitment as it appears in the SoCC	How National Grid fulfilled this commitment
	<ul style="list-style-type: none"> Elected representatives within the PCZ at: <ul style="list-style-type: none"> Norfolk County Council; Suffolk County Council; Essex County Council; Thurrock Council; South Norfolk District Council; Mid Suffolk District Council; Babergh District Council; Tendring District Council; Colchester City Council; Braintree District Council; Chelmsford City Council; Brentwood Borough Council; Basildon Borough Council; and Parish Councils within the PCZ. 	<p>See Section 8.11.11 of this report for more details.</p> <p>A copy of emails and letters can be found in Appendix F of this report.</p>
Table 5.3: Promotion methods	<p>Statutory notices</p> <ul style="list-style-type: none"> We will publish statutory notices in locally circulating newspapers; and We will publicise the consultation – once in a national newspaper and the London Gazette and twice in local circulating newspapers. 	<p>The Section 48 notice was published twice in three local newspapers, once in a national newspaper and once in the London Gazette between 10 April 2024 to 18 April 2024.</p> <p>The consultation was extended by a period of five weeks as detailed in Section 3.4.1 of this report and the Section 48 notice was republished detailing the consultation extension in the same newspapers between 12 June 2024 to 20 June 2024.</p> <p>The Section 47 notice was published in three local newspapers between 10 and 17 April 2024.</p> <p>Evidence of the publication of the Section 47 and Section 48 notices in newspapers can be found in Appendix H of this report.</p>

Where in SoCC	Commitment as it appears in the SoCC	How National Grid fulfilled this commitment
Table 5.3: Promotion methods	<p>Information posters:</p> <p>Posters including details of the consultation, how to access Project information, and how to get involved, will be sent to each parish council within the PCZ.</p>	<p>National Grid produced a poster that included information about the Project and details of the consultation and how to get involved. These posters were sent to each parish council within PCZ. The information poster can be found in Appendix I of this report.</p>
Table 5.3: Promotion methods	<p>Social media</p> <p>We will promote the consultation on National Grid UK's X (formerly Twitter) and Facebook account, @NationalGridUK.</p> <p>We will also develop a social media guide for local authorities to use on their social media channels. This guide will include links for the Project website.</p> <p>We are unable to accept feedback through social media channels, however, we will monitor comments or questions we receive through our owned channels and respond where practicable. We will aim to point people towards sources of information, including the Project website, the interactive Project map and to formal feedback channels.</p>	<p>Social media adverts were placed to promote the consultation. These media adverts included links to the Project website.</p> <p>More information about social media posts can be found in Appendix I of this report.</p> <p>A social media guide was developed that contained key consultation information and links to the Project website. This guide was shared with the Local Planning Authorities (LPAs) on the 9 April 2024 and can be found in Appendix I of this report.</p> <p>No feedback was captured and considered within social media channels</p>
5.6.1.	<p>Public information events will be held for communities to find out information about the proposed Project and the consultation and talk to representatives from the Project team. The events will be held at suitable, publicly accessible venues that are within or near to the PCZ.</p>	<p>The Project information posters and feedback questionnaires were available in the public information events. Representatives of the Project team attended these events to talk and respond any query from the public. The list of the public information events can be found in Chapter 8 of this report.</p>
5.6.2.	<p>Details of where and when the public information events will be held will be published on the Project website and in the Community Newsletter sent to all</p>	<p>The information about the public events were published on the Project website and was shared in the Community Newsletter.</p>

Where in SoCC	Commitment as it appears in the SoCC	How National Grid fulfilled this commitment
	properties within the PCZ and available at inspection points.	
5.6.3.	The events will be held during afternoons and early evenings in the week and at least one will be held on a weekend, where feasible.	The public information events were arranged to be held during afternoons, early evenings and one in the weekend, to give the consultees the opportunity to attend the events. More information of the public information events can be found in Chapter 8 of this report.
5.6.4.	Copies of all relevant consultation materials will be made available in print format at each event. There will also be a series of banners to present the proposals for the proposed Project, including maps.	A paper copy of the consultation materials was available in the public information events. The list of the materials available can be found in Appendix I of this report.
5.6.5.	Those attending the public information events will be encouraged to provide their feedback via the online or paper feedback questionnaire on the proposals.	<p>Hard copies of the feedback questionnaire were available at public information events listed in Table 8.10 Table 8-10.</p> <p>The Freepost address: FREEPOST N TO T was available for the duration of consultation to receive hard-copy feedback.</p> <p>Details about the Project website were also available on all consultation materials at the public information events.</p>
5.6.6.	Should any events (in person or webinars) need to be altered or cancelled for any reason, the most appropriate mitigation would be identified on a case-by-case basis in consultation with the relevant Local Planning Authority(ies)	<p>The consultation was extended by a period of five weeks as detailed in Section 3.4.1 of this report and five of the webinars were re-arranged.</p> <p>We contacted the LPA officers to discuss our approach before making the decision to move the dates of the webinars.</p> <p>On the 28 May 2024, an email notification was sent to approximately 150 members of the public who had signed up for the webinars to advise they would be re-scheduled.</p>

Where in SoCC	Commitment as it appears in the SoCC	How National Grid fulfilled this commitment
		<p>On the 3 June 2024, a follow-up email notification was sent to the same 150 members of the public with the new confirmed dates.</p> <p>Further details of the webinars can be found in Table 8.12.</p>
5.7.1.	We will try to hold six webinars during the consultation period. We will run two general overview webinars and four that are section specific. People will be able to sign up to the webinars via the Project website, or by contacting National Grid by using the contact details set out in Section 6.1 of the SoCC.	<p>Six webinars were held and 209 people attended, further information is provided in Section 8.8 of this report.</p> <p>Due to General Elections, five webinars were rescheduled to allow time for the public to attend. These webinars were scheduled to the following dates:</p> <ul style="list-style-type: none"> • Wednesday 17 April, 6pm-7pm: Norwich to Tilbury Project Overview One; • Wednesday 10 July, 6pm-7pm: Section A and B South Norfolk and Mid Suffolk; • Thursday 11 July, 6pm-7pm: Section C and D Babergh, Tendring and Colchester; • Tuesday 16 July, 6pm-7pm: Section E and F – Braintree and Chelmsford; • Wednesday 17 July, 6pm-7pm: Section G and H Basildon, Brentwood and Thurrock; and • Thursday 18 July, 6pm-7pm: Norwich to Tilbury Project Overview Two.
5.7.2.	The sessions will cover the proposals in detail and provide an opportunity for attendees to ask questions of the Project team.	The webinars gave the opportunity for the public to ask questions about the Project.
5.7.3.	National Grid will endeavour to make British Sign Language (BSL) interpretation available for one of	National Grid made available BSL interpretation for the following webinar:

Where in SoCC	Commitment as it appears in the SoCC	How National Grid fulfilled this commitment
	the general overview webinars which will be recorded and published on the Project website.	Wednesday 17 April, 6pm-7pm: Norwich to Tilbury Project Overview One.
5.8.1.	<p>National Grid will offer briefings and / or meetings with the following stakeholders in the run-up to, or during the consultation:</p> <ul style="list-style-type: none"> • MPs, where all or part of their constituencies lie within either consultation zone; • Elected representatives of district and county councils within the PCZ; • Parish councils, where all or part of the parish falls within the PCZ; • Local authorities, including neighbouring authorities; • Key prescribed consultees, such as National Landscapes (formerly known as AONB) conservation boards; and • Persons with an Interest in Land (PILs) under Section 42(1)(d) of the PA 2008. 	The proposed briefings and meetings took place with the stakeholders described, see full details in Section 8.8 of this report.
5.8.2	National Grid will consider meetings with other organisations and individuals upon request.	There were no additional requests for meetings with organisations or individuals that were different to those listed in paragraph 5.8.1 of the SoCC.
5.9.1.	National Grid wants to ensure that all our engagement and consultation is inclusive, and we want to reach those who otherwise may not engage with us. Hard-to-reach and seldom heard groups are defined as being inaccessible to most traditional and conventional methods of consultation for any reason	Engagement and consultation were inclusive, ensuring the hard-to-reach and seldom heard groups were reached by utilising different engagement methods listed in Table 5.4 of the SoCC. More details about how National Grid reached seldom heard groups can be found in Table 8.15 of this report.
5.9.2.	To allow people to engage with the proposed Project and the consultation at their own	The public were able to sign up to an online webinar and see the Project website as part of the 'online

Where in SoCC	Commitment as it appears in the SoCC	How National Grid fulfilled this commitment
	convenience, we have taken a ‘digital first’ approach to consultation. This allows individuals and groups to take part even if they cannot make an event. The online webinar and Project website is open and accessible to anyone to attend and ask questions of the Project team. Information will be available on the website and people are encouraged to submit feedback using the online feedback questionnaire. Those engaging with the Project can also ask questions and find out more by contacting National Grid by using the contact details set out in Section 6.1 of the SoCC.	approach’. The feedback questionnaire was also available online for the public to provide feedback and ask questions by contacting National Grid contact details.
5.9.3.	For those less able or less comfortable engaging digitally, we have developed consultation ‘in person’ aspects to be as accessible as possible, with the focus on ensuring events are accessible and held over several days in different locations to encourage attendance. We will also seek to ensure there is adequate parking and venues are accessible via public transport.	The Project team offered an ‘in-person’ approach for those members of the public that preferred this format, ensuring the events were accessible and held over different days and times to ensure attendance. Full details of in-person events can be found in Section 8.8 of this report.
5.9.4.	Inspection points have also been identified based on their accessibility and availability for people wanting to access Project information.	Inspection points have been identified based on accessibility and availability to the public. More information on the inspection points can be found in Section 8.12 of this report.
5.9.5.	We also recognise that some individuals or groups may have difficulty taking part in the consultation process for a range of reasons. We have identified several organisations representing hard to reach or seldom heard groups. These organisations will be written to, via email, at the start of consultation. Requests for specific additional consultation activities will be planned and agreed with the	National Grid identified and engaged with several organisations representing hard to reach or seldom heard groups. Section 5.9.7 of the SoCC included Table 5.4 which detailed how the Project would engage with hard to reach or seldom heard groups. More information about the engagement activities listed in Table 5.4 of the SoCC, can be found in Section 8.3 of this report.

Where in SoCC	Commitment as it appears in the SoCC	How National Grid fulfilled this commitment
	requesting organisation so that our activities best meet the needs of those it represents.	On 10 April 2024 a consultation letter was attached to an email sent to all identified organisations representing hard to reach or seldom heard groups. The letter provided details about the consultation, Project, and how to respond (see Appendix F of this report). A full list of those consulted can be found in Appendix I of this report.
5.9.6.	On request, we will also consider providing materials in alternative formats. We will endeavour to provide British Sign Language signing at one of our webinars.	National Grid provided materials in alternative format if requested. All feedback received through writing via email, post or online feedback questionnaire. A BSL interpreter attended the webinar on Wednesday 17 April. More details can be found in Table 8.9 .
5.9.7.	Table 5.4 of the SoCC sets out how the proposed Project will seek to engage hard to reach/seldom heard groups during the consultation.	More information on the engagement with the hard to reach/seldom heard groups can be found in Section 8.12 of this report.
6.1.1.	<p>People will be able to submit their feedback in the following ways:</p> <ul style="list-style-type: none"> • Completing the feedback questionnaire online via the Project website: nationalgrid.com/norwich-to-tilbury; • Providing feedback by email (contact@n-t.nationalgrid.com) or in writing (FREEPOST N TO T); • Completing a paper feedback questionnaire, which can be provided on request, at one of the designated inspection points, or completed in person at the face-to-face events; and • The questionnaire can be returned free-of-charge using the Freepost address: FREEPOST 	National Grid made available different options to submit consultation responses. These were online, by email, by post, or at inspection points and they were available throughout the consultation period.

Where in SoCC	Commitment as it appears in the SoCC	How National Grid fulfilled this commitment
	N TO T (please write this in capitals, you do not need a stamp).	
6.1.2.	Consultation responses received via any other method than those listed above, such as through social media, may not be formally recorded as part of the consultation.	No social media feedback has been recorded as a formal consultation response.
6.1.3.	Responses given orally, such as via telephone or in a meeting, may be considered in exceptional circumstances on a case-by-case basis where someone may not otherwise be able to respond to the consultation.	Conversations held over the phone or in meetings directed people to submit consultation responses online, by email, by post, or at inspection points. No oral feedback has been recorded as a formal consultation response as there were no requests for this to be done.
6.1.5.	All feedback will be handled in accordance with all applicable laws concerning the protection of personal data, including the UK General Data Protection Regulation (GDPR) .	<p>National Grid are legally obligated to use personal information in line with all applicable laws concerning the protection of personal data, including the UK GDPR. For more information, see the full data privacy statement: nationalgrid.com/privacy-policy.</p> <p>Any personal information included in the feedback questionnaire will be handled, made available or used by the following recipients to record, analyse, and report on the feedback received:</p> <ul style="list-style-type: none"> • National Grid; • PINs (which will administer our application for consent to build the Project – any details published as part of this process will be anonymised); • The SoS (who will take the decision on our application); • Our legal advisers; and • Consultants working on the Project.

Where in SoCC	Commitment as it appears in the SoCC	How National Grid fulfilled this commitment
6.1.6.	More information on how National Grid will use the information collected about respondents will be made available in the consultation feedback questionnaire and on the Project website during the consultation period.	<p>National Grid included in the feedback questionnaire the purposes of how the data will collected be used. The purposes included:</p> <ul style="list-style-type: none"> • ‘To analyse your feedback to the consultation; • To produce a Consultation Feedback Report, based on our analysis of responses (individuals will not be identified in that report.); • To write to you with updates about the results of the consultation and other developments if you have provided consent for us to do so; and • To keep up-to-date records of our communications with individuals and organisations.’
6.2.1	Following the close of the consultation all feedback will be collated, reviewed and analysed to understand key themes and concerns. Our proposals will be reviewed and, where appropriate, refined in light of feedback.	<p>After the consultation closed, all feedback was analysed and headline issues are presented in Chapter 9 of this report.</p> <p>Responses are thematically presented within this report with National Grid’s response to those matters raised.</p> <p>Chapter 9 of this report also outlines the changes made to the Project further to feedback received.</p>
6.2.2	The proposed DCO application will be finalised, taking into consideration the feedback received from the consultation in accordance with Section 49 of the Planning Act.	Chapter 9 of this report demonstrates the requirement to have regard to consultation responses (Section 49).
6.2.3.	A Consultation Report will be produced as part of the application for a DCO, as required by Section 37(3)(c) of the PA 2008. The report will include a summary of the consultation process undertaken in accordance with this SoCC and will set out how the feedback from the consultation has shaped and	This Consultation Report was produced as required by Section 37 (3)(c) of the PA 2008. This report comprises with a summary of the consultation process undertaken and how the feedback has

Where in SoCC	Commitment as it appears in the SoCC	How National Grid fulfilled this commitment
	influenced the proposals as submitted within the application for a DCO.	shaped the proposals submitted within the application for a DCO.
6.2.4	Responses to the consultation and extracts of responses may be published as part of the report. Any responses that are published will have all personal details redacted.	<p>National Grid are legally obligated to use personal information in line with all applicable laws concerning the protection of personal data, including the UK General Data Protection Regulation (GDPR). For more information, see the full data privacy statement: nationalgrid.com/privacy-policy.</p> <p>All responses have been fully redacted to ensure confidentiality of addresses and contact details.</p>
6.2.5	Upon receipt of an application for a DCO, the Planning Inspectorate will decide whether the application meets the required standards to proceed to examination and will determine whether the statutory consultation process has been adequate. As part of this process, local authorities will be invited to provide an adequacy of the consultation response to the Planning Inspectorate.	Included for information completeness. National Grid will support stakeholders on their actions.
6.2.6.	The Consultation Report will be available online, alongside other application documents, once an application for a DCO has been accepted. Paper copies will be available from the Project Team on request and may be subject to a charge to cover printing and postage fees.	<p>This Consultation Report can be found on the PINs website, as well as in the Project website.</p> <p>Paper copies of the report are available upon request. For more information, including printing and postage fees, please contact the project team at:</p> <ul style="list-style-type: none"> • 0800 915 2497; • FREEPOST N TO T; and • contact@n-t.nationalgrid.com
6.3.1	If, following the statutory consultation, National Grid considers it is necessary to undertake further statutory consultation, this would be undertaken, so far as relevant, practicable and proportionate, in	A period of targeted consultation took place between 30 January 2025 and 17 April 2025. The targeted consultation was conducted in accordance with the principles of the PA 2008 and in line with the

Where in SoCC	Commitment as it appears in the SoCC	How National Grid fulfilled this commitment
	accordance with the principles and methods set out in this SoCC or any update to it.	principles and methods set out in the SoCC. Chapter 10 of this report provides further details on the three targeted consultations, one of which was statutory.
Contact us	<p>If you would like to contact the Community Relations team, please get in touch via:</p> <p>0800 915 2497</p> <p>FREEPOST N TO T</p> <p>contact@n-t.nationalgrid.com</p> <p>nationalgrid.com/norwich-to-tilbury</p>	National Grid made available the following options to submit the consultation response: telephone, post, email address and website for the consultation. The Project team were monitoring the phone calls and emails throughout the consultation period.

8.11 Publicising Pursuant to Section 48

- 8.11.1 Section 48 of the PA 2008 sets out how an Applicant must publicise its proposed application for development consent.
- 8.11.2 The Section 48 notice was first published in newspapers at the launch of consultation on the 10 April 2024. The Section 48 notice included the consultation end date of 18 June 2024.
- 8.11.3 The consultation was extended by a period of five weeks as detailed in **Section 3.4.1** of this report and the Section 48 notice was republished detailing the consultation extension between 12 June 2024 to 20 June 2024.
- 8.11.4 A copy of both Section 48 notices can be found in **Appendix H** of this report. The updated Section 48 notice shows the specified time for responses to be considered, stating that:

‘National Grid must receive all responses by 11:59pm on Friday 26 July 2024 to ensure their consideration’.
- 8.11.5 National Grid’s Section 48 notice was written in order to meet all the requirements under Regulation 4 (3) of the APFP Regulations and to meet the requirements of The Infrastructure Planning (Publication and Notification of Applications etc.) (Amendment) Regulations 2020 which amended the APFP regulations.

Newspaper Advertisements

- 8.11.6 The statutory publicity requirements are set out in Regulation 4 (2) of the APFP Regulations. **Table 8.5** of this report provides a summary of the newspapers in which the Section 48 notice was published and the dates the notice ran for.

Table 8.5 Newspapers where the Section 48 Notice was Published

Newspaper	Dates
East Anglian Daily Times	10 April 2024 and 17 April 2024
Eastern Daily Press	10 April 2024 and 17 April 2024
London Gazette	10 April 2024
Guardian	An incorrect version of the Section 48 notice was published in the Guardian on 10 April 2024 The corrected version of the Section 48 notice was published in the Guardian on 17 April 2024
Essex Chronicle	11 April 2024 and 18 April 2024

- 8.11.7 An additional round of newspaper adverts were published as a result of the consultation extension following the announcement of the General Election. **Table 8.6** of this report provides a summary of the newspapers in which the notice for the extension of the consultation was published and the dates the notice ran for.

Table 8.6 Newspapers where the Section 48 Notice was Published – Consultation Extended Notice

Newspaper	Dates
East Anglian Daily Times	12 June 2024 and 19 June 2024
Eastern Daily Press	12 June 2024 and 19 June 2024
London Gazette	12 June 2024
The Guardian	12 June 2024
Essex Chronicle	13 June 2024 and 20 June 2024

Notices on Site

- 8.11.8 Copies of the Section 48 notice were also placed at 46 locations along the route placed approximately 5 km from each other. **Table 8.7** of this report provides the location of each site notice. A site notice location plan and photographs can be found in **Appendix H** of this report.
- 8.11.9 Site notices were also placed on 605 parcels of un-registered land. Photographs can be found in **Appendix H** of this report.
- 8.11.10 Through due diligence checks during the preparation for the route-wide PILs engagement in Summer 2025, it was identified that five parcels of un-registered land did not have site notices placed during statutory consultation in 2024. These five parcels of un-registered land were included as part of the route-wide PILs engagement in Summer 2025. See **Chapter 11** of this report for further details.

Number	Location	Number	Location
Location 23	Grove Hill, Langham, Colchester, CO4	Location 46	Tilbury Substation, RM18

- 8.11.11 Throughout the consultation period, National Grid carried out weekly checks on the site notices to ensure that they were still visible and remained undamaged. National Grid replaced the site notices where required.

Prescribed Consultees

- 8.11.12 In accordance with Regulation 13 of The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017 (the EIA Regulations) all prescribed Section 42(1)(a) consultees including environmental bodies were sent a copy of the Section 48 notice. The list of Section 42(1)(a) stakeholders can be found in **Appendix F** of this report.

8.12 Making Information Available and Enquiry Channels

- 8.12.1 The consultation materials were developed to support the statutory consultation process as identified in the SoCC, see **Appendix I** of this report.

Raising Awareness of the Statutory Consultation

- 8.12.2 National Grid developed two different consultation mailing zones aimed to publicise the statutory consultations. These zones are referred as the PCZ and the SCZ.
- 8.12.3 Other methods to raise further awareness of the Project ahead of statutory consultation have included:
- Issuing an interim community newsletter to all addresses within the 2023 PCZ providing an update following the 2023 non-statutory consultation (issued in December 2023); Offering to brief and update elected representatives, local interest groups, local planning authority officers and hard-to-reach groups about the current status of the Project, plans for the forthcoming statutory consultation, and how people can get involved;
 - Engagement with the local media to raise awareness of the Project and each phase of consultation; and
 - Providing updates to the Project website when new information is available.

Engagement with the Public

Primary Consultation Zone (PCZ)

- 8.12.4 The PCZ includes people and businesses with properties postcodes within 1 km of the Project's draft Order Limits, approximately 77,000 addresses. The zone has changed since the last round of consultation as a result of feedback and environmental studies as well as inclusion of construction information.

- 8.12.5 A community newsletter with Project information was sent to all the properties within the PCZ including the details of how to get involved in the consultation. The community newsletter included:
- A letter with website details with an overview of the proposals and Project map;
 - Information on webinars and how to sign up;
 - Information on how to book telephone or video appointments with the Project team and technical experts;
 - Information on how to give feedback and speak to the Project team; and
 - How to request feedback questionnaire and freepost envelopes.
- 8.12.6 A copy of the community newsletter issued to the PCZ can be found in **Appendix I11** of this report.
- 8.12.7 A postcard was issued to the PCZ on 6 June 2024 which provided details about the extension to the consultation (described in **Section 3.4.1** of this report). A copy of the postcard can be found in **Appendix I** of this report.

Secondary Consultation Zone (SCZ)

- 8.12.8 An additional wider SCZ was developed, comprising a 4 km buffer around the Project's draft Order Limits. Methods used in the SCZ included newspaper advertisements, press releases, posters, social media and other forms listed in **Appendix I** of this report.

Non-Prescribed Consultees

- 8.12.9 On 10 April 2024 a consultation letter was sent to all identified non-prescribed consultees. The letter provided details about the consultation, project, and how to respond (see **Appendix F** of this report).
- 8.12.10 As detailed in **Section 3.4.1**, the consultation was extended by five weeks. A letter detailing the extension, including the new consultation deadline was sent to the non-prescribed consultees on 5 June 2024 (see **Appendix F** of this report).
- 8.12.11 A full list of those consulted can be found in **Appendix I** of this report.
- 8.12.12 The responses from non-prescribed consultees have been analysed and headline issues are presented in **Chapter 9**.

Project Update Subscribers

- 8.12.13 Since the launch of the Project website, members of the public have been invited to sign-up with their email address to receive Project updates as the programme progresses. Throughout the statutory consultation (and afterwards), Project updates were sent to those who had subscribed to them.
- 8.12.14 Each notification was sent to approximately 2,641 email addresses.
- 8.12.15 Monthly project updates and their headlines comprise of:
- April 2024- 'Public consultation starts';

- May 2024- ‘We are extending our statutory consultation...’;
- June 2024- ‘Less than 1 month to go to have your say on Norwich to Tilbury’;
- July 2024- ‘1 week to go to have your say on Norwich to Tilbury’; and
- August 2024- ‘Consultation Update’.

8.12.16 Copies of the Project update notifications can be found in **Appendix I** of this report.

Materials Produced to Support Consultation

8.12.17 A collection of consultation materials were published at the launch of the consultation to ensure there was enough information available to enable people and organisations to understand and comment on any aspect of the Projects’ development and design.

8.12.18 The consultation materials included:

- **Project Background Document:** provided a summary of the Project including:
 - The background to the Project;
 - Information about design changes as a result of the 2023 non-statutory consultation;
 - Information about potential benefits and impacts of the Project;
 - How we might propose to mitigate any significant effects; and
 - Signposts for readers to more detailed information reports and how to provide feedback on the Project.
 - **Community Newsletter 2024:** included details of the Project, information about the consultation, an overview of map of the Project area and how to provide feedback, along with a list of engagement activities throughout the consultation period;
 - **Preliminary Environmental Information Report (PEIR)** and non-technical summary (NTS)*: contained a description of the Project, and a preliminary assessment of the likely significant environmental effects of the Project based on the initial information available at that time. It also sets out how we propose to reduce these effects and how we propose to maximise the benefits of the Project. The NTS of the PEIR was also developed;
- *A PEIR errata document was produced after the consultation launch. See **Section 8.12.20** of this report for more details.*
- **2024 Design Development Report:** an in-depth technical document detailing the design work that has been done to date, focusing on the work since the 2023 non-statutory consultation;
 - **2024 Strategic Options Back Check and Review:** provided an updated overview if the appraisal approach used to date to consider strategic options. These are reviewed and backchecked on as part of the ongoing strategic options assessment and decision-making process;

- **2023 Non-Statutory Consultation Feedback Report:** summarised the feedback received during the 2023 non-statutory consultation and how it has been considered;
- **Project Maps:** a series of maps and plans showing the extent of the Project;
- **Consultation banners:** exhibition banners with information relating to the Project that was used at the public information events;
- **Interactive Project map:** an interactive map of the Project;
- **Consultation notices:** with details of the consultation and provided to statutory consultees as required under Section 48 of the PA 2008;
- **SoCC:** sets out how National Grid intends to consult statutory consultees, stakeholders, affected residents, businesses and local communities ahead of its application for development consent for the Project;
- **Feedback Questionnaire:** an online and paper feedback questionnaire to gather responses to the statutory consultation; and
- **Guide to Interacting with our Consultation Plans:** a guide that outlined the consultation maps and plans, and how to use them.

8.12.19 National Grid gave stakeholders and local community digital and non-digital opportunities to engage with the consultation materials through a dedicated website, public events and webinar events as well as via email, phone and Freepost.

PEIR Errata Document

8.12.20 After the consultation launched on the 10 April 2024, an errata and corrections log was prepared to accompany the PEIR in response to enquiries received from members of the public.

8.12.21 It provided a list of minor corrections that were noted in the PEIR since its issue as part of statutory consultation. A copy of the PEIR errata document can be found in **Appendix I** of this report.

8.12.22 The PEIR errata was available on the Project website from the 28 June 2024. There were more than 28 days left of the consultation.

8.12.23 On the 28 June 2024, letters were sent to the following consultees to notify them of the errata:

- Section 42(1)(a), (b) and (d) prescribed bodies notifying them of the errata;
- Parish councils affected by changes to the PEIR; and
- Communities that fell into the PEIR 'map gap'. This refers to locations where it was identified that edges of maps had been clipped in the PEIR. Letters were sent to communities that potentially fell within those geographical areas to let them know where they could review the updated pages. More information is available in the PEIR errata and corrections log which can be found in **Appendix I18** of this report.

8.12.24 Copies of these letters can be found in **Appendix I** of this report.

Online Activities

8.12.25 National Grid was committed to ensuring that the consultation process and associated communication was made accessible to as many parts of the community as possible.

Project Website

8.12.26 National Grid set up a website to publish information on the Project along with consultation materials as well as historical project information.

8.12.27 The website included links to additional resources.

8.12.28 During the consultation period the Project website received 44,899 views.

8.12.29 Features of the Project website can be found in **Table 8.8** of this chapter.

Table 8.8 Website Features

Function	Rationale
Interactive project map	To enable members of the public to see how different components of the Project fit together and how they interact with the existing landscape
Document library	<p>The document library including the following documents:</p> <ul style="list-style-type: none">• Project background document 2024;• Community newsletter 2024;• PEIR and NTS;• 2024 Design Development Report;• 2024 Strategic Options Back Check and Review;• 2023 Non-Statutory Consultation Feedback Report;• Project maps;• Consultation banners;• Consultation notices;• SoCC;• Feedback questionnaire; and• Guide to Interacting with our Consultation Plans. <p>All historic project documents from previous consultations are also available in the Document Library</p>
Frequently Asked Questions (FAQs)	To provide answers to FAQs without the need to contact the team or attend an in-person event
Online feedback questionnaire	To enable members of the public to submit their feedback online
Webinar sign-up form	To enable members of the public to sign up to webinars

Function	Rationale
Get in Touch	National Grid made a phone, email address and Freepost available for the public to provide their feedback during the consultation period. Contact details for landowners were also available on the Project website

Project Webinars

- 8.12.30 Six webinars were held during the consultation period to provide more information about the proposals. These webinars were available to the general public. More information about the webinars can be found in **Table 8.9** of this chapter.
- 8.12.31 These webinars were also recorded, and the recording was available on the Project website.
- 8.12.32 The consultation was extended by a period of five weeks as detailed in **Section 3.4.1** of this report and five of the webinars were re-arranged.
- 8.12.33 On the 28 May 2024, an email notification was sent to approximately 150 members of the public who had signed up for the webinars to advise they would be re-scheduled.
- 8.12.34 On the 3 June 2024, a follow-up email notification was sent to the same 150 members of the public with the new confirmed dates.
- 8.12.35 Copies of the email notifications can be found in **Appendix I** of this report.

Table 8.9 Summary of Project Webinars

Webinar	Date	Number of attendees
Norwich to Tilbury Project Overview One*	Wednesday 17 April, 6pm-7pm	40
Section A and B South Norfolk and Mid Suffolk	Wednesday 10 July, 6pm-7pm Originally scheduled for 29 May 2024	43
Section C and D Babergh, Tendring and Colchester	Thursday 11 July, 6pm-7pm Originally scheduled for 30 May 2024	31
Section E and F – Braintree and Chelmsford	Tuesday 16 July, 6pm-7pm Originally scheduled for 5 June 2024	40
Section G and H Basildon, Brentwood and Thurrock	Wednesday 17 July, 6pm-7pm Originally scheduled for 6 June 2024	42

Webinar	Date	Number of attendees
Norwich to Tilbury Project Overview Two	Thursday 18 July, 6pm-7pm Originally scheduled for 12 June 2024	13

Public Information Events

- 8.12.36 National Grid held a combination of in-person events throughout the consultation period, providing an opportunity to view consultation materials and speak to members of the Project team. Information about the proposals were on display, including the interactive map, as well as copies of maps and technical documents. Members of the Project team were available to talk through the proposals and answer any questions.
- 8.12.37 The public information events were held across the local area and were accessible and inclusive to the public. More information about the public information events can be found in the **Table 8.10** of this chapter.

Table 8.10 Summary of Public Information Events

Date and Time	Venue	Number of attendees
Wednesday 24 April, 12pm-5pm	Towngate Theatre, St Martin's Square, Basildon, Essex, SS14 1DL	38
Thursday 25 April, 2pm-7pm	The Brentwood Centre, Doddinghurst Road, Pilgrims Hatch, Brentwood, CM15 9NN	107
Saturday 27 April, 11am-4pm	Chelmsford City Racecourse, Chelmsford, CM3 1QP	387
Tuesday 30 April, 12pm-5pm	Gislingham Village Hall, Mill Street, Gislingham, IP23 8JT	240
Wednesday 1 May, 11am-4pm	Copdock Village Hall, Old London Road, Copdock, IP8 3JN	109
Friday 3 May, 1-6pm	Needham Market Community Centre, School St, Needham Market, Ipswich IP6 8BB	171
Saturday 4 May, 11am-4pm	Lawford Venture Centre 2000, Bromley Road, Lawford, Manningtree CO11 2JE	131
Wednesday 8 May, 2pm-7pm	The Civic Hall, Blackshots Lane, Grays, RM16 2JU	36
Thursday 9 May, 1pm-6pm	Thorpe Hall, Ashwell Thorpe and Fundenhall Community Centre, Muskett Road, Ashwellthorpe, NR16 1FD	95

Date and Time	Venue	Number of attendees
Friday 10 May, 1pm-6pm	Tibenham Community Hall, Pristow Green Lane, Tibenham, Norwich NR16 1PX	215
Tuesday 14 May, 11am-4pm	Witham Public Hall, Collingwood Road, Witham, CM8 2DY	146
Wednesday 15 May, 1pm-6pm	Diss Town Football Club, Diss, IP22 4QP	191
Thursday 16 May, 2pm-7pm	Langham Community Centre, School Road, Langham, Colchester, CO4 5PA	302
Friday 17 May, 1pm-6pm	Great Bromley Village Hall, Parsons Hill, Great Bromley, Colchester, CO7 7JA	91

Inspection Points

- 8.12.38 Paper copies of the statutory consultation community newsletter and feedback questionnaire were made available to collect at 25 public inspection points during the consultation. In addition to this, reference copies of the 2024 Project Background Document and the NTS of the PEIR were also available at the inspection points.
- 8.12.39 The SoCC listed 14 inspection points that were located within or in close proximity to the 2024 preferred draft alignment.
- 8.12.40 In addition to the 14 inspection points outlined in the SoCC, the Project team made the documents available in an additional 11 other locations. This decision was made in response to requests from the public and stakeholders.
- 8.12.41 A list of inspection point locations available during the statutory consultation can be found in **Table 8.11** of this chapter, whilst full address details, and opening times can be found in **Appendix I** of this report.

Table 8.11 Inspection Points

Location	Location	Location
Inspection points listed in the SoCC		
Long Stratton Library	Norwich Library	Prettygate Library
Tuckswood Library	Diss Library	Wivenhoe Library
Stowmarket Library	Capel St Mary Library	Stanway Library
Coggeshall Library	Chelmsford Central Library	Greenstead Library
Colchester Library	Tilbury Library	

Location	Location	Location
Additional inspection points		
Manningtree Library	Basildon Library	Hatfield Peverel Library
Witham Library	Brentwood Library	Brentwood Town Council
Chadwell Library	Ingatestone Library	Writtle Library
Ipswich Library	East Tilbury Hub and Library	

- 8.12.42 On 9 May 2024, contact was made with all the inspection points and the following additional requests were made for information:
- Stowmarket Library – 10 feedback questionnaires, 10 foldable maps, 10 community newsletters;
 - Chelmsford Central Library – six feedback questionnaires, six foldable maps, six community newsletters;
 - Ipswich Library – a full library consultation document pack; and
 - Brentwood Library – five community newsletters.

Promotional Activity – Press and Social Media

- 8.12.43 All members of the public, including those within the SCZ, could register to receive all Project information and engage as they wished. National Grid raised awareness of the Project and statutory consultation with stakeholders within the SCZ through the broad dissemination of information. This included:
- placing advertisements in local and regional newspapers providing information about the statutory consultation and how to get involved. See **Table 8.12** of this chapter for the schedule of adverts and **Appendix I** of this report for copies of the adverts; and
 - placing advertisements on social media to target different demographics and to include those who might not otherwise engage with the statutory consultation. See **Table 8-12** of this report for information about the social media campaigns.

Table 8.12 Newspaper Adverts Schedule

Publication	Date(s)	Type
Consultation Launch		
East Anglian Daily Times	10 April 2024 and 17 April 2024	Full page advert
Eastern Daily Press	10 April 2024 and 17 April 2024	Full page advert
Essex Chronicle	11 April 2024 and 18 April 2024	Full page advert

Publication	Date(s)	Type
The consultation was extended by a period of five weeks as detailed in Section 3.4.1 and newspaper adverts were republished with the new consultation deadline		
East Anglian Daily Times	12 June 2024 and 19 June 2024	Half page advert
Eastern Daily Press	12 June 2024 and 19 June 2024	Half page advert
Essex Chronicle	13 June 2024 and 20 June 2024	Half page advert

- 8.12.44 A social media campaign ran from 15 April 2024 to 26 April 2024 across Facebook, Instagram and X (formerly Twitter). Each advert directed users to visit the Project website and engage with the statutory consultation, with adverts targeted at users living within the PCZ and SCZ and nearby communities.
- 8.12.45 The consultation was extended by a period of five weeks as detailed in **Section 3.4.1** of this report and a second social media campaign ran from 2 July 2024 to 16 August 2024 across Facebook and Instagram.
- 8.12.46 The traffic generated from the social media campaigns is set out in **Table 8.13** of this chapter.

Table 8.13 Social Media Campaign

Platform	Campaign dates	Total Impressions
Facebook, Instagram and X (formerly Twitter)	15 April 2024 – 26 April 2024	1,696,536
Facebook and Instagram	2 July 2024 – 16 August 2024	1,150,937

- 8.12.47 Copies of the social media adverts can be found in **Appendix I** of this report.

Additional Engagement Activities Undertaken

- 8.12.48 In addition to in-person, online events and inspection points, briefings were arranged with 13 councils prior and during the consultation period. As the General Election took place during consultation period, the briefings were given to former and new (newly elected and re-elected) MPs.
- 8.12.49 These briefings showed the proposals in each area and how National Grid consulted with local communities. It also gave the opportunity to former and new MPs to provide their feedback. The briefings are included in **Table 8.14** of this chapter.

15 July 2024	Thurrock Council	Virtual	2

Engaging Seldom Heard Groups and Key Stakeholders

8.12.50 Seldom heard groups are defined as being inaccessible to most traditional and conventional methods of consultation for any reason. National Grid undertook research to identify local seldom heard organisations and worked with LPAs and other bodies as needed to identify additional groups. The approach was defined as

part of the development of the SoCC, giving LPAs the opportunity to influence this strategy. The methods and tools as identified within the SoCC are included in **Table 8.15** of this chapter.

Table 8.15 Seldom Heard Engagement Tools

Seldom Heard Group	Consultation approach
Older people:	<p>National Grid engaged with older people by mailing the Community Newsletter to all properties within the PCZ providing details of how to access digital and paper copies of other documents. The public was able to engage and submit their feedback through conventional communication channels including by post and telephone if deemed necessary.</p> <p>Online engagement was also available through online webinars and the Project website provided information about the Project including maps and online feedback questionnaire. National Grid provided the consultation materials in alternative format on a case-by-case basis.</p> <p>In-person Public Information Events were organised at a variety of locations and times across the route of the Project. Online webinars sessions were available for those with further questions, featuring a booking system which will take into consideration individual needs. Social media and newspaper advertising was published across the PCZ, SCZ and further afield.</p> <p>Paper copies of the consultation materials were available at inspection points locations along with contact details for the Project Team, who were able to provide further assistance and send selected consultation documents to those who were unable to access the material online.</p>
People with visual impairments:	<p>National Grid engaged with people with visual impairments by providing the consultation banners audio guide on request. Other consultation materials in alternative format (including alternative font sizes) were considered on a case by-case basis. In addition, the project website was available with enlarged text if required.</p>
People with hearing impairments:	<p>National Grid engaged with people with hearing impairments by providing a British Sign Language interpreter in the online webinar on Wednesday 17 April, 6pm-7pm, Norwich to Tilbury Project Overview One.</p>
People with limited mobility / disability:	<p>National Grid engaged with people with limited mobility by mailing the Community Newsletter to all properties within the PCZ providing details of how to access digital and paper copies of other documents. The public was able to engage and submit their feedback through conventional communication channels including by post and telephone if deemed necessary.</p> <p>Online engagement was also available through online webinars and the Project website provided information about the Project including</p>

Seldom Heard Group Consultation approach

maps and online feedback questionnaire. National Grid provided the consultation materials in alternative format on a case-by-case basis. In-person Public Information Events were organised at a variety of locations and times with disabled access, across the route of the Project. Online webinar sessions were available for those with further questions, featuring a booking system which will take into consideration individual needs. The Project website was available throughout the consultation period provided opportunities for the public to provide feedback. Social media and newspaper advertising was published across the PCZ, SCZ and further afield.

Youth groups:

National Grid aimed to reach young people to have their say and shape the plans. A young adult explainer document about the Project was produced and shared with all secondary school, sixth forms, colleges and universities within the consultation zone of the Project. National Grid emailed over 100 secondary schools, sixth form colleges and universities to raise awareness of the consultation, promote the youth webinar and provide a digital copy of youth explainer document. National Grid held two pop up events and one webinar to engage with young people.

- The event at University of East Anglia (UEA) involved a pop-up stall in the main square at the campus on Monday 13 May from 10:00 – 14:00 which engaged with 15 people;
- At the University of Essex, National Grid took part in the weekly Thursday Market on 23 May at 10:00 – 14:00 and engaged with 18 people; and
- A webinar was held on the evening of Tuesday 21 May from 18:00 – 19:00. This engaged with five people.

Social media and newspaper advertising was part of the consultation publicity to reach the younger generation across the PCZ, SCZ and further afield. The Project website was also available during the consultation period for the youth to review and have their say.

Carers and families with young children:

National Grid posted the Community Newsletter to all properties within the PCZ providing details of how to access the digital and paper copies of other documents and provide feedback by post if needed. National Grid made available different options to engage through conventional and digital channels providing flexibility to the public. Public Information Events and webinar sessions were organised at a variety of locations and times across the route of the Project. The Project website was available throughout the consultation period provided opportunities for the public to provide feedback. Social media and newspaper advertising was published across the PCZ, SCZ and further afield.

Seldom Heard Group	Consultation approach
Economically inactive individuals:	National Grid delivered online engagement through online webinars. The Project website allowed the public to access the Project information, including the interactive Project maps, and provide their feedback throughout the consultation period. National Grid made available other methods of engagements such as conventional engagement through post. Social media and newspaper advertising was delivered across PCZ, SCZ and further afield.
Geographically isolated individuals or communities:	National Grid engaged the geographically isolated individuals and communities by mailing the Community Newsletter to all properties within the PCZ providing details of the consultation and how to access the digital and paper copies of other documents and feedback. Public Information Events and webinars sessions were organised at a variety of locations and times across the route of the Project. The Project website was available throughout the consultation period gave opportunity for the public to provide feedback. Social media and newspaper advertising was published across the PCZ, SCZ and further afield.
Locally under-represented minority ethnic groups (such as black, Asian and minority ethnicity):	National Grid engaged with locally under-represented minority ethnic groups (such as black, Asian and minority ethnicity) through community groups representing minority ethnic groups to offer engagement opportunities.
English as a Second Language (ESL):	National Grid provided the consultation materials in alternative language upon reasonable request.
Travellers:	National Grid engaged with travellers through the community groups representing travellers to offer engagement opportunities: A full list of those consulted can be found in Appendix I of this report.
Digitally isolated:	<p>National Grid engaged with digitally isolated individuals by contacting community groups representing digitally isolated groups to offer engagement opportunities:</p> <ul style="list-style-type: none"> • National Grid posted the Community Newsletter to all properties within the PCZ providing details of how to access the digital and paper copies of other documents and provide feedback by post if needed. • Paper copy of the consultation materials was available at inspection points locations along with contact details for the Project Team, who were able to provide further assistance and send selected consultation documents to those who were unable to access the material online. <p>A full list of those consulted can be found in Appendix I of this report.</p>

9. Responses to Statutory Consultation

9.1 Introduction

- 9.1.1 Statutory consultation was held between 10 April 2024 and 26 July 2024 and provided the opportunity for the public and stakeholders to see how the Project had evolved since the 2023 non-statutory consultation, and comment on further detailed engineering design and environmental assessment work.
- 9.1.2 The statutory consultation closed at 23:59 on the 26 July 2024.
- 9.1.3 A total of 12,996 feedback submissions were received during the consultation period from community stakeholders and consultees, along with members of the local community. This comprised of 2,310 feedback questionnaires (433 paper copies and 1,877 submitted online), 6,499 emails sent to the project inbox, and 4,187 letters (including 4,099 slips of the same feedback)
- 9.1.4 All feedback received before the 26 July 2024 has been considered in the reporting process for **Sections 9.5 to 9.7** of this report.
- 9.1.5 National Grid continued to review and consider all late feedback that was received after the close of the 2024 statutory consultation (26 July 2024). This feedback is summarised in **Section 9.8** of this report.
- 9.1.6 **Chapter 9** is structured as follows:
- **Section 9.2: Responses Received to the Statutory Consultation:** outlines the Section 42(1)(a), Section 42(1)(b), Section 42(1)(d) and Section 47 consultees who responded to the consultation;
 - **Section 9.33: Feedback Questionnaire:** contains a breakdown of the questionnaire and the types of questions asked;
 - **Section 9.5: Responses to Closed Questions:** presents and discusses the results of the closed questions on the questionnaire;
 - **Section 9.6: Findings from the Statutory Consultation:** presents and discusses the feedback gathered via the open questions on the questionnaire, or via other open formats; and
 - **Section 9.7: Summary of Changes made Following Feedback Received from Statutory Consultation:** outlines the changes made to the Project further to feedback received.
 - **Section 9.8: Ongoing Engagement:** details the headline issues raised between the close of the statutory consultation and the beginning of the targeted consultations.

9.2 Responses Received

- 9.2.1 Responses were received from 91 Section 42(1)(a) consultees. A full list of the Section 42(1)(a) consultees who were consulted and those who responded can be found in **Appendix F** of this report.
- 9.2.2 Responses were received from 24 Section 42(1)(b) consultees. A full list of the Section 42(1)(b) consultees who were consulted and those who responded can be found in **Appendix F** of this report.
- 9.2.3 A full list of the Section 42(1)(d) consultees who were consulted and those who responded can be found in **Appendix G** of this report.
- 9.2.4 Responses were received from 37 non-prescribed consultees and key stakeholder organisations. A full list of the non-prescribed consultees and key stakeholder organisations who were consulted and those who responded can be found in **Appendix I** of this report.

9.3 Feedback Questionnaire

- 9.3.1 The feedback questionnaire asked a total of 28 questions, including a mix of closed and open questions.
- 9.3.2 The feedback questionnaire can be found in **Appendix I** of this report and consisted of 10 sections as detailed in **Table 9.1** of this report.

Table 9.1 Questionnaire Sections and Question Types

Section	Question	Type
About You	Your Details	Closed Questions
	Q1	Closed / Open
Section A South Norfolk	Q2, Q3 and Q4	Open
Section B Mid Suffolk	Q5, Q6 and Q7	Open
Section C and D Babergh, Tendring and Colchester	Q8 and Q9	Open
Section E Braintree	Q10 and Q11	Open
Section F Chelmsford	Q12 and Q13	Open
Section G Basildon and Brentwood	Q14 and Q15	Open
Section H Thurrock	Q16 and Q17	Open
General Considerations	Q18	Open
Our Consultation	Q19 and Q20	Closed / Open
	Q21 and Q22	Closed

Section	Question	Type
	Q23	Open
	Q24, Q25, Q26 and Q27	Closed
	Q28	Open

9.3.3 The results of both the closed (quantitative) and open (qualitative) questions are further detailed in **Section 9.5** of this chapter.

9.3.4 Feedback on the Project could be provided through the questions and comment boxes in the feedback questionnaire (either online or in hard copy) or otherwise as a bespoke response issued by email or letter.

9.4 Analysing Responses to the Statutory Consultation

9.4.1 The responses to the closed questions were analysed and the outcome of this analysis is set out in **Section 9.5** of this chapter. With regards to the percentages on the graphs in **Section 9.5**, the numbers have been rounded up or down (to the nearest whole number) to provide the percentage and, as such, there will be times when the totals are not equal to 100%.

9.4.2 To analyse the responses received to the open questions, a coding framework was used based on the structure of the consultation feedback questionnaire. This enabled the grouping of responses into headline issues which was considered a reasonable and proportionate approach given the volume of feedback received and preferable to setting out each individual item of feedback in this report which would lead to more duplication.

9.4.3 A response to an open text question could receive multiple codes to highlight different headline issues covered. Responses were also accepted through letter and email, and these were recorded and analysed in the same way as the open question responses to the feedback questionnaire.

9.4.4 A coding framework and classification tree was created to code all written/longform feedback – this comprised of letters, emails, and the free text sections on the feedback questionnaire.

9.4.5 Classification categories were created based on issues raised at events and briefings. In addition, new classifications were added on an ad-hoc basis as feedback was received allowing for further breakdown of headline issues.

9.4.6 Some categories (such as ‘Visual Impact’) were also split so that comments could be coded as being specific to a certain area of the Project. The thematic analysis groups common headline issues, statements and feedback for specific locations to enable a structured and organised report which is user-friendly. Throughout this process, the detail of comments is not lost in any way, with new code summaries added with each new piece of feedback.

- 9.4.7 All responses, regardless of their origin, were analysed by the Project team and assigned codes based upon the content of the response(s) provided. All responses have been fully redacted to ensure confidentiality of addresses and contact details.
- 9.4.8 As required by Planning Inspectorate (PINs) Guidance on Nationally Significant Infrastructure Projects (NSIPs): Advice on the Consultation Report (August 2024), a checking system was put in place to ensure that comments were correctly identified and grouped. A full project brief and training was provided to the analysis team to ensure that they understood the classification tree and how to apply this to responses, as well as daily calls to discuss comments or to check coding. Quality assurance checks were undertaken by a senior analyst on 10% of the data to ensure that responses were accounted for and analysed correctly.
- 9.4.9 Summary tables have been separated into sections of the Project as consulted on (such as 'South Norfolk' and 'Mid Suffolk'), and within each table categories are grouped into headline issues (such as 'Agricultural land' and 'Community/Social Impact')
- 9.4.10 Grouping headline issues, statements and feedback enables a structured and organised report which is user-friendly. Throughout this process, the detail of comments is not lost in any way, with new code summaries added with each new piece of feedback.
- 9.4.11 All categories and responses from each consultation can be found:
- **Appendix B** of this report: summary of responses received to the 2022 non-statutory consultation and National Grid's regard had to those comments;
 - **Appendix C** of this report: summary of responses received to the 2023 non-statutory consultation and National Grid's regard had to those comments;
 - **Chapter 9** of this report: summary of responses received to statutory consultation and National Grid's regard had to those comments;
 - **Chapter 10** of this report: summary of responses received to the three targeted consultations and National Grid's regard had to those comments; and
 - **Chapter 11** of this report: summary of responses received to the additional persons with interest in lands (PILS) engagement in 2025, and other feedback until 31 July 2025 and National Grid's regard had to those comments.

9.5 Responses to Questions

- 9.5.1 This section presents feedback gathered through the questions on the feedback questionnaire (**Table 9-1** of this report) during the statutory consultation period.
- 9.5.2 National Grid has had regard to the feedback provided through the response questions, using these to help guide understanding of public sentiment and the key areas of interest to assist as the proposals have been further developed.

Question 1

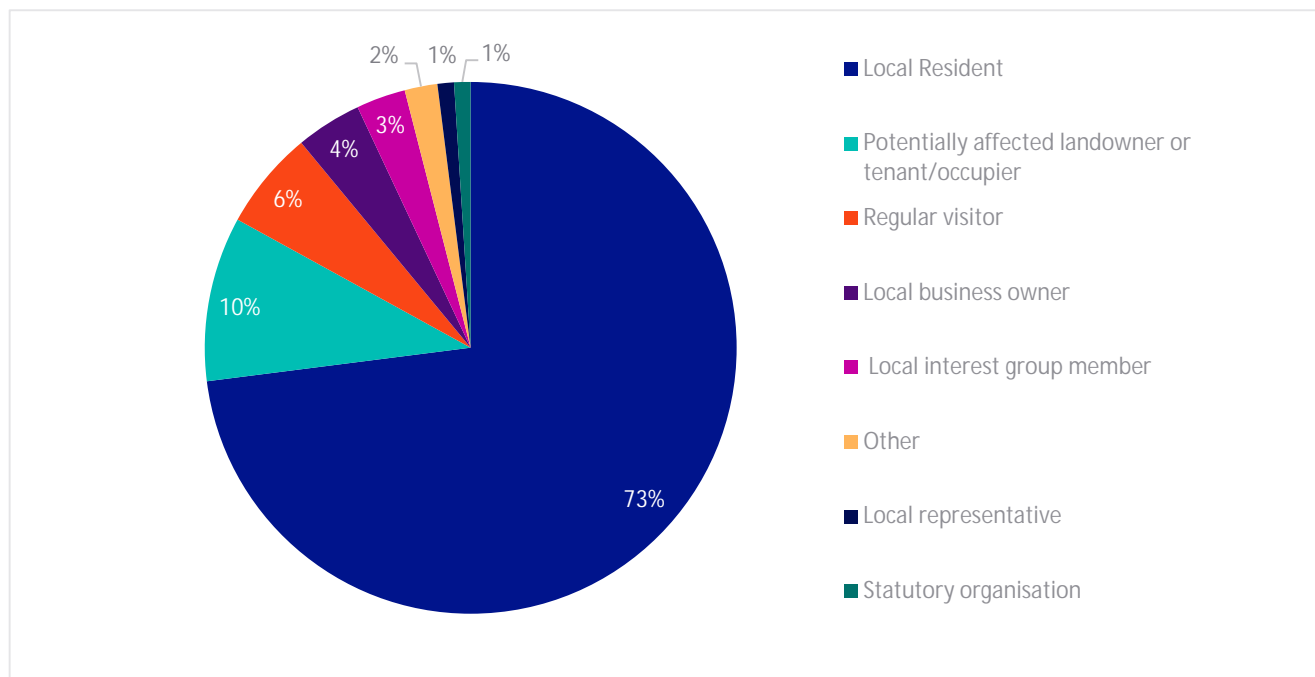

- 9.5.3 Question 1 of the feedback questionnaire (**Appendix I** of this report) asked respondents:

‘How would you describe your interest in Norwich to Tilbury?’

- 9.5.4 Respondents could select more than one option. A total of 2,266 respondents answered this question, resulting in 2,689 responses. See Figure 9.1 of this report.
- 9.5.5 The largest category of responses was ‘Local resident’, with 73% of responses selecting this option. The next most frequent category was “Potentially affected landowner or tenant/occupier” with 10% of responses for this option. A small percentage of responses were received from ‘Regular visitor’ (6%), ‘Local business owner’ (4%), ‘Local interest group member’ (3%), and ‘Other’ (2%). The final small number of responses were for ‘Local representative’ (1%) and ‘Statutory organisation’ (1%).
- 9.5.6 Some of the common ‘Other’ responses comprised of councillors, land agents and environmental representatives.

Figure 9.1 Question 1: How would you describe your interest in Norwich to Tilbury

Total responses: 2,689

Question 2

- 9.5.7 In relation to Section A South Norfolk, Question 2 of the feedback questionnaire (**Appendix I** of this report) asked respondents:
- ‘Do you have any comments on the following within this section?...’*
- 9.5.8 A list of key Project features was provided for Section A South Norfolk.
- 9.5.9 Responses to the points raised through this question, and other open written feedback have been summarised in **Section 9.6** of this report.

Question 3

- 9.5.10 In relation to Section A South Norfolk, Question 3 of the feedback questionnaire (**Appendix I** of this report) asked respondents:
- ‘Do you have any comments on both alternatives being presented at the Waveney Valley?’*
- 9.5.11 Responses to the points raised through this question, and other open written feedback have been summarised in **Section 9.6** of this report.

Question 4

- 9.5.12 In relation to Section A South Norfolk, Question 4 of the feedback questionnaire (**Appendix I** of this report) asked respondents:
- ‘Do you have any further comments on our proposals in this section?’*
- 9.5.13 Responses to the points raised through this question, and other open written feedback have been summarised in **Section 9.6** of this report.

Question 5

- 9.5.14 In relation to Section B Mid Suffolk, Question 5 of the feedback questionnaire (**Appendix I** of this report) asked respondents:
- ‘Do you have any comments on the following within this section?...’*
- 9.5.15 A list of key Project features was provided for Section B Mid Suffolk.
- 9.5.16 Responses to the points raised through this question, and other open written feedback have been summarised in **Section 9.6** of this report.

Question 6

- 9.5.17 In relation to Section B Mid Suffolk, Question 6 of the feedback questionnaire (**Appendix I** of this report) asked respondents:
- ‘Do you have any comments on both alternatives being presented for the Waveney Valley area?’*
- 9.5.18 Responses to the points raised through this question, and other open written feedback have been summarised in **Section 9.6** of this report.

Question 7

- 9.5.19 In relation to Section B Mid Suffolk, Question 7 of the feedback questionnaire (**Appendix I** of this report) asked respondents:
- ‘Do you have any further comments on our proposals in this section?’*
- 9.5.20 Responses to the points raised through this question, and other open written feedback have been summarised in **Section 9.6** of this report.

Question 8

- 9.5.21 In relation to Sections C and D Babergh, Tendring and Colchester, Question 8 of the feedback questionnaire (**Appendix I** of this report) asked respondents:

‘Do you have any comments on the following within this section?...’

- 9.5.22 A list of key Project features was provided for Sections C and D Babergh, Tendring and Colchester.
- 9.5.23 Responses to the points raised through this question, and other open written feedback have been summarised in **Section 9.6** of this report.

Question 9

- 9.5.24 In relation to Sections C and D Babergh, Tendring and Colchester, Question 9 of the feedback questionnaire (**Appendix I** of this report) asked respondents:

‘Do you have any further comments on our proposals in this section?’

- 9.5.25 Responses to the points raised through this question, and other open written feedback have been summarised in **Section 9.6** of this report.

Question 10

- 9.5.26 In relation to Section E Braintree, Question 10 of the feedback questionnaire (**Appendix I** of this report) asked respondents:

‘Do you have any comments on the following within this section?...’

- 9.5.27 A list of key Project features was provided for Section E Braintree.
- 9.5.28 Responses to the points raised through this question, and other open written feedback have been summarised in **Section 9.6** of this report.

Question 11

- 9.5.29 In relation to Section E Braintree, Question 11 of the feedback questionnaire (**Appendix I** of this report) asked respondents:

‘Do you have any further comments on our proposals in this section?’

- 9.5.30 Responses to the points raised through this question, and other open written feedback have been summarised in **Section 9.6** of this report.

Question 12

- 9.5.31 In relation to Section F Chelmsford, Question 12 of the feedback questionnaire (**Appendix I** of this report) asked respondents:

‘Do you have any comments on the following within this section?...’

- 9.5.32 A list of key Project features was provided for Section F Chelmsford.
- 9.5.33 Responses to the points raised through this question, and other open written feedback have been summarised in **Section 9.6** of this report.

Question 13

- 9.5.34 In relation to Section F Chelmsford, Question 13 of the feedback questionnaire (**Appendix I** of this report) asked respondents:

‘Do you have any further comments on our proposals in this section?’

- 9.5.35 Responses to the points raised through this question, and other open written feedback have been summarised in **Section 9.6** of this report.

Question 14

- 9.5.36 In relation to Section G Basildon and Brentwood, Question 14 of the feedback questionnaire (**Appendix I** of this report) asked respondents:

‘Do you have any comments on the following within this section?...’

- 9.5.37 A list of key Project features was provided for Section G Basildon and Brentwood.

- 9.5.38 Responses to the points raised through this question, and other open written feedback have been summarised in **Section 9.6** of this report.

Question 15

- 9.5.39 In relation to Section G Basildon and Brentwood, Question 15 of the feedback questionnaire (**Appendix I** of this report) asked respondents:

‘Do you have any further comments on our proposals in this section?’

- 9.5.40 Responses to the points raised through this question, and other open written feedback have been summarised in **Section 9.6** of this report.

Question 16

- 9.5.41 In relation to Section H Thurrock, Question 16 of the feedback questionnaire (**Appendix I** of this report) asked respondents:

‘Do you have any comments on the following within this section?...’

- 9.5.42 A list of key Project features was provided for Section H Thurrock.

- 9.5.43 Responses to the points raised through this question, and other open written feedback have been summarised in **Section 9.6** of this report.

Question 17

- 9.5.44 In relation to Section H Thurrock, Question 17 of the feedback questionnaire (**Appendix I** of this report) asked respondents:

‘Do you have any further comments on our proposals in this section?’

- 9.5.45 Responses to the points raised through this question, and other open written feedback have been summarised in **Section 9.6** of this report.

Question 18

9.5.46 Within a *General Considerations* section of the feedback questionnaire, Question 18 of the feedback questionnaire (**Appendix I** of this report) asked respondents:

'Is there anything you would like us to consider as we finalise our proposals?'

9.5.47 Responses to the points raised through this question, and other open written feedback have been summarised in **Section 9.6** of this report.

Question 19

9.5.48 Question 19 of the feedback questionnaire (**Appendix I** of this report) asked respondents:

'How did you hear about this consultation?'

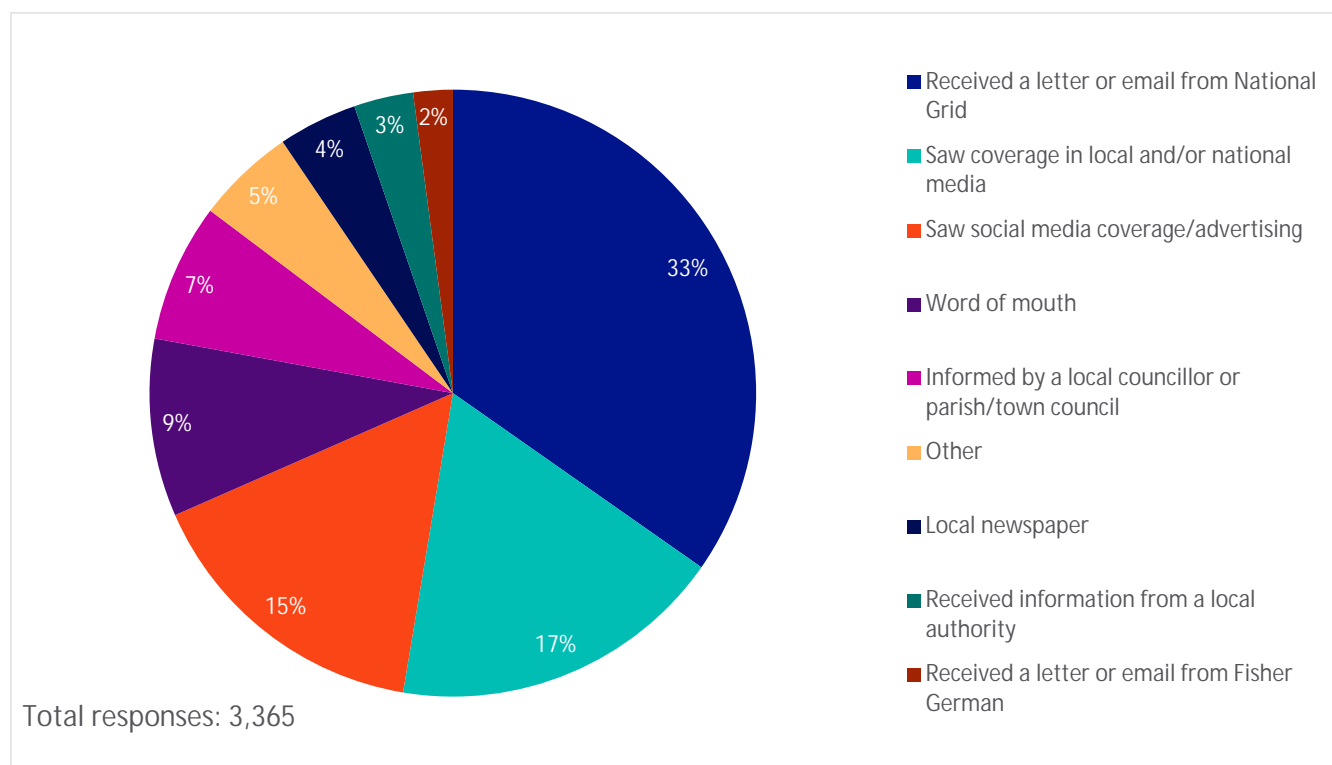

9.5.49 Respondents could select more than one option. A total of 2,144 respondents answered this question, resulting in 3,365 responses. See **Figure 9.2** of this report **Figure 9.3**.

9.5.50 In response to question 19, the most popular method was by receiving a letter or email from National Grid with 33% of responses for this option. 'Saw coverage in local and/or national media' was the next most popular method with a 17% of total responses for this option.

9.5.51 The least popular method of publicity was by receiving a letter or email from Fisher German with only 2% of total responses for this option. Other feedback methods and response numbers are detailed in **Figure 9.2** of this report.

9.5.52 5% of responses were 'Other'. Respondents who selected this option were asked to provide detail and common responses comprised of notification from local businesses/campaigns, Google searches and information at local libraries.

Figure 9.2 Question 19: How did you hear about this consultation

Question 20

9.5.53 Question 20 of the feedback questionnaire (**Appendix I** of this report) asked respondents:

‘Please rate the information we have published in terms of how clearly it was presented and how easy it was to understand’

9.5.54 A total of 2,077 respondents answered this question, see **Figure 9.3** of this report.

9.5.55 In response to question 20, 31% of respondents rate the information as ‘Good’ or ‘Very Good’. A third of respondents (33%) rate the information as ‘Average’ whilst 3% of respondents were ‘Unsure’. The remaining 32% of respondents felt that the presented information was ‘Poor’ or ‘Very poor’.

9.5.56 Respondents were also asked:

‘Tell us more about why you selected the above option.’

9.5.57 Responses to the points raised through this question, and other open written feedback have been summarised in **Section 9.6** of this report.

Figure 9.3 Question 20: Please rate the information we have published in terms of how clearly it was presented and how easy it was to understand

Question 21

9.5.58 Question 21 of the feedback questionnaire (**Appendix I** of this report) asked respondents:

‘If you attended one of our public information events, how did you find it?’

9.5.59 A total of 1,422 respondents answered this question, see **Figure 9.4** of this report.

9.5.60 In response to question 21, 4% of respondents described the public consultation events as ‘*Very informative*’ and just over a fifth of respondents (21%) described them as ‘*Quite informative*’. 34% of respondents found the information events ‘*Not informative*’ whilst the remaining two fifths (41%) of respondents had ‘*No opinion*’.

Figure 9.4 Question 21: If you attended one of our public information events, how did you find it

Question 22

9.5.61 Question 22 of the feedback questionnaire (**Appendix I** of this report) asked respondents:

‘If you attended one of our online webinars, how did you find it?’

9.5.62 A total of 1,031 respondents answered this question, see **Figure 9.5** of this report.

9.5.63 In response to question 22, 1% of respondents described the online webinars as 'Very informative' and 6% of respondents described them as 'Quite informative'. 19% of respondents found the information events 'Not informative' whilst the remaining almost three quarters (74%) of respondents had 'No opinion'.

Figure 9.5 Question 22: If you attended one of our online webinars, how did you find it

Question 23

9.5.64 Question 23 of the feedback questionnaire (**Appendix I** of this report) asked respondents:

'Do you have further comments about our materials, consultation process or any suggestions for how we can improve our consultation?'

9.5.65 Responses to the points raised through this question, and other open written feedback have been summarised in **Section 9.6** of this report.

Question 24

9.5.66 Question 24 of the feedback questionnaire (**Appendix I** of this report) asked respondents:

'What is your gender?'

9.5.67 A total of 2,117 respondents answered this question, see **Figure 9.6** of this report.

9.5.68 In response to question 24, 47% of responses came from males, and 43% of responses were from females. <1% of respondents categorised themselves as 'Non-binary'. The remaining 11% of respondents did not wish to provide their gender.

Figure 9.6 Question 24: What is your gender

Total responses: 2,117

Question 25

9.5.69 Question 25 of the feedback questionnaire (**Appendix I** of this report) asked respondents:

‘Do you consider yourself a person with a disability?’

9.5.70 A total of 2,091 respondents answered this question, see **Figure 9.7** of this report.

9.5.71 In response to question 25, the majority of respondents (82%) answered ‘No’ whilst a small proportion (6%) of respondents answered ‘Yes’. The remaining 12% of respondents did not wish to answer.

Figure 9.7 Question 25: Do you consider yourself a person with a disability

Question 26

9.5.72 Question 26 of the feedback questionnaire (**Appendix I** of this report) asked respondents:

'How would you describe your ethnic background?'

9.5.73 A total of 2,110 respondents answered this question, see **Figure 9.8-8** of this report.

9.5.74 In response to question 26, the majority of respondents (82%) indicated they were 'White English, Welsh, Scottish, Northern Irish or British'. This was followed by 15% of respondents who did not wish to express their ethnic background.

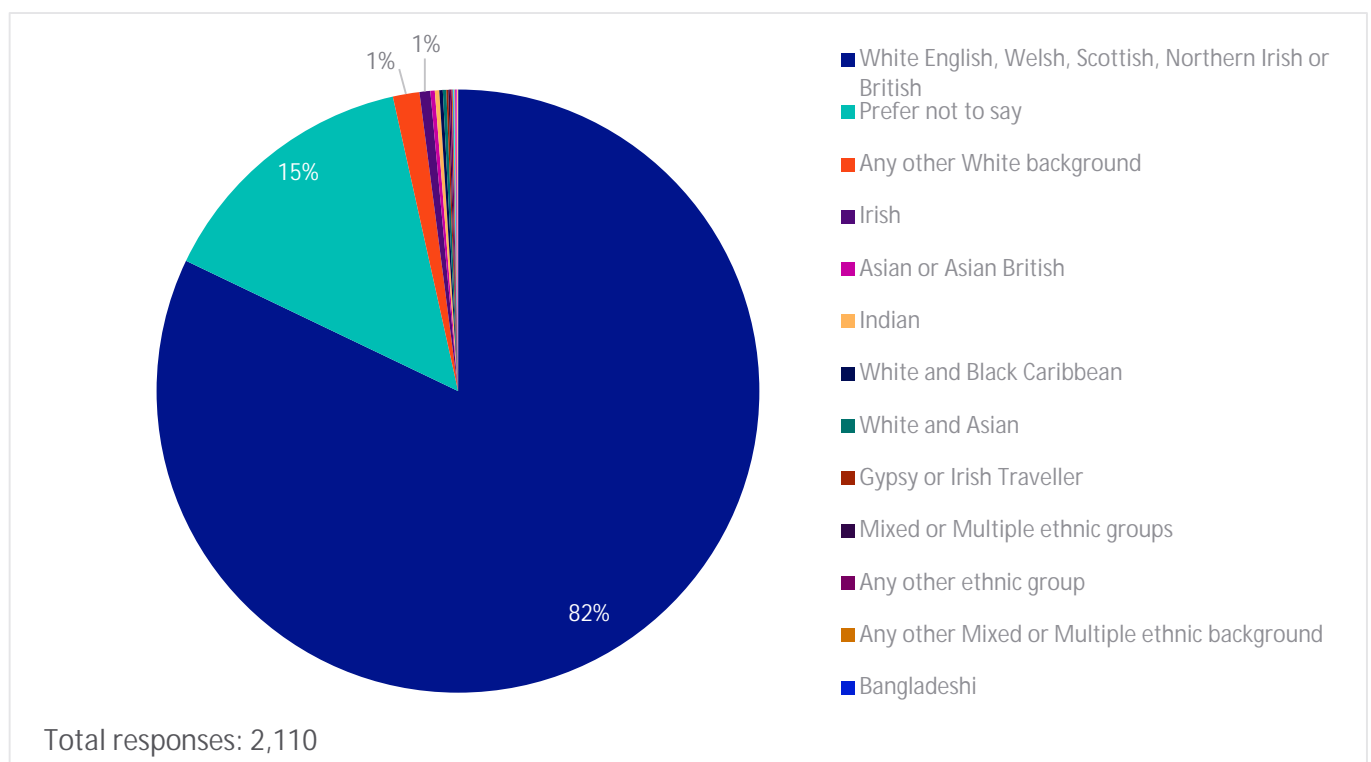

9.5.75 1% of respondents described their ethnic background as 'Any other white background' and 'Irish'.

9.5.76 <1% of respondents indicated the following ethnic backgrounds:

- Asian or Asian British;
- Indian;
- White and Black Caribbean;
- White and Asian;
- Gypsy or Irish Traveller;
- Mixed or Multiple ethnic groups;
- Any other ethnic group;

- Any other Mixed or Multiple ethnic background;
- Bangladeshi;
- Chinese;
- Any other Asian background;
- Black, African, Caribbean or Black British;
- African; and
- Arab.

Figure 9.8 Question 26: How would you describe your ethnic background

Question 27

9.5.77 Question 27 of the feedback questionnaire (**Appendix I** of this report) asked respondents:

'What is your age?'

9.5.78 A total of 2,102 respondents answered this question, see **Figure 9.9** of this report.

9.5.79 In response to question 27, the highest number of responses were from the '65+' category, representing a 29% share of the responses received. This was closely followed by the '55-64' age bracket which represented 24% of responses. The '45-54' category had a 15% share of responses, whilst 10% of responses were from respondents within the '35-44' age range.

9.5.80 The least represented age groups were '25-34', '16-24' and 'Under 16' with 4%, 1% and <1% respectively. The remaining 16% of respondents did not wish to provide their age.

Figure 9.9 Question 27: What is your age

Question 28

9.5.81 Question 28 of the feedback questionnaire (**Appendix I** of this report) asked respondents:

'Please provide any further comments you may have.'

9.5.82 Responses to the points raised through this question, and other open written feedback have been summarised in **Section 9.6** of this report.

9.6 Findings from the Statutory Consultation

9.6.1 National Grid has complied with Section 49 of the PA 2008 by demonstrating in this chapter that it has had regard to all of the responses received at statutory consultation and the comments raised. This Consultation Report has also been prepared in fulfilment of Section 37(3)(c) of the PA 2008.

9.6.2 This section presents and discusses the feedback gathered via the open questions on the feedback questionnaire, or via other open formats provided by respondents (e.g., letters/emails).

9.6.3 This section begins by identifying headline issues which have emerged from the analysis of the feedback, which give a high-level understanding of the primary areas

of interest and/ or concern amongst respondents. All responses, regardless of their origin (including those received after the consultation period), were analysed using the methodology as described in **Section 9.4** of this report.

- 9.6.4 The sections below provide a summary of the feedback raised during the consultation and how National Grid has considered or addressed this.
- 9.6.5 Each row of feedback and response contains a unique reference number, 'X' marks to indicate which stakeholder type the feedback came from (s42(1)(a), (b), (d) or s47), and whether a change to the design has been made including reasons why changes have, or have not, been made.
- 9.6.6 National Grid's responses to consultation feedback are drafted with reference to the route option or alignment shown plans relevant to the relevant stage of consultation, in respect of the most recent consultations responses in 2025 this is the alignment shown on the Works Plans in the application (document reference 2.3). Save for the commitments within the Code of Construction Practice (document reference 7.2) which expressly secure the position of certain specified pylons on the alignment, the alignment shown on the Works Plans is subject to limits of deviation as specified in the draft development consent order that is provided with the DCO application.

Non-section specific feedback

Non-section specific feedback (Statutory Consultation)

Table 9-2 Summary of consultee comments and National Grid's response

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Agricultural Land						
9-2.1	Concern that the Project will take away valuable agricultural land / disrupt farming operations	<p>During the construction stage of the Project, there would be areas of agricultural land that would be temporarily disrupted. National grid would only use land that is required as part of the Project and would seek to minimise the use of agricultural land where reasonable and safe to do so.</p> <p>National Grid is and will continue to work with all landowners including farmers who may be affected by the proposals to understand the impacts on their operations and to work with them as the Project is developed. We would seek to work with the farming community to limit disruption where practicable. This includes providing prior warning of works which may result in the need to move livestock. Compensation claims for disturbance are considered on a case-by-case basis, if negative impact on farming operations can be proven. Particular agricultural matters can also be addressed through voluntary land agreements.</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.2	Concern that the Project will have a negative impact on agricultural livestock (e.g. type of livestock)	<p>National Grid is and will continue to work with all landowners including farmers and equestrian facilities who may be affected by the proposals to understand the impacts on their operations and to work with them as the Project progresses. We would seek to work with the farming community to limit disruption where practicable. This includes providing prior warning of works which may result in the need to move livestock. Compensation claims for disturbance are considered on a case-by-case basis, if negative impact on farming operations can be proven. Particular agricultural matters can also be written into voluntary land agreements. There will also be mitigation put in place where animal grazing maybe affected.</p> <p>As well as possible effects on humans, possible effects of Electric and Magnetic Fields (EMFs) on various animals have been studied. No detectable effects of EMFs have been found on, for example, health, milk production, fertility, and behaviour. This is confirmed in National Policy Statement (NPS) EN-5 which states: <i>"There is little evidence that exposure of crops, farm animals or natural ecosystems to transmission line EMFs has any agriculturally significant consequences."</i></p>			X	
9-2.3	Criticism that National Grid propose to scope out the effects on agricultural landholdings during operation (and maintenance) from the ES, before this has been properly assessed	The effects of the Project on agricultural land holdings during construction is assessed in full in Chapter 6: Agriculture and Soils (document reference 6.6) of the Environmental Statement (ES). The effects on agricultural land holdings have been scoped out during operation (and maintenance) as the majority of land			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		required for construction would be returned to its pre-construction land use during operation, and maintenance associated with operation is likely to only comprise small-scale, temporary works, the effects of which are likely to be limited and not significant. This approach has been agreed through the adopted Scoping Opinion (document reference 6.20)				
9-2.4	Suggest that significant mitigations in working practices and financial undertakings should be implemented to protect the farming community	National Grid is and would continue to work with all landowners including farmers who may be affected by the proposals to understand the impacts on their operations and to work with them as the Project is developed. We would seek to work with the farming community to limit disruption where practicable. This includes providing prior warning of works which may result in the need to move livestock. Compensation claims for disturbance are considered on a case-by-case basis, if negative impact on farming operations can be proven. Particular agricultural matters can also be addressed through voluntary land agreements.			X	
9-2.5	Concern that the Project will result in weed and pest contamination through imported material and machinery	During construction, good practice biosecurity measures will be in place, as detailed in the Outline Code of Construction Practice (CoCP) (Document Reference 7.2).	X		X	
9-2.6	Construction traffic introduces a significant biosecurity risk, potentially spreading diseases such as blackgrass. No biosecurity management plan addressing the risk of agricultural pests and diseases has been presented. Even if National Grid	During construction, good practice biosecurity measures will be in place, as detailed in the Outline Code of Construction Practice (CoCP) (Document Reference 7.2).			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	provides a plan, there is no guarantee that contractors will adhere to it, as there is often a discrepancy between what is promised and what occurs in practice, as seen with the current surveys					
9-2.7	There is no clear strategy from National Grid on how they will manage weeds and invasive species under the pylons in the long term	<p>National Grid carry out annual inspections of all pylons on the National Transmission System. The inspection identifies vegetation within the base of the pylons which may cause damage to the transmission pylon or provide unauthorised access above the pylon. The inspection does not identify the presence of weeds, nor do we control weeds on private land. National Grid does not take freehold ownership of the land and instead enters into an easement agreement with landowners to allow for the pylon to be installed, maintained and removed. Any vegetation under the pylon is still under the ownership and responsibility of the landowner.</p> <p>Measures taken to prevent the spread of Invasive Non-Native Species (INNS) of terrestrial and aquatic plants are included in the Outline Code of Construction Practice (CoCP) (document reference 7.2). If a landowner has any questions regarding how vegetation would be managed on their land, they should contact the Project lands team to discuss: Norwich-Tilbury@fishergerman.co.uk or by calling on Freephone 0808 175 3314.</p> <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD.				
9-2.8	Suggest that National Grid implement a soil management strategy for the storage of topsoil during construction, including the method of weed control	Appendix C: Outline Soil Resource Plan of the Outline Code of Construction Practice (CoCP) (document reference 7.2) sets out key strategy, methodology and guidance, and outlines key soil mitigation measures to protect soil resources during the stages of preconstruction, construction, post construction and operation.			X	
9-2.9	Concern that the Project proposes development in generally a greater proportion of higher-grade agricultural land compared to the average for England, as confirmed in the Preliminary Environmental Information Report (PEIR) (e.g Grade 3A land at Blind Lane)	The agricultural grade of the land within the Order Limits has been confirmed by detailed Agricultural Land Classification (ALC) surveys and is presented in Chapter 6: Agriculture and Soils (document reference 6.6) of the Environmental Statement (ES).			X	
9-2.10	Suggest that where development of agricultural land is demonstrated to be necessary, poorer quality land should be preferred to those of a higher quality	The siting of elements of the Project has considered all relevant factors. In respect of any individual element being sited (e.g. cable sealing end compounds substations etc) the potential loss of Best and Most Versatile (BMV) land is balanced against the effects and costs from the other implications of a change such as longer or shorter overhead line or underground cable routes if the specific site were moved onto non-BMV land. This approach is consistent with the balanced decision making inherently envisaged by NPS EN-1.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.11	Concern that the Project will result in a breach of respondent's contract for the Countryside Stewardship Scheme (CSS)	Land acquired temporarily during construction (including that from undergrounding) will be reinstated to its previous ALC grade during operation, meaning land quality and land management including Countryside Stewardship Schemes should remain the same post construction. The permanent land take of agricultural land from pylon footings is relatively small proportional to field sizes. The permanent footprint of the substations was rationalised through the design process to minimise the total amount of land required.			X	
9-2.12	Concern about the risk of collisions between farm vehicles and pylons	National Grid acknowledges there is a risk of collision between farm vehicles and pylons. In exceptional circumstances, where there is a higher risk of collisions due to volume and size of equipment, then mitigation measures will be agreed and implemented. Any collision with a National Grid pylon should be reported via the 0800 number on the National Grid property plate.			X	
9-2.13	Criticism of National Grid for using legislation to allow them to access to land for the Project despite the land being worked for crops / agriculture without needing to provide compensation for any damage caused	Where voluntary agreement for surveys cannot be reached and the surveys are time critical, National Grid may have to use powers granted under Section 172 of the Housing and Planning Act 2016. If access is taken under voluntary agreement or under powers, compensation will still be made to landowners where damages, disturbance or losses have been caused.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.14	Suggest that National Grid should provide power cable purlin holders on the sides or in the corners of respondent's fields (address not provided by respondent; e.g. as there will be a 6m grass strip around all the respondent's arable fields so that National Grid have a permanent access track of grass to access equipment if needed and respondent does not have to drive around them in their fields)	<p>Further information is required by National Grid to better understand the feedback. It is unclear why 'power cable purlin holders' are being requested. To discuss the proposals in greater detail, landowners should contact National Grid or the lands team to discuss proposals on their land.</p> <p>The access track referred to in the respondent's feedback is for future surveys and maintenance if required and will not be used for construction. We are not proposing to construct anything for this permanent access route, existing tracks and roads are being used where possible. The 6 m strip around the respondent's fields can still be used by the respondent as they see fit. National Grid will only need to use it for access to survey and maintain the overhead line and will always engage with the landowner ahead of works in the future.</p>			X	
9-2.15	Criticism of assessment statements in the Scoping Opinion for the Project (Preliminary Environmental Information Report (PEIR) Vol Part 1 of 4 Appendix 5.1), including the following:	<p>As per the Scoping Opinion (document reference 6.20), the impacts on soil ecosystem functions are considered to be limited during the operational phase of the Project as the majority of land required for construction would be returned to its pre-construction land use and the impacts on soil ecosystem functions during operation (and maintenance) are likely to be limited.</p> <p>The impacts on agricultural operations were considered to be limited during the operational phase of the Project as any maintenance or repair works required which would result in disturbance to agricultural operations</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>would be undertaken in accordance with standard practice. Disturbance to agricultural operations during the construction phase are assessed in full in Chapter 6: Agriculture and Soils (document reference 6.6) of the Environmental Statement (ES).</p> <p>The financial effects on individual businesses are being addressed through separate discussions/negotiations which lie outside the scope of the ES (as agreed in the Scoping Opinion (document reference 6.20)).</p> <p>Therefore, the financial effects on individual businesses have not been assessed in Chapter 6: Agriculture and Soils of the ES (document reference 6.6) or Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15).</p>				
9-2.16	Criticism that the response to the Environmental Impact Assessment (EIA) scoping opinion (Paragraph 6.9.9) describes that impacts on soil ecosystem functions are likely to be "limited", where these would actually be a significant harm;	<p>National Grid would compensate landowners in line with the Compensation Code.</p> <p>If a landowner would like to discuss compensation they should contact the Projects lands team or appoint an agent to act on their behalf and be able to advise on compensation matters.</p> <p>Please contact the Project lands team via Norwich-Tilbury@fishergerman.co.uk or by calling on Freephone 0808 175 3314.</p> <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Airfields						
9-2.18	Suggest that National Grid consult with the Civil Aviation Authority (CAA) with regard to the potential impact of the Project on local airfields (including potential safety concerns)	As a prescribed consultee, National Grid formally notified the Civil Aviation Authority (CAA) of the statutory consultation period. We recognise however, that as the majority of civil airfields potentially impacted by the Project are not licensed, any response may be limited as the CAA's regulatory responsibilities relate to licensed and officially safeguarded airfields only. National Grid's aviation advisors have therefore also been consulting with the CAA's separate Airfield Advisory Team (AAT), who provide advice to support licensed and non-licensed airfields in their own responsibilities for safety, to ensure relevant considerations are reflected within the Project's design. We will continue to engage with local airfield operators and other relevant parties as appropriate. Further information on the assessment of airfields can be found in the Environmental Statement (ES) (Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).			X	
9-2.19	Criticism that National Grid has not considered CAP 738 (Safeguarding of Aerodromes) which includes the need for a 5 km safeguarded zone designed to protect aviation operations	The stated intention of the Civil Aviation Authority's Safeguarding of Aerodromes (CAP 738) document is to provide advice and guidance to all those involved in the process of aerodrome safeguarding to ensure aviation safety and operations are not compromised by new development. The guidance states that responsibility for safeguarding rests with the aerodrome operator and			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>is a requirement for licensed aerodromes and encouraged for non-licensed sites. The process involves the development of a safeguarding map, to be agreed with and held by the Local Planning Authority (LPA). The maps depict the Obstacle Limitation Surfaces (OLS), areas of airspace around aerodromes where development may present a hazard to aviation operations, as well as other constraints. In addition to CAP 738, paragraphs 5.5.8-5.5.20 of the Government's Overarching National Policy Statement for Energy (NPS) EN-1 specifically recognise aviation safeguarding arrangements as relevant to energy proposals. Both CAP 738 and NPS EN-1, as well as other relevant energy and aviation policies and guidance, have been carefully considered by National Grid.</p> <p>Neither CAP 738 nor NPS EN-1 refer to a 5 km safeguarded zone – although CAP 738 does reflect that a safeguarding map could potentially extend to a radius of up to 13 km from the airfield. It should be noted that, even though a proposed development falls within the safeguarded area, it does not follow that its presence would cause airfield operations to be unsafe.</p> <p>National Grid's bespoke approach to the assessment of aviation safety impacts considers not only obstacle clearance distances and limits but additional site-specific factors including flight patterns, operational procedures, aircraft performance and topography. National Grid assessments are directly informed by</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>ongoing consultation with the aerodrome operators, which includes consideration of safeguarding maps where these have been developed by the operators for the unlicensed airfields potentially affected.</p> <p>National Grid's Aviation Impact Assessments consider the Civil Aviation Authority's (CAA's) CAP 738 guidance, which provides advice for operators responsible for aerodrome safeguarding in their development of safeguarding maps. The guidance explains technical calculations regarding Obstacle Limitation Surfaces (OLS) in relation to obstacles, to be conducted when safeguarding assessments take place, and which are applied as part of National Grid's impact assessment methodology. It is noted, however, that the guidance does not specify or require a 5 km safeguarding zone. Further information on the assessment of airfields can be found in the Environmental Statement (ES) Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15)) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).</p>				
9-2.20	Criticism that National Grid has not considered CAP 168	<p>The stated purpose of Civil Aviation Authority's (CAAs) 'Licensing of Aerodromes' document (CAP 168) is to give advice and guidance to applicants and licence holders on licensing procedures. The guidance also provides descriptions of licensing requirements relating to operational management and the planning of aerodrome development, including methods for the assessment and treatment of obstacles within the</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		aerodrome or its vicinity. Whilst the majority of civil aerodromes identified as potentially impacted by the proposal are unlicensed, National Grid's approach to impact assessment includes consideration the extent to which the Project might breach the CAP 168 obstacle clearance limits if the unlicensed airfields assessed were treated as licensed, therefore CAP 168 has been considered. Further information on the assessment of airfields can be found in the Environmental Statement (ES) (Chapter 15: Socio-Economic, Recreation and Tourism (document reference 6.15)) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).				
9-2.21	Criticism that National Grid has not considered CAP 793	<p>In the absence of detailed guidance for new development in relation to existing aerodromes, an approach based on a risk assessment, tailored to the specific circumstances of each site is adopted. Some relevant material is available in the Civil Aviation Authority's Safer Operating Procedures at Unlicensed Aerodromes guidance (CAP 793, 2010). CAP 793 has been considered, noting however that this was originally published to guide development of new unlicensed aerodromes or assess the impact of obstacles on runways that were previously licensed. Other reasons for not limiting assessment to CAP 793 criteria only are:</p> <ul style="list-style-type: none"> There is no distinction between obstacles in the take-off/ approach area and those elsewhere. 			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<ul style="list-style-type: none"> Runway length and operation type is not taken into account. The study may not consider an appropriate area – 2000 m is given as a fixed radius for consideration at all unlicensed aerodromes, regardless of size or use. The document was likely never intended to be used for the current requirement – CAP793 was published with the intention of recommending an optimum obstacle environment for new airfields or for assessing obstacles in relation to airfields that were previously licensed but did not need to be anymore (due to a change in UK legislation in 2009). There is no published guidance for mitigating an obstacle threat or flight alongside/ over obstacles. Non-aerodrome aviation sites (e.g. for ballooning or model flying) are not in the document's scope. <p>Further information on the assessment of airfields can be found in the Environmental Statement (ES) Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).</p>				
9-2.22	Criticism that the ASA is incorrect in its assertion that the provisions of CAP 168, clearly articulated	The stated purpose of the Civil Aviation Authority's (CAA's) 'Licensing of Aerodromes' guidance (CAP 168)			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	for General Aviation Aerodromes in CAP 738 are not appropriate	<p>is to give guidance to applicants and licence holders on licensing procedures. The guidance also provides descriptions of licensing requirements relating to operational management and the planning of aerodrome development, including methods for the assessment and treatment of obstacles within the aerodrome or its vicinity. Whilst the majority of civil aerodromes identified as potentially impacted by the proposal are unlicensed, National Grid's approach to impact assessment includes consideration the extent to which the Project might breach the CAP 168 obstacle clearance limits if the unlicensed airfields assessed were treated as licensed, amongst other considerations.</p> <p>Furthermore, National Grid recognises that the CAA's 'Safeguarding of Aerodromes' guidance (CAP 738) should be and has been considered in conjunction with CAP 168, which includes parameters for Obstacle Limitation Surfaces (OLS) and Obstacle Free Zones (OFZ), notwithstanding that CAP 738 is advisory for non-licensed aerodromes. CAP 738 does not explicitly refer to General Aviation aerodromes.</p> <p>Further information on the assessment of airfields can be found in the Environmental Statement (ES) Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).</p>				
9-2.23	Criticism that unlicensed aerodromes have not been afforded the same protections as licensed	The Government's Overarching National Policy Statement (NPS) for Energy EN-1 recognises that			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	aerodromes / Suggest that unlicensed aerodromes should be afforded the same protections as licensed aerodromes	<p>certain civil aerodromes are officially safeguarded on the basis of their importance to the national air transport systems to ensure that their safety and operation are not compromised by new development (para. 5.5.8 refers). Otherwise, NPS EN-1 refers to the Civil Aviation Authority's (CAA's) 'Safeguarding of Aerodromes' guidance (CAP 738), which requires all licensed aerodromes to have safeguarding systems in place and encourages non-licensed sites to do the same. NPS EN-1 states that responsibility for the safeguarding of General Aviation aerodromes lies with the aerodrome operator.</p> <p>As the applicant, National Grid, recognises its responsibilities to consult aviation stakeholders, including aerodrome operators – licensed or otherwise – likely to be affected by the proposed development in preparing assessments of the proposal on aviation interests, as well as to develop mitigations if appropriate. It continues to consult with operators in close proximity to the Project and considers its approach to be consistent with NPS EN-1, and the parameters of CAP 738 and other relevant CAA guidance. #</p> <p>Further information on the assessment of airfields can be found in the Environmental Statement (ES) (Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.24	Criticism that the Airport Services Association (ASA) is incorrect to safeguarding standards being 'aimed at the design stage for new airfields' and at 'dispensations' / Concern/Criticism that National Grid's aviation advisors have considered that generation aviation airfields are not required to meet the same safety standards as 'Officially safeguarded' aerodromes	<p>In the absence of detailed guidance for new development in relation to existing aerodromes, an approach based on a risk assessment, tailored to the specific circumstances of each site is adopted. Some relevant material is available in the Civil Aviation Authority's (CAA) 'Safer Operating Procedures at Unlicensed Aerodromes' guidance (CAP 793,2010), which has been considered, noting however that this was originally published to guide development of new unlicensed aerodromes or assess the impact of obstacles on runways that were previously licensed. Other reasons for not limiting assessment to CAP 793 criteria only are:</p> <ul style="list-style-type: none"> • There is no distinction between obstacles in the take-off/ approach area and those elsewhere. • Runway length and operation type is not taken into account. • The study may not consider an appropriate area – 2000 m is given as a fixed radius for consideration at all unlicensed aerodromes, regardless of size or use. • The document was likely never intended to be used for the current requirement – CAP 793 was published with the intention of recommending an optimum obstacle environment for new airfields or for assessing obstacles in relation to airfields that were previously licensed but did not need to be 			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>anymore (due to a change in UK legislation in 2009).</p> <ul style="list-style-type: none"> There is no published guidance for mitigating an obstacle threat or flight alongside/ over obstacles. Non-aerodrome aviation sites (e.g. for ballooning or model flying) are not in the documents scope. <p>Further information on the assessment of airfields can be found in the Environmental Statement (ES) (Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).</p>				
9-2.25	Criticism that the Airport Services Association (ASA) has not provided any robust 'safety case' to counter the experienced, robust knowledge of the operators of aerodromes across the Project (e.g. it has made sweeping and unsupported assertions) / Concern about the aviation advice received by National Grid for the Project regarding aviation safety	National Grid has appointed independent aviation consultants who have considered the likely performance of the aircraft and ability of pilots to avoid or overfly the obstacles with an adequate safety margin. Their assessments are based on a detailed appraisal of the performance of different aircraft types based on independently verified data. Consideration has been given to the likely safety risks based on a review of all air accidents involving collision with an overhead line over the past 12 years (per Air Accident Investigation Board database). Further information on the assessment of airfields can be found in the Environmental Statement (ES) (Chapter 15: Socio-Economics, Recreation and Tourism (document			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).				
9-2.26	Criticism that the views of highly experienced operators of the aerodromes across the Project hold the expert opinion on safeguarding sites, and the ASA has not taken this into account that there are occasions when there are interactions between aerodromes and operating procedures designed to address proximity	National Grid recognises that responsibility for the safeguarding of General Aviation (GA) aerodromes lies with the aerodrome operator and have consulted operators to inform assessments of potential aviation impacts resulting from the Project, in accordance with applicant responsibilities as described in the Overarching National Policy Statement (NPS) for Energy EN-01. Existing operating procedures and any interactions between nearby aerodromes (e.g. Tibenham and Priory Farm) have been taken into account during the assessment of potential impacts. In the cases of Tibenham and Priority Farm, assessments concluded that, with the Project as currently proposed, operations can continue at both aerodromes. Further information on the assessment of airfields can be found in the Environmental Statement (ES) Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).			X	
9-2.27	Criticism that the Airport Services Association (ASA) has not looked in detail at the type of operations at each site and nor has it taken into account changes in volume or nature of the activities / Concern that the National Grid's aviation advisors have not carried out any detailed appraisal	The current flight procedures at potentially affected airfields and airstrips have been taken into account in the assessment process, having been informed by consultation with operators. The National Grid-appointed aviation consultants do not anticipate that there would be any significant increases in the number or type of movements at any of the airfields – except			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	of airfields affected by the Project, and suggest that site specific appraisal should be undertaken	potentially the introduction of electric vertical take-off and landing (eVTOL) aircraft, which have similar or better performance than existing aircraft types. Further information on the assessment of airfields can be found in the Environmental Statement (ES) Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).				
9-2.28	Request for the ASA to clarify where the ANO exemption can be found	National Grid is unclear as to which Air Navigation Order (ANO) exemption is referred to in this instance. The National Grid appointed independent aviation consultancy does not consider that any dispensation to the ANO would be necessary in order for airfields to operate safely in relation to the Project. Further information on the assessment of airfields can be found in the Environmental Statement (ES) Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).			X	
9-2.29	Request that the ASA must take account of site specific issues (e.g. which it does not seem to have done so to date)	National Grid's appointed aviation consultancy has developed a methodology to assess the potential impacts of the Project on airfields in close proximity. The approach enables consideration of obstacle clearance distances and limits as well as additional site-specific factors including flight patterns, operating procedures, aircraft performance, and topography. This tailored approach, informed by consultation with airfield operators has, to date, resulted in adjustments to the			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Project design to minimise potential impacts, as well as the consideration of alternative mitigation measures, such as changes to aerodrome operational procedures, where reasonable and appropriate. Continued collaboration with operators and consultees seeks to agree the acceptability of proposed mitigations. National Grid considers this approach to be in accordance with its responsibilities as applicant as described within the Government's Overarching National Policy Statement (NPS) for Energy EN-1. Further information on the assessment of airfields can be found in the Environmental Statement (ES) Chapter 15: Socio-Economic, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).				
9-2.30	Suggest that the officials and executives at National Grid that are responsible for the Project should be held accountable and prosecuted should any aviation incident related to the Project occur	<p>The Government's Overarching National Policy Statement for Energy (NPS) EN-1 states that responsibility for the safeguarding of General Aviation (GA) aerodromes lies with the aerodrome operator.</p> <p>As the applicant, National Grid recognises its responsibilities as described by NPS EN-1 to consult aviation stakeholders, including aerodrome operators likely to be affected by the proposed development, in preparing assessments of the proposal on aviation interests, as well as to develop mitigations if appropriate. It has and continues to consult with operators in close proximity to the Project and considers its approach to be consistent with NPS EN-1, as well as Civil Aviation Authority (CAA) guidance,</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		where relevant. Further information on the assessment of airfields can be found in the Environmental Statement (ES) Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).				
9-2.31	Concern that the Project does not comply with government / the Civil Aviation Authorities (CAA) guidelines on safeguarding airfields and aviation safety (generally; including Combined Aerodrome Safeguarding Team (CAST) advice) / Concern that the Project does not comply with the aviation safety guidelines set out in the National Planning Policy Framework (NPPF) and National Policy Statements / Concern that the Project does not comply with government aims on safeguarding aviation	In accordance with its responsibilities as an applicant as described within the Government's Overarching National Policy Statement (NPS) for Energy EN-1, National Grid appointed an independent aviation consultancy to develop a methodology to assess the potential impacts of the Project on aviation and consider potential mitigations, including as part of the Project design. The assessment methodology enables risk-based site-specific assessment of a range of criteria, including but not limited to, lateral and vertical clearance margins, aircraft types, airfield operational activities and procedures, and the surrounding context. The approach and assessment parameters are informed by Civil Aviation Authority (CAA) regulations and guidance as well as ongoing consultation with airfield owners and operators. Furthermore, we have been consulting with the CAA's Airfield Advisory Team (AAT), who provide advice to support airfields to fulfil their responsibilities for safety and safeguarding, to ensure relevant considerations are taken into account. While the NPS EN-1 and the NPS EN-5 provide the primary policy for decisions taken by the Secretary of State on applications for projects of this significance,			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>we also recognise that account may be taken of the provision of the broader National Planning Policy Framework , and have reflected its requirements, especially in relation to the General Aviation network, within our approach to assessment.</p> <p>Further information on the assessment of airfields can be found in the Environmental Statement (ES) Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).</p>				
9-2.32	Concern that the Project does not comply with the Air Navigation Order 2016	<p>We understand that the Air Navigation Order (ANO) 2016 (as amended) provides the legislative basis for civil aviation and safety regulation, and this context is recognised within our approach to the assessment of potential impacts to aviation from the Project, as well as consideration of appropriate mitigations. We do not anticipate that potential impacts of the Project will result in non-compliance with the Order. We would be grateful for more specific information on any particular aspects of the ANO of concern to the respondent.</p> <p>Further information on the assessment of airfields can be found in the Environmental Statement (ES) Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).</p>			X	
9-2.33	Criticism that the only aviation related organisation National Grid contacted was the Civil Aviation Authority (CAA), as the relevant CAP's (168 and	As a prescribed consultee, National Grid formally notified the Civil Aviation Authority (CAA) of the statutory consultation period. In addition, National Grid			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	738) identify the operator of an unlicensed airfield as the expert on its safe operation because it has the operating experience, knows the limitations of the airfield and can apply them in the most prudent manner as safe operation is crucial to the commercial future of that airfield. Accordingly, to comply with CAA guidance and insurers requirements most unlicensed airfield operators work in accordance with the CAA's advice and guidelines	has consulted with the owners and operators of licensed and unlicensed airfields potentially affected by the Project to inform its aviation impact assessments. This approach coincides with National Grid's responsibilities as an applicant as described within the Government's Overarching National Policy Statement for Energy (NPS) EN-1, and recognises the airfield's particular knowledge and expertise regarding its own operations, as well as operator responsibilities for safeguarding. We have also consulted with the CAA's separate Airfield Advisory Team (AAT), who provide advice to support licensed and unlicensed operators in their own responsibilities for safety to ensure relevant regulatory and guidance considerations are reflected within the impact assessment methodology. Further information on the assessment of airfields can be found in the Environmental Statement (ES) Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).				
9-2.34	Concern that National Grid have not considered Government Planning Note 01/03 for the safeguarding of aerodromes, technical sites and military explosive storage areas	We recognise that the Government's Overarching National Policy Statement for Energy (NPS) EN-1 refers to the Department for Transport's Circular 01/2003 in relation to aerodrome safeguarding. In accordance with our responsibilities as an applicant as described within NPS EN-1, National Grid has appointed an independent aviation consultancy to develop a methodology to assess the potential impacts of the Project on aviation and consider potential		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>mitigations, including as part of the Project design. This approach has involved notification of the Civil Aviation Authority (CAA), the Ministry of Defence (MoD) and airfield owners and operators in relation to Project proposal, recognising their varied safeguarding responsibilities in relation to officially safeguarded civil and military, licensed and unlicensed aerodromes, as reflected within the Circular. We are continuing to engage the MoD and owners/operators of potentially impacted airfields to discuss our impact assessments and any potential mitigations, as necessary. Furthermore, we have been consulting with the CAA's Airfield Advisory Team, who provide advice to support airfields to fulfil their responsibilities for safety and safeguarding, to ensure relevant considerations are taken into account. Further information on the assessment of airfields can be found in the Environmental Statement (ES) Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).</p>				
Community/social impact						
9-2.35	Concern about impact of the Project on children / families / residents / communities	<p>National Grid recognises people may have concerns about the potential impacts of living close to an overhead line, and that the uncertainty whilst the proposals are developed may cause anxiety.</p> <p>We have sought to reduce potential effects on communities, residents – including children - through</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>routeing and design. We have also sought to reduce concern or uncertainty about the proposals through making timely design decisions and engaging with people and stakeholders throughout the development of the Project. If the Project received Development Consent, the Project team would continue to engage with people potentially affected during construction, through regular communication including letters, phone calls and meetings, where necessary.</p> <p>We urge anyone with concerns to get in touch through the Norwich to Tilbury Freephone number, address or email, which will remain open throughout examination.</p> <p>National Grid is committed to working with local suppliers, facilitated by supporting forums (such as the local Chambers), on electricity industry skills and workforce planning. National Grid is also committed to providing a coordinated regional approach to jobs and skills opportunities. This commitment is broader than the individual project and separate to any commitments under the proposed development consent order for this Project. The socio-economic effects of the Project are assessed in Chapter 15: Socio-economics, Recreation and Tourism of the Environmental Statement (ES) (document reference 6.15). Post construction job opportunities are limited given the nature of the development however we will still work with Local Authorities (including facilitating local partners) to understand what is important to them around skills and</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>employment to ensure we leave a lasting positive legacy in the communities where we operate.</p> <p>With regards to a delivery mechanism, the above measures will be delivered as part of our community benefit package, which will look at both local and regional initiatives. This will be delivered outside the development consent process and is not a material consideration in the decision on the proposed Project or a matter to be secured as part of the Development Consent Order (DCO), as per the Community Funds for Transmission Infrastructure: Guidance (DESNZ, 2025).</p>				
9-2.36	Concern about impact of the Project on school / educational facilities	<p>Through routeing and siting, National Grid has sought to avoid, as far as practicable, locations of education establishments.</p> <p>Environmental Statement (ES) Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) presents an assessment of the potential impacts on education facilities as a result of the Project. As part of the assessment, a range of measures are considered during the construction phase to reduce, where practicable, disruption to education establishments. These include traffic management, signage and routing measures to ensure access or partial access can be maintained where feasible. These are identified within Environmental Statement (ES) Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15), the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) and the Outline</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Code of Construction Practice (CoCP) (document reference 7.2). The assessment concludes that there would be no significant effects on education facilities within the study area as a result of the construction and operation of the Project.				
9-2.37	Concern about impact of the Project on leisure	Through routeing and siting National Grid has sought to avoid, as far as practicable, locations that are important for leisure and tourism. Environmental Statement (ES) Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) presents an assessment on of the potential impacts on sports clubs, recreational land and recreational routes located within the Order Limits. As part of this assessment, a range of measures have been considered throughout the construction phase of the Project to minimise disruption on leisure and tourism. These include: traffic management, signage and routeing measures. These are identified within Environmental Statement (ES) Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15), the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).	X	X	X	
9-2.38	Concern about over development of area / other works in the area	A cumulative effects assessment has been undertaken in accordance with the Planning Inspectorate's Advice Note 17 'Cumulative Effects Assessment' and is presented in Environmental Statement (ES) Chapter 17: Cumulative Effects (document reference 6.17). The	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>cumulative effects assessment has considered the effects of the Project in conjunction with other existing and, or approved developments in line with guidance. As part of this process, National Grid has engaged with other developers who are proposing development in proximity of the Project to understand their requirements.</p> <p>The cumulative assessment has been undertaken in accordance with the overarching National Policy Statement (NPS) for Energy EN-1.</p> <p>Paragraph 4.1.5 in EN-1 states:</p> <p><i>'In considering any proposed development, in particular when weighing its adverse impacts against its benefits, the Secretary of State should take into account: ... its potential adverse impacts, including on the environment, and including any long-term and cumulative adverse impacts, as well as any measures to avoid, reduce, mitigate or compensate for any adverse impacts, following the mitigation hierarchy'.</i></p> <p>Paragraph 4.2.12 in EN-1 states:</p> <p><i>'The cumulative impacts of multiple developments with residual impacts should also be considered.'</i></p> <p>Paragraph 4.3.3 in EN-1 states:</p> <p><i>'The Regulations require an assessment of the likely significant effects of the proposed project on the environment, covering the direct effects and any indirect, secondary, cumulative, transboundary, short, medium, and long-term, permanent and temporary,</i></p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p><i>positive and negative effects at all stages of the project, and also of the measures envisaged for avoiding or mitigating significant adverse effects'.</i></p> <p>Paragraph 4.3.19 of EN-1 states:</p> <p><i>'The Secretary of State should consider how the accumulation of, and interrelationship between, effects might affect the environment, economy, or community as a whole, even though they may be acceptable when considered on an individual basis with mitigation measures in place'.</i></p> <p>Paragraph 4.4.5 in EN-1 states:</p> <p><i>'The impacts of more than one development may affect people simultaneously, so the applicant should consider the cumulative impact on health in the ES where appropriate'.</i></p> <p>The long list and short list of other existing and, or approved developments considered for the Cumulative Effects Assessment is presented in Environmental Statement (ES) Appendix 17.2: Long List and Short List of Other Developments (document reference 6.17.A2), detailing the other developments shortlisted for detailed assessment. The appendix provides details on other developments screened out of the assessment in accordance with the methodology presented in Environmental Statement (ES) Chapter 17: Cumulative Effects (document reference 6.17). The detailed assessment of shortlisted other developments is presented in Appendix 17.3: Inter-Project Cumulative</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Effects Matrix (document reference 6.17.A3). Appendix 17.3: Inter-Project Cumulative Effects Matrix (document reference 6.17.A3) outlines the residual significance of cumulative effects for each development, for each environmental topic that has a Zone of Influence that overlaps with that development (i.e. socio-economic, recreation and tourism impacts).				
9-2.39	Concern about the Project being in too close proximity to recently built housing developments / using land being considered for future development (including residential, commercial, infrastructural, and employment sites)	<p>National Grid has obtained information on existing, under construction, consented but not built schemes as well as development proposals within the planning system. The Project design has responded to those that are confirmed through consideration of routeing.</p> <p>In the case of development proposals, some can be amended to be designed around our proposed infrastructure but in other cases our proposals may need to be amended at a corridor level, or proposed developments factored into our detailed route design.</p> <p>Based on known information, and in light of changes made following consideration of feedback to the 2022 and 2023 non-statutory consultations, statutory consultation, the targeted consultations, and landowner consultation, we consider our proposals are consistent with relevant policy and guidelines and the alignment designed such that they do not prevent proposed housing developments from being successfully progressed. UK law does not prescribe minimum distances between overhead lines and homes, but any implications on landscape and visual receptors, residential amenity or from concerns about</p>		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		electromagnetic fields are robustly assessed as part of the Environmental Impact Assessment (EIA) and balanced as part of the decision making process. We will continue to review planning applications and engage with developers as necessary.				
9-2.40	Concern about the Project causing communities to become encircled / surrounded by overhead lines (generally - no location given)	The alignment has been routed to achieve some separation from the existing 400 kV overhead line, such that villages are not encircled by overhead lines to both sides. Separation is inevitably reduced in certain locations due to the presence of constraints to routing and environmental features. Detailed assessment reported in the Environmental Impact Assessment (EIA) identifies any measures considered to be necessary to reduce likely significant effects which would also consider the potential for effects potentially arising from close paralleling existing 132 kV overhead line and new 400 kV overhead line infrastructure.			X	
9-2.41	Concerned that the Project will have a negative impact on domestic horses / equestrian activities (generally - no location given)	As well as possible effects on humans, the possible effects of Electric and Magnetic Fields (EMFs) on various animals have been studied. No proven effects of EMFs have been found in any species at levels below the guidelines. This is confirmed in National Policy Statement (NPS) EN-5 which states: "There is little evidence that exposure of crops, farm animals or natural ecosystems to transmission line EMFs has any agriculturally significant consequences." Although horses are not directly mentioned, there is no evidence to suggest they are any different to other farm animals.		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		As well as the possible direct biological or health effects addressed above, indirect effects such as microshocks can occur as a result of electric fields. Microshocks are small spark discharges which are similar to a static shock after walking across a nylon carpet for example. The Project would be designed in accordance with the principles of the Governments Code of Practice 'Power Lines: Control of Microshocks and other indirect effects of public exposure to electric fields' to ensure these are mitigated, which include equestrian activities.				
9-2.42	Concern about the impact of the Project on emergency services / ambulances / hospitals / health service	<p>Through routeing and siting National Grid has sought to avoid and reduce as far as practicable effects on identified healthcare facilities.</p> <p>Environmental Statement (ES) Chapter 10: Health and Wellbeing (document reference 6.10) consider the potential impacts on, and access to, healthcare facilities, including emergency services, ambulances, hospitals and other NHS services associated with the construction of the Project, drawing on information from Environmental Statement (ES) Chapter 16: Traffic and Transport (document reference 6.16). No health facilities are due to be directly impacted by the Project and where road diversions are required traffic management and mitigation measures would be in place to reduce impacts. These include: traffic management, signage and routing measures to ensure access or partial access can be maintained where feasible. Further detail on proposed mitigation</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		measures are presented in the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), which has been produced following engagement with stakeholders including the emergency services.				
9-2.43	Concern that the Project could disrupt telecommunications / broadcast signals / electrical equipment / GPS	<p>Radiofrequency emissions can interfere with electrical equipment, telecommunication, Wi-Fi and broadcast equipment. These emissions are limited from overhead lines by design set out in National Grid's Technical Specifications, which include the requirements of British Standards minimising the generation of radio interference. All the equipment used will meet the requirements in these standards, which are in place to prevent interference issues. These are the same good engineering practices that are applied to the existing transmission system assets, including existing 400 kV overhead lines, which cause no interference issues for electrical equipment, telecommunication, Wi-Fi and broadcast equipment under normal operating conditions. Therefore, we also expect no interference issues as a result of the Project.</p> <p>Global Positioning Systems (GPS) are increasingly being used to provide accurate position information such as in precision farming. It uses a radio receiver to receive the transmitted radio signals from a number of satellites orbiting the earth. Additional accuracy is used in differential GPS (DGPS) which involves the use of signals transmitted from a local fixed transmitter (or another satellite). Close to a pylon, there might be some degradation in GPS performance, just as there</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		can be some degradation close to buildings and trees. The thickness of individual wires means that they do not cause a problem. Any radio interference emitted by the line is too small to have any effect. Other than that, there is no evidence of power lines interfering with GPS used in precision farming.				
9-2.44	Criticism that the Project only benefits those living elsewhere (e.g. London, exports to Europe)	There is a need to reinforce the existing high voltage electricity network in the East Anglia region. It does not currently have the capability needed to transport reliably and securely the electricity that will be generated and connected to the electricity transmission network by 2030, while working to the required standards. The Project would benefit the UK as a whole, including local communities, by enabling the connection of new sources of renewable energy and by contributing to our energy security in the future, helping the country to achieve the government's Net Zero target and ensuring that the national grid meets future power demands.	X	X	X	
9-2.45	Request that benefits are contributed to communities that are impacted by the Project	The Government has published its guidance on community funds for transmission infrastructure (DESNZ, 2025). National Grid is committed to working with Ofgem, industry partners, local communities and their representatives to ensure community benefits are delivered fairly and effectively, driving lasting, positive change for the people and places integral to our developing electricity network. The Government has also announced its plans to	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>introduce a bill discount scheme for households within 500 metres of new infrastructure, which it proposes to introduce through the Planning and Infrastructure Bill. This is evolving government policy. Government expects this scheme to be in place by 2026 and we will share further details as they emerge.</p> <p>National Grid is committed to providing a coordinated local and regional approach to community benefits. This will be delivered outside the development consent process, since this is not a material consideration in the decision on the proposed Project or a matter to be secured as part of the Development Consent Order (DCO), as per the Community Funds for Transmission Infrastructure: Guidance (DESNZ, 2025).</p>				
9-2.46	Suggest that local labour / contractors are used for the Project	<p>National Grid sources suppliers through competitive tender to ensure the right requirements are met. National Grid promotes the use of local supply chain and small and medium enterprises (SMEs) through the main construction contractors they employ. We also work with schools and local authorities to encourage the next generation of engineers and help the unemployed to develop new skills.</p>		X	X	
9-2.47	Criticism that National Grid will be displacing horses from fields impacted by the Project to liverys as this is unfair on owners (e.g. owners would have to travel to visit their animals)	<p>Due to the nature of construction works and the areas needed to constructed, there is sometimes the need to temporarily relocate stock and other animals. National Grid will work with landowners where this is needed and look to agree any mitigation and compensation tailored to the individual situation.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.48	Suggest that electricity subsidies / payments / free electricity is offered to residents in communities affected by the Project	<p>Electricity transmission infrastructure will be a critical enabler in the clean energy transition. In order to support the government's ambition of connecting 50 GW of offshore wind by 2030, we'll need to deliver over five times more electricity transmission infrastructure in the next seven years, than has been built in the last 30 years.</p> <p>Communities will play a key part in this transition, and National Grid believe that those that host energy infrastructure should see fair and enduring benefits for doing so.</p> <p>National Grid welcome the Governments announcement in March 2025 regarding community benefits for those living near new energy infrastructure and will continue to work with the regulator to introduce this into projects including Norwich to Tilbury.</p>			X	
9-2.49	Concern about cumulative impact of energy projects in East Anglia (including the Project, the Hornsea 3 Substation, EDF Battery Energy Storage System, EDF solar farm, FPC BESS approved and another Battery Energy Storage System from Innova in the early stages of planning and Equinor's substation for the Sheringham Shoal and Dudgeon Offshore Wind Farm Extensions (SEP and DEP)	With regards to multiple developments proposed within East Anglia, the assessment of cumulative effects of each project in combination with other developments will be undertaken by each developer at a project level and detailed within each projects respective planning applications. The cumulative effects assessments undertaken by each project would be considered on their own merit in the context of legislative requirements as well as national and local planning policies by the relevant determining authorities, such as the respective Local Planning Authorities (LPAs) or the Secretary of State. Any such application would be	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>considered in accordance with planning policy and material considerations, such as scale, suitability, and interaction with other Nationally Significant Infrastructure Projects (NSIPs).</p> <p>National Grid has engaged with other developers who are proposing development in proximity of the Project to understand their requirements.</p> <p>Meetings have been held with the North Falls and Five Estuaries Offshore Wind Farm project teams. Both of these wind farms are proposed to be located off the coast of East Anglia and connect into the proposed East Anglia Connection Node (EACN) substation. Both projects involve the construction of new substations, which are proposed to be located adjacent to the EACN substation. Project teams have worked collaboratively to reduce potential cumulative traffic effects should they be undertaken in parallel.</p> <p>Where there is certainty of a development (such as a new residential development, an offshore wind farm and its associated onshore equipment etc) being constructed, and there is adequate information in the public domain to understand the impacts of that development on the receiving environment, these have been considered within the cumulative effects assessment of the Project. The other developments listed are included within the long list of other developments for the cumulative effects assessment. The cumulative effects assessment follows Planning Inspectorate's Advice Note 17 'Cumulative Effects</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Assessment' and is presented in Chapter 17: Cumulative Effects of the Environmental Statement (ES) (document reference 6.17). The Cumulative Effects chapter has assessed the potential intra-project cumulative effects and inter-project cumulative effects. The detailed assessment of the Project with other developments can be found in Appendix 6.17.A1: Inter-Project Cumulative Effects. The assessment of clusters of other developments on common receptors can be found in Chapter 17: Cumulative Effects (document reference 6.17).				
9-2.50	Suggest that National Grid puts in place a fair, transparent and flexible community benefits policy that prioritises sustainability goals and community and environmental benefits, and that community benefit funds are properly resourced and delivered using experienced independent facilitators	<p>National Grid knows that our responsibility as a business goes beyond safely building new energy infrastructure to enable a cleaner, fairer, and affordable future. We want to leave a lasting positive impact where we build our projects, to help those areas and communities thrive and to support a sustainable future. Our Responsible Business Charter sets out our commitments and ensures that responsibility is woven through everything we do. It focusses on four key areas where we believe we can really make a difference: the environment, our communities, our people, and our governance.</p> <p>We are working with stakeholders and communities to understand what is important to them and will endeavour to deliver initiatives in the region to support those priorities. There are four key areas where we believe we can bring benefit to those who are hosting</p>		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>the infrastructure that supports the green energy transition:</p> <p>Natural Environment – we will build partnerships with environmental groups and non-governmental organisations where we can support initiatives that enhance the landscape, biodiversity, and availability of green space within the areas we are constructing our projects;</p> <p>Net Zero – we will help to support the region in achieving its own net zero priorities;</p> <p>Skills and Employment – we are extending our Grid for Good programme, and building other partnerships, to deliver training and skills development in the region, to encourage the next generation of green energy workers;</p> <p>Community Grant Programme – when projects are in construction, through our Community Grant Programme, charities and not-for-profit organisations can apply for a grant towards community-based initiatives that deliver social, economic, and environmental benefits.</p>				
9-2.51	Request for National Grid to consider more granular data about the nature of the local populations along the proposed development depending on the availability of data (e.g. at Lower Super Output Area, Middle Layer Super Output Area, ward level, and local authority level)	<p>Engagement with Local Planning Authorities (LPA) identified a desire to see more granular data used to describe the existing populations along the route of the Project and to inform the assessment for Environmental Statement (ES) Chapter 10: Health and Wellbeing (document reference 6.10).</p> <p>The study area for the assessment was subsequently</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>amended to include a Local Study Area (based on wards which intersect or are directly adjacent to the Project route) as well as the Wider Study Area (local authorities through which the route passes). Baseline data for a variety of demographic and health data has been collected at ward and local authority level, with Lower Super Output Areas (LSOA) data used in relation to deprivation data along the route. This information has been used to define the sensitivity of local populations to change and is presented in Figures 10.3 to 10.14 and in Appendix 10.1: Health and Wellbeing Baseline Statistics (document reference 6.10.A1) of the ES.</p> <p>Concerns about the potential health effects are often raised when new electricity infrastructure is proposed in an area. The UK has a carefully thought-out set of policies for protecting us all against Electric and Magnetic Fields (EMFs), the main component of which is exposure guidelines. Those exposure guidelines are set by independent scientific bodies and are based on decades-long studies into the effects of EMFs and ill health. After those decades of research, the weight of evidence is against there being any health risks of EMFs below the guideline limits. These policies are incorporated into the decision-making process for Development Consent in National Policy Statement (NPS) EN-5. All the equipment which forms part of this Project, will be fully compliant with these policies, set to protect everyone. This will be fully and publicly documented in the Development Consent Order (DCO)</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>submission.</p> <p>Recognising that concerns about EMF may adversely impact some individuals, National Grid provide open and transparent information about EMFs on the website www.emfs.info, including what EMFs are, exposures from electricity infrastructure, research into health effects and the policies and guidelines in place to protect against EMF for members of the public to access. An EMF helpline is also available to answer and questions or concerns about the subject. EMF specialists were also available at all public consultation events, to address any concerns and answer questions individuals may have. These measures are aimed at providing information on EMFs and the measures in place to protect helping to reduce anxiety around the subject. The potential effects on mental health and wellbeing, including the perceptions of impacts from Electric and Magnetic Fields (EMFs) arising from the Project has been assessed in ES Chapter 10: Health and Wellbeing (document reference 6.10).</p>				
9-2.52	Request for National Grid to produce a skills and employment strategy securing demonstrable benefits to the local economy and workforce (including a breakdown of employment on the project by phase with expected dates, with estimates of types of skilled worker needed at each phase over the lifetime of this NSIP)	Due to the nature of the Project, the potential maximum peak day construction workforce for local workers is anticipated to be approximately 172 Full Time Equivalent (FTE) and the total job demand throughout the four-year construction period is anticipated to be approximately 480 jobs locally. This is considered to not be a significant number of construction employment when compared with other sectors. Given these		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>considerations, a Skills and Employment Strategy would not be proportionate or necessary for the Project. National Grid is committed to working with local suppliers, facilitated by supporting forums (such as the local Chambers), on electricity industry skills and workforce planning. National Grid is also committed to providing a coordinated regional approach to jobs and skills opportunities. This commitment is broader than the individual project and separate to any commitments under the proposed development consent order for this Project. The socio-economic effects of the Project are assessed in Chapter 15: Socio-economics, Recreation and Tourism of the Environmental Statement (ES) (document reference 6.15). Post construction job opportunities are limited given the nature of the development however we will still work with Local Authorities (including facilitating local partners) to understand what is important to them around skills and employment to ensure we leave a lasting positive legacy in the communities where we operate. With regards to a delivery mechanism, the above measures will be delivered as part of our community benefit package, which will look at both local and regional initiatives. This will be delivered outside the development consent process and is not a material consideration in the decision on the proposed Project or a matter to be secured as part of the DCO, as per the Community Funds for Transmission Infrastructure: Guidance (DESNZ, 2025).</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.53	Request that National Grid prepare a local supply chain plan	The construction of the Project would be highly technical and would require specialised contractors with the required expertise and experience, sourced via a competitive tender. This process would also be applied to the supply of materials by our specialist contractors. However, National Grid promotes the use of local supply chain and small and medium enterprises (SMEs) through the main construction contractors they employ. We work with schools and local authorities to encourage the next generation of engineers and help the unemployed to develop new skills.			X	
9-2.54	Suggest that attention should be given to siting the places where the heat is released from the AC cables in such a way that local businesses, farms, schools, communities, swimming pools or institutions could benefit from harvesting the waste heat, to give some reduction in energy demand and costs for the county and to bring benefits to the economy and avoid waste	Case studies for heat recovery have only ever been carried out where high voltage underground cables are in a tunnel scenario where the heat generated can be recovered by extracting it from the tunnel and replacing it with cooled air. There are currently no plans for tunnels where heat recovery could be explored. There are no plans for tunnels on any part of the route where heat recovery would be an option. The underground cable route that is planned is open cut trenching with cables laid in ducts.		X		
9-2.55	Concern that diverted Public Rights of Way will require land owners to allow access onto otherwise restricted land	Through routeing and siting, National Grid has sought to and will continue to reduce, as far as practicable, impacts and disruption to Public Rights of Way (PRoW). The iterative process of route design has identified the existing PRoW network and their wider connectivity and sought where practicable to reduce and where possible			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>remove impacts to PRow. If mitigation has been identified, measures may include the temporary closure of PRow during the construction phase, and where possible a diversion to allow for the continued use and movement of the wider PRow network. The land take required for such PRow diversions onto land not currently designated as such are allowed for within the Order Limits.</p> <p>Effects on PRow would be mitigated where possible, maintaining access where practicable, with temporary closures as a last resort. We will continue to engage with relevant stakeholders on the PRow network.</p> <p>An Outline Public Rights of Way Management Plan has been prepared (document reference 7.6) and submitted with the application for development consent.</p>				
9-2.56	Concern about the impact of the Project on water security (e.g. this is one of the driest parts of the country and the supply of water is always a concern)	The Project has secured via commitments within the Outline Code of Construction Practice (CoCP) (document reference 7.2), measures to use water efficiently during its construction to reduce water consumption and during operation the Project has a low water demand.			X	
9-2.57	Suggest that National Grid put access gates on their temporary roads where they join the national road system / Concern that otherwise an open gateway to a field is an open invitation to criminal activity / unauthorised access	National Grid proposes security fencing and gates for all site access points to secure the works area, the construction corridor and haul roads. Security gates are to be set back a minimum of 20 m from the edge of the carriageway to allow for vehicles transitioning between the works area and public highway to stop outside of the gate whilst not impeding the public highway. A			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>typical site access point layout including tracking of construction vehicles, visibility splays and fencing arrangements can be found on drawings within the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).</p> <p>In accordance with the Outline Code of Construction Practice (CoCP) (document reference 7.2), working areas would be appropriately fenced.</p> <p>Access controlled measures such as fencing and gated accesses to working areas would typically be in place for safety and security. Access and crossover points would be designed to reduce highway safety risks and congestion on the public highway by providing for the safe and efficient passage of construction traffic.</p>				
9-2.58	Concern about the impact of the Project on food security / food prices (e.g. increased prices during cost of living crisis)	<p>Several factors influence food prices, including climate change, geopolitical events, supply chain disruptions etc. The DEFRA (2024) UK Food Security report states that the impacts of climate change both at home and abroad remains a pressing risk to food security. The Project is a vital part of the transition to net zero and is critical to delivering a network which supports clean power pathways by 2030, in efforts to tackle climate change and significantly reduce carbon emissions. The Project is therefore responding to a major threat to food security.</p> <p>The Environmental Statement (ES) – Chapter 6: – Agriculture and Soils (document reference 6.6)</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		confirms the amount of agricultural land to be permanently lost.				
9-2.59	Concern about the impact of the Project on people with hearing loss (e.g. frequency related hearing loss), people that use hearing aids or have cochlear implants (e.g. will be more impacted by potential sound emissions from the overhead lines / pylons than fully hearing people who do not require permanent use of hearing aids)	<p>Cochlear implants and similar devices are designed to British Standards to ensure they have a level of immunity from external electric and magnetic fields. Specifically, BS EN 45502-2-3 2010 states in subclause 27.2:</p> <p><i>“The function of an IMPLANT SYSTEM shall not be significantly influenced by external electromagnetic fields which might be encountered during normal daily living.”</i>. This would include exposures from electricity transmission infrastructure. This standard requires an immunity level typically higher than the overhead line will produce when directly underneath.</p> <p>Additionally, the British Cochlear Implant Group give the following advice:</p> <p>“In close proximity to high voltage equipment, radars or telecommunications equipment there may be some perceived interference in the audio signal. This itself is not harmful”.</p> <p>This would be similar to other appliances in your home, such as induction hobs, which could potentially cause some temporary interference to the audio signal.</p> <p>The Electric and Magnetic Field's (EMFs) from overhead lines reduce extremely quickly with distance, limiting the fields and any potential interference.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.60	Concern that, with cumulative impacts from other developments in the area (e.g. North Falls and Five Estuaries), surface water run off / drainage impacts on village water sources, cesspits and also on public highways will become worse - particularly around Ardleigh Road, Grange Road, Shop Road and surrounding area	<p>National Grid has prepared a detailed Flood Risk Assessment (FRA) (document reference 7.9) as part of its Development Consent Order (DCO) application. The FRA describes baseline surface water flood risk, drawing on a range of data sources, and assesses the potential for the Project to impact on flood risk from this source. It also sets out the control and management measures that will be secured through the DCO to ensure no detriment to surface water and land drainage regimes.</p> <p>Meetings have been held with the North Falls and Five Estuaries wind farm project teams. These wind farms are proposed to be located off the coast of East Anglia and connect into the proposed East Anglia Connection Node (EACN) substation. Both projects involve the construction of new substations, which are proposed to be located adjacent to the EACN substation. Project teams have worked collaboratively to reduce potential cumulative traffic effects should they be undertaken in parallel.</p> <p>Although the North Falls and Five Estuaries shares common water environment receptors and drainage catchments with Norwich to Tilbury, it would be constructed and designed in accordance with good practice and would achieve flood risk and drainage mitigation to prevent any increases in flood risk/adverse drainage effects. No significant cumulative effects are therefore likely.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.61	Criticism of contractors used for the Project so far (the team that arrived to dig test holes on the neighbouring farm did not make prior arrangements to access land through resident's yard, and arrived with vehicles and plant, expecting access and room to park and leave their machinery over night. The contractors left huge amounts of mud on the yard and the road, and did not clean it up which is dangerous and an offence under the Highways Act 1980), and request that contractors involved in the Project in future are professional and considerate towards land and home owners	<p>During the planning stages of the Project, and in advance of the final detailed design for construction, we undertake surveys over land so that we can understand any potential constraints to be considered in the Project design. We will endeavor to agree access on a voluntary basis wherever possible, and landowners/occupiers will always be afforded as much notice as reasonably practicable before access is taken. An advance payment of compensation will be made to you to compensate any losses incurred as a result of surveys. Any further losses will be dealt with on a proven loss basis. If we are unable to agree voluntary access, but we need to undertake particular surveys to inform design, a statutory notice may be relied upon.</p> <p>When taking access to land through voluntary agreement, we will seek to agree in advance access routes, suitable parking areas and any other reinvent requirements. When taking access under notice this is sometimes unachievable. If a landowner or member of the public is concerned over how a site has been left on completion of a survey, they should contact the Project team.</p> <p>All National Grid contractors undertake risk assessments and follow safe systems of work as per the specific Method Statement including the requirement to leave sites in the same condition post completion of the works as they were pre-commencement of the works, regardless of technology</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		type being constructed, which in turn will be independently reviewed by National Grid. This Risk Assessment and Method Statement (RAMS) will follow industry standard practice.				
9-2.62	Concern that the Project may impact / interfere with the Earth's natural electric and magnetic fields	<p>The Electric and Magnetic Fields (EMF) produced by this Project would be 50 Hz fields. These would not impact the Earth's natural fields as they are at a different frequency.</p> <p>Health considerations are given a high priority in the process by which we arrive at any proposals for new electricity circuits. Assessment of compliance with EMF guidelines and policies is key to National Grid's approach. The UK has a carefully thought-out set of policies for managing EMFs. There have been over four decades of research looking into whether EMFs can cause health effects and there are no established effects below the exposure limits. When designing our overhead lines, substations and cables design criteria ensures they will not exceed those exposure limits, even when operating at 100% capacity. Additionally, the precautionary measures which the Government have adopted, are applied to the design which ensure the EMFs reduce as quickly with distance as possible. Evidence of that compliance will be presented in the Electric and Magnetic Field Compliance Report (document reference 7.8) submitted as part of the Development Consent Order (DCO) application.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.63	Criticism that the claim that the Project will create employment opportunities is questioned, especially due to health risks associated with those working on pylons	<p>Our industry needs to recruit 400,000 jobs between now and 2050 to get the UK to net zero. Many of these jobs will be in the engineering and construction sectors, but there will also be employment opportunities in legal, consenting, and environmental sectors. Norwich to Tilbury is a key part of the UK's proposals to reaching net zero and will create thousands of job opportunities in East Anglia.</p> <p>National Grid takes the issue of health very seriously and relies on authoritative and independent scientific organisations, such as the World Health Organization (WHO) and the UK Health Security Agency (UKHSA), to review the worldwide body of scientific evidence on electric and magnetic fields (EMFs) and health, as well as reviewing the science ourselves.</p> <p>We believe it is right that the decision on what is acceptable or not is made independently of industry. We ensure that all our assets comply with the guidelines set by Government on advice from the UKHSA.</p> <p>A vast amount of research has been done into the possibility of health effects, without establishing any risks below these levels set by the guidelines.</p>			X	
9-2.64	Criticism that National Grid has underestimated the impact of the Project on tourism, and request that this impact should be more accurately quantified	<p>Through routeing and siting, National Grid has sought to avoid, as far as practicable, locations of tourism assets.</p> <p>National Grid has engaged with stakeholders throughout the pre-application stage.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Following feedback received from stakeholders, an additional 1 km study area (1 km buffer from the Order Limits) has been included in Environmental Statement (ES) Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) to assess the potential impact on businesses where visual impact is likely to be an economic consideration.				
9-2.65	Concern about the lack of clarity on how much funding is available for community benefits for the Project as the Government response (November 2023) specifies that direct benefits "up to £10,000 per household within 300m of the infrastructure and for community wide benefits up to £200,000 per km of overhead lines" / Concern about the use of the words "up to" and suggest that any Community Benefits for the Project should be made Statutory and payments should be mandatory for both direct benefits to individuals and wider community benefits with payments no less than those quoted	<p>The Government has published its guidance on community funds for transmission infrastructure (DESNZ, 2025). National Grid is committed to working with Ofgem, industry partners, local communities and their representatives to ensure community benefits are delivered fairly and effectively, driving lasting, positive change for the people and places integral to our developing electricity network.</p> <p>Government has also announced its plans to introduce a bill discount scheme for households within 500 metres of new infrastructure, which it proposes to introduce through the Planning and Infrastructure Bill. This is evolving government policy. Government expects this scheme to be in place by 2026 and we will share further details as they emerge.</p> <p>National Grid is committed to providing a coordinated local and regional approach to community benefits. This will be delivered outside the development consent process, since this is not a material consideration in the decision on the proposed Project or a matter to be secured as part of the Development Consent Order</p>	X

		<p>Information on the estimated workforce is included in the ES Chapter 4: Project Description (document reference 6.4) and ES Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15).</p> <p>Projected construction employment is assessed as part of the Chapter 15: Socio-economics, Recreation and Tourism assessment of the ES (document reference 6.15). The ES assesses over the four-year construction phase, there would be a maximum peak day where approximately 1,720 full-time equivalent gross direct employees would be working on the Project over 180 km, of which 172 FTE are likely to be local workers.</p> <p>The Socio-economics, Recreation and Tourism assessment of the ES (Chapter 15: Socio-economics, Recreation and Tourism, document reference 6.15) also assesses the potential effect on visitor accommodation bedspace would be negligible.</p>				
9-2.67	Information provided to National Grid that Phase 2 of the Chelmsford North East Bypass has planning permission. Concerns are raised regarding the length of the route and position of Pylons TB130 to TB132 and their proximity to the Bypass and the areas needed to ensure construction.	National Grid is well aware of the status of the bypass and had previously taken this into account in the development of the Project. We have continued to liaise with the Highway Authority to obtain the latest available design information and slightly adjusted the position of the pylons at either side and also modified aspects of the temporary works to better align with the bypass arrangements. This dialogue will continue and respond to the relative progress of each project through to construction.		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.68	Criticism that insufficient consideration has been given to economic impact of the Project on General Aviation / Criticism that the experience of pilot retraining post pandemic clearly evidences the value of grassroots training and the Self improvement route into aviation	<p>In accordance with its responsibilities as an applicant, as described within the Government's Overarching National Policy Statement for Energy (NPS) EN-1, National Grid's appointed independent aviation consultancy has developed a methodology to assess the potential impacts of the Project on aviation including airfields in proximity. The assessment methodology enables risk-based site-specific (tailored) assessment of a range of criteria, including but not limited to, lateral and vertical clearance margins, aircraft types, airfield operational activities and procedures, and the surrounding context. The approach is informed by Civil Aviation Authority regulations and guidance as well as ongoing consultation with airfield owners and operators to agree the acceptability of proposed mitigations in relation to their operational activities.</p> <p>In relation to recreational effects, National Grid sought to avoid impacts on airfields or flight path of airfields during the design process. Further information on the assessment of airfields can be found in the Environmental Statement (ES) Chapter 15: Socio-Economic, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).</p>			X	
9-2.69	Concern that none of the National Policy Statements (NPS) which cover Nationally Significant Infrastructure Projects (NSIP) development address how NSIPs may affect viability on site allocations in	National Grid has obtained information on development proposals within the planning system for the area potentially impacted by the Project. The nature of our response varies as in some cases proposals can be		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	a Local Plan, or on planning applications determined under the Town and Country Planning Act 1990, which may subsequently become unviable and affect the receipts which a Local Planning Authority (LPA) then is able to receive towards meeting its infrastructure needs / Criticism that without addressing this matter, National Grid cannot substantiate its claims that the Project will not prevent housing delivery	<p>amended to be designed around our proposed infrastructure but in other cases our proposals may need to be amended at a corridor level or factored into detailed route design. Based on known information we consider our proposals are consistent with relevant policy and guidelines and routes designed such that they do not prevent proposed housing developments. It should also be noted that there are no minimum distances prescribed in UK law between overhead lines and homes.</p> <p>We will continue to review planning applications and monitor emerging local plan proposals and engage with developers and local planning authorities to back-check and update our proposals as necessary.</p> <p>National Policy Statement (NPS) EN-5, taken together with the overarching NPS for energy EN-1, provides the primary basis for decisions taken by the Planning Inspectorate on applications for development consent it receives for Nationally Significant Infrastructure Projects (NSIPs) for electricity networks infrastructure. Paragraph 4.1.13 of NPS EN-1 sets out that where a project conflicts with a proposal in a draft Development Plan, the Secretary of State should take account of the stage which the Development Plan document has reached in deciding what weight to give the plan for the purposes of determining the planning significance of what is replaced, prevented or precluded. Paragraph 4.1.14 goes onto state that the closer a Development Plan is to being adopted, the greater the weight which can be attached to it. Paragraph 4.1.15 sets out that in</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>the event of a conflict between local development plan policies and an NPS, the NPS prevails for the purpose of Secretary of State decision making given the national significance of the infrastructure.</p> <p>Furthermore, National Grid considers that the presence of Norwich to Tilbury should not prevent development sites from coming forward. National Grid would highlight Creating a Sense of Place: design guidelines which demonstrates how new developments can successfully incorporate overhead line infrastructure.</p>				
9-2.70	<p>Criticism that National Grid's claim that the Project will not 'prevent proposed housing developments' will not stand up to scrutiny given that:</p> <p>a) the Preliminary Environmental Information Report (PEIR) makes reference to a number of evidence documents which still need to be produced</p> <p>b) the current evidence base does not recognise the various existing housing market areas across the route</p> <p>c) fails to acknowledge that under Government Standard Methodology each local authority's housing targets change on a yearly basis</p> <p>d) their evidence does not take account of the importance of financial viability in planning, particularly in respect of its importance for infrastructure funding and housing delivery</p>	<p>National Grid notes this comment. National Grid has obtained information on development proposals within the planning system for the area potentially impacted by the Project. The nature of our response varies as in some cases proposals can be amended to be designed around our proposed infrastructure but in other cases our proposals may need to be amended at a corridor level or factored into detailed route design. Based on known information we consider our proposals are consistent with relevant policy and guidelines and routes designed such that they do not prevent proposed housing developments. It should also be noted that there are no minimum distances prescribed in UK law between overhead lines and homes. We will continue to review planning applications and monitor emerging local plan proposals and engage with developers to back-check and update our proposals as necessary.</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.71	Suggest that Section 10.5.4 of the Preliminary Environmental Information Report (PEIR) should be expanded to include the 'Joint Local Health and Wellbeing Strategy 2022 – 2027' and data available at Suffolk Office of Data & Analytics	This information has been noted and is considered within Chapter 10: Health and Wellbeing of the Environmental Statement (ES) (document reference 6.10).		X		
9-2.72	Suggest that a substantial funded landscape compensation scheme should be provided for the Project instead of community benefits (e.g. to recognise the long-term negative unmitigable construction and operational impact of the Project on landscape and visual receptors)	<p>The Landscape and Visual Impact Assessment (LVIA) set out in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13) identifies significant adverse residual effects on landscape and visual receptors along the length of the Project, up to a distance of approximately 1.5 km from the Project. Mitigation measures of relevance to landscape and visual effects are summarised in ES Chapter 13: Landscape and Visual (document reference 6.13).</p> <p>Any landscape softening that does not remove or reduce a significant residual effect but seeks to off-set the effect is classed as landscape compensation. Such landscape compensation measures (e.g. creating or enhancing natural landscape features outside of the Order Limits) are considered in relation to the mitigation hierarchy but there is no requirement under policy to compensate for all residual effects. The residual effects that remain following the application of the mitigation hierarchy and any compensation provided then falls to the Planning Balance.</p>		X		
9-2.73	Suggest that delivery and maintenance activities for the Project are adequately and appropriately	The delivery and maintenance of the Project are controlled through the implementation of the Outline		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	controlled through the prior approval of clear, precise and enforceable control documents in order to protect the amenity and wellbeing of the communities	Code of Construction Practice (CoCP) (document reference 7.2), Outline Landscape and Ecological Management Plan (LEMP), Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) and Appendix E: Community Engagement and Public Information of the Outline Code of Construction Practice (CoCP) (document reference 7.2). Each document includes the relevant Community Liaison Officer in charge of enforcing the requirements detailed in each plan.				
9-2.74	Concern about National Grid staff having to access respondent's property, in regard to personal security (e.g. respondent may have to let strangers from National Grid into their property to carry out works when they may be home alone with limited control over who has access and when) / Concern that access for construction of the Project may make residents feel vulnerable	National Grid does not require access to private buildings but may require access to private land. Where access is required, National Grids appointed land agent Fisher German would make contact in advance to agree the time and date, and where required and appropriate can get the survey team to provide their details in advance and show identification on arrival.			X	
9-2.75	Socioeconomics, recreation, and tourism: 1.3 Is it positive to note that National Grid wants to leave a lasting positive impact amongst the communities and to help those areas to thrive and support a sustainable future. To enhance efforts, we recommend • Three of the local authorities in Essex (Tendring, Basildon, and Colchester) are part of our Levelling Up areas within Essex where efforts are being developed to create opportunities for communities	An Outline Public Rights of Way Management Plan (document reference 7.6) submitted with the Development Consent Order (DCO) application contains information of the Public Rights of Way (PRoWs) to be affected and the proposed management measures to reduce potential impacts. The Government has published its guidance on community funds for transmission infrastructure (DESNZ, 2025). National Grid is committed to working with Ofgem, industry partners, local communities and		X

		will be delivered as part of our community benefit package, which will look at both local and regional initiatives. This will be delivered outside the development consent process and is not a material consideration in the decision on the proposed Project or a matter to be secured as part of the DCO, as per the Community Funds for Transmission Infrastructure: Guidance (DESNZ, 2025).				
9-2.86	Criticism of the lack of assessment undertaken in relation to the cumulative impacts of the construction and operation of the Project in combination with the build out of Dunton Hills Garden Village (DHGV) (and the wider Brentwood Southern Growth Corridor). Criticism that no information has been provided on the phasing of the Project which is necessary to minimise adverse impacts on host communities	A cumulative effects assessment has been undertaken for the Project and can be found in Chapter 17: Cumulative Effects of the Environmental Statement (document reference 6.17). The assessment has considered the potential for cumulative effects when considered with the Dunton Hills Garden Village. The full assessment can be found in Appendix 17.3: Inter-Project Cumulative Effects Assessment (document reference 6.17.A3). Dunton Hills Garden Village is captured as other project ID: A3 (BrBC). Cumulative impacts with other allocations listed within Brentwood Local Plan are provided within Appendix 17.3: Inter-Project Cumulative Effects Assessment (document reference 6.17.A3).		X		
Construction impacts						
9-2.87	Concern about disruption from construction	An Environmental Statement (ES) (document reference: Volume 6: Environmental Statement) has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 ('the Infrastructure EIA Regulations').	X	X	X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>The ES identifies and assesses the likely significant effects on the environment resulting from the construction of the Project and recommends appropriate mitigation to reduce effects.</p> <p>Environmental mitigation measures have been defined within each environmental topic chapter and set out in relevant management documents submitted with the Development Consent Order (DCO) application, including the Outline Code of Construction Practice (CoCP) (document reference 7.2), the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (AMS-WSI) (document reference 7.5).</p>				
9-2.88	Concern about impact on traffic levels in local area caused by construction works (generally - no location given)	<p>As part of the pre-application process National Grid has engaged with the relevant authorities, their highways teams and National Highways to understand and gain information on their road networks. This information has been used to inform and guide the drafting of the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) for the Project that accompanies the Development Consent Order (DCO) application. A strategy has been developed to manage the impact of construction vehicles on the public highway and sensitive receptors, using suitable Local Road Network connections from the Strategic Road Network called Primary Access Routes. In addition,</p>	X	X	X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>temporary haul roads for construction vehicles are proposed along the Project alignment, further reducing the impact of construction traffic on the local road network. Further details of the strategy can be found within the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).</p> <p>Environmental Statement (ES) Chapter 16: Traffic and Transport (document reference 6.16) includes the assessment of the potential impacts of the Project including changes in traffic flow, delays, road safety and impact on Walking, Cycling and Horse-Riding modes on the roads along the Primary Access Routes located in the Local Road Network.</p> <p>The Transport Assessment (document reference 7.11), submitted with the DCO application, examines capacity, safety, and operational efficiency of the network, identifying potential bottlenecks or safety concerns.</p> <p>Within the assessment of the ES and the Transport Assessment, mitigation measures are proposed to minimise likely adverse impacts</p>				
9-2.89	Concern about noise and other issues resulting from construction (e.g. mud on roads, dust)	<p>An Environmental Statement (ES) (document reference: Volume 6: Environmental Statement) has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 ('the Infrastructure EIA Regulations'). The ES identifies and assesses the likely significant effects on the environment resulting from the</p>	X	X	X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>construction of the Project and recommends appropriate mitigation to reduce effects.</p> <p>Specifically, a Construction Noise and Vibration Impact Assessment has been undertaken and is reported in ES Chapter 14: Noise and Vibration (document reference 6.14). During construction, mitigation would be implemented to reduce noise and vibration impacts from construction activities and increased road traffic noise and vibration due to additional movement from construction traffic. Mitigation measures are outlined in ES Chapter 14: Noise and Vibration (document reference 6.14) and the Outline Code of Construction Practice (CoCP) (document reference 7.2). This includes the assumption that construction working would be undertaken within the agreed working hours, construction traffic would be managed through the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), haul roads would be well maintained, and Best Practicable Means (BPM) would be employed to reduce construction noise and vibration.</p> <p>ES Chapter 7: Air Quality (document reference 6.7) presents an assessment of the potential impacts from the construction of the Project on air quality. During construction, mitigation would be implemented to reduce the impact of dust generation and construction vehicle emissions. Mitigation measures are outlined in ES Chapter 7: Air Quality (document reference 6.7), and the Outline CoCP (document reference 7.2). The</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>dust-emitting activities can be greatly reduced or eliminated by applying the site-specific mitigation measures (see Outline CoCP (document reference 7.2)) for high risk sites following measures recommendations in the Institute of Air Quality Management (IAQM) guidance (IAQM, 2024). The IAQM guidance states that with the implementation of effective site-specific mitigation measures, the environmental effect would not be significant in most cases.</p> <p>In addition, National Grid has prepared an Outline CoCP (document reference 7.2). The Outline CoCP sets out the required mitigation measures and environmental commitments that would be implemented during the construction phase of the Project to avoid or reduce potential effects of the Project on the environment.</p>				
9-2.90	Concern that local road infrastructure is not suitable for heavy construction vehicles and machinery (generally - no location given) (including damage in relation to this, e.g. to buildings)	A strategy has been developed to manage the impact of construction vehicles on the public highway and sensitive receptors, using suitable Local Road Network connections from the Strategic Road Network called Primary Access Routes. In addition, temporary haul roads for construction vehicles are proposed along the Project alignment, further reducing the impact of construction traffic on the local road network. Further details of the strategy can be found within the Outline	X	X	X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Construction Traffic Management Plan (CTMP) (document reference 7.3).</p> <p>The Project also requires the transportation of Abnormal Indivisible Loads (AIL). National Grid is developing specific routing proposals for AIL movements and is developing these through engagement with the relevant stakeholders including the local highway authorities and National Highways. An AIL routing strategy containing details about these movements are submitted in support of the Development Consent Order (DCO) application.</p>				
9-2.91	Suggest that consideration is given to the carbon footprint of the Project during construction (e.g. construction methods, materials, transport, concrete, steel) / Concern about carbon footprint of the Project (including survey work)	<p>National Grid has set challenging targets to reduce the carbon emissions of our organisation, including a specific commitment to deliver carbon neutral construction by 2025/26. Key to the delivery of this commitment is to measure the carbon footprint of our projects through concept, detailed design and into delivery and construction using a range of best practice carbon tools and data sets.</p> <p>Prior to construction, and as part of our procurement process, carbon management and carbon reduction forms a key award criteria for all projects. At tender stage, we require all contractors to calculate a detailed carbon footprint of the project using our Carbon Interface Tool (CIT), this provides a Capital Carbon baseline in Tonnes of CO2e* from which the contractors are then incentivised (via Key Performance Indicators) and quarterly reviews to reduce the Carbon</p>	X	X	X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Footprint of the Project during construction. Contractors are contractually required to provide carbon data on a quarterly basis to demonstrate performance against carbon reduction commitments agreed at contract award.</p> <p>We also have a range of Net Zero working groups within National Grid Electricity Transmission that explore low carbon innovations and approaches. These groups bring together our contractors and our supply chain to help to reduce the carbon footprint of the materials and resources required to deliver our projects. These groups are: Low-carbon concrete, Low-carbon steel and aluminium, Net Zero construction and Low Carbon cables. These working groups all report progress to an overarching Net Zero forum.</p> <p>The carbon calculations derived from the CIT are used to inform progress against our overall strategic commitments to reducing carbon emissions across its portfolio of projects and meeting its Net Zero targets for construction projects'.</p> <p>*CO2e/ Carbon Dioxide equivalent: is the number of metric tons of CO2 emissions with the same global warming potential as one metric ton of another greenhouse gas.</p> <p>In addition, National Grid has prepared a Greenhouse Gas (GHG) Assessment (see Appendix 4.1: Greenhouse Gas Assessment (document reference 6.4.A1)). The assessment provides a simple estimate of the greenhouse gas emissions associated with the</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>construction phase of the Project, comparing this against UK emissions to determine if the Project is likely to have a material impact on the ability of the Government to meet its carbon reduction targets.</p> <p>Alongside the GHG Assessment, Appendix H: Greenhouse Gas Reduction Strategy of the Outline Code of Construction Practice (CoCP) (document reference 7.2) presents how National Grid should effectively manage GHG emissions throughout the Proposed Project lifecycle in line with National Grid's net zero goals. This strategy encourages early consideration of GHG emissions and creation of appropriate governance structures and processes.</p> <p>This approach is in accordance with the Scoping Report (document reference 6.19) and Scoping Opinion (document reference 6.20).</p>				
9-2.92	Suggest that field evaluation is carried for land affected by the Project (e.g. working compounds, permanent and temporary haul roads and access roads, substations and the route itself) through a variety of archaeological survey methods / that trial trenching is undertaken to establish the nature of further excavation or other mitigation measures which will be required	National Grid have undertaken a Historic Environment assessment detailed in Environmental Statement (ES) Chapter 11: Historic Environment (document reference 6.11) as part of the Environmental Impact Assessment (EIA) process to identify likely significant effects on archaeological sites. To inform this assessment we have undertaken, alongside desk-based assessments, geophysical surveys of the areas of impact to understand the baseline historic environment and refine the Project design further. Archaeological trial trenching has also been undertaken and the scope of this has been agreed with Historic England and Local Planning Authorities. We have engaged with these stakeholders			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		on aspects relating to heritage, including appropriate mitigation measures and techniques and to take their views into account.				
9-2.93	Suggest that all necessary archaeological fieldwork should be carried out within a clear research strategy, referring to the East of England Archaeological Research Frameworks and in consultation with local, regional and national archaeological bodies	<p>The Written Schemes of Investigation (WSI) for the pre-application fieldwork reference the East of England Regional Research Framework to inform the aims of the fieldwork. The Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5) for the post-consent phase of fieldwork for the Project also references the framework to inform strategy.</p> <p>We have engaged with Historic England and Local Planning Authorities on aspects relating to heritage, including appropriate mitigation measures and techniques and will continue to engage with them post-submission to refine the details of mitigation.</p>			X	
9-2.94	If National Grid use T-Pylons, careful consideration needs to be given to the pros and cons of this (for example T-Pylons may need permanent access routes for clearing vegetation due to their lower height)	The latest independent report on the Comparison of Electricity Transmission Technologies: Costs and Characteristics (Institute of Engineering and Technology, 2025) confirms that whilst T-Pylons may in certain locations provide an alternative to conventional overhead lines with potential benefits in visual impact and reduced land-take, this is at a higher cost. The build cost is approximately 2 to 2.5 times that of an equivalently rated conventional overhead line, and the lifetime costs are around 1.6 to 1.7 times that of a conventional overhead line. The current arrangements for the oversight of funding by Ofgem requires that the		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>lowest cost acceptable design is taken forward rather than a more expensive design even if that design is perceived to reduce the level of effect.</p> <p>As such consideration of their use follows after establishing a need to mitigate effects of the standard lattice design and after considering the benefit of adopting a low height lattice pylon design. T pylons themselves are also less adaptable to varied terrains and require more substantial access infrastructure. Furthermore, their resilience and environmental impact are comparable to conventional overhead lines, but with increased carbon intensity due to construction materials. Attention also needs to be given to the transitions between pylon types. Given It is the surrounding context that drives the need for alternative design mitigation, where this is not required along the entire route, any visual break and transition in pylon design also needs to be carefully sited.</p> <p>Assessment findings have concluded that, where there is not a reversal of the presumption to use overhead lines, the use of lattice pylons (either standard or low height) is consistent with planning policy throughout the route. Whilst there may be some locations (for examples see appendix A of the 2024 Design Development Report (available on the Project Website) where there may be a design option for the use of T pylons, the need to mitigate for unacceptable effects from lattice pylons is not engaged. On this basis T pylons are not proposed for the Project.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.95	Suggest that National Grid use the latest and safest practice and materials as part of the construction process	<p>National Grid prioritises the use of the latest and safest practices and materials in its construction processes. When it comes to ensuring longevity and durability of our projects, we explore various options. We consult with experts in the field to stay updated on the latest advancements and best practices, ensuring that our projects are built to last.</p> <p>We have produced an Outline of Code of Construction Practice (CoCP) (document reference 7.2) which sets out the approach to the construction works, including mitigation.</p>			X	
9-2.96	Suggest that National Grid use 40 metre trenches instead of 120 meter trenches	<p>Set distances between underground cables are required for the thermal stability of high voltage cables. The distance of the spacing of the cables is what dictates the width of the cable swathe that is required. Typically, 800 mm spacing would be required between each cable resulting in a 2000 mm minimum trench size for three cables. There would need to be a 5000 mm spacing between each trench and a minimum of six trenches in each underground cable swathe. A haul road is also required to minimise excessive transport on local roads as well as stockpiles for subsoil and separate topsoil for the reinstatement of the underground cable swathes once works are complete. The space required is calculated to ensure that 18 cables are sufficiently spaced to provide the required heat dissipation as overheating of the cables will lead to an inefficient power system. The space required for the cable trenches is approximately 50.6 metres, the</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		120 metres is the temporary area required to provide a suitable work area for access excavation and installation.				
9-2.97	Suggest that the new connectors are used for the Project, as these are safer and reliable for longer and would result in a huge reduction in the size of the substation that houses them	National Grid is not sure what the reference of “new connectors” is referring to. The substations consist of various items including circuit breaks, earth poles, insulators etc. The overall footprint of the substation is denoted by a series of factors including safety distances from live bus bars and also the ability to inspect, remove equipment without coming into contact with any fixed assets. The largest part of a substation consists of Super Grid Transformers (SGTs), shunt reactors, switchgear – which are all type approved and nominally a given size which is universally accepted. Reducing the size of an independent component would not alter the overall footprint of the substation.			X	
9-2.98	Suggest that National Grid consider 'no-dig' construction methods for compounds, access tracks, etc	In order to accommodate the imposed loading of the proposed construction vehicles within fields the ground needs to be strengthened. A No-Dig construction method would not provide the required bearing capacity.			X	
9-2.99	Suggest the that National Grid undertake further Transport Assessment works for the Project (including vehicles, access and access routes, and impacts during construction, cabling route / grid connection, and impacts during operation) / Suggest that a Transport Appraisal should be undertaken for the Project	A strategy has been developed to manage the impact of construction vehicles on the public highway and sensitive receptors, using suitable Local Road Network connections from the Strategic Road Network called Primary Access Routes. In addition, temporary haul roads for construction vehicles are proposed along the			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Project alignment, further reducing the impact of construction traffic on the local road network. Further details of the strategy can be found within the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).</p> <p>The Transport Assessment (document reference 7.11), submitted with the Development Consent Order (DCO) application, examines capacity, safety, and operational efficiency of the network, identifying potential bottlenecks or safety concerns during construction. Mitigation measures are proposed to minimise likely adverse impacts. The traffic levels associated with operation and maintenance activities are considered to be negligible in comparison with typical traffic levels and a traffic assessment has not been deemed necessary.</p>				
9-2.100	Suggest that the Project does not pass directly over any Control of Major Accident Hazards (COMAH) or high-risk sites	<p>The Health and Safety Executive (HSE) has provided its response to the Project in which it listed 3 Major Accident Hazard sites in proximity to the Project. We do not oversail any of them. We are however in consultation with the site operators in order to ensure there are no adverse impacts.</p> <p>Where we oversail Major Accident Pipelines, this cannot be avoided. We are in consultation with operators and specialists to assess and mitigate permanent and temporary construction impacts. Major accidents and disasters were scoped out of the Environmental Impact Assessment (EIA) in the Scoping</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Report (document reference 6.19). The Planning Inspectorate (on behalf of the Secretary of State) formally adopted its Scoping Opinion (document reference 6.20) on 14 December 2022 which has informed the scope of the EIA for the Project. A standalone major accident and / or disasters chapter is therefore not included within the Environmental Statement (Volume 6 of the Development Consent Order (DCO) application). Where appropriate, relevant environmental aspects have identified the likely risks to the Project in relation to potential areas of vulnerability, for example, any flood risk concerns are considered within Environmental Statement (ES) Chapter 12: Hydrology, Land Drainage and Flood Risk (document reference 6.12) and are addressed as part of the Flood Risk Assessment (document reference 7.9).				
9-2.101	Suggest that National Grid undertake a thorough impact assessment of the Carbon emissions the Project will produce and that further consideration is given to sustainable construction practices	Appendix 4.1: Greenhouse Gas (GHG) Assessment is set out in the Environmental Statement (ES) (document reference 6.4.A1). The assessment provides a simple estimate of the Greenhouse Gas emissions associated with the construction and operation phase of the Project, comparing this against UK emissions to determine if the Project is likely to have a material impact on the ability of the Government to meet its carbon reduction targets. Alongside the GHG Assessment, Appendix H: Greenhouse Gas Reduction Strategy of the Outline Code of Construction Practice (CoCP) (document reference 7.2) presents how National Grid should	X		X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>effectively manage GHG emissions throughout the proposed Project lifecycle in line with National Grid's net zero goals. This strategy encourages early consideration of GHG emissions and creation of appropriate governance structures and processes, including sustainable construction practices.</p> <p>This approach is in accordance with the Scoping Report (document reference 6.19) and Scoping Opinion (document reference 6.20).</p> <p>Commitments to sustainable construction practices are included in the Outline CoCP (document reference 7.2), including implementing a Construction Workers Travel Plan to support and encourage sustainable travel, capturing surface water runoff with sustainable drainage techniques and adopting a sustainable approach to development by proactively taking measures to ensure the Project leaves the environment in a better condition than it was before development.</p>				
9-2.102	Suggest that strict guidelines are put in place for construction workers to limit damage to hedgerows and trees	<p>The potential impacts on hedgerows and woodland habitat have been included within the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8). Further details on tree impacts are located within Appendix 13.6: Arboricultural Impact Assessment (AIA) of the ES (document reference 6.13.A6) providing further information on tree species and impact.</p> <p>The Outline Construction Code of Practice (CoCP) (document reference 7.2) provides information relating</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		to root protection areas for high and moderate value trees together with an offset of 5 m applied for low quality trees.				
9-2.103	Criticism that in section 12.7.4 of the PEIR Vol I, National Grid acknowledges the need for the temporary access roads and haul roads to cross watercourses, however mitigation has only been proposed for the main rivers and those with WFD status (e.g. this is not acceptable as it is not in accordance with the principles of NPPF, where no increase in flood risk shall be caused by development, including along small watercourses and from the construction works)	National Grid has engaged with all relevant Lead Local Flood Authorities (LLFAs) throughout pre-application with regard to Project interactions with non- main rivers (ordinary watercourses). As part of this engagement, National Grid has shared a series of technical notes covering design and mitigation principles for drainage and works to all watercourses, including minor watercourses and drains. Feedback on these has been incorporated into relevant environment and design commitments documented in the Outline Code of Construction Practice (CoCP) (document reference 7.2) and reflected in the assessment presented in Environmental Statement (ES) Chapter 12: Hydrology, Land Drainage and Flood Risk (document reference 6.12) and the Water Framework Directive (WFD) Assessment (document reference 7.10). These assessments conclude, that with the proposed design and mitigation measures in place for temporary crossings of all watercourses by Project access/haul roads there would be no significant effects on these receptors, in terms of their flow regimes/flood risk and water quality, thereby achieving compliance with the principles of the National Planning Policy Framework (NPPF).		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.104	Criticism and request for justification for the selection of the 2m minimum distance between the pylons and an ordinary water course (as stated in section 12.7.4 in the PEIR Vol I) / Request that pylons are at least 3.5m away from the top of bank of an ordinary watercourse	A minimum distance between pylons and ordinary watercourses of at least 3.5 m has been maintained by the design and commitment W20 within the Outline Code of Construction Practice (CoCP) (document reference 7.2), secures controls on construction works in proximity to watercourses in order to reduce the risks of pollution and other impacts.		X		
9-2.105	Suggest that National Grid should minimise the amount of hedgerow removed during construction	<p>At National Grid, we prioritise the preservation of natural habitats and landscapes during our construction projects. We understand the significance of hedgerows and their role in providing shelter, food, and nesting sites for various wildlife species. We recognise the importance of minimising the amount of hedgerow removed whenever feasible.</p> <p>Before undertaking any construction project, we conduct thorough assessments to identify potential impacts on hedgerows and other ecological features. Our teams work closely with environmental experts and regulatory bodies to develop mitigation measures that aim to minimise any adverse effects. The assessment of the effects of hedgerows during construction is presented in Chapter 8: Ecology and Biodiversity of the Environmental Statement (ES) (document reference 6.8).</p> <p>In cases where hedgerow removal is necessary, we explore alternatives such as rerouting or adjusting the Project design to avoid or reduce the impact on hedgerows. We also consider the possibility of</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		transplanting hedgerow plants to other suitable locations to maintain their ecological function. National Grid is committed to responsible and sustainable practices, and we strive to strike a balance between meeting the energy needs of communities and protecting the environment. By taking into consideration all options and operating on a case-by-case basis, we aim to minimise the impact on hedgerows and ensure the long-term conservation of our natural surroundings.				
9-2.106	Suggest that National Grid should employ banksmen at road crossings to ensure local safety during construction	National Grid will consider each road crossing prior to construction to determine the most appropriate method of traffic control measures to make safe crossings.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Construction Impacts						
9-2.107	Suggest that National Grid should ensure that land (including farmland) is properly secured during construction to avoid risks to the local community and to farmers and landowners / Suggest that the number and width of crossing points over fields created through removal of hedgerow for access must be minimised and fenced with suitable lockable gates put in place to maintain physical security / Concern that the fencing of access roads will not be fully secure, impacting the safety and security of landowners	<p>Fencing requirements during construction and required crossing points would be agreed with individual landowners.</p> <p>National Grid usually fence out their construction working width to protect both members of the public and livestock. This also helps to avoid trespass. Unless otherwise agreed with the landowner/occupier, the method of fencing the construction working width would be livestock-proof to ensure exclusion of any stock kept on the adjoining land. Where no livestock is kept, post and rope fences or wire may be used. National Grid would exercise reasonable care and undertake practical measures to avoid entry by trespassers. Crossing points may be included within this fencing to facilitate the continuation of agricultural operations. The crossing points would be installed at appropriate locations to enable reasonable access across the construction working width. All temporary fencing would be maintained throughout construction works until the land has been reinstated, unless otherwise agreed with the landowner/occupier.</p> <p>Temporary construction compounds, including offices, are secured to protect the public and prevent unauthorised entry to site. Access to temporary construction compounds would be limited to specific entry points and personnel entries/exits would be</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		recorded and monitored for both security and health and safety purposes.				
9-2.108	Suggest that National Grid should work closely with farmers in respect of soil removal, storage, reinstatement, drainage and irrigation, employing agricultural vehicles to minimise harm and compensating farmers and landowners where necessary / Suggest that National Grid ensure that full detailed remedial drainage schemes are agreed well in advance with landowners to ensure the on-going impact of the scheme is minimised from a land drainage and soil structure perspective	<p>Landowners would be consulted on all aspects of construction including soil management, drainage, and reinstatement. Appropriate vehicles would be used for construction.</p> <p>Landowners would be compensated for losses, disturbance and damages in line with the Compensation Code.</p>			X	
9-2.109	Suggest that National Grid restrict working to business hours (i.e. 9am-5pm / 8am to 5pm) on weekdays and possibly Saturdays (e.g. only Saturday mornings), avoiding Sundays and Bank Holidays entirely	<p>Chapter 4: Project Description of the Environmental Statement (ES) (document reference 6.4) provides details of the construction working hours. It is assumed that the core working hours for construction would be:</p> <p>Mondays to Fridays: 07:00 –19:00</p> <p>Saturdays, Sundays, Bank Holidays and other public holidays: 07:00 –17:00.</p> <p>No percussive piling works would take place outside of the hours of 07:00 – 19:00 Monday to Friday and 07:00 to 17:00 on Saturdays.</p> <p>The following operations may take place outside of the core working hours:</p> <ul style="list-style-type: none"> Trenchless crossing operations including at landfalls and beneath highways, railway lines, 	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>woodlands, nature reserves, Sites of Special Scientific Interest or watercourses</p> <ul style="list-style-type: none"> • The installation and removal of conductors, pilot wires and associated protective netting [included but not limited to] across highways, railway lines or watercourses • The jointing of underground cables • The continuation of any work activity commenced during the core working hours to a point where they can securely and or safely be paused • Any highway works requested by the highway authority to be undertaken on a Saturday or Sunday or outside the core working hours • The testing or commissioning of any electrical plant installed as part of the authorised development including undertaking of any identified corrective activities • The completion of works delayed or held up by severe weather conditions which disrupted or interrupted normal construction activities¹³ • Activity necessary in the instance of an emergency where there is a risk to persons or property • Security monitoring • Non-intrusive surveys • Intrusive surveys • Oil processing of transformers or reactors in substation sites 				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<ul style="list-style-type: none"> Delivery to the transmission works of abnormal loads and any highway works requested by the highway authority to be undertaken outside the core working hours Mechanical and electrical installation works within buildings once erected and enclosed. <p>The core working hours exclude start up and close down activities, which can take place up to one hour either side of the core working hours.</p> <p>There is no intention for night working on the Project as standard. However, there would be occasions where night working is required, as set out in the operations that may take place outside of the core working hours above. There is also the potential for the trenchless crossings to be undertaken at night. Parts of the trenchless crossing operations require continuous working to achieve completion of the crossing. Some road works may also need to be undertaken at night to reduce effects on local traffic.</p>				
9-2.110	Suggest that National Grid set out and consult on detailed plans for construction work in each area and consider feedback prior to any commencement of works	At the public information events, National Grid had technical information available on our proposals. This included our construction access plans, maps, and documents. We also had several members of the team available who could explain these documents and our plans for the construction of the Project. Following our statutory consultation, we reviewed all the feedback we received and made amendments to our alignment and access as a result of these changes.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		We would not start any construction for the Project until we receive a Development Consent Order (DCO).				
9-2.111	Concern about damage to properties (including older buildings / properties) caused by vibrations from construction vehicles	The Noise and Vibration assessment, presented in Environmental Statement (ES) Chapter 14: Noise and Vibration (document reference 6.14) includes consideration of potential damage to building and structures due to vibration during construction. Five such locations have been identified where there is the potential for damage from construction vibration without mitigation. This will be reviewed by the contractor as part of the specific noise and vibration assessments and specific measures will be put in place to manage and reduce vibration levels. These measures are secured via Appendix F: Outline Noise and Vibration Management Plan (NVMP), of the Outline Code of Construction Practice (CoCP) (document reference 7.2).	X		X	
9-2.112	Suggest that National Grid adopt a joined-up approach between the Project and other major projects in the east of England and along the east coast of England	The potential for cumulative effects to arise in combination with other projects is recognised. National Grid has addressed these cumulative effects in the Environmental Statement submitted as part of the Development Consent Order (DCO).		X	X	
9-2.113	Concern that the haul roads built as part of the Project will take agricultural land out of commission for years after they have been taken away and the land re-instated / Concern that haul roads built as part of the Project will have a lasting impact on farmland	The proposed haul road would involve the removal of the topsoil and subsoil. National Grid would then retain it on site and protect it before reinstating at the end of the Project, where practicable, to its pre-construction condition and use (or a condition discussed with the landowner). All soil handling including soil stripping,	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		stockpiling and reinstatement would be in line with relevant good practice guidance, such as the Defra Code, as detailed in the Outline Soil Resource Plan (Appendix C of the Outline Code of Construction Practice (CoCP)) (document reference 7.2). Therefore, it is not envisaged to have long-term lasting impacts on farmland due to the haul road. Chapter 6: Agriculture and Soils of the Environmental Statement (ES) (document reference 6.6) concludes that the effect on agricultural landholdings as a result of the Project would not be significant during construction, as by the end of construction, all land required temporarily would be reinstated, and effects on agricultural operations during the construction phase would be managed through compensation agreements (which lie outside of the EIA process).				
9-2.114	Concern about possible disruption to rail / public transport services caused by the Project	<p>National Grid is engaging with Network Rail and Local Highway Authorities to minimise any such disruptions to rail and bus services. Any disruption is expected to be short term in their impact and would be implemented in agreement with the relevant authority.</p> <p>The Environmental Statement (ES) follows standard methodology for assessing the Traffic and Transport environmental effects of the Project. Chapter 16: Traffic and Transport (document reference 6.16) assesses the impact to bus passenger services and delay. The Transport Assessment (document</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		reference 7.11) also provided details on the impact to public transport services as a result of the Project.				
9-2.115	Suggest that lanes and edges of the roads need to be maintained during all construction works and reinstated to their original condition once work is completed, given that large holes / channels can develop at the sides of the lanes where traffic has to pass or move across and these can become huge drops, fill with water and then drivers cannot see how deep they are ruining tyres and vehicles / Concern about the improvement, maintenance and repair of roads following completion of the Project	<p>As part of the pre-application process National Grid has engaged with the relevant authorities, and their highways teams and National Highways to understand and gain information on their local road networks. This information has been used to inform and guide the drafting of the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) for the Project that accompanies the Development Consent Order (DCO) application. A strategy has been developed to manage the impact of construction vehicles on the public highway and sensitive receptors, using suitable Local Road Network connections from the Strategic Road Network called Primary Access Routes. In addition, temporary haul roads for construction vehicles are proposed along the Project alignment, further reducing the impact of construction traffic on the local road network. Further details of the strategy can be found within the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).</p> <p>Roads used for construction traffic will be monitor throughout and where damaged will be repaired by the contractor.</p>			X	
9-2.116	Concern that the Project will result in safety implications due to working in proximity of gas pipes	In planning the Project, National Grid considers and engages with all existing utilities and agrees interface and mitigation arrangements (where required) with			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>their owners. We also consider any such future installations where planning applications are in the system and visible and likewise as part of the consultation process, we contact all third-party utility providers in the area.</p> <p>Working in proximity to existing utility assets (both above ground and buried) is common practice for National Grid and their contractors. However, National Grid and their contractors shall adhere to relevant Health and Safety Executive (HSE) and National Grid specific legislation, policy and guidance when constructing, operating and maintaining the Project.</p>				
9-2.117	Concern that the Project may impact utilities and has the potential to cause disruption to neighbouring households (e.g. of water supplies, etc)	In planning the Project, National Grid considers all existing utilities and agree interface and mitigation arrangements (where required) with their owners. We also consider any such future installations where planning applications are in the system and visible and likewise as part of the consultation process we contact all third-party utility providers in the area.			X	
9-2.118	Criticism that National Grid have not considered flooding when planning the Project	Flood risk from rivers and surface water sources have been a consideration in informing the Projects developing design. New pylons in the floodplains of watercourses have been avoided, with a very small number of exceptions, and all of the proposed new substations are situated in low flood risk zones. Construction compounds and other elements of temporary infrastructure have also avoided areas at high risk of flooding where practicable. Where			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		development in flood risk areas cannot be avoided a suite of control and mitigation measures have been secured to prevent any increases in flood risk. These are described in the Flood Risk Assessment (FRA) (document reference 7.9) that has been submitted as part of the Development Consent Order (DCO) application.				
9-2.119	Concern about light pollution caused from construction activities for the Project	<p>As detailed in Chapter 4: Project Description of the Environmental Statement (ES) (document reference 6.4), exterior and interior lighting would be provided at the site to allow for safe movement of equipment. All lighting would be designed in accordance with the appropriate design standards. Lighting would be directional and is intended to support safe movement of pedestrians and vehicles around the site (and minimise light spill to the local environment), the lighting would therefore not be on by default (only whilst there are activities happening at the site as dictated by operational requirements).</p> <p>Further mitigation measures for construction lighting are secured within the Outline Code of Construction Plan (CoCP) (document reference 7.2).</p>	X	X	X	
9-2.120	Criticism that the Project proposes construction activities seven days per week and includes extended working hours	We acknowledge the concerns raised regarding the proposed seven-day working hours during the construction phase of the Project. These working hours have been proposed to enable efficient delivery of the Project and to minimise the overall duration of construction impacts on local communities.	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Proposed working hours have been reported within Environmental Statement (ES) Chapter 4: Project Description Document Reference 6.4), along with some specific criteria where works outside of these defined hours would be permitted.</p> <p>The Outline Code of Construction Practice (CoCP) (document reference 7.2) and the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) detail proposed mitigation measures to reduce impacts during the construction phase of the Project.</p> <p>Any work proposed outside of standard hours will be carefully managed and restricted to specific situations such as safety-critical operations or where weather or technical constraints require it and will be subject to appropriate controls.</p>				
9-2.121	Suggest that air quality is scoped into the Environmental Impact Assessment	<p>National Grid submitted a Scoping Report (document reference 6.19) to the Planning Inspectorate on 7 November 2022. The Planning Inspectorate (on behalf of the Secretary of State) formally adopted its Scoping Opinion (document reference 6.20) on 14 December 2022 which has informed the scope EIA for the Project.</p> <p>The assessment of impacts on air quality as per the Scoping Report and Scoping Opinion are assessed in Chapter 7: Air Quality (document reference 6.7) of the Environmental Statement (ES).</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.122	Opposition to construction activities as part of the Project	<p>National Grid notes the respondent's feedback. National Grid has, as part of the development of the Project, considered the security measures required to ensure construction can be completed safely.</p> <p>Temporary construction compounds, including offices, will be secured to protect the public and prevent unauthorised entry to site.</p> <p>Access to temporary construction compounds will be limited to specific entry points and personnel entries/exits will be recorded and monitored for both security and health and safety purposes.</p> <p>Security fencing and gates are proposed for all site access points to secure the works area, the construction corridor and haul roads.</p> <p>In the event that a haul road is blocked, resulting in a site location becoming inaccessible from a site access point, an alternative access shall be facilitated from a suitable crossover point.</p> <p>In the event of any incident occurring which impacts on the safe and efficient operation of the road network, additional mitigation measures will be considered, which could include contingency routes. Contingency routes will be provided by pre-established traffic diversions and diversions as set out by National Highways, the relevant highway authorities and the police.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.123	Concern that work will be done by subcontractors who may be less communicative than National Grid when addressing issues with parishioners and Councillors locally	<p>If we receive consent for the Project, we would use subcontractors to carry out the construction work. We will still have a dedicated community phonenumber and email for members of the public should they have any questions regarding construction.</p> <p>We will keep people updated on construction through regular project updates and the Project website.</p>	X			
9-2.124	Suggest that National Grid undertake a whole life carbon assessment for the Project / Suggest that a long-term environmental impact assessment would help identify which type of cabling would have the lowest impact on the carbon footprint	<p>The need for the Project is to support the connection and transfer of green, renewable energy into the National Electricity Transmission System. The Project would support the UK's net zero target to achieve net zero emissions by 2050 through the connection in East Anglia of new low carbon energy generation, and by reinforcing the transmission network. Therefore, the operational, medium- to long-term benefits of delivering the Project on a national level are considered to outweigh any short-term impacts of greenhouse gas emissions because of material use including cables and construction activities.</p> <p>The Environmental Statement (ES) that accompanies the application for development consent is supported by a simple estimate of the greenhouse gas emissions associated with the construction phase of the Project, comparing this against UK emissions to determine if the Project is likely to have a material impact on the ability of the Government to meet its carbon reduction targets. The assessment also identifies potential opportunities to save carbon.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.125	Concern about soil and groundwater contamination from equipment leaks and spills (e.g. from substations)	Commitments included within the Outline Code of Construction Practice (CoCP) (document reference 7.2) require appropriate use and storage of chemicals and fuels to be undertaken in accordance with relevant environmental legislation and will be controlled and monitored under the Outline CoCP (document reference 7.2). This will include procedures for good general construction site practices, environmental and waste management procedures, regular vehicle checks and maintenance, use of spill kits, correct waste storage and disposal, use of oil-water separators as necessary, collection of process water. In accordance with the Outline CoCP (document reference 7.2), additional restrictions are placed on works within a groundwater source protection zone 1 and 2, which are more sensitive groundwater areas. All contractors working on site will comply with current, Health, Safety and Environmental legislation. Therefore, the prevention of spills will be mitigated as part of the risk assessment process and failure to prevent spills will be supported by a robust spill response process.	X			
9-2.126	Concern that National Grid's commitment for all vehicles, including construction vehicles and generators, to be Euro VI compliant is too ambitious / unachievable (e.g. due to the number of daily vehicle movements proposed)	National Grid is committed to reducing emissions from construction vehicles and non-road mobile machinery and plant. The Outline Code of Construction Practice (CoCP) (document reference 7.2) and Appendix D: Outline Dust Management Plan of the CoCP (document reference 7.2) submitted as part of the Development Consent Order (DCO) application for the			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Project, set out and update, where necessary, any commitments relating to emissions from vehicles and non-road mobile machinery and plant.</p> <p>It is assumed that the comment that “<i>National Grid's commitment for all vehicles, including construction vehicles and generators, to be Euro VI compliant is too ambitious / unachievable</i>” relates to the Preliminary Environmental Information Report (PEIR) Chapter 7 Air Quality. Paragraph 7.8.20 in Chapter 7 refers to European Stage VI engine emission standards for non-road mobile machinery and plant, including generators. This was a typo and should have said “<i>European Stage IV engine emission standards</i>”.</p> <p>As stated above, Appendix D: Outline Dust Management Plan of the Outline Code of Construction Practice (CoCP) (document reference 7.2) set out the most up-to-date commitments relating to emissions.</p>				
9-2.127	Concern that parts of the Project are in close proximity to Flood Zone 3 and associated floodplains	<p>The Project, through iterative design, has largely avoided siting new operational development in Flood Zone 3 to prevent impacts on watercourses and their floodplains. Where, in a small number of locations, this has not been practicable, in consultation with the Environment Agency and other key flood risk management authorities, mitigation has been agreed (detailed in the Flood Risk Assessment (document reference 7.9) that has been prepared) to ensure no increase in pre-development fluvial flood risk, this involves provision of compensatory storage for all</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		losses of floodplain storage volume within the 1 per cent plus climate change flood extent.				
9-2.128	Criticism that the Preliminary Environmental Impact Assessment includes very generic comments, such as <i>"There is the potential for the Project to increase flood risk during construction"</i> (paragraph 5.8.13), which do not take into consideration any potential risk to the residents, environment and surrounding areas from flood risk and how it would be mitigated	Since completion of the Preliminary Environmental Impact Assessment, the Project has been subject to a detailed Flood Risk Assessment (FRA) (document reference 7.9) that has appraised flood risk to and arising from the Project from a range of sources. An initial drainage design has also been progressed that includes a range of measures to capture, store and attenuate rainfall runoff from the Project and its construction swathe. The Flood Risk Assessment (document reference 7.9) has identified a range of good practice and additional mitigation measures that would be needed to ensure that flood risk to existing communities and infrastructure is not increased during construction and operation. These measures are described in the Outline Code of Construction Practice (document reference 7.2).			X	
9-2.129	It should also be noted that there is only one mention of the sequential test within the Preliminary Environmental Impact Assessment, and no evidence that it has been applied to this scheme at any decision-making stages / Concern that National Grid have not applied the Sequential Test and may have therefore underestimated potential flood risks for the Project	The Sequential Test encourages new development to areas at low risk of flooding. The requirements of the test have been considered through the iterative process of Project design and operational development in areas that are at high risk of flooding from rivers and surface water has been avoided along the vast majority of the Project alignment. Where this has not been possible (namely for a small number of pylons and some elements of temporary works), justification is presented within the Flood Risk			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Assessment (document reference 7.9) that has been prepared and the Exception Test has been applied, with mitigation measures, detailed in Environmental Statement (ES) Chapter 12: Hydrology, Land Drainage and Flood Risk of the Environmental Statement (document reference 6.12) secured through the Development Consent Order (DCO) to ensure no increase in flood risk as a consequence of the Projects development.				
9-2.130	Based upon the Preliminary Environmental Impact Assessment, it is unclear whether there has been an exercise to determine whether the Project as proposed has the least risk to increase flooding	The National Planning Policy Framework Sequential Test encourages new development to areas at low risk of flooding. The requirements of the test have been considered through the iterative process of Project design and operational development in areas that are at high risk of flooding from rivers and surface water has been avoided along the vast majority of the Project alignment. Where this has not been possible (namely for a small number of pylons and some elements of temporary works), justification is presented within the Flood Risk Assessment (document reference 7.9) that has been prepared and the Exception Test has been applied, with mitigation measures (Detailed in Chapter 12: Hydrology, Land Drainage and Flood Risk of the Environmental Statement (ES) (document reference 6.12) secured through the Development Consent Order (DCO) to ensure no increase in flood risk as a consequence of the Project's development.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.131	A flood risk assessment would have ensured an exercise to assess the likely worst case environmental, social and economic effects of the proposed development are taken into account / Criticism of lack of evidence that this has been considered for the Project or for any potential alternatives to inform the Project being chosen, and lack of evidence that the Project is the preferred option from a flood risk perspective / Criticism that flood risk assessments for the Project have been insufficient, including lack of worse case assessment	Alternatives to the Project are detailed and assessed in Chapter 3: Alternatives (document reference 6.3). The National Planning Policy Framework Sequential Test encourages new development to areas at low risk of flooding. The requirements of the test have been considered through the iterative process of Project design and operational development in areas that are at high risk of flooding from rivers and surface water has been avoided along the vast majority of the Project alignment. Where this has not been possible (namely for a small number of pylons), justification is presented within the Flood Risk Assessment (document reference 7.9) that has been prepared and the Exception Test has been applied, with mitigation measures detailed in Chapter 12: Hydrology, Land Drainage and Flood Risk of the Environmental Statement (ES) (document reference 6.12) secured through the Development Consent Order (DCO) to ensure no increase in flood risk as a consequence of the Project's development.	X		X	
9-2.132	Concern about the tonnage of aggregate/stone which the Project requires for the haul roads, which occupy a far wider space overall (21 m) than the 8 m wide the National Grid originally told the respondent	The proposed haul road is only 8 m wide, reducing to 6 m in locations, however, the overall haul road swath is 21 m wide. The swathe contains material storage, fencing, drainage and is not surfaced with aggregates.	X			
9-2.133	Suggest that the Project is delivered in phases with land only being taken as the construction of the Project moves south, and at the same time the	Works will be phased in delivery. At this stage the detailed construction programme has not been finalised but it is likely that works will commence in			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	northern sections first constructed are restored and returned to landowners	<p>several locations along the route, and the logical place to commence would be that works will commence from primary access points initially and work away from them along the length of the Project.</p> <p>It is also likely that there will be periods in locations where no physical construction works will be taking place as it is a linear project and certain activities can only happen in sequential order e.g., construction of access and working area, installation of foundations, tower assembly at ground level, tower erection, prep for installing conductor, installing conductor. Once the new line is switched on the demobilisation period can commence.</p>				
9-2.134	Criticism that National Grid have not considered how construction traffic will access the land isolated where the Project crosses the London to Norwich railway, and by implication how many miles of new temporary roadways need to be constructed (this occurs at other locations where the route crosses electrified railways)	<p>National Grid's planning and assessment include detailed assessments of how construction vehicles would access the haul road, including at points where the route crosses electrified railways. We have ensured all accesses to land affected by the alignment are maintained or provided.</p> <p>National Grid has worked with the Local Highway Authority, National Highways, and Network Rail to develop our access proposals for the Project.</p> <p>As part of the design of the access proposals we have agreed specific prescribed routes, known as Primary Access Routes (PARs) which the contractor would be required to use. We have identified suitable access routes and proposed mitigations where identified. This information has been used to inform and guide the</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		drafting of the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) for the Project that accompanies the Development Consent Order (DCO) application. The Outline CTMP (document reference 7.3) also highlights any restrictions to reduce impacts to other road users from construction traffic related to the Project. Additionally, National Grid has been working with Network Rail to minimise and mitigate disruption to railways.				
9-2.135	Suggest that haul roads as part of the Project are constructed to National Highways' A road specification (including new bridges and services diversion) to ensure sufficient load and traffic level capacity for the safe passage of construction traffic / Concern that this has not yet been proposed by National Grid, so a significant cost overrun is likely	Details of the proposed haul road arrangement are provided in the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), presented during the statutory consultation. This includes a standard detail showing the typical layout of the haul road as shown in the Outline CTMP (document reference 7.3). At the current design stage, the haul road design is indicative, National Grid has conducted a preliminary ground investigation and would be developing the design based on this and anticipated traffic numbers in accordance with industry standards.			X	
9-2.136	Suggest that construction work for the Project should abide by the recommendations set out in the Clocs (Construction Logistics and Community Safety) guide	An Outline Code of Construction Practice (CoCP) (document reference 7.2) and an Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) have been submitted with the DCO application. These documents have been developed in consultation with key stakeholders and contain measures, comprising effective construction logistics			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		practices, management activities and techniques, that would be implemented during construction of the Project. Specifically, the Outline Code of Construction Practice (CoCP) (document reference 7.2) includes relevant standard/good practice measures relating to traffic and transport and the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) provides details of the proposed traffic management of delivery vehicles and other traffic generated during construction.				
9-2.137	Suggest that all construction vehicles (e.g. lorries) used on the Project comply with the Direct Vision Standard at the level applicable from October 2024 (e.g. three stars)	The Direct Vision Standard (DVS) is a London specific standard and is a measure of how much HGV drivers can see from their cab directly, National Grid has produced an Outline Code of Construction Practice (CoCP) (document reference 7.2) and will work with local and national highways to ensure vehicles used during construction of the Project are compliant with appropriate safety and environmental standards (compliance with the Outline Code of Construction Practice to be secured by Development Consent Order (DCO) Requirement), but there is no current plan to directly replicate the DVS scheme imposed by TFL.			X	
9-2.138	Concern about the safety of cyclists in relation to construction of the Project, and suggest that all deployed drivers for the Project should have a compulsory Bikeability level 3 training. With this, also suggest that National Grid engage with Cycling UK (CUK) as CUK has previously offered	National Grid notes the response. The impact on sensitive receptors, which includes cyclists, along all Primary Access Routes (PARs) can be found in Chapter 16: Traffic and Transport (document reference 6.16) of the Environmental Statement (ES).			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	face-to-face awareness sessions for companies' lorry drivers and, in some instances, organised led cycle rides for them (e.g. which may be beneficial if contractors have not already completed similar training)	<p>The Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) for the Project that accompanies the Development Consent Order (DCO) identifies methods for recording and monitoring safety related issues. A Driver Information Pack issued to each driver is anticipated to include information on footways, cycleways and bridleways, and warnings of routes which could have a higher volume of pedestrians, cyclists and equestrians. Where roads are closed for safe working, it is anticipated that these roads will remain open for cyclists, where practicable and safe to do so.</p> <p>Commitment T08 in the Outline Code of Construction Practice (CoCP) (document reference 7.2), which accompanies the DCO (document reference 3.1), requires that site inductions cover traffic safety, highlighting the need to pay special attention to vulnerable road users. Commitment T09 requires the Main Works Contractor(s) to prepare a Driver Information Pack.</p>				
9-2.139	Any Project for temporary accesses that are not needed for operation to be made permanent as a legacy benefit, need to be treated on a case-by-case basis. Any design may need to be altered in order to be commensurate with their future use rather than the temporary use during construction.	If consented, once the Project has been constructed and commissioned, the working areas would be removed, and the site reinstated. Temporary construction haul roads (including temporary bridges and culverts) are likely to be removed unless identified as offering a long-term improvement to the environment and land usage during the design (and agreed with the landowner, Lead Local Flood Authority and / or the Environment Agency (where required)).		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Temporary features such as site welfare, fencing and scaffolding would be removed. Any stripped topsoil would be reinstated, and the site would be returned to its former use, subject to any planting restrictions or agreements with landowners.</p> <p>Reinstatement would also include landscaping. This is likely to include reseeded grassland areas, replanting hedgerows, and trees. It would also include additional landscape planting in some areas to help screen the new infrastructure from sensitive receptors. Details of reinstatement is provided within the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) and the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4).</p>				
9-2.140	Suggest that a Foundation Works Risk Assessment should be completed where piles are proposed for the Project (in relation to the Preliminary Environmental Information Report (PEIR) Sections 4.8.13 and 9.5.15)	In accordance with Commitment GH02 included within the Outline Code of Construction Practice (CoCP) (document reference 7.2), a foundation works risk assessment would be undertaken, prior to construction, at locations where the use of piled foundations are required. The risk assessment would be undertaken in accordance with Environment Agency guidance 'Piling and Penetrative Ground Improvement Methods on Land Affected by Contamination' (Environment Agency, 2001).	X		X	
9-2.141	Based on available project information it may be reasonable to assume that there will be no consumptive use of abstracted water (as per	As described in Chapter 4: Project Description (document reference 6.4) of the Environmental Statement (ES), water supply needs for the Project	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	Section 9.5.15 of the Preliminary Environmental Information Report (PEIR)). However, suggest that National Grid should note that common construction uses of water resources such as plant washing and dust suppression would be considered consumptive if water used is from a groundwater source of supply. License exemptions exist around the temporary abstraction of dewatered groundwater from construction, but to be exempt there must be no intervening use of this water prior to discharge (see The Water Abstraction and Impounding (Exemptions) Regulations 2017 Regulation 5(d)(i-ii))	during construction would be sourced either from mains water supply or in remote locations or where this option is not available water would be tankered in. Chapter 12: Hydrology, Land Drainage and Flood Risk of the Environmental Statement (ES) (document reference 6.12) assesses the potential effects of the Project on surface water resources, and effects on groundwater resources are assessed in Chapter 9: Contaminated Land, Geology and Hydrogeology of the Environmental Statement (ES) (document reference 6.9).				
9-2.142	<p>Suggest the following for the Environmental Assessment for the Project in relation to highways:</p> <ul style="list-style-type: none"> - Suggest that geographical scope should include Primary Access Routes where construction or worker traffic is significant; - Suggest scoping out of transport issues from operational phase except for Abnormal Indivisible Load (AIL) movements; - Suggest that Public Rights of Way (PRoWs) should be covered in their own topic rather than covered in multiple topics; - Suggest the use of Institute of Environmental Management and Assessment (IEMA) 2023 guidance; - In relation to Rules 1 and 2, suggest that percentages should not be taken as absolutes 	<p>Chapter 16: Traffic and Transport (document reference 6.16) of the Environmental Statement (ES) identifies all Primary Access Routes used by construction vehicles and workers from the Project Site Access Points to the Strategic Road Network /Major Road Network. Operational phase has been scoped out of the Traffic and Transport assessment as per the Scoping Report (document reference 6.19) and Scoping Opinion (document reference 6.20). The AIL Access Strategy is provided as an Appendix to the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).</p> <p>As per the Scoping Report (document reference 6.19) and Scoping Opinion (document reference 6.20) a separate Public Right of Way (PRoW) chapter has not been provided. This is because PRoWs are assessed</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>recognising that there is an element of statistical variation in survey data (e.g. increases of 29 per cent or 9 per cent should not be discounted without justification);</p> <p>- Suggest that data should always be used instead of engineering judgement (as the latter may be open to challenge)</p>	<p>using different methodologies by several different environmental topic chapters including the ES Chapter 16: Traffic and Transport (document reference 6.16), Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15), Chapter 10: Health and Wellbeing (document reference 6.10) and Chapter 13: Landscape and Visual (document reference 6.13). PRoWs are therefore assessed separately within each relevant environmental topic chapter of the ES and within Chapter 17: Cumulative Effects (document reference 6.17).</p> <p>Further detail on PRoW is also provided within the following documents for the Project that accompany the Development Consent Order (DCO) application:</p> <ul style="list-style-type: none"> • Transport Assessment (document reference 7.11) • Outline (PRoW) Management Plan (document reference 7.6) • Access, Rights of Way and Public Rights of Navigation Plans (document reference 2.5) • Traffic Regulation Order Plans (document reference 2.4) <p>The Institute of Environmental Management and Assessment (IEMA) 2023 guidance has been used in the assessment within Chapter 16: Traffic and Transport (document reference 6.16) of the Environmental Statement (ES). National Grid has noted comments on percentages and this has been taken into consideration within the assessment.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Professional judgement has only been used where no quantifiable data or standard assessment criteria is available. Where this occurs, the assessment has drawn from assessment undertaken on similar Nationally Significant Infrastructure Projects.				
9-2.143	Suggest that adequate control, monitoring and enforcement measures with regard to construction traffic should be included within Construction Management Plans for the Project	<p>National Grid has worked with the local highway authorities and National Highways as we developed our access proposals for the Project.</p> <p>As part of this process, control, monitoring, and enforcement measures have been developed and are noted in the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).</p>		X		
9-2.144	Suggest that a noise and vibration management plan for the Project should be available at least 28 days prior to construction commencing	<p>An Outline Noise and Vibration Management Plan (NVMP) has been prepared, and submitted as Appendix F: Outline Noise and Vibration Management Plan of the Outline Code of Construction Practice (CoCP) (document reference 7.2). The NVMP would be updated by the contractor following their detailed construction noise and vibration assessments into a NVMP prior to construction.</p> <p>The final plan (which must be substantially in accordance with the outline) will be discharged under the Development Consent Order (DCO) requirement to discharge the CoCP should development consent be granted. As currently proposed no development can commence until the final CoCP (including all management plan appendices) has been approved. This requirement will be submitted to the relevant</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Local Planning Authorities for discharge and as currently proposed in the draft DCO they will have 28 days to determine the application.				
9-2.145	Suggest the use of the Department for Environment, Food and Rural Affairs (DEFRA) Construction Code of Practice for the Sustainable Use of Soils on Construction Sites in the design and construction of the Project, including any planning conditions. With this, suggest that National Grid use an appropriately experienced soil specialist to advise on, and supervise soil handling, including identifying when soils are dry enough to be handled and how to make the best use of soils on site	Appendix C: Outline Soil Resource Plan (SRP) of the Outline Code of Construction Practice (CoCP) (document reference 7.2) sets out key strategy, methodology and guidance (including the Department for Environment, Food and Rural Affairs code and other relevant guidance), and outlines key soil mitigation measures to protect soil resources during the stages of preconstruction, construction, post construction and operation. The Outline SRP details the roles and responsibilities of the Project soil scientist, who would be a qualified soil scientist with the necessary training, qualifications, and experience and would support the site environmental manager.	X			
9-2.146	The Lead Local Flood Authority (LLFA) recommends the drainage proposal for areas under Essex should comply with SuDS Design Guide. The proposal should assess areas susceptible to surface water flooding and requires appropriate measures to mitigate any adverse impacts during construction phase, including any implication associated with existing drainage interruption / blockage or temporary diversions	The Project's overarching drainage strategy has been developed with reference to the requirements of relevant LLFA SuDS design guidance. Areas susceptible to surface water flooding have been identified and are described in the Flood Risk Assessment (document reference 7.9), which recommends a range of control and management measures to prevent increases in surface water flood risk during the construction of the Project, including measures to mitigate impacts on existing land drainage infrastructure. These measures are included			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		within the Outline Code of Construction Practice (document reference 7.2).				
9-2.147	<p>Suggest submission of a construction management strategy. This should include the following:</p> <p>Any temporary works (culverts) to ordinary water courses / drainage channels for the purpose to give access to the project location;</p> <p>The surface water management during construction of office, storage compounds;</p> <p>Required mitigation to prevent onsite / offsite flooding;</p> <p>Measures taken to prevent pollutants entering surface or ground water; and</p> <p>Appropriate measures to deal with spills and leakages onsite</p>	An overarching strategy for managing construction phase drainage, in terms of quantity and quality of flows has been developed for the Project, which is described within the Flood Risk Assessment (document reference 7.9). The Flood Risk Assessment provides details of the mitigation measures that would be implemented to prevent increases to flood risk, as well as an assessment of the effects on temporary watercourse crossings. The Outline Code of Construction Practice (document reference 7.2) secures a range of measures to safeguard water quality, including measures to deal with spills/leaks and to prevent pollutants entering surface and groundwater bodies.			X	
9-2.148	<p>Suggest that proposal for surface runoff disposal during construction phase and from built area's (offices, storage compounds) will need to be in accordance with SuDS Design Guide 2020.</p> <p>Suggest that unrestricted runoff from the site into any open water body or sewer is not recommended</p>	The Projects overarching drainage strategy has been developed with reference to the requirements of relevant LLFA SuDS design guidance, including the SuDS Design Guide 2020. Runoff from construction work sites, compounds and haul roads would be subject to suitable treatment and attenuation prior to discharge to the receiving water environment, as secured by commitment W13 within the Outline Code of Construction Practice (document reference 7.2).			X	
9-2.149	Suggest that consent will be required for areas where the project will have a direct or indirect effect	As detailed in commitment W01 within the Outline Code of Construction Practice (document reference			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	on drainage channels, or ordinary water courses (Section 23 of the Land Drainage Act, 1991)	7.2), all qualifying works to ordinary watercourses will accord with the protective provisions of the DCO for the benefit of the LLFAs.				
9-2.150	Support for the Trenchless construction method / Suggest geotechnical investigations and surveys are undertaken to understand the existing ground conditions and any risk associated with trenchless construction method for proposed land	<p>Trenchless installation techniques, such as Horizontal Directional Drilling (HDD), can be used as an alternative to a trenched (cut and cover) approach to install underground cables. It is usually the choice of methodology where minimal disturbance to above ground features is required, given trenched methods are more disruptive in terms of the level of disturbance to the landscape and environment. The benefits of using HDD need to be carefully considered to ensure ground conditions are suitable and that the balance of potential environmental effects is achieved.</p> <p>When utilising HDD, the underground cables need to be installed at a greater depth to provide adequate protection against inadvertent excavation strikes as this method doesn't allow us to install warning tapes/tiles above the cables. Furthermore, local constraint features that interface with the route such as water courses or other buried infrastructure may require the cables to be installed deeper to avoid clashes. The deeper the underground cables are installed, the wider they need to be spaced to allow for suitable thermal dissipation (avoiding overheating) and so a wider below ground asset corridor needs to be present to allow for the permanent underground cable corridor, this can be quite difficult to ascertain.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>HDD as a methodology increases complexities with regards to engineering, programme and in turn increase cost hence why HDD is not the preferred methodology of underground cable installation but more so an alternative means where National Grid needs to negotiate the route close to environmental sensitive receptors.</p> <p>We fully assess the underground cable routes in detail considering the route incumbent features and potential effects of installation by open trench method. Where such methodology is deemed not preferred then installation by HDD methods will also be assessed before deciding on where HDD would be used.</p> <p>There is approximately 21.5 km of underground cable on the scheme. The additional cost of utilising trenchless methods for the Project is not practical or justified in policy terms. However, National Grid remains keen to keep trenches open for the shortest practical length of time.</p> <p>Commitment GH01 of the Outline Code of Construction Practice (CoCP) (document reference 7.2) includes a commitment for additional intrusive ground investigation to be undertaken prior to construction with appropriate testing and assessment to inform geotechnical design.</p>				
9-2.151	Concern in relation to Appendix H of the Preliminary Environmental Information Report (PEIR), that whilst initial assessment of vibration	The buffer for potential construction vibration SOAEL exceedances presented in Figure 14.3 of the Preliminary Environmental Information Report (PEIR)		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	effects is presented, it is unclear on thresholds for 'ground compaction' or 'percussive piling'	<p>includes both percussive piling and vibratory compaction, whichever is worst at any given location. It is assumed that percussive piling is required for pylon foundation construction and substation construction, and that vibratory compaction is required for access/haul road, substation, compound, and underground cable construction. The buffers are assigned based on the values presented in Table A14.1.4 of Appendix 14.1 of the PEIR for the two sources (available on the Project Website).</p> <p>The purpose of the buffers is to identify noise sensitive receptors (NSR) that fall within the buffer, and may therefore experience significant adverse effects without mitigation.</p> <p>Where NSR fall within the buffer, these are detailed in Section 8 of Chapter 14 of the PEIR, including the source.</p>				
9-2.152	Criticism that the lowest observed adverse effect level Lowest Observed Adverse Effect Level (LOAEL) threshold for extended working hours presented in Table 14.2 is defined as 50 dB LAeq,T, which is the same as the LOAEL for 'normal' working hours	<p>The LOAEL value of 50 dB LAeq,T is based on achieving good acoustic conditions during daytime periods externally (e.g. in garden spaces) and internally in living rooms and bedrooms with open windows, based on the guidance provided in BS 8233:2014 '<i>Guidance for sound insulation and noise reduction for buildings</i>'. Note that the values provide good conditions with open windows and internal conditions would be even better with closed windows.</p> <p>The guidelines for good daytime conditions state a time period of between 07:00 and 23:00 as daytime,</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		with no separate distinction for weekends. As such, the LOAEL value stated is applicable during all periods between 07:00 and 23:00.				
9-2.153	Concern that where some elements of the project are not fixed (pylon locations and cable alignment), there is the potential for construction activities to move closer to National Schedule of Rates (NSRs), leading to increased noise/vibration levels. Suggests further detail is provided to confirm mitigation measures applied in the form of Business Process Management (BPM) would adjust accordingly to avoid significant adverse effects	There is potential for differing effects from construction noise and vibration due to the flexibility in the design, both positive and negative. No locations have been identified where significant adverse effects may occur due to flexibility in the design within the LoD, where best practicable means (BPM) are applied. As suggested, the specific mitigation measures will vary depending on the level of impact and risk for those specific works. This will principally be driven by proximity of the noise sensitive receptor (NSR) to the works. However, the specific mitigation measures would be determined by the Main Works Contractor(s) following their detailed construction noise and vibration assessments which would consider the exact location of works following the detailed design phase.		X		
9-2.154	Criticism in relation to figure 14.2 of the Preliminary Environmental Information Report (PEIR), that whilst calculations in accordance with British Standard (BS) 5228 were made on construction phase noise and vibration, it is unclear what construction activities have been used to define buffer areas indicated on Figure 14.2	The buffers for potential construction noise and vibration SOAEL exceedances presented in Figure 14.2 of the Preliminary Environmental Information Report (PEIR) includes the effects of all potential activities whichever is worst at any given location. The buffers are assigned based on the values presented in Table A14.1.3 (with regards to noise) Table A14.1.4 (with regards to vibration) of Appendix 14.1 of the PEIR (available on the Project Website).		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>The buffers are presented as a whole for simplicity to indicate the extent of potential SOAEL exceedances, without mitigation.</p> <p>The purpose of the buffers is therefore to identify noise sensitive receptors (NSR) that fall within the buffers and may therefore experience significant adverse effects without mitigation. These were referred to as noise and vibration 'hot-spots'.</p> <p>Where NSR fall within the buffer, these are detailed in Section 8 of Chapter 14 of the PEIR, including detailing the source, or sources, of potential exceedance.</p> <p>A further detailed assessment of construction noise and vibration impacts has been undertaken for the Environmental Statement (ES), as presented in ES Chapter 14: Noise and Vibration (document reference 6.14) and associated Figures 14.2: Construction Noise Assessment Outputs (document reference 6.14.F2 and associated Figures 14.3: Construction Vibration Assessment Outputs (document reference 6.14.F3). The assessment is based on the construction plan information detailed in Appendix 14.1: Construction Noise and Vibration Data (document reference 6.14.A1).</p>				
9-2.155	Suggestion that pre-construction works must not obstruct or disturb any public rights of way, unless otherwise agreed. Suggest management measures should be discussed, and any temporary closures	The potential impacts on Public Rights of Way (PRoW) are assessed and set out in Environmental Statement Chapter 13: Landscape and Visual (document reference 6.13), Chapter 15: Socio-economics,		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	will need to be included in the Development Consent Order (DCO)	<p>Recreation and Tourism (document reference 6.15) and Chapter 16: Traffic and Transport (document reference 6.16).</p> <p>The Outline Public Rights of Way Management Plan (document reference 7.6) has been submitted as part of the Development Consent Order (DCO) application, which sets out management measures and mitigation measures for PRoW affected by the construction activities. PRoWs crossing the working areas affected by pre-construction works, such as archaeological fieldwork, will be managed in discussion with the relevant local authorities.</p> <p>It has been agreed with Natural England that a Great Crested Newt (GCN) District Level License (DLL) will be obtained for the full extent of the Project. Pre-construction mitigation included within this license does not include amphibian fencing and will therefore not obstruct or disrupt any PRoWs.</p>				
9-2.156	Suggestion that a workforce profile should be provided outlining peak workforce numbers, average daily workforce numbers, broad competencies of the workforce (e.g., civils, mechanical, electrical), and the anticipated split of home-based and non-home-based workforce. Suggest these profiles need to be set against the construction timeline	<p>ES Chapter 15: Socio-economics, Recreation and Tourism sets out the anticipated peak construction workforce numbers, overall construction workforce number throughout the four-year construction period and the anticipated split of local and non-local construction workforce for the Project.</p> <p>The average daily workforce numbers are not provided in the ES due to the fact that the overall construction workforce number throughout the four-year construction period has been reported.</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		At this stage, the competence profile of the construction workforce is not available. However, it is anticipated that this information may become accessible following the appointment of the construction contractor.				
9-2.157	In relation to the Preliminary Environmental Information Report (PEIR) Volume 1 paragraph 11.69 of the design proposals, request for detailed information regarding the Decommissioning Strategy for the 132 kV power lines, including whether foundations will be removed to plough depth	<p>The decommissioning for 132 kV steel lattice towers is site specific. Generally, these towers will have a number of the tower legs cut and then felled onto open land via puling with a tractor (or similar) and connecting cable.</p> <p>Where site constraints restrict felling in this manner the towers will be dismantled section by section from the top of the tower down to the base via crane.</p> <p>Tower foundations will be removed to below plough depth where reasonably able to do so.</p>		X		
9-2.158	<p>Specific Comments on the Mitigation Measures, relating to transport, as set out at Table 5.1 are as follows:</p> <ul style="list-style-type: none"> • Further details are required on the Staff Travel Plan, including management processes, controls, targets, reporting and the approval process. • Wheel washing is required at any access where there is significant vehicle movement to prevent detritus being brought onto the highway and in the interests of road safety. • Complaints relating to traffic and transport should be reviewed as part of the CTMP. • The contractor must have measures in place to 	<p>An Outline Construction Worker Travel Plan (CWTP) (Appendix B of the Outline Construction Traffic Management Plan (CTMP) document reference 7.3)) has been developed and was issued to local highway authorities in May 2025. It forms part of the Development Consent Order (DCO) application.</p> <p>The Outline Construction Traffic Management Plane (document reference 7.3) includes information on the complaints procedure. The Outline Code of Construction Practice (CoCP) (document reference 7.2) includes a commitment that members of the community, local businesses and local stakeholders would be kept informed regularly of the works through</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	prevent deposits onto the public highway, with the ability to rectify any issues as soon as reasonably possible, if conditions on the public highway worsen	<p>active community liaison. This would typically include the notification of 'noisy activities', heavy traffic periods and start and end dates of key phasing. A contact number would be provided which members of the public can use to raise any concerns or complaints about the Project. All construction-related complaints would be logged by the Main Works Contractor(s) in a complaints register, together with a record of the responses given and actions taken.</p> <p>The Outline CoCP (document reference 7.2) includes a commitment that the Main Works Contractor(s) would seek to ensure no debris deposits on to the public road occur due to construction traffic and that cleaning facilities are available where required.</p>				
9-2.159	Given the shift patterns proposed, it is not understood why any staff vehicles would arrive during the traditional peak hours, as above a review mechanism should be embedded into the CTMP, such that the staff arrival and departures patterns are monitored and if more typical shift patterns are exhibited, a review of the development impacts is undertaken and in the event of any additional impacts being identified, reasonable and pragmatic management measures are implemented to reduced these impacts. Any assessment of peak hour impacts within the Transport Assessment should consider the potential for movements within these hours	<p>An Outline Construction Workers Travel Plan (CWTP) (Appendix B of the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3)), has been developed. Details include the monitoring of staff shift patterns and inclusion of this within the monitoring report shared with Local Highway Authority.</p> <p>The assessment of the impact of construction traffic during the AM and PM peak hours included in the Transport Assessment (document reference 7.11) considers administrative staff vehicles arriving at or departing from the satellite and main compounds during the traditional peak hours.</p> <p>On the other hand, construction staff vehicles are expected to arrive before 7am and after 7pm and</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		therefore these have been excluded from the assessment.				
9-2.160	The outputs from the booking system should be reported to the local authorities so that compliance with assessed HGV numbers can be evidenced, and to inform future developments	The Outline Construction Traffic Management Plan (document reference 7.3) includes details of the HGV tracking including GPS on a high proportion of HGVs and number plate tracking for all HGVs making deliveries. This will be used to undertake enforcement actions if required.		X		
9-2.161	The frequency of use of the contingency routes needs to be considered. Further information is also sought on the location, purpose and use of the Alternative Access Routes referred to in the consultation materials	The Outline Construction Traffic Management Plan (document reference 7.3) details the Main Works Contractor(s) to communicate the proposed use of contingency routes when required to the Local Highway Authority.		X		
9-2.162	The management measures within Section 6 do not require the developer to achieve any levels of sustainable travel and do not include any material commitments. EN-1 sets out the need for achieving sustainable transport patterns. Measures should be put in place that ensure high levels of car share or other non-car modes reflecting any assumptions within the ES and Transport Assessment. This should be monitored, reported and managed to respond to low levels of car share	An Outline Construction Worker Travel Plan (CWTP) (Appendix B of the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3)), has been developed and includes monitoring and management of staff travel to the construction site.		X		
9-2.163	The monitoring of vehicle movements through the CTMP needs to be reported to the local highway authorities, so that any incidence of failed compliance is understood and can be investigated,	Details of the monitoring for route compliance is detailed within the Outline Construction Traffic Management Plan (CTMP), (document reference 7.3).		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	along with monitoring of staff arrival and departure patterns and modal splits. There is significant concern about construction vehicles failing to utilise the construction routes, and so robust monitoring processes are needed to give confidence	An Outline Construction Worker Travel Plan (CWTP), (Appendix B of the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3)), has been developed which details the monitoring processes proposed for staff arrival and departure.				
9-2.164	All HGVs accessing the site should include some form of identification within the cabin so that project vehicles are identifiable to the public	Details on the identification for HGVs are included within the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).		X		
9-2.165	<p>It is recommended that an Outline Access Management Plan is submitted as part of the DCO, the plan should look to:</p> <ul style="list-style-type: none"> • Set out the requirements and standards that will be incorporated into the final access design. • The approach to accessing the site, including access and haul road crossing locations. • Explanation of the rationale for the design of the accesses / crossing points. • Drawings of the accesses/crossing points, including extent of red line, highway boundary, swept paths and visibility splays. • A Road Safety Audit with designers' response. • Mitigation measures. • The process for technical approval. • Traffic management. • Access management. • Processes for protecting the highway from detritus. 	<p>Noted, these have all been provided within the Development Consent Order (DCO) submission.</p> <p>In addition, individual drawings for accesses and crossing points have been produced and submitted to individual Local Highway Authorities for acceptance within the Stage 1 Road Safety Audit process. Each individual drawing included:</p> <ul style="list-style-type: none"> • location, • visibility splays based on existing speed limits or surveyed speed data or engineering judgement where reduction of speed is intended, • vehicle swept paths of construction vehicles, • vehicle movement forecasts, • additional areas of visibility on the outside of the curve (Figure 3.9 CD 123 Version 2.1.0). <p>The drawings were accompanied by a Road Safety Audit brief, compiled in accordance with Standards for Highways, DMRB GG119.</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.166	The Council welcomes the commitment at 5.5.4 of the CTMP that security gates are to be set back a minimum of 20 m from the edge of the carriageway to allow for vehicles transitioning between the works area and public highway to stop outside of the gate whilst not impeding the public highway. Further clarification is sought to confirm that this is the correct distance to ensure that waiting vehicles have sufficient space to sit without blocking onto the highway, along with the proposed management arrangements of the accesses to minimise vehicles waiting on the public highway	<p>Illustrative details contained within Document Reference 2.6.3 specifies a minimum 20 m set back distance from the carriageway for gates at site access points or vehicle crossover bellmouths, which provides sufficient space for construction vehicles to wait without impeding the highway.</p> <p>Traffic management will be provided at site access points or vehicle crossover bellmouth locations where required, and additionally, welfare huts are to be provided in locations where required, to provide facilities for gatemen to assist with access/egress arrangements of construction traffic to minimise waiting times on the public highway.</p>		X		
9-2.167	The DCO will need a mechanism for recovering costs as a result of extraneous traffic on the local highway network associated with construction of the development	National Grid would not agree to any payment up front for potential damage, if there is damage that National Grid would be liable to rectify, it may be that National Grid choose to rectify this themselves in the first instance but only upon agreement that National Grid have been the sole cause of any damage. Any such agreement will need to be managed on a case-by-case basis and as a result of the joint agreement of the parties involved, including National Grid.		X		
9-2.168	It is noted that Paragraph 5.11.28 of the Overarching National Policy Statement for Energy (EN-1) states that " <i>Where a proposed development has an impact upon a Mineral Safeguarding Area (MSA), the Secretary of State should ensure that appropriate mitigation measures have been put in</i>	Details on the mineral resources, including Mineral Safeguarding Areas, and minerals infrastructure crossed by the Project are included within Appendix 9.2: Qualitative Minerals Resource and Infrastructure Assessment (document reference 6.9.A2) of the Environmental Statement (ES).		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<i>place to safeguard mineral resources". Active extraction sites are within the MSA and so ensuring the ability of these sites to operate in accordance with their planning permission and thusly make their quantified contribution to the strategic supply of minerals to Essex and beyond is therefore a material planning consideration</i>					
9-2.169	The MWPA are currently engaged in a Review on its Minerals Local Plan (MLP), which involved a Call for Sites exercise where respondents put forward land in their ownership for consideration for allocation for future extraction. From the CRF it can be seen that promoters of sites put forward as part of the MLP Review have also provided representation to this National Grid consultation. Examples of this can be found at CRF References 4.13.237 and 4.14.11. It is welcomed that throughout the CRF, National Grid makes numerous acknowledgements that the proposed route has the potential to impact on a number of active quarries as well as these other parcels of mineral bearing land that have been submitted to the MWPA for potential allocation for mineral extraction. The MWPA welcomes the principles set out in National Grid's responses, which are that National Grid are working to ensure their route impacts on as little mineral safeguarded land as possible, including working directly with site promoters. The MWPA suggests that this is the	Acknowledgement of the review of the Minerals Local Plan is included in Chapter 9: Contaminated Land, Geology and Hydrogeology (document reference 6.9) and Appendix 9.2: Qualitative Minerals Resource and Infrastructure Assessment (document reference 6.9.A2) Details of the sites identified within the Call for Sites exercise are also included within Appendix 9.2: Qualitative Minerals Resource and Infrastructure Assessment (document reference 6.9.A2). National Grid continue to engage within the relevant minerals operators/promoters.		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	kind of proactive engagement that would benefit from being appropriately documented in MIIAs and WIIAs for the benefit of both the Planning Inspectorate and the MWPA					
9-2.170	It is further noted that the MWPA would welcome early engagement on all minerals and waste safeguarding documents ahead of submission to the Planning Inspectorate. Whilst it is noted that CRF Reference 4.2.100 states that at least some of the documents requested by the MWPA will be submitted with the planning application, and the MWPA will therefore have a chance to review the documents at that point, early engagement has often proved useful in these matters to avoid issues arising deeper into the planning process. This is also set out within the procedures found in Appendix Three	Appendix 9.2: Qualitative Minerals Resource and Infrastructure Assessment (document reference 6.9.A2) has been included within the submission of the Environmental Statement (ES). An earlier draft of this document was also submitted with the Preliminary Environmental Information Report for the purposes of the statutory consultation (See project website).		X		
9-2.171	It is noted that in its response to the MLP Review, National Grid highlighted that the proposed route has the potential to impact five of the Candidate Sites submitted to the MWPA for potential inclusion in the next MLP. Of these, National Grid noted that they are in consultation with the site promoters and, at this stage, do not consider that the proposed route of the project would be a showstopper to three of these sites being allocated in a future MLP. In relation to A85 and A86 however, it is stated that " <i>National Grid considers</i>	Acknowledgement of the review of the Minerals Local Plan and Call for Sites exercise is included in Environmental Statement (ES) Chapter 9: Contaminated Land, Geology and Hydrogeology (document reference 6.9) and Appendix 9.2: Qualitative Minerals Resource and Infrastructure Assessment (document reference 6.9.A2). Details of the sites identified within the Call for Sites exercise are also included within Appendix 9.2: Qualitative Minerals Resource and Infrastructure Assessment (document reference 6.9.A2).		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p><i>that it must object to the potential inclusion of Sites A85 and A86 and requests that these candidate sites are discounted from the Essex Minerals Plan Review on the basis that their inclusion will significantly constrain the ability to route the underground and overhead transmission equipment required for the Norwich to Tilbury Project."</i></p> <p>Without any prejudice to the outcome of the Essex MLP Preferred Site selection exercise, which has yet to conclude, it is noted that Site A85 and Site A86 are the only Candidate Sites put forward as part of the MLP Review which include resources of silica sand. This is a rarer and more valuable resource than the building/ concreting sand found across much of Essex due to its specialist uses. The British Geological Survey¹ states that for most applications, silica sands have to conform to very closely defined specifications, and consistency in quality is of critical importance. This makes deposits of silica sand more difficult to substitute with other silica sand deposits and consequently different grades of silica sand are usually not interchangeable in use. This in part allows silica sand to command higher prices than construction sands and they serve a wider geographical market because of it, making this resource regionally significant. The same fact sheet lists an Essex producer as being an important producer in</p>	<p>National Grid will continue to engage with the relevant mineral operators.</p> <p>In addition, design scenarios have been included within Environmental Statement (ES) Chapter 4: Project Description (document reference 6.4) which includes options in regard to if these sites become allocated, which have been developed in consultation with relevant landowners/mineral promotors.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>England, and it is from this part of the county, represented by the proposed site extensions A85 and A86, where the only deposits have been found.</p> <p>In relation to the above, the MWPA notes that representatives of National Grid met with MWPA planning officers in May 2024 where this issue was constructively addressed. The MWPA notes that National Grid resolved to reassess their conclusions regarding Site A85 and Site A86 by assessing whether there were any opportunities for realignment now that this silica sand issue has been raised. The MWPA again stresses that no decision has been to allocate any site, including Site A85 and A86, but is required to raise this issue under the auspices of its requirement to safeguard finite mineral resources</p>					
9-2.172	<p>Returning to CRF Reference 4.2.100, the MWPA notes that a Minerals Resource Assessment (MRA) is intended to be produced. Appendix Three of this response sets out what the MWPA would expect to see from an MRA, which assesses impacts on MSA designated land which is not allocated, permitted or active for mineral development. CRF References 4.14.109 and 4.14.111 touch on the issue of how pylon location will impinge on the wider future potential extraction of sand and gravel. The response to this issue however takes a largely site-based focus rather than one rooted in the MSA as a whole. Assessing site-based impacts is not</p>	<p>A qualitative Minerals Resource and Minerals Infrastructure assessment is included within Appendix 9.2: Qualitative Minerals Resource and Infrastructure Assessment (document reference 6.9.A2) which discusses the impacts on safeguarded areas that do not have planning permission as well as active minerals infrastructure. In regards to the brick clay deposits, pylons have been sited outside of these areas as far as practicable to ensure impacts on the brick clay are limited.</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>the typical role of an MRA, which is to quantify the extent of mineral bearing land, typically without planning permission, that the proposed development will sterilise and make unworkable without prior extraction. It is the MIIA (and WIIA) that address site specific issues although naturally all minerals and waste safeguarding requirements can be incorporated into a single impact document. The MRA's primary purpose however is to demonstrate that the impacts of this development on unworked mineral resources are fully understood and that the mitigation hierarchy has been fully implemented in accordance with national and local policy.</p> <p>The MWPA recognises that the normally requested sampling techniques to inform an MRA are not practical given the size of the proposed development. It is also recognised that prior extraction outside of where land is currently being worked or has been put forward for allocation is also unlikely given the linear form of the development. The MWPA do however expect the MRA to set out the extent that issues of mineral sterilisation have impacted on the final proposed route. For example, it would include more detail around such statements as found on Page 38 of the Project Background Document 2024, which declares that "<i>We have also widened the order limits in this area to allow for routeing changes to</i></p>					

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<i>respond to a possible allocation for mineral extraction that could be confirmed in 2024".</i> The MWPA further expects the future MRA to spatially qualify and quantify the extent of mineral bearing land, both visually and in hectares, that would be sterilised by the proposed development. This would be achieved by calculating the extent of land that would be objected to by National Grid for mineral extraction due to the need for stand-offs from pylons, cabling and any other infrastructure. The MRA can then set out how minimisation of this impact has been sought. This is particularly important in relation to the brick clay resource which is worked on a limited scale in Essex, including for use in specific heritage projects which rely fully on this resource being available					
9-2.173	The MWPA acknowledges the Preliminary Minerals Resource Assessment (PMRA) forming Appendix 9.2 of the Preliminary Environmental Impact Report and recognises it addresses many of the issues set out above. It is assumed that an updated MRA will be produced when the final route is proposed as the current PMRA is based on Order Limits that it is assumed will be narrowed as certainty increases. Either way, the MWPA accepts the principle that prior extraction is not practical outside of allocated or proposed sites. This satisfies the prior extraction test set out in NPPF Paragraph 216d. Should the final MRA come to a similar conclusion, this will be	A qualitative Minerals Resource and Minerals Infrastructure assessment is included within Appendix 9.2: Qualitative Minerals Resource and Infrastructure Assessment (document reference 6.9.A2) of the Environmental Statement (ES). The assessment has come to similar conclusions as the report submitted as part of the Preliminary Environmental Information Report (PEIR) at statutory consultation (see the project website).		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	accepted by the MWPA. It is however noted that the PMRA states in its conclusion that <i>"the quantity of mineral sterilised by the Project is insignificant in the context of the extensive occurrence of sand and gravel within all counties and the national need/significance of the Project"</i> . The MWPA notes that abundance is not a material consideration when assessing whether best use has been made of finite resources as required by NPPF Paragraph 215					
9-2.174	To conclude, the MWPA accepts, subject to a satisfactorily completed MRA, that prior extraction is not practical at the proposed development site. The MPWA notes that the site promoters are proactively holding conversations with the site promoters of candidate sites for future mineral extraction submitted through the MLP Review process, which is welcomed, as is the ongoing liaison between MWPA officers and representatives of the project. The MWPA does however request the submission of MIIAs and WIIAs based on the schedule of existing sites set out at Appendix Two. The MWPA would welcome further engagement in relation to the requirement for MIIA and WIIA	Noted. A qualitative Minerals Resource and Minerals Infrastructure assessment is included within Appendix 9.2: Qualitative Minerals Resource and Infrastructure Assessment (document reference 6.9.A2) of the Environmental Statement (ES) which includes an assessment of minerals infrastructure.		X		
9-2.175	The MWPA note the National Grid's response to comments relating to Bradwell Quarry on page 416 (Reference 3.14.52) of the 2022 non-statutory	National Grid notes that this comment is from a previous round of consultation undertaken on the Project. The content/request is superseded by recent		X

	<p>consultation Feedback Report, however, all other comments have not been addressed. The MWPA wishes to comment on the statements (Reference 3.14.52) within your response as set out below:</p> <p>Quarrying activities and the routing of overhead lines may not be incompatible, for example it may be possible to oversail extraction areas. Likewise, where oversail may not be possible the potential loss of resource (which may primarily be financial) must be considered against the effects arising from possible alternative routes.</p> <p>In the Bradwell Quarry area National Grid consider that an alignment which oversails the existing consented area and minimises interaction with a future expansion area (for which no planning application has been made at this time) provides an appropriate balance at this stage. A more extensive alternative route would be longer with larger changes of direction, greater effects on residential amenity (i.e. an existing property as well as new housing for which an application has been submitted) and increased effects on listed buildings, whilst still requiring some oversail of the potential quarry expansion area.</p> <p>As a point of principle, it is incorrect to say the loss would be only financial, any sterilisation of permitted mineral reduces the County's "landbank" of permitted mineral. If the Landbank is reduced, then the MWPA may need to consider allocating</p>	<p>consultation responses received from Essex County Council. National Grid's response to comments received from stakeholders, including Essex County Council, for the 2023 non-statutory consultation and 2022 non-statutory consultation can be found in Appendix B and Appendix C of this report.</p> <p>A qualitative Minerals Resource and Minerals Infrastructure assessment is included within Appendix 9.2: Qualitative Minerals Resource and Infrastructure Assessment (document reference 6.9.A2) of the Environmental Statement (ES) which includes an assessment of minerals infrastructure including Bradwell Quarry.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>further mineral reserves. The purpose of the mineral safeguarding area is to protect mineral resources from sterilisation, both permitted and potential mineral resources and is required by the NPPF para 2010, extract below:</p> <p>However, it is now noted that with respect to Bradwell Quarry site A7 (ECC ref ESS/12/20/BTE), the lines oversail the workings, which is preferable. That said, it should be noted that extraction has commenced in site A7 and will continue for 10 to 12 years. An MIIA will be required, to demonstrate that the construction works, and development of the overhead lines would not adversely impact the effective working of the quarry.</p> <p>If mineral within the MSA is to be sterilised, likely through pylon bases, then the application for the overhead lines would be required to be accompanied by a MRA to demonstrate what quantity of mineral would be sterilised and whether there was any opportunity for prior extraction. As set out in the MWPA's response June 2022, the MWPA would be willing to discuss the content of the MRA, MIIAs and WIIA's required with respect to Essex County's mineral and waste sites</p>					
9-2.176	A significant proportion of the proposals are located across land which is designated as a Mineral Safeguarding Area (MSA) and therefore the application is subject to Policy S8 of the Essex Minerals Local Plan 2014 (MLP). The MLP can be	National Grid notes the respondent's feedback.		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	viewed on the County Council's website via the following link: https://www.essex.gov.uk/minerals-waste-planning-policy/minerals-local-plan					
9-2.177	Policy S8 of the MLP requires that a non-mineral proposal located within an MSA which exceeds defined thresholds must be supported by a Minerals Resource Assessment to establish the existence, or otherwise, of a mineral resource capable of having economic importance. This will ascertain whether there is an opportunity for the prior extraction of that mineral to avoid the sterilisation of the resource, as required by the National Planning Policy Framework (Paragraph 210). The NPPF requires policies that encourage the prior extraction of mineral where it is practical and environmentally feasible	<p>National Grid notes that this comment is from a previous round of consultation undertaken on the Project. The content/request is superseded by recent consultation responses received from Essex County Council. National Grid's response to comments received from stakeholders, including Essex County Council, for the 2023 non-statutory consultation and 2022 non-statutory consultation can be found in Appendix B and Appendix C of this report.</p> <p>A qualitative Minerals Resource and Minerals Infrastructure assessment is included within Appendix 9.2: Qualitative Minerals Resource and Infrastructure Assessment (document reference 6.9.A2) of the Environmental Statement (ES).</p>		X		
9-2.178	The area of land associated with the proposed development that lies within an MSA for sand and gravel exceeds the 5ha threshold upon which local resource safeguarding provisions are applied for this mineral. Part of the application site also falls within a MSA for brick clay and exceeds the threshold of one dwelling for this mineral. These thresholds are defined in Policy S8 of the MLP. Policy S8 of the MLP therefore applies, and this states "...Proposals which would unnecessarily sterilise mineral resources or conflict with the	<p>National Grid notes that this comment is from a previous round of consultation undertaken on the Project. The content/request is superseded by recent consultation responses received from Essex County Council. National Grid's response to comments received from stakeholders, including Essex County Council, for the 2023 non-statutory consultation and 2022 non-statutory consultation can be found in Appendix B and Appendix C of this report.</p> <p>A qualitative Minerals Resource and Minerals Infrastructure assessment is included within Appendix</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p><i>effective workings of permitted minerals development or Preferred Mineral site allocation shall be opposed."</i></p> <p>Therefore, a Minerals Resource Assessment (MRA) is required as part of a planning application to establish the practicality and environmental feasibility of the prior extraction of mineral such that the resource is not sterilised where this can be avoided. If found to be practical and environmentally feasible, prior extraction is expected to take place ahead of sterilisation by non-mineral development.</p> <p>The scope and level of detail of a Minerals Resource Assessment will be influenced by the specific characteristics of the site's location, its geology, and the nature of the development being applied for. However, a number of key requirements can be identified which are likely to satisfy the MWPA that the practicality and environmental feasibility of prior extraction have been suitably assessed in the MRA. The detail to be provided should be in proportion to the nature of the proposed application. The MWPA welcomes early engagement to clarify the requirements of MRA</p>	<p>9.2: Qualitative Minerals Resource and Infrastructure Assessment (document reference 6.9.A2) of the Environmental Statement (ES). The Minerals Resource and Minerals Infrastructure assessment has been written with regard to the Minerals Safeguarding Practice Guidance and considers relevant local planning policies, including Essex County Council's Minerals Local Plan.</p>

	their segregation and the identification of available capacity across an appropriate study area	A Qualitative Minerals Resource and Minerals Infrastructure assessment is included within Environmental Statement (ES) Appendix 9.2: Qualitative Minerals Resource and Infrastructure Assessment (document reference 6.9.A2).				
9-2.191	East Anglia Green Energy Enablement Corridor and Preliminary Routeing and Siting Study Report, 2022 The MWPA is pleased to note that the East Anglia Green Energy Enablement Corridor and Preliminary Routeing and Siting Study Report, 2022 (PRSS) through its appendices recognises the role of the Essex Minerals Local Plan 2014 and the fact that the proposed development has implications for the safeguarding of mineral resources and mineral development. It is noted that the PRSS further recognises that the proposed development has implications for the safeguarding of waste development although it is noted that there is no reference to the Essex and Southend-on-Sea Waste Local Plan 2017. References should be added to this document where relevant	The Essex and Southend-on-Sea Waste Local Plan (2017) is referenced in the Planning Statement (document reference 5.6) and the Environmental Statement (ES) Chapter 2: Key Legislation and Planning Policy Context (document reference 6.2) which both form part of the Development Consent Order (DCO) application.		X		
9-2.192	With respect to the safeguarding of mineral resources, the PRSS states, with respect to the Bramford to EAC Options Selection at Paragraph 5.5.20, that 'the corridors all pass through areas either allocated for minerals extraction or waste sites. As these county designations (Supplementary Note 3) are common they are not	National Grid notes that this comment is from a previous round of consultation undertaken on the Project. The content/request is superseded by recent consultation responses received from Essex County Council. National Grid's response to comments received from stakeholders, including Essex County Council, for the 2023 non-statutory consultation and		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	considered to be a differentiator in the selection of a preferred corridor.' This is questioned to the extent that where routes would have less impact on safeguarded mineral resources or infrastructure, then this should be carried through into relevant assessments. This is particularly the case when potential impacts on existing, permitted or allocated minerals and/ or waste infrastructure are being assessed as the contribution these facilities make to the strategic issues of minerals supply and waste management form part of a County's long term strategy with regards to these issues. It is also clarified that although these county designations may be 'common', that this does not obviate the need to comply with relevant minerals and waste policy.	2022 non-statutory consultation can be found in Appendix B and Appendix C of this report. A qualitative Minerals Resource and Minerals Infrastructure assessment is included within Environmental Statement (ES) Appendix 9.2: Qualitative Minerals Resource and Infrastructure Assessment (document reference 6.9.A2).				
9-2.193	The Appendices associated with the PRSS go into more detail with regards to individual sections of the proposed route. The assessments of individual sections of the route contain both generalised and bespoke statements with regards to minerals and waste safeguarding as considered appropriate for the context of each section	This comment is noted.		X		
9-2.194	With regard to safeguarded mineral resources, it is often stated in the report something similar to 'Much of the section would fall within areas of minerals safeguarding (sand and gravel) under the Essex Minerals Local Plan (for the areas of the	National Grid notes that this comment is from a previous round of consultation undertaken on the Project. The content/request is superseded by recent consultation responses received from Essex County Council. National Grid's response to comments		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	section falling within (X) and (Y)...’ Safeguarding ensures protection of mineral resources from risk of sterilisation as the result of development.’ The PRSS is however largely silent on the implications of this within Essex, which is set out in Section ‘Mineral Matters – Safeguarding Mineral Resources’ above. As also set out above, The MWPA would welcome the opportunity to discuss the scope of an MRA	received from stakeholders, including Essex County Council, for the 2023 non-statutory consultation and 2022 non-statutory consultation can be found in Appendix B and Appendix C of this report. A qualitative Minerals Resource and Minerals Infrastructure assessment is included within Environmental Statement (ES) Appendix 9.2: Qualitative Minerals Resource and Infrastructure Assessment (document reference 6.9.A2).				
9-2.195	The PRSS further states that ‘It is not considered that siting of pylons would cause significant sterilisation of any mineral resources due to the small pylon footprint, however, careful routeing and siting, and consultation with the relevant minerals planning authorities should help to avoid significant effects.’ The rationale behind this conclusion should be set out in an MRA as part of a future planning application such that this conclusion and any consultation with the MWPA on this matter is appropriately documented	National Grid notes that this comment is from a previous round of consultation undertaken on the Project. The content/request is superseded by recent consultation responses received from Essex County Council. National Grid's response to comments received from stakeholders, including Essex County Council, for the 2023 non-statutory consultation and 2022 non-statutory consultation can be found in Appendix B and Appendix C of this report. A qualitative Minerals Resource and Minerals Infrastructure assessment is included within Environmental Statement (ES) Appendix 9.2: Qualitative Minerals Resource and Infrastructure Assessment (document reference 6.9.A2).		X		
9-2.196	The CPRSS contains a number of bespoke sections recognising where particular sections of the overall route have potential implications for one or more allocated, permitted or active minerals and waste infrastructure. At this stage, the MWPA does	National Grid notes that this comment is from a previous round of consultation undertaken on the Project. The content/request is superseded by recent consultation responses received from Essex County Council. National Grid's response to comments		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	not consider that it is proportionate to comment on these individually until the promoters have carried out initial MIAs and WIAs to inform an assessment of potential impacts. It is noted that the PRSS have scoped in operations at Martells, Wivenhoe, Fingringhoe and Sandon. The MWPA notes that these facilities are all more than 400m away from the proposed route and therefore outside of Mineral Consultation Areas	received from stakeholders, including Essex County Council, for the 2023 non-statutory consultation and 2022 non-statutory consultation can be found in Appendix B and Appendix C of this report. A qualitative Minerals Resource and Minerals Infrastructure assessment is included within Environmental Statement (ES) Appendix 9.2: Qualitative Minerals Resource and Infrastructure Assessment (document reference 6.9.A2).				
9-2.197	Having reviewed the Project Background, Preliminary Environmental Information Report (PEIR), 2024 Design Development Report and other associated documents, following the statutory consultation, the ECCs GI Team raise the following recommendations: The previous recommendations made by the ECC GI Team to the second nonstatutory consultation dated 25 July 2023 remain applicable in terms of: • A production of a o Detailed Green Infrastructure/Landscape Strategy and plans for the scheme, especially for the proposed planting ecology and landscape screening around the EACN substation and CSE Compound sites and reinstatement of vegetation removed whether for overhead or underground and haul road access are required. As well as the inclusion of the environmental mitigation ('Environmental Areas'), areas identified for onsite BNG (included within the 'Environmental Areas').	An Environmental Statement (ES) (document reference Volume 6: Environmental Statement) has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 ('the Infrastructure EIA Regulations'). The ES identifies and assesses the likely significant effects on the environment resulting from the construction of the Project and recommends appropriate mitigation to reduce effects. Environmental mitigation measures have been defined within each environmental topic chapter and set out in relevant management documents submitted with the Development Consent Order (DCO) application, including the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4). Mitigation around substations, substation extensions and cable Sealing Ends (CSE) compounds is detailed		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>o Construction Environment Management Plan. It is noted that the PEIR Appendix 4.1: Draft Outline Code of Construction Practice in Volume III has been produced which will help the control and management of the environmental effects set out in the PEIR and is welcomed.</p> <p>o Landscape Ecological Management Plan (LEMP). It is welcomed that the PEIR Volume 1 (page 60, 69 of 593, Para 4.3.2) states that the environmental mitigation that relates to the permanent assets will be outlined within the LEMP will be submitted as part of the ES.</p> <p>o Biodiversity Gain Plan. We would recommend that the proposal submits a BNG Site Wide Strategy for the whole project covering all sections (zones) and a zone-wide Biodiversity Gain Plan for each section to be approved. See below for details on proposed condition 1. Again, it is recommended to take a similar approach to the Habitat Management and Monitoring Plans</p>	<p>in the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4). National Grid has committed to a 3:1 replacement for individual trees and individual trees within small groups. The tree planting strategy will prioritise replanting for individual trees and small groups of individual trees within the Order Limits, although offsite provision may however be required. Any offsite tree planting will be secured via a legal agreement. Further detail is provided in the Outline LEMP (document reference 7.4).</p> <p>Additional planting may be considered within the Order Limits at detailed design stage, in locations such as around Tilbury North Substation and the permanent access roads to the East Anglia Connection Node (EACN) and Tilbury North CSE compounds.</p> <p>Sites with woodland, tree or hedgerow reinstatement within the Order Limits will be monitored/managed for a five-year period following the completion of the reinstatement works.</p> <p>The Biodiversity Net Gain (BNG) Report (document reference 7.1) includes habitat creation and enhancement within the Environmental Areas and applies a 30 year management and monitoring period to these habitats. Given that BNG is not yet a mandatory requirement for Development Consent Orders (DCO) there are currently no guidelines for how to apply BNG to Nationally Significant Infrastructure Projects (NSIP). As there is no guidance for BNG on NSIPs, guidance devised for Town and County</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Planning Applications (TCPA) has been applied and modified as relevant, as agreed with Natural England. This guidance includes Statutory Biodiversity Metric: User Guide (Department for Environment, Food and Rural Affairs (Defra), 2024) and BNG good practice principles. Given that biodiversity is not bound by local authority boundaries, we have presented all data based on a Project wide metric.				
9-2.198	<p>Construction Traffic Management:</p> <p>Embedded mitigation measures should be included to support low emission travel methods to encourage a modal shift away from the use of the private vehicle for those traveling to and from site. The applicant should highlight the importance of target setting around increasing the number of staff using sustainable travel options and a general reduction of travel movements over the duration of the project.</p> <p>Plans should identify measures to improve efficiency of likely transport journeys to site associated with material transportation. Significant targets could be introduced to limit certain journeys to within an appropriate distance from the site, encouraging local supply chain interaction and reducing road-based emissions from vehicles.</p>	<p>National Grid notes the respondents feedback relating to mitigation and sustainable methods of transport.</p> <p>As part of the Development Consent Order (DCO) application we have prepared an Outline Construction Worker Travel Plan (CWTP) which is appended to the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) The CWTP outlines embedded mitigation measures to support low emissions travel while shifting away from single occupancy private travel. As well as reducing the overall travel movements over the duration of the project.</p> <p>Regarding identifying transportation of materials and the supply chain, the Outline CTMP does cover the overall strategy but specific targets will be agreed within the full CTMP.</p>		X		
9-2.199	Site Waste Management:	Appendix B: Outline Site Waste Management Plan (SWMP) of the Outline Code of Construction Practice		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>This applicant should specifically link into the storage and re-use of 'waste' materials and how they are defining waste – this could include ensuring that reuse of materials is prioritised, or making a publicly available register of 'waste materials' that may be useful to other development contractors within the local area. This could be beneficial in ensuring that materials are re-used locally, which has other environmental benefits. Materials currently devised for demolition on the existing sites should be explored for feasibility of reuse, and should integrate a 'deconstruct over demolition' approach to aim to keep materials in a state that keeps them at their highest possible value.</p> <p>This is in keeping with well-established Circular Economy principles; deconstructing an asset and retain its constituent elements, systems and components as much as possible. Reusing each system, component or material again through checks, cleaning and repair, and with minimal reprocessing or remanufacture.</p> <p>The inclusion of measurable targets for on-site waste and diversion of waste from disposal would be advisable.</p> <p>Other embedded measures taken should seek to reduce carbon losses from existing carbon stores (soil and vegetation) and improve carbon sequestration, for example through planting of new areas of woodland and vegetation. PEIR section</p>	<p>(CoCP) (document reference 7.2) sets out how the Project seeks to reduce the consumption of primary and raw materials and to encourage the use of secondary or recycled sources. It also sets out the waste hierarchy by reducing waste produced in the first place before considering alternatives such as reuse, recycling and repurposing.</p> <p>National Grid has committed to seek to reduce waste to landfill during construction and contribute to the target to achieve zero-waste to landfill across construction projects; as well as commit to keeping records of how the Project has followed the waste hierarchy to reduce waste and avoid waste being sent to landfill.</p> <p>The contractor will be responsible for implementing the measures outlined within the Appendix B: Outline Site Waste Management Plan of the Outline CoCP (document reference 7.2)).</p> <p>Appendix C: Outline Soil Resource Plan (SRP) of the Outline CoCP (document reference 7.2) sets out key soil mitigation measures required to protect soil resources. Implementation of these measures during pre-construction, construction, post-construction and operation (including maintenance) will allow land temporarily disturbed to be restored to its former use / condition or a use / condition as discussed with the landowner, as stated in environmental commitment AS02 outlined in the Outline COCP (document reference 7.2). There will be a requirement for an</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	6.8.1 has identified the risk of soil removal and the effects on soil carbon storage. Design progression should identify that soil is only removed in areas strictly necessary and should provide mitigation methods to ensure no further disturbance occurs	<p>aftercare period where soils are being reinstated to return soils to their previous condition, or the condition required for their end-use. Details of site-specific soil measures and soil baseline information including soil profiles in combination with detailed construction approaches will be set out in the SRP.</p> <p>Implementation of best practice soil handling, as detailed in the Outline SRP, will minimise the effects on soil carbon storage during construction (e.g., correct topsoil removal, storage and reinstatement will maintain the topsoil structure and organic matter content limiting carbon losses).</p> <p>As detailed in the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4), National Grid has committed to a 3:1 replacement for individual trees and individual trees within small groups. It should be noted that all other tree habitat including scrub and woodland (area habitats) are assessed and mitigated through the BNG metric and captured within the Biodiversity Net Gain Report (document reference 7.1). The Project will prioritise the replanting for individual trees and small groups of individual trees within the Order Limits, offsite provision may however be required. The tree replanting will be in accordance with the following site selection principles:</p> <ul style="list-style-type: none"> • Within the Order Limits (on-site landscape mitigation) 				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<ul style="list-style-type: none"> Where possible, trees will be replanted in the same, or in close proximity to, the location from which they were removed If constraints preclude tree planting in the same or in close proximity to where they were removed, tree planting will be undertaken as close as possible to the original location Outside the Order Limits (off-site landscape compensation). If it is not possible to replant the trees within the Order Limits, then offsite provision will be provided. <p>Details of the onsite tree planting will be provided in accordance with the final LEMP secured through a requirement in the draft Development Consent Order (DCO) (document reference 3.1).</p>				
9-2.200	<p>Materiality:</p> <p>Material efficiencies should focus on: local procurement, low carbon materials (prioritising reused materials where possible), lean design and waste minimisation during fabrication.</p> <p>The applicant should identify any processes in place to source materials from local and sustainable sources and to use recycled materials where these do not compromise the required design standards and operational life of the project. It is likely that key typical materials will be used</p>	<p>National Grid has processes in place for quantifying its CO2e emissions on its projects. These are set out in Appendix 4.1: Greenhouse Gas Assessment (document reference 6.4.A1) and are proportionate to the stage of the Project and the data available at that time. The three key stages are:</p> <ul style="list-style-type: none"> Cost Book – this is used at the optioneering stage to compare the CO2e associated with different options. This includes a high-level assessment of the capital (construction) and draws on generic assumptions around embodied CO2 within raw materials. It also 		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	such as concrete, steel, and aluminium are to be used. The materials sourced should be the lowest feasible embodied carbon, whilst still meeting design requirements, as possible. Current opportunities within the construction industry could allow significant reductions in CO2e through the use of novel, but well tested materials such as low carbon concretes and steel alternatives (including steel reuse). These avenues must be explored when procuring the project materials with options presented in future documentation.	<p>includes some operational CO2e, including SF6 alternatives CO2e calculations and CO2e of operational line loss data. The CO2e that is identified within the Cost Book can be factored into decisions about which option to take forward.</p> <ul style="list-style-type: none"> E-Hub database – this is used when a preferred option has been identified and allows a more detailed assessment of the baseline CO2e. This is focused on the capital (construction) carbon but includes more specific information regarding the materials than the Cost Book. This also includes a Red, Amber, Green (RAG) status based on historical construction carbon data. Carbon Interface Tool (CIT) – this is provided to the Main Works Contractor(s) for the Project as they are required to provide a more detailed breakdown of materials, assets, equipment and energy that they propose to use in construction of the Project. The CIT also considers the origin of materials, the transport distances, opportunities for reuse of materials and low carbon alternatives. <p>National Grid has also produced a Greenhouse Gas Reduction Strategy (Appendix H to the Outline Code of Construction Practice – document reference 7.2). This document provides National Grid with a route map, setting out how the GHG emissions associated with</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		the Project would be managed and reduced. A decarbonisation tracker would be developed as part of the GHG Reduction Strategy, which would contain a log of key carbon reduction opportunities identified for the Project. Reduction opportunities are identified in terms of the following four categories: Strategy and governance; Innovative design; Lower carbon products; Lean construction technique.				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.201	Preliminary workforce numbers are indicated at paragraph 15.8.4 as 800 Full Time Equivalent employees; however, no evidence is provided to support these figures. More details will be required at the DCO submission including the origin of these figures and the profile across the life of the project, including any assumptions around origins of workforce and how that informs the assessment of travel to site and the Travel Plan. These assumptions should feed into management and monitoring within the relevant management plans, including around shift patterns	<p>The Preliminary Environmental Information Report is a preliminary document published in 2024 and it is now superseded by the Environmental Statement (ES).</p> <p>A detailed assessment on direct, indirect and induced employment is captured under the ES, Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) which has been submitted as part of the Development Consent Order (DCO) application).</p> <p>An Outline Construction Worker Travel Plan (CWTP), appended to the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), has been submitted as part of the DCO application and details the profiles of construction workers across the construction programme for the Project. Details of the monitoring and management of shift patterns are detailed with the Outline CWTP appended to the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).</p>		X		
9-2.202	Paragraph 16.5.10 sets out the thresholds used for determining further assessment, no evidence is submitted that associates these impacts with calculated vehicle movements associated with project activities, which will be required as part of the DCO	The thresholds for further assessment are established according to the guidelines Environmental Assessment of Traffic and Movement (IEMA 2023). The calculated vehicle movements associated with the Project construction activities are in Appendix 16.4: Traffic and Transport Construction Effects (document reference 6.16.A4). This table shows the percentage increase in traffic, the sensitivity of the road, and the defined threshold for further assessment based on Rule 1 (Include road links where total traffic or Heavy Goods		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Vehicle (HGV) flows would increase by more than 30%) or Rule 2 (Include road links through sensitive areas where total traffic would increase by more than 10% or where there are significant changes in the composition of traffic e.g. large increase in the number of HGVs). Where the thresholds have been met or exceeded the road links on the constriction route are included in the assessment within Chapter 16: Traffic and Transport (document reference 6.16) within the Environmental Statement (ES).</p> <p>The assessment includes any potential severance to drivers and pedestrians, cycling and horse-riders along the Primary Access Routes and the Public Rights of Way (PRoW).</p>				
9-2.203	<p>The assessment as set out at 16.5.14 is based on changes in daily traffic flows; consideration is needed towards assessing the hour of greatest change, which is considered to be a requirement based on the following text, which is taken from paragraph 1.22 of the IEMA guidance 'Environmental Assessment of Road Traffic and Movement': "Traffic and movement assessments for EIA and non-statutory environmental assessments, present the impact of traffic and movement on people and the environment – which are initially undertaken with reference to daily traffic flows prior to assessing the time period with the highest potential impact (i.e. degree of change from baseline conditions), which</p>	<p>Chapter 16: Traffic and Transport (document reference 6.16) within the Environmental Statement (ES) includes a 12 hour traffic assessment of daily movements on road links on the Local Road Network (LRN), which provides a comprehensive view of traffic impacts across the day.</p> <p>In addition, the assessment of the junctions along the LRN and the connection to the Strategic Road Network (SRN) have been assessed in the Transport Assessment (TA) (document reference 7.11) for peak hours and a profile of change over the duration of works provided. The assessment has been undertaken for the AM and PM peak hours following standard industry practice as these periods represent the times when the</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	may not be the same as the time period with the highest baseline traffic flows. The large proportion of traffic impact is likely to be in a short specific time frame (as a result of shift patterns), and only assessing the 12-hour impact dilutes this impact against a greater baseline of traffic	highway network is most sensitive to potential adverse impacts due to capacity constraints and travel patterns				
9-2.204	It is noted that the traffic at the crossing points is not included in the PEIR as per 16.6.7. Assuming that this is only at the crossing point, and not where it has travelled to access the site; this is considered reasonable; however, consideration should be given to the impact on delay on the highway network as a result of the use of these crossing points as per EN-1	<p>According to the guidelines Environmental Assessment of Traffic and Movement (IEMA 2023), the scale and extent of the environmental assessment includes those roads where a significant increase in traffic levels is expected.</p> <p>Chapter 16: Traffic and Transport (document reference 6.16) within the Environmental Statement (ES) includes the assessment of any potential severance to drivers and walking, cycling and horse-riders along the Primary Access Routes that the construction vehicles would use to access the construction site access points.</p> <p>As identified in the Outline Construction Traffic Management Plan (document reference 7.3), no Heavy Goods Vehicle (HGV) construction traffic is proposed to use these crossover points to access the haul roads from the public highway under typical operation, and vice versa. Therefore, an increase above baseline traffic at the crossover points is not expected as the crossover points will only allow the construction vehicles to circulate along the proposed haul roads. Temporary traffic management measures would be in place to avoid</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>delays at crossover points, with priority given to the flow of traffic on the public highway.</p> <p>No significant impact is expected on these roads and has therefore not been assessed in the ES Chapter 16: Traffic and Transport (document reference 6.16) or the Transport Assessment (document reference 7.11) submitted as part of the Development Consent Order (DCO) application.</p>				
9-2.205	<p>The conclusions at paragraph 16.7.12 that no further mitigation beyond the embedded mitigation is needed is not agreed; however, it is recognised that this is a work in progress. Limited evidence is provided on the change in traffic flows and how the traffic flows associated with the project have been generated for each access, nor why identified impacts at Appendix 16.3 do not require mitigation. There are limited commitments to managing traffic which creates risk in the assessment methodology, which include the following:</p> <ul style="list-style-type: none"> • No evidence supporting the number of workers or the modal split of workers. Nor any controls within the CTMP. • No evidence indicating the origin of the workforce. Nor any controls within the CTMP. • No evidence indicating the shift patterns of the workforce. Nor any controls within the CTMP. • No evidence supporting the number or timing of HGV movements. Nor any controls within the CTMP. 	<p>Chapter 16: Traffic and Transport (document reference 6.16) within the Environmental Statement (ES) includes the assessment of any potential severance to drivers and walking, cycling and horse-riders along the Primary Access Routes and the Public Rights of Way (PRoW). These assessments ensure that all impacts are considered and appropriate mitigation measures have been identified and implemented on a case-by-case basis.</p> <p>An Outline Construction Worker Travel Plan (CWTP), appended to the Outline Construction Traffic Management Plan (document reference 7.3), has been developed which details the monitoring and controls for staff movements associated with the Project.</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<ul style="list-style-type: none"> No assessment of the hour of greatest change is provided. 					
9-2.206	Appendix 16.3 indicates a number of locations where an impact would occur as a result of daily increases in HGV traffic at Sensitive Locations; and no rationale is provided as to why this would not result in a requirement for mitigation. It is recognised that in some cases this may be down to the low baseline of movements or the temporal nature of the project, but this is not explained	<p>Chapter 16: Traffic and Transport (document reference 6.16) within the Environmental Statement (ES) includes the assessment of any potential severance to drivers and walking, cycling and horse-riders along the Primary Access Routes and the Public Rights of Way (PRoW). These assessments take into account the sensitivity of the road link from the perspective of the land uses, facilities for walking, cycling and horse-riding, capacity concerns and/or road safety. The magnitude of impact considers the baseline levels of traffic and the temporary nature of the construction activities.</p> <p>Considering the sensitivity of the road link and the magnitude of impact, appropriate mitigation measures are put in place as needed.</p>		X		
9-2.207	As part of the DCO submission, it would be beneficial if the traffic flow Tables referred to in the Appendices could be provided in Excel format, along with the raw traffic survey data used, to allow for easier review.	National Grid notes the respondent's feedback. There is a large amount of data. National Grid will liaise with Essex County Council following DCO submission to discuss the terms/arrangements for sharing the traffic flow tables and raw traffic survey data in Excel format.		X		
9-2.208	Further assessment is indicated at paragraph 16.8.11 as part of the ES, and this is welcomed, as it is currently difficult to ascertain how conclusions have been reached	Chapter 16: Traffic and Transport (document reference 6.16) within the Environmental Statement (ES) includes the assessment of any potential severance to drivers and walking, cycling and horse-riders along the Primary Access Routes and the Public Rights of Way (PRoW)		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		following the guideline Environmental Assessment of Traffic and Movement (IEMA 2023) and the methodology agreed at scoping stage.				
9-2.209	The approach of reporting the highest impacts at each access as per paragraph 16.9.3 is considered to be appropriate for the ES, but for understanding the magnitude of impact it is beneficial to understand the temporal nature of the traffic on each lin.	<p>The specific durations of peak traffic along each road link that comprises the Primary Access Routes is detailed in Appendix 16.4: Traffic and Transport Construction Effects (document reference 6.16.A4) of the Environmental Statement (ES).</p> <p>The total daily construction traffic flow (7:00 to 19:00) generated by the Project at each road link forming the Primary Access Route for the peak week has been graphically presented identifying the split between Heavy Goods Vehicles (HGVs) and total traffic in Section 16.5 of Appendix 16.4: Traffic and Transport Construction Effects.</p> <p>In general the worst-case peak activity is short-term and temporary in nature. Outside of this period that has been assessed within the ES, construction flows are generally lower but may occur over medium term.</p>		X		
9-2.210	It would be beneficial if all traffic data could be submitted in excel format, including any supporting traffic survey data, for ease of review. Without the data, the Council cannot confirm any of the conclusions drawn by the Applicant on transport are acceptable. This is not necessary for the PEIR but will be necessary for the DCO submission	National Grid notes the respondent's feedback. There is a large amount of data. National Grid will liaise with Essex County Council following DCO submission to discuss the terms/arrangements for sharing the traffic flow tables and raw traffic survey data in Excel format.		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.211	Further discussions on the potential mitigation locations on the Construction Access Plans is welcomed. The Highway Authority will need to be confident that mitigation is deliverable either within the site or the public highway	National Grid notes the respondent's feedback.		X		
9-2.212	Any permissions sought under the DCO will need to ensure that any street furniture that is required to be temporarily removed (such as for D1 to D6) is reinstated to the satisfaction of the highway authority. The applicant will need to ensure that necessary powers are sought under the DCO to implement any temporary restrictions on the highway (such as those shown at C12)	National Grid notes the respondent's feedback. The Development Consent Order (DCO) Schedule 13 Traffic Regulation Order and Plans includes details for locations where temporary parking restrictions would be required on the highway.		X		
9-2.213	It is recommended that any proposals that require alterations to the highway network (such as C14 and C15) are discussed with the highway authority at an early stage	National Grid notes the respondent's feedback, these have been discussed and agreed. Locations where road widening or passing places within the existing highway boundary or within private lands outside of highway boundary are proposed have been discussed and submitted to individual local highway authorities for acceptance within Stage 1 Road Safety Audit process including vehicle swept paths.		X		
9-2.214	Vehicle swept paths should be provided for locations where highway mitigation is being proposed	National Grid notes the respondent's feedback, these have been provided. Locations where road widening or passing places within the existing highway boundary or within private lands outside of highway boundary are proposed have been discussed and submitted to		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		individual local highway authorities for acceptance within Stage 1 Road Safety Audit process including vehicle swept paths.				
9-2.215	For those locations where temporary signage is to be used either as a result of limited forward visibility or highway width, consideration needs to be given as to whether the proposed signage would be effective in ensuring compliance, or whether additional mitigation is needed	<p>The principles have been discussed with individual local highway authorities.</p> <p>Final details of proposed signage and specific locations are to be firmed up for agreement at detailed design/pre-construction stage, but would be provided in accordance with the Traffic Signs Manual Chapter 8, Traffic Safety Measures and Signs for Road Works and Temporary Situations (Department for Transport, 2009).</p>		X		
9-2.216	For Section 6 Sheet 2, the Applicant should be aware that there is a new roundabout broadly at the location of E1 that has been permitted as part of planning application 18/00549, which would form their Primary Access Route	National Grid notes the respondent's feedback, thank you for advising.		X		
9-2.217	Consideration should be given to why there is not any routeing from the south to access points north of Chelmsford and the use of the Chelmsford Radial Distributor Road; this might reduce total vehicle miles, with associated reductions in emissions in transport	The proposed Primary Access Routes have been chosen based on roads which are operational and have been adopted by the Local Highway's Authority. The distributor road is not complete at the time of submitting the Development Consent Order (DCO). In addition, the land around the distributor road is proposed to be developed into housing, if National Grid were to speculatively propose this as the Primary Access Route we would impact more receptors.		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.218	Confirmation is sought on what elements of the works the CTMP will apply to, particularly what scale of pre commencement works might occur without the controls embedded within the CTMP being applicable. It is considered sensible for the CTMP to be applicable to all works	<p>The Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) clarifies that the document applies to the construction phase of the Project, as defined in the draft Development Consent Order (DCO), and not to pre-commencement works.</p> <p>This approach reflects standard practice for DCO applications. The definition of “commencement” in the draft DCO typically excludes low-impact preparatory activities such as ecological surveys, archaeological investigations, vegetation clearance, and fencing. These works are generally of short duration and limited in scope and are not expected to generate traffic movements or impacts of a scale that would require the full suite of controls set out in the Outline CTMP (document reference 7.3). Applying the full Outline CTMP (document reference 7.3) to such activities would risk introducing disproportionate requirements and could hinder timely mobilisation.</p> <p>However, National Grid acknowledges the concerns raised by Essex County Council and is committed to ensuring appropriate oversight of any pre-commencement works that may have a material impact on the local highway network. Where such activities are identified, National Grid will work with the Highway Authority to agree a proportionate Pre-Commencement Traffic Management Plan (PCTMP) to ensure appropriate controls are in place.</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.219	As noted, it would be beneficial for an indicative construction schedule to be provided as part of the DCO submission; this will give an indication of the temporal nature of some of the project impacts, and so will help inform discussions	<p>National Grid acknowledges the request for an indicative construction schedule to support understanding of the temporal nature of project impacts.</p> <p>An indicative high-level construction programme is presented in Environmental Statement (ES) Chapter 4: Project Description (document reference 6.4).</p> <p>Should consent be granted in 2027, it is anticipated that construction of the Project would commence in 2027, likely starting with pre-commencement works including, site clearance activities, the installation of temporary construction compounds and access roads. It is expected the main construction works would continue through to 2031 (four years). Prior to the pre-commencement works beginning and before consent, a number of pre-construction environmental surveys would be undertaken in 2026.</p> <p>The programme has supported assessments presented in the Environmental Statement (Volume 6 of the Development Consent Order application). The schedule will be refined further post-consent as detailed design progresses and contractor inputs are confirmed.</p>		X		
9-2.220	The programme of working hours set out in Section 2.3 is far beyond what would ordinarily be accepted as reasonable working hours. Working hours should exclude working after 1pm on Saturday and no working on Sunday and Bank Holidays, to allow	<p>As detailed in the Outline Code of Construction Practice (document reference 7.2), it is assumed that the core working hours for construction would be:</p> <p>Monday to Friday: 07:00 –19:00</p> <p>Saturdays, Sundays, Bank Holidays and other public holidays: 07:00 –17:00.</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	much needed respite for residents at these more sensitive times	<p>No percussive piling works would take place outside of the hours of 07:00 – 19:00 Monday to Friday and 07:00 to 17:00 on Saturdays.</p> <p>Unless otherwise agreed with the Local Highway Authority, no Heavy Goods vehicle (HGV) deliveries would be made to site outside of the hours of 07:00 to 19:00 Monday to Friday and 07:00 to 17:00 on Saturdays.</p> <p>There is no intention for night working on the Project as standard. However, there would be occasions where night working is required, as set out in the operations that may take place outside of the core working hours above. There is also the potential for the trenchless crossing works to be undertaken at night. Parts of the trenchless crossing operations require continuous working to achieve completion of the crossing. Some road works may also need to be undertaken at night to reduce effects on local traffic.</p> <p>The proposed core working hours are based on standard hours applied across major infrastructure projects, allowing for efficient delivery while maintaining safeguards to manage noise and other impacts.</p>				
9-2.221	The Councils welcome the commitment to preconstruction surveys at Section 5.2. The approval process for the surveys needs to be agreed, through the CTMP or otherwise. Consideration is needed around a process that allows for the highway authorities to recover costs for any extraneous	National Grid would not agree to any payment up front for potential damage, if there is damage that National Grid would be liable to rectify it may be that National Grid choose to rectify this themselves in the first instance but only upon agreement that National Grid have been the sole cause of any damage. Any such		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	damage to the highway network as a result of the development	agreement will need to be managed on a case by case basis and as a result of the joint agreement of the parties involved, including National Grid.				
9-2.222	An assessment of AIL and HGV routes to/from the site should be undertaken, inclusive of a review of structures to ensure that they can accommodate the required vehicles, to understand any mitigation that may be required, and how it links to the Construction Access Plans	Noted, an assessment of routes has been undertaken as well as an initial assessment of the structures by the Local Highways Authorities. Further assessments will be required prior to agreeing any use of an asset to carry Abnormal Indivisible Loads (AILs) or Heavy Goods Vehicles (HGVs).		X		
9-2.223	Whilst decommissioning sits outside of the scope of the CTMP, it is considered reasonable that there is a requirement for a decommissioning plan to be submitted for approval of the authorities prior to any decommissioning activity, and reflecting up to date standards and practices	<p>National Grid notes that decommissioning sits outside the scope of the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), which is focused on the delivery of the authorised development under the Development Consent Order (DCO).</p> <p>We acknowledge Essex County Council's view that a decommissioning plan should be secured and subject to approval by the relevant authorities prior to any future decommissioning activity. National Grid considers this to be a reasonable approach and agrees that such a plan should reflect current best practice and relevant guidance at that time.</p> <p>While decommissioning is not proposed as part of this application, National Grid is content for a requirement to be included in the DCO that would require the submission and approval of a Decommissioning Traffic Management Plan (or equivalent) ahead of any</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		decommissioning works. This will ensure that future impacts are appropriately assessed and mitigated in line with applicable standards and stakeholder expectations.				
9-2.224	The removal of vegetation at the distances stated and the installation of pylons is likely to have a major negative impact on enjoyment of Public Rights of Way. Where possible the reinstatement of vegetation is preferable to 'soften' the landscape, which is stated as such within this chapter. Reinstatement is detailed within the PROW Management Plan. Given the negative visual impact aspect the Council would expect to receive improvements to the PROW network, rather than accepting the minimum pre-construction condition. This may not be applicable to all sections of PROW affected but, in those circumstances, where a change in surface condition, drainage improvement or the permanent removal of an unlawful structure could resolve a long-term issue, it is reasonable for that to be provided as per EN-5	<p>National Grid notes the Council's feedback but also notes that hedgerows, shrubs, trees or dense vegetation would be retained wherever possible and that hedges of under 1.5 m have the potential to provide effective screening (vegetation lower than around 3m would not typically be expected to be removed) and may not have to be removed even if the Public Right of Way (PRoW) is diverted for safety reasons.</p> <p>A landscape and visual impact assessment (LVIA) has been undertaken as part of the EIA and reported in ES Chapter 13: Landscape and Visual (application document 6.13). The LVIA sets out the potential landscape and visual effects, which includes consideration of visual amenity of visual receptor areas (including, for example, people using public rights of way). An illustrative landscape plan has been produced for the land around National Grid's permanent assets, defined as 'Environmental Areas', with the exception of Bramford Substation where there is not sufficient space due to other planned developments. These areas will provide landscape and visual mitigation to help filter, and screen views from the surrounding area to reduce significant effects on visual receptors including users of the PRoW network, as well as offering ecological value. This is contained within Appendix D: Outline Landscape</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Proposals of the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4).				
9-2.225	Paragraph 16.5.2 sets out the Study Area, clarity is sought as to whether the junctions connecting with the Strategic Road Network are included in the Study Area. It is considered that the junctions should be included, unless evidenced otherwise	The modelling of the junctions connecting the Primary Access Routes with the Strategic Road Network that have been identified with potential capacity issues due to the Project construction flows have been included in the Transport Assessment (document reference 7.11) submitted as part of the Development Consent Order (DCO) application.		X		
9-2.226	As the assessment is based on the impacts on the Primary Access Routes, there is required to be commitments within the DCO, via the CTMP, which it is noted there currently are, that these are the routes utilised by construction traffic. However, there are no commitments on the number of vehicles using these routes, which brings risks to any conclusions on the extent of impacts. Caps on HGV numbers should be presented in order to give confidence in the assessed results	National Grid notes the respondent's feedback. Details on the monitoring, management and enforcements surrounding Heavy Goods Vehicle (HGV) numbers are detailed within the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) submitted as part of the Development Consent Order (DCO) application.		X		
9-2.227	The assessment as set out at 16.5.14 identifies 12-hour shift patterns; further clarity is sought on how these shift patterns will be monitored. It is recommended that through the CTMP a monitor and manage process is embedded to check the shift patterns are commensurate with those assessed, and, if not, to either assess to see if the impacts are material or to identify additional management	National Grid notes the respondent's feedback. An Outline Construction Worker Travel Plan (CWTP), appended to the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), has been developed and submitted as part of the Development Consent Order (DCO) application and		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	measures that can be put in place to address these impacts	provides a monitor and manage approach to staff travel to and from site.				
9-2.228	As per paragraph 16.5.16, it would be beneficial to all parties for the ES to give a clear understanding of the temporal nature of the impacts at all relevant locations; potentially setting out a profile for the project, as this will make clear what impacts are short term	<p>The specific durations of peak traffic along each road link that comprises the Primary Access Routes is detailed in Appendix 16.4: Traffic and Transport Construction Effects (document reference 6.16.A4) of the Environmental Statement (ES). Note that the duration of peak construction activity varies between each road link PAR forming the Primary Access Route. During this peak construction activity, the total daily construction traffic flow over a 12-hour period (7:00 to 19:00) generated by the Project at each road link for the peak week has been graphically presented identifying the split between Heavy Goods Vehicles (HGVs) and total traffic in Section 16.5 of Appendix 16.4: Traffic and Transport Construction Effects (document reference 6.16.A4).</p> <p>In general, the worst-case peak activity is short-term and temporary in nature. Outside of the peak activity, construction flows are generally lower but may occur over a longer period.</p>		X		
9-2.229	The growth factor referred to at paragraph 16.6.9 should be set out, including how it has been calculated. Further details should be provided on the calculation method for obtaining 12-hour flows as per paragraph 16.6.10, as there would be some concern over the application of generic figures from the SRN	<p>Details of the calculation of the TEMPro factors have been included in the Transport Assessment (document reference 7.11) submitted as part of the Development Consent Order (DCO) application.</p> <p>Chapter 16: Traffic and Transport (document reference 6.16) within the Environmental Statement (ES) specifies</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	on rural roads, albeit this may have limited impact on any conclusions	that the 12-hour traffic factor conversion for the roads along the Primary Access Routes that is applied to the Annual Average Daily Traffic (AADT) flows was derived from a standard daily traffic profile from the Department for Transport's online road traffic statistics Table TRA0307.				
9-2.230	<p>A number of collision clusters are identified. However, based on Appendix 16.3 the current impacts suggest the following:</p> <ul style="list-style-type: none"> • Primary Access Route 40: Proportional change in HGVs and total vehicles less than 10%. This would indicate no impact. • Primary Access Route 50: Proportional change in HGVs greater than 30%. Proportional change in total vehicles less than 10%. This would indicate a material impact. • Primary Access Route Proportional change in total vehicles less than 10%. This would indicate a material impact. • Primary Access Route 63: Proportional change in HGVs and total vehicles less than 10%. This would indicate no impact. <p>Further details are needed on the relative impacts above, the context of the collisions and the potential need for mitigation. Further discussion is needed on why no reference is made to the clusters shown at the following locations:</p>	<p>National Grid notes the respondent's feedback.</p> <p>The analysis of the collisions have been updated with the latest Department for Transport, road traffic statistics - road collisions (STATS19 database) for the three year period 2021-2023, Details of the collisions are included in Section 16.5 of the Appendix 16.2: Traffic and Transport Baseline Conditions (document reference 6.16.A2) within the Environmental Statement (ES). Chapter 16: Traffic and Transport (document reference 6.16) within the ES includes the following assessment related to road collisions:</p> <p>Identification of collision clusters</p> <p>Analysis of the collisions for vulnerable users (walkers, cyclists and horse-riders)</p> <p>Collision data analysis along the full length of the road links to identify patterns in collision locations in order to establish any areas of safety concerns, considering light conditions, weather conditions and road surface conditions. No specific collision patterns were identified based on conditions.</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<ul style="list-style-type: none"> • On Figure 16.3 Page 17 of 25 on PAR 41 on the B1018 at Cressing Temple Barns. • On Figure 16.3 Page 22 and 23 on PAR 58 Based on Appendix 16.3 the current impacts suggest the following: <ul style="list-style-type: none"> • Primary Access Route 41: Proportional change in HGVs and total vehicles less than 30%. This would indicate no impact. • Primary Access Route 58: Proportional change in HGVs greater than 30%. Proportional change in total vehicles less than 10%. This would indicate a material impact. <p>Further details are needed on the relative impacts above, the context of the collisions and the potential need for mitigation.</p>	<p>Calculation of the collision rate per billion vehicle kilometres on the road links forming the Primary Access Routes to compare against the national statistic, to identify any hotspot. Most of the road links forming part of the Primary Access Routes have a collision rate below or similar to the national accident rate per billion vehicle kilometres.</p> <p>Mitigation measures related to road safety are provided within the Outline Construction Traffic Management Plan (document reference 7.3).</p> <p>Safety of road users along Primary Access Routes have been considered for walkers, cyclists and horse riders in the mitigation proposals presented in Chapter 16: Traffic and Transport (document reference 6.16) within the ES.</p>				
9-2.231	It would be beneficial for further details on the methodology for estimating the peak impact on each road link, as set out at 16.6.26, to be provided, so that it can be reviewed	<p>A meeting with Essex County Council took place on the 5th June 2025 to describe the methodology.</p> <p>The peak construction flow for each road link has been estimated aggregating the trip generation flows from all the Primary Access Routes that use the road link for the whole duration of the construction activities, between 2027 and 2031.</p> <p>The maximum number of construction vehicles has been estimated from the data associated with each road link for the period 2027 and 2031 and the date of when that</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>maximum number of construction vehicles takes place has been identified.</p> <p>The number of Light Goods Vehicles (LGV) and Heavy Goods Vehicles (HGV) on the date of the peak construction activities has been obtained to determine the split of vehicle types.</p> <p>The total daily construction traffic flow (7:00 to 19:00) generated by the Project at each road link forming the Primary Access Route for the peak week has been graphically presented identifying the split between HGV and total traffic in Section 16.5 of the Appendix 16.4: Traffic and Transport Construction Effects (document reference 6.16.A4). The total hourly construction traffic flow (AM / PM peak hours) at each road link forming the Primary Access Route has been graphically presented identifying the split between HGV's and total traffic in the Transport Assessment (document reference 7.11).</p>				
9-2.232	<p>Appendix 16.1 includes a description of the highway links and at 16.1.2 a list of the haul road crossing points. There are approximately 50 crossing points in Essex of which limited detail is provided in the document. For each crossing point the Council requires the following information to be submitted at DCO:</p> <ul style="list-style-type: none"> • Visibility splays within the DCO redline or public highway based on the road speed limit or surveyed speed data. • Vehicle swept paths. 	<p>National Grid notes the respondent's feedback, the required information has been provided within the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) submitted with the Development Consent Order (DCO) application.</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<ul style="list-style-type: none"> • Traffic Management. • Data on the relative use of the access (i.e. total vehicle movements, peak vehicle movements broke down by vehicle class). • A Stage 1 Road Safety Audit with designer's response. • Road construction. 					
9-2.233	<p>Limited detail is provided on the assessment of cumulative effects; however, with regards to transport, the proposed high-level methodology appears reasonable. However, transport specific interactions the Council would recommend the Applicant considers include the following:</p> <ul style="list-style-type: none"> • The interrelationship between impacts on users of PRow and users of the highway network. • The interrelationship of impacts on PRow users (i.e. visual, transport, health and recreation etc). • Repeated impacts on users of the transport network over the lifetime of the project (i.e. repeated closures and traffic management) for both PRow and the road network. <p>Further to the above, consideration needs to be given to the impact of this project in combination of other projects in terms of repeated impacts on receptors as a result of multiple projects occurring one after the other over a relatively short timeframe. There is limited evidence that has been provided that</p>	<p>Details on the interactions with Public Rights of Way (PRoW), including indicative durations and proposals in relation to mitigation/management are contained within the Public Rights of Way Management Plan (document reference 7.6) which is submitted as part of the Development Consent Order (DCO) application. However, during construction the intention is to keep the majority of PRow open via management measures wherever possible and, where not possible, to provide appropriate diversions. Post-construction PRow would be re-instated along their original line wherever possible.</p> <p>The assessment provided in Chapter 16: Traffic and Transport (document reference 6.16) within the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) includes the committed developments with construction programmes are known to overlap or with operational flows not included within TEMPro.</p> <p>The committed developments and the cumulative flows that are considered for the cumulative assessment are</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	supports the conclusions on the likely preliminary cumulative effects at Table 17.2. As such, any conclusions relating to transport are not agreed	listed in ES Appendix 16.3: Future Baseline (document reference 6.16.A3).				
9-2.234	The Council do not support the use of access H25-A2 shown on Section F Sheet 3 due to potential impacts on the use of the layby in this location and would request consideration of other access locations. It needs to be determined whether any widening is required for a number of accessing including Chatham Hall Lane for accessing H27-A1. Consideration needs to be given to any interaction between pylons TB130 to TB132 and Phase 2 of the Chelmsford Northeast Bypass, which has planning permission. The Applicant is advised to investigate any weight restrictions on the crossing of Roxwell Brook to access H29-A1. For the Primary Access Route providing access to H28-A2 and H29-A1, the Applicant should consider pinch points along the route, including on Rainsford Road to the immediate west of its junction with the A1016, and further assessment should be undertaken of the A1060 junction with Park Avenue. It would be beneficial to understand whether the presence of the haul road would negate the need for any traffic to travel through Chelmsford. If the route is to be used, the Council would want to see peak hour restrictions on HGV movements on this route. The junction of the A1060 with Lordship Road is proposed to be	<p>An alternative location, sharing the SRC Group bellmouth has been proposed for the site access point for H25-A2, and agreed with the local highway authority. Chatham Hall Lane, H27-A1 preliminary design indicates no widening requirements.</p> <p>Pylons have been positioned using the alignment of the Chelmsford Northeast Bypass ensuring it is spanned. If the bypass goes ahead and severs our proposed haul road an additional access and haul road off the phase 2 bypass's most northern roundabout has been accounted for within the Order Limits.</p> <p>The proposed Primary Access Routes have been discussed and agreed with the local highway authorities. No concerns have been raised that there is a weight restriction on the Roxwell Brook bridge. There is a posted weight restriction on the approach to Roxwell, which National Grid understands relates to the village and not to the bridge. Any bridges proposed to be used for construction traffic would be subject to an approved/agreed Agreement in Principle between the contractor and the local highways authority. In order to agree this, a structural survey of the Roxwell Brook may be required if the local authority deem it necessary.</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>improved as part of an 880 dwelling residential development to the immediate north of the A1060 that is currently pending a decision (Chelmsford Planning Application Reference: 21/01545). For the Primary Access Route to H29-A2 and H30-A1 the immediate bend before the accesses on A414 has a recent road collision resulting in a fatality, and consideration should be given to what measures can be put in place as a result of the road speeds. Consideration should be given to options for accessing H30-A2, including whether traffic from the south can use the existing slip road on the A12 instead of routeing through Margaretting and whether access can be achieved from Writtle Road rather than using Ivy Barns Lane, which is unsuitable</p>	<p>The largest construction vehicles anticipated travelling on Routes H28-A2 and H29-A1 are a mobile crane and Heavy Goods Vehicle (HGV). Any existing pinch points or traffic islands should remain unaffected.</p> <p>The Transport Assessment (document reference 7.11) has assessed the junctions in Chelmsford, part of the Primary Access Routes H28-A2 and H29-A1, including the A1060 junction with Park Avenue. The expected construction vehicle movements during the peak hour on the worst-case day are 27 two-way HGVs/hour over a short duration of time i.e. 1 week. Temporary mitigation for the A1060 junction with Park Avenue has been proposed to improve the operation of the junction and reduce the likely impact on road users. Furthermore, given that the likely impact of the Project construction traffic would be temporary and short term, it is considered that the Project would not have a substantial impact upon the operation of the road network. A414 Ongar Road. This has been identified within the Development Consent Order (DCO) Schedule 13 Traffic Regulation Orders for a temporary speed restriction to 40mph for the construction works.</p> <p>Following comments received at consultation, including feedback from the Local Highway Authority, National Grid has reviewed this proposed Primary Access Route. Our assessments have not identified a suitable alternative access route other than Ivy Barns Lane, to this section of temporary haul road. As part of the pre-application process National Grid has engaged with the</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		relevant authorities, and their highways teams and National Highways to understand and gain information on their local road networks. This information has been used to inform and guide the drafting of the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) for the Project that accompanies the DCO application. Ivy Barns Lane would have provision of localised temporary road widenings along it, has been discussed with the Local Highway Authority, and has been subject of a Stage 1 Road Safety Audit.				
9-2.235	For the bridge strengthening works at F7, considerations should be given to a worst-case assessment of the impacts on the highway network, in the event of the works being undeliverable. There are concerns that this route is used to access Pylons 186 to 201 and the appropriateness of its use and the implications on the remainder of project or the need for alternative routes as a result	<p>National Grid has engaged with the bridge asset owner, Network Rail. As part of our assessment study we have considered the worst case scenario in terms of vehicles accessing the bridge.</p> <p>Appropriate mitigations have been agreed in principle with Network Rail conditional on a further condition survey prior to use, ensuring the appropriate safe use of the bridge for access during construction.</p> <p>The discussions and studies to date do not reveal a need to strengthen the asset. This will be kept under review.</p>		X		
9-2.236	Within Section G of the Consultation Plans; National Grid Drawing Reference AENC-NG-ENG-PLN0008 shows the haul route connecting to the A128 running adjacent to Dunton Hills Golf Course. As this does	<p>This bellmouth and haul route were shown as a potential option depending on the build out programme of the Dunton Garden Village development.</p> <p>This access and route have been removed.</p>		X		X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	not form part of the primary access route, we would query its purpose and potential use					
9-2.237	The working hours set out at paragraph 2.3.1 are assumed hours and as such bring risks to any assessment methodologies as they move impacts outside of the normal peak hours. They also are likely to mean a greater impact in the hour of greatest change due to lower baselines in traffic. It is recommended that a review process is embedded into the CTMP, such that the staff arrival and departures patterns are monitored and if more typical shift patterns are exhibited, a review of the development impacts is undertaken and in the event of any additional impacts being identified, reasonable and pragmatic management measures are implemented to reduce these impacts	An Outline Construction Workforce Travel Plan (CWTP) appended to the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) has been developed. Details on the monitoring of staff shift patterns and feedback on this to Local Highway Authorities is detailed within the Outline CWTP (see document reference 7.3).		X		
9-2.238	With regards to paragraph 5.4.9, how will it be determined what vehicle movements are time critical? Whilst the need for flexibility is recognised, any movements outside of the core working hours should be minimal, and only in extraneous situations. This needs to be monitored and reported on, with any excessive use resulting in a review. There are no proposals to limit the number of HGV movements to reflect those predicted by the Applicant, and this is not considered to be acceptable.	The Outline Construction Traffic Management Plan (CTMP), (document reference 7.3), includes detail on the monitoring and management proposals throughout the Project.		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.239	As above, a number of sensitive locations are identified experiencing effects; further discussions are sought on these effects, and either the mitigation strategy or the rationale for why mitigation is not required for these locations.	<p>Details of the links on the list are provided below:</p> <p>Highway mitigation has been provided to several locations to accommodate design vehicle movements.:</p> <p>Link PAR 28 - Wick Road / Grove Hill</p> <p>Link PAR 33 – Old Ipswich Road</p> <p>Link PAR 36 - A134 Northern Approach Rd / A134 Wildeve Avenue / A134 Nayland Rd / A134 The Causeway</p> <p>Link PAR 37 – A1124 Halstead Road</p> <p>Link PAR 43 - Spinks Ln / Highfields Rd / Spa Rd / Flora Rd / Faulkbourne Rd / Church Hill</p> <p>Link PAR 44 - A131 Great Notley Bypass / A131 Great Leighs Bypass / A131 Braintree Rd</p> <p>Link PAR 54 - B1002 Main Rd</p> <p>Link PAR 56 - Ivy Barns Ln</p> <p>Link PAR 58 - A176 Noak Hill Road / A176 Laindon Road / A129 Southend Road</p> <p>Further details can be found in the Indicative Highway Mitigation Plans (see Appendix C of the Outline Construction Traffic Management Plan (document reference 7.3)).</p> <p>Additionally, Chapter 16: Traffic and Transport (document reference 6.16) within the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) and the Transport Assessment (document reference 7.11) include</p>		X

		<p>additional mitigation as a result of the assessment for the following road links:</p> <p>Link PAR 28 - Wick Road / Grove Hill</p> <p>Link PAR 35 - A1341 Via Urbis Romanae</p> <p>Link PAR50 - A1016 Waterhouse Ln / A1016 Rainsford Ln</p> <p>Link PAR 36 - A134 Northern Approach Rd / A134 Wildeve Avenue / A134 Nayland Rd / A134 The Causeway</p> <p>Link PAR 37 - A1124 Halsted Rd</p> <p>Link PAR 38 - Mill Rd</p> <p>Link PAR 43 - Spinks Ln / Highfields Rd / Spa Rd / Flora Rd / Faulkbourne Rd / Church Hill</p> <p>Link PAR 44 - A131 Great Notley Bypass / A131 Great Leighs Bypass / A131 Braintree Rd</p> <p>Link PAR46 - B1008 Braintree Rd / B1008 Main Rd</p> <p>Link PAR 49 - A414 Three Mill Hill / A1114 London Rd</p> <p>Link PAR 51 - A1060 Rainsford Rd / A1060 Roxwell Rd</p> <p>Link PAR 54 - B1002 Main Road</p>				
9-2.240	Paragraph 5.1.4 refers to a Staff Travel Plan, it would be beneficial for a Draft of this document to be submitted prior to the DCO, so that issues can be identified at an early stage and reduce potential disagreement during the examination	An Outline Construction Worker Travel Plan, appended to the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) has been developed and was issued to local highway authorities in May 2025.		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.241	The legal minimum widths are quoted (as per Highway Act 1980) at paragraph 5.1.7. For bridleways, three metres is the maximum width of a bridleway and is the width we aspire to provide on all our network within Essex and user groups will expect the same. This is especially preferable if the bridleway or diverted route is temporarily enclosed by fencing or segregated to accommodate a temporary access road	The comments regarding minimum widths, maximum widths and the Essex aspiration for 3 m bridleways is noted. When managing impacts on Public Rights of Way (PRoW) the existing widths are maintained or, where temporarily diverting, the widths provided would comply with the Highways Act.		X		
9-2.242	No specific timescales are mentioned within the Management Measures section. This should be agreed with the PROW maintenance team – months would be preferable to weeks or days' notice	The comment regarding notice periods is noted. Exact details of the proposals for Public Rights of Way (PRoW) are subject to discussion with PRoW Officers. For locations where active management or short period closures are required (e.g. for a few hours) the relevant PRoW Officer would be informed at least seven days in advance. For longer period closures a programme of closures would be produced and notified to the relevant PRoW Officer in advance. Should any additional closures, outside of those identified within the Development Consent Order (DCO), be required these would be discussed and agreed with the relevant PRoW Officer and landowner prior to implementation and relevant formal consent of the street authority would be obtained.		X		
9-2.243	Comment supporting of the repositioning of the Cable Sealing End (CSE) compound between pylons TB108 - TB103 (nr. Fairstead) to limit impacts.	In Fairstead Lane/Road (Protected Lane BTELANE17) there is a crossover point that allows construction vehicles to cross over the road and progress along the		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>Suggestion that Protected Lanes should be identified as receptors within the Environmental Statement and agreement reached on which features define their traditional landscape and nature conservation character.</p> <p>Request for more information around the effects on Fairstead Lane/Road (Protected Lane BTELANE17 in Braintree District Council (BDC) Protected Lanes Assessment 2013), including existing public rights of way, water features, banking to the lane, and generally undulating landform close to areas of construction activity and environmental enhancement</p>	<p>proposed haul roads. There will not be an increase in baseline traffic along Fairstead Lane/Road as no HGV construction traffic is proposed to access the haul roads from the public highway under typical operation, and vice versa; hence, an increase in baseline traffic is not expected and has not been assessed within the ES Chapter 16 Traffic and Transport (document reference 6.16), submitted as part of the Development Consent Order (DCO) application. Temporary traffic management measures would be in place to avoid delays at crossover points as described within the Outline CTMP (document reference 7.3) submitted as part of the Development Consent Order (DCO) application.</p> <p>The Outline Public Rights of Way Management Plan (document reference 7.6) submitted as part of the Development Consent Order (DCO) application, sets out management measures and mitigation measures for each PRoW affected by the construction activities and operation of the Project.</p> <p>The potential impacts on PRoW as a result of the Project are assessed in the Environmental Statement (ES) Chapter 16: Traffic and Transport (document reference 6.16).</p> <p>Bridleway White Notley 11 (Part of White Notley Circular Walk) will be temporary closed for 10 months with managed access, that is, allowing a safe passage throughout of the PRoW users. As a result, the magnitude of impact on the PRoW is considered minor</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>and the overall effect has been classified as not significant for these PRow users.</p> <p>Due to the limited interaction between Project traffic and Fairstead Lane/Road, and the raft of measures to secure pollution control and sustainable drainage of construction worksites and haul routes (described in the Outline Code of Construction Practice (document reference 7.2)), submitted as part of the Development Consent Order (DCO) application, there would be no impact on local water features.</p> <p>The protected lanes have been identified and assessed in Chapter 11: Historic Environment of the ES (document reference 6.11) submitted as part of the Development Consent Order (DCO) application . The protected lanes have been judged to be low value. The setting of low value assets is not considered further as per the ES methodology agreed with stakeholders.</p> <p>The potential effects on recreational routes are assessed in Chapter 15: Socio-economics, Recreation and Tourism of the ES (document reference 6.15).</p> <p>Fairstead Road shares the same path with White Notley Circular Walk and Essex Way. Following mitigations outlined in the Outline CoCP (document reference 7.2), Outline CTMP (document reference 7.3) and Outline PRow Management Plan (document reference 7.6) (including closure with managed access and diversion during the duration of construction works for an indicative period of four years), a temporary, short-term,</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>negligible and not significant effects during construction have been identified.</p> <p>During operational (and maintenance), no access disruption or permanent diversion is anticipated for Essex Way, resulting in a permanent, long-term, neutral and not significant effect on Essex Way. There would be a permanent acquisition of right of access for White Notley. However, no physical works are proposed and the acquisition of right of access is not anticipated to impact on general usage of the recreational route, resulting in a permanent, long-term, negligible and not significant effect during operation (and maintenance).</p> <p>Protected lanes have been assessed as part of the landscape and visual assessment presented in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13), supported by ES Appendix 13.1: Landscape and Visual Methodology (document reference 6.13.A1), ES Appendix 13.2: Landscape Baseline and Assessment (document reference 6.13.A2) and ES Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3), submitted as part of the Development Consent Order (DCO) application.</p> <p>ES Appendix 13.1: Landscape and Visual Methodology (document reference 6.13.A1) notes that the susceptibility of visual receptors to changes in views/visual amenity is a function of the occupation or activity of people experiencing the view and the extent to</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>which their attention is focused on views (GLVIA 3, para 6.32). People engaged in outdoor recreation (including users of cycle routes, footpaths, public rights of way and Quiet Lanes / Protected Lanes whose interest is likely to be focused on the landscape) is judged to be high.</p> <p>The landscape assessment within ES Appendix 13.2: Landscape Baseline and Assessment (document reference 6.13.A2) identifies in the Central Essex Farmlands LCA (Area Two TB102-TB135) that Fairstead Lane would be directly affected by construction activity as it lies within the Order Limits and crosses under the works.</p> <p>The visual assessment within ES Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3) includes consideration of visual amenity of visual receptor areas (including communities and people travelling along protected lanes). This appendix sets out the assessment for visual receptor areas including E5 Black Notley & White Notley and E6 Terling and Witham which are relevant to this feedback.</p> <p>An illustrative landscape plan has been produced for the Environmental Area around the Fairstead (EACN side) and Fairstead (Tilbury side) CSE compounds to the east of Fairstead Lane. This is contained within Appendix D: Outline Landscape Proposals of the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4).</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.244	<p>Request for information on the siting of pylons between TB80 - TB88 (south of Coggeshall), notably minerals, biodiversity, and heritage constraints and the decision not to achieve a straight alignment, instead retaining a slight kink south.</p> <p>Requests for more information on how the route integrates with, and can be mitigated from, users of countryside and rights of way open access land at Pantling's Lane</p>	<p>Pylons between TB80-TB88 have been carefully sited to reduce environmental impacts.</p> <p>A range of protected species and other ecological surveys have been undertaken within the area of TB80-TB88, and the results are outlined in ES Chapter 8: Ecology and Biodiversity (document reference 6.8) and Appendices 8.1 – 8.16 of the ES (document reference 6.8.A1 to 6.8.A16). The ecological constraints considered in this area included the presence of Coggeshall Hall Farm Local Wildlife Site (LWS). Both the construction haul road and proposed overhead line alignment have crossed the narrowest section of the LWS to reduce impacts on the LWS, while also avoiding the woodland blocks further to the west.</p> <p>Appropriate mitigation for the potential impact on Coggeshall Hall Farm LWS has been included within the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) that has been submitted as part of the Development Consent Order (DCO) and agreed with the Local Planning Authority. The assessment concludes that with the proposed mitigation measures in place there would be no likely significant effects on any ecological receptors. Chapter 15: Socio-economics, Recreation and Tourism of the ES (document reference 6.15) reports on the potential effects on recreational routes.</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>It is noted that four Public Rights of Way (PRoWs) fall between TB80 and TB88. These are Kelvedon 4, Kelvedon 2, Kelvedon 29 and Kelvedon 5.</p> <p>The Outline Public Rights of Way Management Plan (document reference 7.6) has been submitted as part of the Development Consent Order (DCO) application, which sets out management measures and mitigation measures for each PRoW affected by the construction activities. The PRoW will be temporarily closed with managed access, that is, allowing a safe passage throughout for the PRoW users, and/or temporarily closed with a diversion in place.</p> <p>Kelvedon 4 would be temporarily closed with a diversion for an indicative duration of two months, and temporarily closed with managed access for an indicative duration of four years (i.e. the duration of construction works).</p> <p>Kelvedon 5 would be temporarily closed with managed access for an indicative duration of four years (i.e. the duration of construction works), and diversion of an indicative duration of one month for overhead conductor stringing, and two months for the working area for overhead conductor stringing.</p> <p>Kelvedon 2 would be temporarily closed with diversion for an indicative duration of four years (i.e. the duration of construction works) and temporarily closed with managed access for an indicative duration of one month for overhead conductor stringing, five days for existing</p>

		<p>consultation alongside issues of access and permanent and temporary haul roads.</p> <p>We also wanted to know about any concerns or questions about the proposals, or if there were any local factors that should be considered.</p> <p>The feedback received through the statutory consultation from members of the public and the relevant Councils has informed how the proposals have been developed. Where this led to a significant change from what we had presented at statutory consultation, we held targeted consultations with directly affected properties throughout February and March 2025.</p> <p>How feedback has influenced the changes which have been made is set out in this report and in the 2025 Design Development Report (document reference 5.15).</p>				
9-2.260	Suggest that feedback is listened to	<p>National Grid listen to all the feedback we receive. Many of the changes presented at the statutory consultation were as a direct result of the information and feedback we received at the 2022 and 2023 non-statutory consultations.</p> <p>National Grid has continued to listen to all feedback received during the consultation, we asked for feedback on the 2024 preferred draft alignment, including pylon positions, the locations of underground cables, Cable Sealing End (CSE) compounds, the East Anglia Connection Node (EACN) substation and the changes that were made to the route since the last consultation</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>alongside issues of access and permanent and temporary haul roads.</p> <p>We also wanted to know about any concerns or questions about the proposals, or if there were any local factors that should be considered.</p> <p>The feedback received through the statutory consultation has informed how the proposals have been developed. Where this led to a significant change from what we had presented at statutory consultation, we held targeted consultations with directly affected properties throughout February and March 2025.</p> <p>How we have considered feedback, and any changes as a result of this, have been made is set out in this report and in the 2025 Design Development Report (document reference 5.15).</p>				
9-2.261	Criticism that there was not enough time to consider the proposals	<p>Before the start of the statutory consultation, National Grid prepared a Statement of Community Consultation. This document set out how we were planning to consult on the Project. We shared this in draft with the potentially affected Local Planning Authorities who provided us with comments based on their knowledge and experience of consultation in the area. We amended the Statement of Community Consultation based on feedback where practicable and information on this is available in this report together with information on how we complied with the Statement of Community Consultation. The Statement of Community Consultation is available as Appendix E to this report.</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		It is important that all stakeholders had enough time to consider and respond to the materials that were presented at consultation. At both non-statutory consultations held in 2022 and 2023, National Grid allowed for eight weeks. At statutory consultation we allowed for ten weeks in which to respond, which was then extended to 15 weeks following the General Election. A total of 14 public information events along the proposed route and six webinars were held during the consultation period of 15 weeks. Recordings of the webinars were available on the Project website for people to view at any time.				
9-2.262	Criticism of when the consultation was held (e.g. time of year)	<p>Before the start of the statutory consultation, National Grid discussed its approach with officers from the Local Planning Authorities and prepared a Statement of Community Consultation. An informal consultation was held on the Statement of Community Consultation from 1 December 2023 to 5 January 2024. A formal consultation was held from 1 March. This document set out how we were planning to consult on the Project and was published on the Project website.</p> <p>We held 14 public information events between April and May 2024. We held several events in the evening and at the weekend. Where people were unable to attend our in-person events, we held six online webinars where we presented the same information that was available at our public information events, and this remains available in the document library on our Project website.</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.263	Criticism that Gunning Principles have not been considered	<p>This Project comprises a proposed overhead line connection over 2 km in length and therefore it is currently expected to be classified as a Nationally Significant Infrastructure Project (NSIP). Therefore, the Project would require consent under the Planning Act 2008. The Planning Inspectorate publish guidance and advice on developing an NSIP Project for developers to follow. National Grid considers that we have developed our proposals and carried out consultation in accordance with the Gunning Principles. The Gunning Principles set out four principles for consultation as follows:</p> <p>Consultation must be at a point when proposals are still at a formative stage. A final decision has not yet been made, or predetermined, by the decision makers.</p> <p>All of our consultations on the Project (non-statutory consultations in 2022 and 2023, our statutory consultation in 2024, the targeted consultations and landowner consultation in 2025) were held at a formative stage where final decisions on the proposals were still to be made and we took on board feedback on our proposals at each stage.</p> <p>There is sufficient information to give 'intelligent consideration'. The information provided must relate to the consultation and must be available, accessible, and easily interpretable for consultees to provide an informed response.</p> <p>We have published a considerable amount of information to support both non-statutory consultations</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>and statutory consultation. This information was available online and in paper copy at our public events during consultation and remains available on the Project website. Information was available in alternative formats on request.</p> <p>There is adequate time for consideration and response. There must be sufficient opportunity for consultees to participate in the consultation.</p> <p>Our statutory consultation ran for a period of 15 weeks, and this gave sufficient time for people to review the information provided, attend a face-to-face event, webinar, or contact the Project team with any questions to enable them to provide an informed response. We follow advice and guidance provided in relation to consultation for a Project of this nature and are confident we go over and above any statutory requirements to engage fully with all stakeholders.</p> <p>Conscientious consideration must be given to the consultation responses before a decision is made. Decision makers should be able to provide evidence that they took consultation responses into account.</p> <p>In response to the statutory consultation, we received over 13,000 responses. Responses were received from members of the public, elected members, Local Planning Authorities and technical stakeholders. All responses received have been carefully read and considered by the Project team. Information from the</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>feedback has been considered and changes have been made as we have developed the alignment.</p> <p>Evidence of how we carefully considered the feedback submitted during the 2022 and 2023 non-statutory consultations is detailed in our previous consultation feedback reports, which are available on the Project website.</p>				
9-2.264	Criticism that Holford Rules have not been considered	<p>National Grid disagrees that the Holford Rules have not been considered. The Corridor and Preliminary Routeing and Siting Study (CPRSS) published in 2022, and the Design Development Reports (DDR) published as part of the 2023 non-statutory consultation, 2024 statutory consultation and with the Development Consent Order (DCO) submission, all set out how the Holford Rules informed decision making. A summary of the Holford Rules is provided within Appendix I22 of this report. We use the Environmental Impact Assessment (EIA) process to inform the balance and define our proposals that we take forward, and which are also informed by feedback. We would note that application of the Holford Rules typically involves balancing alternative solutions which can present conflicting Holford Rule compliance. For example, routeing over relatively higher ground rather than in an adjacent valley may conflict with Rule 4 and 5 but may be appropriate if the valley contains extensive areas of unavoidable ancient woodland, effects on which would conflict with Rule 2. A balanced</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		decision is taken which is not the same as not considering the Holford Rules.				
9-2.265	Criticism that Horlock Rules have not been considered	National Grid disagrees that the Horlock Rules have not been considered. The Corridor and Preliminary Routeing and Siting Study (CPRSS) published in 2022 and the 2023 and 2024 Design Development Reports (DDR) (available on the Project website) and the 2025 DDR (document reference 5.15) published with the Development Consent Order (DCO) submission, all set out how the Horlock Rules informed decision making. We use the Environmental Impact Assessment (EIA) process to inform the balance and define our proposals that we take forward, and which are also informed by feedback. We would note that application of the Horlock Rules typically involves balancing alternative solutions which can present conflicting Horlock Rule compliance albeit that all aspects have been considered.	X		X	
9-2.266	Criticism that the National Planning Policy Framework (NPPF) has not been considered / Criticism that the Project does not abide with the NPPF / Suggest that the NPPF should be considered (including the Planning Practice Guidance: Use of Planning Condition and Technical Advice Notes (TANs)) / Suggest Planning Practice Guidance for developments within the setting of AONB's is considered	National Grid disagrees that the Horlock Rules have not been considered. The Corridor and Preliminary Routeing and Siting Study (CPRSS) published in 2022, and the 2023 and 2024 Design Development Reports (DDR) (available on the Project website) and the 2025 DDR (document reference 5.15) published with the Development Consent Order (DCO) submission, all set out how the Horlock Rules informed decision making. We use the Environmental Impact Assessment (EIA) process to inform the balance and define our proposals that we take forward, and which are also informed by	X	X	X

		feedback. We would note that application of the Horlock Rules typically involves balancing alternative solutions which can present conflicting Horlock Rule compliance albeit that all aspects have been considered				
9-2.267	Suggest that the Project should follow the HM Treasury Green Book (e.g. legal requirements and methodology; when appraising alternatives) / Criticism that HM Treasury Green Book has not been followed (e.g. calculations for externalities have not been considered)	<p>National Grid is confident that the process we follow to identify and then assess potential strategic options is robust and the most appropriate. This has been tried and tested through numerous previous projects, the formal examination process and ultimately decided by the relevant Secretary of State.</p> <p>The Treasury Green Book provides guidance on the interpretation by public servants of public spending, assets and resources for projects, policies and spend from the public purse. That is not relevant for National Grid Electricity Transmission (NGET).</p> <p>There is no requirement in the Planning Act 2008 for developers to have to submit a Treasury Green Book assessment as part of a Development Consent Order (DCO) application.</p> <p>NGET is an Ofgem regulated business, with obligations to consider customer, environmental and other considerations as outlined in the Electricity Act 1989 and in its licence commitments. Consideration of the costs of a project and the funding it should receive via the regulatory settlement is the subject of a separate regulatory process, and it is not appropriate for the Planning Inspectorate, Examining Authority or the</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Secretary of State in their remit under the Planning Act to seek to duplicate other regimes.				
9-2.268	Suggest that there is need for further consultation	National Grid held two non-statutory consultations in 2022 and 2023 and a statutory consultation in 2024 where we presented our proposals for the Project. At each stage of consultation, we reviewed all the feedback we received and amended the alignment, where feasible in response to this. Where necessary following statutory consultation, we held in targeted consultations with directly affected properties where the alignment or access proposals have changed. We believe that this is adequate for a project of this size to allow the public time to have careful consideration and engagement with the proposals and leave meaningful feedback.	X	X	X	
9-2.269	Request to generally speed up the process (e.g. the consultation / construction) / Suggest the Project needs to be completed sooner	It is important that we take enough time for all stakeholders to consider and respond to the materials presented at consultation, and for the Project to carefully consider all the feedback we receive The Project is aiming to be operational for 2030, which ensures we're able to connect new sources of energy to the wider electricity network and people's homes and businesses. We are always looking at how we can be more efficient and will consider feedback and comments from the public on that point.			X	
9-2.270	Criticism of impact surveys undertaken (e.g. conducted at inappropriate times)	A full suite of ecological surveys has been undertaken across the Project. Further details are presented in Environmental Statement (ES) Chapter 8: Ecology and	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Biodiversity (document reference 6.8) with survey reports in Appendices 8.1 - 8.15 (document reference 6.8.A1 - 6.8.A15).</p> <p>A detailed survey scoping exercise was undertaken to determine the most appropriate survey type, methods and location based on a range of factors including existing records, habitat suitability and likely impacts. Survey scope has been discussed and agreed with the relevant stakeholders to ensure a robust baseline assessment.</p>				
9-2.271	Criticism of Consultation advertising / Consultation advertising was not adequate / More consultation advertising needed	<p>The consultation was advertised widely on social media, TV, radio and in local newspapers. Before the start of the statutory consultation, National Grid prepared a Statement of Community Consultation (SOCC) to set out how we were planning to consult on the Project. National Grid shared this document in draft with the potentially affected Local Planning Authorities who provided us with comments based on their knowledge and experience of consultation in the area. We incorporated these comments where practicable and information on this is available in this report. The SOCC is available as an appendix to this report and sets out how we intended to consult at statutory consultation.</p>	X		X	
9-2.272	Criticism that it was difficult to find the consultation / feedback form / information on the Project	<p>National Grid will continue to look at how we can optimise the user experience and make the website easy to navigate. Wherever possible we look to signpost how to submit feedback and find information. Where people have issues, we encourage them to contact us</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		directly via our hotline number, email, or Freepost. All our consultation information remains available in the document library on the Project website.				
9-2.273	Criticism that there was not enough information available for the consultation	<p>At the statutory consultation National Grid had all of the Project documentation available, this included key technical documents such as the Preliminary Environmental Information Report (PEIR), 2024 Design Development Report, and Strategic Options Backcheck and Review (SOBR). We also had construction and access maps alongside non-technical documents. Members of the Project team were available at our public information events to help guide members of the public through the documents and explain the more technical elements. All information relating to the Project remains available on the Project website.</p> <p>We believe that all the relevant information required for the public to make informed decisions on the proposals was made available throughout the consultation periods. This information remains available on the Project website.</p>	X	X	X	
9-2.274	Criticism that consultation letter was not received / Criticism that respondent was not contacted directly by National Grid / Criticism that residents near the Project did not receive Project documentation	The Project newsletter was sent to approximately 77,000 addresses along the preferred corridor within an area of approximately 1 km either side. National Grid also sent copies to Parish Councils within the consultation zone and made them available at inspection points across a wider area, at the public information events and online.	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		In addition to raise awareness of the consultation, we published a series of newspaper advertisements setting out information on our consultation and public information events.				
9-2.275	Criticism that consultation was not accessible to those without IT access / internet access / IT capability	<p>Before the start of the statutory consultation, National Grid discussed its approach with officers from the Local Planning Authorities and prepared a Statement of Community Consultation (SOCC). This document set out how we were planning to consult on the project and is published on the project website.</p> <p>To help ensure the consultation was accessible, we wrote to approximately 77,000 properties with details of our proposals and held 14 face-to-face events and six webinars. We also made a freephone and freepost service available for people to contact us with any queries. This provided an alternative option for those who may have difficulty accessing other engagement channels or were less comfortable with online technology. National Grid is happy to discuss any special requirements for marginalised groups for consultation and implement these where practicable.</p> <p>The Statement of Community Consultation is available as Appendix A to this report.</p>	X		X	
9-2.276	Criticism that consultation was not accessible to those with limited literacy / reading skills	Before the start of the statutory consultation, National Grid discussed its approach with officers from the Local Planning Authorities and prepared a Statement of Community Consultation (SOCC). This document set out	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>how we were planning to consult on the project and is published on the Project website.</p> <p>To help ensure the consultation was accessible, we wrote to approximately 77,000 properties with details of our proposals and held 14 face-to-face events and six webinars.</p> <p>Information in the 2024 Project Background Document and website was written in non-technical language, supplemented with visual materials, to help explain the Project. National Grid also published the 2024 Guide to Interacting with Our Consultation Plans which provided guidance on what is shown on the plans.</p> <p>If people could not access the written materials, members of the team were available at public information events to speak to. National Grid also held online webinars with a presentation on the plans. The webinars were recorded and were made available on the Project website.</p> <p>We also made a freephone and freepost service available for people to contact us with any queries. This provided an alternative option for those who may have difficulty accessing other engagement channels or were less comfortable with online technology. Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.277	Criticism of consultation questionnaire (e.g. questions are misleading / form is cumbersome) / Criticism of process for respondents to submit feedback	The feedback form provided as part of the consultation is only a guide to enable the consultees to provide feedback on our proposals. The feedback form included a number of open and closed questions. Free text boxes enabled people to provide any other feedback they wanted. Respondents were free to answer any questions they felt most relevant. National Grid has found in the past, that people find a feedback form useful in structuring their responses and that the form has been helpful. However, feedback could be provided in any way that the consultee wished, either by using the feedback form template, by letter, or email. All feedback received from the consultations has been read by the Project team and all feedback was considered as we finalised our proposals.		X	X	
9-2.278	Criticism of National Grid collecting personal information (e.g. gender, age, ethnic background, disabilities) in questionnaire	National Grid gives people the option to provide further details relating to their background, gender and age when they submit feedback. This information enables us to understand how different groups of people interact with the Project. All the data is collected, stored and used according to General Data Protection Regulation (GDPR) and set out in our data privacy notice – which is available on our website and was on the printed feedback form. Respondents did not need to answer these questions, and all feedback was considered whether or not further personal information was submitted.	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.279	Comment supportive of consultation materials (e.g. easy to understand)	National Grid notes the respondent's feedback.	X		X	
9-2.280	Criticism of consultation materials	<p>Before the start of the statutory consultation, National Grid prepared a Statement of Community Consultation (SOCC). This document set out how we were planning to consult on the Project, including the materials to be presented.</p> <p>We aim to make consultations as accessible as possible and offer a range of materials to enable this, including an overarching introduction to the Project and the consultation (the 2024 Project Background Document), an interactive map and more technical information. We also offer ways to contact the Project team should someone need more information, or information in a different format.</p> <p>We will continue to assess how best to present information in an accessible way and format, but always recommend people contact the team directly via our hotline or email address if they have questions or concerns.</p> <p>We believe that all the relevant information required for the public to make informed decisions on the proposals was made available throughout the consultation period. This information remains available on the Project website. We believe that all the relevant information required for the public to make informed decisions on</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		our statutory consultation was made available and do not believe that this impacted the feedback we received.				
9-2.281	Criticism of Project Background Document / Design Development Report	<p>All comments and feedback are welcomed and noted and National Grid will bear this in mind when developing documents for future projects. All our documents were available in alternative formats by request.</p> <p>We believe that all the relevant information required for the public to make informed decisions on our statutory consultation was made available and do not believe that this impacted the feedback we received. Our Project Background Document and Design Development Report (document reference 5.15) included the relevant information on the design and routing and siting of the project. Additional information on alternative options, environmental considerations, and access were available in our other consultation documents which were made available on the Project website.</p>	X	X	X	
9-2.282	Criticism of consultation maps	<p>National Grid notes the concerns about the mapping.</p> <p>An interactive map was and continues to be available on the Project website so that people can look at our proposals in more detail. The interactive map has different layers which could be turned on and off, allowing people to view a more simplified map, for example only showing the Order Limits, or showing other aspects of our proposals and environmental constraint.</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Large scale maps were available at all the events and copies were posted to members of the public who requested them during and following events.</p> <p>National Grid also published the 2024 Guide to Interacting with Our Consultation Plans which provided guidance on the plans and what is shown on each plan.</p> <p>In June 2024 a Preliminary Environmental Information Report (PEIR) – Errata and Corrections Log was prepared which provides a list of minor corrections to plans within the PEIR.</p>				
9-2.283	Criticism of imagery / photography / visualisations used for consultation materials	<p>The statutory consultation materials, including the newsletter and Project Background Document, showed a mix of photographs including images of infrastructure such as pylons. The photography showed pylons located in the UK, including 50 m pylons and other infrastructure such as Cable Sealing End (CSE) compounds and substations. Photographs of infrastructure both in construction and operation were also available including images of underground cable construction.</p> <p>At the statutory consultation public information events, we had a 3D visualisation tool available which showed a visualisation of the proposals from any post code within a 2.5 km distance from the alignment. The model was intended to be illustrative proposals and it was advised that it should be viewed in conjunction with the published consultation materials.</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>The 3D visualisation tool was only available at events and not online as the programme used a large amount of data and would therefore not be compatible being hosted on the Project website.</p> <p>In terms of data used for the 3D visualisation tool, The National Tree Map dataset was used to identify tree locations. The data set is limited to vegetation over three metres in height and does not record exact tree species. Regionally appropriate assumptions for typical tree species and structure were used.</p> <p>The 3D tool could be set to winter and summer seasons. Buildings, including domestic properties, were presented to illustrate their spatial location and footprint, rather than specific architecture. Building height shown was to eaves.</p> <p>Wireline visualisations were also developed as part of the Preliminary Environmental Information Report (PEIR), which showed what the overhead line would look like in certain locations along the alignment. These visualisations were available on the Project website.</p>				
9-2.284	Criticism of consultation in-person events	Before the start of the statutory consultation, National Grid discussed its approach with officers from the Local Planning Authorities and prepared a Statement of Community Consultation (SOCC). This document set out how we were planning to consult on the project and is published on the Project website.	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		From experience we find an informal approach works best for people who attend consultation events. It allows them to take their time in viewing the information available and when they are ready, to spend some time talking to a member of the project team. We recognise that some of the events were very well attended, although our team worked to ensure that the capacity of venues was not exceeded at any time. We also held six online webinar events to provide information to those who felt more comfortable with online meetings or were unable to attend one of our in-person events.				
9-2.285	Criticism of accessibility to venue for public consultation events (e.g. for disabled people)	National Grid tried to make sure the consultation was accessible for local communities and held 14 public information events along the route of the alignment, including at least one in each local authority area. We had to balance a number of factors when booking the consultation venues, including availability and selecting larger venues along the route to ensure everyone who wanted to attend could be accommodated. As part of our risk assessment of these venues, we made sure that they had full disabled access and bathroom facilities as well as adequate capacity for the expected number of people attending to be comfortably accommodated for. We also held a series of six online webinar events which provided further opportunities for people to find out the same information and ask questions.	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.286	Criticism that venues for public consultation events did not have appropriate facilities (e.g. toilets, (free) car parking, refreshments)	National Grid tried to make sure the consultation was accessible for local communities which meant balancing a number of factors. This included ensuring appropriate facilities were available, the venue was accessible and there was space available for parking. We also aimed to hold events at a range of times to allow people to attend. Where people were unable to attend our events, we also held a series of six online webinar events and opportunities to engage with the Project team via phone, email and freepost.	X		X	
9-2.287	Criticism of getting to the consultation venue (e.g. due to traffic / lack of transport options / lack of signage to venue)	National Grid tried to find venues as close to the project as practicable to ensure that we reduced the distance people had to travel to the public information events. We were required to find larger venues with better facilities to ensure that as many people as possible could attend our events. In some cases, this meant a greater travelling distance compared to smaller but more local options that were considered inadequate. Where people were unable to attend our events, we also held a series of six online webinar events and opportunities to engage with the Project team via phone, email and freepost.	X	X	X	
9-2.288	Suggest additional consultation events / Criticism that there were not enough consultation events	Ahead of the statutory consultation, National Grid developed and consulted on a Statement of Community Consultation (SOCC) with the potentially affected Local Planning Authorities. The SOCC set out how we intended to consult, including which venues we intended to use and when. When planning the public information	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		events, we reflected on our own learnings from the 2023 non-statutory consultation, the feedback we received and the input from Local Planning Authorities. We tried to strike the right balance between the consultation channels and methods of engaging to ensure everyone could take part in the method of their choice.				
9-2.289	Request that representatives are more identifiable at events	National Grid representatives wore name badges at events and there was a member of staff present at a welcome desk available to direct people to members of staff. We will consider what other actions we can take to make our team members more visible			X	
9-2.290	Criticism of consultation webinars	<p>Before the start of the statutory consultation, National Grid discussed its approach with officers from the Local Planning Authorities and prepared a Statement of Community Consultation (SOCC). This document set out how we were planning to consult on the Project, including public events and online webinars, and is published on the Project website.</p> <p>Throughout our consultation period, we held six online webinars for those who were unable to attend one of our in-person events.</p> <p>Registration for the online webinars was available online and the Project phonenumber and email were available for people to contact if they were struggling to sign up. The webinars were recorded and made available on our Project website shortly after they were held. In-person events were not recorded to ensure people felt</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>comfortable asking questions and could share details on specific queries relating to their land and / or property. Questions were taken using the chat function and the team answered as many questions as possible during the Q&A session. If people felt like their questions weren't answered we shared the Project contact details for people to get in touch with the team following the webinars.</p> <p>We rescheduled webinars due to the general election being announced during the consultation period. All people registered for the original dates were notified and the new dates were clearly displayed on the Project website.</p>				
9-2.291	<p>Criticism that alternatives (such as offshore, use of underground cables and alternative routes) have not been presented for consultation / consulted on / Suggest that National Grid justify why alternative options have not been consulted on / Suggest that National Grid should show that they have considered all options for the Project / Suggest that the consultation should be paused until all options have been considered</p>	<p>National Grid has considered a wide range of alternative means for the Project and set these out in the Corridor and Preliminary Routing and Siting Study (CPRSS), published in support of the 2022 non-statutory consultation, and the 2023 and 2024 Strategic Options Backcheck and Reviews (SOBR) (available on the Project website), published in support of the 2023 non-statutory consultation and statutory consultation and the 2025 SOBR (document reference 7.17). We have also considered feedback relating to suggested alternatives and set out responses within the 2022 and 2023 non-statutory consultation Feedback Report's and elsewhere within this report.</p> <p>Our job is to carefully consider the most feasible options and present proposals for public consultation. National</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Grid cannot present an alternative for consultation that would not meet the requirements placed on us by the government and our regulator Ofgem				
9-2.292	Criticism that the majority of consultation events are held during working hours (e.g. attendance may have resulted in resulting in loss of earnings) / Suggest that more consultation events are held outside of working hours	National Grid held 14 Public Information Events and six public webinars over a variety of days. Times and days for the events were dependent on availability of venues and three of the 14 Public Information Events and all webinars were open until 7 pm in the evening. Two of our Public Information Events were held on a Saturday to allow those who work in the week to attend.	X		X	
9-2.293	Suggest that households within five miles of the Project are consulted at every stage with an opportunity to comment and vote on the Project at every stage	During National Grid's statutory consultation period we engaged with properties within 1 km of the proposed route as part of our Primary Consultation Zone (PCZ). This included sending Project specific information to the properties and sharing information about how to engage with the project and leave feedback. We advertised our statutory consultation within a wider Secondary Consultation Zone which extended to 4 km on either side of the 2024 preferred draft alignment. We welcomed feedback from everyone, regardless of where they lived in relation to the Project. We will keep members of the public up to date with the development of the Project through regular project updates. Our communication channels will also remain open to answer any questions.			X	
9-2.294	Suggest that a vote is held with those affected by the Project to determine the Projects outcome	The Development Consent Order (DCO) decision for the Project will be decided on by the Planning Inspectorate			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>and Secretary of State, who will review all the documents National grid produced alongside the feedback that we received as part of our statutory consultation. It would not be compliant with the requirements placed on us by our regulator Office of Gas and Electricity Markets (Ofgem), and the UK Government for us to determine the outcome of the Project through a popular</p> <p>There could be as much as 18 GW of offshore wind and interconnector energy coming into East Anglia by the end of the decade. There isn't currently enough network capacity in the region to support this level of energy so we need the Project to reinforce and develop the network to ensure this energy can be connected to homes and businesses across the UK.</p>				
9-2.295	Suggest that National Grid improve how they present the needs case for the Project (e.g. simpler for the general public, more engaging for younger people)	<p>National Grid published several documents during our statutory consultation that established the need for the project. This included technical and non-technical documents that were more accessible to the public. Non-technical documents included the Project Background Document and a non-technical summary of the Preliminary Environmental Information Report (PEIR).</p> <p>To engage with younger people, we held several youth focused events, including two university pop-ups and a youth only webinar. We also contacted schools along the route to offer more information to them on the proposals. This is consistent with our approach set out in</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Appendix E: Statement of Community Consultation (SoCC) and supporting evidence (document reference 5.1) which has been submitted as part of this Development Consent Order (DCO) application.				
9-2.296	Suggest that National Grid present the existing overhead line network together with the Project	National grid has a filter on our interactive map that shows existing overhead infrastructure. This can be toggled on or off. The interactive map can be found on our Project website. We also had existing overhead lines shown on our 3D visualisation tool that was available at our public information events.			X	
9-2.297	Suggest that the press allowed to attend and record / broadcast consultation events	National Grid had members of the press present at several of our Public Information Events. They were not allowed to record the events due to licensing requirements and laws regarding the recording of members of the public and children. Public information events were held at a range of times throughout the day and early evening and were publicised in the Secondary Consultation Zone (SCZ) to ensure that as many people could attend as possible.			X	
9-2.298	Criticism that National Grid contradict their actions elsewhere (e.g. use of undersea cables / underground cables for other Projects)	National Grid assess projects on a case-by-case basis, taking into consideration various factors such as feasibility, cost, environmental impact, statutory duties and regulatory requirements. Each project is evaluated independently, and decisions are made based on the specific circumstances and needs of that project. While National Grid may use undersea cables or underground	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		cables for certain projects, it does not necessarily mean that the same approach will be taken for all projects. The selection of cable types depends on a range of factors, including the specific requirements and constraints of each project. The selection of technology type depends on a range of factors, including the specific requirements and constraints of each project as well as complying with assumption in National Policy Statement EN-5.				
9-2.299	Criticism of electricity companies	National Grid note the respondent's feedback.			X	
9-2.300	Suggest that all responses to the consultation are published for the public to view	<p>National Grid notes the respondent's feedback. To analyse the responses received to the open questions in the feedback form, letters and emails, a coding framework was used. This framework was based on the structure of the statutory consultation response form which enabled the grouping of responses into location, categories and themes.</p> <p>Each response was assigned a unique reference number to create an audit trail throughout the analysis process. Quality assurance checks were undertaken to ensure that each response was accounted for and analysed.</p> <p>This was considered a reasonable and proportionate approach given the volume of feedback received and preferable to setting out each individual item of feedback in the report which would lead to duplication and increasing the length of the report substantially and is also in line with the Government advice on the</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>consultation report and appendices and requirements of the Planning Act.</p> <p>Some categories (such as visual impact) were split so that comments could be coded as being specific to a certain area of the Project. A response could receive multiple codes to highlight different themes and/or locations covered.</p> <p>Each code was responded to within the report within a table specific to the location it was referring to. If no location was specified, or if responses were general to the Project, a separate table ('X- no location') was used. Within each table individual codes were grouped into categories to make it easy for respondents to find National Grid's response to each separate code, for example 'Environmental Impacts', or 'Health and Safety'.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.301	Criticism that formal planning applications have already been made	<p>Norwich to Tilbury Project is a 'Nationally Significant Infrastructure Project' (NSIP).</p> <p>NSIPs are dealt with under the Planning Act 2008 and were introduced to streamline the consenting process for major infrastructure schemes as well as make it fairer and faster for local communities and applicants.</p> <p>Instead of applying to a Local Planning Authority for planning permission, NSIP developers apply to the Planning Inspectorate (PINS) for a Development Consent Order (DCO). PINS is responsible for operating the planning process which includes examining an application and writing a report with recommendations to the relevant Secretary of State who then makes a decision on whether or not to grant consent.</p> <p>Local Planning Authorities hosting NSIPs are statutory consultees in the DCO process and have several critical roles to play at each stage of the work.</p> <p>National Grid has just submitted its application for the Norwich to Tilbury Project.</p> <p>A planning application for an extension to Norwich Main substation was made in 2024 and granted consent by the relevant Local Planning Authority through the Town & Country Planning regime. Work started in October 2024. The extension of the substation is separate to our proposals for the Norwich to Tilbury Project, which is proposed to connect into Norwich Main. The substation extension is needed to connect the Hornsea Project Three offshore wind farm, and the Sheringham Shoal</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>and Dudgeon offshore wind farm extensions. It would also facilitate the connection of Norwich to Tilbury, should the Project be consented. The substation extension would still be required to connect new offshore wind generation even if Norwich to Tilbury did not go ahead.</p> <p>No applications have been made for the Project as of yet.</p>				
9-2.302	Criticism of the financial cost and environmental impact of printing and posting consultation materials (e.g. delivered by Yodel; received duplicate letters) / Request for National Grid to provide information on the financial cost and environmental impact of printing and posting consultation materials	<p>National Grid took a 'digital first' approach to consultation. It held all consultation materials on the Project website and encouraged people to access the documents online if they were able to. We also had documents available at Public Information Events.</p> <p>To ensure our engagement and consultation is inclusive, we developed consultation 'in person' aspects such as inspection points where we provided paper copies of materials.</p> <p>For those unable to travel to the inspection points we also provided printed copies by request to provide an inclusive consultation for all people.</p> <p>The Project is a Nationally Significant Infrastructure Project (NSIP) which requires development consent from the Secretary of State for Energy Security and Net Zero (SoS) via a Development Consent Order (DCO) process. This means that the application must demonstrate that adequate consultation has been undertaken. This process ensures that there is sufficient</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>opportunity from pre application engagement through undertaking various rounds of consultation. As consultation is a statutory requirement, it was carried out as part of the development process and all costs are associated with the wider project. It would not be possible to separate the costs for consultation from the cost of developing the Project. Our approach to consultation is agreed with the relevant Local Authorities before we launch.</p> <p>We are required to produce and post materials to properties affected by the proposals and use environmentally friendly materials where possible. This is part of our responsibility to ensure local residents are informed on the Project and can leave feedback on our proposals.</p>				
9-2.303	Criticism that that the Project uses overhead lines, when these are being removed elsewhere in the UK (e.g. due to impact on the environment, communities, landscape and heritage)	<p>The National Grid Visual Impact Provision (VIP) project is making use of a £465 m provision by Ofgem to carry out work that reduces the impact of existing transmission lines in English and Welsh National Landscapes (formerly Areas of Outstanding Natural Beauty (AONBs)) and National Parks. Where the Project is proposed as overhead line it is not located within a National Park or National Landscape (AONB) and would therefore site outside of the VIP project scope.</p> <p>National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is 'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Park, The Broads, or Area of Outstanding Natural Beauty (AONB)'. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25).</p> <p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at other locations proposed as overhead line would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
9-2.304	Suggest that the 400 kV lines and 132 kV lines are included on the interactive map	<p>National Grid has a filter on our interactive map that shows existing overhead infrastructure. This can be toggled on or off. The interactive map can be found on the Project website.</p> <p>We also had existing overhead lines shown on the 3D visualisation tool that was available at the public information events.</p>			X	
9-2.305	Criticism that National Grid has chosen not to delay the consultation to consider the Electricity System Operator ESO report findings (March 2024)	<p>National Grid considered the findings of the Electricity System Operator (ESO) report when it was released in March 2024 and published our response to the findings of the report in April 2024. Our response is available in our document library on our Project website.</p> <p>We were awaiting confirmation on whether the Government intended to take the Offshore Co-ordination Support Scheme (OCSS) forward, or if the customers involved wished to change their contracted arrangements. While waiting for that information,</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>National Grid had a legal obligation to connect the customers and had to continue to progress the development of the existing East Anglian network projects.</p> <p>The Government later announced that, based on the findings of the feasibility work funded through the OCSS, they would not continue funding the OCSS for the 2024 to 2025 financial year.</p>				
9-2.306	Criticism that the findings of the Electricity System Operator (ESO) review (March 2024) have not been considered / Criticism that National Grid have not adequately addressed the findings of the ESO review (March 2024) / Suggest that the ESO review (March 2024) is used to guide future work on the Project	National Grid has considered the findings of the March 2024 Electricity System Operator (ESO) East Anglia Network Study, and we published our response to the findings of the report in April 2024. It is available in our document library on the Project website.	X	X	X	
9-2.307	Suggest that letters and emails should be sent to all residents affected by the Project	<p>During National Grid's statutory consultation period we engaged with properties within 1 km of the proposed route as part of our Primary Consultation Zone (PCZ). This included sending through Project specific information to the properties and sharing information about how to engage with the Project and leave feedback. This contact included through both letters and emails to residents along the route.</p> <p>We advertised our consultation in regional newspapers within a wider Secondary Consultation Zone (SCZ) which extended to 4 km on either side of the alignment.</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		This is in line with the statutory requirements placed on us by our regulators for the running of consultation.				
9-2.308	Criticism that residents affected by changes to the Project since the previous consultation were not contacted directly	<p>During National Grid's statutory consultation period we engaged with properties within 1 km of the proposed route as part of our Primary Consultation Zone (PCZ). This included sending through Project specific information to the properties and sharing information about how to engage with the project and leave feedback. All residents affected by the Project, including any changes since non-statutory consultation, would have been contacted directly as part of this PCZ.</p> <p>Where our alignment had changed significantly since our non-statutory consultation in 2023, we held more targeted Public Information Events in those villages that were impacted by the alignment change. For example, we held an event at Gislingham village hall after an alignment change that brought the route closer to the village.</p>			X	
9-2.309	Suggest that additional consultation is held for local schools	During statutory consultation National Grid held several events that were targeted at young people, including two university pop-up events, and a youth focused online webinar. We made direct contact with primary and secondary schools along the route to share information about the Project and a link to register for the youth webinar. Our approach for engaging with young people is outlined in the Statement of Community Consultation (SoCC) which is available on our Project website and			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		was submitted as part of our application for development consent.				
9-2.310	Criticism that contracts have already been confirmed, despite National Grid not owning all required land	<p>The connection process for customers, including customer contracts (for which agreements are in place with numerous offshore windfarms), which are contracts between the customer and the National Energy System Operator (NESO) (previously the Electricity System Operator – ESO), is governed by the Connection and Use of System Code and is managed by NESO in accordance with government policy. National Grid is legally obliged (under its Transmission Owner Licence) to provide capacity at the dates formally agreed in contracts with energy generators (or customers).</p> <p>There is no requirement for National Grid to acquire rights over land prior to a contract being confirmed.</p>	X		X	
9-2.311	Criticism that National Grid has already started / commenced works in preparation for constructing the Project / Suggest that National Grid pause works until the consultation is complete	<p>National Grid has not started any construction work for Norwich to Tilbury. We have been carrying out various surveys including archaeological surveys along the route of the Project to inform the design and environmental assessments. National Grid is carrying out several other developments in the area that are undergoing construction work such as the Bramford to Twinstead Reinforcement and works at our Norwich Main Substation.</p> <p>These projects have been consented and are being developed separately to our proposals for Norwich to Tilbury Project and are part of the wider Great Grid</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Upgrade to connect new sources of renewable energy into the grid.				
9-2.312	Suggest door-to-door surveys in areas of higher population so those who are unable to put views in writing still have chance to express their views	<p>Due to the length of the Project, it would not be possible for us to use door-to-door contact with properties.</p> <p>During our statutory consultation period National Grid engaged with properties within 1 km of the proposed route as part of our Primary Consultation Zone (PCZ). This included sending through Project specific information to the properties and sharing information about how to engage with the Project and leave feedback.</p> <p>In exceptional circumstances, we accepted feedback in alternative ways where people were unable to utilise the other methods. This included through allowing others to leave feedback on their behalf as written correspondence. The public information events were open to all members of the public to allow them to learn more about the proposals and had copies of our feedback questionnaire available so that they could leave feedback here. If someone was unable to attend a Public Information Event, we also held six webinars where they could express their views and ask questions.</p>	X		X	
9-2.313	Criticism that National Grid have not considered Lord Charles Banner KC's review(s) of the Project / Criticism that National Grid haven't responded to Charles Banner KC	National Grid has read and considered all the feedback we received as part of the 2022 and 2023 non-statutory consultations, 2024 statutory consultation and the 2025 targeted consultations and landowner consultation. The feedback submitted during previous consultations,	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		including from Charles Banner KC was responded to in Chapter 4 of the 2023 Non-Statutory Consultation Feedback Report. The previous reports remain available on the Project website. The feedback submitted by Charles Banner KC at statutory consultation is responded to in Appendix N5.				
9-2.314	Suggest that National Grid uses local design panels and community forums	The Project will be decided on by the Planning Inspectorate and Secretary of State, who will review all the documents National Grid produced alongside the feedback that we received as part of our statutory consultation. It would not be compliant with the requirements placed on us by our regulator Ofgem, and the UK Government for us to determine the outcome of the Project through a local forum.			X	
9-2.315	Criticism that National Grids consultation material does not cover Ofgem role in the overall decision process	<p>National Grid is regulated by Ofgem, and our decisions are scrutinised by them to ensure that we are acting in line with the requirements placed on us. They are not directly linked with the decision-making process for Nationally Significant Infrastructure Projects (NSIPs), which are reviewed and decided on by the Planning Inspectorate.</p> <p>After receiving the application, the Planning Inspectorate has 28 days to accept it and decide if it can proceed to the examination stage.</p> <p>The Planning Inspectorate will hold an examination. When this finishes it has three months to make a recommendation to the Secretary of State about whether</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		the application should be approved. The Secretary of State then has a further three months to make a final decision.				
9-2.316	Criticism that the National Policy Statement for Energy 2011 has not been considered	The National Policy Statement (NPS) for Energy EN-1 published in 2011 was considered in the development of the Project as set out in Section 3 of the Corridor and Preliminary Routeing and Siting Study (CPRSS) published in 2022 (available on the Project website). Draft updates to the policy, which were being consulted upon were also considered. This policy has now been superseded and replaced by NPS EN-1 published in 2023 and enacted in early 2024. The updated policy has been considered in the development of the Project and detailed in the Planning Statement (document reference 5.6).	X	X	X	
9-2.317	Concern that opposition to the Project will delay the proposed completion date and take away the financial advantage of using overhead lines	Electricity transmission infrastructure will be a critical enabler in the clean energy transition. In order to support the government's ambition of connecting 50 GW of offshore wind by 2030, we will need to deliver over five times more electricity transmission infrastructure in the next seven years, than has been built in the last 30 years. The Norwich to Tilbury Project is required in order to ensure new sources of energy can be connected to the network. If the Project is delayed, it would place constraints on the network which would lead to constraint payments, adding further costs to the Project.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.318	Criticism that the Project opposes Government strategy for an offshore grid	National Grid is not aware of government policy for an offshore grid. National Grid takes forward its proposals under the current regulatory and national planning policy framework. If that changes then National Grid will back-check its proposals in light of that. Strategic alternatives for the Project, including underground cables and offshore cables, have been considered and are set out in the published Strategic Options Backcheck and Reviews (SOBR) published in 2023 and 2024 (available on the Project website) and the 2025 SOBR (document reference 7.17).			X	
9-2.319	ESG considerations have not been applied	National Grid is legally and ethically required to align its operations with relevant regulations and standards. This ensures that its activities adhere to environmental protection laws, social accountability frameworks, and governance principles. ESG reporting includes an environmental, social and governance (ESG) materiality assessment. However, this is reported on separately to meet wider legislation and corporate requirements. There is no statutory requirement for an application requiring development consent to apply ESG.	X		X	
9-2.320	Suggest that National Grid should speak with all landowners impacted by the Project	National Grid consults with all landowners and persons with an interest in a piece of land impacted by the Project. If a landowner or a person with an interest in the land feels that they have not been consulted they should make contact with the Project Lands Team to discuss:			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.</p> <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD.</p>				
9-2.321	Suggest that National Grid provide a mock-up of the Project, specifically the overhead lines / pylons in real life size along with representations of the 100 m channels for undergrounding	<p>National Grid provide a wealth of drawings and information to depict the scale of the Project. This information can be found on the Project website.</p> <p>At the statutory consultation there was also a 3D Visualisation tool available for viewing.</p>			X	
9-2.322	Suggest that National Grid ask the Secretary for Energy for an extension to the Projects 2030 contract, so that alternative options (such as underground cables an offshore solution) can be considered / Suggest that the Secretary of State should delay the Project so that alternative options can be considered	<p>Strategic alternatives for the Project, including underground cables and offshore cables, have been considered and are set out in the published Strategic Options Backcheck and Review (SOBR) published in 2023 and 2024 (available on the Project website) and the 2025 SOBR (document reference 7.17). These are available on the Project website. National Grid has considered National Policy Statement (NPS) EN-5 which covers the development of new energy infrastructure. The Project aligns with NPS EN-5. This policy concludes that in most cases, the government expects that overhead lines will be appropriate and should be used as standard to reinforce the grid. Regarding offshore alternatives, there is no fully offshore solution to connect offshore wind to the grid, and we have to bring the power onshore somewhere. Our job is to carefully</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>consider the most feasible options and present proposals for public consultation. In doing this, we must consider impacts on local communities and the environment and deliver value for electricity consumers. We have assessed an equivalent offshore option with connections onshore, and to deliver the same capacity as the overhead line, we would need to build three subsea cables and associated onshore infrastructure. There are a range of environmental factors and other onshore and offshore impacts which need to be considered in this option. This option would also mean significant extra cost to consumers, and that would not meet the requirements placed on us. Taking all these considerations into account we have concluded that an onshore connection is the most appropriate solution.</p> <p>National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is 'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Park, The Broads, or Area of Outstanding Natural Beauty (AONB))'. Where no such</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25).</p> <p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at other locations proposed as overhead line would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.323	Criticism that no representatives from Ofgem were in attendance at consultation events	National Grid's public information events were attended by various members of the Project team, including from the planning, consents, environmental, engineering and traffic teams. We did not have representatives from Ofgem at these events as the events were held to share more information on the proposals for Norwich to Tilbury Project that have been developed by the team at National Grid.			X	
9-2.324	Suggest that National Grid "pause" the Project to consider the Electricity System Operator (ESO) report findings in collaboration with the Department for Energy Security and Net Zero, and local stakeholders	<p>National Grid considered the findings of the National Energy System Operator (NESO) (previously Electricity System Operator (ESO)) report when it was released in March and published our response to the findings of the report in April 2024. Our response is available in the document library on the Project website.</p> <p>National Grid has a statutory obligation to our customers to maintain an efficient and coordinated system of electricity transmission, and while awaiting further information in response to the ESO East Anglia Network Study, we had to continue to progress the development of the existing East Anglian network projects in order to meet our legal obligations. We were awaiting confirmation on whether the government intended to take the Offshore Co-ordination Support Scheme (OCSS) forward, or if the customers involved wished to change their contracted arrangements.</p> <p>The government later announced that, based on the findings of the feasibility work funded through the OCSS,</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		they would not continue funding for the OCSS scheme for the 2024 to 2025 financial year.				
9-2.325	Criticism that National Grid have not sufficiently addressed the independent report commissioned by Norfolk County Council, Essex County Council and Suffolk County Council	National Grid has considered the independent review carried out by Hiorns Smart Energy Networks in September 2023. We carefully reviewed the report and its appraisals and published our response to the findings of the Hiorns Report in April 2024. Our response is available in the document library on the Project website.	X		X	
9-2.326	Suggest that National Grid should engage with Norfolk County Council and UK Power Networks to consider opportunities to provide power to Norfolk, identifying additional infrastructure which may be required for this / Suggest that this is carried out in conjunction with Norfolk County Council's preparation of an Energy Plan, and that National Grid contribute towards such a plan	<p>Throughout National Grid's consultations, we have engaged with all the relevant Parish, District, and County Councils along the proposed route. This included Norfolk County Council to discuss our proposals in the region. We have also worked with UK Power Networks to assess how the Project might interact with its existing and proposed electricity supply infrastructure. Where required, we are removing sections of UK Power Networks overhead lines to reduce accumulated visual impacts.</p> <p>We have taken on board all the feedback we received at the statutory consultation and, where possible, have amended our proposals to reflect this. This includes several pieces of feedback from Norfolk County Council.</p> <p>All our projects are developed in response to the current and expected demand on the network, which will increase in order to reach net zero. As part of our Ofgem licence to operate, National Grid Electricity Transmission</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>(NGET) and National Energy System Operator (NESO) must ensure that there is an adequate supply of electricity to meet demand (hence why the Project is being promoted) and offer a connection to developers wanting to connect new sources of electricity generation to the national transmission system.</p> <p>Our statutory duty and the terms of our transmission licence require National Grid to be efficient, coordinated, and economical when formulating proposals while also considering the effect on the environment.</p>				
9-2.327	Criticism that National Grid has not considered the Electricity Act 1989 / Criticism that the Project is contrary to the Electricity Act 1989 (e.g. paragraph 1(1) of Schedule 9; Section 9)	<p>National Grid follows a robust assessment process which we believe is appropriate for projects like this. Our assessments, strategy, plans and recommendations all come under Ofgem regulation and approval. Ultimately our processes will be assessed by the Planning Inspectorate and the relevant Secretary of State.</p> <p>The Project has been developed in line with the requirements placed on us by relevant government acts and regulations, including the 1989 Electricity Act.</p>	X		X	
9-2.328	Suggest that National Grid include protected lanes on their maps	<p>Protected lanes have been considered within the route development process, and when considering feedback but it is not possible to show all constraints on the same plan and still retain the functionality of the plans and figures.</p> <p>The Historic Environment Assessment presented in ES Chapter 11: Historic Environment (document reference 6.11) has considered historic routeways including</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>designated Protected Lanes and other historic routes identified through historic mapping or through Historic Environment Records and these are shown on associated figures (see ES appendices (document reference 6.11.A1 to 6.11.A7) and ES figures (document reference 6.11.F1 to 6.11.F5)).</p> <p>National Grid does not consider that the presence of Protected Lanes or cycle routes is a barrier to routeing. The potential effects of their use for construction access are noted and used to inform the access arrangements proposed in the statutory consultation.</p> <p>The basemap shown on the plans and figures contained within the statutory consultation materials and the Development Consent Order (DCO) submission materials is as received from Ordnance Survey, which does not reference protected lanes.</p>				
9-2.329	Suggest that the A1066 is included as part of the Strategic Road Network (SRN) in the Non-Technical Summary	National Highways sets which roads are classified as part of the Strategic Road Network (SRN), which the A1066 is not, National Grid has no control over which roads are classified as part of the SRNs.		X		
9-2.330	Request that in the Design Development Report (and Appendices) Stutson Common and Diss Golf Club are treated separately	National Grid can confirm that Stutson Common and Diss Golf Club were considered separately with regards to the Environmental Impact Assessment (EIA), including effects described within the Environmental Statement (document reference Volume 6: Environmental Statement) as well when assessing		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		alternative routeing options as described in the 2025 Design Development Report (document reference 5.15).				
9-2.331	Suggest that sensitive receptors are shown on the A1066 route from Thetford	The impact of the Project on the A1066 from Thetford has been assessed in Chapter 16: Traffic and Transport of the Environmental Statement (ES) (document reference 6.16), including baseline information such as the list of sensitive receptors, collisions and highway constraints.		X		
9-2.332	National Grid should make direct contact with all receptors within 250 m of the Project and advise them of the means to raise concerns or complaints, reporting any complaints to the Environmental Health Department of the relevant Local Authority	<p>At the start of statutory consultation, National Grid wrote to all properties within our Primary Consultation Zone (PCZ), which extended to 1 km on either side of the alignment. In this, we shared information on how members of the public could leave feedback on our proposals through our public information channels.</p> <p>Paper copies of the key consultation documents were also placed at information points in publicly accessible venues along the route sharing information on how to leave feedback.</p> <p>The contact channels for people wishing to raise concerns or complaints directly to National Grid – Norwich to Tilbury are:</p> <p>email us at: contact@n-t.nationalgrid.com</p> <p>Write to us at (no stamp required): FREEPOST N TO T</p> <p>Call us on: 0800 915 2497.</p> <p>These details are available on the Project website and are included in all Project materials sent to properties.</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		How we propose to contact residents and stakeholders during construction and the complaints procedure we propose to follow is detailed in Appendix E: Community Engagement and Public Information of the Outline Code of Construction Practice (CoCP) (document reference 7.2).				
9-2.333	Criticism that it appears that the overriding objective of the Project is timing to minimise the cost of compensation to wind farm operators who are unable to connect to the Grid	<p>National Grid is legally obliged (under our Transmission Owner Licence) to provide capacity at the dates formally agreed in contracts with energy generators (or customers). Contract dates are set out by National Energy System Operator (NESO) independent of National Grid.</p> <p>Ultimately, if there is insufficient transmission network capacity to allow connected windfarm to generate, then constraints payments to the windfarms, would be triggered. The cost of this in any one year, could be very substantial. This is ultimately paid by electricity bill payers. Therefore, timing is a key consideration of the Project. The need case for the Project is set out in the 2025 Strategic Options Backcheck and Review (document reference 7.17).</p> <p>The NESO Clean Power 2030 Report, published in Nov 2024 states, with reference to the Norwich to Tilbury and SeaLink projects:</p> <p>"Three projects have been identified as critical to delivering a network which supports the clean power pathways, but at present have delivery dates after 2030. Support is therefore needed to bring these projects</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		forward for 2030 delivery. These are projects in East Anglia and in the southeast that are critical for connecting offshore wind in the North Sea and supporting the flow of clean power. Our assessment suggests that without these projects, the clean power objective would not be achieved, leaving the clean power target short by around 1.6% in 2030 (assuming a typical weather year) and consumers could face extra constraint costs of around £4.2 billion in 2030".				
9-2.334	Criticism that the National Policy Statement (NPS) for electricity networks infrastructure (EN-5) has not been considered (e.g. Paragraph 2.12.3; Paragraph 2.8.4), including the updates made to the NPS in January 2024	<p>The respondent appears (by reference to updates to the National Policy Statements (NPSs)) to be implying a residual status for the 2011 NPSs. However, these are withdrawn with the relevant NPSs being those enacted in January 2024.</p> <p>Paragraph 2.8.4 of NPS EN-5 refers to bringing forward economic and efficient proposals which National Grid considers the Project design is doing given the substantially greater cost of fully underground or substantially offshore solutions. Paragraph 2.12.3 of NPS EN-5 refers to the need for substantial amount of new onshore infrastructure, which National Grid agrees is required and is developing in a co-ordinated, economic and efficient manner.</p>	X	X	X	
9-2.335	Request that a better description of the temporary works structures and the length of time they are proposed to be in situ for is included in the Project Description within the Preliminary Environmental;	The Preliminary Environmental Information Report (PEIR) was a preliminary document and reflected the Project proposals at the time of statutory consultation.		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	Information Report (PEIR) to better reflect the construction works arrangements (in relation to section 4.1.3 in PEIR Vol I)	Temporary works structures are described within Chapter 4: Project Description of the Environmental Statement (ES) (document reference 6.4). Once the Project has been constructed and commissioned, the temporary construction working areas would be removed, and the site reinstated. Haul roads (including temporary bridges and culverts) are likely to be removed unless identified as offering a long-term improvement to the environment and land usage during the detailed design (and agreed with the landowner, Lead Local Flood Authority and / or the Environment Agency (where required)). Temporary features such as site welfare, working areas, fencing and scaffolding would be removed. Any stripped topsoil would be reinstated, and the site would be returned to its former use, subject to any planting restrictions or agreements with landowners.				
9-2.336	Request that further information is provided within the Preliminary Environmental Information Report (PEIR) in relation to the crossing of existing ordinary watercourses by the temporary construction works, along with ordinary watercourse consents which are likely to be required for all relevant watercourse crossings (in relation to section 4.7.8 in PEIR Vol I)	The Preliminary Environmental Information Report (PEIR) was a preliminary document and reflected the Project proposals at the time of statutory consultation. Further detail on the watercourse crossings proposed is included within Chapter 12: Hydrology, Land Drainage and Flood Risk of the Environmental Statement (ES) (document reference 6.12), including a schedule of the proposed crossings required.		X		
9-2.337	Request for details on the surface water management for all compounds and temporary	Details of surface water management proposals are provided in the Flood Risk Assessment (FRA)		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	construction works features (in relation to section 4.8.3 in PEIR Vol I)	<p>(document reference 7.9). The FRA describes that surface water runoff would be collected from compounds and other work areas and provided with the necessary treatment and attenuation prior to discharge into the water environment. A suite of principles for managing surface water have been agreed with the Environment Agency, Lead Local Flood Authorities (LLFAs) and Internal Drainage Boards (IDBs).</p> <p>Commitment GG27 within the Outline Code of Construction Practice (CoCP) (document reference 7.2) secures that the appointed main works contractor(s) would further develop these principles and prepare a Construction Surface Water Management Plan. The Plan would demonstrate how runoff across the site would be controlled and how any off-site effects would be managed and mitigated. There would be no intentional discharge of site runoff to ditches, watercourses, drains or sewers without appropriate treatment and agreement of the relevant authority.</p> <p>Chapter 12: Hydrology, Land Drainage and Flood Risk of the ES (document reference 6.12) assesses the effects of temporary works on hydrology, land drainage and flood risk and concludes no likely significant effects.</p>				
9-2.338	Criticism that the Overarching National Policy Statement for Energy (EN-1) has not been considered (e.g. in relation to identifying alternative options for the Project) / Suggest that National Policy Statement for Energy (EN-1) should be considered	National Grid disagrees with this response and notes for example that in Section 3 of the Corridor and Preliminary Routeing and Siting Study (CPRSS) (available on the Project website) the policy context set out and informing the development included National Policy Statement	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		(NPS) EN-1 and NPS EN-5 (2011) with this position being updated in the 2024 Design Development Report (available on the Project website) to respond to the updated NPS EN-1, EN-3 and EN-5. The current position and explanation of how policy has guided Project design is set out in the 2025 Design Development Report (document reference 5.15).				
9-2.339	Criticism that National Grid don't provide any evidence in the Preliminary Environment Information Report (PEIR) to show that the pylons need to be consistently at 50 metres in order to deliver the scheme	<p>The Preliminary Environment Information Report (PEIR) presents a preliminary assessment of the likely significant environmental effects of the Project, to inform consultation.</p> <p>The purpose of the PEIR is to enable members of the public, consultation bodies, and other stakeholders, to develop an informed view of the preliminary likely significant effects of the Project and comment on aspects of interest.</p> <p>The 2025 Design Development Report (document reference 5.15) contains additional technical detail including the rationale behind heights of lattice pylons (document reference 5.15). Each pylon is a different height bespoke to the constraints around it, things that typically drive variations in pylon heights can be span lengths, topography of those spans to ensure ground clearance is maintained and any other physical constraint that may be present.</p> <p>National Grid are required to adhere to Policy Statements and Technical Specifications which detail minimum safe clearances from the ground for all new</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		overhead transmission lines, these specifications were agreed with government at the time they were published and form a uniform approach across new overhead line routes. These clearances are adhered to in order to maintain safe electrical clearances whilst maintaining safe levels of exposure to Electric and Magnetic Fields (EMFs) and minimise the risk of microshocks occurring.				
9-2.340	Criticism that the Infrastructure Planning (Decisions) Regulation 2010 (Reg 3) has not been considered	The assessment of the impact of the Project on the historic environment has been carried out in accordance with relevant legislation, including the Infrastructure Planning (Decisions) Regulations 2010 (Regulation 3), The Environmental Statement (ES), particularly Chapter 11: Historic Environment (document reference 6.11), demonstrates how these requirements have been considered in assessing impacts on listed buildings, their settings, and conservation areas. The approach taken has been discussed and agreed with statutory consultees, including Historic England and the relevant Local Planning Authorities.	X		X	
9-2.341	Criticism that National Grid have not considered the Planning (Listed Buildings and Conservation Areas) Act 1990 (including section 66(1) and section 72)	The Historic Environment assessment included in Chapter 11: Historic Environment of the Environmental Statement (document reference 6.11) has been undertaken in accordance with relevant legislation, planning policy and guidance. This includes undertaking an assessment of the impact of the Project due to change in the settings of listed buildings that affects their value, to enable the Examining Authority on behalf of the	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		secretary of State to make a decision with reference to section 66(1) and section 72 of the Planning (Listed Buildings and Conservation Areas) Act 1990.				
9-2.342	Concern that the Project will go to judicial review, even if approved by the Secretary of State, due to public opposition (including County and District Councils, and MPs), which will cause major delays and result in National Grid not being able to meet its 2031 completion date for the Project / Suggest that National Grid should look at alternative options as the Project will likely be delayed due to appeals and Judicial Reviews	Should the Secretary of State (SoS) grant development consent then National Grid is fully aware that any legal challenge could be by way of Judicial Review. However, any potential claimant would need to secure permission from the court to bring an application for judicial review, commonly known as the 'permission stage' at which point the court would consider the merits of the claim against the relevant test: whether the claim discloses an arguable case. It is up to the court to consider the application and determine whether the claim should be heard. The threat of a Judicial Review at this stage should not simply determine the outcome of the proposed Project.			X	
9-2.343	Concern that National Grid has allocated offshore connections that they cannot yet accept and that National Grid will have spare capacity should the Project go ahead alongside Necton and Bramford	The Needs Case set out in our Strategic Options Backcheck and Review Report 2024 and 2025 (available on the Project website), includes the connection projects that are listed on the National Energy System Operator (NESO) Transmission Entry Connections (TEC) and Interconnectors Register. All of the Connections listed on these Registers have a NESO contract to connect to the transmission system.			X	
9-2.344	Concern that the Project does not include the 60 km connection from the North Sea to the Norwich Main substation, and that the environmental and social	The cumulative effects of the Project with other committed developments has been considered in the Environmental Impact Assessment (EIA) for the Project.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	impact of this additional connection has not been presented as part of the Project	The results of this assessment are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the application for development consent.				
9-2.345	Criticism that National Grid has not engaged with government representatives on the Strategic Spatial Energy Plan or considered the Transmission Network Infrastructure Government Statement	<p>In October 2024 the UK, Scottish and Welsh Governments jointly commissioned the National Energy System Operator (NESO) to produce a Strategic Spatial Energy Plan (SSEP) for Great Britain. This more strategic approach to planning will help accelerate the Government's clean energy superpower mission. National Grid supports the need for a SSEP and is engaged with NESO responsible for its production, as required.</p> <p>However, NESO's Clean Power 2030 report identifies the need for the Project to be delivered by 2030. National Grid has in conjunction with NESO undertaken the necessary exercises/studies and its now important the Project makes progress to ensure NESO's ambition for Clean Power 2030 is realised.</p>			X	
9-2.346	Criticism that the alternative options (e.g. offshore, underground, etc) for the Project were not assessed independently / Suggest that options for the Project are independently assessed (e.g. costs for offshore and underground cables)	<p>National Grid assessed the alternative technologies which could be employed as part of the Project, as contained in our 2024 and 2025 Strategic Options Backcheck and Review (available on the Project website).</p> <p>The use of offshore connections and underground cables was also independently assessed by Electricity System Operator (ESO) (now National Energy System</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Operator (NESO)) in its 2024 East Anglia Network Study. The report concluded that an offshore or underground alternative, including using High Voltage Direct Current (HVDC) cables, would be much more expensive, have unique environmental impacts, and present engineering challenges. The ESO Study also confirms that an underground HVDC option or offshore connection wouldn't be deliverable until at least 2034. This would not meet our licence obligations to provide capacity at the dates formally agreed in contracts with energy generators (or customers). Contract dates are set out by ESO, and we are required to deliver this connection by 2030. The ESO Study is also clear that waiting until 2034 to deliver infrastructure is at least £1 bn worse for consumers, due to additional constraint costs.				
9-2.347	Criticism of meetings held with landowners	<p>All affected landowners were offered a meeting with Fisher German as part of the statutory consultation for the Project. At these meetings information / plans were shown to landowners, and the opportunity was given to provide feedback / change requests to be assessed by the Project team.</p> <p>Landowners were offered the opportunity to meet with Fisher German ahead of the general public consultation which allowed landowners the further opportunity to attend a consultation event and speak with other Project disciplines i.e. engineering, environmental and consents.</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.348	Suggest that National Grid organise exclusive technical challenges and open discussions	<p>During our statutory consultation, National Grid held 14 public information events where members of the public could ask our Project team questions. We also had all of our Project material available at these events, including technical documents and maps.</p> <p>These documents remain available on our Project website, and we have dedicated communication channels that are open to the public should they have any questions about our proposals.</p>			X	
9-2.349	Suggest that a joined up electricity strategy for the whole of Great Britain is developed	<p>National Policy Statement for Electricity Infrastructure Networks (EN-5) (DESNZ, 2024) emphasises the importance of strategic co-ordination – Paragraph 2.12.4 states 'it is important that the network planning for offshore transmission is much more closely coordinate with the planning and development of the onshore transmission network than previously'.</p> <p>Paragraph 2.12.5 goes on to state 'offshore-onshore transmission co-ordination work is undertaken through a process of ongoing reform with the key outcomes including the Holistic Network Design (HND) and its subsequent follow up exercises for offshore-onshore transmission and subsequent strategic network planning exercises such as the Centralised Strategic Network Plan (CSNP) led by National Grid Electricity System and/or the Future Systems (once established)'.</p> <p>The UK, Scottish and Welsh Governments have jointly commissioned the National Energy System Operator</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>(NESO) to produce a Strategic Spatial Energy Plan (SSEP) for Great Britain. This more strategic approach to planning will help accelerate the Government's clean energy superpower mission.</p> <p>The Project has been subject to strategic network exercises such as the Holistic Network Design and therefore has been subject to strategic network planning. National Grid is also engaged in the SSEP and CSNP exercises where potential interactions with existing Projects will need to be understood.</p> <p>NESO's Clean Power 2030 report identifies the need for the Project to be delivered by 2030. National Grid has in conjunction with NESO undertaken the necessary exercises/studies and its now important the Project makes progress at pace to ensure NESO's ambition for Clean Power 2030 is realised.</p>				
9-2.350	Suggest that all of National Grid's alignments are drawn up by independent parties who look at all sides and carry out site visits to cover the entire proposed alignments	To reach an alignment, National Grid undertakes a phased options appraisal process. This staged approach, whereby the options are consulted upon and then narrowed down through consultation gives a structured approach to project optioneering to reach a defined alignment. This is a tried and tested approach which takes into consideration feedback from non-statutory and statutory consultation. National Grid is always looking for continuous improvements – the comments provided are noted but there is no mandatory requirement for this to be carried out by independent parties.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.351	Criticism of multiple communications received from National Grid	During National Grid's statutory consultation, we wrote to properties within 1 km of the proposed alignment to keep them informed about our proposals. We are aware that some properties received several of the same document, this happened where we had multiple residents listed at a property and so each resident would have received a copy of the consultation information. Throughout consultation, we had communication channels available so that people could request to be taken off our mailing lists.			X	
9-2.352	Criticism that National Grid included the wrong date in their email notifying consultees that the consultation had been extended (e.g. the email stated 28th / 29th June instead of the 26 July)	National Grid is aware that in our June Project Update we incorrectly stated the end of consultation as the 29 June. We issued a corrected Project Update to the same contacts with the date updated to the 26 July the following day.			X	
9-2.353	Criticism that Norwich to Tilbury, 5 Estuaries, North Fall and Tarchon are being consulted on separately, despite their large cumulative impact	National Policy Statement for Electricity Infrastructure Networks (EN-5) (DESNZ, 2024) says the government does envisage that, wherever reasonably possible, applications for new generating stations and their related infrastructure should be contained in a single application to the Secretary of State. However, EN-5 also states that a consolidated approach of this kind may not always be possible, nor represent the most efficient strategy for delivery of new infrastructure (paragraph 2.7.2). Separate development consent applications cannot be consulted upon together because each development consent application is considered an independent			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>project under the Planning Act 2008, with distinct legal, procedural and statutory requirements. The law requires that each project is assessed individually to ensure compliance with the relevant regulations and to allow for a clear, fair and transparent consultation process.</p> <p>While consultations cannot be combined, cumulative impacts of separate development consent projects in the same area must still be assessed. This means each development consent application must evaluate how its project interacts with others in terms of environmental, social and economic effects. The Planning Inspectorate considers cumulative impacts as part of each project's examination but does so within the framework of the individual development consent.</p>				
9-2.354	Criticism that letter was sent to the wrong person / Criticism that letter was sent to someone who is deceased	As part of the statutory consultation, National Grid sent out letters to all parties that were considered to have an interest in a potentially affected piece of land. In order to do this, land referencing was carried out and information acquired from the HM Land Registry and land interest questionnaires sent out. Unfortunately, land registry data is not always up to date / correct and where we have not received a response to a land interest questionnaire, this can sometimes result in correspondence being addressed incorrectly.			X	
9-2.355	Suggest that the postcode question should have had a drop down list, instead of a freeform address box	Due to the large number of respondents and addresses contacted during the consultation, a freeform address box was included in the online feedback questionnaire			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		as well as the hard copy version. A drop-down list of all post codes along the route would be difficult for users to navigate and a freeform address box also allowed wider participation in the consultation from those interested and impacted who do not have a postcode on the list.				
9-2.356	Suggest that National Grid should wait until the result the Electricity Distribution Network Study from the National Infrastructure Commission is available (due in early 2025)	National Grid has remained open-minded to considering any new external studies that are appropriate and relevant. However, there is a need to continue progressing with the Project to meet planned customer connection requirements and therefore we cannot simply wait until further studies emerge. Furthermore, the Project will reinforce the region's electricity transmission network. Therefore, this specific study on electricity distribution (not transmission) is not considered relevant to the Project.	X			
9-2.357	Criticism that National Grid have taken the view that the Project is required by assuming that the power from the wind farms is already transported to Norwich, when the reality is that it is not	New connections for new offshore wind and nuclear power generation projects and for interconnectors into East Anglia are expected to continue in addition to the current contracted position. These new connections are being constructed or are expected to connect into substations at Necton, Norwich Main, Bramford, Friston and Sizewell. Additionally, agreements are in place with two offshore wind farm projects and an interconnector based on their connections into a new East Anglia Connection Node (EACN) substation. National Grid has a duty to facilitate new connections and maintain a safe National Electricity Transmission System (NETS) and	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>has considered the capability of the existing network to support such connections.</p> <p>East Anglia's 400 kV electricity transmission network was built in the 1960s. It was built to supply regional demand, centred around Norwich and Ipswich. With the growth in new energy generation from offshore wind, nuclear power and interconnection with other countries, there will be more electricity connected in East Anglia than the network can currently accommodate.</p> <p>As a result, and to comply with its duties, National Grid needs to reinforce the electricity network to allow power to be imported to and exported from East Anglia. The reinforcement would provide additional capability to connect to areas of demand, allowing power flows cross boundaries, and linking into interconnectors to and from Europe.</p>				
9-2.358	Request for this Statutory consultation for the Project to be extended from the 4 July 2024 (e.g. due to the general election)	On the 5 June 2024, we announced an extension to our statutory consultation until the 26 July to allow the public, their representatives, and stakeholders additional time to provide feedback on our proposals after the General Election on 4 July.		X	X	
9-2.359	Suggest that the Centralised Strategic Network Plan (CSNP) must frontload more rigorous environmental assessments (SEA) to provide a more holistic analysis of onshore and offshore options / Suggest that the CSNP must be opened up to inputs from wider environmental and community stakeholders to	The Centralised Strategic Network Plan (CSNP) will be developed by the National Energy System Operator (NESO). NESO can provide a link showing how communities can get involved in the National Planning Review (NPR) of which the CSNP is a part via the following email box.NPR@nationalenergyso.com.	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	provide better balancing of environmental and community constraints					
9-2.360	Criticism that the new ESO East Anglian network study reveals that the 'early opportunities' (OCSS) scheme (landing offshore wind power via Sea Link at Friston in Suffolk rather than Tendring in Essex) is unlikely to meaningfully reduce local environmental and amenity impacts unless wider offshore or undergrounding solutions are employed	<p>In September 2024 the Secretary of State for Energy Security and Net Zero decided not to grant further funding to the Offshore Coordination Support Scheme (OCSS) consortium.</p> <p>The feasibility study submitted by the consortium in March 2024 identified that feasibility is technically achievable, however, it also identified:</p> <ul style="list-style-type: none"> - An increase in capital costs of up to £890m; - Constraint costs associated with an outage on Sea Link of over £500m; and - A programme delay for North Falls and Five Estuaries of up to five years. <p>The consortium supported the Secretary of State's decision and won't be pursuing a coordinated offshore connection.</p>			X	
9-2.361	Criticism that the consultation should have started earlier	The statutory consultation started on the 10 April and ran for 15 weeks until the 26 July. National Grid started the consultation in April so that we had enough time after the 2023 non-statutory consultation to consider the feedback we received, make any changes to the Project, and produce the documents needed to support a statutory consultation. The timing and duration of the statutory consultation is consistent with the regulations			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		placed on us, which states that statutory consultation must last for a minimum of 28 days.				
9-2.362	Suggest that National Grid start a new national conversation about energy infrastructure, place-making and the role of planning for net zero (e.g. to address the short-term changes required to green the 'Great Grid Upgrade' in East Anglia)	The Great Grid Upgrade comprises 17 major infrastructure projects that will both scale up the grid and update our existing networks. There is also a national campaign for the Great Grid Upgrade as it will help the UK switch to clean energy and make sure our electricity network is fit for the future; carrying more clean, secure energy from where it's generated to where you need it. National Grid has provided sufficient information on the background behind the Project and its wider relevance to the Great Grid Upgrade as context throughout the non-statutory and statutory consultations. This is despite there being no actual policy requirement for the applicant to start a new national conversation about energy infrastructure, place-making and the role of planning for net zero.			X	
9-2.363	Criticism that decisions to date are being made at times based on inconsistent quality of data (e.g. Google Maps used for identifying species) and therefore contradicting a claim to be entirely evidence-based (criticism made in relation to the Preliminary Environmental Information Report (PEIR))	The Preliminary Environmental Information Report (PEIR) was a preliminary document and reflected the Project proposals at the time of statutory consultation. Baseline data within the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) is based on a number of different sources including desk-based data, supplemented with survey results where applicable. The Project obtained high level imagery, which was used to support the identification of habitats, along with Google Earth, however other data			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		sources were also used. A range of ecological surveys have been conducted along the route of the Project, where access has been granted, in order to ground truth data, and to ensure a robust understanding of the habitat types and conditions present.				
9-2.364	Criticism that there are notable omissions in significant impacts on the physical, chemical and biological aspects of the environment, such as the presence of acid sulphate soils (criticism made in relation to the Preliminary Environmental Information Report (PEIR)) / Concern about impact of the Project on acid sulphate soils, and criticism that analysis by National Grid with regard to acid sulphate soils has been inadequate	The Preliminary Environmental Information Report (PEIR) was a preliminary document and reflected the Project proposals at the time of the statutory consultation. Detailed Agricultural Land Classification (ALC) surveys have been undertaken to understand the detail of soil characteristics across the Project. Where acid sulphate soils were predicted to be present samples were taken to test for acid generating potential. This work is reported in full in Chapter 6: Agriculture and Soils of the Environmental Statement (ES) (Document Reference 6.6). As such, the layering of available soil mapping with detailed survey reporting provides clarification on whether acid sulphate soils are present across the Project.			X	
9-2.365	Criticism that National Grid make numerous tenuous assumptions needing further clarification and justification, such as that biodiversity impacts are of local concern only, whilst ignoring the IUCN red list of threatened species (criticism made in relation to the Preliminary Environmental Information) Report PEIR))	A comprehensive survey effort for a range of protected species was completed over the 2023 – 2025 period. Chapter 8: Ecology and Biodiversity of the Environmental Statement (ES) (document reference 6.8) assesses the effects on protected species based on this baseline information and potential impacts. The value of an ecological feature is based on Chartered Institute of Ecology and Environmental Management (CIEEM)			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Guidelines for Ecological Impact Assessment (EclA), the leading professional body for ecologists, which uses the species type and its population size in relation to its geographical context to provide an overall ecological value for an ecological receptor.				
9-2.366	Criticism that National Grid has assumed a lack of direct impacts to particular sites, and made over-optimistic assumptions regarding distance decay of several threats (and apparent omission of others) from development and operations (criticism made in relation to the Preliminary Environmental Information Report (PEIR))	<p>A detailed impact assessment on all international, national and local designated sites has been undertaken and results included within Chapter 8: Ecology and Biodiversity of the Environmental Statement (ES) (document reference 6.8) and for international sites further detail is presented within the Habitats Regulations Assessment Report (document reference 5.3). This assessment on designated sites has taken into account direct impacts, as well as potential indirect impacts (such a hydrological and/or air quality potential impacts) and potential disturbance impacts. Assessments have been made in line with guidelines and based on a reasonable worst-case basis in terms of construction impacts.</p> <p>Consultation on the potential impacts associated with national and international sites has been discussed and agreed with Natural England.</p>			X	
9-2.367	Criticism that there is a lack of application of the mitigation hierarchy (criticism made in relation to the Preliminary Environmental Information Report (PEIR)) / Suggest that the avoidance-mitigation-	The environmental mitigation hierarchy (avoid, prevent, reduce, offset (if possible)) has been applied by the Project team throughout the iterative design process. Where effects could not reasonably be avoided or prevented, then the Project is committed to providing		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	compensation hierarchy should be followed for the Project (e.g. to mitigate impact on habitats)	mitigation measures (embedded, standard or additional mitigation) to reduce effects where practicable. Details of embedded mitigation have been included within Chapter 4: Project Description of the Environmental Statement (ES) (document reference 6.4), which are measures intrinsic to the design, such as careful routeing of the Project to avoid receptors where possible, such as ancient woodlands. Standard mitigation measures have been reported within the Outline Code of Construction Practice (CoCP) (document reference 7.2). These are measures to be implemented throughout the construction phase of the Project. Additional mitigation measures are those over and above the previous measures aimed to further reduce effects. Any additional mitigation measure being proposed as part of the Project is included within the ES.				
9-2.368	Criticism that there is a lack of evidence regarding capacity to deliver sustained biodiversity net gain (criticism made in relation to the Preliminary Environmental Information Report (PEIR)) / Criticism that there is not enough information on how National Grid will meet 10% biodiversity net gain (e.g. to meet the requirements outlined in Schedule 7a of the Town and Country Planning Act 1990) / Suggest that further information is needed on plans for biodiversity net gain for the Project / Suggest that a biodiversity gain statement, statutory metric and condition assessments should be provided for the Project	The Environment Act 2021 introduces a mandatory requirement for 10% Biodiversity Net Gain (BNG) for new Development Consent Order (DCO) developments, which is not yet in force and not expected to become mandatory until Nov 2025. However National Grid has committed to delivering Net Gain of at least 10% or greater in environmental value (including BNG) on all construction projects. The Net Gain target for the Project is currently voluntary and aligned with National Grid's corporate sustainability commitment. The biodiversity mitigation hierarchy has been adhered to throughout the design of the BNG approach and the		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		approach has been agreed with Natural England and the Local Authorities. National Grid are committed to delivering 10% BNG as part of the Project. Full details of the BNG approach and mitigation solution are provided within the Biodiversity Net Gain Report (document reference 7.1).				
9-2.369	Criticism that National Grid have failed to present worst-case effect assumptions in line with national policy statement EN-1's requirement (criticism made in relation to 4.3.12 within the PEIR)	<p>Advice Note 9: The Rochdale Envelope (Planning Inspectorate, 2018) provides guidance regarding the degree of flexibility that may be considered appropriate within an application for development consent under the Planning Act 2008. The advice note acknowledges that there may be parameters of a project's design that are not yet fixed and, therefore, it may be necessary for the Environment Statement (ES) (document reference Volume 6: Environmental Statement) to assess likely worst-case variations to ensure that the likely significant environmental effects of the Project have been assessed.</p> <p>Within the Preliminary Environmental Information Report (PEIR), the description of the Project reflected what was known at the time of statutory consultation. All assessment work undertaken as part of the PEIR applied a precautionary principle, in that where limited information was available (in terms of the proposals for the Project and baseline information), a realistic worst-case was assessed.</p> <p>The final assessment, including an assessment of the worst-case scenario, is presented within the ES</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>(document reference: Volume 6: Environmental Statement) submitted with the Development Consent Order (DCO) application.</p> <p>The ES assessment is based on the description of the design, construction, operation (and maintenance) of the Project presented in ES Chapter 4: Project Description (document reference 6.4). The ES presents the likely significant effects that would result if the Project was implemented, and any proposed mitigation to avoid or reduce those significant effects to a non-significant level (where possible). The ES submitted with the application for development consent, will be taken into account by the decision-making body when determining consent.</p>				
9-2.370	Criticism that Environmental Impact Surveys have not been undertaken as the Project is routed through flood plains, areas of high flood risk, and ancient woodland	<p>A suite of surveys and desk studies have been undertaken to inform the assessments presented in the Environmental Statement (ES). Further details are presented in ES Chapter 8: Ecology and Biodiversity (document reference 6.8) and ES Appendix 13.6: Arboricultural Impact Assessment (document reference 6.13.A6) for ancient woodland, and ES Chapter 12: Hydrology, Land Drainage and Flood Risk (document reference 6.12) for flood risk and floodplains.</p> <p>An Ancient Woodland and Veteran Tree Strategy (Appendix B of the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4)) has been prepared to support the application for development consent. The Strategy aims to outline the principal measures that are required to help avoid,</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>minimise, and compensate for the potential ecological effects of the Project on ancient woodland and veteran trees, during and post construction, as per the mitigation hierarchy.</p> <p>National Grid has also prepared a detailed Flood Risk Assessment (FRA) (document reference 7.9). The FRA assesses flood risk to and arising from the Project. A range of data sources have been used, and National Grid has engaged with key flood risk management authorities in order to shape and agree any flood risk management and mitigation measures necessary to build flood resilience into the Project design and to prevent increases in flood risk off site.</p>				
9-2.371	Suggest that the Environmental Impact Surveys are undertaken for the Project and consulted on	A wide variety of environmental surveys have been undertaken as part of the Project. The scope and methodologies for surveys have been discussed and agreed with relevant stakeholders. Results of these surveys have been used to help inform the iterative design development. Full results and impact assessments conducted as a result of these surveys are included within the Environmental Statement (ES) (document reference Volume 6: Environmental Statement).	X		X	
9-2.372	Criticism that National Grid have not considered Andy Hirons' independent review (e.g. which demonstrates that the Project isn't needed until	National Grid welcomed the Andy Hiorns' Report and produced a full response to the report which is published on the Project website. As set out in the response, the economic analysis in the Electricity System Operator	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	2034) / Suggest that the Project is placed on hold until alternatives are fully considered	(ESO) Study clearly shows that Option 3 – the current Norwich to Tilbury project with the addition of a new Friston to EACN substation line – would be the economically optimal solution if Offshore Coordination Support Scheme (OCSS) funded coordination between Sea Link and the two offshore wind farms progresses. This is the case in the event of delay up to as late as 2033, across a range of generation and demand scenarios and if capex or constraint costs are reduced or increased. The delay sensitivity demonstrates that any of the options, if assumed to be delivered in 2034, would result in at least £962 m additional costs to consumers relative to delivering Option 3 in 2030. Alternating Current (AC) overhead line options are also more adaptable to varying future scenarios than High Voltage Direct Current (HVDC) cable options.				
9-2.373	Criticism that T-Pylons have been deemed unsuitable for the Project, yet they are used in the South-West / Request clarity on this	The latest independent report on the Comparison of Electricity Transmission Technologies: Costs and Characteristics (Institute of Engineering and Technology, 2025) confirms that whilst T-Pylons may in certain locations provide an alternative to conventional overhead lines with potential benefits in visual impact and reduced land-take, this is at a higher cost. The build cost is approximately 2 to 2.5 times that of an equivalently rated conventional overhead line, and the lifetime costs are around 1.6 to 1.7 times that of a conventional overhead line. The current arrangements for the oversight of funding by Ofgem requires that the			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>lowest cost acceptable design is taken forward rather than a more expensive design even if that design is perceived to reduce the level of effect.</p> <p>As such consideration of their use follows after establishing a need to mitigate effects of the standard lattice design and after considering the benefit of adopting a low height lattice pylon design. T pylons themselves are also less adaptable to varied terrains and require more substantial access infrastructure. Furthermore, their resilience and environmental impact are comparable to conventional overhead lines, but with increased carbon intensity due to construction materials. Attention also needs to be given to the transitions between pylon types. Given It is the surrounding context that drives the need for alternative design mitigation, where this is not required along the entire route, any visual break and transition in pylon design also needs to be carefully sited.</p> <p>Assessment findings have concluded that, where there is not a reversal of the presumption to use overhead lines, the use of lattice pylons (either standard or low height) is consistent with planning policy throughout the route. Whilst there may be some locations (for examples see appendix A of the 2024 Design Development Report (available on the Project website)) where there may be a design option for the use of T pylons, the need to mitigate for unacceptable effects from lattice pylons is</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		not engaged. On this basis T pylons are not proposed for the Project.				
9-2.374	Suggest that National Grid increase the area by which residents are engaged within / Criticism that respondent didn't get information on the Project, but are only just over a mile from the planned works	<p>During the statutory consultation period, National Grid engaged with properties within 1 km of the proposed route as part of our Primary Consultation Zone (PCZ). This included sending Project specific information to the properties and sharing information about how to engage with the project and leave feedback.</p> <p>We advertised our consultation within a wider Secondary Consultation Zone (SCZ) which extended to 4 km on either side of the proposed alignment. This is consistent with the requirements placed on us.</p>			X	
9-2.375	Criticism that respondent has been charged to receive mail from National Grid	During the statutory consultation, National Grid had a limited issue with the delivery of some of our landowner materials where some members of the public were charged £5 to collect their information pack. We worked with our Lands Team to address this issue and contacted those affected directly to reimburse them for the payment and for their time.			X	
9-2.376	Criticism that National Grid has not waited for the outcomes and recommendations of the Offshore Co-ordination Support Scheme (OCSS) before proceeding with the Project / Suggest that National Grid should wait for the outcome of the high-level study into the feasibility of coordinated options for	<p>At the time of the statutory consultation, National Grid was awaiting the Government's decision on the outcome of the first phase of this Offshore Coordination Support Scheme (OCSS).</p> <p>To ensure we remained compliant with our legal obligations to connect customers and were aligned with the OCSS guidance, we continued to progress the</p>	X	X	X

	offshore transmission infrastructure by the OCSS before proceeding with the Project	<p>development of the existing East Anglian network projects, including Norwich to Tilbury while awaiting the outcome of the OCSS.</p> <p>In September 2024 the Secretary of State for Energy Security and Net Zero decided not to grant further funding to the consortium. The consortium supported the Secretary of State's decision and will not be pursuing a coordinated offshore connection.</p>				
9-2.377	Criticism that the Project contradicts with National Grid's commitment declared in the Responsible Business Charter 2020 to supply energy in an equitable and affordable manner and their obligatory duty to develop and maintain an efficient, well-coordinated, and cost- effective network (e.g. by not thoroughly assessing the feasibility and costs associated with an integrated offshore approach)	<p>National Grid rejects the notion that the Project contradicts with our commitment to the Responsible Business Charter.</p> <p>National Grid thoroughly accessed the scope, feasibility, and costs of alternatives and published this in our Strategic Options Backcheck Report (SOBR) which is available on the Project website and the subsequent 2025 SOBR (document reference 7.17).</p> <p>We need to consider National Policy Statement (NPS) EN-5 which covers the development of new energy infrastructure. This policy concludes that, in most cases, the Government expects that new overhead lines would be appropriate and should be used as standard to reinforce the grid.</p> <p>National Grid carefully consider the most feasible options and present proposals for public consultation. In doing this, we must consider impacts on local communities and the environment and deliver value for electricity consumers.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>We have assessed an equivalent offshore option and to deliver the same capacity as the overhead line, we would need to build three subsea cables and associated onshore infrastructure. This would mean significant extra cost to consumers, and that would not meet the requirements placed on us.</p> <p>In addition to cost, there are a range of environmental factors and other onshore and offshore impacts which need to be considered in this option. Taking all these considerations into account, we have concluded that an onshore connection is the most appropriate solution.</p>				
9-2.378	Criticism of the Strategic Options Backcheck and Review (June 2023) document / Criticism of backchecking for the Project (e.g. has not made a difference / all backchecking has been an exercise in post-justification / backchecking has been used to justify the original decision)	<p>All the documents National Grid produced for the 2023 non-statutory and statutory consultation were informed by assessments and surveys. The 2025 Strategic Options Backcheck and Review (document reference 7.17) set out how we considered alternatives and why we progressed with the overhead line option for Norwich to Tilbury.</p> <p>These documents were available during our targeted consultations, including at our public information events and bookable sessions, and remain available on the Project website. We also had a freepost, email and freephone number where people could get in touch if they had any questions about the more technical documents.</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.379	Criticism that the coverage of ecologists' visits for ecological surveys undertaken as part of the Project was insufficient (e.g. crucial and ecologically diverse areas have been overlooked)	<p>A range of protected species and other ecological surveys have been undertaken across the Order Limits and the results are outlined in Chapter 8: Ecology and Biodiversity (document reference 6.8) and Appendices 8.1 to 8.16 (document reference 6.8.A1 - 6.8.A16) of the Environmental Statement (ES).</p> <p>While the whole Order Limits have been surveyed for habitats, ground level tree assessment for bats and badgers, other protected species surveys have been targeted at key locations where potential impact pathways have been identified. For a Project in excess of 180 km, surveys have to be efficient, in line with best practice and target the areas of impact. Survey methodology, including survey areas, have been discussed in advance with Natural England and Local Planning Authorities. Full details on surveys can be found within Chapter 8: Ecology and Biodiversity (document reference 6.8) and Appendices 8.1 to 8.16 (document reference 6.8.A1 - 6.8.A16) of the Environmental Statement (ES).</p>			X	
9-2.380	<p>Concern that design choices for the Project are based on insufficient and inadequate survey data /</p> <p>Concern that surveys are being conducted merely as a tick box exercise, leading to the potential for the final design to overlook and adversely affect aspects that remained unidentified during the survey process</p>	<p>There is a staged approach to the process of collection of environmental data as any major project develops. National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project. The assessment is informed by a suite of field surveys and desk studies and results are presented in an Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the application for</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>development consent. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation (and maintenance) of the Project and recommends appropriate mitigation measures to reduce potential adverse impacts. Results of the surveys have been used to help inform the iterative design development. Full results and impact assessments conducted as a result of these surveys are included within the ES (document reference Volume 6: Environmental Statement).</p> <p>The scope of the EIA is included in the Scoping Report (document reference 6.19) which was submitted to the Planning Inspectorate in November 2022 and their Scoping Opinion (document reference 6.20) received in December 2022. This provided the opportunity for statutory bodies to comment on the scope of the EIA which included our approach on study areas, data collection and baseline conditions for a range of environmental topics. We also discussed and agreed survey scope with stakeholders (including Statutory Environmental Bodies and Local Planning Authorities) following the Scoping Opinion (document reference 6.20) to ensure a robust baseline assessment.</p> <p>National Grid has prepared an Outline Code of Construction Practice (CoCP) (document reference 7.2) which sets out the required mitigation measures and environmental commitments that will be implemented during the construction phase of the Project to avoid or reduce potential effects of the Project on the</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		environment, including commitments to undertake further surveys.				
9-2.381	Suggest that the consultation process is restarted (e.g. to address the issues raised by Lord Banner KC)	<p>Before the statutory consultation, National Grid consulted on a Statement of Community Consultation (SoCC) with potentially affected local authorities along the proposed route. This is a requirement under Section 47 of the Planning Act 2008 for a Nationally Significant Infrastructure Project (NSIP), such as this Project. It set out how we intended to consult communities living in the vicinity of the project. Where practicable, we amended our strategy based on feedback from local authorities, and the SoCC was published at consultation launch on the Project website.</p> <p>As outlined by the Gunning Principles, our four principles of consultation include that consultation must be held at a point where proposals are in the formative stage; there is sufficient information for intelligent consideration; there is adequate time for response; consideration is given to consultation responses before a decision is made. We have followed these steps in line with national planning policy.</p> <p>During the consultation period, we contacted the residents in the consultation zone; an area of 1 km on each side of the proposed corridor. We also wrote to the parish councils in the affected area and held 14 face to face events and six webinars as part of this consultation. We have held four stages of consultation in total, giving communities and stakeholders opportunities to feedback</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		and different stages of the design process, and to see the updates we have made before an application is submitted. The first public consultation took place in early 2022, and we held the latest stage of targeted consultations in early 2025.				
9-2.382	Suggest that the Project should only go ahead if there is public support for it	<p>National Grid is committed to taking into account community feedback on its proposals. In line with processes and guidance from the Planning Act 2008 and National Policy Statements (NPS), stakeholders and the public are consulted during the proposed project's evolution allowing for feedback to have influence in the development of the location, design and mitigation proposals of our projects.</p> <p>However, all our projects are developed in response to the current and expected demand on the network, which will increase in order to reach net zero. As part of our transmission licence to operate (as regulated by the Office of Gas and Electricity Markets (Ofgem)), National Grid and National Energy System Operator (NESO) must offer a connection to developers wanting to connect new sources of electricity generation to the national transmission system. At the point of making this offer, the exact point of connection will not be known or specified but is an important part of the work of National Grid. While the nature of new infrastructure means it cannot be without impact, our transmission licence requires National Grid to be efficient, coordinated, and</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		economical when formulating proposals while also considering the effect on the environment.				
9-2.383	Three independent reports since 2011 have shown that integration offshore reduces overall infrastructure (by as much as 50% according to ESO) and reduces overall costs (e.g. the NG ESO 20209, Integrated Offshore Transmission Project IOTP 201510, and Offshore Transmission Coordination Project Conclusions Report (OFTNS) 2011/1211)	<p>There is no fully offshore solution to connect offshore wind to the grid and National Grid has to bring the power onshore to connect to the system, so that energy can reach demand centres across the south-east, south-west and midlands of England. Our job is to carefully consider the most feasible options and present proposals for public consultation. In doing this, we must consider impacts on local communities and the environment and deliver value for electricity consumers. We have assessed an equivalent offshore option and to deliver the same capacity as the overhead line, we would need to build three subsea cables and associated onshore infrastructure. This would mean significant extra cost to consumers, and that would not meet the requirements placed on us.</p> <p>In addition to cost, there are a range of environmental factors and other onshore and offshore impacts which need to be considered in this option. Taking all these considerations into account, we have concluded that an onshore connection is the most appropriate solution.</p>			X	
9-2.384	Criticism that 37,000 people have filled in a petition against the Project, but National Grid are looking to proceed	All our projects are developed in response to the current and expected demand on the network, which will increase in order to reach net zero. As part of our Ofgem license to operate, NGET and NESO must offer a connection to developers wanting to connect new			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>sources of electricity generation to the national transmission system. While the nature of new infrastructure means it cannot be without impact, our transmission licence requires National Grid to be efficient, co-ordinated, and economical when formulating proposals while also considering the effect on the environment.</p> <p>National Grid has held five rounds of consultation which offered the opportunity to provide feedback on our proposals as they developed. This included two non-statutory consultations in 2022 and 2023, a statutory consultation in 2024, a series of targeted consultations and a landowner consultation in 2025. All feedback provided during these consultations has been considered by the Project team.</p>				
9-2.385	Request for National Grid to be transparent about where the power is actually required	<p>There is a need to reinforce the existing high voltage electricity network in the East Anglia region. It does not currently have the capability needed to transport reliably and securely the electricity that will be generated and connected to the electricity transmission network by 2030, while working to the required standards.</p> <p>The Project would benefit the UK as a whole, including local communities, by enabling the connection of new sources of renewable energy and by contributing to our energy security in the future, helping the country to achieve the Government's Net Zero target and ensuring that National Grid meets future power demands.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.386	Criticism of interactive website as difficult to navigate and / or access	Throughout its consultation process, National Grid looked at how to optimise the user experience and make the website easy to navigate. Wherever possible we looked to signpost how to submit feedback and find information. Where people had issues, we encouraged them to contact us directly via our hotline number, email, Freepost or at one of our events.	X		X	
9-2.387	Suggest that there should be consultation on the method of transmission (i.e. rather than on the route of the Project)	National Grid has considered a wide range of alternative means for the Project and set these out in the Corridor and Preliminary Routeing and Siting Study (CPRSS) (available on the Project website), published in support of the 2022 non-statutory consultation, and the 2023 and 2024 Strategic Options Backcheck and Review (SOBR), (available on the Project website) and the 2025 SOBR (document reference 7.17). We have also considered feedback relating to suggested alternatives and set out responses within the 2022 and 2023 Non-Statutory Consultation Feedback Report's and elsewhere within this report. Our job is to carefully consider the most feasible options and present proposals for public consultation. National Grid cannot present an alternative for consultation that would not meet the requirements placed on us by the government and our regulator Ofgem.			X	
9-2.388	Criticism that there are procedural and methodological errors in National Grid's approach to	The scope of the Environmental Impact Assessment (EIA) was agreed through the EIA Scoping Report (document reference 6.19) which was submitted to the			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	landscape, heritage and archaeology, soils and the environment in relation to the Project	<p>Planning Inspectorate in November 2022 and Scoping Opinion (document reference 6.20) received from the Planning Inspectorate in December 2022.</p> <p>The Environmental Statement (ES) follows standard methodology for assessing the environmental effects of the Project. If the Development Consent Order (DCO) application is accepted by the Planning Inspectorate for examination, the ES will be scrutinised by the Examining Authority on behalf of the Secretary of State. The information presented within the ES will be a key consideration in deciding whether to consent the Project or not.</p>				
9-2.389	Criticism that National Grid are not going to comply / have not complied with agreement / licence signed by respondent to receive copies of surveys undertaken (including criticism that National Grid have therefore breached their licence under clauses 6 and 7 of the licence agreement) / Criticism that respondent did not receive survey results within 30 days	<p>National Grid looks to voluntarily agree access to land through licence agreements. These agreements are signed by both parties and clearly state the conditions on which access has been granted. Should either party not comply with these conditions the licence agreement can be terminated or a third party dispute resolution sought.</p> <p>National Grid can provide survey results to relevant landowners once the information has been received from their appointed suppliers in a suitable format. National Grid has made survey data and reports available to the public through the Environmental Statement (ES), as part of the Development Consent Order (DCO) application.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.390	Criticism of submission process for questionnaires (e.g. two stage process / need to confirm submission)	Online questionnaires were submitted if the user clicked 'submit' on the online form. The system that National Grid used also sends people a copy of their feedback for their records. It wasn't necessary to confirm submission using the link in the email. All the feedback submitted through an online form was recorded and considered, regardless of whether the submission was later confirmed.			X	
9-2.391	Criticism that young people were not targeted or reached for consultation / Concern that participation in the consultation was skewed towards older people (e.g. retired) against younger / working people	During statutory consultation National Grid reached out to young people in a variety of ways, including two university pop-up events, a youth-focussed webinar, and emails sent to youth groups and schools along the proposed route. We had direct engagement from these groups which was considered as feedback.			X	
9-2.392	Criticism that the Project is contrary to the government's levelling up policy / Section 245 of the Levelling-up and Regeneration Act 2023	Section 245 (Protected Landscapes) of the Levelling-up and Regeneration Act 2023 (LURA) places a duty on 'relevant authorities', which in this context includes National Grid as a statutory undertaker, to seek to further the statutory purposes of protected landscapes (referred to as the 'seek to further' duty). In relation to National Landscapes (which includes the Dedham Vale National Landscape), this requirement has been incorporated into Section 85 of the Countryside and Rights of Way (CROW) Act, which states: 'In exercising or performing any functions in relation to, or so as to affect, land in an area of outstanding natural beauty in England, a relevant authority other than a	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>devolved Welsh authority must seek to further the purpose of conserving and enhancing the natural beauty of the area of outstanding natural beauty'.</p> <p>The approach National Grid is taking to meet the 'seek to further' duty in relation to the Project has been detailed in National Landscapes - Duty to Seek to Further the Purposes Report (s85 Countryside and Rights of Way Act 2000) (document reference 5.10). The document details how the National Landscape and 'seek to further' duty has been taken into consideration during Project development and highlights potential further measures. The overall approach has been, and continues to be, discussed with relevant stakeholders (which includes but is not limited to the Dedham Vale National Landscape and Stour Valley Partnership) and follows the guidance published by Defra in December 2024 'Guidance for relevant authorities on seeking to further the purposes of Protected Landscapes' (Defra, 2024). It is intended the finalised measures would be secured by an appropriate mechanism as part pursuant to the Development Consent Order (DCO) process.</p>				
9-2.393	Concern that National Grid have already offered and signed contracts prior to the consultation and planning approval	As part of the Development Consent Order (DCO) and planning consent process, National Grid were required to sign certain contracts with suppliers around the design, consents, surveys arena who would gather information and provide intelligence which would feed into the overall DCO plan. At this stage no contracts have been let, nor can any contracts be let with regards			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		to the detail design or construction activities as funding and planning consent has not been granted.				
9-2.394	Suggest further consultation with those directly impacted by the Project and suggest that this should take place earlier	National Grid has held several consultations for the Project; two non-statutory in 2022 and 2023, a statutory consultation in 2024 and then targeted consultations and a landowner consultation in 2025. At all of these, we have engaged directly with affected landowners, stakeholders, and local residents with an interest in the Project. We also held targeted consultations in key areas along the route where our proposals changed following the statutory consultation. In this we engaged directly with those most affected by the changes in alignment or access and took their feedback into account.			X	
9-2.395	Criticism of the King and Crown Estates (e.g. in relation to offshore wind farms; no contribution to alternatives)	This comment is noted. This is not a matter for National Grid.			X	
9-2.396	Concern that not everyone will have been able to access the consultation (e.g. those limited literacy or understanding) and suggest that an attempt should be made to identify people who may have difficulty accessing this consultation so that they can be contacted personally for their views	Throughout our consultation, we have tried to engage with all demographics along the Project. This has included making direct contact with community groups representing those who may find it more difficult to engage with our proposals. At the start of consultation, we emailed these groups to inform them of our proposals and share guidance for how they could find more information.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		In our Statement of Community Consultation (SoCC), we also set out that all of our documents could be made available in accessible formats, such as different languages, braille, or large print on request.				
9-2.397	Criticism that National Grid has not provided details on how they intend to connect up to the three other substations proposed to be built by Five Estuaries, North Falls and Tarchon	The connections from the customers (North Falls, Five Estuaries and Tarchon) into the National Grid substation would be determined and submitted as part of their planning and Development Consent Order (DCO) applications. As these works would not be part of the Project, we are not responsible for gaining consent, but we do have a duty and requirement to work with the customers and to coordinate our works which we will continue to do through this process.			X	
9-2.398	Criticism that the Project is contrary to the Countryside and Rights of Way Act (2000) (e.g. Section 85)	Section 245 (Protected Landscapes) of the Levelling-up and Regeneration Act 2023 (LURA) places a duty on 'relevant authorities', which in this context includes National Grid as a statutory undertaker, to seek to further the statutory purposes of protected landscapes (referred to as the 'seek to further' duty). In relation to National Landscapes (which includes the Dedham Vale National Landscape), this requirement has been incorporated into Section 85 of the Countryside and Rights of Way (CRoW) Act, which states: 'In exercising or performing any functions in relation to, or so as to affect, land in an area of outstanding natural beauty in England, a relevant authority other than a devolved Welsh authority must seek to further the	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>purpose of conserving and enhancing the natural beauty of the area of outstanding natural beauty'.</p> <p>The approach National Grid is taking to meet the 'seek to further' duty in relation to the Project has been detailed in National Landscapes - Duty to Seek to Further the Purposes Report (s85 Countryside and Rights of Way Act 2000) (document reference 5.10). The document details how the National Landscape and 'seek to further' duty has been taken into consideration during Project development and highlights potential further measures. The overall approach has been, and continues to be, discussed with relevant stakeholders (which includes but is not limited to the Dedham Vale National Landscape and Stour Valley Partnership) and follows the guidance published by Defra in December 2024 'Guidance for relevant authorities on seeking to further the purposes of Protected Landscapes' (Defra, 2024). It is intended the finalised measures would be secured by an appropriate mechanism as part pursuant to the Development Consent Order (DCO) process.</p>				
9-2.399	Criticism that although alternatives have been presented in the Strategic Options Lookback Review, these have not been consulted upon	Throughout our planning and siting we considered a variety of alternatives, including an offshore and undersea grid. The option that we have chosen to pursue is the one which we consider will best meet our statutory duties. Our decision to pursue an overhead line was informed by a balancing of costs with effectiveness and various other factors. We have published the work done to date and have set out the details of our	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		evaluation of alternative routes and sites. This approach is compliant with our statutory duties and aligns with national policy guidance.				
9-2.400	Criticism that the findings of the Policy and Legislative Barriers to Consenting Offshore Wind report (May 2024) have not been considered	<p>The Policy and Legislative Barriers to Consenting Offshore Wind Report (May 2024) highlights the absence of a “strategic approach” in respect of the planning and delivery of the electricity grid and the process by which projects are connected to the grid.</p> <p>The findings from this report are a matter for the Government to decide. It is noted that the report acknowledges the development of a Strategic Spatial Energy Plan (SSEP) by the National Energy System Operator (NESO), launched earlier in 2024 – this has the potential to deliver on the report's recommendations, alongside central co-ordination by governments across the UK.</p> <p>In October 2024, NESO was commissioned by the UK, Scottish and Welsh governments to develop a National Strategic Spatial Energy Plan (SSEP). It is unlikely the SSEP would come into effect in time for the Project.</p> <p>National Grid notes that a more strategic approach to network planning is set out in the National Policy Statement EN-5 (2024).</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.401	Suggest that consultation should be independently verified / Criticism that the consultation was not carried out by an independent body	After receiving the application, the Planning Inspectorate has 28 days to accept it and decide if it can proceed to the examination stage. If the application is accepted, the Planning Inspectorate will appoint what is called an 'Examining Authority' to independently review and examine our application, including encouraging the submission of views from communities and other interested parties. Ultimately, the decision will be made by the Secretary of State who will review our documents and consultation process to determine if this was carried out adequately.			X	
9-2.402	Criticism that National Grid have not considered / provided information on the existence, location or details of 3rd Party Associated Developments that are associated with the Project (e.g. Hitachi Battery Storage development currently under construction at Swardeston, Norwich just off the A47/B1113)	<p>All our projects are developed in response to the current and expected demand on the network, which will increase in order to reach net zero. As part of our Ofgem licence to operate, NGET and NESO must offer a connection to developers wanting to connect new sources of electricity generation to the national transmission system. At the point of making this offer, the exact point of connection will not be known or specified but is an important part of the work of National Grid. While the nature of new infrastructure means it cannot be without impact, our transmission licence requires National Grid to be efficient, coordinated, and economical when formulating proposals while also considering the effect on the environment.</p> <p>We are responsible for delivering the proposals for an overhead line between Norwich and Tilbury – along with many other projects across the country - to help meet</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>this demand and to connect the energy generated offshore into where it is vitally needed onshore.</p> <p>We need to develop new infrastructure because the existing transmission network in East Anglia lacks the capacity to manage the expected increase in offshore wind needing to connect to the network in the coming years and beyond. We consider all proposals in depth to ensure that any development is coordinated, efficient, and cost-effective.</p>				
9-2.403	Criticism that not all areas greatly impacted by pylons have been noted in National Grid's documentation for cumulative impacts (e.g. the cumulative impact of the Project at Burstall will be significant, but this is not included in National Grids documentation)	<p>A search of planning applications held on the relevant planning authorities' websites and the Planning Inspectorate's Programme of Projects has been undertaken for the long list of developments to be considered as part of the cumulative assessment. This list has been informed through early engagement with the relevant planning authorities. The long list and short list have been updated periodically through an ongoing planning search to consider any new planning applications or applications for development consent made since the undertaking of the initial scoping exercise. These applications have been taken into account in the EIA and have been reported in the Environmental Statement (ES) Chapter 17: Cumulative Effects (document reference 6.17).</p> <p>National Grid can confirm that Burstall area is covered in ES Appendix 17.3: Inter-Project Cumulative Effects Matrix (document reference 6.17.A3) and ES Chapter 13: Landscape and Visual (document reference 6.13).</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.404	Concern that the submission portal for the online feedback questionnaire was unavailable on 25th July (collapsing at Question 23) and therefore could not be completed, and request that consultation should be extended as a result	National Grid is aware that there were some technical problems with the online feedback questionnaire, including on 25 July, and apologises for any inconvenience. Feedback could still be provided through the other channels, including by email. We also considered all feedback received in the two weeks following the consultation closing, in order to make allowances for technical issues and delays with post. National Grid continued to review and consider all late feedback that was received after the close of the 2024 statutory consultation (26 July 2024). This feedback is summarised in Section 9.8 of this report.			X	
9-2.405	Criticism that National Grid decided on the route for the Project via desk exercise / map data rather than on site / using locally researched and surveyed data / Criticism that there were not enough site visits to thoroughly assess the route for the Project	The respondent's assertion is incorrect. The development of the Project design has been in line with National Grid's approach to options appraisal. The approach combines information from existing data sources, investigative studies and surveys across a range of topics, site inspections and feedback from various consultation activities. The balance of activity changes between stages in the Project development stage but has combined information in an appropriate manner to develop an acceptable scheme.		X	X	
9-2.406	Suggest that the Tarchon Interconnector is discontinued as the work undertaken by the ESO and their partners demonstrates that The Tarchon Interconnector is against the National Interest and raises costs for UK bill payers by approximately £5 billion, however if it does proceed, then the viability	The Energy Market is a free market where applicants apply to connect to the transmission system. National Grid is obliged to connect any customer who applies for a connection to the National Energy System Operator (NESO). A robust holistic process to determine the best location for connection is followed to offer the customer			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	for the East Anglia Connection Node at Ardleigh for just the Tarchon Energy connection should be reviewed	connection. Both National Grid and NESO are required to offer all customers a connection without discrimination and it is for the connecting customer to fund their project independently.				
9-2.407	Criticism that respondent has requested access multiple times to the survey reports covering the surveys undertaken at their land, but these have not been provided by National Grid / Suggest that landowners and the public are given access to post survey reports (and any reports generated in the future)	<p>The Preliminary Environmental Impact Report (PEIR) is a constituent part of the Statutory Consultation material. It was made available on 10th April 2024. The PEIR provided an understanding into National Grid's approach to conducting the EIA at the time of the statutory consultation in 2024.</p> <p>National Grid has made survey data and reports available to the public through the Environmental Statement, as part of the Development Consent Order application.</p>			X	
9-2.408	Suggest that National Grid should agree to pay wayleaves over land which has been compulsory purchased	National Grid does not use Wayleaves when installing permanent equipment on land but instead uses easements. More information on agreement types and payments can be found in National Grid's Land Rights Strategy document, which is available on the Project website. These agreements and payments are used whether agreed voluntary or compulsory acquired.			X	
9-2.409	Criticism that reports that have published since the last consultation have not been considered by National Grid	National Grid has carefully considered relevant reports that have been published since 2023, responses to the ESO East Anglia Network Study and Hiorns report have been published on the Project website.			X	
9-2.410	Criticism that the Project does not meet the four Network Design Objectives (economic and efficient,	National Grid is following a robust process to develop the Project with decision making published in support of			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	deliverable and operable, minimising environmental impact, minimising community impact)	our 2022 and 2023 non-statutory consultations, statutory consultation, targeted consultations and landowner consultation. The Environmental Impact Assessment (EIA), along with feedback received from the consultations, have informed the development of our proposals where we have to balance our duties to be economic and efficient with regard to community and environmental effects. We consider that we have submitted proposals for a project that finds an appropriate balance and meets the Network Design Objectives.				
9-2.411	Criticism that a complete offshore transmission network review as part of the Holistic Network Design has not been included and the commissioned report ignored	<p>The National Energy System Operator (NESO) has produced a comprehensive cost breakdown of the onshore and offshore options. For further details refer to the report on East Anglia study National Energy System Operator (neso.energy). This study assesses different ways to transfer electricity once it's landed from certain offshore windfarms off the coast of East Anglia to where it's needed. This was produced using the same metrics as set out within the Holistic Network Design, which includes: cost to consumers, deliverability and operability, impact on the environment and, impact on local communities.</p> <p>The study began on the 11 December 2023 and results were published on 12 March 2024. Alongside the report itself, NESO has published independent reports which have supported assessment by DNV and Jacobs.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.412	Criticism that Ofgem (and associated Government bodies) and bodies such as the Citizens Advice Bureau, Age UK, Mind, Anglian Water are missing in the consultation, planning and debate	Throughout the Project, including at the launch of the consultations, National Grid contacted key stakeholders, companies, and community groups to ensure that we are engaging with as many people as possible. This included statutory undertakers, hard to reach community groups, and local community organisations, and included those listed in this report. On 10 April 2024 a consultation letter was sent to the Section 42(1)(a) consultees (see Appendix F of the Consultation Report). Along with the letter, consultees were also sent a copy of the project community newsletter and Section 48 notice.			X	
9-2.413	Criticism that National Grid are proposing sections of the Project	National Grid notes the respondent's feedback. The Project was split into sections due to the length and amount of information available. Having the Project information split into sections can assist members of the public and stakeholders in finding information relating to specific locations as well as providing feedback.			X	
9-2.414	Andy Hirons independent review shows that the Project is not needed until 2034, so National Grid should present alternative options for consultation (e.g. offshore and underground cables)	National Grid has carefully reviewed the Hirons Report and its appraisals, and we note that the report is a significant and independent study of our proposals. We welcome the report's support of the need for improvements to the transmission network and recognition that an offshore solution would result in significantly higher costs and provide lower capacity than the Norwich to Tilbury onshore proposals. However, we do not accept the report's conclusions around the timing of need for additional capacity being	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>closer to 2035 than 2030. National Grid is legally obliged (under our Transmission Owner Licence) to provide capacity at the dates formally agreed in contracts with energy generators (or customers). Contract dates are set out by ESO independent of National Grid.</p> <p>We have undertaken backchecks to ensure the capacity required in the contracts is consistent with our understanding of need (see our Strategic Options Backcheck Report 2024 for details). These backchecks also review the progress energy generators are making with planning consents for their projects.</p>				
9-2.415	Criticism that webinars were rescheduled by National Grid and respondents were not informed	We rescheduled our public webinars following the extension of our statutory consultation to allow members of the public, and key stakeholders, additional time to engage with the proposals following the General Election in July. When we rescheduled the series of webinars, we sent an email to everyone who had signed up confirming their cancellation and sharing the new dates and links to register for these. We also made recordings of all our webinars available on our project website for those who were unable to attend.			X	
9-2.416	Criticism that no local businesses have been recorded or reported on in National Grid's documentation supporting the consultation	Local businesses have been identified and assessed in Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) of the Environmental Statement (ES).	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.417	Criticism that information has only been sent to householders within 1km of the pylon line, when the visual impacts of the project are far wider	<p>Under Section 47 of the Planning Act 2008, we have a duty to consult with the local community. At the start of consultation, we wrote to all properties within our Primary Consultation Zone (PCZ) which extended to 1 km either side of the alignment.</p> <p>The zone has changed since the last round of consultation as a result of feedback and environmental studies as well as the inclusion of information such as construction access, compounds, laydown areas and the traffic routes we propose to use during construction. This zone amounts to approximately 77,000 addresses. Where appropriate, the PCZ has been extended to include whole streets and postcodes rather than the 1 km boundary dissecting hamlets or neighbourhoods.</p> <p>The statutory consultation was advertised in local newspapers within a 4 km distance of the proposed alignment alongside wider social media advertising.</p> <p>We accepted feedback on our proposals from anyone, regardless of distance from the alignment.</p>	X	X	X	
9-2.418	Criticism that National Grid have not consulted on pylon type, and have instead made their own subjective decisions not to pursue pylon types other than 50 m lattice towers	The latest independent report on the Comparison of Electricity Transmission Technologies: Costs and Characteristics (Institute of Engineering and Technology, 2025) confirms that whilst T-Pylons may in certain locations provide an alternative to conventional overhead lines with potential benefits in visual impact and reduced land-take, this is at a higher cost. The build cost is approximately 2 to 2.5 times that of an equivalently rated conventional overhead line, and the	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>lifetime costs are around 1.6 to 1.7 times that of a conventional overhead line. The current arrangements for the oversight of funding by Ofgem requires that the lowest cost acceptable design is taken forward rather than a more expensive design even if that design is perceived to reduce the level of effect.</p> <p>As such consideration of their use follows after establishing a need to mitigate effects of the standard lattice design and after considering the benefit of adopting a low height lattice pylon design. T pylons themselves are also less adaptable to varied terrains and require more substantial access infrastructure. Furthermore, their resilience and environmental impact are comparable to conventional overhead lines, but with increased carbon intensity due to construction materials. Attention also needs to be given to the transitions between pylon types. Given it is the surrounding context that drives the need for alternative design mitigation, where this is not required along the entire route, any visual break and transition in pylon design also needs to be carefully sited.</p> <p>Assessment findings have concluded that, where there is not a reversal of the presumption to use overhead lines, the use of lattice pylons (either standard or low height) is consistent with planning policy throughout the route. Whilst there may be some locations (for examples see appendix A of the 2024 Design Development Report) where there may be a design option for the use of T pylons, the need to mitigate for unacceptable effects</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		from lattice pylons is not engaged. On this basis T pylons are not proposed for the Project.				
9-2.419	Concern that National Grid have only considered the use of underground cables where there are wealthier / more influential residents and landowners (e.g. only at Waveney Valley and Dedham Vale; contradicts with Levelling Up and equality)	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is 'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or Area of Outstanding Natural Beauty (AONB))'. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at other locations proposed as overhead line would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.</p> <p>Our proposals include underground cable within the Dedham Vale National Landscape and some other areas where National Policy Statements support undergrounding. Wherever undergrounding is being considered, we need to ensure we're carefully considering the local environment too. This includes looking at local habitats, heritage, and other factors such as watercourses and rivers in order to reduce impacts. The wealth of the area has not impacted our decisions on where we will underground cables.</p>				
9-2.420	Criticism that National Grid have not considered the results of environmental surveys for the Project	A full suite of ecological surveys has been discussed and agreed with key stakeholders including Natural	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		England and undertaken across the Project. The results of completed surveys have been taken into account when designing the Project and are presented within the Environmental Statement (document reference Volume 6: Environmental Statement).				
9-2.421	Suggest that National Grid should consider the Morocco power line in the long term planning for the Project	<p>The plans to install a high-voltage undersea cable to carry renewable energy from Morocco to the UK include transporting electricity from solar and winds farms in the Guelmim-Oued Noun region of Morocco to the UK power grid in Devon, south-west England, via four subsea HVDC cables. This will also require converter stations and other associated infrastructure. This project is not being developed by National Grid.</p> <p>National Grid has considered a sea-based route for Norwich to Tilbury. This option was reviewed and can be seen in our Strategic Options Backcheck and Review.</p> <p>Due to the technology needed for a sea-based connection, our assessments show that an offshore, undersea connection which could provide the same capacity would be significantly more expensive than an onshore solution. It would also limit further connections for potential future wind energy.</p> <p>As a regulated business, we need to consider a range of factors in order to put forward the best possible solution and ensure good value for UK bill payers. We believe the current proposal provides this solution.</p> <p>We also need to progress our proposals in order to meet the Government's deadline to connect new sources of</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		offshore wind to homes and businesses across the UK by 2030.				
9-2.422	Comment supportive of time available to consider proposals	National Grid notes the respondents feedback			X	
9-2.423	Criticism that National Grid have not considered Nick Winner's statement in his Electricity Network Commissioner's report, which states that undergrounding power lines causes more environmental damage	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is 'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or Area of Outstanding Natural Beauty (AONB))'. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due			X

		Government's deadline to connect new sources of offshore wind to homes and businesses across the UK by 2030.				
9-2.424	Concern that National Grid stated that their Subcontractors, once appointed, would decide how certain construction elements of the Project will be carried out, so concern that National Grid have little control of the construction process	<p>National Grid under the Great Grid Upgrade Partnership works with a pre-approved set of suppliers who provide the technical equipment and system studies to labour suppliers and civil specialists who build the infrastructure. The design is done by National Grid to what we call Feed stage alongside one of the design partners. This takes into account all National Grid requirements. Once done, the detailed design and construction is with one or more of the supply chain partners who take the design through to detail design sign off. National Grid holds the Design Assurance role so throughout all the stages the design remains in National Grid control. Once in construction, National Grid appoints Project Managers to oversee / monitor the progress of the project and to ensure that it is always in line with the values and designs which were agreed.</p> <p>All works in delivery will be in compliance with the limitations and boundaries as set out in the DCO documentation.</p>			X	
9-2.425	Criticism that National Grid have disregarded that Anglian Water and Scottish Power place their cables and pipelines underground as they consider that placing their pipelines or cables, on or above ground, would not be appropriate	National Grid carried out non-statutory consultation in 2022 and 2023, statutory consultation in 2024 as well as targeted consultations and landowner consultation in 2025, in line with the requirements outlined in the Planning Act 2008 and relevant legislation. This has included consulting with all prescribed consultees on the	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>scope of the Environmental Impact Assessment (EIA). We have also consulted with third party asset owners, such as Anglian Water, who operate or own assets within the vicinity of the Project. We also informed the Office of Gas and Electricity Markets (Ofgem) at the outset of consultation.</p> <p>National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or Area of Outstanding Natural Beauty (AONB))'</i>. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at other locations proposed as overhead line would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.</p> <p>National Grid is constantly looking into new innovations and investigating alternative technology types. These are explored and assessed for suitability. Alternative technologies were investigated for the Project, these included an offshore connection using Direct Current (DC) technology, and various onshore connection options including: increasing operational voltages on existing network to above 400 kV; Alternating Current (AC) overhead lines (established technology); alternative</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>pylon types; AC underground technology; High Voltage Direct Current (HVDC) overhead line and underground cables; and Gas Insulated Line (GIL). HVDC is not normally used across land as converting AC to DC and back again would require converter stations so it can be used in the rest of transmission network and the distribution network which is currently AC. These converter stations are a significant size and would be required at every interface with the wider AC network i.e. at Norwich, Bramford, East Anglia Connection Node (EACN) substation and Tilbury substations, the cost of these converter stations massively outweighs the benefits offered.</p> <p>Currently, overhead lines offer the most economic and efficient solution to transmit electricity over long distances.</p>				
9-2.426	Criticism of National Policy Statement EN-5 (e.g. the assessment of sustainability identifies failing of policy)	All the National Policy Statement's (NPSs) have been subject to an Appraisal of Sustainability (AoS) required by the 2008 Act and the Environmental Assessment of Plans and Programmes Regulations 2004. Any challenge to the NPS EN-5 on the assessment of sustainability that identifies failure of policy should have been made to the Government's own consultation	X	X	X	
9-2.427	Comment supportive of use of swathe for consultation rather alternative corridor options	National Grid notes the respondent's feedback.			X	
9-2.428	Suggest that there should be an environmental cost / benefit analysis to ascertain whether the impact on	The UK Government has committed to reaching net zero emissions by 2050. The Government's Energy White			X

		assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at other locations proposed as overhead line would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
9-2.431	Criticism that National Grid have not factored in the millions of properties that use local generation (e.g. solar panels) to generate electricity and export electricity into the grid / Criticism that this is not included in any Project materials	<p>National Grid appreciates that there are many properties in the area that already use renewable energy sources such as solar panels, however we need to build Norwich to Tilbury to meet a national energy demand and reach net zero. Our proposals are part of the Great Grid Upgrade, which will increase network capacity across the UK.</p> <p>The way that we generate energy and where it comes from is changing and requires the biggest upgrade to our energy network in generations. One of the main reasons for this is the switch to low carbon, renewable power and the UK Government has set a target to increase the amount of energy generated by offshore wind to 50 GW and deliver a further 18 GW of interconnector capacity by 2030. This would be enough clean, renewable energy to power every home in the UK.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		While offshore wind is already connecting in across the country, in East Anglia there could be as much as 18 GW of offshore wind and interconnector energy coming into the region by the end of the decade. There isn't currently enough network capacity in the region to support this level of energy so we need to reinforce and develop the network to ensure this energy can be connected to homes and businesses across the UK.				
9-2.432	Criticism that the online questionnaire form was not available / could not be submitted	National Grid is aware that there were some technical problems with the online feedback questionnaire, on 25 July. Feedback could still be provided through the other channels, including by email. National Grid continued to review and consider all late feedback that was received after the close of the 2024 statutory consultation (26 July 2024). This feedback is summarised in Section 9.8 of this report.			X	
9-2.433	Criticism that National Grid have been serving S172 notices on landowners (e.g. while crucial questions regarding licences remained unanswered) / Criticism that National Grid have been using Section 172 notices instead of arranging access with landowners (e.g. therefore denying landowners opportunity to liaise with contractors to ensure optimum access routes and times for the landowner)	National Grid only serves Section 172 notices under the Housing and Planning Act 2026 to obtain survey access when reasonable effort has been made to obtain voluntary access. Where voluntary access cannot be agreed, we are left with no other option than to use Section 172 powers. While notices are served, National Grids lands team still work with landowners and appointed agents to answer any questions or concerns.			X	
9-2.434	Criticism that National Grids contractors have been arriving on site without providing the required notice as stipulated in the licence agreements	National Grids appointed contractors are all made aware of the terms in which access is granted to land. If a landowner believes that they are not being given the			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>required notice period before access is taken, they should contact the Projects lands team to discuss: Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.</p> <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD.</p> <p>If National grid has been found in breach of the terms granted within the licence agreement, then the landowner can request that the agreement be terminated. National Grid have the right to contest the breach of licence if they believe the terms of the license have not been breached. If one or both of the parties cannot agree on whether the licence has been breached, then third party dispute resolution will need to be sort.</p>				
9-2.435	Criticism that National Grid have been parking vehicles, welfare equipment, and materials on sites, contrary to provisions agreed upon licence terms	<p>National Grid prioritises the proper and lawful acquisition and lease of land access through the establishment of comprehensive license agreements. We understand the concerns raised regarding the alleged parking of vehicles, welfare equipment, and materials on sites, which may be contrary to the provisions outlined in these agreements.</p> <p>We want to assure you that we take these concerns seriously and are committed to adhering to the terms and conditions set forth in our license agreements. Our</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		processes are designed to ensure that no land access is taken without the correct agreements being in place.				
9-2.436	Criticism that National Grid have been withholding raw survey data, which was agreed to be supplied in the licences	National Grid has made survey data and reports available to the public through the Environmental Statement, part of the Development Consent Order application.			X	
9-2.437	Criticism that National Grid have been delaying payment of agent fees, placing landowners at significant financial risk	<p>National Grid pays land agents professional fees in line with the terms stated in the survey license or agreed with the agents' firm.</p> <p>If a landowner or agent seeks clarification on when fees are paid, they should contact the Projects lands team to discuss:</p> <p>Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.</p> <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD</p>			X	
9-2.439	Concern that National Grid has not sought design advice from the Design Council or other independent professional bodies on the siting and design development of the Project (as recommended in EN-1)	<p>National Grid has not sought advice from the Design Council on the siting and design of the Project.</p> <p>National Policy Statement EN-1 (Overarching National Policy Statement for Energy) highlights the role which the Design Council can play in providing a design review for nationally significant infrastructure projects. National Grid considers that it has followed good design principles in the iterative development of its Norwich to</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Tilbury proposals through the use of routeing and siting studies, application of the Holford and Horlock Rules (see Appendix I22 of this report). It is also important to note (as set out in paragraph 2.4.3 of NPS EN-5 that 'electricity networks infrastructure must in the first instance be safe and secure, and that functional design constraints of safety and security may limit and applicants' ability to influence the aesthetic appearance of that infrastructure.' More details can be found in the Design and Access Statement (document reference 7.15).				
9-2.440	Criticism that the 3 km buffer from the Project (for the above ground elements) for the landscape and visual assessment is not large enough (e.g. given the scale of the project and the far-reaching views across much of the open landscape)	<p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the Environmental Impact Assessment (EIA). The approach to the LVIA follows professional guidance as set out in ES Appendix 13.1: Landscape and Visual Methodology (document reference 6.13.A1), which includes the 3rd Edition Guidelines on Landscape and Visual Impact Assessment (GLVIA3). The LVIA is presented in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13).</p> <p>ES Appendix 13.1: Landscape and Visual Methodology (document reference 6.13.A1) sets out the justification for the study area used for the assessment. This has been determined by the nature and scale of the Project and the nature of the surrounding area and considers the landscape and/ or views that the Project may influence in a significant manner.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.441	Criticism that the Project conflicts with section 5.11 of EN-1, in particular paragraph 5.11.34 which states that the Secretary of State should ensure that applicants do not site their scheme on the BMV agricultural land without justification	The siting of elements of the Project has considered all relevant factors. In respect of a site such as the East Anglia Connection Node (EACN) substation the potential loss of BMV is balanced against the effects and costs from the longer connections required if the EACN substation were moved onto non-BMV land further to the east. This approach is consistent with the balanced decision making inherently envisaged by NPS EN-1.	X		X	
9-2.442	Criticism of information about why surveys are required	Surveys were an important part of how we developed the Project. We undertook archaeological, environmental, and ground investigation surveys to better understand how the Project might impact the local land and environment. The results that came back from these surveys helped to inform our final proposals. Information about surveys is published on the Project website.			X	
9-2.443	Criticism that National Grid have not provided sufficient information to demonstrate that they have modelled the full impact of the Project	National Grid notes the respondent's feedback. The process by which projects of this nature are assessed for potential impacts is set out in various legislation, including the Planning Act 2008, the Electricity Act 1989, Natural Environment and Rural Communities Act 2006, the Wildlife and Countryside Act 1981, National Parks and Access to Countryside Act 1949 and the Environmental Impact Assessment Regulations. The impacts of the Project are set out in the Environmental Statement as submitted with the Development Consent Order (DCO) application.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.444	Request that the Environmental Statement includes consideration of Kent in relation to Heritage Conservation (e.g. and that assessment is undertaken)	The study areas for the Historic Environment assessment were agreed through the Environmental Impact Assessment (EIA) Scoping Report (document reference 6.19) which was submitted to the Planning Inspectorate in November 2022 and Scoping Opinion (document reference 6.20) received from the Planning Inspectorate in December 2022. Heritage assets within those study areas have been considered in the Historic Environment assessment, presented in ES Chapter 11: Historic Environment (document reference 6.11), regardless of which local authority they are situated within.		X	X	
9-2.445	Criticism that there was never any consultation on the basic routing options for the transmission of energy from the East Anglia coast inland	National Grid carefully considers the most feasible options and present proposals for public consultation. In doing this, we must consider impacts on local communities and the environment and deliver value for electricity consumers. It would not meet the requirements placed on us to consult on an option that we would not be able to take forward due to higher costs or environmental impacts.			X	
9-2.446	Criticism that the National Grid ESO review of East Anglian transmission was too narrow, with none of the cost or environmental benefits of integration that would result from a fully coordinated offshore system	The ESO East Anglia Network Study was an independent study and was not undertaken by National Grid Electricity Transmission and is not part of this project. Your feedback is noted, but this is not a matter for National Grid.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.447	Criticism that National Grid have been poor at notifying landowners (e.g. only by white A4 sheets stapled to sticks popping up near to the route)	<p>National Grid makes every effort to contact all affected landowners and build up a data base of contact details for access notification.</p> <p>Land referencing is carried out through desk top based searches, the sending out of land interest questionnaires (LIQs) and site notices.</p> <p>Site notices are only used as a last resort where the land is unregistered or voluntary agreement for land access has not been reached.</p>			X	
9-2.448	Suggest that there should be a formal inquiry into National Grids conduct throughout the consultation for the Project	<p>National Grid is regulated by Ofgem, and our decisions are scrutinised by them to ensure that we are acting in line with the requirements placed on us.</p> <p>As the Project is classified as a Nationally Significant Infrastructure Project (NSIP), it will be reviewed and decided on by the Planning Inspectorate. As a part of their reviewing process, the Planning Inspectorate will consider the adequacy of our consultation and whether we have met the requirements placed on us throughout the consultation process.</p>			X	
9-2.449	Suggest that respondents to the consultation should be able to download their response for future reference	<p>If respondents provided their feedback through the online feedback form, they would have been able to download a copy of their responses.</p> <p>If they did not do this at the time, we had dedicated communication channels available to the public where people could request a copy of their feedback responses. We had several requests during statutory</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		consultation to provide people with a copy of their responses to their online feedback questionnaire.				
9-2.450	Criticism that National Grid have not considered the Offshore Cable Routing Environmental and Community Appraisal, published on the 12 March 2024	<p>National Grid has actively considered the findings of the East Anglia Onshore and Offshore Cable Routing Environmental and Community Appraisal, published in March 2024, to inform its infrastructure planning and decision-making processes. The appraisal provides a strategic-level assessment of potential environmental and community constraints associated with various cable routing options in the East Anglia region.</p> <p>National Grid's response to the appraisal is published on the Project website. NESO's Clean Power 2030 report identifies the need for the Project to be delivered by 2030. National Grid has in conjunction with NESO undertaken the necessary exercises/studies and its now important the Project makes progress at pace to ensure NESO's ambition for Clean Power 2030 is realised.</p>			X	
9-2.451	Criticism that National Grid's reports as part of the consultation contains errors in their approach to Landscape, Heritage and Archaeology, Soils and the Environment / Criticism that National Grid's professional reports which accompany PPEAL's response to the consultation demonstrate procedural and methodological errors in their approach to landscape, heritage and archaeology, soils and the environment	The Environmental Statement (ES) (document reference Volume 6: Environmental Statement) follows a standard methodology for assessing the environmental effects of the project. The ES will be scrutinised as part of the application for development consent by the Examining Authority on behalf of the SoS. The information presented within the ES is a material consideration in deciding whether to consent the project or not.			X

9-2.455	Suggest that a strategy needs to be developed that incorporates how the power from the many developments of offshore windfarms is brought onshore / Criticism that at the moment it seems that as each development comes on stream a new route of overhead lines is proposed	<p>The Project has been subject to strategic network exercises such as the Holistic Network Design and therefore has been subject to strategic network planning.</p> <p>The Holistic Network Design was undertaken as part of the offshore transmission reform work under the Offshore Transmission Network Review (OTNR) which was completed in 2023. Co-ordinated transmission proposals were principally developed under three temporal workstreams under the OTNR. The Early Opportunities projects workstream supported co-ordinated transmission projects brought forward voluntarily by developers as Pathfinders for those projects which had already received connection agreements. For other less developed offshore wind projects, their connection to a transmission network was determined through a new Holistic Network Design (HND) under the 'Pathway to 2030' workstream.</p> <p>This is set out in the National Planning Statement for Electricity Infrastructure Networks (EN-5) (2024). Paragraph 2.13.4 of NPS EN-5 states that 'It is recognised that proposed projects which have progressed through strategic network design exercises have been considered for strategic co-ordination through those exercises.'</p>			X	
9-2.456	Criticism that National Grid are trying to put respondents off the use of underground cables by emphasising how disruptive they will be (e.g. the Waveney Valley Alternative)	National Grid is not biased towards any particular technology solution but operates within clear policy and funding guidance. We have provided information about the different technology options, including			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>undergrounding, in order to allow respondents to provide informed feedback.</p> <p>Previous experience at National Grid has shown that underground lines are more expensive, complicated to maintain, and less reliable. There are also environmental and engineering considerations.</p> <p>As the cost of all connections ultimately goes onto the electricity bills of domestic and business consumers, the UK government, and our regulator Ofgem require us to develop proposals which represent value for money to consumers.</p> <p>We also have to consider the national policy statements. EN-5 is the National Policy Statement (NPS) which covers developing new electricity networks infrastructure and it states that it is the government's position that overhead lines should be the strong starting presumption for electricity networks developments, unless crossing part of a nationally designated landscape.</p> <p>Our proposals include underground cable within the Dedham Vale National Landscape and some select other areas. Wherever undergrounding is being considered, we need to ensure we're carefully considering the local environment too. This includes looking at local habitats, heritage, and other factors such as watercourses and rivers in order to reduce impacts.</p>				
9-2.457	Criticism that National Grid have already sought approval for substation north of Norwich without	Work for the Project has not started yet. There is currently some work taking place at our Norwich Main			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	means of onward transmission to London, and therefore the consultation has been "piecemeal"	Substation to increase its capacity. Work to the eastern extension of the site started in April 2024 and started on the western extension in October 2024. While the Project would, if consented, connect into Norwich Main Substation, the work taking place there is not linked to our proposals for the Project and is needed to connect new sources of offshore wind from the Sheringham Shoal and Dudgeon offshore wind farms. We considered all the feedback we received throughout our consultation and amended our proposals as a result of this. This included to our proposals near Norwich Main Substation.				
9-2.458	Criticism that National Grid have relocated specific pylons during the consultation process, therefore making it hard for the community to provide feedback on	National Grid has presented all changes made to pylon locations at the 2023 non-statutory consultation and statutory consultation as well as the targeted consultations. No changes to pylon locations were made or agreed until all feedback was received and considered from each consultation therefore communities had the opportunity to feedback back on specific pylon locations based on the latest information at the time of each consultation.			X	
9-2.459	Criticism of National Planning Policy / National Policy Statement (NPS) (e.g. the presumption of overhead lines) and suggest that the NPS is reworded to "The most appropriate technology for each situation should be selected and applying Treasury Green Book guidance in the selection of alternatives". With this, suggest that National Grid should pause the	It is indeed the case that National Policy Statement for electricity networks infrastructure EN-5 (Department for Energy Security and Net Zero (DESNZ) 2024) doesn't specify application of the Treasury Green Book. It should be noted that NPS EN-5 was recently published in January 2024. The amendment of a National Policy Statement is a matter for the Secretary of State subject	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	Project until policy has been reviewed in relation to the presumption of overhead lines / Suggest that Nation Policy Statement are changed	to requirements concerning consultation, publicity and parliamentary scrutiny. National Grid will continue to follow national guidance, primarily NPS EN-5 as it currently stands and should any new NPS come forward, a back check and review would be necessary. It is important that we continue to develop our proposals for the Project to meet our statutory duties and responsibilities to deliver the new renewable sources of energy to homes and business across the UK.				
9-2.460	Criticism that, in order to allow for future capacity of the overhead lines, future capacity must be included in the upfront cost for the Project, which could result in the Project being overspecified and having redundant capacity (e.g. where this is not the case for HVDC offshore cables, which can be laid sequentially when demand requires)	National Grid is constantly looking into new innovations and investigating alternative technology types. These are explored and assessed for suitability. Alternative technologies were investigated for the Project, including an offshore connection using direct current (DC) technology, and various onshore connection options including: increasing operational voltages on existing network to above 400 kV; alternating current (AC) overhead lines (established technology); alternative pylon types; AC underground technology; high voltage direct current (HVDC) overhead line and underground cables; and gas insulated line (GIL). Currently, overhead lines offer the most economic and efficient solution to transmit electricity over long distances.			X	
9-2.461	Criticism that landowners have not been consulted on the Code of Construction Practice / Suggest that	The Outline Code of Construction Practice (CoCP) (document reference 7.2) draws together the proposed			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	Code of Construction should also be applied to the pre-construction investigations and mitigation works including archaeology	<p>construction mitigation which was consulted on at the Preliminary Environmental Information Report (PEIR) stage and has been developed further in the Environmental Statement. The Outline CoCP (document reference 7.2) will be considered further at the examination stage of the Development Consent Order (DCO) application.</p> <p>Pre-construction archaeological mitigation is managed through an Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5), with Detailed WSIs to be produced for specific geographical sections of the route or specific elements of the construction works post-consent. The additional archaeological mitigation requirements are contained in the Outline CoCP (document reference 7.2). Both the Outline CoCP (document reference 7.2) and the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5) are secured through requirements in the DCO (document reference 3.1).</p>				
9-2.462	Criticism that National Grid have not evaluated the relative environmental impacts of the Project against the alternative options	National Grid has evaluated alternatives at each stage of the Project's development, including environmental considerations, at a scale appropriate to that stage. These evaluations are set out in the Corridor and Preliminary Routeing and Siting Study (CPRSS) (published on the Project website), the 2023 and 2024 Strategic Options Backcheck and Reviews (available on the Project website), the 2025 Strategic Options			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Backcheck and Review (document reference 7.17), the 2023 and 2024 Design Development Reports (available on the Project website) and the 2025 Design Development Report (document reference 5.15). The Preliminary Environmental Information Report (available in on the Project website) was published at the statutory consultation in 2024 and the Environmental Statement (ES), submitted with the application for a Development Consent Order (DCO) also includes an assessment of the mina alternative considered.				
9-2.463	Criticism that the Holberg Rules have not been considered (including Holberg Rules 1 and 2)	We have assumed this is referring to the Holford Rules. National Grid disagrees with the respondent and considers that a balanced approach has been taken for routeing and siting, taking into consideration the various Holford Rules. In respect of Holford Rule 1 the rule does not preclude routeing through areas such as the National Landscape. In this case avoidance is not possible as set out in the Corridor and Preliminary Routeing and Siting Study (CPRSS) (available on the Project website) with subsequent reviews confirming this position. In respect of Holford Rule 2 such areas / features are avoided where possible to do so without undue changes of direction. A summary of the Holford Rules is provided within Appendix I22 of this report.			X	
9-2.464	Suggest that there could be access to 3-D modelled visualisations, from any point on the interactive map (e.g. like when booking venue seats, you can see a preview of your view from the respective seat)	The 3D visualisation, which was available at all our public information events, was searchable from any postcode within 2.5 km of the 2024 preferred draft alignment.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.465	Criticism that National Grid has not done enough to portray how big a 50 metre pylon is	<p>We had several documents available at our public information events that helped portray the height of a 50 m pylon. These included a 3D visualisation tool that was searchable by any post code within 2.5 km of the proposed alignment. We also had visualisations available in our Preliminary Environmental Information Report (PEIR) that show an accurate representation of the height of the pylons from specific sections along the route.</p> <p>While the 3D model was not available online, we were able to send several people screenshots from their postcode to portray the visual impact that the proposals might have on their property.</p>			X	
9-2.466	Criticism that National Grid have not considered the findings of ESO November 2020 report	<p>The Offshore Coordination Phase 1 Final Report published by ESO in December 2020 provided preliminary analysis of issues at a high-level and has been comprehensively superseded by subsequent assessments.</p> <p>ESO has since given this project the go ahead through its Network Options Assessment process. ESO's East Anglia Network Study published in March 2024 also agrees that an offshore or underground alternative would not be feasibly delivered until 2034.</p>	X	X	X	
9-2.467	Suggest that National Grid need to take a more forward thinking approach to incorporate the requirements of further expansion and give future returns on the initial investments	Looking out into the 2030s, the National Electricity System Operator (NESO) is not recommending any further wider electricity transmission network reinforcements running through the counties of Norfolk,			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Suffolk or Essex or landing within them, aside from the network capacity already proposed.</p> <p>Under its transmission licence, National Grid has a statutory duty to respond to generation customers wanting to connect to the transmission network.</p>				
9-2.468	Criticism that Orsted have already built their massive station on the outskirts of Norwich, and that National Grid have passed the Sunica Project	<p>Work for the Project has not started yet. There is currently some work taking place at our Norwich Main substation to increase its capacity. Work to the eastern extension of the site started in April 2024 and started on the western extension in October 2024. While Norwich to Tilbury would, if consented, connect into Norwich Main Substation, the work taking place there is not linked to our proposals for the Project and is needed to connect new sources of offshore wind from the Sheringham Shoal and Dudgeon offshore wind farms.</p> <p>Works at Norwich Main Substation and our proposals for Norwich to Tilbury have been developed separately to Orsted's battery farm station near Swardeston, Norwich.</p> <p>The Sunnica Project in East Suffolk has been developed by Sunnica, National Grid has not been involved in the approval of Development Consent for this project. More information is available on the Sunnica Energy Farm project website.</p>			X	
9-2.469	Criticism over the proposed Sealink and Nautilus link and the proposed converter stations outside	These projects are independent of Norwich to Tilbury and are being progressed with their own programme of			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	Saxmundham which will destroy the town's chances of future development to the east	consultation. Therefore, this feedback is not relevant to the Project.				
9-2.470	Suggest that planning permission regulations for solar farms need to protect agriculture / food production through panel designs which enable food and power production to co-exist productively	National Grid is not involved in policy creation for the siting of solar farms. Its role is primarily as a transmission system operator and infrastructure provider. The responsibility for drafting legislation and policy in the UK lies with the government, relevant regulatory bodies, and local planning authorities.			X	
9-2.471	Suggest that National Grid should comply with the Management of Hedgerows (England) Regulations 2024 during the construction phase of the Project	While every effort will be made to avoid removing vegetation during the nesting bird season (March to August), as detailed within the Management of Hedgerows (England) Regulations 2024, this may not always be possible to ensure delivery of the Project. Where necessary hedgerows will be removed and/or pruned within this period, but in line with measures outlined within the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Code of Construction Practice (CoCP) (document reference 7.2) as agreed with the local authorities. This will include nesting bird checks by an experienced ecologist to ensure no active bird nests are present.			X	
9-2.472	Criticism of the time taken by National Grid to respond	We aim to respond to all enquiries in a timely manner. During busier periods, such as our statutory consultation, it may have taken us slightly longer to respond to enquiries that required a greater amount of technical information. National Grid continued to review			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		and consider all late feedback that was received after the close of the 2024 statutory consultation (26 July 2024). This feedback is summarised in Section 9.8 of this consultation report				
9-2.473	Criticism that National Grid have chosen the overhead lines approach to open up Suffolk farmland for solar compounds and the profit making that comes with them	<p>National Grid Electrical Transmission (NGET) does not develop solar farms or have control over potential solar developments that may come forward.</p> <p>National Grid is legally obliged (under our Transmission Owner Licence) to provide capacity at the dates formally agreed in contracts with energy generators (or customers). National Grid does not determine or implement policies that influence the form of energy developments. Our role is to respond to the connection requirements for projects that are developed in line with Government Policy to integrate them into the National Transmission System in a timely, economic and efficient manner in line with relevant policies and our duties.</p> <p>All solar farm proposals are subject to individual assessment on their own merits to ensure they are suitable for the specific location, meet planning and regulatory requirements, and balance the benefits of renewable energy generation with local impacts.</p>			X	
9-2.474	Criticism that there was not adequate communication about the consultation for elderly residents	At the launch of our statutory consultation, we sent information relating to the project to all properties within 1 km of our proposed alignment. To ensure that we contacted all demographics, we also sent this information to community groups and organisations	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		including regional Age UK centres along the route alongside The University of the 3rd Age. We also made our consultation materials available in alternative formats on request for those who found them difficult to engage with.				
9-2.475	Criticism of the lack of certainty / clarity over the nature of the land within the proposed order limits / red line boundary (e.g. on the interactive map and through other documentation such as the PEIR)	National Grid notes the respondent's feedback, we produced a 'Guide to Interacting with our Consultation Plans' (available on the Project website) which explained what was shown on the consultation plans. Contact details to the Project inbox and helpline were included on the Project website and consultation material should anyone have any further queries.			X	
9-2.476	Request to revisit the Environmental Impact Assessment (EIA) to ensure comprehensive mitigation	<p>The scope of the Environmental Impact Assessment (EIA) was agreed through the EIA Scoping Report (document reference 6.19) which was submitted to the Planning Inspectorate in November 2022 and Scoping Opinion (document reference 6.20) received from the Planning Inspectorate in December 2022.</p> <p>An Environmental Statement (ES) (document reference: Volume 6: Environmental Statement) has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) EIA Regulations 2017 ('the Infrastructure EIA Regulations'). The ES identifies and assesses the likely significant effects on the environment resulting from the construction of the Project and recommends appropriate mitigation to reduce effects.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Environmental mitigation measures have been defined within each environmental topic chapter and set out in relevant management documents submitted with the Development Consent Order (DCO) application, including the Outline Code of Construction Practice (CoCP) (document reference 7.2), the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5).				
9-2.477	Concern that lack of support for the Project could result in blockage of access to construction sites or risk interference with machinery / equipment for the Project, and with this National Grid may need to pay for security precautions over a long period of time	<p>National Grid has, as part of the development of the Project, considered the security measures required to ensure construction can be completed safely.</p> <p>Temporary construction compounds, including offices, will be secured to protect the public and prevent unauthorised entry to site.</p> <p>Access to temporary construction compounds will be limited to specific entry points and personnel entries/exits will be recorded and monitored for both security and health and safety purposes.</p> <p>Security fencing and gates are proposed for all site access points to secure the works area, the construction corridor and haul roads.</p> <p>In the event that a haul road is blocked, resulting in a site location becoming inaccessible from a site access</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>point, an alternative access shall be facilitated from a suitable crossover point.</p> <p>In the event of any incident occurring which impacts on the safe and efficient operation of the road network, additional mitigation measures will be considered, which could include contingency routes. Contingency routes will be provided by pre-established traffic diversions and diversions as set out by National Highways, the relevant highway authorities and the police.</p>				
9-2.478	Criticism that proposed planting mitigation will take years (e.g. 30) to be effective	<p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the Environmental Impact Assessment (EIA). The LVIA includes an assessment on both landscape character and visual amenity. It sets out the potential landscape and visual effects and identifies areas for potential mitigation planting around substations and Cable Sealing End (CSE) compounds to reduce visual impacts to local receptors. The LVIA considers residual impacts of the Project at operation year 1 and year 15. The benefits of planting vegetation for screening purposes are not taken into account at Year 1 but are considered at Year 15 when planting would be established. The LVIA is presented in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13). The Landscape and Ecological Management Plan (LEMP) (document reference 7.4) includes details regarding the planting proposals.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Furthermore, the timings are set out within the Biodiversity Net Gain Report (document reference 7.1) with many habitats (e.g. grassland and hedgerows) establishing within 5 years. Additionally, BNG also considers enhancement of existing habitats.</p> <p>Any landscape softening that does not remove or reduce a significant residual effect but seeks to off-set the effect is classed as landscape compensation. Such landscape compensation measures (e.g. creating or enhancing natural landscape features outside of the Order Limits) are considered in relation to the mitigation hierarchy but there is no requirement under policy to compensate for all residual effects. The residual effects that remain following the application of the mitigation hierarchy and any compensation provided then falls to the Planning Balance.</p>				
9-2.479	Criticism that there has been no back-checking on routes NB2, NB3 and NB4 from the Corridor and Preliminary Routeing and Siting Study Report (CPRSS)	National Grid has backchecked its decision making as an inherent part of considering feedback after each consultation. We have reviewed whether decision making balance would be affected by policy change, new evidence or new factors, for example close paralleling such as NB2 was addressed in Section 5.3 of the 2024 Design Development Report (available on the Project website). This has been considered and reported in the 2025 Design Development Report (document reference 5.15) but with no change of corridor proposed.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.480	Criticism that a residential amenity assessment has not been carried out for the Project (as specified in the Corridor and Preliminary Routeing and Siting Study Report (CPRSS))	<p>National Grid has sought to reduce, as far as practicable, impacts on visual amenity through routeing and siting and an ongoing iterative design process which has taken on board feedback at different stages of the Project. The iterative design process sought to avoid areas of highest concern, for examples through changes to the route alignment and proposals for underground cables.</p> <p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the Environmental Impact Assessment (EIA). The approach to the LVIA follows professional guidance as set out in ES Appendix 13.1: Landscape and Visual Methodology (document reference 6.13.A1)) and considers impacts on visual amenity of people living and moving around communities. The LVIA is presented in ES Chapter 13: Landscape and Visual (document reference 6.13).</p> <p>Consideration of changes in views experienced from private residencies has also been undertaken in a Residential Visual Amenity Assessment (RVAA) as set out in ES Appendix 13.4: Residential Visual Amenity Assessment (document reference 6.13.A4). This assessment has been informed by the approach detailed in Landscape Institute Technical Guidance Note 2/19 Residential Visual Amenity Assessment (RVAA).</p>			X	
9-2.481	Criticism that National Grid has contracted connections to North Falls, Five Estuaries and	National Grid has agreements with offshore wind farms including North Falls and Five Estuaries and with Tarchon interconnector, subject to these projects			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	Tarchon, when proposals for the Project are not yet approved	receiving development consent. If Norwich to Tilbury does not get planning approval, the other projects would still need to be developed in order to reach net zero targets set by the UK Government.				
9-2.482	Criticism that the accelerated programme of consultation has taken the project outside of the scope for Holistic Network Design (HND) as part of the Offshore Transmission Network Review (OTNR)	<p>The Holistic Network Design (HND) as part of the Offshore Transmission Network Review (OTNR) provide a solid foundation for identifying strategic options that are most viable and should be taken through further analysis and ultimately consultation. It does not set the programme or timescales.</p> <p>National Grid has followed a standard timeline for a project such as Norwich to Tilbury which is needed to connect offshore wind by 2030. We are legally obliged to provide capacity at the dates formally agreed in contracts with energy generators. These dates are set independently by NESO.</p>		X		
9-2.483	Criticism that the Strategic Options Backcheck and Review Document (June 2023) and Design Development Report (June 2023) remain materially unchanged, and the overhead line proposal remains	<p>Whilst noting there are different opinions, National Grid must make its decisions in the context of the relevant planning policy (such as NPS EN-1 and EN-5) and requirements to be economic under the Electricity Act. Decisions are further informed by feedback and environmental effects and technical considerations. Decision making is reviewed as new feedback and evidence becomes available and changes in policy are also considered. The fundamental basis for corridor and technology selection remains unchanged as there are for example no newly designated landscapes or substantive change in relative cost profiles. Whilst there</p>		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		has been no change, this is because the fundamental decision-making parameters remain consistent.				
9-2.484	Concern that the Project proposes harm to many environmental habitats which contradicts the Environmental Principles National Policy Statement which requires policy makers to avoid harm	National Grid has sought to reduce the effect on habitats and designated areas through the routeing of the Project. Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8) assesses the effects on habitats and species and identifies any required mitigation. Preliminary 'Environmental Areas' were presented as part of the statutory consultation material, and these have been refined as part of the application. National Grid has set itself a target of delivering 10% Biodiversity Net Gain (BNG) with wider environmental and societal benefits on all construction projects. The 10% BNG target for the Project is currently voluntary and aligned with our corporate sustainability commitment.			X	
9-2.485	Criticism that the community benefits under the current proposal are inadequate and trivialise losses faced by homeowners and businesses, and that the benefits will not substitute for true comprehensive compensation	<p>The Government has published its guidance on community funds for transmission infrastructure (DESNZ, 2025). National Grid is committed to working with Ofgem, industry partners, local communities and their representatives to ensure community benefits are delivered fairly and effectively, driving lasting, positive change for the people and places integral to our developing electricity network.</p> <p>Government has also announced its plans to introduce a bill discount scheme for households within 500 metres of new infrastructure, which it proposes to introduce through the Planning and Infrastructure Bill. This is</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>evolving government policy. Government expects this scheme to be in place by 2026, and we will share further details as they emerge.</p> <p>National Grid is committed to providing a coordinated local and regional approach to community benefits. This will be delivered outside the development consent process, since this is not a material consideration in the decision on the proposed Project or a matter to be secured as part of the DCO, as per the Community Funds for Transmission Infrastructure: Guidance (DESNZ, 2025).</p> <p>If a property owner is concerned about the impact on their property, they should seek third party advice and/or contact the Project lands team to discuss: Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.</p> <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD</p>				
9-2.486	Concern that the Project / consultation does not comply with the Planning Act (2008) (e.g. Section 55; S42(1)(d), S44(1) and S47(7))	<p>Throughout the development of the proposals, National Grid has considered the Planning Act (2008) and has ensured that the proposals and consultations have been carried out in line with the requirements set out. Ultimately, our proposals will be considered by the Planning Inspectorate and Secretary of State who will review whether we have acted in accordance with the Planning Act.</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.487	Suggest that a strategic approach should be adopted via the work of the National Electricity System Operator (NESO) and the Regional Energy Strategic Planner (RESP)	The Centralised Strategic Network Plan (CSNP) will be developed by the National Energy System Operator (NESO). NESO provide a link seeking how communities can get involved in the National Planning Review (NPR) of which the CSNP is a part of.			X	
9-2.488	Criticism that assessments on the impact of the Project on residential amenity, heritage assets and priority habitats has not been presented in the Preliminary Environmental Information Report (PEIR) (as National Grid said it would be in Paragraph 1.3.23 of the Environment Appraisal of the Corridor Preliminary Routeing and Substation Siting study (CPRSS) (April 2022))	<p>The Preliminary Environmental Information Report (PEIR) included a Landscape and Visual Impact Assessment (LVIA), that followed professional guidance as set out in Guidelines for Landscape and Visual Impact Assessment (GLVIA3), as prepared by the Landscape Institute and the Institute of Environmental Management and Assessment.</p> <p>The assessment of visual effects was presented in Volume III, Appendix 13.2: Visual Baseline and Assessment. The assessment was prepared by qualified and experienced landscape professionals and reported on significant (negative) effects considered likely during construction and operation, including visual receptors from properties.</p> <p>Effects on residential visual amenity have been provided as part of the Environmental Statement (ES) and are contained within ES Appendix 13.4: Residential Visual Amenity Assessment (document reference 6.13.A4).</p> <p>The Preliminary Environmental Information Report (PEIR) also included the ecological desk-based survey and all ecology survey results known at the point of writing the report. The proposed ecology survey methods for other protected species surveys were also</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>included within the document. Since the submission of the PEIR a range of protected species and other ecological surveys have been completed, and the results are outlined in Chapter 8: Ecology and Biodiversity (document reference 6.8) and Appendices 8.1 to 8.16 (document reference 6.8.A1-6.8.A16) of the Environmental Statement (ES). This has included an assessment of priority habitats.</p> <p>The historic environment had its own chapter within the PEIR. This chapter (11) reported the results of the preliminary assessment of the potential effects of the Project on the historic environment during construction and operation. The chapter covered both designated and non-designated: archaeological remains, historic buildings, and historic landscapes. The desk-based assessment within the PEIR was supported by a site walkover and setting survey, where land access was available. The historic environment was assessed within 6.11.A1 Historic Environment Baseline Report. The heritage assets that would be impacted by the Project were identified and assessed within the ES chapter 11.6 and appendix 11.2.</p>				
9-2.489	Criticism that the Project does not align with the government's 25 Year Environment Plan (e.g. the goal to achieve net zero by 2050) / Concern that Government's Environmental Improvement Plan 2023 has not been considered for the Project	A Green Future: Our 25 Year Plan (2018) highlights the Government's support for the reduction in the United Kingdom (UK)'s carbon footprint. The Project is critical to the rapid decarbonisation of the National Grid and the principle of the Project is therefore supported by the Plan.	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>The Overarching National Policy Statement for Energy EN-1 (Department for Energy Security and Net Zero (DESNZ) 2024) states in paragraph 5.4.39 that 'The government's 25 Year Environment Plan and the Environment Act 2021 mark a step change in ambition for wildlife and the natural environment. The Secretary of State should have regard to the aims and goals of the government's Environmental Improvement Plan 2023... and any relevant measures and targets, including statutory targets set under the Environment Act or elsewhere.'</p> <p>Our position that the Project is compliant with both Plans insofar as it is relevant to the Project is set out in the Planning Statement (document reference 5.6).</p>				
9-2.490	Request that National Grid commission a Quantity Surveyor to carry out a proper comparison of the alternatives and advise the public of their findings	<p>National Grid provides full detail of the technology considered, capital cost and lifetime cost in Appendix B of the 2025 Strategic Options Backcheck and Review Report (document reference 7.17).</p> <p>This Methodology is consistent with the previous applications made for Development Consent Orders made by National Grid and is a transparent methodology that aligns with independent benchmarks and price control submissions to the regulator Ofgem. As such the information is available for any third party to scrutinise the information provided.</p>			X	
9-2.491	Suggest that National Grid engineers should attend landowner meetings for the Project to collaboratively	Where deemed appropriate members of the engineering team can attend site meetings with landowners.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	and constructively minimise impact on land and landowners	<p>In most circumstances it is appropriate for the lands team to attend these meetings to discuss the proposals and the impact they may have on the land.</p> <p>Any feedback given at these meetings is recorded and then assessed collaboratively across the different disciplines in the Project team.</p>				
9-2.492	Suggest that National Grid should commission a Valued Landscape Assessment (including at the Colne Valley)	<p>National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project. The results of this assessment are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation (and maintenance) of the Project and recommends appropriate mitigation measures to reduce potential effects.</p> <p>The Landscape and Visual Impact Assessment (LVIA), included in Chapter 13: Landscape and Visual of the ES (document reference 6.13), has been undertaken as part of the EIA. The approach to the LVIA follows professional guidance as set out in ES Appendix 13.1: Landscape and Visual Methodology (document reference 6.13.A1), which includes Guidelines for Landscape and Visual Impact Assessment (GLVIA3). Judgements on landscape value have been made as part of the assessment. These value judgements have been informed by the Landscape Institute's Technical</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Guidance Note (TGN) 02/21 Assessing landscape value outside national designations. This defines landscape value as "the relative value or importance attached to different landscapes by society on account of their landscape qualities" (page 3).				
9-2.493	Suggest that, where roads are to be widened for use as a haul road, roads are to be returned to their original (rural) size following construction of the Project / Concern that the cost associated with the reinstatement of roads used for construction of the Project has not been included in the costings	<p>Once the Project has been constructed and commissioned, the temporary construction working areas would be removed, and the site reinstated. Temporary construction haul roads (including temporary bridges and culverts) will be removed unless identified as offering a long-term improvement to the environment and land usage during the detailed design (and agreed with the landowner, Lead Local Flood Authority (LLFA) and / or the Environment Agency (where required)). Temporary features such as site welfare, working areas, fencing and scaffolding would be removed. Any stripped topsoil would be reinstated, and the site would be returned to its former use, subject to any planting restrictions or agreements with landowners.</p> <p>Reinstatement would also include landscaping. This is likely to include reseeding grassland areas, replanting hedgerows, and trees. It would also include additional landscape planting in some areas to help screen the new infrastructure from sensitive receptors.</p> <p>Proposed planting is detailed within the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4), which details the proposed locations and specifications of planting, along with</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>required maintenance schedules to ensure the success of the landscaping scheme.</p> <p>Costings for the Project are set out in the 2025 Strategic Options Backcheck and Review (document reference 7.17). While reinstatement costs are not explicitly mentioned, they are assumed to be included as part of the unit rates used to calculate cost estimates and are therefore included within the costings.</p>				
9-2.494	Threat of action against the Project	<p>National Grid have, as part of the development of the Project, considered the security measures required to ensure construction can be completed safely.</p> <p>Temporary construction compounds, including offices, would be secured to protect the public and prevent unauthorised entry to site.</p> <p>Access to temporary construction compounds would be limited to specific entry points and personnel entries/exits would be recorded and monitored for both security and health and safety purposes.</p> <p>Security fencing and gates are proposed for all site access points to secure the works area, the construction corridor and haul roads.</p> <p>In the event that a haul road is blocked, resulting in a site location becoming inaccessible from a site access point, an alternative access shall be facilitated from a suitable crossover point.</p> <p>In the event of any incident occurring which impacts on the safe and efficient operation of the road network,</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		additional mitigation measures would be considered, which could include contingency routes. Contingency routes would be provided by pre-established traffic diversions and diversions as set out by National Highways, the relevant highway authorities and the police.				
9-2.495	Suggest that National Grid should conduct a survey for those impacted by the Project on whether they would rather have higher energy bills (e.g. to fund an alternative option such as offshore cables) or the Project in their local area	<p>The Development Consent Order (DCO) decision for the Project will be decided on by the Planning Inspectorate and Secretary of State, who will review all the documents National Grid produced alongside the feedback that we received as part of our statutory consultation. It would not be compliant with the requirements placed on us by our regulator Office of Gas and Electricity Markets (Ofgem), and the UK Government for us to determine the outcome of the Project through a survey.</p> <p>Throughout the development of our proposals, we have considered alternatives including offshore and underground cable. Details of how we considered these alternatives, and why they were not taken forwards are available in the 2025 Strategic Options Backcheck Report (document reference 7.17) which is submitted as part of our application for Development Consent.</p>			X	
9-2.496	Criticism of the assumptions used for the offshore solution as part of the Electricity System Operator (ESO) Study	National Grid welcomed the report produced by the National Energy System Operator (NESO) and provided a full response to the report which can be found on the Project website.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.497	Criticism that National Grid has not considered Historic England's Conservation Principles, Policies and Guidance (e.g. which states that 'potential conflict between sustaining heritage values of a place and other important public interests should be minimised by seeking the least harmful means of accommodating those interests')	<p>Through routeing and siting National Grid has sought to reduce as far as practicable potential impacts on the historic environment, including designated and non-designated heritage assets, for example through careful siting of pylons. Where potential impacts on the historic environment are identified, we have proposed appropriate mitigation measures. Consultation on methodology and baseline has been undertaken with Historic England and Local Planning Authorities.</p> <p>The Historic Environment assessment is presented in ES Chapter 11: Historic Environment (document reference 6.11) and its appendices which was undertaken as part of the Environmental Impact Assessment (EIA) for the Project.</p>	X		X	
9-2.498	Criticism that the Preliminary Environmental Impact Assessment acknowledges the high number of listed buildings and conservation areas that are being impacted, but provides no real mitigation to the majority of the route	<p>The Preliminary Environmental Information Report (PEIR) presented preliminary information, including high level consideration of suitable mitigation, and reflected the Project proposals at the time of the statutory consultation.</p> <p>A complete Environmental Impact Assessment has now been carried out and the results are presented in the Environmental Statement (ES) (Document Reference Volume 6: Environmental Statement) which accompanies the Development Consent Order (DCO) application. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation of the Project and recommends appropriate mitigation to reduce effects.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Details on the historic environment are presented in ES Chapter 11: Historic Environment (document reference 6.11). Care must be taken when considering mitigation for effects resulting from a change in setting that affect the value of listed buildings and conservation areas to ensure that any mitigation, such as screening planting, is not in itself harmful to the value of the asset.				
9-2.499	Criticism of media coverage of the Project (e.g. coverage has been biased)	National Grid does not control the media coverage of the project. Members of our team have spoken to the press on several occasions to represent the Project. Throughout our consultations there has been both supportive and critical media comments on the proposals in the media			X	
9-2.500	Criticism that National Grid claims to have explained why the offshore strategic option was not being progressed, and that 'This information can be found on the Project website' (Preliminary Environmental Information Report (PEIR) 3.3.10), but does state in which of the documents there listed it is to be found	<p>This comment has been noted. Information is included in the Corridor and Preliminary Routeing and Siting Study (CPRSS, 2022), the Strategic Options Backcheck and Reviews 2023, 2024 (available on the Project website) and 2025 (document reference 7.17), the Response to Offshore Electricity Grid Taskforce, the Design Development Reports 2023, 2024 (available on the Project website) and 2025 Design Development Report (document reference 5.15) and the Environmental Statement Chapter 3: Alternatives (document reference 6.3).</p> <p>The CPRSS assessed offshore transmission connections as an alternative to onshore reinforcement. The CPRSS strategic assessment concluded that while offshore connections were technically feasible, they</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>presented significantly higher costs due to specialist marine infrastructure, converter station requirements, and extended delivery timescales. Additionally, substantial onshore infrastructure would still be required at landing points, meaning environmental impacts would be relocated rather than eliminated.</p> <p>Marine options were included in the strategic options taken forward for appraisal in the CPRSS in combination with other technologies but were not selected as the preferred strategic approach due to the cost-benefit analysis favouring onshore alternatives with targeted environmental mitigation.</p> <p>Further information can be found in the documents referred to above.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Consultation (continued)						
9-2.501	Criticism that public consultees are potentially disadvantaged by the unavailability of documents – such as the Environment Statement - that are only published as part of the set accompanying the Development Consent Order (DCO) application, the work-in-progress nature of the Preliminary Environmental Information Report (PEIR) meaning that it is no substitute for the authoritative evidence base that the Environment Statement (ES) would represent	<p>National Grid has noted this comment.</p> <p>The Preliminary Environmental Information Report (PEIR) was prepared in accordance with the Nationally Significant Infrastructure Projects: Advice Note 7 (June 2020) and was a preliminary document that reflected the Project's proposals at the time of statutory consultation.</p> <p>The PEIR was based on the draft proposals and enabled stakeholders and members of the public to comment on the Project at a stage when they could influence the design. The Environmental Impact Assessment (EIA) is published with the Development Consent Order (DCO) application and reflects the final design for the Project. Members of the public and stakeholders are able to view the EIA along with the application on the Planning Inspectorate website.</p>			X	
9-2.502	Criticism that there appear minor discrepancies between the text of the full Preliminary Environmental Information Report (PEIR) and that of the Non-Technical Summary (NTS) PEIR, which seem to have arisen from an attempt to summarise in the latter the content of the former	The Environmental Statement (ES) (document reference Volume 6: Environmental Statement) presents the findings of the Environmental Impact Assessment (EIA), a summary is included in a Non-Technical Summary (NTS) (document reference 6.21)). The Non-Technical Summary has been reviewed to ensure that there are no discrepancies between the key elements of the ES.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.503	Criticism of the £1000 a year discount off energy bills for residents near to overhead lines proposed by the Government (e.g. this is not enough compensation to cover losses on property values)	<p>The Government has published its guidance on community funds for transmission infrastructure (DESNZ, 2025). National Grid is committed to working with Ofgem, industry partners, local communities and their representatives to ensure community benefits are delivered fairly and effectively, driving lasting, positive change for the people and places integral to our developing electricity network.</p> <p>Government has also announced its plans to introduce a bill discount scheme for households within 500 metres of new infrastructure, which it proposes to introduce through the Planning and Infrastructure Bill. This is evolving government policy. Government expects this scheme to be in place by 2026 and we will share further details as they emerge.</p> <p>National Grid is committed to providing a coordinated local and regional approach to community benefits. This will be delivered outside the development consent process, since this is not a material consideration in the decision on the proposed Project or a matter to be secured as part of the Development Consent Order (DCO), as per the Community Funds for Transmission Infrastructure: Guidance (DESNZ, 2025).</p>			X	
9-2.504	Suggest that the standard industrial grey paint colour is not used for pylons for the Project (e.g. due to visual impact)	National Grid uses a standard industrial grey paint colour across the majority of its assets. It is a colour we have used for several years as it provides a sympathetic balance between pylons blending into landscapes and			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		skylines when seen from differing views and natural lighting.				
9-2.505	Criticism that the Equalities Act 2010 has not been considered / Concern that the consultation does not comply with the Equalities Act 2010	We follow a robust assessment process which we believe is appropriate for projects like this. Our assessments, strategy, plans and recommendations all come under Ofgem regulation and approval. Ultimately our processes will be assessed by the Planning Inspectorate and the relevant Secretary of State.	X		X	
9-2.506	Criticism of compensation rates offered by National Grid as the flat rates have not changed since 2010, and so fail to consider inflation / Suggest that compensation rates should be updated in line with inflation	National Grid's Land Rights Strategy and payments were reviewed and updated in early 2024. A copy of the Land Rights Strategy document can be found on the Project website.		X	X	
9-2.507	Criticism that National Grid will require winching compounds at intervals along the route	National Grid have standardised construction methods for new overhead line routes. The conductors would typically be installed in sections between tension (angle) pylons, where the overhead line changes direction. A bow-tie shaped pulling site would be established, for tension/angle pylons, at one end of the section with the conductors running out from a tensioning site at the other end of the section, to keep the wires off the ground. Pilot wires would be used to pull conductors between pylons. Additional fittings, such as spacers (to prevent the conductors from touching each other) and dampers (to prevent oscillations in the overhead line), would then be fitted to the conductors. An earth wire would run along the top of the pylons and contain optical	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		fibres to allow transmission of data around the system. As this is a new overhead line project, the engineering team will require access to every tower for the purpose of winching the conductors.				
9-2.508	Concern that National Grid did not send out 50,000 letters for the consultation as claimed (e.g. as many households, received multiple copies addressed to each household member, while others were entirely unaware of the consultation)	At the launch, and extension, of statutory consultation National Grid contacted properties within a Primary Consultation Zone (PCZ) of 1 km on either side of the alignment. This was approximately 77,000 properties. When we launched our targeted consultations, we wrote to properties within bespoke consultation zones that were developed to assist engagement with the local communities where proposed changes were being considered. Targeted consultations were open to anyone with an interest in the proposed changes, however as we were not asking for feedback on other sections of the route, or the Project as a whole, we did not directly write to everyone who was involved in statutory consultation. Where possible, we asked people to reference a specific change when leaving feedback. This is in line with governmental guidance on consultation for Nationally Significant Infrastructure Projects. Our compliance with government guidance and legislation is available in Chapter 4 of this Consultation Report.			X	
9-2.509	Criticism of the Environmental Impact Assessment (EIA) (e.g. significant deficiencies)	National Grid has undertaken a complete Environmental Impact Assessment (EIA) of the Project which is presented in the Environmental Statement (ES)			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>(document reference Volume 6: Environmental Statement) in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 (the EIA Regulations) and relevant guidance. The methodology used to undertake the EIA is set out in Chapter 5: EIA Approach and Method (document reference 6.5). ES Chapter 2: Key Legislation and Planning Policy Context (document reference 6.2) identifies where the information defined by Schedule 4 of the EIA Regulations 2017 can be found within the ES. The EIA has been undertaken by competent experts with the relevant and appropriate experience in their respective topics. The EIA technical leads responsible for the individual chapters are provided in ES Appendix 1.1: Competent Expert Evidence (document reference 6.1.A1).</p> <p>Furthermore, National Grid submitted an EIA Scoping Report (document reference 6.19) to the Planning Inspectorate on 7 November 2022. The Planning Inspectorate (on behalf of the Secretary of State) formally adopted its Scoping Opinion (document reference 6.20) on 14 December 2022 which has informed the scope of the EIA for the Project.</p>				
9-2.510	Criticism that consultation letter was not delivered to respondent until after the consultation events had taken place / Concern that not enough notice was given for consultation events (e.g. only 24/48 hours)	National Grid launched its statutory consultation on 10 April 2024 and all information was made live on this date. Our Community Newsletter was delivered to properties along the route from this date.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>While there may have been some postal delays in a handful of areas to the delivery of the Community Newsletter and other documents by Royal Mail, we also publicised the consultation through other means including in national and regional newspapers, on social media, and on our Project website.</p> <p>This should have provided sufficient notice for Public Information Events, with the first event held on 24 April and other events running until 17 May.</p>				
9-2.511	Concern that the scoping documents for the Project do not show that a strategic approach to natural resource impact assessment has been taken (e.g. cumulative and indirect impacts, including on habitats and biodiversity, of the Project and other schemes in the area have not been considered)	<p>An assessment on biodiversity has been undertaken as part of the Environmental Impact Assessment (EIA) and is included in Chapter 8: Ecology and Biodiversity) of the Environmental Statement (ES) (document reference 6.8). This assessment includes both direct and indirect effects on ecological receptors.</p> <p>A cumulative assessment has also been undertaken as part of the EIA, which includes cumulative impacts on ecology and biodiversity. This is presented in Chapter 17: Cumulative Effects of the Environmental Statement (ES) (document reference 6.17).</p>			X	
9-2.512	Suggest that community engagement is undertaken before decisions are made, including public consultation on National Grid's Strategic Spatial Energy Plan	National Grid held three public consultations on our proposals for the Project, including two non-statutory in 2022 and 2023 and a statutory consultation in 2024 and additional targeted consultations in 2025. We reviewed and considered all the feedback that we received from these consultations and amended our proposals, where possible, in light of this.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>The final decision on the project will ultimately be made by the Planning Inspectorate and the Secretary of State and we will not start work until a decision has been made.</p> <p>National Grid also notes the feedback regarding the Strategic Spatial Energy Plan (SSEP). However, the SSEP is being developed by the National Energy Systems Operator (NESO), as commissioned by the Government, and not by National Grid.</p>				
9-2.513	Criticism that the Project contradicts the legal precedents, such as the landmark case of Newbury District Council v. Secretary of State for the Environment (1981), which established that the preservation of the character and appearance of an area is a material consideration in planning decisions	<p>The case referred to, Newbury (1981), does not establish that preserving the character and appearance of an area is a material consideration in planning decisions. Regardless, we have considered the landscape and visual impacts of the Project in accordance with applicable statutory requirements and relevant policy and guidance.</p> <p>We follow a robust assessment process which we believe is appropriate for projects like Norwich to Tilbury. Our assessments, strategy, plans and recommendations all come under Ofgem regulation and approval. Ultimately our processes will be assessed by the Planning Inspectorate and the relevant Secretary of State.</p>			X	
9-2.514	Concern that the Project contradicts the Human Rights Act 1998 and the European Convention on Human Rights enshrine the right to respect for private and family life, as well as the peaceful	<p>We follow a robust assessment process which we believe is appropriate for projects like Norwich to Tilbury. Our assessments, strategy, plans and recommendations all come under Ofgem regulation and approval.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	enjoyment of one's home and possessions / Concern that the Project is in breach of Human Rights (e.g. by intending to use land not owned by National Grid)	<p>Ultimately our processes will be assessed by the Planning Inspectorate and the relevant Secretary of State.</p> <p>We believe that our proposals have been developed in line with the Human Rights Act and the European Convention on Human Rights, including Article 8 and Article 1 of Protocol 1 of the ECHR.</p>				
9-2.515	Concern the Project contradicts the landmark case of <i>Garlick v. Cheltenham Borough Council</i> (2001), by which the court ruled that the impact on the landscape and the loss of agricultural land are material considerations in planning decisions	We are unable to locate the case referred to, but we have considered both the Project's landscape impacts and impacts on agricultural land, in accordance with applicable statutory requirements and relevant policy and guidance.			X	
9-2.516	Criticism that the Project contradicts the case of <i>Bushell v. Secretary of State for the Environment</i> (1981) which established that the preservation of residential amenity and the protection of the natural environment are material considerations in planning decisions	<p>The case referred to, <i>Bushell</i> (1981), does not establish the propositions identified by this feedback. Regardless, National Grid has considered the potential impacts of the Project on residential amenity and the natural environment, in accordance with applicable statutory requirements and relevant policy and guidance.</p> <p>Our assessments, strategy, plans and recommendations all come under Ofgem regulation and approval. Ultimately our processes will be assessed by the Planning Inspectorate and the relevant Secretary of State.</p>			X	
9-2.517	Suggest that relevant bodies should be included in the consultation, including the Environment Agency,	Throughout the Project, including at the launch of our consultations, we contacted key stakeholders, companies, and community groups to ensure that we	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	River Stour Trust, East Anglian Waterways Association and the Inland Waterways Association	are engaging with as many people as possible. This included statutory undertakers, utilities providers, and local community organisations, including the Environment Agency who are a statutory consultee.				
9-2.518	Request that following each webinar, attendees are sent a list of each of the question raised along with National Grid's response to each question	The webinars held during statutory consultation were recorded and made available on the Project website. For GDPR reasons, we were not allowed to record the Q&A sections of the webinars where people's names and some personal information may have been shared. If people had specific questions following our webinars, we had a dedicated community phonenumber and email available where we could provide answers.			X	
9-2.519	Threat of further legal action against the Project (e.g. judicial review)	National Grid notes the respondent's feedback. As part of the Development Consent Order (DCO) process applications can be made to the courts for Judicial Review (JR) after the Secretary of State has made his or her decision.	X		X	
9-2.520	Criticism that the Electricity Market Reform (EMR) study that National Grid have committed to provide, is not intended for release until September 2024, which is three months later than the last round of change control and the final statutory consultation submission – which are projected to take place in July 2024. Therefore, the results of the study intended to quantify the risk of the interaction will not be factored into the final submission of the redline	Following the statutory consultation we read and considered all the feedback received. The Project team then went through a series of change control meetings which resulted in amends to the alignment, access, and Order Limits. These meetings were held until November 2024 and considered the findings of relevant studies and reports, including National Grid's own studies which were published up to this point.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	route; and, by extension, the redline will be submitted without a thorough comprehension and consideration of the risks it entails	We have to continue to develop our proposals alongside these reports in order to meet the target set by the UK Government to connect 50 GW of offshore wind by 2030 and help achieve net zero.				
9-2.521	Concern that National Grid have not collaborated with the Department for Energy Security and Net Zero and Ofgem on the Project (e.g. with respect to alternative options)	<p>National Grid develops its projects in line with government national planning policy and within the regulatory framework set out by the regulator, Office of gas and electricity markets (Ofgem).</p> <p>The 2023 and 2024 and 2025 Strategic Options Backcheck and Reviews (SOBR) are public documents setting out the decisions which are available for stakeholders including those referenced to see visibility of options evaluated. The 2023 and 2024 reports can be found on the Project website, the 2025 SOBR has been submitted with the application for development consent (document reference 7.17).</p>			X	
9-2.522	Suggest that the Project is paused until the findings of the Winser Report have been taken into consideration (e.g. including the development of a meaningful strategic assessment and plan)	<p>An independent report by Nick Winser, in his capacity as Electricity Networks Commissioner, was published on 4 August 2023. The report sets out recommendations for accelerating the rollout of electricity transmission infrastructure, which will be crucial to moving electricity generated from renewable sources to the places that need it.</p> <p>The Winser Report includes proposals to government on streamlining the consenting process for major schemes, and for a more strategic approach to planning the future of networks spatially.</p>	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		At present, no change to regime has taken place because of the recommendations in this report and Norwich to Tilbury will continue to be developed as a Nationally Significant Infrastructure Project under the Planning Act 2008. The Project is at an advanced stage of design, having been in development for a number of years and pausing now would delay completion of the Project and the ability to transport electricity generated by offshore wind farms.				
9-2.523	Criticism that the Preliminary Environmental Information Report includes a short paragraph acknowledging that there are health concerns, but states that these are considered low with little to no justification as to why	<p>The Preliminary Environmental Information Report (PEIR) was a preliminary document and reflected the Project proposals and information available at the time of the 2024 statutory consultation.</p> <p>This application is accompanied by an Environmental Statement (ES) (document reference Volume 6: Environmental Statement) which has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 ('the Infrastructure EIA Regulations') and in consultation with the relevant local planning authorities and statutory environmental bodies. Further assessment, taking account of health-related environmental changes, on the physical and mental health impacts arising from the Project, including details on the methodology and criteria for assessment findings, has been presented in Environmental Statement (ES) Chapter 10: Health and Wellbeing (document reference 6.10).</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.524	Criticism that within the Preliminary Environmental Impact Assessment, the methodology used to assess flood risk is unclear, and as with a lot of the other surveys, seems to be mainly desktop based with various assumptions applied	Since publication of the Preliminary Environmental I Information Report (PEIR), the Project has been subject to a detailed Flood Risk Assessment (FRA) (document reference 7.9) that has appraised flood risk to and arising from the Project from a range of sources. The FRA (document reference 7.9) has been informed by data including flood mapping and flood modelling outputs and has been prepared whilst engaging with key flood risk management authorities. The FRA (document reference 7.9) has identified a range of good practice and additional mitigation measures that would be needed to ensure that flood risk to existing communities and infrastructure is not increased during construction and operation. These measures are described in the Outline Code of Construction Practice (CoCP) (document reference 7.2).			X	
9-2.525	Suggest that the regulatory framework should be updated to enable a strategic and collaborative approach to the issue of energy supply (e.g. including offshore windfarm providers, battery storage providers, Local Authorities and the Government) and to ensure that any future consultations provide a full range of considered and costed options	It is Government that sets out national planning policy for Nationally Significant Infrastructure Projects (NSIPs) like Norwich to Tilbury. Government also set out the regulatory framework, managed through the Office of gas and electricity markets (Ofgem). This is therefore a matter for government. If there are any changes to national policy or the regulatory framework, National Grid will take that into account and reconsider its proposals accordingly. The Project has set out a full range of considered and costed option within the 2025 Strategic Options Backcheck and Review (document reference 7.17).	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.526	Suggest that Ofgem enforce use of the Treasury Green Book	<p>The Treasury Green Book provides guidance to public servants when considering government spending on assets and resources financed by the government. As such, it does not apply to National Grid or our projects and is not designed for application by National Grid or our regulator, Ofgem. But that doesn't mean we're exempt from scrutiny and external oversight, including from Ofgem.</p> <p>We've considered a wide range of policies and guidance in the development of our proposals for Norwich to Tilbury, including relevant National Policy Statements and the requirements of the Planning Act 2008. We've demonstrated how we've considered these factors throughout the Project's development. Ultimately, all proposals are examined by the Planning Inspectorate at submission for a development consent application.</p>			X	
9-2.527	Criticism that National Grid dismisses the Community Sentiment aspect of the Project as being "not part of the Holistic Network Design (HND) methodology" in their response to the Electricity System Operator (ESO) study (especially when the ESO study shows all but one of the nine options studied are superior to the Project, which is rated red for Community in Section 7 in this respect)	National Grid notes the respondent's feedback. The Electricity System Operator (ESO) Study includes a separate analysis of 'community sentiment', which is distinct from the consideration of environment and community factors in the Holistic Network Design (HND) methodology. Given the differing geographical locations of alternative options to the current Norwich to Tilbury proposals forming Option 3, it is not clear from the ESO Study if or how the probable sentiment of the communities local to the other options has been taken into account. It is also not clear how the sentiment of potentially affected communities has been assessed by			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		the ESO and the numbers that have been engaged with to determine an appraisal score nor what bearing the community sentiment ratings are expected to have on options appraisal. National Grid is committed to taking into account community feedback on its proposals. In line with processes and guidance from the Planning Act 2008 and National Policy Statements, stakeholders and the public are consulted during the proposed project's evolution allowing for feedback to have influence in the development of the location, design and mitigation proposals of our schemes.				
9-2.528	Suggest that an inflatable (or similar model) 50 m pylon is put on display at consultation events, so attendees have an appreciation of the size of the pylons proposed as part of the Project	We had a range of materials available at our public information events, including a 3D visualisation tool which showed the visual impacts of the Project from any property within 2.5 km of the alignment. In our Preliminary Environmental Information Report (PEIR) we also have visualisations available for specific sections of the route.			X	
9-2.529	Suggest contour maps are shared with the public showing the extent of all impacted landscape with the Project in place	At the statutory consultation, we had a range of maps available, alongside an interactive map on the Project website. At our public information events we also had a 3D visualisation which took into account land contours to show an accurate representation of the visual impact that the proposals would have on the local area.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		We believe that this information provides an appropriate amount of information on the proposals to allow members of the public to engage and leave feedback.				
9-2.530	Oppose any alternative proposals to the Project which include Bradwell as a landfall	Our proposals for Norwich to Tilbury do not include Bradwell as a landfall point. Bradwell as a point of connection would require a greater amount of new infrastructure and is therefore less economic and efficient and would likely be associated with greater environmental effects.			X	
9-2.531	Criticism that the Project will result in dragging cables 20 km inland from the cost to multiple battery farms underground	We note the respondent's feedback regarding cables coming inland for 20 km, but as set out in the Corridor and Preliminary Routeing and Siting Study (CPRSS) (available on the Project website) the alternative is for the 400 kV connection to be made closer to the coast. This would require two overhead line connections down the Tendring peninsula to the alternative coastal node rather than underground cables to a more inland node. This would have increased effects and would be at additional cost and therefore would be less preferred. In regard to other energy projects the approval of those is a matter for NESO and out with National Grid's control with approval being a matter for the relevant consenting authorities which includes the Local Planning Authority depending on scheme size.			X	
9-2.532	Criticism that the Project will result in minimal expansion facilities for new wind farms	National Grid is legally obliged (under our Transmission Owner Licence) to provide capacity at the dates formally agreed in contracts with energy generators (or			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>customers). Contract dates are set out by the National Energy System Operator (NESO) independent of National Grid.</p> <p>The Project will ensure sufficient capacity to manage the expected increase in offshore wind needing to connect in the coming years and beyond.</p> <p>National Grid does not have a duty to provide expansion facilities for new wind farms e.g. new or upgraded roads, manufacturing, testing or maintenance facilities that are associated with the expansion of wind farms.</p>				
9-2.533	Criticism that the Project will result in noise, and fire risks from Lithium battery storage	Noise generated from construction activities will be restricted to agreed working hours and monitored to comply with current Health and Safety legislation. The use of lithium batteries on site will be documented within site specific risk assessments to ensure only approved batteries are used on site and plans are in place to manage any battery failure.			X	
9-2.534	A separate table was provided for Section K to the west of Chelmsford and Section L to the east. Paragraph 3.2.32 of the main report (June 2022) states that 'for each section topic a judgement is made as to whether the residual effects on a receptor would be positive, neutral or negative'. Criticism that the factors listed in paragraph 3.1.10 and the judgement of positive, negative or neutral effects are not evident in the analysis tables for Section K and L	National Grid would refer the respondent to the CPRSS appendices where for example it refers on page D14 to the potential to avoid significant adverse heritage effects or on page D15 to the potential for significant adverse visual effects. Similar examples are noted in the later pages covering corridor L. All corridors were considered on a comparable basis appropriate to decision making between different corridor options. The OAST tables set out the background information to those decisions which are expanded on further in the CPRSS main report.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.535	Concern that local landscape designations were not considered for the Project (e.g. as available within Local Plans and Neighbourhood Plans) / Concern that local landscape designations were not listed as a dataset used within the Geographic Information Systems (GIS) mapping for the Project	<p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the EIA, which includes an assessment of landscape and visual effects. The LVIA is presented in ES Chapter 13: Landscape and Visual (document reference 6.13). The approach to the LVIA follows professional guidance as set out in ES Appendix 13.1: Landscape and Visual Methodology (document reference 6.13.A1). This includes GLVIA3, the 2013 third edition of the 'Guidelines for Landscape and Visual Impact Assessment' as prepared by the Landscape Institute and the Institute of Environmental Management and Assessment. The methodology has been agreed with relevant stakeholders and the assessment prepared by qualified and experienced landscape professionals. The document sets out all data sources used to inform the baseline and the assessment of landscape effects. This includes a range of detailed landscape character sources from national to local level, and designated landscape publications, including:</p> <ul style="list-style-type: none"> • Natural England's National Character Area profiles (Natural England, 2014) • Natural England's National Historic Landscape Characterisation (NHLC) Project • East of England Landscape Typology (Landscape East, 2010) • South Norfolk District LCA (LUC, 2001) • Suffolk LCA (Suffolk County Council, 2010) 			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<ul style="list-style-type: none"> • Tendring District LCA (LUC, 2001) • Colchester Borough LCA (CBA, 2005) • Braintree, Brentwood, Chelmsford, Maldon and Uttlesford LCAs (CBA, 2006) • Essex LCA (CBA, 2003) • LCA of Basildon Borough (The Landscape Partnership, 2014) • Thurrock Landscape Capacity Study (CBA, 2005) • Land of the Fanns, LCA (Alison Farmer Associates, 2016) • Waveney Valley Valued Landscape Assessment (Alison Farmer Associates, 2024) • The Dedham Vale Landscape (LDA for the Countryside Commission, 1997) • Dedham Vale AONB Natural Beauty and Special Qualities and Perceived and Anticipated Risks (Alison Farmer Associates, 2016) • Dedham Vale AONB and Stour Valley Project Area1 Management Plan (Dedham Vale National Landscape and Stour Valley Project Area Partnership, 2021-26) • Dedham Vale AONB and Stour Valley Project Area State of the AONB Report 2018 (LUC, 2019) 				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Other information sources are referenced, including Local Plan documents, and Neighbourhood Plans including those identifying key views. Relevant data was gathered and used to support the LVIA. The East Anglia Green Energy Enablement Consultation – June 2022 Review of Consultation Documentation in Relation to Sections K (ET1) and L (ET5), (Alison Farmer Associates, 2022) is also referenced.				
9-2.536	Suggest that National Grid should undertake a study of existing equipment, facilities, and routes already impacted by pylons, and, where possible, that these should be used for the Project	When considering how to meet an identified reinforcement need, National Grid identifies whether the need can be met by upgrade of the existing network to carry more power. In the case of Norwich to Tilbury this initial review led to the reconductoring of the existing overhead line from Norwich to Bramford as well as improvement to power control systems (noted in the Corridor and Preliminary Routeing and Siting Study (CPRSS) published in 2022 and can be found on the Project website). These changes have increased capability but not sufficient to overcome the need for the Project. We also considered the potential to route alongside other existing overhead lines but concluded that these were less preferred (set out in the various Design Development Reports published in 2023 and 2024 which can be found on the Project website) and the 2025 Design Development Report (document reference 5.15).			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.537	Criticism that consultation materials for the Project make no reference to where displaced earth from construction of the pylons will go and request details on how National Grid will address and manage this	It is anticipated that piled foundations would not result in large volumes of displaced earth as it is displaced laterally during the piling process creating an increased soil density around the pile. Pad and column foundations may result in some displaced materials which would be removed from site as required, this would be detailed in the Project's waste management plan developed by the Principal Contractor.		X	X	
9-2.538	Criticism that National Grid have refused to negotiate on the wording in the license agreements	National Grid has adapted and amended both the non-intrusive and intrusive survey license where possible, following feedback and comments from landowners, agents and the National Farmers Union (NFU). Where National Grid has been unable to accept suggested changes an explanation has been provided.			X	
9-2.539	Suggest the use of holistic spatial planning for the Project	The Project has been subject to strategic network exercises such as the Holistic Network Design (HND) and therefore has been subject to strategic network planning. National Grid is also engaged in the Strategic Spatial Energy Plan (SSEP) and Centralised Strategic Network Plan (CSNP) exercises. The Strategic Options Backcheck Review (document reference 7.17) submitted as part of this Development Consent Order (DCO) application sets out the Network Options Assessment (NOA) and HND recommendations as well as confirming National Energy Systems Operator (NESO) is currently transitioning from the NOA to a more comprehensive approach through the Centralised Strategic Network			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Plan (CSNP). Further to the extensive work carried out we are now at a stage where the Project is identified as critical to delivering a network which supports the 2030 clean power pathways.				
9-2.540	Concern that National Grid has not considered the electricity supply required for the proposed hydrogen hub (e.g. in relation to supporting an offshore route)	National Grid, as part of its backcheck and review process, always considers new applications for demand and generation, should one arise for any proposal, including for a proposed hydrogen hub, this would be taken into account. Strategic alternatives for the Project, including underground cables and offshore cables, have been considered and are set out in the published Strategic Options Backcheck and Reviews (SOBR) published in 2023 and 2024 (available on the Project website) and the 2025 SOBR (document reference 7.17).			X	
9-2.541	Criticism that National Grid have only stated that "work will be done" to determine damage and that they "will propose mitigations" where necessary, rather than proving this information in the consultation materials for the Project, meaning that consultees cannot be fully informed (particularly in the 2023 Feedback Report)	National Grid notes the respondent's feedback, the 2023 Non-Statutory Consultation Feedback Report was written based on the information available at the time of publication. At the point of the statutory consultation when this document was published, site surveys as well as the Environmental Impact Assessment (EIA) were still being undertaken and therefore it was not possible to give more detail at that stage. The EIA has been published with the application for development consent which assesses the impacts of the Project and includes any mitigation proposed.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.542	<p>Criticism that the National Policy Statement for Energy NPS EN-1 contradicts EN-5, and that National Grid have taken advantage of this to justify the Project (e.g. NPS-EN1 at 3.3.60 sets out expectations in respect of Critical National Priority (CNP), stating: <i>'subject to any legal requirements, the urgent need for CNP Infrastructure to achieving our energy objectives, together with the national security, economic, commercial, and net zero benefits, will in general outweigh any other residual impacts not capable of being addressed by application of the mitigation hierarchy. Government strongly supports the delivery of CNP Infrastructure and it should be progressed as quickly as possible'</i> but suggest that this should not be relied upon to avoid the requirements of NPS-EN5 2.9 for two reasons: Firstly, NPS-EN1 speaks of outweighing <i>'residual impacts'</i>. However, EN5 makes clear that there can be no residual impacts. The provision cannot therefore apply. Secondly, NPS-EN1 clarifies that it is only those residual impacts <i>'not capable of being addressed'</i> which may be overridden, which is not the case given alternative options available to National Grid) / Suggest that National Grid are prevented from seeking to rely on the CNP provisions of NPS-EN1 in order to avoid recommended mitigations for the reason that (i) even residual impacts are unacceptable in the terms on NPS-EN5; and (ii) there are mitigations which could</p>	<p>National Grid develops its projects in accordance with relevant policy, submitting its proposals as an application for Development Consent. The points raised by the respondent are, in National Grid's opinion, matters considered by the determining authority and Secretary of State. No change is proposed.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	be undertaken to avoid the damage, such as rerouting the Project and instead using EAS1					
9-2.543	Concern that the Preliminary Environmental Information Report (PEIR) does not identify all Public Rights of Way (PRoWs) impacted by the Project (e.g. only identifies a small amount of the total number of PRoWs)	<p>Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) of the Environmental Statement (ES) (document reference Volume 6: Environmental Statement), submitted as part of the Development Consent Order (DCO) application, includes an assessment of the potential effects on Public Rights of Way (PRoW) within the Order Limits, including footpaths.</p> <p>An Outline Public Rights of Way Management Plan (document reference 7.6) has been submitted as part of the DCO application to manage PRoW during construction. The Outline Public Rights of Way Management Plan (document reference 7.6) includes the proposed management regimes identified to mitigate the impacts of construction on the affected PRoWs across Norfolk, Suffolk, Essex and Thurrock.</p> <p>An assessment on the impact on Public Rights of Way during construction has been provided within Chapter 16: Traffic and Transport (document reference 6.16) of the ES (document reference Volume 6: Environmental Statement). The walking, cycling and horse-riding delays have been analysed for those PRoW that have a diversion.</p> <p>The magnitude of impact considered for the walkers, cyclists and horse-riders (WCH) delay depends on the journey length increase as defined in the (DMRB) LA</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>104 Environmental Assessment and Monitoring and the magnitude of the impact is adjusted based on the duration of the impact, i.e. if the temporary increase in journey length along a PRow is less than four weeks in any 12-month period.</p> <p>Details of the assessment can be found in ES Appendix 16.4: Traffic and Transport Construction Effects (document reference 6.16.A4).</p>				
9-2.544	Criticism that National Grid have accessed respondent's land without a court order	<p>National Grid in the first instance does not require a court order to enter land to carry out survey works. If access has been refused and National Grid can physically not take access after a notice has been served, then National Grid may need to obtain a warrant from the magistrate's court to allow reasonable force of entry.</p> <p>National Grid only serves notices under Section 172 of the Housing and Planning Act 2016 to obtain survey access when reasonable effort has been made to obtain voluntary access. Where voluntary access cannot be agreed, we are left with no other option than to use Section 172 powers. While notices are served, National Grids lands team still work with landowners and appointed agents to answer any questions or concerns.</p>			X	
9-2.545	Criticism of policy which says that the cost of the work dictates which way the route will take, so as to give the 'best value' to the consumers, and suggest	Cost is one of the factors that needs to be considered in making decisions on the Project as guided by our duties under the Electricity Act 1989.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	that either the policy should be changed or an exception to the policy should apply for the Project	<p>The relevant National Policy Statement (NPS) is EN-5 which makes it clear that the Government considers overhead lines to be appropriate and acceptable in most instances. However, the Government is aware that overhead lines may not be appropriate in particularly sensitive areas. The process of appraising different identified options is undertaken using guidance (National Grid's Approach to Consenting). Its aim is to ensure that decisions regarding the scheme design (route, location, or technology option) are based on a full understanding and balance of the technical, socio-economic, environmental, and cost implications of each option. Once all identified options have been appraised, the option or options that best meet National Grid statutory duties and obligations are selected as preferred. These duties include balancing the need to be economic and efficient, which includes keeping costs down in the interests of the bill-paying consumers to whom the costs are eventually passed, with a duty to have regard to preserving amenity, which includes the natural environment, cultural heritage, landscape, and visual quality.</p> <p>The consideration of cost within the decision-making process is therefore one of our statutory duties and is not something that we could make representation to the Office of Gas and Electricity Markets (Ofgem) to waive.</p>				
9-2.546	Suggest that National Grid consider the technical information set out in Natural England and Forestry	National Grid notes the respondent's feedback. Due consideration to both the Natural England and Forestry	X			X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	Commission's Standing Advice on Ancient Woodland – plus supporting Assessment Guide and “Keepers of Time” – Ancient and Native Woodland and Trees Policy in England / Suggest that National Grid consider the Root Protection Zone (as specified in British Standard 5837) for any woodland within the development boundary, land required for temporary use or land where rights are required for the diversion of utilities	Commission's Standing Advice on Ancient Woodland, the supporting Assessment Guide and “Keepers of Time” – Ancient and Native Woodland and Trees Policy in England has been considered as part of the ancient woodland and veteran tree mitigation strategy (see Appendix B of the Outline Landscape and Ecological Management Plan (document reference 7.4)).				
9-2.547	Concern about public notices for the Project creating litter and / or concern that public notices for the Project are not biodegradable (e.g. due to waterproof finish) and / or suggest that National Grid should be fined for the littering of public notices for the Project	<p>At the statutory consultation stage of a Nationally Significant Infrastructure Project (NSIP) National Grid needs to ensure that landowners / persons with an interest in a piece of land are aware of the consultation and can give feedback on the proposals.</p> <p>As part of this National Grid is required to put up notices in areas of unregistered land and then monitor them for the duration of the consultation period. Due to the fact these notices need to stay in place for several months they are made using waterproof materials.</p> <p>Also, where surveys are taking place and voluntary agreement to take access has not been reached, access notices will also be installed on site advising landowners that notice has been served and that access will be taken from a particular date.</p> <p>Once notices are no longer required, they will be collected from site and disposed of appropriately. If a member of the public has concerns that a notice is no longer attached to its original location, then please make</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>contact with the Project's lands team to discuss: Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.</p> <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD.</p>				
9-2.548	Request that the evaluation model used by National Grid to assess options for the Project be made public	The assessment of potential alternative options was set out in the Corridor and Preliminary Routeing and Siting study (CPRSS) published in 2022 on the Project website. The strategic options are set out in the 2025 Strategic Options Backcheck and Review (document reference 7.17).			X	
9-2.549	Criticism that National Grid have delayed the creation of an independent body to consult on planning of the Project (e.g. to put it through)	National Grid notes the respondent's feedback. It has not been the intention of National Grid to form an independent organisation that inputs into the development stages of its proposals. The proposals as submitted are subject to scrutiny at examination by the Planning Inspectorate which is an independent organisation.			X	
9-2.550	Criticism of the number of signs (given that respondent's land is not registered with HM Land Registry) that have been put on respondent's land for notice of the Project (address not provided by respondent; 22 notices to date)	As part of consultation and the ongoing engagement with landowners, National Grid must put up a number of different site notices. One of these is unregistered land notices, which are put up in areas where land is not registered with the HM Land Registry. If a landowner has confirmed ownership of a piece of unregistered land			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		and provided documentation, there would be no need to put up further unregistered land notices.				
9-2.551	Request that National Grid consider the National Policy Statement for Ports (NPSP) for the Project	<p>The National Policy Statement (NPS) for Ports was published in January 2012 and provides the framework for decisions on proposals for new port development. It is also a relevant consideration for the Marine Management Organisation, established in the Marine and Coastal Access Act 2009, which decides other port development proposals, and for local planning authorities where they have a role to play. It applies, wherever relevant, to associated development, such as road and rail links, for which consent is sought alongside that for the principal development.</p> <p>Following consideration of feedback, direct engagement with relevant parties and further technical review, National Grid has modified the connection arrangements at Tilbury. We now propose to connect to the National Electricity Transmission System by establishing a new 'Tilbury North' substation to the south of Orsett Golf Course which would be connected into the existing 400 kV overhead line (running north from the existing Tilbury Substation). The main reason for making the change is that it removes the potential effects on important economic development sites (such as Freeport) where restrictions on development potential would be expected on part of the site with potentially regionally significant economic effects. As a result of this design change,</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		National Grid has not included the NPS for Ports in its assessment of relevant planning policy.				
9-2.552	Suggest that National Grid should provide Easy Read for their consultation materials	All of our consultation materials were available in alternative formats on request. This included Easy Read, braille, and translations.			X	
9-2.553	Concern that the impact of the Project on aging populations (such as within Essex) has not been considered by National Grid	<p>At the launch of our statutory consultation, we sent information relating to the project to all properties within 1 km of the 2024 preferred draft alignment. To ensure that we contacted all demographics, we also sent this information to community groups and organisations including regional Age UK centres along the route alongside The University of the 3rd Age and welcomed their feedback.</p> <p>We also made our consultation materials available in alternative formats on request for those who found them difficult to engage with.</p>			X	
9-2.554	Criticism that National Grid has not provided an Environmental Impact Assessment / Criticism that the Environmental Impact Assessment is incomplete, so any environmental decisions are difficult and erroneous	National Grid produced a Preliminary Environmental Information Report (PEIR) which was presented at the statutory consultation. This presented the environmental information known at the time of the statutory consultation. We have produced an Environmental Impact Assessment (EIA) which has been submitted with the Development Consent Order (DCO) application.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.555	Criticism that the Project was planned and contracts signed during the national lockdown with limited political scrutiny	The Electricity System Operator (ESO (now NESO) is the organisation that contracts with offshore wind farm operators. National Grid is not aware of any influence that the national lockdown had on the timing of these contracts being signed.			X	
9-2.556	Criticism of National Grid's reporting relating to soils and agricultural and the impact this has on the credibility of National Grid's reporting generally	Chapter 6: Agriculture and Soils (document reference 6.6) of the ES assesses the potential impacts of the Project on agricultural land, including Best and Most Versatile (BMV) land, and soils. The extent of BMV land within the Order Limits is informed by a detailed Agricultural Land Classification (ALC) survey, where results are reported in ES Appendix 6.1: Agricultural Land Classification (ALC) Report (document reference 6.6.A1). The approach to the assessment follows the current IEMA guidance, and ALC surveys have been conducted in accordance with published guidance.	X		X	
9-2.557	Criticism that National Grid have only considered this option for the Project (as opposed to options alternative to overhead lines) due to the time frame laid down by the government and/or the energy regulator	National Grid has considered multiple options for the Project, these are set out in the 2025 Strategic Options Backcheck and Review (document reference 7.17). This review of strategic options concludes that an onshore, overhead line solution is the most appropriate Project to take forward in order to meet the needs case.			X	
9-2.558	Suggest that all vehicles used for construction of the Project should be ULEZ compliant (e.g. to mitigate impact on air quality)	Appendix D: Outline Dust Management Plan of the Outline Code of Construction Practice (CoCP) (document reference 7.2) states that all on-road heavy vehicles would comply with the standards set within the			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		London Low Emission Zone (LEZ) across all sites within Order Limits for the relevant class of vehicle. As the project is located outside the Ultra Low Emission Zone (ULEZ), the application of the LEZ standards is considered appropriate for this location.				
9-2.559	Concern that the delay in receiving the Written Scheme of Investigation (WSI) (November 2023) for the geophysics for the Project has resulted in a large amount of survey work being completed prior to receiving a final version of the WSI, and that a WSI for the trial trenching evaluation has not yet been provided to respondent for comment or approval	<p>As the Project Order Limits and layout have changed so has the geophysical priority areas. Through comments from stakeholders and changes in priority areas, the geophysical survey Written Scheme of Investigation (WSI) has also changed. The latest geophysical survey WSI (version 9) was produced in April 2025 and was shared with stakeholders for comment.</p> <p>An Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5) for the Project has been produced and agreed with relevant stakeholders.</p>		X		
9-2.560	Concern that there is not enough time for National Grid to complete the surveys (on the Historic Environment), especially the trial trenching	Sufficient archaeological survey data has been gathered to undertake a robust impact assessment and design mitigation. This will be supplemented post submission with further survey data and presented in an addendum to the ES ahead of DCO examination. The approach to providing Supplementary Environmental Information (SEI) for archaeology post DCO submission has been agreed with Historic England and the archaeological advisors for Norfolk County Council, Suffolk County Council and Essex County Council. The SEI is not expected to introduce any additional significant effects to		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		those presented in the ES and would provide more detail around mitigation. Further details are provided in ES Chapter 11: Historic Environment (document reference 6.11).				
9-2.561	Criticism that the Electricity System Operator (ESO) have assumed that 100% of contracted projects in the South East will be successfully awarded Contract for Difference and require connection to the network by 2030	The Electricity System Operator (ESO) acknowledges that not all projects in the connection queue will progress as planned. Factors such as planning delays, financing challenges and unsuccessful Contracts for Difference (CfD) bids can impede project advancement. Therefore, the ESO does not operate under the assumption all contracted projects will be realised by 2030.	X	X		
9-2.562	Suggest that the Project should be delivered by a company other than National Grid (e.g. for an offshore option)	National Grid notes the respondent's feedback. The need case and the identification of the preferred strategic option to meet that need is not influenced by the delivery organisation.			X	
9-2.563	Concern that the Project will not be delivered on time, and suggest that National Grid to plan and assess the actual risks of delay and deliverability (e.g. as many strategic infrastructure projects across the UK have demonstrated a difficulty in being delivered on time)	Works are programmed and scheduled in a way that we are envisaging this Project being delivered in line with the governments targets. We do aim to manage risks throughout the project lifecycle and will aim to complete in line with government targets. There are risks and events that can happen outside of the projects control and if any of these occur, we will aim to mitigate to the best of our ability.			X	
9-2.564	Suggest that pylon locations should be appropriately assessed prior to submission of the Development Consent Order (DCO) application for the Project,	National Grid notes the respondent's feedback. Advice Note 9: The Rochdale Envelope (Planning Inspectorate, 2018) provides guidance regarding the degree of			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	and should the location of a pylon need to be revised for the Project, then the new pylon location should be reconsulted on and evidenced (e.g. given that the Preliminary Environmental Information Report (PEIR) makes the assumption that the draft Order Limits are approximately 100 metres wide (50 metres either side of the overhead lines) to allow for flexibility when it comes to the location of the pylons if the submitted location proves to be unsuitable)	<p>flexibility that may be considered appropriate within an application for development consent under the Planning Act 2008. The advice note acknowledges that there may be parameters of a project's design that are not yet fixed and, therefore, it may be necessary for the Environmental Statement (ES) to assess likely worst-case variations to ensure that the likely significant environmental effects of the Project have been assessed.</p> <p>Sufficient flexibility within the design is allowed to provide the future design and build Main Works Contractor(s) with sufficient scope for value engineering through innovative design and / or construction techniques and to respond to unknown information such as ground conditions. As such, the Project design presented in this ES and the accompanying assessment, reflects the need for this flexibility and the requirements of Advice Note 9: Rochdale Envelope (Planning Inspectorate, 2018) to ensure that the likely significant effects of the Project are assessed. This means that the assessment presented covers this flexibility and no further consultation is needed for change within the defined flexibility. Furthermore, the design has been informed by the EIA with the design reflecting iterative working between the designers and the environmental specialists.</p> <p>The Order Limits include the Limits of Deviation (LoD), which represent the maximum locational flexibility for permanent infrastructure, such as the overhead line,</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>pylons, underground cables, Cable Sealing End (CSE) compounds, the proposed East Anglia Connection Node (EACN) substation and the proposed Tilbury North substation.</p> <p>To assess the potential effects of these elements, a realistic worst-case scenario has been identified, with due consideration given to how the flexibility in design may affect the assessment, with Section 7 or Section 9 of each environmental topic chapter within the Environmental Statement presenting the findings of the assessment.</p>				
9-2.565	Request that the Environmental Statement (ES) submitted with the Development Consent Order (DCO) application appropriately assesses and addresses the impacts of overhead lines and pylons (e.g., visual, design, noise, health, safety and traffic impacts) as well as cumulative impacts with other proposed developments (e.g. residential development at Ongar Road in Chelmsford) to ensure that there are no adverse effects	<p>The Environmental Statement (ES) (document reference Volume 6: Environmental Statement) assesses the likely significant residual effects of the Project on a variety of environmental topics including, Landscape and Visual, Noise and Vibration, Health and Wellbeing and Traffic and Transport, along with mitigation measures proposed to reduce the effects. ES Chapter 17: Cumulative Effects (document reference 6.17) reports any cumulative effects as a result of the Project's interaction with other projects.</p> <p>The Electric and Magnetic Field Compliance Report (document reference 7.8) assess the compliance of the Project with exposure limits and policies in place for the protection of the public from electric and magnetic fields (EMF).</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.566	<p>Criticism that the Preliminary Environmental Information Report (PEIR) for the Project reports initial assessment findings without sufficient detail on which to base a detailed consultation response. The PEIR notes the Environmental Statement (ES) will follow guidance available from the Institute of Environmental Management and Assessment (IEMA). The ES should report on the evidence and professional judgement on which the assessment of significance is based and report in accordance with the IEMA guidance. One purpose of the impact assessment is to enable local communities to understand the potential effects from the scheme and provide an opportunity to influence scheme design and impact assessment findings. There are occasions where community impact reports, which consider specific communities, should be provided. A linear development, such as transport or distribution systems will impact on a large number of separate communities, in addition to scheme wide impacts. This can create environmental statements that are overly complex, repetitive, and difficult to interpret, particularly for local communities. In these cases, the ES should include scheme wide assessments supported by logically geographically bounded community impact reports. These community impact reports should draw together relevant findings that relate to health. This requires no additional work but requires the bringing together</p>	<p>The Preliminary Environmental Information Report (PEIR) presented the baseline and assessment of the Project as it was understood at the time of the statutory consultation.</p> <p>A complete Environmental Impact Assessment (EIA) has been carried out and this is presented in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement).</p> <p>The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation of the Project and recommends appropriate mitigation to reduce effects.</p> <p>The ES breaks the Project down into 'Project Sections', which largely correspond to local authority boundaries. The ES, when talking about a receptor, reports them in relation to the Project section in which they are located to aid the reader.</p> <p>The Government has published its guidance on community funds for transmission infrastructure (DESNZ, 2025). National Grid is committed to working with Ofgem, industry partners, local communities and their representatives to ensure community benefits are delivered fairly and effectively, driving lasting, positive change for the people and places integral to our developing electricity network.</p> <p>Government has also announced its plans to introduce a bill discount scheme for households within 500 metres of new infrastructure, which it proposes to introduce</p>	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	of existing information relevant to each community / geographic area	<p>through the Planning and Infrastructure Bill. This is evolving government policy. Government expects this scheme to be in place by 2026 and we will share further details as they emerge.</p> <p>National Grid is committed to providing a coordinated local and regional approach to community benefits. This will be delivered outside the development consent process, since this is not a material consideration in the decision on the proposed Project or a matter to be secured as part of the DCO, as per the Community Funds for Transmission Infrastructure: Guidance (DESNZ, 2025).</p>				
9-2.567	Criticism that Paragraph 3.4.2 of the Appendix 11.1 of the Preliminary Environmental Impact Report (PEIR) (Historic Environment Baseline Report: Annex C Cultural Heritage EIA Methodology Document) incorrectly states that the Historic Environment Baseline Report has been split based on archaeology, built heritage and historic landscape characterisation, where it is actually split between time period, with sub-categories of designated and non-designated heritage assets, and suggest that the methodology or baseline report should be updated to ensure the documents reflect each other. With this, also suggest that a split as per the methodology (between archaeological, built and landscape features) is used	Although Annex C: Historic Environment Assessment Methodology of ES Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1) does state that the Baseline Report will be split between archaeology, built heritage and historic landscape characterisation, the Baseline Report as is split between eight Sections (A-H) largely based on local authority boundaries. Within these areas the data is present under sub-areas: historic landscape characterisation, conservation area and then all other assets (designated, non-designated, built, archaeological etc) are described within their time periods. This has been discussed and agreed with stakeholders.		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.568	<p>Concern that National Grid's response to concerns on cumulative impact in the Non-Statutory Consultation Feedback Report April 2024 (Paragraphs 4-5-107, 4-5-89, 4-5-17, and 4-5-19) is general (given that further information is to be provided within the final Landscape and Visual Impact Assessment (LVIA)) and suggest that the Project should comply fully with the Planning Inspectorate's Advice Note 17 on cumulative impact which states: <i>'The description of the likely significant effects on the factors specified in regulation 5(2) should cover the direct effects and any indirect, secondary, cumulative, transboundary, short-term, medium-term and long-term, permanent and temporary, positive and negative effects of the development.'</i></p> <p>This guidance requires a detailed explanation and evaluation of the cumulative impact of the many infrastructure and generation projects in the area and also an assessment of the impact of multiple projects during their construction phases</p>	<p>Chapter 17: Cumulative Effects of the Environmental Statement (ES) (document reference 6.17) complies with Schedule 4, paragraph 5 of the Environmental Impact Assessment (EIA) Regulations and Nationally Significant Infrastructure Projects (NSIPs): Advice on Cumulative Effects Assessment' (September 2024).</p> <p>The chapter assesses the likely significant intra-project and inter-project cumulative effects during construction and operation (and maintenance). Furthermore, the chapter summarises the likely significant intra-project and inter-project cumulative effects, proposed mitigation and residual intra-project and inter-project cumulative effects during construction and operation (and maintenance).</p>	X			
9-2.569	<p>Section 16.2 of the Preliminary Environmental Information Report (PEIR) sets out matters in respect of National Policy Statement for Energy (NPS) EN-1 and EN-5, however paragraphs 5.14.8 (disruption to transport services and infrastructure) and 5.14.12 (encouraged a modal shift of freight from road to other modes) of the EN-1 are not</p>	<p>The Transport Assessment (TA) (document reference 7.11) has considered National Policy Statement (NPS) EN-1 and EN-5 in relation to disruption to transport services and infrastructure and modal shift of freight from road to other modes.</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	mentioned and should be considered by National Grid, and section 2.5 of EN-5 is also not mentioned and should be considered by National Grid					
9-2.570	Criticism that it is unclear whether the study area, set out in section 16.5.2 of the Preliminary Environmental Information Report (PEIR) includes junctions connecting with the Strategic Road Network (SRN), and these should be included, unless evidenced otherwise	Chapter 16: Traffic and Transport (document reference 6.16) includes the assessment of the road links on the Local Road Network (LRN). The assessment of the junctions along the LRN and the connection to the SRN have been assessed in the Transport Assessment (TA) (document reference 7.11)		X		
9-2.571	Criticism that there is no commitment on the number of vehicles using the construction routes as part of the Project, which brings risks to any conclusion on the extent of impacts, for instance caps on HGV numbers should be presented to give confidence in the assessed results	Further information on traffic numbers over the construction period is provided as part of the Development Consent Order (DCO). Total number of proposed trips and associated traffic impacts are presented in Chapter 16: Traffic and Transport of the Environmental Statement (ES) (document reference 6.16). The Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) presents the enforcement options, where non-compliance will be investigated. This includes exceedance of daily target of vehicle numbers, where the non-compliance procedure will be followed, with Local Highway Authorities informed. The CTMP also displays the vehicle numbers expected throughout the construction period in Section 5.4.		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.572	Preliminary construction workforce numbers are indicated as 800 FTE (full time equivalent) employees, however, no evidence is provided to support these figures. More details will be expected at the Development Consent Order (DCO) submission including the origin of these figures and the profile across the life of the project, including origins of the workforce and how that informs the assessment of travel to site and the Travel Plan. These assumptions should feed into management and monitoring within the relevant management plans, including around shift patterns. Consequently, as there is limited data on workforce numbers, any conclusions reached on impacts relating to vehicle movements is treated with caution	<p>The potential percentage split of local and non-local workers are reported in Chapter 4: Project Description (document reference 6.4) and Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) of the Environmental Statement (ES).</p> <p>An Outline Construction Worker Travel Plan (CWTP) has been prepared and is appended to the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) which has been submitted as part of the Development Consent Order (DCO) application.</p>		X		
9-2.573	National Grid's assessment of traffic is based on changes in daily traffic flow, however, consideration is needed towards assessing the hour of greatest change	<p>Chapter 16: Traffic and Transport of the Environmental Statement (ES) (document reference 6.16), submitted as part of the Development Consent Order (DCO) application, includes the assessment of daily movements on road links on the Local Road Network (LRN). This provides a comprehensive view of traffic impacts across the day.</p> <p>In addition, an assessment of the junctions along the LRN and the connection to the Strategic Road Network (SRN) have been included in the Transport Assessment (TA) (document reference 7.11) for peak hours and a profile of change over the duration of works provided. The assessment has been undertaken for the AM and</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		PM peak hours following standard industry practice as these periods represent the times when the highway network is most sensitive to potential adverse impacts due to capacity constraints and travel patterns.				
9-2.574	National Grid's assessment of traffic identifies 12 hours shift patterns and it is recommended through the Construction Transport Management Plan (CTMP) that a monitor and manage process is embedded to ensure these shift patterns are monitored and commensurate with those assessed. Typical shift patterns would also be expected. If not, to either assess if the impacts are material or to identify additional management measures that can be put in place to address these impacts. As a large proportion of traffic impact is likely to therefore be in a short specific time frame and only assessing the 12 hour impact dilutes this impact against a greater baseline of traffic	As part of the pre-application process National Grid engaged with the relevant highway authorities and their highways teams and National Highways to understand and gain information on their local road networks (LRNs). This information has been used to inform and guide the drafting of the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) for the Project that accompanies the Development Consent Order (DCO) application. A strategy has been developed to manage the impact of construction vehicles on the public highway and sensitive receptors, using suitable Local Road Network connections from the Strategic Road Network called Primary Access Routes. In addition, temporary haul roads for construction vehicles are proposed along the Project alignment, further reducing the impact of construction traffic on the local road network. Further details of the strategy can be found within the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3). In the Environmental Statement (ES) Chapter 16: Traffic and Transport (document reference 6.16) a 12-hour		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		assessment period has been adopted to provide a comprehensive view of traffic impacts across the day for the 7am – 7pm shift patterns, that is the time in which receptors are most likely to be affected. However, to take into account the most sensitive times of the day, the assessment of the peak periods have been carried out in the Transport Assessment (document reference 7.11).				
9-2.575	Consideration should be given to the impact on delay to the highway network as a result of the use of crossing points. Further information on the crossing points would be expected as part of the Development Consent Order (DCO) including visibility splays, vehicle swept paths, traffic management, data on relative use of the access, road construction and Stage 1 Road Safety Audit with designer's response	<p>National Grid has worked with the relevant highway authorities and National Highways as we developed our access proposals for the Project. Our assessments have included visibility, highway geometry, and vehicle swept paths.</p> <p>As part of the design development of the Project, the proposed bellmouth junctions have undergone Road Safety Audits, and mitigation measures for road safety have been developed. This may include temporary traffic management measures such as speed limit reductions and/or temporary signals, the various measures vary across the project based on traffic numbers, scale of mitigation required and road classification. National Grid has also engaged with the relevant highway authorities, and their highways teams and National Highways to understand and gain information on their local road networks (LRNs). This information has been used to inform and guide the drafting of the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) for the Project that accompanies the Development Consent Order (DCO) application.</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		The proposed mitigation at crossovers have minimal impact to traffic on the road. Temporary traffic management such as traffic signals would only be activated when construction vehicles are required to cross the road, therefore general traffic would only be held at that time so unlikely to cause any significant delay.				
9-2.576	When considering traffic, it would be beneficial for the Environmental Statement (ES) to give a clear understanding of the impacts at all the relevant locations, potentially setting out a profile of the Project so it will be clear what impacts are short term	Chapter 16: Traffic and Transport of the Environmental Statement (ES) (document reference 6.16) includes the assessment and significance of impact of daily construction movements on road links on the local road network that form the Primary Access Routes (PARs) between the Project and the strategic road network (SRN). AM and PM peak hour traffic assessments of key junctions along the LRN and the connection to the SRN have been assessed in the Transport Assessment (TA) (document reference 7.11). A profile for construction traffic over the duration of the project is also provided to show when peak activity occurs.		X		
9-2.577	When considering traffic flows, a growth factor is referred to. This should be set out including how it has been calculated and details on the calculation method for obtaining 12 hour flows. There is a concern over whether the application of generic figures from the Strategic Road Network (SRN) is applicable on rural roads	The future baseline traffic on the SRN /major road network (MRN) is presented within the Transport Assessment (TA) (document reference 7.11) and has been estimated by applying appropriate growth factors derived from Trip Env Model Presentation Program (TEMPPro) National Trip End Model (NTEM) dataset v7.2 with baseline year 2023. The data was extracted for the four local highways authorities as the routes combine		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		multiple different Middle Layer Super Output Areas (MSOAs) and for rural roads.				
9-2.578	The requirement for further environmental assessment has been identified where the Project may give rise to any significant and transport effects following the Institute of Environmental Management Assessment (IEMA) criteria, and this has been found to occur to primary access route 50, A1016, as collision clusters have been found at its junctions with Rainsford Road and Chelmsford Road. These are a proportional change in HGV's is greater than 30%, indicating a material impact. Further details are needed on the relative impact, the context of the collisions and the potential need for mitigation	<p>The analysis of the collisions have been updated with the latest DfT, Road traffic statistics - Road collisions (STATS19 database) for the three year period 2021-2023, Details of the collisions are included in ES Appendix 16.2: Traffic and Transport Baseline Conditions (document reference 6.16.A2).</p> <p>ES Chapter 16: Traffic and Transport (document reference 6.16) includes the following assessment related to road collisions:</p> <p>Identification of collision clusters</p> <p>Analysis of the collisions for vulnerable users (walkers, cyclists and horse-riders)</p> <p>Collision data analysis along the full length of the road links to identify patterns in collision locations in order to establish any areas of safety concerns, considering light conditions, weather conditions and road surface conditions. No specific collision patterns were identified based on conditions</p> <p>Calculation of the collision rate per billion vehicle kilometres on the road links forming the Primary Access Routes (PARs) to compare against the national statistic, to identify any hotspot. The A1016 has a collision rate below the national accident rate per billion vehicle kilometres</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>The expected number of construction vehicles during the peak hour on the worst-case day is of 27 HGVs on both directions. The duration of this impact is expected to be low, i.e. one week and therefore, not considered to be significant.</p> <p>A rise in traffic flow can potentially increase the risk of collisions. However, it is considered that the temporary increase in construction traffic associated with the Project is unlikely to materially affect safety. Mitigation measures are provided within the Outline CTMP (document reference 7.3). The overall effects on road user safety from the construction phase would be short-term minor adverse and not significant.</p>				
9-2.579	No mitigation is identified for the Primary Access Routes (PARs) 44, 46, 49, 50, 51, and 53. One of these is a sensitive location experiencing effects, and it is unclear why there no mitigation required for these locations	<p>Highway mitigation has been provided to Link PAR 44 - A131 Great Notley Bypass / A131 Great Leighs Bypass / A131 Braintree Rd several locations to accommodate design vehicle movements.:</p> <p>Further details can be found in the Development Consent Order (DCO) Access, Rights of Way and Public Rights of Navigation Plans (document reference 2.5).</p> <p>Additionally, ES Chapter 16: Traffic and Transport (document reference 6.16) and the Transport Assessment (document reference 7.11) include additional mitigation as a result of the assessment for the following road links:</p> <p>Link PAR 44 - A131 Great Notley Bypass / A131 Great Leighs Bypass / A131 Braintree Rd</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Link PAR46 - B1008 Braintree Rd / B1008 Main Rd</p> <p>Link PAR 49 - A414 Three Mill Hill / A1114 London Rd</p> <p>Link PAR50 - A1016 Waterhouse Ln / A1016 Rainsford Ln</p> <p>Link PAR 51 - A1060 Rainsford Rd / A1060 Roxwell Rd</p>				
9-2.580	<p>Pinch points should be considered along the Primary Access Route providing access to H28-A2 and H29-A1, shown on the Construction Access Plans, including on Rainsford Road to the immediate west of its junction with the A1016 and further assessment of the A1060 junction with Park Avenue. It would also be beneficial to know whether the presence of the haul road would negate the need for any traffic to travel through Chelmsford. If this route is used, then Chelmsford City Council would want to see peak hour restrictions on HGV movements on this route. Furthermore, part of this route has a collision cluster, and consideration should also be given to what measures can be put in place as a result of road speeds</p>	<p>National Grid has worked with the local highway authorities and National Highways as we develop our access proposals for the Project.</p> <p>As part of the design development vehicle swept path analysis has been completed for each Primary Access Route (PAR). Based on this assessment, no constraints have been identified on H28-A2 and H29-A1 that require additional mitigation works.</p> <p>The PAR H28-A2 and H29-A1 are required for access due to severance of the haul road at Writtle College. Our assessments have not identified a suitable alternative access route to this section of temporary haul road.</p> <p>As part of the pre-application process National Grid has engaged with the relevant authorities, and their highways teams and National Highways to understand and gain information on their local road networks (LRNs). This information has been used to inform and guide the drafting of the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) for the Project that accompanies the Development Consent Order (DCO) application. The Outline CTMP provides details about the proposed construction access strategy</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>that has been developed to manage the impact of construction vehicles on the Public Highway and sensitive receptors. The Outline CTMP highlights any restrictions to reduce impacts to other road users from construction traffic related to the Project.</p> <p>The Transport Assessment (TA) (Document Reference 7.11), submitted with the Development Consent Order (DCO) application, examines capacity, safety, and operational efficiency of the network, identifying potential bottlenecks or safety concerns during construction. Mitigation measures are proposed to minimise likely adverse impacts.</p> <p>The A1060 junction with Park Avenue has been modelled as part of this capacity assessment. The junction will operate within capacity if signal optimisation is implemented in both AM and PM peak hours. No further mitigation is required.</p>				
9-2.581	Access H25-A2 as shown on the Construction Access Plans would be via a layby to the side of A131 Braintree Road, and concerns are raised between a conflict between the use of the layby and the use of the access by HGV vehicles	National Grid has noted the feedback received. As part of the design development the H25-A2 access bellmouth has been changed from its original location at the lay-by to a new location further north. The new access bellmouth now uses an existing access point.		X		
9-2.582	The Construction Transport Management Plan (CTMP) needs to set out what elements of the works would be covered by its provision. The Project would result in the removal of vegetation to obtain adequate access for construction and this has the	The Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) sets out all the applicable provisions it relates to. Which does include removal of vegetation among other provisions.		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	potential to create disturbance to the highway network. It is expected therefore for the CTMP to be applicable to all works					
9-2.583	EN-1 sets out the need for achieving sustainable transport patterns. Measures should be put in place that ensure high levels of car share or other non-car modes reflecting any assumptions within the Environmental Statement (ES) and Transport Assessment. This should be monitored, reported and managed to respond to low levels of car share	An Outline Construction Worker Travel Plan (CWTP) (which is appended to the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) has been prepared and submitted with the Development Consent Order (DCO) application. The Outline CWTP (document reference 7.3) sets out the strategy and measures which would be adopted by National Grid and the main works contractor(s), subject to agreement with the local highway authorities and National Highways. The Outline CWTP (document reference 7.3) has been considered within Chapter 16: Traffic and Transport of the Environmental Statement (ES) (document reference 6.16) and Transport Assessment (TA) (document reference 7.11)) with the aim of reducing the potential environmental impact of construction staff on the local road network (LRN)/major road network (MRN)/Strategic Road Network (SRN), ensuring appropriate consideration is given to the safety and travel patterns of site workers, and to encourage construction workers to travel to the site via sustainable modes.		X		
9-2.584	Any gates to the Project should be set back to ensure that waiting vehicles have sufficient space to sit without blocking the highway. These should be shown on any relevant plans showing the access to	National Grid would install security fencing and gates at all site access points to secure the works area, construction corridor, and haul roads. Security gates would be set back at least 20 m from the edge of the		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	the Project. Typical elevations of these gates shall also be provided	carriageway, allowing vehicles to stop outside the gate without obstructing the public highway. A typical site access point layout, including construction vehicle tracking, visibility splays, and fencing arrangements, can be found on Drawing AENC-NG-ENG-DWG-0002 within the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).				
9-2.585	Concern that the Project does not align with the commitments outlined National Grid's Responsible Business Charter 2023 (e.g. in relation to protection of the environment)	<p>National Grid notes the respondent's feedback. The manner in which Nationally Significant Infrastructure Project's (NSIPs) are developed is set out in the Planning Act 2008 and various environmental legislation. In developing projects we also take into account National Grid's statutory duties as well as its own commitments to the environment including the principals set out in the Responsible Business Charter 2023. In developing proposals for the Project, how we are proposing to avoid, minimise or mitigate effects is assessed and set out in the Environmental Statement (ES).</p> <p>National Grid has set itself a target of delivering at 10% Biodiversity Net Gain (BNG) with wider environmental and societal value on all construction projects, meaning that as a result of measures taken, the biodiversity rating of the area should be enhanced by 10% greater than prior to the construction of the Project.</p>			X	
9-2.586	Suggest that National Grid appoint a liaison person to work with local communities and the local	Throughout the development of our proposals National Grid has worked closely with local planning authorities			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	authority for the Project (e.g. to ensure that any temporary diversions are in place and signed off by the relevant officer)	for the areas that would be affected by the Norwich to Tilbury proposals. If we receive development consent, we would continue to work with relevant stakeholders and local communities to ensure information is communicated and to respond to concerns and complaints. .				
9-2.587	Suggest that National Grid should provide a timeline comparison for the Project against an offshore alternative	Depending on the specifics of any particular project, the programme to deliver an onshore overhead line solution or a subsea solution are not considered to be significantly different. To embark on an alternative option for Norwich to Tilbury at this stage would not be deliverable within the required timescales in order to meet the need case, as set out in the 2025 Strategic Options Backcheck and Review (document reference 7.17).			X	
9-2.588	Request that Project is compliant with local and national policy requirements	National Grid notes the respondent's feedback. Nationally Significant Infrastructure Projects (NSIPs) of this nature are guided by National Planning Policy (NPS EN-1 and EN-5). However local planning policy is considered in developing the design of the Project where possible.	X			
9-2.589	National Grid have a duty to address concerns from the community, local authorities and interested organisations across the Norwich to Tilbury area on impacts of the Project and whether or not the Project impacts the Dedham Vale National Landscape	Throughout National Grid's consultation process, we have consulted with a range of stakeholders including parish, district, and county councils alongside properties and communities along the route. We have asked for and considered feedback from these groups at our non-statutory consultations in 2022 and 2023, statutory	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	(previously known as the Dedham Vale Area of Outstanding Natural Beauty (AONB))	consultation, subsequent targeted consultations and landowner consultation in 2025. Our proposals have been revised following these consultations based on the feedback we received. This was considered along the whole route, not just in the Dedham Vale National Landscape.				
9-2.590	Request that National Grid provide evidence of meeting their enhanced duty under Section 85 of the Countryside and Rights of Way Act 2000 (as amended)	<p>Section 85 of the Countryside and Rights of Way Act 2000 (as amended) requires that <i>'In exercising or performing any functions in relation to, or so as to affect, land in an area of outstanding natural beauty in England, a relevant authority other than a devolved Welsh authority must seek to further the purpose of conserving and enhancing the natural beauty of the area of outstanding natural beauty'</i>.</p> <p>National Grid (NG) is a relevant authority for the purposes of this Act. NG has committed to underground cables in the areas of highest amenity value (Dedham Vale National Landscape (previously an Area of Outstanding Natural Beauty (AONB)). NG has also assessed the impacts on designated landscapes, including Dedham Vale National Landscape. This includes consideration of the setting of the National Landscape. The full assessment of the effects on the National Landscape can be found in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13).</p>	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.591	Criticism of National Grid's decision to not assess or quantify the impact of the Project on the health and wellbeing of those affected	Chapter 10: Health and Wellbeing (document reference 6.10) of the Environmental Statement (ES) includes a health and wellbeing assessment of the Project. The assessment considers impacts to physical and mental health during construction and operation in line with recent Institute of Environmental Management and Assessment (IEMA) guidance (Nov 2022) on scoping and determining significance in the assessment of human health in Environmental Impact Assessment (EIA). In line with this guidance, Health Impact Assessment (HIA) principles are incorporated into the assessment, and therefore a separate HIA is not proposed.	X		X	
9-2.592	Request comprehensive environmental review and detailed mitigation plans with a 100% commitment to return the impacted land to pre-project status	A complete Environmental Impact Assessment (EIA) has been carried out and the results are presented in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) which accompanies the Development Consent Order (DCO) application. The assessment presented aligns with advice provided in the Planning Inspectorate's Advice Note 7: Environmental Impact Assessment: Process, Preliminary Environmental Information and Environmental Statements and the Infrastructure EIA Regulations 2017. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation of the Project and recommends appropriate mitigation to reduce effects. Further details of mitigation required is recorded within	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		the Outline Code of Construction Practice (CoCP) (document reference 7.2). The Outline CoCP (document reference 7.2) includes measures to ensure appropriate reinstatement of land following construction, such as the management and reinstatement of soils.				
9-2.593	Suggest that a Distribution System Options Report should be produced for the Project (e.g. to ensure potential environmental and electricity system and economic benefits of the Project are fully realised, mitigating the impact on local supply and connectivity issues in the Stowmarket area for, and around, the Freeport at Gateway 14). This will require effective collaboration between National Grid Electricity Transmission (NGET), UK Power Networks (UKPN) and Ofgem	National Grid liaises regularly with electricity Distribution Network Operators (DNO). In East Anglia that is UK Power Networks (UKPN). Potential opportunities to rationalise, or make new connections to, the local network, or high demand centres, such as Gateway 14 requires a combination of the developer, the DNO and National Grid identifying a need case that would be supported by the regulator, Office of gas and electricity markets (Ofgem), or funded by some other means. National Grid is required under its transmission licence, to make connections where applications are made including to local networks or demand centres If a connection application is made National Grid would progress it accordingly.		X		
9-2.594	Criticism of National Grid's interpretation of the National Policy Statement for Energy (NPS-EN5) / Criticism that National Grid have not considered changes made by Government to NPS-EN5 designed to put beyond question the fact that cables must be undergrounded near to National Landscapes and that even residual impacts there are unacceptable	National Grid disagrees with the respondent's interpretation. We would also note that undergrounding through the National Landscape has been extended to the north and south and has also been proposed where the connection alignment is in proximity to the National Landscape near Great Horkeley. The National Policy Statement (NPS) EN-5 does not state that any residual impacts are unacceptable but refers to harm and the			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		need to balance drivers for undergrounding against the effects caused by undergrounding and the costs (see for example NPS EN-5 paras 2.9.22 and 2.9.24). It is acknowledged that the tops of some pylons will be visible in certain views from the National Landscape but considering the NPS EN-5 wording we do not consider further undergrounding to be justified.				
9-2.595	Criticism that National Grid place deliberate constraint upon those they undertake to consult / Criticism that in references to Heritage assets, National Grid undertake to consult with Historic England and with Local Planning Authorities but do not undertake to consult or consider the views of custodians and owners of those assets	<p>Throughout the development of our proposals, at our non-statutory consultations in 2022 and 2023, our statutory consultation in 2024, subsequent targeted consultations and the landowner consultation in 2025, we welcomed feedback from residents, landowners, business owners, and anyone else interested in the area. It involved custodians and owners of heritage assets. In addition, we engaged with key statutory stakeholders representing important environmental and heritage groups.</p> <p>Stakeholders concerned about a heritage asset had the opportunity to raise this in their consultation feedback, not just Historic England and local planning authorities (LPAs). We considered all the feedback as we developed our proposals.</p> <p>When we launched our targeted consultations, we also consulted with residents and properties within a bespoke consultation zone; these were developed in proportion to the change proposed. We consulted with key stakeholders, landowners, and community groups to</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		ensure that all those interested in the proposed changes were contacted.				
9-2.596	Suggest that boundaries between groundwater vulnerability zones may not reflect underlying conditions at the resolution provided, and the complex geology of superficial deposits in East Anglia often contain higher conductivity strata than can create preferential pathways for pollutants (Preliminary Environmental Information Report (PEIR) Section 9.6.46)	Groundwater vulnerability data is used in conjunction with other sources of information to determine the sensitivity of groundwater receptors. Chapter 9: Contaminated Land, Geology and Hydrogeology of the Environmental Statement (ES) (document reference 6.9) recognises the presence of high vulnerability areas.	X			
9-2.597	Suggest the Strategic Options Back Check and Review Report is updated to reflect the proposed upgrade / replacement of the existing 132 kV Bramford to Twinstead overhead line (400 kV) through which power is currently transmitted from Bramford to Tilbury (e.g. existing lines via Twinstead and Rayleigh)	This Project and the review of strategic options has taken the Bramford to Twinstead reinforcement, and the capacity it provides, into account, and this is included in the needs case as set out in the 2025 Strategic Options Backcheck and Review (document reference 7.17).			X	
9-2.598	Concern that Sizewell C is included as justification for the Project in Table 3.2 (Page 32) of the Strategic Options Back Check and Review Report as well as for the Bramford to Twinstead upgrade proposal and is therefore being double counted (e.g. it suggest that there is sufficient capacity already for Sizewell supply to London through the existing Twinstead / Rayleigh / Tilbury lines or via Twinstead to Pelham overhead lines), and suggest that Table 3.2 should be improved to demonstrate needs case for the	The Bramford to Twinstead reinforcement and Norwich to Tilbury show the whole generation background in the area. There is no double-counting as more generation has been contracted in the area. The volume of generation requires both projects to be in place to allow the connection of contracted generation, including the Sizewell C. The design and planning for the national high-voltage transmission network has to be based on the total existing and contracted generation, as all of the generation is considered contributory by the National			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	Project (e.g. as the only total on the table that is supported by the detail appears to be ' <i>Total Existing Generation 5,984.3 MW</i> '; and, since the Project is completely new or extending existing infrastructure to enable planned future generation capacity, then including existing generation figures are only relevant as an addendum and should not be treated as to imply they are a part of the justification for the Project)	Electricity Transmission System Security and Quality of Supply Standard and must be compliant with the standards.				
9-2.599	Suggest that the Preliminary Environmental Information Report (PEIR) should acknowledge the potential for archaeological remains of demonstrably equivalent significance to scheduled monuments, which are currently unknown to exist within the Project route, as required by EN-1 5.9.5 and 5.9.6 (e.g. to be identified through further non-intrusive and intrusive archaeological work)	<p>The Preliminary Environmental Information Report (PEIR) was prepared in accordance with the Nationally Significant Infrastructure Projects: Advice Note Seven (June 2020) and was a preliminary document that reflected the Project's proposals at the time of statutory consultation.</p> <p>National Grid has completed an Environmental Impact Assessment (EIA) for the Project, and the results of this assessment are provided in the Environmental Statement (ES) accompanying the Development Consent Order (DCO) application. The impacts of the Project on the historic environment are assessed in Chapter 11: Historic Environment of the Environmental Statement (ES) (document reference 6.11).</p> <p>National Grid acknowledges the potential for unknown archaeological remains of all values to be within the bounds of the Order Limits. Areas where the Project will impact below ground archaeological remains such as underground cabling, compounds have been deemed</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		priority areas for geophysical survey and archaeological trial trenching. Other areas deemed to be a priority area include, but not limited to, where known heritage assets of high or medium heritage value, construction and highways laydown areas etc. The assets encountered, either known or previously unknown, will have their significance and value re-assessed and discussions with the Local Planning Authority (LPA) archaeological officers and other stakeholders will be conducted.				
9-2.600	Concern that the Project may become redundant if power cannot be redistributed further across the UK / inland in future (e.g. as the Project is step one of future upgrade works, further infrastructure will be needed to distribute the power provided by the Project around the UK)	The National Energy System Operator (NESO) is responsible for ensuring that the national transmission network is fit for purpose for the foreseeable future. In March 2024 NESO published its report 'Beyond 2030' which sets out holistic proposals for the development of the transmission system. This takes into account Norwich to Tilbury and demonstrates how that Project is integral to the overall development of the national transmission network.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.601	Criticism that there are some fundamental errors in the aviation advice given to National Grid. The advice focuses on the relevance of the administrative distinction between Licensed / Unlicensed airfields. However, in the town planning context, most airfields fulfil the same role, albeit to different operating standards, and should be considered in the same way. The advice given to National Grid ignores this, instead claiming that it was not necessary for any regard to be given to the continued operation of Unlicensed Airfields	In accordance with its responsibilities as an applicant, as described within the Government's Overarching National Policy Statement for Energy (NPS EN-1), National Grid has appointed an independent aviation consultancy to develop a methodology to assess the potential impacts of the Project on airfields (licensed and unlicensed) in proximity. The assessment methodology enables risk-based site-specific assessment of a range of criteria, including but not limited to, lateral and vertical clearance margins, aircraft types, airfield operational activities and procedures, and the surrounding context. The approach is informed by Civil Aviation Authority regulations and guidance, including that relating to both licensed and unlicensed airfields, as well as ongoing consultation with airfield owners and operators to agree the acceptability of proposed mitigations.			X	
9-2.602	Criticism that the aviation advice provided to National Grid focuses on the significance of mandatory against advisory, however, this is largely academic as once a risk has been identified it has to be mitigated whatever the status of the airfield (e.g. this is not simply due to the advice and requirements of Civil Aviation Publication's (CAP's) 168 and 738, it is also driven by safety, operational, business and insurance considerations	In accordance with its responsibilities as an applicant, as described within the Government's Overarching National Policy Statement for Energy (NPS EN-1), National Grid has appointed an independent aviation consultancy to develop a methodology to assess the potential impacts on airfields (licensed and unlicensed) in close proximity to the Project, and consider appropriate mitigations. The assessment methodology enables risk-based site-specific assessment of a range of criteria, including but not limited to, lateral and vertical clearance margins,			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>aircraft types, airfield operational activities and procedures, and the surrounding context. The approach is informed by Civil Aviation Authority regulations and guidance, including that relating to both licensed and unlicensed airfields, as well as ongoing consultation with airfield owners and operators to agree the acceptability of proposed mitigations in relation to their safeguarding responsibilities and operational activities.</p> <p>Further information on the assessment of airfields can be found in the Environmental Statement (ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).</p>				
9-2.603	<p>Criticism of National Grid's use of the basic formula of 'Cost of Relocation against the Cost of Compensation' when considering the impact of the Project on aviation and respective mitigation (e.g. this reflects a short-term materialistic approach that is inappropriate for such a long-term Project) / Suggest that consideration of each airfield needs to be tailored for each airfield reflecting all the relevant factors</p>	<p>In accordance with its responsibilities as an applicant as described within the Government's Overarching National Policy Statement for Energy (NPS EN-1) National Grid's appointed independent aviation consultancy has developed a methodology to assess the potential impacts of the Project on aviation including airfields in proximity. The assessment methodology enables risk-based site-specific (tailored) assessment of a range of criteria, including but not limited to, lateral and vertical clearance margins, aircraft types, airfield operational activities and procedures, and the surrounding context. The approach is informed by Civil Aviation Authority (CAA) regulations and guidance as well as ongoing consultation with airfield owners and operators to agree</p>			X

		<p>the acceptability of proposed mitigations in relation to their operational activities.</p> <p>National Grid will continue to work with all individual airfields to look at and agree suitable mitigation / compensation where required and justified. Further information on the assessment of airfields can be found in the Environmental Statement (ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).</p>				
9-2.604	<p>The Project would involve a significant number of interactions with Network Rail's operational railway. As such, it is strongly advised that National Grid take all potential areas of concern to Network Rail into account in their documentation for consideration at planning. In addition, it is imperative that Network Rail's Asset Protection Team be consulted directly by National Grid to ensure that risks to the railway infrastructure are safely managed due to all construction activities associated with their proposed development</p>	<p>National Grid has been engaging with Network Rail's Asset Protection Team regarding Norwich to Tilbury to fully convey and mitigate impacts to the railway crossings.</p>	X			
9-2.605	<p>Network Rail would have an interest in understanding the full impact of National Grid's proposed development on all of Network Rail's infrastructure in the vicinity. This further understanding should identify improvements and / or mitigations required to facilitate National Grid's</p>	<p>National Grid has been engaging with Network Rail's Asset Protection Team regarding Norwich to Tilbury to fully convey and mitigate impacts to the railway crossings to ensure continued safe and efficient running of railway operations.</p>	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	proposed development. These improvements / mitigations would need to be funded by National Grid to ensure the safe and efficient running of the operational railway					
9-2.606	Before any development, construction and / or alterations can occur by National Grid to any of Network Rail's land, assets and / or operational railway, it is required that further site-specific safety requirements, engineering technical approval and detailed conditions be sought from Network Rail's Asset Protection Team	National Grid has engaged with Network Rail in their defined clearance processes to seek a mutually acceptable crossing scenario.	X			
9-2.607	Network Rail has their own standard protective provisions, which must be included on the face of the Development Consent Order (DCO) for the Project as a minimum. It is recommended that National Grid contact Network Rail to request a copy of these protective provisions and discuss any other agreements that will need to be entered with Network Rail	National Grid has engaged with Network Rail to obtain and agree this set of protective provisions.	X			
9-2.608	Several legal and commercial agreements might need to be entered between National Grid and Network Rail, for example, asset protection agreements, method statements, connection agreements, property agreements and all other relevant legal and commercial agreements. This list is not exhaustive and will need to be reviewed once more details of the Project are discussed between	National Grid has engaged with Network Rail to determine legal and commercial agreements required as a result of the impact to Network Rail operations from Norwich to Tilbury. Additionally National Grid has been engaging with Network Rails asset protection team within the clearance	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	both parties. It should also be acknowledged that any easements required by National Grid would need to go through Network Rail's clearance process and all other rail industry processes. National Grid should also be made aware of the likely possibility that they may be responsible for either any charges and / or costs associated with Network Rail in relation to their proposed Development Consent Order (DCO)	process regarding Norwich to Tilbury to fully convey and mitigate impacts to the railway crossings.				
9-2.609	Request that the management of associated Biodiversity Units be extended from 30 years to 40-years, mirroring the lifespan of the infrastructure	The Biodiversity Net Gain (BNG) strategy and associated Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) includes measures, within the Environmental Areas, for habitat management and maintenance where new habitats have been created or enhanced for BNG. These proposed measures are in line with guidelines which requires 30 years of management.			X	
9-2.610	Criticism of the presentation of the Preliminary Environmental Information Report (PEIR). The Project is broken in several sections, with Section A (South Norfolk), Section B (Mid-Suffolk), and Section C (Babergh, Colchester City, and Tendring) relevant to Suffolk. For several impact assessments, including County Wildlife Sites (CWS) (also referred to as Local Wildlife Sites), Section C is more difficult to assess, with CWS designation not only falling in different local authority areas, but across two	The Environmental Statement (ES) breaks the Project down into 'Project Sections', which largely correspond to local authority boundaries. The ES, when talking about a receptor, reports them in relation to the Project section in which they are located to aid the reader. Figures are provided to support each environmental topic chapter which present relevant receptors, as discussed within the topic chapter. Breaking the Project into sub-sections for receptors identified at a County or Local Authority level would add			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	counties / Suggest that breaking Section C into sub-sections for receptors identified at a county or local authority area would make assessment easier for those constrained by administrative boundaries	unnecessary complexity and would introduce inconsistency for other receptors.				
9-2.611	Criticism that National Grid has provided the incorrect date of death for John Constable in the Historic Baseline Report, Paragraph 3.4.45 (e.g. should be 1837 rather than 1737)	This has been corrected within Appendix 11.1: Historic Baseline Report (document reference 6.11.A1).		X		
9-2.612	Oppose the Five Estuaries, Tarchon and North Falls developments	These developments are not proposed by National Grid and are not the subject of this Development Consent Order.			X	
9-2.613	Concern that the Project will impact Local Nature Recovery schemes / Concern that the Project contradicts Local Nature Recovery schemes (e.g. which the Government should be encouraging)	National Grid notes the respondent's feedback. The draft Local Nature Recovery Strategies (LNRS) for Norfolk, Suffolk and Essex have been reviewed and considered in relation to the Project in terms of both impacts and mitigation. Specifically, the content of the draft LNRS's has been directly included within the Biodiversity Net Gain (BNG) Report (document reference 7.1) in relation to the strategic significant multiplier within the metric. The off-site selection criteria for BNG mitigation sites will include a preference for locations within the draft LNRS plans.			X	
9-2.614	Concern that the 2030 deadline for the Project is a result of contracts that have already been signed with wind farm operators which contain clauses that will result in constraint/penalty payments being made	Wind farm operators' contract with the National Energy System Operator (NESO (previously ESO)) and connection dates would have been arrived at in discussion with the transmission operator (NGET) and			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	to the operators if that date is not met, and request for confirmation on whether payments will have to be made to operators if they cannot connect to by 2030 and whether any constraint/penalty payments will have to be paid by National Grid or by consumers	the windfarm operator. If the contract connection dates are not met constraint payments are payable to the generator, the costs of which are borne by the consumer.				
9-2.615	<p>Concern about High and Intermediate pressure (above 2 bar) Gas Pipelines and associated equipment, and Low or Medium pressure (below 2 bar) gas pipes and associated equipment (it is highly likely that there are also gas services and associated apparatus in the vicinity, these are not shown on plans, but their presence should be anticipated) within or in close proximity to the Project.</p> <p>Regarding diversions for such gas pipelines, request that:</p> <ul style="list-style-type: none"> - Where diversions of apparatus are required to facilitate the Project, adequate notice should be provided to respondent and discussions should be started at the earliest opportunity; - National Grid should obtain any necessary land rights, planning permissions and other consents to enable the diversion works to be carried out, and details of these consents should be agreed in writing with the respondent before any application is made, with a minimum of C4 / Design study to have been carried out to establish an appropriate diversion route, temporary and permanent land take ahead of any application being made; 	<p>National Grid would undertake all required desktop and site based surveys to determine asset location in the vicinity prior to excavation.</p> <p>National Grid has engaged with affected pipeline owners to agree any such works required to existing pipelines and all rights and permissions needed to carry out such works will be included in the Development Consent Order (DCO) unless carried out under existing utility operation and maintenance provisions of the owner/operator.</p> <p>National Grid has engaged with all affected pipeline owners/operators to agree a set of protective provisions for inclusion within the DCO.</p> <p>National Grid is aware of the underground pipelines in the vicinity of the Project and where they will be impacted, we are working with pipeline operators to mitigate impacts, both permanent and during construction.</p> <p>1. Where pipeline diversions are required, National Grid or the utility operator will coordinate timeously with affected stakeholders and seek the necessary consents as required by planning policy.</p>	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>- Where diversions sit outside the highway boundary the party requesting the diversion will be responsible for obtaining at their cost and granting the necessary land rights, on the respondent's standard terms, to allow the construction, maintenance and access of the diverted apparatus. As such adequate land rights must be granted to the respondent (e.g. following the exercise of compulsory powers to acquire such rights included within the Development Consent Order (DCO)) to enable works to proceed, to the respondent's satisfaction. The respondent's approval to the land rights powers included in the DCO prior to submission is strongly recommended to avoid later substantive objection to the DCO. Land rights will be required to be obtained prior to construction and commissioning of any diverted apparatus, in order to avoid any delays to the Project's timescales. A diversion agreement may be required addressing responsibility for works, timescales, expenses and indemnity.</p> <p>Regarding Protection/Protective Provisions for such gas pipelines, request that:</p> <p>- Where the Promoter intends to acquire land, extinguish rights, or interfere with any of the respondent's apparatus, the respondent will require appropriate protection for retained apparatus and further discussion on the impact to its apparatus and rights including adequate Protective Provisions.</p> <p>Operations within the respondent's existing</p>	<p>2. National Grid is working with the pipeline operators to determine what mitigation works are required to agree an acceptable design solution.</p> <p>3. The Project does not anticipate the need to divert any existing buried pipelines.</p> <p>4. National Grid is working with pipeline operators to agree protective provisions which will be adhered to by our Contractor during delivery should the project successfully acquire DCO permission.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	easement strips are not permitted without approval and will necessitate a Deed of Consent or Crossing Agreement being put in place. Any proposals for work in the vicinity for the respondent's existing apparatus will require approval by Plant Protection under the Protective Provisions/Asset Protection Agreement and early discussions are advised					
9-2.616	Criticism that National Grid has not considered the Government Offshore Transmission Network Review	<p>National Grid has actively considered the UK government's Offshore Transmission Network Review (OTNR). The OTNR, initiated by the Department for Business Energy and Industrial Strategy (BEIS), aims to develop a more coordinated approach to offshore electricity transmission to support the UK's net zero emissions target by 2050. National Grid has expressed full support for the OTNR's objectives.</p> <p>The work carried out under the OTNR is referred to in National Policy Statement for Electricity Infrastructure Networks (EN-5) (2024). NPS EN-5 specifically refers to OTNR as being the driver to principally develop co-ordinated transmission proposals.</p> <p>National Grid Electricity transmission (NGET) has responded to studies conducted under the OTNR framework. In April 2024, NGET provided a response to the electricity system operators (ESO) East Anglian network study, which was part of the OTNR's initiative to explore coordinated offshore infrastructure. This response indicates NGET's engagement with the OTNR's findings and its consideration of these insights in</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>planning and developing transmission projects. By integrating the OTNRs recommendations and collaborating with relevant stakeholders, National Grid aims to ensure that its projects contributes effectively to a coordinated and efficient electricity transmission network, facilitating the UK's transition to net zero emissions.</p> <p>The Project will need to have regard to and demonstrate compliance with NPS EN-5 policies and this will be documented in the Policy Compliance Document to be submitted with the Development Consent Order (DCO) application.</p>				
9-2.617	Criticism that compensation arrangements for the Project are at present limited only to persons with "Title" (i.e. "online")	<p>National Grid would compensate landowners in line with the Compulsory Purchase Compensation Code.</p> <p>If a landowner's land is whole or part unregistered they would still receive compensation if they can adequately evidence the ownership.</p>			X	
9-2.618	Criticism that Historic England's Conservation Principles, the Responsible Business Charter 2020 and the Health and Safety Executive (HSE) report have not been considered for the Project	<p>The Project has been undertaken in line with relevant national legislation and established best practice guidance for heritage assessment, including Historic England's Conservation Principles, Policies and Guidance (2008), DMRB LA 104 and LA 106 (National Highways, 2020), and other relevant planning policy and guidance. While the Responsible Business Charter 2020 is not a statutory requirement for heritage assessment, the values it promotes—such as sustainability, integrity, and social responsibility—are reflected in the wider</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		approach taken by the Project, including stakeholder engagement, mitigation design, and integration of cultural heritage into the decision-making process. Similarly, health and safety considerations in the delivery of heritage fieldwork and site assessments are managed in accordance with the Health and Safety Executive (HSE) regulations and internal SHEQ protocols.				
9-2.619	Criticism of the Least Worse Regrets Method (LWRM) used to assess options for the Project (e.g. weighted in favour of an onshore route) / Suggest that a Strengths and Weaknesses, Threats and Opportunities analysis of an offshore option should be included in a separate LWRM approach (e.g. for a balanced assessment)	National Grid considers the process to have been an appropriate means for providing information on the work to inform the Project design, and the basis for progressing the Project set within the duties and policy framework within which we must work. In addition to the work undertaken to support the application for development consent, including assessment on Least Worst Regret basis, which we believe to be a robust method (used by the NESO and accepted and adopted by Ofgem), we have conducted the back-check and review in accordance with National Grid's document 'Our Approach to Consenting', which was published in 2025. The 2025 Strategic Options Backcheck and Review (document reference 7.17) appraises the ability of both onshore and offshore options to meet the system need while balancing cost, technical performance and environmental and socio-economic effects.	X		X	
9-2.620	Criticism that the Project does not satisfy Section 122 of the Planning Act (e.g. as private loss will not outweigh public benefit), and suggest that this	Section 122 of the Planning Act sets out the legal tests that must be satisfied before compulsory acquisition can be authorised as part of a Development Consent Order	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	cannot be resolved unless the option assessment for the Project is undertaken again, with proper consideration of private loss for the alternative options undertaken / Criticism that detail of private loss to landowners will be determined too late to undertake an assessment of whether the public benefit outweighs private loss (e.g. as any detailed assessment of private loss can only occur after statutory consultation as it is only at that point National Grid engage with landowners with a view to reaching agreement for the rights sought)	(DCO). National Grid incorporates these requirements into its project planning, design, and consultation processes to ensure compliance. During the DCO examination process, the Planning Inspectorate (PINS) and the Secretary of State review whether National Grid has satisfied Section 122 of the Planning Act. National Grid must demonstrate the necessity of the land for the Project and that there is a compelling case in the public interest for the land to be acquired.				
9-2.621	Concern that the Project does not satisfy the Environment Act 2021 / Concern that National Grid has not considered their duties under the Environment Act 2021 (e.g. in relation to environmental targets and the Government's Environmental Improvement Plan 2023)	In accordance with organisational and legal obligations, National Grid is committed to ensuring that the Project fully complies with the requirements set forth in the Environment Act 2021. Environmental responsibilities are taken seriously, and all relevant regulations would be diligently adhered to throughout the lifecycle of the Project.			X	
9-2.622	Suggest that the Electricity System Operator (ESO) Options Report should be widened to include starting points other than Norwich (e.g. as considering Norwich as the starting point for all options makes an overhead line option the most economical, compared to an offshore option)	Offshore wind power has to come onshore at some point to connect to the national transmission network. Starting points, regardless of where they may be, are therefore inevitably onshore. Locations, other than Norwich, have been looked at and are set out in the 2025 Strategic Options Backcheck and Review (document reference 7.17).	X			
9-2.623	For any unplanned non-domestic water requests (for industrial processes) that exceed 20,000 litres per	National Grid along with our main works contractors would assess the anticipated water usage at our primary	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	day or where there is a cumulative impact from a significant number of smaller requests, there might be a need to decline in order to protect existing supplies and the environment. In order to assess these requests, suggest that National Grid submit a Water Resource Assessment for the Project as part of Anglian Water's planning process	and secondary sites. The overall requirement would be discussed with Anglian Water and agreement reached as to how best to apply for multiple water connections if required.				
9-2.624	Suggest that the new Government have a debate about the Project in Parliament and go to a vote on the Project / alternatives options	National Grid notes the respondent's feedback however National Grid is not able to influence the debates held by the new Government in Parliament.			X	
9-2.625	Request that, once a route for the Project has been approved and confirmed, The East of England Ambulance Service Trust are informed of future road closures (e.g. to mitigate impact on service). The East of England Ambulance Service Trust is likely to be impacted by road closures and will need to be consulted throughout the construction process	National Grid notes the respondent's feedback. The proposed approach for road closures and management is set out in paragraph 5.7.3 of the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3). Roads would only be closed where this is required for safe working. Temporary closures would be required for works including the construction of bellmouth junctions, highway mitigation, installation of buried cabling, and stringing of overhead lines/netting. If no suitable existing alternative access provision is available, temporary alternative access would be provided. Information on mitigation measures is included within the Outline CTMP (document reference 7.3) which is submitted as part of the Development Consent Order (DCO) application. National Grid will liaise with relevant stakeholders during construction should consent be granted.	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		National Grid has prepared draft Statements of Common Grounds (SoCGs) with a range of stakeholders (including relevant emergency services) that have been submitted as part of the DCO application. The draft SoCGs will be reviewed and updated during the Examination with the relevant stakeholders. If granted consent, National Grid and/or the Main Contractor will continue to liaise with emergency services during the construction phase of the Project.				
9-2.626	Criticism that decisions taken in 2022 and outlined in the Corridor Preliminary Routeing and Siting study (CPRSS) were generally high level. Corridor options were rejected because of general constraints without proper assessments of mitigations that might make that option acceptable, making it impossible for respondents to compare and evaluate options, as they do not have the comparable information that they need / Concern that it is very difficult for back-checking to lead to a complete change of direction when justified, as so much time and work has been invested in the original course of action / Suggest that all CPRSS potential route corridors should be consulted on, without prejudice in favour of any particular one, presenting the most up-to-date information for overcoming any constraints for each option as part of the consultation	National Grid's approach to option down selection has been tested on numerous previous occasions. National Grid considers that its decision making is robust and appropriate and consistent with the requirements within relevant planning policy and environmental impact assessment requirements. Back checking can lead to a change of project direction though needs care to ensure it reflects how other options may develop if further study was completed. Furthermore, it is neither practical nor economic or efficient to complete surveys to a comparable Preliminary Environmental Impact Report (PEIR) or Environmental Statement (ES) level across all potential options before making decisions. The Corridor and Preliminary Routeing and Siting Study (CPRSS) (available on the Project website), as one of the first documents published, therefore presents a high level comparison allowing the obviously poorer performing options to be removed. This avoids inefficient deployment of resources and cost when options are so	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		materially poorer performing. There is obligation on a developer to present details of the alternatives studied and reasons for the choices made, but no obligation to present alternative options by way of a referendum style vote.				
9-2.627	Suggest that community organisations / representative groups (e.g. parish councils) are routinely offered a 'surgery' type meeting with National Grid	Throughout National Grid's consultation process, we have engaged with many community groups and parish councils along the route. This included section specific webinars for the parish councils alongside our public webinars. During our statutory consultation we also held several meetings with groups of parish councils on their request.	X		X	
9-2.628	Suggest that consideration is given to the Project following a more direct line from EACN to Tilbury, considering whether any of the options considered by National Grid in their Corridor Preliminary Routeing and Substation Siting study (CPRSS) which were discounted due to proximity to flight paths of protected birds, could be more acceptable if underground cables were used instead of overhead lines	The Corridor and Preliminary Routeing and Siting Study (CPRSS) (available on the Project website) considered whether adverse effects on site integrity from overhead line effects to protected species could be mitigated by the use of underground cable (see section 7.5). It was concluded that this was subject to a high level of uncertainty and required there to be no reasonable alternative. This conclusion remains valid as an alternative is available and therefore no change is proposed.	X		X	
9-2.629	Criticism that soil and geology, and water have been scoped out of the Environmental Impact Assessment (EIA), and criticism that it is unclear why the other	National Grid submitted an Environmental Impact Assessment (EIA) Scoping Report (document reference 6.19) to the Planning Inspectorate on 7 November 2022. The Planning Inspectorate (on behalf of the Secretary of State) formally adopted its Scoping Opinion (document	X	X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	included topics should be regarded as reasonable proxies	reference 6.20) on 14 December 2022 which has informed the scope of the EIA for the Project. A complete EIA has now been carried out and the results are presented in the Environmental Statement (document reference Volume 6: Environmental Statement) which accompanies the Development Consent Order (DCO) application. There is a chapter for each environmental topic that was agreed by the Planning Inspectorate to be scoped into the Environmental Statement, and this includes a chapter (and accompanying assessment during construction and/or operation as per the Scoping Opinion (document reference 6.20)) on agriculture and soils, contaminated land, geology and hydrogeology, and hydrology, flood risk and land drainage.				
9-2.630	Suggest that National Grid should publish a full feasibility report setting out the fundamentals of the Project	The National Energy System Operator (NESO) conducted the East Anglia Network Study, which assessed various options for transmitting electricity from offshore wind farms in East Anglia to demand centres. The study evaluated options based on cost to consumers, deliverability, operability, environmental impact and community impact. The economic analysis indicated that the Project would be the most economically optimal solution.			X	
9-2.631	Criticism that at 4.8.20 of Appendix 4.1: Draft Outline Code of Construction Practice (CoCP) in Volume III of the Preliminary Environmental Information Report	Since the Preliminary Environmental Information Report (PEIR), further consideration has been given to veteran trees, other higher quality trees and areas such as		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	(PEIR), National Grid make a commitment that following detailed design and prior to construction all vegetation would be subject to a full tree / vegetation survey and site-specific assessment where vegetation removal may be reduced further than the generalised approach assessed in the PEIR and Environmental Statement (ES), but this is too late / It is expected that the design is informed by the survey and that the locations of notable arboricultural constraints are understood	<p>ancient woodland that have been identified through arboricultural surveys conducted for the Project.</p> <p>A review of these features has been undertaken to identify relevant mitigation, with further details outlined in Appendix 13.6: Arboricultural Impact Assessment (document reference 6.13.A6).</p> <p>The Outline Code of Construction Practice (CoCP) (document reference 7.2) includes a commitment that following detailed design and prior to construction all vegetation would be subject to a full tree / vegetation survey and site-specific assessment where vegetation removal may be reduced further.</p> <p>The commitments of the CoCP have been reviewed and consulted on with the relevant stakeholders.</p>				
9-2.632	Criticism that at 4.8.18 of Appendix 4.1: Draft Outline Code of Construction Practice (CoCP) in Volume III of the Preliminary Environmental Information Report (PEIR), it is not clear whether existing hedgerows will be retained where they pass under the overhead cables / Request that this be addressed explicitly within the Code of Construction Practice	Existing hedgerows that lie beneath overhead lines will be retained. The commitments of the Outline Code of Construction Practice (CoCP) (document reference 7.2) have been reviewed and consulted on with the relevant stakeholders.		X		
9-2.633	Concern that the crossing protection scaffolding measures included in 4.8.21 and 4.8.22 of Appendix 4.1: Draft Outline Code of Construction Practice (CoCP) in Volume III of the Preliminary Environmental Information Report (PEIR) will result in further vegetation loss, but the details of these	<p>Amongst other design information, Appendix 13.6: Arboricultural Impact Assessment (document reference 6.13.A6) includes the crossing protection scaffold areas.</p> <p>A Landscape and Visual Impact Assessment (LVIA) has also been undertaken as part of the Environmental</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	measures is yet to be provided by National Grid / Request for National Grid to confirm when they will be providing further details on the crossing protection scaffolding measures, and request for National Grid to address the vegetation loss resulting from these measures within the arboricultural assessment and Landscape Visual Impact Assessment (LVIA)	Impact Assessment (EIA). The LVIA sets out the potential landscape and visual effects, including impacts which may be influenced by vegetation loss resulting from the introduction of the Project during construction and during operation. The LVIA is presented in the Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13).				
9-2.634	Request for clarification as to why Preliminary Environmental Information Report (PEIR) section 4.8.57 of Appendix 4.1: Draft Outline Code of Construction Practice (CoCP) in Volume III of the PEIR fails to refer to the 21m typical cross section of the haul road but does mention the Limit of Deviation (LoD) Request for National Grid to clarify why the width of the haul road needs to be continuous, and whether there could be passing places instead, especially where there is conflict with existing hedgerows and trees	The proposed haul road is 6 m in width, widening to 8 m in locations to provide bigger passing places for vehicles. The overall swathe for the haul road however is wider at 21 m to allow for storage of topsoil and sub soil as well as providing adequate drainage.		X		
9-2.635	Suggest that in the event that the Project is decommissioned, the restrictions to reinstatement/replanting of trees remains unless there are new subsequent constraints that preclude it (e.g. replacement could be based on tree removal plans consented by the Development Consent Order (DCO))	Decommissioning has been scoped out of the Environmental Statement (ES), as per the Environmental Impact Assessment (EIA) Scoping Opinion (document reference 6.20). It is expected that proposals for decommissioning would be subject to separate consenting procedures, including environmental assessment of the proposed activities,		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		taking account of the baseline as it exists at the time of decommissioning. Chapter 4: Project Description of the ES (document reference 6.4) outlines the works likely required to decommission the permanent elements of the Project.				
9-2.636	Suggest that new public guidance is needed on how, where, and why lines should be onshore or offshore, overhead or underground, lattice pylons or novel designs, and on how system design should balance different environmental benefits and costs (e.g. as there is no agreed public guidance at present)	<p>National Grid develops its projects in accordance with existing government policy, guidance and regulatory frameworks. This guides the consideration of routeing options, technology choices and structure types. National Grid does not publish national guidance itself, however for further detail on how we apply the applicable planning and regulatory framework in practice, please refer to our Approach to Consenting document published in April 2022, available on the National Grid website.</p> <p>National Grid's options selection and identification process is outlined in the 'Approach to Consenting' (National Grid, April 2022).</p>			X	
9-2.637	Suggest the inclusion of the Circular 01/2022 'Strategic road network and the delivery of sustainable development' within the review of relevant guidance within the Preliminary Environmental Information Report (PEIR)	Proposed access from the A120 which has been accepted and agreed with National Highways, captured within the Statement of Common Ground, is compliant with Circular 01/2022 and DMRB.	X			
9-2.638	Construction traffic will be using the Strategic Road Network (SRN) and Major Road Network (MRN) to access the region, and from the SRN, and MRN,	A Transport Assessment (document reference 7.11) has been submitted as part of the Development Consent Order (DCO) application. The assessment has been	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	construction traffic will be routed along a Primary Access Route (PAR) to the Site Access Points. From these points, construction traffic for the project will be routed off of public highways and along Haul Roads to access the construction sites. This approach is considered acceptable in principle however, further investigations of impacts on each junction is required, and where necessary, appropriate mitigation needs to be agreed	developed through engagement with the local highway authorities and National Highways, reviews the impact at key junctions on the Local Highways Network (LHN) and Strategic Road Network/Major Road Network and identifies appropriate mitigation measures.				
9-2.639	Although the proposed HGV routeing strategy for the most part seems reasonable, this would only work if drivers are well informed and the strategy is enforced. Additional details are required on these matters, in particular the delivery, monitoring, and enforcement of the proposed routes. Furthermore, any proposals for monitoring equipment/measures that need to be implemented along the Strategic Road Network (SRN) will need to be agreed with National Highways	<p>The Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) has been updated to reflect additional monitoring, enforcement and management measures.</p> <p>National Grid has worked with the local highway authorities and National Highways to develop our access proposals for the Project. As part of the design of the access proposals we have agreed specific prescribed routes, known as Primary Access Routes (PARs) which the contractor would be required to use. This has been noted in the Driver Information pack which all vehicles attending site would be required to follow.</p>	X			
9-2.640	The Abnormal Indivisible Loads (AIL) route strategy for the proposed scheme have been under discussion but has not yet been agreed. National Highways would need to agree any AILs that intended to use the Strategic Road Network (SRN)	National Grid has engaged with National Highways on the proposed Abnormal Indivisible Loads (AIL) movements and routes. Their inputs have led to amending AIL routes and developing an AIL movement strategy outlined within the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3)	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.641	Section 16.6.24 of the ES identifies several SRN/MRN junctions that connect to Primary Access Routes with Collision Clusters. Further assessment including traffic modelling is required of these junctions to ensure any additional construction traffic using these junctions does not increase the road safety risks in these locations and any increased safety risk is to be mitigated through the scheme	<p>Traffic modelling has been undertaken on selected junctions connecting to or along the Primary Access Routes (PARs) as agreed with local highway authorities and National Highways. Findings can be found within the Transport Assessment (document reference 7.11).</p> <p>The junction modelling identified the impact of the increase to future baseline traffic as a result of the Project and confirmed whether the impact would be managed due to the temporary nature of the disruption, or through some form of mitigation at the junction, taking road safety into consideration.</p>	X			
9-2.642	Suggest that National Highways will need to agree any proposed signage to be located within the Strategic Road Network (SRN)	National Grid has engaged with National Highways on the proposed Primary Access Routes (PAR) and mitigation measures required including removal of signage. Specific details would be agreed through further engagement as the Project progresses.	X			
9-2.643	Suggest that a Maintenance and Repair Statement in accordance with the Design Manual for Roads and Bridges (DMRB) GD304 is to be prepared and updated as the design progresses, and that clear highway boundary should be submitted	Provision of highway boundary data is supplied directly from the relevant highway authority and we can only work with the data we are supplied, land registry also supplies details of private land ownership boundaries. Specific maintenance and repair statements are not necessary as agreements with third party stakeholders such as highways would be discussed and agreed throughout the hearings of the Development Consent Order (DCO) process and beyond into construction with regard to some specifics around legal agreements for	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>future operations being covered in these legal agreements.</p> <p>Our designs will be completed in line with standard relevant industry practices appropriate to the specifics of that particular design.</p>				
9-2.644	The Design Organisation (DO) should take reasonable steps to ensure compliance with Design Manual for Roads and Bridges (DMRB) requirements. Where compliance cannot be achieved, the DO is responsible for identifying and securing Departures from Standard from the Overseeing Organisation (OO). Where the DO is unable to achieve recommended DMRB design clauses, the DO should justify their decision in a Design Strategy Record.	<p>National Grid notes the respondent's feedback. The criteria or guidance set out within the Design Manual for Roads and Bridges (DMRB) has been applied to preliminary design options undertaken to date in relation to the highways associated components, for bellmouths, visibility splays and highway mitigation proposals.</p> <p>Should compliance to DMRB within any future detailed design not be achievable, a Design Strategy Record would be used to justify design decisions and discussed/agreed with the relevant local highway authority through the Departures from Standard procedures.</p>	X			
9-2.645	Any works along the Strategic Road Network (SRN) is to be subject to Walking, Cycling and Horse-Riding Assessment and Review (WCHAR), Road Safety Audit (RSA) in strict accordance with GG119 and environmental audits as detailed in the Design Manual for Roads and Bridges (DMRB). RSA should not commence until the end of the preliminary design stage and has been accepted in principle by National Highways	<p>Any permanent works along the Strategic Road Network (SRN) have been subject to Road Safety Audit (RSA) in strict accordance with GG119 and environmental audits as detailed within DMRB.</p> <p>Other permanent works in the SRN include the improvements to the junctions at A120/Bentley Road and A12/B1070. A Walking, Cycling, and Horse Riding Assessment and Review (WCHAR), following DMRB GG142 has been carried out already for the A120/Bentley Road Improvement Scheme as part of the Five</p>	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Estuaries Offshore Wind Farm planning application. A WCHAR is being prepared for the upgrade of the A12/B1070 junction, in accordance with DMRB GG142.</p> <p>Road Safety Audits (RSA) have been undertaken in accordance with GG119. Acceptance in principle was sought from National Highways and each local highway authority relating to the preliminary design proposals (RSA stage 1) for site access bellmouths and the haul road crossover bellmouths prior to the audit assessments being carried out at the site locations.</p> <p>The same process is to be followed for the forthcoming RSAs of the preliminary highway mitigation design proposals.</p> <p>GG119 should also be adhered to for future RSA Stage 2 detailed designs, again with acceptance in principle sought from National Highways and the local highway authorities in advance of the audits.</p> <p>A WCHAR will be undertaken by National Grid for all highway works on the SRN where the requirements are identified within DMRB Standard GG142.</p>				
9-2.646	Suggest that any design hazards are to be assessed with a Safety Risk Assessment (SRA), prepared in accordance with Design Manual for Roads and Bridges (DMRB) GG104, with the view to eliminating the risk, where possible, or, if unavoidable, reducing it to as low as reasonably practicable	National Grid notes the respondent's feedback. Existing hazards in close proximity to bellmouths have been identified during the preliminary design stage to eliminate any risks where possible, or measures applied to reduce, manage or control any remaining. This information has been used to inform and guide the drafting of the Outline Construction Traffic Management	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Plan (CTMP) (document reference 7.3) for the Project that accompanies the Development Consent Order (DCO) application. The proposed highways works have all undergone road safety audits as part of the design process. Through discussion with National Highways we have ensured road safety is fully considered within the Transport Assessment Chapter of the ES (Document reference 7.11)				
9-2.647	<p>The Project currently crosses the Strategic Road Network (SRN) at the following locations, and National Grid will require an Approval in Principle and enter a S169 Licence for each of these locations:</p> <ul style="list-style-type: none"> - A14 – between Creeting St Peter and Creeting St Mary - A12 – North of J29 - A120 – Between Coggeshall and Marks Tay - A12 – South of J14 	National Grid notes the respondent's feedback. Applications for Licences to Erect Temporary Scaffolding or Hoarding on or Over the Highway, under Section 169 of the Highways Act 1980 would be sought where required. Any requirements for any associated traffic management or Traffic Regulation Orders would be contained within relevant Development Consent Order (DCO) Schedules.	X			
9-2.648	Where the Project crosses the A12, north of Langham by Horizontal Directional Drilling (HDD), undergrounding will be subject to a S50 licence and will be required to be carried out in accordance with CD622. It should be noted that National Highways do not allow the Compulsory Acquisition of land beneath the Strategic Road Network (SRN) and the implications of this may need to be considered	<p>Section 50 of the Highways Act 1980 is the requirement of a licence to install or maintain apparatus in the public highway.</p> <p>The contractor who would be carrying out the roadworks excavation in the construction stage of the Project would apply to each local highway authority.</p> <p>National Grid is seeking the rights to undertake the works as part of the Development Consent Order (DCO). The requirement for technical acceptance of the</p>	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>work from the local highway authorities can be included within the DCO requirement including the commitment to CD622.</p> <p>Ground investigation information in the detailed design stage should confirm if Horizontal Directional Drilling (HDD) is suitable in this location, without impacting on any existing services.</p> <p>National Grid will look to obtain voluntary agreement / consent to install apparatus under National Highway land. If voluntary consent cannot be reached, then National Grid will need to rely on compulsory acquisition powers.</p>				
9-2.649	National Highways request confirmation from the National Grid that the Pylons will be constructed in accordance with Construction (Design and Management) Regulations (CDM). National Highways would need to be satisfied the structures have been designed and installed safely and would not pose a safety threat to the Strategic Road Network (SRN)	<p>National Grid complies with Construction (Design and Management) Regulations (CDM) 2015 (as amended) and adopts a Construction (Design and Management) Regulations (CDM) 2015 (as amended) approach to the management of health and safety reflecting industry best practice.</p> <p>Additionally, the legal framework that regulates electrical safety in the UK is The Electricity Safety, Quality and Continuity Regulations (ESQCR) 2002. This also details the minimum electrical safety clearances, which are used as a basis for the Energy Networks Association (ENA) TS 43-8.</p> <p>These standards have been agreed by CENELEC (European Committee for Electrotechnical Standardisation) and also form part of the British</p>	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Standard BS EN 50341-1:2012 Overhead Electrical Lines exceeding AC 1kV. Similarly, the pylons and foundation are designed in accordance with this British Standard.</p> <p>All electricity companies are bound by these rules, standards and technical specifications. They are required to uphold them by their operator's licence.</p> <p>All design works will be completed in line with relevant design standards, all structures are fully designed and in line with site specific conditions. That work has not been undertaken at this stage of the Project but it would be a bespoke design for each individual tower reflecting the site specific constraints and conditions when the design progresses to detailed design and build phase.</p>				
9-2.650	Criticism of comments made by the East of England Energy Group in relation to the Project	Noted. This is not a comment for National Grid.			X	
9-2.651	Suggest that a Flood Risk Assessment (FRA) should be provided for the Project (as required under the National Planning Policy Framework (NPPF), as stated in the Flood Risk Assessment Screening), including a full review of flood risk (including residual risks) from all screened in sources of flooding (fluvial/tidal, pluvial, and groundwater flooding). Where the site is found to be at medium or high risk of flooding from at least one source, the FRA should also consider the need for flood resilience and	A detailed Flood Risk Assessment (FRA) has been prepared (document reference 7.9) in addition to a flood warning and evacuation plan that details actions for flooding emergency during Project construction, as an appendix to the Outline Code of Construction Practice (CoCP) (document reference 7.2). The FRA has assessed a range of sources of flooding to the Project and arising from the Project, and a range of measures, including those embedded within the design, and good practice, have been secured to ensure that the Project is resilient to flooding, and does not contribute to an		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	emergency planning measures. The FRA should include the likelihood of groundwater contamination	increase in flood risk from any source. The likelihood of groundwater contamination is assessed in Chapter 9: Contaminated Land, Geology and Hydrogeology (document reference 6.9) of the Environmental Statement.				
9-2.652	<p>Suggest the following for Appendix 4.1 (Draft Outline Code of Construction Practice (CoCP)) of the Preliminary Environmental Information Report (PEIR) for the Project:</p> <ul style="list-style-type: none"> - In relation to Table 4.1, suggest that outside of a Development Consent Order (DCO), hedgerow removals should continue to come under the jurisdiction of the Hedgerows Regulations and administered by the local planning authority (LPA); - Concern that B8, GG15, GG16, and GG17 imply that a tree/vegetation survey will be undertaken after detailed design, and suggest that this should be undertaken before detailed design; - Suggest that LV06 of the draft Code of Construction Practice (CoCP) should be reworded to require that all works to all trees should be by suitably qualified and experienced arborists (not just 'high grade' trees) in order to ensure no inadvertent damage and support best practice. It is also recommended not to refer to 2012 in British Standards (BS), as the Standard might be revised 	<p>National Grid notes this comment.</p> <p>All required hedgerow removals are set out on the 'Tree and Hedgerows to be Removed and/or Managed Plan' (document reference 2.16) that form part of the Development Consent Order (DCO) application. Therefore, consent for removal will be included within the DCO.</p> <p>Detailed arboricultural surveys have been undertaken across the whole route and the results have been used to inform design, details of which are presented in Appendix 13.6: Arboricultural Impact Assessment (document reference 6.13.A6). A pre-commencement arboricultural survey will also be undertaken post consent prior to works starting and the results will be used to inform detailed design. An updated 'Trees and Hedgerows to be Removed and/or Managed Plan' (document reference.2.16) will be subsequently prepared to discharge the relevant requirement.</p> <p>It is considered appropriate to reference BS5837:2012 as this is the current standard and remains in place post DCO submission.</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Text within the Outline Code of Construction Practice (CoCP) (document reference 7.2) has been updated confirming that all tree works will be undertaken by a suitably qualified and experienced arborist and supervised by an Arboricultural Clerk of Works.				
9-2.653	Suggest that Construction Exclusion Zones (CEZ) need to be justified and clearly identified within the Landscape and Ecological Management Plan (LEMP) and relevant plans submitted in support of the Development Consent Order (DCO). CEZs should be clearly identified, with buffer distances clearly identified and mapped and used to inform detailed design	<p>The Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) includes the identification of Construction Exclusion Zones (CEZ). The area to the rear of tree protection fencing would be considered to form a CEZ. No construction activities, storage of materials or pedestrian or vehicular access would take place within this area.</p> <p>All weather notices would be attached to the tree protection fencing at suitable intervals of 20 m and would include suitably sized informative text containing the following statement: 'Tree Protection Fencing Construction Exclusion Zone – No Access'</p>		X		
9-2.654	Suggest that percussive piling should not be used for the Project and other piling types should be selected (e.g. due to noise and vibrations)	Chapter 14: Noise and Vibration (document reference 6.14) of the Environmental Statement (ES) includes an assessment of construction noise and vibration. The assessment includes an assessment of potential impacts from piling activities, and percussive piling is assumed as a worst-case. Other methods may be used in line with best practicable means. However, depending on ground conditions percussive piling may be required. Where percussive piling is proposed, best practicable		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>means would be employed to reduce the potential adverse of noise and vibration as far as practicable.</p> <p>The foundation types required will be dictated by ground conditions on a pylon-by-ylon basis.</p> <p>Driven percussive piles are good for loose soils with a high water table, however, there are alternative approaches. It is possible to undertake alternative types of piling (Continuous Flight Auger (CFA) / Sectional Flight Auger (SFA) piling within these zones), especially where chalk is present (as is seen across lots of East Anglia). CFA/SFA will prevent heave between piles in each leg.</p> <p>A specialist piling contractor will determine piling type on a case by case basis at the detailed design stage post ground investigations have been completed.</p>				
9-2.655	Query regarding the minimum extent a full tree survey will cover in order to provide data against which designs for the Project can be assessed / Suggest that the tree and hedgerow survey covers the maximum potential extent of vegetation clearance and management (e.g. including the extents of haul roads and Limits of Deviation (LoD) margins)	<p>The arboricultural survey has considered trees within the extent of the Order Limits. National Grid confirms this included the haul roads and Limits of Deviation (LoD) margins.</p> <p>The arboricultural survey methodology is presented in the Scoping Report which was submitted to the Planning Inspectorate in November 2022 (document reference 6.19), and is sign posted in Appendix 13.6: Arboriculture Impact Assessment (AIA) (document reference 6.13.A6) of the Environmental Statement (ES).</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.656	Concern that in the event of the scheme, either all or in part, is decommissioned, the restrictions to reinstatement/replanting of trees will no longer apply and suggest that there should be an obligation to do this unless there are new subsequent constraints, approved development or otherwise, that preclude it. Replacement could be based on tree removal plans consented by the Development Consent Order (DCO)	Decommissioning has been scoped out of the Environmental Statement (ES), as per the Environmental Impact Assessment (EIA) Scoping Opinion (document reference 6.20). It is expected that proposals for decommissioning would be subject to separate consenting procedures, including environmental assessment of the proposed activities, taking account of the baseline as it exists at the time of decommissioning. Chapter 4: Project Description of the Environmental Statement (ES) (document reference 6.4) outlines the works likely required to decommission the permanent elements of the Project. Trees and Hedgerows to be Removed and or Managed Plans (document reference 2.16) have been submitted as part of the DCO application		X		
9-2.657	Suggest that full photomontage visualisations of the Project should be provided in the final Environmental Statement (in relation to the Landscape and Visual chapter of the Preliminary Environmental Information Report (PEIR)), and that the final wireframes and photomontages should cover Limits of Deviation (LoD) margins	A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the EIA and is presented in Chapter 13: Landscape and Visual (document reference 6.13) of the Environmental Statement (ES). The LVIA includes an assessment on both landscape character and visual amenity and sets out the potential landscape and visual effects of the Project, and the approach follows professional guidance as set out in Appendix 13.1: Landscape and Visual Methodology (document reference 6.13.A1). The methodology and approach has been discussed and agreed with relevant stakeholders. During these		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		discussions a number of landscape and visual viewpoints were identified and agreed with stakeholders. Some of these have been used to produce photomontages and wireframes to support the LVIA and assist stakeholders and ultimately the Examining Authority to understand the likely effects of the Project on landscape character and on views from specific points. The visualisations are based on the Project as proposed in the DCO. Iterations of different scenarios within the limits of deviation have not been illustrated within the visualisations as this is not considered to be a reasonable or proportionate approach. The limits of deviation has, however been considered in the LVIA in terms of assessment.				
9-2.658	Criticism that within the Preliminary Environmental Information Report (April 2024) National Grid only provide headline information / Criticism that whilst National Grid describe the methodology used in making decisions, they do not then explain in detail why decisions have been made and whether decisions have been made in line with the methodology described	<p>The Preliminary Environmental Information Report (PEIR) was a preliminary document produced in line with Nationally Significant Infrastructure Projects - Advice Note Seven (June 2020).</p> <p>The assessments detailed in the PEIR were all undertaken in line with the methodologies described in the report.</p> <p>A full Environmental Impact Assessment (EIA) has now been undertaken and is presented in the Environmental Statement (document reference Volume 6: Environmental Statement).</p> <p>The assessments detailed in the ES, including the Health and Wellbeing, Historic Environment, Landscape and Visual and Traffic and Transport Chapters, have</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		been undertaken in line with the methodologies described in the report.				
9-2.659	Suggest that National Grid should make a commitment to continue to work with local communities with regards to the Project, and that this commitment should be embedded within the Development Consent Order (DCO)	<p>The Government has published its guidance on community funds for transmission infrastructure (DESNZ, 2025). National Grid is committed to working with Ofgem, industry partners, local communities and their representatives to ensure community benefits are delivered fairly and effectively, driving lasting, positive change for the people and places integral to our developing electricity network.</p> <p>Government has also announced its plans to introduce a bill discount scheme for households within 500 metres of new infrastructure, which it proposes to introduce through the Planning and Infrastructure Bill. This is evolving government policy. Government expects this scheme to be in place by 2026 and we will share further details as they emerge.</p> <p>National Grid is committed to providing a coordinated local and regional approach to community benefits. This will be delivered outside the development consent process, since this is not a material consideration in the decision on the proposed Project or a matter to be secured as part of the Development Consent Order, as per the Community Funds for Transmission Infrastructure: Guidance (DESNZ, 2025).</p>	X			
9-2.660	Concern that National Grid has not coordinated with UK Power Networks for the Project (e.g. regarding	National Grid and UK Power Network have a mandate to rationalise the transmission and distribution networks	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	the sighting and possible removal of the UK Power Networks existing network and substations and the interface of programmes for these works)	where able to do so and opportunities for such works have been investigated with UK Power Networks throughout the design process for Norwich to Tilbury while balancing consideration of consumer costs.				
9-2.661	Suggest direct engagement with councils for Ipswich, Norwich and West Suffolk, given that the Study Area has been expanded to include these areas	National Grid has engaged directly with Ipswich, Norwich and West Suffolk councils on the scope and methodology of the Socio-Economics, Recreation and Tourism assessment detailed in Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) of the Environmental Statement (ES).		X		
9-2.662	Concern that the analysis of impact on economic development, skills and tourism has been underestimated and suggest that there are significant impacts in respect of these issues, especially tourism, that should be more accurately quantified	Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) of the Environmental Statement (ES) covers the assessment of potential effects on the local economy, local employment, tourism economy and tourism businesses. This approach is in line with other National Grid connection projects, including Yorkshire GREEN and Bramford to Twinstead Reinforcement.		X		
9-2.663	Suggest National Grid coordinate the Project with other relevant and reasonably foreseeable development projects in the area, namely Freeport East / Gateway 14, in order to minimise impacts and maximise potential benefits to be realised. Specifically, suggest that potential benefits, through appropriately coordinated delivery of interrelated energy projects and network infrastructure, could include improved connectivity for Freeport East at	National Grid develops the Transmission System and progresses reinforcement in response to a formal process of connection applications (from developers), connection offers (from NESO) and signed connection agreements. As such we are not able to shape proposals to respond to uncertainty associated with anticipated or foreseeable demand. At the time of writing no such connection agreements were signed. We nonetheless considered routes close to Gateway 14 that		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	Gateway 14 as well as other major commercial operations and other interests in the area, enabling decarbonisation and other green energy objectives for these sites and affected communities. With this, suggest that National Grid recognise and act upon the value such strategic coordination will add to the Project, the wider Great Grid Upgrade objectives by enabling effectively, appropriate and sustainably planned local generation and storage for focused local distribution and consumption as part of the government's priorities for a decarbonised economy and to contribute to the challenge of fuel poverty (in relation to The Freeports Roadmap)	were raised in feedback but considered them to be less preferred due to greater effects on residents in Creeping St Peter. The Project focuses specifically on supporting and enhancing the 400 kV transmission system in the area (as described in the 2025 Strategic Options Backcheck Report (document reference 7.17)), any connection to local generation or distribution system would be considered via an appropriate network connection application.				
9-2.664	Suggest that a Habitat Regulations Assessment should be undertaken for the Project	A Habitat Regulations Assessment (HRA) (document reference 5.3) has been prepared for the Project and Natural England have been engaged through the production process.	X			
9-2.665	Though use of the Biodiversity Net Gain (BNG) metric for calculating mitigation / compensation requirements is supported, suggest that bespoke compensation will be required if certain high quality habitats cannot be avoided (although avoidance is the clearly preferred route). For other major infrastructure projects in the area, compensation for 'open mosaic habitats' especially where these are characterised by uniqueness in some way (e.g. Pulverised Fuel Ash	Any habitats identified as irreplaceable are considered outside of the standard Biodiversity Net Gain (BNG), process as is standard practice. A separate mitigation strategy for irreplaceable habitats has been developed. The Ancient Woodland and Veteran Tree Strategy (Appendix B of the Landscape and Ecological Management Plan (document reference 7.4)) details impacts and bespoke mitigation package for impacts on habitats classified as irreplaceable in line with Natural	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	(PFA) or complex wetlands etc.) has been sought at a ratio of 3:1. Thus, suggest that BNG should be used alongside a bespoke approach for the Project to deliver optimal outcomes and consistency across major infrastructure projects.	England guidance. No other irreplaceable habitat has been identified across the Project.				
9-2.666	Concern that the Project was decided on outside of the planning system (e.g. in relation to alternatives) / Concern that the needs case for the Project is based on the Network Options Assessment (NOA), Future Energy Scenarios (FES), Electricity Ten Year Statement (ETYS), Holistic Network Design (HND) which are not relevant for the Project (e.g. where the Electricity Act 1989, Planning Act 2008 and associated NPS's are of relevance in the Development Consent Order (DCO) process) / Concern that the option for the Project has not been decided on based on planning documents (e.g. like the 'Stonehenge decision') / has only been decided on based on pre-planning documents (e.g. which are not planning documents and are not relevant to the DCO given that they do not assess the heritage, community or environmental impacts) / Concern that National Grid has not addressed feedback that electricity planning decisions (such as the Network Options Assessment) do not overrule planning law	<p>National Grid notes the respondent's feedback. The Project has not yet been granted planning permission. All work on the Project to date has been part of the pre-planning process, we have now submitted our application for development consent and, if accepted the application would then be examined by the Planning Inspectorate.</p> <p>The need case for the Project is set out in various documents and is driven by the need to connect new significant volumes of generation to the network and to transmit that into East Anglia and beyond.</p> <p>The existing network does not have capacity to accommodate this new generation and it is therefore necessary to consider how the network can be reinforced. Having identified the need to reinforce the network, strategic alternatives were published in the Strategic Options Report (document reference 7.17) and subsequent backcheck, with a preferred option taken forward through the relevant national planning regime (the Planning Act 2008). The proposals that are developed and applied for in the Development Consent Order (DCO) application will be examined independently by the Planning Inspectorate, as part of the planning</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>process and determined by the relevant Secretary of State (SoS).</p> <p>The Network Options Assessment (NOA) which used to be carried out by the Electricity System Operator (ESO) (now National Energy System Operator (NESO), the Electricity Ten Year Statement and other forecasting mechanisms have indicated a need for some form of reinforcement. However, in addition to those indicators, the need for reinforcement is very apparent from the list of wind farm generators that are contracted to connect to the grid.</p>				
9-2.667	In relation to the selection of the Project over alternative options, concern that the limited sensitivities have been tested and that the most up to date methodology has not been used	The methodology used to compare and assess strategic options is set out in the 2023, 2024 and 2025 Strategic Options Backcheck and Reviews (document reference 7.17). We consider this methodology to fit for purpose, robust and has been tried and tested, under Examination, through numerous previous major electricity transmission projects and found to be appropriate. National Grid keeps an open-mind to alternative methodologies that may emerge that align with the need to assess options on an objective, like-for-like basis.			X	
9-2.668	In relation to National Grid's response to feedback at the previous consultation, disagree with / criticism of National Grid's assertion that the Green Book does not apply to the Project, given that National Grid are a Statutory Undertaker / the transmission network is	<p>The Green Book is guidance issued by HM Treasury on how to appraise policies, programmes and projects.</p> <p>It is intended to ensure that public funds are spent effectively and is applicable to decisions requiring economic justification. Whilst the Green Book is not</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	of public interest despite being privately owned / the Project is a Nationally Significant Infrastructure Projects (NSIPs) which must be approved by a Secretary of State indicating that it is of national interest / National Grid is regulated business with obligations to consider customer, environmental and other considerations (e.g. so National Grid should therefore adhere to the Treasury Green Book guidance and Ofgem should enforce adherence)	explicitly mandated for National Grids Development Consent Order (DCO) projects its principles underpin the regulatory and appraisal process overseen by Ofgem and influence how DCO applications are prepared. National Grid must align its appraisals with Green Book methodologies to satisfy Ofgem's funding requirements and demonstrate compliance with the economic, social and environmental objectives outlined in National Policy Statements. Whilst Ofgem does not explicitly mandate adherence to the HM Treasury Green Book in all its processes they follow its core principles to ensure economic, social and environmental appraisals align with value for money and efficiency goals. This alignment is particularly evident in its regulatory frameworks such as RIIO where it evaluates projects like is proposed by National Grid.				
9-2.669	Criticism of the analysis of feedback to previous consultation (e.g. responses were 'boiled down' to generic categories)	<p>National Grid followed due process to report on all feedback received during the 2022 and 2023 non-statutory consultations, statutory consultation, targeted and landowner consultations, and to explain how the consultation results have been taken into account. This included responses to the questionnaire, emails and letters.</p> <p>All feedback was read and taken into account. It was then subsequently analysed using a coding framework. This framework enabled the grouping of responses into location, categories and themes.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Each code was responded to within the report within a table specific to the location it was referring to. If no location was specified, or if responses were general to the Project, a separate table ('X- no location') was used.</p> <p>This was considered a reasonable and proportionate approach given the volume of feedback received and preferable to setting out each individual item of feedback in the report which would lead to duplication.</p> <p>Each response was assigned a unique reference number to create an audit trail throughout the analysis process. Quality assurance checks were undertaken to ensure that each response was accounted for and analysed.</p> <p>Some categories (such as visual impact) were split so that comments could be coded as being specific to a certain area of the Project. A response could receive multiple codes to highlight different themes and/or locations covered.</p>				
9-2.670	Concern that surveys submitted by the respondent as part of their 2022 and 2023 consultation feedback were not considered by National Grid	<p>National Grid notes the respondent's feedback, all feedback including surveys has been read and considered. Surveys provided within feedback are considered by our specialists and where applicable have informed the design process alongside other relevant published information.</p> <p>We have completed our own surveys in accordance with the scope and methods agreed with the Planning</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Inspectorate which have informed our Environmental Impact Assessment (EIA).				
9-2.671	Criticism that National Grid incorrectly directs respondents to Chapter 3 of the 2023 Non-Statutory Consultation Feedback Report in regard to National Grid's response to their feedback (e.g. rather than Chapter 4)	National Grid notes the respondent's feedback. This error which affected a small number of responses was identified during the statutory consultation and was rectified. An updated version of the 2023 Non-Statutory Consultation Report was published with the correct chapter referenced.			X	
9-2.672	Criticism that respondent's request for quantitative analysis of socio-economic and natural capital impacts of the Project has not been responded to (e.g. National Grid states that impacts on leisure and tourism will be 'written up' in the Environmental Impact Assessment (EIA) but does not respond to requests for quantification of impacts)	<p>The methodologies for assessing impacts of a Nationally Significant Infrastructure Project (NSIP) projects are agreed through a structured and collaborative process between the developer and statutory consultees as prescribed by the EIA Regulations 2017. The process ensures that methodologies are fit for purpose and proportionate to the potential impacts of the project.</p> <p>Assessment methodologies for NSIPs are agreed upon through a collaborative and iterative process involving the developer, statutory consultees and the Planning Inspectorate. These methodologies must align with regulatory requirements, established guidance, and stakeholder input to ensure a robust and defensible assessment of environmental effects.</p> <p>We have completed a socio-economic assessment as part of the Environmental Impact Assessment (EIA), this is set out in in Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) of the Environmental Statement (ES).</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.673	Concern that reports on bird strikes, priority habitats, bird hotspots, landscapes, heritage and culture ('A Patchwork of East Anglian Heritage and Culture', and the Forge Field case and Bramshill case) submitted by the respondent as part of their previous consultation feedback were not considered by National Grid	<p>The bird strike and bird hotspot report provided by the respondent have been reviewed by National Grid's ornithological specialists. The data provided within these documents, including results from past projects, have been included as part of the bird collision impact consideration. A bird collision risk model has been developed for the project and has been based on surveys undertaken and approach agreed with Natural England. The data within the priority habitat report provide has already been captured by National Grid and further detailed surveys were subsequently undertaken to ground truth the desk based habitat information.</p> <p>Full details are provided within outlined in Chapter 8: Ecology and Biodiversity (document reference 6.8) and Appendices 8.1 to 8.16 (document reference 6.8.A1-6.8.A16) of the Environmental Statement.</p> <p>The landscape impact report and viewpoint mapping provided by the ESNP group has been referenced by the landscape team. It is noted that the information includes feedback gathered from residents and any relevant baseline information provided in the document has been proof checked / ground truthed where necessary against sources of information set out in Chapter 13: Landscape and Visual (document reference 6.13), as well as against site surveys and observations, and desk top research.</p> <p>Heritage specialists have reviewed the report. Please refer to the Baseline Report (Vol.6 6.11 Chapter 11) for</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		the assessment of scoped in assets, the topography, and historic landscape character, the ES chapter (6.11.A1 Appendix 11.1) which details assets taken forward to assessment, and the Scoped Out Listed Buildings document 6.11.A1 Annex E) which details assets which haven't been taken forward to assessment.				
9-2.674	Criticism of National Grid's response to respondent's suggestion to use existing infrastructure at Bradwell, submitted at previous consultation (e.g. disagree with National Grid's argument that a greater amount of new infrastructure is needed if the landing point chosen is Bradwell and the existing route to south Essex is used)	In respect of connecting at the old Bradwell power station, there is an existing overhead line connection to the Bradwell B site. This has been operating at lower voltage (132 kV) and has not been used for a few years and is in generally poor condition. This overhead line would need to be rebuilt, however, this onward connection via Rayleigh to Tilbury is also constrained by urban development and further environmental designations and some sections may need to be re-routed if connections were made at Bradwell. Additionally, any connection point also requires two points of connection to the National Electricity Transmission System (NETS) (to meet compliance standards) requiring either a double overhead line through the Bradwell peninsula and onwards to separate locations or a connection back to Bramford (in addition to one towards Tilbury). A connection to Bramford would require connections to cross the Special Protection Area (SPA) designated Blackwater Estuary (3 km to 7 km tunnel likely to be required at much greater cost) as well as interact with other Special Area of Conservation (SAC) and SPA designations.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		The existing network through Norfolk, Suffolk and Essex would also still need to be upgraded to transport the electricity due to come onto the network in the Norwich area and provide the necessary two points of connection to the NETS. Taken together a Bradwell point of connection requires a greater amount of new infrastructure and is therefore less economic and efficient and expected to be associated with greater environmental effects.				
9-2.675	Concern that physical copies of Project documentation were not available at consultation events / in libraries / Concern that not enough (or any) copies of the various documents for the Project were held at libraries / Inspection Points, and those they did have were rarely well displayed and had to be requested (e.g. Chelmsford; Stanway did not have a complete copy of the Preliminary Environmental Information Report (PEIR), and very few copies of the Community Newsletter including Map, Statement of Community Consultation, and Feedback Questionnaire; in Colchester documents were inconspicuously located on a shelf with consultation documents for other schemes) / Concern that libraries holding copies of Project documentation were not as near to villages impacted by the Project as they could have been (e.g. Writtle)	<p>National Grid sent several copies of the non-technical documents to inspection points along the route, these were normally libraries. We did not provide these libraries with a full copy of the Preliminary Environmental Information Report (PEIR) due to the length of this document and associated costs of printing. We stayed in contact with the inspection points throughout statutory consultation and offered to send additional materials on request. We did send further documents to these inspection points on several occasions.</p> <p>If a member of the public was looking for a specific document related to our proposals, they were all made available on the Project website, and on request we sent copies of documents to properties. For some of the longer documents, we did include a cost for print and postage.</p> <p>All our documents, including a full copy of the PEIR were available at our public information events and we had</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>staff available to help explain the more technical documents.</p> <p>We sent these documents to 25 inspection points along the route, this included Writtle. However, we could not determine how the libraries stored these materials and due to size constraints, they may have been more difficult to find in certain libraries.</p>				
9-2.676	Concern that the consultation period was not long enough (e.g. government guidance recommends 12 weeks, but the consultation was only 10 weeks)	National Grid extended the statutory consultation following the announcement of a General Election in July to run for a period of 15 weeks.			X	
9-2.677	Concern that the 2023 interactive map for the Project remains active and is the second Google result in a search (e.g. this could cause confusion and, due to the absence of draft order limits and traffic access information, could mislead respondents about the scale of the Project)	On the Project website National Grid had the most up to date version of the Project interactive map available. We are aware that the previous interactive map remained online at a unique URL. In our consultation documents, we directed members of the public to our interactive map through the website, which would be the most up to date version.			X	
9-2.678	Regarding adequacy of consultation, concern that there were late changes to the Preliminary Environmental Information Report (PEIR) as per the errata document and corrections log, including to some pages where the edges of maps have been clipped. With this, criticism that National Grid stated that the changes in the errata were not significant, given that the changes may have impacted assessments made by others reviewing the PEIR,	Feedback received during the statutory consultation highlighted discrepancies in one of the figures included in the Preliminary Environmental Information Report (PEIR). Further investigation revealed that a total of 37 figures contained discrepancies, although the extent of the issues varied across the figures. As a result, it was decided to update all 37 affected figures rather than addressing only the specific figure identified by the stakeholder.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	such as residents and other bodies, and that concern that it would not be reasonable to expect respondents to read the errata / concern that changes were not highlighted in the errata (examples provided by respondent). Likewise, concern that the changes may impact referencing in feedback responses where respondents have referred to specific sheet numbers from the original versions and could create confusion for PINS	<p>The updated figures replaced the superseded versions within the PEIR figures volume on the Project website. To maintain transparency, an errata document was created to outline the specific changes made to each of the 37 figures. Additionally, a stamp was added to each updated figure to clearly indicate that it had been replaced.</p> <p>The revisions, along with the errata document, were completed and uploaded to the project website on 28th June 2024. This ensured compliance with the mandatory consultation requirement of 28 days.</p>				
9-2.679	Concern that there were not enough pre-paid envelopes available at consultation events for respondents to submit their feedback (e.g. ran out at the Chelmsford event)	Due to the high attendance at some of the public information events, National Grid is aware that we ran out of pre-paid envelopes for the return of feedback questionnaires. People were welcome to fill out, and submit, a feedback questionnaire at any of our public information events. The questionnaires, and other forms of feedback, could be sent to us at FREEPOST N TO T, and these did not need a stamp or any further details.			X	
9-2.680	Suggest that detailed models of the Project comparable in quality to those presented at the North Falls statutory consultation should be presented for consultation (e.g. more detail than current)	At the public information events National Grid had 3D visualisations available. These showed views from anywhere within 2.5 km of the alignment. We also had our interactive map, and static visualisations available.			X	
9-2.681	Concern that respondent was advised at a consultation by National Grid's archaeology expert	Baseline data for the historic environment have been collated from the full suite of sources referenced in			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	that they needed to notify Historical Environmental Records and Council Heritage Officer about archaeology for it to be considered (e.g. rather than providing details as feedback to the consultation)	Environmental Statement (ES) Chapter 11: Historic Environment (document reference 6.11). Feedback received through all stages of consultation has also been reviewed and, where relevant, incorporated into Appendix 11.2: Historic Environment Baseline Report (document reference 6.11.A2). Together, these sources underpin the assessment and ensure that the baseline reflects both published evidence and stakeholder input.				
9-2.682	Criticism that attendees were not able to take videos or photos at consultation events (e.g. despite events being held in public buildings)	The public information events were attended by members of the Project team and members of the public, including children. National Grid did not allow for photography or recording inside of the events as we could not guarantee permission from everyone attending.			X	
9-2.683	Criticism that visualisations were only provided of the Project and not of alternative options (e.g. fewer pylons, lower height pylons)	National Grid's 3D visualisation was available at our public information events and showed the proposals from any post code within 2.5 km of the alignment. This was indicative of the proposals that we were developing at statutory consultation. At our public drop-in events during targeted consultation, we had the 3D visualisations available which showed the proposed alignment at the Walthams and Thurrock Airfield with an option to show both the standard and lower height lattice pylon.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.684	Criticism that documentation for the Project was not indexed (e.g. therefore difficult to navigate) / Criticism that documents had a limited contents page	<p>National Grid notes the respondent's feedback. A contents page was included at the start of each document published at the statutory consultation, including at the start of each volume and document submitted as part of the Preliminary Environmental Information Report (PEIR), which was the largest document published.</p> <p>Each document submitted as part of the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) includes a clear contents page.</p> <p>Within our Development Consent Order (DCO) submission documents, there is a Navigation Document to aid in locating specific documents and contents pages for the Consultation Report have been made more extensive to assist in navigating the document.</p>			X	
9-2.685	Criticism that only residents within 1km, the Primary Consultation Zone (PCZ) of the draft order red line, were notified by National Grid about the consultation despite the Zone of Theoretical Visibility maps showing that the Project would be seen from over 3km, sometimes up to 8km, away. As such, suggest that a wider area should have been covered and that residents in the Secondary Consultation Zone (SCZ), which is a 4km buffer around the red line limit of the draft order limit, should also have been notified	National Grid directly contacted everyone within our Primary Consultation Zone (PCZ) which extended to 1 km on either side of the draft alignment. Our consultation was advertised in the wider area through regional and national newspapers and social media. We welcomed feedback from anyone, regardless of their proximity to the proposals.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.686	Criticism that National Grid has not provided Geographic Information Systems (GIS) files of the Project or the draft order limits	<p>National Grid was unable to provide the Geographic Information System (GIS) shapefiles during consultation as the shapefiles showed an indicative route alignment which remained the subject of the statutory consultation and has continued to be developed in response to consultation feedback and further engineering and environmental surveys.</p> <p>The information contained within the GIS files was made available to the public in the April 2024 Consultation Newsletter, the interactive map and the photomontages.</p> <p>The alignment has been finalised in response to consultation feedback and further surveys, and the updated Order Limits and other information forms part of our Development Consent Order (DCO) application. The route presented at submission is available on the updated interactive Project map.</p>			X	
9-2.687	Criticism that National Grid did not provide respondent with all documents requested, and had to wait number of weeks for printing and a courier and was told that there may be a charge of maximum £500 (e.g. the Preliminary Environmental Information Report (PEIR))	<p>National Grid made all consultation documents available for request. These requests could be made on any of our dedicated communication channels. For some of the longer documents, we did include a cost for print and postage.</p> <p>Further, all our documents were all made available on the Project website.</p> <p>All our documents, including a full copy of the Preliminary Environmental Information Report (PEIR) were available at our public information events and we</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		had staff available to help explain the more technical documents.				
9-2.688	Criticism that delivery of Project documents needed signing for and the delivery company took photos of the recipients (e.g. as it was intimidating)	To ensure that the Project documents were delivered to properties along the route, National Grid sent these using recorded delivery. We did not request for any photos to be taken on delivery. The Project documents were delivered by a mailing house, and not by National Grid directly so this may have been due to separate rules of the delivery companies.			X	
9-2.689	Criticism that National Grid sent respondent incorrect maps (e.g. for a different area than that requested)	National Grid allowed members of the public to request copies of the consultation materials, including maps. During busier periods of consultation, there may have been a delay in the delivery of these. If someone had not received the documents they requested, received documents other than those they requested, or wanted to request any further documents, we had dedicated communication channels open where they could do so and the requested documents were then posted.			X	
9-2.690	Criticism that there was no formal announcement of the extension to the consultation period	On 5 June 2024 National Grid announced the extension of the statutory consultation. As part of this announcement, we contacted 77,000 properties along the route alongside political stakeholders and community groups. We also advertised the extension of consultation in regional and national newspapers and on social media.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.691	Concern that National Grid has not shown most up to date plans / agreed changes to the Project (e.g. the "Rochdale principle" allows minor changes within an "envelope" to approved plans, though if National Grid has already agreed changes then these should be shown for consultation; changes agreed during landowner meetings have not been shown)	National Grid presented the most up to date plans at the statutory consultation. Changes requested during meetings with Fisher German were compiled and assessed alongside all other changes requested during statutory consultation. No changes were accepted or agreed by National Grid prior to the start of statutory consultation as all feedback and requested changes needed to be assessed together to ensure a balanced approach.			X	
9-2.692	Concern about the safety of public notices for the Project (e.g. dangerous due to flapping in the wind; scared respondent's horse)	<p>National Grid, throughout the consultation phases of the Project, must install public notices, which either contain information regarding the general project or a specific location.</p> <p>National Grid looks to install these notices at suitable locations, ensuring that they are securely fixed and then check periodically.</p> <p>Unfortunately, due to the amount of information that is required in the notices, multiple pages and the ability for a member of the public to look through the notices is needed. This can result in some notices being able to flap in the wind.</p> <p>If a member of the public has concerns over where a notice has been placed, or the need for the notice, they should contact the Projects lands team.</p>			X	
9-2.693	Criticism that National Grid has justified the Project given existing connection contracts in place with	National Grid has a statutory duty under its transmission licence to facilitate connections requested by developers			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	offshore developers, despite evidence that, in the event that a Development Consent Order (DCO) is not granted for the Project, the contractual obligation to connect the offshore windfarms in question to it falls away / Criticism that the statement by the Minister for Energy Security and Net Zero in the 16th January statement that "the Government will not, and cannot, force changes to contracts" in place with offshore developers is incorrect and, if it formed part of the reasoning for the eventual grant of a DCO, it would not withstand judicial scrutiny	<p>of energy projects, including offshore wind farms, in line with contractual agreements. These connection agreements are entered into in response to the UK Government's energy policies and targets, such as delivering 50 gigawatts of offshore wind capacity by 2030 as part of the net zero strategy.</p> <p>National Grid's justification for the project is not solely based on existing connection contracts but on the overarching need to deliver secure reliable and sustainable electricity transmission infrastructure in line with national energy strategies. The Development Consent Order (DCO) process ensures that the project is thoroughly scrutinised, and any decision not to grant consent would prompt a reassessment of the delivery mechanism for the contracted generation capacity.</p>				
9-2.694	Criticism that National Grid's stance that the Treasury Green Book applies only to policies, not projects, and is not relevant to the determination of an application for a DCO under the Planning Act 2008 ("the 2008 Act") is not correct (e.g. legally flawed)	<p>The Green Book is guidance issued by HM Treasury on how to appraise policies, programmes and projects.</p> <p>It is intended to ensure that public funds are spent effectively and is applicable to decisions requiring economic justification. Whilst the Green Book is not explicitly mandated for National Grid's Development Consent Order (DCO) projects its principles underpin the regulatory and appraisal process overseen by Ofgem and influence how DCO applications are prepared. National Grid must align its appraisals with Green Book methodologies to satisfy Ofgem's funding requirements and demonstrate compliance with the economic, social and environmental objectives outlined National Policy</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Statements. Whilst Ofgem does not explicitly mandate adherence to the HM Treasury Green Book in all its processes they follow its core principles to ensure economic, social and environmental appraisals align with value for money and efficiency goals. This alignment is particularly evident in its regulatory frameworks such as RIIO where it evaluates projects like is proposed by National Grid.				
9-2.695	Criticism that the 2022 and 2023 Non-Statutory consultations are relied upon for the Project at the Statutory Consultation (e.g. the starting point has been the pre-formulated route corridor which was the subject of the Summer 2022 consultation, with the approach one of backchecking and fine-tuning), and (given concerns that the 2022 and 2023 Non-Statutory consultations were legally deficient consultations) therefore there has not been consultation, consistent with the Gunning Principles, on the Project proposals whilst they are at a formative stage. As such, concern that the Statutory Consultation, in the context of the 2022 and 2023 Non-Statutory consultations, is not adequate for pre-application consultation to enable a Development Consent Order (DCO) application to proceed to examination under s.55 of the 2005 Act	<p>Before the statutory consultation, National Grid consulted on a Statement of Community Consultation (SoCC) with potentially affected local authorities along the proposed route. This is a requirement of a project this type and sets out how we intend to consult communities living in the vicinity of the Project. Where practicable, we amended our strategy based on feedback from local authorities, and the SoCC was published at consultation launch on the Project website.</p> <p>As outlined by the Gunning Principles, our four principles of consultation include that it must be at a point where proposals are in the formative stage; there is sufficient information for intelligent consideration; there is adequate time for response; consideration is given to consultation responses before a decision is made. We have followed these steps in line with national planning policy.</p> <p>We have held four stages of consultation in total, giving communities and stakeholders opportunities to feedback and different stages of the design process, and to see</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		the updates we have made before an application is submitted. The first public consultation took place in early 2022, and we held the latest stage of targeted consultations in 2025.				
9-2.696	Criticism that National Grid has not addressed technical queries from respondents (generally) / Criticism of the administrative handling of queries from the public (e.g. queries are not answered until a project milestone; getting an answer to queries has been time consuming for respondent)	National Grid notes the respondent's feedback. We believe it to be important that complete and accurate information is shared in an equitable manner across all communities potentially impacted by the Project. To consult, receive and take into account feedback and consider subsequent changes to the Project design is a time consuming but important part of developing the Project. We have sought to consult on our proposals in robust ways which have been agreed with the relevant local planning authorities and we strive to respond to queries promptly where possible.			X	
9-2.697	Criticism of National Grid's raising of administrative documents (e.g. invoices, statements, and remittances) and concern that it is hard to keep track of the various option payments and compensation payments made for different parts of the Project	<p>The Project has not reached the stage of making option payments.</p> <p>If a landowner or appointed agent has any concerns or questions over how payments are made in relation to compensation or agreements, they should contact the Project's Lands team.</p> <p>Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.</p> <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD.				
9-2.698	Concern that National Grid will take respondent to court if they do not sign the licence agreement (as an access road (easement agreement) is planned through respondent's front gates past their house; no location given)	When National Grid is required to carry out survey works, they would contact the landowner and seek to agree a voluntary survey license. Where a voluntary agreement cannot be reached but access is still required, National Grid would need to serve notice under Section 172 of the Housing and Planning Act 2016, which grants National Grid, and its appointed suppliers permission to take access to the land.			X	
9-2.699	Concern that the Project falls into the consultation zones of several Major Accident Hazard Sites (MAHS) and the consultation zones of several notified Major Accident Hazard Pipelines (MAHP). National Grid should make contact with the respective site operators of the major accident hazard sites identified (H3532 - JH & GM Farrer, Darrow Wood Farm, Shelfanger Road, Diss, Norfolk; H0786 - National Grid Gas PLC, Bishop Stortford Road, Roxwell, Chelmsford, Essex, CM1 4LU; and H0809 - Durox Building Products Ltd, Northumberland Road, Lindford, Stanford - le - Hope, Essex, SS17 0PU) to inform an assessment of whether or not the Project is vulnerable to a possible major accident. The identified notified major accident hazard pipelines' consultation zones that appear within the	National Grid is aware of its obligations under the Pipeline Safety Regulations 1996. We have consulted with the listed pipeline operators where affected and we're working with our experts to assess impacts. From these results and if required, potential mitigations will be developed in collaboration with the pipeline operators.	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>Draft Project Order Limits have expanded and include a single major accident hazard pipeline from a new operator. The full list identified major accident hazard pipelines identified are by operator:</p> <ul style="list-style-type: none">- Operated by National Grid Gas PL (5 Feeder Diss Comp Tee / Stowmarket, HSE: 7448, Transco: 1707; 5 Feeder Roxwell / Abridge, HSE: 7598, Transco: 1851; 5 Feeder Braintree / Roxwell, HSE: 7599, Transco: 1852; 5 Feeder Horndon / Tilbury Thames North, HSE: 8189, Transco: 2448; 5 Feeder Roxwell / Horndon, HSE: 8190, Transco: 2449; and 18 Feeder Stapleford Tawney / Tilbury Thames North, HSE: 8191, Transco: 2450)- Operated by Cadent Gas Limited (Yelverton/East Carleton, HSE: 7385, Transco: 1644; Wilby / Frenze Hall, HSE: 7386, Transco: 1654; Roydon Spur, HSE: 7387, Transco: 1646; Bramford / Langham, HSE: 7424, Transco: 1683; Little Braxted / Tye Green, HSE: 7568, Transco: 1823; Langham / Daisy Green / Little Braxted, HSE: 7571, Transco: 1826; Chalk End / Springfield, HSE: 7577, Transco: 1831; Daisy Green Tee / Fordham, HSE: 7584, Transco: 1838; Eight Ash Green Spur, HSE: 7585, Transco: 1939; West Bergholt Spur, HSE: 7586, Transco: 1840; Langham / Ardleigh, HSE: 7589, Transco: 1843; Connection to STN 33 12", HSE: 8140, Transco: 2399; Hordon / Albridge, HSE: 8146, Transco: 2405; Shoulder Hall/ Southend Arterial Road, HSE: 8147, Transco: 2406; Orsett / Chadwell St. Mary, HSE:

	8149, Transco: 2408; 8" Inlet / Station 81/1 (Chadwell), HSE: 8164, Transco: 2423; Inlet / Station 82/2 (Chadwell), HSE: 8165, Transco: 2424; Mardyke / Stock, HSE: 8169, Transco: 2428; Cadent Gas Ltd: Bake Street / Canvey, HSE: 8176, Transco: 2435; Hainault / Ashingdon, HSE: 8179, Transco: 2438; Horndon / Clockhouse Land, HSE: 8183, Transco: 2442; Canvey / Horndon, HSE: 8185, Transco: 2444; and INLET TO MOUNTNESSING STN 314/315 8", HSE: 4107406, Transco: 2426) - Operated by Barking Power Limited (Horndon to Barking, HSE: 7324, Transco: None applicable) National Grid should contact the above pipeline operators to confirm and to inform an assessment of whether the proposed development is vulnerable to a possible major accident from their pipelines.					
9-2.700	Based on the 2024 consultation documents, it remains unclear whether National Grid has considered the hazard classification of any chemical substances that may be proposed to be present at the Project. This may be because there are none due to the nature of the scheme. The respondent would like to highlight that hazardous substances consent (HSC) is required to store or use any of the Categories of Substances or Named Hazardous Substances set out in Schedule 1 of The Planning (Hazardous Substances) Regulations 2015 as amended, if those hazardous substances will be	The Main Works Contractor will adhere to all Health and Safety Executive (HSE) requirements in relation to hazardous substance. Potentially hazardous materials used or encountered during construction (e.g., paints, solvents, sealants, fuel etc) would be safely and securely stored including use of secondary containment where appropriate (to avoid contaminating other material and waste streams). National Grid would adopt good construction and management practices to ensure waste is minimised as far as possible and that the storage, transport and eventual disposal of any waste have limited	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	present on, over or under the land at or above the controlled quantities. Also, there is an "addition rule" in Part 4 of Schedule 1 for below-threshold substances. Further information on HSC should be sought from the relevant Hazardous Substances Authority.	environmental effects. The management and collection of waste arisings would be carried out under the requirements of the UK waste regulatory regime. The Main Works Contractor(s) would produce a Site Waste Management Plan (SWMP) prior to construction (an Outline SWMP is provided as an appendix to the Outline CoCP (document reference 7.2)). The Outline SWMP (document reference 7.2) provides a framework to reduce the generation of waste in the first place and appropriate measures to reuse and recycle materials where practicable. The SWMP would identify appropriate waste facilities to dispose of materials.				
9-2.701	In the 2024 consultation documents, it was not clear if there was consideration of risk assessments arising from the Projects vulnerability to major accidents. The respondent would advise this is considered further in line with Advice Note 11 Annex on the Planning Inspectorate's website - Annex G – The Health and Safety Executive taking account of the following: "it may be beneficial for applicants to undertake a risk assessment as early as possible to satisfy themselves that their design and operation will meet the requirements of relevant health and safety legislation as design of the Proposed Development progresses.". Note that there are no additional requirements for any risk assessments submitted to and approved by the relevant planning	National Grid undertakes regular design reviews as part of the project development. The process of managing and assessing the changes put forward from consultation feedback also get assessed by a number of disciplines with different focus and as such risk and hazards are assessed as part of National Grids standard design procedures which are designed and developed to consider our obligations under statute and guidance from bodies such as HSE.	X			X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	authority to also be considered by the Health and Safety Executive (HSE).					
9-2.702	Criticism that National Grid has failed to comply with the requirements set out under heritage legislation, national and local planning policy and relevant technical guidance to give due weight to the impact of the scheme on heritage resources	<p>National Grid has worked to minimise potential impacts on the historic environment and its setting, through strategic routing and siting measures. Statutory consultation feedback and the results of archaeological fieldwork have been used to inform design development to reduce as far as practicable impacts to archaeological remains in this area.</p> <p>The assessment of the historic environment for the Project has been undertaken in line with relevant heritage legislation, national and local planning policy, and established technical guidance. The methodology has been developed with reference to best practice, including the National Planning Policy Framework (NPPF), the Planning (Listed Buildings and Conservation Areas) Act 1990, the Ancient Monuments and Archaeological Areas Act 1979, and local development plan policies where applicable. The list of the source is available in Chapter 11: Historic Environment of the Environmental Statement (ES) (document reference 6.11)</p> <p>The methodology and scoping approach were discussed and agreed with key stakeholders during the scoping process and at subsequent thematic working group meetings, including engagement with Historic England and relevant Local Planning Authorities. We are confident that the methodology applied is robust,</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>proportionate, and has given appropriate weight to the potential impacts of the Project on designated and non-designated heritage assets, including effects from physical change and change to setting.</p> <p>The assessment findings are presented in Chapter 11: Historic Environment of the ES (document reference 6.11), supported by Appendix 11.1: Historic Environment Baseline Report of the ES (document reference 6.11.A1) and other technical appendices, and include both the assessment of potential impacts and the identification of appropriate mitigation measures.</p>				
9-2.703	Criticism that National Grid scoped out 95% of heritage assets that exist within 5km of the Project from further assessment as part of the PEIR. Of the 5% remaining, all have been assessed as likely to be significantly impacted as a result of the Project, with no mitigation proposed to offset the harm that will be caused to the designated assets within 500m of the line. Operational effects on non-designated assets have not been included within the assessment at all.	The methodology for scoping in and out heritage assets for assessment was developed in accordance with established best practice and relevant guidance, including Historic England's <i>Good Practice Advice Note 3: The Setting of Heritage Assets (2017)</i> . This approach was discussed and agreed with key stakeholders during the scoping process and at subsequent thematic working group meetings. We are confident that this robust and proportionate methodology has ensured that all assets with the potential to be meaningfully affected by the Project have been appropriately considered.			X	
9-2.704	Suggest that a detailed assessment of settings needs to be provided, based upon Historic Environment Good Practice in Planning Note 3 (Second Edition, 2017). The importance of the setting of the heritage assets lies in the contribution	The Preliminary Environmental Information Report (PEIR) presents the approach and methods used to undertake the setting assessment of heritage assets. The methodology employed aligns with established national guidance, including Historic England's Good			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	that it makes to the significance (or the ability to appreciate the significance).	<p>Practice Advice in Planning Note 3: The Setting of Heritage Assets (Second Edition, 2017), and is further supported by the Scope of the Assessment (document reference 6.5.A2).</p> <p>Further detail is provided in Chapter 11: Historic Environment of the Environmental Statement (ES) (document reference 6.11), which forms part of Volume 6 of the Development Consent Order (DCO) application. This chapter provides a comprehensive assessment of the potential residual effects of the Project on the historic environment, including:</p> <ul style="list-style-type: none"> • Direct physical effects on archaeology during construction, including impacts from the movement of contaminants or pollutants and permanent changes to groundwater flows resulting from underground cabling; • Setting and indirect effects on archaeological remains during construction and operation (and maintenance); • Setting and indirect effects on built heritage assets during construction and operation (and maintenance); • Indirect physical effects on built heritage, including vibration or subsidence caused by changes to groundwater; • Physical effects on designated and non-designated historic landscapes, including registered parks and gardens. 				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>To support this, Appendix 11.2: Historic Environment Assessment Tables of the ES (document reference 6.11.A2) has been produced. It outlines the findings of the assessment of designated and non-designated heritage assets during both construction and operation (and maintenance). The appendix also includes a Significance of Effects matrix, clearly illustrating how significance has been determined.</p> <p>The methodology used in the scoping and assessment of heritage assets, including the approach to setting, has been discussed at subsequent thematic working group meetings. and agreed with relevant statutory stakeholders, including Historic England and local planning authorities. We are therefore confident that the methodology is robust, proportionate, and fully compliant with national policy and guidance.</p>				
9-2.705	Criticism that the scoping out of the majority of the heritage assets during the pre-application negates the efficacy of the Environmental Statement (i.e. a detailed assessment of the effects of the Project on the environment will only address 5% of the total historic environment that will be impacted)	The methodology for scoping in and out heritage assets for assessment was developed in accordance with established best practice and relevant guidance, including Historic England's Good Practice Advice Note 3: The Setting of Heritage Assets (2017). This approach was discussed and agreed with key stakeholders during the scoping process and at subsequent thematic working group meetings. We are confident that this robust and proportionate methodology has ensured that all assets with the potential to be meaningfully affected by the Project have been appropriately considered.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.706	Inaccurate assessments of Heritage Assets throughout the study area, due to the wrong data being evaluated or as a result of inadequate significance and settings assessments are rife throughout the PEIR. Case Studies demonstrate inadequate information on which the scoping evaluation has been based, which has led to a poor consideration of the significance and setting of each asset. The resulting flawed information consequently leads to the wrong result within the significance matrix, with the result that the majority of the heritage assets within the study areas will not be taken forward to the ES for detailed assessment.	<p>Updates have been made to the Historic Environment Baseline Report (HEBR) (see Environmental Statement (ES) Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1)) and Chapter 11: Historic Environment of the ES (document reference 6.11) to ensure the robustness and clarity of the heritage assessments. These updates have addressed earlier feedback and further enhanced the transparency and accuracy of the assessment process.</p> <p>The approach to assessing the significance and setting of heritage assets has been developed in accordance with established good practice, including Historic England's Conservation Principles (2008) and Good Practice Advice Note 3: The Setting of Heritage Assets (2017), as well as the Design Manual for Roads and Bridges (DMRB) LA 104 and LA 106. The methodology was also informed by ICOMOS and UNESCO guidance and has been discussed extensively and agreed with key stakeholders, including Historic England and local planning authorities, during the scoping process and through Thematic Working Group meetings.</p> <p>The assessments of heritage significance and setting have been informed by a range of data sources, including Historic Environment Records (HER), archive research, site visits, photographic surveys, and fieldwork (e.g. geophysical survey, archaeological trial trenching, and geoarchaeological monitoring). These efforts have provided a comprehensive and evidence-based</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>foundation for understanding the value and sensitivity of both designated and non-designated heritage assets.</p> <p>The significance of effects matrix and scoping decisions were made using professional judgement and in accordance with the agreed methodology. Assets not taken forward to the ES for detailed assessment were scoped out based on a robust understanding of their significance and setting, supported by field data and in line with policy and guidance.</p> <p>We are confident that the updated assessments and the methodology applied ensure a proportionate and thorough evaluation of heritage impacts across the study area.</p>				
9-2.707	<p>Criticism that only a 'screened' Zone of Theoretic Visibility (ZTV) has been submitted and not a 'Bareground' ZTV, as such, the impact that the Project would have on intervening buildings or vegetation has not been assessed. The PEIR states that the ZTV has not informed the decision making process as part of this statutory consultation, but will be included as part of the ES next year. The visibility of the tall infrastructure from the heritage assets along the route has therefore not been taken into account as part of the PEIR, and over 75% of heritage assets have therefore been scoped out without due consideration of impact to views upon the significance and settings of these assets.</p>	<p>Cultural Heritage - The current iterations of the Historic Environment Baseline Report (document reference 6.11.A1) and Appendix 11.2: Historic Environment Assessment Tables (document reference 6.11.A2) of the Environmental Statement (ES) includes an up-to-date assessment of the Project's impact on the historic environment and incorporates all available ZTV.</p> <p>The Zone of Theoretic Visibility (ZTV) has been used as a starting point in the assessment to provide an indication of theoretical visibility and has been ground truthed in the field so that the assessment conclusions better represent the potential visibility of the Project.</p> <p>Woodland blocks have been modelled into the ZTVs, using the National Forest Inventory mapping dataset</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>which have been assigned a height of 15 m. This is considered a conservative approach to represent the likely screening/filtering effects of mature woodland. However, the ZTVs do not consider the additional screening and filtering effects of hedgerow and field trees, small copses or more recently planted trees, woodland and hedgerows which are found in many places throughout the study area. The ZTVs also would not account for any proposed planting within Environmental Areas around CSE compounds, substations and substation extensions.</p> <p>Hence, whilst the ZTV indicates relatively widespread theoretical visibility, the subsequent assessment been refined by additional survey work to establish likely levels of visibility that are less than those illustrated by the ZTV.</p>				
9-2.708	<p>Criticism that National Grid has not complied with the following in undertaking a desk based assessment of heritage assets:</p> <ul style="list-style-type: none"> • Standard and guidance for historic environment desk-based assessment (Chartered Institute for Archaeologists (CIfA), 2014, updated 2020) • DMRB LA 106 Cultural Heritage Assessment (National Highways et al., 2020) • Conservation Principles Policies and Guidance for the Sustainable Management of the Historic Environment (Historic England, 2008) • Managing Significance in Decision-Taking in the 	<p>The assessment of the historic environment for the Project has been undertaken in line with relevant heritage legislation, national and local planning policy, and established technical guidance. The methodology has been developed with reference to best practice, including the National Planning Policy Framework (NPPF), the Planning (Listed Buildings and Conservation Areas) Act 1990, the Ancient Monuments and Archaeological Areas Act 1979, and local development plan policies where applicable. The list of the source is available in Chapter 11: Historic</p>			X

	<p>Historic Environment. Historic Environment Good Practice Advice in Planning: 2 (Historic England, 2015)</p> <ul style="list-style-type: none"> • The Setting of Heritage Assets: Historic Environment Good Practice Advice in Planning Note 3 (Second Edition) (Historic England, 2017) • Statements of Heritage Significance: Analysing Significance in Heritage Assets. Historic England Advice Note 12 (Historic England, 2019) • Guidance on Heritage Impact Assessments for Cultural World Heritage Properties (ICOMOS, 2011) • Principles of Cultural Heritage Impact Assessment in the UK (IEMA, IHBC, CifA, 2021) 	<p>Environment of the Environmental Statement (ES) (document reference 6.11)</p> <p>The methodology and scoping approach were discussed and agreed with key stakeholders during the scoping process and at subsequent thematic working group meetings, including engagement with Historic England and relevant Local Planning Authorities. We are confident that the methodology applied is robust, proportionate, and has given appropriate weight to the potential impacts of the Project on designated and non-designated heritage assets, including effects from physical change and change to setting.</p> <p>The assessment findings are presented in Chapter 11: Historic Environment of the Environmental Statement (document reference 6.11), supported by Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1) and other technical appendices, and include both the assessment of potential impacts and the identification of appropriate mitigation measures.</p>				
9-2.709	<p>Criticism that the impact associated with heritage assets is based on wrong information, and the level of impact varied between that stipulated in The Historic Environmental Baseline Report (HEBR) and the PEIR. The impact of the Project has not been properly assessed and the suggestion that the preliminary assessment of the PEIR can determine significant positive, negative or neutral effects is fundamentally flawed</p>	<p>The PEIR and the Historic Environmental Baseline Report (HEBR) (see ES Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1)) presented at the 2024 statutory consultation were written using an earlier version of the Order Limits and represented a point of time. The HEBR (see Appendix 11.1 of the Environmental Statement Appendices (document reference 6.11.A1) has been</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		updated to accompany the ES, in response to design change, consultation and comments.				
9-2.710	Criticism that National Grid has not considered The Energy Act 2023	National Grid has taken into consideration the Energy Act and other national legislation and policy relating to the energy sector and climate change. This is acknowledged in the Planning Statement (document reference 5.6).			X	
9-2.711	Criticism that while setting is correctly identified as making a considerable contribution to the value of both heritage assets, the preliminary operational effect assessment states that the Project will cause only a minor change to the rural aspect of their setting which makes a moderate contribution to their value. This demonstrates failure to cross reference the significance of an asset before assessing likely impact. In reality, the Pylons will dominate the landscape causing substantial harm to the contribution that setting makes to the significance of both listed buildings	National Grid has undertaken a full review and update of the Historic Environment Baseline Report (document reference 6.11.A1) and produced Appendix 11.2 Historic Environment Assessment Tables (document reference 6.11.A2) and Appendix 11.7 Assessment of Harm to Designated Heritage Assets (document reference 6.11.A7). The revised text confirms that the rural setting of Manor House (1179387) and the Church of All Saints (1049992) makes a considerable contribution to the value of each building. That statement is now carried through consistently into the assessment tables, ensuring clear cross-reference between the description of the value and the evaluation of potential change. Our assessment concludes that both assets would experience not significant effects (as assessed in Appendix 11.2) or Lower Less Than Substantial Harm (as assessed in Appendix 11.7) once the project is operational.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.712	Criticism that the assessment of All Saints Church records incorrectly state that it is located within Tibenham Conservation Area. However, Tibenham does not have a conservation area	Noted. HEBR text edited.			X	
9-2.713	Criticism that The Historic Environmental Baseline Report (HEBR) assessed Little Wenham Castle incorrectly, including stating an incorrect location and providing an incomplete and inaccurate description within the initial section	<p>Little Wenham Castle is located within Wenham Parva Cp of Section C within the Historic Environment Baseline Report (document reference 6.11.A1). The asset has been described in this section as being approximately 1.2km south-east of the Order Limits and 1km north-east of the settlement of Great Wenham and is within the Little Wenham area.</p> <p>The Baseline has been updated to reflect this.</p>			X	
9-2.714	Suggest that National Grid record all points raised by attendees at drop in events	<p>National Grid notes the respondents feedback. Requests for documentation and queries were all recorded at our public information events. Changes requested were also recorded where possible, but attendees were encouraged to submit their feedback through the formal channels to ensure that these were captured and responded to in our consultation feedback reports.</p> <p>Chapter 9 of the Consultation Report (document reference 5.1) provides a summary of National Grid's regard to all of the responses received at statutory consultation and the comments raised.</p>			X	
9-2.715	Suggest additional statutory consultation once ongoing survey work concludes, and missing information becomes available to allow Local	Following our statutory consultation, we held four rounds of targeted consultation for areas where we had made significant changes to our proposals. We have stayed in			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	Planning Authorities (LPA's) to provide meaningful feedback.	contact with Local Planning Authorities (LPA) and have shared information with them where relevant relating to survey work and our consultations. All LPAs had an opportunity to comment on the adequacy of our consultation as part of the Adequacy of Consultation Milestone (AoCM) (see Appendix M of this report) which was submitted in June 2025.				
9-2.716	Criticism that the Preliminary Environmental Information Report (PEIR) does not mention Unexploded Ordnance (UXO) risk, suggests clarification of the approach is included in the Environmental Statement (ES).	National Grid notes the respondent's feedback. UXO risks will be addressed by the Main Works Contractor(s) as part of general health and safety prior to and during construction. UXO risks are not considered to be an environmental concern and risks did not form part of the aspects to be included in the ES (as defined in the EIA Scoping Report (document reference 6.19) or EIA Scoping Opinion (document reference 6.20).		X		
9-2.717	Criticism that National Grid has not considered Babergh Mid Suffolk Joint Local Plan (2023)	Section 104(2) of the Planning Act (PA) 2008 sets out that the primary policy considerations for Nationally Significant Infrastructure Projects (NSIPs) include any relevant National Policy Statement (NPS). The NPSs are produced by the Government, pursuant to specific legislative requirements under the PA 2008 to set out policy for nationally significant development in a particular sector and provide the framework for decisions on applications for NSIPs in that sector. In this case, the Energy NPSs (NPS EN-1 and NPS EN-5) are of relevance to the Project, therefore Section 104 of the PA 2008 applies.		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Other national and local policy may also be considered 'important and relevant' to the decision-making process by the Secretary of State. The Project has considered current and emerging local policy documents relevant to the Project, including the Babergh Mid Suffolk Joint Local Plan, which are likely to inform the local impact reports prepared by the Local Planning Authorities, and which may be relevant and important in their own right. The Planning Statement (document reference 5.6), submitted with the application for development consent, includes an assessment of planning policy.				
9-2.718	In relation to Preliminary Environmental Information Report (PEIR) Volume 1 Section 11.2.6, suggestion that the section makes to reference the National Planning Policy Framework (NPPF), in accordance with the Planning Act 2008 and EN-1	Environmental Statement (ES) Chapter 11: Historic Environment (document reference 6.11) and other related documentation has been produced in adherence with the National Planning Policy Framework (NPPF) and in accordance with the Planning Act 2008 and EN-1 amongst several other guidance documents.		X		
9-2.719	Criticism that a draft Outline Landscape and Ecology Management Plan (OLEMP) has not been provided and suggestion that it is prior to the submission of the Development Consent Order (DCO) application, to resolve any potential issues before examination.	The Outline Landscape and Ecological Mitigation Plan (LEMP) (document reference 7.4) has been shared with statutory consultees and updates have been incorporated from the feedback provided.		X		
9-2.720	Suggest that National Grid actively engage with the Councils to secure benefits for and investment in local businesses and employment networks.	National Grid is committed to working with local suppliers, facilitated by supporting forums (such as the local Chambers), on electricity industry skills and workforce planning. National Grid is also committed to providing a coordinated regional approach to jobs and		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		skills opportunities. This commitment is broader than the individual project and separate to any commitments under the proposed development consent order for this Project. The socio-economic effects of the project are assessed in Chapter 15: Socio-economics, Recreation and Tourism of the Environmental Statement (document reference 6.15). Post construction job opportunities are limited given the nature of the development however we will still work with Local Authorities (including facilitating local partners) to understand what is important to them around skills and employment to ensure we leave a lasting positive legacy in the communities where we operate. With regards to a delivery mechanism, the above measures will be delivered as part of our community benefit package, which will look at both local and regional initiatives. This will be delivered outside the development consent process and is not a material consideration in the decision on the proposed Project or a matter to be secured as part of the DCO, as per the Community Funds for Transmission Infrastructure: Guidance (DESNZ, 2025).				
9-2.721	Landscape and visual impacts: 1.2 The PEIR notes significant negative effects on landscape views and visual amenity during both construction and operation, with potential impacts on health of residents. Report notes it is difficult to conclude an overall significance on health and wellbeing of landscape and visual effects during the	The Environmental Statement (ES) identifies that there will be significant effects on landscape and visual amenity during construction and operation. The landscape and visual effects on the landscape and people are considered in Chapter 13 Landscape and Visual (DCO document 6.13). This includes consideration of the effect of lighting during construction		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>operation (and maintenance) and considered to be neutral during construction due to temporary effects and relevant mitigation. It is crucial to assess these impacts further within the ES. We recommend:</p> <ul style="list-style-type: none"> • As stated in Paragraph 13.9.29, assess how to further reduce visual effects in some locations through additional measures to help change the effect from significant to not significant within localised areas or from specific visual receptors. To also incorporate qualitative input from impacted receptors • The Essex Healthy Places Guidance and Essex Green Infrastructure Strategy highlight evidence base around the positive benefits to health and wellbeing from open green and blue spaces. We recommend that the Ecology and Biodiversity section of the ES is also considered within the Health and Wellbeing chapter. There may be potential health benefits from mitigation strategies that aim to improve the natural environment along the linear route of the Project. LV10 highlights mitigations that the draft Order Limits could include adequate room for planting and potentially mounding for additional screening. • Paragraph 13.8.12: notes significant negative visual effects during construction which could potentially include lights if present at night that could extend up to 2km of the draft order limits in some 	<p>and operation. The effects on health and wellbeing are considered in Chapter 10 Health and Wellbeing (DCO document 6.10).</p> <p>The Landscape and Visual Impact Assessment (LVIA) follows the industry guidelines (Guidelines for Landscape and Visual Impact Assessment, 3rd Edition).</p> <p>The Government has published its guidance on community funds for transmission infrastructure (DESNZ, 2025). National Grid is committed to working with Ofgem, industry partners, local communities and their representatives to ensure community benefits are delivered fairly and effectively, driving lasting, positive change for the people and places integral to our developing electricity network.</p> <p>Government has also announced its plans to introduce a bill discount scheme for households within 500 metres of new infrastructure, which it proposes to introduce through the Planning and Infrastructure Bill. This is evolving government policy. Government expects this scheme to be in place by 2026 and we will share further details as they emerge.</p> <p>National Grid is committed to providing a coordinated local and regional approach to community benefits. This will be delivered outside the development consent process, since this is not a material consideration in the decision on the proposed Project or a matter to be secured as part of the DCO, as per the Community</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>locations. It is noted that effects would be transient and change throughout the construction period noted in paragraphs 13.8.16 to 13.8.19. However, further assessment of landscape and visual effect should be presented within the ES</p> <ul style="list-style-type: none"> • PEIR notes that significant negative effects on views and visual amenity during operation (and maintenance) are predicted to be experienced for the majority of receptors particularly where close views of the Project are available and are unable to conclude on overall significance on health and wellbeing during operation of the Project. Public Health encourages consideration of how significant negative impacts could be off set through positive community benefits for local communities within Essex, such as funding for community energy schemes, training, and skills investment within the local area for those adversely affected by the Project particularly in areas of with high levels of deprivation 	Funds for Transmission Infrastructure: Guidance (DESNZ, 2025).				
9-2.722	The respondent requests that National Grid provides confirmation on the timing and sequencing of the negotiations it has had with CEG Land Promotions Limited (CEG) relating to land rights and the potential undergrounding of existing electricity transmission infrastructure at Dunton Hills Garden Village (DHGV). The respondent notes on paragraph 2.6.4 of National Policy Statement (NPS) EN-5 that where compulsory acquisition rights are sought,	A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the Environmental Impact Assessment (EIA). The LVIA includes an assessment on both landscape character and visual amenity and is presented in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13). An assessment of effects on visual receptors is provided in Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3). For Visual Receptor Area		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>permanent arrangements are strongly preferred over voluntary wayleaves. The respondent strongly advocates this position as it provides greater reliability, economic efficiency and reflects not just the importance of delivering critical national priority (CNP) infrastructure, but the need for robust assessment and the application of the mitigation hierarchy which should include compensation (paragraph 2.6.6 of NPS EN-5).</p>	<p>(VRA) C13 Little Bromley significant effects are identified up to a distance of approximately 1.5 km from the Project.</p> <p>An assessment of effects on visual receptors at representative viewpoints is provided in Annex A to Appendix 13.3. The following is a summary of effects at the identified viewpoints:</p> <p>Viewpoint 3.21 Barn Lane, Little Bromley (Figure 7.12.F88) (document reference 7.12) – not significant during construction and operation</p> <p>Viewpoint 3.12 Waterhouse Lane, Burnt Heath (Figure 7.12.F81) (document reference 7.12) – significant during construction and operation, reducing to not significant at year 15 when mitigation planting is semi-mature</p> <p>Viewpoint 3.13 PRoW, Little Bromley (Little Bromley 16) (Figure 7.12.F82) (document reference 7.12) – significant during construction and operation</p> <p>Effects on Dedham Vale National Landscape are set out in ES Appendix 13.5: National Landscape Assessment Study (document reference 6.13.A5).</p>				
9-2.723	<p>In relation to the Preliminary Environmental Information Report (PEIR) Volume 1 section 5.14.16, suggestion to consider Department for Transport (DfT) policy guidance "Water Preferred Policy Guidelines for the movement of abnormal indivisible loads".</p> <p>Suggestion that all stages of the project should</p>	<p>National Grid has prepared an AIL Strategy (appendix A of the Outline Construction Traffic Management Plan (document reference 7.3) and a Multi-Mode Transport Report (appendix G.1 of the Transport Assessment (document reference 7.11). Both these documents consider the policy guidance "Water Preferred Policy</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	support and encourage a modal shift of freight from road to more environmentally sustainable alternatives, such as rail, cargo bike, maritime, and inland waterways. Including appropriate provision for infrastructure needed to support the use of alternative fuels, including charging for electric vehicles.	<p>Guidelines for the movement of abnormal indivisible loads”.</p> <p>Overarching National Policy Statement for Energy (EN-1) (National Policy Statement EN-1) states that: <i>‘All stages of the project should support and encourage a modal shift of freight from road to more environmentally sustainable alternatives, such as rail, cargo bike, maritime and inland waterways, as well as making appropriate provision for and infrastructure needed to support the use of alternative fuels including charging for electric vehicles.’</i> National Policy Statement EN-1 is considered in the Transport Assessment (document reference 7.11), where multiple sustainable transport modal options have been assessed for their appropriateness in delivering the materials required for the Project. The approach to material supply and associated transport logistics will be refined following detailed design, and commercial agreements for the procurement of material quantities.</p> <p>The Multi-Mode Transport Report has identified potential facilities for the delivery of materials for the Project by either rail or water-borne transportation. In the event that development consent is granted for the Project, National Grid, in collaboration with the appointed Main Works Contractor(s), will pursue the exploration and implementation (where feasible, commercially viable and operationally reasonable) of alternative transport modes to deliver materials and large and/or heavy items.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Design Change						
9-2.724	Oppose the use of underground cables (generally - no location given) / Concern about the use of underground cables (e.g. due to impact of construction)	<p>National Grid has carefully considered the feedback received during the 2022 and 2023 non-statutory consultations, the statutory consultation, targeted and landowner consultations, the alternatives available, and other factors including our duties and obligations. These duties include balancing the need to be economic and efficient, which includes keeping costs down in the interests of the bill-paying consumers, with a duty to have regard to preserving amenity, which includes the natural environment, cultural heritage, landscape and visual quality, National Policy Statement (NPS) EN-5 makes clear that <i>'the government's position that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments would cross part of a nationally designated landscape (i.e. National Park, The Broads, or Area of Outstanding Natural Beauty (AONB))'</i>. The NPS also confirms that widespread and significant adverse landscape and/or visual impacts in other locations may also justify the use of undergrounding. We may also adopt underground cables in other circumstances such as to cross existing 400 kV overhead line infrastructure.</p> <p>Where the installation of underground cables is required in lieu of overhead lines, the design of the Project has incorporated suitable consideration of the existing</p>	X	X	X

		environment, ecology and site ground conditions based on site specific survey data. We have undertaken an Environmental Impact Assessment (EIA) which includes a baseline of the existing environment as well as site specific information and survey data.				
9-2.725	Suggest a minimum distance that the Project should be sited from residential areas / residences	National Grid does not use standard minimum distances as a routeing consideration. Applying an arbitrary distance may be too big or too small for the specific circumstances. We utilise the Holford Rules (a description of the Holford Rules can be found in Appendix I22 of this report) informed by feedback and professional judgement to define appropriate corridors and alignments that are consistent with the relevant policy framework and duties. In response to feedback to the 2022 and 2023 non-statutory consultations, statutory consultation, targeted and landowner consultations, we have modified the alignment in various locations to increase separation to properties where this is possible without undue deviation or transfer of effects to other similar properties or other receptors. A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the Environmental Impact Assessment (EIA) process. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13). This assesses the impact of the Project and identifies the need for additional mitigation if required.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.726	Suggest that existing overhead lines should be removed (generally - no location given)	<p>The existing electricity transmission network provides power, via the local distribution network, into the local area where it is used in homes and businesses. Such lines cannot just be removed as power supplies would not be maintained.</p> <p>The need case and funding for the Project is to deliver the new network reinforcement needed, rather than to remove existing overhead lines which would need to be replaced by another form of connection such as underground cables.</p> <p>Unless required for crossings or mitigation, undergrounding existing overhead lines on the transmission network would not be in accordance with National Policy Statement (NPS) EN-5 and would result in substantial cost to bill payers. There may also be significant environmental impacts due to the removal works on sensitive ecological and archaeological receptors as well as constraints from either existing buildings or unsuitable ground conditions.</p>		X	X	
9-2.727	Suggest that existing overhead lines should be replaced by underground cables (generally - no location given)	<p>National Policy Statement (NPS) EN-5 establishes the position that the starting basis for new connections is a presumption on the acceptability of overhead lines but with this presumption reversed within designated landscapes and in certain other circumstances.</p> <p>The existing electricity transmission network provides power, via the local distribution network, into the local area where it is used in homes and businesses. The</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>need case and funding for the Project is to deliver the new network reinforcement needed, rather than to remove existing overhead lines by undergrounding them.</p> <p>We have identified a number of locations where we are proposing to place existing overhead lines underground. These locations are where existing 132 kV and lower voltage lattice pylon lines are crossed by the proposed 400 kV overhead line and / or mitigation of effects are considered necessary. This includes locations such as at Mellis, between Offton and Bramford Substation, to the south of Bramford Substation and near Fuller Street.</p> <p>Unless required for mitigation, undergrounding existing overhead lines on the transmission network would not be in accordance with NPS EN-5 and would result in substantial cost to bill payers. There may also be significant environmental impacts due to the removal works on sensitive ecological and archaeological receptors as well as constraints from either existing built form or unsuitable ground conditions.</p>				
9-2.728	Suggest that the existing overhead lines are reinforced / upgraded instead	The existing transmission network in the region was upgraded during 2022 and 2023 to ensure the system is running at its most efficient performance. The existing assets / networks are not able to be upgraded sufficiently to cope with the new future demands expected on the network. As a result, new lines and substations would be required to accommodate the changing demands on the network.	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.729	Suggest that the Project is routed away from populated / residential areas (generally - no location given)	<p>Deciding where and how to build new high voltage electricity lines is a complex issue and National Grid is mindful of the potential effects this infrastructure may have on local communities and the concerns these may bring. We recognise that people living near our transmission infrastructure, including high voltage overhead lines, may have concerns about audible noise and potential health impacts. It has sometimes been suggested that minimum distances between properties and overhead lines should be prescribed.</p> <p>We do not consider this appropriate since each instance must be dealt with on its merits. However, we have always sought to route new lines away from residential property on grounds of general amenity where possible.</p> <p>We have undertaken a noise and vibration assessment which can be found in the Environmental Statement (ES), Chapter 14: Noise and Vibration (document reference 6.14) that forms part of the Environmental Impact Assessment (EIA) for the Project. Noise levels and the effect on residential properties as well as other sensitive areas, such as hospitals and schools, are carefully considered during planning, assessed according to the appropriate UK standards, and mitigated where necessary. We set strict technical standards for the equipment we install on our network. These will apply to the proposed new East Anglia Connection Node (EACN) substation, and extensions required to the existing Norwich Main, Bramford, and</p>	X	X	X

		<p>Tilbury Substations. These standards include requirements to ensure the occurrence of audible noise is eliminated or reduced as far as practicable. Therefore, significant adverse effects from noise are not expected.</p> <p>Noise from overhead lines is predominately determined by the conductor design, voltage and weather conditions. The overhead line would be designed using a relatively quiet conductor that meets the design specification required, and operational noise is not likely to be significant at nearby sensitive receptors under any weather conditions. Pylon fittings, such as insulators, dampers, spacers, and clamps, are also designed and procured in accordance with a series of National Grid Technical Specifications to reduce the potential for audible noise and tones to occur from all types of fittings. Where noise does occur, it is likely to be localised and of short duration. If this is due to a fault, action can be taken to rectify it. A technical note has been submitted as part of the application for development consent to support scoping out noise associated with overhead lines from the ES.</p> <p>In addition, we have undertaken a Landscape and Visual Impact Assessment (LVIA) for the Project.</p> <p>This includes an assessment on both landscape character and visual amenity. The LVIA is presented in the ES, Chapter 13: Landscape and Visual (document reference 6.13).</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.730	Suggest that the Project should run in closer to / parallel to the existing overhead lines (generally - no location given)	<p>The health and safety of the public, local communities and employees is central to everything that we do. The UK has a carefully thought-out set of policies for protecting us all against Electric and Magnetic Fields (EMFs), the main component of which is exposure guidelines. The exposure guidelines are set by independent scientific bodies and are based on decades-long studies into the effects of EMFs and ill health. After those decades of research, the weight of evidence is against there being any health risks of EMFs below the guideline limits. Our approach is to ensure that our network comply with those policies, which are set by Government on the advice of their independent advisors. The Project is designed to ensure it is fully compliant with these policies and guidelines. This ensures that health concerns are properly and adequately addressed.</p> <p>Policies for both noise and EMF are incorporated into the decision-making process for development consent as set out in National Policy Statement (NPS) EN-5. It is National Grid's policy to ensure that all its equipment complies fully with those policies and guidelines. The application for a Development Consent Order (DCO) includes assessments against these policies, including both construction and operational noise and EMF.</p> <p>National Grid notes the potential for close paralleling existing overhead lines to reduce the level of effects that may arise from a new overhead line.</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>However, where existing overhead lines are present along the proposed route, there are constraints and features that mean, overall, we consider close paralleling would lead to greater effects on receptors in the area and be less compliant with the Holford Rules or be less consistent with the policy to be economic and efficient. A summary of the Holford Rules is provided within Appendix I22 of this report. A number of residential properties are present in close proximity to the existing 400 kV overhead line meaning that if the overhead lines were close paralleled it would result in the properties having an overhead line close to both sides. There are also some locations where the combination of existing physical and environmental features (road infrastructure, commercial and residential properties etc) present very substantial challenges to routeing and siting. As a result, whilst close paralleling may appear beneficial in some sections, overall, the increased environmental effects where the overhead lines have to converge and diverge, and those increased effects on properties with overhead lines on both sides are considered greater than those introduced by a new overhead line separated from existing 400 kV overhead lines. Whilst crossings and use of underground cable technology may be able to address various constrained locations, we consider the costs and environmental effects arising from the additional infrastructure required to be less compliant with our duties and relevant policies.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.731	Suggest that underground cables are used (generally / for entire of the Project)	<p>National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors.</p> <p>National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Park, The Broads, or Area of Outstanding Natural Beauty (AONB))'</i>. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider this section in its entirety would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.</p> <p>Therefore, whilst undergrounding the whole of this section is not considered appropriate, our proposals do include underground cable within the Dedham Vale National Landscape (previously known as Area of Outstanding Natural Beauty (AONB)) in accordance with NPS EN-5. Prior to our 2023 non-statutory consultation we identified the need to extend the underground cable beyond the National Landscape boundary because of potential effects, we have further extended this section of underground cable following consideration of feedback on our 2023 non-statutory consultation and additional investigation into potential effects. We also identified an approximately 4 km section near Great Horkesley as meeting the particularly sensitive criteria</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		where underground cable is also proposed. Additionally, underground cable is proposed at Fairstead for a 400 kV overhead line crossing.				
9-2.732	Suggest that underground cables are used in populated / residential areas (generally - no location given)	<p>National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors.</p> <p>National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or Area of Outstanding Natural Beauty (AONB))'</i>. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at all populated or residential areas in this section would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
9-2.733	Suggest that the Project should use lower height pylons	Consideration has been given to the use of low height pylons in circumstances where standard lattice pylons are considered to be inconsistent with policy. These low height design lattice pylons are useful where height is a strong consideration, however they also occupy a greater footprint and have a bulkier and denser profile. They can therefore provide visual benefits in some scenarios, for example where a reduction in pylon height means that views of the tops of pylons are screened by intervening woodland. In other scenarios they can	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		increase adverse visual effects, for example where relatively close to visual receptors without intervening filtering vegetation where they are likely to appear more noticeable in views from residential receptors. Low height lattice pylons have been proposed as necessary to reduce effects in two locations, to the north-west of Little Waltham and to the east of Thurrock airfield.				
9-2.734	Suggest that the Project should use T-pylons	<p>The latest independent report on the Comparison of Electricity Transmission Technologies: Costs and Characteristics (Institute of Engineering and Technology, 2025) confirms that whilst T-Pylons may in certain locations provide an alternative to conventional overhead lines with potential benefits in visual impact and reduced land-take, this is at a higher cost. The build cost is approximately 2 to 2.5 times that of an equivalently rated conventional overhead line, and the lifetime costs are around 1.6 to 1.7 times that of a conventional overhead line. The current arrangements for the oversight of funding by Ofgem requires that the lowest cost acceptable design is taken forward rather than a more expensive design even if that design is perceived to reduce the level of effect.</p> <p>As such consideration of their use follows after establishing a need to mitigate effects of the standard lattice design and after considering the benefit of adopting a low height lattice pylon design. T pylons themselves are also less adaptable to varied terrains and require more substantial access infrastructure.</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Furthermore, their resilience and environmental impact are comparable to conventional overhead lines, but with increased carbon intensity due to construction materials. Attention also needs to be given to the transitions between pylon types. Given It is the surrounding context that drives the need for alternative design mitigation, where this is not required along the entire route, any visual break and transition in pylon design also needs to be carefully sited.</p> <p>Assessment findings have concluded that, where there is not a reversal of the presumption to use overhead lines, the use of lattice pylons (either standard or low height) is consistent with planning policy throughout the route. Whilst there may be some locations (for examples see appendix A of the 2024 Design Development Report) where there may be a design option for the use of T pylons, the need to mitigate for unacceptable effects from lattice pylons is not engaged. On this basis T pylons are not proposed for the Project.</p>				
9-2.735	Suggest that the capacity of the Project is increased	The Project would be constructed at the highest capacity currently available. This would be in line with the existing networks that are being updated in East Anglia including the existing Norwich to Bramford circuit and the Bramford to Rayleigh circuit.			X	
9-2.736	Suggest that the Project should be offshore / Suggest an offshore grid is used instead (including partial offshore option)	The Government has set a target that by 2050 the UK will have net zero carbon emissions. In order to achieve this, and hit the targets along the way, such as connecting 40 GW of offshore wind by 2030, new	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>infrastructure will be needed to deliver the increased energy production. This will include new overhead lines, underground cables, Cable Sealing End (CSE) compounds (where underground cables meet overhead lines) and substations.</p> <p>Offshore solutions were considered as part of our strategic proposal to upgrade the network in East Anglia. The Corridor and Preliminary Routeing and Siting Study (CPRSS) (available on the Project website) examines several strategic options that were considered for the Project that might achieve the required reinforcement including offshore and subsea options. These options were not taken forward as they did not fully address technical or physical/geographical constraints or enable the network to operate to the required standards.</p> <p>A subsea connection would have a third of the capacity of the proposed overhead line connection and therefore to transfer the anticipated levels of power generation, three subsea connections would be required including associated infrastructure such as convertor stations. This would make the connection significantly more costly to energy bill payers.</p> <p>In addition, an offshore option would still require development of onshore infrastructure. This would include onshore connections from Norwich, Bramford and Tilbury respectively to the coast. The onshore work is required to reinforce the existing onshore transmission network and ensure that National Grid can continue to</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>operate the transmission network safely and securely with the increase of generation connecting into the East Anglia area.</p> <p>The National Electricity System Operator (NESO (formerly ESO), leads an annual process looking at how the electricity transmission network might need to adapt to likely changes to where the electricity we all use will come from. That starts with stakeholder discussions and analysis about potential Future Energy Scenarios (FES) which are published each summer. NESO takes those different scenarios and looks at what that might mean for the transmission network over the next ten years, publishing an Electricity Ten Year Statement (ETYS) each November. The transmission network owners, including National Grid, respond to the issues outlined in the ETYS with suggestions as to how those can be addressed. Then in January each year, NESO publishes a document known as the Network Options Assessment (NOA), which outlines their recommendations as to which reinforcement projects should be taken forward during the coming year to meet the future network requirements.</p> <p>A need was identified to resolve electrical boundary issues in East Anglia. There are three onshore power boundaries where additional system flexibility is required to ensure that power generated in the area from offshore wind farms and nuclear generation has more ways to flow into the wider transmission network during maintenance or faults on the system.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>In addition, two new offshore wind farms off the Suffolk/Essex coast are currently proposed to be connected to the transmission network to transport the low carbon energy they will produce to the homes and businesses where it will be used along with an interconnector from the European continent.</p> <p>The NOA 2021 identified need for an upgrade to the existing line in East Anglia in all FES and this was confirmed in NOA 22.</p>				
9-2.737	Suggest that the Project should run adjacent to existing transport infrastructure generally	<p>While there could be potential benefits from infrastructure being concentrated geographically, i.e., by routing the Project in close proximity to existing road and rail infrastructure, National Grid does not consider these benefits arise for the whole route. Rail lines or roads potentially align (at least in part) with the general routing of the Project. However, there are constraints and features that mean that we do not consider close paralleling will reduce environmental effects or improve compliance with the Holford Rules or be more consistent with the policy requirement to be economic and efficient. A summary of the Holford Rules is provided within Appendix I22 of this report.</p> <p>A number of residential properties, as well as hamlets, villages and towns, are present in close proximity to the existing transport infrastructure necessitating multiple diversions of an overhead line. There are also some locations where the combination of existing physical and environmental features (railway and road infrastructure,</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		commercial and residential property, woodlands and orchards) present very substantial challenges to routeing and siting. As a result, whilst close paralleling of transport infrastructure may appear beneficial in some short sections, overall, the increased environmental effects from multiple changes of direction are considered greater and less compliant with the Holford Rules than those that are associated with a new route alignment.				
9-2.738	Suggest that energy is generated near to where it is needed instead (e.g. London) / Criticism that energy is being generated far from where it is needed	National Grid does not determine or implement policies that influence the form and location of energy developments. Those matters are for Government to take forward. Our role is to respond to the connection requirements for projects that are developed in line with Government Policy to integrate them into the National Transmission System (NETS) in a timely, economic and efficient manner in line with relevant policies and our statutory duties under Section 9 of the Electricity Act 1989.	X		X	
9-2.739	Suggest that underground cables are installed using Horizontal Directional Drilling (HDD) rather than open trenches (cut and cover)	Trenchless installation techniques, such as Horizontal Directional Drilling (HDD), can be used as an alternative to a trenched (cut and cover) approach to install underground cables. It is usually the choice of methodology where minimal disturbance to above ground features is required, given trenched methods are more disruptive in terms of the level of disturbance to the landscape and environment. The benefits of using HDD need to be carefully considered to ensure ground	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>conditions are suitable and that the balance of potential environmental effects is achieved.</p> <p>When utilising HDD the underground cables need to be installed at a greater depth to provide adequate protection against inadvertent excavation strikes as this method doesn't allow us to install warning tapes/tiles above the cables. Furthermore, local constraint features that interface with the route such as water courses or other buried infrastructure may require the cables to be installed deeper to avoid clashes. The deeper the underground cables are installed, the wider they need to be spaced to allow for suitable thermal dissipation (avoiding overheating) and so a wider below ground asset corridor needs to be present to allow for the permanent underground cable corridor, this can be quite difficult to ascertain.</p> <p>HDD as a methodology increases complexities with regards to engineering, programme and in turn increase cost hence why HDD is not the preferred methodology of underground cable installation but more so an alternative means where National Grid needs to negotiate the route close to environmental sensitive receptors.</p> <p>We fully assess the underground cable routes in detail considering the route incumbent features and potential effects of installation by open trench method. Where such methodology is deemed not preferred then</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>installation by HDD methods will also be assessed before deciding on where HDD would be used.</p> <p>There is approximately 21.5 km of underground cable on the Project. The additional cost of utilising trenchless methods for the Project is not practical or justified in policy terms. However, National Grid remains keen to keep trenches open for the shortest practical length of time.</p>				
9-2.740	Suggest the use of 'Superconducting cable' technology	<p>National Grid is monitoring how this technology develops in the future, but for the moment it is not a deployable technology that could be considered for any current projects.</p> <p>Superconductor technology remains in its' infancy and has only been trialled in a limited number of circumstances globally. The technology is not at the level of development maturity where it can provide the capacity, voltage level or distance required for this Project.</p>			X	
9-2.741	Suggest schemes to reduce energy consumption / other energy saving schemes	<p>Whilst National Grid is continually encouraging consumers to use less energy, the modelling predictions stated in the Government's Energy White Paper (EWP) suggests that the overall electricity demand could double by 2050 largely as a result of the electrification of cars and vans and the increased use of clean electricity replacing gas for heating. The EWP states that "as a result, electricity could provide more than half of the final energy demand in 2050, up from 17% in 2019 and</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>would require a four-fold increase in clean electricity generation". In order to meet this demand, the Government's EWP has outlined a plan to increase energy from offshore wind to 40 GW by 2030 (target increased to 50 GW in April 2022).</p> <p>Notwithstanding this predicted increase in electricity demand, the Government recognises that smart technologies will need to be implemented to reduce electricity consumption, for example in buildings, the use of smart meters and appliances and energy storage. The recently published Clean Power 2030 report (Annex 1: Electricity demand and supply analysis) calls for the widespread adoption of efficient products and energy efficiency measures to manage the electrification of demand.</p>				
9-2.742	Suggest that alternative energy sources are used instead of nuclear / wind (e.g. Tidal, hydrogen)	<p>To meet the predicted doubling in electricity demand by 2050 and the Government's 2050 Net Zero target, the Government Energy White Paper (EWP), whilst not planning for a specific technology solution, predicts that "a low cost, Net Zero consistent system is likely to be composed predominantly by wind and solar" but also complementing intermittent renewables with technologies including nuclear and gas with carbon capture and storage. Under its transmission licence, National Grid has a statutory duty to respond to generation customers wanting to connect to the transmission network. As well as the Tarchon Interconnector, the Project will also fulfil connection</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		offers for two offshore wind farms - North Falls and Five Estuaries - which will contribute to the Government's 50 GW offshore wind target. The advantages of offshore wind farms compared to onshore are that they are considered more efficient (with higher wind speeds and consistency in direction) and are further away from local populations. The Project will also provide increased capacity for future generation from various generators.				
9-2.743	Suggest that existing overhead lines are converted to Direct Current (DC) to avoid the need for new overhead lines (e.g. as in an alternating current system at 400 kV the current is mostly concentrated in the skin of the conductor, whereas the current density in a conductor carrying direct current is uniform across the cross sectional area; as capacity could be increased by eight times for a double circuit overhead line)	Alternating Current (AC) power is able to share power between sources and loads much more easily than Direct Current (DC) power, allowing for a more stable and flexible grid. The infrastructure for AC power grids is already widespread, making retrofitting and upgrading existing AC infrastructure more cost-effective than building new DC infrastructure with the wider network running as AC, to use DC power would require the construction of converter stations which take a large footprint of land and would be required wherever we currently interact with any other electricity import or export to or from the grid.	X		X	
9-2.744	Suggest providing a shore connection at Sizewell rather than constructing a new route from the coast	This feedback relates to the new connections being developed for the North Falls and Five Estuaries windfarms and Tarchon Interconnector. The connection offers made by the Electricity System Operator (ESO) to the respective developers establish the most appropriate point of connection bearing in mind factors such as required power transfer and system capability. ESO identified that these offers should be made into a new	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		connection node referred to as the East Anglia Connection Node (EACN) substation, with National Grid having a duty to develop the network to enable this connection. The Corridor and Preliminary Routeing and Siting Study (CPRSS) reports the work done to locate the EACN substation and rationale for its inland location.				
9-2.745	Suggest that Project follows railway lines instead / Suggest that overhead lines for rail are upgraded instead	<p>While there could be potential benefits from infrastructure being concentrated geographically, i.e., by routeing the Project in close proximity to existing road and rail infrastructure, National Grid do not consider these benefits arise for the whole route. Rail lines or roads potentially align (at least in part) with the general routeing of the Project. However, there are constraints and features that mean that we do not consider close paralleling would reduce environmental effects or improve compliance with the Holford Rules (these can be found in Appendix I22 of this report) or be more consistent with the statutory duty under the Electricity Act 1989 to be economic and efficient.</p> <p>A number of residential properties, as well as hamlets, villages and towns, are present in close proximity to the existing transport infrastructure necessitating multiple diversions of an overhead line. There are also some locations where the combination of existing physical and environmental features (railway and road infrastructure, commercial and residential property, woodlands and orchards) present very substantial challenges to routeing and siting. As a result, whilst close paralleling of</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		transport infrastructure may appear beneficial in some short sections, overall, the increased environmental effects from multiple changes of direction are considered greater and less compliant with the Holford Rules than those that are associated with a new route alignment.				
9-2.746	Suggest that underground cables and / or an offshore solution is used for the Project with the additional cost for this charged to the consumers (e.g. through a loan from Central Government) / through taxes	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is ' <i>that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Park, The Broads, or Area of Outstanding Natural Beauty (AONB))</i> '. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at other locations which are proposed as overhead line would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.</p> <p>Our proposals include underground cable within the Dedham Vale Area of Outstanding Natural Beauty (AONB) and some select other areas. Wherever undergrounding is being considered, we need to ensure we're carefully considering the local environment too. This includes looking at local habitats, heritage, and other factors such as watercourses and rivers in order to reduce impacts.</p> <p>There is also no fully offshore solution to connect offshore wind to the Grid. We have to bring the power</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		onshore somewhere. Our job is to carefully consider the most feasible options and present proposals for public consultation, which go as far as possible to address impacts on local communities and the environment and also deliver for electricity consumers.				
9-2.747	Suggest that the Project should run adjacent to major roads (including the M11 / A12 / M25 / A14 / A11 / A13 / A130)	<p>While there could be potential benefits from infrastructure being concentrated geographically, i.e., by routeing the Project in close proximity to existing road infrastructure, National Grid do not consider these benefits arise for the whole route. Roads such as the M11, A12, M25, A14, A11, A13 and A130 potentially align (at least in part) with the general routeing of the Project. However, there are constraints and features that mean that we do not consider close paralleling the roads would reduce environmental effects or improve compliance with the Holford Rules or be more consistent with the policy requirement to be economic and efficient. A summary of the Holford Rules is provided within Appendix I22 of this report.</p> <p>A number of residential properties, as well as hamlets, villages and towns, are present in close proximity to the existing transport infrastructure necessitating multiple diversions of an overhead line. There are also some locations where the combination of existing physical and environmental features (railway and road infrastructure, commercial and residential property, woodlands and orchards) present very substantial challenges to routeing and siting. Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		transport infrastructure may appear beneficial in some short sections, overall, the increased environmental effects from multiple changes of direction are considered greater and less compliant with the Holford Rules than those that are associated with a new route alignment.				
9-2.748	Suggest that the Project uses underground cables and follows the alignment of the A12 (i.e. underground cables beneath the A12)	<p>National Grid notes the respondent's feedback. If an underground cable experiences a fault or breakdown, identifying and repairing the underground cable can be more challenging, costly and time-consuming, if the underground cables were run to follow the A12 then this would require the highway to be shut down in such an event in order to locate the fault, excavate and repair. A large corridor is required for the underground cable swathe as it needs to accommodate up to 18 underground cables, this is much wider than the A12 alignment can provide. Aswell as the underground cabling, we also need to position above ground earthing pillars, these need to be positioned as near as possible to each joint bay which are normally positioned every 800-1000 m, the positioning of these within a live highway would also be problematic. During construction the jointing of the underground cables would also require the road to be closed for a considerable amount of time.</p> <p>National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Park, The Broads, or Area of Outstanding Natural Beauty (AONB))'</i>. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at other locations proposed as overhead line would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
9-2.749	Suggest that the Project uses brownfield landing sites	Routeing and siting studies that have been undertaken for the Project have considered whether brownfield sites provided suitable opportunities for the siting of the East Anglia Connection Node (EACN) substation. Responsibility for the Landing Sites as noted by the respondent rests with third party developers and not with National Grid. No sites were identified for the EACN substation that met the requirements for the Project. This was reviewed after feedback was considered from the 2022 and 2023 non-statutory consultations and statutory consultation where alternative EACN substation locations were proposed. Reasons for not preferring alternative brownfield locations have been set out within the 2023 and 2024 Design Development Reports (available on the Project website), and the 2025 Design Development Report (document reference 5.15) submitted as part of the Development Consent Order (DCO) application.	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.750	Suggest that underground cables are used for the entire Project with the government contributing significantly towards this (i.e. the Project is needed to meet the net zero aspirations of the Government)	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is ' <i>that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Park, The Broads, or Area of Outstanding Natural Beauty (AONB))</i> '. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at other locations proposed as overhead line would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
9-2.751	Suggest that the energy network is nationalised and brought under the authority of the UK Government	<p>National Grid is a private limited company. National Grid Electricity Transmission plc (NGET) (referred to as 'National Grid'), owns and maintains the national high voltage electricity transmission network throughout England and Wales. It's National Grid Electricity Transmission that's developing plans for the Project. For the transmission network to be nationalised, it would be a Central Government decision to do so. Any large-scale nationalisation will almost certainly require primary legislation, and there is no current act of parliament in place for the electricity transmission network to be owned by the UK Government.</p> <p>However, a new publicly owned National Energy System Operator (NESO) has been established through powers</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		under the Energy Act 2023. This sets out the responsibilities of the new public body to maintain the UK's energy supplies, protect energy consumers and plan for an efficient clean energy system that is fit for the future.				
9-2.752	Suggest that National Grid upgrade power transport units on existing overhead lines instead of the Project	<p>The existing transmission network in the region is currently being upgraded to ensure the system is running at its most efficient performance. The existing assets networks are not able to be upgraded sufficiently to cope with the new future demands expected on the network. As a result, new lines and substations will be required to accommodate the changing demands on the network.</p> <p>The existing overhead lines cannot be further adapted safely and securely to enable them to carry more power or additional conductors (wires) added to take the amount of power being proposed in East Anglia.</p>			X	
9-2.753	Suggest the pylon design mirrors those used in conjunction with the Hinkley Point C development to reduce the impact on landscape	The latest independent report on the Comparison of Electricity Transmission Technologies: Costs and Characteristics (Institute of Engineering and Technology, 2025) confirms that whilst T-Pylons may in certain locations provide an alternative to conventional overhead lines with potential benefits in visual impact and reduced land-take, this is at a higher cost. The build cost is approximately 2 to 2.5 times that of an equivalently rated conventional overhead line, and the lifetime costs are around 1.6 to 1.7 times that of a conventional overhead line. The current arrangements	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>for the oversight of funding by Ofgem requires that the lowest cost acceptable design is taken forward rather than a more expensive design even if that design is perceived to reduce the level of effect.</p> <p>As such consideration of their use follows after establishing a need to mitigate effects of the standard lattice design and after considering the benefit of adopting a low height lattice pylon design. T pylons themselves are also less adaptable to varied terrains and require more substantial access infrastructure. Furthermore, their resilience and environmental impact are comparable to conventional overhead lines, but with increased carbon intensity due to construction materials. Attention also needs to be given to the transitions between pylon types. Given It is the surrounding context that drives the need for alternative design mitigation, where this is not required along the entire route, any visual break and transition in pylon design also needs to be carefully sited.</p> <p>Assessment findings have concluded that, where there is not a reversal of the presumption to use overhead lines, the use of lattice pylons (either standard or low height) is consistent with planning policy throughout the route. Whilst there may be some locations (for examples see appendix A of the 2024 Design Development Report) where there may be a design option for the use of T pylons, the need to mitigate for unacceptable effects from lattice pylons is not engaged. On this basis T pylons are not proposed for the Project.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.754	Suggest that underground cables are used for the entire Project and that these follow the alignment of existing gas pipelines	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Park, The Broads, or Area of Outstanding Natural Beauty (AONB))'</i> . Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at other locations proposed as overhead line would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.</p> <p>National Grid notes the respondent's feedback. Underground cables are less efficient than overhead lines, especially at high voltage and capacity. This can lead to a loss of transmission capacity, which can be compensated for by installing additional devices. However, these devices can create resonance that disrupts the stability of the grid.</p> <p>It's also easier to identify faults and perform maintenance on overhead lines.</p> <p>If an underground cable fails, it can be very difficult and expensive to inspect and repair.</p> <p>The installation of shunt or series reactors to provide stability to the additional underground Alternating Current (AC) cables would require substation</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		compounds all along the cable route to house the Low Voltage Alternating current (LVAC) and Direct Current (DC) supplies as well as the required protection and control systems. Also, additional underground crossings would require more trenchless installation which would significantly extend the completion programme, not to mention a number of major crossings would require tunnelling or trenchless installation technologies again increasing cost and programme.				
9-2.755	Suggest the Project uses High Voltage Direct Current (HVDC) cables (e.g. Alternative 8 proposed by the Electricity System Operator (ESO) in the East Anglia Review) / Suggest that HVDC cables are used as opposed to Alternating Current (AC) cables (e.g. with a converter near London)	<p>The transmission network already used Direct Current (DC) cables as part of its system to transmit power over long distances – Scotland to southern England or from England to the continent. The use of DC cables within the more local transmission network however creates constraints and increases costs due to the technology that is required to convert the DC to Alternating Current (AC) for domestic transmission and household use. AC power is also easier to balance and distribute (especially with fluctuating power flows like from wind farms and solar).</p> <p>National Grid is constantly looking into new innovations and investigating alternative technology types. These are explored and assessed for suitability. Alternative technologies were investigated for the Project, these included an offshore connection using DC technology, and various onshore connection options including: increasing operational voltages on existing network to above 400 kV; AC overhead lines (established</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>technology); alternative pylon types; AC underground technology; High Voltage Direct Current (HVDC) overhead line and underground cables; and Gas Insulated Line (GIL).</p> <p>Currently, overhead lines offer the most economic and efficient solution to transmit electricity over long distances.</p>				
9-2.756	Suggest that the Project should be brought onshore at Bradwell (e.g. to reduce cost compared to a full offshore option)	<p>In respect of connecting at the old Bradwell power station, there is an existing overhead line connection to the Bradwell B site. This has been operating at lower voltage (132 kV) and has not been used for a few years and is in generally poor condition. This overhead line would need to be rebuilt, however, this onward connection via Rayleigh to Tilbury is also constrained by urban development and further designations and some sections may need to be re-routed if connections were made at Bradwell. Additionally, any connection point also requires two points of connection to the National Electricity Transmission System (NETS) (to meet compliance standards) requiring either a double overhead line through the Bradwell peninsula and onwards to separate locations or a connection back to Bramford (in addition to one towards Tilbury). A connection to Bramford would require connections to cross the Special Protection Area (SPA) designated Blackwater Estuary (3 km to 7 km tunnel likely to be required at much greater cost) as well as interact with</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>other Special Area of Conservation (SAC) and SPA designations.</p> <p>The existing network through Norfolk, Suffolk and Essex would also still need to be upgraded to transport the electricity due to come onto the network in the Norwich area and provide the necessary two points of connection to the NETS. Taken together a Bradwell point of connection requires a greater amount of new infrastructure and is therefore less economic and efficient and expected to be associated with greater environmental effects.</p>				
9-2.757	Suggest use of smart grid technologies and / or microgrids as an alternative to the Project	Smart Grids (Smartwires) are being installed in the UK at 400 kV. This technology complements the current transmission and distribution network however does not on its own remove the issues around life expired current assets, the need for increased capacity and the need to connect in and allow more green energy solutions to connect in. The 2023 and 2024 Strategic Options Backcheck and Review (available on the Project website) published at both the 2023 non-statutory consultation and the statutory consultation in 2024 as well as the 2025 Strategic Options Backcheck and Review (document reference 7.17) set out the different options considered and how these were taken forward and determined that the Project as proposed remained the preferred technical solution.			X	
9-2.758	Suggest that the Project should utilise existing infrastructure at Bradwell having been brought	In respect of connecting at the old Bradwell power station, there is an existing overhead line connection to	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	onshore at this location (e.g. existing overhead lines at Blackwater Estuary from the now redundant nuclear power station)	<p>the Bradwell B site. This has been operating at lower voltage (132 kV) and has not been used for a few years and is in generally poor condition. This overhead line would need to be rebuilt, however, this onward connection via Rayleigh to Tilbury is also constrained by urban development and further designations and some sections may need to be re-routed if connections were made at Bradwell. Additionally, any connection point also requires two points of connection to the National Electricity Transmission System (NETS) (to meet compliance standards) requiring either a double overhead line through the Bradwell peninsula and onwards to separate locations or a connection back to Bramford (in addition to one towards Tilbury). A connection to Bramford would require connections to cross the Special Protection Area (SPA) designated Blackwater Estuary (3 km to 7 km tunnel likely to be required at much greater cost) as well as interact with other Special Area of Conservation (SAC) and SPA designations.</p> <p>The existing network through Norfolk, Suffolk and Essex would also still need to be upgraded to transport the electricity due to come onto the network in the Norwich area and provide the necessary two points of connection to the NETS. Taken together a Bradwell point of connection requires a greater amount of new infrastructure and is therefore less economic and efficient and expected to be associated with greater environmental effects. This is set out in the 2023 and</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		2024 Design Development Reports published in subsequent consultations, found on the Project website.				
9-2.759	Suggest that subsidies for solar and wind energy are used to subsidise an offshore solution for the Project instead	<p>Subsidies are a matter for Government to consider. National Grid takes forward its proposals under the current regulatory and national planning policy framework. If that changes then National Grid will back-check its proposals in light of that.</p> <p>Offshore solutions were considered as part of our strategic proposal to upgrade the network in East Anglia. The Corridor and Preliminary Routeing and Siting Study (CPRSS) (available on the Project website) examines several strategic options that were considered for the Project that might achieve the required reinforcement including offshore and subsea options. These options were not taken forward as they did not fully address technical or physical/geographical constraints or enable the network to operate to the required standards. A subsea connection would have a third of the capacity of the proposed overhead line connection and therefore to transfer the anticipated levels of power generation, three subsea connections would be required including associated infrastructure such as convertor stations. This would make the connection significantly more costly to energy bill payers.</p>			X	
9-2.760	Suggest that Sizewell C is built at Tilbury instead to remove the need for the Project	Sizewell is just a power generator – it would still require the transmission and distribution network to carry the power generated into the wider National Grid.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		National Grid is not in control of where generators decide to build their generation assets and nuclear would present its own siting challenges which would have been assessed as part of their planning process.				
9-2.761	Suggest local power solutions instead of the Project (e.g. solar, wind, etc)	The project responds to the need to overhaul and upgrade the electricity transmission network to ensure that renewable energy can move from where it's generated to where it's needed. There are a number of offshore wind projects which are due to connect to the grid in 2030. We are already carrying out work to reinforce and upgrade the existing network in East Anglia, but even with these upgrades, the network will not be sufficient for the amount of new electricity connecting to it. As a result, our proposals for a new overhead line between Norwich and Tilbury are essential in supporting the wider UK transition to renewable energy. Local solar and wind power instead of this project would not meet this need to connect to existing projects which are coming online.	X		X	
9-2.762	Suggest that a main pipe is built offshore around the UK with inlets and outlets for electricity, gas, fibre optic cables, and fresh water	We have considered the feedback and note this would require a holistic approach to all UK wide service providers but would also create constraints in terms of funding, serviceability and ownership. Also on a security front, the UK would not want all major services and utilities running in the same space for various security reasons. This kind of coordination and interface doesn't exist on shore under present arrangements in roads etc and is considered unfeasible. Sharing of ducts between			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		different utilities also introduces health and safety and maintenance issues that could not feasibly be managed. Offshore options were considered and explored at strategic stage and are looked at in the strategic option back check documents produced throughout the consultation process. The conclusion from the reviews is that an onshore solution for this particular project remains the most appropriate option to take forward.				
9-2.763	Suggest that National Grid use a wind farm in France and run cables under the sea or through the channel tunnel	<p>The Project is responding to the regional challenge of new offshore wind, nuclear power generation, and interconnectors coming into East Anglia and the south-east along the East Coast.</p> <p>The need case for the Project is explained in the Strategic Options Back Check and Review (2024). Connections for new offshore wind and nuclear power generation projects, and for interconnectors, are expected into East Anglia by 2030. These are being constructed or are expected to connect into substations at Necton, Norwich Main, Bramford, Friston and Sizewell. Additionally, agreements are in place with Tarchon Energy for a 1400 megawatt (MW) interconnector between the UK and Germany, and with the North Falls and Five Estuaries offshore wind farms for connection into the new East Anglia Connection Node (EACN) substation. National Energy System Operator (NESO) (previously National Grid Electricity System Operator (ESO)) assessments have concluded that the existing high voltage electricity network in East</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Anglia requires reinforcement to ensure the network continues to meet the Security and Quality of Supply Standard (SQSS).</p> <p>National Grid does not determine or implement policies that influence the form of energy developments. Our role is to respond to the connection requirements for projects that are developed in line with Government policy to integrate them into the National Transmission System in a timely, economic and efficient manner in line with relevant policies and our statutory duties under the Electricity Act 1989.</p>				
9-2.764	Suggest that the Project switches between lattice and T-Pylons, including sections of T-Pylons	<p>The latest independent report on the Comparison of Electricity Transmission Technologies: Costs and Characteristics (Institute of Engineering and Technology, 2025) confirms that whilst T-Pylons may in certain locations provide an alternative to conventional overhead lines with potential benefits in visual impact and reduced land-take, this is at a higher cost. The build cost is approximately 2 to 2.5 times that of an equivalently rated conventional overhead line, and the lifetime costs are around 1.6 to 1.7 times that of a conventional overhead line. The current arrangements for the oversight of funding by Ofgem requires that the lowest cost acceptable design is taken forward rather than a more expensive design even if that design is perceived to reduce the level of effect.</p> <p>As such consideration of their use follows after establishing a need to mitigate effects of the standard</p>			X

		<p>lattice design and after considering the benefit of adopting a low height lattice pylon design. T pylons themselves are also less adaptable to varied terrains and require more substantial access infrastructure. Furthermore, their resilience and environmental impact are comparable to conventional overhead lines, but with increased carbon intensity due to construction materials. Attention also needs to be given to the transitions between pylon types. Given It is the surrounding context that drives the need for alternative design mitigation, where this is not required along the entire route, any visual break and transition in pylon design also needs to be carefully sited.</p> <p>Assessment findings have concluded that, where there is not a reversal of the presumption to use overhead lines, the use of lattice pylons (either standard or low height) is consistent with planning policy throughout the route. Whilst there may be some locations (for examples see appendix A of the 2024 Design Development Report) where there may be a design option for the use of T pylons, the need to mitigate for unacceptable effects from lattice pylons is not engaged. On this basis T pylons are not proposed for the Project.</p>				
9-2.765	Criticism that 2030 is not realistic / necessary for the Project, so alternatives should be used instead (e.g. the Project should be offshore / underground / use High Voltage Direct Current (HVDC) cables) / Suggest that delivery date for National Grid to	National Grid is legally obliged (under its Transmission Owner Licence) to provide capacity at the dates formally agreed in contracts with energy generators (or customers). Contract dates are set out by National	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	provide additional capacity on the network is changed to a later date (e.g. 2034) so that alternatives could be used instead of the Project / Criticism that National Grid has accelerated the Project to meet 2030 deadline (e.g. lack of consideration of alternatives)	<p>Energy System Operator (NESO), independent of National Grid.</p> <p>It is also responsible for delivering major new projects to connect more clean, low-carbon power to the transmission network in England and Wales.</p> <p>These projects play a vital part in achieving the UK Government's ambition of connecting 50 GW of offshore wind by 2030. They will be delivered under the regulator's Accelerated Strategic Transmission Investment (ASTI) framework.</p> <p>Strategic alternatives for the Project, including underground cables and offshore cables, have been considered and are set out in the published Strategic Options Backcheck and Reviews (SOBR) published in 2023 and 2024 (available on the Project website) and the 2025 SOBR (document reference 7.17).</p>				
9-2.766	Suggest that the Project uses existing disused infrastructure at Bradwell-on-Sea (e.g. to avoid the use of greenfield sites) / Suggest that existing unused 132kV transmission between Bradwell and Rayleigh and the existing unused substation at Bradwell are upgraded to 400kV and utilised instead of the Project (e.g. in line with National Grid's Electricity Act Duties under Schedule 9, and in line with National Policy Statement (NPS) EN-5; to reduce cost and environmental impact, such as by reusing existing concrete foundations; given that National Grid possesses pre-existing relationships	In respect of connecting at the old Bradwell power station, there is an existing overhead line connection to the Bradwell B site. This has been operating at lower voltage (132 kV) and has not been used for a few years and is in generally poor condition. This overhead line would need to be rebuilt, however, this onward connection via Rayleigh to Tilbury is also constrained by urban development and further designations and some sections may need to be re-routed if connections were made at Bradwell. Additionally, any connection point also requires two points of connection to the National Electricity Transmission System (NETS) (to meet			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	with landowners in these regions, simplifying the process of negotiating access and easement agreements; given that there is no conflict with the future development of Bradwell B and opportunity to connect Bradwell B to an upgraded 400kV line; given that the surrounding areas of Bradwell are already acclimatised to the presence of pylons, so upgrading the existing line would have a lesser impact on property valuations and therefore compensation for private loss payable by National Grid would be significantly less; to reduce impact on heritage and ecology; given that the impact of upgrading infrastructure at Bradwell on the Blackwater SSSI and Ramsar sites would be minor compared to the environmental impact across Essex, Suffolk and Norfolk)	<p>compliance standards) requiring either a double overhead line through the Bradwell peninsula and onwards to separate locations or a connection back to Bramford (in addition to one towards Tilbury). A connection to Bramford would require connections to cross the Special Protection Area (SPA) designated Blackwater Estuary (3 km to 7 km tunnel likely to be required at much greater cost) as well as interact with other Special Area of Conservation (SAC) and SPA designations.</p> <p>The existing network through Norfolk, Suffolk and Essex would also still need to be upgraded to transport the electricity due to come onto the network in the Norwich area and provide the necessary two points of connection to the NETS. Taken together a Bradwell point of connection requires a greater amount of new infrastructure and is therefore less economic and efficient and expected to be associated with greater environmental effects.</p>				
9-2.767	Suggest that the Project uses brownfield sites / brownfield land	The development of the Project has considered whether suitable brownfield sites were available for the siting of infrastructure. In general, such sites are few in number, of inappropriate size, have incompatible former uses (e.g are made ground), are located remotely from the route such that for example they any diversion considered would be less economic and efficient. For example, we have considered the use of former airfields (such as Boxted) for the siting of the East Anglia	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Connection Node (EACN) substation but ruled it out as explained in the 2025 Design Development Report (document reference 5.15). This was due to the greater impact on the National Landscape from multiple underground corridors.				
9-2.768	Suggest that National Grid use the Project to add value rather than devaluing, by routing the Project over already developed areas (e.g. demolishing run down tower blocks and community areas, and rebuilding them to give the owners an increase in their homes value, rather than decreasing the value of homes that are set in countryside but get ruined)	National Grid has carefully considered the presence of existing homes and buildings, environmental features and other constraints in developing its proposals. The proposed routeing and construction techniques have also been modified and designed in response to feedback in specific locations, such as indicated by the respondent, to reduce effects including restricting working areas or modifications to route. Documents have been published throughout the evolution of the Project including the Corridor Preliminary Routing and Siting Study which was published at the 2022 non-statutory consultation, this explored the high-level routing of corridors. At the 2023 non-statutory consultation the 2023 Design Development Report was published that set out the more detailed approach and evolution of the development of a draft alignment. A further Design Development Report was also published at the statutory consultation in 2024. The 2025 Design Development Report (document reference 5.15) accompanies the Development Consent Order (DCO) application.			X	
9-2.769	Suggest that the Project uses existing pylons between Bradwell and Rayleigh	In respect of connecting at the old Bradwell power station, there is an existing overhead line connection to			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>the Bradwell B site. This has been operating at lower voltage (132 kV) and has not been used for a few years and is in generally poor condition. This overhead line would need to be rebuilt however this onward connection via Rayleigh to Tilbury is also constrained by urban development and further designations and some sections may need to be rerouted if connections were made at Bradwell. Additionally, any connection point also requires two points of connection to the National Electricity Transmission System (NETS) (to meet compliance standards) requiring either a double overhead line through the Bradwell Peninsula and onwards to separate locations or a connection back to Bramford (in addition to one towards Tilbury). A connection to Bramford would require connections to cross the Special Protection Area (SPA) designated Blackwater Estuary (3 km to 7 km tunnel likely to be required at much greater cost) as well as interact with other Special Area of Conservation (SAC) and SPA designations. The existing network through Norfolk, Suffolk and Essex would also still need to be upgraded to transport the electricity due to come onto the network in the Norwich area and provide the necessary two points of connection to the NETS. Taken together a Bradwell point of connection requires a greater amount of new infrastructure and is therefore less economic and efficient and expected to be associated with greater environmental effects.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.770	Suggest that National Grid should maximise the amount of infrastructure which is placed offshore and minimise that onshore, combining Five Estuaries and North Falls with Sealink to transmit power both north and south (e.g. avoiding the need to put infrastructure in the Dedham Vale and North Colchester area entirely)	<p>As part of National Grid's transmission licence to operate (regulated by the Office of Gas and Electricity Markets (Ofgem)), National Grid Electricity Transmission (NGET) and National Energy System Operator (NESO) must offer a connection to developers wanting to connect new sources of electricity generation to the national transmission system. While the nature of new infrastructure means it cannot be without impact, our transmission licence requires National Grid to be efficient, coordinated, and economical when formulating proposals while also considering the effect on the environment.</p> <p>We are responsible for delivering the proposals for an overhead line between Norwich and Tilbury – along with many other projects, such as SeaLink- to help meet this demand and to connect the energy generated offshore by projects such as North Falls and Five Estuaries into where it is vitally needed onshore.</p> <p>We need to develop new infrastructure because the existing transmission network in East Anglia lacks the capacity to manage the expected increase in offshore wind needing to connect to the network in the coming years and beyond. We consider all proposals in depth to ensure that any development is coordinated, efficient, and cost-effective. Our assessments have shown that an overhead line between Norwich and Tilbury, via Bramford, is the most cost effective and efficient way of delivering this. Our proposals do include several uses of</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>underground cabling in areas such as the Dedham Vale National Landscape and north-west of Colchester.</p> <p>Both North Falls and Five Estuaries have connection agreements in place and both projects have been clear that they're progressing existing plans in parallel with the study. National Grid's transmission licence requires us to provide the network capacity needed to meet contracted dates as set out in the Transmission Entry Capacity (TEC) register.</p>				
9-2.771	Concern that the Project will be delayed and costs will rise due to public opposition should overhead lines be used, so suggest that HVDC cables are used for the entire Project (e.g. given that the ESO concluded that costs were similar for HVDC compared to overhead lines)	<p>National Grid is constantly looking into new innovations and investigating alternative technology types. These are explored and assessed for suitability. Alternative technologies were investigated for the Project, these included an offshore connection using Direct Current (DC) technology, and various onshore connection options including: increasing operational voltages on existing network to above 400 kV; Alternating Current (AC) overhead lines (established technology); alternative pylon types; AC underground technology; High Voltage Direct Current (HVDC) overhead line and underground cables; and Gas Insulated Line (GIL).</p> <p>Currently, overhead lines offer the most economic and efficient solution to transmit electricity over long distances.</p>	X		X	
9-2.772	Suggest that National Grid remove the East Anglia Connection Node (EACN) substation from its proposals, instead connecting North Falls and Five	The East Anglian Connection Node (EACN) substation proposed at Ardleigh, will offer a connection point for Tarchon Interconnector. As part of National Grid's	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	Estuaries offshore to Sealink (as proposed under the Offshore Coordination Support Scheme (OCSS)), and suggest that the Tarchon Interconnector should not go ahead as it is against national interests (e.g. it will increase consumer bills by £5bn; increase in UK carbon output; bring no benefit to UK energy security; and, destabilise the UK energy network due to increased constraint costs; to avoid the need to go through the Dedham Vale National Landscape) / Suggest that the Tarchon Interconnector does not go ahead so that the East Anglia Connection Node (EACN) no longer needed and therefore can be removed from the Project (e.g. this would significantly shorten the route, eliminate the section in which the highest damage occurs to a protected National Landscape, and remove the most expensive section of the project. A solution without the EACN could be delivered more cheaply and potentially more quickly)	<p>transmission licence to operate (regulated by the Office of Gas and Electricity Markets (Ofgem)), National Grid Electricity Transmission (NGET) and National Energy System Operator (NESO) must offer a connection to developers wanting to connect new sources of electricity generation to the national transmission system. While the nature of new infrastructure means it cannot be without impact, our transmission licence requires National Grid to be efficient, coordinated, and economical when formulating proposals while also considering the effect on the environment.</p> <p>We are responsible for delivering the proposals for an overhead line between Norwich and Tilbury – along with many other projects across the country - to help meet this demand and to connect the energy generated offshore into where it is vitally needed onshore.</p> <p>We need to develop new infrastructure because the existing transmission network in East Anglia lacks the capacity to manage the expected increase in offshore wind needing to connect to the network in the coming years and beyond. We consider all proposals in depth to ensure that any development is coordinated, efficient, and cost-effective.</p>				
9-2.773	Suggest that EAS1 should be used instead of the section of the Project between Bramford and Tilbury (e.g. as the Strategic Options Backcheck Review highlights EAS1 as a cheaper option; to avoid the Dedham Vale National Landscape)	Whilst noting the respondent's preference for the EAS1 option, the reasons why this was not taken forward were stated in the 2024 Strategic Options Backcheck and Review (available on the Project website). Specifically, paragraph 15.4.6 onwards note the limitations in	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		meeting the overall reinforcement requirement and the additional costs to extend the customer connections further inland concluding at paragraph 15.4.10 that, 'EAS1 was less optimal from a technical perspective and additional costs.....would make the overall cost impact of the option less favourable.....'. Those reasons remain valid, and no change is proposed.				
9-2.774	Suggest that Alternative 5b proposed by ESO in the East Anglia Review is used instead of the section of the Project between Bramford and Tilbury (e.g. to avoid the Dedham Vale National Landscape)	National Grid notes the respondent's feedback. Alternative 5b would be subject to where proposed interconnectors land. Should interconnectors land elsewhere, this would move the need for the reinforcement elsewhere. Currently one interconnector and two offshore windfarms are planned to connect into the proposed East Anglia Connection Node (EACN) substation on the Tendring peninsula, therefore alternative 5b would not fulfil the need for this reinforcement and is therefore not being taken forward.	X		X	
9-2.775	Suggest that the Project should be brought from offshore to the existing substations at Bradwell, Tilbury and Richborough via an offshore grid, potentially enabling the existing overhead lines at these locations to be used without the need for further overhead lines	When developing the project, National Grid carefully considered a range of options for where to connect the power generated by offshore wind farms, including options at existing substations such as Bradwell. Our assessments showed that connecting into these substations would require a greater amount of new infrastructure and would not be in line with the guidance placed on us by the Government and our regulators. All information on our assessments of substation alternatives can be found in our Corridor and Preliminary			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Routing and Siting Study (CPRSS), which is available on the Project website.</p> <p>We have also carried out upgrades to existing infrastructure in the region, but there is no form of technology that would allow us to upgrade to carry the amount of energy we need to connect to the network, so we need to build new infrastructure.</p>				
9-2.776	Suggest that the Project should run adjacent to the A12, A13 or M25	<p>Whilst there could be potential benefits from infrastructure being concentrated geographically, i.e., by routeing the Project in close proximity to existing road and rail infrastructure, National Grid do not consider these benefits arise for the whole route. Roads, such as the A140 and A12 potentially align (at least in part) with the general routeing of the Project. However, there are constraints and features that mean that we do not consider close paralleling would reduce environmental effects or improve compliance with the Holford Rules or be more consistent with the policy requirement to be economic and efficient. A summary of the Holford Rules is provided within Appendix I22 of this report. Several residential properties, as well as hamlets, villages and towns, are present in close proximity to the existing transport infrastructure necessitating multiple diversions of an overhead line. There are also some locations where the combination of existing physical and environmental features (railway and road infrastructure, commercial and residential property, woodlands and orchards) present very substantial challenges to routeing</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		and siting. As a result, whilst close paralleling of transport infrastructure may appear beneficial in some short sections, overall, the increased environmental effects from multiple changes of direction are considered greater and less compliant with the Holford Rules than those that are associated with a new route alignment. We have completed an Environmental Impact Assessment (EIA) for the Project. The results of this assessment are provided in the Environmental Statement (ES) that accompanies the Development Consent Order (DCO) application. The ES identifies and assesses the likely significant effects on the environment of the Project and recommends appropriate mitigation measures where required.				
9-2.777	Suggest that National Grid include an exclusion zone placed around towers, or suggest they are given an extensive earth system to minimise the earth resistance and EPR values / Request for National Grid to provide the proposed potential contour map around the towers so the impact (according to IEC TS 60479) can be properly assessed	<p>The Project would be fully compliant with the UK government policies on Electric Magnetic Field (EMF). Specifically, all the EMF produced would be below the relevant exposure limits to meet National Policy Statement (NPS) EN-5 compliance and states: 'EMF effects are minimal' and therefore, there would be no significant EMF effects resulting from the Project. As part of our Development Consent Order (DCO) documentation the Electric Magnetic Field Compliance Report (document reference 7.8) demonstrates this compliance. Where additional earthing is required, this shall be considered on a pylon by pylon basis.</p> <p>In accordance with BS EN 50341 unless the tower is classified as an often frequented tower, National Grid do</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		not typically undertake and provide potential contour mapping. If identified as such then National Grid will evidence the earthing management and can, subject to further agreement, provide the potential contour mapping.				
9-2.778	Suggest bringing power onshore close to the areas where it is needed / Suggest that infrastructure (e.g. converter stations) should be situated as close as possible to the point of demand for electricity	<p>The existing network in East Anglia was developed in the 1960s. Though it has been successful in meeting demand to date, achieving government targets for renewable and low-carbon energy will require a significant overhaul and upgrade, along with many other regions across the UK.</p> <p>National Grid are already carrying out work to reinforce and upgrade the existing network in East Anglia, but even with these upgrades, the network will not be sufficient for the amount of new electricity connecting to it.</p> <p>So, as an important part of The Great Grid Upgrade, we are developing proposals for a new overhead electricity line between substations in Norwich (Norfolk), Bramford (Suffolk) and Tilbury (Essex). This will transport the electricity generated at offshore wind farms connecting in at Norwich and Necton, as well as on the Tendring Peninsula.</p>			X	
9-2.779	Suggest that smaller more modern pylons that are slimmer and use less metal are used (e.g. to reduce material costs and reduce visual impacts)	The latest independent report on the Comparison of Electricity Transmission Technologies: Costs and Characteristics (Institute of Engineering and Technology, 2025) confirms that whilst T-Pylons may in certain			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>locations provide an alternative to conventional overhead lines with potential benefits in visual impact and reduced land-take, this is at a higher cost. The build cost is approximately 2 to 2.5 times that of an equivalently rated conventional overhead line, and the lifetime costs are around 1.6 to 1.7 times that of a conventional overhead line. The current arrangements for the oversight of funding by Ofgem requires that the lowest cost acceptable design is taken forward rather than a more expensive design even if that design is perceived to reduce the level of effect.</p> <p>As such consideration of their use follows after establishing a need to mitigate effects of the standard lattice design and after considering the benefit of adopting a low height lattice pylon design. T pylons themselves are also less adaptable to varied terrains and require more substantial access infrastructure. Furthermore, their resilience and environmental impact are comparable to conventional overhead lines, but with increased carbon intensity due to construction materials. Attention also needs to be given to the transitions between pylon types. Given It is the surrounding context that drives the need for alternative design mitigation, where this is not required along the entire route, any visual break and transition in pylon design also needs to be carefully sited.</p> <p>Assessment findings have concluded that, where there is not a reversal of the presumption to use overhead lines, the use of lattice pylons (either standard or low</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		height) is consistent with planning policy throughout the route. Whilst there may be some locations (for examples see appendix A of the 2024 Design Development Report) where there may be a design option for the use of T pylons, the need to mitigate for unacceptable effects from lattice pylons is not engaged. On this basis T pylons are not proposed for the Project.				
9-2.780	Suggest that cables for the overhead lines are made from carbon fibre (e.g. given that they are lighter so are less likely to sag, and therefore less pylons will be needed) / Suggest the use of carbon cored conductors (e.g. to upgrade the existing 400kV overhead lines)	<p>The Project is proposing to use all aluminium conductors ('overhead cables') made of all aluminium strands, which have a low electrical resistance and proven service history.</p> <p>Carbon fibre has a much higher electrical resistance than aluminium and cannot be used on its own as a conductor.</p> <p>One type of conductor that uses carbon fibre is high temperature low sag (HTLS) conductor. HTLS is a generic term to describe conductors with an inner core such as carbon fibre (or other advanced materials). The outer part of the conductor is still aluminium, which largely carries the electricity.</p> <p>HTLS conductor can transmit more power than the equivalent aluminium conductor. However, HTLS operates at a higher temperature and may therefore be less efficient. Consequently, HTLS is generally deployed when aluminium conductors cannot achieve the power transfer required.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.781	Suggest that underground cables are used for the Project, with solar panels placed above the underground cables	<p>The ongoing maintenance and inspection of underground cabling is significantly more challenging than that of overhead transmission infrastructure. Underground cable insulation and bonding systems require periodic inspection and maintenance to avoid early deterioration of the underground cable system. The route must be surveyed periodically to ensure that the cable system is protected from external factors such as infrastructure development, ground movement and the risk of vandalism. The placing of solar panels above an underground cable route would seriously restrict access for future underground cable maintenance or repair.</p> <p>The decision for the undergrounding of cables where required in areas such as National Landscapes is to reduce the visual impact. To then place solar panels over the underground cable swathe would go against the reason for undergrounding. Extra substations would also be required to transfer to a suitable transmission voltage.</p>			X	
9-2.782	Suggest that the Project should be offshore between Sizewell and Tilbury	Throughout the process of routeing and planning, National Grid has considered an offshore connection. We are required to balance effectiveness and costs and must pursue the most cost-effective option, which for Norwich to Tilbury is an overhead line. This is because all costs ultimately end up being passed onto domestic bills for households and businesses.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Our own assessments have concluded that the costs for an offshore grid would be around £4 billion, with lifetime costs of £4.5 billion. Whereas the costs of pursuing the onshore option would be £895 million, and lifetime costs of £1,231 million.</p> <p>An offshore option between Sizewell and Tilbury would not meet the statutory requirements placed on us by our regulators and the UK government.</p>				
9-2.783	Suggest the Project uses High Voltage Direct Current (HVDC) cables, with a conversation station at Tilbury to convert power back to AC	<p>AC transmission has an expected lifetime of approximately 60–80 years, with mid-life refurbishment of overhead lines, which are the largest capital component, needed after 40 years. In contrast, HVDC systems have a shorter life expectancy of 40 years, and large parts of the converter stations (valves and control systems) are likely to need replacing after 20 years. Maintenance costs for DC systems are generally higher than AC because of the complex converter stations that require regular, specialist maintenance.</p> <p>National Grid is constantly looking into new innovations and investigating alternative technology types. These are explored and assessed for suitability. Alternative technologies were investigated for the Project, these included an offshore connection using direct current (DC) technology, and various onshore connection options including: increasing operational voltages on existing network to above 400 kV; alternating current (AC) overhead lines (established technology); alternative pylon types; AC underground technology; high voltage</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>direct current (HVDC) overhead line and underground cables; and gas insulated line (GIL). HVDC is not normally used across land as converting AC to DC and back again would require converter stations so it can be used in the rest of transmission network and the distribution network which is currently AC. These converter stations are a significant size and would be required at every interface with the wider AC network i.e. at Norwich, Bramford, East Anglia Connection Node (EACN) substation and Tilbury substations, the cost of these converter stations outweighs the benefits offered. Currently, overhead lines offer the most economic and efficient solution to transmit electricity over long distances.</p>				
9-2.784	Suggest that energy generating equipment is installed on pylons (e.g. solar panels, wind turbines)	<p>National Grid transmits high-voltage electrical power from where it is generated to where it is needed. We do not generate power nor do we sell energy.</p> <p>Different designs of pylon in use in the UK do not include a design that could safely support the installation of solar panels or wind turbines, as this would affect both the feasibility of construction, and safe access and egress for maintenance purposes.</p>			X	
9-2.785	Suggest that Local Grids are created and managed instead of the Project	National Grid recognises the value of local energy generation used to power houses and small communities. Our proposals for Norwich to Tilbury are part of our wider Great Grid Upgrade proposals which will increase energy generation across the UK to meet a			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>national demand for energy as we try to reach net zero. While local energy generation can be beneficial, it cannot generate enough power to meet the expected increase in demand.</p> <p>Norwich to Tilbury would carry the power from where it is generated to where it is needed in the UK, the existing network was built in the 1960s and cannot support the increase in energy generated from offshore wind farms.</p>				
9-2.786	Suggest that the existing overhead lines are upgraded using innovative solutions such as TS Conductors' technology / Magic Balls / Suggest that National Grid upgrade the existing network using Grid-Enhancing Technologies (GETs) such as dynamic line ratings, advanced power flow controls, advanced conductors (specifically TS Conductor), transmission switching and conversion from Alternating Current overhead lines (AC OHL) to direct current (DC) OHL / Request that National Grid demonstrate that these options have been explored	<p>National Grid is monitoring how this technology develops in the future, but for the moment it is not a deployable technology that could be considered for any current projects. Superconductor technology remains in its infancy and has only been trialled in a limited number of circumstances globally. The technology is not at a level of development maturity where it can provide the capacity, voltage level or distance required for this Project.</p> <p>Some technologies can be used and National Grid has a dedicated research and development team who look at these technologies on a case-by-case basis. This does not replace the requirement to strengthen the current network and provide additional connection points for all the new generators coming online – this is all part of achieving net zero by 2050.</p>			X	
9-2.787	Suggest that the Project is routed underground eastwards from Swardeston to the North Sea and then sent south undersea	Throughout the process of routing and planning, National Grid also considered pursuing an offshore connection. We are required to balance effectiveness			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>and costs and must pursue the most cost-effective option, which for Norwich to Tilbury is an overhead line. This is because all costs ultimately end up being passed onto bills for households and businesses. The strategic options for the Project including an offshore and underground option have been explored and can be found in the 2025 Strategic Options Backcheck and Review (document reference 7.17).</p> <p>National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Park, The Broads, or Area of Outstanding Natural Beauty (AONB))'</i>. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23)</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the entire Project would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
9-2.788	Suggest transposing then undergrounding the overhead lines as part of the Project to get past the existing 440 kV lines (e.g. as proposed at Fairstead)	National Grid notes the respondent's feedback. Transposition is generally used over short sections where routeing challenge can be overcome by repositioning an existing live connection. Theoretically there may be circumstances where it may be possible for crossings to be addressed in this manner but the	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		complexity in this case does not justify any perceived benefit. In this case the connection southwards from Rayleigh, which would be the natural diversion point for the connection from the East Anglia Connection Node (EACN) substation does not have the available capacity. There are also additional programme risks and challenge from the suggested approach readily overcome by the use of Cable Sealing End (CSE) compounds. No change is therefore proposed.				
9-2.789	Criticism that National Grid has not chosen the shortest route to Tilbury / Request for National Grid to confirm why the shortest route has not been taken	The alignment has to respond to various influences encompassing technical factors defining connections points to be achieved, environmental features, homes and constraints limiting routing to ensure compliance with relevant policy. The straightest route combining and meeting these requirements is proposed. A more direct route from Norwich to Tilbury would not meet these requirements. The rationale for the route is set out in the 2025 Design Development Report (document reference 5.15).			X	
9-2.790	Suggest that instead of the Project, the money is used for solar grants for homes instead	The Project responds to the need to overhaul and upgrade the electricity transmission network to accommodate the changes in how we produce and use energy, including the increase in offshore wind which needs to connect in 2030. We are already carrying out work to reinforce and upgrade the existing network in East Anglia, but even with these upgrades, the network will not be sufficient for the amount of new electricity connecting to it. As a result, our proposals for a new			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		overhead line between Norwich and Tilbury are essential in supporting the wider UK transition to renewable energy. This need would not be met by instead funding solar grants for homes.				
9-2.791	Suggest that National Grid consider the 790 acres on Hampstead Heath that could be considered for power generation	National Grid has duties relating to the transmission of power rather than the generation of power so does not consider this feedback to be relevant to the Project. No change is proposed.			X	
9-2.792	Suggest that National Grid use pylons the same height as those currently used	The overhead line is designed to meet industry standards and National Grid technical specifications, guidelines and requirements. The pylon heights proposed are sufficient to maintain the relevant electrical clearances required (which vary subject to what is being crossed and pylon positioning). The average height of the pylons proposed is similar to that of existing 400 kV overhead lines across the network.			X	
9-2.793	Suggest that National Grid use underground cables laid alongside British Rail tracks within the Railtrack 'curtilage'	In developing its onshore proposals National Grid has considered the potential to parallel existing transport infrastructure (which is close to the existing 400 kV overhead line for part of this area) and consider them to be less preferred alternatives. Numerous properties (residential and commercial such as on Greenways), constraints and environmental features are present in close proximity to existing infrastructure and would be more adversely affected by close paralleling. Alternatively, if such an alternative was pursued the costs to avoid such effects (multiple direction changes			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		for crossings of the existing overhead line or other infrastructure) would be much greater with additional limitations on the ability to achieve the necessary outages (to undertake the works safely) within the time available.				
9-2.794	Suggest that inter-continental infrastructure is considered by National Grid	Interconnection with Europe is an important feature of the UK's energy requirements, and it helps supply meet demand and overall keeps energy costs lower. The UK is linked to several European mainland countries such as Denmark, Germany, France, Sweden, Belgium, and Ireland through a number of 'interconnectors'. This area of National Grid's business is managed by a legally separate company to National Grid Electricity Transmission – 'National Grid Ventures'. If the Project were to be constructed, it would form part of the National Transmission Network (NTS) and indirectly would allow the transmission of electricity from interconnectors, some of which are already connected at Bramford Substation. In addition, there is a proposal for a new interconnector from Germany (Tarchon) which, if constructed as currently proposed, would connect directly into this Project.			X	
9-2.795	Suggest the use of EHV transmission lines suspended from a common steel bridge (e.g. like those used over electric rail links)	Network Rail lines operate at a much lower voltage than the National Grid overhead lines and as a result the gap between their overhead lines and other conductive materials can be much smaller. At 400 kV, clearance between the overhead line and other conductive material needs to be greater than 3 m which is why our			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		pylons are taller than other electrical lines such as Network Rail and the distribution lines.				
9-2.796	Suggest that pylons should be no taller than the current 400 kV lines in East Anglia	The overhead line is designed to meet industry standards and National Grid technical specifications, guidelines and requirements. The pylon heights proposed are sufficient to maintain the relevant electrical clearances required (which vary subject to what is being crossed and pylon positioning). The average height of the pylons proposed is similar to that of existing 400 kV overhead lines across the network.			X	
9-2.797	Suggest that National Grid remove all haul roads and reinstate all hedgerows and farmland following completion of construction of the Project, and renegotiation of access for maintenance when new cables are required	As outlined within the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Code of Construction Practice (CoCP) (document reference 7.2) the general approach will be to reinstate all habitat where possible once the construction phase is complete, including farmland and hedgerows. The only exception will be where a separate agreement has been made with a landowner, upon their request, for the retention of a haul road. Access routes for ongoing maintenance will use existing access routes only.			X	
9-2.798	Suggest that National Grid use vertical 'Tulip' turbines which can be placed much closer together	National Grid is not proposing to install any turbines as part of the Project, as the transmission network operator National Grid Electricity Transmission does not construct, own, or operate generation assets.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.799	Suggest that National Grid use underground cables in areas of residential housing, at least a mile either side	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Park, The Broads, or Area of Outstanding Natural Beauty (AONB))'</i> . Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at other locations proposed as overhead line would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
9-2.800	Suggest that landing points and interconnectors should be re-assessed so that they take into account existing infrastructure and that the requirement for the wind farms to a collective point should be considered	Landing points and interconnectors are key components of energy infrastructure, specifically designed for the transmission of electricity between countries or for connecting offshore energy sources to the onshore grid. The Project is not an interconnector or a landing point scheme. It is a terrestrial transmission project designed to strengthen the onshore electricity network.	X			
9-2.801	Suggest the Tarchon Interconnector should connect further south at a brownfield site such as Bradwell, Tilbury or Grain / in the North of the country to reduce the constrain payments. It should increase in capacity to 2GW, becoming and OHA.	The Energy Market is a free market where applicants apply to connect to the transmission system. National Grid is obliged to connect any customer who applies for a connection to the National Energy System Operator (NESO). A robust holistic process to determine the best location for connection is followed to offer the customer connection. Both National Grid and NESO are required	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		to offer all customers a connection without discrimination and it is for the connecting customer to fund their project independently.				
9-2.802	Suggest that the requirement for the Tarchon Interconnector is reconsidered (e.g. in the way that has currently been proposed to interface with the Project)	The Energy Market is a free market where applicants apply to connect to the transmission system. National Grid is obliged to connect any customer who applies for a connection to the National Energy System Operator (NESO). A robust holistic process to determine the best location for connection is followed to offer the customer connection. Both National Grid and NESO are required to offer all customers a connection without discrimination and it is for the connecting customer to fund their project independently.	X		X	
9-2.803	Suggest that the Project follows route NB2 from the Corridor and Preliminary Routeing and Siting Study Report (CPRSS) (i.e. instead of NB1) given the additional costs of undergrounding for the Project as proposed	The NB2 corridor would require close parallelling the existing overhead line. This has been considered and reviewed through the Project development process. There are multiple locations where existing homes, environmental features lead to increased effects with a number of locations posing particular challenge. Corridor NB1 is being progressed as overhead line and whilst the respondent's preference is noted, in the absence of new evidence or information this remains preferred.			X	
9-2.804	Suggest that an alternative solution (e.g. underground cables, offshore, etc) is used for the Project with the additional costs 'fund raised' by residents / consumers	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Park, The Broads, or Area of Outstanding Natural Beauty (AONB))'</i>. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project in its entirety would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.</p> <p>The cost of the Project would be shared by all billpayers, not just those in East Anglia. National Grid is funded by a price control mechanism which is agreed with and set by the regulator, the Office of Gas and Electricity Markets (Ofgem). National Grid pays up front for the costs to build a new power transmission line. The cost is then gradually passed to consumers through their electricity bills over the next 40 years or so. Any alternative option would also be funded in this way, and so we are required to pursue the cheapest option as all costs ultimately go onto the billpayer.</p>				
9-2.805	Suggest that the Project should use monopole towers (e.g. to mitigate visual impact)	The latest independent report on the Comparison of Electricity Transmission Technologies: Costs and Characteristics (Institute of Engineering and Technology, 2025) confirms that whilst T-Pylons may in certain locations provide an alternative to conventional overhead lines with potential benefits in visual impact and reduced land-take, this is at a higher cost. The build cost is approximately 2 to 2.5 times that of an			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>equivalently rated conventional overhead line, and the lifetime costs are around 1.6 to 1.7 times that of a conventional overhead line. The current arrangements for the oversight of funding by Ofgem requires that the lowest cost acceptable design is taken forward rather than a more expensive design even if that design is perceived to reduce the level of effect.</p> <p>As such consideration of their use follows after establishing a need to mitigate effects of the standard lattice design and after considering the benefit of adopting a low height lattice pylon design. T pylons themselves are also less adaptable to varied terrains and require more substantial access infrastructure. Furthermore, their resilience and environmental impact are comparable to conventional overhead lines, but with increased carbon intensity due to construction materials. Attention also needs to be given to the transitions between pylon types. Given It is the surrounding context that drives the need for alternative design mitigation, where this is not required along the entire route, any visual break and transition in pylon design also needs to be carefully sited.</p> <p>Assessment findings have concluded that, where there is not a reversal of the presumption to use overhead lines, the use of lattice pylons (either standard or low height) is consistent with planning policy throughout the route. Whilst there may be some locations (for examples see appendix A of the 2024 Design Development Report) where there may be a design option for the use</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		of T pylons, the need to mitigate for unacceptable effects from lattice pylons is not engaged. On this basis T pylons are not proposed for the Project.				
9-2.806	Suggest that the East Anglia Connection Node (EACN) should be located next to the substation for the Five Estuaries	National Grid is only responsible for the siting of their own assets however through working alongside the developers the East Anglia Connection Node (EACN) substation is positioned as close to the Five Estuaries and North Falls as technically possible, taking into account constraints such as land availability.			X	
9-2.807	Suggest that North Falls and Five Estuaries should connect offshore via Sealink, and that Tarchon should be removed as it's against the National Interest, and as the East Anglia Connection Node (EACN) will not be required, the overhead lines must be moved away from the Dedham Vale National Landscape to one of the alternative routes already identified by National Grid and Electricity System Operator (ESO)	The Energy Market is a free market where applicants apply to connect to the transmission system. National Grid is obliged to connect any customer who applies for a connection to the National Energy System Operator (NESO). A robust holistic process to determine the best location for connection is followed to offer the customer connection. Both National Grid and NESO are required to offer all customers a connection without discrimination, and it is for the connecting customer to fund their project independently. National Grid recognises the importance of National Landscapes and the Project has proposed mitigation where such a protected landscape is crossed.	X		X	
9-2.808	Suggest the installation of offshore hubs or energy islands (as part of offshore alternative to the Project)	There is no fully offshore solution to connect offshore wind to the grid and we have to bring the power onshore somewhere. Our job is to carefully consider the most feasible options and present proposals for public consultation. In doing this, we must consider impacts on			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>local communities and the environment and deliver value for electricity consumers.</p> <p>We have assessed an equivalent offshore option and to deliver the same capacity as the overhead line, we would need to build three subsea cables and associated onshore infrastructure. This would mean significant extra cost to consumers, and that would not meet the requirements placed on us.</p> <p>In addition to cost, there are a range of environmental factors and other onshore and offshore impacts which need to be considered in this option. Taking these considerations into account we have concluded that an onshore connection is the most appropriate solution.</p>				
9-2.809	Suggest that trenchless alternatives (e.g. using trenchless cable ploughing equipment) are used to lay underground cables to mitigate environmental damage (e.g. to soil structure)	Higher voltage underground cables, such as 400 kV, are typically larger and heavier than lower voltage underground cables. This increased size and weight can make them more difficult to install using underground cable ploughing techniques, which are often better suited for smaller, lighter underground cables. The effectiveness of underground cable ploughing can be significantly influenced by soil conditions. If the soil is too compacted or contains large rocks, it may hinder the plough's ability to create a suitable trench for the underground cable. This can lead to inadequate burial depth or damage to the underground cable during installation. The installation of 400 kV underground cables may require more extensive environmental assessments and mitigation strategies compared to			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		lower voltage installations. This can complicate the use of trenchless methods like cable ploughing, as additional precautions may be necessary to protect sensitive areas.				
9-2.810	Suggest that if the Project is required to deliver electricity to Tilbury, then the recipients and beneficiaries bear the impact of the transportation instead	<p>The UK Government has set a target to increase the amount of energy generated by offshore wind to 50 GW and deliver a further 18 GW of interconnector capacity by 2030. This would be enough clean, renewable energy to power every home in the UK. In East Anglia there could be as much as 18 GW of offshore wind and interconnector energy coming into the region by the end of the decade.</p> <p>Norwich to Tilbury responds to this increased amount of offshore wind energy which needs to connect into the grid, including sources of offshore wind connecting into Norwich and a new East Anglia Connection Node (EACN) at Tendring. There isn't currently enough network capacity in the region to support this level of energy so we need to reinforce and develop the network to ensure this energy can be connected to homes and businesses across the UK, not just in Tilbury.</p>			X	
9-2.811	Suggest that the energy transported by the Project should only be provided to the areas impacted by the Project, and that given the impact on local residents, it should be sold cheaply to them	National Grid Electricity Transmission's (NGET) role is to transmit electricity from where it is generated to distribution networks that deliver it to homes and businesses. Electricity generated in one region is sent to where it is most needed, regardless of where it originates the electricity grid is designed to ensure the balance of supply and demand on a national scale.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Energy pricing in the UK is regulated to ensure fairness and consistency. Suppliers buy electricity at wholesale prices set in the national market and the costs are distributed evenly across all consumers.				
9-2.812	The respondent welcomes National Grid's assurances regarding Electric and Magnetic Field (EMF) radiation, however, given the fact that research is still ongoing, a precautionary approach to site the pylons and wires as far away from the residential properties as possible should be taken	<p>The safety of the public, local communities and our employees is central to everything that National Grid does. The UK has a carefully thought-out set of policies for managing Electric and Magnetic Fields (EMFs) emissions like those produced by overhead lines and substations. These policies includes both numerical exposure guidelines to protect against established, acute effects of EMFs, and precautionary policies to provide appropriate protection against the possibility of chronic effects of EMFs at lower levels, which have not been established by science. These exposure limits have been set by an independent authoritative scientific body called the International Commission on Non-Ionizing Radiation Protections (ICNIRP) who carefully review all science around magnetic fields and health. We believe it is right that the decision on what is acceptable or not is made independently of industry. After decades of research into EMF and health there are no established health effects below the exposure limits.</p> <p>These policies are incorporated into the decision-making process for Development Consent set out in National Policy Statement EN-5, which would apply to this Project. We will ensure that all overhead lines and substations comply with those exposure limits and</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		precautionary policies, which will be submitted as part of our consent application. In addition to these policies to protect against EMFs, our approach is to maximise the distance between residential properties and the proposed overhead line, for visual amenity purposes wherever possible and taking into account other constraints.				
9-2.813	Suggest that any pylons are as small, quiet and transparent as possible, and that they should be proven not to have any Electric and Magnetic Field (EMF) impact on land within 500m (e.g. rather than the theoretical assumptions to date)	<p>The safety of the public, local communities and our employees is central to everything that NGET does. The UK has a carefully thought-out set of policies for managing Electric and Magnetic Fields (EMFs) emissions like those produced by overhead lines and substations. These policies have been based on research which has now been carried out for four decades. There are no established health effects below the exposure limits which form part of the Government's policies on EMF exposure, despite all of the research that has been carried out. We have ensured that all the equipment proposed as part of this project complies with these guidelines and policies set to protect against EMF effects.</p> <p>The introduction of 'corridors' around overhead lines and other precautionary measures in respect of public exposure to EMFs has been considered by Government. In 2009, the Government responded to a report and recommendations by the Stakeholder Advisory Group on Extremely Low Frequency EMFs (SAGE),</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>The Government adopted several of the recommendations SAGE had made for precautionary measures. Those measures specific to high voltage power lines include 'optimal phasing' of power lines and providing more advice on EMFs. The proposed overhead lines have been designed to comply with these precautionary policies. Evidence of this compliance is submitted in the Electric and Magnetic Fields Compliance report as part of our Development Consent Order (DCO) application (document reference 7.8).</p> <p>Other precautionary measures, specifically the introduction of corridors around new and existing overhead lines, were considered but were considered to be disproportionate in light of the evidence and were not adopted.</p> <p>A full Environmental Impact Assessment (EIA) assessment has been completed, and the results are detailed in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement). Impacts of pylons on noise receptors have been assessed in ES Chapter 14: Noise and Vibration (document reference 6.14), including details of appropriate mitigation.</p> <p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken and is presented in ES Chapter 13: Landscape and Visual (document reference 6.13). The assessment is based on the Project design as described</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>in ES Chapter 4: Project Description (document reference 6.4).</p> <p>The proposed overhead line conductor design is a relatively quiet conductor that National Grid uses for overhead lines operating at 400 kV. The proposed 'triple Araucaria' design ensures that the electrical stresses on the conductors/wires remain as low as practicable. Pylon fittings, such as insulators, dampers, spacers, and clamps, are designed and procured in accordance with a series of National Grid Technical Specifications to reduce the potential for audible noise and wind-induced noise to occur. Operational noise is not likely to be significant at nearby sensitive receptors under any weather conditions.</p> <p>Operational noise from overhead lines is scoped out of the ES (Volume 6 of the DCO application), in accordance with the Scoping Opinion (document reference 6.20), on the basis that a low noise conductor system is proposed. However, information on noise from overhead lines is provided in Appendix 14.5: Operational Noise from Overhead Lines (Informative) (document reference 6.14.A5), for information.</p>				
9-2.814	Request that National Grid and the Government continue the last Government's pledge to urgently review the pylon presumption (e.g. to save money for billpayers and deliver infrastructure more quickly, through far less local opposition)	It is the National Policy Statement for Electricity Networks Infrastructure (EN-5) paragraphs 2.9.20 to 2.9.25 that sets out the government's position that overhead lines should be the strong starting presumption for electricity networks developments in general and where this is reversed.	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		The amendment of a National Policy Statement is a matter for the Secretary of State subject to requirements concerning consultation, publicity and parliamentary scrutiny. This is a separate process under the Planning Act 2008 and sits outside the remit of the Project.				
9-2.815	Suggest that the Project is funded by National Grid and offshore generators, instead of using public money	<p>National Grid is funded by a price control mechanism which is agreed with and set by the regulator, the Office of Gas and Electricity Markets (Ofgem). National Grid pays up front the costs to build a new power transmission line. The cost is then gradually passed to consumers through their electricity bills over the next 40 years or so. The funding for these up-front costs comes from National Grid's shareholders and the institutions that lend us money. Across all our investments in our vital infrastructure, this amounts to many billions of pounds. They invest in us because they expect that we will make a sufficient profit to provide an appropriate return on their investment and eventually pay them back. This brings a major benefit to electricity bill payers as it allows the recovery of the cost of our investment to be spread out over many years, rather than having a spike in electricity bills when we build a large new transmission connection.</p> <p>Cost is a factor that has been, and will continue to be, taken into consideration throughout the development of the Project as these will eventually be passed on to the consumer through the agreed Ofgem mechanisms.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.816	Suggest that all manufacturing is transferred to Great Yarmouth (e.g. to create local jobs close to the electricity source)	From National Grid's previous experience with similar projects, it is expected that around 65% of the Project cost would be spent on civil engineering works (e.g. excavations, foundations, construction and reinstatement) and around 35% on plant and equipment (e.g. pylon materials, conductors and cables). It would be expected that some of the plant and equipment would be sourced from UK suppliers. However, previous experience suggests that much of the plant and equipment supply would come from outside of the UK. National Grid is committed to working with local suppliers and contractors where possible, contributing to the local economy.			X	
9-2.817	Concern that further connections will be needed to the East Anglia Connection Node (EACN) in future (e.g. third party connections), which will each require more local infrastructure (substations) and connections, and suggest that National Grid should provide a single overhead line from the EACN to the coast (e.g. where third parties will connect in) rather than undertaking multiple projects (e.g. each connecting to the EACN)	The point of connection to the National Electricity Transmission System (NETS) for further connections is not defined by National Grid so we are not in a position to comment. This is determined by the Network Electricity System Operator (NESO). And only when connection agreements are signed and general locations defined would National Grid become involved.			X	
9-2.818	Suggest that an offshore solution is used for the Project as this will not only be cheaper than an on land solution, but it will only take several weeks compared with the two to three years for an on land solution	Offshore and onshore projects together help resolve the task of moving power around the country economically and efficiently. In some cases, offshore solutions are the most viable and economic. The power flows that the Project is needed to facilitate is very high – 6 GW.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Offshore cables can only take a third (2 GW) of the power of an overhead line so, in this case three offshore projects would be required. At each end of a subsea cable, a 'converter station' would be required. These are very large and cost several hundred million pounds each. We estimate that the offshore equivalent for this Project would cost about 4 times as much. Our calculations are set out in the 2025 Strategic Options Backcheck & Review document (document reference 7.17).</p> <p>National Grid must respond to the scale and timing of connection agreements as part of its duties and obligations. A number of these, drive a need for the timing of the reinforcement delivered by the Project to meet a 2030 timescale. An integrated offshore grid alternative cannot meet this deadline, something recognised by Government, through independent reviews, and as published in the Holistic Network Design. As such this approach would not meet the need of the Project it was not addressed in that document.</p>				
9-2.819	Request for the energy to be delivered to London via the Thames Estuary	National Grid has considered the use of an offshore connection to connect into Tilbury. This presents a number of technical and environmental challenges but may be achievable. However, in making a balanced decision this option was less preferred due to the substantially increased cost to achieve the necessary power flows. This is reported in the 2025 Strategic Options Backcheck and Review (document reference	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		7.17). Whilst noting the respondent's preference, in the absence of new evidence or the identification of new factors no change is proposed with previous decisions remaining valid.				
9-2.820	Suggest onshore wind energy generation instead of offshore windfarms (e.g. to avoid the need to transmit energy)	National Grid is legally obliged (under our Transmission Owner Licence) to provide capacity at the dates formally agreed in contracts with energy generators (or customers). National Grid does not determine or implement policies that influence the form of energy developments. Our role is to respond to the connection requirements for projects that are developed in line with Government policy to integrate them into the National Transmission System in a timely, economic and efficient manner in line with relevant policies and our duties.			X	
9-2.821	Suggest that the existing overhead lines from Pitsea to Braintree are reinforced or upgraded instead to mitigate damage to the countryside / Suggest that the Project should run in closer to or parallel to the existing overhead lines from Pitsea to Braintree to mitigate damage to the countryside	In the Corridor and Preliminary Routeing and Siting Study (CPRSS) published as part of the 2022 non-statutory consultation and in the 2023 and 2024 Design Development Report's (available on the Project website) National Grid sets out the challenges associated with routeing to the east of Chelmsford parallel to the existing 400 kV overhead line (replacing the alignment of existing 132 kV overhead line). Whilst noting the respondent's preference, no new factors have been identified nor new evidence is provided nor identified to reduce the greater effects or address the constraints to routeing. As such the eastern alignment remains less preferred and no change has been proposed.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.822	Suggest that angle towers for the Project should not be used / located near Grade I listed buildings	National Grid has routed and sited the alignment in accordance with the Holford Rules. A summary of the Holford Rules is provided within Appendix I22 of this report. Where we have tried to minimise the distance to listed buildings, it is not always possible. We have produced an Environmental Impact Assessment (EIA) which includes a heritage assessment (see Environmental Statement (ES) Chapter 11: Historic Environment (document reference 6.11)) which has assessed the impacts of the Project on listed buildings, this assessment has also influenced the design of the Project.			X	
9-2.823	Suggest that National Grid should integrate Sealink with North Falls and Five Estuaries (e.g. for the removal of the East Anglia Connection Node (EACN) and underground cables through the Dedham Vale and surrounding areas) regardless of whether or not the Government decides to contribute further funds to it in the form of subsidy	National Grid supports the conclusions drawn in the review of the potential for Offshore Co-ordination and Support Scheme to facilitate net zero aspirations of the government, that integrating SeaLink with North Falls and Five Estuaries does not provide the most appropriate and cost-effective means of achieving the reinforcement needs and no change is proposed.			X	
9-2.824	Suggest that Five Estuaries and North Falls are connected into an upgraded Tarchon instead of Sea Link and that Tarchon is connected at Bradwell, Tilbury or Grain	With regards to connecting the windfarms via an upgraded Tarchon connector at the old Bradwell power station (or at Tilbury or Grain), there is an existing overhead line connection to the Bradwell B site. This has been operating at lower voltage (132 kV), has not been used for a number of years and is in generally poor condition. This overhead line would need to be rebuilt, however, this onward connection via Rayleigh to Tilbury			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>is also constrained by urban development and further designations and some sections may need to be re-routed if connections were made at Bradwell. Additionally, any connection point also requires two points of connection to the National Electricity Transmission System (NETS) (to meet compliance standards) requiring either a double overhead line through the Bradwell peninsula and onwards to separate locations or a connection back to Bramford (in addition to one towards Tilbury). A connection to Bramford would require connections to cross the Special Protection Area (SPA) designated Blackwater Estuary (3 km to 7 km tunnel likely to be required at much greater cost) as well as interact with other Special Area of Conservation (SAC) and SPA designations.</p> <p>The existing network through Norfolk, Suffolk and Essex would also still need to be upgraded to transport the electricity due to come onto the network in the Norwich area and provide the necessary two points of connection to the NETS. Taken together a Bradwell point of connection requires a greater amount of new infrastructure and is therefore less economic and efficient and expected to be associated with greater environmental effects. Similarly extending and upgrading the Tarchon interconnector to connect at Tilbury or Grain requires that connection to be built in addition to the Norwich to Tilbury reinforcement and overall requires additional infrastructure. Tarchon is also a private entity and therefore there are additional</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		implications to achieve an increased capability. Overall, the suggested change would require additional infrastructure and is therefore less preferred.				
9-2.825	Criticism that the Project is not more direct (e.g. proposed to be routed in a zig-zag) (whole Project)	The general arrangement is guided by the various points that need to be connected by the reinforcement which have been confirmed through the project development phase. For the selected corridor / route, a more direct routeing could theoretically be achieved but would have a consequence of increased effects such as much closer proximity to certain homes and listed buildings. It would also oversail to a greater degree areas of woodland leading to more extensive removal and greater effects. A more balanced approach has been taken to introduce additional angle pylons to allow for more avoidance of effects by routeing around homes, constraints and environmental features. We consider that an appropriate balance has been struck.			X	
9-2.826	Suggest that pylons for the Project should be located closer to field boundaries (generally, no location given; specific change requests previously provided to National Grid)	National Grid notes the preference from certain landowners for pylons to be situated on hedge lines where possible to reduce the impact on agricultural activities and reduce land take. We have assessed requests from landowners on an individual basis and have moved pylons to the edges of fields where this can be achieved without undue diversion or introducing safety concerns.			X	
9-2.827	Suggest coordination between the previous proposal for a connection named TENC between Tilbury and	The Strategic Options Back Check and Review (SOBR) sets out the network considerations and how each may			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	Grain as part of the Project and the ongoing Grain to Tilbury project (which appears to be a re-engineering of an existing sub-Thames tunnel and replacement of an existing cable), and suggest that the proposed tunnel could also carry additional cables (e.g. to make TENC cheaper / easier to deliver)	interface with each other. The different reinforcements are broken up into individual aspects to allow appropriate flexibility in different technical solutions. The SOBR concludes that the proposals being taken forward present the best solution both in terms of delivering technical solutions in an efficient and economic manner.				
9-2.828	Suggest that construction compounds for the Project should be located away from residential and Listed Buildings, perhaps locating these near to farm buildings or other commercial activities (e.g. to minimise disruption to residents)	National Grid notes the respondent's feedback. The location of construction compounds and laydown areas are determined by proximity to the alignment and the haul road as well as to Primary Access Routes (PARs). While we have tried to locate compounds away from residential properties and listed buildings, this isn't always possible as there may not be an alternative suitable location. We have completed an Environmental Impact Assessment (EIA) which includes impacts such as noise, dust and traffic which have the potential to cause disruption. Details, including any proposed mitigation, are presented within the Environmental Statement (ES) (Volume 6).			X	
9-2.829	Suggest that underground cables for the Project are installed using ducting, unless circumstances dictate that it is not the best solution; with Horizontal Directional Drilling (HDD) only used in specific locations/circumstances	The Project is proposing to install underground cables as described in this request. All underground cables are proposed to be ducted (rather than direct buried) and trenchless installation is used in specific locations, where dictated by environmental or technical constraints.	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.830	Suggest the Project is integrated with the Suffolk-Kent Sea Link (e.g. to reduce costs for an offshore option)	The Sea Link project provides only a 2 GW capability whereas the Project need is 6 GW. This would require additional reinforcement by multiple High Voltage Direct Current (HVDC) projects hence why National Grid concludes that an increased marine component is not the preferred option as the cost becomes disproportionately high for the power transfer achieved. No change is therefore proposed.			X	
9-2.831	Suggest that the EACN substation is relocated to next to the sea (e.g. near Sizewell; near Bawdsey; near Bradwell)	The identification of the site for the East Anglia Connection Node (EACN) substation has considered a number of other locations although no brownfield sites of sufficient size have been identified. The reinforcement need being met by the project could potentially be met by a connection to Grain but as set out in the 2022 Corridor and Preliminary Routeing and Siting Study (CPRSS) (available on the Project website), and confirmed in subsequent back checks, would be at considerably increased costs and therefore would be less economic and efficient and not preferred. Alternatives to make the EACN substation connections at Bradwell have been considered in the 2023 and 2025 Design Development Reports (available on the Project website) but were considered less preferred. The overhead line from Bradwell has been operating at lower voltage (132 kV) and has not been used for a few years and is in generally poor condition. This overhead line would need to be rebuilt however this onward connection via Rayleigh to Tilbury is also constrained by			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		urban development and further designations and some sections may need to be re-routed if connections were made at Bradwell. Additionally, any connection point also requires two points of connection to the National Electricity Transmission System (NETS) (to meet compliance standards) requiring either a double overhead line through the Bradwell peninsula and onwards to separate locations or a connection back to Bramford (in addition to one towards Tilbury). A connection to Bramford would require connections to cross the Special Protection Area (SPA) designated Blackwater Estuary (3 km to 7 km tunnel likely to be required at much greater cost) as well as interact with other Special Area of Conservation (SAC) and SPA designations. The existing network through Norfolk, Suffolk and Essex would also still need to be upgraded to transport the electricity due to come onto the network in the Norwich area and provide the necessary two points of connection to the NETS. Taken together a Bradwell point of connection requires a greater amount of new infrastructure and is therefore less economic and efficient and expected to be associated with greater environmental effects. No change is therefore proposed.				
9-2.832	Suggest that the existing UK Power Networks overhead line between Bramford and Lawford substation is upgraded instead of the Project (e.g. like Bramford and Twinstead), and suggest	National Grid notes the respondent's feedback. The existing 132 kV overhead line from Bramford to Lawford routes, as an overhead line, through the Dedham Vale National Landscape. We have previously considered this and other corridors through the National Landscape (including as underground cable through the National			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	connecting the North Shores Wind Farm to the existing Lawford substation	<p>Landscape) but considered them less preferred to that within which the alignment has been developed. The main reasons include greater effects on residential amenity, close routeing to the Flatford Mill complex of Grade I listed buildings and tourism centre and closer proximity to European designated sites. These considerations were published in the Corridor and Preliminary Routeing and Siting Study (CPRSS) published in support of the 2022 non-statutory consultation and back checked in the 2023 and 2024 Design Development Reports (available on the Project website). In the absence of new evidence, we consider these reasons for that to be less preferred to remain valid and on this basis no change is proposed.</p> <p>Lawford substation is a Distribution Network Operator substation and is therefore not a National Grid asset. Connecting the North Shores Wind Farm into the existing Lawford substation is not feasible due to the capacity and number of connections required to connect the wind farm into the network.</p>				
9-2.833	Suggest a more direct route for the Project (all sections; plan provided by respondent)	National Grid has considered more direct alternatives throughout the Project and clearly outlined in the 2023, 2024 and 2025 Design Development Reports (available on the Project website and document reference 5.15) why it has concluded a particular preference. We note the respondent's preference but in the absence of new evidence nor identification of any new factors the			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		previous decisions remain valid, and no change is proposed.				
9-2.834	Suggest that Norwich should not be the starting point for the Project (e.g. as the need boundary is the North Sea; as the Project is needed to move power south, towards London, out of the area north of the EC5N boundary, from the Sizewell generation group, and from the Essex generation group rather than from Norwich to Tilbury)	The development of the strategic proposal was initially set out in the Corridor and Preliminary Routeing and Siting Study (available on the Project website) and has subsequently been backchecked and presented in the 2025 Strategic Options Backcheck and Review (document reference 7.17). Whilst noting the respondent's preference, National Grid continues to consider the project, as presented from Norwich to Tilbury via Bramford and the East Anglia Connection Node (EACN) substation, to be the appropriate form for the connection requirement. The power transfer is not specifically to London but is the least cost means of making the connection to cost-effectively reinforce the network under various demand and supply patterns.			X	
9-2.835	Criticism of National Grid's consideration of EAS3 (e.g. the possibility that Bradwell could be connected to the substation near Sizewell and possible on to Richborough Offshore Project has not been considered) / Suggest further consideration of EAS3, and that the substation near Sizewell could be used for the connection to the North Falls Windfarm to the substation near Sizewell and the export of power to eastern Europe (e.g. as this would be the most cost and environmentally effective location)	EAS3 envisages a 6 GW connection from Bramford to Bradwell. To replace this with the equivalent between Sizewell and Richborough (or other equivalent) would require the 2 GW Sizewell to Richborough connection to be replicated a further two times. This substantially changes the relative performance of this option making it considerably higher capital cost.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.836	Suggest that National Grid position individual pylons on edges or corners of fields / woodlands	National Grid notes the preference from certain landowners for pylons to be situated along field boundaries where possible to reduce the impact on agricultural activities and reduce land take. We have assessed requests from landowners on an individual basis and moved pylons where possible where this is technically feasible, doesn't increase visual effects or increase vegetation removal or reduce compliance with the Holford Rules by adding angle pylons (the Holford Rules can be found in Appendix I22 of this report).			X	
9-2.837	Suggest that underground cables are used for the Project between the A12 and the A129	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Park, The Broads, or Area of Outstanding Natural Beauty (AONB))</i> . Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project between the A12 and the A129 would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.</p>

Economic / Employment Impact						
9-2.838	Concern about negative impact on businesses	<p>Through the routeing and siting exercise, National Grid has sought to reduce as far as practicable impacts to businesses.</p> <p>Impacts on local businesses within the Local Study Area (the Order Limits) and within the 3 km Study Area (where visual impact is likely to be an economic consideration) are assessed in Environmental Statement (ES) Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15). As part of this assessment, a range of mitigation measures have been considered to reduce disruption to businesses and their users during the construction phase of the Project. These measures are identified in ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15), the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) which accompany the Development Consent Order (DCO) application.</p>	X	X	X	
9-2.839	Concern about impact of the Project on the economy	<p>Chapter 15: Socio-economics, Recreation and Tourism of the Environmental Statement (ES) (document reference 6.15) assesses the potential construction effect on the local economy and tourism economy.</p> <p>A temporary, short-term, negligible to minor beneficial and not significant effect is anticipated on the local</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>economy during construction from the Project's direct, indirect and induced contribution to the local economy.</p> <p>Following construction good practices and mitigation measures outlined in the Outline Code of Construction Practice (document reference 7.2), Outline Construction Traffic Management Plan (document reference 7.3) and Outline Public Right of Way (PRoW) Management Plan (document reference 7.6) to mitigate potential air quality, noise, traffic and effects on accessibility, a temporary, short-term, negligible adverse and not significant effect is anticipated on the tourism economy during construction.</p> <p>Economic effects during operation have been scoped out of the EIA as agreed in the Scoping Opinion.</p>				
9-2.840	Suggest that job / employment opportunities should be offered as part of the Project	<p>National Grid is committed to working with local suppliers, facilitated by supporting forums (such as the local Chambers), on electricity industry skills and workforce planning. National Grid is also committed to providing a coordinated regional approach to jobs and skills opportunities. This commitment is broader than the individual project and separate to any commitments under the proposed development consent order for this Project. The socio-economic effects of the project are assessed in Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) of the Environmental Statement. Post construction job opportunities are limited given the nature of the development however we will still work with Local</p>		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Authorities (including facilitating local partners) to understand what is important to them around skills and employment to ensure we leave a lasting positive legacy in the communities where we operate. With regards to a delivery mechanism, the above measures will be delivered as part of our community benefit package, which will look at both local and regional initiatives. This will be delivered outside the development consent process and is not a material consideration in the decision on the proposed Project or a matter to be secured as part of the DCO, as per the Community Funds for Transmission Infrastructure: Guidance (DESNZ, 2025).				
9-2.841	Concern about the impact of the Project on commuting to work (e.g. London)	The impact of the construction traffic along the Strategic Road Network has been assessed in the Transport Assessment (document reference 7.11).			X	
9-2.842	Concern that the Project will not offer many employment opportunity benefits (e.g. opportunities will only be temporary during the construction phase, and only a small number of opportunities will be available for ongoing maintenance)	National Grid is committed to working with local suppliers, facilitated by supporting forums (such as the local Chambers), on electricity industry skills and workforce planning. National Grid is also committed to providing a coordinated regional approach to jobs and skills opportunities. This commitment is broader than the individual project and separate to any commitments under the proposed development consent order for this Project. The socio-economic effects of the project are assessed in Chapter 15 of the Environmental Statement (document reference 6.15). Post construction job opportunities are limited given the nature of the			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		development however we will still work with Local Authorities (including facilitating local partners) to understand what is important to them around skills and employment to ensure we leave a lasting positive legacy in the communities where we operate. With regards to a delivery mechanism, the above measures will be delivered as part of our community benefit package, which will look at both local and regional initiatives. This will be delivered outside the development consent process and is not a material consideration in the decision on the proposed Project or a matter to be secured as part of the Development Consent Order (DCO), as per the Community Funds for Transmission Infrastructure: Guidance (DESNZ, 2025).				
9-2.843	Suggest that East Suffolk should be included in the economic development and skills study area, as described in Table 15.1 of the Preliminary Environmental Information Report (PEIR) (e.g. as per the same rationale as widening of the wider study area to include West Suffolk due to the location of the project office and Ipswich Borough Council to more accurately reflect potential sources of labour where commuting distance is 45 minutes or less, given that major settlements of East Suffolk are located within this 45-minute commuting radius in order to adequately reflect the labour market area and commuting patterns for construction workers for infrastructure projects; given the large number of	<p>The study area for local employment has not utilised the 45-minute commuting radius. Instead, a broader study area, encompassing the local planning authorities through which the Project passes, has been adopted. This approach has been informed by project experience gained from other National Grid schemes, including Yorkshire GREEN and the Bramford to Twinstead Reinforcement.</p> <p>The inclusion of West Suffolk District within the Wider Study Area is primarily due to the location of the Project office in Bury St Edmunds and the proximity of Ipswich, a densely populated area situated adjacent to the Project. In contrast, East Suffolk, being geographically larger and located further from the Project with no</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	other Nationally Significant Infrastructure Projects which will be under construction in the region)	Project office within the local authority, is not considered proportionate to include within the WSA.				
9-2.844	Concern that socio-economics, recreation and tourism have been grouped together when National Grid has considered the inter-project Zone of Influence (ZOI) for the Project (Table 17.4 in the Preliminary Environmental Information Report (PEIR)), and suggest that socio-economics should be considered separately as the current ZOI of 1km to allow for inter-project impacts to be accurately represented. With this, suggest that socio-economics is considered independently and that the ZOI for this environmental topic specifically is widened in order to accurately reflect the employment impacts across the wider study area, which has been identified as significantly bigger than 1km	Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) of the Environmental Statement assesses three study areas, including the Local Study Area, 3 km Study Area and a Wider Study Area (WSA) (being the local authority areas through which the route passes). The assessment covers the potential effects on the local economy, employment and tourism accommodation bedspace during construction for the WSA which is significantly bigger than 1km.		X		
9-2.845	Suggest that 5% of the roles required by the Project should be filled through 'earn and learn' positions (e.g. apprenticeships, graduates on formalised training schemes and sponsored students as per the definition of the '5% club'), and suggest that National Grid should commit to a minimum number of apprenticeship opportunities to be provided to local people	National Grid is committed to working with local suppliers, facilitated by supporting forums (such as the local Chambers), on electricity industry skills and workforce planning. National Grid is also committed to providing a coordinated regional approach to jobs and skills opportunities. This commitment is broader than the individual project and separate to any commitments under the proposed development consent order for this Project. The socio-economic effects of the project are assessed in Chapter 15: Socio-economics, Recreation and Tourism of the Environmental Statement (document		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		reference 6.15). Post construction job opportunities are limited given the nature of the development however we will still work with Local Authorities (including facilitating local partners) to understand what is important to them around skills and employment to ensure we leave a lasting positive legacy in the communities where we operate. With regards to a delivery mechanism, the above measures will be delivered as part of our community benefit package, which will look at both local and regional initiatives. This will be delivered outside the development consent process and is not a material consideration in the decision on the proposed Project or a matter to be secured as part of the DCO, as per the Community Funds for Transmission Infrastructure: Guidance (DESNZ, 2025).				
9-2.846	Concern that National Grid has prioritised the environmental strand of sustainable development (e.g. with the aim of net zero) over the two other strands of sustainability for the Project (e.g. economic and social), and suggest that all three strands should be respected with no one strand emphasised over another in order for the Project to be sustainable	A number of environmental factors are considered from the early development stages of the Project. Whilst an element of the needs case (which can be found in the Strategic Options Backcheck Review (document reference 7.17) submitted as part of the Development Consent Order (DCO) application) for the Project is considered to be supporting the commitment to achieving net zero carbon emissions by 2050. National Grid has also considered potential impacts upon the environment through the Environmental Impact Assessment (EIA), in line with the EIA process as required by the Infrastructure Planning (Environmental Impact Assessment) Regulations 2017 ('the Infrastructure EIA Regulations'). The DCO application is		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		accompanied by an Environmental Statement (ES) (document reference Volume 6: Environmental Statement) prepared in accordance with the Infrastructure EIA Regulations. The ES identifies and assesses the likely significant effects on the environment, resulting from the construction and operation of the Project and recommends appropriate mitigation to reduce effects, specifically socio-economic impacts which are assessed in Chapter 15: Socio-economics, Recreation and Tourism of the ES (document reference 6.15).				
Environmental Impact						
9-2.847	Concern about negative impact of the Project on the Green Belt(s) (generally - no location given)	<p>To facilitate the Project, it would be necessary to route through the Metropolitan Green Belt. National Grid has considered the effects on the Green Belt and all of the options connecting into Tilbury identified in the Corridor and Preliminary Routeing and Siting Study (CPRSS) would result in new and upgraded infrastructure in the Green Belt.</p> <p>The National Electricity Transmission System (NETS) transports energy from where it is generated to where it is used, in homes, schools, hospitals, businesses, and factories. Electricity networks are an established feature in our landscapes, taking energy across open countryside to towns and cities where it is needed. To ensure the national electricity network can transport energy efficiently there are numerous electricity</p>		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>transmission connections crossing Green Belts. Many of these connections are by way of overhead lines. By their nature, electricity transmission infrastructure (overhead lines) within the Green Belt is inevitable due to the need to transport energy around the country and the need to avoid the most built-up areas around our towns and cities (Holford Rule Supplementary Note 1 - A summary of the Holford Rules is provided within Appendix I22 of this report).</p> <p>Some electricity infrastructure such as overhead lines, are considered to be engineering operations. By the nature of their design, and the sensitive siting, some of this infrastructure such as pylons and conductors may not be considered inappropriate development in the Green Belt as they do not conflict with Green Belt purposes and preserve openness. Although overhead lines may occupy long corridors within Green Belt, they involve little physical change to the land through which they pass and leave a large majority of the land beneath them free from development and therefore open.</p> <p>The Planning Statement (document reference 5.6), submitted with the application for development consent, includes an assessment of the Project against Green Belt planning policy (as contained in National Policy Statement EN-1 and the National Planning Policy Framework).</p>				
9-2.848	Concern that the Project will impact SSSIs (generally - no location given)	Through routeing, siting and design development, National Grid has sought to reduce, as far as	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>practicable, impacts on biodiversity and in particular features of high ecological value such as Sites of Special Scientific Interest (SSSI). The Project avoids all direct impacts on SSSIs, with no long-term negative impacts anticipated on any SSSIs as a result of the Project. Potential direct and indirect impacts on each SSSI within the study area have been considered within the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8) and any necessary mitigation detailed to ensure no significant residual effects.</p> <p>National Grid will continue to engage with Natural England.</p>				
9-2.849	Concern that the Project will impact ancient woodland (generally - no location given)	<p>Through routeing, siting and detailed design, National Grid has sought to reduce, as far as practicable, impacts on biodiversity and in particular features of high ecological value, such as ancient woodland. A standard 15 m buffer from construction activities has been applied where practicable. Potential direct and indirect impacts on each block of ancient woodland within the study area have been considered within the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8) and any necessary mitigation detailed to ensure no significant residual effects. An Ancient Woodland and Veteran Tree Strategy is included as part of the Outline Landscape and Ecological Management Plan (document reference 7.4, Appendix B). The Outline LEMP has been developed in</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		consultation with relevant stakeholders including Natural England and local planning authorities.				
9-2.850	Concern that the Project will impact nature reserve / RSPB reserve / Special Protection Area (SPA) (please provide in details sheet)	Through routeing, siting and design development, National Grid has sought to reduce, as far as practicable, impacts on biodiversity and in particular features of high ecological value, such as local wildlife sites (LWS), Royal Society for the Protection of Birds (RSPB) reserves and Special Protection Area (SPA's). Whilst there are no impacts on RSPB reserves, potential direct and indirect impacts on LWS's and SPA's within the study area have been considered within the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8). SPA's and the associated impact on birds has also been considered within the Habitats Regulations Assessment (HRA) (document reference 5.3).		X	X	
9-2.851	Concern that the Project will impact Ramsar sites (generally - no location given)	Through routeing, siting and design development, National Grid has sought to reduce, as far as practicable, impacts on biodiversity and in particular features of high ecological value, such as Ramsar sites. Although there are 13 Ramsar sites within the study area, current proposals avoid the majority of impacts, with no long-term negative impacts anticipated on any Ramsar site as a result of the Project. Potential direct and indirect impacts on each scoped in Ramsar site has been considered within the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8) and/or Habitats Regulations Assessment			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		(HRA) depending on potential impact pathways. Any necessary mitigation has been detailed within the ES, HRA and the Outline Code of Construction Practice (CoCP) (document reference 7.2) to ensure no significant residual effects, as agreed with Natural England.				
9-2.852	Concern that the Project will result in a negative impact on the environment / countryside generally (generally - no location given)	<p>National Grid has sought to reduce, as far as practicable, impacts on the environment / countryside through routeing and siting and an ongoing iterative design process which has taken on board feedback at different stages of the Project. The iterative design process sought to avoid areas of highest concern, for examples through changes to the route alignment or changes to the method e.g. trenchless crossings. National Grid has engaged with a range of stakeholders (including Statutory Environmental Bodies (SEBs) and relevant local planning authorities) throughout the development of the Project design and environmental assessment work.</p> <p>National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project. The results of this assessment are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation (and maintenance) of the Project and</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>recommends appropriate mitigation measures to reduce potential effects.</p> <p>A number of mitigation measures have been incorporated into the Project design. Mitigation relevant to specific environmental topics (including Ecology and Biodiversity, Landscape and Visual and Historic Environment) are presented in the relevant ES chapters. The Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Code of Construction Practice (CoCP) (document reference 7.2) contain a list of relevant good practice measures to avoid or reduce risks to habitats and species.</p> <p>In addition to the EIA, National Grid has set itself a target of delivering 10 % biodiversity net gain (BNG) with environmental and societal benefits on all construction projects, meaning that as a result of measures taken, the biodiversity rating of the area will be enhanced by 10 % greater than prior to the construction of the Project. The BNG target for the Project is currently voluntary and aligned with our corporate sustainability commitment.</p>				
9-2.853	Suggest that areas other than the AONB should be protected / Criticism that only the AONB has been considered (please use a separate code if a location is provided)	National Policy Statement (NPS) EN-5 states that the Government considers overhead lines to be appropriate and acceptable in most instances, although it recognises that there may be, at particularly sensitive locations, potential adverse landscape and visual impacts of overhead line infrastructure that make it inconsistent with our duties and relevant planning policy.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>The National Landscape designation is one such location where there is a presumption that underground cable technology is adopted with the extent of underground cabling extending beyond the boundary in response to the potential for the Project to affect National Landscapes. Our proposals include a total of approximately 20 km of underground cable through and in the vicinity of the Dedham Vale National Landscape, including a section at Great Horkesley to reduce the changes in views and setting of the National Landscape from within and adjacent to its designated boundary. Underground cabling is also proposed for short sections near Fairstead and North Tilbury.</p> <p>The higher cost of underground cables to bill paying consumers, and the environmental implications of installing underground cables and maintaining them elsewhere, are not considered to be justifiable in the context of national policy or National Grid's statutory duties, which include the need to be economic and efficient.</p> <p>A Landscape and Visual Impact Assessment (LVIA), presented in ES Chapter 13: Landscape and Visual (document reference 6.13), has been undertaken as part of the Environmental Impact Assessment (EIA). The LVIA sets out potential effects on landscape and visual receptors.</p>				
9-2.854	Concern about the quantity of cement needed to secure pylons in place for the Project, due to the	National Grid notes the respondent's feedback. The pylon foundation type and design is based on ground			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	toxins which cement emits which are easily absorbed into the soil	<p>investigations undertaken to inform the detailed design of the Project which includes where and the type of concrete used.</p> <p>National Grid has existing processes in place to source materials from sustainable sources and to use recycled materials where these do not compromise the required design standards and operational life, where practicable. National Grid and their contractors shall adhere to relevant legislation, policy and guidance when constructing the Project.</p>				
9-2.855	Concern that the Project will impact conservation area (generally - no location given)	<p>Through routeing and siting National Grid has sought to reduce as far as practicable potential impacts on the historic environment. The impacts of the Project on the historic environment are assessed in Chapter 11: Historic Environment of the Environmental Statement (ES) (document reference 6.11). The assessment considers the potential impact on conservation areas and includes assessment of potential for physical impact and impact through change to setting that affects the value of a heritage asset. The assessment is supported by walkover and setting surveys, as documented in Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1). The assessment concludes that some conservation areas would experience significant effects. In addition to the proposals in the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4), the Outline Archaeological Mitigation Strategy and</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Written Scheme of Investigation (WSI) (document reference 7.5) sets out appropriate mitigation for the historic environment. The Project has engaged with Historic England and relevant planning authorities on aspects relating to heritage, including appropriate mitigation measures and techniques and to take their views into account during Project development.				
9-2.856	Concern about the impact of the Project on protected lanes	<p>National Grid has sought to reduce, as far as practicable, impacts on protected lanes through routeing and siting and an ongoing iterative design process which has taken on board feedback at different stages of the Project.</p> <p>Further details on the impact of the Project on protected lanes can be found in Environmental Statement (ES) Chapter 11: Historic Environment (Document Reference 6.11) and ES Chapter 13: Landscape and Visual (Document Reference 6.13).</p> <p>A Landscape and Visual Impact Assessment (LVIA) in ES Chapter 13: Landscape and Visual (Document Reference 6.13) sets out the potential landscape and visual effects, including consideration of visual amenity of people travelling along protected lanes and also impacts on landscape character which may for example be influenced by vegetation loss along protected lanes during construction.</p>	X	X	X	
9-2.857	Criticism that the Project sets a bad precedent for other developments in the countryside	National Grid has a duty under the Electricity Act to maintain and develop the National Transmission			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		System. The design is developed in line with relevant policy, such as National Policy Statements for Energy EN-1 and for Electricity Network Infrastructure EN-5. Routeing and siting has been considered in line with the Holford and Horlock Rules to reduce effects on the countryside and particular features. A full Environmental Impact Assessment (EIA) has been completed, and the results are detailed in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement). Impacts on the landscape are detailed in ES Chapter 13: Landscape and Visual (document reference 6.13). On the assumption that it receives development consent, National Grid considers the Norwich to Tilbury project to be appropriate and acceptable development.				
9-2.858	Suggest that National Grid use publicly available information such as Norfolk Tree and Hedge Map to help inform the design of the Project	<p>National Grid notes the respondent's feedback.</p> <p>National Grid has sought to reduce, as far as practicable, impacts on trees through routing and siting and an ongoing iterative design process which has taken on board feedback at different stages of the Project. We have engaged with a range of stakeholders (including Statutory Environmental Bodies (SEBs) and relevant Local Planning Authorities) throughout the development of the Project design and environmental assessment work.</p> <p>Appendix 13.6: Arboricultural Impact Assessment (AIA) (document reference 6.13.A6) predominantly uses baseline tree data-collected in the field and cross referenced against publicly available information, such</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		as the Ancient Tree Inventory and provided Tree Preservation Order data. The AIA identifies trees which have the potential to be affected by the Project, assesses the impact of the Project on those trees, and recommends protection measures as necessary to ensure the health of retained trees.				
9-2.859	The full extent of the arboriculture impacts of these should be included with a BS 5837 (2012) – Trees in Relation to Design, Demolition and Construction Assessment. This Assessment should include a tree constraints plan to inform design choices at an early stage and enable arboriculture impacts to be avoided and designed out where possible	<p>The methodology for the arboricultural tree survey and the assessment of impacts and reporting was agreed through the Environmental Impact Assessment (EIA) Scoping Report (document reference 6.19) which was submitted to the Planning Inspectorate in November 2022 and Scoping Opinion (document reference 6.20) received from the Planning Inspectorate in December 2022. Impacts on arboriculture are reported within Appendix 13.6: Arboricultural Impact Assessment (AIA) (document reference 6.13.A6) which has been submitted alongside the Development Consent Order (DCO) application.</p> <p>Tree constraints information has been used to inform the design of the Project, and a 'Trees and Hedgerows to be Removed or Managed Plan' (document reference 2.16) has also been submitted alongside the DCO application.</p>		X		
9-2.860	Request that the trees in Norfolk near Waveney Valley should be checked for ancient or veteran tree features and for the presence of protected species	Detailed arboricultural surveys have been undertaken across the route and the results have been used to inform the iterative design process. Details of which are presented in Environmental Statement (ES) Appendix 13.6: Arboricultural Impact Assessment (AIA) (document reference 6.13.A6).		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>The Ancient Woodland and Veteran Tree Strategy (Appendix B of the Outline Landscape and Ecological Management Plan (document reference 7.4)) sets out the ancient woodland and veteran tree surveys undertaken on the Project, the impacts and proposed mitigation measures.</p> <p>A range of protected species and other ecological surveys have been undertaken across Norfolk (near Waveney Valley) and the results are outlined in Chapter 8: Ecology and Biodiversity (document reference 6.8) and Appendices 8.1 to 8.16 (document reference 6.8.A1-6.8.A16) of the Environmental Statement (ES). This has included the assessment of trees for bat roosts and barn owl nests/roosts. Appropriate mitigation would be implemented where impacts are identified as agreed with Natural England and the Local Planning Authority as relevant.</p>				
9-2.861	Suggest that National Grid undertake more onsite surveys due to the limitations on aerial surveys	<p>A detailed survey scoping exercise has been undertaken to determine the most appropriate survey type, methods and location based on a range of factors including existing records, habitat suitability and likely impacts. Survey scope has been discussed and agreed with the relevant stakeholders to ensure a robust baseline assessment. Further details about the environmental surveys can be found in the Environmental Statement (document reference Volume 6: Environmental Statement).</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.862	Suggest that all construction compounds should be unlit when unoccupied and only fitted with motion activated lights where health and safety dictates	Proposed lighting would be designed in accordance with the appropriate design standards. Commitment GG26 the Outline Code of Construction Practice (CoCP) (document reference 7.2) secures that construction lighting will be of the lowest luminosity to safely perform each task and include motion sensors or switched off when not in use where it is safe and efficient to do so. In addition Commitment GG17 within the Outline CoCP (document reference 7.2) secures that any activity carried out or equipment located within a temporary construction compound that may produce a noticeable nuisance, including but not limited to dust, noise, vibration, and lighting, will be located away from sensitive receptors such as residential properties or ecological sites where reasonably practicable (see the Outline CoCP (document reference 7.2) for further details).			X	
9-2.863	Concern about responsibility and accountability with regard to who will be accountable for the long-term environmental health of areas impacted by the project (e.g. which organisations and stakeholders will be responsible)	For the majority of the route, National Grid will occupy land on a temporary basis for the purposes of construction only. Upon completion of construction and reinstatement of the land in accordance with the relevant environmental management plans (such as the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and environmental commitment GG07 of the Outline Code of Construction Practice (CoCP) (document reference 7.2), this land will be returned to the respective landowners upon their agreement that the land has been reinstated to its			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>former condition or a condition agreed by the land owner. The long-term maintenance and management of these areas will revert to the landowners, consistent with their existing land use responsibilities.</p> <p>In locations where environmental mitigation and enhancement measures such as replacement planting or habitat creation are required, National Grid will retain responsibility for monitoring and maintaining the health and condition of these areas for a period of five years. These obligations will be secured through the relevant Requirements in the Development Consent Order (DCO) and set out in the associated Landscape and Ecological Management Plan. Monitoring will include the assessment of planting success and the implementation of remedial measures where necessary to ensure that the objectives of the mitigation are met.</p> <p>National Grid is committed to ensuring that the environmental impacts of the project are appropriately mitigated and that long-term stewardship responsibilities are clearly defined and adhered to in line with legal and regulatory obligations.</p>				
9-2.864	<p>Concern about the methodology used to assess the impact of greenhouse gases emitted as a result of the project (e.g. how the duration of the pylons' operation in producing electricity has been factored into the greenhouse gas emissions calculations; how emissions associated with cement used for the pylon bases have been quantified; how cumulative emissions have been assessed), and request for</p>	<p>During our Option Selection Process, we aim to reduce Carbon Emissions and their impact on the society by calculating the Carbon Emissions and associated Carbon Cost of each option (this is calculated based on guidance from DESNZ) to inform the preferred option. We continue to measure carbon during the Design Process and benchmark this against historic projects by applying a red, amber, green (RAG) system. This</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	transparency and accountability regarding greenhouse gas emission calculations	<p>ensures that we strategically optimise the project from the design stage, which is when we create the maximum impact.</p> <p>During design, we create a Sustainability Action Plan to identify the opportunities for Carbon Reduction. During construction, we review and monitor the Carbon Emissions Quarterly and ensure that the project incorporates Carbon Reduction initiatives throughout the duration of construction.</p> <p>Throughout the Project Lifecycle, we calculate and track the Carbon Emissions using our in-house Carbon tools. These tools are based on the Carbon Asset Database which consists of Carbon Emissions associated with all our assets, materials, and construction activities. This database is owned by the three GB Transmission Operators and has recently been updated in line with the Inventory of Carbon and Energy Database version 4 (ICEv4).</p>				
9-2.865	Criticism that any green credentials created and enhanced by policy decisions to implement offshore wind farms are cancelled out by the Project which includes 158 kilometres of steel and concrete pylons being built across unspoilt countryside	The Overarching National Policy Statement for Energy (EN-1) (DESNZ, 2004) sets out the need case for new nationally significant electricity infrastructure. Section 3.3 recognises that the volume of onshore reinforcement works needed to meet decarbonisation targets is substantial ... and forecasts that over the next decade, a doubling of north-south power transfer capacity will be required. Specific mention is made of the need for 'substantial reinforcement in East Anglia to handle increased power flows from offshore wind generation'.	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>The Landscape and Visual Impact of the Project has been assessed in the Environmental Statement (ES) – Chapter 13 (document reference 6.13).</p> <p>The overall planning conclusions and balance, weighing impacts and benefits, is provided in the Planning Statement (document reference 5.6)</p>				
9-2.866	Concern about the impact of the Project on soils (e.g. degradation, soil compaction, soil structure, substrata of the soil, etc)	<p>The impact of the Project on soil resources and agricultural land is assessed in full in Chapter 6: Agriculture and Soils (document reference 6.6) of the Environmental Statement (ES). Appendix C: Outline Soil Resource Plan of the Outline Code of Construction Practice (CoCP) (document reference 7.2) provides details of the approach to soil handling which would be adopted during construction by the Main Works Contractor(s) (a requirement in the Development Consent Order (DCO) for compliance with the CoCP(s)) to protect and avoid damage to soil resources in line with the Defra Code and other good practice guidance.</p>	X	X	X	
9-2.867	Concern that the Project will impact natural land drainage	<p>Where the Project interacts with land drainage systems there is a commitment (AS05, W14 of the Outline Code of Construction Practice (CoCP) (document reference 7.2)) to maintaining the efficiency of the existing systems. The Project may include a system of 'cut-off' drains which feed into a new header drain and the Project will also consider surface water runoff measures. The Main Works Contractor(s) will ensure any affected land drains, within the Order Limits, as a result of the</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Project, will be reinstated and replacement drainage schemes will be installed where appropriate. A specialised drainage contractor(s) will review the drainage designs and provide advice to National Grid and the Main Works Contractor(s) during all relevant construction and reinstatement activities. Permanent records of the land drainage locations will be made and passed to the landowners/occupiers.				
9-2.868	Concern that the Project will result in a change of water table and consequential flooding / Concern that the Project will increase flooding / Concern that pylons will be sited on floodplains (generally)	National Grid has submitted a detailed flood risk assessment (FRA) (document reference 7.9) as part of its Development Consent Order (DCO) application. The FRA (document reference 7.9) characterises existing sources of flood risk with the Order Limits, including from rivers, surface water and groundwater flooding, and assesses the impacts of the Projects construction and operation, identifying control and mitigation measures to prevent increases in flood risk from these sources. These controls and mitigation measures are detailed in and secured through inclusion within the Outline Code of Construction Practice (CoCP) (document reference 7.2). The Project has sought to avoid locating pylons in fluvial floodplains. Where, by exception, this has not been possible, a mitigation strategy has been agreed with the Environment Agency, centring on provision of compensation floodplain storage, to ensure no increase in flood risk.	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.869	Criticism that National Grid won't provide 'enhancement to the environment' or 'Biodiversity Net Gain' as a result of this Project	<p>The Environment Act 2021 introduces a mandatory requirement for 10% Biodiversity Net Gain (BNG) for development (subject to certain exemptions), however this requirement is not yet in force for development consented pursuant to a Development Consent Order (DCO). Current indications are that it will apply to DCO applications submitted from May 2026, however this is yet to be confirmed.</p> <p>National Grid has committed to deliver 10% BNG with wider environmental and societal benefits on all construction Projects. The 10% BNG target for the Project is currently voluntary and aligned with our corporate sustainability commitment.</p> <p>As well as avoiding and minimising our impacts to nature, the Project considers the land required for mitigation, compensation and enhancement that can deliver BNG and wider environmental and societal benefits, which has been identified through Project design development. This would require delivery of offsite Biodiversity Units via habitat creation or enhancement actions in strategic areas, and all options have been considered in the BNG Report of the Environmental Statement (ES) (document reference 7.1).</p>	X	X	X	
9-2.870	Suggest that works within the Marine area require a licence from the Marine Management Organisation, and that National Grid should take the necessary steps to ascertain whether their works will fall below	<p>This comment has been noted.</p> <p>National Grid can confirm that no works are being carried out within a marine area that will require a</p>	X

	the Mean High Water Springs mark. With this, information provided on Marine Licensing process	necessary licence from the Marine Management Organisation (MMO).				
9-2.871	Concern over the lack of National Parks in Suffolk or Essex, emphasizing the importance of preserving the limited areas of green land	<p>The designation of National Parks falls outside the remit of National Grid.</p> <p>National Grid has sought to reduce, as far as practicable, impacts on the landscape through routeing and siting and an ongoing iterative design process which has taken on board feedback at different stages of the Project. The iterative design process sought to avoid areas of highest concern, for examples through changes to the route alignment and proposal of underground cables.</p>			X	
9-2.872	Concern about the impact of the Project on water quality (e.g. due to construction and operation)	The potential for the Project to impact on the water quality of surface water receptors and groundwaters has been assessed with the Environmental Statement (ES) and its accompanying Water Framework Directive Assessment (Document Reference 7.10). A suite of measures is included in the design and secured in the Outline Code of Construction Practice (document reference 7.2) to prevent detriment to water quality and with these measures in place, the assessments conclude no likely significant effects on water quality during construction or operation of the Project.			X	
9-2.873	Concern that the Project will hinder existing / future conservation measures or efforts (e.g. reintroduction of species, diversification projects, tree planting)	The majority of ecological impacts associated with the Project are considered to be temporary and during the period of construction only. National Grid are working closely with any known conservation schemes in the			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.874	Criticism that due to the impact of the Project on agriculture / food production, more food will need to be imported, increasing the Projects carbon footprint, which will far outweigh the carbon savings of National Grid's green policy and National Grid's carbon saving strategy will be nullified	<p>area that are likely to interact with our construction programme. It is not considered that any longer-term reintroduction of species or other future conservation schemes will be significantly impacted by the Project. There will be some limited longer-term restrictions on tree planting under the overhead line and over the top of underground cables, however some shallow rooted and lower lying tree species can be planted and incorporated into any future schemes and therefore any impacts will be negligible.</p> <p>Detailed Agricultural Land Classification (ALC) surveys support estimates of temporary (i.e. for construction) and permanent agricultural land area losses (including BMV land), likely to occur as a result of the Project. Whilst land grades relate to the potential productivity of land, not all high-grade land may be being used to its full potential for a range of reasons, including landowner choices, budgets etc. It is therefore very difficult to link field-specific impacts from the project to national food security. A Government Food Strategy Paper was published in June 2022. This highlights a need to maintain current levels of production through intensification, land sharing and land sparing (e.g. to make space for nature). It also commits to a Land Management Framework to be published in 2023 (not available yet). It does not talk about protecting land from development, and part of the strategy is about growth, ensuring that businesses can operate efficiently and effectively.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		In 2021, the report notes that over half of all food (58%) consumed in the UK was of UK origin, with over half of the rest of food consumed (23%) in the UK being of EU origin. However, it is reported that there has been a downward trend in the amount of UK produced food being consumed. The report states that since 1988, the amount of food consumed in the UK of UK origin has fallen from 66% to 58% and the amount of food consumed of EU origin has risen from 18% to 23% over the same period.				
9-2.875	Concern about soil carbon release from construction for the Project	Land temporarily acquired during construction (including that from undergrounding) will be reinstated to its previous Agricultural Land Classification (ALC) grade during operation, meaning land quality and land management should remain the same post construction. Therefore, soil carbon release during construction would only be temporary and would not be significantly different to soil carbon loss as the result of agricultural practices which disturb soils, such as ploughing. Surplus soil from land permanently acquired for the project will be re-used where appropriate to reduce any environmental loss.			X	
9-2.876	Concern that the consequential damage caused by Project in areas that are considered to be less valuable in landscape terms will lead to greater pressure on those landscapes that have been protected	Protected landscapes that fall within the 3 km Study Area for the Landscape and Visual Impact Assessment (LVIA) include Dedham Vale National Landscape and Suffolk Coast and Heaths National Landscape (both nationally designated as Areas of Outstanding Natural Beauty or AONB). The legal purpose of AONB			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>designation is 'to conserve and enhance natural beauty'. National Landscape teams work with partners (including farmers, landowners, district and parish councils, organisations like the RSPB and National Trust) to coordinate conservation and enhancement of the area; guided by Management Plan's which are updated every 5 years.</p> <p>Detailed and ongoing consultation with statutory bodies, including local authorities and the National Landscape teams has been undertaken. Their feedback has been considered in the design of the Project to avoid, where possible, unnecessary pressure on the landscape (including for recreation and leisure purposes) as a result of the introduction of the Project.</p>				
9-2.877	Criticism that the environmental appraisal has focused too strongly on ecology as opposed to landscape damage	The scope of the environmental topics assessed in the Preliminary Environmental Information Report (PEIR) together with the scope of the preliminary environmental assessment is based on the Environmental Impact Assessment (EIA) Scoping Report (document reference 6.19) and the EIA Scoping Opinion (document reference 6.20) received from the Planning Inspectorate in 2022.			X	
9-2.878	Criticism that National Grid's consultation documentation does not consider or evaluate the extent of the impact of the Project, and instead concedes that such damage is a natural and justified consequence of the Project	National Grid has undertaken a thorough and detailed pre-application consultation with technical stakeholders. The information presented during the statutory consultation provided the preliminary environmental information from the Environmental Impact Assessment (EIA) process.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		A complete EIA has now been carried out and the results are presented in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) which accompanies the Development Consent Order (DCO) application. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation of the Project and recommends appropriate mitigation to reduce effects.				
9-2.879	Concern that removal of hedgerows required for the Project will remove natural windbreaks and therefore increase soil erosion and increase flow of water / run-off across fields	Where hedgerows are removed for temporary construction features (i.e., haul roads and vegetation clearance for underground cabling), following construction, hedgerows would be replanted, where possible. This would prevent soil erosion and water run-off during operation of the Project. Temporary measures to control and manage runoff from construction working areas would also be put in place to reduce soil erosion risks and prevent increases in runoff. These measures are described in the Outline Code of Construction Practice (CoCP) (document reference 7.2).			X	
9-2.880	Suggest that National Grid systematically weight the 'importance' for each of the landscape qualities identified and mentioned by other respondents (e.g. geological and soil, vegetation and habitats, visual and human sensory, historical, and cultural)	National Grid notes this comment. The assessment in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) is based on the methodology outlined in the EIA Scoping Report (document reference 6.19) as well as discussions had with the Local Planning Authorities (LPAs). The landscape and visual impact assessment			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>(LVIA), included within the ES, has been undertaken as part of the EIA. The approach to the LVIA follows professional guidance as set out in Appendix 13.1: Landscape and Visual Methodology (document reference 6.13.A1), which includes GLVIA3. Judgements on landscape value have been made as part of the assessment. These value judgements have been informed by the Landscape Institute's Technical Guidance Note (TGN) 02/21 Assessing landscape value outside national designations. This defines landscape value as "the relative value or importance attached to different landscapes by society on account of their landscape qualities" (page 3). The LVIA is presented in ES Chapter 13: Landscape and Visual (document reference 6.13).</p> <p>The ES also includes an assessment of the impacts on agriculture and soils, air quality, agriculture and soils, geology, cultural heritage and habitats, detailed in Chapter 6: Agriculture and Soils (document reference 6.6), Chapter 7: Air Quality (document reference 6.7), Chapter 8: Ecology and Biodiversity (document reference 6.8), Chapter 9: Contaminated Land, Geology and Hydrogeology, Chapter 11: Historic Environment (document reference 6.11) and Chapter 14: Noise and Vibration (document reference 6.14) including details of appropriate mitigation.</p>				
9-2.881	Concern that the Project does not align with the commitment made under the G7 Nature compact	A range of protected species and other ecological surveys have been undertaken and the results are	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	biodiversity and sustainability agreement to " <i>support and drive the protection, conservation and restoration of the ecosystems critical to halt, and reverse biodiversity loss and tackle climate change, such as supporting the target to conserve or protect at least 30% of global land</i> "	outlined in Chapter 8: Ecology and Biodiversity (document reference 6.8) and Appendices 8.1 to 8.16 (document reference 6.8.A1-6.8.A16) of the Environmental Statement (ES). Appropriate mitigation would be implemented where impacts are identified as agreed with Natural England (NE) and the Local Planning Authority (LPA) as relevant to ensure no long-term impacts. No residual significant effects on ecological receptors have been identified within the assessment. As part of proposals National Grid has committed to the delivery of at least 10% Biodiversity Net Gain (BNG) with wider environmental and societal benefits leaving an overall positive effect on nature.				
9-2.882	Suggest that underground cables should include measures to minimise damage to any defined Area of Outstanding Natural Beauty (AONB) qualities that would suffer negative impacts including treatment of hedgerows and other wildlife habitats and seek to route the corridor through arable and pastureland	Underground cable technology has been adopted where the Project passes through the Dedham Vale National Landscape (formerly known as an Area of Outstanding Natural Beauty (AONB)) designation. Routeing of the underground cable has considered the alternatives available, and other factors including our duties and obligations. These duties include balancing the need to be economic, efficient, and keep costs down in the interests of the bill-paying consumers, balanced against a duty to have regard to preserving amenity, the natural environment, cultural heritage, landscape, and visual quality. The aim is that this process therefore ensures that the final design presents the most balanced outcome.	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>National Grid has sought to reduce, as far as practicable, impacts of underground cables within Dedham Vale through routeing and siting and an ongoing iterative design process which has taken on board feedback at different stages of the project. The iterative design process sought to avoid areas of highest concern, considering the special qualities of the National Landscape, and through changes to the route alignment and proposals for trenchless crossing to minimise impacts.</p> <p>The installation of underground cabling would broadly adopt the following process: initially, the removal and storage of topsoil of a width sufficient to allow for construction machinery and the digging of the trenching required for underground cabling. The underground cables would then be laid in the trench, soils would be backfilled, and hedgerows and shrubs reinstated where practicable. At this point, an appropriate grass seed mixture would be sown to encourage regrowth. In some locations trenchless techniques are expected to be adopted to reduce effects.</p> <p>It is anticipated that after a period following completion of the construction of the underground cabling, and replanting of hedgerows and vegetation there would be minimal visibility of the works at ground level.</p> <p>Where there are constraints and at hedgerows it has been agreed that vegetation wouldn't be removed just to allow the storage of spoil.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		The routing of the underground cable has been assessed against environmental impacts and as always there are compromises and trade-offs needed. However, every effort has been taken through the scheme development to consider and minimise impacts on sensitive features.				
9-2.883	Suggest that landscaping and planting for the Project should be designed, planted and maintained in such a way that it is responsive to local conditions and adaptable to the impacts of climate change (e.g. in line with Suffolk County Council's Energy and Climate Adaptive Infrastructure Policy (2023))	<p>National Grid has sought to reduce environmental impacts, as far as practicable, through routeing and siting and an ongoing iterative design process which has taken on board feedback at different stages of the Project.</p> <p>Climate change was scoped out of requiring a standalone chapter in the Environmental Statement (ES) (Volume 6 of the Development Consent Order (DCO) application) within the Environmental Impact Assessment (EIA) Scoping Report (document reference 6.19). The Planning Inspectorate agreed with this approach in their Scoping Opinion (document reference 6.20). The vulnerability of the Project to future flooding is considered as part of the Flood Risk Assessment (FRA) (document reference 7.9).</p> <p>The Landscape and Visual Impact Assessment (LVIA), presented in ES Chapter 13: Landscape and Visual (document reference 6.13), includes an assessment on both landscape character and visual amenity and sets out the potential landscape and visual effects. It identifies areas for potential mitigation planting around proposed substations and Cable Sealing End (CSE)</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>compounds, to reduce landscape effects and visual impacts.</p> <p>Environmental mitigation measures have been described within each environmental topic chapter. In order to minimise impacts, an Outline Code of Construction Practice (CoCP) (document reference 7.2), and Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) have been included as part of the DCO application to deliver any mitigation required, including proposed management and monitoring.</p> <p>The Outline LEMP (document reference 7.4) includes details regarding any planting proposals, and information relating to the restoration of any habitats and landscape features. Indicative species lists are provided in Appendix C: Planting Schedules of the Outline LEMP (document reference 7.4); these are primarily species which are native to the East of England. Consideration was also given to including climate-resilient species (e.g. Hornbeam). A five-year monitoring period is proposed to ensure that reinstated vegetation and landscape mitigation proposals successfully establish.</p>				
9-2.884	Suggest that flood compensation should be provided where the Project is within the 1:100 (1%) Annual Exceedance Probability (AEP) plus climate change outline	In agreement with the Environment Agency, floodplain compensation storage would be provided by the Project for the volumes of storage lost due to the placement of pylons within the 1 in 100 year plus climate change flood extents. Details are provided in the Flood Risk Assessment (FRA) (document reference 7.9) and the	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		mitigation is secured by inclusion within the Outline Code of Construction Practice (CoCP) (document reference 7.2).				
9-2.885	Suggest that Flood Risk Permits should be provided for temporary works for the Project, such as scaffolding over main rivers, and for all works within 8m of fluvial main rivers and 16m of tidal main rivers. Applications should include design drawings, method statements and risk assessments (in relation to section 5.4.37 & 5.4.53 of the Design Development Report)	As detailed in the Outline Code of Construction Practice (CoCP) (document reference 7.2) Flood Risk Activity Permits for qualifying works to main rivers would be secured by the contractor.	X			
9-2.886	Suggest that any removal of ingress of groundwater for the Project (e.g. at shallow groundwater at the proposed Waveney and Stour crossings) should abide with The Water Abstraction and Impounding (Exemptions) Regulations 2017 Regulation 5, which specifies limits under how much water can be dewatered without requiring an abstraction permit	Commitment GH07 in the Outline Code of Construction Practice (CoCP) (document reference 7.2) requires that any temporary dewatering activities be undertaken in accordance with Environment Agency guidance, and if required, that abstraction licenses and environmental permits are obtained.	X			
9-2.887	Request that Anglian Water is added to the further data sources to inform the first stage of the Environmental Statement (ES) particularly regarding water supply	Anglian Water data (where provided) is included within Chapter 9: Contaminated Land, Geology and Hydrogeology (document reference 6.9) of the ES to inform the assessment presented.	X			
9-2.888	Concern that there may be potential issues and foreseeable uncertainties with providing for replacement trees as often the suitable locations are outside of the Development Consent Order (DCO),	National Grid has committed to a 3:1 replacement for individual trees and individual trees within small groups. It should be noted that all other tree habitat including scrub and woodland (area habitats) are assessed and		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	and the mechanisms for ensuring that the planting is successful are often reliant on landowner co-operation for the long term	<p>mitigated through the Biodiversity Net Gain (BNG) metric and captured within the BNG Report (document reference 7.1). The Project will prioritise the replanting for individual trees and small groups of individual trees within the Order Limits, offsite provision may however be required. The tree replanting will be in accordance with the following site selection principles:</p> <p>Within the Order Limits (on-site landscape mitigation).</p> <p>Where possible, trees will be replanted in the same, or in close proximity to, the location from which they were removed.</p> <p>If constraints preclude tree planting in the same or in close proximity to where they were removed, tree planting will be undertaken as close as possible to the original location.</p> <p>Outside the Order Limits (off-site landscape compensation).</p> <p>If it is not possible to replant the trees within the Order Limits, then offsite provision will be provided.</p> <p>Details of the onsite tree planting will be provided in accordance with the final Landscape and Ecological Management Plan (LEMP) secured under a Requirement (if provided within the Environmental Areas) or the Reinstatement Planting Plan secured under a different Requirement (as appropriate) of the draft DCO (document reference 3.1).</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Offsite tree planting will be secured via a legal agreement. The offsite provision (onsite deficit) can only be finalised once final details of the onsite provision have been approved under the final LEMP through a discharge of the appropriate requirement of the DCO.</p> <p>Offsite tree planting will be delivered through collaboration with landowners and/or third parties.</p> <p>An Offsite Planting Delivery Scheme will be provided to the relevant Local Planning Authorities for their information which provides details of the offsite provision.</p>				
9-2.889	<p>Suggest that noise impact assessments (NIA) and vibration impact assessments (VIA) should be undertaken for construction compounds of the Project. Given the length of time that the compounds will be in place and be used the NIA should be undertaken in accordance with B4142. This should include an assessment of noise and vibrations relating to the construction of compound. Also suggest that lighting assessments should be undertaken for construction compounds, which should be undertaken in accordance with the Institute of Lighting Professionals (ILP) Guidance Note 1 on Obtrusive Light and Bats and Artificial Light. Similarly, suggest that a NIA and VIA in accordance with BS5228 should be produced for each pylon location, each substation location, each Cable Sealing End Compound (CSEC) location and</p>	<p>Chapter 14: Noise and Vibration (document reference 6.14) of the Environmental Statement (ES) includes an assessment of construction noise and vibration. The assessment includes construction compounds, pylons, substations, Cable Sealing End (CSE) compounds, underground cables, and access routes undertaken in accordance with the methodology described in BS 5228. Outline mitigation has been detailed where this is required to avoid significant adverse effects.</p> <p>Construction noise is explicitly excluded from the scope of BS 4142. As such, BS 4142 is not appropriate for the assessment of construction impacts. However, best practicable means would be employed, including within construction compounds, to reduce the effects of noise as far as practicable.</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	each underground cable location. These should include details of any proposed mitigation, and suggest that a dust management plan should be provided for each	<p>The Outline Code of Construction Practice (CoCP) (document reference 7.2) details mitigation measures to guard against light pollution and dust management (Appendix D: Dust Management Plan) during construction.</p> <p>Further detail on ecologically sensitive lighting proposals will be included within the final (CoCP) post consent.</p>				
9-2.890	Suggest that a strict buffer around the woodland should be maintained as per Natural England's standing advice on ancient woodland and ancient and veteran trees, and suggest that ancient woodland should not be used to screen or mitigate effects from the Project on undesignated or locally important landscapes at the detriment of the irreplaceable habitat	<p>The standing advice in terms of buffer zones for ancient woodland and veteran trees has been considered and is reported on within Appendix 13.6 Arboricultural Impact Assessment Report (document reference 6.13.A6).</p> <p>For the majority of the Project the recommended 15m exclusion zone around ancient woodland is adhered to, where unavoidable encroachment is proposed into this 15m ancient woodland buffer, details on protection and mitigation measures have been set out within the Ancient Woodland and Veteran Tree Strategy (Appendix B to the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4)).</p> <p>Ancient woodland, together with tree cover and woodland in the wider landscape would filter and screen views of the Project in places as people move around the landscape.</p>	X			
9-2.891	Suggest that National Grid consider baseline data in the Environment Agency's hydrology data explorer, which includes regularly updated groundwater levels from the Groundwater Levels Monitoring Network, to	A Groundwater Risk Assessment is included as Appendix 9.3: Groundwater Baseline and Qualitative Groundwater Risk Assessment (document reference 6.9.A3) which includes a list of the sources of	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	complement the British Geological Survey (BGS) Hydrogeological Maps	information used to inform the groundwater assessment which includes the use of the hydrology data explorer where suitable.				
9-2.892	With regard to Consents, Commitments and Permissions (Appendix 4, pages 11-12) of the Preliminary Environmental Information Report (PEIR), concern that the outline reviews a large number of potential environmental impacts and outlines but there is mention of anticipated license requirements in Table 4.1, page 11, including abstraction licences here, which contradicts PEIR Vol. 1 9.8.26-27, p. 260-1, Hydrogeology which assumes there will be no need for abstraction	<p>The current Project assumption, as detailed within Environmental Statement (ES) Chapter 4: Project Description (document reference 6.4), is that there would be no new temporary or permanent consumptive abstractions and that the water supply needs of the Project during construction would be sourced either from mains water supply or in remote locations tankered in. However, there is the potential that there may be the need for temporary dewatering during the construction of the Project, at such places as trenchless crossing, and where certain criteria are not met, as described in ES Chapter 4 Project Description, an abstraction licence could be required.</p> <p>An overview of National Grid's intended strategy for obtaining the consents, licences and associated agreements to be sought outside the Development Consent Order are presented in Consents and Licences Required Under Other Legislation (document reference 5.5)</p>	X			
9-2.893	Criticism of National Grid's interpretation of / use of data on soils (e.g. "off-the-shelf" rather than bespoke analysis; irrelevant data; incorrect data; lack of critical information) (report provided by respondent). Specifically, criticism of the following: - Concern that the soilscape shown in Map 2 of	Chapter 6: Agriculture and Soils (document reference 6.6) of the Environmental Statement (ES) refers to Soil Associations of the more detailed National Soil Map of England and Wales (rather than the generalised soilscape map) to assess the baseline for reporting of soil types. Detailed Agricultural Land Classification			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>Section 6.6 in Volume II of the Preliminary Environmental Information Report (PEIR) (from the Cranfield University/Defra Land Information System) for Hapton and Tasburgh show deep loams, seasonally wet deep loams, and seasonally wet deep sands, where these are actually soils of the Ashley Association (principally Ashley Series clay loam on chalky boulder clay) and Beccles Association (principally Beccles Series seasonally wet sandy clay loam over chalky boulder clay) and there are no seasonally wet deep sands (these would be best described as mixed bottomland);</p> <ul style="list-style-type: none"> - Concern that National Grid has described soils in terms of soil texture and a subjective assessment of wetness, rather than use small scale soil maps that are available (e.g. maps at scales smaller than 1:25 000 or 1:50 000 depicting soils of the Beccles and Ashley Associations that extend from the north Norfolk coast deep into Suffolk are available); - Concern that the soilscape shown in Map 3 of Section 6.6 in Volume II of the PEIR on Bunwell (which shows deep loams, seasonally wet deep loams and wet sands) does not reflect the actual soil pattern of Beccles Association on the plateau and quite restricted areas of Ashley Association on the upper slopes. The flood plain of the Tas is mapped as wet sands although it is composed of alluvium of various textures and peat; - Concern that Map 4 incorrectly shows seasonally 	<p>(ALC) surveys have been undertaken across the Project to support the agriculture and soils assessment and are detailed in full in Appendix 6.1: ALCA Report (document reference 6.6.A1). The ALC surveys further support the identification of localised changes in soil types across the Project.</p> <p>Suitable consideration of the ground conditions, including soil mechanics, will be incorporated into the detailed design of the Project, undertaken post-submission. This will be based on suitable site-specific ground investigation in accordance with best practice outlined in commitment GH01 of the Outline Code of Construction Practice (CoCP) (document reference 7.2).</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>wet deep loams in the area between Shelfanger and Burstn;</p> <ul style="list-style-type: none"> - Concern that Map 5 at the crossing of the Waveney does not show that the peat and the adjacent unripe alluvium are acid sulphate soils; - Concern that maps do not show acid sulphate soils in the Stour Valley (as per the mapping of the Soil Survey of England and Wales); - Concern that National Grid has adopted the Agricultural Land Classification of the former Ministry of Agriculture, Fisheries and Food (MAFF 1988) as their main source of information (e.g. Class 3 constitutes about half of the land in England and Wales and MAFF divided into 3a and 3b in the 1988 revision because of this is where the critical difference between good land and poor land is manifest but this subdivision has not been considered in the soilscape mapping; Agricultural Land Classification is based on expert judgement rather than scientific procedure based on measurement and collation of significant soil and land characteristics; it was made in the light of agricultural practice in the 1960s, which has since changed; the criterion was not crop yields or profitability but the flexibility of use) - Concern that the report demonstrates no knowledge of the soil mechanics that determine suitability for foundations, feeder roads and over-winter site conditions, except at major river crossings 					

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.894	Criticism that the Environmental Statement (ES) does not set the mitigation cost-calculation methodology for the Project (e.g. as required by EN-5 2.9.5)	National Grid submitted an Environmental Statement (ES) Scoping Report (document reference 6.19) to the Planning Inspectorate on 7 November 2022. The Planning Inspectorate (on behalf of the Secretary of State) formally adopted its Environmental Statement Scoping Opinion (document reference 6.20) on 14 December 2022 which has informed the scope of the Environmental Impact Assessment (EIA) for the Project. Costs and considerations of alternatives are presented within the 2025 Strategic Options Backcheck and Review (document reference 7.17).			X	
9-2.895	Concern that there is no worst-case assessment of flooding presented in the Preliminary Environmental Information Report (PEIR), and concern that the summary in the PEIR underestimates flood risks associated with the Project / Suggest that National Grid provide further information on flood risk	Further detailed assessment of flood risk has been carried out since the statutory consultation and is reported in the Flood Risk Assessment (FRA) (document reference 7.9). The scenarios and sources of flood risk that are appraised have been agreed with the Environment Agency and other flood risk management authorities and a suite of commitments to managing flood risk are included in the Outline Code of Construction Practice (CoCP) document reference 7.2).			X	
9-2.896	Concern about the impact of the Project on Country Wildlife Sites (generally)	The impacts on County Wildlife Sites (CWS) is assessed in Chapter 8: Ecology and Biodiversity of the Environmental Statement (ES) (document reference 6.8).			X	
9-2.897	Criticism that the assessment of conservation areas are inconsistent and often have not adequately considered the character and appearance of these	The assessment of Conservation Areas has been carried out using a robust and systematic methodology in line with established best practice, including Historic			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>designated assets, listing instead the listed buildings which are to be found and any key views associated with the area. In most cases, the setting of the conservation areas is considered to make a considerable contribution to their value (although this is not explained or defined further). Of the 54 conservation areas within the study area, 41 have been scoped out as this setting is not considered to extend to the Draft Order Limit. This appears to largely be based upon subjective opinion which has attributed a medium value to each area with no apparent reasoning. Conservation Areas only appear to be scoped in as a result of proximity to The Project, rather than as a result of following the 5 step process as recommended by Historic England in GPA3.</p>	<p>England's Good Practice Advice Note 3: The Setting of Heritage Assets (Second Edition, 2017). This methodology was developed, discussed, and agreed with key stakeholders through the scoping process and thematic working group meetings.</p> <p>Each Conservation Area has been assessed with due consideration of its character and appearance, as well as the contribution made by its setting to its significance. The presence of listed buildings and key views within these areas was included to support a contextual understanding of their historic and architectural interest, but the value and setting of the Conservation Area as a designated heritage asset was assessed independently.</p> <p>Scoping decisions regarding whether the setting of a Conservation Area extended to the Order Limits were informed by site visits, photographic survey, and analysis of the Zone of Theoretical Visibility (ZTV), in combination with professional judgement. The conclusions were not based solely on proximity, but on a holistic appraisal of whether the proposed development would be experienced in a way that might affect the asset's significance.</p> <p>We are therefore confident that the approach to the assessment of Conservation Areas is appropriate, proportionate, and aligned with national policy and guidance, including the five-step process recommended by Historic England in GPA3.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.898	<p>In relation to Chapter 6 of the Preliminary Environmental Information Report (PEIR), criticism that policies LPP70 and LPP73 of the Braintree District Council BDC Adopted Local Plan have not been considered and any harm which arises from loss of the Best and Most Versatile (BMV) land will need to be weighed in the wider planning balance and the cumulative effects also appreciated. It will be necessary to understand how effective soil management plans can fundamentally be at preserving the quality and structure of soils of differing vulnerability. Overall, judgement of effects is currently hampered by sufficient detail on assessment methodology and explanation of how accurately the impacts have been identified. There would not appear to be a thorough understanding of how surplus soil will be dealt with, for example, and whether the earth moving operations will be extensive in this regard.</p> <p>Overall, the baseline information remains high-level with the 'worst case scenario' only getting to a point where it is agreed that significant effects are likely to occur. Detailed information and analysis will not only assist in quantification of harm but also assist in the design of measures to minimise this, including those to protect soil quality and avoid '4 compaction'. For these reasons, it is not possible to understand where the opportunities lie to further avoid or mitigate impacts: this being a fundamental aim of</p>	<p>Chapter 6: Agriculture and Soils (document reference 6.6) of the Environmental Statement (ES) considers the key regional and local policy, including the Braintree District Council Adopted Local Plan, to inform the assessment of the impacts of the Project on agricultural land (including BMV land), alongside the impacts on soils and agricultural landholdings. The baseline information which informed the assessment included Provisional Agricultural Land Classification (ALC) data, alongside additional detailed ALC site surveys which were undertaken for the Project to confirm the presence of BMV land within the Order Limits. The full details of the ALC grade distribution across the Project are presented in Appendix 6.1: Agricultural Land Classification Report (document reference 6.6.A1).</p> <p>Appendix C: Outline Soil Resource Plan (SRP) of the Outline Code of Construction Practice (CoCP) (document reference 7.2) sets out key soil mitigation measures required to protect soil resources. The Outline SRP will be evolved into the SRP prior to construction commencing, where detailed construction approaches, soil baseline information including soil profiles, and details of site-specific soil measures (including details of surplus soil) will be set out.</p>		X

	<p>cannot be identified and design cannot demonstrate that it aims to minimise this loss.</p> <p>Criticism that the lack of information makes it difficult to distinguish the temporary and permanent effects of vegetation loss from pylons and overhead lines.</p> <p>Recommendation that better oversight of this is provided.</p> <p>Criticism that Environmental Statement (ES) is poorly understood and articulated</p>	<p>of the Development Consent Order (DCO) application. Appendix 13.6: Arboricultural Impact Assessment (AIA) (document reference 6.13.A6) submitted as part of the ES provides details of the impacts to trees (including high value features). The draft AIA was shared with Local Planning Authorities on 28th March 2025.</p> <p>The Trees and Hedgerows to be Removed and/or Managed Plans are provided with the DCO (document reference 2.16).</p> <p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the EIA. The LVIA includes an assessment on both landscape character and visual amenity during construction and operation. The LVIA is presented in ES Chapter 13: Landscape and Visual (document reference 6.13). The assessment takes into consideration the temporary and permanent effects of vegetation loss as a result of the Project.</p>				
9-2.901	<p>Criticism of the use of 'worst-case scenario' assessments as a comprehensive method for competing interests and suggestion that a blanket approach to mitigation will require considerable bespoke refinement. The respondent suggests an initial list is drawn up where input into this refinement process would be beneficial as they would like to address and fix many aspects of the design prior to submission.</p> <p>Suggests that other relevant planning considerations (including those scoped out of scrutiny under the</p>	<p>Through careful design, the Project seeks to avoid and mitigate impacts on the environment and sensitive receptors. In line with the approach set out in Environmental Statement (ES) Chapter 5: Environmental Impact Assessment (EIA) Approach and Method (document reference 6.5) and in accordance with National Policy Statement EN-1 (Department for Energy Security and Net Zero, 2024) the mitigation hierarchy has been applied during the iterative design process to, in the first instance, avoid creating adverse</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	Environmental Impact Assessment (EIA) regime) do deserve to receive some emphasis before a design is fixed for submission, the respondents understands that National Grid is currently focusing on assessing the likely significant effects within the confines of the EIA legislation	<p>effects, prevent, reduce and finally, where appropriate, offset adverse effects.</p> <p>The Project team have applied the mitigation hierarchy to minimise residual impacts and the need for the Project strongly outweighs those impacts. The mitigation hierarchy has been applied throughout development of the Project as part of the iterative EIA process which has informed the routeing and siting process. The Project has been designed to avoid, reduce or mitigate potentially significant adverse residual effects. The application for development consent is supported by an Environmental Statement (ES) (Volume 6 of the Development Consent Order application) which demonstrates that the mitigation hierarchy has been applied throughout the design and development of the Project. The ES provides a description of the measures to avoid, prevent or reduce and, where practical, offset likely significant effects on the environment.</p> <p>National Grid has embedded measures into the design of the Project to avoid or reduce significant effects that may otherwise be experienced during construction and operation (and maintenance) of the Project. Embedded measures are those that are intrinsic to and built into the design of the Project. The key embedded measures are presented in ES Chapter 4: Project Description (document reference 6.4).</p> <p>National Grid submitted an Environmental Impact Assessment (EIA) Scoping Report (document reference</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		6.19) to the Planning Inspectorate on 7 November 2022. The Planning Inspectorate (on behalf of the Secretary of State) formally adopted its Scoping Opinion (document reference 6.20) on 14 December 2022 which has informed the scope of the EIA for the Project. The EIA has been undertaken in accordance with the Infrastructure Planning EIA Regulations 2017.				
9-2.902	Criticism in relation to Preliminary Environmental Information Report (PEIR) Chapter 6 (including appendix & drawing) Section 6.2.8, that dates referring to the Braintree District Council Local Plan are incorrect and that this should be updated in the Environmental Statement. Suggestion to update references of standard guidance documents relevant to the protection of soils and agricultural land. For examples, to include the 2021 Institute of Quarrying guidance "Good Practice Guide for Handling Soils in Mineral Workings"	Chapter 6: Agriculture and Soils (document reference 6.6) of the ES has been updated to reflect the revised dates associated with the Braintree District Council Local Plan. The relevant guidance has also been updated to include the 2021 Institute of Quarrying guidance "Good Practice Guide for Handling Soils in Mineral Workings".		X		
9-2.903	Suggestion in relation to Preliminary Environmental Information Report (PEIR) Chapter 6, section 6.5.4, that a more detail statement is provided on how Agricultural Land Classification (ALC) surveys are being conducted within the full Draft Order Limits (DOL) including within narrow corridors of the limits. Request for confirmation that the ALC survey process is in line with the Institute of Environmental Management and Assessment (IEMA) guidance,	The detailed Agricultural Land Classification (ALC) survey methodology is presented in full in Appendix 6.1: Agricultural Land Classification Survey Report (document reference 6.6.A1), including relevant policy and guidance (including the Institute of Environmental Management and Assessment (IEMA) guidance and Design Manual for Roads and Bridges (DMRB) guidance) along with the survey assessment approach and methodology.		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	along with details on laboratory analysis and how sensitive soils will be identified					
9-2.904	Criticism in relation to sections 6.5.5 to 6.5.9 of the Preliminary Environmental Information Report (PEIR), that whilst it is supportive of the use of Institute of Environmental Management and Assessment (IEMA) guidance to assess impacts on soils and agricultural land, there is a need to provide further detail about how this will be presented, such as key soil characteristics (e.g.: texture) as well as references to specific tables within the IEMA guidance for assessing receptor sensitivity and magnitude of change	Chapter 6: Agriculture and Soils of the ES (document reference 6.6) comprehensively details the assessment methodology, referencing the Institute of Environmental Management and Assessment (IEMA) guidance and Design Manual for Roads and Bridges (DMRB) guidance and specifies the tables within these documents to assess receptor sensitivity and magnitude of change.		X		
9-2.905	Requests confirm that Natural England approved the Agricultural Land Classification (ACL) survey methodology within the Environmental Statement (ES) chapter associated with Table 6.1	Table 6.1 of Chapter 6: Agriculture and Soils (document reference 6.6) of the ES has been updated to include all correspondence with Natural England and their approval of the Agricultural Land Classification (ALC) survey methodology.		X		
9-2.906	Criticism in relation to section 6.7.3 of the Preliminary Environmental Information Report (PEIR), that mitigation measures are not specific to soils and agriculture and that this information should be expanded in the Environmental Statement (ES) with a description of soil function enhancements, as well as detail on how impacts on soils and agricultural land have been avoided for the sensitive routing and siting measure.	Section 6.6: Proposed Mitigation of Chapter 6: Agriculture and Soils of the ES (document reference 6.6) details the embedded, standard and additional mitigation measures specific to soils and agriculture. Appendix C: Outline Soil Resource Plan of the Outline Code of Construction Practice (document reference 7.2) sets out the good practice soil handling mitigation measures.		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	Suggestions that measures to protect soil quality are established and embedded within mitigation measures in accordance with Policy LPP 70 of the Braintree District Local Plan					
9-2.907	Criticism that there is no clear statement in the baseline data section 6.6, whether Agricultural Land Classification (ALC) will be included within the inter-project cumulative impacts for the Braintree area and consideration given due to the high prevalence of BMV land in the district and potential for localised cumulative loss in relation some of the permanent infrastructure associated with the proposed development	Agriculture and soils are considered in the inter-project cumulative effects assessment presented in Chapter 17: Cumulative Effects of the ES (document reference 6.17).		X		
9-2.908	Support the approach outlined in the Preliminary Construction Effects, in relation to the worst-case scenario approach scenario to assess provisionally mapped Grade 3 as Subgrade 3a for the Preliminary Environmental Information Report (PEIR), however, the respondent suggests that this should be based upon detailed Agricultural Land Classification (ALC) survey data within the Environmental Statement (ES) Chapter. Suggests that the ES Chapter regarding the impacts on the soil resource and agricultural land be assessed separately in line with the Institute of Environmental Management and Assessment (IEMA) guidance and the receptor sensitivity of the	Detailed Agricultural Land Classification (ALC) surveys were undertaken to establish the baseline conditions which support the assessment presented in Chapter 6: Agriculture and Soils of the ES (document reference 6.6). The results of the ALC surveys are presented in full in Appendix 6.1: Agricultural Land Classification Survey Report (document reference 6.6.A1). ES Chapter 6: Agriculture and Soils (document reference 6.6) assesses the residual effects of the Project on agricultural land, soils, and agricultural landholdings during construction and agricultural land during operation (and maintenance) in line with the 2022 Institute of Environmental Management and Assessment		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	soil resource should be informed by the results of the detailed Soil and ALC survey	(IEMA) guidance: A New Perspective on Land and Soil in Environmental Impact Assessment				
9-2.909	Suggestion in relation to Section 6.7.5, to include in the 'suitable conditions for soil handling' section of the Soil Resource Plan (SRP), which will require STOP conditions section outlining unsuitable weather conditions where soil trafficking and handling should be paused and the method for soil moisture and consistency testing prior to soil handling activities be provided	Chapter 6: Agriculture and Soils of the ES (document reference 6.6) has been updated to include the soil management measures detailed in Appendix C: Outline Soil Resource Plan of the Outline Code of Construction Practice (document reference 7.2), including reference to climatic STOP conditions.		X		
9-2.910	Criticism that there is no clear description as to how impacts on soil quality are being assessed, including no clear distinction made between potential impacts resulting from soil disturbance in terms of either soil susceptibility to erosion or compaction	Chapter 6: Agriculture and Soils of the ES (document reference 6.6) assesses the impacts of the Project on soils (impact on soil quality and ecosystem services) drawing on guidance set out in the Institute of Environmental Management and Assessment (IEMA), 2022 guidance: A New Perspective on Land and Soil in Environmental Impact Assessment. The assessment considers the impact on soil resource and function and soil handling (structural damage).		X		
9-2.911	Criticism in relation to the Preliminary Construction Effects, that there is no detailed assessment methodology in the Preliminary Environmental Information Report (PEIR), including land temporarily moved from agricultural production in the construction effects section. Suggests that a detailed breakdown is included for each of the different design elements in the Environmental Statement	Chapter 6: Agriculture and Soils of the ES (document reference 6.6) details in full the residual effects on the temporary loss of agricultural land during construction and the permanent loss of agricultural land during operation (and maintenance) in relation to specific permanent design features.		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	Chapter to understand potential effects and mitigations					
9-2.912	Suggestion to use Natural England's 2017 Likelihood of best and most versatile (BMV) Land Maps alongside current information for the baseline section of the Environmental Statement (ES) Chapter	Chapter 6: Agriculture and Soils of the ES (document reference 6.6) details the Natural England 2017 Likelihood of Best and Most Versatile (BMV) Agricultural Land – Strategic scale map Eastern Region in Section 6.5 Baseline Conditions.		X		
9-2.913	<p>Suggestion that the permanent loss of areas of agricultural land and soils would be better included in the construction effects of the Environmental Statement Chapter due to the soil handling activities being more likely to take place during the construction instead of operational phase. That, rather than the Preliminary Operational (and Maintenance) Effects chapter.</p> <p>Criticism that there has not been a systematic approach in the assessment methodology which limits the respondents understanding of the potential impacts on soils and agricultural land within the Environmental Statement.</p> <p>Criticism that Section 6.8.10 of the Preliminary Environmental Information Report (PEIR), does not contain information as to what the end usage of the soils located within the Technical Note GM12443 MAY 2024 Page 7 areas of permanent land take will be</p>	<p>The permanent loss of agricultural land was assessed in the operational (and maintenance) phase in Chapter 6: Agriculture and Soils of the ES (document reference 6.6), as agreed within the Scoping Opinion (document reference 6.20). The temporary loss of agricultural land and the impacts on soil resources caused by any soil disturbance during construction are considered in the construction phase.</p> <p>The assessment methodology for the impacts of the Project on agricultural land and soils is detailed in full in Section 6.4: EIA Approach and Methods of Chapter 6: Agriculture and Soils of the ES (document reference 6.6), referencing the Institute of Environmental Management and Assessment (IEMA) guidance and Design Manual for Roads and Bridges (DMRB) guidance.</p> <p>Chapter 6: Agriculture and Soils of the ES (document reference 6.6) details (in reference to the end usage of soils located within areas of permanent land take) 'that any soil excavated from the Project (e.g. displaced from</p>		X

		<p>Statement (ES) (document reference Volume 6: Environmental Statement) submitted as part of the Development Consent Order (DCO) application. The results of the air quality assessment are detailed within Chapter 7: Air Quality of the Environmental Statement (ES) (document reference 6.7).</p> <p>The assessment has been undertaken in line with recognized guidance and best practice to ensure transparency and completeness, and the methodologies applied have been designed to provide robust and outcomes that represent the predicted air quality impacts associated with the Project. Specifically, the assessment followed the Institute of Air Quality Management (IAQM) guidance on the assessment of dust from demolition and construction, IAQM/Environment Protection UK guidance on land-use planning and development control, and Defra Local Air Quality Management Guidance.</p>				
9-2.919	Suggestion that relevant checks with Local Planning Authorities (LPAs) are conducted regarding statutory protection areas	<p>Schedule 14 of the draft DCO (document reference 3.1) details the impacts to trees covered by Tree Preservation Orders.</p> <p>All ecologically statutory designated sites have been obtained from national sources.</p> <p>Data for conservation areas were obtained from Historic England and cross-referenced with Local Planning Authority websites.</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-2.920	Criticism in relation to paragraph 9.8.4 of the Preliminary Environmental Information Report (PEIR), as it currently states "While Sites of Geological Importance have been identified within the study area, construction activities and therefore physical ground disturbance is restricted to within the draft Order Limits (DOL), and therefore there is no potential for damage to or loss of these sites", however there can be indirect effects, and these should be fully considered	Sites of geological importance remain outside of the Order Limits and therefore it continues to be the case that there would not be any ground disturbance within designated areas. In addition, areas of potential contamination that could be mobilized by the Project have not been identified close to any sites of geological importance.		X		
9-2.921	Criticism that whilst 'GC08: for the sensitive features to be retained (i.e., veteran, and mature trees, and ancient woodland), an appropriate protective area or protection mechanisms will be established', and 'LV06 for the main works contractor to apply the relevant principles as set out in British Standard (BS) 5837:2012 Trees in relation to design, demolition, and construction', are accepted for inclusion for the duration of the development. Further information regarding the categories, age class and conditions of trees cited along the planned route is required in the Preliminary Environmental Information Report (PEIR) Volume 1	An Arboricultural survey has been completed, results of which are presented in Appendix 13.6: Arboricultural Impact Assessment (AIA) of the Environmental Statement (ES) (document reference 6.13.6A). The AIA (document reference 6.13.A6) contains tree category and life stage information following the guidance from BS5837:2012 and detailed at scoping stage. Appendix B: Ancient Woodland and Veteran Tree Strategy of the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) contains information specific to veteran trees Arboricultural mitigation measures are set out within the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the Outline Landscape and Ecological Management Plan (document reference 7.4). An Arboricultural Method Statement (AMS) will also be produced which includes tree protection measures		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		where construction activities are likely to impact retained trees.				
9-2.922	Criticism in relation to Chapter 9 of the Preliminary Environmental Information Report (PEIR) which states that the proposed development would be unlikely to have significant effects on hydrogeology receptors, as relevant assessments aren't complete. Suggests that the outcomes of the screening process, with corresponding justifications, are detailed in the Environmental Statement (ES) in relation to the private water abstractions within the Braintree District Council area	The Environmental Statement includes a groundwater risk assessment as Appendix 9.3: Groundwater Baseline and Qualitative Groundwater Risk Assessment (document reference 6.9.A3) which includes additional supporting information on the potential risks and therefore effects on hydrogeological receptors, including private water supplies, to inform the assessment in Chapter 9: Contaminated Land, Geology and Hydrogeology (document reference 6.9).		X		
9-2.923	Criticism of the information provided in the Preliminary Environmental Information Report (PEIR) about the assessment of hydrogeological effects lacks detail and defers to the Environmental Statement (ES) which will provide detail	The Environmental Statement includes a groundwater risk assessment as Appendix 9.3: Groundwater Baseline and Qualitative Groundwater Risk Assessment (document reference 6.9.A3) which includes additional supporting information on the potential risks and therefore effects on hydrogeological receptors to inform the assessment in Chapter 9: Contaminated Land, Geology and Hydrogeology (document reference 6.9).		X		
9-2.924	Criticism of the methodology used to screen out historical land uses which could classify them as having a moderate or greater potential for generating contamination, as it is based on previous land use and free National Library of Scotland (NLS) mapping instead of comprehensive commercially available data.	A full list of the data sources used to inform Chapter 9: Contaminated Land, Geology and Hydrogeology (document reference 6.9) are presented within Section 9.4 of the chapter, data sources are also presented within Appendix 9.1: Baseline Information and Preliminary Contamination Risk Assessment (document reference 6.9.A1), this includes, but not limited to,		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>Criticism the criteria in Table A9.1.8 is subjective (e.g.: Low categorization) and further reasoning is needed why some sites have been categorised 'Low'.</p> <p>Criticism that the data sources listed in Paragraph 9.5.4 are suitably comprehensive to inform the assessment and suggests suitably complete baseline data is considered as well as any gaps in historic data, and clearly lists data sources in the Environmental Statement (ES)</p>	<p>National Library of Scotland, historical aerial imagery and Envirocheck report for parts of the route. The information is further supplemented by information obtained from the local councils and the Environment Agency.</p> <p>Appendix 9.1: Baseline Information and Preliminary Contamination Risk Assessment (document reference 6.9.A1) provides a Tier 1 Preliminary Risk Assessment and identifies sites where a potential source of contamination could lead to a significant effect. Professional judgement has also been used within the assessment to determine what could potentially be significant. A description of the sites that have been identified as a potential source of contamination is given in Section 9.4 which has helped inform the potential for generating contamination score.</p>				
9-2.925	<p>Ancient Woodlands. It is noted that some of the locations have been changed to mitigate the impacts on Ancient Woodlands and for others are still under consideration. ECCs GI team recommends that the N2T proposal refers to the appropriate landscape buffers, and that the perfected option corridor is designed and planned to avoid detrimental direct and indirect impacts. Therefore, ECCs GI team expects this ancient woodland to be protected, with comprehensive compensation plans in place where it is not possible.</p> <p>There is a Big Green Internet project aiming to plant</p>	<p>The presence of ancient woodlands has been a key consideration within the design process, with every effort made to avoid and minimise impacts on ancient woodlands. Proposals for the alignment have successfully avoided direct impacts on ancient woodland through careful routeing and siting. There are however third-party works to existing assets that will have minor impacts to ancient woodlands. This is unavoidable due to the locations of these assets already being within/adjacent to ancient woodland habitat. Impacts have been minimised and mitigation proposed within the Ancient Woodland and Veteran Tree Strategy at</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	and connect the woodlands from Tendring to Epping Forest, which potentially the path of this proposal may well pass from Tendring, through to Colchester and Chelmsford and the opportunities to contribute and the potential effects should be considered. https://thebiggreeninternet.co.uk/ourjourney/ Paragraph 8.5.14 (page 175, 184 of 593) mentioned that through the removal of overhead lines through Writtle Park wood will allow the woodlands to regenerate naturally and would work to the original footprint of the gas pip for Bushey Wood. It is anticipated for Writtle Park Wood to regenerate naturally that it will be left for self-seeding and there are no plans to enhance through planting creating a balanced approach and for Bushey wood that the regeneration would not allow certain trees to be planted along the pipeline, due to the depths of the roots	Appendix B of the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4).				
9-2.926	Essex Climate Focus Area (CFA). This could potentially impact the delivery of the CFA targets to increase natural and urban GI and the potential for the CFA will look to developments to contribute to these targets	Although not currently mandatory for NSIPs, National Grid has committed to delivering 10% Biodiversity Net Gain (BNG) with wider environmental and societal benefits for the Project. Full details of the BNG assessment, the onsite mitigation and offsite enhancement proposals are detailed within the Biodiversity Net Gain Report (document reference 7.1). Offsite BNG will be delivered through collaboration with expert partners or purchased from commercially registered providers. National Grid has been engaging in		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		productive discussions with third parties regarding the provision of offsite BNG.				
9-2.927	ECC GI Team welcomes the proposed changes to positioning and location of pylons, overhead lines to minimise and avoid negative impact on conservation areas, landscapes, trees, ancient woodlands, hedgerows and open access land as set out in the Project Background Report and the 2024 Design Development Report. It is noted that some of the proposed pylons will move to align with field boundaries and the potential impact or loss of quality hedgerow will need to be considered and compensated where necessary. The planting for ecological and landscape screening around the EACN Substation and CSE Compound sites are welcomed, and further details are required. There are concerns given the height of the pylons that visual screening is not always effective	<p>Detailed hedgerow condition surveys across the Project have been undertaken. A quantitative impact assessment has been undertaken within Chapter 8: Ecology and Biodiversity (document reference 6.8) of the Environmental Statement and within the Biodiversity Net Gain (BNG) metric. The results of the BNG metric are presented within the BNG report (document reference 7.1). The BNG report outlines the onsite mitigation requirement in order to achieve the targeted 10 % BNG for hedgerows.</p> <p>Illustrative landscape plans have been developed for the Environmental Areas around the substations and Cable Sealing End (CSE) compounds. These are provided in Appendix D to the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4).</p> <p>The concerns around screening are noted, and the assessment presented in Chapter 13: Landscape and Visual (document reference 6.13) considers the likely effects of the Project during construction at operational Year 1 and year 15 to account for the effect of vegetation maturing over time and the level of screening provided.</p>		X		
9-2.928	ECCs GI team support an approach to landscaping that seeks to maximise opportunity for biodiversity enhancement, carbon capture and sequestration,	The locations for any off-site Biodiversity Net Gain (BNG) will require careful consideration and will follow National Grid BNG site selection criteria. Part of this		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	drought resistance, air quality improvement, flood and water management and ease of maintenance and management	selection criteria looks at additional value that can be delivered alongside BNG, such as environmental and societal benefits. Indicative landscape proposals are set out in the Outline Landscape and Ecological Management Plan (document reference 7.4) and careful consideration has been given to ensuring that benefits are maximised where possible, and other environmental constraints are considered in the wider proposals.				
9-2.929	<p>The Project Background (page 26) and PEIR Volume 1 (page 9 & 60, 18 & 69 of 593 para 1.5.1 and 4.3.2) states that the proposal is required to deliver the minimum 10% Biodiversity Net Gain (BNG). The Environment Act (2021) BNG requirement for NSIPs is to achieve at least 10% measurable net gain from November 2025, which is to be secured for at least 30 years. Therefore, it is welcomed that this proposal will look to deliver at least 10% BNG and would welcome more ambitious target. This legislation will need to be considered as part of the Legislation and National Policy stated within the 2024 Design Development Report.</p> <p>It is worth noting that the ECC Growth and Development Team (NSIP), Place Services (Ecology) and Essex Biodiversity Net Gain officer are exploring a project proposal to highlight the benefits to nature recovery in Essex of BNG being set at 20% rather than 10% for NSIPs. Discussions are underway in that the N2T NSIP project has been identified as a potential case study by way of</p>	<p>The Environment Act 2021 introduces a mandatory requirement for 10 % Biodiversity net gain (BNG) for development (subject to certain exemptions), however this requirement is not yet in force for development consented pursuant to a Development Consent Order (DCO). Current indications are that it will apply to DCO applications submitted from May 2026 however this is yet to be confirmed.</p> <p>National Grid has committed to deliver Net Gain of at least 10% for BNG on all construction projects. The 10% BNG target for the Project is currently voluntary and aligned with our corporate sustainability commitment.</p> <p>As well as avoiding and minimising impacts to nature, the Project considers the land required for mitigation, compensation and enhancement that can deliver BNG and wider environmental and societal benefits. Off-site BNG will be delivered in strategic areas, and all options have been considered in the Biodiversity Net Gain Report of the Environmental Statement (ES) (document reference 7.1).</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>example.</p> <p>The PEIR Volume 1 mentions in table 8.1 for Ecology and Biodiversity the discussion with stakeholders of the potential for offsite BNG initiatives. ECCs GI team expects this development site to deliver Biodiversity Net-Gain (BNG) in line with the Environment Act. The delivery of BNG is expected to take place on-site where possible, via the protection and retention of existing GI and provision of new features. However, it is recognised that this might not always be conceivable, and that off-site delivery to compensate for the loss of GI and habitats could provide additional benefits and be used to protect areas of land that are of local natural and wildlife value and provide good quality access connecting people to nature and encourage active and healthy lifestyle. This will need to be discussed and approved by the Local Planning Authorities</p>					
9-2.930	<p>INFORMATIVES: • Any GI features proposed for adoption by Essex County Council should be consulted on with the relevant Highways Development Management Office. • It is not within the scope of the GI team to comment on the overall viability of a scheme as the decision is based on a range of issues which are outside of this authority's area of expertise. • We will advise on the acceptability of green infrastructure and the information submitted on planning applications</p>	National Grid notes the respondent's feedback.		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>based on the key documents listed within this letter. However, any relevant information relating to green infrastructure submitted as part of any previous applications should be submitted with the updated information. • The GI consultation responses provide a high-level review of the proposals onsite. However, the relevant specialists e.g., ecology and landscape specialists should still be consulted on the information submitted. It should be noted that detailed discharge of condition applications should be referred to technical specialists rather than the GI planning team. • Mitigating and adapting to a changing climate is a national and Essex County Council priority. The Climate Change Act 2008 (amended in 2019) commits the UK to achieving net-zero by 2050. In Essex, the Essex Climate Action Commission proposed 160+ recommendations for climate action. Essex County Council is working with partners to achieve specific goals by 2030, including net zero carbon development. All those active in the development sector should have regard to these goals and applicants are invited to sign up to the Essex Developers' Group Climate Charter [2022] and to view the advice contained in the Essex Design Guide. Climate Action Advice guides for residents, businesses and schools are also available</p>					
9-2.931	The ECAC Net Zero: Making Essex Carbon Neutral Report (July 2021) sets out a plan for Essex to tackle	Environmental Statement Appendix 4.1: Greenhouse Gas Assessment (document reference 6.4.A1), provides		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>climate change and the key steps needed for Essex to reach net zero by 2050. Specifically, for energy, the document sets out a series of recommendations. The recommendation to embrace large-scale renewable energy installations, such as solar and wind farms, aligns with the projects ambition to connect the county to new offshore wind farms and other clean sources of energy in a way that benefits the local community and supports developments that offer community ownership, and improvements to biodiversity. The report highlights the realisation however that energy produced from renewable sources is often variable and it is inefficient to transmit energy over long distances, favouring local generation and storing. The impact of the proposed scheme on emissions within the county and potential impact on the target for Essex to be net zero by 2050 should be included in the assessment and the importance of reducing the impact of the proposed scheme to as close to 'net zero' as possible should be acknowledged.</p> <p>To reduce the impact of the proposed scheme, provision should be made for the reduction of greenhouse gas emissions, in both construction and operational phases, in order to minimise the development's carbon footprint and mitigate the effects of climate change. Only once all avenues of reduction have been explored should offsetting be utilised. Opportunities for the scheme to implement</p>	<p>an assessment of the impact of both construction and operation of the Project on Greenhouse Gases (GHG). In addition, Appendix H: Greenhouse Gas Reduction Strategy of the Outline Code of Construction Practice (document reference 7.2) provides the Greenhouse Gas Reduction Strategy which will be used to reduce GHG emissions. The GHG Reduction Strategy presents the overarching GHG management principles and requirements to reduce and manage GHG emissions related to the Project.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	the recommendations set out in the ECAC Report (2021) should be taken too					
9-2.932	<p>The Environmental Statement should aim to consider the impact of the proposed scheme on climate (for example the nature and magnitude of greenhouse gas (GHG) emissions. To do this, the applicant should set out a methodology of assessment utilising key data sets such as BEIS Carbon Factors for reporting GHG emissions, the 'Cost Book', E-Hub database, Carbon Interface Tool (CIT) to create a carbon asset database for the project emission data reporting. Further sources should be drawn from such as the Inventory of Carbon and Energy database (Circular Ecology, 2019), plus Department for Environment, Food and Rural Affairs (Defra) emission factors (updated annually) and main equipment supplier data. At present, the applicant appears to intent to draw from the most basic data set available to estimate the associated CO2e for the project (PEIR; section 4.4.11). Due to the significance of the proposals, it must be iterated that the most detailed calculations available for the project carbon emissions should be presented as part of the Environmental Statement. In order to ensure a clarity in the CO2e implications of the project, it is necessary for the applicant to carry out a detailed calculation of emissions utilising the most thorough data collection methods, drawing from</p>	<p>Environmental Statement Appendix 4.1: Greenhouse Gas Assessment (document reference 6.4.A1), provides an assessment of the impact of both construction and operation of the Project on Greenhouse Gases (GHG). Emission factors used in the assessment are derived from the E-Hub database. The assessment provides the total GHG emissions for both construction and operational phases.</p> <p>The scope of this assessment is included in the Scoping Report (document reference 6.19) which was submitted to the Planning Inspectorate in November 2022 and agreed in their Scoping Opinion (document reference 6.20) received in December 2022.</p> <p>The construction and operational CO2e numbers are not considered to have a material impact on the ability of the Government to meet its carbon reduction targets and therefore are considered not significant.</p>		X

	direct supply chain EPD relevant data, transport and on-site emissions to calculate the upfront emissions caused by the development					
9-2.933	The scheme should be assessed in terms of its impact on climate and the effects of climate on the scheme itself during both construction and operation. All opportunities to extend the design life should be explored to avoid short term retrofit being required. Decommissioning has not been assessed, however design principles to ensure reuse of materials at end of life should be implemented where possible	Appendix 4.1: Greenhouse Gas Assessment (document reference 6.4.A1), provides an assessment of the impact of both construction and operation of the Project on Greenhouse Gases (GHG). In addition, Appendix H: Greenhouse Gas Reduction Strategy of the Outline Code of Construction Practice (document reference 7.2) provides the Greenhouse Gas Reduction Strategy which will be used to reduce GHG emissions. The GHG Reduction Strategy presents the overarching GHG management principles and requirements to reduce and manage GHG emissions related to the Project.		X		
9-2.934	The applicant should assess the potential likely significant effect of the schemes' carbon emissions against the national level legally binding targets on climate as set out in the Climate Change Act 2008. The applicant must carry out a similar assessment against locally set targets and existing local carbon emission data. For example, the target for the County to achieve net zero by 2050 as set out in the ECAC Report (July 2021) and re-stated in the ECC Climate Action Plan (Nov 2022). The Government's 2005 to 2021 UK local and regional greenhouse gas emissions – data tables (Excel) (updated 6 July 2023) advised that in 2021, Essex Countywide emissions equated to 6,619 kilo-tonnes of CO2. The	Appendix 4.1: Greenhouse Gas Assessment (document reference 6.4.A1), provides an assessment of the impact of both construction and operation of the Project on Greenhouse Gases (GHG). The scope of this assessment is included in the Scoping Report (document reference 6.19) which was submitted to the Planning Inspectorate in November 2022 and agreed in their Scoping Opinion (document reference 6.20) received in December 2022. The assessment considers the change in GHG emissions against the relevant carbon budget as set out in the Climate Change Act 2008.		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	proportion of emissions associated to development within the county should be appraised against this value (or a more up to date value at time of presentation of the Environmental Statement) in order to identify the project impacts level of significance in relation to the county's contribution to carbon emissions	The construction and operational CO2e numbers are not considered to have a material impact on the ability of the Government to meet its carbon reduction targets and therefore are not significant. It is not considered necessary to assess against a county target as the GHG emissions from the Project would not be included in the County reporting.				
9-2.935	ECC believes that the target of achieving net zero by 2050 on a County level in Essex is an important local aim and a key component of the legally binding UK net zero target for 2050. It is important to understand the impact of the scheme on the County net zero target. ECC therefore request that the impact of the scheme on the County target is assessed and reported	<p>Appendix 4.1: Greenhouse Gas Assessment (document reference 6.4.A1), provides an assessment of the impact of both construction and operation of the Project on Greenhouse Gases (GHG).</p> <p>The assessment considers the change in GHG emissions against the relevant carbon budget as set out in the Climate Change Act 2008.</p> <p>The scope of this assessment is included in the Scoping Report (document reference 6.19) which was submitted to the Planning Inspectorate in November 2022 and agreed in their Scoping Opinion (document reference 6.20) received in December 2022.</p> <p>The assessment concludes the impact on GHG will have no material impact on the government's ability to meet carbon reduction targets. It is not considered necessary to assess against a county target as the GHG emissions from the Project would not be included in the County reporting.</p>		X		
9-2.936	PEIR Section 4.4.9 identifies the applicant's stance on issues relating to medium to long term climate	National Grid notes the respondent's feedback.		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	effects in relation to GHG impacts associated with material use and construction activities. Whilst it is acknowledged that the project has a role to play in the national efforts for decarbonisation, at a local level, it cannot be underestimated how efforts to reduce emissions associated to material use and construction activities can impact on the county's contribution to global warming. All efforts should be made to present suitable low carbon options for the development to identify how decisions relating to materials and construction activities have been made in relation to their carbon impact					
9-2.937	<p>The applicant intends to further reduce its carbon emissions, reduce its resource use, improve the natural environment and demonstrate leadership for change with firm targets, including delivering carbon neutral construction by 2025/26, achieving zero-waste to landfill across key areas of waste.</p> <p>A Materials and Waste Management Plan (MWMP) should outline comprehensive measures for reducing the use of raw materials through reuse and recycling. Whilst a Construction Environmental Management Plans (CEMP) should include details of the measures proposed to reduce effects from emissions, including identifying relevant methods of mitigation. The ambition of the applicant should direct attention to appreciate that for the UK target to be met, then every development that occurs in the</p>	<p>Appendix H: Greenhouse Gas Reduction Strategy of the Outline Code of Construction Practice (document reference 7.2) provides the Greenhouse Gas (GHG) Reduction Strategy which will be used to reduce GHG emissions. The GHG Reduction Strategy presents the overarching GHG management principles and requirements to reduce and manage GHG emissions related to the project.</p> <p>In addition, Appendix B: Outline Site Waste Management Plan (SWMP) of the Outline Code of Construction practice (CoCP) (document reference 7.2) sets out how the Project seeks to reduce the consumption of primary and raw materials and to encourage the use of secondary or recycled sources. It also sets out the waste hierarchy by reducing waste produced in the first place before considering</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	country must be aiming to be as close to net zero as possible, and therefore radically reduce upfront and operational GHG emissions. The proposed scheme, which will be carbon intensive in its construction, needs to show a commitment and methodology to first reduce and lastly offset the carbon footprint of the development and aim for net zero. The reality is that for the UK to achieve net zero in practice, all sectors need to play their part and reduce emissions to as close to zero as possible for all emissions created through development	alternatives such as reuse, recycling and repurposing. The contractor will be responsible for implementing the measures outlined within the Outline SWMP (document reference 7.2).				
9-2.938	ECC would expect typical measures to be taken to demonstrate how to reduce and avoid GHG emissions on an infrastructure project of this scale. These enhancement measures relate to: - reducing or avoiding GHG emissions during construction stage by using electric or low carbon construction equipment, making use of telematics and start/stop technology, generating renewable energy on-site, using low energy solutions for onsite offices / site compound etc. - reducing or avoiding GHG emissions associated with the consumption of raw materials, including carbon intensive materials (e.g. concrete, steel, aluminium and cement). Setting ambitious reduction targets for embodied carbon against early assumptions and adopting low carbon solutions throughout. - further reducing the	Appendix H: Greenhouse Gas Reduction Strategy of the Outline Code of Construction Practice (CoCP) (document reference 7.2) will be used to reduce Greenhouse Gas (GHG) emissions. The GHG Reduction Strategy presents the overarching GHG management principles and requirements to reduce and manage GHG emissions related to the project. The measures outlined by ECC would be considered as part of the GHG reduction strategy,		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>magnitude of GHG emissions associated with the use of materials and waste disposal, through for example, undertaking pre-demolition assessments which make recommendations for materials re-use, recycling and other recovery or final disposal. The applicant should aim to be leading the construction industry by example and striving to achieve and play their part in contributing to the national goal of achieving net zero by 2050. Therefore, ECC would urge the applicant to commit to these measures and seek to implement them in full.</p> <p>As a significant infrastructure provider, the applicant has a unique opportunity to share resources, knowledge and data nationally, in order to achieve best practice in respect of mitigating the effects of construction, operation and maintenance of energy network infrastructure</p>
