	Scientific Interest (SSSI) of Middle Wood, and flight path to Wattisham Army Air Corps base)	considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or Area of Outstanding Natural Beauty (AONB))'</i> . Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which				

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)b	S42(1)(d) and S47	Resulted in Design Change
		assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at RG183 and RG200 would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of NPS EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
9-4.198	Suggest that the Project is rerouted between Pylons RG146 and RG152 to the east of Saxham Street (e.g. to mitigate the impact on residences and heritage), and suggest that National Grid should take mitigation measures to reduce the impact of construction traffic on the proposed access adjacent to Saxham Street	<p>National Grid has considered the respondent's feedback and has looked at moving the alignment to the east in this location, moving to the east would require a greater amount of removal of woodland and would also move it closer to other properties, transferring effects.</p> <p>It would also result in additional angle pylons with a greater change of direction, which would be inconsistent with the Holford Rules, therefore we are not proposing a change to the location of these pylons. A summary of the Holford Rules is provided within Appendix I22 of this report. An Environmental Impact Assessment (EIA) has been undertaken and the findings (including impact of construction traffic) are presented in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement), which has identified any need for additional mitigation.</p>	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)b	S42(1)(d) and S47	Resulted in Design Change
9-4.199	Suggest that the Project is rerouted at Gislingham, as National Grid have been unable to resolve the loop of overhead lines running through the village	<p>National Grid has considered the respondent's feedback and whilst no specific alternative is suggested, has reviewed a number of alternative alignments and adjustments in this area. These include broader alternative corridors, close paralleling etc but these are less preferred as set out in the 2023, 2024 Design Development Reports (available on the Project website) and the 2025 Design Development Report (document reference 5.15)</p> <p>We have also considered a suggestion to route to the west of Gislingham, which would decrease impacts to the north and east of the village but would transfer these effects by increasing impacts to the town further south. A western alternative route would also be approximately 500 m longer in length with a similar number of angle pylons, there would also be an increased impacts on listed buildings and very constrained routeing between homes. Adjustments to the east have also been reviewed though previous reasons for those not being preferred remain. On this basis no change is proposed.</p>			X	
9-4.200	Suggest the use of T-pylons for the Project in between Gislingham and Stowupland (e.g. to mitigate visual and health impacts)	The latest independent report on the Comparison of Electricity Transmission Technologies: Costs and Characteristics (Institute of Engineering and Technology, 2025) confirms that whilst T-Pylons may in certain locations provide an alternative to conventional overhead lines with potential benefits in visual impact and reduced land-take, this is at a higher cost. The build cost is approximately 2 to 2.5 times that of an			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)b	S42(1)(d) and S47	Resulted in Design Change
		<p>equivalently rated conventional overhead line, and the lifetime costs are around 1.6 to 1.7 times that of a conventional overhead line. The current arrangements for the oversight of funding by Ofgem requires that the lowest cost acceptable design is taken forward rather than a more expensive design even if that design is perceived to reduce the level of effect.</p> <p>As such consideration of their use follows after establishing a need to mitigate effects of the standard lattice design and after considering the benefit of adopting a low height lattice pylon design. T pylons themselves are also less adaptable to varied terrains and require more substantial access infrastructure. Furthermore, their resilience and environmental impact are comparable to conventional overhead lines, but with increased carbon intensity due to construction materials. Attention also needs to be given to the transitions between pylon types. Given it is the surrounding context that drives the need for alternative design mitigation, where this is not required along the entire route, any visual break and transition in pylon design also needs to be carefully sited.</p> <p>Assessment findings have concluded that, where there is not a reversal of the presumption to use overhead lines, the use of lattice pylons (either standard or low height) is consistent with planning policy throughout the route. Whilst there may be some locations (for examples see Appendix A of the 2024 Design Development Report (available on the Project webpage)) where there may be</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)b	S42(1)(d) and S47	Resulted in Design Change
		a design option for the use of T pylons, the need to mitigate for unacceptable effects from lattice pylons is not engaged. On this basis T pylons are not proposed for the Project.				
9-4.201	Suggest that Pylons RG152, RG153 and RG154 are relocated (e.g. to mitigate landscape impact on the Western boundary of Earl Stonham / Plateau Clayland and visual impact), with Pylon RG153 relocated further away from the residences east of the proposed location)	<p>Through routeing and siting National Grid has sought to reduce as far as practicable potential impacts on the landscape and on views and visual amenity, including careful siting of pylons to reduce impacts where possible. This includes siting away from, or equidistant between residential properties where feasible, whilst following an economical and technically feasible route that seeks to avoid other environmental constraints.</p> <p>In this location, routeing further west would necessitate the introduction of an additional angle pylon to accommodate a shift to the west. This would in turn increase the length of the route and bring the alignment closer to properties east of Stowupland and along Saxham Street. Properties to the east of the current alignment are over 250 m from the alignment, and there are small woodland strips and pockets of vegetation around areas of settlement that provide slightly more screening than properties to the west of the alignment. A shift slightly further to the west is unlikely to alter effects on landscape character and any direct loss of landscape features. For these reasons, the alignment remains preferred.</p> <p>National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project. The results of this</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)b	S42(1)(d) and S47	Resulted in Design Change
		<p>assessment are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application. The ES identifies and assesses the likely significant effects on visual amenity resulting from the construction and operation (and maintenance) of the Project and recommends appropriate mitigation measures where possible to reduce potential effects.</p> <p>A Landscape and Visual Impact Assessment (LVIA) has been produced and the approach to the LVIA follows professional guidance as set out in Appendix 13.1: Landscape and Visual Methodology (document reference 6.13.A1), which includes Guidelines for Landscape and Visual Impact Assessment Third Edition (GLVIA3). The LVIA is presented in the ES, Chapter 13: Landscape and Visual (document reference 6.13).</p>				
9-4.202	Suggest that the Project should be routed away from land south of Bullen Lane (near Bramford Substation) due to future development (due to be constructed prior to the construction of the Project) (planning application reference provided by respondent)	The interface here was with the proposed construction compound. In light of landowner feedback and the emerging design detail of the future proposals a relocation of the compound has been progressed further south within the same field (to avoid conflict with other developments) and providing a more direct and shorter access for construction activities.			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)b	S42(1)(d) and S47	Resulted in Design Change
9-4.203	Suggest that Pylons RG118 and RG119, and associated haul roads for the Project, should be relocated away from Spring Farm (e.g. due to impact on business as the land is bisected, and impact on biodiverse water meadow)	<p>National Grid has considered the respondent's feedback and has made a change to the alignment between RG113 and RG118 (now RG112 and RG119) which would move the alignment (and RG118 and RG119) further east towards the railway.</p> <p>The Environmental Statement (ES) (document reference Volume 6: Environmental Statement) assesses the likely significant residual effects of the Project on a variety of environmental topics (including Cultural Heritage, and Landscape and Visual). ES Chapter 17: Cumulative Effects (document reference 6.17) reports any cumulative effects as a result of the Project's interaction with other projects and multiple effects on a single receptor.</p>			X	
9-4.204	Suggest that the use of underground cables for the Project at Waveney Valley is extended to Pylon RG94 (e.g. to mitigate impact on the Wortham Ling Site of Special Scientific Interest (SSSI) and the Waveney Valley flood plain, such as at Pylon RG90), with a trenchless construction method used (e.g. to mitigate impact on fen peat soils)	National Grid has considered the justification for the use of underground cable for the crossing of the Waveney Valley and on the matter of extending the use of underground cable to RG94 raised in the respondent's feedback. The starting presumption in National Policy Statement (NPS) EN-5 paragraph 2.9.20 in a location such as the Waveney Valley which, although valued is not designated, is that overhead line is the appropriate 400 kV connection technology. We have also considered whether the effects from the overhead line are at a level that engages other parts of NPS EN-5 (such as paragraph 2.9.23) to prompt consideration of whether			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)b	S42(1)(d) and S47	Resulted in Design Change
		<p>the benefits of undergrounding outweigh any extra economic, social or environmental impacts. At the Waveney we conclude that the benefits from a change to underground cable, do not justify the additional cost that would be incurred. The use of underground cable would lead to a lowering of effects on the setting of the Grade I Listed St Remegius Church, albeit the effects of progressing with an overhead line are assessed as less than substantial harm and don't themselves require a change in technology.</p> <p>In terms of community effects, existing trees would provide some screening and filtering of views of an overhead line for those in residential areas and on recreational routes. A change from overhead line to underground cable would reduce these community effects but bring disbenefits, most notably increased ecological effects from installation within peaty soils and increased technical risk to cable integrity from the WALOR channel naturalisation and landscape recovery plans. Conversely there may be compromise to the WALOR project by measures to ensure cable integrity. After consideration of the decision making guidance at paragraph 2.9.25 of NPS EN-5, National Grid concludes that whilst effects from overhead lines to individual receptors may be significant in Environmental Impact Assessment (EIA) terms they do not justify the potential for compromise to the WALOR project, the effects on peaty soils which would arise with an underground cable design nor justify the expected cost of an underground</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)b	S42(1)(d) and S47	Resulted in Design Change
		<p>cable design. On this basis, National Grid concludes that the use of an overhead line should be taken forward for the crossing of the Waveney Valley. Prior to making this decision we had considered whether requests to relocate the Cable Sealing End (CSE) compounds and extend the cable both to the north and the south may alter the decision making balance. Such extensions would bring benefits to various residential receptors but with the additional cost of longer length of cables. We conclude that given the absence of any designated status pertinent to NPS EN-5, and the extent to which some views from residential areas are filtered and screened and lower the level of adverse effects from the overhead line, we do not consider the additional cost associated with extending the underground cable would be justified.</p> <p>We have undertaken an EIA including assessments on ecology (including Sites of Special Scientific Interest). The results are outlined in Chapter 8: Ecology and Biodiversity (document reference 6.8) and Appendices 8.9 to 8.11 (document reference 6.8.A9 - 6.8.A11) of the ES. Appropriate mitigation would be implemented where impacts are identified as agreed with Natural England and the local planning authority as relevant.</p>				
9-4.205	Suggest that Pylons RG184 and RG185 are relocated to the north, so that Pylon RG185 is located on an existing field boundary (ideally the northern field boundary if possible)	National Grid notes the preference from certain landowners for pylons to be situated along hedge lines where possible to reduce the impact on agricultural activities and reduce land take. We have assessed			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)b	S42(1)(d) and S47	Resulted in Design Change
		requests from landowners on an individual basis. RG185 (now RG186) is as close to a field boundary as possible while taking into account the Public Rights of Way (PRoW) on the field boundary. RG184 (now RG185) cannot be moved to a field boundary due to the large nature of the field. Unbalanced span lengths and taller pylon heights would be needed to place this pylon on a field boundary which would increase visual effects and so would be less preferred. We are therefore not proposing a change to these pylon locations.				
9-4.206	Suggest that maintenance access for the Project should be from Offton Road via the existing farm track that leads from the sugar beet pad (on Bulls Ash Corner) leading in a north easterly direction rather than down Tye Lane as currently proposed (e.g. due to the narrow nature of this road)	National Grid notes the respondent's feedback. The access route proposed is for future survey and maintenance, if required, and would not be used for construction. We are not proposing to construct anything for this permanent access route, existing tracks and roads are being used where possible. Permanent access to RG185 (now RG186) would utilise the track to the north-east as suggested.			X	X
9-4.207	Suggest that the use of underground cables for the replacement of the existing 132 kV overhead line is extended (near Ringshall) across respondent's land (e.g. as this route would be shorter and more direct)	National Grid has a mandate to be economic and efficient in its spend and so consideration of longer and more circuitous underground cable routes must be carefully considered against this mandate. In this instance, there is insufficient justification to increase the mitigation against the mandate. In this particular location the proposed 132 kV underground cable is routed in the shorter, most direct route across the fields, noting the need to be offset from environmental constraints.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)b	S42(1)(d) and S47	Resulted in Design Change
9-4.208	Suggest that Pylon RG186 and proposed haul road are relocated away from sugar beet pad (located to the north-west of Pylon RG186), or alternatively that National Grid make provision for a new sugar beet pad to be constructed elsewhere on the respondent's land (proposed location and specification of the sugar beet pad provided to National Grid previously)	National Grid notes the respondent's feedback. We are unable to move RG186 (now RG187) due to multiple constraints in the area as well as the space required around the pylon for stringing of cables during construction. National Grid suggests the landowner contacts the Project Lands team, Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.			X	
9-4.209	Suggest relocation of Pylons RG205 and RG206 to be directly on top of the field boundary rather than being offset, and suggest relocation of the Construction Compound RG-CC06 further to the south of the field to mitigate impact on farming operations	National Grid notes the preference from certain landowners for pylons to be situated along hedge lines where possible to reduce the impact on agricultural activities and reduce land take. We have assessed requests from landowners on an individual basis and have therefore moved RG205 to be on top of the field boundary. RG206 has also been moved further south.			X	X
9-4.210	Suggest the Project follows the existing 400kV overhead line between Forward Green and Little Stonham to remove the sharp change in direction (plan provided by respondent) (e.g. to mitigate impact on Roydons Hall (Creting St Peter), Hempnalls Hall, Boundary Farm, Batts Farm, Potters Farm, Wicks Farm, Eldens Lane Farm, Cotton Lodge, Wimble Lane Cottage, Red House Farm and all properties along Saxham Street; Church Farm, Batts Farm and Lodge Farm; the nature reserve (land parcel reference provided by respondent))	National Grid notes the potential for close paralleling to reduce the level of effects that may arise from a new overhead line. However, there are constraints and features adjacent to the existing overhead line that mean that overall, we consider close paralleling would lead to greater effects on receptors in the area and be less compliant with the Holford Rules and be less consistent with the policy to be economic and efficient. A summary of the Holford Rules is provided within Appendix I22 of this report. In the area identified from around RG128 to RG160 there are features to east and west of the existing overhead line (including listed buildings,			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)b	S42(1)(d) and S47	Resulted in Design Change
		residential property, woodland etc) that create a need for multiple diversions, making this alternative less preferred due to the greater level of effects and need for multiple connection outages. As a result, whilst close paralleling may appear beneficial, overall, the increased environmental effects where the lines must converge and diverge, and those increased effects on properties with overhead line to both sides are considered greater than those introduced by a new route alignment separated from existing 400 kV overhead lines. In the absence of new evidence or new information no change is proposed.				
9-4.211	Suggest that the Project should be rerouted further east to run along field boundaries and away from residences (between Pylons RG121 and RG128), and criticism of National Grid's response to this change request when previously raised (e.g. National Grid do not specify where this change would mean that the Project is closer to the other residential properties to the east) (plan provided by respondent)	National Grid notes the respondents' comments but also notes that the alternative alignments have been described or mapped, as set out in the 2024 Design Development Report (available on the Project website). On that basis we do not think it necessary to identify every property that was closer or further from the alignment. The specific change requested would move the alignment closer to residential properties at Abbey Farm Cottages and at Surwood Farm, from a position approximately equidistant between property to east and west. A change was made going somewhat to reducing the effects but was limited to avoid transfer of effects wholly to other parties. No further change is proposed.			X	
9-4.212	Suggest that Coldham Grove (near Gislingham) should not be used as an access road for the Project	National Grid notes the respondent's feedback. The access route proposed is for future survey and			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)b	S42(1)(d) and S47	Resulted in Design Change
		maintenance if required and would not be used for construction. We are not proposing to construct anything for this permanent access route, existing tracks and roads are being used where possible.				
9-4.213	Suggest that the Project is rerouted between Pylons RG131 and RG139 to follow field boundaries (e.g. to mitigate disruption to farmland and farming operations and avoid crossing over the gas pipeline; to mitigate damage to wildlife)	The alignment in this location cannot readily follow field boundaries as this would require increased tree removal. That said we have sought to reposition some pylons close to field boundaries and repositioned the haul road as well as the route of any underground lower voltage cables around field edges where possible (e.g. RG138). In some cases, the alternative route suggested in feedback for access reduces efficiency through the introduction of multiple dead ends and is less preferred, or in other cases alternative pylon positions would place the pylons much closer to residential properties.			X	
9-4.214	Suggest that the Project should be rerouted as far east as possible away from respondent's property in Cotton (address and grid reference provided by respondent), as a minimum to the midway point between the respondent's residence and Lodge Farm in Mendlesham	Making this change as suggested would require additional angle pylons and would be less consistent with Holford Rule 3 in order to avoid transferring effects to other residential properties. A summary of the Holford Rules is provided within Appendix I22 of this report. As such, it is less preferred and no change is proposed. We have considered a range of alternatives in this area, as set out in the 2023 and 2024 Design Development Reports (available on the Project website) and consider that the alignment represents an appropriate balance reducing the effects as far as possible with as straight an alignment as possible.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)b	S42(1)(d) and S47	Resulted in Design Change
9-4.215	Criticism of the dog leg at Pylon RG154 to the east (which brings the Project in very close proximity to heritage assets (including Grade II* and Grade I listed assets) and across the Gipping River valley and over a railway line), and suggest that the dog leg is relocated slightly to the west to avoid heritage assets, bringing the Project through Gateway 14 (which has large-scale distribution buildings and several distribution pylons). With this, suggest that UK Power Networks (UKPN) pylons are removed and replaced with larger pylons (also allowing UKPN cables to be placed on them). Suggest that the Project should then cross the River Gipping in an industrial location and rejoin the currently proposed route at RG176 to avoid Badley Wood	The 2024 Design Development Report (available on the Project website) revisited alternative routes in this area as set out from paragraph 5.4.86 and included alternatives in this area but considered them less preferred. On the specific feedback the existing 132 kV alignment cannot be followed as it would be too close to residential properties and other built development and would oversail and therefore substantially curtail a site allocated for development. In the absence of any other new evidence or the identification of further factors the previous decision making remains valid. No change is proposed.			X	
9-4.216	Concern that the Project will divide respondents farm into two due to the access road being built (e.g. whilst compensation could help compensate the farmers, the impact on wildlife could not be compensated and the farm would become uneconomical to continue business)	National Grid has considered the respondent's feedback and note their concerns about the haul road route through their farm. As the haul road needs to be in close proximity to the alignment, an alternative alignment in this location has been assessed. An alternative to the west or east would be a longer route with more angle pylons and would be less consistent with the Holford Rules. A summary of the Holford Rules is provided within Appendix I22 of this report. Moving pylons from some fields to other fields is considered to transfer effects from one landowner to another and therefore we are not proposing a change to			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)b	S42(1)(d) and S47	Resulted in Design Change
		<p>the alignment and therefore the haul road in this location.</p> <p>National Grid has completed the Environmental Impact Assessment (EIA) for the Project. The results of this assessment is provided in the Environmental Statement (ES) that accompanies the Development Consent Order (DCO) application. The ES identifies and assesses the likely significant effects on the environment resulting from the construction of the Project and recommends appropriate mitigation measures (in consultation with relevant stakeholders) to reduce potential effects.</p> <p>All affected landowners would be compensated for any temporary/permanent losses, and this would be dealt with on a case-by-case basis.</p> <p>If there are any specific concerns requiring compensation and how it would be assessed, please contact the Project lands team: Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.</p> <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD</p>				
9-4.217	Concern about the impact of haul roads and construction laydown area proposed for the Project in the small grass meadow and fields to the east of the respondent's property on Coldham Lane, Gislingham (e.g. impact on wildlife (list of species	<p>The impacts on agricultural land, soils and agricultural land holdings are assessed in full in Chapter 6: Agriculture and Soils (document reference 6.6) of the Environmental Statement (ES). Appendix C: Outline Soil Resource Plan of the Outline Code of Construction</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)b	S42(1)(d) and S47	Resulted in Design Change
	provided by respondent); impact on farming, including reduction of Sustainable Farming Incentives and soil compaction)	<p>Practice (CoCP) (document reference 7.2) also sets out key strategy, methodology and guidance, and outlines key soil mitigation measures to protect soil resources (i.e., avoiding soil compaction) during the stages of preconstruction, construction, post construction and operation. Any land acquired temporarily during construction (including that from haul roads and construction laydown areas) would be returned to its former land use/condition or a use/condition as discussed with the landowner (where practicable), meaning land quality and land management including Sustainable Farming Incentive schemes should remain the same post construction.</p> <p>A range of protected species and other ecological surveys have been undertaken and the results are outlined in Chapter 8: Ecology and Biodiversity (document reference 6.8) and Appendices 8.1 to 8.16 (document reference 6.8.A1 - 6.8.A16) of the ES. Appropriate mitigation would be implemented where impacts are identified as agreed with Natural England and the local planning authority as relevant.</p>				
9-4.218	Concern about the haul road for the Project on Thornham Road (e.g. impact on traffic and access to the A140), and suggest that Pylon RG119 should be accessed from the Wickham Skeith direction instead	It appears that there is a misunderstanding with the permanent access and the construction access. There is a permanent access located off Thornham Road that would not be used as a construction access. National Grid has not proposed to use Thornham Road in Gislingham as part of the Primary Access Routes for construction access from the Strategic Road Networks			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)b	S42(1)(d) and S47	Resulted in Design Change
		<p>/Major Road Networks. The haul road crosses Thornham Road, hence a crossover bellmouth is proposed. A bellmouth is also provided to the east of this location to allow construction access to the haul road south of Thornham Road leading towards Pylon RG120. The access to A140 would remain open and would be unaffected.</p> <p>The proposed traffic management at haul road bellmouths is detailed in the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) for the Project that accompanies the Development Consent Order (DCO) application.</p> <p>The impact on Thornham Road between haul road access bellmouths can be found within Chapter 16: Traffic and Transport (document reference 6.16) of the Environmental Statement (ES) which has undertaken an assessment of the impact of peak construction traffic along all Primary Access Routes.</p>				
9-4.219	Suggest that the Project should be rerouted away from Gislingham through the less populated area west at the end of Mill Street, crossing Back Street between Jenny Bungalow and Nu Lodge Farm and then across the fields to join the currently proposed route around Eastlands Farm Finningham	National Grid has considered a change to the alignment to pass the west side of Gislingham. This would reduce residential amenity effects for a number of properties to the eastern and north-eastern edges of Gislingham. However, those residential amenity effects are transferred to residential properties to the western and southern edge of Gislingham and potentially to the north-eastern side of Finningham depending on route used to return to the 2024 preferred draft alignment. Additionally, any route to the west also has to pass			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)b	S42(1)(d) and S47	Resulted in Design Change
		<p>between properties less than 150 m apart whereas this is the minimum separation distance to the closest residential properties when routed to the east. As a result of this a western alternative route is less consistent with Holford Rule Supplementary Notes. A summary of the Holford Rules is provided within Appendix I22 of this report.</p> <p>On heritage assets, a route to the west would increase separation to the moat to the west of Mellis Common but require an alignment passing closer to a greater number of listed buildings, albeit overall there is considered to be no major difference in consistency with Holford Rule 2. However, the alternative to the west is considered less consistent with Holford Rule 3 being around 500 m longer with at least one more pylon. Overall, this requested change is considered to be less preferred and is therefore not proposed to be taken forward.</p>				
9-4.220	Suggest the use of High Voltage Direct Current (HVDC) underground cables for the Project through Creeting St Peter or, if this is not possible, suggest the use of T-pylons for the Project through Creeting St Peter	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed</i>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)b	S42(1)(d) and S47	Resulted in Design Change
		<p>developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or Area of Outstanding Natural Beauty (AONB))'. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at Creeting St Peter would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of NPS EN-5. The LVIA is presented in the Environmental Statement (ES),</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)b	S42(1)(d) and S47	Resulted in Design Change
		<p>Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.</p> <p>The latest independent report on the Comparison of Electricity Transmission Technologies: Costs and Characteristics (Institute of Engineering and Technology, 2025) confirms that whilst T-Pylons may in certain locations provide an alternative to conventional overhead lines with potential benefits in visual impact and reduced land-take, this is at a higher cost. The build cost is approximately 2 to 2.5 times that of an equivalently rated conventional overhead line, and the lifetime costs are around 1.6 to 1.7 times that of a conventional overhead line. The current arrangements for the oversight of funding by Ofgem requires that the lowest cost acceptable design is taken forward rather than a more expensive design even if that design is perceived to reduce the level of effect.</p> <p>As such consideration of their use follows after establishing a need to mitigate effects of the standard lattice design and after considering the benefit of adopting a low height lattice pylon design. T pylons themselves are also less adaptable to varied terrains and require more substantial access infrastructure. Furthermore, their resilience and environmental impact are comparable to conventional overhead lines, but with increased carbon intensity due to construction materials. Attention also needs to be given to the transitions between pylon types. Given it is the surrounding context</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)b	S42(1)(d) and S47	Resulted in Design Change
		<p>that drives the need for alternative design mitigation, where this is not required along the entire route, any visual break and transition in pylon design also needs to be carefully sited.</p> <p>Assessment findings have concluded that, where there is not a reversal of the presumption to use overhead lines, the use of lattice pylons (either standard or low height) is consistent with planning policy throughout the route. Whilst there may be some locations (for examples see appendix A of the 2024 Design Development Report (available on the Project webpage)) where there may be a design option for the use of T pylons, the need to mitigate for unacceptable effects from lattice pylons is not engaged. On this basis T pylons are not proposed for the Project.</p> <p>National Grid is constantly looking into new innovations and investigating alternative technology types. These are explored and assessed for suitability. Alternative technologies were investigated for the Project, these included an offshore connection using Direct Current (DC) technology, and various onshore connection options including: increasing operational voltages on existing network to above 400 kV; Alternating Current (AC) overhead lines (established technology); alternative pylon types; AC underground technology; HVDC overhead line and underground cables; and Gas Insulated Line (GIL). HVDC is not normally used across land as converting AC to DC and back again would require converter stations so it can be used in the rest of</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)b	S42(1)(d) and S47	Resulted in Design Change
		<p>transmission network and the distribution network which is currently AC. These converter stations are a significant size and would be required at every interface with the wider AC network i.e at Norwich, Bramford, East Anglia Connection Node (EACN) substation and Tilbury substations, the cost of these converter stations outweighs the benefits offered.</p> <p>This is covered within the ES (document reference Volume 6: Environmental Statement) as well as in the 2025 Design Development Report (document reference 5.15) submitted with the Development Consent Order (DCO) application.</p> <p>Currently, overhead lines offer the most economic and efficient solution to transmit electricity over long distances.</p>				
9-4.221	Suggest that an access road from the A12 at or near Junction 13 (the Four Sister's Junction) passing to the North of Holton St Mary until the entrance of Notley Enterprise Park on Acacia Road is constructed for the Project instead of using the B1070	<p>National Grid has carefully considered the feedback received during the statutory consultation for this Primary Access Route for construction vehicles and has identified an opportunity to utilise an offline temporary haul road located east of Holton St Mary from the B1070 to the construction corridor. It is proposed that this route would act as a bypass for Holton St Mary during construction.</p> <p>Through this process, National Grid has also considered alternative routes for this bypass, including the use of the historic railway alignment. These alternatives were discounted through assessment and identification of constraints and requirements.</p>			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)b	S42(1)(d) and S47	Resulted in Design Change
9-4.222	Suggest the Project should follow the railway line adjacent to Gislingham northwards before crossing south of Mellis to mitigate damage of farmland (plan provided by respondent)	National Grid has considered the respondent's feedback, the alignment diverts to the west at Mellis due to a number of factors including avoiding impacts on Mellis Common, avoiding heritage assets and therefore taking the opportunity to follow part of the route of the existing 132 kV overhead line which would then be replaced with underground cable. The route then deviates back to the east of Gislingham, following feedback we have made a change to the alignment between RG113 and RG118 (as in between RG112 and RG119) which would move the alignment further east towards the railway, however we are not proposing to move the alignment back further east towards Mellis as suggested due to the reasons above.			X	X
9-4.223	Suggest that the Project is rerouted further north in this Section	National Grid notes the respondent's feedback, however without further detail about which part of the section is being referred to we are unable to comment further.			X	
9-4.224	Suggest that the Project is relocated north by 1/4 mile to Darrow Lane to Common Road (e.g. to mitigate impact on properties and to mitigate fire risk to crops) and is located north of this junction	National Grid has considered the respondent's feedback, moving the alignment to the north to Common Road would make the alignment longer and less direct, which would be less consistent with the Holford Rules. A summary of the Holford Rules is provided within Appendix I22 of this report. There are also constraints to routing due to pinch points between properties when passing south towards Bressingham, which would transfer or increase effects. We are therefore not proposing a change to the alignment at this location.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)b	S42(1)(d) and S47	Resulted in Design Change
9-4.225	Query about what the construction laydown area at Acacia Road will be used for, and suggest that this is relocated further north	<p>National Grid has noted the respondent's feedback and has reviewed alternative locations for JC-CC2.</p> <p>The proposed compound between Raydon and Holton St Mary serves underground cabling works between the proposed Cable Sealing End (CSE) compound north of the Notley Enterprise Park and the River Stour. Moving the proposed compound to land adjacent to Notley Enterprise Park would increase the distance that construction vehicles must travel from the Primary Access Route by approximately 1.5-1.8 km.</p> <p>Approximately two thirds of the cable section served by this compound is to the south of the current compound position, therefore moving the compound would also significantly increase construction vehicle movements from the compound to work sites along the cable alignment.</p> <p>In response to various pieces of feedback, National Grid has proposed the construction of a separate construction haul road to the north of Holton St Mary, to remove construction traffic from the majority of the B1070.</p>	X			X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-4.226	Suggest that the Project should be routed in a straight line between Pylons RG101 and RG113 around Burgate (e.g. to mitigate the impact on trees, including ancient oaks, and hedgerows)	<p>National Grid proposed the change to the alignment between RG102 and RG117 (previously RG103 and RG116) to adopt the alignment of the existing 132 kV overhead line for approximately 2 km, to then realign south to the west of Burgate Road. This change was proposed due to the identification of historic assets that need to be avoided as well as impacts on Mellis Common and the opportunity to follow the route of existing pylons. We are therefore not proposing a further change to the alignment at this location.</p> <p>A full range of ecology surveys have been undertaken across the 2022-2024 period. Results of these baseline surveys, an impact assessment and any proposed mitigation have been detailed within Chapter 8: Ecology and Biodiversity of the Environmental Statement (ES) (document reference 6.8). Detailed mitigation measures are also set out within the Outline Code of Construction Practice (CoCP) (document reference 7.2) which contains a list of relevant good practice measures to avoid or reduce impacts.</p>			X	
9-4.227	Suggest that Pylon RG116 is relocated further north and east away from the floodplain, and by default away from Gislingham Village. The copse to the east would provide some screening and provides an opportunity to cross the railway line at that point	National Grid has considered the respondent's feedback and made a change to the alignment between RG113 and RG118 (now RG119) which moved RG115, RG116, RG117 and RG118 further east away from Gislingham. RG117 would also then be positioned on the other side of the copse as suggested. Crossing the railway at the location suggested would result in the loss of a greater amount of woodland to the east of the railway and would			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		be closer to a campsite and venue to the east. Therefore, we are not proposing a change to cross the railway at this location.				
9-4.228	Concern that the siting of Pylons RG117 and RG118 and permanent compounds will mean very restricted vehicle access and closure of all public footpaths to the Thornham Wildlife Site / Suggest that Pylons RG117 and RG118, and all compounds, are located to the east of the railway line	<p>National Grid has considered the respondent's feedback and has made a change to the alignment between RG113 and RG118 which would move RG116, RG117 and RG118 (now RG119) further east away from Gislingham. RG117 would also then be positioned on the other side of the copse as suggested. Crossing the railway at the location suggested would result in the loss of a greater amount of woodland to the east of the railway and would be closer to a campsite and venue to the east. Therefore, we are not proposing a change to cross the railway at this location.</p> <p>Vehicle access would be maintained throughout the construction period.</p> <p>An Outline Public Rights of Way (PRoW) Management Plan (document reference 7.6) has been prepared and submitted as part of the Development Consent Order (DCO) application. The document details the mitigation strategy for PRoW during construction and Access, Rights of Way and Public Rights of Navigation Plans (document reference 2.5) have been prepared.</p> <p>An assessment on the impact on PRoW during construction and proposed mitigation measures has been provided within Chapter 16: Traffic and Transport</p>			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>(document reference 6.16) of the Environmental Statement (ES).</p> <p>The material laydown area location is specifically positioned next to the proposed highways mitigation works which are required to a major lane west of the railway bridge.</p>				
9-4.229	<p>Due to the proximity of the Project between Pylons RG110 and RG120 and residential properties and businesses, and in particular Pylon RG117 which is less than the 300m buffer used by National Grid to assess the impact, Gislingham would be subject to significant noise and vibration. The Preliminary Environmental Information Report (PEIR) from April 2024 (section 5.10) acknowledges that construction activities, increased road traffic and ongoing maintenance will have significant noise and vibration impact.</p> <p>Criticism that the report then goes on to give an opinion that the effects would not be significant without providing any information to support such a conclusion. In addition, the mitigations are just stated as best practice methods without providing any detail for the stakeholder to scrutinise. Criticism that this approach is unacceptable, as a statutory consultation should at least include the results of local noise and vibration tests at significantly affected locations.</p> <p>Suggest that a mitigation for this would be to realign</p>	<p>The Preliminary Environmental Information Report (PEIR) was a preliminary document and reflected the Project proposals at the time.</p> <p>The 300 m buffer refers to the study area for assessing the effects of construction noise. Similarly, a 100 m buffer is used to assess the effects of construction vibration. However, these are not the distances within which significant effects are expected. Significant effects are only expected within much shorter distances than study area buffers. Additional buffers were presented in the PEIR showing where there are potential significant adverse effects without mitigation. These are referred to as construction noise and vibration 'hot-spots'. In both cases, the assessment presented in the PEIR demonstrated that significant adverse effects at the identified 'hot-spots' would not be expected where best practicable means are employed to reduce the effects of construction noise and vibration.</p> <p>Chapter 14: Noise and Vibration of the Environmental Statement (ES) (document reference 6.14) considers the potential effects of construction noise and vibration, and construction traffic noise associated with the Project.</p>			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	these pylons further from Gislingham village and retain existing treelines and hedgerows, and the railway embankment as sound buffers	<p>The assessment presented in the ES is based on a more detailed assessment of noise and vibration from each construction activity at each receptor within the study area. Similar to the PEIR, the assessment initially presents the findings without mitigation so that 'hot-spots' can be identified where mitigation is required to avoid significant adverse effects. The assessment then considers the effect of mitigation at these locations to determine whether there would be any remaining significant adverse effects. The assessment demonstrates that no significant adverse effects are expected where best practicable means are employed to reduce construction noise and vibration effects. The ES presents outline mitigation measures to be implemented to mitigate effects which are presented within the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the associated Outline Noise and Vibration Management Plan (NVMP) (Appendix F of the CoCP).</p> <p>Further detailed construction noise and vibration assessments will be undertaken by the Main Works Contractors(s) prior to commencing works and site specific, best practicable means mitigation measures will be determined at that stage.</p> <p>National Grid has considered the respondent's feedback and made a change to the alignment between RG113 and RG118 (now RG119) which moved RG115, RG116, RG117 and RG118 further east away from Gislingham. RG117 would also then be positioned on the other side</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		of the copse as suggested. Crossing the railway at the location suggested would result in the loss of a greater amount of woodland to the east of the railway and would be closer to a campsite and venue to the east. Therefore, we are not proposing a change to cross the railway at this location.				
9-4.230	The Preliminary Environmental Information Report (PEIR) from April 2024 (Section 5.13) considers the cumulative effects of the Project. Criticism that the report is completely remiss in not identifying that many locations are affected by multiple significant aspects of the Project (in particular in Gislingham). Section 5.13.9 confirms that cumulative effects are likely but is reliant on individual mitigations. Criticism that this is inadequate and focused mitigation with community consultation is required for these significantly affected locations	<p>The Preliminary Environmental Information Report (PEIR) was undertaken in April 2024 and was a preliminary assessment (i.e. a full assessment at that stage had not been undertaken). Further environmental studies have been undertaken since the submission of the PEIR.</p> <p>The Environmental Statement (ES) (document reference Volume 6: Environmental Statement) assesses the likely significant residual effects of the development on a variety of environmental topics. ES Chapter 17: Cumulative Effects (document reference 6.17) reports any intra-project and inter-project cumulative effects.</p> <p>Construction, Landscape and Visual effects are anticipated on pedestrians, cyclists and horse riders who may use roads, PRoW, long distance footpaths or cycle routes within several Visual Receptor Areas (VRA) within Project Section B. These include VRA B4 Finningham and Gislingham.</p> <p>During all our consultations we welcomed feedback on all aspects of our proposals, including on our proposed mitigation in affected locations. Following our consultations we considered all the feedback we</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		received and amended our proposals where necessary. We also held a targeted consultation on a proposed change in Gislingham where we welcomed further feedback on our proposals and mitigations in this area.				
9-4.231	Suggest that the Project between Pylons NG117 and NG119 is rerouted a few hundred metres to the north of Thornham Road (plan provided by respondent) where there is adequate clearance (e.g. to mitigate impact on farm, ancient trees, water meadows, long standing hedgerows, productive farmland, wildlife habitats and listed building)	National Grid has considered the respondent's feedback and has made a change to the alignment between RG113 and RG119 which would move RG116, RG117 and RG119 further east away from Gislingham.			X	X
9-4.232	Suggest that Pylon RG161 is relocated to the field boundary next to Mill Lane (plan provided by respondent, e.g. to mitigate impact on farming)	<p>National Grid notes the respondent's feedback; we are unable to move RG161 (now RG162) further south towards to Mill Lane as space is required for scaffolding to be erected next to the road during construction.</p> <p>The impact of permanent pylon footings on agricultural land is assessed in Chapter 6: Agriculture and Soils (document reference 6.6) of the Environmental Statement (ES). Design sought to minimise impacts on farming activities when considering pylon locations, including RG161. The pylon footings cover a relatively small area of land proportional to field sizes; therefore, the impacts on farming activities and agricultural yields should be small.</p> <p>Should any landowner have any specific queries regarding impacts to farming or compensation please contact the Project lands team to discuss:</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314. Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD.				
9-4.233	Suggest that the laydown area at Pylon RG162 is relocated, moving it from the West of the working width to the East to minimise the short term disturbance to the use of the remaining land within the field, outside of the working width, whilst still providing National Grid's contractors with sufficient space to lay down their equipment (plan provided by respondent)	National Grid notes the respondent's feedback. We have moved the construction laydown area further east underneath the overhead line. It is not possible to move the laydown area as far east as suggested by the respondent.			X	X
9-4.234	Suggest the removal of a proposed temporary / permanent access between Pylons RG162 and RG163 on the basis that it relies upon the use of an existing bridge, which currently straddles the river but which following the sale and splitting up of the land holding, will shortly be removed	A change to the permanent right of access is proposed in response to the feedback. For construction access we propose to retain use of a crossing (with temporary bridge installed if required) as it is more efficient than upgrading the alternative via Creeting Hall and avoids the routing of construction traffic past residential properties at Creeting Hall.			X	X
9-4.235	Concern about the impact of haul road for the Project between Pylons RG190 and RG191 on protected hedgerow (list of species provided by respondent), and suggest that the haul road is relocated 80m east	National Grid notes the respondent's feedback. We have made a slight change to the haul road to traverse the western edge of the field boundary, as well as crossing the hedgerow under the alignment to minimise vegetation loss to the same area. At the northern end,			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	to cross a narrower, less ecologically diverse hedgerow (plan provided by respondent)	the position of the haul road is dictated by the crossover bellmouth that is positioned to ensure highway safety requirements are met. A range of protected species and habitat surveys, including hedgerow surveys, have been undertaken and the results are outlined in the Chapter 8: Ecology and Biodiversity (document reference 6.8) of the Environmental Statement (ES). Appropriate mitigation would be implemented, including reinstatement of the hedgerow on completion of works, as agreed with the Local Planning Authority. Mitigation for hedgerow habitat loss is also presented in the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4).				
9-4.236	Suggest that the Project should follow a more direct route between Pylons RG154 and RG165 (e.g. rather than the dog leg)	National Grid has considered the respondent's feedback and has reviewed alternatives to the west of Creeping St Peter between RG154 and RG165. Western alternatives would take the alignment closer to a greater number of properties at Stowmarket and Creeping St Peter and would have a larger number of angle pylons being less consistent with the Holford Rules. We are therefore not taking forward a change to the alignment at this location. A summary of the Holford Rules is provided within Appendix I22 of this report.			X	
9-4.237	Suggest that the construction haul road for the Project between Pylons RG161 and RG162 should follow a more direct route (e.g. to mitigate impact on farming due to the dog leg)	National Grid notes the respondent's feedback. The haul road between RG161 and RG162 (now RG162 and RG163) is this shape due to the need to route around the conductor stringing work area to the east of pylon			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		RG162 (now RG163). Both the haul road and stringing work area are temporary for construction only and land will be reinstated post construction.				
9-4.238	<p>Concern about the impact of the Project on Stage Zero river restoration works of the River Waveney as part of the Waveney and Little Ouse Landscape Recovery Project (WaLOR), given that proposed Stage Zero restoration will see the main river channel move away from the two sections of Horizontal Directional Drilling (HDD) (plan provided by respondent) and the trenched depth of 0.9-1.4m (to top of cable) is likely to impact river restoration, and suggest that changes to where deep bodies of water occur should be considered for the Project. Similarly, concern that, should a delay occur in the delivery of Stage Zero river restoration by WaLOR and the Project is constructed first, the Project could compromise the delivery of Stage Zero restoration works if the route and depth of the underground cables were not carefully designed to accommodate future river restoration proposals (e.g. impact the guaranteed payment, a legally binding agreement between WaLOR, landowner and government to deliver the WaLOR objectives, including Stage Zero restoration).</p> <p>With this, suggest that the sections of HDD for the Waveney Valley Alternative are extended to avoid impacts to Stage Zero restoration, and that the use</p>	<p>Following careful consideration of feedback received from the public, stakeholders and the findings of our ground investigations (GI) and environmental surveys in the area, an overhead line design, rather than an underground cable in this area, has been taken forward. The effects of this design on the River Waveney are presented in the Environmental Statement (ES) Chapter 12: Hydrology, Land Drainage and Flood Risk (document reference 6.12), which also considers the Projects interaction with the Waveney and Little Ouse Landscape Recovery (WaLOR) project.</p> <p>Detailed Agricultural Land Classification (ALC) surveys and additional peat surveys undertaken in the Waveney Valley identified organic mineral (peaty) soils, but not peat. The survey results are presented in full in Appendix 6.1: Agricultural Land Classification Report (document reference 6.6.A1) of the ES.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	of HDD is considered for the Project across the entire Waveney Valley (e.g. given the existing peat soils within the River Waveney Valley, the proposed plan to increase peat soils as part of the WaLOR project, and the potential impact to the historic river channel from a trenched crossing, using HDD to cross the entire span of the river valley would follow the 'Avoid' step in the Mitigation Hierarchy)					
9-4.239	Suggest that Pylon JC15 is relocated north away from Sproughton Park County Wildlife Site (CWS)	National Grid notes the respondent's feedback to move JC15 (now JC16) away from Sproughton Park County Wildlife Site (CWS). We are unable to move this pylon further away from the CWS without increasing impacts to Hintlesham Fisheries to the west or woodland to the east. Impacts on habitats, wildlife and ecology have been assessed by a team of specialists, who have inputted into the design process and are in considered in Chapter 8: Ecology and Biodiversity (document reference 6.8) of the Environmental Statement (ES).			X	
9-4.240	Support the use of Horizontal Directional Drilling (HDD) methods for the Project under priority habitat deciduous woodland at The Coombs County Wildlife Site (CWS), and suggest that HDD should also be used for the Project approximately 1km south at the priority habitat deciduous woodland around the crossing of the Black Brook, between two parcels of Black Brook CWS (e.g. currently proposed to be delivered using an open trenched method)	The underground cable installation methodology at Black Brook, has been subject to significant consideration due to the high ecological value of the site. A range of construction methods and routes have been investigated for the area. However, the site is highly constrained, including a property that is located immediately north of Black Brook, Black Brook local wildlife site (LWS) and priority woodland habitat. The use of Horizontal Directional Drilling (HDD) is not			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		technically feasible due to these site constraints and alternative trenchless solutions are expected to require use of tunnelling methods, which would be substantially more expensive than HDD. This cannot be justified in policy terms.				
9-4.241	Suggest the haul road access track to Saxham Street is relocated away from respondent's land and directly from Debenham Road to the south (e.g. to mitigate security risk; due to construction delays associated with Avian Flu; to mitigate impact on soils and farming)	National Grid notes the respondent's feedback. The haul road is required to be located as close to the alignment as possible and therefore we are not proposing a change to its location at Saxham Street. With regards to impacts on farming and risks associated with avian flu National Grid has and will continue to engage with all landowners and look to agree any suitable mitigation / compensation where required.			X	
9-4.242	Suggest an alternative route for the Project between Pylon RG140 and RG153, following west of Saxham Street (plan provided by respondent)	The 2023 and 2024 Design Development Reports (available on the Project website) have both considered this alternative and concluded that it was less preferred because of restricted space between properties. A planning application to the north of Stowupland Hall would further restrict routeing. This was confirmed to not be Environmental Impact Assessment (EIA) development in November 2024. Environmental and other studies have not identified any further information to alter this previous conclusion, and no new evidence is provided by the respondent nor further decision making factors identified. No change is proposed. The effects of the Project are assessed and presented in the EIA and this has identified any need for additional mitigation.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-4.243	Suggest that the use of underground cables (for the Waveney Valley Alternative) should be extended past Finningham to Mendlesham Road (pylon RG133)	National Grid has considered the justification for the use of underground cable for the crossing of the Waveney Valley and on the matter of extending the use of the underground cable past Finningham to Mendlesham Road raised in the respondent's feedback. The starting presumption in National Policy Statement (NPS) EN-5 paragraph 2.9.20 in a location such as the Waveney Valley which, although valued is not designated, is that overhead line is the appropriate 400 kV connection technology. We have also considered whether the effects from the overhead line are at a level that engages other parts of NPS EN-5 (such as paragraph 2.9.23) to prompt consideration of whether the benefits of undergrounding outweigh any extra economic, social or environmental impacts. At the Waveney we conclude that the benefits from a change to underground cable, do not justify the additional cost that would be incurred. The use of underground cable would lead to a lowering of effects on the setting of the Grade I Listed St Remegius Church, albeit the effects of progressing with an overhead line are assessed as less than substantial harm and don't themselves require a change in technology. In terms of community effects, existing trees would provide some screening and filtering of views of an overhead line for those in residential areas and on recreational routes. A change from overhead line to underground cable would reduce these community effects but bring disbenefits, most notably increased ecological effects from installation within peaty soils and	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>increased technical risk to cable integrity from the WaLOR channel naturalisation and landscape recovery plans. Conversely there may be a compromise to the WaLOR project by measures to ensure cable integrity. After consideration of the decision making guidance at paragraph 2.9.25 of NPS EN-5, National Grid concludes that whilst effects from overhead lines to individual receptors may be significant in Environmental Impact Assessment (EIA) terms they do not justify the potential for compromise to the WaLOR project, the effects on peaty soils which would arise with an underground cable design nor justify the expected cost of an underground cable design. On this basis, National Grid concludes that the use of an overhead line should be taken forward for the crossing of the Waveney Valley. Prior to making this decision we had considered whether requests to relocate the Cable Sealing End (CSE) compounds and extend the cable both to the north and the south may alter the decision making balance. Such extensions would bring benefits to various residential receptors but with the additional cost of longer length of cables. We conclude that given the absence of any designated status pertinent to NPS EN-5, and the extent to which some views from residential areas are filtered and screened and lower the level of adverse effects from the overhead line, we do not consider the additional cost associated with extending the underground cable would be justified.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-4.244	Suggest that the Project should follow the existing 132 kV overhead line near Brook Farm airstrip (e.g. to mitigate impact on the airstrip) and suggest that the replacement of the existing 132 kV overhead line with underground cables should be extended north to the River Waveney	Following consideration of this and other feedback the alignment has been modified to follow the alignment of the existing 132 kV overhead line from around PKF30. This allows continued flight activity from the airstrip, positions the alignment so that residential properties benefit from additional filtering of views from existing trees and also reduces the potential for cumulative effects. We considered the potential to extend the existing 132 kV underground cable further north, but cumulative effects were not considered to be at a level to justify the additional effects and costs given.			X	X
9-4.245	Suggest that the Project should be routed south-eastwards across Dams Lane towards the alignment of the existing 132 kV overhead line, to PKF30, PKF31 or PKF32 (subject to full assessment), and to connect from there back into the currently proposed alignment for the Project at Pylon RG102	Following consideration of this and other feedback the alignment has been modified to follow the alignment of the existing 132 kV overhead line from around PKF30. This allows continued flight activity from the airstrip, positions the alignment so that residential properties benefit from additional filtering of views from existing trees and also reduces the potential for cumulative effects. We considered the potential to extend the existing 132 kV underground cable further north, but cumulative effects were not considered to be at a level to justify the additional effects and costs given.		X		X
9-4.246	Concern about the impact of the Project on archaeological site around St John's House (west of Pylon RG95) and suggest that full geophysical surveys and trial trenching should be undertaken for the Project at this location. With this, suggest that	National Grid has considered the justification for the use of underground cable for the crossing of the Waveney Valley and on the matter of the crossing of Doit Lane raised in the respondent's feedback. The starting presumption in National Policy Statement (NPS) EN-5		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	additional Horizontal Directional Drilling (HDD) may be needed at this location, including where the Project crosses Doit Lane	paragraph 2.9.20 in a location such as the Waveney Valley which, although valued is not designated, is that overhead line is the appropriate 400 kV connection technology. We have also considered whether the effects from the overhead line are at a level that engages other parts of NPS EN-5 (such as paragraph 2.9.23) to prompt consideration of whether the benefits of undergrounding outweigh any extra economic, social or environmental impacts. At the Waveney we conclude that the benefits from a change to underground cable, do not justify the additional cost that would be incurred. The use of underground cable would lead to a lowering of effects on the setting of the Grade I Listed St Remegius Church, albeit the effects of progressing with an overhead line are assessed as less than substantial harm and don't themselves require a change in technology. In terms of community effects, existing trees would provide some screening and filtering of views of an overhead line for those in residential areas and on recreational routes. A change from overhead line to underground cable would reduce these community effects but bring disbenefits, most notably increased ecological effects from installation within peaty soils and increased technical risk to cable integrity from the WaLOR channel naturalisation and landscape recovery plans. Conversely there may be a compromise to the WaLOR project by measures to ensure cable integrity. After consideration of the decision making guidance at paragraph 2.9.25 of NPS EN-5, National Grid concludes				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		that whilst effects from overhead lines to individual receptors may be significant in Environmental Impact Assessment (EIA) terms they do not justify the potential for compromise to the WaLOR project, the effects on peaty soils which would arise with an underground cable design nor justify the expected cost of an underground cable design. On this basis, National Grid concludes that the use of an overhead line should be taken forward for the crossing of the Waveney Valley. Prior to making this decision we had considered whether requests to relocate the Cable Sealing End (CSE) compounds and extend the cable both to the north and the south may alter the decision making balance. Such extensions would bring benefits to various residential receptors but with the additional cost of longer length of cables. We conclude that given the absence of any designated status pertinent to NPS EN-5, and the extent to which some views from residential areas are filtered and screened and lower the level of adverse effects from the overhead line, we do not consider the additional cost associated with extending the underground cable would be justified.				
9-4.247	Suggest that the Project should be routed between Burgate Road to the west and the Moatyard Plantation to the east, while still respecting the setting of the moated site by either starting the route change at Pylon RG108 or RG109 (e.g. to avoid the double crossing of Burgate Road; to avoid cutting	National Grid notes the respondent's feedback. The alignment diverts to the west at Mellis due to a number of factors including avoiding impacts on Mellis common, avoiding heritage assets and therefore taking the opportunity to follow part of the route of the existing 132 kV overhead line which would then be replaced with		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	through the Green Lane connecting Burgate Road and Mellis Road; to mitigate impact on landscape and views)	underground cable. Moving the alignment between Burgate Road to the west and the Moatyard Plantation to the east would impact a non-designated heritage asset and we are therefore not proposing a change to the alignment at this location.				
9-4.248	Suggest that the replacement of the existing UK Power Networks (UKPN) overhead line with underground cables should be extended to PKF14 (e.g. to mitigate the concentration of energy infrastructure at Burgate Road), and suggest that robust screen planting should be provided around the Cable Sealing End (CSE) compound	<p>National Grid notes the feedback received and all feedback has been taken into consideration as part of the iterative design process. National Grid has liaised with UK Power Networks to understand opportunities for the existing 132 kV network rationalisation. The Project includes proposals to replace certain sections of existing 132 kV overhead line connection with underground cable to rationalise the network and mitigate the effects of the Project as outlined in paragraph 2.10.5 of National Policy Statement (NPS) EN-5.</p> <p>The existing 132 kV overhead line is proposed to be dismantled and underground between pylons PKF35 to PKF16 to facilitate the proposed 400 kV overhead line in this section. Extending the length of underground a further two spans to PKF14 to the west would be over and above what is required technically to facilitate the Project and would bring works associated with the Cable Sealing End (CSE) compound closer to other receptors, thus this change has not been made.</p> <p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the Environmental Impact Assessment (EIA). Existing infrastructure (such as existing overhead lines) has formed part of the baseline</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>environment for the Project to be assessed against, to identify if significant landscape and/or visual effects are likely to arise. The LVIA sets out the potential visual effects and identifies areas for potential mitigation planting to reduce visual impacts to local receptors. The landscape and visual assessment is presented in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13). The Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) includes details regarding the planting proposals.</p> <p>The findings and conclusions of the LVIA and other topics assessments have been considered within the cumulative impact assessment for the Project. The list of developments as part of the cumulative assessment are presented on ES Chapter 17: Cumulative Effects (document reference 6.17). This chapter considers the landscape and visual effects of the Project cumulatively with other proposed developments that are being progressed.</p>				
9-4.249	Suggest that the proposed access to the construction corridor from Thornham Road / Major Lane via Coldham Lane should be relocated away from unused track with mature, potentially veteran, trees on either side (e.g. to mitigate impact on ecology and cultural heritage) and instead suggest that an access should be created directly into the	<p>There is a misunderstanding with the permanent access and the construction access. There is a permanent access located off Thornham Road this would not be used as a construction access. National Grid has not proposed to use Thornham Road as part of the Primary Access Routes (PARs) for construction access.</p> <p>The permanent access route for future surveys and maintenance that was routed along the unused track</p>		X		X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	corridor from Thornham Road / Major Lane at a suitable point, where it crosses the corridor	with mature trees either side has been removed from the Order Limits. The permanent access route for future surveys and maintenance to pylons RG119 and RG120 now comes from Coldham Lane from the west.				
9-4.250	Suggest that the Project should be rerouted between Pylons RG160 and RG167 to the west of Creeping Hall (e.g. to mitigate impact on former Special Landscape Area and listed building) and suggest that the use of underground cables is considered (e.g. to mitigate impact on Public Rights of Way (PRoWs)) subject to full geophysical surveys and trial trenching	<p>National Grid has considered the respondent's feedback and has reviewed alternatives to the west of Creeping Hall. Western alternatives would take the alignment closer to a greater number of properties at Stowmarket and Creeping St Peter and would have a larger number of angle pylons and be less consistent with the Holford Rules. A summary of the Holford Rules is provided within Appendix I22 of this report. Greater heritage effects may occur depending on the alternative potentially on the Grade I Church of St Peter. We are therefore not proposing a change to the alignment at this location.</p> <p>National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is 'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>landscape (i.e. National Parks, The Broads, or Area of Outstanding Natural Beauty (AONB)). Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified. Therefore, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project between RG160 and RG167 would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		(document reference 6.13) and this has identified any need for additional mitigation.				
9-4.251	Suggest that the Project should be rerouted to the west of Creeting St Peter and through Gateway 14, crossing the river in an industrial location and using distribution pylons already sited on Gateway 14	National Grid has considered the respondent's feedback and has reviewed alternatives to the west of Creeting St Peter, close to or through Gateway 14. Routes through the development site present challenges as they require increased pylon heights to achieve necessary clearance and over sails itself is problematic for maintenance. The route available is to the east of an area of woodland which leads to this alternative having a greater level of effects to residential amenity by close routeing to the west of Creeting St Peter to avoid an area of woodland and the development footprint. We are therefore not taking forward a change to the alignment at this location.			X	
9-4.252	Suggest that the Project should be rerouted to the south of the Waveney Valley to replace the existing 132 kV overhead line (e.g. to mitigate impact on airstrip)	National Grid has considered this feedback in conjunction with other feedback and has made a change in line with this request and further extended the 132 kV replacement by underground cable south of the Waveney Valley to start north of the A143, which avoids impacts to Brook airstrip.			X	X
9-4.253	Suggest that the Project is rerouted to run to the east of Middle Wood (Offton Site of Special Scientific Interest (SSSI)) to mitigate the need for the Project to pass over woodland.	National Grid notes the respondent's feedback. The existing 132 kV overhead line at Offton is proposed to be replaced by underground cable to the east of Middle Wood, Offton Site of Special Scientific Interest (SSSI). The Project is to be routed to the west, which is a shorter, more direct route and more consistent with the Holford Rules. A summary of the Holford Rules is	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		provided within Appendix I22 of this report. The alignment has been designed to avoid oversail of the woodland with an appropriate 15 m buffer applied to ensure no detrimental impact on the SSSI. No removal of woodland within Middle Wood, Offton SSSI is proposed.				
9-4.254	Suggest the introduction of a new Grid Supply Point (GSP) in the Stowmarket area in order to coordinate the scheme with other relevant and reasonably foreseeable development projects in the area and to maximise benefits and improve area connectivity for Freeport East at Gateway 14 and Stowmarket area	National Grid would only promote new Grid Supply Points (GSP) where they are essential to meet the purposes of the Project by allowing removal of an existing line to provide space for the new overhead line. This is not the case in the Stowupland area so the Project cannot provide this. The alternative is for the provision of a new GSPs to be defined by National Energy System Operator responding to applications by generators or Distribution companies (either UK Power Network or independent Distribution Network Operators). No such requirement has been raised to National Grid. No change is therefore proposed.			X	
9-4.255	Suggest that the Project should be relocated 5m to the side at Furze Way, Burgate to follow the edge of the farm field (e.g. to mitigate impact on trees and hedges)	National Grid has considered the respondent's feedback and has removed the requirement for scaffolding at this location, instead the access to the residential property would be managed during construction, this would reduce the impact on trees and hedgerows along Furze Way.			X	X
X9-4.256	Suggest the use of High Voltage Direct Current (HVDC) underground cables for the Project to the	National Grid is constantly looking into new innovations and investigating alternative technology types. These are explored and assessed for suitability. Alternative			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	east of Hempnalls Hall (e.g. to mitigate impact on footpaths and tourism business in Cotton)	technologies were investigated for the Project, these included an offshore connection using Direct Current (DC) technology, and various onshore connection options including: increasing operational voltages on existing network to above 400 kV; Alternating Current (AC) overhead lines (established technology); alternative pylon types; AC underground technology; High Voltage Direct Current (HVDC) overhead line and underground cables; and Gas Insulated Line (GIL). HVDC is not normally used across land as converting AC to DC and back again would require converter stations so it can be used in the rest of transmission network and the distribution network which is currently AC. These converter stations are a significant size and would be required at every interface with the wider AC network i.e at Norwich, Bramford, East Anglia Connection Node (EACN) substation and Tilbury substations, the cost of these converter stations outweighs the benefits offered. Currently, overhead lines offer the most economic and efficient solution to transmit electricity over long distances.				
9-4.257	Suggestion that the Project is routed away from / the Project should not be located at a specific location	Further assessment and technical appraisal have been undertaken following feedback received from the statutory consultation and subsequent targeted consultations which has resulted in several changes. Further details on these changes can be found in this report and in the 2025 Design Development Report	X		X

9-4.286	Suggestion that the Project is routed away from / the Project should not be located at Finningham	National Grid has considered the respondent's feedback highlighting a preference for an alternative moved away from Finningham. In the absence of a specific basis for the change or a proposed alternative alignment, we have considered this feedback by following the guidance in the Holford Rules in developing the alignment. Guidelines on overhead line routeing are known as the "Holford Rules" which remain a valuable tool in selecting and assessing potential overhead line route options as part of the options appraisal process. A summary of the Holford Rules is provided within Appendix I22 of this report. We are therefore not proposing a change to the alignment at Finningham.	X		X	
9-4.286-1	Suggest that the use of underground cables at the Waveney Valley is extended from Wortham to the B1077 to avoid areas of high population density and to mitigate impact on Wortham Airstrip	National Grid has considered the justification for the use of underground cable for the crossing of the Waveney Valley and on the matter of extending the use of underground cable from Wortham to the B1077 raised in the respondent's feedback. The starting presumption in National Policy Statement (NPS) EN-5 paragraph 2.9.20 in a location such as the Waveney Valley which, although valued is not designated, is that overhead line is the appropriate 400 kV connection technology. We have also considered whether the effects from the overhead line are at a level that engages other parts of NPS EN-5 (such as paragraph 2.9.23) to prompt			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>consideration of whether the benefits of underground outweigh any extra economic, social or environmental impacts. At the Waveney we conclude that the benefits from a change to underground cable, do not justify the additional cost that would be incurred. The use of underground cable would lead to a lowering of effects on the setting of the Grade I Listed St Remegius Church, albeit the effects of progressing with an overhead line are assessed as less than substantial harm and don't themselves require a change in technology. In terms of community effects, existing trees would provide some screening and filtering of views of an overhead line for those in residential areas and on recreational routes. A change from overhead line to underground cable would reduce these community effects but bring disbenefits, most notably increased ecological effects from installation within peaty soils and increased technical risk to cable integrity from the WaLOR channel naturalisation and landscape recovery plans. Conversely there may be a compromise to the WALOR project by measures to ensure cable integrity. After consideration of the decision making guidance at paragraph 2.9.25 of NPS EN-5, National Grid concludes that whilst effects from overhead lines to individual receptors may be significant in Environmental Impact Assessment (EIA) terms they do not justify the potential for compromise to the WALOR project, the effects on peaty soils which would arise with an underground cable design nor justify the expected cost of an underground cable design. On</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>this basis, National Grid concludes that the use of an overhead line should be taken forward for the crossing of the Waveney Valley. Prior to making this decision we had considered whether requests to relocate the Cable Sealing End (CSE) compounds and extend the cable both to the north and the south may alter the decision-making balance. Such extensions would bring benefits to various residential receptors but with the additional cost of longer length of cables. We conclude that given the absence of any designated status pertinent to NPS EN-5, and the extent to which some views from residential areas are filtered and screened and lower the level of adverse effects from the overhead line, we do not consider the additional cost associated with extending the underground cable would be justified.</p> <p>We have also considered the potential for effects on this airstrip of the overhead line alternative and are proposing a change to the overhead line alternative here that is considered to be needed to allow continued flight activity which also supports feedback to reduce cumulative effects and effects to other communities to the south.</p>				
9-4.286-2	Suggest that the Project is rerouted between Pylons RG123 and RG140 to mitigate impact on land that is ecologically sensitive and critical to many rare species that National Grid's ecologists have not considered	Through routeing, siting and design development National Grid has sought to reduce, as far as practicable, potential impacts on biodiversity including protected species. The design process takes account of existing biodiversity, the natural environment and, where practicable, seeks to reduce impacts on areas of			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>ecological sensitivity including protected species and their associated habitats, through avoidance or mitigation.</p> <p>A comprehensive survey effort for a range of protected species was completed over the 2023 – 2025 period in this area. Ecology surveys in this area have included habitat, badger, bat, water vole and otter amongst others. Habitat to be impacted between RG123 and RG140 (now RG125 and RG141) comprises primarily arable land of low value to wildlife, with the route strategically located to avoid mature habitats. We are therefore not proposing a change to the alignment between RG123 and RG140 to mitigate impacts on ecology.</p> <p>Chapter 8: Ecology and Biodiversity of the Environmental Statement (ES) (document reference 6.8) assesses the effects on protected species based on this baseline information and where/if required appropriate mitigation measures are detailed. Suitable mitigation for protected species has been developed in consultation with Natural England to ensure legal compliance and best practice guidelines are adhered to. No significant residual effects on ecology features have been identified in this area.</p>				
9-4.286-3	Suggest relocation of Pylons RG127 to RG132 to mitigate impact on heritage (e.g. Hempnall's Hall), agriculture (e.g. near Mendlesham Road) footpaths, and wildlife (e.g. ancient deer parks)	National Grid has carefully considered the feedback received and the alternatives available, we previously made a change to the alignment between RG123 and RG130 (now RG124 and RG131) which moved the			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		alignment further to the east, further away from Hempnalls Hall. Moving the alignment further east would transfer effects to other properties and would also make the alignment longer and less direct with a larger angle pylon at RG129 required, therefore being less consistent with the Holford Rules. A summary of the Holford Rules is provided within Appendix I22 of this report. ¶¶We have undertaken an Environmental Impact Assessment (EIA) which has assessed the impact of the Project including heritage impacts and impacts to wildlife and footpaths, and recommended mitigation where required. If a land owner is concerned about impacts to farming, they should contact the Project's lands team to discuss: Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.¶¶Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD.				
9-4.286-4	Suggest that at minimum, the Project is rerouted from Pylon RG116 to run south east to cross the railway on the north side of major lane, then run south to rejoin at Pylon RG119 (e.g. this would reduce the impact on Gislingham and take advantage of a 10m drop in the height of the land)	National Grid has considered the respondent's feedback and is proposing a change to the alignment between RG113 and RG118 (as in between RG112 and RG119) which would move RG117 approximately 170 m further east towards the railway. Due to a number of constraints in this area including woodland, a campsite and venue to the east and the preferred crossing of the railway, we are not proposing to cross the railway further north. The effects of the Project are assessed as part of the Environmental Impact Assessment (EIA) and presented			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		in the Environmental Statement (ES) and this has identified any need for additional mitigation.				
Economic / Employment impacts						
9-4.287	Concern about negative impact on businesses in the area	<p>Through the routeing and siting exercise, National Grid has sought to reduce as far as practicable impacts to businesses.</p> <p>Impacts on local businesses within the Local Study Area (the Order Limits) and within the 3 km Study Area (where visual impact is likely to be an economic consideration) are assessed in Environmental Statement (ES) Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15). As part of this assessment, a range of mitigation measures have been considered to reduce disruption to businesses and their users during the construction phase of the Project. These measures are identified in ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15), the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) which accompany the Development Consent Order (DCO) application.</p>	X	X	X	
9-4.288	Suggest that National Grid engages with councils in Suffolk to secure benefits for and investment in local businesses and employment networks	National Grid is committed to working with local suppliers, facilitated by supporting forums (such as the local Chambers), on electricity industry skills and workforce planning. National Grid is also committed to		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>providing a coordinated regional approach to jobs and skills opportunities. This commitment is broader than the individual project and separate to any commitments under the proposed development consent order for this Project. The socio-economic effects of the Project are assessed in Chapter 15: Socio-Economics, Recreation and Tourism of the Environmental Statement (ES) (document reference 6.15). Post construction job opportunities are limited given the nature of the development however we will still work with Local Authorities (including facilitating local partners) to understand what is important to them around skills and employment to ensure we leave a lasting positive legacy in the communities where we operate. With regards to a delivery mechanism, the above measures will be delivered as part of our community benefit package, which will look at both local and regional initiatives. This will be delivered outside the development consent process and is not a material consideration in the decision on the proposed Project or a matter to be secured as part of the DCO, as per the Community Funds for Transmission Infrastructure: Guidance (DESNZ, 2025).</p>				
Environmental impact						
9-4.289	Concern about negative impact of the Project on the Green Belt(s)	To facilitate the Project, it will be necessary to route through the Metropolitan Green Belt. National Grid has considered the effects on the Green Belt and all of the			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>options connecting into Tilbury identified in the Corridor and Preliminary Routeing and Siting Study (CPRSS) would result in new and upgraded infrastructure in the Green Belt.</p> <p>The National Electricity Transmission System (NETS) transports energy from where it is generated to where it is used, in homes, schools, hospitals, businesses, and factories. Electricity networks are an established feature in our landscapes, taking energy across open countryside to towns and cities where it is needed. To ensure the national electricity network can transport energy efficiently there are numerous electricity transmission connections crossing Green Belts. Many of these connections are by way of overhead lines. By their nature, electricity transmission infrastructure (overhead lines) within the Green Belt is inevitable due to the need to transport energy around the country and the need to avoid the most built-up areas around our towns and cities (Holford Rule Supplementary Note 1 - A summary of the Holford Rules is provided within Appendix I22 of this report).</p> <p>Some electricity infrastructure such as overhead lines, are considered to be engineering operations. By the nature of their design, and the sensitive siting, some of this infrastructure such as pylons and conductors may not be considered inappropriate development in the Green Belt as they do not conflict with Green Belt purposes and preserve openness. Although overhead lines may occupy long corridors within Green Belt, they</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		involve little physical change to the land through which they pass and leave a large majority of the land beneath them free from development and therefore open. The Planning Statement (document reference 5.6), submitted with the application for development consent, includes an assessment of the Project against Green Belt planning policy (as contained in National Policy Statement EN-1 and the National Planning Policy Framework).				
9-4.290	Concern that the Project will impact SSSIs	Through routeing, siting and design development National Grid has sought to reduce, as far as practicable, impacts on biodiversity and in particular features of high ecological value such as Sites of Special Scientific Interest (SSSI). Although there are 22 SSSI within the study area, current proposals avoid the majority of impacts on SSSIs, with no long-term negative impacts anticipated on any SSSIs as a result of the Project. Potential direct and indirect impacts on each SSSI within the study area have been considered within the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8) and any necessary mitigation detailed to ensure no significant residual effects. National Grid will continue to engage with Natural England.	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-4.291	Concern that the Project will impact ancient woodland	Through routeing, siting and detailed design, National Grid has sought to reduce, as far as practicable, impacts on biodiversity and in particular features of high ecological value, such as ancient woodland. A standard 15 m buffer from construction activities has been applied where practicable. Potential direct and indirect impacts on each block of ancient woodland within the study area have been considered within the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8) and any necessary mitigation detailed to ensure no significant residual effects. An ancient woodland and veteran tree mitigation strategy is included as part of the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4). The Outline LEMP (document reference 7.4) has been developed in consultation with relevant stakeholders including Natural England.	X	X	X	
9-4.292	Concern that the Project will impact nature reserve / RSPB reserve / Special Protection Area (SPA)	Through routeing, siting and design development National Grid has sought to reduce, as far as practicable, impacts on biodiversity and in particular features of high ecological value, such as Royal Society for the Protection of Birds (RSPB) reserves. Potential direct and indirect impacts on RSPB reserves within the study area have been considered within the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8). No RSPB reserves are directly impacted by the Project.	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-4.293	Concern that the Project will impact Ramsar site	Through routeing, siting and design development, National Grid has sought to reduce, as far as practicable, impacts on biodiversity and in particular features of high ecological value, such as Ramsar sites. Although there are 13 Ramsar sites within the study area, current proposals avoid the majority of impacts, with no long-term negative impacts anticipated on any Ramsar site as a result of the Project. Potential direct and indirect impacts on each scoped in Ramsar site has been considered within the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8) and/or Habitats Regulations Assessment (HRA) depending on potential impact pathways. Any necessary mitigation has been detailed within the ES, HRA and the Outline Code of Construction Practice (CoCP) (document reference 7.2) to ensure no significant residual effects, as agreed with Natural England.	X	X		
9-4.294	Concern that the Project will result in a negative impact on the environment / countryside generally	National Grid has sought to reduce, as far as practicable, impacts on the environment / countryside through routeing and siting and an ongoing iterative design process which has taken on board feedback at different stages of the Project. The iterative design process sought to avoid areas of highest concern, for examples through changes to the route alignment or changes to the method e.g. trenchless crossings. National Grid has engaged with a range of stakeholders (including Statutory Environmental Bodies (SEBs) and	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>relevant Local Planning Authorities) throughout the development of the Project design and environmental assessment work.</p> <p>National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project. The results of this assessment are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation (and maintenance) of the Project and recommends appropriate mitigation measures to reduce potential effects.</p> <p>A number of mitigation measures have been incorporated into the Project design. Mitigation relevant to specific environmental topics (including Ecology and Biodiversity, Landscape and Visual and Historic Environment) are presented in the relevant ES chapters. The Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Code of Construction Practice (CoCP) (document reference 7.2) contain a list of relevant good practice measures to avoid or reduce risks to habitats and species.</p> <p>In addition to the EIA, National Grid has set itself a target of delivering 10% biodiversity net gain (BNG) with environmental and societal benefits on all construction</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		projects, meaning that as a result of measures taken, the biodiversity rating of the area will be enhanced by 10% greater than prior to the construction of the Project. The BNG target for the Project is currently voluntary and aligned with our corporate sustainability commitment.				
9-4.295	Suggest that areas other than the AONB should be protected / Criticism that only the AONB has been considered	<p>National Policy Statement (NPS) EN-5 states that the Government considers overhead lines to be appropriate and acceptable in most instances, although it recognises that there may be, at particularly sensitive locations, potential adverse landscape and visual impacts of overhead line infrastructure that make it inconsistent with our duties and relevant planning policy.</p> <p>The National Landscape designation is one such location where there is a presumption that underground cable technology is adopted with the extent of underground cabling extending beyond the boundary in response to the potential for the Project to affect National Landscapes. Our proposals include a total of approximately 20 km of underground cable through and in the vicinity of the Dedham Vale National Landscape, including a section at Great Horkesley to reduce the changes in views and setting of the National Landscape from within and adjacent to its designated boundary.</p> <p>Underground cabling is also proposed for short sections near Fairstead and North Tilbury.</p> <p>The higher cost of underground cables to bill paying consumers, and the environmental implications of installing underground cables and maintaining them</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>elsewhere, are not considered to be justifiable in the context of national policy or National Grid's statutory duties, which include the need to be economic and efficient.</p> <p>A Landscape and Visual Impact Assessment (LVIA), presented in the Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13), has been undertaken as part of the Environmental Impact Assessment (EIA). The LVIA sets out potential effects on landscape and visual receptors.</p>				
9-4.296	Concern that the Project will impact conservation area/s	<p>Through routeing and siting National Grid has sought to reduce as far as practicable potential impacts on the historic environment, including conservation areas.</p> <p>A Historic Environment Assessment has been undertaken and is presented in Chapter 11: Historic Environment (document reference 6.11) of the Environmental Statement (ES). Conservation areas within 2 km of the Order Limits are considered in the Historic Environment assessment for the Project. The assessment of conservation areas is supported by setting surveys, as documented in ES Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1). The Project has engaged with Historic England and relevant planning authorities on aspects relating to heritage, including appropriate mitigation measures and techniques and to take their views into account during Project development. Required mitigation measures are presented in the</p>	X	X	X

		(document reference 7.9) identifies the measures necessary to ensure the safety of the Project from flooding over its lifetime, and that flood risk is not increased during the construction or operation of the Project.				
9-4.298	Concern that the baseline dataset from the Environment Agency does not adequately take into account climate change, and therefore construction is likely to have greater impact on the local community (of Gislingham) once flooding and climate change are adequately assessed	Information from the national flood maps for rivers and surface water, produced by the Environment Agency were updated in January 2025 under the National Flood Risk Assessment 2 programme, to account for climate change. This mapping, in addition to other data sources that account for the predicted effects of climate change on flood conditions e.g. river modelling outputs and data from the Lead Local Flood Authorities, has been used to inform the Flood Risk Assessment (FRA) (document reference 7.9). The design of the Project also incorporates climate change resilience, for example, the capacity of surface water drainage systems that will serve the Project over its operational lifetime includes allowance for the predicted increases in rainstorm intensity.			X	
9-4.299	Criticism that the baseline dataset from the Environment Agency does not adequately take into account climate change and therefore construction is likely to have greater impact on the local community once flooding and climate change are adequately assessed	The National Flood Information from the national flood maps for rivers and surface water, produced by the Environment Agency, has been supplemented by more detailed data sources that account for the predicted effects of climate change on flood conditions e.g. river modelling outputs, data from the Lead Local Flood Authorities and data from the February 2025 update to			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		the NaFRA maps that accommodate climate change allowances for fluvial and surface water flood risk. These data have been used to inform the Flood Risk Assessment (FRA) (document reference 7.9) submitted with the Development Consent Order (DCO) application. The design of the Project incorporates climate change resilience, for example, the capacity of surface water drainage systems that will serve the Project over its operational lifetime includes allowance for the predicted increases in rainstorm intensity.				
9-4.300	Concern that the Project will impact countryside stewardship areas (e.g. wildlife impacts)	National Grid has undertaken a range of habitat and protected species surveys across the route to determine an accurate baseline value for the site. This has included areas of land within Countryside Stewardship schemes. On completion of the works, habitats will be returned to the baseline habitat type.			X	
9-4.301	Concern over the underground drainage from the proposed haul road (adjacent to Bullocks Ley on Burgate Road) - this runs into a drainage ditch that feeds the pond and subsequently drains into the large pond on the common (Little Green) (e.g. given that this could contaminate the ground water that feeds into these ponds and harm the habitat for wildlife, including water voles and great crested newts)	It is proposed that runoff from haul roads would be collected via linear features such as swales or filter drains and conveyed to attenuation storage features. The storage features would provide for the capture and settlement of suspended solids and the treatment of other potential pollutants within the runoff, in order to prevent pollution of the local water environment. The potential for effects on surface and groundwater quality associated with haul road drainage has been assessed within the Environmental Statement (ES) (document reference Volume 6: Environmental			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Statement) that accompanies the Development Consent Order (DCO) application. The ES identifies and assesses the likely significant effects on the water environment resulting from the construction of the Project and recommends appropriate mitigation measures to reduce potential effects.				
9-4.302	Concern about the impact of haul lanes for the Project on flooding, given that the area is liable to flooding (at Burgate Road from Bugg's Road to St Mary's Church, Burgate; and Burgate Road leading to Gislingham)	<p>National Grid has completed an Environmental Impact Assessment (EIA) for the Project. The results of this assessment are provided in the Environmental Statement (ES) that accompanies the Development Consent Order (DCO) application. The ES identifies and assesses the likely significant effects on the environment resulting from the construction of the Project and recommends appropriate mitigation measures (in consultation with relevant stakeholders) to reduce potential effects.</p> <p>A Flood Risk Assessment (FRA) (document reference 7.9) has been prepared for the Project to support and inform the EIA. The FRA describes the measures that will be put in place to manage construction and operational flood, and land drainage impacts to ensure the development is safe from flooding over its lifetime and that off-site flood risk is not increased.</p> <p>Chapter 12: Hydrology, Land Drainage and Flood Risk (document reference 6.12) of the Environmental Statement (ES) includes consideration of potential impacts on flood risk from all relevant sources, including the River Waveney and key surface water flood risk</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		areas local to Burgate, during construction of the Project and over its design life, taking account of the effects of climate change.				
9-4.303	Criticism that there has been an inconsistent approach to designating Sites of Scientific Interest (SSSI) along the pylon route / Suggest that Gislingham should be added to the SSSI list	The Sites of Scientific Interest (SSSI) are nationally important sites for ecology that have been designated for nature value by Natural England. National Grid has taken the nationally important designated site information directly from Natural England, which does not include any sites at Gislingham. National Grid is not responsible for designating these national sites.	X		X	
9-4.304	Suggest that underground cables for the replacement of the existing 132 kV overhead line (in Ringshall) should be laid to at least a 1.2 m depth (e.g. so that the cover from the top of the cable to the eventual surface allows for remedial drainage)	Where existing overhead lines are replaced with underground cables, the underground cable would be laid to avoid interference with normal agricultural operations wherever possible. The underground cable would be laid with a suitable depth of cover from the original surface to the top of the protective tile, except where necessary for engineering reasons, and with the agreement of the landowner.			X	
9-4.305	Concern about light pollution caused by the Cable Sealing End (CSE) compound at JC33 and JC34	There is no requirement for low voltage supplies to the Cable Sealing End (CSE) compound. This means that we are not expecting permanent lights at any of the CSE compounds. Portable lights may be brought in to carry out some specific ad-hoc maintenance activities. Cable Sealing End (CSE) compounds will only be lit in the unlikely event that National Grid operatives or	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		contractors are required to attend the location to carry out reactive works outside of usual working hours.				
9-4.306	Criticism that Val's Wood was not marked as deciduous woodland in the Environment Report for the Project	<p>The information presented on the annotated Figure A. 8.1.2: Protected/notable Habitat and Plant Desk Study, of the Preliminary Environmental Information Report (PEIR) (available on the Project website), was obtained from various sources including local record centres and Natural England's Woodland Priority Data Set (as displayed within their online source Magic Map). Val's Wood is not mapped as such in this database. The purpose of the Figure is to show the results of the desk study prior to the completion of on the ground survey work.</p> <p>Additional habitat survey work was undertaken and the presence of Val's Wood as valuable woodland habitat has been acknowledged and mapped on Figure A8.1.1 of Chapter 8: Ecology and Biodiversity (document reference 6.8) of the Environmental Statement (ES). Routeing of the alignment has therefore looked to avoid impacts on Val's Wood with careful design to the west.</p>			X	
9-4.307	Concern that the routing around Gislingham is insensitive to farming needs. The Preliminary Environmental Information Report (PEIR) confirms that damage to soil function, quality and associated ecosystem services will be significant, and offers no timeline to any viable reinstatement	The assessment of the effects of the Project on agricultural land (including Best and Most Versatile (BMV) land), soils (impacts on soil quality and associated ecosystem services) and agricultural landholdings are presented in full in Chapter 6: Agriculture and Soils of the Environmental Statement (ES) (document reference 6.6). The chapter also			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		outlines appropriate proposed embedded, standard and additional mitigation (where required).				
9-4.308	Criticism that Section 5.8.13 of the Preliminary Environmental Information Report (PEIR) confirms the potential for the Project to increase flood risk, with increased runoff volumes, disrupted flow regimes, pollution and other physical disturbances, and highlights in Section 5.8.6 that River Dove tributaries are Flood Zone 3 High Risk. The use of generic datasets, without specific local surveys and lack of detailed site specific mitigation, is concerning and unacceptable	The Flood Risk Assessment (FRA) (document reference 7.9) provides a detailed assessment of flood risk from the River Dove and its tributaries informed by a range of data sources, including Environment Agency (EA) flood models. The report also identifies mitigation measures for any works that are undertaken in Flood Zone 3 to prevent increases in flood risk.			X	
9-4.309	Concern about the impact of the Project on the Waveney and Little Ouse Landscape Recovery Project (WaLOR) (e.g. the initial delivery of habitat creation as well as the ongoing impacts on natural processes, and the viability of this area of the WaLOR Project to generate income from natural capital and ecosystem service markets as well as through its traditional land-uses)	<p>Consultation with the Waveney and Little Ouse Landscape Recovery Project (WaLOR) team has been undertaken throughout the design process with every effort made to reduce impacts and ensure the successful delivery of both projects from a construction programme perspective. Significant weight has been given to the potential impacts on the WaLOR project in the design process.</p> <p>National Grid has considered the justification for the use of underground cable for the crossing of the Waveney Valley and on the matter of the impact to the WaLOR project raised in the respondent's feedback. The starting presumption in National Policy Statement (NPS) EN-5 paragraph 2.9.20 in a location such as the Waveney Valley which, although valued is not designated, is that</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>overhead line is the appropriate 400 kV connection technology. We have also considered whether the effects from the overhead line are at a level that engages other parts of NPS EN-5 (such as paragraph 2.9.23) to prompt consideration of whether the benefits of undergrounding outweigh any extra economic, social or environmental impacts. At the Waveney we conclude that the benefits from a change to cable, do not justify the additional cost that would be incurred. The use of cable would lead to a lowering of effects on the setting of the Grade I Listed St Remegius Church, albeit the effects of progressing with an overhead line are assessed as less than substantial harm and don't themselves require a change in technology. In terms of community effects, existing trees would provide some screening and filtering of views of an overhead line for those in residential areas and on recreational routes. A change from overhead line to underground cable would reduce these community effects but bring disbenefits, most notably increased ecological effects from installation within peaty soils and increased technical risk to cable integrity from the WaLOR channel naturalisation and landscape recovery plans. Conversely there may be a compromise to the WaLOR project by measures to ensure cable integrity. After consideration of the decision making guidance at paragraph 2.9.25 of NPS EN-5, National Grid concludes that whilst effects from overhead lines to individual receptors may be significant in Environmental Impact Assessment (EIA)</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		terms they do not justify the potential for compromise to the WaLOR project, the effects on peaty soils which would arise with an underground cable design nor justify the expected cost of an underground cable design. On this basis, National Grid concludes that the use of an overhead line should be taken forward for the crossing of the Waveney Valley. Prior to making this decision we had considered whether requests to relocate the Cable Sealing End Compounds and extend the cable both to the north and the south may alter the decision making balance. Such extensions would bring benefits to various residential receptors but with the additional cost of longer length of cables. We conclude that given the absence of any designated status pertinent to NPS EN-5, and the extent to which some views from residential areas are filtered and screened and lower the level of adverse effects from the overhead line, we do not consider the additional cost associated with extending the underground cable would be justified.				
9-4.310	Concern that the Draft Order Limits for the Project include an area liable to flooding near Offton (plan provided by respondent) (e.g. area may not be suitable for heavy machinery) / Query what this area will be used for as it is not near the Project, existing overhead lines or a proposed haul road	National Grid notes the respondent's feedback. The area shown on the plan is the route proposed for the underground cable for the existing 132 kV overhead line. The existing overhead line and pylons would be removed and placed underground within the Order Limits shown on our plans submitted with our Development Consent Order (DCO) application. Further details on the works proposed to be undertaken to achieve the undergrounding are provided in Chapter 4:			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Project Description of the Environmental Statement (document reference 6.4). We have undertaken a Flood Risk Assessment (FRA) (document reference 7.9) as part of our Environmental Impact Assessment (EIA) for the Project which includes consideration of the works to existing 132 kV infrastructure.				
9-4.311	Suggest that the Waveney Valley Valued Landscape Assessment is considered for the Project	<p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the Environmental Impact Assessment (EIA), which includes an assessment of landscape and visual effects. The approach to the LVIA follows professional guidance as set out in Appendix 13.1: Landscape and Visual Methodology (document reference 6.13.A1). This includes Guidelines for Landscape and Visual Impact Assessment (GLVIA3), as prepared by the Landscape Institute and the Institute of Environmental Management and Assessment. The LVIA is presented in the Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13).</p> <p>The methodology and approach is set out in Appendix 13.1: Landscape and Visual Methodology (document reference 6.13.A1) and has been agreed with relevant stakeholders and the assessment prepared by qualified and experienced landscape professionals. The document sets out all data sources used to inform the baseline and the assessment of landscape effects. This includes a range of detailed landscape character sources from national to local level, designated</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		landscape publications, and also the Waveney Valley Valued Landscape Assessment.				
Financial compensation						
9-4.312	Concern that the Project will devalue property / impact on property value in this section	<p>National Grid acknowledges that its proposals may cause concern to landowners. Diminishment of property value known as 'injurious affection' and any other appropriate heads of claim would be considered on an individual basis in accordance with current legislation. We would pursue a voluntary agreement with affected landowners, acquiring rights in accordance with our Land Rights Strategy (the strategy is subject to review). If a voluntary agreement cannot be reached, then the Compulsory Purchase Code allows for a claim of compensation for the loss that property owners may have suffered as a direct result of the retained part of your property ownership being worth less as a direct result of the works.</p> <p>If there are any specific concerns about the devaluation of property, National Grid would advise seeking third party advice. or alternatively please contact the Project team:</p> <p>Norwich-Tilbury@fishergerman.co.uk</p> <p>or by calling us on Freephone 0808 175 3314.</p> <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD.				
9-4.313	Request for adequate financial compensation / Suggest that impacted individuals need to be compensated	<p>All affected landowners would be compensated for any temporary/permanent losses, and this would be dealt with on a case-by-case basis in line with the Compensation Code.</p> <p>If there are any specific concerns requiring compensation and how it would be assessed, please contact the Project team:</p> <p>Norwich-Tilbury@fishergerman.co.uk</p> <p>or by calling us on Freephone 0808 175 3314.</p> <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD</p> <p>The Government has published its guidance on community funds for transmission infrastructure (DESNZ, 2025). National Grid is committed to working with Ofgem, industry partners, local communities and their representatives to ensure community benefits are delivered fairly and effectively, driving lasting, positive change for the people and places integral to our developing electricity network.</p> <p>Government has also announced its plans to introduce a bill discount scheme for households within 500 metres of new infrastructure, which it proposes to introduce through the Planning and Infrastructure Bill. This is</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>evolving government policy. Government expects this scheme to be in place by 2026, and we would share further details as they emerge.</p> <p>National Grid is committed to providing a coordinated local and regional approach to community benefits. This would be delivered outside the development consent process, since this is not a material consideration in the decision on the proposed Project or a matter to be secured as part of the DCO, as per the Community Funds for Transmission Infrastructure: Guidance (DESNZ, 2025).</p>				
9-4.314	Request that National Grid purchases respondent's property / business	<p>National Grid is not required to purchase any properties or businesses as part of the Project.</p> <p>National Grid compensates landowners in line with the Compensation Code and any other relevant legislation.</p>			X	
Health, Safety & Wellbeing						
9-4.315	Concern that the Project may result in a negative impact on mental health / wellbeing	<p>National Grid recognises people may have concerns about the health effects of living close to an overhead line, and that the uncertainty whilst the proposals are developed may cause anxiety.</p> <p>We have sought to reduce potential effects on communities and residents through routing and design. We have also sought to reduce concern or uncertainty about the proposals through making timely design</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>decisions and engaging with the people and stakeholders throughout the development of the Project.</p> <p>The Project team will continue to engage with people potentially affected during progress of the Project, through regular communication including letters, phone calls and meetings. This will enable concerns to be raised and discussed at an early opportunity and provide a regular point of contact to respond to queries and concerns.</p> <p>We urge anyone with concerns to get in touch through the Norwich to Tilbury Freephone number, address or email throughout the progress of the Project:</p> <p>Call our Community Helpline: 0800 915 2497 (Lines are open Monday to Friday 9:00am – 5:30pm)</p> <p>Email us: contact@n-t.nationalgrid.com</p> <p>Write to us: FREEPOST N TO T (No stamp or further address details are required)</p> <p>The UK has a carefully thought-out set of policies for protecting us all against Electric and Magnetic Fields (EMFs), the main component of which is exposure guidelines. Those exposure guidelines are set by independent scientific bodies and are based on decades-long studies into the effects of EMFs and ill health. After those decades of research, the weight of evidence is against there being any health risks of EMFs below the guideline limits. These policies are incorporated into the decision-making process for Development Consent in National Policy Statement</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		(NPS) EN-5. It is National Grid's policy to ensure that all of its equipment comply fully with those exposure limits.				
9-4.316	Concern about health risks associated with the Project / physical health risks associated with the Project	<p>Health considerations are given a high priority in the process by which we arrive at any proposals for new electricity circuits. Assessment of compliance with Electric and Magnetic Field (EMF) guidelines and policies is key to National Grid's approach. The UK has a carefully thought-out set of policies for managing EMFs. There have been over four decades of research looking into whether EMF can cause health effects and there are no established effects below the exposure limits. When designing our overhead lines, substations and underground cables design criteria, we ensure they would not exceed those exposure limits, even when operating at 100% capacity. Additionally, the precautionary measures which the Government have adopted, are applied to the design which ensure the EMFs reduce as quickly with distance as possible. Evidence of that compliance is presented in the Electric and Magnetic Field Compliance Report (document reference 7.8) submitted as part of the Development Consent Order (DCO) application.</p> <p>National Grid takes this issue very seriously and looks to authoritative and independent scientific organisations such as the World Health Organisation (WHO) and in the UK Health Security Agency (UKHSA) to review the worldwide body of scientific evidence on health. Important decisions on health are taken independently of</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		industry, and National Grid has followed the guidance and policies adopted by Government on advice from their scientific experts. Each of these organisations have comprehensive reviews of EMF research available to view on their websites.				
9-4.317	Concern that the Project poses a safety risk to aircraft (including balloons) in the area / Concern that the Project will impact airfields in this area	<p>National Grid recognises the need for the Project to be developed collaboratively alongside aviation stakeholders to identify, assess, and as appropriate mitigate, adverse impacts on aviation safety, in accordance with Government's Overarching National Policy Statement (NPS) EN-1. Our review of aerodromes potentially impacted by the Project identified 17 civil aerodromes (including 2 helipads) within 5 km of the preferred corridor and one military site (Wattisham Flying Station). We have also considered other airfields and flight activities where these have been identified through the 2022 and 2023 non-statutory, statutory consultation, targeted consultations and landowner consultation, including for ballooning and for model flying. As well as considering feedback, National Grid's aviation advisers (an independent aviation consultancy) have directly engaged with these parties (with National Grid present).</p> <p>A number of route alignment and pylon positioning changes have been made following consideration of feedback and in all but one case the assessment concludes that the airfields can continue to operate. In the remaining case of a private airstrip near Little</p>	X		X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Burstead, we continue to liaise with the operator to identify an appropriate solution.</p> <p>Specifically in respect of Wattisham Flying Station our proposals position the alignment onto relatively lower ground (to remove the potential for interference with Instrument Landing System (ILS) radar) and adopt an alignment closer to the existing 132 kV overhead line and include replacing part of the 132 kV line south of Offton by underground cable to avoid a new overhead line corridor being introduced.</p> <p>We will continue to engage with relevant parties as appropriate.</p> <p>Further information on the assessment of airfields can be found in the Environmental Statement (ES) Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).</p>				
9-4.318	Suggest that National Grid includes a condition to any consent for the Project that sufficient data is submitted to ensure that structures can be accurately charted to allow deconfliction (for flight activities to / from RAF Wattisham Station)	National Grid is liaising with relevant authorities and airfield operators to provide the necessary information to support the continuation of safe flight activity. This engagement includes the Ministry of Defence and those with responsibility for Wattisham Flying Station. Further information on the assessment of airfields can be found in the Environmental Statement (ES) Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2). 9-4.322	Information provided that the crash site of B24 bomber Dixie Dumper, which crashed on 20th	National Grid has sought to reduce, as far as practicable, impacts on the historic environment			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	February 1944, is located in the vicinity of pylons RG48 and RG49 and the haul roads between the two (very approx. TM 12991 91254) - eyewitness believes the plane crashed in the Bunwell Low Meadows (now pushed through into larger fields south of Brick Kiln Grove) / Criticism that this is not noted within the Preliminary Environmental Information Report (PEIR)	including listed buildings and known heritage assets through routeing and siting and an ongoing iterative design process which has taken on board feedback at different stages of the Project. The iterative design process sought to avoid areas of highest concern, for example through changes to the route alignment. No records are present in the Historic Environment Record (HER) or other desk-based sources for this specified event described in the location of these pylons. It seems likely on the basis of available information that the remains of the plane were recovered and therefore there is no heritage asset to include within assessment.				
9-4.323	Concern that the haul road crosses Cow Lane (TM 12962 91155), which is an ancient byway, of which there may be archaeology in the vicinity / Criticism that this is not noted within the Preliminary Environmental Information Report (PEIR)	The Preliminary Environmental Information Report (PEIR) and supporting figures were a preliminary document and reflected the Project proposals at the time of the statutory consultation. Through routeing and siting National Grid has sought to reduce as far as practicable potential impacts on the historic environment including protected historical lanes and known heritage assets. The Environmental Assessment (ES) Chapter 11: Historic Environment (document reference 6.11) presents an assessment of the potential impacts from the construction and operation of the Project upon the historic environment (comprising archaeological remains, historic buildings and historic landscapes). The assessment was carried out in accordance with professional standards and guidance and agreed with			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		key heritage stakeholders. It has been shown in Chapter 11: Historic Environment (document reference 6.11) that there would be no significant effects upon the historic environment at this location as works would use an existing access, creating no new impacts. Therefore, no additional mitigation is proposed.				
9-4.324	Concern about the impact of Pylon RG156 on Roydon Hall	National Grid, through the routing and siting exercise, has sought to reduce the impact on the historic environment, including listed buildings in this area. All listed buildings within 2 km of the Order Limits are considered in the Historic Environment Assessment for the Project. The impacts of the Project on the historic environment are assessed in Environmental Statement (ES) Chapter 11: Historic Environment (document reference 6.11). The assessment considers the potential impact on historic buildings and includes assessment of potential for physical impact and impact through change to setting that affects the value of a heritage asset. The assessment of listed buildings is supported by setting surveys, as documented in the Environmental Statement (ES) Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1). The Project has engaged with Historic England and relevant planning authorities on aspects relating to heritage, including appropriate mitigation measures and techniques and to take their views into account during Project development.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		The assessment of Roydon Hall concludes a significant effect during construction and operation. No additional mitigation measures are proposed as any measures designed to lessen the visual impact of the Project would be of a scale that would visually adversely alter the setting of the asset.				
9-4.325	Concern about structural damage to Mayfields (Grade II listed Tudor Hall) from construction traffic for the Project, and suggest that National Grid undertakes a full independent structural survey of Mayfields before commencing construction, and undertake further surveys every three months during construction, and then take a final survey upon completion of construction to determine structural damage of Mayfields, with the caveat that should there be evidence of structural damage in survey taken during construction that construction ceases immediately	<p>A Construction Vibration Assessment has been conducted as part of Environmental Statement (ES) Chapter 14: Noise and Vibration (document reference 6.14) and submitted with the Development Consent Order (DCO) application. Vibration levels are predicted to be below the level at which building damage, even cosmetic, may occur at this location. This, however, would be reviewed by the contractor as part of the specific noise and vibration assessments.</p> <p>Previous alignments presented at consultation events have shown an access route passing closer to this property, this access route is no longer present in the latest alignment.</p>			X	
9-4.326	Concern about the impact of the Project on listed buildings in Holton St Mary (e.g. impacts of heavy machinery on foundations and integrity of buildings), and request for information on mitigation measures at these locations	A Construction Vibration Assessment has been conducted as part of Environmental Statement (ES) Chapter 14: Noise and Vibration (Document Reference 6.14) and submitted with the Development Consent Order (DCO) application. No buildings/structures have been identified in this area as being in close proximity to potential works with the potential to result in high vibration levels, without mitigation. This will be reviewed	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		by the contractor as part of the specific noise and vibration assessments and specific measures will be put in place to manage and reduce vibration levels.				
9-4.327	Concern about the impact of Pylons RG90 to RG93 on the Worham Church of St Mary the Virgin (e.g. visual impact and impact on heritage)	<p>National Grid, through the routeing and siting exercise, has sought to reduce the impact on the historic environment, including listed buildings in this area. All listed buildings within 2 km of the Order Limits are considered in the Historic Environment Assessment for the Project. The impacts of the Project on the historic environment are assessed in Chapter 11: Historic Environment (document reference 6.11) of the Environmental Statement (ES). The assessment considers the potential impact on historic buildings and includes assessment of potential for physical impact and impact through change to setting that affects the value of a heritage asset. The assessment of listed buildings is supported by setting surveys, as documented in ES Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1). The Project has engaged with Historic England and relevant planning authorities on aspects relating to heritage, including appropriate mitigation measures and techniques and to take their views into account during Project development.</p> <p>The Church of Saint Mary was scoped out of further assessment during the production of Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1). The Baseline Report concluded that the setting of the asset does not extend to the Order</p>	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Limits due to distance (c. 1.5 km), its mature graveyard and screening in the intervening landscape by development and mature tree lined hedgerows and copses.				
9-4.328	Concern about the impact of Pylons RG101 to RG106 on Burgate Church of St Mary	<p>National Grid, through the routing and siting exercise, has sought to reduce the impact on the historic environment, including listed buildings in this area. All listed buildings within 2 km of the Order Limits are considered in the Historic Environment Assessment for the Project. The impacts of the Project on the historic environment are assessed in Chapter 11: Historic Environment (document reference 6.11) of the Environmental Statement (ES). The assessment considers the potential impact on historic buildings and includes assessment of potential for physical impact and impact through change to setting that affects the value of a heritage asset. The assessment of listed buildings is supported by setting surveys, as documented in the Environmental Statement (ES) Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1). The Project has engaged with Historic England and relevant planning authorities on aspects relating to heritage, including appropriate mitigation measures and techniques and to take their views into account during Project development.</p> <p>The assessment of the Church of St Mary concludes a significant effect during construction and operation. No additional mitigation measures are proposed as any</p>	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		measures designed to lessen the visual impact of the Project would be of a scale that would visually adversely alter the setting of the asset.				
9-4.329	Concern about the impact of Pylon RG110 on a moated site at Stubbings Entry	<p>National Grid has worked to minimise potential impacts on the historic environment, including non-designated assets such as asset (2227), a moated site, through strategic routeing and/or siting measures. Statutory consultation feedback and the results of archaeological fieldwork have been used to inform design development to reduce as far as practicable impacts to archaeological remains in this area. The assessment is supported by walkover, setting and geophysical surveys, as documented in Environmental Statement (ES) Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1) and Appendix 11.4 Geophysical Survey Results Report (document reference 6.11.A4).</p> <p>The assessment of this moated site concludes that the asset will not experience any direct physical impacts, and that its setting does not extend to the Order Limits. As such, the assessment determines that there would be no significant effect on the asset.</p>	X			
9-4.330	Concern that existing data regarding known designated and non-designated heritage assets within Suffolk (recorded within the Suffolk Historic Environment Record (HER) and presented within 11.1 Historic Norwich to Tilbury Statutory Consultation Environment Baseline Report) has only	The methodology used to inform the assessment of the historic environment, including Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1) of the Environmental Statement (ES), has been developed in accordance with established good practice and national guidance. It has been discussed and		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	been used to provide an assessment of the heritage asset value and has not been used to provide an understanding of the archaeological potential of the proposed route for the Project and impacts of the Project on the significance of those potential heritage assets, which are yet to be identified. With this, suggest that full archaeological assessment is required to fully understand the heritage asset values provided within the Historic Environment Baseline Report	<p>agreed upon with relevant stakeholders during the scoping process and through ongoing engagement at thematic working group meetings. The approach taken provides a robust and proportionate understanding of both designated and non-designated heritage assets, including those recorded within the Suffolk Historic Environment Record (HER).</p> <p>The assessment does not rely solely on the HER for the determination of heritage asset value but also considers the wider archaeological potential of the proposed route. This is achieved through a combination of desk-based analysis.</p> <p>Moreover, the conclusions drawn within the assessment are further supported by site surveys, including geophysical survey and archaeological trial trenching, to better inform the understanding of the archaeological resource and potential impact of the Project on both known and as-yet unidentified heritage assets.</p>				
9-4.331	Concern that, when looking at groups of artefacts (withing the Historic Baseline Report for the Project), the heritage asset value is determined based on the individual artefact and the group value is not always considered, and suggest that the heritage asset value should be provided for the group asset not the individual artefact for the following / suggest a higher heritage asset value is appropriate for the following: - Neolithic assets described in Paragraph 3.3.69 (as the combination of these heritage assets and	<p>A – It is acknowledged that in situ Neolithic settlement remains would be of at least medium value. The few lithic described in that paragraph are not considered to represent settlement activity. Given the time depth of the Neolithic (1,800 – 2,000 years), the lithics are considered to be more likely the result of intermittent use of the landscape and accumulated over a considerable timespan.</p> <p>B – in the latest iteration of the baseline these assets have been grouped, but as they constitute a small</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>location within a River Valley indicates significant activity within this area, and is indicative of occupation within this setting, particularly when the Portable Antiquities Scheme (PAS) finds are considered in relation to other heritage assets in the vicinity);</p> <ul style="list-style-type: none"> - Bronze Age assets described in Paragraph 3.3.83 (needs assess the group value of the finds rather than assess the heritage asset value of the individual finds); - Iron Age assets described in Paragraph 3.3.102 (needs assess the group value of the finds rather than assess the heritage asset value of the individual finds. The purpose of this is to provide an assessment of the likely buried archaeological remains, indicated by the finds group); - Iron Age assets described in Paragraph 3.3.104 (individual PAS finds have been considered individually, however, when the information from the PAS database is combined the concentration and types of finds present are indicative of Late Iron Age/Early Roman occupation); - Iron Age assets described in Paragraph 3.3.107; - Prehistoric assets described in Paragraph 3.3.113 (these lithic scatters when combined with other heritage assets in the immediate area show a landscape of prehistoric activity along the Dove River Valley); - Large multi-period concentration of PAS artefacts 	<p>number of finds, they are still considered to be of low value. Given the time depth of the Bronze Age (1,500 – 1,800 years), it is more likely the assemblage formed over time rather than it represent a single phase of settlement activity.</p> <p>C – In the latest iteration of the baseline these assets have been grouped, but as they constitute a small number of finds, they are still considered to be of low value. There is not enough evidence to suggest these assets represent medium value settlement activity.</p> <p>D - In the latest iteration of the baseline these assets have been grouped and reported as medium value.</p> <p>E - In the latest iteration of the baseline these assets have been grouped, but as they constitute a small number of finds, they are still considered to be of low value.</p> <p>F - In the latest iteration of the baseline these assets have been grouped, but as they constitute a small number of finds, they are still considered to be of low value. Given that the dateable lithics on site range from the late Mesolithic through to the Bronze Age it is not possible to suggest this small number of artefacts represent a single phase of occupation and they are more likely to represent intermittent activity in the landscape.</p> <p>G - In the latest iteration of the baseline these assets have been grouped and reported as medium value.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	described in Paragraph 3.3.136; - Roman artefacts described in Paragraph 3.3.148; - Romano-British artefact scatter described in Paragraph 3.3.150	H - In the latest iteration of the baseline these assets have been grouped and reported as medium value. I - In the latest iteration of the baseline these assets have been grouped and reported as medium value.				
9-4.332	In relation to Paragraph 3.3.327 in the Historic Baseline Report for the Project, concern that the location of the Wickham Abbey is not known (given that there has been no systematic archaeological investigation of the area). There is high archaeological potential for below-ground heritage assets associated with the benedictine cell in the wider area. As result, suggest National Grid provides an assessment of the likely buried archaeological remains, indicated by the information in the Historic Environment Report	The assessment in the Environmental Statement (ES) Chapter 11: Historic Environment (document reference 6.11) and its Appendices (document reference 6.11.A1 to 6.11.A7) considers potential physical impact to archaeological remains as a result of construction works. The nearest area of impact within the Order Limits is the temporary haul road and pylons RG126 – 127 over 300 m to the west of the asset. These areas will be subject to geophysical survey and, should it be required following the results and consultation with stakeholders, subsequent archaeological fieldwork.		X		
9-4.333	Concern that impact of the Project on the setting of monks abbey at Wickham Skeith (near Pylons RG123 to RG126) has not been consider (e.g. on Page 178 of the Preliminary Environmental Information Report (PEIR)) and that National Grid has ruled out of further assessment as the abbey is outside of the draft order limits for the Project	As no evidence of the Benedictine cell has been identified, the asset is adjudged low value. The setting of low value assets is not considered further as per agreed methodology.			X	
9-4.334	Concern about impact of Pylons RG124 and RG125 on Abbey Farm (e.g. impact on views and heritage)	An assessment of landscape and visual effects is presented in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13). The landscape and visual impact assessment (LVIA) sets out			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>the potential effects. Abbey Farm is located in Section B, in Visual Receptor Area (VRA) B5 Wickham Skeith and Mendlesham, and lies over 350m from the proposed alignment. Major and significant visual effects have been reported in the assessment at this location (Appendix 13.3: Visual Baseline and Assessment – document reference 6.13.A3) due to the close proximity and open views across this arable landscape. Mitigation planting is not proposed at this location and effects will remain as assessed.</p> <p>Abbey Farmhouse (1182599) was scoped into assessment to the ES chapter based on it's proximity to the Project and that its setting extends to the Order Limits (further discussed in the Historic Baseline Report (6.11.A1), and the ES Chapter (6.11. Chapter 11). The assessment of the significance of effect during the construction and operation phases, resulted in both phases that the asset will experience lower less than substantial harm (further detailed in the ES Appendix 11.7 Assessment of Harm to Designated Heritage Assets (document reference 6.11.A1). The Harm Assessment was determined as such due to the Project only being partially visible due to established vegetation and other buildings, which would cause a low impact on the value of the asset. Mitigation, which is described in the Proposed Mitigation section of Chapter 11: Historic Environment (document reference 6.11) will apply to this</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		asset and will lessen the potential harm to value and setting during both phases.				
Information						
9-4.335	Information provided that Suffolk Constabulary (SC) does not have a dedicated Abnormal Indivisible Load (AIL) Team and the resourcing of AIL's is managed on an 'overtime basis' - AIL movements through Suffolk are therefore required to book a 'police escort' in advance, and AIL's are then scheduled - subject to the county-wide demand and SC's resource capacity at a given point in time	Discussions between National Grid and Suffolk Constabulary are ongoing regarding the policing (resourcing) of Abnormal Indivisible Load (AIL) movements. National Grid has engaged with Suffolk Constabulary on the proposed AIL movements and routes. Their inputs have led to amending AIL routes and developing an AIL movement strategy, which is appended to the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), submitted with the Development Consent Order (DCO) application.	X			
9-4.336	Information provided that increased use of the Suffolk Road network by HGV and light traffic requires the 'Abnormal Indivisible Load (AIL) escort guidance' and 'risk factors' to be reviewed, particularly where a sustained increase in HGV movements on local roads is influenced by a major construction project destination (in the context of Suffolk Constabulary)	<p>National Grid notes the respondent's feedback. National Grid has engaged with Suffolk Constabulary on the proposed Abnormal Indivisible Load (AIL) movements and routes. Their inputs have led to amending AIL routes and developing an AIL movement strategy, which is appended to the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), submitted with the Development Consent Order (DCO) application.</p> <p>Increased HGV movements on local roads as a result of the construction of the Project is assessed in Chapter 16: Traffic and Transport (document reference 6.16) of</p>	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		the Environmental Statement (ES) (document reference Volume 6: Environmental Statement).				
9-4.337	Information provided that Abnormal Indivisible Load (AIL) (and any additional low loader) movements are likely to breach double white lines and / or require traffic to be redirected - this service can only be managed by the police (in the context of Suffolk Constabulary)	<p>National Grid has engaged with Suffolk Constabulary on the proposed Abnormal Indivisible Loads (AIL) movements and routes. Their inputs have led to amending AIL routes and developing an AIL movement strategy, which is appended to the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), submitted with the Development Consent Order (DCO) application.</p> <p>All AIL vehicles and routes have been tracked. Where vehicles are wider than the white lines and police escort is required, this has been noted within the AIL movement strategy, which is appended to the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), submitted with the Development Consent Order (DCO) application.</p>	X			
9-4.338	Information provided that, at this stage, it is envisaged that developer mitigation funding for a 'Dedicated Police Abnormal Indivisible Load (AIL) Team' is likely to be required, which would provide the Project with capacity to schedule AIL movements to suit the construction programme (in the context of Suffolk Constabulary)	National Grid notes the respondent's feedback. Discussions between National Grid and Suffolk Constabulary are ongoing regarding the case for developer mitigation funding for a 'Dedicated Police Abnormal Indivisible Load (AIL) Team' to serve the Project.	X			
9-4.339	Information provided that construction phases of a development lead to an increase in the incidence of	There is a requirement on the Principal Contractor to manage site security to ensure vandalism and/or	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	criminal activity, such as property-based theft and vandalism, which is a fact acknowledged by the Chartered Institute of Building in its publication(s) on 'Crime in the Construction Industry' (in the context of Suffolk Constabulary)	material theft does not impact on safety or programme. In addition, National Grid's corporate security liaise nationally and locally with government agencies to monitor increased areas of materials theft. This information is available to the Project team to help manage site security				
Mitigation						
9-4.340	Suggest mitigation measures	An Environmental Statement (ES) (document reference Volume 6: Environmental Statement) has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 ('the Infrastructure EIA Regulations'). The ES identifies and assesses the likely significant effects on the environment resulting from the construction, operation and maintenance of the Project and recommends appropriate mitigation to reduce effects. Environmental mitigation measures have been defined within each environmental topic chapter and set out in relevant management documents submitted with the Development Consent Order (DCO) application, including the Outline Code of Construction Practice (CoCP) (document reference 7.2), the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Archaeological Mitigation	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Strategy and Outline Written Scheme of Investigation (WSI) (document reference 7.5).				
9-4.341	Concern regarding the level of hedge and tree removal proposed near Pylon RG45 (as shown on the interactive map) / Suggest that with specific regards to the oak avenue at TM 13541 91974 (between Pylons RG45 and RG46), the contractor considers alternative access arrangements, such as using the loke, or installing traffic lights in place of a visibility splay, to prevent or mitigate the felling of mature trees along the driveway	<p>National Grid is committed to minimising impacts on trees and hedgerows where practicable, whilst also developing designs for safe and practical junctions. The visibility splays required for the crossing of this access have been reduced to a minimum speed of 30 mph to reduce the visibility splays.</p> <p>It is not considered appropriate for safety reasons to remove the visibility splays entirely from crossings.</p>			X	
9-4.342	Suggest that National Grid take mitigation action to reduce the impact of construction traffic to the proposed route coming in from Lion Road (e.g. which will heavily the impact on the village of Palgrave) / Request that there must be a clear exit route in place with construction traffic forbidden to turn left towards Palgrave	<p>National Grid has worked with the Local Highway Authorities and National Highways to we develop access proposals for the Project. Our assessments, which include visibility and highway geometry, have been completed for Lion Road and we have carefully assessed the necessary mitigation measures to enable its use. Highway improvement measures along Lion Road have not been identified to be required.</p> <p>As part of the design development of the Project, the proposed bellmouth junctions have undergone Road Safety Audits, and mitigation measures for road safety have been developed as the designs progress. This may include temporary traffic management measures such as speed limit reductions and/or temporary signals.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Project Finance / Costs						
9-4.343	Criticism that the Project will cross existing overhead lines between the area north of Mellis and south-east of Burfield, Suffolk, which was not noted during the original plan and will increase costs due to the need for a tunnelled option, in addition to above ground buildings needed to host the existing overhead lines	<p>Since the 2023 non-statutory consultation the Project has become more advanced in its design and so further information was included within the statutory consultation to attain public feedback.</p> <p>The existing overhead line in question, PKF 132kV owned and operated by UK Power Network, would be constructed via open cut trenching techniques which do not require tunnelling.</p> <p>The 132 kV underground cables will be terminated upon cable sealing end platform pylons and so no additional buildings are required to host the existing overhead line.</p>			X	
PROW (Public Rights of Way)						
9-4.344	Concern about negative impact on PROW / footpaths / cycle paths / bridleways	<p>Through routeing and siting, National Grid has sought to reduce, as far as practicable, impacts and disruption to Public Rights of Way (PROW).</p> <p>The iterative design process identified the existing PROW network and their wider connectivity and sought where practicable to reduce and where possible remove impacts to PROW.</p> <p>Effects on PROW would be mitigated where possible, maintaining access where practicable, with closures as a last resort. We will continue to engage with relevant stakeholders on the PROW network to enable feedback and input to be considered as the Project progresses.</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		An Outline Public Rights of way Management Plan (document reference 7.6) is submitted with the Development Consent Order (DCO) application.				
9-4.345	Concern that Pylons RG118 and RG119 will require the closure of Footpath 021 (preventing access to Thornham walks, a circular route used by many residents), and that Pylon RG120 will require the closure of Footpath 022 (preventing access to Thornham on foot)	<p>The Outline Public Rights of Way Management Plan (document reference 7.6) submitted with the Development Consent Order (DCO) application sets out management measures and mitigation measures for each PRoW affected by the construction activities and operation of the Project.</p> <p>The Outline PRoW Management Plan (document reference 7.6) has defined the management of the PRoW in the area around pylons RG118 to RG120, in particular footpaths W-267/021/0 and W-267/022/0. Both PRoW will be temporarily managed for the duration of the works, that is, allowing a safe passage throughout for the PRoW users.</p> <p>As a result, the magnitude of impact on the PRoW is considered negligible and the overall effect has been classified as not significant.</p>			X	
9-4.346	Concern about the impact of Pylons RG114, RG115, RG118, and RG119 on footpaths (Green Lane, footpath number 14 on the Gislingham definitive map; and, footpath number 21 on the Gislingham definitive map)	National Grid endeavours to reduce impacts on Public Rights of Way (PRoW), including reducing the duration of any closures, as far as practicable. The locations of PRoW affected by the Project, along with proposed diversion routes are shown on the Access, Rights of Way and Public Rights of Navigation Plans (document reference 2.5).			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Impacts on PRow as a result of the construction and operation of the Project are assessed in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) Chapter 10: Health and Wellbeing (document reference 6.10), ES Chapter 13: Landscape and Visual (document reference 6.13), ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15), and ES Chapter 16: Traffic and Transport (document reference 6.16) . The ES includes details about the level of impact created and the mitigation proposed in relation to the Project.</p> <p>An Outline Public Rights of Way Management Plan (document reference 7.6) to be submitted as part of this Development Consent Order (DCO) application sets out management measures and mitigation measures for each PRow affected by the construction activities and operation of the Project.</p>

Public Right of Way (PRoW)						
9-4.347	Concern about the impact of Pylons RG90 to RG110 on Public Rights of Way (e.g. impact on footpaths, bridleways and byways in Wortham and Burgate, and the Wortham Walkers Group and nearby Mellis CaniCross Group)	<p>The impacts on Public Rights of Way (PRoW) have been minimised wherever possible where impacted upon by any temporary construction works or permanent works. Where possible access along all PRoW crossing the Order Limits have been maintained with access managed, or PRoW diverted, and only closed where absolutely necessary during specific construction activities. Any required temporary diversions would be clearly signed at both ends, detailing the diversion routes, the duration of the diversion and a contact number for any concerns. Exact details of the forms of any management, diversions or closures would be subject to discussion with relevant local authority access officers. This discussion would also include the consideration of timings to prevent parallel or concurrent closures which may compound impacts for users. Details are presented in the Outline Public Rights of Way Management Plan (document reference 7.6).</p> <p>In addition, an assessment of impacts to recreational routes and on Public Rights of Way (PRoW) during construction, and proposed mitigation measures has been provided in Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) and Chapter 16: Traffic and Transport (document reference 6.16) of the Environmental Statement (ES), the Outline Public Rights of Way Management Plan (document reference 7.6) and Access, Rights of Way</p>	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		and Public Rights of Navigation Plans (document reference 2.5).				
9-4.348	Suggest that construction bridges and tracks for the Project are retained following construction to improve public access in this Section (e.g. a construction bridge over the River Gipping would offer potential legacy benefits if retained as access for public rights of way are constrained in this area)	<p>National Grid acknowledges the suggestion to retain construction bridges and tracks, such as a bridge over the River Gipping, to improve local access. While we recognise the potential for legacy benefits, the construction infrastructure proposed as part of the Project – including haul roads, bridges and culverts – is intended to be temporary and is not designed, constructed, or consented for long-term public use.</p> <p>These assets are typically engineered to serve a defined construction period only, without the maintenance regimes, surfacing, safety measures, or structural resilience required for ongoing public access. Retaining them would introduce long-term operational, legal and safety risks that fall outside the Project's scope.</p> <p>As such, these features will be removed and the land reinstated in accordance with commitments set out in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement).</p>		X		
9-4.349	Concern about impact of construction for the Project on footpaths near Gislegham (e.g. the circular route and the route to Thornham and Wickham Skeith), specifically: FP267/021 near Pylon RG119 (no access to Clay Street/Thornham Walks by not using the road); FP267/022 near Pylon RG118 (across the railway line leading to	The assessment of recreational routes are outlined in the Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) of the Environmental Statement (ES) with the Outline Public Rights of Way Management Plan (document reference 7.6) and Access, Rights of Way and Public Rights of Navigation Plans (document reference 2.5) submitted			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	Stahouse Farm, again blocking the route to Thornham and Wickham Skeith); FP267/14 – bridleway between the Mellis and Burgate Roads (as there are only three bridleways in the village and the other two are not suitable due to crossing a railway line and going through a wood with tree stumps and low hanging branches); FP267/14A near Pylon RG114. With this, concern that the footpaths mentioned will not be reopened in the future (following completion of the Project)	<p>with the Development Consent Order (DCO) application.</p> <p>An assessment on the impact on Public Rights of Way (PRoW) during construction and proposed mitigation measures has been provided within Chapter 16: Traffic and Transport (document reference 6.16) of the Environmental Statement (ES).</p> <p>In terms of specific detail, the PRoW will be temporarily stopped up and an alternative route around the construction site will be provided. Following completion of the Project, the diversion route would be removed, the ground reinstated, and the existing PRoW reopened.</p>				
Requests						
9-4.350	Concern regarding construction traffic entering village from Lion Road / Request for National Grid to provide details for mitigation for this, and request for advice to be taken into account regarding construction traffic using the A143 / Lion Road access (e.g. which is a very tight bend and prone to flooding)	<p>National Grid have worked with the Local Highway Authorities and National Highways to develop our access proposals for the project. Our assessments, which include visibility and highway geometry, have been completed for Lion Road and we have carefully assessed the necessary mitigation measures to enable its use. Highway improvement measures along Lion Road have not been identified to be required.</p> <p>As part of the design development of the Project, the proposed bellmouth junctions have undergone Road Safety Audits, and mitigation measures for road safety have been developed as the designs progress. This may include temporary traffic management measures</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		such as speed limit reductions and/or temporary signals.				
9-4.351	Will the companies involved in upgrade works for Bramford substation (which respondent fully supports) be required to frequently deploy road sweepers on the Bullen Lane access road to keep mud on the B1113 to a minimum?	As detailed in the Outline Code of Construction Practice (CoCP) (document reference 7.2), National Grid would undertake regular on-site and off-site inspections, where receptors (including roads) are nearby, to monitor dust, record inspection results, and make the log available to the local authority when asked. This should include regular dust soiling checks of surfaces such as street furniture, cars and windowsills within 100 m of site boundary, with cleaning to be provided if necessary.			X	
9-4.352	Criticism that existing pylons which run parallel to the proposed pylons have recently been updated / Request for further information as to why this was necessary when new pylons are proposed	Whilst the existing transmission network in the region is currently being upgraded to ensure the system is running at its most efficient performance, the existing assets are not able to be upgraded sufficiently to cope with the new future demands expected on the network. As a result, new overhead lines and substations will be required to accommodate the changing demands on the network. The existing overhead lines cannot be further adapted safely and securely to enable them to carry more power or additional conductors (wires) added to take the amount of power being proposed in East Anglia.	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Technology / Operations						
9-4.353	Suggestion that if National Grid are going to create access roads, that they be an improvement to local roads	<p>National Grid notes the comment raised. Unfortunately, the maintenance and condition of the public highway is not the responsibility of this Project and sits with the Local Highways Authority or National Highways.</p> <p>As part of this Project, we would undertake a pre-condition and post-condition survey and would be required to undertake remediation works where changes to the condition have occurred due to the Project construction work.</p>			X	
Tourism						
9-4.354	Concern about impact of the Project on tourism	<p>Through routeing and siting, National Grid has sought to avoid, as far as practicable, locations important for leisure and tourism.</p> <p>Environmental Statement (ES) Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) presents an assessment on the potential impacts on tourism economy (during construction) and tourism assets (during construction and operation), including visitor accommodations. As part of this assessment, a range of measures have been considered throughout the construction phase of the Project to minimise disruption on tourism. These include: traffic management, signage and routeing measures. These are identified within the ES Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15), the Outline Code of</p>	X	X	X

		and visual amenity and identifies areas for potential mitigation planting around substations and CSE compounds to reduce visual impacts to local receptors. The Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) includes details regarding the planting proposals.				
9-4.357	Concern that lighting for the compound at Cotton / Carters Meadow will cause light pollution	<p>Exterior and interior lighting would be provided at the substation sites to allow for safe movement and the operation of equipment. All lighting would be designed in accordance with the appropriate design standards and expected to include the use of motion detection triggered and directional lighting to reduce the potential for effects of concern. Further details are provided in the Environmental Statement (ES), Chapter 4: Project Description (document reference 6.4). Embedded mitigation details relating to lighting are presented in the Outline Code of Construction Practice (CoCP) (document reference 7.2).</p> <p>Any operational lighting associated with the permanent assets such as Cable Sealing End (CSE) compounds and the East Anglia Connection Node (EACN) substation have been considered within the Environmental Impact Assessment (EIA). Night-time effects on designated landscapes, landscape character and visual amenity during construction and operation are assessed in the Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13).</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-4.358	Concern that the land to the west of the current Bramford Substation does not benefit from natural landcover and is exposed	<p>National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project. The results of this assessment are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation (and maintenance) of the Project and recommends appropriate mitigation measures to reduce potential effects.</p> <p>A Landscape and Visual Impact Assessment (LVIA) (document reference 6.13) has been undertaken as part of the EIA, located in Chapter 13 of the Environmental Assessment (document reference 6.13). Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3) considers baseline views and is in agreement with the comment that the land to the west of the current Bramford Substation does not benefit from natural landcover and is exposed.</p> <p>As part of the assessment of visual effects, Visual Receptor Areas (VRA) have been identified along the study area. VRA B12: Elmsett lies to the west of Bramford Substation and the baseline description notes the views are open and long distance, and that rolling hills can be seen in the distance with a wooded backdrop. VRA C1: Burstall also lies to the west, and notes that in baseline views there are some longer distance views from higher land on low ridges located</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>to the north-west of Burstall, frequent views of an existing 400 kV overhead line and 132 kV overhead line which pass through the area, and views to transmission masts and other overhead lines which all converge at Bramford Substation to the north-east of this area.</p> <p>The assessment goes on to report major adverse and significant visual effects resulting from the introduction of the Project within 0.5 km of the Project, reducing to moderate within 1.5 km, and minor (not significant) beyond 1.5 km for both VRAs.</p> <p>In terms of mitigation, land around National Grid permanent assets has been defined as Environmental Areas, with the exception of Bramford Substation where there is not sufficient space due to existing equipment and other planned developments. The levels of effect reported in the assessment reflect this.</p>				
9-4.359	Concern about the cumulative impact of Pylon RG109 and the proposed Cable Sealing End (CSE) compound for the replacement of the existing UK Power Networks (UKPN) 132 kV local distribution overhead line with underground cables (e.g. visual impact), and concern about the increased impact of the Project between Pylons RG103 and RG108 (compared to existing UKPN 132 kV overhead line) due to the greater pylon height (e.g. visual impact between Pylons RG103 and RG106, site of a Saxon manor house). Similarly, concern about the cumulative impact of Pylon RG100 and the	National Grid notes the respondent's feedback. The Environmental Statement (ES) (document reference Volume 6: Environmental Statement) assesses the likely significant residual effects of the Project on a variety of environmental topics (including Cultural Heritage, and Landscape and Visual). ES Chapter 17: Cumulative Effects (document reference 6.17) reports any cumulative effects as a result of the Project's interaction with other projects and multiple effects on a single receptor.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	proposed CSE compound for the replacement of the existing UKPN 132 kV local distribution overhead line at the bottom of Dam Lane, Mellis (e.g. due to impact on woodland and impact on archaeological site)					
9-4.360	Concern about the impact of Pylons RG92 to RG100 on the designated Visually Important Open Space at Long Green Wortham	<p>A Landscape and Visual Impact Assessment (LVIA), which includes an assessment of landscape and visual effects is presented in Chapter 13: Landscape and Visual of the Environmental Statement (ES) (document reference 6.13). The approach to the LVIA follows professional guidance as set out in Appendix 13.1: Landscape and Visual Methodology (document reference 6.13.A1) This includes Guidelines for Landscape and Visual Impact Assessment (GLVIA3), as prepared by the Landscape Institute and the Institute of Environmental Management and Assessment. The methodology and approach has been agreed with relevant stakeholders and the assessment prepared by qualified and experienced landscape professionals.</p> <p>Effects on Visual Receptor Areas (VRA) (including VRA B1 Wortham) are presented in Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3). A selection of landscape and visual viewpoints have been used to produce technical visualisations to support the LVIA and assist stakeholders and ultimately the examining authority to understand the likely effects of the Project on landscape character and on views from specific points.</p>	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Viewpoint 2.32 – Public Rights of Way north of Wortham (Wortham 39) (document reference 7.12.F51) illustrates how the Project would appear in views from Wortham and the footpath network around Long Green, which is included in the visually important open spaces identified in the Mid Suffolk District Local Plan. Wortham and the area of Common Land at Long Green sit on a localised elevated plateau. The Project is located approximately 1.5 km to the east and south on lower lying landform, which would help screen sections of the overhead line. The Project would be screened and filtered from views in some places by intervening buildings, mature hedgerows and trees on field boundaries, pockets of woodland, and intervening landform. The assessment identifies that visual effects are likely to be significant (adverse) within approximately 1.5 km of the Project within VRA B1.				
Waveney Valley Alternative

9-4.365	Suggest that the Project uses High Voltage Direct Current (HVDC) underground cables as opposed to Alternating Current (AC) underground cables through the Waveney Valley / Suggest that the Waveney Valley Alternative (underground option) uses HVDC underground cables	<p>National Grid is constantly looking into new innovations and investigating alternative technology types. These are explored and assessed for suitability.</p> <p>National Grid has considered the justification for the use of underground cable for the crossing of the Waveney Valley. The starting presumption in National Policy Statement (NPS) EN-5 paragraph 2.9.20 in a location such as the Waveney Valley which, although valued is not designated, is that overhead line is the appropriate 400 kV connection technology. We have also considered whether the effects from the overhead line are at a level that engages other parts of NPS EN-5 (such as paragraph 2.9.23) to prompt consideration of whether the benefits of undergrounding outweigh any extra economic, social or environmental impacts. At the Waveney we conclude that the benefits from a change to underground cable, do not justify the additional cost that would be incurred. The use of underground cable would lead to a lowering of effects on the setting of the Grade I Listed St Remegius Church, albeit the effects of progressing with an overhead line are assessed as less than substantial harm and don't themselves require a change in technology. In terms of community effects, existing trees would provide some screening and filtering of views of an overhead line for those in residential areas and on recreational routes. A change from overhead line to underground cable would reduce these community effects but bring disbenefits, most notably</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>increased ecological effects from installation within peaty soils and increased technical risk to cable integrity from the Waveney and Little Ouse Recovery (WaLOR) channel naturalisation and landscape recovery plans. Conversely there may be compromise to the WALOR project by measures to ensure cable integrity. After consideration of the decision making guidance at paragraph 2.9.25 of NPS EN-5, National Grid concludes that whilst effects from overhead lines to individual receptors may be significant in Environmental Impact Assessment (EIA) terms they do not justify the potential for compromise to the WALOR project, the effects on peaty soils which would arise with an underground cable design nor justify the expected cost of an underground cable design. On this basis, National Grid concludes that the use of an overhead line should be taken forward for the crossing of the Waveney Valley. Prior to making this decision we had considered whether requests to relocate the Cable Sealing End (CSE) compounds and extend the cable both to the north and the south may alter the decision making balance. Such extensions would bring benefits to various residential receptors but with the additional cost of longer length of cables. We conclude that given the absence of any designated status pertinent to NPS EN-5, and the extent to which some views from residential areas are filtered and screened and lower the level of adverse effects from the overhead line, we</p>

		would lead to a lowering of effects on the setting of the Grade I Listed St Remegius Church, albeit the effects of progressing with an overhead line are assessed as less than substantial harm and don't themselves require a change in technology. In terms of community effects, existing trees would provide some screening and filtering of views of an overhead line for those in residential areas and on recreational routes. A change from overhead line to underground cable would reduce these community effects but bring disbenefits, most notably increased ecological effects from installation within peaty soils and increased technical risk to cable integrity from the Waveney and Little Ouse Recovery (WaLOR) channel naturalisation and landscape recovery plans. Conversely there may be a compromise to the WaLOR project by measures to ensure cable integrity. After consideration of the decision making guidance at paragraph 2.9.25 of NPS EN-5, National Grid concludes that whilst effects from overhead lines to individual receptors may be significant in Environmental Impact Assessment (EIA) terms they do not justify the potential for compromise to the WaLOR project, the effects on peaty soils which would arise with an underground cable design nor justify the expected cost of an underground cable design. On this basis, National Grid concludes that the use of an overhead line should be taken forward for the crossing of the Waveney Valley. Prior to making this decision we had considered whether requests to relocate the Cable Sealing End (CSE) compounds and

		extend the cable both to the north and the south may alter the decision-making balance. Such extensions would bring benefits to various residential receptors but with the additional cost of longer length of cables. We conclude that given the absence of any designated status pertinent to NPS EN-5, and the extent to which some views from residential areas are filtered and screened and lower the level of adverse effects from the overhead line, we do not consider the additional cost associated with extending the underground cable would be justified.				
9-4.369	Suggest that underground cables as part of the Waveney Valley Alternative (underground option) are extended past the village of Palgrave, as the area already has hundreds of acres of solar farms	National Grid has considered the justification for the use of underground cable for the crossing of the Waveney Valley and on the matter of extending the use of underground cable past Palgrave raised in the respondent's feedback. The starting presumption in National Policy Statement (NPS) EN-5 paragraph 2.9.20 in a location such as the Waveney Valley which, although valued is not designated, is that overhead line is the appropriate 400 kV connection technology. We have also considered whether the effects from the overhead line are at a level that engages other parts of NPS EN-5 (such as paragraph 2.9.23) to prompt consideration of whether the benefits of undergrounding outweigh any extra economic, social or environmental impacts. At the Waveney Valley we conclude that the benefits from a change to underground cable, do not justify the additional cost that would be incurred. The use of underground cable	X		X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-4.380	Concern that the Project will have a negative impact on bees / Bees will be unable to navigate under high voltage overhead lines	As well as possible effects on humans, possible effects of Electric and Magnetic Fields (EMFs) on various animals have been studied a number of times. No proven effects of EMFs have been found in any species at levels below the guidelines. This is confirmed in National Policy Statement (NPS) EN-5 which states: <i>"There is little evidence that exposure of crops, farm animals or natural ecosystems to transmission line EMFs has any agriculturally significant consequences."</i> Beehives can become charged if directly under an overhead line because of the electric field it produces. For existing overhead lines, this can be eliminated by screening or earthing the hive, but for new overhead lines, embedded design measures and careful routeing will avoid any potential effects. There does not seem to be evidence of EMFs adversely affecting bees directly. In the United States of America, the strip of land along power lines has been shown to be particularly attractive to bees, with these areas being utilised by commercial bee farms. Additionally, National Grid has worked with the British Beekeeping Association to establish hives around our sites, including high voltage substations, which have thrived.	X		X	
9-4.381	Concern that the Project will result in a negative impact on flora / plants / woodlands / hedgerows	Through routeing, siting and detailed design, National Grid has sought to reduce, as far as practicable, potential impacts on biodiversity including priority grassland, wetland, woodland, and hedgerow habitats. The design process has taken account of existing biodiversity, the natural environment and, where	X	X	X

		habitat creation or enhancement actions in strategic areas, and we will consider all offsite options that are available to us.				
9-4.384	Suggest ecological enhancements as part of the Project	<p>The Environment Act 2021 introduces a mandatory requirement for 10% Biodiversity Net Gain (BNG) for new Development Consent Order (DCO) developments (which is not yet in force and expected May 2026). National Grid has committed to deliver 10% BNG with environmental and societal benefits on all construction projects. The 10% BNG target for the Project is currently voluntary and aligned with our corporate sustainability commitment.</p> <p>As well as seeking to avoid and minimise our impacts to nature the Project considers the land required for mitigation, compensation and enhancement that can deliver BNG and wider environmental and societal benefits. This would require delivery of offsite Biodiversity Units via habitat creation or enhancement actions in strategic areas, and we would consider all offsite options that are available to us.</p>			X	
9-4.385	Concern that a track used by badgers in this section will be intersected by the Project (including proposed haul road) (pylon references provided by respondent)	National Grid has undertaken badger surveys across the route to identify the location of badger setts and associated mammal pathways. The crossing of a potential badger pathway has been considered as part of the Environmental Impact Assessment (EIA) and appropriate mitigation measures included within the Outline Landscape and Ecological Management Plan			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		(LEMP) (document reference 7.4) to ensure no detrimental impact on the local badger clan.				
9-4.386	Suggest that the Rookeries at TM 13798 92144 is included and marked on the map as a local wildlife site and surveyed for wildlife	National Grid has obtained information on all formally designated local wildlife sites from the relevant local record centres, but to date this has not included a local wildlife site at TM 13798 92144. The designation of areas as local wildlife sites is undertaken by the relevant Local Authority.			X	
9-4.387	Concern about the impact of the project on the bat colony that lives in St Mary's Church and their flight path along Thornham Road, towards Pylon RG116	<p>A suite of surveys, including at static surveys have been undertaken across the route to identify roosts and key commuting and foraging routes for bats across the Project.</p> <p>The assessment on protected species is presented in the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8). In addition, ES Appendices 8.9 – 8.11 (document reference 6.8.A9 – 6.8.A11) provide further information on the presence of bats within the Order Limits. An impact assessment has been undertaken to identify any important bat foraging/commuting routes and appropriate mitigation outlined as necessary. This bat mitigation has been triggered by the presence of certain bat assemblages and/or high usage rates in areas of greater impact. A static detector was installed at Thornham road and results identified moderate activity for the majority of bat species groups with the exceptions of <i>myotis sp.</i> and <i>plecotus auritus</i> which were found to have relatively high activity levels. However use of an</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		artificial bat flyway has not been proposed in this location due to the limited impact on the woodland vegetation as a result of the project. Impact on bat commuting at this location is not considered significant.				
9-4.388	Concern that the Project will impact a rare species of tree that can be found in a copse that is in a field on the left when leaving the village along Thornham Road (walking.spruced.biked) and contains varied wildlife including nesting buzzards	Arboriculture and Ecology surveys have been undertaken to establish the baseline ahead of undertaking an impact assessment. The Environmental Statement (ES) Appendix 13.6: Arboricultural Impact Assessment (AIA) (document reference 6.13.A6) provides further information on tree species and impact.			X	
9-4.389	Concern that the Project will impact an 800-year-old ancient oak with a Tree Preservation Order (TPO) on it that is sited at the entrance of one of the haul roads (truffles.pump.rifled)	The haul road is sited on the opposite side of Thornham Road to that of the veteran oak tree. Appendix 13.6 Arboricultural Impact Assessment (AIA) of the Environmental Statement (ES) (document reference 6.13.A6) provides mitigation measures for working within buffer zones. The impacts to the tree are assessed as low.			X	
9-4.390	Concern that the Project will impact well-established trees, especially oak trees, and hedgerows with many native species on both sides of Thornham Road as far as Swattesfield campsite, as well as over the railway arch	Arboriculture and ecology surveys have been undertaken to establish the baseline ahead of undertaking an impact assessment. The Environmental Statement (ES) Appendix 8.1: Habitat Report (document reference 6.8.A1) and ES Appendix 13.6: Arboricultural Impact Assessment (AIA) (document reference 6.13.A6) provide further information. While there will be some unavoidable loss of trees/hedgerow along Thornham Road, the overhead line has been positioned to avoid the areas of more dense vegetation.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Replacement planting will be implemented on the completion of works. Further details are provided in the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4). National Grid are also committed to the delivery of 10% biodiversity net gain (BNG) across the Project.				
9-4.391	Concern that the fencing used to line the haul roads and construction sites will disrupt paths and tracks used by deer	National Grid notes this response. It is not expected that deer will be impacted by construction fencing.			X	
9-4.392	Concern that the Primary Access Route HO6-A2 on the Thornham Road will require the removal of a valued 7m girth Ancient Oak (registered on the Ancient Tree Inventory with ID. 62138)	As part of the changes that we have made in this location following statutory consultation, the alignment has been moved further east. This has resulted in the access proposals and associated bellmouth junction and construction laydown area also being relocated. Through these changes we have been able to remove the impacts on this tree and it is no longer affected by the proposals.			X	X
9-4.393	Concern about the impact of the Project on wildlife, hedgerows and oak trees on the haul road swathe from Notley Enterprise Park to the B1068, and request for information on mitigation measures at this location (Holton St Mary) / Suggest long-term wilding at this location (including mitigation for wildlife / provision of wildlife corridors; reducing flooding; maintaining air quality and carbon capture)	A range of protected species and habitat surveys have been undertaken across the Project, including between Notley Enterprise Park and the B1068. The results of these surveys are outlined in the Environmental Statement (ES), Chapter 8 and its associated appendices. Appropriate mitigation will be implemented where impacts have been identified as agreed with Natural England and the Local Planning Authority as relevant. Mitigation for potential habitat loss and/or fragmentation has also been presented in the Outline Landscape and Ecological Management Plan (LEMP)	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		(document reference 7.4). On completion of works replacement planting will be undertaken in line with measures set out in the Outline LEMP.				
9-4.394	Concern about the impact of the Project (e.g. haul road and site storage) on trees and hedges on registered common land in Furze Way, and suggest that a special dispensation will be required for this location	<p>National Grid notes the respondent's feedback. Following feedback, we have removed the requirement for scaffolding and storage in this location which would reduce impacts to vegetation either side of Furze Way required for the overhead line. Furze Way will need to be managed during the removal of the existing 132 kV overhead line and installation of the Project but will be managed with engagement with the residential property at the eastern end of Furze Way. The haul road in this location does not cross or impact Furze Way.</p> <p>Areas of common land (and other special category land) within the Order Limits over which National Grid are intending to seek permanent rights are considered in Appendix C of the Statement of Reasons (document reference 4.1) and where land is deemed to be special category the relevant procedure and legislation would be followed.</p>			X	X
9-4.395	Concern about impact of construction of haul road for the Project on gas main (e.g. due to disturbance of heavy clay soil) (near Pylons RG131 to RG139), and concern that the gas pipe has to be exposed in order to have a protective matting placed over it, along with an existing 32 kV double pole and 11 kV single pole line moved underground due to the	<p>The haul roads are proposed to typically be constructed within the underground cable corridor and adjacent to the overhead lines. At many locations across the Project the haul road must cross over existing buried utilities or beneath existing overhead line utilities. This is common practice for transmission projects.</p> <p>In planning the Project, National Grid will survey the ground conditions along the length of the haul road as</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	Project crossing over the gas main (e.g. impact on agriculture, hedgerows and trees)	<p>this will determine the final design specification required for the haul road at specific locations. Additionally, National Grid will consider all existing utilities and agree interface, protection and mitigation arrangements (where required) with their owners.</p> <p>There is the potential, based on induced currents from the 400 kV overhead line, that alternating current mitigation measures may need to be installed to the ferrous Yelverton to Stowmarket pipeline operated by National Gas at RG136 to RG140. The scope and extent of such mitigation measures will be dependent on the final design arrangements of the Project which will continue to evolve within the parameters of confirmed Limits of Deviation. Factors including crossing angle and clearance height, length of parallelism, site specific soil resistivity etc. combine to define the requirement for mitigation. The mitigation itself is typically achieved by the installation, alongside the ferrous pipeline (in an area which is likely to have been previously disturbed during construction), of additional earthing which extends away from the crossing point. Consultation between National Grid and the relevant utility provider will confirm the requirement for installed mitigation, based on the final 400 kV design arrangements, which will be implemented by the relevant utility provider under their existing utility operation and maintenance provisions.</p> <p>Detailed Agricultural Land Classification (ALC) surveys have been undertaken to inform an Outline Soil</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Resource Plan (SRP) (Appendix C of the Outline Code of Construction Practice (CoCP), (document reference 7.2)), which will be developed into a Final SRP prior to construction commencing, taking into account detailed construction approaches and site-specific soil measures, and will be further informed by soil resource surveys undertaken post consent / preconstruction in areas which were not covered by the detailed ALC surveys. The SRP details key soil mitigation measures required to protect soil resources during the stages of construction and implementation of these measures will reduce the impact on agricultural operations as land can be restored to its previous condition following the construction phase.</p> <p>Most of the vegetation impact will be temporary, including impact associated with installation of the construction haul road, with like-for-like replacement planting committed to along the length of the Project following completion of works. The only restrictions to this like for like replacement planting, are beneath the overhead line and above the underground cable, where tree/hedgerow species will need to be low growing or have shallow roots. All vegetation loss will be adequately mitigated through either Biodiversity Net Gain (BNG) or the individual tree mitigation strategy. Full details of the likely impact on vegetation are presented within Chapter 8: Ecology and Biodiversity of the Environmental Statement (ES) (document reference 6.8).</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-4.396	Concern about impact of the Project on wildlife and biodiversity between Pylons RG131 and RG139 (report provided by respondent), and requests in relation to mitigating impact at this location (land parcel reference provided by respondent) as follows: the same management regime should be maintained for the land parcel; an Environmental Impact Assessment (EIA) should be undertaken prior to any construction commencing and made available to the respondent for review	A range of habitat and protected species surveys have been undertaken across the Project and include land between pylons RG131 and RG139. The results of these ecology surveys are outlined in Chapter 8: Ecology and Biodiversity (document reference 6.8) and Appendices 8.1 to 8.16 (document reference 6.8.A1-A16) of the Environmental Statement (ES). Appropriate mitigation would be implemented where impacts are identified as agreed with Natural England and the Local Planning Authority as relevant.			X	
9-4.397	Request for mitigation measures at land adjacent to Pylons RG131 to RG139 (land parcel reference provided by respondent) for wildlife (House Martins, Bats, Barn and Little Owls, Hedgehogs and Roe Deer), and query regarding what measures will be in place to enable animals taller than 100 mm, the height currently proposed for the gap beneath perimeter fence for passage of small animals, to pass through (e.g. as land is used to release rehabilitated hedgehogs and is used by roe deer)	A range of protected species surveys have been undertaken and the results are outlined in Chapter 8: Ecology and Biodiversity (document reference 6.8) and Appendices 8.1 to 8.16 (document reference 6.8. A1-A16) of the Environmental Statement (ES). Appropriate mitigation would be implemented where impacts are identified as agreed with Natural England and the Local Planning Authority as relevant. Construction fencing would be designed to ensure minimised fragmentation impacts which is detailed in the Outline Code of Construction Practice (CoCP) (document reference 7.2).			X	
9-4.398	Concern about the impact of Pylons RG85 to RG110 on wildlife in Wortham and Burgate (list of species provided by respondent)	A range of protected species surveys have been undertaken throughout the route (including areas of Wortham and Burgate) and the results are outlined in Chapter 8: Ecology and Biodiversity (document reference 6.8) and Appendices 8.1 to 8.16 (document reference 6.8.A1-6.8.A16) of the Environmental	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Statement (ES). Appropriate mitigation would be implemented where impacts are identified as agreed with Natural England and the Local Planning Authority as relevant.				
9-4.399	Concern about the impact of Pylon RG90 on bats (e.g. as bat surveys have recorded up to nine different species of bat in this location)	Bat activity surveys have been undertaken across the proposed route to identify both the bat species present and the important foraging and commuting routes. The results are outlined in Chapter 8: Ecology and Biodiversity (document reference 6.8) and Appendix 6.8.A10: Bat Activity Report of the Environmental Statement (ES). RG90 lies within the centre of a large arable field and no removal of bat habitat would be required to facilitate the construction. No significant effect on bats (either roosting or foraging/commuting) has been identified at RG090 and therefore no mitigation is proposed.			X	
9-4.400	Suggest that the impact assessment (as noted in Section 8.2.23 to 8.2.28 of the Preliminary Environmental Information Report (PEIR)) for the Project on large birds should consider the anticipated future increase in bird numbers from the Waveney and Little Ouse Landscape Recovery Project (WaLOR)	The presence of the Waveney and Little Ouse Landscape Recovery Project (WaLOR) has been considered as part of the Project design and is included within Chapter 17: Cumulative Effects of the Environmental Statement (ES) (document reference 6.17).			X	
9-4.401	Concern about the rationale for ruling out impact on Hintlesham Woods Site of Special Scientific Interest (SSSI) in the Preliminary Environmental Information Report (PEIR), as Table 8.5 indicates that it is 1.52km from the draft order limit but the text	Hintlesham Woods Site of Special Scientific Interest (SSSI) has been scoped in within of Chapter 8: Ecology and Biodiversity (document reference 6.8) of the Environmental Statement (ES) however no impact pathways relating to the designating features of the	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	beneath states that Hintlesham Woods SSSI 'is located approximately 2.1 km from areas surveyed for breeding birds and therefore not considered to be functionally linked, so it is not entirely clear what this means. If order limits are within 1.5km of the SSSI this would trigger an impact risk zone ('IRZ') for pylons and cables, 2.1km would be just outside. As such, suggest this should be revisited in the Environmental Statement and that National Grid should engage with the Royal Society for the Protection of Birds (RSPB) on Hintlesham Woods SSSI before ruling out an impact	SSSI were identified. The SSSI lie's outside of the Zones of Influence (Zol) for disturbance to birds included within the designation. Our approach to designated sites was agreed at Scoping stage with relevant consultees.				
9-4.402	Suggest that the Environmental Statement should consider the ecological implications of building major infrastructure between the two parcels of woodland at Middle Wood, Offton Site of Special Scientific Interest (SSSI) and consider opportunities to increase connectivity	The potential fragmentation impact between the two parcels of Middle Wood, Offton Site of Special Scientific Interest (SSSI) is assessed and detailed within Chapter 8: Ecology and Biodiversity of the Environmental Statement (ES) (document reference 6.8).	X			
9-4.403	Concern that the Project from Pylon RG103 to RG106 will impact designated environmental scheme (e.g. a field dedicated to birds and insect life) as the Project will impact the completed work so far (bird count sheets provided by respondent)	A range of protected species surveys, including birds and invertebrates, have been undertaken for the Project, including in land parcels located around RG103 to RG106 and the results are outlined in Chapter 8: Ecology and Biodiversity (document reference 6.8) and Appendices 8.1 to 8.16 (document reference 6.8.A1-6.8.A16) of the Environmental Statement (ES). Specific mitigation for protected species has been included within the Outline			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Design Change Request		Landscape and Ecology Management Plan (LEMP) (document reference 7.4).				
9-4.404	Suggest that an alternative access is used for the Project instead of the B1113 (currently proposed as a primary access route) (e.g. given unserviceability of the road, use by cattle and cyclists)	<p>Our assessments have not identified a suitable alternative access route to this section of temporary haul road. As part of the pre-application process National Grid has engaged with the relevant authorities, and their highways teams and National Highways to understand and gain information on their local road networks. This information has been used to inform and guide the drafting of the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) for the Project that accompanies the Development Consent Order (DCO) application.</p> <p>A strategy has been developed to manage the impact of construction vehicles on the public highway and sensitive receptors, using suitable Local Road Network connections from the Strategic Road Network called Primary Access Routes. In addition, temporary haul roads for construction vehicles are proposed along the Project alignment, further reducing the impact of construction traffic on the local road network. Further details of the strategy can be found within the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).</p>			X	

Babergh, Colchester and Tendring feedback

Babergh, Colchester and Tendring section specific feedback (Statutory Consultation)

Table 9-5 Summary of consultee comments and National Grid's response

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Agricultural Land						
9-5.1	Concern that the Project will take away valuable agricultural land / disrupt farming operations	<p>During the construction stage of the Project, there would be areas of agricultural land that would be temporarily disrupted. National Grid would only use land that is required as part of the Project and would seek to minimise the use of agricultural land where reasonable and safe to do so.</p> <p>National Grid is and will continue to work with all landowners including farmers who may be affected by the proposals to understand the impacts on their operations and to work with them as the Project is developed. We would seek to work with the farming community to limit disruption where practicable. This includes providing prior warning of works which may result in the need to move livestock. Compensation claims for disturbance are considered on a case-by-case basis, if negative impact on farming operations can be proven. Particular agricultural matters can also be addressed through voluntary land agreements.</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-5.2	Concern that the Project will have a negative impact on agricultural livestock (e.g. type of livestock)	<p>National Grid is and will continue to work with all landowners including farmers and equestrian facilities who may be affected by the proposals to understand the impacts on their operations and to work with them as the Project progresses. We would seek to work with the farming community to limit disruption where practicable. This includes providing prior warning of works which may result in the need to move livestock. Compensation claims for disturbance are considered on a case-by-case basis, if negative impact on farming operations can be proven. Particular agricultural matters can also be written into voluntary land agreements. There will also be mitigation put in place where animal grazing maybe affected.</p> <p>As well as possible effects on humans, possible effects of Electric and Magnetic Fields (EMFs) on various animals have been studied. No detectable effects of EMFs have been found on, for example, health, milk production, fertility, and behaviour. This is confirmed in National Policy Statement (NPS) EN-5 which states: <i>"There is little evidence that exposure of crops, farm animals or natural ecosystems to transmission line EMFs has any agriculturally significant consequences."</i></p>	X		X	
9-5.3	Concern that the trench for the underground cables from the Dedham Vale through to Ardleigh (under the railway line) will damage the fragile water table causing an irreversible impact on farming operations	The Environmental Statement (ES) includes an assessment within the Contaminated Land, Geology and Hydrogeology Chapter 9 (document reference 6.9), which identifies any potential impacts, including to groundwater abstractions, and introduce any mitigation,			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		as required. In addition, hydrogeological risk assessments have been included within the Outline Code of Construction Practice (CoCP) (document reference 7.2) regarding areas of underground cabling/trenchless crossings.				
9-5.4	Suggest that National Grid ensure that any impact on the drainage of the respondent's field is addressed during the construction period and remedied thereafter to mitigate impact on agricultural performance (plan provided by respondent)	<p>National Grid would carry out an assessment of how temporary and permanent works may impact each area of land. Along with assessing existing drainage there may also be the need to install new (temporary or permanent) drainage systems.</p> <p>Landowners would be advised of the findings of these assessments at the appropriate time, and they would also be consulted before the reinstatement phase of the Project.</p> <p>National Grid is committed to returning the land (including drainage) to the condition it was before works began.</p> <p>Under the Compensation Code landowners have the right to compensation for loss and damage caused during construction.</p>			X	
9-5.5	Concern that whole area encompassed by the scheme is heavily cultivated and the route crosses many arable crop fields which are often used for the planting of potatoes (e.g. a very high water-use crop) and that the possible clash of electric and watering systems would entail high risk. This would mean that this valuable crop would be unable to	<p>Where crops are affected (temporarily or permanently) by the Project, National Grid would compensate landowners in line with the Compensation Code.</p> <p>Irrigation systems can be used under overhead lines, the respondent should contact the Project's Lands Team to provide further information as required or organise a site visit with an overhead line engineer:</p>	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	survive once the pylons were active (e.g. in turn having a negative impact on rural employment in the area)	<p>Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.</p> <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD.</p> <p>We have completed an Environmental Impact Assessment (EIA) for the Project which includes an assessment on socio-economic impacts – Chapter 15: Socio-Economics, Recreation and Tourism of the Environmental Statement (ES) (document reference 6.15).</p>				
9-5.6	Concern about the permanent loss of farmland for the East Anglia Connection Node (EACN) substation (estimated as in excess of 200 acres by the respondent) and permanent access road (estimated as in excess of 6-7 acres by the respondent)	Decision making about substation siting balances a wide variety of factors. Initially the search area is informed by the sources of generation and where is appropriate to connect in general terms with the National Transmission System. The site identification process did not identify a suitable brownfield site. The evaluation of the other sites that are available then considered factors such as soil, landscape and heritage in making a balanced decision. This is explained within the Corridor and Preliminary Routeing and Siting study (CPRSS) published in 2022 and subsequently backchecked but unchanged as explained in the 2023 and 2024 Design Development Reports (available on the Project website). The area requirement is a function of the technology and the need to establish a permanent route for Abnormal Indivisible Loads (AIL) to respond rapidly in case of equipment	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		failure. Alternative sites that may have reduced the road length have been considered as set out in the CPRSS and the 2023 and 2024 Design Development Reports (available on the Project website), but present other disbenefits and on balance the East Anglia Connection Node (EACN) substation site remains preferred. No change is proposed.				
9-5.7	Concern about the impact on Pylon TB20 on sand and gravel extraction (e.g. impact on royalty payments to respondent made for every tonne of sand and gravel extracted from the site) / Concern that the location of Pylon TB20 conflicts with the existing restriction that only sand and gravel can be extracted from the land / Criticism of National Grid's justification for the siting of Pylon TB20 (e.g. as food distribution centre has not received planning approval and may not go ahead)	National Grid has been in discussion with parties relevant to consented and proposed developments to the north and south of the position of this pylon. The project is progressing based on TB20 remaining at its current position (and recognising the potential for compensation due to restrictions on gravel extraction) but with potential to adopt an alignment passing to the north of Wick Lane which is subject to confirmation of the location of a warehouse which has been granted consent. The ability to route to the north depends on timely confirmation regarding the warehouse positioning to allow confirmation of sufficient space for the overhead line. National Grid continues to liaise with relevant parties and will develop Statements of Common Ground.			X	
9-5.8	Concern about the impact of the Project on planned solar panel array (for powering reservoir pump) at respondent's farm near Pylons TB78 and TB79 (plan provided by respondent)	National Grid has altered the overhead alignment design in this location which moves the pylons, overhead line and as such the Order Limits south away from the respondent's farm and solar panel array. The Project is now approximately 190 m to the south away from the respondent's solar array.			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-5.9	Concern about impact of haul road for the Project at Pylons TB78 and TB79 on the sewage pipeline (not indicated on National Grid consultation mapping) which runs from Kelvedon to the sewage works (owned by Anglia Water) next to Crosspaths and Reservoir fields and on reservoir for the farm. With this, request that National Grid provide an engineer's report, corroborated by the Environment Agency	National Grid is aware of the Anglian Water sewage pipeline that runs from Kelvedon to the sewage works and has positioned permanent infrastructure to be offset from this asset (pylon TB81). In planning the Project, National Grid considers all existing utilities and agree interface and mitigation arrangements (where required) with their owners, in this case Anglian Water.			X	
Airfields						
9-5.10	Concern about the impact of the Project on Wormingford Airfield / Suggestion that the Project is routed away from Wormingford Airfield	National Grid has appointed an independent aviation consultancy who has engaged (with National Grid also present) with Wormingford Airfield. Following this and further assessment it has been determined, that the airfield can continue to operate. We will continue to engage with nearby airfields as appropriate. Further information on the assessment of airfields can be found in the Environmental Statement (ES) Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).	X		X	
9-5.11	Concern about the impact of the Project on Boxted Airfield (Royal Air Force (RAF) Boxted) / Suggestion that the Project is routed away from Boxted Airfield (RAF Boxted)	National Grid has appointed an independent aviation consultancy who has contacted Boxted Airfield. Following further assessment, it has been determined that the airfield is deemed to be disused. It was last used for a one day fly in, in 2021 by the South Suffolk		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Strut who have advised that they no longer wish to use the airfield due to the condition of the runway.</p> <p>We will continue to engage with nearby airfields as appropriate.</p> <p>Further information on the assessment of airfields can be found in the Environmental Statement (ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).</p>				
9-5.13	<p>Concern about the impact of the Project on Royal Air Force (RAF) Raydon Airfield (including electrical interference and air turbulence from overhead lines) / Suggestion that the Project is routed away from RAF Raydon Airfield</p>	<p>For clarity this is not an operational Royal Air Force (RAF) base albeit there is an active airstrip known as Raydon Wings.</p> <p>National Grid has appointed an independent aviation consultancy which has engaged with the operators of Raydon Wings airfield (with National Grid also present) to inform the impact assessment. This is in accordance with the requirements of the Overarching National Policy Statement (NPS) for Energy (EN-1) and the NPS for electricity networks infrastructure (EN-5), recognising potential impacts from electrical interference and turbulence amongst other risk factors, the principal being from the presence of an obstacle in the vicinity of the airfield. It is assessed that the proposed overhead alignment to the north of the airfield enables safe overflight and need not impact existing flying circuits, although minor changes to operational procedures may</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>be undertaken by the operator. We will continue to engage with them as appropriate.</p> <p>Further information on the assessment of airfields can be found in the Environmental Statement (ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).</p>				
9-5.14	Concern about the impact of the Project on Nayland Airfield / Suggestion that the Project is routed away from Nayland Airfield	<p>National Grid has appointed an independent aviation consultancy who has engaged (with National Grid also present) with Nayland Airfield. Following discussion with the airfield and further assessment it has been determined that the airfield can continue to operate.</p> <p>We will continue to engage with nearby airfields as appropriate.</p> <p>Further information on the assessment of airfields can be found in the Environmental Statement (ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).</p>	X		X	
9-5.15	Request clarification on whether National Grid have consulted with the Civil Aviation Authority (CAA) or the Aircraft Owners and Pilots Association UK (AOPAUK) in relation to their Proposals for Raydon Wings and other airfields along the Project route	<p>As a prescribed consultee, National Grid formally notified the Civil Aviation Authority (CAA) of the statutory consultation period. As Raydon Wings and the majority of other airfields potentially affected by the Project are unlicensed airfields, we recognise that any response may be limited as the CAA's regulatory responsibilities relate to licensed and officially safeguarded airfields only. National Grid's aviation consultants have also been</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>consulting with the CAA's separate Airfield Advisory Team (AAT), who provide advice to support licensed and non-licensed airfields in their responsibilities for safety, to ensure relevant considerations are taken into account within the Project's design. We have not consulted directly with the Aircraft Owners and Pilots Association UK (AOPAUK). They are not a prescribed or statutory consultee, although any feedback received from them would be duly taken into consideration.</p> <p>Further information on the assessment of airfields can be found in the Environmental Statement (ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).</p>				
9-5.16	Concern that the Project may impact on a current or future Air Traffic Zone (ATZ) at Raydon Wings	<p>Raydon Wings Airfield does not have an Air Traffic Zone (ATZ) and, we understand, is unlikely to have one in the future. This would require an Air Traffic Control (ATC) Unit, Flight Information Service or Air/Ground Communications Service to implement this. This is unlikely to be warranted by the number of movements currently at the airfield or expected in the future.</p> <p>Further information on the assessment of airfields can be found in the Environmental Statement (ES) Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-5.17	Suggest that the use of underground cables should start further north in order to avoid Raydon Wings Airfield altogether	<p>National Grid has appointed an independent aviation consultancy which has engaged with the operators of Raydon Wings airfield (with National Grid also present) to inform the impact assessment. It is assessed that the proposed overhead alignment to the north of the airfield enables safe overflight and need not impact existing flying circuits, although minor changes to operational procedures may be undertaken by the operator. We will continue to engage with them as appropriate. In view of the assessment conclusions, the proposed extension of underground cables is not considered to be justified on grounds of aviation impacts.</p> <p>Further information on the assessment of airfields can be found in the Environmental Statement (ES) Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).</p>			X	
9-5.18	Suggest that Raydon Wings Aerodrome Safeguarding Plan is considered for the Project	National Grid has appointed an independent aviation consultancy. The independent aviation consultants have considered the Raydon Wings Safeguarding Plan as part of their assessment of the potential impact of the overhead line on the safety of operations at the airfield, recognising the Plan's intended purpose is to trigger a consultation process regarding proposed nearby development, which in this instance had already been instigated by National Grid. The assessment methodology enables site-specific consideration of a range of criteria including, but not limited to, lateral and			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>vertical clearance margins. In this instance it is assessed that, whilst the overhead line represents a new obstacle in the vicinity of the aerodrome, it is sufficiently distanced from the runway, take-off and landing paths, and flight circuits to the north to enable operations to continue safely, although minor changes to operational procedures may be undertaken by the operator. We will continue to engage with them to confirm the acceptability of the design.</p> <p>Further information on the assessment of airfields can be found in the Environmental Statement (ES) Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).</p>				
9-5.19	Suggest that an expert assessment is undertaken on the impact of underground cables crossing Raydon Wings Aerodrome runway on aircraft systems (e.g. to assess potential disruption)	National Grid anticipates magnetic fields of between 77-111 microteslas at 1 metre above ground may be produced by underground cables proposed at Raydon Wings airfield runway. In the absence of standards specifying maximum electromagnetic field strengths for aviation, National Grid has previously performed testing involving aircraft taxiing over operational cables at a comparable aerodrome and determined that Alternating Current (AC) cable interference did not impact aircraft avionics in that instance. Magnetic compasses are unaffected by AC fields. AC operates at 50 hertz while aviation electrical supply, when not Direct Current (DC) typically operates around 400 hertz and aviation communication operates in the megahertz range, so no			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>interference is likely by that mechanism. Also, electromagnetic field interference on radio altimeters, which operate in the gigahertz range, is not expected from power transmission sources. Furthermore, it is recognised that the aircraft types known to utilise Raydon Wings are unlikely to be fitted with radio altimeters, or reliant on Instrument Flight Procedures (IFPs) that require runway protection or allow Autoland capability. It should be noted that electromagnetic fields produced by the Project cables are unlikely to be distinguishable from those generated by the aircraft's own electrical systems and therefore not disruptive to instrumentation.</p> <p>Further information on the assessment of airfields can be found in the Environmental Statement (ES) Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).</p>				
9-5.20	Concern about the impact of the Project on Garnons Farm Airfield / Suggestion that the Project is routed away from Garnons Farm Airfield	In accordance with its responsibilities as an applicant as described within the Government's Overarching National Policy Statement for Energy (NPS EN-1) National Grid has appointed an independent aviation consultancy to develop a methodology to assess the potential impacts of the Project on aviation including airfields in close proximity. The assessment methodology enables risk-based site-specific assessment of a range of criteria, including but not limited to, lateral and vertical clearance margins, aircraft types, airfield operational activities and	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>procedures, and the surrounding context. The approach is informed by Civil Aviation Authority (CAA) regulations and guidance as well as ongoing consultation with airfield owners and operators.</p> <p>In relation to Garsons Farm airfield, our impact assessments recognise that the airfield is distanced from the overhead line (by approx. 2.5 km). Furthermore, the airfield take-off and approach paths do not overfly the overhead line. We therefore assess that the Project will not impact airfield operations and understand that the owner agrees with this assessment. Proposed changes to the Project design are therefore not justified on this basis.</p> <p>Further information on the assessment of airfields can be found in the Environmental Statement (ES) Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).</p>				
9-5.21	Suggest that the Project should be located at least 2 km from the centre of Brook Farm Airfield runways in accordance with Civil Aviation Publication (CAP) 793 (plan provided by respondent)	In accordance with its responsibilities as an applicant as described within the Government's Overarching National Policy Statement for Energy (NPS EN-1) National Grid has appointed an independent aviation consultancy to develop a methodology to assess the potential impacts of the Project on aviation including airfields in close proximity. The assessment methodology enables risk-based site-specific assessment of a range of criteria, including but not limited to, lateral and vertical clearance margins, aircraft types, airfield operational activities and		X		X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>procedures, and the surrounding context. The approach is informed by Civil Aviation Authority (CAA) regulations and guidance (including its 'Safer Operating Procedures at Unlicensed Aerodromes' guidance - CAP793) as well as ongoing consultation with airfield owners and operators. It is suggested this approach enables more nuanced assessment of impacts rather than the application of a fixed radius of 2 km, which does not consider other variables.</p> <p>In relation to Brook Farm specifically, responding to consultation and aviation impact assessments, a design change has been implemented to re-position the overhead line alignment further east to mitigate impacts on the airfield, enabling safe overflight of the overhead line. We are continuing to engage with the operator to confirm the acceptability of the design change.</p> <p>Further information on the assessment of airfields can be found in the Environmental Statement (ES) Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).</p>				
Community / Social Impact						
9-5.22	Concern about impact of the Project on children / families / residents / communities	National Grid recognises people may have concerns about the potential impacts of living close to an overhead line, and that the uncertainty whilst the proposals are developed may cause anxiety.	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>We have sought to reduce potential effects on communities, residents – including children - through routeing and design. We have also sought to reduce concern or uncertainty about the proposals through making timely design decisions and engaging with people and stakeholders throughout the development of the Project. If the Project received development consent, the Project team would continue to engage with people potentially affected during construction, through regular communication including letters, phone calls and meetings, where necessary.</p> <p>We urge anyone with concerns to get in touch through the Norwich to Tilbury Freephone number, address or email, which will remain open throughout examination.</p> <p>National Grid is committed to working with local suppliers, facilitated by supporting forums (such as the local Chambers), on electricity industry skills and workforce planning. National Grid is also committed to providing a coordinated regional approach to jobs and skills opportunities. This commitment is broader than the individual project and separate to any commitments under the proposed Development Consent Order (DCO) for this Project. The socio-economic effects of the project are assessed in Chapter 15: Socio-economics, Recreation and Tourism of the Environmental Statement (ES) (document reference 6.15). Post construction job opportunities are limited given the nature of the development however we will still work with Local Authorities (including facilitating local partners) to</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>understand what is important to them around skills and employment to ensure we leave a lasting positive legacy in the communities where we operate.</p> <p>With regards to a delivery mechanism, the above measures will be delivered as part of our community benefit package, which will look at both local and regional initiatives. This will be delivered outside the development consent process and is not a material consideration in the decision on the proposed Project or a matter to be secured as part of the DCO, as per the Community Funds for Transmission Infrastructure: Guidance (DESNZ, 2025).</p>				
9-5.23	Concern about impact of the Project on school / educational facilities	<p>Through routeing and siting, National Grid has sought to avoid, as far as practicable, locations of education establishments.</p> <p>Environmental Statement (ES) Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) presents an assessment of the potential impacts on education facilities as a result of the Project. As part of the assessment, a range of measures are considered during the construction phase to reduce, where practicable, disruption to education establishments. These include traffic management, signage and routing measures to ensure access or partial access can be maintained where feasible. These are identified within the Environmental Statement (ES) Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15), the Outline Construction</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Traffic Management Plan (CTMP) (document reference 7.3) and the Outline Code of Construction Practice (CoCP) (document reference 7.2). The assessment concludes that there would be no significant effects on education facilities within the study area as a result of the construction and operation of the Project.				
9-5.24	Concern about impact of the Project on leisure	Through routeing and siting National Grid has sought to avoid, as far as practicable, locations important for leisure and tourism. Environmental Statement (ES) Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) presents an assessment on the potential impacts on leisure and tourism. As part of this assessment, a range of measures have been considered throughout the construction phase of the Project to minimise disruption on leisure and tourism. These include: traffic management, signage and routeing measures. These are identified within ES Chapter 15: Socio-economics, Recreation and Tourism, the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).	X	X	X	
9-5.25	Concern about over development of area / other works in the area (e.g. cumulative impact)	A cumulative effects assessment has been undertaken in accordance with the Planning Inspectorate's Advice Note 17 'Cumulative Effects Assessment' and is presented in Environmental Statement (ES) Chapter 17: Cumulative Effects (document reference 6.17). The	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>cumulative effects assessment has considered the effects of the Project in conjunction with other existing and, or approved developments in line with guidance. As part of this process, National Grid has engaged with other developers who are proposing development in proximity of the Project to understand their requirements.</p> <p>The cumulative assessment has been undertaken in accordance with the overarching NPS for Energy (EN-1) Paragraph 4.1.5 in EN-1 states:</p> <p><i>'In considering any proposed development, in particular when weighing its adverse impacts against its benefits, the Secretary of State should take into account: ... its potential adverse impacts, including on the environment, and including any long-term and cumulative adverse impacts, as well as any measures to avoid, reduce, mitigate or compensate for any adverse impacts, following the mitigation hierarchy'.</i></p> <p>Paragraph 4.2.12 in EN-1 states:</p> <p><i>'The cumulative impacts of multiple developments with residual impacts should also be considered.'</i></p> <p>Paragraph 4.3.3 in EN-1 states:</p> <p><i>'The Regulations require an assessment of the likely significant effects of the proposed project on the environment, covering the direct effects and any indirect, secondary, cumulative, transboundary, short, medium, and long-term, permanent and temporary, positive and</i></p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p><i>negative effects at all stages of the project, and also of the measures envisaged for avoiding or mitigating significant adverse effects'.</i></p> <p>Paragraph 4.3.19 of EN-1 states:</p> <p><i>'The Secretary of State should consider how the accumulation of, and interrelationship between, effects might affect the environment, economy, or community as a whole, even though they may be acceptable when considered on an individual basis with mitigation measures in place'.</i></p> <p>Paragraph 4.4.5 in EN-1 states:</p> <p><i>'The impacts of more than one development may affect people simultaneously, so the applicant should consider the cumulative impact on health in the ES where appropriate'.</i></p> <p>The long list and short list of other existing and, or approved developments considered for the Cumulative Effects Assessment is presented in Appendix 17.2: Long List and Short List of Other Developments (document reference 6.17.A2) of the Environmental Statement (ES), detailing the other developments shortlisted for detailed assessment. The appendix provides details on other developments screened out of the assessment in accordance with the methodology presented in ES Chapter 17: Cumulative Effects (document reference 6.17). The detailed assessment of shortlisted other developments is presented in Appendix 17.3: Inter-Project Cumulative Effects Matrix (document reference</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		6.17.A3). Appendix 17.3: Inter-Project Cumulative Effects Matrix (document reference 6.17.A3) outlines the residual significance of cumulative effects for each development, for each environmental topic that has a Zone of Influence that overlaps with that development (i.e. socio-economic, recreation and tourism impacts).				
9-5.26	Concern about the Project being in too close proximity to recently built housing developments / using land being considered for future development (including residential, commercial, infrastructural, and employment sites)	<p>National Grid has obtained information on existing, under construction, consented but not built schemes as well as development proposals within the planning system. The Project design has responded to those that are confirmed through consideration of routeing.</p> <p>In the case of development proposals, some can be amended to be designed around our proposed infrastructure but in other cases our proposals may need to be amended at a corridor level, or proposed developments factored into our detailed route design.</p> <p>Based on known information, and in light of changes made following consideration of feedback to the 2022 and 2023 non-statutory consultations, statutory consultation, targeted consultations, and landowner consultation, we consider our proposals are consistent with relevant policy and guidelines and the alignment designed such that they do not prevent proposed housing developments from being successfully progressed. UK law does not prescribe minimum distances between overhead lines and homes, but any implications on landscape and visual receptors, residential amenity or from concerns about</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		electromagnetic fields are robustly assessed as part of the Environmental Impact Assessment (EIA) and balanced as part of the decision making process. We will continue to review planning applications and engage with developers as necessary.				
9-5.27	Concern about the Project causing communities to become encircled / surrounded by overhead lines	The alignment has been routed to achieve some separation from the existing 400 kV overhead line, such that villages are not encircled by overhead lines to both sides. Separation is inevitably reduced in certain locations due to the presence of constraints to routeing and environmental features. Detailed assessment reported in the Environmental Statement (ES) identifies any measures considered to be necessary to reduce likely significant effects which will also consider the potential for effects potentially arising from close paralleling existing 132 kV overhead line and new 400 kV overhead line infrastructure.	X		X	
9-5.28	Concerned that the Project will have a negative impact on domestic horses / equestrian activities	As well as possible effects on humans, the possible effects of Electric and Magnetic Fields (EMFs) on various animals have been studied. No proven effects of EMFs have been found in any species at levels below the guidelines. This is confirmed in National Policy Statement (NPS) EN-5 which states: " <i>There is little evidence that exposure of crops, farm animals or natural ecosystems to transmission line EMFs has any agriculturally significant consequences.</i> " Although	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>horses are not directly mentioned, there is no evidence to suggest they are any different to other farm animals.</p> <p>As well as the possible direct biological or health effects addressed above, indirect effects such as microshocks can occur as a result of electric fields. Microshocks are small spark discharges which are similar to a static shock after walking across a nylon carpet for example. The Project will be designed in accordance with the principles of the Governments Code of Practice 'Power Lines: Control of Microshocks and other indirect effects of public exposure to electric fields' to ensure these are mitigated, which include equestrian activities.</p>				
9-5.29	Concern about the impact of the Project on emergency services / ambulances / hospitals / health service	<p>Through routeing and siting National Grid has sought to avoid and reduce as far as practicable effects on identified healthcare facilities.</p> <p>Environmental Statement (ES) Chapter 10: Health and Wellbeing (document reference 6.10) and ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) consider the potential impacts on, and access to, healthcare facilities, including emergency services, ambulances, hospitals and other NHS services associated with the construction of the Project, drawing on information from ES Chapter 16: Traffic and Transport (document reference 6.16). No health facilities are due to be directly impacted by the Project and where road diversions are required traffic management and mitigation measures will be in place to reduce impacts. These include traffic management,</p>		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		signage and routing measures to ensure access or partial access can be maintained where feasible. Further detail on proposed mitigation measures is presented in the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), which has been produced following engagement with stakeholders including the emergency services.				
9-5.30	Concern about the safety risk to cyclists in relation to the Project on South Suffolk Cycle Route B	<p>National Grid has carefully considered the feedback received during the statutory consultation for this Primary Access Route for construction vehicles and has identified an opportunity to utilise an offline temporary haul road located east of Holton St Mary from the B1070 to the construction corridor. It is proposed that this route would act as a bypass for Holton St Mary during construction.</p> <p>This change to the access arrangements reduces the interface between the Primary Access Route and the South Suffolk Cycle Route B.</p>			X	X
9-5.31	Concern that the Project will impact access to private driveways	It is anticipated that roads would only be closed where this is required for safe working. In accordance with measure AS03 in Outline Code of Construction Practice (CoCP) (document reference 7.2), where practicable and safe to do so, existing access to and from residential, commercial, community and agricultural land uses would be maintained throughout the construction period, or as agreed through landowner discussions.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-5.32	Concern that the Project will split Aldham village in half / Concern that Pylons TB52 to TB59 will split Aldham	National Grid has considered the respondent's feedback. However, it is not possible to route to the north or west of Aldham without undue diversion, thereby making the route longer and less direct and/or oversailing residential gardens. This would be contrary to the Holford Rules. We have therefore not changed the route around Aldham. A summary of the Holford Rules is provided within Appendix I22 of this report.	X		X	
9-5.33	Concern raised by residents of East Gores Road and Salmons Lane regarding Pylons TB66 to TB70	National Grid notes the respondent's feedback. Specific concerns have been responded to as part of this Consultation Report. If the respondent has any further concerns or questions they are encouraged to speak to the Project lands team: Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314. Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD.			X	
9-5.34	Concern about the impact of Pylons TB49, TB50, TB51, TB52, and TB53 and the construction laydown area (CLA) to the north of Pylon TB51 for the Project (e.g. on community woodland; on the Fordstreet Conservation Area; Public Rights of Way (PRoWs) (including: the Essex Way; FP3 which runs east-west passing across the haul road between Pylons TB50 and TB51 to the edge of Fiddlers	National Grid has sought to reduce, as far as practicable, impacts on the environment / countryside through routeing and siting and an ongoing iterative design process which has taken on board feedback at different stages of the Project. The iterative design process sought to avoid areas of highest concern, for examples through changes to the route alignment or changes to the method e.g. trenchless crossings. We	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	Wood; FP5 which runs north from New Road, about 100m west of TB52; FP7); encirclement of village at Pylons TB52 and TB53; impact on views; impact on Church of St Margaret's and St Catherine's; impact on residents)	<p>have engaged with a range of stakeholders (including Statutory Environmental Bodies (SEBs) and relevant local planning authorities (LPAs)) throughout the development of the Project design and environmental assessment work.</p> <p>The concerns raised relate to pylons TB49-53 in the area between the northern edge of the Colne Valley near Fordham Bridge and to the west of Gallows Green. Here, the alignment crosses lower valley areas adjacent to the river, passing first through an area of trees that line the riverbed, then arable farmland and its associated field boundaries, before rising to cross the valley sides and the A1124 towards Gallows Green. It is unclear from the feedback what a preferred solution might be, other than not to have the alignment pass through this area. Paragraph 5.4.136 of the 2024 Design Development Report (available on the Project website) notes that an alternative alignment to the west of Fordstreet and Fordham was considered and sets out the reasoning why a western option was not preferred when compared to the alignment. The report summarises that <i>'Overall whilst noting some potential for a reduction in the number of residential properties with potential amenity effects if the western alternative was taken forward, this would be a longer less economic and efficient route with more pylons and angle pylons. It would also potentially increase effects in respect of construction within a flood zone (but subject to micro-siting this difference may be avoided) and be likely</i></p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p><i>to increase effects on heritage assets including a Grade I listed building and several moats associated with listed buildings. It is also noted that the 2023 preferred draft alignment is consistent with policy and overall, it is considered that there would be insufficient benefits from potentially reduced residential amenity and landscape effects of the western alternative to offset the technical concerns and additional infrastructure required for delivery it. On that basis the 2023 preferred draft alignment, subject to localised modifications, remains preferred and has been taken forward as the 2024 preferred draft alignment.'</i></p> <p>Any larger shifts in the preferred alignment (east or west) would bring the alignment closer to either areas of settlement in Fordstreet and Fordham in the west, closer to areas of community woodland and to the Fordstreet Conservation Area in the west, or to the ancient woodland at Fiddlers Wood and the area of settlement at Gallows Green in the east. Due to the direction required to make the grid connection (the Project), a crossing of the river and of the Essex Way and associated network of public footpaths is required. Routeing has sought to minimise effects on these where possible, including at the construction phase, by avoiding the highest areas of environmental value, such as ancient woodland. As such, this alignment remained preferred and was assessed as part of the Environmental Impact Assessment (EIA) for the Project.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>The results of this assessment are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation (and maintenance) of the Project and recommends appropriate mitigation measures to reduce potential effects. This includes a landscape and visual impact assessment (LVIA), which includes an assessment of landscape and visual effects. The LVIA is presented in the ES, Chapter 13: Landscape and Visual (document reference 6.13). The assessment concludes that there would be significant effects on views from the local community and Public Rights of Way (PRoW) network within Visual Receptor Areas (VRA) D5 Fordham, D6 West Bergholt, Fordham Heath and Eight Ash Green, and D7 Fordstreet and Aldham. Further detail is provided in the Environmental Statement (ES), Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3).</p> <p>An Outline PRoW Management Plan (document reference 7.6) has been submitted as part of this DCO application. This document sets out management measures and mitigation measures for each PRoW affected by the construction activities and operation of the Project. The Outline PRoW Management Plan has defined the management of the PRoW between TB49 and TB53. These include Fordham 33 (share the same</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>path with Essex Way), Fordham 35 (shares the same path with Essex Way), Aldham 3 (noted as FP3 in the consultation response), Aldham 5 (noted as FP5 in the consultation response) and Aldham 7 (noted as FP7 in the consultation response).</p> <p>Fordham 33 (shares the same path with Essex Way), Fordham 35 (shares the same path with Essex Way), Aldham 5 and Aldham 7 would be temporarily closed with managed access, that is, allowing a safe passage throughout of the PRow and Essex Way users.</p> <p>Aldham 3 would be partly temporarily closed with managed access, and partly temporarily closed with diversion.</p> <p>National Grid, through the routeing and siting exercise, has sought to reduce the impact on the historic environment, including grade II listed buildings in this area.</p> <p>All listed buildings within 2 km of the Order Limits are considered in the historic environment assessment for the Project. The impacts of the Project on the historic environment are assessed in Chapter 11: Historic Environment (document reference 6.11) of the Environmental Statement (ES). The assessment considers the potential impact on historic buildings and includes assessment of potential for physical impact and impact through change to setting that affects the value of a heritage asset. The assessment of listed buildings is supported by setting surveys, as documented in</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Environmental Statement (ES) Appendix 11.1 Historic Environment Baseline Report (document reference 6.11.A1). The Project has engaged with Historic England and relevant planning authorities on aspects relating to heritage, including appropriate mitigation measures and techniques and to take their views into account during Project development.</p> <p>These actions have been documented and are presented in the Environmental Statement (ES), Chapter 11: Historic Environment (document reference 6.11), which forms an integral part of the Environmental Impact Assessment (EIA) for the Project. The approach to assessment and mitigation presented in the Environmental Statement (ES) Chapter 11: Historic Environment (document reference 6.11) have been discussed and agreed with key heritage stakeholders. The assessment of Fordstreet Conservation Area (CA9) concluded that the Project would have a significant effect on the setting of the asset during construction and operation phases.</p> <p>The assessment of Church of St Margaret and St Catherine (1170063) concluded that the Project would have a not significant effect on the setting of the asset during construction and operation phases.</p>				
9-5.35	Concern about the impact of Pylons TB54, TB55, TB56, TB57, TB58, and / or TB59 (e.g. impact on St Margaret's Church and St Catherine's Church; impact on listed buildings at Aldham Hall; impact on	The Environmental Statement (ES) (Volume 6 of the Development Consent Order (DCO) application) reports the assessments undertaken to evaluate and identify the likely significant environmental effects arising from the	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	Public Rights of Way (PRoWs) (FP15 that links to Aldham Hall Wood; FP12; FP13); impact on Crapes Fruit Farm and associated wildlife; impact on views; impact on residences; impact on birds, including geese and swans)	<p>proposed construction and operation (and maintenance) phases of the Project, including identification of mitigation measures. Further information is included in Environmental Statement (ES) Chapter 6: Agriculture and Soils (document reference 6.6), Chapter 8: Ecology and Biodiversity (document reference 6.8), Historic Environment (document reference 6.11), Chapter 13: Landscape and Visual (document reference 6.13), and Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15).</p> <p>In order to minimise impacts, an Outline Code of Construction Practice (CoCP) (document reference 7.2), and Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) have been included as part of the DCO application to deliver any mitigation required, including proposed management and monitoring.</p> <p>The impacts of pylons on agricultural land and soils are assessed in full in Chapter 6: Agriculture and Soils (document reference 6.6) of the Environmental Statement (ES). It is considered that as the permanent land take of agricultural land from pylon footings is relatively small proportional to field sizes, agricultural operations, land quality and land management should remain the same. Standard mitigation would be implemented to reduce the impacts of construction on agricultural operations, as detailed in the Outline Code of Construction Practice (CoCP) (document reference 7.2), including maintaining access to agricultural land</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>uses throughout the construction phase (or as agreed through landowner discussions) and providing alternative field access where field-to-field access points require alteration because of construction.</p> <p>In response to the wildlife/bird concerns, a range of protected species and other ecological surveys have been undertaken and the results are outlined in Chapter 8: Ecology and Biodiversity (document reference 6.8) and Appendices 8.1 to 8.16 (document reference 6.8.A1-6.8.A16) of the Environmental Statement (ES). This includes an assessment of impacts on wildlife/ecological receptors including birds around Crapes Fruit Farm. No bird collision risk has been identified at this location.</p> <p>Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) covers the potential effects on PRoW, including footpaths, from the Project. An Outline Public Rights of Way Management Plan (document reference 7.6) is submitted as part of the (DCO) application which details the proposed management of PRoW during construction.</p> <p>The Outline PRoW Management Plan (document reference 7.6) has defined the management for Aldham 12 (noted as FP12 in the consultation response) and Aldham 15 (noted as FP15 in the consultation response).</p> <p>Aldham 12 and Aldham 15 will be temporarily closed for the duration of the works with managed access, that is,</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>allowing a safe passage throughout of the PRow users. Aldham 12 will also be temporarily diverted during overhead conductor stringing and pylon work.</p> <p>Aldham 13 (noted as FP13 in the consultation response) falls beyond the Order Limits. Hence, no disruption is anticipated on the footpath.</p> <p>Access to PRowS are expected to be reinstated during operation.</p> <p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the Environmental Impact Assessment, which includes an assessment of effects on landscape and visual receptors. This includes pylons TB54-59, which are located near Aldham in Section D, on the boundary of Visual Receptor Areas (VRA) VRA D6 Fordham Heath and Eight Ash Green and D7 Fordstreet and Aldham. The LVIA is presented in the Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13). Visual effects are presented in Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3). The assessment concludes that there would be significant effects on visual receptors within VRA D6 and VRA D7.</p> <p>Through routeing and siting National Grid has sought to reduce as far as practicable potential impacts on the historic environment. The impacts of the Project on the historic environment are assessed in Chapter 11: Historic Environment of the Environmental Statement (ES) (document reference 6.11). The assessment</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		concludes there will be a significant impact to 'Aldham Hall' (1306270) and a not significant impact to 'The Church of St Margaret and St Catherine' (1170063) during both the construction and the operational phase. Therefore, during the construction phase, standard construction mitigation as outlined in the Code of Construction Practice (CoCP) (document reference 7.2) will be implemented. Ongoing collaboration with Historic England and relevant planning authorities has ensured a comprehensive approach to heritage-related matters, incorporating suitable mitigation measures and techniques based on their input.				
9-5.36	Concern about the proximity of the Project (underground cable and overhead line) between Pylons TB5 and TB9 to respondent's residence near Little Bromley Road (e.g. impact of construction; impact on mental and physical health)	The health and safety of the public, local communities and employees is central to everything that we do. The UK has a carefully thought-out set of policies for protecting us all against Electric and Magnetic Fields (EMFs), the main component of which is exposure guidelines. The exposure guidelines are set by independent scientific bodies and are based on decades-long studies into the effects of EMFs and ill health. After those decades of research, the weight of evidence is against there being any health risks of EMFs below the guideline limits. Our approach is to ensure that our network complies with those policies, which are set by Government on the advice of their independent advisors. The Project has been designed to ensure it is fully compliant with these policies and guidelines. Evidence of this will be submitted as part of the DCO			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		application. Siting of the East Anglia Connection Node (EACN) substation has been carefully considered taking into account the effects from the EACN substation itself as well as those of the National Grid and customer (North Falls, Five Estuaries and Tarchon) connections to it, which include overhead lines and underground cables. The connection routeing itself responds to the presence of homes, environmental features and other constraints. Alternative sites for the EACN substation and other routes for the connections have been considered but are less preferred as set out in the 2025 Design Development Report (document reference 5.15).				
9-5.37	Concern about impact of the Project on the Boxted Neighbourhood Plan (e.g. the Project would remove green spaces outlined in the plan)	The Boxted Neighbourhood Plan was adopted in December 2016. The Neighbourhood Plan now forms part of the statutory Development Plan for Colchester and accordingly has been subject to review in the Policy Compliance Document (document reference 5.7).	X			
9-5.38	Suggest that consideration is given to the provision of safe pasture, stable and yard arrangements, and hacking routes for horse owners during construction	Where required, National Grid would consider alternative arrangements for the protection of livestock within the immediate location of site activities to ensure safety of both the workforce and livestock. Where a significant risk is identified, the Project's Lands Team would engage with the relevant landowner and agree appropriate mitigation or compensation in line with the Compensation Code.			X	
9-5.39	Concern about the impact of the Project on events / activities at Little Bromley (including the 10 km run,	The assessment of community facilities, businesses, recreation and tourism assets, which fall within the study			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	Corbeau Seats Rally, Tour de Tendring, Women's Ride London, Tendring Farmers Show, Duke of Edinburgh activities) (e.g. due to impact on charities)	<p>areas (including Little Bromley 10 km Run, Corbeau Seats Rally and Tour de Tendring) and proposed mitigation measures are presented in Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) of the Environmental Statement (ES).</p> <p>Tendring Famers Show falls beyond the Local Study Area and therefore is not assessed in Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15). Location of Women's Ride London and Duke of Edinburgh activities are not defined in the public domain. As detailed in the Outline Code of Construction Practice (document reference 7.2), National Grid would seek to work with event organisers to minimise disruption to events and event organisers are encouraged to contact National Grid in advance of their event to ensure effective coordination and support.</p>				
9-5.40	Concern about the impact of the Project on irrigation and distribution of liquid digestate at Fordham Place (e.g. impact on farming)	National Grid is and will continue to work with all landowners including farmers who may be affected by the proposals to understand the impacts on their operations and to work with them as the Project is developed. We would seek to work with the farming community to limit disruption where practicable. This includes providing prior warning of works which may result in the need to move livestock. Compensation claims for disturbance are considered on a case-by case basis, if negative impact on farming operations can be proven. Particular agricultural matters can also be addressed through voluntary land agreements.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>During the construction phase of the Project there may be temporary restrictions on the use of some irrigation systems. This would be avoided where practicable but if not, mitigation would be implemented to reduce the impacts. Following construction and when the permanent asset is in place, safety clearance would need to be adhered to.</p> <p>If landowners have any concerns regarding the use of irrigation systems during and after the works please get in contact with the Project's lands team: Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.</p> <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD.</p> <p>Landowners are encouraged to provide as much information as early as possible in relation to any private supplies, drainage and irrigation systems on their land so these can be factored in at the detailed design stage of the project ahead of construction starting on site, please raise this at any meeting with the National Grid Lands Team who will keep a record and pass on any information.</p>				
9-5.41	Concern about the impact of Pylons TB23, TB24 and TB25 and associated haul road (e.g. on residential property; on business park; on future development, including residential, commercial and	Northward movement of these pylons within the same field is constrained by a water pipeline at the northern edge of the field. It is not possible to restrict the position of the pylons within the narrow grass strip at the			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>solar developments; on farming). As such, suggest the following:</p> <ul style="list-style-type: none"> - Suggest that Pylons TB23 and TB24 50 metres north to the green strip between the solar panels and the field, allowing the construction road to utilise and improve an existing track along the northern boundary of the field; - Suggest that T-pylons should be used for Pylons TB23, TB24 and T025; - Suggest that Pylon TB26 is relocated 50 metres east into the corner of the adjacent field (e.g. to mitigate impact on farming); - Suggest that the order limits around Pylon TB25 should be reduced to the minimum necessary area (e.g. as Pylon TB025 is not an angle tower and National Grid does not need to acquire rights to this additional land); and, - Suggest that the future access route to Pylons TB23, TB24, and TB25 should be removed from the order limits, instead accessing these pylons from the track to the north (south of the solar farm) (e.g. to mitigate impact on farming) 	<p>southern edge of the solar farm. There needs to be flexibility to respond to ground conditions and an area is also required to facilitate construction which would lead to some permanent reduction in the panel area as well as additional temporary construction effects. On balance the alignment remains preferred on the basis of overall reduced level of effects. The latest independent report on the Comparison of Electricity Transmission Technologies: Costs and Characteristics (Institute of Engineering and Technology, 2025) confirms that whilst T-Pylons may in certain locations provide an alternative to conventional overhead lines with potential benefits in visual impact and reduced land-take, this is at a higher cost. The build cost is approximately 2 to 2.5 times that of an equivalently rated conventional overhead line, and the lifetime costs are around 1.6 to 1.7 times that of a conventional overhead line. The current arrangements for the oversight of funding by Ofgem requires that the lowest cost acceptable design is taken forward rather than a more expensive design even if that design is perceived to reduce the level of effect. As such consideration of their use follows after establishing a need to mitigate effects of the standard lattice design and after considering the benefit of adopting a low height lattice pylon design. T pylons themselves are also less adaptable to varied terrains and require more substantial access infrastructure. Furthermore, their resilience and environmental impact are comparable to conventional overhead lines, but with</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>increased carbon intensity due to construction materials. Attention also needs to be given to the transitions between pylon types. Given It is the surrounding context that drives the need for alternative design mitigation, where this is not required along the entire route, any visual break and transition in pylon design also needs to be carefully sited.</p> <p>Assessment findings have concluded that, where there is not a reversal of the presumption to use overhead lines, the use of lattice pylons (either standard or low height) is consistent with planning policy throughout the route. Whilst there may be some locations (for examples see appendix A of the 2024 Design Development Report (available on the Project website)) where there may be a design option for the use of T pylons, the need to mitigate for unacceptable effects from lattice pylons is not engaged. On this basis T pylons are not proposed for the Project.</p> <p>TB25 is proposed as a pylon used for installation and tensioning of the conductors given the potential restrictions to the east of Ipswich Road, so it is not possible to reduce the Order Limits. It is further noted that the temporary work area for installation and tensioning would be returned to agricultural use after completion of the works.</p>				
9-5.42	Concern about the impact of Pylons TB39 to TB53 / Pylons TB42 to TB48 on Fordham, the River Colne Valley and Hill House Woods (specifically Pylons	National Grid has sought to reduce, as far as practicable, impacts on the environment/countryside through routeing and siting and an ongoing iterative			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	TB41, TB42, TB43 and TB47) (e.g. impact on environment, landscape, ecology, heritage, listed buildings, the Essex Way, Countryside Conservation Area)	<p>design process which has taken on board feedback at different stages of the Project. The iterative design process sought to avoid areas of highest concern, for examples through changes to the route alignment or changes to the method e.g. trenchless crossings. We have engaged with a range of stakeholders (including Statutory Environmental Bodies (SEBs) and relevant Local Planning Authorities) throughout the development of the Project design and environmental assessment work.</p> <p>Impacts on Ecology and Biodiversity - A range of protected species and other ecological surveys have been undertaken across the Project and include land between pylons TB39 to TB53; and pylons TB42 to TB48. The results are outlined in Chapter 8: Ecology and Biodiversity (document reference 6.8) and Appendices 8.1 to 8.16 (document reference 6.8.A1-6.8.A16) of the Environmental Statement (ES). Appropriate mitigation will be implemented where impacts are identified as agreed with Natural England and the Local Planning Authority as relevant.</p> <p>Impacts on Heritage - National Grid has undertaken a detailed routeing and siting exercise to reduce, as far as practicable, the potential impacts of the Project on the historic environment, including designated assets in and around Fordham. The alignment and placement of pylons between TB39 and TB53—including TB43 and TB47—have been developed with full consideration of the historic character of the River Colne Valley and the</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>designated and non-designated heritage assets within the area.</p> <p>A robust methodology was applied to the assessment of heritage assets, developed in accordance with national policy and technical guidance, including the National Planning Policy Framework (NPPF) and Historic England's Good Practice Advice Note 3: The Setting of Heritage Assets (Second Edition, 2017). This approach was thoroughly discussed with, and agreed by, stakeholders including Historic England and relevant local planning authorities through the archaeological thematic working group meetings and the EIA scoping process.</p> <p>All listed buildings within and around Fordham have been conscientiously assessed. This has been informed by detailed historical research, analysis of historic mapping, site walkovers, Historic Environment Record (HER) data, and where applicable, local listing information. In addition, archaeological investigation has included geophysical surveys and trial trenching where necessary to inform a deeper understanding of the historic environment and the potential impacts of the Project.</p> <p>We are confident that this comprehensive and proportionate methodology has given appropriate weight to both physical impacts and changes to setting for heritage assets, including those within Fordham and along the River Colne Valley. Assessment outcomes</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>and mitigation measures are detailed in the Historic Environment Baseline Report (document reference 6.11.A1), Chapter 11 of the Environmental Statement (document reference 6.11), and Appendix 11.2: Historic Environment Assessment Tables (document reference 6.11.A2).</p> <p>Impacts on Public Rights of Way (PRoW) - The assessment on PRoW and Essex Way is detailed in Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) of the ES . An Outline PRoW Management Plan (document reference 7.6) has been submitted with the Development Consent Order (DCO) application to set out measures to manage access to PRoW around Pylons TB39 to TB53 / Pylons TB42 to TB48 during construction.</p> <p>These include temporary closure with managed access for Fordham 21 for the duration of the construction works (current indicative duration of four years); Fordham 33 (part of Essex Way) for an indicative period of one month; Fordham 35 (part of Essex Way) for an indicative period of one day; Aldham 3 for the duration of the construction (current indicative duration of four years); Aldham 5 for an indicative duration of two months and Aldham 7 for the duration of the construction works (current indicative duration of four years).</p> <p>Fordham 22 would be temporarily closed with diversion in place for an indicative duration of 3 days.</p> <p>These also include temporary closure with part diversion and part managed access for Fordham 16, for an</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>indicative duration of two months for trackway, one month for overhead conductor stringing, and two months for crossing protection scaffolding; Fordham 24 for an indicative duration of one month for overhead conductor stringing, two months for trackway and two months for crossing protection scaffolding, Fordham 36 for an indicative duration of two months for working area for overhead conductor stringing, two months for overhead conductor stringing and the duration of construction for haul road (current indicative duration of four years). Impacts on Landscape - The concerns raised relate to pylons TB39-53 around Fordham and the Colne Valley. Significant landscape and visual effects are identified in this area, as set out in Environmental Statement (ES) Appendix 13.2: Landscape Baseline and Assessment (document reference 6.13.A2) and Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3). Paragraph 5.4.136 of the 2024 Design Development Report (DDR) (available on the Project website) notes that an alternative alignment to the west of Fordstreet and Fordham was considered and sets out the reasoning why a western option was not preferred when compared to the proposed alignment. The report summarises that <i>‘Overall whilst noting some potential for a reduction in the number of residential properties with potential amenity effects if the western alternative was taken forward, this would be a longer less economic and efficient route with more pylons and angle pylons. It would also potentially increase effects in respect of</i></p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p><i>construction within a Flood Zone (but subject to micro-siting this difference may be avoided) and be likely to increase effects on heritage assets including a Grade I listed building and several moats associated with listed buildings. It is also noted that the 2023 preferred draft alignment is consistent with policy and overall, it is considered that there would be insufficient benefits from potentially reduced residential amenity and landscape effects of the western alternative to offset the technical concerns and additional infrastructure required for delivery it. On that basis the 2023 preferred draft alignment, subject to localised modifications, remains preferred and has been taken forward as the 2024 preferred draft alignment.'</i></p> <p>Any larger shifts in the preferred alignment (east or west) would bring the alignment closer to either areas of settlement in Fordstreet and Fordham in the west, closer to areas of community woodland and to the Fordstreet Conservation Area in the west, or to the ancient woodland at Fiddlers Wood and the area of settlement at Gallows Green in the east. Due to the direction required to make the grid connection (the Project), a crossing of the river and of the Essex Way and associated network of public footpaths is required. Routeing has sought to minimise effects on these where possible, including at the construction phase, by avoiding the highest areas of environmental value, such as ancient woodland. As such, this alignment remained</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>preferred and was assessed as part of the Environmental Impact Assessment (EIA) for the Project.</p> <p>Impacts on Traffic and Transport - An Outline Public Rights of Way (PRoW) Management Plan (document reference 7.6) has been submitted as part of this Development Consent Order (DCO) application, and sets out management measures and mitigation measures for each PRoW affected by the construction activities and operation of the Project.</p> <p>The impact on PRoW (including Essex Way) from the construction and operation of the Project are presented in Environmental Statement (ES) Chapter 16: Traffic and Transport (document reference 6.16) and ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15).</p> <p>The Outline PRoW Management Plan (document reference 7.6) has defined the management of the PRoW in the Essex Way, in particular the PRoW Langham 3, Great Horkesley 31, Fordham 33, Fordham 35, Great Tey 36, Great Tey 42, White Notley 15, Great And Little Leighs 29 and Great And Little Leighs 40.</p> <p>Most of PRoWs will be temporary closed for the duration of the works with managed access, that is, allowing a safe passage throughout of the PRoW users.</p> <p>The footpaths Great Tey 36, Great Tey 42 and Great and Little Leighs 40, and bridleway White Notley 15 will be temporary diverted for during the construction period. Footpath Great Tey 36 will have a diversion of less than</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>5 minutes during 2 days and Great Tey 42 will be diverted for less than 2 minutes during 1 week. The diversion of Great and Little Leighs 40 will follow a similar alignment to the existing footpath, resulting in a minimum increase in journey time and distance.</p> <p>As a result, the magnitude of impact on the PRow's in the Essex Way is considered negligible and the overall effect has been classified as not significant.</p>				
9-5.43	Concern about the removal of street furniture and traffic islands for the Project in Ardleigh (e.g. due to impact on road and pedestrian safety)	National Grid has been working with the local highway authorities to develop access proposals for the Project. Our assessments have included mitigation measures. We have taken on feedback from regular engagement with the relevant local highway authority and have addressed safety concerns raised for the mitigations proposed.			X	
9-5.44	Concern about impact on access to respondent's drive due to underground cables for the Project (address and land parcel references provided by respondent)	National Grid and their contractors would make every effort to ensure that access to properties is minimally impacted by the works and would consult with and inform any residents that may be affected.			X	
9-5.45	Concern about the impact of the haul road for the Project on services and parking at St Mary's Church	Following concerns about construction traffic on the B1070, National Grid is proposing a bypass haul road to the east of Holton St Mary for accessing the cabling haul road and the cabling compound. Further details are presented in the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3),	X		X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>submitted as part of the Development Consent Order (DCO) application.</p> <p>The access point to the bypass haul road will be located to the south-east of St Mary's Church, with all construction vehicles approaching this access from the south. Therefore, no construction traffic is expected to pass directly by St Mary's Church, or its parking area and no impact is expected.</p>				
9-5.46	Suggest a full review of the Project, Bramford to Twinstead Reinforcement (BTNO) and the UK Power Networks (UKPN) 132 kV network to identify further options for mitigation and infrastructure reduction in Bramford (e.g. to mitigate impact on communities), requiring collaboration from National Grid, UKPN and Ofgem	National Grid's proposals at statutory consultation for the Project to replace two 132 kV overhead lines with underground cable for between 1 km and 2.5 km out from Bramford Substation to the south-east and also replace around 8 km of 132 kV overhead line with underground cable through to Offton to the north. We consider this mitigates the impact on communities from the Project. The Bramford to Twinstead Reinforcement is itself removing a section of overhead line replacing it with a new grid supply point substation in order to adopt part of the removed alignment for new infrastructure. National Grid is also proposing the preparation of an initial feasibility study to assess the feasibility for the PJ Line removal in the longer term. The PJ Line is an existing 132 kV overhead line between Bramford and Lawford. This work would be limited to a feasibility exercise and any steps beyond that regarding potential removal would be for future consideration with relevant stakeholders outside of the Project and Development Consent Order (DCO). Further detail is available in		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		National Landscapes – Duty to Seek to Further the Purposes Report (s85 Countryside and Rights of Way Act 2000) (document reference 5.10).				
9-5.47	Criticism that the pylon route cuts off Ardleigh from the AONB, changing the feel of the village	<p>National Grid has considered the respondent's feedback. In the absence of a specific basis for the change or a proposed alternative alignment, we have considered this feedback by following the guidance in the Holford Rules in developing the alignment. Guidelines on overhead line routeing are known as the "Holford Rules" which remain a valuable tool in selecting and assessing potential overhead line route options as part of the options appraisal process. A summary of the Holford Rules is provided within Appendix I22 of this report. We are therefore not proposing a change to the alignment at Ardleigh.</p> <p>National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project. The results of this assessment are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation (and maintenance) of the Project and recommends appropriate mitigation measures to reduce potential effects.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-5.48	Concern about the impact of shared haul road (near Church Road, Little Bromley) with the North Falls / Five Estuaries on respondent's residence (e.g. given that shared use of the haul road would also significantly the duration of use and disturbance to residence and farming) / Concern about coordination of the three organisations for use of the haul road (e.g. the wind farms are independently negotiating access agreements without any information about the Project; who is responsible for mitigations and remediation). With this, suggest that a single organisation should be responsible for the haul road throughout to provide continuity and consistency in negotiations, compensation, day to day management and final completion	National Grid has engaged with North Falls and Five Estuaries to develop co-ordinated arrangements for access for construction. That includes the use by National Grid of the substation access road location alongside the windfarm export cable corridor. It will only be used by National Grid after it has been constructed by the windfarm companies and is expected to be decommissioned when no longer required by the windfarm companies who are expected to retain responsibility for the road construction, repair and decommissioning though with exact arrangements subject to commercial agreement. When the substation access road is not available, National Grid construction traffic will use the widened Bentley and Ardleigh roads and a private permanent Abnormal Indivisible Load (AIL) access road.			X	
9-5.49	Concern about impact of trenching for underground cables near Malting Farm Lane on respondent's well water supply (e.g. quantity and quality), and request that National Grid should provide a new operational well should the existing well cease to provide an adequate drinkable water supply due to the impact of the Project (address provided by respondent). With this, criticism that National Grid have not provided a response on this issue yet (despite being raised by respondent several times)	National Grid has conducted preliminary ground investigations in order to better understand the geology along the underground cable route, including ground water levels. This would be supplemented by more detailed investigations prior to construction should the Project obtain consent. National Grid would assess the impact of the works on all identified ground water sources, including public and private abstraction points, and take appropriate measures to avoid detriment to those water sources. Landowners are encouraged to provide as much information as early as possible in relation to any private			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>supplies, drainage and irrigation systems on their land so these can be factored in at the detailed design stage of the project ahead of construction starting on site. As part of the development of the Project a Groundwater Baseline and Qualitative Groundwater Risk Assessment has been undertaken and will form part of the Environmental Statement (ES) (document reference 6.9.A3). This document provides an assessment of the potential effects of the Project on groundwater resources and includes an appraisal of the impacts on groundwater supplies. Mitigation measures have been included within the Outline Code of Construction Practice (CoCP) (document reference 7.2) regarding the prevention of groundwater pollution as well as measures specific to safeguarding groundwater fed water supplies. Commitments would include the safe and responsible storage of fuels, oils and chemicals, the monitoring of water quality prior to construction to confirm a baseline for future tests during construction and additional hydrogeological risk assessment at specific locations where there is a potential for the Project to impact on groundwater. Drainage design will follow sustainable drainage systems best practice including ensuring sufficient filter media is maintained between any infiltration systems and any underlying groundwater aquifers.</p>				
9-5.50	Concern about the impact of Pylons TB1, TB2, TB3, TB4, TB5, TB6, TB7, TB8, TB9, TB10, TB11, TB12,	Impacts on Public Rights of Way (PRoW) - An Outline PRoW Management Plan (document reference 7.6) has			X

Construction Impacts						
9-5.54	Concern about disruption from construction	<p>An Environmental Statement (ES) (document reference: Volume 6: Environmental Statement) has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 ('the Infrastructure EIA Regulations'). The ES identifies and assesses the likely significant effects on the environment resulting from the construction of the Project and recommends appropriate mitigation to reduce effects.</p> <p>Environmental mitigation measures have been defined within each environmental topic chapter and set out in relevant management documents submitted with the Development Consent Order (DCO) application, including the Outline Code of Construction Practice (CoCP) (document reference 7.2), the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (WSI) (document reference 7.5).</p>	X	X	X	
9-5.55	Concern about impact on traffic levels in local area caused by construction works	As part of the pre-application process National Grid has engaged with the relevant authorities, their highways teams and National Highways to understand and gain information on their road networks. This information has been used to inform and guide the drafting of the Outline	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Construction Traffic Management Plan (CTMP) (document reference 7.3) for the Project that accompanies the Development Consent Order (DCO) application. The Outline CTMP provides details about the proposed construction access strategy that has been developed to manage the impact of construction vehicles on the Public Highway and sensitive receptors, using a combination of more suitable Local Road Network connections from the Strategic Road Network, and temporary haul roads for access along the proposed alignment. The Outline CTMP highlight any measures to reduce impacts to other road users from construction traffic related to the Project.</p> <p>Environmental Statement (ES) Chapter 16: Traffic and Transport (document reference 6.16) includes the assessment of the potential impacts of the Project including changes in traffic flow, delays, road safety and impact on Walking, Cycling and Horse-Riding modes on the roads along the Primary Access Routes located in the Local Road Network.</p> <p>The Transport Assessment (document reference 7.11), submitted with the DCO application, examines capacity, safety, and operational efficiency of the network, identifying potential bottlenecks or safety concerns.</p> <p>Within the assessment of the ES and the Transport Assessment, mitigation measures are proposed to minimise likely adverse impacts.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-5.56	Concern about noise and other issues resulting from construction (e.g. mud on roads, dust)	<p>An Environmental Statement (ES) (document reference: Volume 6: Environmental Statement) has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 ('the Infrastructure EIA Regulations'). The ES identifies and assesses the likely significant effects on the environment resulting from the construction of the Project and recommends appropriate mitigation to reduce effects.</p> <p>Specifically, a Construction Noise and Vibration Impact Assessment has been undertaken and is reported in Environmental Statement (ES) Chapter 14: Noise and Vibration (document reference 6.14). During construction, mitigation would be implemented to reduce noise and vibration impacts from construction activities and increased road traffic and vibration due to additional movement from construction traffic. Mitigation measures are outlined in ES Chapter 14: Noise and Vibration (document reference 6.14) and the Outline Code of Construction Practice (CoCP) (document reference 7.2). This includes the assumption that construction working would be undertaken within the agreed working hours, construction traffic would be managed through the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), haul roads would be well maintained, and Best Practicable Means (BPM) would be employed to reduce construction noise and vibration.</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>The Environmental Statement (ES) Chapter 7: Air Quality (document reference 6.7) presents an assessment of the potential impacts from the construction of the Project on air quality. During construction, mitigation would be implemented to reduce the impact of dust generation and construction vehicle emissions. Mitigation measures are outlined in Environmental Statement (ES) Chapter 7: Air Quality (document reference 6.7), and the Outline Code of Construction Practice (CoCP) (document reference 7.2). The dust-emitting activities can be greatly reduced or eliminated by applying the site-specific mitigation measures (see Outline CoCP) for high-risk sites following measures recommendations in the Institute of Air Quality Management (IAQM) guidance (IAQM, 2024). The IAQM guidance states that with the implementation of effective site-specific mitigation measures, the environmental effect would not be significant in most cases.</p> <p>In addition, National Grid has prepared an Outline Code of Construction Practice (CoCP) (document reference 7.2). The Outline CoCP (document reference 7.2) sets out the required mitigation measures and environmental commitments that will be implemented during the construction phase of the Project to avoid or reduce potential effects of the Project on the environment.</p>				
9-5.57	Concern that local road infrastructure is not suitable for heavy construction vehicles and machinery	The Construction Access Strategy has been developed to manage the impact of construction vehicles on the	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Public Highway and sensitive receptors, using a combination of more suitable Local Road Network connections from the Strategic Road Network, and temporary haul roads for access along the alignment. Further details of the Construction Routing Strategy are included within the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).</p> <p>The Project also requires the transportation of Abnormal Indivisible Loads (AIL). National Grid is developing specific routing proposals for AIL movements and is developing these through engagement with the relevant stakeholders including the Local Highway Authorities and National Highways. An AIL routing strategy containing details about these movements are submitted in support of the Development Consent Order (DCO) application.</p>				
9-5.58	Concern that the Project will impact flooding / drainage at Stratford St Mary which is a high risk flood area / Suggest mitigation measures with regards to works on the floodplains and flood risk at Stratford St Mary / Concern that the chosen crossing point on the river at Stratford St Mary is not a suitable location (e.g. the area is a very active floodplain with eight flood warnings issued over the last winter period, and soil disturbed for the use of underground cables is likely to be washed into the river by rainfall) / Suggest that the proposed	A Flood Risk Assessment (FRA) (document reference 7.9) has been prepared as part of the application for development consent. The assessment was scoped in consultation with key flood risk management authorities and demonstrates how flood risk would be managed during construction and operation of the Project, describing the measures that would be put in place to ensure no increase to flood risk, which is a key requirement of the National Policy Statement (NPS) for Energy Infrastructure. Where the Project crosses existing flood defence infrastructure, such as at the River Stour at Stratford St Mary, key crossing design	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	underground cables should be rerouted away from this part of the river	principles have been agreed with the Environment Agency/Lead Local Flood Authority as applicable, and monitoring would be undertaken during construction of the crossing to ensure that the integrity of flood defences is maintained. In addition, the main works contractor would manage the Stratford St Mary worksite in accordance with a Flood Warning and Evacuation Plan (an outline of which is appended to the Outline Code of Construction Practice (CoCP) (document reference 7.2) and as part of this plan, measures and protocols would be enacted to prevent pollution of the River Stour during adverse weather events.				
9-5.59	Concern that the underground cables that the Project proposes between Langham and West Bergholt will effectively dam this watersheet causing extensive flood risk from Great Horkesley to West Bergholt / Request for confirmation on how National Grid will quantify and mitigate this risk	A Flood Risk Assessment (FRA) (document reference 7.9) has been undertaken, drawing on a range of data sources and informed by engagement with key flood risk management authorities. The FRA identifies the flood risk management and control measures that need to be put in place during construction and operation to manage surface water runoff and prevent increases in flood risk from a range of sources. These measures would either be integrated into the Project design at detailed design stage (e.g., runoff capture and attenuation features) and secured within the Outline Code of Construction Practice (CoCP) (document reference 7.2) which can be found within the Environmental Statement (ES) submitted with the Development Consent Order (DCO) application, and would be implemented by the appointed contractor(s), or	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		through the use of Flood Risk Activity Permitting (FRAP) with the Environment Agency.				
9-5.60	Concern that the high ground at Great Horkesley and West Bergholt is thick London Clay and does not respond well to heavy machinery compacting the drainage (that has evolved over hundreds of years)	Appendix C: Outline Soil Resource Plan of the Outline Code of Construction Practice (CoCP) (document reference 7.2) provides details of soil handling to protect and avoid damage to soil resources, referring to good practice and specifically the Defra Code, along with other relevant guidance. This would be evolved and further developed prior to construction commencing, taking into account detailed construction approaches, including the use of heavy construction equipment. Suitable consideration of the ground conditions, including soil mechanics, will be incorporated into the detailed design of the Project, undertaken post-submission. This will be based on suitable site specific ground investigation in accordance with best practice outlined in commitment GH01 of the Outline CoCP (document reference 7.2).			X	
9-5.61	Suggest that Noaks Road / Raydon Road, Bacons Green should be closed during construction to prevent rat running through Bacons Green	The proposed approach for road closures and management is set out in the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3). It is anticipated that roads would only be closed where this is required for safe working. Temporary closures may be required for works including the construction of bellmouth junctions, highway mitigation, installation of buried cabling, and stringing of overhead lines/netting. If no suitable existing alternative access			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		provision is available, a temporary alternative access would be provided.				
9-5.62	Concern that the respondents water supply (near Sandpits Lane) will be impacted by the Project	<p>National Grid has reviewed the underground alignment in this location, south of Sandpits Lane the alignment has been moved further away from the properties, however it is still required to cross Sandpits Lane in the same location. Crossing of underground utilities (both public and private) is normal practice for underground cable installation. Underground cable installation can normally be conducted without compromise to existing utilities. Detailed site investigations would be undertaken prior to construction to determine the location and nature of existing utilities</p> <p>Landowners are encouraged to provide as much information as early as possible in relation to any private supplies, drainage and irrigation systems on their land so these can be factored in at the detailed design stage of the Project ahead of construction starting on site.</p>			X	X
9-5.63	Concern that a drainage pipe proposed as part of the Project (near Sandpits Lane) will cause flooding impacting respondent's property	Construction (temporary) drainage run-off would be managed via an attenuation pond to ensure water is kept to a manageable flow rate for the outfall location.			X	
9-5.64	Request for the expected duration of works near Sandpits Lane as part of the Project, before the land is reinstated / Request to know if Sandpits Lane be closed for the duration of the works	All construction works take into account the local communities, and whilst focusing on getting the work done as safely and swiftly as possible, National Grid are not always able to avoid road or service closures. At this time, the construction programme is still being finalised,			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>however National Grid will be reviewing all impacts on local communities, taking into consideration and reducing or removing these impacts, where possible. All means possible would be considered.</p> <p>Information regarding construction programme is included in the Environmental Statement (ES), Chapter 4: Project Description (document reference 6.4) an estimated construction period is between 2027 and 2031.</p> <p>The proposed approach for road closures and management is set out in the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3). It is anticipated that roads would only be closed where this is required for safe working. Temporary closures may be required for works including the construction of bellmouth junctions, highway mitigation, installation of buried cabling, and stringing of overhead lines/netting. If no suitable existing alternative access provision is available, a temporary alternative access would be provided.</p>				
9-5.65	Request for information regarding the protrusion finishing close to the roadside copse north of Pintins, heading from Laits Barn; if this to house equipment and cause noise impacts	National Grid assumes that this relates to the Limits of Deviation (LoD) along the west side of Sandpits Lane, which are shown at full width and then stepped into a narrowed width to the south of Lait's Barn to avoid the woodland and property. Due to the narrowed section, this area may be used to store spoil as it arises from that section, as the usual method of placing the spoil to the side of the underground cable swathe would not be			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		possible in the narrower corridor. This is not currently designated as a compound to store equipment. Soil stored in this area would be temporary, construction vehicles would be required to move and store the soil safely. Whilst the soil is being stored, no additional noise impacts are expected.				
9-5.66	Concern that the Project will cut off respondent's water supply which runs from behind Hill Cottage across the field north to Rams Farm Road (e.g. this runs through the proposed construction site)	<p>Crossing of underground utilities (both public and private) is normal practice for underground cable installation. Underground cable installation can normally be conducted without compromise to existing utilities.</p> <p>An Outline Code of Construction Practice (CoCP) (document reference 7.2) has been prepared and submitted with the Development Consent Order (DCO) application. This document provides commitments to reduce construction impacts together with a framework for detailed management plans to be prepared at detailed design stage in order to reduce and mitigate potential impacts and/or disruptions that may arise during the construction phase.</p> <p>Landowners are encouraged to provide as much information as early as possible in relation to any private supplies, drainage and irrigation systems on their land so these can be factored in at the detailed design stage of the Project ahead of construction starting on site.</p>			X	
9-5.67	Concern that the Project will impact ground water supply that serves residents of Little Bromley (including Mulleys Cottage) due to no mains water	Appendix 9.3: Groundwater Baseline and Qualitative Groundwater Risk Assessment of the Environmental Statement (ES) (document reference 6.9.A3), provides			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	provision being available / Request for further information on the impact the construction of the Project will have on ground water supplies and request that National Grid guarantee that no pollution will enter the water supply of residents of Little Bromley	an assessment of the potential effects on groundwater from the Project and includes the impacts on groundwater supplies. In addition, mitigation measures have been included within the Outline Code of Construction Practice (CoCP) (document reference 7.2) regarding the prevention of pollution.				
9-5.68	Concern about damage to Mulleys Cottage (a Grade II listed building with a timber frame) caused by vibrations from construction vehicles as part of the Project in addition to the widening works being carried out on Bentley Road / Request for further information on the mitigation measures National Grid will be taking to protect Mulleys Cottage from this risk	<p>National Grid has worked to minimise potential impacts on the historic environment, including listed buildings such as the Pair of Cottages approximately 10 m south of The Fox and Hounds Public House, Bentley Road (1111418) and its setting through assessments made including site visits and extensive desk-based research, to thoroughly evaluate the setting of the heritage assets and understand their value during the design process. Mitigation efforts have then been explored to mitigate identified impacts effectively.</p> <p>These have been documented within the Historic Environment Assessment in the Environmental Statement (ES), Chapter 11: Historic Environment (document reference 6.11), which forms an integral part of the Environmental Impact Assessment (EIA) for the Project. Ongoing collaboration with Historic England and relevant planning authorities has ensured a comprehensive approach to heritage-related matters, incorporating suitable mitigation measures and techniques based on their input.</p> <p>The heritage assessment of Pair of Cottages Approximately 10 m South of the Fox and Hounds Public</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>House (1111418) - including Mulleys Cottage concludes a temporary negligible adverse significance of effect on the asset during the construction period and a permanent negligible adverse significance of effect on the asset during the operation phase.</p> <p>No additional mitigation measures are proposed during the construction phase as any measures designed to lessen the visual impact of the Project would be of a scale that would visually adversely alter the setting of the asset.</p> <p>National Grid acknowledges there would be plant movement and noise during the construction of an East Anglia Connection Node (EACN) substation access carriageway causing a minor change to the rural aspect of the asset's setting. Therefore, during the construction phase, standard construction mitigation as outlined in the Outline Code of Construction Practice (CoCP) (document reference 7.2) would be implemented.</p> <p>An assessment of construction vibration is presented in Environmental Statement (ES) Chapter 14: Noise and Vibration (document reference 6.14). The assessment indicates that impacts from construction traffic vibration are not expected at Mulleys Cottage. This would be reviewed further by the contractor(s) prior to works and mitigation measures would be incorporated into the works where required.</p>				
9-5.69	Concern that National Grid's proposals at Sandpits Lane will impact the entire valley and its wildlife into	The hydrological and ecological impacts on wetland habitats and the River Brett are assessed as part of the			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	River Brett / Criticism that EDF are intending to drain run off / spoil water / foul water containing pollutants into springs that feed ponds and wetland along the valley, running into Shelley and the River Brett	Environmental Statement (ES), with mitigation set out within the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4). There would be no discharge of foul water / spoil water into the receiving water environment, this would be discharged to foul sewer (where connections are available) or alternatively, collected and removed from site for disposal at a licenced facility. Rainfall runoff from works areas would be subject to collection, treatment and attenuation prior to discharge. These measures would prevent pollution of the water environment within the River Brett catchment.				
9-5.70	Criticism that EDF will be polluting the watercourse that runs the whole length of the landowners holding (e.g. impacting wildlife including protected species) / Suggest that EDF reconsider their plans to pollute the spring fed wetland and pond that is a few metres from the red rectangle (plan provided by respondent)	<p>It is noted that the comment refers to an EDF Project however it is assumed that the points raised are in relation to National Grid and the Norwich to Tilbury Project.</p> <p>The hydrological and ecological impacts on wetland habitats have been assessed as part of the Environmental Statement (ES) including in Chapter 8: Ecology and Biodiversity (Document Reference 6.8) and Chapter 12: Hydrology, Land Drainage and Flood Risk (document reference 6.12). These assessments conclude that, with mitigation controls to manage pollution risks, as well as safeguard existing land drainage and hydrological regimes in place there would be no significant effects on the wetlands and water features (and associated protected species). The</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		mitigations measures and controls are set out within the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4).				
9-5.71	Concern about the impact of the construction of Pylons TB44 to TB50 on the valley through Aldham and Fordham, including impact on localised flooding	<p>National Grid has completed an Environmental Impact Assessment (EIA) for the Project. The results of this assessment are provided in the Environmental Statement (ES) that accompanies the Development Consent Order (DCO) application. The ES identifies and assesses the likely significant effects on the environment resulting from the construction of the Project and recommends appropriate mitigation measures (in consultation with relevant stakeholders) to reduce potential effects.</p> <p>Should consent be granted in 2027, it is anticipated that access and construction of the Project would commence in 2027, likely starting with pre-commencement works including site clearance activities, the installation of temporary construction compounds and access roads. It is expected the construction works would continue through to 2031 (four years) (with only demobilisation in 2031). While the phasing of the construction programme is yet to be confirmed, it will be programmed and sequenced to reduce disruption to the local surroundings and the environment, residents, businesses and roads users as far as practicable. Further information is provided in Chapter 4: Project</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Description of the Environmental Statement (ES) (document reference 6.4).</p> <p>An Outline Code of Construction Practice (CoCP) (document reference 7.2) and an Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) has been prepared and submitted with the DCO application. These documents will provide commitments to reduce construction impacts together with a framework for detailed management plans to be prepared at detailed design stage in order to reduce and mitigate potential impacts and / or disruptions that may arise during the construction phase.</p> <p>A Flood Risk Assessment (FRA) (document reference 7.9) has been prepared for the Project. The FRA describes the measures that will be put in place to manage construction and operational flood, and land drainage impacts to ensure the development is safe from flooding over its lifetime and that off-site flood risk is not increased.</p>				
9-5.72	Concern that the Project will impact land drainage, farm borehole irrigation, impact on those without mains drainage and / or impact on well water properties at Ardleigh and Little Bromley	<p>Drainage surveys would be carried out in advance of construction works and would include on-site assessments and engagement with affected landowners. Existing drainage would be avoided where reasonably practicable. Where it cannot be avoided, it would be rerouted, or temporary drainage would be installed for the construction period.</p> <p>Landowners are encouraged to provide as much information as early as possible in relation to any</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>drainage and irrigation systems on their land so these can be factored in at the detailed design stage of the Project ahead of construction starting on site.</p> <p>The Environmental Statement (ES) includes an assessment within Chapter 9: Contaminated Land, Geology and Hydrogeology (document reference 6.9) which identifies any potential impacts, including to groundwater abstractions, and introduces any mitigation, as required. In addition, hydrogeological risk assessments have been undertaken within areas of underground cabling/trenchless crossings and are presented within Appendix 9.1: Baseline Information and Preliminary Contamination Risk Assessment (document reference 6.9.A1) and Appendix 9.3: Groundwater Baseline and Qualitative Groundwater Risk Assessment (document reference 6.9.A3) of the Environmental Statement (ES).</p>				
9-5.73	Concern the project will impact drainage / cause flooding at Parney Heath and Park View	<p>The Project has sought to avoid development in areas that are at high risk of flooding and would implement robust drainage systems to manage construction and operational surface water runoff and to ensure continuity of existing land drainage routes. National Grid has submitted a detailed Flood Risk Assessment (FRA) (document reference 7.9) as part of its Development Consent Order (DCO) application. The FRA recommends measures to mitigate any effects on flooding and the drainage regime, so that there is no increase in flood risk at Parney Heath and Park View.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-5.74	Concern that the area is prone to flooding, and suffers from water runoff from surrounding fields, particularly in the Fordstreet area	<p>National Grid has completed an Environmental Impact Assessment (EIA) for the Project. The results of this assessment are provided in the Environmental Statement (ES) that accompanies the Development Consent Order (DCO) application. The ES identifies and assesses the likely significant effects on the environment resulting from the construction of the Project, including consideration of potential impacts on flood risk from all relevant sources, both temporary and permanent impacts, taking account of the effects of climate change over the Project's design life, and will recommend appropriate mitigation measures (in consultation with relevant stakeholders) to reduce potential effects.</p> <p>A Flood Risk Assessment (FRA) (document reference 7.9) has been prepared for the Project to support and inform the EIA. The FRA describes the measures that would be put in place to manage construction and operational flood, and land drainage impacts to ensure the development is safe from flooding over its lifetime and that off-site flood risk is not increased.</p>			X	
9-5.75	Concern that the longer term impact of widening Bentley Road will increase traffic for people who would have previously used the B1035 as it will become a cut through / Request for confirmation whether National Grid have carried out any investigation into the long term impact and anticipated changes to traffic behaviour based on the widening of Bentley Road	<p>The required permanent highway improvements are determined by the operational and maintenance requirements of the proposed substation. This includes the requirement for infrequent emergency access for replacement equipment to be available should substation equipment fail.</p> <p>It is not expected that the proposed widening on Bentley Road would lead to an increase in the long-term traffic.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		The short sections of selected widening where the road is narrow would only extend from the A120 up to the outer edge of Little Bromley, the roads north of the village would remain unchanged. None of the proposed mitigation works would lead to changing the classification of the C road to a B road and the B1035 would still remain the dominant connection route.				
9-5.76	Concern over removing historic ditches at Upp Hall Farmhouse, used for land and property drainage / Concern that no mitigating measures have been put in place to prevent interruption	<p>National Grid has worked to minimise potential impacts on the historic environment, including listed buildings such as Upp Hall (1223380) and its setting as well as known heritage assets, through strategic routing and siting measures. The impacts of the Project on the historic environment are assessed in Chapter 11: Historic Environment (document reference 6.11) of the Environmental Statement (ES). The assessment considers the potential impact on archaeology, historic buildings and historic landscapes and includes assessment of potential for physical impact and impact through change to setting that affects the value of a heritage asset.</p> <p>National Grid has conducted comprehensive assessments, including site visits and extensive desk-based research, to thoroughly evaluate the setting of this heritage asset and understand its value, the findings of which are detailed in the Historic Environment Baseline Report (document reference 6.11.A1) and Chapter 11 (document reference 6.11) of the Environmental Statement (ES). These assessments</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>increase the understanding of the historical significance of this setting. It is acknowledged there would be plant movement, tall cranes for pylon construction, near two pulling locations, haul road construction and overhead line mitigation works causing a moderate adverse change to the rural aspect of the asset's setting and a significant impact during construction, which is reduced to not significant during the operational phase. Therefore, during the construction phase, standard construction mitigation as outlined in the Outline Code of Construction Practice (CoCP) (document reference 7.2) would be implemented.</p> <p>The Project has engaged with Historic England and relevant planning authorities on aspects relating to heritage, including appropriate mitigation measures and techniques and to take their views into account during Project development.</p>				
9-5.77	Concern that the Project will disrupt or damage the water supply to / surface water drainage from Upp Hall Farmhouse, The Stable Barn House, all the farm business units, and the livestock / Concern that no information has been received from National Grid in relation to this	<p>In planning the Project, National Grid considers all existing utilities and agree interface and mitigation arrangements (where required) with their owners. We also consider any such future installations where planning applications are in the system and likewise as part of the consultation process, we have contacted all third party utility providers in the area.</p> <p>The Environmental Impact Assessment (EIA) includes an assessment which can be found in the Environmental Statement (ES), Chapter 9: Contaminated Land, Geology and Hydrogeology (document reference 6.9),</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>which identifies any potential impacts, including to groundwater abstractions, and introduce any mitigation to safeguard existing drinking water supplies (both with regard to quantity and quality), as required. However, as the Project in this section of the route constitutes overhead lines, interaction with underlying aquifers would be limited. Any piling activities e.g., for pylon foundations, would be undertaken in accordance with good practice, and informed by Project Ground Investigation data.</p> <p>Landowners are encouraged to provide as much information as early as possible in relation to any private supplies, drainage and irrigation systems on their land so these can be factored in at the detailed design stage of the project ahead of construction starting on site.</p>				
9-5.78	Concern over access to Upp Hall Farm on Salmons Lane, 24/7 access is required to the livestock and there are no alternative entry points	<p>The proposed approach for road closures and management is set out in the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).</p> <p>It is anticipated that roads would only be closed where this is required for safe working. Temporary closures may be required for works including the construction of bellmouth junctions, highway mitigation, installation of buried cabling, and stringing of overhead lines/netting. If no suitable existing alternative access provision is available, a temporary alternative access would be provided.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-5.79	Concern that Salmons Lane / East Gores Road will be impacted by construction traffic for the Project (e.g. there are frequent vehicle movements to the business units and two dwellings served by these roads, and East Gores Road is susceptible to flooding, so cannot be relied upon for alternative access)	<p>The proposed approach for road closures and management is set out in the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).</p> <p>No construction traffic is proposed to use either Salmons Lane or East Gores Road. Construction traffic would use a separated dedicated haul road and cross over these roads to maintain use on the haul road. Priority would be provided to the Salmons Lane and East Gores Road and the construction traffic would have to wait until it can cross the public highway.</p>			X	
9-5.80	Concern that the Project will cause damage to utility supplies and watercourses near Pylons TB68 and TB69	<p>National Grid is working and consulting with all third party statutory utility owners. Where required, appropriate mitigations would be agreed in order to negotiate such existing infrastructure.</p> <p>In planning the Project, National Grid considers all existing utilities and agree interface and mitigation arrangements (where required) with their owners. We also consider any such future installations where planning applications are in the system and visible and likewise as part of the consultation process, we contact all third party utility providers in the area. This will be reviewed as the Project progresses.</p> <p>Works with potential to impede land drainage or the flow regime of any ordinary watercourse would be subject to consent under the Land Drainage Act 1991. Further details are presented in the Consents and Licences</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Required Under Other Legislation document (document reference 5.5) that accompanies the Development Consent Order (DCO) application.				
9-5.81	Concern that Pylon TB68 will impact water supply, sewerage soakaway, use of underground cables for electric supply and broadband	<p>National Grid does not envisage any direct impact on existing drainage and utility assets at TB68. Protection of such assets if present would be confirmed during detailed design.</p> <p>National Grid is working and consulting with all third party statutory utility owners. Where required, appropriate mitigations would be agreed in order to negotiate such existing infrastructure.</p> <p>In planning the Project, National Grid considers all existing utilities and agree interface and mitigation arrangements (where required) with their owners. We also consider any such future installations where planning applications are in the system and visible and likewise as part of the consultation process, we contact all third party utility providers in the area. This would be reviewed as the Project progresses.</p> <p>Works with potential to impede land drainage or the flow regime of any ordinary watercourse would be subject to consent under the Land Drainage Act 1991. Further details are presented in the Consents and Licenses Required Under Other Legislation document (document reference 5.5) that accompanies the Development Consent Order (DCO) application.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Landowners are encouraged to provide as much information as early as possible in relation to any private supplies, drainage and irrigation systems on their land so these can be factored in at the detailed design stage of the project ahead of construction starting on site.				
9-5.82	Concern that Pylon TB68 will harm residents (including children) due to electronic field	<p>Electric and Magnetic Fields (EMFs) are produced wherever electricity is used, and National Grid fully recognises people's concerns.</p> <p>We take this issue very seriously and look to authoritative and independent scientific organisations such as the World Health Organisation (WHO) and the UK Health Security Agency (UKHSA) to review the worldwide body of scientific evidence on EMFs and health. We believe important decisions on health should be made independently of industry, as is the case in the UK.</p> <p>Health considerations are given a high priority in the process by which we arrive at any proposals for new electricity circuits. Assessment of compliance with national guidance and policies is key to our approach. The UK has a carefully thought-out set of policies for managing EMFs, which includes both numerical exposure guidelines to protect against established, acute effects of EMFs, and precautionary policies to provide appropriate protection against the possibility of chronic effects of EMFs at lower levels, which have not been established by scientific research. These policies are incorporated into the decision-making process for</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>development consent in National Policy Statement (NPS) EN-5.</p> <p>Our approach is to ensure that all our assets comply with those policies, which are set by Government on the advice of their independent advisors UK Health Security Agency (UKHSA). This ensures that health concerns are properly and adequately addressed. The evidence concerning compliance with these policies, including the numerical guidelines are documented in the Electric and Magnetic Field Compliance Report (document reference 7.8) submitted as part of our Development Consent Order (DCO) application.</p>				
9-5.83	Concern that the Project will impact cess pits, soak aways and incoming water supplies to the cottages on East Gores Road (e.g. as damage took place when recent test drilling was undertaken, which closed East Gores Road for five days)	<p>National Grid is working and consulting with all third party statutory utility owners and landowners. Where required, appropriate mitigations would be agreed in order to negotiate such existing infrastructure.</p> <p>In planning the Project, National Grid considers all existing utilities and agree interface and mitigation arrangements (where required) with their owners. We also consider any such future installations where planning applications are in the system and visible and likewise as part of the consultation process, we contact all third party utility providers in the area. This would be reviewed as the Project progresses.</p> <p>Landowners are encouraged to provide as much information as early as possible in relation to any private supplies, drainage and irrigation systems on their land</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>so these can be factored in at the detailed design stage of the Project ahead of construction starting on site.</p> <p>Regarding damage caused by recent drilling resulting in a five-day closure of East Gores Road, National Grid can confirm that this was not related to Norwich to Tilbury and has stringent measures in place to avoid such impacts from future surveys or works on the Project. Where accidental damage is caused, National Grid would work with affected stakeholders to rectify the impact as fast and efficiently as possible.</p>				
9-5.84	Concern about impact of construction on access to Ardleigh Road and Birchwood Road, and associated noise and pollution levels next to respondent's property	<p>Ardleigh Road and Birchwood Road are proposed to be used as Primary Access Routes for construction. During construction, there may be periods where Primary Access Routes require closure or traffic management measures for works such as road widening. The Project will seek to limit road closures where appropriate and safe to do so and when these occur, suitable alternative access routes would be identified or provided.</p> <p>Chapter 14: Noise and Vibration (document reference 6.14) of the Environmental Statement (ES) includes an assessment of potential noise impacts from construction traffic on the public highway, including on Ardleigh Road and Birchwood Road. The assessment indicates that significant adverse effects from construction traffic noise are not expected on these routes.</p> <p>Chapter 7: Air Quality (document reference 6.7) of the ES includes an assessment of construction traffic emissions to determine any changes in air quality arising</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>from construction phase. Chapter 7 of the ES also recommends best industry practices to mitigate the impact of the Project on air quality from construction.</p> <p>No significant new effects are expected along Ardleigh Road or Birchwood Road. Air quality modelling for the ES assessed 59 human receptor locations across three scenarios (Baseline, Do Minimum, and Do Something), and no exceedances of Air Quality Objectives (AQO) were predicted for any pollutants (NO₂, PM₁₀, and PM_{2.5}). The closest human receptor to both Ardleigh Road and Birchwood Road are located directly adjacent to each road. Modelled pollutant concentrations at these receptors remain well below AQO thresholds for all pollutants. Additionally, existing background pollutant levels in the area are already significantly lower than AQO limits. Therefore, the planned works near Ardleigh Road and Birchwood Road are not expected to result in any exceedances of AQO limits for annual mean NO₂, PM₁₀, or PM_{2.5} at nearby human receptor locations.</p>				
9-5.85	Concern that the natural drainage of respondent's field will be impacted by underground cables as part of the Project	<p>National Grid notes the respondent's feedback. Drainage surveys would be carried out in advance of construction works and would include on-site assessments and engagement with affected landowners. Existing drainage would be avoided where reasonably practicable. Where it cannot be avoided, it would be rerouted, or temporary drainage would be installed for the construction period.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>The Environmental Statement (ES) includes an assessment within the Contaminated Land, Geology and Hydrogeology Chapter 9 (document reference 6.9), which identifies any potential impacts, including to groundwater abstractions, and introduce any mitigation, as required. In addition, hydrogeological risk assessments would be undertaken within areas of underground cabling/trenchless crossings.</p> <p>The Project would manage surface water runoff using sustainable drainage systems techniques appropriate to local conditions. In this location, the drainage for temporary construction work is assumed to comprise an attenuation pond (or alternative feature) and outfall. As set out in the Flood Risk Assessment (document reference 7.9) the philosophy of the surface water drainage strategy is to replicate as closely as possible the natural runoff characteristics of the existing site.</p> <p>Landowners are encouraged to give the National Grid Lands Team details of any private supply, drainage and irrigation systems as early as possible to ensure these can be assessed as part of the detailed Project design.</p>				
9-5.86	Concern that there is an irrigation main that crosses onto landowners land precisely where the new access across Sandpits Lane is proposed / Any severing of this irrigation main would result in significant losses for landowner, and National Grid has not confirmed whether irrigation can continue under the power lines, raising concerns that the farm	National Grid notes the respondent's feedback. Drainage surveys would be carried out in advance of construction works and would include on-site assessments and engagement with affected landowners. Existing drainage would be avoided where reasonably practicable. Where it cannot be avoided, it			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	may never be able to grow high value crops in this area again (this would have a significant financial impact for the farm)	<p>would be rerouted, or temporary drainage would be installed for the construction period.</p> <p>The Environmental Statement (ES) includes an assessment within the Contaminated Land, Geology and Hydrogeology Chapter 9 (document reference 6.9), which identifies any potential impacts, including to groundwater abstractions, and introduce any mitigation, as required. In addition, hydrogeological risk assessments would be undertaken within areas of underground cabling/trenchless crossings.</p> <p>The Project is proposing underground cables in this location, irrigation systems can continue to be used above the underground cables once the land is reinstated.</p> <p>Landowners are encouraged to give the National Grid Lands Team details of any private supply, drainage and irrigation systems as early as possible to ensure these can be assessed as part of the detailed Project design.</p>				
9-5.87	Concern that the Project includes pylons and concrete pads next to a floodplain area, increasing the risk of flooding, and risking exasperating existing flooding issues at respondent's property (location provided by respondent)	The Project has been subject to a robust Flood Risk Assessment (FRA) (document reference 7.9) which has appraised the potential impacts of construction on flood risk from a range of sources. The FRA has identified a number of control and management/mitigation measures for preventing increases in flood risk. These include provision of drainage to capture and attenuate rainfall runoff from areas of impermeable land, such as concrete pads and pylon foundations, and provision of			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		compensation storage for any loss of floodplain volumes due to construction of new pylons.				
9-5.88	Concern that the Project will impact flooding / drainage at Little Bromley (e.g. as the area already has a high water table), including locations at the following: Shop Road (including rear of Harlequin), Ardleigh Road, Grange Road (including junction of Ardleigh Road and Grange Road), and Barn Lane	The Project has been subject to a detailed Flood Risk Assessment (FRA) (document reference 7.9) that has appraised flood risk to and arising from the Project from a range of sources, including groundwater flood risk in areas where the water table is high, such as at Little Bromley. An initial drainage design has also been progressed that includes a range of measures to capture, store and attenuation rainfall runoff from the Project and its construction swathe. Drainage proposals are tailored to local conditions, accounting for example for topography, and groundwater conditions. The FRA has identified good practice and additional mitigation measures that would be needed to ensure that flood risk to existing communities and infrastructure is not increased. These measures are described in the Register of Environmental Commitments, part of the Outline Code of Construction Practice (CoCP) (document reference 7.2) and would be secured through the Development Consent Order (DCO).			X	
9-5.89	Concern that vibrations caused by heavy construction traffic as part of the Project will damage respondents Grade II Listed property (near Little Bromley) / Criticism that National Grid have not included respondent's property (near Little Bromley) on their list	A Construction Vibration Assessment has been conducted as part of the Environmental Statement (ES), Chapter 14: Noise and Vibration (document reference 6.14) and submitted with the Development Consent Order (DCO) application.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Vibration from construction traffic has been scoped out of the assessment on the basis that vibration from traffic is caused by irregularities in the road surface (e.g. potholes). Where the road is well maintained significant levels of vibration would not be expected.</p> <p>The vibration assessment does, however, include consideration of construction activities which may generate material levels of vibration, such as piling and ground compaction. The assessment assumes relatively worst-case assumptions in order to identify potential vibration 'hot-spots' with regards to potential impacts on people within buildings (i.e. annoyance), as well as potential damage to buildings and structures.</p> <p>The level of vibration that is perceptible to people is significantly lower than that which would cause damage to buildings or structures. Vibration levels where there is a risk of damage to buildings and structures would only occur where vibratory works are in very close proximity; within 2 to 10 meters, depending on the activity. The assessment has taken a risk-based approach to potential damage to buildings and structures, identifying locations where there is even a slight risk of damage from vibration, based on the guidance of BS 5228-2:2009+A1:2014 'Code of practice for noise and vibration control on construction and open sites – Part 2: Vibration'.</p> <p>A small number of locations have been identified where there is a non-zero risk of damage from construction</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>vibration; all of which are due to potential compaction activities associated with highways upgrades and haul roads. The identified locations would require special consideration by the contractor to reduce and manage vibration levels to avoid significant adverse effects and potential damage. This would include consideration of alternative methods, such as non-vibratory techniques, pre- and post-works condition surveys, and monitoring of vibration levels during the works.</p> <p>Additionally, further to the assessment conducted as part of the ES, the contractor would undertake further detailed construction vibration assessments, as secured by the Code of Construction Practice (CoCP) (document reference 7.2) and Appendix F: Outline Noise and Vibration Management Plan (NVMP) found within the Outline Code of Construction Practice (CoCP) (document reference 7.2), based on their specific methodologies for each activity so that any additional risks can be identified and appropriate mitigation put in place.</p> <p>As such, where appropriate mitigation is put in place in the form of Best Practicable Means (BPM), significant adverse effects and potential damage to buildings or structures would not be expected at any location.</p>				
9-5.90	Concern that Bentley Road, Little Bromley uses well water / Request for National Grid to confirm how this water will be affected by the Project	The Environmental Statement (ES) includes an assessment within Appendix 9.3: Groundwater Baseline and Qualitative Groundwater Risk Assessment (document reference 6.9.A3) and the Environmental			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Statement (ES) Chapter 9: Contaminated Land, Geology and Hydrogeology (document reference 6.9). Appendix 9.3: Groundwater Baseline and Qualitative Groundwater Risk Assessment (document reference 6.9.3) identifies groundwater abstractions within 500 m of the Order Limits, including a number of abstractions within the area of Bentley Road. The risk assessment concludes that significant impacts on the private water supplies surrounding Bentley Road are considered to be unlikely. A number of additional commitments are included within the Outline Code of Construction Practice (CoCP) (document reference 7.2) to ensure water supplies are identified and protected, such as W04.				
9-5.91	Concern about damage to existing infrastructure in the Tendring area due to industrial activity required for the Project	<p>National Grid is working and consulting with all third party statutory utility owners. Where required, appropriate mitigations would be agreed in order to negotiate such existing infrastructure.</p> <p>In planning the Project, National Grid considers all existing utilities and agree interface and mitigation arrangements (where required) with their owners. We also consider any such future installations where planning applications are in the system and visible and likewise as part of the consultation process we contact all third party utility providers in the area. This would be reviewed as the Project progresses through the Development Consent Order (DCO) application submission.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		An Outline Code of Construction Practice (CoCP) (document reference 7.2) and an Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) has been prepared and submitted with the DCO application. These documents provide commitments to reduce construction impacts together with a framework for detailed management plans to be prepared at detailed design stage in order to reduce and mitigate potential impacts and/or disruptions that may arise during the construction phase.				
9-5.92	Suggest that working hours for construction and haulage for the Project should be restricted near to residences in Langham (where the Project is within 100 metres of residential properties)	<p>Should consent be granted in 2027, it is anticipated that construction of the Project would commence in 2027, likely starting with pre-commencement works, including site clearance activities, the installation of temporary construction compounds and access roads. It is expected the construction works would continue through to 2031 (four years) (with only demobilisation in 2031).</p> <p>It is assumed that the core working hours for construction (as set out within the requirement of the draft Development Consent Order (DCO) (document reference 3.1) would be:</p> <ul style="list-style-type: none"> • Mondays to Fridays: 07:00–19:00 • Saturdays, Sundays, Bank Holidays and other public holidays: 07:00–17:00 <p>No percussive piling works would take place outside of the hours of 07:00 – 19:00 Monday to Friday and 07:00 to 17:00 on Saturdays.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Unless otherwise agreed with the Local Highway Authority, no HGV deliveries would be made to site outside of the hours of 07:00 to 19:00 Monday to Friday and 07:00 to 17:00 on Saturdays.</p> <p>Work outside of the core working hours might be required in certain circumstances and would be carried out following consultation with the relevant Local Planning Authorities. An Outline Code of Construction Practice (CoCP) (document reference 7.2) and an Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) have been submitted with the application for development consent.</p> <p>These documents provide a framework for detailed management plans to be prepared at detailed design stage in order to reduce and mitigate potential impacts and/or disruptions that may arise during the construction phase.</p>				
9-5.93	Concern that the access onto the B1070 from the A12 is narrow and unsuitable for the volume of construction traffic and private vehicles used by staff / workers travelling to the various Project sites in this area and off this junction	National Grid has carefully considered the feedback received during the statutory consultation for this Primary Access Route for construction vehicles this included the use of the historic railway alignment and access through Notley Enterprise Park. These alternatives were discounted through assessment and identification of constraints. The consultation has identified an opportunity to utilise an offline temporary haul road located east of Holton St Mary from the B1070 to the construction corridor. It is proposed that this route	X		X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>would act as a bypass for Holton St Mary during construction.</p> <p>National Grid has carefully considered any necessary works along the Primary Access Routes for construction as part of the Project proposals.</p> <p>Due to the junction arrangement, it is proposed that only the northbound side of Junction 31 of the A12 is used for construction access. Our preliminary designs include for upgrades to this junction as part of the Project works to improve the northbound acceleration lane. National Grid is consulting with National Highways to develop this proposal and are considering the opportunity for this improvement to be maintained as a permanent upgrade.</p> <p>Our vehicle tracking of the slip lane off the A12 to the junction of the B1070 has not indicated there is any concern with the road width, nor through our consultation with National Highways has it been raised as a concern.</p> <p>In addition, National Grid has undertaken an assessment of the potential effects of the Project on traffic and transport and recommends appropriate mitigation to reduce potential effects (see the Environmental Statement (ES), Chapter 16: Traffic and Transport (document reference 6.16) for further detail).</p>				
9-5.94	Concern about impact of Project on respondent's access to their property (near Malting Farm Lane)	It is anticipated that roads would only be closed where this is required for safe working.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Where practicable and safe to do so, existing access to and from residential, commercial, community and agricultural land uses would be maintained throughout the construction period, or as agreed through landowner discussions.				
9-5.95	Concern that the B1070 falls below the safe working width for a two-way haul road because the road is only 5.5m in places (e.g. this falls below the safe working width for a two-way haul road)	<p>National Grid has carefully considered the feedback received during the statutory consultation for this Primary Access Route for construction vehicles and has identified an opportunity to utilise an offline temporary haul road located east of Holton St Mary from the B1070 to the construction corridor. It is proposed that this route would act as a bypass for Holton St Mary during construction.</p> <p>Through this process, National Grid has also considered alternative routes for this bypass, including the use of the historic railway alignment. These alternatives were discounted through assessment and identification of constraints and requirements.</p>	X		X	X
9-5.96	Concern about structural damage to Hawain Public House (Grade II listed) caused by vibrations from construction vehicles	A Construction Vibration Assessment has been conducted as part of Environmental Statement (ES) which can be found within Chapter 14: Noise and Vibration (document reference 6.14) and submitted with the Development Consent Order (DCO) application. Vibration levels due to construction traffic are predicted to be below the level at which building damage, even cosmetic, may occur at this location. However, this location has been identified as being in close proximity	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		to potential compaction works in relation to highways mitigation which has the potential to result in high vibration levels without mitigation. This would be reviewed by the contractor as part of the specific noise and vibration assessments and specific measures would be put in place to manage and reduce vibration levels. If a building was found to of sustained damage due to the construction works, National Grid would be liable to carry out repairs and/or compensate the property owner.				
9-5.97	Concern that the respondent's water and electricity supply passes through land impacted by the Project (which also impacts the respondents access driveway)	<p>National Grid works and consults with all third party statutory utility owners as well as the local water and electricity companies. Where required, appropriate mitigations would be agreed in order to negotiate and avoid impacts to such existing infrastructure.</p> <p>Locating existing water and electricity supplies is important to us; you may have knowledge of supply locations which we would be grateful if you could share with us. Having this information allows us to reduce the effects on your property and our Project.</p> <p>If we interrupt or accidentally damage any water supplies or other services in the land, we would repair the damage and/or provide an adequate alternative as soon as reasonably practicable.</p> <p>National Grid and their contractors would make every effort to ensure that access to properties is minimally impacted by the works and would consult with and inform any residents that may be affected.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		National Grid has considered the respondent's feedback amongst other pieces and is proposing a change to the Project. The underground cable is now being routed to the west; however temporary access would still cross the driveway.				
9-5.98	Concern about site runoff being released along the suggested 'temporary' pipelines into a low point at the bottom of an old sand/gravel pit on Dewlands Farm, which is within the Dedham Vale National Landscape (previously known as the Dedham Vale Area of Outstanding Natural Beauty (AONB))	<p>Site run off would be held in an attenuation pond before being released into the water course. This would allow solid contaminants to settle out. Where other contaminants are expected, further measures would be introduced to ensure that effluent released into water courses does not impact on water quality. These measures are highlighted in the Flood Risk Assessment (FRA) (document reference 7.9) and the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) submitted with the Development Consent Order (DCO) application. The discharge rate has been agreed with the Lead Local Flood Authority and relevant stakeholders, available data indicates a watercourse flowing out of the outfall location due west. National Grid has reviewed the drainage proposal in this area and has subsequently removed the northern drainage outfall.</p> <p>If flooding is a concern, an FRA has been undertaken and is part of the ES. The FRA will continue to be updated as the designs progress.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-5.99	Concern about the impact of the Project on flooding at Stour Valley, and suggest that flood risk should be mitigated	<p>National Grid has engaged with the Environment Agency as part of the Project development. All works in the River Stour flood plain would be subject to a Flood Risk Activity Permit, which would require agreement with the Environment Agency.</p> <p>The design includes measures to mitigate flood risk, including an allowance for additional laydown areas to the north and south of the flood plain (e.g.: for temporary soil storage). The design also includes space for drainage attenuation ponds, to control the rate of discharge of surface water from the works to a rate agreed with the relevant Lead Local Flood Authorities.</p>			X	
9-5.100	Concern about the impact of the construction compound (materials storage) at the Sandpits Lane / B1070 junction with Bacon's Green on flooding	National Grid has identified appropriate drainage measures to control the rate of discharge of surface water from all temporary and permanent areas of hard surfacing created by the Project. The design includes for an infiltration basin adjacent to this compound. All drainage features have been sized to suit drainage design criteria agreed with the relevant Lead Local Flood Authorities (in this case, with Suffolk County Council).			X	
9-5.101	Suggestion that trenching and cabling designs in the Stour Valley area (including Stratford St Mary) need to ensure that they do not impede or divert flood waters away from their route to the sea	A Flood Risk Assessment (FRA) (document reference 7.9) has been undertaken, drawing on a range of data sources and informed by engagement with key flood risk management authorities. The FRA identifies the flood risk management and control measures that need to be put in place during construction and operation to	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		manage surface water runoff and prevent increases in flood risk from a range of sources. These measures would be integrated into the Project design at detailed design stage (e.g., runoff capture and attenuation features) and secured within the Outline Code of Construction Practice (CoCP) (document reference 7.2) which can be found within the Environmental Statement (ES) submitted with the Development Consent Order (DCO) application, and would be implemented by the appointed contractor(s), or through the use of Flood Risk Activity Permitting (FRAP) with the Environment Agency.				
9-5.102	Concern that Stratford St Mary forms a significant bottleneck for the River Stour and its floodplains / Concern that the underground cables as part of the Project are located in an area which has a significantly high flood risk factor and forms a significant flood relieving safety net for local communities	A Flood Risk Assessment (FRA) (document reference 7.9) has been undertaken, drawing on a range of data sources and informed by engagement with key flood risk management authorities. The FRA identifies the flood risk management and control measures that need to be put in place during construction and operation to manage surface water runoff and prevent increases in flood risk from a range of sources. These measures would be integrated into the Project design at detailed design stage (e.g., runoff capture and attenuation features) and secured within the Outline Code of Construction Practice (CoCP) (document reference 7.2) which can be found within the Environmental Statement (ES) submitted with the Development Consent Order (DCO) application, and would be implemented by the appointed contractor(s), or through the use of Flood Risk Activity Permitting (FRAP) with the Environment Agency.	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-5.103	Concern that the trench and cables in Stratford St Mary will have to be left open for 3 years whilst the rest of the installation is completed so that it can all be tested prior to back filling. During this time there will be multiple flood weeks and days when the cables, equipment and excavation will be underwater and open to damage. Concern that during these 3 years there is also a considerable risk that the trench, cables and spoil will divert the water flow across the fields and cause additional flooding	<p>Trenches would be opened to allow for installation of ducts and structural surrounds. The majority of the trenches would be open for two to three months, depending on the construction schedule, and in most cases would be closed much sooner. The spoil removed from the excavations would be used to backfill over the cables and as such any bunding created by the spoil heaps would be in place for the same amount of time as the excavation.</p> <p>In certain locations (e.g., at joint bays and complex third party asset crossings) they may need to be open for longer, but for these isolated cases mitigation measures would be put in place to prevent flooding of the excavation and surrounding areas. A Flood Risk Assessment (FRA) (document reference 7.9) has been undertaken and is part of the Environmental Statement (ES) submitted with the Development Consent Order (DCO) application. The FRA would continue to be updated as the designs progress, through the use of Flood Risk Activity Permitting (FRAP) with the Environment Agency.</p>	X			
9-5.104	Concern that the Project will impact drainage and water supply to / from property (location not provided)	Should consent be granted for the Project, drainage surveys would be carried out in advance of construction works and would include on-site assessments and engagement with affected landowners. Existing drainage would be avoided where reasonably practicable. Where it cannot be avoided, it would be rerouted, or temporary drainage would be installed for the construction period.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>The Environmental Impact Assessment (EIA) includes an assessment within Chapter 9: Contaminated Land, Geology and Hydrogeology of the Environmental Statement (ES) (document reference 6.9), which identifies any potential impacts, including to groundwater abstractions, and introduce any mitigation to safeguard existing drinking water supplies (both with regard to quantity and quality), as required.</p> <p>Landowners are encouraged to provide as much information as early as possible in relation to any private supplies, drainage and irrigation systems on their land so these can be factored in at the detailed design stage of the project ahead of construction starting on site, please raise this at any meeting with the National Grid Lands Team who will keep a record and pass on any information.</p>				
9-5.105	Concern that respondent's field will be dissected by the Project's new road / Suggest that the Project's new road is relocated along the edge of the field (e.g. as shown by Route E in plan provided by respondent)	National Grid notes the respondent's feedback and has reviewed the alternatives suggested. One suggestion to follow the eastern field boundary and the other to follow the northern field boundary adjacent to the properties within Little Bromley. Whilst potentially a reasonable option for very occasional AIL movements the potential for this to be used for construction HGV movements until the substation haul road becomes available raises the level of environmental effect for residential occupants meaning this is considered less preferred. National Grid recognises that decision making is influenced to an extent by factors that are as yet uncertain, such as			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		potential use by construction HGVs which depends on when North Falls or Five Estuaries commence their works. Whilst still to be confirmed National Grid is aware of some calls from Local Planning Authorities involved with the windfarm Development Consent Orders (North Falls and Five Estuaries) for restrictions to be imposed to prevent wind farm construction before the Project is consented and free from judicial review risk. This increases the likelihood that the AIL route will be carrying construction HGVs. On this basis we propose to make no change at this stage to the route presented at the 2025 targeted consultations but we will continue to engage with the landowner(s) (as information continues to emerge) to either take forward the arrangements as proposed or, subject to necessary permissions being secured, may adopt one of the alternatives.				
9-5.106	Concern that the Project's new road crosses and is aligned with the underground drinking water supply pipe for both Hall Farm House and Little Bromley Hall (shown between C and D on map provided by respondent) / This needs to be maintained or relocated as it is the primary drinking water supply	National Grid notes the respondent's feedback. We would undertake the construction work in accordance with industry best practice for the identification of drainage and services. We would protect and/or divert any services identified during the works. Any land drainage would be appropriately diverted during the works and reinstated subsequently to maintain the existing system. Specific to drinking water supply systems the following commitment is secured through inclusion in the Outline Code of Construction Practice (CoCP) (document reference 7.2) – W04: Where the installation works have been shown to affect a private			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>water supply, an alternative water supply will be provided, as appropriate.</p> <p>Landowners were encouraged during the pre-submission engagement to provide as much information as early as possible in relation to any private supplies, drainage and irrigation systems on their land so these can be factored in at the detailed design stage of the project ahead of construction starting on site. Engagement is still ongoing with landowners.</p>				
9-5.107	Concern that respondent's field will be dissected by the Project's new road, which have a network of land drains and ditches in order to maintain drainage and the road dissects many of these / Remedial drainage will need to be installed prior to any works to prevent flooding	<p>National Grid notes the respondent's feedback. We will undertake the construction work in accordance with industry best practice for the identification of drainage and services. Services identified would be appropriately protected and/or diverted for the works. Any land drainage identified would be appropriately diverted for the works and reinstated subsequently to maintain the existing system. Commitment AS05 within the Outline Code of Construction Practice (CoCP) (document reference 7.2) is specific to maintaining the integrity of existing land drainage systems, committing to design of a scheme of pre-construction land drainage, with the intent of maintaining the efficiency of the existing known land drainage systems.</p> <p>Landowners were encouraged during the pre-submission engagement to provide as much information as early as possible in relation to any private supplies, drainage and irrigation systems on their land so these can be factored in at the detailed design stage of the</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Project ahead of construction starting on site. Engagement is still ongoing with landowners.				
9-5.108	Suggest that alternative traffic management measures are used within areas in and around the National Landscape (e.g. reduced speed limits / traffic lights) to reduce loss of hedges and trees need for access road visibility splays	<p>National Grid has been working with the local highway authorities and National Highways as we developed our access proposals for the Project.</p> <p>Vegetation clearance has been limited by reducing visibility splays where possible, to keep within the highway boundary. Where this has not been possible due to protected trees and/or hedges, alternative mitigation measures have been proposed such as temporary traffic lights, banksmen, and temporary reduction in speed limits. These are detailed in the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) for the Project that accompanies the Development Consent Order (DCO) application.</p>			X	
9-5.109	Concern that the location of the Project's new road will block access to respondents field / Request that access to respondent's field is maintained over the roadway or another access is provided (locations C and D within plan provided by respondent)	National Grid notes the respondent's feedback and has reviewed the alternatives suggested. One suggestion to follow the eastern field boundary and the other to follow the northern field boundary adjacent to the properties within Little Bromley. Whilst potentially a reasonable option for very occasional AIL movements the potential for this to be used for construction HGV movements until the substation haul road becomes available raises the level of environmental effect for residential occupants meaning this is considered less preferred. National Grid recognises that decision making is influenced to an			X

		<p>extent by factors that are as yet uncertain, such as potential use by construction HGVs which depends on when North Falls or Five Estuaries commence their works. Whilst still to be confirmed National Grid is aware of some calls from Local Planning Authorities involved with the windfarm Development Consent Orders (North Falls and Five Estuaries) for restrictions to be imposed to prevent wind farm construction before the Project is consented and free from judicial review risk. This increases the likelihood that the AIL route will be carrying construction HGVs. On this basis we propose to make no change at this stage to the route presented at the 2025 targeted consultations but we will continue to engage with the landowner(s) (as information continues to emerge) to either take forward the arrangements as proposed or, subject to necessary permissions being secured, may adopt one of the alternatives. Access would be agreed with the landowner should consent be granted. The contractor would be required to maintain access to the fields maintained throughout construction rather than causing more disruption by creating new entrances in field boundaries. Any deviation from this strategy would be agreed with the landowner.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Consultation						
9-5.110	Comment supportive of engagement that has taken place / feel listened to	National Grid notes the respondent's feedback.			X	
9-5.111	Comment supportive of the Project in this section	National Grid notes the respondent's feedback.			X	
9-5.112	Criticism of consultation specific to this section	National Grid notes the respondent's feedback.	X		X	
9-5.113	Criticism that no consultation events have been held in Ardleigh for the statutory or non-statutory consultations / Suggest that a consultation event should be held in Ardleigh (e.g. at the village hall)	National Grid carefully assessed event venues for the non-statutory and statutory consultations, and specifically looked at venues that were easily accessible, were available, were close to the route and potentially affected communities and were of a suitable size for the display of materials, high footfall and had breakout space for private meetings and staff welfare. Ardleigh was considered, but published its maximum public capacity of 100, which was not considered large enough for staff, the public and the materials available. Instead, alternative venues were found as close to these locations as possible. This included an event approximately three miles from Ardleigh at Langham Community Centre and a Saturday event at Lawford Venue Centre, also approximately three miles from Ardleigh, for those not able to attend during the week. The venues were shared with local planning authorities ahead of statutory consultation.	X		X	
9-5.114	Request for further clarity on why it is not physically possible for the return leg from the East Anglia	Decision making around the connection arrangements has been reviewed in response to feedback and			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	Connection Node (EACN) substation to use underground cables due to constrictions in crossing the railway line	additional information. In respect of the railway crossing National Grid remains of the view that there is insufficient space for certain trenchless techniques to be deployed for cable to be utilised for both connections. However, there are other techniques but to have certainty over delivery we consider this would need to comprise three tunnels installed by pipejack techniques and may require buildings to each end to provide necessary ventilation. There are also a range of technical difficulties (including restricted space between built developments and a reservoir to be passed beneath) and other considerations (such as an area between the railway and the East Anglia Connection Node (EACN) substation potentially to be included in the next Essex Minerals Plan) meaning that we do not consider underground cable for both connections to the EACN substation to be preferred.				
9-5.115	Criticism that the Colne Valley has not been given the same consideration as the Waveney Valley with respect to the use of underground cables proposed for the Waveney Valley Alternative (e.g. the rationale set out in paragraph 5.4.51 of the Design Development Report for the underground alternative in the Waveney Valley would also apply to the Colne Valley)	National Grid considers each location on its individual merits. In the case of the Waveney Valley, we have concluded that through a combination of challenges to the success of trenchless crossing techniques, the cost of the underground cable based solution and the effects arising from an amended 400 kV overhead line that an entirely overhead line with standard lattice pylons is the preferred solution. Similarly, we considered the merits of adopting a cable section for the Colne Valley crossing but concluded that on the basis it is both outside and not within the setting of a National Landscape the			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		presumption in National Policy Statement (NPS) EN-5 to utilise underground cables in such designated landscapes is not engaged. We also considered whether the level of effects more generally justified, as per NPS EN-5 para 9.2.23, the different effects and costs of the use of cable and concluded that overhead line remained the preferred connection technology.				
9-5.116	Criticism that National Grid has justified the location of the East Anglia Connection Node (EACN) at Ardleigh using the windfarms and Tarchon Interconnector as a reason (e.g. given that National Grid chose the location of these projects' connection point to the grid; given that Tarchon was only planned after the location of the EACN had been advertised)	National Grid has previously considered several alternative sites for the East Anglia Connection Node (EACN) substation during the initial siting work as set out in the Corridor and Preliminary Routeing and Siting Study (CPRSS). It was also considered in response to feedback as set out in the Design Development Reports published in 2023 and 2024 where we considered an alternative site to the west of the A12. The decision making about siting balances the environmental effects, technical consideration and cost arising from the substation and the connections to it for both National Grid and North Falls and Five Estuaries wind farms and the Tarchon project. We continue to consider the EACN substation as proposed to be the preferred location. However National Grid must take account of future flexibility and the potential for additional connections into the EACN substation wherever it is located. A third customer has now been confirmed and there is still the need to preserve future flexibility. We therefore consider the siting of the EACN substation to have been			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		developed appropriately and to remain valid. On this basis no change is proposed.				
9-5.117	Criticism that National Grid has not provided details on what will happen to the existing 25 m UK Power Networks (UKPN) 128 kV line, and concern that this will restrict the area where National Grid has proposed putting the site for the East Anglia Connection Node (EACN) substation at Ardleigh	<p>We have considered this feedback in combination with emerging assessment findings. The East Anglia Connection Node (EACN) substation siting was undertaken from the perspective of establishing the most economic and efficient means of meeting the need for network reinforcement and connecting additional customers. This was set out in the 2022 Corridor and Preliminary Routeing and Siting Study (CPRSS) and has been reviewed in subsequent 2023 and 2024 Design Development Reports (on the Project website) and the 2024 Strategic Option Backcheck and Review (available on the Project website) and the 2025 Strategic Option Backcheck and Review (document reference 7.17).</p> <p>Section 245 (Protected Landscapes) of the Levelling-up and Regeneration Act 2023 (LURA) places a duty on 'relevant authorities', which in this context includes National Grid as a statutory undertaker, to seek to further the statutory purposes of protected landscapes (referred to as the 'seek to further' duty). In relation to National Landscapes (which includes the Dedham Vale National Landscape), this requirement has been incorporated into Section 85 of the Countryside and Rights of Way (CRoW) Act, which states:</p> <p><i>'In exercising or performing any functions in relation to, or so as to affect, land in an area of outstanding natural beauty in England, a relevant authority other than a</i></p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p><i>devolved Welsh authority must seek to further the purpose of conserving and enhancing the natural beauty of the area of outstanding natural beauty'.</i></p> <p>The approach National Grid is taking to meet the 'seek to further' duty in relation to the Project has been detailed in National Landscapes – Duty to Seek to Further the Purposes Report (s85 Countryside and Rights of Way Act 2000) (document reference 5.10). The document details how the National Landscape and 'seek to further' duty has been taken into consideration during Project development and highlights potential further measures. The overall approach has been, and continues to be, discussed with relevant stakeholders (which includes but is not limited to the Dedham Vale National Landscape and Stour Valley Partnership) and follows the guidance published by Defra in December 2024 'Guidance for relevant authorities on seeking to further the purposes of Protected Landscapes' (Defra, 2024). It is intended the finalised measures would be secured by an appropriate mechanism as part pursuant to the Development Consent Order (DCO) process.</p> <p>As part of the package National Grid is proposing the preparation of an initial feasibility study to assess the potential feasibility for the PJ Line removal in the longer term. The PJ Line is an existing 132 kV overhead line between Bramford and Lawford. This work would be limited to a feasibility exercise and any steps beyond that regarding potential removal would be for future consideration with relevant stakeholders entirely outside</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		of the Project and Development Consent Order (DCO). Further detail is available in National Landscapes – Duty to Seek to Further the Purposes Report (s85 Countryside and Rights of Way Act 2000) (document reference 5.10).				
9-5.118	Criticism that visual simulations presented at consultation events did not show the true number of pylons that will be visible from the Dedham Vale National Landscape (previously known as the Dedham Vale Area of Outstanding Natural Beauty (AONB)) due to the short cutoff used (1.5km) (e.g. the visualisations showed no pylons, but the true number could be up to 60 pylons)	The 3D Visualisation tool allowed for existing pylons to be viewed from within 2.5 km either side of the alignment.			X	
9-5.119	Criticism that the Colne Valley has not been given the same consideration as the Dedham Vale National Landscape (previously known as the Dedham Vale Area of Outstanding Natural Beauty (AONB)) and the Stour Valley	The Dedham Vale is subject to a national landscape designation and therefore engages certain aspects of National Policy Statement (NPS) EN-5 which do not apply to areas that are not subject to such national landscape designations. The Colne Valley is not a nationally designated landscape so would be expected to be treated differently from areas that are designated. We have considered locations outside nationally designated landscapes against other aspects of NPS EN-5 and whether there is justification for the effects and additional costs associated with the use of underground cable. In this case the effects at the Colne Valley are not considered to provide that justification. The effects of the Project are assessed and presented in the			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Environmental Statement (ES), and this has identified any need for additional mitigation.				
9-5.120	Criticism that National Grid has not considered Tendring District Council's Planning Policy (including its local plan)	National Grid notes this comment. Whilst the Project will be considered against the policy context contained in National Policy Statements EN-1 and EN-5, consideration has been given to the Adopted Tendring Local Plan, emerging Tendring Colchester Borders Garden Community Plan and relevant Neighbourhood Plans, particularly where they contain policies that may be a material consideration in the determination of applications for development consent. Further details are presented in the Planning Statement (document reference 5.6) and Policy Compliance Document (document reference 5.7) which has been submitted with the Development Consent Order (DCO) application.	X		X	
9-5.121	Request that it is set out in the Construction Management Plan that working hours for the Project are 7am to 7pm, and that security lighting will be motion activated	As stated in Chapter 4: Project Description (document reference 6.4) of the Environmental Statement (ES), it is assumed that the core working hours for construction (as set out within a Requirement of the Draft Development Consent Order (DCO) (document reference 3.1) would be: Mondays to Fridays: 07:00 –19:00 Saturdays, Sundays, and Bank Holidays: 07:00 –17:00 Proposed construction lighting for the Project is also detailed in ES Chapter 4: Project Description (document reference 6.4) and the Outline Code of Construction Practice (CoCP) (document reference 7.2). All lighting			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		would be designed in accordance with the appropriate design standards. Construction lighting would be of the lowest luminosity to safely perform each task and include motion sensors or switched off when not in use where it is safe and efficient to do so.				
9-5.122	Criticism that the routing of the Project has been dictated by the illogical siting of the East Anglia Connection Node (EACN) / Criticism that National Grid has not reconsidered the siting of the EACN	The justification for the siting of the East Anglia Connection Node (EACN) substation was initially set out in the 2022 Corridor and Preliminary Routeing and Siting Study (CPRSS) including details of alternative sites considered and the reasons for the selection of the EACN substation location. The subsequent 2023 and 2024 Design Development Reports (available on the Project website) and 2025 Design Development Report (document reference 5.15) have carefully considered other locations raised in feedback which include alternatives to the west of the A12 and at Bradwell amongst other suggestions. The reports have set out the basis for our view that the preferred location for the EACN substation remains the site to the east of Ardleigh taking into account the costs and effects associated with connections to and from it to the National Transmission System and connections from customers when considered in the context of National Grid's duties and the relevant policies.	X		X	
9-5.123	Criticism that National Grid has not considered the West Bergholt Neighbourhood Plan	National Grid notes this comment. Whilst the Project will be considered against the policy context contained in National Policy Statements EN-1 and EN-5,	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		consideration has been given to the Adopted West Bergholt Neighbourhood Plan (August 2019). Further details are presented in the Planning Statement (document reference 5.6) and Policy Compliance Document (document reference 5.7).				
9-5.124	Criticism that National Grid has not considered Colchester Borough Council's countryside environment policies including section 14.3.7 which refers to ten local wildlife sites which are protected within the local planning system	Chapter 8: Ecology and Biodiversity (document reference 6.8) of the Environmental Statement (ES) considers the potential impacts during the construction and operation of the Project on biodiversity (including local wildlife sites designated by Colchester Borough Council) and presents committed measures to avoid or mitigate impacts. Further details on mitigation measures are set out within the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and Outline Code of Construction Practice (CoCP) (document reference 7.2). Further detail of compliance with these planning policies is set out in the Planning Statement (document reference 5.6) and Policy Compliance Document (document reference 5.7)	X			
9-5.125	Criticism that Little Wenham has not been given the same consideration as the Waveney Valley despite its historic significance (e.g. it has the most heritage buildings along the Project)	All historic assets have been considered on a case by case basis. With the Project at around 1.4 km separation from Little Wenham, the effects are judged to be at a level that is not inconsistent with policy. (National Planning Policy Framework, Overarching National Policy Statement (NPS) for Energy EN-1 and NPS EN-5). On this basis there is no policy based justification that a			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		change to route or technology is required. We have undertaken an Environmental Impact Assessment (EIA) to assess the potential impact of the Project, and this has identified any need for additional mitigation. We have also engaged with Historic England and not been advised of a perceived need for further mitigation from their perspective.				
9-5.126	Criticism that the Project between Pylons TB35 and TB45 falls under Section 106 of the Town and Country Planning Act and therefore there is the need for a Section 106 agreement, and this need should be discussed between the developer of the Project and the planning officer assigned to the development and said discussions should have taken place prior to the planning application having been submitted	<p>National Grid notes this comment. Section 106 Agreements are legal agreements between a determining authority and a developer, or undertakings offered unilaterally by a developer, that ensure that certain extra works related to a development are undertaken.</p> <p>A review of planning applications between TB35 and TB45 has failed to identify any extant planning consents which are subject to Section 106 Agreements. Discussions on the need for a Section 106 Agreement have been undertaken with the host local authorities where the need for such an agreement has been identified.</p> <p>No discussions have taken place between National Grid and Colchester City Council with regard to the need for a Section 106 Agreement.</p>	X			
9-5.127	Criticism that there has not been enough consultation on the East Anglian Connection Node (EACN), and suggest further consultation is	The East Anglia Connection Node (EACN) substation is a proposed new substation on the Tendring Peninsula near Ardreigh. This has been included in National Grid's proposals at the non-statutory consultations in 2022 and	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	undertaken for the East Anglian Connection Node (EACN)	<p>2023 and the statutory consultation. At all stages of consultation, we welcomed feedback on all aspects of our proposals, including the EACN substation. The information on our development of proposals for the substation is available in our Corridor Preliminary Routing and Siting Study (CPRSS) which is available on the Project website.</p> <p>We believe that this is an adequate level to let people leave feedback on our proposals.</p>				
9-5.128	Criticism that National Grid suggested relocating respondent's business during construction works for the Project (e.g. lack of understanding of this type of business, given that there are no suitable alternative sites in the area such as for replacement grazing and/or hacking, and this would not allow for 24/7 presence on the site)	<p>National Grid acknowledges that landowner's businesses may be affected by the Project during construction and would where possible seek to agree/put in place mitigation to lessen any effects.</p> <p>Where mitigation cannot be used or does not fully address the effects, National Grid would compensate landowners in line with the Compensation Code.</p>			X	
9-5.129	Criticism of National Grid's response to feedback provided in the 2023 Consultation regarding the visibility of the Cable Sealing End (CSE) compound at Little Horkesley and consequent damage to the Dedham Vale (being 1.3 km distant), and criticism of National Grid's visual simulations to show the view from Wormingford (e.g. it is trivial to produce another view from Crabtree Lane in which the CSE compound negatively impacts the view of the Vale)	National Grid notes the respondent's feedback but also notes that it is the level of effects that are taken into consideration in siting decision making, not the fact of whether infrastructure is or is not visible. The infrastructure may be visible but if this does not lead to a level of effect that, in policy terms, engages parts of policy that would lead to a need for change, then there is no basis for the location of the infrastructure to be changed. In this case the effects on residential views, listed buildings, and the National Landscape amongst other factors do not justify the effects and additional			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>costs from a change in Cable Sealing End (CSE) compound location. The Environmental Impact Assessment (EIA) has assessed the impact of the Project and identified any need for additional mitigation. The EIA is presented in the Environmental Statement (document reference Volume 6: Environmental Statement) which has been submitted as part of the Development Consent Order (DCO) application.</p> <p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the EIA. The approach to the LVIA follows professional guidance as set out in ES Appendix 13.1: Landscape and Visual Methodology (document reference 6.13.A1). The LVIA has been produced by Chartered Landscape Architects, based on findings of desk top research and backed up by numerous site visits as outlined within the methodology. The LVIA includes an assessment on both landscape character and visual amenity and sets out the potential landscape and visual effects of the Project, including those close to Little Horkesley in Section D. The LVIA is presented in ES Chapter 13: Landscape and Visual (document reference 6.13).</p> <p>A selection of landscape and visual viewpoints have been used to produce technical visualisations to support the LVIA and assist stakeholders and ultimately the Planning Inspectorate to understand the likely effects of the Project on landscape character and on views from specific points. This includes Viewpoint 4.04: Public Rights of Way (PRoW) off Crabtree Lane in Figure 13.7:</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Visual Receptors and Viewpoints (document reference 6.13.F7), which illustrates how the Project would appear in views from the landscape to the south-east of Little Horkesley. It is intended to capture how the CSE compound and overhead line (TB35 and TB36 onwards) would appear in this area. Viewpoint 4.07: School Road / Stour Valley Path, west of Little Horkesley in Figure 13.7: Visual Receptors and Viewpoints (document reference 6.13.F7), which illustrates how the Project would appear in views from the landscape to the west of Little Horkesley. It is intended to capture how the CSE compound and overhead line (TB35 and TB36 onwards) would appear in this area from views within the Dedham Vale National Landscape. Viewpoint 4.34 Crab Tree Lane, north of West Bergholt in Figure 13.7: Visual Receptors and Viewpoints (document reference 6.13.F7) is intended to illustrate how the Project would appear in views from the landscape to the north of West Bergholt, capturing how the CSE compound and overhead line (TB35 and TB36 onwards) would appear in this area in views towards the Dedham Vale National Landscape near Little Horkesley. We have engaged with a range of stakeholders (including Statutory Environmental Bodies (SEBs) and relevant local planning authorities) throughout the development of the Project design and environmental assessment work, including the selection of viewpoint locations.</p> <p>Further visual assessment work relating to this area can be found in Visual Receptor Area (VRA) D2 Little</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Horkesley and Wormingford, which can be found in ES Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3).				
9-5.130	Criticism that National Grid has not considered the Marks Tey Neighbourhood Plan 2020 to 2033 (e.g. MT06, MT01, MT08)	The Marks Tey Neighbourhood Plan was adopted in April 2022 and forms part of the statutory development plan for Colchester. The Neighbourhood Plan and relevant policies are considered within the Planning Statement (document reference 5.6) and Policy Compliance Document (document reference 5.7).	X		X	
9-5.131	Request further consultation and cooperation with Raydon Wings Aerodrome, with this ongoing throughout construction to mitigate the impact of the Project	National Grid has appointed an independent aviation consultancy who has engaged (with National Grid also present) with the operator of Raydon Wings Aerodrome. Our specialists have assessed that, whilst the overhead line represents a new obstacle in the vicinity of the aerodrome, it can continue to operate, although minor changes to operational procedures may be undertaken by the operator. We will continue to consult with them to confirm the acceptability of proposed mitigations and to manage temporary works to install underground cables, minimising disruption to aerodrome operations where possible. Further information on the assessment of airfields can be found in the Environmental Statement (ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-5.132	Criticism that the Project contradicts the Countryside and Rights of Way Act 2000, which protects National Landscapes	<p>Section 245 (Protected Landscapes) of the Levelling-up and Regeneration Act 2023 (LURA) places a duty on relevant authorities, which in this context includes National Grid as a statutory undertaker, to seek to further the statutory purposes of protected landscapes (referred to as the 'seek to further' duty). In relation to National Landscapes, this requirement has been incorporated into Section 85 of the Countryside and Rights of Way (CRoW) Act, which states:</p> <p><i>'In exercising or performing any functions in relation to, or so as to affect, land in an area of outstanding natural beauty in England, a relevant authority other than a devolved Welsh authority must seek to further the purpose of conserving and enhancing the natural beauty of the area of outstanding natural beauty'.</i></p> <p>The approach National Grid is taking to meet the 'seek to further' duty in relation to the Project has been detailed in National Landscapes – Duty to Seek to Further the Purposes Report (s85 Countryside and Rights of Way Act 2000) (document reference 5.10). The document details how the 'seek to further' duty has been taken into consideration during Project development and highlights potential further measures. The overall approach has been, and continues to be, discussed with relevant stakeholders and follows the guidance published by Defra in December 2024 'Guidance for relevant authorities on seeking to further the purposes of Protected Landscapes' (Defra, 2024), as well as the</p>	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		principles outlined in the current and draft Dedham Vale National Landscape and Stour Valley Management Plans.				
9-5.133	Criticism that National Grid has breached a signed access agreement as respondent has not yet received a final report following the walkover archaeological study (which collected and recorded significant Roman clay tiles close to the compound location) at the proposed location for Pylons TB36 and TB37	<p>If a landowner has concerns over a survey licence agreement or feel that they have not been provided with required information they should contact the Project lands team: Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.</p> <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD.</p>			X	
9-5.134	<p>Criticism of the Preliminary Environmental Information Report (PEIR) in relation to Langham Hall Estate, including the following:</p> <ul style="list-style-type: none"> - Criticism that Table A13.1.10 of the PEIR concludes that impact on trees and hedgerows is "not significant" at Langham Hall Estate (e.g. as loss of trees is permanent and impact cannot be remedied in future), and that the PEIR does not explain how National Grid has undertaken its assessment or identify the criteria upon which it has reached its conclusion; - Criticism that Table A13.1.6 contradicts 13.8.9 and 13.8.24 in this locality, and that the conclusion is not robust given the impact of the Project on the 	<p>National Grid notes the respondent's feedback. Although an underground route was previously proposed at this location and assessed in the Preliminary Environmental Information Report (PEIR), following feedback received at statutory consultation, we are proposing a change to the underground cable alignment at this location which would move the alignment to the west and therefore avoid Langham Hall Estate.</p> <p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the Environmental Impact Assessment (EIA). The LVIA includes an assessment of the Project on landscape character and visual amenity including the consideration of Dedham Vale National Landscape. The approach to the LVIA follows</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>National Landscape and environment;</p> <ul style="list-style-type: none"> - Criticism that the Design Development report paragraph 5.4.116 is inconsistent with the 180m easement free of any vegetation except grass and a 21m wide haul road corridor (with 8m haul road) as referenced at paragraph 4.8.48 of the PEIR Main Text, running adjacent to the underground cable corridor (paragraph 4.8.46); Criticism there is no mention in the PEIR of the historic entrance to Langham Hall Estate lined with mature lime trees, or the proximity of the proposed haul road to the Estate entrance or how the proposals would fundamentally change the approach to Grade I Listed St Mary's church at the same time as blocking off the only entrance to Glebe Farm; - Criticism of the landscape assessment and the heritage assessment; - Criticism of information provided on flooding (e.g. high level screening exercise only which identifies possible sources of flooding during construction, operation and maintenance of the Project without demonstrating how flood risks will be managed) 	<p>professional guidance as set out in ES Appendix 13.1: Landscape and Visual Methodology (application document reference 6.13.A1). This sets out the justification for the Study Area used for the assessment which has been determined by the nature and scale of the Project and the nature of the surrounding area and considers the landscape and/ or views that the Project may influence in a significant manner.</p> <p>On the Design Development Report (DDR) point, there may have been a misunderstanding as the DDR reference is to a potential linear length of trenchless crossing whereas the PEIR reference relates to a width across the of corridor. These documents are therefore not inconsistent, and no change is proposed.</p> <p>The LVIA is presented in ES Chapter 13: Landscape and Visual (application document reference 6.13) and is supported by ES Appendix 13.5: National Landscape Assessment Study (Annex A: Dedham Vale National Landscape Setting Study) (application document 6.13.A5) which considers impacts on the National Landscape and its special qualities.</p> <p>Detailed information on how flood risk would be managed during construction and operation of the Project is provided in the Flood Risk Assessment (document reference 7.9) that has been prepared. The flood risk management measures are secured through the Outline Code of Construction Practice (CoCP))</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>(document reference 7.2) and the Environmental Commitments Register.</p> <p>Following on from the PEIR, the impacts of the Project on the historic environment have been assessed in Chapter 11: Historic Environment (document reference 6.11) of the Environmental Statement (ES). The assessment considered the potential impact, of all elements of the design, on archaeology, historic buildings and historic landscapes and includes assessment of potential for physical impact and impact through change to setting that affects the value of a heritage asset. Both Langham Hall (The Hall) and St. Mary's Church were assessed as having a minor adverse significance of effect (not significant) during the construction phase and no change during operation.</p>				
9-5.135	<p>Concern about the impact of the Project on flooding / impact of flood risk on the Project at Langham Hall Estate and the area in the north of the Estate, including in the area identified as the entry/exit point for the trenchless crossing (Horizontal Directional Drilling (HDD) element) of the River Stour north from the Estate's northern boundary with the river.</p> <p>Likewise, concern about location of the proposed river crossing for the Project as it goes right through the extraction point for irrigation of the farm at Langham Hall Estate and suggest that National Grid should engage with Anglian Water on this. With this, request for further information on flood risk in respect</p>	<p>The Project design has evolved to move its alignment west, avoiding Langham Hall Estate and land to the north. The impact of the Project on flood risk associated with the River Stour is appraised within the Flood Risk Assessment (FRA) (document reference 7.9) that has been prepared. The FRA includes details of the flood risk management and mitigation measures that would be adopted during the Projects construction and operation to ensure the resilience of the Project and to prevent off site increases in flood risk. At the Stour crossing details of flood conditions have been collected from the Environment Agency flood model and this data would be used to inform programme and management of the</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	of the Estate both in terms of the ability of National Grid to install infrastructure in the manner proposed, the effect of that infrastructure on flood risk for the Estate in the longer term and specific details of how flood risk has been assessed and the proposals developed where the Project passes through the Estate	<p>River Stour Horizontal Directional Drilling (HDD) crossing construction. Where the Project interacts with existing land drainage and irrigation systems, there is a commitment within the Outline Code of Construction Practice (CoCP) (document reference 7.2) to provide suitable alternative provision in agreement with landowners/tenants.</p> <p>The crossing of the River Stour is constrained by various existing features and conditions. This includes a gas main to the east of the corridor, a Source Protection Zone 1 to the west of the corridor and various waterbodies and meanders in the River Stour between the two proposed corridors. These constraints mean that there is not sufficient width in either corridor for a typical Horizontal Directional Drilling (HDD) installation of the proposed underground cables. The design includes measures to mitigate flood risk, including an allowance for additional laydown areas to the north and south of the flood plain (e.g.: for temporary soil storage). The design also includes space for drainage attenuation ponds, to control the rate of discharge of surface water from the works to a rate agreed with the relevant Lead Local Flood Authorities. Crossing of underground utilities (both public and private) is normal practice for underground cable installation. Underground cable installation can normally be conducted without compromise to existing utilities. Detailed site investigations will be undertaken prior to construction to determine the location and nature of existing utilities.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-5.136	<p>In the course of the 2023 consultation, National Grid had themselves suggested an alternate site for the western Cable Sealing End (CSE) compound near to Pylon TB40 (now closer to Pylons TB41/TB42) instead of the currently planned location atop the ridge of the Great Horkesley Plateau. Community responses argued that such location would be much better (i) eliminating impact upon the Dedham Vale due to topology – the site is some 16m below the ridge and offers potential through small adjustments to select a site more than 30m beneath the ridge, (ii) eliminating the 'gateway' effect across the B1508, (iii) eliminating impact to the cluster of Listed Buildings impacted by the proposed site. Community responses also highlighted that underground cables would allow a more direct shorter route, which would have been impossible with pylons, removing some 700m from the path.</p> <p>National Grid responded that: "we concluded that the effects reported to drive a request for change did not, in the context of national policy of National Grid's statutory duties, justify the higher cost of additional underground cables to bill paying consumers" (Table 2.2 Ref 4.5.45 Non-Statutory Consultation Feedback Report) and "... Moving the location of the western CSE compound further to the south to reduce residential amenity effect to a number of residential properties and to reduce effects on the [Dedham Vale National Landscape</p>	<p>National Grid appreciates that different respondents may have different interpretations of policy but has developed the Project based on its interpretation which is set out in the Planning Statement (document reference 5.6). In respect of the specific points made National Grid notes that: i) its own assessment bearing in mind constraint and engineering considerations is that the height change suggested are not achievable; ii) & iii) the perception of a gateway effect is not considered to be a compelling driver for change but along with heritage effects forms part of the considerations by technical specialists in judging the potential benefits of change as part of the decision making process; iv) it cannot just be assumed that a direct line can be taken, in this case National Grid considered an appropriate route and this did not achieve the stated reduction.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>(previously known as the Dedham Vale Area of Outstanding Natural Beauty (AONB)]. Whilst acknowledging the reduction in effects from such a change, it is noted that the change would transfer effects to other residential properties. It is also considered that any effects on the AONB in the terms established in NPS EN-5 section 2.9 do not occur at a level that would be considered to meet a threshold justifying the effects and additional cost of additional 800m of underground cable.” (5.4.134 Design Development Report).</p> <p>There are four significant problems with this response: (i) whereas National Grid acknowledges impacts to the Dedham Vale and that rerouting would eliminate these it determines that the impacts are acceptable. However, the National Policy Statement for Energy NPS-EN5 makes it clear that even residual impacts to the National Landscape are unacceptable and that rerouting should occur in order to avoid impact or else undergrounding must be used to eliminate (ii) whereas National Grid argues cost as a reason to accept the damage, in the terms of NPS-EN5 section 2.9 the cost is not a relevant argument when considering reduction of impact to the National Landscape (iii) National Grid wrongly states that the increase in cable length would be in the order of 800m and presumably base their cost arguments on this, ignoring the potential to reduce length of cable by approximately 700m</p>					

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	through use of a more direct underground route, any estimate of cost is therefore wrong (iv) whereas National Grid argues that impact would be transferred to other residential properties this is untrue: those properties are already impacted by a similar angle-tower in the current designs and the proposed change would represent a significant reduction in impact to Listed Buildings					
9-5.137	Criticism that the Project is contrary to the requirements of the Colchester and the Babergh and Mid Suffolk Joint Local Plan in respect of the Dedham Vale	National Grid notes this feedback. While the application for development consent will be considered by the Secretary of State primarily against the policies in the relevant National Policy Statement (NPS) EN-1 and EN-5, the Secretary of State must also take Development Plans into consideration if they are ' <i>both important and relevant to the Secretary of State's decision</i> ' (Section 104 of the Planning Act 2008). Accordingly, National Grid has taken into consideration the relevant development plans (both adopted and emerging) which have been prepared by all of the relevant local planning authorities along the route of the Project. Further details are provided in the Planning Statement (document reference 5.6) and Policy Compliance Document (document reference 5.7) which has been submitted as part of the Development Consent Order (DCO) application.			X	
9-5.138	Criticism that whilst National Grid has already determined that the Stour Valley Project is deserving	National Grid has made decisions within the policy of the National Policy Statement (NPS) EN-1 and EN-5 that			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	of protection (set out in the 2022 Corridor Preliminary Routeing and Substation Siting Study (CPRSS)), National Grid is not affording the same protection to the Colne Valley (due to working from a now outdated version of the National Policy Statement for Energy NPS-EN5 in force at that time)	were enacted in early 2024. The River Stour crossing is within an area that is nationally designated (so there is a presumption in favour of using underground cable) whereas the Colne Valley is not designated in terms that directly engage NPS EN-5. Following the feedback and after further consideration, we do not consider that the other tests in NPS EN-1 and EN-5 are engaged. Even if they were engaged the level of effect is expected, or if engaged are not met.				
9-5.139	Criticism that National Grid did not visit or complete / request surveys at respondent's property on Gun Hill (address provided by respondent) (e.g. due to being outside of the Draft Order Limits for the Project)	The scope and methodologies adopted to undertake surveys (including the area needed to be surveyed for each habitat/species) for the Project have been agreed with stakeholders including Local Planning Authorities (LPAs) and Natural England (NE). Many survey areas are not required to extend beyond the order limits. The results of the surveys undertaken for the Project are outlined within the Appendices of the respective topic chapters of the Environmental Statement (ES) (document reference: Volume 6: Environmental Statement).			X	
9-5.140	Concern that National Grid has not complied with their legal duties outlined in the Nationally Significant Infrastructure Projects Advice Note with respect to the cumulative impact on Ardleigh	Chapter 17: Cumulative Effects (document reference 6.17) of the Environmental Statement (ES) has been prepared in accordance with the EIA Scoping Report (document reference 6.19) and EIA Scoping Opinion (document reference 6.20) and the 'Planning Inspectorate Advice Note: Nationally Significant			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Infrastructure Projects: Cumulative Effects Assessment' (September 2024).</p> <p>In line with this Advice Note, the Project has identified suitable Zones of Influence for each environmental aspect considered within the ES. Ardleigh falls within Zones of Influence and has therefore been assessed within the Cumulative Effects Assessment.</p>				
9-5.141	Criticism that National Grid has not considered local plan policies in Colchester and Babergh and Mid Suffolk	<p>National Grid notes this comment. It is important to note that National Policy Statement (NPS) EN-5, taken together with the overarching NPS for energy (EN-1), provides the primary basis for decisions taken by the Planning Inspectorate on applications for development consent it receives for Nationally Significant Infrastructure Projects (NSIPs) for electricity networks infrastructure.</p> <p>The adopted local plans of the local authorities along the route of the Project have been taken into consideration. This is reported on in the Planning Statement (document reference 5.6) and Policy Compliance Document (document reference 5.7).</p>			X	
9-5.142	Criticism that there was not a trenching / drilling expert at the consultation event in Lawford (e.g. despite being one of the closest events to the National Landscape)	<p>Our public information events were attended by a range of our senior Project team, including representatives from the lands, engineering, and environmental teams. If any members of the public felt their questions were not appropriately answered at the events, we also held six public webinars that were attended by specialist members of the team. Alternatively, we had dedicated</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		communication channels available to the public where they could ask questions which would be passed on to the relevant member of the team.				
9-5.143	Criticism that National Grid added a new field (in this Section) to landowner's pack during the consultation and it was for the incorrect address (plan and reference provided by respondent)	<p>If landowners have any concerns over the accuracy of documentation that is sent out as part of the Project, they should contact the Projects lands team.</p> <p>Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.</p> <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD.</p>			X	
9-5.144	Criticism that National Grid did not provide respondent with printed documents requested at the Lawford consultation event as promised	We had the option at our public information events for members of the public to request copies of the consultation materials. During busier periods of consultation, there may have been a delay in the delivery of these. If someone had not received the documents they requested, or wanted to request any further documents, we had dedicated communication channels open where they could do so.			X	
Design Change						
9-5.145	Oppose the use of underground cables	National Grid has carefully considered the feedback received during the 2022 and 2023 non-statutory consultations, the statutory consultation, targeted consultations and landowner consultation, the	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>alternatives available, and other factors including our duties and obligations. These duties include balancing the need to be economic and efficient, which includes keeping costs down in the interests of the bill-paying consumers, with a duty to have regard to preserving amenity, which includes the natural environment, cultural heritage, landscape and visual quality, National Policy Statement (NPS) EN-5 makes clear that <i>'the government's position that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)'</i>. The NPS also confirms that widespread and significant adverse landscape and/or visual impacts in other locations may also justify the use of undergrounding. We may also adopt underground cables in other circumstances such as to cross existing 400 kV overhead line infrastructure.</p> <p>Where the installation of underground cables is required in lieu of overhead lines, the design of the Project has incorporated suitable consideration of the existing environment, ecology and site ground conditions based on site specific survey data.</p>				
9-5.146	Suggest a minimum distance that the Project should be sited from residential areas / residences	National Grid does not use standard minimum distances as a routeing consideration. Applying an arbitrary distance may be too big or too small for the specific circumstances. We utilise the Holford Rules (a			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		description of the Holford Rules can be found in Appendix I22 of this report) informed by feedback and professional judgement to define appropriate corridors and alignments that are consistent with the relevant policy framework and duties. In response to feedback to the 2022 and 2023 non-statutory consultations, statutory consultation, targeted consultations and landowner consultation, we have modified the alignment in various locations to increase separation to properties where this is possible without undue deviation or transfer of effects to other similar properties or other receptors. A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the Environmental Impact Assessment (EIA). The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13). This assesses the impact of the Project and identifies the need for additional mitigation if required.				
9-5.147	Suggest that existing overhead lines in this section should be removed	<p>The existing electricity transmission network provides power, via the local distribution network, into the local area where it is used in homes and businesses. Such lines cannot just be removed as power supplies would not be maintained.</p> <p>The need case and funding for the Project is to deliver the new network reinforcement needed, rather than to remove existing overhead lines which would need to be replaced by another form of connection such as underground cables.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Unless required for crossings or mitigation, undergrounding existing overhead lines on the transmission network would not be in accordance with National Policy Statement (NPS) EN-5 and would result in substantial cost to bill payers. There may also be significant environmental impacts due to the removal works on sensitive ecological and archaeological receptors as well as constraints from either existing buildings or unsuitable ground conditions.				
9-5.148	Suggest that existing overhead lines in this section should be replaced by underground cables	<p>National Policy Statement (NPS) EN-5 establishes the position that the starting basis for new connections is a presumption on the acceptability of overhead lines but with this presumption reversed within designated landscapes and in certain other circumstances.</p> <p>The existing electricity transmission network provides power, via the local distribution network, into the local area where it is used in homes and businesses. The need case and funding for the Project is to deliver the new network reinforcement needed, rather than to remove existing overhead lines by undergrounding them.</p> <p>We have identified a number of locations where we are proposing to place existing overhead lines underground. These locations are where existing 132 kV and lower voltage lattice pylon lines are crossed by the proposed 400 kV overhead line and / or mitigation of effects are considered necessary. This includes locations such as</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		at Mellis, between Offton and Bramford Substation, to the south of Bramford Substation and near Fuller Street. Unless required for mitigation, undergrounding existing overhead lines on the transmission network would not be in accordance with NPS EN-5 and would result in substantial cost to bill payers. There may also be significant environmental impacts due to the removal works on sensitive ecological and archaeological receptors as well as constraints from either existing built form or unsuitable ground conditions.				
9-5.149	Suggest that the existing overhead lines in this section are reinforced / upgraded instead	The existing transmission network in the region was upgraded during 2022 and 2023 to ensure the system is running at its most efficient performance. The existing assets / networks are not able to be upgraded sufficiently to cope with the new future demands expected on the network. As a result, new lines and substations would be required to accommodate the changing demands on the network.			X	
9-5.150	Suggest that the Project is routed away from populated / residential areas	Deciding where and how to build new high voltage electricity lines is a complex issue and National Grid is mindful of the potential effects this infrastructure may have on local communities and the concerns these may bring. We recognise that people living near our transmission infrastructure, including high voltage overhead lines, may have concerns about audible noise and potential health impacts. It has sometimes been	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>suggested that minimum distances between properties and overhead lines should be prescribed.</p> <p>We do not consider this appropriate since each instance must be dealt with on its merits. However, we have always sought to route new lines away from residential property on grounds of general amenity where possible.</p> <p>We have undertaken a noise and vibration assessment which can be found in the Environmental Statement (ES), Chapter 14: Noise and Vibration (document reference 6.14) that forms part of the Environmental Impact Assessment (EIA) for the Project. Noise levels and the effect on residential properties as well as other sensitive areas, such as hospitals and schools, are carefully considered during planning, assessed according to the appropriate UK standards, and mitigated where necessary. We set strict technical standards for the equipment we install on our network. These will apply to the proposed new East Anglia Connection Node (EACN) substation, and extensions required to the existing Norwich Main, Bramford, and Tilbury Substations. These standards include requirements to ensure the occurrence of audible noise is eliminated or reduced as far as practicable. Therefore, significant adverse effects from noise are not expected.</p> <p>Noise from overhead lines is predominately determined by the conductor design, voltage and weather conditions. The overhead line will be designed using a relatively quiet conductor that meets the design</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>specification required, and operational noise is not likely to be significant at nearby sensitive receptors under any weather conditions. Pylon fittings, such as insulators, dampers, spacers, and clamps, are also designed and procured in accordance with a series of National Grid Technical Specifications to reduce the potential for audible noise and tones to occur from all types of fittings. Where noise does occur, it is likely to be localised and of short duration. If this is due to a fault, action can be taken to rectify it. A technical note has been submitted as part of the application for development consent to support scoping out noise associated with overhead lines from the Environmental Statement (ES).</p> <p>In addition, we have undertaken a Landscape and Visual Impact Assessment (LVIA) for the Project.</p> <p>This includes an assessment on both landscape character and visual amenity. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13).</p> <p>The health and safety of the public, local communities and employees is central to everything that we do. The UK has a carefully thought-out set of policies for protecting us all against Electric and Magnetic Fields (EMFs), the main component of which is exposure guidelines. The exposure guidelines are set by independent scientific bodies and are based on decades-long studies into the effects of EMFs and ill</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>health. After those decades of research, the weight of evidence is against there being any health risks of EMFs below the guideline limits. Our approach is to ensure that our network comply with those policies, which are set by Government on the advice of their independent advisors. The Project is designed to ensure it is fully compliant with these policies and guidelines. This ensures that health concerns are properly and adequately addressed.</p> <p>Policies for both noise and EMF are incorporated into the decision-making process for development consent as set out in National Policy Statement (NPS) EN-5. It is National Grid's policy to ensure that all its equipment complies fully with those policies and guidelines. The application for a Development Consent Order (DCO) includes assessments against these policies, including both construction and operational noise and EMF.</p>				
9-5.151	Suggest that the Project should run in closer to / parallel to the existing overhead lines	<p>National Grid notes the potential for close paralleling existing overhead lines to reduce the level of effects that may arise from a new overhead line.</p> <p>However, where existing overhead lines are present along the proposed route, there are constraints and features that mean, overall, we consider close paralleling would lead to greater effects on receptors in the area and be less compliant with the Holford Rules or be less consistent with the policy to be economic and efficient. A summary of the Holford Rules is provided within Appendix I22 of this report. A number of</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		residential properties are present in close proximity to the existing 400 kV overhead line meaning that if the overhead lines were close paralleled it would result in the properties having an overhead line close to both sides. There are also some locations where the combination of existing physical and environmental features (road infrastructure, commercial and residential properties etc) presents very substantial challenges to routeing and siting. As a result, whilst close paralleling may appear beneficial in some sections, overall, the increased environmental effects where the overhead lines have to converge and diverge, and those increased effects on properties with overhead lines on both sides are considered greater than those introduced by a new overhead line separated from existing 400 kV overhead lines. Whilst crossings and use of underground cable technology may be able to address various constrained locations, we consider the costs and environmental effects arising from the additional infrastructure required to be less compliant with our duties and relevant policies.				
9-5.152	Suggest that underground cables are used for the entirety of this section	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors.	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)'</i>. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>give rise to significant adverse effects (in environmental impact terms), we do not consider this section in its entirety would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.</p> <p>Therefore, whilst undergrounding the whole of this section is not considered appropriate, our proposals do include underground cable within the Dedham Vale National Landscape (previously known as Area of Outstanding Natural Beauty (AONB)) in accordance with NPS EN-5. Prior to our 2023 non-statutory consultation we identified the need to extend the underground cable beyond the National Landscape boundary because of potential effects, we have further extended this section of underground cable following consideration of feedback on our 2023 non-statutory consultation and additional investigation into potential effects. We also identified an approximately 4 km section near Great Horkesley as meeting the particularly sensitive criteria where underground cable is also proposed. Additionally, underground cable is proposed at Fairstead for a 400 kV overhead line crossing.</p>				
9-5.153	Suggest that underground cables are used in populated / residential areas	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant			X

		<p>5.10.34) to also consider whether the use of underground cable was justified the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). We are proposing to underground a section of the alignment between the East Anglia Connection Node (EACN) substation, through the National Landscape to just north of Raydon Airfield. A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the remaining overhead line section of the Project between Bramford Substation and the EACN substation would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		6.13) and this has identified any need for additional mitigation.				
9-5.155	Suggest that the Project uses underground cables from Belstead / Washbrook to enable a more direct route from Belstead to Holton (e.g. to preserve the countryside, avoid impacting a frequently used public footpath, and to mitigate the Project having a disproportionate effect on Chattisham)	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is ' <i>that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)</i> '. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project from Belstead to Holton would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
9-5.156	Suggest that Pylons JC21 and / or JC22 are relocated (e.g. to avoid the Project having a disproportionate effect on Chattisham; to mitigate impact on footpaths and wildlife)	It is not possible to relocate pylons JC21 and JC22 on to other routes without transferring and increasing effects as set out in the Design Development Reports published in 2023 and 2024. Views of the pylons from the village and residential properties in Chattisham are filtered and screened to some degree by trees within gardens and hedgerows. The pylons are also relatively evenly spaced from the nearest property having been positioned to be mid span with the nearest pylons at just over 200 m distance. It is noted that on the road into the village from the south, the absence of roadside hedgerows leads to			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		an open but transitory view to pylons at just under 100 m from the road at the closest point. This is not considered to be a disproportionate effect on Chattisham nor inconsistent with planning policy and therefore no change is proposed.				
9-5.157	Suggest that Project follows railway lines in this section instead / Suggest that overhead lines for rail are upgraded instead	<p>It is not possible to upgrade the overhead lines above electrified railways to carry the necessary amount of power. The rail infrastructure supplies a much lower level of power at lower voltage.</p> <p>While there could be potential benefits from infrastructure being concentrated geographically, i.e., by routeing the Project in close proximity to existing road and rail infrastructure, National Grid does not consider these benefits arise for the whole route, though rail lines or roads potentially align (at least in part) with parts of the general routeing of the Project. However, there are constraints and features that mean that we do not consider close paralleling would reduce environmental effects or improve compliance with the Holford Rules or be more consistent with the policy requirement to be economic and efficient. A summary of the Holford Rules is provided within Appendix I22 of this report. A number of residential properties, as well as hamlets, villages and towns, are present in close proximity to the existing transport infrastructure necessitating multiple diversions of an overhead line. There are also some locations where the combination of existing physical and environmental features (railway and road infrastructure,</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		commercial and residential property, woodlands and orchards) presents very substantial challenges to routeing and siting. As a result, whilst close paralleling of rail infrastructure may appear beneficial in some short sections, overall, the increased environmental effects from multiple changes of direction are considered greater and less compliant with the Holford Rules than those that are associated with a new route alignment.				
9-5.158	Suggest that underground cables are extended from the end of the underground section at Pylons TB35/TB36 to at least Pylon TB70 (i.e. to cross the River Colne, River Roman and their tributaries)	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is ' <i>that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)</i> '. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project between TB35 to TB70 would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
9-5.159	Suggest that the Project is rerouted away from Haveli, Langham Road, CO4 5HT (i.e. to mitigate impact on residents)	National Grid has considered the respondent's feedback. We are unable to reroute the alignment away from this property due to several constraints in this area, including other properties.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-5.160	Suggest the Project uses underground cables across the Langham Road stretch	<p>National Grid has considered the respondent's feedback. Undergrounding of the cables in this location would cause a greater effect on the neighbouring properties due to the required width of the construction swathe being significantly wider than the pylon/ wire swing corridor. The use of pylons minimises the effect, albeit with visual implications.</p> <p>In addition to the above reason, National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)'</i>. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also</p>			X

		concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at Great Horkesley to Fordham would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
9-5.168	Suggest that the Project uses undersea cables from Manningtree	National Grid has considered alternative strategic proposals (including offshore proposals) in the 2022 Corridor and Preliminary Routeing and Siting Study (CPRSS) and in subsequent Strategic Option Backcheck and Review documents published in 2023 and 2024 (found on the Project website). The Design Development Reports have also considered alternatives routeing from the East Anglia Connection Node (EACN) substation via Bradwell. All such options are less preferred primarily as they require considerable additional cost to achieve the same movement of power and as such are less economic and inconsistent with National Grid's duties. There is no reason to consider that an offshore alternative via Manningtree would be any different. Therefore, no change is proposed.			X	
9-5.169	Suggest that the Project uses High Voltage Direct Current (HVDC) underground cables as opposed to Alternating Current (AC) underground cables	National Grid is constantly looking into new innovations and investigating alternative technology types. These are explored and assessed for suitability. Alternative			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	through the Dedham Vale National Landscape (previously known as the Dedham Vale Area of Outstanding Natural Beauty (AONB))	technologies were investigated for the Project, these included an offshore connection using Direct Current (DC) technology, and various onshore connection options including: increasing operational voltages on existing network to above 400 kV; Alternating Current (AC) overhead lines (established technology); alternative pylon types; AC underground technology; High Voltage Direct Current (HVDC) overhead line and underground cables; and Gas Insulated Line (GIL). HVDC is not normally used across land as converting AC to DC and back again would require converter stations so it can be used in the rest of transmission network and the distribution network which is currently AC. These converter stations are a significant size and would be required at every interface with the wider AC network i.e at Norwich, Bramford, East Anglia Connection Node (EACN) substation and Tilbury substations, the cost of these converter stations outweighs the benefits offered. . Currently, overhead lines offer the most economic and efficient solution to transmit electricity over long distances and so the incorporation of two converter stations on either side of the National Landscape would not be a suitable technical solution.				
9-5.170	Suggest that the Project follows a straight alignment instead of the current proposed curve at residential property (address provided by respondent) to mitigate impact on private water supply, and impact on residents' health	National Grid has reviewed the underground alignment in this location, the curve in the alignment as it crosses south-west of Bacon's Green is preferred as any route to the west (avoiding the curve) would result in a greater loss of woodland within the National Landscape.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		National Grid is aware of the private water supply, and we have undertaken an Environmental Impact Assessment (EIA) which includes any recommendations for required mitigation.				
9-5.171	Suggest that underground cables are used between Great Horkesley and Ardleigh (extending use of underground cables between underground cable sections / between Pylons TB1 and TB34, e.g. to remove additional CSE compounds) / Suggest the use of underground cables through Boxted (from Ardleigh to Great Horkesley) / Suggest that underground cables are used all along the southern boundary of the National Landscape	National Grid has carefully considered the feedback proposing to extend the use of underground cable between Great Horkesley and Ardleigh, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is ' <i>that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)</i> '. No such designations are present between Great Horkesley and Ardleigh, nor is this area, within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified. The starting presumption for the Project here is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in this location would likely result in particularly significant landscape and visual	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant level of landscape and visual effects from the Project. While we consider that landscape and visual effects between Great Horkesley and Ardleigh, may be widespread and therefore reach the threshold set out in NPS EN-5, there are also a range of technical difficulties (including restricted space between built developments and a reservoir to be passed beneath) and other considerations (such as a railway crossing to be crossed on 400 kV connection routes to and from the East Anglia Connection Node (EACN) substation and an area between the railway and the EACN substation potentially to be included in the next Essex Minerals Plan) meaning that we do not consider underground cable to be preferred through this section.				
9-5.172	Suggest that the Project should follow a more direct route at Ardleigh (e.g. to avoid fishing pond, vineyard and residences)	An alternative alignment to follow a more direct route avoiding the features identified has been considered but is less preferred. Any alternative alignment has to route past other features with the result that potential effects are transferred to other similar receptors including to	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		other residential properties and in the case of effects on woodland, are increased. On this basis a straight alignment is not possible and there is little change in consistency with Holford Rule 3 but reduced consistency with Holford Rule 2. Therefore, no change is proposed. A summary of the Holford Rules is provided within Appendix I22 of this report.				
9-5.173	Suggest that an alternative construction road should be built from the A12 J31 (e.g. bypassing Holton St Mary to the Raydon Airfield entrance on Acacia Road, an access to Notley Enterprise Park could be left after construction or a construction road could be built following the old railway line route from Capel St Mary A12 J32 direct to Raydon)	<p>National Grid has carefully considered the feedback received during the statutory consultation for this Primary Access Route for construction vehicles, this included the use of the historic railway alignment and access through Notley Enterprise Park. These alternatives were discounted through assessment and identification of constraints.</p> <p>Feedback from the consultation identified an opportunity to utilise an offline temporary haul road located east of Holton St Mary from the B1070 to the construction corridor and cabling compound. It is proposed that this route would act as a bypass for Holton St Mary during construction.</p>			X	X
9-5.174	Suggest that the construction compound should be placed on Notley Enterprise Park, where there is some infrastructure already and removing vehicles from B1070	<p>National Grid has noted the respondent's feedback and has reviewed alternative locations for JC-CC02.</p> <p>The proposed compound between Raydon and Holton St Mary serves underground cabling works between the proposed Cable Sealing End (CSE) compound north of the Notley Enterprise Park and the River Stour. Moving the proposed compound to land adjacent to Notley</p>	X		X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Enterprise Park would increase the distance that construction vehicles must travel from the Primary Access Route (PAR) by approximately 1.5-1.8 km. Approximately two thirds of the cable section served by this compound is to the south of the current compound position, therefore moving the compound would also significantly increase construction vehicle movements from the compound to work sites along the underground cable alignment.</p> <p>In response to various pieces of feedback, National Grid has proposed the construction of a separate construction haul road to the north of Holton St Mary, to remove construction traffic from the majority of the B1070.</p>				
9-5.176	Suggest that for the construction activities in the Dedham Vale National Landscape (previously known as the Dedham Vale Area of Outstanding Natural Beauty (AONB)), an alternative construction road should be built following the route of the old railway line from Capel St Mary to Raydon and the Construction Compound should make use of the facilities already available at Notley Enterprise Park	<p>National Grid has carefully considered the feedback received during the statutory consultation for this Primary Access Route for construction vehicles this included the use of the historic railway alignment and access through Notley Enterprise Park. These alternatives were discounted through assessment and identification of constraints.</p> <p>The consultation has identified an opportunity to utilise an offline temporary haul road located east of Holton St Mary from the B1070 to the construction corridor. Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-5.177	Suggest that the Project and compound JC-CC02 should be routed further away from boundary of residential property to minimise disruption to residents and wildlife (images and address provided by respondent)	National Grid has noted the respondent's feedback and has reviewed alternative locations for JC-CC02. The proposed compound between Raydon and Holton St Mary serves underground cabling works between the proposed Cable Sealing End (CSE) compound north of the Notley Enterprise Park and the River Stour. Moving the proposed compound to land adjacent to Notley Enterprise Park would increase the distance that construction vehicles must travel from the Primary Access Route by approximately 1.5-1.8 km. Approximately two thirds of the underground cable section served by this compound is to the south of the current compound position, therefore moving the compound would also significantly increase construction vehicle movements from the compound to work sites along the underground cable alignment. Moving the proposed compound south, would move it closer to the Dedham Vale National Landscape (previously known as an Area of Outstanding Natural Beauty (AONB)).	X		X	
9-5.178	Suggest that the construction area and underground cables are relocated further from residential property (address provided by respondent) by utilising the open fields on the opposite side of the swathe instead	National Grid has considered the respondent's feedback, and we have made a slight change to the underground cable alignment in this area to move south-east. This would move the underground cable alignment further away from the respondent's property. Cable construction compound JC-CC02 is the primary construction compound for this section of the underground cable route and serves the underground cable construction swathe between the River Stour and			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		the Cable Sealing End (CSE) compound north of Notley Enterprise Park. The majority of this section is located to the south of the B1070. The village of Bacon's Green is located approximately 500 m south of this field, moving the compound south would have a greater effect on the residents of this village and other alternatives suggested such as further north towards Notley Enterprise Park are less preferred as locating the construction compound at or adjacent to the primary highways access is preferable, we have therefore not proposed a change to the location of this compound.				
9-5.179	Suggest that Pylon TB21 is relocated one field further away from respondent's property to mitigate impact on residents (this could be achieved without the Project being closer to any other residential properties north or south of the A12)	National Grid has considered the respondent's feedback. We are not proposing a change to the alignment in this location as the route that the respondent is referring to would take the alignment through a proposed development site and would add an angle pylon. Routeing and siting in this area is also constrained by a water pipeline.			X	
9-5.180	Suggest that the Project is rerouted further north of residential property at Great Horkesley (near School Lane; address provided by respondent) to reduce magnetic field exposure to residents	National Grid has considered the respondent's feedback; we have reviewed the underground cable alignment in the vicinity of School Lane. Due to constraints in this area limiting routeing options for the underground cable swathe we are not able to route north of the respondent's property as suggested. Health considerations are given a high priority in the process by which we arrive at any proposals for new electricity circuits. Assessment of compliance with EMF guidelines			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>and policies is key to National Grid's approach. The UK has a carefully thought-out set of policies for managing Electric and Magnetic Fields (EMFs). There have been over four decades of research looking into whether EMF can cause health effects and there are no established effects below the exposure limits. When designing our overhead lines, substations and cables design criteria ensure they will not exceed those exposure limits, even when operating at 100% capacity. Additionally, the precautionary measures which the Government have adopted, are applied to the design which ensure the EMFs reduce as quickly with distance as possible. Evidence of that compliance is presented in the Electric and Magnetic Field Compliance Report (document reference 7.8) submitted as part of the Development Consent Order (DCO) application.</p> <p>National Grid takes this issue very seriously and looks to authoritative and independent scientific organisations such as the World Health Organisation (WHO) and in the UK Health Security Agency (UKHSA) to review the worldwide body of scientific evidence on health. Important decisions on health are taken independently of industry, and National Grid has followed the guidance and policies adopted by Government on advice from their scientific experts. Each of these organisations have comprehensive reviews of EMF research available to view on their websites.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-5.181	Criticism that planning laws have prevented expansion at Ardleigh, so they should also prevent National Grid from locating the Project at Ardleigh	Norwich to Tilbury is a Nationally Significant Infrastructure Project (NSIP). NSIPs are dealt with under the Planning Act 2008. Instead of applying to a local planning authority for planning permission, NSIP developers apply to the Planning Inspectorate for a Development Consent Order (DCO). The Planning Inspectorate is responsible for operating the planning process which includes examining an application and writing a report with recommendations to the relevant Secretary of State (SoS) who then makes a decision on whether or not to grant consent. Section 104 of the Planning Act 2008 states, amongst other matters, that applications must be decided in accordance with any relevant National Policy Statements (NPS), except where the SoS is satisfied that the adverse impact of the proposed development would outweigh its benefits. In determining an application, the Planning Inspectorate will need to appraise the proposal against NPS (in this case EN-1 and EN-5). The Planning Statement (document reference 5.6) and Policy Compliance Document (document reference 5.7) submitted with the application sets out how the Project complies with National Policy.			X	
9-5.182	Suggest that the underground cables from the Stour Valley are extended to the Colne Valley	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)'</i>. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at the Colne Valley would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
9-5.183	Suggest that the Project should make provision for receiving input from the Bradwell connection through the Rayleigh substations	In respect of connecting at the old Bradwell power station, there is an existing overhead line connection to the Bradwell B site. This has been operating at lower voltage (132 kV) and has not been used for a few years and is in generally poor condition. This overhead line would need to be rebuilt, however, this onward connection via Rayleigh to Tilbury is also constrained by urban development and further designations and some sections may need to be re-routed if connections were made at Bradwell. Additionally, any connection point also requires two points of connection to the National Electricity Transmission System (NETS) (to meet compliance standards) requiring either a double overhead line through the Bradwell peninsula and onwards to separate locations or a connection back to Bramford (in addition to one towards Tilbury). A connection to Bramford would require connections to cross the Special Protection Area (SPA) designated Blackwater Estuary (3 km to 7 km tunnel likely to be			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>required at much greater cost) as well as interact with other Special Area of Conservation (SAC) and SPA designations.</p> <p>The existing network through Norfolk, Suffolk and Essex would also still need to be upgraded to transport the electricity due to come onto the network in the Norwich area and provide the necessary two points of connection to the NETS. Taken together a Bradwell point of connection requires a greater amount of new infrastructure and is therefore less economic and efficient and expected to be associated with greater environmental effects.</p>				
9-5.184	Suggest that the Project extends the proposed use of underground cables from Horkesley / Wormingford through the valley to where the current location of Pylon TB46 (e.g. mitigating visual impact on the valley)	<p>National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)'</i>. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph</p>			X

9-5.185	Suggest that the underground cables at Great Horkesley are extended through to Boxted to mitigate the visual impact of the Project between Pylons TB27 and TB29	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)'</i> . Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project between Great Horkesley and Boxted would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
9-5.186	Suggest that underground cables are used both to and from the East Anglia Connection Node (EACN) instead of using both underground cables and overhead lines (e.g. even if the trench needs to be widened to achieve this)	National Grid has carefully considered the feedback proposing the use of underground cable out of the East Anglia Connection Node (EACN) substation past Ardeleigh, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National</i>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p><i>Landscapes</i>). No such designations are present between Great Horkesley and Ardleigh, nor is this area, within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified. The starting presumption for the Project here is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in this location would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant level of landscape and visual effects from the Project. While we consider that landscape and visual effects at Ardleigh, may be widespread and therefore reach the threshold set out in NPS EN-5, there are also a range of technical difficulties (including restricted space between built developments and a reservoir to be passed beneath) and other considerations (such as a railway crossing to be crossed on 400 kV connection routes to and from the East Anglia Connection Node (EACN) substation and an area between the railway and the EACN substation potentially</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		to be included in the next Essex Minerals Plan) meaning that we do not consider underground cable to be preferred through this section.				
9-5.187	Suggest that the underground cables from Pylon TB33 are extended to include Pylons TB27, TB28, and TB29 (e.g. to mitigate impact on residents, views, public footpath and the countryside in Boxted)	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is ' <i>that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)</i> '. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project between TB27 and TB33 would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
9-5.188	Suggest that the Project uses the gate at the bottom of Perry Lane, Langham to gain access to field, rather than going through Langham Village	National Grid has considered the respondent's feedback. The design proposals presented for statutory consultation do not propose a new direct access from the A12 in this location as this would not meet the National Highways criteria for an acceptable new direct access onto their Strategic Road Network and would be considered to represent a safety risk to a high-speed road.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-5.189	Suggest that the Project is rerouted through the Manningtree area / Criticism that National Grid has taken a less direct route to go through the Dedham Vale Natural Landscape (previously known as the Dedham Vale Area of Outstanding Natural Beauty (AONB)) rather than going through the Manningtree area	The Corridor and Preliminary Routeing and Siting Study (CPRSS) considered alternative corridors to the east of the Order Limits in the area suggested. National Grid has also considered other suggestions including following the general alignment of the existing 132 kV overhead line. In the absence of new evidence or further factors being identified we consider previous conclusions (set out in the CPRSS and both the 2023 and 2024 Design Development Reports (available on the Project website) to remain valid and these alternatives to be less preferred. The main reasons being increased effects on homes, environmental features and on locations such as Flatford Mill.			X	
9-5.190	Suggest that the Project uses underground cables from Pylons TB1 to TB12 using the channels for the underground cables to the East Anglia Connection Node (EACN)	National Grid has carefully considered the feedback proposing to extend the use of underground cable between TB1 and TB12, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)</i> . No such designations are present between Great Horkesley and			X

		Plan) meaning that we do not consider underground cable to be preferred through this section.				
9-5.191	Suggest that the Project uses underground cables from Pylons TB1 to TB15 taking advantage of the channels for the underground cables to the East Anglia Connection Node (EACN) to mitigate the visual impact on views from residences and the school in Ardleigh / Suggest the use of underground cables through Ardleigh	National Grid has carefully considered the feedback proposing to extend the use of underground cable between TB1 and TB15, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)</i> . No such designations are present between Great Horkesley and Ardleigh, nor is this area, within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified. Therefore, the starting presumption for the Project here is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in this location would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant level of landscape and visual effects from the Project. While we consider that landscape and visual effects between TB1 and TB15 may be widespread and therefore reach the threshold set out in NPS EN-5, there are also a range of technical difficulties (including restricted space between built developments and a reservoir to be passed beneath) and other considerations (such as a railway crossing to be crossed on 400 kV connection routes to and from the East Anglia Connection Node (EACN) substation and an area between the railway and the EACN substation potentially to be included in the next Essex Minerals Plan) meaning that we do not consider underground cable to be preferred through this section.				
9-5.192	Suggest that the Project is rerouted along field boundaries and away from housing at Aldham to minimise disruption to residents	National Grid has considered the respondent's feedback, alternatives around Aldham would be longer and less direct and therefore less consistent with the Holford Rules. We have therefore not changed the route around Aldham. A summary of the Holford Rules is provided within Appendix I22 of this report.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-5.193	Suggest that the access road directly opposite respondent's property (location provided by respondent) is not used, and instead National Grid utilises the existing bridleway and spur both left and right to feed two pylons (instead of having two separate access roads)	National Grid has considered the respondent's feedback, the access road opposite the respondent's property is only to be used for future surveys and maintenance and is not going to be used for construction, a road will also not be constructed for this access. When planning for future maintenance we try to ensure there is access for pylons without having to cross multiple land ownerships. Therefore, we have not proposed a change to the access roads in this area.			X	
9-5.194	Suggest that an alternative construction road should be built from the A12 to the Notley Enterprise Park and that the construction compound could also be sited next to the construction materials lay down area (e.g. to safeguard the villages from construction traffic)	National Grid has carefully considered the feedback received during the statutory consultation for this Primary Access Route for construction vehicles this included the use of the historic railway alignment and access through Notley Enterprise Park. These alternatives were discounted through assessment and identification of constraints. The consultation has identified an opportunity to utilise an offline temporary haul road located east of Holton St Mary from the B1070 to the construction corridor. It is proposed that this route would act as a bypass for Holton St Mary during construction.			X	X
9-5.195	Suggest that underground cables should continue from Langham and not cross the A12 at Langham but continue southwest for a further 1.5 miles and then cross the A12 (along with the Ardleigh to Great Horkesley section, all using underground cables, and	In the Corridor and Preliminary Routeing and Siting Study (CPRSS) (available on the Project website) National Grid established that integrating the connection of two offshore windfarms and an interconnector into the Project was the most economic and efficient approach and specifically a connection point on the Tendring			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	thus avoiding a significant underground section from Langham to Ardleigh)	<p>peninsula. This is preferred to alternative routes more direct between Norwich and Tilbury via the Twinstead area (see the CPRSS), and is also preferred over connection points closer to the coast and alternatives further west such as at RAF Boxted as set out in the 2025 Design Development Report (document reference 5.15).</p> <p>National Grid has carefully considered the feedback proposing to extend the use of underground cable between Great Horkesley and Ardleigh, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)</i>. Therefore, the starting presumption for the Project here is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		considered (i) whether an overhead line in this location would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant level of landscape and visual effects from the Project. While we consider that landscape and visual effects between Great Horkesley and Ardeigh, may be widespread and therefore reach the threshold set out in NPS EN-5, there are also a range of technical difficulties (including restricted space between built developments and a reservoir to be passed beneath) and other considerations (such as a railway crossing to be crossed on 400 kV connection routes to and from the East Anglia Connection Node (EACN) substation and an area between the railway and the EACN substation potentially to be included in the next Essex Minerals Plan) meaning that we do not consider underground cable to be preferred through this section.				
9-5.196	Suggest that Pylons TB9, TB10, TB11 and TB12 are relocated (e.g. to mitigate visual impact, and impacts	National Grid has considered the respondent's feedback, due to multiple constraints in this area including a cemetery, residential properties and gas and			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	on heritage and communities) / Concern about impact of Pylons TB11, TB12 and TB13 on school	water pipelines it is not possible to relocate these pylons without transferring or increasing effects. Therefore, we have not proposed a change to the location of these pylons.				
9-5.197	Suggest that the Project should use T-pylons at Ardleigh / near the Dedham Vale National Landscape (previously known as the Dedham Vale Area of Outstanding Natural Beauty (AONB))	<p>The latest independent report on the Comparison of Electricity Transmission Technologies: Costs and Characteristics (Institute of Engineering and Technology, 2025) confirms that whilst T-Pylons may in certain locations provide an alternative to conventional overhead lines with potential benefits in visual impact and reduced land-take, this is at a higher cost. The build cost is approximately 2 to 2.5 times that of an equivalently rated conventional overhead line, and the lifetime costs are around 1.6 to 1.7 times that of a conventional overhead line. The current arrangements for the oversight of funding by Ofgem requires that the lowest cost acceptable design is taken forward rather than a more expensive design even if that design is perceived to reduce the level of effect.</p> <p>As such consideration of their use follows after establishing a need to mitigate effects of the standard lattice design and after considering the benefit of adopting a low height lattice pylon design. T pylons themselves are also less adaptable to varied terrains and require more substantial access infrastructure. Furthermore, their resilience and environmental impact are comparable to conventional overhead lines, but with increased carbon intensity due to construction materials.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Attention also needs to be given to the transitions between pylon types. Given It is the surrounding context that drives the need for alternative design mitigation, where this is not required along the entire route, any visual break and transition in pylon design also needs to be carefully sited.</p> <p>Assessment findings have concluded that, where there is not a reversal of the presumption to use overhead lines, the use of lattice pylons (either standard or low height) is consistent with planning policy throughout the route. Whilst there may be some locations (for examples see Appendix A of the 2024 Design Development Report) where there may be a design option for the use of T pylons, the need to mitigate for unacceptable effects from lattice pylons is not engaged. On this basis T pylons are not proposed for the Project.</p>				
9-5.198	Suggest that a permanent alternative access route is provided from the A12 to the Project, possibly following the old disused railway line route (e.g. this would provide better access including more suitable and possibly longer slip roads for the project, and in the future providing positive benefits for already established local businesses within the local area)	<p>National Grid has carefully considered the feedback received during the statutory consultation for this Primary Access Route for construction vehicles this included the use of the historic railway alignment and access through Notley Enterprise Park. These alternatives were discounted through assessment and identification of constraints.</p> <p>The consultation has identified an opportunity to utilise an offline temporary haul road located east of Holton St Mary from the B1070 to the construction corridor. It is proposed that this route would act as a bypass for Holton St Mary during construction.</p>	X		X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		When obtaining rights for the Project, either through voluntary agreement or compulsory acquisition, National Grid can only obtain these rights on the grounds of what is needed and justified to construct, install and maintain the asset in the future. The majority of future maintenance would only require light vehicle access which can use existing access points and therefor does not justify the construction haul road being left in place after construction.				
9-5.199	Suggest that an alternative access route is used from the A12 to Capel St Mary slip road (A12 Junctions 32A and 32B)	<p>National Grid has carefully considered the feedback received during the statutory consultation for this Primary Access Route for construction vehicles. The option to use the slip roads of the A12 junctions at Capel St Mary were consider and discounted through assessment and identification of highway and safety constraints.</p> <p>The consultation has identified an opportunity to utilise an offline temporary haul road located east of Holton St Mary from the B1070 to the construction corridor. It is proposed that this route would act as a bypass for Holton St Mary during construction.</p>			X	X
9-5.200	Suggest that the Cable Sealing End (CSE) compound in Raydon is moved further north to Pylon JC26 / Wenham Thicks to maintain a clear safe approach from all directions to Raydon Winds Airfield (e.g. to mitigate impact on airfield / Grade II Listed Buildings at Wenham Grange and Vauxhall /	National Grid has appointed an independent aviation consultancy which has engaged with the operators of Raydon Wings airfield (with National Grid also present) to inform their impact assessment. The overhead line alignment (including the Cable Sealing End (CSE) compound) is assessed to be at a sufficient distance to		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	the National Landscape) / Suggest that the CSE compound in Raydon is moved 1.5km further north to mitigate impact on Raydon Winds Airfield	<p>the north of the runway to ensure that overflight is not required on take-off or landing and that approaches are therefore not impacted. We will continue to engage with the airfield operators to confirm the acceptability of the design. In view of the assessment conclusions, further changes to the proposed overhead line alignment, including the re-location of the CSE compound has not been implemented, as the associated extension of underground cables is not considered to be justified on grounds of aviation impacts. Further information on the assessment of airfields can be found in the Environmental Statement (ES) Chapter 15: Socioeconomics, Recreation and Tourism (document reference 6.15) and ES Appendix 15.2: Summary of Aviation Impact (document reference 6.15.A2).</p> <p>National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)'</i>. Where no such designations are present,</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project between Raydon Airfield and JC26 would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.</p>

Design Change						
9-5.201	Suggest that construction compound JC CC2 is moved onto Notley Enterprise Park, north of the Materials Lay Down Area to place it adjacent to an industrial area	<p>National Grid has noted the respondent's feedback and has reviewed alternative locations for JC-CC02. The proposed compound between Raydon and Holton St Mary serves underground cabling works between the proposed Cable Sealing End (CSE) compound north of the Notley Enterprise Park and the River Stour. Moving the proposed compound to land adjacent to Notley Enterprise Park would increase the distance that construction vehicles must travel from the Primary Access Route by approximately 1.5-1.8 km. Approximately two thirds of the underground cable section served by this compound is to the south of the current compound position, therefore moving the compound would also significantly increase construction vehicle movements from the compound to work sites along the underground cable alignment. This increase would result in additional costs and carbon emissions. Moving the proposed compound south, would move it closer to the Dedham Vale National Landscape (previously known as an Area of Outstanding Natural Beauty (AONB)).</p> <p>In response to various pieces of feedback, National Grid has proposed the construction of a separate construction haul road to the north of Holton St Mary, to remove construction traffic from the majority of the B1070.</p>	X		X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-5.202	Suggest that the Project is rerouted from Pylon TB51 to instead run straight across the A1124, into the middle of the field ringfenced by the A1124 and New Road Aldham, that Pylon TB52 is positioned in that field, and that the Project then runs across the new road in Aldham, with Pylon TB53 sited in this location, and that the Project is then continued on across country, over Tey Road and Rectory Road to Pylon TB60	The respondent's preference for a route based on the 2022 non-statutory consultation corridor and graduated swathe is noted. In the absence of new evidence or further factors being identified, National Grid continues to consider the reasons for it being less preferred to remain valid as it increases the oversail of residential properties and their private gardens and reduced consistency with Holford Rule Supplementary Notes. A summary of the Holford Rules is provided within Appendix I22 of this report.			X	
9-5.203	Suggest that the service road shown to run to the rear of Old School House is removed, and instead access for services is available near to Pylon TB53 (the entrance National Grid will use for that pylon)	National Grid notes the respondent's feedback. This access route is only to be used for future surveys and maintenance and is not going to be used for construction, a road would also not be constructed for this access. When planning for future maintenance we try to ensure there is access for pylons without having to cross multiple land ownerships. The proposed permanent access route no longer routes along the rear of Old School House and instead is routed directly south of TB53.			X	X
9-5.204	Suggest the use of underground cables from Raydon to Chattisham	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>is 'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Park, The Broads, or Area of Outstanding Natural Beauty)'. Where no such designations are present, nor is the area within the setting of such a designated area, which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23), we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line (paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25).</p> <p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. 		Project between Chattisham and Raydon would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
9-5.205	Suggest that an angle tower pylon is not used at Little Wenham	National Grid notes the respondent's feedback. The angle pylon at JC26 (now JC27), is required in this location in order to avoid other constraints such as woodland and properties while continuing the route north to Bramford Substation. We are therefore not proposing a change to this pylon.			X	
9-5.206	Suggest that lower height lattice pylons are used for the section from the East Anglia Connection Node (EACN) towards the A12 / Request for the revised pylon positions if this suggestion is implemented by National Grid	National Grid notes the preference expressed by the respondent but after review does not consider the use of the low height lattice design to be preferred in this location. The low height lattice has a more restricted angle of direction change compared with the standard lattice design and would be expected to require more pylons and fewer suspension pylons given the constraints to routeing in this area and is therefore less consistent with Holford Rule 3. A summary of the Holford Rules is provided within Appendix I22 of this report. The ability to cross the railway with a low height lattice design is also unknown as there is no approved design for the level of electrical clearance required. The lower height design is considered more appropriate where the main aim is to reduce the height below a ridgeline or some screening feature, but the use of low height lattice			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		pylons potentially increases effects to community receptors where there are close and open views.				
9-5.207	Suggest that the Project begins marginally further east at Holly Bush Corner and proceeds in a straight line north-east, instead of curving around (e.g. this would avoid the archaeological site, be further from Pintins, avoid the next small copse, and sit further east of Laits Barn and Lark Hall)	National Grid has considered the respondent's feedback and has assessed multiple alternatives in this area. The underground cable alignment east of the B1068 has been straightened as much as possible. Other alternatives in this area are either not feasible as there is not enough space due to constraints or would be longer and result in a greater amount of woodland loss and are therefore less preferred.			X	X
9-5.208	Suggest minor amendments to the haul road and gateway near the proposed Pylons TB74 and TB75 (plan provided by respondent) / Suggest that following in relation to haul road and access (near respondent's farm in Kelvedon): the haul road is relocated to follow the headlands; that the haul road is relocated into the same field as proposed Pylon TB74 (e.g. to mitigate impact on farming); the track to the scaffolding is relocated to the headland; the new access point is retained post construction, with National Grid securing the necessary planning permissions (plan provided by respondent)	National Grid has considered the respondent's feedback, due to a slight change to the alignment in this area the haul road and bellmouth position at TB74 and TB75 (as in between TB70 and TB76) have been amended.			X	X
9-5.209	Suggest the use of underground cables for the Project through the Colne Valley (e.g. in line with National Policy Statement (NPS) EN5, Section 2.9.23) / Suggest the use of underground cables for the Project through the Colne Valley and its	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of	X	X	X

	tributaries / Suggest the use of underground cables through the Colne Valley (from West Bergholt, past Fordham and Aldham and into Marks Tey and Great Tey)	<p>cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is '<i>that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Park, The Broads, or Area of Outstanding Natural Beauty)</i>'. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25).</p> <p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at the Colne Valley would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
9-5.210	Suggest that Pylons TB53 to TB57 are relocated (e.g. to mitigate impact on village, community, wildlife, views, and local traffic)	National Grid has considered the respondent's feedback, alternatives around Aldham would be longer and less direct and therefore less consistent with the Holford Rules. We have therefore not changed the route around Aldham. A summary of the Holford Rules is provided within Appendix I22 of this report.			X	
9-5.211	Suggest that the Project from the proposed substation to Boxted (Pylons TB1 to TB34) is rerouted (e.g. to mitigate the visual impact due to the topography and the impact on residents / communities)	National Grid has carefully considered the feedback proposing to extend the use of underground cable between Great Horkesley and Ardleigh, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated</i>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p><i>landscape (i.e. National Park, The Broads, or Area of Outstanding Natural Beauty)</i>'. No such designations are present between Great Horkesley and Ardleigh, nor is this area, within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified. Therefore, the starting presumption for the Project here is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in this location would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25).</p> <p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant level of landscape and visual effects from the Project. While we consider that landscape and visual effects between Great Horkesley and Ardleigh, may be widespread and therefore reach the threshold set out in NPS EN-5, there are also a range of technical difficulties (including restricted space between built developments and a reservoir to be passed beneath) and other considerations (such as a railway crossing to be crossed</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		on 400 kV connection routes to and from the East Anglia Connection Node (EACN) substation and an area between the railway and the EACN substation potentially to be included in the next Essex Minerals Plan) meaning that we do not consider underground cable to be preferred through this section.				
9-5.212	Suggest that the Project is rerouted from Pylons TB15 to TB19 (e.g. to mitigate impact on landowners, views, wildlife, farming, business, valuable resource in the form of gravel, and heritage)	<p>Whilst noting the landowner's preference, there are limitations to routeing alternatives in this location due to the presence of other constraints, homes and environmental features. The route being taken forwards would reduce impacts on other developments to the extent possible, though some impact on the minerals site is considered to be unavoidable but could be addressed through compensation should a viable claim be made. If there are any specific concerns requiring compensation and how it would be assessed, please contact the Project lands team:</p> <ul style="list-style-type: none"> Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314. <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD.</p>			X	
9-5.213	Suggest new access road from the A12 to the compound site (rather than the B1070)	National Grid has carefully considered the feedback received during the statutory consultation for this Primary Access Route for construction vehicles this included the use of the historic railway alignment and			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>access through Notley Enterprise Park. These alternatives were discounted through assessment and identification of constraints.</p> <p>The consultation has identified an opportunity to utilise an offline temporary haul road located east of Holton St Mary from the B1070 to the construction corridor. It is proposed that this route would act as a bypass for Holton St Mary during construction.</p>				
9-5.214	Suggest that the construction compound (JC CC2) and materials lay down area is moved adjacent to the Raydon Sealing in compounds to avoid negative impacts on Holton St Mary and Raydon village associated with traffic and the compound	<p>National Grid has noted the respondent's feedback and has reviewed alternative locations for JC-CC02. The proposed compound between Raydon and Holton St Mary serves underground cabling works between the proposed Cable Sealing End (CSE) compound north of the Notley Enterprise Park and the River Stour. Moving the proposed compound to land adjacent to Notley Enterprise Park would increase the distance that construction vehicles must travel from the Primary Access Route by approximately 1.5-1.8 km. Approximately two thirds of the underground cable section served by this compound is to the south of the current compound position, therefore moving the compound would also significantly increase construction vehicle movements from the compound to work sites along the underground cable alignment. Moving the proposed compound south, would move it closer to the Dedham Vale National Landscape (previously known as an Area of Outstanding Natural Beauty (AONB)).</p>			X	X

		<p>must be considered in accordance with paragraphs 2.9.24 and 2.9.25).</p> <p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project between Raydon and Chattisham / Washbrook would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.</p> <p>Alternative locations for the Cable Sealing End (CSE) compound have been assessed, however the current location is preferred in terms of technical feasibility and there is no policy driver to move the CSE compound further north increasing the length of underground cable.</p>				
9-5.217	Suggestion the Project is rerouted from the Bramford Substation to run alongside the A12 from Bramford via Washbrook and Capel St Mary	<p>Whilst there could be potential benefits from infrastructure being concentrated geographically, i.e., by routing the Project in close proximity to existing road and rail infrastructure, National Grid does not consider these benefits arise for the section of the A12 indicated. There are constraints and features that mean that we do not consider close paralleling the A12 will reduce environmental effects or improve compliance with the Holford Rules or be more consistent with the policy</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>requirement to be economic and efficient. A summary of the Holford Rules is provided within Appendix I22 of this report.</p> <p>Several residential properties, as well as hamlets, villages and towns, are present in close proximity to the existing transport infrastructure necessitating multiple diversions of an overhead line. There are also some locations, such as to the east of Capel St Mary, where the combination of existing physical and environmental features (road infrastructure, commercial and residential property, woodlands etc) present very substantial challenges to routeing and siting. As a result, whilst close paralleling of transport infrastructure may appear beneficial in some short sections, overall, the increased environmental effects from multiple changes of direction are considered greater and less compliant with the Holford Rules than those that are associated with a new route alignment. We have undertaken an Environmental Impact Assessment (EIA) to assess the potential impact of the Project, and this has identified any need for additional mitigation.</p>				
9-5.218	Suggest that the East Anglia Connection Node (EACN) is relocated to be sited between Langham and Great Horkesley instead (e.g. to mitigate impact on the Dedham Vale National Landscape (previously known as the Dedham Vale Area of Outstanding Natural Beauty (AONB)) and conservation areas at Ardleigh)	National Grid has previously considered a number of alternative sites for the East Anglia Connection Node (EACN) substation during the initial siting work as set out in the 2022 Corridor and Preliminary Routeing and Siting Study (CPRSS) (available on the Project website). It was also considered in response to feedback as set out in the 2023 and 2024 Design Development Reports			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>(available on the Project website) where we considered an alternative site to the west of the A12 which is in the area suggested by the feedback. The siting decision making balances the environmental effects, technical consideration and cost arising from the substation and the connections to it for National Grid and the North Falls and Five Estuaries wind farms and the Tarchon project.</p> <p>We have reviewed this again and as set out in the 2025 Design Development Report (document reference 5.15) and continue to consider the EACN substation as proposed to be the preferred location on the basis that an alternative further west presents multiple aspects of uncertainty and construction risk, reduces future flexibility, increases risks to programme for the customers and National Grid with potential for substantial constraint costs if programme is delayed.</p>				
9-5.219	Suggest that Cable Sealing End (CSE) compounds should be located further away from the Dedham Vale National Landscape (previously known as the Dedham Vale Area of Outstanding Natural Beauty (AONB))	<p>National Grid has sought to reduce, as far as practicable, impacts on Dedham Vale National Landscape through routeing and siting and an ongoing iterative design process which has taken on board feedback at different stages of the Project. The iterative design process sought to avoid areas of highest concern, for examples through careful siting of Cable Sealing End (CSE) compounds, changes to the route alignment and proposals for trenchless crossings.</p> <p>The relevant National Policy Statement (NPS) EN-5 makes it clear that the Government considers overhead</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>lines to be appropriate and acceptable in most instances, although it recognises that that there may be, at particularly sensitive locations, potential adverse landscape and visual impacts of overhead line infrastructure that make it inconsistent with our duties and relevant planning policy.</p> <p>Dedham Vale National Landscape (previously known as an Area of Outstanding Natural Beauty (AONB)) designation is one such location where there is a presumption that underground cable technology is adopted with the extent of underground cabling extending beyond the boundary in response to the potential for the Project to affect the natural beauty of the National Landscape. Our proposals include a total of approximately 20 km of underground cable through and in the vicinity of the Dedham Vale National Landscape, including a section at Great Horkesley to reduce the changes in views and setting of the National Landscape from within and adjacent to its designated boundary. National Grid considers the siting of the CSE compounds to be appropriate in terms of the avoidance of impacts on Dedham Vale National Landscape.</p> <p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the Environmental Impact Assessment (EIA). The LVIA includes an assessment of the Project on landscape character and visual amenity including the consideration of Dedham Vale National Landscape and identifies areas for potential mitigation planting to reduce visual impacts to local receptors. The</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		approach to the LVIA follows professional guidance as set out in Environmental Statement (ES) Appendix 13.1: Landscape and Visual Methodology (document reference 6.13.A1). The LVIA is presented in ES Chapter 13: Landscape and Visual (document reference 6.13) and is supported by ES Appendix 13.5: National Landscape Assessment Study (document reference 6.13.A5) which considers impacts on the National Landscape and its special qualities. The Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) includes details regarding the planting proposals which include areas around the proposed CSE compounds.				
9-5.220	Criticism of the siting of the Cable Sealing End (CSE) compound at Great Horkesley (north east of Horkesley Plantation) (e.g. due to the flat ground and lack of screening; close proximity to Dedham Vale National Landscape (previously known as the Dedham Vale Area of Outstanding Natural Beauty (AONB)), listed buildings and Essex Way) / Suggest that the CSE compound is relocated away from Great Horkesley	The respondent's preference is noted but no alternative location has been suggested. National Grid has in response to other feedback, considered whether other locations further east were more appropriate. Siting in the immediate field to the east is constrained by an existing high pressure gas pipeline and water main. Moving further east has also been considered with conclusions presented in the 2024 Design Development Report (available on the Project website) and the 2025 Design Development Report (document reference 5.15) and summarised as being that the level of effects on the National Landscape were not at a level to justify the additional cost (and effects arising) from extending the underground cable distance. In the absence of new evidence or the identification of further factors we continue to consider the proposed Cable Sealing End	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		(CSE) compound site near Great Horkesley to be preferred, and no change is proposed.				
9-5.221	Criticism of the siting of the Cable Sealing End (CSE) compound at Crabtree Lane, Little Horkesley (e.g. due to lack of screening, despite dip in landscape given that only one end of the gantries would be located at the 8 to 10 m elevation with the other being much closer to the ridge and thus higher; impact on listed buildings), and suggest that the alternative site in the 2023 Design Development Report should be used instead (e.g. given that this location is lower set in the landscape (at 16m lower elevation than the site proposed) and screened from listed buildings and Dedham Vale National Landscape (previously known as the Dedham Vale Area of Outstanding Natural Beauty (AONB))	The respondent's feedback is noted and has been considered however National Grid considers that the actual site level reduction achieved by a change to a more southern location as reviewed in the 2023 Design Development Report (available on the Project website), would be much less than that suggested and do not consider this limited change to justify the additional cost for a longer length of underground cable. Even if it were a change of the order suggested by the respondent, we do not consider the additional cost, given the low level of effects on the National Landscape, to justify the additional cost (and effects arising) from extending the underground cable distance. In the absence of new evidence or the identification of further factors we continue to consider the proposed Cable Sealing End (CSE) compound site to the west of Great Horkesley to be preferred, and no change is proposed. Effects on heritage such as on listed buildings as well as on the National Landscape have been assessed and are presented in the Environmental Statement (ES), including details of any mitigation where required.	X		X	
9-5.222	Suggest that a construction road from the A12 to Notley Park is built, at the expense of its users	National Grid has carefully considered the feedback received during the statutory consultation for this Primary Access Route for construction vehicles this included the use of the historic railway alignment and access through Notley Enterprise Park. These			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>alternatives were discounted through assessment and identification of constraints.</p> <p>The consultation has raised the option to construct an offline temporary haul road located east of Holton St Mary from the B1070 to the construction corridor. This route is now proposed as the access route to bypass Holton St Mary during construction.</p>				
9-5.223	Suggest that underground cables should be used at least 2 km beyond the Dedham Vale National Landscape (previously known as the Dedham Vale Area of Outstanding Natural Beauty (AONB)) as recommended in Chapter 5 of the Corridor Preliminary Routeing and Substation Siting study (CPRSS) (e.g. given that only a 1.2 km boundary for use of underground cables is proposed for the Project at present)	<p>National Grid has sought to reduce environmental impacts, as far as practicable, through routeing and siting and an ongoing iterative design process which has taken on board feedback at different stages of the Project. The iterative design process sought to avoid areas of highest concern, for examples through undergrounding and careful siting of Cable Sealing End (CSE) compounds through the Dedham Vale National Landscape (formerly the Area of Outstanding Natural Beauty).</p> <p>The relevant National Policy Statement (NPS) EN-5 makes it clear that the Government considers overhead lines to be appropriate and acceptable in most instances, although it recognises that there may be, at particularly sensitive locations, potential adverse landscape and visual impacts of overhead line infrastructure that make it inconsistent with our duties and relevant planning policy. Policy identifies no set distance (such as 5 km) by which such mitigation should be extended outside the National Landscape boundary.</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		National Grid identifies the requirement for mitigation (whether by additional planting, type of pylon or choice of alternative technology such as underground cable) based on consideration of the potential effects that may arise on a case by case basis. This takes into account the specific details of the designation (including special qualities, key views etc.) and local circumstances including landform and existing vegetation. This approach allows consideration of the predicted effects arising from cable or overhead line technology and the CSE compounds (the transition sites between technologies) rather than applying an arbitrary distance that may be too great or too small for the specific circumstances. Dedham Vale National Landscape designation is one such location where there is a presumption that underground cable technology is adopted with the extent of underground cabling extending beyond the boundary in response to the potential for the Project to affect the natural beauty of the National Landscape. Our proposals include a total of approximately 20 km of underground cable through and in the vicinity of the Dedham Vale National Landscape, including a section at Great Horkesley to reduce the changes in views and setting of the National Landscape from within and adjacent to its designated boundary.				
9-5.224	Suggest that the proposed construction laydown area is relocated closer to the B1070 / Acacia Road junction	Locating the laydown area closer to B1070 and Acacia will move the laydown area further away from where the stone is required. The location of the material laydown	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		area has been carefully selected based on the distances the material is required to serve. Whilst minimising the impact on farming land and Public Rights of Way. We have therefore not changed the location of this laydown area.				
9-5.225	Criticism that National Grid propose to develop an access road / track on Perry Lane involving widening which will negatively impact verges, re-route utility services, and disrupt village roads and footpaths / Suggest that construction traffic instead uses direct access from the northbound A12 (e.g. there is a very wide verge alongside the A12 to accommodate an entry and exit point)	<p>The design proposed for this Primary Access Road (PAR) does not propose any widening or development of an access, only use of Perry Road. Thus, no impact on verges or utilities requiring diversions and no impact on footpaths.</p> <p>A new direct access from the A12 in this location would not meet the National Highways criteria for an acceptable new direct access onto their Strategic Road Network and would be considered to represent a safety risk to a high-speed road.</p> <p>National Grid has carefully developed the proposals for access for Perry Lane. Our suggested mitigation is the use of temporary traffic management only where vehicles will be marshalled to site. The proposed approach for management is set out in the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), submitted with the Development Consent Order (DCO) application.</p> <p>Chapter 16: Traffic and Transport of the Environmental Statement (ES) (document reference 6.16) found that the future baseline traffic flow on Perry Lane would be notably low and the short section of road link being utilised is considered non-sensitive based on receptors.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Therefore, although there would be an increase in traffic flows on Perry Lane, as a result of the Project, it is considered unlikely, using professional judgement, that significant effects would be realised given the low number of construction vehicles expected, and the road link characteristics and sensitivity of receptors.				
9-5.226	Suggest the use of underground cables between Ardleigh and Fordham (e.g. to mitigate the impact of the Project on the Dedham Vale National Landscape (previously known as the Dedham Vale Area of Outstanding Natural Beauty (AONB))); to reduce overall infrastructure, given that the Cable Sealing End (CSE) compound north east of Horkesley Plantation will not be needed)	National Grid has carefully considered the feedback proposing to extend the use of underground cable between Fordham and Ardleigh, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is ' <i>that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Park, The Broads, or Area of Outstanding Natural Beauty)</i> '. No such designations are present between Great Horkesley and Ardleigh, nor is this area, within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified. Therefore, the starting presumption for the Project here is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>overhead line in this location would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25).</p> <p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant level of landscape and visual effects from the Project. While we consider that landscape and visual effects between Great Fordham and Ardleigh, may be widespread and therefore reach the threshold set out in NPS EN-5, there are also a range of technical difficulties (including restricted space between built developments and a reservoir to be passed beneath) and other considerations (such as a railway crossing to be crossed on 400 kV connection routes to and from the East Anglia Connection Node (EACN) substation and an area between the railway and the EACN substation potentially to be included in the next Essex Minerals Plan) meaning that we do not consider underground cable to be preferred through this section.</p>				
9-5.227	Suggest that the Cable Sealing End (CSE) compound at Little Horkesley should be relocated further south to at least Pylon TB41/TB42 (e.g. to	The respondent's preference is noted and has been considered previously as set out in both the 2023 and 2024 Design Development Reports (available on the			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	eliminate impact on the Dedham Vale and to take better advantage of terrain and natural screening opportunities, to avoid a road crossing, reduce the number of landowners involved, avoid a site with roman archaeology, reduce visual impact to nearby Listed Buildings)	Project website). However National Grid considers that the suggested relocation in some cases transfers effects between receptors so whilst not crossing one road it would cross a different road. It proposes a change in respect of listed buildings which whilst potentially reducing effects, are reducing effects which are inherently low. The site level reduction would not substantially change the level of screening provided and we do not consider the low level of effects on the National Landscape as a compelling basis for change. The change would require a longer length of underground cable, and we do not consider the limited change to justify the additional cost. In the absence of new evidence or the identification of further factors we continue to consider the proposed Cable Sealing End (CSE) compound site to the west of Great Horkesley to be preferred, and no change is proposed. We have undertaken an Environmental Impact Assessment (EIA) to assess the potential impact of the Project.				
9-5.228	Suggest that underground cables should be used between Pylons TB42 and TB50 (e.g. given the special character of the Fordham Valley and the disproportionate impact overhead lines would bring to the area)	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in</i>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p><i>general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Park, The Broads, or Area of Outstanding Natural Beauty)'. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25).</i></p> <p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at TB42 to TB50 would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-5.229	Suggest that the archaeological sites in the area between Pylons TB46 and TB52 should be avoided by the Project entirely, regardless of whether overhead lines or underground cables are employed, although the Project should not be routed on a more easterly route through woodlands at Fiddlers Farm / Fiddlers Woods as alternative (e.g. given that they are ancient woodlands and near a listed building)	<p>EN-5. The LVIA is presented in ES Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.</p> <p>Statutory consultation feedback and the results of archaeological fieldwork have been used to inform design development to reduce as far as practicable impacts to archaeological remains in this area. As a result of this information pylon TB47 was moved north-east to avoid direct physical impact to the archaeological site in this area. Various alternative route alignments have been considered that would pass to south and east or west of this area. Those to the south and east are less preferred due to conflict with areas designated as ancient woodland or where the additional interaction with utility connections means there is insufficient space available to allow for pylon positioning. Those to the west present greater effects on heritage assets that are known.</p> <p>National Grid has undertaken a detailed routeing and siting exercise, iteratively refined through statutory consultation, geophysical survey and archaeological trial-trenching, to limit, so far as practicable, effects on known and potential heritage assets between pylons TB46 and TB52.</p> <p>All designated and non-designated heritage assets within the 250 m study area have been assessed in the ES Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1). The non</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>designated assets that intersect the Order Limits such as assets 4082, 4102, 4103 and 4090, or designated assets whose settings extend to the Order Limits, are evaluated in ES Appendix 11.2: Historic Environment Assessment Tables (document reference 6.11.A2) and ES Chapter 11: Historic Environment (document reference 6.11), with the level of harm to designated assets (e.g. Fordstreet Conservation Area CA9) set out in Appendix 11.7: Assessment of Harm to Designated Heritage Assets (document reference 6.11.A7). Landscape and visual effects on the same stretch are illustrated by general LVIA Viewpoints 4.20, 4.24, 4.25 and 4.27 and by Heritage Viewpoint HE 26 (photomontage), which together confirm that the amended alignment minimises intrusion into key views. Where archaeological sensitivity remains, the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5) requires mitigation and the Outline Code of Construction Practice (CoCP) (document reference 7.2), also provides for an agreed protocol should previously unknown remains be encountered.</p> <p>The scope and methodology described above were developed in accordance with national policy (NPS EN-1, NPS EN-5, NPPF), relevant professional guidance, and have been reviewed and agreed at regular archaeology working-group meetings with Historic England and the Local Planning Authorities. On this basis National Grid is confident that the potential</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		impacts on archaeological sites in the TB46–TB52 corridor have been robustly assessed and that proportionate mitigation is secured through the Development Consent Order (DCO) documentation.				
9-5.230	Suggest that the Project is rerouted from Bramford crossing the A12 to avoid Capel St Mary then rejoining and following the A12 via underground cables beneath the road which is in need of improvement / Suggest that road improvements could be delivered for the A12 at the same time (plan provided by respondent)	National Grid notes the potential for this to appear to reduce effects on the National Landscape and more generally. However, the need for above ground structures above each cable trench every 800 m to 1 km at jointing bays (which would then be in the carriageway) makes this impractical. Even if resolved in some way the potential disruption through future maintenance of the cable would have very substantive effects and as such is not considered an appropriate basis for an option. It is also not appropriate for bill payers to pay for the completion of a major road scheme over and above the costs of the connection Project when there is a route available that is not inconsistent with policy. Routeing alongside the A12 does not provide a resolution as this would lead to effects on extensive areas of woodland and be constrained by other existing residential and commercial properties. Therefore, no change has been made.			X	
9-5.231	Criticism that the Project in the area of East Gores Road and Salmons Lane travels over farm sheds (housing live animals), gas storage tanks, and several utility supply lines / Suggest that the Project is rerouted to Pylons TB66 to TB69	National Grid has considered the respondent's feedback and is proposing a slight change to the alignment to ensure adequate clearance to the gas storage tanks. The alignment does not oversail any farm sheds. Part of the Order Limits that was shown over the farms sheds was an existing 11 kV overhead line that was to be			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		removed and placed underground to enable the Project to cross over this area. This has now been reduced and therefore no longer crosses the sheds. Alternative alignments between TB66 and TB69 would take the alignment closer to a Grade I listed church and to other residential properties to the south or would be a longer and less direct route that would result in a greater loss of woodland and transfer effects to properties to the north. We are therefore not proposing an alternative alignment at this location,				
9-5.232	Suggest that the Project uses underground Alternating Current (AC) / Direct Current (DC) cables replacing Pylons TB66 to TB69 (e.g. to protect the countryside)	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is ' <i>that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Park, The Broads, or Area of Outstanding Natural Beauty)</i> '. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25).</p> <p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at TB66 to TB69 would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in ES Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.</p> <p>National Grid is constantly looking into new innovations and investigating alternative technology types. These are explored and assessed for suitability. Alternative technologies were investigated for the Project, these included an offshore connection using Direct Current (DC) technology, and various onshore connection</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>options including: increasing operational voltages on existing network to above 400 kV; Alternating Current (AC) overhead lines (established technology); alternative pylon types; AC underground technology; High Voltage Direct Current (HVDC) overhead line and underground cables; and Gas Insulated Line (GIL). HVDC is not normally used across land as converting AC to DC and back again would require converter stations so it can be used in the rest of transmission network and the distribution network which is currently AC. These converter stations are a significant size and would be required at every interface with the wider AC network i.e. at Norwich, Bramford, East Anglia Connection Node (EACN) and Tilbury substations, the cost of these converter stations massively outweighs the benefits offered.</p> <p>Currently, overhead lines offer the most economic and efficient solution to transmit electricity over long distances.</p>				
9-5.233	Suggest that the Project between Pylons TB35 and TB51 is rerouted via the old airfield area to the north of Fordham (which would be easier to develop and less destructive) / Suggest that National Grid's previous preferences for this site could be realised / Suggest that the Project should be routed to the north of Fordham (e.g. as the airfield is out of use and the flying club's lease runs out in 2026 and is not to be renewed)	National Grid has considered this alternative route previously but has not considered it to be preferred. We have noted some potential for reduced effects in respect of some topics but also noted in the 2024 Design Development Report (available on the Project website) paragraph 5.4.143 that it was less preferred as it was a longer, less economic and efficient route with more pylons and angle pylons. We also noted it was likely to lead to increased effects on various heritage assets			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		including a Grade I listed building and several moats associated with other listed buildings. In the absence of new evidence or the identification of further factors we continue to consider these reasons valid, and no change is proposed.				
9-5.234	Suggest that the underground cables should be extended to Pylon JC20 (ideally High Voltage Direct Current (HVDC))	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is ' <i>that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Park, The Broads, or Area of Outstanding Natural Beauty)</i> '. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25).</p> <p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project between Raydon and JC20 would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.</p> <p>National Grid is constantly looking into new innovations and investigating alternative technology types. These are explored and assessed for suitability. Alternative technologies were investigated for the Project, these included an offshore connection using Direct Current (DC) technology, and various onshore connection options including: increasing operational voltages on existing network to above 400 kV; Alternating Current (AC) overhead lines (established technology); alternative pylon types; AC underground technology; High Voltage</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Direct Current (HVDC) overhead line and underground cables; and Gas Insulated Line (GIL).</p> <p>Currently, overhead lines offer the most economic and efficient solution to transmit electricity over long distances.</p>				
9-5.235	<p>Suggest that the Project is rerouted between Pylons TB15 and TB19 to mitigate impact on respondents fields, particularly Pylon TB15 which would impact respondents wine / vineyards and café business / Suggest that Pylons TB15 and TB18 are relocated due to impact on business (e.g. impact on crop rotation and irrigation; impact on field drainage; impact on sand and gravel opportunities) / Suggest that the Project is rerouted between Pylons TB13 and TB21 to mitigate impact on businesses (e.g. vineyard, let farm shop, tourism income, potential restaurant, sand and gravel opportunities and the farm's root crop rotation)</p>	<p>Whilst noting the landowner's preference, there are limitations to routing alternatives in this location (between TB15 and TB19) due to the presence of other constraints, homes and environmental features. The route being taken forwards reduces impact on other developments to the extent possible, though some impact on the vineyard site is considered to be unavoidable but can be addressed through compensation, on submission of a valid and agreed claim. Alternative routes to the north would transfer effects to other business receptors and would also increase effects on woodland areas crossed by the alternative routes. Alternatives to the south are similar but present additional technical difficulties to cross Ardleigh reservoir and other water bodies. Therefore, no change is proposed.</p> <p>Socio-economic impacts as well as impacts to soil and drainage have been assessed and presented in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) which also details any proposed mitigation where required.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-5.236	Concern that Pylons TB74 to TB76 are sited within land being used for a ground mounted solar farm (e.g. works to Distribution Network Operator (DNO) poles and overhead lines)	National Grid has engaged with the developer taking these proposals forward and confirmed that in light of the detailed plans there is no interaction with the proposed permanent and temporary 400 kV works and that interaction with the lower voltage works (replacing some overhead lattice pylons with underground cable) would be minimised by the use of H poles to reduce the required diversion. A small overlap with the corner of the site may be unavoidable but is not expected to conflict with site activities.			X	
9-5.237	Suggest that Pylons TB46 and TB47 are relocated away from Fordham All Saints Primary School (e.g. due to health concerns)	<p>Electric and Magnetic Fields (EMFs) are produced wherever electricity is used, and National Grid fully recognises people's concerns.</p> <p>We take this issue very seriously and look to authoritative and independent scientific organisations such as the World Health Organisation (WHO) and the UK Health Security Agency (UKHSA) to review the worldwide body of scientific evidence on EMFs and health. We believe important decisions on health should be made independently of industry, as is the case in the UK.</p> <p>Health considerations are given a high priority in the process by which we arrive at any proposals for new electricity circuits. Assessment of compliance with national guidance and policies is key to our approach. The UK has a carefully thought-out set of policies for managing EMFs, which includes both numerical exposure guidelines to protect against established,</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>acute effects of EMFs, and precautionary policies to provide appropriate protection against the possibility of chronic effects of EMFs at lower levels, including, specifically, the possibility of a risk for childhood leukaemia. These policies are incorporated into the decision-making process for development consent in National Policy Statement (NPS) EN-5.</p> <p>Our approach is to ensure that all our assets comply with those policies, which are set by Government on the advice of their independent advisors UKHSA. This ensures that health concerns are properly and adequately addressed. The evidence concerning compliance with these policies, including the numerical guidelines have been fully and publicly documented in an Electric and Magnetic Field Compliance Report (document reference 7.8) which is submitted as part of our Development Consent Order (DCO) application. Additionally, in developing a route for the connection National Grid sought to maximise the distance from schools as far as possible on the grounds of general amenity. Mental health and wellbeing, including the perceptions of impacts from EMFs arising from the Project are also assessed within Chapter 10: Health and Wellbeing of the Environmental Statement (document reference 6.10).</p> <p>TB46 and TB47 have been located in accordance with the Holford Rules (see Appendix I22 of this report) as well as to avoid residential properties and environmental</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		constraints. We therefore are not proposing a change to the location of these pylons.				
9-5.238	Suggest that Pylons TB48, TB49 and TB50 should be relocated to make use of the valley floor and take advantage of the screening provided by fall of the valley on either side of Mill Road, rather than on the west side of Mill Road as currently proposed (e.g. to reduce impact on residents of Ford Street; to reduce cumulative impact given that there are existing overhead lines already situated in the fields where Pylons TB48, TB49 and TB50 are proposed) / Suggest that Pylons TB48 and TB49 are relocated to follow a more direct line along the valley floor (e.g. away from Ford Street)	The 2024 Design Development Report (available on the Project website) has previously considered alternative routes that passed to the south-east of the 2024 preferred draft alignment, routeing through the area suggested by the feedback, but considered them to be less preferred. The reasons for this include the combination of constraints presented by the River Colne, Fiddlers Wood Ancient Woodland, the closer proximity to the residential property at Mill House where there are open views to the east, utility pipelines (water and high-pressure gas), flood zones around the river and areas of woodland. Taken together these mean that there is insufficient space for the routeing / siting of pylons. The suggested localised change to TB48 to TB50 would have to route through the same area and is constrained by the factors above, particularly the closer proximity and open views from Mill House, pylon positioning within the flood zones along with potential effects on one or two veteran trees (subject to exact route). Given these constraints, and in the absence of any evidence of change to the constraints or new factors being identified, it is not proposed to change from the 2024 preferred draft alignment. We have undertaken an Environmental Impact Assessment (EIA) to assess the potential impact of the Project, and this has identified any need for additional mitigation. The EIA results can be found in the			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Environmental Statement (ES) (document reference Volume 6: Environmental Statement).				
9-5.239	Suggest that the Project is rerouted from Pylon TB89 to TB91 (plans provided by respondent) to significantly reduce impact on Rivenhall Hall Farm	National Grid has considered the respondent's feedback. These changes would require diversions of the alignment to the south. This would result in a less direct alignment with larger angle changes and is therefore less consistent with Holford Rule 3. A summary of the Holford Rules is provided within Appendix I22 of this report. The change of route would also increase effects on residential amenity through moving the alignment in front of other residential properties and be less consistent with Holford Rule Supplementary Notes. For these reasons no change is proposed.			X	
9-5.240	Suggest that the East Anglia Connection Node (EACN) should be removed from the Project and that the Project should be routed away from the Dedham Vale National Landscape (formerly the Dedham Vale Area of Outstanding Natural Beauty (AONB)) to one of the alternative routes identified by National Grid and the Electricity System Operator (ESO) (e.g. given the savings highlighted by National Grid) / Suggest that the East Anglia Connection Node (EACN) is not needed	National Grid does not consider there to be cost savings from adopting alternative strategic proposals or routes. Our consideration of the strategic proposal that meets the identified needs of the Project concluded that it was most economic and efficient, and that effects would be reduced overall, by integrating the reinforcement need from the north of East Anglia with the need to connect new customers around the Tendring Peninsula. This was set out in the 2022 Corridor and Preliminary Routeing and Siting Study (CPRSS) (available on the Project website) and has been backchecked in the 2023 and 2024 Strategic Option Backcheck and Reviews (SOBR) (available on the Project website) and the 2025 SOBR (document reference 7.17). In the absence of	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>new evidence or further factors being identified this remains National Grid's preferred strategic proposal. Consideration of other route and corridor alternatives further to the west of the National Landscape (previously known as an Area of Outstanding Natural Beauty (AONB)) was published within the CPRSS (available on the Project website) as part of our 2022 non-statutory consultation. We have continued to backcheck the strategic connection proposal and siting of the East Anglia Connection Node (EACN) substation, which is part of the holistic consideration of the most appropriate form of the Project. In the absence of further information or new factors we continue to consider this integrated approach to be preferred. Alternative corridors and routes west of the National Landscape were considered and have been backchecked as have other more western locations for the EACN substation. On balance, alternative corridors were less preferred as they would be longer and therefore lead to effects over a much greater length to other receptors at greater cost than the route through the National Landscape. National Grid has previously considered a number of alternative sites for the EACN substation during the initial siting work as set out in the CPRSS (available on the Project website). It was also considered in response to feedback as set out in the 2023 and 2024 Design Development Reports (available on the Project website) where we considered an alternative site to the west of the A12 which is in the area suggested by the feedback. The decision making</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>about siting balances the environmental effects, technical consideration and cost arising from the substation and the connections to it for National Grid and the North Falls and Five Estuaries wind farms and the Tarchon project.</p> <p>We have reviewed this again and as set out in the 2025 Design Development Report (document reference 5.15) continue to consider the EACN substation as proposed to be the preferred location on the basis that an alternative further west presents multiple aspects of uncertainty and construction risk, reduces future flexibility, increases risks to programme for the customers and National Grid with potential for substantial constraint costs if programme is delayed.</p>				
9-5.241	Suggest that the East Anglia Connection Node (EACN) should be relocated to at least Pylon TB41/TB42 to allow the use of underground cables along the entire southern border of the Dedham Vale	<p>National Grid has previously considered a number of alternative sites for the East Anglia Connection Node (EACN) substation during the initial siting work as set out in the Corridor and Preliminary Routeing and Siting Study (CPRSS) (available on the Project website). It was also considered in response to feedback as set out in the 2023 and 2024 Design Development Reports (available on the Project website) where we considered an alternative site to the west of the A12. This feedback request specifically suggests an area further west of this beyond the western end of the Great Horkesley section of cable. This presents additional challenges as the North Falls and Five Estuaries wind farms and the Tarchon project all need to get to the EACN substation</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>in addition to the National Grid connection, wherever it is located. The decision making about siting, balances the environmental effects, technical consideration and cost arising from the substation and the connections to it for National Grid and the three customer's infrastructure. We have reviewed this against this alternative suggestion and as set out in the 2025 Design Development Report (document reference 5.15) continue to consider the EACN substation as proposed to be the preferred location. The same challenges apply to the suggested location further west as to the other site near the A12 at the former Royal Air Force (RAF) Boxted. In summary there would be greater effects on the National Landscape to route the Project and the three customer connections to this location. In addition, the need for multiple cables from different parties through the same general corridor also presents multiple aspects of uncertainty and construction risk, reduces future flexibility, increases risks to programme for the customers and National Grid with potential for substantial constraint costs if programme is delayed. Additionally National Grid does not consider that the use of overhead line to the south of Dedham Vale is inconsistent with policy. National Policy Statement (NPS) EN-5 paragraphs 2.9.20 and 2.9.21 are not engaged to change the presumption to underground cable because the area is outside any relevant designation and does not engage Overarching NPS EN-1 paragraph 5.10.34 by being beyond the area</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		considered to comprise the setting of the National Landscape. Finally, NPS EN-5 paragraph 2.9.23 and onwards are not considered to be engaged to the extent that the use of underground cable is considered to be justified. On this basis no change is proposed.				
9-5.242	Suggest that Cable Sealing End (CSE) compounds should be relocated (no location given) and / or screened from view / Criticism of siting of CSE compounds	All Cable Sealing End (CSE) compounds have been sited after careful consideration of alternative sites. In the absence of new evidence or identification of further factors we consider the decision making to remain valid as set out in previously published Design Development Reports (available on the Project website). The siting has considered the effects on the National Landscape and consider factors set out in the Horlock Rules and assessed effects to communities and environmental factors. In the absence of new evidence or identification of further factors no change is proposed. We have undertaken an Environmental Impact Assessment (EIA) to assess the potential impact of the Project, and this has identified any need for additional mitigation as set out in the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4).			X	
9-5.243	Suggest that the Project has a lower ridge for pylons and that the Raydon Cable Sealing End (CSE) compound should be moved onto lower ground around Washbrook	National Grid notes the respondent's feedback regarding a potential alternative route. Alternatives on lower ground to the north and south of the alignment have been considered but are less preferred due to greater effects on residential properties and listed buildings. We are therefore not proposing a change to the alignment to the north of Raydon. More details on alternatives			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>considered at this location can be found in the 2023 and 2024 Design Development Reports (available on the Project website).</p> <p>National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Park, The Broads, or Area of Outstanding Natural Beauty)'</i>. No such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified. Therefore, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25).</p> <p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project between Raydon and Washbrook would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.</p> <p>Alternative locations for the Cable Sealing End (CSE) compound have been assessed, however the current location is preferred in terms of technical feasibility and there is no policy driver to move the CSE compound further north increasing the length of underground cable.</p>				
9-5.244	Suggest that after crossing Sandpits Lane by Lark Hall and running southwards in the direction of B1068, the Project takes a straighter alignment and runs down the far side of a field and joins up with the original point of the crossing on the B1068 (e.g. a more direct route will mitigate the impact on listed	National Grid is proposing to straighten the alignment as suggested by the respondent after crossing Sandpits Lane and turning south, the alignment will follow the western edge of the field more closely.			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	property in the Dedham Vale National Landscape (formerly the Dedham Vale Area of Outstanding Natural Beauty (AONB)) including through noise and dirt)					
9-5.245	Suggest that Pylons TB12 and TB13 are as low in height and modern as possible / Suggest T-Pylons are used for Pylons TB12 and TB13	<p>The latest independent report on the Comparison of Electricity Transmission Technologies: Costs and Characteristics (Institute of Engineering and Technology, 2025) confirms that whilst T-Pylons may in certain locations provide an alternative to conventional overhead lines with potential benefits in visual impact and reduced land-take, this is at a higher cost. The build cost is approximately 2 to 2.5 times that of an equivalently rated conventional overhead line, and the lifetime costs are around 1.6 to 1.7 times that of a conventional overhead line. The current arrangements for the oversight of funding by Ofgem requires that the lowest cost acceptable design is taken forward rather than a more expensive design even if that design is perceived to reduce the level of effect.</p> <p>As such consideration of their use follows after establishing a need to mitigate effects of the standard lattice design and after considering the benefit of adopting a low height lattice pylon design. T pylons themselves are also less adaptable to varied terrains and require more substantial access infrastructure. Furthermore, their resilience and environmental impact are comparable to conventional overhead lines, but with increased carbon intensity due to construction materials.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Attention also needs to be given to the transitions between pylon types. Given It is the surrounding context that drives the need for alternative design mitigation, where this is not required along the entire route, any visual break and transition in pylon design also needs to be carefully sited.</p> <p>Assessment findings have concluded that, where there is not a reversal of the presumption to use overhead lines, the use of lattice pylons (either standard or low height) is consistent with planning policy throughout the route. Whilst there may be some locations (for examples see appendix A of the 2024 Design Development Report (available on the Project website)) where there may be a design option for the use of T pylons, the need to mitigate for unacceptable effects from lattice pylons is not engaged. On this basis T pylons are not proposed for the Project.</p>				
9-5.246	Suggest that the Project should use High Voltage Direct Current (HVDC) technology throughout the Dedham Vale National Landscape (formerly the Dedham Vale Area of Outstanding Natural Beauty (AONB)) and in the area close to it between Raydon and Holton St Mary	National Grid is constantly looking into new innovations and investigating alternative technology types. These are explored and assessed for suitability. Alternative technologies were investigated for the Project, these included an offshore connection using Direct Current (DC) technology, and various onshore connection options including: increasing operational voltages on existing network to above 400 kV; Alternating Current (AC) overhead lines (established technology); alternative pylon types; AC underground technology; High Voltage			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Direct Current (HVDC) overhead line and underground cables; and Gas Insulated Line (GIL).</p> <p>HVDC is not normally used across land as converting AC to DC and back again would require converter stations so it can be used in the rest of transmission network and the distribution network which is currently AC. These converter stations are a significant size and would be required at every interface with the wider AC network i.e. at Norwich, Bramford, East Anglia Connection Node (EACN) and Tilbury substations, the cost of these converter stations outweighs the benefits offered. Currently overhead lines offer the most economic and efficient solution to transmit electricity over long distances.</p>				
9-5.247	<p>Suggest the use of underground cables (using High Voltage Direct Current (HVDC) technology) should be extended to the Bramford Substation</p>	<p>National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Park, The Broads, or Area of Outstanding Natural Beauty)'</i>. Where no such</p>			X

		<p>designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25).</p> <p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project between Bramford Substation and Raydon would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>National Grid is constantly looking into new innovations and investigating alternative technology types. These are explored and assessed for suitability. Alternative technologies were investigated for the Project, these included an offshore connection using Direct Current (DC) technology, and various onshore connection options including: increasing operational voltages on existing network to above 400 kV; Alternating Current (AC) overhead lines (established technology); alternative pylon types; AC underground technology; High Voltage Direct Current (HVDC) overhead line and underground cables; and Gas Insulated Line (GIL).</p> <p>Currently, overhead lines offer the most economic and efficient solution to transmit electricity over long distances.</p>				
9-5.248	Suggest that during construction, construction traffic should access the underground cable construction site passing between Holton St Mary and Raydon via the B1068 and the haul road rather than via the B1070 through the village of Holton St Mary (e.g. mitigating impact on residents and avoiding the need for heavy construction traffic to navigate the narrow A12 junction / slip road at Four Sisters (A12 / B1070 junction))	<p>National Grid has carefully considered the feedback received during the statutory consultation for this Primary Access Route for construction vehicles this included the use of the historic railway alignment and access through Notley Enterprise Park. These alternatives were discounted through assessment and identification of constraints.</p> <p>The consultation has identified an opportunity to utilise an offline temporary haul road located east of Holton St Mary from the B1070 to the construction corridor. It is proposed that this route would act as a bypass for Holton St Mary during construction.</p>			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		It is proposed that only the northbound side of Junction 31 of the A12 is used for construction access. National Grid's preliminary designs include upgrades to this junction as part of the Project works to improve the northbound acceleration lane.				
9-5.249	Suggest that the Project should be rerouted between Pylons TB66 and TB73 (around Broad Green, Surrex hamlet) given that it would create a danger to the operation of the Essex & Herts Air Ambulance, that operates out of Earls Colne Airfield (e.g. particularly as the A120 from Braintree to Marks Tey is a dangerous road, with regular serious accidents and fatalities)	<p>Earls Colne Airfield is approximately 5 km from the alignment. As a result, it is assessed that neither fixed wing nor helicopter operations at the airfield would be impacted by the Project. Further information on the assessment of airfields can be found in the Environmental Statement (ES) Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and ES Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).</p> <p>The ES Chapter 16: Traffic and Transport (document reference 6.16) has assessed the road collisions at the A120 between Coggeshall and Marks Tey interchange and it has been identified as a potential hotspot for accidents. In general collisions happened during daylight hours or with lights lit, with fine weather conditions and with a dry road surface and therefore no specific collision patterns were identified. Furthermore, the collision rate per annum is similar to the national average.</p>			X	
9-5.250	Suggest that Pylon TB69 should be relocated away from the ancient oak tree	National Grid has completed surveys along the Project and no designated veteran trees or ancient woodland have been identified in the location of TB69. We have			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>tried to route and site the Project in accordance with the Holford Rules where possible and moving TB69 would add an additional angle pylon. We are therefore not proposing a change to the location of TB69. A summary of the Holford Rules is provided within Appendix I22 of this report.</p> <p>We have undertaken an Environmental Impact Assessment (EIA) and the findings are presented in the Environmental Statement. This includes an Arboricultural Impact Assessment (AIA) (document reference 6.13.A6) to assess the potential impact of the Project, and this has identified any need for additional mitigation.</p>				
9-5.251	Suggest that underground cables and the Cable Sealing End (CSE) compound near Raydon (address provided by respondent) is relocated away from residential property (e.g. to mitigate impact on residents)	National Grid has considered the respondent's feedback and is proposing an alternative underground cable route moved to the east and connecting to the previously proposed Cable Sealing End (CSE) compound. This alternative alignment would move the Project further away from the respondent as requested. The location of the CSE compound has not been changed, alternative locations have been assessed, however the current location is preferred in terms of technical feasibility and there is no policy driver to move the CSE compound further north increasing the length of underground cable.			X	X
9-5.252	Suggest that the Cable Sealing End (CSE) compound at Raydon should be moved towards	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	Chattisham and that the Project should use underground cables to Chattisham	<p>under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Park, The Broads, or Area of Outstanding Natural Beauty)'</i>. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25).</p> <p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project between Raydon and Chattisham would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.</p> <p>Alternative locations for the Cable Sealing End (CSE) compound have been assessed; however the current location is preferred in terms of technical feasibility and there is no policy driver to move the CSE compound further north increasing the length of underground cable.</p>				
9-5.253	Suggest that the East Anglia Connection Node (EACN) should be relocated (e.g. to avoid the switch-back directly across the area), and, if not, suggest that the Project should continue from Ipswich to the east of Colchester (nearer Lawford) and then south, keeping to the east of Colchester	National Grid does not consider there to be cost savings from adopting alternative strategic proposals or routes. Our consideration of the strategic proposal that meets the identified needs of the Project concluded that it was most economic and efficient, and that effects would be reduced overall, by integrating the reinforcement need from the north of East Anglia with the need to connect new customers around the Tendring Peninsula. This was set out in the 2022 Corridor and Preliminary Routeing and Siting Study (CPRSS) (available on the Project website) and has been backchecked in the 2023 and 2024 Strategic Option Backcheck and Reviews (SOBR) (available on the Project website) and 2025			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>SOBR (document reference 7.17). In the absence of new evidence or further factors being identified this remains National Grid's preferred strategic proposal. Consideration of other route and corridor alternatives was published within the CPRSS (available on the Project website). We have continued to backcheck the strategic connection proposal and siting of the East Anglia Connection Node (EACN) substation, which is part of the holistic consideration of the most appropriate form of the Project. In the absence of further information or new factors we continue to consider this integrated approach to be preferred. Alternative corridors and routes east of Colchester were considered and have been backchecked with the constraints of the Special Area of Conversation (SAC) and Special Protection Areas (SPA) designations unchanged and still considered to require the adoption of a route not affecting these designations. National Grid has previously considered a number of alternative sites for the EACN substation during the initial siting work as set out in the CPRSS (available on the Project website). It was also considered in response to feedback as set out in the 2023 and 2024 Design Development Reports published in 2023 (available on the Project website) where we considered an alternative site to the west of the A12 which is in the area suggested by the feedback. The decision making about siting balances the environmental effects, technical consideration and cost arising from the substation and the connections to it for</p>

Whilst there may be some locations (for examples see appendix A of the 2024 Design Development Report (available on the Project website)) where there may be a design option for the use of T pylons, the need to mitigate for unacceptable effects from lattice pylons is not engaged. On this basis T pylons are not proposed for the Project.</p>				
9-5.264	Suggest that Pylon TB27 should be relocated 100m to the south, so that Pylon TB25 is connected to the repositioned Pylon TB27 (e.g. to mitigate impact on trees; require less tree height management; require less work on visibility splays)	National Grid has considered the respondent's feedback and has reviewed an alternative alignment that would move TB27 south as suggested. This alternative would introduce an angle pylon close to residential properties to the south and would oversail residential gardens either to the north or south of the alignment. We are therefore not proposing to take this change forward. We have submitted an Arboricultural Impact Assessment (AIA) (document reference 6.13.A6) which includes an assessment of tree loss and includes details of mitigation where required.			X	
9-5.265	Suggest that underground cables should be used for at least 5 km beyond the Dedham Vale National Landscape (previously known as the Dedham Vale Area of Outstanding Natural Beauty (AONB)) (e.g. to	National Policy Statement (NPS) EN-5 makes it clear that the government expects overhead lines to be appropriate in most instances, although it recognises that there may be, at particularly sensitive locations			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	mitigate visual impact) / Suggest that overhead lines should be at least 5 km (ideally 10 km) away from the Dedham Vale National Landscape (e.g. to mitigate visual impact)	<p>which includes nationally designated areas such as the Dedham Vale National Landscape (previously known as an Areas of Outstanding Natural Beauty (AONB)), potential adverse landscape and visual impacts of an overhead line that make it unacceptable in planning terms. National Grid has therefore adopted underground cable technology as mitigation within areas such as the National Landscape. Policy identifies no set distance (such as 5 km) by which such mitigation should be extended outside the National Landscape boundary.</p> <p>National Grid identifies the requirement for mitigation (whether by additional planting, type of pylon or choice of alternative technology such as underground cable) based on consideration of the potential effects that may arise on a case by case basis. This takes into account the specific details of the designation (including special qualities, key views etc) and local circumstances including landform and existing vegetation. This approach allows consideration of the predicted effects arising from cable or overhead line technology and the Cable Sealing End (CSE) compounds (the transition sites between technologies) rather than applying an arbitrary distance that may be too great or too small for the specific circumstances.</p>				
9-5.266	Suggest that tunnelling is used to install underground cables at the Dedham Vale National Landscape (previously known as the Dedham Vale Area of Outstanding Natural Beauty (AONB)) (e.g. to	The installation of underground cable through the Dedham Vale National Landscape (previously known as Area of Outstanding Natural Beauty (AONB)) is mostly planned as open trench installation which means six			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	mitigate impact on wildlife, woodlands, and footpaths)	<p>trenches would be excavated over the route, ducts would be installed, and the trenches backfilled. Underground cables would then be pulled through the ducts and once all works have been completed, the land would be reinstated. There are sections however where open trenching may not be suitable due to environmental and other constraints, and we have therefore proposed a trenchless excavation/installation method such as horizontal directional drilling.</p> <p>Tunnelling would potentially require head houses along the route at regular intervals for access egress, emergency escape and also for ventilation purposes. This would have a permanent impact on the landscape and so is not suitable with planning policy as would have significant effect on designated landscape. The construction activity would have a much greater impact as tunnel arisings are excavated and removed from site meaning much greater impact on traffic in the area. Materials such as precast tunnel sections and entry and reception chambers, Furthermore the cost is considerably more than the typical open cut methodology. Therefore, this would be increasing the cost for no additional gain in terms of impact of the Project on Dedham Vale National Landscape, so weighed in the balance, tunnelling is not value for money.</p> <p>The Environmental Statement (Volume 6 of the DCO application) provides an assessment of the Project during construction. An Outline Code of Construction</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-5.267	Suggest that mitigation for repair / replacement of underground cables after their lifetime should be considered, such as pulling through conduit similar to tunnelling rather than encasing in sand cement mix / Concern that replacement of underground cables will impact landscape again in future (as replacement required every 40-60 years) and suggest that underground cables are sited in larger conduits to allow for replacement without disturbing the ground (like for Bramford to Twinstead reinforcement project)	<p>Practice (CoCP) (document reference 7.2) has been prepared and submitted with the DCO application. This document provides commitments to reduce construction impacts together with a framework for detailed management plans to be prepared at detailed design stage in order to reduce and mitigate potential impacts and/or disruptions that may arise during the construction phase.</p> <p>The installation of underground cable through the National Landscape (previously known as an Area of Outstanding Natural Beauty (AONB)) is mostly planned as open trench installation which means six trenches would be excavated over the route, ducts would be installed, and the trenches backfilled. Underground cables would then be pulled through the ducts and once all works have been completed, the land would be reinstated. There would be sections however where open trenching may not be suitable due to environmental and other constraints, and we would therefore have to consider a trenchless excavation/installation method such as horizontal directional drilling.</p> <p>All underground cable routes are laid using either open cut or trenchless crossing technology, ducting is then used to form the passage to which cables are then pulled through. This method enables the replacement of cables in the future without having to fully excavate the full route.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-5.268	Suggest that substations should be sited a minimum of 3 km outside the Dedham Vale National Landscape (previously known as the Dedham Vale Area of Outstanding Natural Beauty (AONB) (e.g. the East Anglia Connection Node is only 1 km away at present)	National Grid does not define a set distance from designated landscapes as the basis to define the extent of separation from the Project infrastructure. The approach adopted responds to the specific circumstances of each location and is therefore guided by the nature of the feature or designation, existing screening by landform or vegetation rather than a predefined standard. We do not consider the Special Qualities of the National Landscape to be impacted at a level that requires further mitigation in order to be consistent with Holford Rules and relevant policy. On this basis no change is proposed. A summary of the Holford Rules is provided within Appendix I22 of this document.			X	
9-5.269	Suggest that underground cables should be used from Bramford Substation to the Raydon Wings Airstrip (in the Ipswich Fringe Settlement area) (e.g. to mitigate visual impact)	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is ' <i>that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Park, The Broads, or Area of Outstanding Natural Beauty)</i> '. Where no such			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25).</p> <p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project between Bramford Substation and Raydon would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-5.270	Suggest that the Project is routed via farmland nearer Hadleigh (e.g. to mitigate impact on villages; to mitigate impact on expansion into the Ipswich Fringe Settlement area) (plan provided by respondent)	National Grid has considered the respondent's feedback. Routeing in this way would require a third overhead line parallel to the existing overhead line and the proposed Bramford to Twinstead Reinforcement. This would be a longer route that would need to cross both such overhead lines by use of an additional underground cable section between Cable Sealing End (CSE) compounds. While potentially deliverable, this transfers effects from one group of receptors to another group and at much greater cost and therefore provides a less economic and efficient solution which is less consistent with National Grids duties and relevant policies. This change is therefore not currently proposed to be taken forwards. We have undertaken an Environmental Impact Assessment (EIA) to assess the potential impact of the Project, and this has identified any need for additional mitigation.			X	
9-5.271	Suggest that the East Anglia Connection Node (EACN) is relocated to the north east of Colchester, linking up to the rerouting of the Project to the west of Stowmarket (e.g. to avoid need for the underground section at the Dedham Vale National Landscape (previously known as Dedham Vale Area of Outstanding Natural Beauty (AONB)), and the Project is then routed to the west of Coggeshall or to the north west of Witham or Fairstead	The feedback suggests a much more direct routeing for the Project positioning the alignment and East Anglia Connection Node (EACN) substation to the west of the Dedham Vale. This alternative requires much longer connections for the customer connections to the EACN substation and would require more corridors to be utilised with greater effects than arise from the single corridor for the Project. National Grid's consideration of corridor alternatives further to the west of the National Landscape (previously known as an Area of Outstanding			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Natural Beauty (AONB)) was published within the 2022 Corridor and Preliminary Routeing and Siting Study (CPRSS) (available on the Project website). We have continued to backcheck the strategic connection proposal and siting of the EACN substation, which is part of the holistic consideration of the most appropriate form of the Project. In the absence of further information or new factors we continue to consider alternatives west of the National Landscape to be less preferred. On balance, these were less preferred as they would be longer and therefore lead to effects over a much greater length to other receptors at greater cost than the route through the National Landscape. Undergrounding through the National Landscape is consistent with National Policy Statement (NPS) EN-5. The siting of Cable Sealing End (CSE) compounds (the transition sites between the overhead line and underground cable) has identified locations to reduce effects on the designation and consider the use of trenchless techniques – subject to ground conditions – to reduce certain construction effects. National Grid has previously considered a number of alternative sites for the EACN substation during the initial siting work as set out in the CPRSS. It was also considered in response to feedback as set out in the 2023 and 2024 Design Development Reports (available on the Project website) where we considered an alternative site to the west of the A12. The decision making about siting balances the environmental effects, technical consideration and cost</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>arising from the substation and the connections to it for National Grid and the North Falls and Five Estuaries wind farms and the Tarchon project.</p> <p>We have reviewed this again and as set out in the 2025 Design Development Report (document reference 5.15) continue to consider the EACN substation as proposed to be the preferred location on the basis that an alternative further west presents multiple aspects of uncertainty and construction risk, reduces future flexibility, increases risks to programme for the customers and National Grid with potential for substantial constraint costs if programme is delayed.</p>				
9-5.272	Suggest relocation of East Anglia Connection Node (EACN) substation at Ardleigh (no location given) / Criticism of the siting of the East Anglia Connection Node (EACN) (e.g. due to impact on the environment, heritage, and ecology; as it is not located at the electrical load centre of the network and the route of the Project deviates to the proposed site; impact on PRoWs, including Footpath 158 28 and 29 from the railway line near the village to Morrow Lane and from Morrow Lane to Little Bromley Road)	National Grid has previously considered a number of alternative sites for the East Anglia Connection Node (EACN) substation during the initial siting work as set out in the Corridor and Preliminary Routeing and Siting Study (CPRSS) (document reference 7.18). It was also considered in response to feedback as set out in the 2023 and 2024 Design Development Reports (available on the Project website) where we considered an alternative site to the west of the A12. The decision making about siting balances the environmental effects, technical consideration and cost arising from the substation and the connections to it for both National Grid and the customer infrastructure. We have reviewed this and continue to consider the EACN substation as proposed to be the preferred location. Other alternatives to the west (to avoid the cited deviation) present multiple	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		aspects of uncertainty and construction risk, reduce future flexibility, increase risks to programme for the customers and National Grid with potential for substantial constraint costs if programme is delayed. On this basis no change is proposed. An Environmental Impact Assessment (EIA) has been undertaken which includes assessment of Public Rights of Way (PRoW).				
9-5.273	Suggest that the East Anglia Connection Node (EACN) Substation at Ardleigh, along with the three other substations proposed to be built by Five Estuaries, North Falls and Tarchon, is relocated 300 m further east, or, if this is not possible, that the East Anglia Connection Node (EACN) substation at Ardleigh is relocated further east but still inside the red line area of the proposed substation	The siting of the East Anglia Connection Node (EACN) substation carefully considered the position of the EACN substation taking into account the presence of homes, physical constraints and environmental features. The change proposed in the feedback would lead to a repositioning of proposed EACN substation infrastructure beyond a mature hedge line providing a degree of filtering of views. This transfers potential effects from some properties currently benefitting from some filtering of views by vegetation to properties to the east without or with reduced filtering vegetation. This would also increase the length of cable at the additional cost of several million pounds and is not considered to be justified in light of effects arising from the proposed EACN substation positioning. On this basis it is considered to be less preferred and no change is proposed.			X	
9-5.274	Suggest that there should not be a pinch point of approximately 50 m on Hungerdown Lane where two 400 kV cables run (one underground and one overground), and a haul road has been proposed for	National Grid has considered whether this coincidence of overhead line and underground cable route, with temporary haul road can be avoided. This would only be possible by realignment of one of the connections further			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	the Project / Concern regarding the cumulative electromagnetic field (EMF) resulting from the two cables that are immediately adjacent at Hungerdown Lane (e.g. impact on health of residents and impact on ability to sell property)	<p>south. This would increase the length of connection and for the overhead line, which would be the most appropriate to divert, be expected to require an additional pylon with a larger angle change. As such it would be less consistent with Holford Rule 3. A summary of the Holford Rules is provided within Appendix I22 of this report.</p> <p>Potential effects to residential properties on Hungerdown Lane would be transferred to a substantial degree to properties to the south and be expected to be increased on the potential minerals site (referred to as Martells 85 & 86). On this basis the change is less preferred, and no change is proposed.</p> <p>The UK has a carefully thought-out set of policies for protecting us all against Electric and Magnetic Fields (EMFs), the main component of which is exposure guidelines. Those exposure guidelines are set by independent scientific bodies and are based on decades-long studies into the effects of EMFs and ill health. After those decades of research, the weight of evidence is against there being any health risks of EMFs below the guideline limits. These policies are incorporated into the decision-making process for Development Consent in National Policy Statement (NPS) EN-5. All the equipment which forms part of this Project, including the cumulative impacts of the overhead line and cables, has been demonstrated as being fully compliant with these policies, set to protect everyone. The Electric and magnetic field compliance</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		report will be submitted as part of the Development Consent Order (DCO).				
9-5.275	Suggest that an access road from the recently constructed roundabout at Great Bromley should be used instead of upgrading the proposed road from the A120 for access (e.g. to avoid a continuous flow of lorries through the Little Bromley each day)	National Grid notes the respondent's feedback. This option has been considered, the route from the recently constructed roundabout would mean using Harwich Road and the B1029 requiring passing over and under the A120 where there are height and weight restrictions. This prevents access for our large transformer delivery vehicles which means they would be unable to cross the A120.			X	
9-5.276	Suggest that a temporary (or even permanent) haulage road could be constructed near Capel St Mary from the A12 straight across open land to the old Raydon Airfield (where Notley Enterprise Park is situated), as there is an existing disused railway track that could be used depending on the optimum route from the A12 to Raydon Airfield (e.g. to avoid construction traffic on the proposed route through Holton St Mary), and suggest that Raydon Airfield could be used as a Materials Lay Down site, given that it is existing infrastructure and would not involve further construction on a road junction close to a 90 degree bend	<p>National Grid has carefully considered the feedback received during the statutory consultation for this Primary Access Route for construction vehicles this included the use of the historic railway alignment and access through Notley Enterprise Park. These alternatives were discounted through assessment and identification of environmental constraints.</p> <p>The consultation has identified an opportunity to utilise an offline temporary haul road located east of Holton St Mary from the B1070 to the construction corridor. It is proposed that this route would act as a bypass for Holton St Mary during construction.</p> <p>A construction laydown area is proposed to be located at the historic Raydon Airfield in our design proposals presented at consultation, and we are continuing the propose to use this location following feedback received during consultation.</p>			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-5.277	Suggest that a new haul road using the route of the old railway line from Bentley to Raydon is used, making use of the A12 Junction 32B and link with Notley Enterprise Park (disused Raydon Airfield) North of the Materials Lay Down area, and suggest that the construction compound could then be relocated away from the planned B1070/Acacia Road junction (e.g. to mitigate visual impact on the Dedham Vale National Landscape (previously known as the Dedham Vale Area of Outstanding Natural Beauty (AONB)). Suggest that, following the completion of the Project, this new link could be adopted by National Highways and relieve Holton St Mary of heavy traffic permanently and make any need for alterations at Junction 31 unnecessary	<p>National Grid has carefully considered the feedback received during the statutory consultation for this Primary Access Route for construction vehicles this included the use of the historic railway alignment and access through Notley Enterprise Park. These alternatives were discounted through assessment and identification of environmental constraints.</p> <p>The consultation has raised the option identified an opportunity to construct utilise an offline temporary haul road located east of Holton St Mary from the B1070 to the construction corridor. This route It is now proposed as the access route that this route would act as a to bypass for Holton St Mary during construction. Whilst noting the request to retain this haul road after construction is complete. National Grid is seeking consent for a temporary haul road, rather than a permanent road design to an adoptable standard.</p> <p>National Grid has also carefully considered the feedback received during the statutory consultation for this construction compound.</p> <p>The proposed compound between Raydon and Holton St Mary serves underground cabling works between the proposed Cable Sealing End (CSE) compound north of the Notley Enterprise Park and the River Stour. Moving the proposed compound to land adjacent to Notley Enterprise Park will increase the distance that construction vehicles must travel from the primary access route by approximately 1.5-1.8 km.</p>			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Approximately two thirds of the cable section served by this compound is to the south of the current compound position, therefore moving the compound would also significantly increase construction vehicle movements from the compound to work sites along the underground cable alignment.				
9-5.278	Suggest the use of underground cables at Little Wenham Hall / Little Wenham Castle / historic Wenham (3km)	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is ' <i>that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Park, The Broads, or Area of Outstanding Natural Beauty)</i> '. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25).</p> <p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at Little Wenham would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.</p> <p>Alternative locations for the Cable Sealing End (CSE) compound have been assessed; however, the current location is preferred in terms of technical feasibility and there is no policy driver to move the CSE compound further north increasing the length of underground cable.</p>				
9-5.279	Suggest that the East Anglia Connection Node (EACN) should be relocated further away from the Dedham Vale National Landscape (previously known	We have considered this feedback and note that the Project is unrelated to the convertor stations at Friston which are associated with other customer connections			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	as the Dedham Vale Area of Outstanding Natural Beauty (AONB)) (e.g. given that the proposed the location is only 1.2 km outside the National Landscape and likely to result in legal challenge), and that the three High Voltage Direct Current (HVDC) converter substations should be considered when deciding a new location for the EACN (e.g. so that additional infrastructure at Friston is not needed)	and separate justification processes for their siting. Additionally, only one of the customers proposed to connect at the East Anglia Connection Node (EACN) substation is utilising High Voltage Direct Current (HVDC) technology. In respect of the request to increase the distance from the EACN substation to the Dedham Vale National Landscape we do not define a specific distance to be complied with when siting such infrastructure but consider siting on a case by case basis informed by the attributes of the site and effects on the Special Qualities. In the case of the EACN substation, we do not consider that the EACN substation, nor the connection infrastructure to it, would have effects that are inconsistent with relevant policy for the National Landscape. On this basis, we do not consider further distance to be required, and no change is made.				
9-5.280	Suggest that pylons are not used at the southern boundary of the Dedham Vale National Landscape (previously known as the Dedham Vale Area of Outstanding Natural Beauty (AONB))	National Grid has carefully considered the feedback proposing to extend the use of underground cable between Great Horkesley and Ardleigh, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated</i>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p><i>landscape (i.e. National Park, The Broads, or Area of Outstanding Natural Beauty)'. No such designations are present between Great Horkesley and Ardleigh, nor is this area, within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified. Therefore, the starting presumption for the Project here is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in this location would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25).</i></p> <p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant level of landscape and visual effects from the Project. While we consider that landscape and visual effects between Great Horkesley and Ardleigh, may be widespread and therefore reach the threshold set out in NPS EN-5, there are also a range of technical difficulties (including restricted space between built developments and a reservoir to be passed beneath) and other considerations (such as a railway crossing to be crossed</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		on 400 kV connection routes to and from the East Anglia Connection Node (EACN) substation and an area between the railway and the EACN substation potentially to be included in the next Essex Minerals Plan) meaning that we do not consider underground cable to be preferred through this section.				
9-5.281	Suggest that construction compounds, laydown sites, and access roads should be relocated away from the Dedham Vale National Landscape (previously known as the Dedham Vale Area of Outstanding Natural Beauty (AONB))	<p>The Project requires access to the cable corridor for construction, including in the Dedham Vale National Landscape. The proposed construction access strategy has been developed to manage the impact of construction vehicles on the Public Highway and sensitive receptors, using a combination of more suitable Local Road Network connections from the Strategic Road Network, and Temporary Haul Roads for access along the proposed alignment. Further details of the Construction Routing Strategy are provided in Section 5.4 of the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), Construction compounds and laydown areas are located close to the Primary Access Routes which offers traffic and logistical benefits.</p> <p>National Grid has sought to reduce, as far as practicable, impacts on Dedham Vale National Landscape through routeing and siting and an ongoing iterative design process which has taken on board feedback at different stages of the Project. The iterative design process sought to avoid areas of highest concern, for example through careful siting of Cable</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Sealing End (CSE) compounds, access roads and laydown areas, and through changes to the alignment and proposals for trenchless crossings.</p> <p>The relevant National Policy Statement (NPS) EN-5 makes it clear that the Government considers overhead lines to be appropriate and acceptable in most instances, although it recognises that that there may be, at particularly sensitive locations, potential adverse landscape and visual impacts of overhead line infrastructure that make it inconsistent with our duties and relevant planning policy.</p> <p>Dedham Vale National Landscape (previously known as Area of Outstanding Natural Beauty (AONB)) designation is one such location where there is a presumption that underground cable technology is adopted with the extent of underground cabling extending beyond the boundary in response to the potential for the Project to affect the natural beauty of the National Landscape. Our proposals include a total of approximately 20 km of underground cable through and in the vicinity of the Dedham Vale National Landscape, including a section at Great Horkesley to reduce the changes in views and setting of the National Landscape from within and adjacent to its designated boundary. National Grid considers the siting of the CSE compounds, access roads and laydown sites to be appropriate in terms of the avoidance of impacts on Dedham Vale National Landscape.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-5.282	Suggest that National Grid retain the irrigation main which runs around the Houchins Farm (plan provided by respondent)	The proposals to the southeast of Houchins Farm are to install two new pylons (TB70 and TB71 and associated overhead line. A stone haul road to both pylons and a stone working area at each pylon location are required to facilitate the construction of the pylons. Additionally, a conductor stringing work (trackway matting) area is required at TB70 and south of TB71 scaffolding is required to enable netted protection of the Colchester Road (A120) during stringing of the overhead lines. All construction activities would be refined at detailed design and would take account of and would avoid or protect private drainage and irrigation where practical. National Grid and our main works contractors would continue to engage landowners to minimise any disturbance.			X	
9-5.283	Suggest that an alternative permanent access route is used by National Grid to mitigate impact on Houchins Farm (plan provided by respondent)	National Grid has considered the respondent's feedback and is proposing a change to this permanent access to the new route as requested by the respondent.			X	X
9-5.284	Suggest that existing tarmacked bellmouths be used, rather than creating additional hard accesses from the A120 and that the road is surveyed to assess the viability of the existing access points	For the proposed bellmouth junctions, the most suitable location for the proposed access point, and access to the haul roads, has been determined with consideration of road geometry, maximising junction visibility and other site-specific constraints. Locations have, where appropriate, been chosen to minimise the impact on trees and hedgerows. Existing land/field accesses have been used where they are considered to be suitable locations as determined by the above assessment criteria.			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		National Grid has worked with National Highways to develop proposals for access routes from their Strategic Road Network, which the A120 is part of, including visibility assessments and identification of necessary highway improvement works.				
9-5.285	Suggest that National Grid consider respondent's proposal to host proposed compound as part of the Project on their land instead of their neighbour's land (plan provided by respondent)	National Grid has considered the respondent's feedback and are unable to accept the respondent's proposed location for the laydown area. This is due to the need for the compound to be located close to the works and south of the A120 as it is servicing the route to the south of here.			X	
9-5.286	Concern that the redline order limits include Public Footpath Feering 4 / Kelvedon 4 / Suggest that the route is moved to either south of Mill Lane and Mill Cottages or north of Feeringbury, the sewage works and Half-Way Cottages, which would avoid Feering and Kelvedon Footpath 4 and also be north of Feering Footpath 22 and Kelvedon Footpaths 3 and parts of Footpath 2	National Grid has considered the respondent's feedback; a more northern route would take the alignment closer to and between listed buildings at Feeringbury and Coggeshall which have a historic link. It would also take the alignment over a sewerage treatment works which introduces a technical constraint, we are therefore not taking this change forward. A change to the alignment has been made which would move pylon TB77 (as in between TB75 and TB79) south of Mill Cottages and then reconnect with the alignment at TB80 (now TB82). This change goes some way to addressing the concerns of the respondent.	X			X
9-5.287	Suggest that the underground section of the Project near Raydon is realigned so that Pylon JC31 is the final pylon before switching to underground cables (e.g. to improve safety at Raydon Airfield, as this	National Grid has appointed an independent aviation consultancy which has engaged with the operators of Raydon Wings airfield (with National Grid also present) to inform their impact assessment. The overhead line			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	location is approximately 1 km away, whereas Pylon JC33 as currently proposed is only 300 m from the airfield)	<p>alignment is assessed to be at a sufficient distance to the north of the runway to ensure that overflight is not required on takeoff or landing. Furthermore, the alignment need not impact existing flying circuits to the north as overflight is assessed to be at a safe distance. In view of the assessment conclusions, further changes to the overhead line alignment have not been implemented as there is considered to be insufficient justification for the proposed extension of the underground cables on grounds of safety. We will continue to engage with the airfield operator to confirm the acceptability of the design.</p> <p>Further information on the assessment of airfields can be found in Environmental Statement (ES) Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and ES Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).</p>				
9-5.288	Suggest that underground cables in the region of Birchwood Road, adjacent to the A12, are located as far west as possible to reduce the impact of construction to the properties along Boxhouse Lane	National Grid has considered the respondent's feedback to move the underground cable alignment further west along Birchwood Road. We are not proposing a change to the alignment at this location as the suggested route would not be feasible due to restrictions in the turning radius for underground cables. The route suggested would also be longer and less direct.			X	
9-5.289	Suggest that the construction compound and construction laydown area on Birchwood Road is relocated to reduce the potential visual harm to Dedham Vale National Landscape (previously known	National Grid has considered the respondent's feedback to move cable construction compound JC-C4 and the adjacent construction laydown area. We are not proposing a change to the location of these areas as			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	as the Dedham Vale Area of Outstanding Natural Beauty (AONB))	they need to be connected to the Primary Access Route. As there is no alternate option for the Primary Access Route that could provide the same access point off the A12 for the underground cable compound which is required to be in close proximity to the strategic road network. Moving the compound away from the strategic road network would create more vehicle movements and therefore increasing any disruption. It should be noted that the construction compound and construction laydown area are temporary for use during construction and will be removed once construction is complete and land reinstated.				
9-5.290	Criticise that the proposed Primary Access Route (PAR 27) - Birchwood Road, Dedham is not appropriate and should not be used (e.g. to mitigate road safety risk, impact on residents, traffic issues, etc)	National Grid has worked with the local highway authorities and National Highways to develop our access proposals for the Project. Our strategy, which has included assessment of visibility and highway geometry, has been completed for Birchwood Road and we have carefully assessed the necessary measures to enable its use. Road safety audits of all proposed junctions have been undertaken and assessed by the local authorities.			X	
9-5.291	Suggest that the project is moved at least 400m away from residential property in the Tendring area (e.g. as a pylon is proposed only approximately 136 m away from property as present	National Grid does not use standard minimum distances as a routeing consideration. We utilise the Holford Rules informed by feedback and professional judgement to define appropriate corridors and alignments that are consistent with the relevant policy framework and duties. A summary of the Holford Rules is provided within Appendix I22 of this report.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		TB11 and TB12 are approximately 130 m from the nearest residential property. Its positioning is constrained locally by roads, residential properties and limitations on adjacent pylon adjustments. As a result, its positioning has not been able to be adjusted. A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the Environmental Impact Assessment (EIA). This assesses the impact of the Project and identifies the need for additional mitigation if required. The LVIA can be found in ES Chapter 13: Landscape and Visual (document reference 6.13).				
9-5.292	Suggest that the use of underground cables for the Project is extended to start at Pylon TB11 (plan provided by respondent), and query as to why it is planned to use underground cables and overhead line in this area at present	National Grid has carefully considered the feedback proposing to extend the use of underground cable between Great Horkesley and Ardleigh, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Park, The Broads, or Area of Outstanding Natural Beauty)'</i> . No such designations are present between Great Horkesley and Ardleigh, nor is this area, within the setting of such a designated area			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified. Therefore, the starting presumption for the Project here is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in this location would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25).</p> <p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant level of landscape and visual effects from the Project. While we consider that landscape and visual effects between Great Horkesley and Ardleigh, may be widespread and therefore reach the threshold set out in NPS EN-5, there are also a range of technical difficulties (including restricted space between built developments and a reservoir to be passed beneath) and other considerations (such as a railway crossing to be crossed on 400 kV connection routes to and from the East Anglia Connection Node (EACN) substation and an area between the railway and the EACN substation potentially to be included in the next Essex Minerals Plan) meaning</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		that we do not consider underground cable to be preferred through this section.				
9-5.293	Suggest that Pylon TB46 is relocated away from Fossetts Lane (e.g. due to spring flow and water dependant habitats; due to impact of views of Woodland Trust land)	<p>National Grid has considered the respondent's feedback, the location of TB46 is constrained by woodland and a water pipeline. We have routed and sited the alignment in accordance with the Holford Rules where possible and moving TB46 would make the alignment in this section longer and less direct and would also result in additional angles. A summary of the Holford Rules is provided within Appendix I22 of this report.</p> <p>We have reviewed alternative alignments in this area; however, all were less preferred, therefore we are not proposing a change to the location of this pylon.</p>			X	
9-5.294	Suggest that Pylon TB47 is relocated away from small reservoir (e.g. due to visual impact; due to archaeological impact)	<p>National Grid has sought to reduce, as far as practicable, impacts on the landscape and historic environment through routeing and siting and an ongoing iterative design process which has taken on board feedback at different stages of the Project. The iterative design process sought to avoid areas of highest concern, for example through changes to the route alignment.</p> <p>National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project. The results of this assessment are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Development Consent Order (DCO) application. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation (and maintenance) of the Project and recommends appropriate mitigation measures to reduce potential effects.</p> <p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the Environmental Impact Assessment, which includes an assessment of landscape and visual effects resulting from the Project. This includes near pylon TB47, which is located near Fordham in Section D. The reservoir sits within Visual Receptor Areas (VRA) D5 – Fordham. The LVIA is presented in the Environmental Statement Chapter 13: Landscape and Visual (document reference 6.13). Visual effects are presented in Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3). Whilst the overhead line does not directly oversail the reservoir, it lies approximately 60 m from the centre of the alignment. The Project would be visible in close views, seen on the skyline and appear prominent in views. The LVIA reported major visual effects within 0.5 km of the overhead line for VRA D5 Fordham, during construction and during operation. At this location, there is scattered settlement to the southwest of Fordham. Residential receptors are considered to be of high sensitivity to an overhead line. Areas of woodland and hedgerow trees are present within the river valley associated with the River Colne. The route seeks to</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		avoid these constraints and route equidistant between them where possible, hence the selected location of the route within 60 m of the reservoir. No mitigation is proposed at this location.				
9-5.295	Suggest that Pylon TB41 is relocated away from line of sight with Rams Farm Road running west to east from Fordham (e.g. as the road crests at a high point where the field and valley open up and the pylon will be directly in line)	National Grid has considered the respondent's feedback. We have reviewed alternative alignments in this area; however all were less preferred, therefore we are not proposing a change to the location of this pylon. We have undertaken an Environmental Impact Assessment (EIA) to assess the potential impact of the Project, and this has identified any need for additional mitigation.			X	
9-5.296	Suggest that haulage road/side road north of Pylon TB46 is relocated to avoid large section of open land (e.g. due to impact on wildlife and plants)	National Grid has considered the respondent's feedback. For the proposed haul road and bellmouth junctions, the most suitable location for the proposed access point, and access to the haul roads, has been determined with consideration of road geometry, maximising junction visibility and other site-specific constraints. Locations for the haul road and bellmouths have, where appropriate, been chosen to minimise the impact on trees and hedgerows. National Grid is working with National Highways to develop proposals for access routes from their Strategic Road Network, including visibility assessments and identification of necessary highway improvement works.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-5.297	Suggest that the Project is rerouted between Pylons TB35 and TB45 to avoid valley to the east towards Hillhouse Wood (e.g. to mitigate on birds of prey)	<p>National Grid previously set out in the 2024 Design Development Report (available on the Project website), our consideration of an alternative route through Hemp's Green. We have backchecked this alternative following further feedback from the statutory consultation, the western alternative route remains less favoured on the basis of technical considerations. The western alternative is around 0.6 km longer, requires an estimated additional three pylons and requires three additional angle pylons and therefore is a less economic option.</p> <p>Overall, the western alternative, would be a longer less economic and efficient route with more pylons and angle pylons. It would also potentially increase effects in respect of construction within a flood zone (but subject to micro-siting this difference may be avoided) and be likely to increase effects on heritage assets including a Grade I listed building. National Grid also notes that the alignment is consistent with policy and overall considers that there would be insufficient benefits from potentially reduced residential amenity and landscape effects of the western alternative to offset the technical concerns and additional infrastructure required to deliver it. On this basis no change to the alignment is proposed.</p>			X	
9-5.298	Suggest that the East Anglia Connection Node (EACN) should be relocated to next to a large road (e.g. the A120)	National Grid has previously considered a number of alternative sites for the East Anglia Connection Node (EACN) substation during the initial siting work as set out in the Corridor and Preliminary Routeing and Siting			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Study (CPRSS) (document reference 7.18). It was also considered in response to feedback as set out in the 2023 and 2024 Design Development Reports (available on the Project website), where we considered an alternative site to the west of the A12. The decision making about siting balances the environmental effects, technical consideration and cost arising from the substation and the connections to it for National Grid and the North Falls and Five Estuaries wind farms and the Tarchon project. Accessibility to the strategic road network was part of the decision making and we considered a site adjacent to the A120 as part of that. Overall, this site was less preferred due to the effects arising from a double overhead line connection likely to be the preferred connection option. In the absence of new evidence or information about further factors relevant to the decision, we have reviewed this again and as set out in the 2025 Design Development Report (document reference 5.15) continue to consider the EACN substation as proposed to be the preferred location, on the basis that an alternative further west presents multiple aspects of uncertainty and construction risk, reduces future flexibility, increases risks to programme for the customers and National Grid with potential for substantial constraint costs if programme is delayed.				
9-5.299	Suggest that Pylons TB16 to TB19, and the haul road, are relocated to avoid farmland (e.g. to mitigate impact on irrigation on the fields they cross	We have reviewed this feedback and are of the view that an alternative route to avoid the fields between TB16 and TB19 would transfer effects to other similar			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	and to prevent the sand and gravel on the farmland underneath from being sterilised)	<p>receptors and lead to an increased level of effects. A range of homes, environmental features and other constraints such as the reservoir (existing and proposed), provide limitations to routeing further to the south. Any route that was developed will be expected to have to divert to the north and in particular lead to greater effects. These include greater effects on woodland (which is less consistent with Holford Rule 2) with a route expected to be closer to other residential properties (less consistent with Holford Rules Supplementary Notes) and have greater effects on other established businesses. A summary of the Holford Rules is provided within Appendix I22 of this report.</p> <p>The minerals site is subject to consultation for inclusion in the plan and the extent of abstraction and how it may interact with the pylon positions remain uncertain. Due to the other restrictions set out above it is not possible to avoid crossing the site though pylon positioning has restricted this to one pylon within the site. It is acknowledged that this may lead to sterilisation of some of the potential minerals but is unavoidable. On this basis, and given some flexibility to reduce effects, no change is proposed.</p>				
9-5.300	Criticism that Pylons JC1 to JC4 will result in overdevelopment of the Bramford Substation and are sited to the west of the Substation where they will be exposed due to lack of natural land cover	The position of JC1 to JC4 is dictated by the layout of the existing substation, substation extension and other adjacent infrastructure. Any movement to the east is restricted by the presence of other lower voltage substation infrastructure. We have undertaken an			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Environmental Impact Assessment (EIA) to assess the potential impact of the Project, and this has identified any need for additional mitigation with none identified to be required here.				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Design Change						
9-5.301	Criticism that the Project alignment requires a greater footprint than needed by entering the Bramford Substation from the north-west, exiting from the south-west, routeing east and then south	The position of the line entries to Bramford Substation is dictated by the layout of the existing substation, substation extension and other adjacent infrastructure. It also takes into account the potential for cumulative effects with existing 132 kV overhead lattice pylon lines (some of which are proposed to be replaced by underground cable connections) and existing and currently under construction 400 kV overhead lines. The footprint has been reduced as far as possible. We have undertaken an Environmental Impact Assessment (EIA) to assess the potential impact of the Project, and this has identified any need for additional mitigation with none identified to be required here.			X	
9-5.302	Suggestion to use Gas Insulated Lines (GIL) to reduce the number of pylons and reroute the exit to less exposed ground at the Bramford Substation	<p>National Grid is constantly looking into new innovations and investigating alternative technology types. Alternative technologies were investigated for the Project, these included an offshore connection using Direct Current (DC) technology, and various onshore connection options including:</p> <ul style="list-style-type: none"> increasing operational voltages on existing network to above 400 kV; Alternating Current (AC) overhead lines (established technology); alternative pylon types; AC underground technology; High Voltage Direct Current (HVDC) overhead line and underground cables; and 			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<ul style="list-style-type: none"> Gas Insulated Line (GIL). <p>Currently, overhead lines offer the most economic and efficient solution to transmit electricity over long distances.</p> <p>Regarding the re-routeing onto less exposed ground out of Bramford, there are constraints in terms of the existing 400 kV network and proposed modifications as part of the new Bramford to Twinstead Reinforcement along with a proposed third party development, as a result the alignment is being taken forward and involves the undergrounding of two existing Distribution Network Operator overhead lines to be replaced with our overhead line.</p>				
9-5.303	Suggestion to route the pylons from Bramford Substation to the east, where the ground is lower, so the pylons will have less visual impact	National Grid has considered alternative routes for the JC section of overhead line. The initial position of the route from the substation is dictated by the layout of the existing substation, substation extension and other adjacent infrastructure. It also takes into account the potential for cumulative effects with existing 132 kV overhead lattice pylon lines (some of which are proposed to be replaced by underground cable connections) and existing and currently under construction 400 kV overhead lines. Movement to the east was considered but requires additional length of connection at greater change of angle and is less consistent with Holford Rule 3. Whilst the potential for increased consistency with Holford rule 4 / 5 is noted, this is only achievable by routeing more closely to a			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>number of residential properties and on balance this is less preferred. A summary of the Holford Rules is provided within Appendix I22 of this report.</p> <p>We have undertaken an Environmental Impact Assessment (EIA) to assess the potential impact of the Project, and this has identified any need for additional mitigation with none required here.</p>				
9-5.304	Suggest that the Project uses underground cables at the Bramford Substation, at the very least from the substation entry through to pylons being well away from high, prominent and exposed ground and historic sites	<p>National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is '<i>that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Park, The Broads, or Area of Outstanding Natural Beauty)</i>'. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23)</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25).</p> <p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at Bramford Substation would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.</p>				
9-5.305	Suggest that the use of underground cables between Roydon Wings Airstrip and Ardleigh East Anglia Connection Node (EACN) is continued from Langham across to the underground section at Great Horkesley, to avoid Ardleigh and surrounding areas, and suggest that the EACN is built elsewhere	The two parts of the feedback are inter-related as the positioning of the East Anglia Connection Node (EACN) substation dictates the need for underground cable connection. Therefore, dealing with the EACN substation siting first, National Grid has previously considered a number of alternative sites for the EACN substation			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	between Langham and Horkesley (e.g. to avoid the detour, extra costs and mitigate impact on the environment)	during the initial siting work as set out in the Corridor and Preliminary Routeing and Siting Study (CPRSS). It was also considered in response to feedback as set out in the Design Development Reports published in 2023 and 2024 (available on the Project website) where we considered an alternative site to the west of the A12 on the former Royal Air Force (RAF) Boxted. This feedback specifically suggests an area covering this site and potentially others further west (though for sites further west the same issues arise). This site and others further west present additional challenges as the North Falls and Five Estuaries wind farms and the Tarchon project all need to get to the EACN substation, wherever it is located. The decision making about siting balances the environmental effects, technical consideration and cost arising from the substation and the connections to it for National Grid and the North Falls and Five Estuaries wind farms and the Tarchon project. We have reviewed this against this alternative suggestion and as set out in the 2025 Design Development Report (document reference 5.15) and continue to consider the EACN substation as proposed to be the preferred location on the basis. The same challenges apply to the suggested location as to the other site near the A12. These present multiple aspects of uncertainty and construction risk, reduce future flexibility, increase risks to programme for the customers and National Grid with potential for substantial constraint costs if programme is delayed. On this basis no change is proposed.				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-5.306	Suggest underground cables should be extended beyond the Dedham Vale National Landscape (previously known as the Dedham Vale Area of Outstanding Natural Beauty (AONB)) to Badley Hall so that underground cables are used both into and out of the East Anglia Connection Node (EACN)	National Grid has carefully considered the feedback proposing to extend the use of underground cable between Great Horkesley and Ardleigh, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is ' <i>that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Park, The Broads, or Area of Outstanding Natural Beauty)</i> '. No such designations are present between Great Horkesley and Ardleigh, nor is this area, within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified. Therefore, the starting presumption for the Project here is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in this location would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse			X

		2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
9-5.308	Suggest that the Project is routed away from Tunmers Farm to mitigate impact on wildlife, and that the principles of the mitigation hierarchy are followed (e.g. do everything possible first and then minimise impacts on biodiversity)	National Grid notes the respondent's feedback to route away from their farm. We have routed the underground cable alignment balancing the need to be economic and efficient with reducing impact on the environment where possible. Routes to the east and west of the alignment at this location are less preferred as they would result in a longer, less direct route or would increase impacts such as woodland loss. We are therefore not proposing a change to the alignment at this location. Potential direct and indirect impacts on important ecological features have been considered within Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8) and any necessary mitigation detailed to ensure no significant residual effects. The mitigation hierarchy has been at the forefront of routeing decisions, with ecological mitigation proposed only where impacts cannot be completely avoided.			X	
9-5.309	Suggest that the Project uses underground cables from Roydon to Washbrook	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)'</i>. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may</p>

		<p>with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project between Raydon and JC20 would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.</p> <p>Alternative locations for the Cable Sealing End (CSE) compound have been assessed, however the current location is preferred in terms of technical feasibility and there is no policy driver to move the CSE compound further north increasing the length of underground cable.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-5.311	Suggest that the Cable Sealing End (CSE) compound should be relocated northwards to the Chattisham area, north of Brimlin Wood (otherwise the Project will be located on high ground and the Roydon CSE compound would be visible from the Dedham Vale)	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is ' <i>that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Park, The Broads, or Area of Outstanding Natural Beauty)</i> '. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding			X

		<p>must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project between Raydon and Chattisham would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.</p> <p>Alternative locations for the Cable Sealing End (CSE) compound have been assessed, however the current location is preferred in terms of technical feasibility and there is no policy driver to move the CSE compound further north increasing the length of underground cable.</p>				
9-5.312	Suggest that the East Anglia Connection Node (EACN) is relocated to be sited between Langham and Great Horkesley on agricultural land (e.g. to mitigate impact on Ardleigh, and to avoid the need for the major works on the main A12)	National Grid has previously considered a number of alternative sites for the EACN substation during the initial siting work as set out in the Corridor and Preliminary Routeing and Siting Study (CPRSS) published in 2022. It was also considered in response to feedback as set out in the Design Development Reports published in 2023 and 2024 (available on the Project website) where we considered an alternative site to the west of the A12 which is in the area suggested by the			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		feedback. The decision making about siting balances the environmental effects, technical consideration and cost arising from the substation and the connections to it for National Grid and the North Falls and Five Estuaries wind farms and the Tarchon project. We have reviewed this again and as set out in the 2025 Design Development Report (document reference 5.15) continue to consider the EACN substation as proposed to be the preferred location on the basis that an alternative further west presents multiple aspects of uncertainty and construction risk, reduces future flexibility, increases risks to programme for the customers and National Grid with potential for substantial constraint costs if programme is delayed.				
9-5.313	Suggest that no other access routes to Pylon TB99 be included in the Development Consent Order (DCO) application and that access is taken on the marked route only (plan provided by respondent)	National Grid has considered the respondent's feedback and has amended this permanent access route for TB99 (now TB101) as requested by the respondent.			X	X
9-5.314	Suggest that the haul road through land affected by Pylon TB99 should follow the southern headland of the field (plan provided by respondent)	National Grid has considered the respondent's feedback, while it is not possible to follow the exact route requested by the respondent, as the working area for the pylon will be located in that area of the field meaning there is no space for the haul road there, we have amended the haul road at TB99 (now TB101) to reduce impacts.			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-5.315	Suggest that underground cables should be used for the Project north of Brimlin Wood (at least 3 km from Little Wenham Hall)	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is ' <i>that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Park, The Broads, or Area of Outstanding Natural Beauty)</i> '. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding			X

		<p>justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project north of Raydon would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.</p> <p>Alternative locations for the Cable Sealing End (CSE) compound have been assessed, however the current location is preferred in terms of technical feasibility and there is no policy driver to move the CSE compound further north increasing the length of underground cable.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-5.318	Suggest that Pylons TB13 and TB14 should be relocated (e.g. away from lake) / Concern about impact of Pylons TB13 and TB14 (e.g. on angling business)	<p>National Grid notes the respondent's feedback. The alignment in this area is restricted by the proximity to residential properties and their gardens and constraints to routeing including the need to cross a reservoir. This does mean oversail of the waterbody used for fishing. The avoidance of oversail of the small water body could only be achieved by a series of five angle pylons and an additional pylon. On balance, National Grid considers that maintaining a straighter alignment with fewer angles is more consistent with the Holford Rules and National Grid's duties albeit that angling activity would need to be terminated to ensure safety distance of angling being no closer than 30 m from the conductors could be maintained. A summary of the Holford Rules is provided within Appendix I22 of this report.</p> <p>The restriction to angling does not preclude continued use of the Public Rights of Way (PRoW) to the south of the site or broader use of the site as open space. Therefore, no change is proposed in this location.</p> <p>National Grid's lands team will continue to work with landowners and appointed agents to answer any questions or concerns. If you have further questions or need additional details, please do not hesitate to contact the Project lands team to discuss:</p> <p>Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.</p> <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD.				
9-5.319	Suggest that the Project is rerouted to take a straight line from Pylons TB73 to TB81 (e.g. to avoid Pylon TB75 on high ground)	National Grid has considered the respondent's feedback, a straight route from TB73 and TB81 (as in between TB70 and TB83) would take the alignment closer to and between listed buildings at Feeringbury and Coggeshall which have a historic link. It would also take the alignment over a sewerage treatment works which introduces a technical constraint. We are therefore not proposing to straighten the alignment between TB73 and TB81.			X	
9-5.320	Suggest that the haulage tracks to the west of Old Road and south of Skye Green Road are rerouted with local knowledge to mitigate the loss of good land and the use of existing tracks	National Grid notes the respondent's feedback. The access routes referred to, to the west of Old Road, and south of Skye Green Road are permanent access routes that are required to enable access for future surveys and maintenance of the pylons, should this be required. No construction is proposed for this permanent access route and existing tracks are proposed to be used where possible. The haul road which is to be used for construction is to the west of the alignment at this location and will be removed after construction and land returned to its previous state.			X	
9-5.321	Suggest that the Project uses T-pylons from Raydon to Chattisham	The latest independent report on the Comparison of Electricity Transmission Technologies: Costs and Characteristics (Institute of Engineering and Technology,			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>2025) confirms that whilst T-pylons may in certain locations provide an alternative to conventional overhead lines with potential benefits in visual impact and reduced land-take, this is at a higher cost. The build cost is approximately 2 to 2.5 times that of an equivalently rated conventional overhead line, and the lifetime costs are around 1.6 to 1.7 times that of a conventional overhead line. The current arrangements for the oversight of funding by Ofgem requires that the lowest cost acceptable design is taken forward rather than a more expensive design even if that design is perceived to reduce the level of effect.</p> <p>As such consideration of their use follows after establishing a need to mitigate effects of the standard lattice design and after considering the benefit of adopting a low height lattice pylon design. T-pylons themselves are also less adaptable to varied terrains and require more substantial access infrastructure. Furthermore, their resilience and environmental impact are comparable to conventional overhead lines, but with increased carbon intensity due to construction materials. Attention also needs to be given to the transitions between pylon types. Given It is the surrounding context that drives the need for alternative design mitigation, where this is not required along the entire route, any visual break and transition in pylon design also needs to be carefully sited.</p> <p>Assessment findings have concluded that, where there is not a reversal of the presumption to use overhead</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		lines, the use of lattice pylons (either standard or low height) is consistent with planning policy throughout the route. Whilst there may be some locations (for examples see appendix A of the 2024 Design Development Report, (available on the Project website)) where there may be a design option for the use of T-pylons, the need to mitigate for unacceptable effects from lattice pylons is not engaged. On this basis T-pylons are not proposed for the Project.				
9-5.322	Suggest that Pylons TB54 and TB55 are relocated, or underground cables are used instead (e.g. to mitigate financial impact on residents and disruption caused) / Concern about the impact of Pylons TB54 and TB55 (e.g. on residents), and the construction laydown area for Pylon TB54 (e.g. impact on residents and roads)	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is ' <i>that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Park, The Broads, or Area of Outstanding Natural Beauty)</i> '. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at TB54 and TB55 would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
9-5.323	Suggest that Pylons TB66 to TB69 and the haul road are relocated to mitigate impact on Upp Hall Farmhouse (e.g. impact on historic hedges, drainage, wildlife, residents, visual impact, etc)	National Grid has considered the respondent's feedback and is proposing a slight change along the alignment to ensure adequate clearance to the gas storage tanks. Part of the Order Limits that was shown over the farms sheds was an existing 11 kV overhead line that was to			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		be removed and placed underground to enable the Project to cross over this area. The amount of 11 kV overhead line being undergrounded has now been reduced and therefore does not cross the sheds. Alternative alignments between TB66 and TB69 would take the alignment closer to a Grade I listed church and to other residential properties to the south or would be a longer and less direct route that would result in a greater loss of woodland and transfer effects to properties to the north. We are therefore not proposing an alternative alignment at this location.				
9-5.324	Suggest that underground cables are used instead of Pylon TB68	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is ' <i>that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Park, The Broads, or Area of Outstanding Natural Beauty)</i> '. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at TB68 would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
9-5.325	Suggest that use of underground cables at Raydon Airstrip is extended further away from the ENE toward Bramford and that the Cable Sealing End	National Grid has appointed an independent aviation consultancy which has engaged with the operators of Raydon Wings airfield (with National Grid also present)			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	(CSE) compound is relocated further away from the ENE to Pylon JC21 at some 3km away or at the very minimum to Pylon JC26 (approx 1.5 km away), so that Pylons JC33 and JC34 are further away from Raydon Airstrip	<p>to inform their impact assessment. The overhead line alignment (including the Cable Sealing End (CSE) compound) is assessed to be at a sufficient distance to the north of the runway to ensure that overflight is not required on take-off or landing, and that approaches are therefore not impacted. Furthermore, the alignment need not impact existing flying circuits to the north as overflight is assessed to be at a safe distance. We will continue to engage with the airfield operators to confirm the acceptability of the design. Alternative locations for the CSE compound have been assessed, however the current location is preferred in terms of technical feasibility. In view of the assessment conclusions, the proposed relocation of the CSE compound further north, increasing the length of underground cable, cannot be justified on grounds of aviation safety.</p> <p>Further information on the assessment of airfields can be found in the Environmental Statement (ES) (see ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and ES Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).</p>				
9-5.326	Suggest that the Project should be routed west of the Aldham Church (e.g. to take advantage of reduced visibility that the lower ground/valley would provide not on the top of a crest)	National Grid has considered the respondent's feedback. However, it is not possible to route to the north or west of Aldham without undue diversion, thereby making the route longer and less direct and/or oversailing residential gardens. This would be contrary to the Holford Rules. We have therefore not changed the			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>route around Aldham. A summary of the Holford Rules is provided within Appendix I22 of this report.</p> <p>We have undertaken a Landscape and Visual Impact Assessment (LVIA) which assesses the impacts of the Project including visual impacts. The LVIA is presented in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.</p>				
9-5.327	<p>Suggest that the East Anglia Connection Node (EACN) is relocated to a brownfield site (e.g. in Bradwell or Grain)</p>	<p>The identification of the site for the East Anglia Connection Node (EACN) substation has considered a number of other locations although no brownfield sites of sufficient size have been identified. The reinforcement need being met by the Project could potentially be met by a connection to Grain but as set out in the 2022 Corridor and Preliminary Routeing and Siting Study (CPRSS) (available on the Project website), and confirmed in subsequent back checks, would be at considerably increased costs and therefore, would be less economic and efficient and not preferred.</p> <p>Alternatives to make the EACN substation connections at Bradwell have been considered in the 2023 and 2024 Design Development Reports (available on the Project website) but were considered less preferred. The overhead line from Bradwell has been operating at lower voltage (132 kV) and has not been used for a few years and is in generally poor condition. This overhead line would need to be rebuilt however this onward connection via Rayleigh to Tilbury is also constrained by</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>urban development and further designations and some sections may need to be re-routed if connections were made at Bradwell. Additionally, any connection point also requires two points of connection to the National Electricity Transmission System (NETS) (to meet compliance standards) requiring either a double overhead line through the Bradwell peninsula and onwards to separate locations or a connection back to Bramford (in addition to one towards Tilbury). A connection to Bramford would require connections to cross the Special Protection Area (SPA) designated Blackwater Estuary (3 km to 7 km tunnel likely to be required at much greater cost) as well as interact with other Special Area of Conservation (SAC) and SPA designations. The existing network through Norfolk, Suffolk and Essex would also still need to be upgraded to transport the electricity due to come onto the network in the Norwich area and provide the necessary two points of connection to the NETS. Taken together a Bradwell or Grain point of connection requires a greater amount of new infrastructure and is therefore less economic and efficient and expected to be associated with greater environmental effects. No change is therefore proposed.</p>				
9-5.328	Suggest that underground cables are used from the East Anglia Connection Node (EACN) to Pylon TB21 to reduce the impact on Ardleigh village	National Grid has carefully considered the feedback proposing to extend the use of underground cable between TB21 and Ardleigh, the alternatives available, and other relevant considerations. These include our			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is '<i>that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)</i>'. No such designations are present between TB21 and Ardleigh, nor is this area, within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified. Therefore the starting presumption for the Project here is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in this location would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant level of landscape and</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		visual effects from the Project. While we consider that landscape and visual effects between TB21 and Ardleigh, may be widespread and therefore reach the threshold set out in NPS EN-5, there are also a range of technical difficulties (including restricted space between built developments and a reservoir to be passed beneath) and other considerations (such as a railway crossing to be crossed on 400 kV connection routes to and from the East Anglia Connection Node (EACN) substation and an area between the railway and the EACN substation potentially to be included in the next Essex Minerals Plan) meaning that we do not consider underground cable to be preferred through this section.				
9-5.329	Suggest that the pylons at Ardleigh should be moved further north of the village to the fields alongside the road named 'Hunters Chase'	National Grid notes the respondent's feedback and has reviewed the suggested alternative. This suggested change would move the pylons further away from Ardleigh but place them within the setting of the National Landscape and therefore in conflict with Holford Rule 1 and the National Policy Statement EN-5. Connecting pylons in this location to the East Anglia Connection Node (EACN) substation and back to the route to Tilbury would also be less direct with more and larger angle changes (less consistent with Holford Rule 3) and be expected to increase community and environmental effects through much closer proximity to residential property (including some unavoidable oversail), increased loss of woodland amongst other effects (less consistent with Holford Rule Supplementary Notes and			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Rule 3). On this basis it is less preferred, and no change is proposed. A summary of the Holford Rules is provided within Appendix I22 of this report.				
9-5.330	Suggest that the Project should be routed directly south from the East Anglia Connection Node (EACN) rather than circling around the village of Ardleigh	The 2022 Corridor and Preliminary Routeing and Siting Study (available on the Project website) considered routes passing to the east and south of Colchester but did not take them forward due to the effects on Special Area of Conservation (SAC) and Special Protection Area (SPA) designations. The legislation is such that routes where such effects are absent or reduced must be taken forward where available. The proposed route for the connection to the north and west of Colchester meets this requirement. In the absence of new information or identification of new factors no change is proposed. An overhead line connection passing to the south of Ardleigh and reconnecting around TB15 was also considered, as set out in the 2025 Design Development Report (document reference 5.15), but would lead to increased heritage effects by crossing a scheduled monument, unavoidably oversails residential property and gardens and potentially a hospitality business. It would also present considerable technical challenges to identify a suitable means for crossing the reservoir given the presence of additional water bodies to the west of the reservoir. Taken together it is considered that a more southern route for the pylons from the East Anglia Connection Node (EACN) substation would be less consistent with Holford Rules and policy set out in			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		National Policy Statement EN-5. A summary of the Holford Rules is provided within Appendix I22 of this report.				
9-5.331	Criticism that underground cables were used to connect in to the East Anglia Connection Node (EACN) from the west (to mitigate visual impact), and yet National Grid choose to use overhead lines for the Project on the same route as underground cables from TB1 to TB13	National Grid has carefully considered the feedback proposing to extend the use of underground cable between TB1 to TB13, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is ' <i>that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Park, The Broads, or Area of Outstanding Natural Beauty)</i> '. No such designations are present between TB1 to TB13, nor is this area, within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified. Therefore the starting presumption for the Project here is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in this location would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant level of landscape and visual effects from the Project. While we consider that landscape and visual effects between TB1 to TB13, may be widespread and therefore reach the threshold set out in NPS EN-5, there are also a range of technical difficulties (including restricted space between built developments and a reservoir to be passed beneath) and other considerations (such as a railway crossing to be crossed on 400 kV connection routes to and from the East Anglia Connection Node (EACN) substation and an area between the railway and the EACN substation potentially to be included in the next Essex Minerals Plan) meaning that we do not consider underground cable to be preferred through this section.				
9-5.332	Suggest that underground cables as part of the Project are relocated to the west side of Sandpits Lane (e.g. to mitigate long term impacts such as mineral sterilisation, and impact on vine crops) (plan provided by respondent)	National Grid has considered the respondent's feedback, as the alignment is to the east of Sandpits Lane currently, we have assessed alternatives to the west, these alternatives would result in greater woodland loss in the National Landscape and would be a longer and less direct route. We are proposing to straighten the alignment as suggested by the respondent after crossing			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Sandpit's Lane and turning south, the alignment will follow the western edge of the field more closely.				
9-5.333	Suggest that the underground cables as part of the Project are rerouted to the edge of the existing field (e.g. to reduce the portion of the field that would be affected) (plan provided by respondent)	National Grid is proposing to straighten the alignment as suggested by the respondent after crossing Sandpit's Lane and turning south, the alignment will follow the western edge of the field more closely.			X	X
9-5.334	Suggest that the new access point that has been proposed to cross Holtonwood Road is relocated to the east, near the corner of the field (e.g. to minimise the impact on the field and reduce the length of the cables) (plan provided by respondent)	The location suggested would mean the proposed cross over bellmouth would be approximately 20 m from an existing highways junction which would not be compliant with the UK road design standards Design Manual for Roads and Bridges (DMRB) and thus be unsafe and fail a road safety audit.			X	
9-5.335	Suggest that the draft order limits should be reduced to the cable laying area and the construction zone only (e.g. there appears to be a large area outside the construction zone, if this will not contain cables then it should be removed from National Grid's permanent rights) / Request that if additional land is needed in the future, it should be agreed upon with the landowner at that time	The underground cable alignment has been altered to move it closer to the field boundary. Even with limits of deviation, this causes it to be further away from the property and reduces the potential woodland loss. The Land Plans (document reference 2.2) and the Works Plans (document reference 2.3) show the Project design. The Order Limits include the underground cable corridor, construction swathe and limits of deviation. The Order Limits are wider than the Limits of Deviation which are wider to allow for temporary works including spoil storage alongside the construction swathe during construction. The Land Plans (document reference 2.2) and the Statement of Reasons (document reference 4.1)			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		provide further information and context regarding the classes of rights.				
9-5.336	Suggest that underground cables are used from Fordstreet to Great Tey (e.g. as this would be relatively simple with open farmland)	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is ' <i>that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Park, The Broads, or Area of Outstanding Natural Beauty)</i> '. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project from Fordstreet to Great Tey would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
9-5.337	Concern that the proposed crossing point for Sandpits Lane is unsuitable, dangerous, and needs to be reconsidered	<p>National Grid has worked with the local highway authorities and National Highways as we developed our access proposals for the Project. Our assessments have included visibility and highway geometry and have included the crossing point for Sandpits Lane.</p> <p>As part of the design development of the Project, the proposed bellmouth junctions have undergone Road Safety Audits, and mitigation measures for road safety have been developed. For Sandpits Lane temporary traffic management measures such as speed limit</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		reductions and temporary signals and waiting areas are proposed.				
9-5.338	Criticism that Pylons TB64 and TB65 are within 300 m of Grade II listed house and associated outbuildings	<p>National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project and has worked to minimise potential impacts on the historic environment, including listed buildings and their setting, through strategic routeing and siting measures. Mitigation efforts have been explored to mitigate identified impacts effectively. Comprehensive assessments, including site visits and extensive desk-based research, to thoroughly evaluate the setting of the heritage assets near TB64 and TB65 and understand their value have been conducted.</p> <p>It is acknowledged there will be significant impacts to the assets close to TB64 and TB65, during both the construction and the operational phase. Therefore, during the construction phase, standard construction mitigation as outlined in the Outline Code of Construction Practice (CoCP) (document reference 7.2) will be implemented. The results of this assessment are provided in the Environmental Statement (ES) Chapter 11: Historic Environment (document reference 6:11). Ongoing collaboration with Historic England and relevant planning authorities has ensured a comprehensive approach to heritage-related matters, incorporating suitable mitigation measures and techniques based on their input.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the EIA. The approach to the LVIA follows professional guidance as set out in ES Appendix 13.1: Landscape and Visual Methodology (document reference 6.13.A1), which includes the 3rd Edition Guidelines on Landscape and Visual Impact Assessment (GLVIA3). The LVIA is presented in ES Chapter 13: Landscape and Visual (document reference 6.13).				
9-5.339	Suggest that the Project is routed between Great Tey and the start of the proposed underground section through Horkesley to avoid the villages of Aldham and Fordham completely, by taking a slightly more northerly route through Hemp's Green (also mitigating visual impact and impact on heritage)	An alternative, as suggested in the feedback to route via Hemp's Green to avoid Aldham and Fordham, was considered in an earlier consultation but confirmed to be less preferred. The reasons included being a longer less economic and efficient route with more pylons and angle pylons and increased heritage effects. This was set out from paragraph 5.4.136 in the 2024 Design Development Report (available on the Project website). In the absence of new evidence or identification of further factors we consider the reasons for it being less preferred to be unchanged from that set out in the 2024 report and for these reasons no change is proposed. We have undertaken an Environmental Impact Assessment (EIA) to assess the potential impact of the Project, and this has identified any need for additional mitigation.			X	
9-5.340	Suggest that the Project is rerouted further north away from Little Wenham Church (e.g. to avoid	The 2024 Design Development Report (available on the Project website) considered a number of alternatives to either extend the underground cable so that pylons were			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	spoiling the historic view that was painted by John Constable)	further from Little Wenham or re-route the pylon alignment further to the north to be further from Little Wenham. In light of the assessed level of effects given the approximately 1.4 km distance and increased effects of the alternatives no change was taken forward. In the absence of new evidence or identification of further factors we consider the reasons for changes to the north to be less preferred to be unchanged from those set out in the 2024 Design Development Report. Depending on the alternative these reasons include being longer and requiring additional underground cable to cross other existing 400 kV connections and either transfer or increased effects to various receptors such as residential receptors. Given there is no policy basis to make a change due to the level of effects at Little Wenham, no change is proposed. We have undertaken an Environmental Impact Assessment (EIA) to assess the potential impact of the Project, and this has identified any need for additional mitigation.				
9-5.341	Suggest that the Project is rerouted further north between Chattisham and Raydon Airfield, or taken underground (e.g. to mitigate impact on views)	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting</i>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p><i>presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Park, The Broads, or Area of Outstanding Natural Beauty)'. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project between Chattisham and Raydon Airfield would meet the</i></p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.</p> <p>Alternative locations for the Cable Sealing End (CSE) compound have been assessed, however the current location is preferred in terms of technical feasibility and there is no policy driver to move the CSE compound further north increasing the length of underground cable.</p>				
9-5.342	Suggest that the Project is relocated closer / next to the A12 (e.g. to mitigate impact on populated areas)	National Grid has carefully considered alternative locations for the East Anglia Connection Node (EACN) substation and for the route alignment. Adopting a site or a route closer to the A12 has been considered but these are less preferred. For the EACN it leads to greater effects on the Dedham Vale National Landscape and for the route more generally the presence of residential properties, environmental features and other constraints leads to multiple diversions and deviations (less consistent with Holford Rules) and does not avoid populated areas. A summary of the Holford Rules is included in Appendix I22 of this report.			X	
9-5.343	Concern that the pylons in the area of pond near Dead Lane / Dedham Road (between Pylons TB13 and TB14) is currently where Geese migrate and also the low flight path for army apache helicopters from Wattisham to Colchester / Suggest that the	Wintering and passage bird surveys have been undertaken across the Project between 2022-2024 including at Ardleigh. Survey results from these vantage point surveys, in the vicinity of Ardleigh reservoir, found only Canada goose (non-native) and greylag (mainly			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	pylons in the area near Dedham Road and Dead Lane are relocated to the south of Ardleigh	<p>feral) species to be recorded at collision risk height for any notable amount of time and therefore bird collision risk is not considered significant at this location. This assessment of impacts based on survey results has been agreed with Natural England. National Grid has engaged with Wattisham Flying Station and the Ministry of Defence (MOD) Defence Infrastructure Organisation (DIO) to understand any concerns regarding impacts of the proposals on aerodrome operations and military low flying activities more broadly. Changes made to alignment and some associated removal of existing lines were welcomed by Wattisham Flying Station and no constraint to its operational activities is envisaged. We are continuing to engage with the DIO to secure appropriate mitigations relating to low flying areas. Further information on the assessment of airfields can be found in the Environmental Statement (ES) (see ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and ES Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2)).</p> <p>The 2022 Corridor and Preliminary Routeing and Siting Study (CPRSS) considered routes passing to the south of Ardleigh and to the east and south of Colchester but did not take them forward due to the effects on Special Area of Conservation (SAC) and Special Protection Area (SPA) designations and their designating features (wintering/passage birds). The Overarching National Policy Statement (NPS) for Energy EN-1 and NPS EN-5</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		make it clear that route options where such effects are absent or reduced, must be taken forward where available. The proposed route for the connection to the north and west of Colchester meets this requirement. In the absence of new information or identification of new factors no change is proposed. An overhead line connection passing to the south of Ardleigh reconnecting around TB15 was also considered, as set out in the 2025 Design Development Report (document reference 5.15) but would lead to increased heritage effects by crossing a scheduled monument, unavoidably oversail residential property and gardens and potentially a hospitality business. It would also present considerable technical challenges to identify a suitable means for crossing the reservoir given the presence of additional water bodies to the west of the reservoir. Taken together it is considered that a more southern route for the pylons from the East Anglia Connection Node (EACN) substation would be less consistent with Holford Rules and policy set out in NPS EN-5. A summary of the Holford Rules is provided within Appendix I22 of this report.				
9-5.344	Concern that the Project between Pylons JC25 and JC30 negatively impact the view from the church painted by John Constable and Little Wenham Hall	There is nothing in planning policy (Overarching National Policy Statement (NPS) for Energy EN-1 or NPS EN-5) that identifies visibility per se as a determinative factor, rather it is the implications of that change for the setting of heritage assets or special qualities of the National Landscape that are considered. The 2024 Design			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Development Report (available on the Project website) considered a number of alternatives to either extend the underground cable so that pylons were further from Little Wenham or re-route the pylon alignment further to the north to be further from Little Wenham. In light of the assessed level of effects arising from the visibility of pylons given the approximately 1.4 km distance and increased effects of the alternatives no change was taken forward. In the absence of new evidence or identification of further factors we consider the reasons for changes to the north to be less preferred to be unchanged from those set out in the 2024 Design Development Report. Depending on the alternative these reasons include being longer and requiring additional underground cable to cross other existing 400 kV connections and either transfer or increased effects to various receptors such as residential receptors. Given there is no policy basis to make a change due to the level of effects at Little Wenham, no change is proposed. We have undertaken an Environmental Impact Assessment (EIA) to assess the potential impact of the Project, and this has identified any need for additional mitigation.</p> <p>National Grid has undertaken a routeing and siting exercise to reduce, as far as practicable, the potential impacts of the Project on the historic environment, including designated assets such as those in the Wenham Castle complex. This process has been informed by a robust assessment methodology that was</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>developed in line with relevant national policy and guidance and agreed through engagement with key heritage stakeholders including Historic England and the Local Planning Authority. The settings of Wenham Castle (scheduled monument), the Church of St Lawrence, and the other listed buildings in the complex have been assessed as part of the Environmental Impact Assessment (EIA), and the findings are documented in Chapter 11: Historic Environment of the Environmental Statement (ES) (document reference 6.11), supported by Appendix 11.1: Historic Environment Baseline Report and Appendix 11.2: Historic Environment Assessment Tables. The assessment concludes that only the setting of Wenham Castle extends to the Order Limits and that the asset would experience not significant effects during the construction and operation (and maintenance) phases.</p> <p>Standard construction mitigation would be adopted as detailed in the Outline CoCP (document reference 7.2). Changes to the setting would be temporary and would be removed once the construction phase is completed. No additional mitigation measures are proposed during the construction and operation (and maintenance) phases as any measures designed to lessen the visual impact of the Project would be of a scale that would visually adversely alter the setting of the asset.</p> <p>A landscape and visual impact assessment (LVIA) has also been undertaken as part of the EIA and reported in ES Chapter 13: Landscape and Visual (application</p>

		<p>document 6.13). The LVIA sets out the potential landscape and visual effects, which includes consideration of visual amenity of visual receptor areas (including, for example, people in communities and using public rights of way). ES Chapter 13: Landscape and Visual (application document 6.13) is supported by ES Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3). This appendix sets out the assessment for visual receptor areas including C5 Capel St Mry which is relevant to this feedback. There are also two viewpoints in this location as below:</p> <ul style="list-style-type: none"> • Viewpoint 3.09: PRow, Little Wenham (Wenham Parva 14) (document reference 7.12) • Viewpoint HE3: Little Wenham Castle (document reference 7.12) • Viewpoint locations are shown on Figure 13.7 Visual Receptors and Viewpoints (document reference 6.13.F7). 				
9-5.345	Concern that Pylons TB11 to TB15 will impact footpaths and outdoor areas within their vicinity	<p>National Grid endeavours to reduce impacts on Public Rights of Way (PRoW), including reducing the duration of any closures, as far as practicable. The locations of PRoW affected by the Project, along with proposed diversion routes are shown on the Outline Public Rights of Way Management Plan (document reference 7.6) submitted as part of the Development Consent Order (DCO) application.</p> <p>Impacts on PRoW within the vicinity of TB11 to TB15 as a result of the construction and operation of the Project</p>			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>are assessed in Chapter 13: Landscape and Visual (document reference 6.13), Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15), and Chapter 16: Traffic and Transport (document reference 6.16) of the Environmental Statement (ES) (document reference Volume 6: Environmental Statement). The ES includes details about the level of impact created and the mitigation proposed in relation to the Project.</p> <p>The Outline PRoW Management Plan (document reference 7.6) sets out management measures and mitigation measures for each PRoW affected by the construction activities and operation of the Project.</p> <p>The Outline PRoW Management Plan (document reference 7.6) has defined the management of the PRoW in the Ardleigh area around pylons TB11 to TB15. The PRoW would be temporary closed for the duration of the works with managed access, that is, allowing a safe passage throughout of the PRoW users.</p> <p>The bridleway Ardleigh 2 would be temporary diverted for less than one week to allow for the installation of the 11 kV underground cable. The diversion would follow a similar alignment to the existing bridleway, resulting in a minimum increase in journey time and distance.</p> <p>As a result, the magnitude of impact on the PRoW is considered negligible and the overall effect has been classified as not significant.ES Chapter 10: Health and Wellbeing (document reference 6.10) considers the</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>impacts to health and wellbeing arising from changes to PRow and outdoor areas as a result of the Project. Taking account of the proposed pylon positions and construction phase and PRow-specific mitigation proposed in the area between and around pylons TB11 to TB15, no permanent likely significant effects on health and wellbeing (physical or mental) are identified.</p> <p>ES Chapter 16: Traffic and Transport (document reference 6.16) considers the impacts to walkers, cyclists, and horse riders arising from changes to the PRow as a result of the Project. The PRow within the vicinity of pylons TB11 to TB15 would remain open and access managed to minimise the disruption to PRow users. No temporary or permanent significant effects are identified.</p>				
9-5.346	Criticism of changes made to the Project near Washbrook / Suggest that National Grid relocate pylon back to the field towards the fisheries (e.g. to mitigate impact on residential property)	National Grid has considered the feedback and has been able to reposition pylons to move the pylon indicated back to the north side of the road. It does mean the next pylon to the south moves slightly north, but not to the extent that it offsets the change sought.			X	X
9-5.347	Suggest that the Project is rerouted between Pylons TB35 and TB44 to mitigate visual impact and impact on residents	National Grid has considered alternative routes both to the west and to the east of the alignment published at statutory consultation. The reasons for these being less preferred were set out in the 2024 Design Development Report (available on the Project website) from paragraph 5.4.136. In the absence of new evidence or the identification of new factors we remain of the view that			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		such alternatives are less preferred. We have undertaken an Environmental Impact Assessment (EIA) to assess the potential impact of the Project, and this has identified any need for additional mitigation				
9-5.348	Suggest that the Project uses underground cables at Fordham Valley (e.g. to give the same protection to Fordham Valley as the Stour Valley and Dedham Vale National Landscape (previously known as the Dedham Vale Area of Outstanding Natural Beauty (AONB))	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is ' <i>that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)</i> '. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at the Fordham Valley would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
9-5.349	Suggest that National Grid give consideration to the area to the West of Ardleigh (e.g. between Pylons TB13 and TB15) to mitigate the visual impact of overhead lines on the east and north of Ardleigh (e.g. in such close proximity to around 300 houses, a primary school)	National Grid has undertaken an Environmental Impact Assessment (EIA) to assess the potential impact of the Project. A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the EIA. The LVIA is presented in ES Chapter 13: Landscape and Visual (document reference 6.13). The assessment concludes that there would be significant effects on the local community, road users and users of PRow west of Ardleigh during construction and operation, within Visual			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Receptor Area (VRA) C12 Ardleigh. Further detail is provided in ES Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3).</p> <p>National Grid has carefully considered the feedback proposing to extend the use of underground cable between TB13 and TB15, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Park, The Broads, or Area of Outstanding Natural Beauty)'</i>. No such designations are present between TB13 and TB15, nor is this area, within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified. Therefore the starting presumption for the Project here is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in this location would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant level of landscape and visual effects from the Project. While we consider that landscape and visual effects between TB13 and TB15, may be widespread and therefore reach the threshold set out in NPS EN-5, there are also a range of technical difficulties (including restricted space between built developments and a reservoir to be passed beneath) and other considerations (such as a railway crossing to be crossed on 400 kV connection routes to and from the East Anglia Connection Node (EACN) substation and an area between the railway and the EACN substation potentially to be included in the next Essex Minerals Plan) meaning that we do not consider underground cable to be preferred through this section.				
9-5.350	Disagree with National Grid's stance that a Cable Sealing End (CSE) compound to the west of Ardleigh would be worse than the overhead lines that are currently proposed to pass residences at Ardleigh	There are technical and practical reasons for retaining overhead line for the immediate line entry to the East Anglia Connection Node (EACN) substation (equating to the last one or two overhead line spans). This is due to the very considerable risks presented by the complex and technically challenging crossing of multiple cables. There is also a potential need to retain overhead line through to TB7 in order to reduce the interaction with a			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>potential minerals site (subject to plan making outcome). On this basis a combination of one underground cable and one overhead line for the immediate line entry to the EACN substation is required. There are further technical challenges between TB15 and TB22, where the combination of the reservoir and multiple adjacent development proposals require the use of overhead line. For the intervening section National Grid have considered the potential for the use of underground cable between TB7 and TB15. To be consistent with policy the requirements set out in National Policy Statement (NPS) EN-5 paragraph 2.9.23 must be engaged and the Secretary of State of the view that the cost to reduce effects is justified. Assessments have concluded that nature conservation and heritage effects are not at a level to suggest a need to change from overhead line to underground cable. There are effects on community receptors from views of the alignment from residential properties and when traveling through the area on roads and Public Rights of Way though these are not in themselves considered to meet the threshold within 2.9.23 of the NPS EN-5. There are also certain viewpoints within the National Landscape from which infrastructure outside the setting of the National Landscape can be seen, but these are not considered to be significant in Environmental Impact Assessment (EIA) terms. These effects are not considered to be at a level to engage para 2.9.23, but even if they were, the additional cost for undergrounding the connection</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		between around TB7 and TB15 is not considered to be justified. Whilst reducing some effects it would introduce effects resulting from the new Cable Sealing End (CSE) compounds (and potentially head houses if required). Taking all factors into account, National Grid considers that, on balance, the potential cost of adopting an underground 400 kV cable solution for the TB7 to TB15 section is not justified for the level of benefit it provides.				
9-5.351	Suggest that the underground cables branch off near Pylon TB12 and resurface near Pylon TB15 (e.g. to mitigate the impact of the Project on residents of Ardleigh and the school)	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is ' <i>that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Park, The Broads, or Area of Outstanding Natural Beauty</i> '. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project between TB12 and TB15 would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.</p>				
9-5.352	<p>Suggest that the Project is rerouted between Pylons TB9 and TB17 to avoid residence (e.g. visual impact)</p>	<p>Re-routing options are limited between these pylons to a slight adjustment to the north. However, this transfers effects from one group of houses to another similar number and would be expected to lead to greater loss of woodland (less consistent with Holford Rule 2) and also</p>	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>increase effects on businesses. A summary of the Holford Rules is provided within Appendix I22 of this report.</p> <p>A similar route was considered but less preferred as set out in the 2023 Design Development Report (available on the Project website) in section 6.4. As such it is less preferred. No alternative that avoids visual impact has been identified in this section. We have undertaken an Environmental Impact Assessment (EIA) to assess the potential impact of the Project, and this has identified any need for additional mitigation.</p>				
9-5.353	Suggest the use of underground cables for the Project in the Dedham Vale National Landscape (previously known as the Dedham Vale Area of Outstanding Natural Beauty (AONB)) is extended to the Black Brook Valley	National Grid notes the respondent's feedback. The underground cable section extends from north of Notley Enterprise Park through to the East Anglia Connection Node (EACN) substation. Therefore, we are proposing to underground the Project at the Black Brook Valley.			X	
9-5.354	Suggest alternative route for the Project from Dedham Road to the east of Glebe Farm barn and west of Ewens Farm (plan provided by respondent), which rejoins the proposed route for the Project north of Furze Lodge to avoid crossing the bridleway and Tree Protection Order (TPO) avenue trees close to the Dedham Vale National Landscape (previously known as the Dedham Vale Area of Outstanding Natural Beauty (AONB)) boundary, instead crossing further south (where the avenue trees are already impacted by existing overhead lines and less visible	National Grid has made a change of underground cable route between the River Stour and Black Brook moving the alignment to the west from the River Stour passing to the west of Langham and reconnecting to the south of Glebe Farm. We have also considered this feedback to route to the east of Glebe Farm but consider that has increased effects on woodland and is restricted by various constraints such as a Gas pipeline. We separately considered the route of the construction access road and in particular the potential implications of access road construction and visibility splays on the			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	from the National Landscape) (e.g. to mitigate impact on Glebe Farm and Glebe House, including access; to mitigate impact on bridleway and footpaths; to mitigate impact on farming; to mitigate impact on utilities near Glebe Farm; to mitigate impact on archaeology; reduce loss of mature trees)	avenues of trees. We have adopted an alternative access arrangement that passes to the north of Glebe House crossing Rectory Road before turning south to intercept the underground cable corridor.				
9-5.355	Suggest that a new haul road is provided along the existing, closed railway track connecting the Cable Sealing End (CSE) compound to the A12 (e.g. to mitigate the impact on Raydon village)	<p>National Grid has carefully considered the feedback received during the statutory consultation for this Primary Access Route for construction vehicles this included the use of the historic railway alignment and access through Notley Enterprise Park. These alternatives were discounted through assessment and identification of constraints.</p> <p>The consultation has identified an opportunity to utilise an offline temporary haul road located east of Holton St Mary from the B1070 to the construction corridor. It is proposed that this route would act as a bypass for Holton St Mary during construction.</p> <p>It is not proposed for the Primary Access Route for construction vehicle to pass through Raydon village along the B1070.</p>	X			X
9-5.356	Concern about the impact of the Project, particularly Pylon TB47, on archaeological sites	National Grid has worked to minimise potential impacts on the historic environment, heritage assets and buried archaeology, such as those near TB47, through strategic routeing and siting measures. Comprehensive assessments, including site visits (walkover, geophysics survey and trial trenches surveys) and desk-based			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>research have been undertaken to support the evaluation of heritage assets.</p> <p>Due to the proximity of a Roman asset (4082) to pylon TB47, this pylon has been re-sited to the north-east of the asset, into the neighbouring field, to reduce potential physical impacts to the below ground archaeology.</p> <p>The assessment of this asset is documented in Environmental Statement (ES) Chapter 11: Historic Environment (document reference 6.11) and ES Appendix 11.2: Historic Environment Assessment Tables (document reference 6.11.A2), which conclude that the asset would experience a moderate adverse significance of effect during the construction and operation of the Project.</p> <p>Appropriate mitigation measures are identified in ES Chapter 11: Historic Environment (document reference 6.11), the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5) and the Outline Code of Construction Practice (CoCP) (document reference 7.2). Ongoing collaboration with Historic England and relevant planning authorities has ensured a comprehensive approach to heritage-related matters, incorporating suitable mitigation measures and techniques.</p>				
9-5.357	Criticism of the Project between Pylons TB35 and TB62 due to the impact on heritage, archaeological sites, views, farmland, woodland and the countryside	National Grid has sought to reduce, as far as practicable, impacts on the environment, including heritage, archaeological sites, views, farmland, woodland and the countryside through routing and			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>siting and an ongoing iterative design process which has taken on board feedback at different stages of the Project. The iterative design process sought to avoid areas of highest concern, for example, through changes to the route alignment.</p> <p>National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project. The results of this assessment are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation (and maintenance) of the Project and recommends appropriate mitigation measures to reduce potential effects.</p> <p>Chapter 6: Agriculture and Soils (document reference 6.6), Chapter 8: Ecology and Biodiversity (document reference 6.8), Chapter 11: Historic Environment (document reference 6.11) and Chapter 13: Landscape and Visual (document reference 6.13) of the Environmental Statement (ES) present the assessment and relevant mitigation measures for Agriculture and Soils, Ecology and Biodiversity, Historic Environment and Landscape and Visual respectively.</p>				
9-5.358	Criticism that an angle tower as part of the Project is located opposite the driveway to a Grade II Listed 16th Century Kings Farmhouse and furrow field	National Grid notes the respondent's feedback. The alignment in this area has been routed in accordance with the Holford Rules (see Appendix I22 of this report).			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>TB40 (the angle pylon referred to in the feedback) is positioned at this location in order to reduce impacts to woodland.</p> <p>Through routeing and siting National Grid has sought to reduce as far as practicable potential impacts on the historic environment such as listed buildings.</p> <p>The impacts of the Project on the historic environment are assessed in Environmental Statement (ES) Chapter 11: Historic Environment (document reference 6.11). The assessment concludes a moderate significant effect on the Grade II Listed 16th Century King's Farmhouse resulting from the construction and operation (and maintenance) phases of the Project.</p> <p>Appropriate mitigation measures are identified in ES Chapter 11: Historic Environment (document reference 6.11), the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5). The Project has engaged with Historic England and relevant planning authorities on aspects relating to heritage, including appropriate mitigation measures and techniques and to take their views into account during Project development.</p>				
9-5.359	Criticism that the Project includes pylons on both sides of the B1508, which forms the access to the Stour Valley Project areas at Wormingford / Suggest alternate much lower site at Pylon TB40 which had	Pylons on each side of B1508 would not permanently alter access to the Stour Valley Project area.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	been previously suggested by National Grid (e.g. this would not be visible from either the Stour Valley Project or from the Dedham Vale, and may offer partial mitigation to at least the northern section of the River Colne tributary)	The Cable Sealing End (CSE) compound at Great Horkesley West was considered to be located to the south near the position of pylon TB40. The option to the south would result in the likely increase in vegetation removal and was more complex from an engineering perspective. Natural screening from the valley positioning was expected to be similar for both options.				
9-5.360	Suggest that the Project uses underground cables around and beyond Fordham to mitigate the impacts of aviation activities to / from Wormingford Airfield	Underground cables are proposed where the Project alignment crosses the runway centerline (associated with Wormingford Airfield) so there is no impact on gliding or the occasional glider tug. Underground cables around and beyond Fordham are therefore unnecessary from an aviation standpoint. Further information on the assessment of airfields can be found in the Environmental Statement (ES) (see ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and ES Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2)).			X	
9-5.361	Criticism that National Grid have ruled out the alternative route which would have rerouted the pylons away from the southern end of Fordham village without impacting any other area of habitation (e.g. the alternative to the proposed route between Pylons TB42 and TB50)	Decision making on the route alignment has to consider a range of factors and not just effects on residential properties. In this case National Grid has considered alternative routes both to the west and to the east of the alignment published at statutory consultation. The reasons for these being less preferred were set out in the 2024 Design Development Report from paragraph 5.4.136. For the specific diversion TB42 to TB50 the combination of constraint from utilities and ancient			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		woodland preclude the alignment to the south by overhead line routeing. In the absence of new evidence or the identification of new factors we remain of the view that such alternatives are less preferred. We have undertaken an Environmental Impact Assessment (EIA) to assess the potential impact of the Project, and this has identified any need for additional mitigation.				
9-5.362	Criticism that National Grid have ruled out the alternative route which avoids Fordham, Fordstreet and Aldham completely (the alternative to the current proposed Pylons TB35 to TB63 route). This route has been rejected notwithstanding the fact that, by National Grid's own admission (see Page 71 of the Design Development Report) that this alternative route would run within 200 m of 28 properties rather than the 49 for the proposed route and " <i>The western alternative would likely have an overall lower landscape effect. There would be less conflict with landform and tree cover and this alternative would cross the Colne Valley in a location where there is slightly reduced recreational value in terms of less dense of Public Rights of Way (PRoW) and avoiding open access land</i> " and " <i>the western alternative would have lower effects particularly by avoidance of small areas of newly planted woodland on the Woodland Trust's Fordham Hall Estate</i> " (Pylons TB45 to TB49)	<p>National Grid has considered alternative routes both to the west and to the east of the alignment published at statutory consultation. The reasons for these being less preferred were set out in the 2024 Design Development Report (available on the Project website) from paragraph 5.4.136. The respondent does indeed identify that the 2024 report identifies some potential reductions in some effects for the alternatives but fails to identify that there were also other factors on which the alternatives performed less well. National Grid must consider all factors and make a balanced decision informed by the policy context of National Policy Statement (NPS) EN-5 and routeing guidance such as the Holford Rules. A summary of the Holford Rules is provided within Appendix I22 of this report.</p> <p>In the absence of new evidence or the identification of new factors we remain of the view that such alternatives are less preferred for the reasons set out in the 2024 Design Development Report. We have undertaken an Environmental Impact Assessment (EIA) to assess the</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		potential impact of the Project, and this has identified any need for additional mitigation.				
9-5.363	Suggest the use of underground cables for the Project between Pylons TB9 and TB12, branching off from the existing underground swathe close to where Pylon TB9 is planned, and suggest that the Cable Sealing End (CSE) compound is located to the west of Ardleigh between the currently proposed sites of Pylons TB13 to TB15 (e.g. to reduce visual impact on Ardleigh and to reduce impact on residents)	National Grid has carefully considered the feedback proposing to extend the use of underground cable between TB9 and TB12, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is ' <i>that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Park, The Broads, or Area of Outstanding Natural Beauty)</i> '. No such designations are present between TB9 and TB12, nor is this area, within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified. Therefore the starting presumption for the Project here is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in this location would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant level of landscape and visual effects from the Project. While we consider that landscape and visual effects between TB9 and TB12, may be widespread and therefore reach the threshold set out in NPS EN-5, there are also a range of technical difficulties (including restricted space between built developments and a reservoir to be passed beneath) and other considerations (such as a railway crossing to be crossed on 400 kV connection routes to and from the East Anglia Connection Node (EACN) substation and an area between the railway and the EACN substation potentially to be included in the next Essex Minerals Plan) meaning that we do not consider underground cable to be preferred through this section.				
9-5.364	Concern that there is a pylon sited in a field at the end of Wick Lane, where gravel extraction currently takes place / Concern that this location is to be a future Country Park, once the 20-year gravel extraction is completed in 2027, which was the promise made to Ardleigh residents when the gravel extraction rights were first agreed	It is National Grid's view that the expected gravel extraction may need to be curtailed (subject to viable resource being proven to be present and capable of extraction and with appropriate compensation to the owner of the minerals) to retain a 'pillar of support' to allow for the proposed pylon position. If this is the case it is National Grid's position that a pylon would not materially impact the future establishment or use of the			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		area as a country park. National Grid is also continuing to investigate whether an alternative routeing to the north of Wick Lane can be secured and on this basis is retaining wider Order Limits at this location.				
9-5.365	Suggest that consideration should be given to construction of a road from the A12 to Acacia Road at the entrance junction to the Notley Industrial Zone	National Grid has carefully considered the feedback received during the statutory consultation for this Primary Access Route for construction vehicles this included the use of the historic railway alignment and access through Notley Enterprise Park. These alternatives were discounted through assessment and identification of constraints. The consultation has identified an opportunity to utilise an offline temporary haul road located east of Holton St Mary from the B1070 to the construction corridor. It is proposed that this route would act as a bypass for Holton St Mary during construction.			X	X
9-5.366	Criticism that the East Anglia Connection Node (EACN) is not placed on the most direct route, and suggest that the Project should be routed, if not placed under, the A12 (given the road replacement work taking place)	National Grid has previously considered a number of alternative sites for the East Anglia Connection Node (EACN) substation during the initial siting work as set out in the 2022 Corridor and Preliminary Routeing and Siting Study (CPRSS) (available on the Project website). It was also considered in response to feedback as set out in the 2023 and 2024 Design Development Reports (available on the Project website) where we considered an alternative site to the west of the A12 which would have given a straighter route for the 400 kV infrastructure but required more corridors to			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>accommodate longer customer connections. The decision making about siting balances the environmental effects, technical consideration and cost arising from the substation and the connections to it for National Grid and the North Falls and Five Estuaries wind farms and the Tarchon project. In the absence of new evidence or information about further factors relevant to the decision, we have reviewed this again and as set out in the 2025 Design Development Report (document reference 5.15) where we continue to consider the EACN substation as proposed to be the preferred location, on the basis that an alternative further west presents multiple aspects of uncertainty and construction risk, reduces future flexibility, increases risks to programme for the customers and National Grid with potential for substantial constraint costs if programme is delayed. Routeing/siting under the A12 is impractical both in terms of programme and because of the implications of future maintenance which would necessitate partial or full closure of the Road. Close paralleling the A12 has also been considered but is less preferred due to different start and end points of the different projects and the extent of constraints, houses and environmental features leading to either greater effects or a much less direct route.</p>				
9-5.367	Suggest that a more direct route is used for the Project from the station north of Burstall to the underground section near Raydon (e.g. to mitigate	A number of alternative alignments have been considered to seek to achieve the connection from Bramford to the Raydon Cable Sealing End (CSE)			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	impact on landscape, local economy, and property value)	compound. All have to respond to the presence of homes, constraints and environmental features. The feedback suggests a straighter route but this is less preferred because of the potential for cumulative effects on Burstall (two overhead lines to the north and Norwich to Tilbury to the south), and on Hintlesham again with two overhead lines to the north and one to the south. For these reasons this is less preferred and no change is proposed.				
9-5.368	Suggest that the Project uses underground cables from Bramford to Dedham	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is ' <i>that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)</i> '. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project from Bramford to Dedham would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
9-5.369	Suggest that the use of underground cables is rerouted where it passes through respondent's property near Langham (address provided by	Based on a review of feedback National Grid has identified that a change of underground cable route should be taken forward between the River Stour and Black Brook moving the alignment to the west from the			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	respondent) to avoid ancient oak trees and fruit orchard (e.g. to mitigate impact on business)	River Stour passing to the west of Langham and reconnecting to the south of Glebe Farm. This achieves the change requested in the feedback.				
9-5.370	Concern that the Project will intersect the respondent's drainage ditches (near Langham; address provided by respondent), and suggest that National Grid provide a new drainage system	National Grid is aware of the impact of the Project on existing land drainage systems. Where affected, land drainage systems would be assessed prior to construction, appropriately diverted during construction and reinstated following completion.			X	
9-5.371	Suggest that directional drilling for the use of underground cables under the A12 should be extended (e.g. to mitigate impact on water course and conifer trees between respondent's property boundary and the A12)	National Grid notes the respondent's feedback and notes that we are currently working on the assumption of installing the trenchless crossing of the A12 via trenchless techniques. The crossing is in a relatively narrow corridor, bounded by a property to the north and a gas pipeline to the south. Extending the trenchless crossing further would make the narrow width of the crossing location more challenging. It is therefore more likely that the extent of the trenchless installation would not be extended as requested but this will be investigated further as the Project progresses into detailed design.			X	
9-5.372	Suggest relocation of Pylons TB45 and TB46 to follow a valley between Kings Farm and Hill House Wood, and then going westerly to run along the Colne River Valley (e.g. to mitigate impact on business, heritage and wildlife), and request that National Grid provide and cost for a full Business Impact Assessment showing an economic	The 2024 Design Development Report (available on the Project website) from paragraph 5.4.144 considered alternatives to route between King's Farm and Hillhouse wood and then along the Colne valley. In the absence of new evidence or information about further factors relevant to the decision the reasons set out in the 2024 report remain valid and no change is proposed. The			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	assessment of both the Project's current proposed route and the route proposed by the respondent to detail the impact on all businesses along both routes and submit it to be considered in the decision-making process	effects of the Project are assessed and presented in the Environmental Statement (ES) and this has identified any need for additional mitigation. National Grid's Land Rights Strategy sets out compensation payments that would be made to landowners. The document and the payment schedules contained within, were reviewed, and updated in early 2024. A copy of this document is available on the Project website.				
9-5.373	Suggest that if the East Anglia Connection Note (EACN) is retained, that it is relocated to allow the Project to use underground cables along the entire southern border of the Dedham Vale National Landscape (previously known as the Dedham Vale Area of Outstanding Natural Beauty (AONB)) (as required in National Policy)	<p>National Grid has carefully considered the feedback proposing to relocate the East Anglia Connection Node (EACN) substation to facilitate extending the use of underground cable between Great Horkesley and the EACN substation, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors.</p> <p>Dealing firstly with relocation of the EACN substation, we have identified that a change to the EACN substation location to the former RAF Boxted potentially supports the extension of the use of underground cable between Great Horkesley and the alternative site. However, the three customer connections to the EACN substation all still need to get to the alternative site. Our assessment is that this presents challenges and has consequences that are less preferred including increasing the length of underground cable constructed within the National Landscape and reducing flexibility for future connections</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>as a result of restricted connection access. The EACN substation location to the east of Ardleigh therefore remains preferred.</p> <p>More generally National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is '<i>that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Park, The Broads, or Area of Outstanding Natural Beauty)</i>'. No such designations are present between Great Horkesley and the EACN substation, nor is this area, within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified. Therefore the starting presumption for the Project here is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in this location would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>been undertaken which assesses the likely significant level of landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project south of the National Landscape would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. We consider that landscape and visual effects at Ardleigh, may be widespread and therefore reach the threshold set out in NPS EN-5, there are also a range of technical difficulties (including restricted space between built developments and a reservoir to be passed beneath) and other considerations (such as a railway crossing to be crossed on 400 kV connection routes to and from the EACN substation and an area between the railway and the EACN substation potentially to be included in the next Essex Minerals Plan) meaning that we do not consider underground cable to be preferred through this section.</p>				
9-5.374	<p>Suggest that the Cable Sealing End (CSE) compound at Pylons TB33 and TB34 at Great Horkesley is moved 1 km to 1.5 km to the east into the former Boxted Airfield close to Pylon TB26 to reduce the impact on views and the setting of the Dedham Vale National Landscape (previously known as the Dedham Vale Area of Outstanding Natural Beauty (AONB)) (e.g. addressing concerns from residents and statutory bodies)</p>	<p>For the connection from the East Anglia Connection Node (EACN) substation to Tilbury covering the area identified in the feedback, the pylons are outside a designated landscape which leads to a starting presumption, outlined in National Policy Statement (NPS) EN-5, for the use of overhead line technology. We do consider, for a section of the alignment north of Great Horkesley, that the alignment is within the setting of the National Landscape and the effects justify, in the terms</p>	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		of NPS EN-5 the additional cost and effects of adopting underground cable in place of overhead lines. However, we do not consider the effects of an overhead line on the National Landscape, the wider landscape or on community and other receptors to the east of the Great Horkesley Cable Sealing End (CSE) compound i.e. east of TB34 to justify the additional cost of underground cable. As such no change is proposed. The effects of the Project are presented in the Environmental Statement (ES) and this has identified any need for additional mitigation.				
9-5.375	Suggest that the Project uses underground cables at Boxted	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is ' <i>that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Park, The Broads, or Area of Outstanding Natural Beauty)</i> '. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at Boxted would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
9-5.376	Concern about the impact of Pylon TB15 and TB16 on ancient oak tree (subject to tree preservation order)	The overhead line and pylon positioning is constrained by a range of technical and environmental factors and influenced by Holford Rule guidance. A summary of the			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Holford Rules is provided within Appendix I22 of this report. These include the likelihood of removing more trees should the whole alignment be moved northwards, greater visual effects from additional angle pylons if TB15 alone was moved north along with additional technical challenges to positioning from various buried utilities. The alignment does not require the tree to be removed, though a need for some management of branches to the north side may be required to ensure electrical clearances can be maintained under some circumstances. Specifically, movement of the pylons and alignment towards the identified tree between TB15 and TB16 within the Limits of Deviation may require management. The need for any management would only be confirmed once final pylon siting has been finalised following completion of ground investigations and detailed design work.				
9-5.377	Suggest the Haul Road at Wicks Lane is moved (plan provided by respondent) to mitigate impact on residential property, heritage, flora, and residents	We have reviewed this feedback and made the change to the haul road requested.			X	X
9-5.378	Suggest that underground cables in this section are extended north and south well away from the Dedham Vale National Landscape (previously known as the Dedham Vale Area of Outstanding Natural Beauty (AONB)), and that High Voltage Direct Current (HVDC) cables are used	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Park, The Broads, or Area of Outstanding Natural Beauty)'</i>. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		impact terms), we do not consider the Project further north and south of the National Landscape would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
9-5.379	Suggest that the large construction site off the B1070 / Acacia Road junction should be moved to the land on the old Raydon Airfield well away from the junction / Suggest that the construction compound proposed near the National Landscape is relocated to Raydon Airfield	<p>The proposed compound between Raydon and Holton St Mary serves underground cabling works between the proposed Cable Sealing End (CSE) compound north of the Notley Enterprise Park and the River Stour. Moving the proposed compound to land adjacent to Notley Enterprise Park would increase the distance that construction vehicles must travel from the Primary Access Route by approximately 1.5-1.8 km. Approximately two thirds of the cable section served by this compound is to the south of the current compound position, therefore moving the compound would also significantly increase construction vehicle movements from the compound to work sites along the cable alignment.</p> <p>In response to various pieces of feedback, National Grid has proposed the construction of a separate construction haul road to the north of Holton St Mary, to remove construction traffic from the majority of the B1070.</p>			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-5.380	Concern regarding Pylon TB68 due to its proximity to nearby cottages and Upp Hall Farm, and crossing existing utilities	In this area National Grid has positioned the alignment and pylons as far from properties as possible within restrictions imposed by other factors and environmental features. The alignment, subject to Limits of Deviation, positions the centreline around 60 m from the nearest property with pylons around 150 m from the nearest properties. Agricultural buildings and safety zones for some gas holders restrict further separation. Utility crossings have been considered in the design development process and are not considered a constraint to the Project. Given the constraints, it is not proposed to change from the current alignment. We have undertaken an Environmental Impact Assessment (EIA) to assess the potential impact of the Project, and this has identified any need for additional mitigation. The results of the EIA are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application.	X			
9-5.381	Suggest that proposed permanent access roads in close proximity to the village War Memorial in Little Bromley are removed after construction (e.g. as their usefulness in supporting the substations post-construction is unclear, to mitigate impact on farmland and heritage)	The proposed permanent access routes are to be used for access to the substation for the purposes of operations and maintenance, including any future works that may be required. The War Memorial on the junction of Church Road and Bentley Road is not included within this permanent access route.	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-5.382	Request a detailed survey of the properties (residential / business / heritage) along the proposed route in Little Bromley in relation to concern over their foundations and potential for damage during construction	A Construction Vibration Assessment has been conducted as part of Environmental Statement (ES) Chapter 14: Noise and Vibration (document reference 6.14) and submitted with the Development Consent Order (DCO) application. Four buildings/structures have been identified in this area as being in close proximity to potential compaction works in relation to highways mitigation which has the potential to result in high vibration levels without mitigation. This would be reviewed by the contractor as part of the specific noise and vibration assessments and specific measures would be put in place to manage and reduce vibration levels. If a building or structure was found to of sustained damage due to the construction works, National Grid would be liable to carry out repairs and/or compensate the property owner.	X			
9-5.383	Suggest relocation of proposed haul roads and permanent access road in the village centre of Little Bromley for construction and for access to the East Anglia Connection Node (EACN) away from the A120 (e.g. to mitigate impact on heritage, archaeology, properties, residents, amenities, safety, traffic, protected hedgerows, wildlife, water supply, and businesses)	National Grid has completed an Environmental Impact Assessment (EIA) for the Project. The results of this assessment are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application. The ES identifies and assesses the impacts on heritage, landscape and visual amenity, traffic and transport, ecology and businesses from proposed haul roads and permanent access roads in Little Bromley during the construction and operation of the Project. The respective	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>assessments of the ES recommend appropriate mitigation measures to reduce potential effects.</p> <p>Construction Access Plans Section C Sheets 9 and 10, set out in the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), shows the proposed access arrangements in the vicinity of Little Bromley. Construction traffic is not proposed to pass through the village of Little Bromley and instead is proposed to be routed via a private access road between Bentley Road and Ardleigh Road. Proposals also include an off-carriageway cycleway/footway facility along Bentley Road for use during construction, shown in the Access, Rights of Way and Public Rights of Navigation Plans (document reference 2.5).</p> <p>Chapter 16: Traffic and Transport (document reference 6.16) of the ES includes the assessment of the residual impacts of the Project including changes in traffic flow, delays, road safety and impact on walking, cycling and horse-riding modes along the Primary Access Routes located on the Local Road Network. This document sets out mitigation measures which are proposed to minimise negative impacts.</p>				
9-5.384	Suggest that the use of underground cables for the Project is extended to the Bramford substation (from the Dedham Vale; e.g. to mitigate impact on Burstall, Flowton and Hintlesham), with underground cables installed via horizontal directional drilling under major roads including the A1071	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)'</i>. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		give rise to significant adverse effects (in environmental impact terms), we do not consider the Project between Raydon and Bramford Substation would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
9-5.385	Suggest that to provide an alternative option for the road widening element, the red line boundary in Little Bromley should incorporate the paddock on the opposite side of the road to the respondent's farmhouse (the landowner is content for the road widening requirements to be pushed on to the paddock land)	This feedback has been taken into account and the proposed widening has changed to be located within the paddock land as well as the introduction of a cycleway/footway facility along Bentley Road for use during construction.			X	X
9-5.386	Concern about the impact of the Project at Pylons TB78 and TB79, and associated haul roads and compounds on respondent's irrigation system, solar panels and blackcurrant farm (plan provided by respondent), and suggest that the haul road is relocated from the middle of the respondent's field to the edge where there is an existing track (e.g. to mitigate impact on soils) / Suggest that the haul road at Pylon TB79 should be relocated to the headland (plan provided by respondent)	After review of the feedback, considering other changes to the alignment and subsequent engagement with the landowner the construction access roads have been routed to minimise the effect on the irrigation system and on the fruit crops, though some temporary construction effect is unavoidable. The crossing bellmouth cannot be moved to the field boundary due to highway safety. It is also notable that where possible we have positioned permanent infrastructure to field edges with temporary works further into fields, we consider this to reduce effects in the longer term.			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-5.387	Suggest that the Project is rerouted to follow a more direct route between Pylons JC10 / JC11 and JC32 / JC33 (e.g. this would be straighter and nearer to existing overhead lines and infrastructure to mitigate impact on landscapes, tourism, property values and farming)	The change proposed transfers effects to other similar receptors in particular increasing effects to a scheduled moat and requiring the alignment to be routed close to a number of residential properties and as such increasing effects. As such whilst potentially straighter and more consistent with some aspects of the Holford Rules it is less consistent with other aspects of the Holford Rules. Overall, we consider the effects to be reduced for the alignment subject to statutory consultation compared with the suggested alternative. Additionally, we do not consider the impacts of the alignment consulted upon in the statutory consultation in 2024 to be at a level that requires further mitigation in order to be consistent with Holford Rules and relevant policy. A summary of the Holford Rules is provided within Appendix I22 of this report.			X	
9-5.388	Suggest that Pylon JC22 should be relocated north and to the west to be placed further from wildlife and footpath in this location, and also to allow for farm equipment to pass easily around all sides	National Grid has considered the respondent's feedback. To move JC22 (now JC23) to the north and west would introduce an angle pylon and would be less consistent with the Holford Rules. A summary of the Holford Rules is provided within Appendix I22 of this report. We have positioned JC22 as close to the field boundary as possible to reduce land take, however there is a Public Rights of Way (PRoW) along the field boundary that we are maintaining a distance from. We have undertaken an Environmental Impact Assessment (EIA) to assess the potential impact of the Project, and this			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		has identified any need for additional mitigation. The results of the EIA are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application.				
9-5.389	Suggest that Pylons JC21 and JC22 should be relocated further apart to the east and west respectively, as the current route shows these pylons being much closer together than Pylons JC20 and JC23 (e.g. to mitigate impact on residents and to reduce the need for significant angles and therefore limit the height of the pylons required)	National Grid notes the respondent's preference for JC21 and JC22 (now JC22 and JC23) to be further apart. These pylons are slightly closer together in order to keep the required clearance for the overhead line when crossing over the road. In order to move these pylons further apart we would need to increase the height of these two pylons to ensure the required clearance is achieved, which would increase visual effects. We are therefore not proposing to increase the distance between these two pylons.			X	
9-5.390	Suggest that Pylon JC23 is relocated west to avoid footpath which it intersects with (the footpath cuts across the field and does not appear on the map)	National Grid has considered the respondent's feedback. To move JC23 (now JC24) to the west would introduce an angle pylon and would be less consistent with the Holford Rules. A summary of the Holford Rules is provided within Appendix I22 of this report. We have tried to avoid Public Rights of Way (PRoWs) when routing and siting the Project and we are unaware of any PRoW across this field. We have undertaken an Environmental Impact Assessment (EIA) to assess the potential impact of the Project, and this has identified any need for additional mitigation. The results of the EIA are provided in the Environmental			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application.				
9-5.391	Concern that Pylons TB63 and TB64 are too close to respondents' property (within 80 m) / Suggest that Pylons TB63 and TB64 are relocated away from residences / listed buildings	<p>National Grid does not use standard minimum distances as a routeing consideration. Applying an arbitrary distance may be too big or too small for the specific circumstances. We utilise the Holford Rules informed by feedback and professional judgement to define appropriate corridors and alignments that are consistent with the relevant policy framework and duties. TB64 is approximately 170 m from the nearest residential property. A summary of the Holford Rules is provided within Appendix I22 of this report.</p> <p>Its positioning is constrained locally by roads, a Grade I listed church to the south-west and limitations on adjacent pylon adjustments. As a result, its positioning has not been able to be adjusted significantly and has only been moved approximately 10 m to the east due to engineering optimisation. A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the Environmental Impact Assessment (EIA) as is presented in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13) submitted as part of the Development Consent Order (DCO) application. The LVIA assesses the impact of the Project and identifies the need for additional mitigation if required.</p>			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-5.392	Concern that the proposed underground cables which now run parallel to Woodlands Road, Raydon before passing through the village of Raydon will cause significant traffic issues on the B1070 through the village and result in major disruption to the residents / Suggest that National Grid instead border a lightly built-up area adjacent to the Notley Enterprise Park running parallel to Acacia Road	National Grid has carefully considered the feedback received during the statutory consultation for this Primary Access Route for construction vehicles and has identified an opportunity to utilise an offline temporary haul road located east of Holton St Mary from the B1070 to the construction corridor. It is proposed that this route would act as a bypass for Holton St Mary and Raydon during construction.			X	X
9-5.393	Concern about runoff into Dewlands caused by the Project (given the wetlands and watercourse), and suggest that water is stored and removed instead	National Grid would secure measures to maintain existing hydrological function and drainage regimes on land within the Project boundary. These measures would be informed by the hydrology and soils impact assessments that have been undertaken to inform the Environmental Statement (ES). A Flood Risk Assessment (FRA) (document reference 7.9) has also been prepared, and this demonstrates how flood risk would be managed and describe the measures that would be put in place to ensure no increase to flood risk, which is a key requirement of the National Policy Statement (NPS) for Energy Infrastructure.			X	
9-5.394	Suggest that Pylon TB13 is relocated closer to the reservoir edge or closer to the field boundary with the house (e.g. to mitigate impact on farming)	A position at the northern edge of the field to minimise the agricultural impact would position the pylon in the direct view at the end of the garden and is not considered to be an appropriate balance. It may be possible to move the pylon closer to the reservoir, though space is still required to support construction activity and to reduce the risk of water pollution from			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		runoff and a similar level of effect on the agricultural activity would also be expected. On balance a mid-field position remains preferred and provides possibility of agricultural activity being undertaken around the pylon. No change is therefore proposed.				
9-5.395	Suggest that in this section T-Pylons should be used on low ground, and no angle towers or Cable Sealing End (CSE) compounds should be visible	<p>The latest independent report on the Comparison of Electricity Transmission Technologies: Costs and Characteristics (Institute of Engineering and Technology, 2025) confirms that whilst T-Pylons may in certain locations provide an alternative to conventional overhead lines with potential benefits in visual impact and reduced land-take, this is at a higher cost. The build cost is approximately 2 to 2.5 times that of an equivalently rated conventional overhead line, and the lifetime costs are around 1.6 to 1.7 times that of a conventional overhead line. The current arrangements for the oversight of funding by Ofgem requires that the lowest cost acceptable design is taken forward rather than a more expensive design even if that design is perceived to reduce the level of effect.</p> <p>As such consideration of their use follows after establishing a need to mitigate effects of the standard lattice design and after considering the benefit of adopting a low height lattice pylon design. T-pylons themselves are also less adaptable to varied terrains and require more substantial access infrastructure. Furthermore, their resilience and environmental impact are comparable to conventional overhead lines, but with</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>increased carbon intensity due to construction materials. Attention also needs to be given to the transitions between pylon types. Given It is the surrounding context that drives the need for alternative design mitigation, where this is not required along the entire route, any visual break and transition in pylon design also needs to be carefully sited.</p> <p>Assessment findings have concluded that, where there is not a reversal of the presumption to use overhead lines, the use of lattice pylons (either standard or low height) is consistent with planning policy throughout the route. Whilst there may be some locations (for examples see appendix A of the 2024 Design Development Report (available on the Project website)) where there may be a design option for the use of T pylons, the need to mitigate for unacceptable effects from lattice pylons is not engaged. On this basis T-pylons are not proposed for the Project.</p>				
9-5.396	Suggest that Pylons JC16, JC17, and JC18 are relocated to mitigate impact of views on respondent's property (images provided by respondents)	National Grid has considered the respondent's feedback and is proposing a slight change to the pylon positions by relocating them to the north as requested by the respondent.			X	X
9-5.397	Suggest that the Cable Sealing End (CSE) compound is relocated approximately 1.5km to the north, just inside the north-east corner of the orange safeguarding zone, in order to reduce the impact on Raydon Wings Aerodrome	National Grid has appointed an independent aviation consultancy which has engaged with the operators of Raydon Wings airfield (with National Grid also present) to inform their impact assessment. The overhead line alignment (including the Cable Sealing End (CSE)			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		compound) is assessed to be at a sufficient distance to the north of the runway to ensure that overflight is not required on take-off or landing (taking into account possible lateral deviation) and that existing flight paths are therefore not impacted. Furthermore, the alignment need not impact existing flying circuits to the north as overflight is assessed to be at a safe distance. We will continue to engage with the airfield operators to confirm the acceptability of the design and support their consideration of whether reasonable changes to operational procedures are required. Further information on the assessment of airfields can be found in the Environmental Statement (ES) (see ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and ES Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2)).				
9-5.398	Suggest that National Grid use underground cables between Pylons TB1 and TB41/TB42, or at least between Pylons TB31 and TB34 at Great Horkesley	National Grid has carefully considered the feedback proposing to extend the use of underground cable between TB42 and the East Anglia Connection Node (EACN) substation, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed</i>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>when proposed developments will cross part of a nationally designated landscape (i.e. National Park, The Broads, or Area of Outstanding Natural Beauty)'. No such designations are present between TB42 and the EACN substation, nor is this area (with the exception of the proposed underground cable at Great Horkesley), within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified. Therefore the starting presumption for the Project here is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in this location would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant level of landscape and visual effects from the Project. While effects to individual receptors or a type of receptor do not in isolation justify undergrounding, when considered together, the landscape and visual effects (visual effects on community and recreational receptors, people moving in and around the area, and effects on</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		landscape character, etc.) have the potential to meet the thresholds set out in NPS EN-5. However, there are also a range of technical difficulties (including restricted space between built developments and a reservoir to be passed beneath) and other considerations (such as a railway crossing to be crossed on 400 kV connection routes to and from the East Anglia Connection Node (EACN) substation and an area between the railway and the EACN substation potentially to be included in the next Essex Minerals Plan) meaning that we do not consider underground cable to be preferred through this section.				
9-5.399	Suggest that the Cable Sealing End (CSE) compound at Great Horkesley (Horkesley Plantation) should be relocated further to the east and sited further from the National Landscape and in a less visible area	In response to feedback, National Grid has considered whether the Cable Sealing End (CSE) compound location to the east of Great Horkesley could be moved further east. Relatively localised movement to the edge of the field or into the next field to the east are constrained by gas and water pipelines and the edge of properties and hedge lines to the north. Movement may be possible further east but this would increase the underground cable length. In all cases we concluded that the effects reported as driving the request for change did not, in the context of national policy or National Grid's statutory duties, justify the higher cost of underground cables to bill-paying consumers, and the environmental implications of installing and maintaining them.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		The Environmental Impact Assessment (EIA) has assessed the impact of the Project and identified any need for additional mitigation. The results of the EIA are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application.				
9-5.400	Support the change from the 2023 Draft Alignment with the Project on the western extremity of development site at Marks Tey, and suggest that the Project is routed further west at the development site at Marks Tey	These potential development sites near Marks Tey have no formal status in planning terms so have not been taken into account in the design of the Project. Such decision making is focussed on existing homes, constraints and environmental features and proposed developments which have some status in planning terms.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Design Change						
9-5.401	Suggest that the Project is routed further northward where the Project is north of the A120 and passes through the development site at Marks Tey (e.g. to mitigate impact on the Marks Tey Brickpit Site of Special Scientific Interest (SSSI))	The Project is not expected to have effects on the Marks Tey Brickpit Site of Special Scientific Interest (SSSI) so a change is not required. Furthermore, to achieve the change requested would introduce a need for additional changes of direction and be less consistent with Holford Rule 3. A summary of the Holford Rules is provided within Appendix I22 of this report. For example, to route from TB56 to the west passing to the north of homes and ancient woodland and then south to reconnect around TB63 would add two further angle pylons. No change is proposed.			X	
9-5.402	Suggest that pylons for the Project (e.g. at farm near Fordham Road) should be located at field boundaries within the 6 m unfarmed margin / at the corners of fields with access roads around the perimeter headland, or alternatively pylons should be located a minimum of 54 m from the field boundary (e.g. to mitigate impact on farming operations)	The positioning of individual pylons has responded to technical factors including topography as well as environmental features such as the presence of hedges and protected species. Where possible positioning has also sought to respond to specific landowner tramline spacings (which vary between respondents) which would be able to be refined at detailed design stage by direct liaison between construction contractors and the individual landowner to seek to reduce effects.			X	
9-5.403	Concern about the impact of Pylons TB6, TB8 and TB9, and the currently proposed High Voltage Alternating Current (HVAC) underground cables for the Project (e.g. impact on farm; impact on roman road), and suggest that Pylon TB6 is not needed given that the distance between the proposed location of Pylons TB4 to TB5 is the same as Pylons	Long spans, such as between TB4 and TB5 are possible but there are also design constraints which regulate the distance of adjacent spans in combination. That prevents the removal of the pylon noted. Additionally, following consideration of feedback in this area a change to the pylon positions is being taken			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	TB5 to TB7 and consequently removed from the Project (e.g. to mitigate impact on turtle dove re-establishment operation at this location)	forwards with the pylons moved to the south of Little Bromley Road. While National Grid are aware of a small scale turtle dove release programme in the area, bird surveys (Appendix 6.8.A7: Breeding Bird Report and Appendix 6.8.A8 Wintering Bird Report) have not identified significant numbers of turtle doves or a significant collision risk as a result of our proposals.				
9-5.404	Suggest that Pylon TB29 is relocated further away from residence (e.g. due to safety concerns)	Neither UK law, National Policy Statements (NPS) nor the Holford Rules prescribe minimum distances between overhead lines and homes, nonetheless routing seeks to reduce effects where possible by considering, for example positioning the alignment midway between properties or positioning properties mid span all subject to the presence of other environmental features and constraints. In the absence of any specific request National Grid does not consider the separation from residential properties to be inconsistent with policy. Any implications on landscape and visual receptors, residential amenity or from concerns about electromagnetic fields are robustly assessed as part of the Environmental Impact Assessment (EIA) and balanced as part of the decision making process. We will continue to review planning applications and engage with developers to back check and update our proposals as necessary.			X	
9-5.405	Concern about the impact of construction compounds for the Project at the corner of Dedham Road / Ipswich Road and next to Birchwood Road on	National Grid notes the respondent's feedback. The cable construction compound JC-CC03 needs to be located close to where the underground cables are			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	the National Landscape and Listed Buildings (e.g. aggregate storage compound), and concern that aggregate storage compound is proposed on the site of a historic quarry and too close to a listed building with no foundations / Suggest that construction compounds should be relocated further away from the Dedham Vale National Landscape (previously known as the Dedham Vale Area of Outstanding Natural Beauty (AONB))	being installed, as well as being close to the primary access route along Ipswich Road. Following statutory consultation feedback, we have moved this compound slightly further to the west within the field away from the respondent's property.				
9-5.406	Suggest that the underground cables are extended to the north of Little Wenham as far east as the area around Pylon JC20 (e.g. to mitigate the potential visual impact on All Saints' and Little Wenham)	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>"that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Park, The Broads, or Area of Outstanding Natural Beauty)"</i> . Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25).</p> <p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project between Raydon and JC20 would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.</p>				
9-5.407	Suggest that the underground cables should be buried alongside the new water pipeline that is already under construction (near Layham, Hadleigh)	<p>National Grid has assessed various routes for the new underground cables and overhead line in order to identify the optimum route for the Project.</p> <p>Paralleling existing infrastructure can have benefits if the new and existing infrastructure has a common start</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		and end point. If this is not the case, any potential benefits would typically be outweighed the additional underground cable length required (and the associated increase in crossings and environmental impact). Installation of the proposed underground cables would require substantially more space than a typical water pipeline (by virtue of the number of cables required), meaning that the underground cables cannot necessarily fit through gaps between existing features that other infrastructure has already used.				
9-5.408	Concern about the impact of angle tower pylon at Kings Farmhouse (Pylon TB40), and suggest the use of underground cables should be extended further along the valley with the Cable Sealing End (CSE) compound relocated accordingly	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is " <i>that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Park, The Broads, or Area of Outstanding Natural Beauty)</i> ". Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-5.409	Suggest that underground cables under the A134, School Lane, London Road, Vinesse Road and Crabtree Lane should be constructed using trenchless crossing methods (e.g. directional drilling)	<p>locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25).</p> <p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project from TB35 through the Colne Valley would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.</p> <p>Physical constraints at the road crossings coupled with the current underground cable design assumptions mean that open cut crossings are considered at these locations.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Crossing of the A134 is feasible using open cut methods and traffic management (i.e. alternate single lane closures with traffic management, localised widening may be required). Where road widths are not sufficient to accommodate single lane closures, National Grid would look to close the roads and use suitable short-term diversions.</p> <p>As the underground cable system design is progressed into detailed design the crossing methodology will be reviewed.</p>				
9-5.410	Criticism of the siting of the Cable Sealing End (CSE) compound at Crabtree Lane, Little Horkesley (e.g. due to being in close proximity to and readily visible from Listed Buildings and / or curtilage of Listed Buildings at each of The Grove, Gladwinds Farm, Holts, Upper Dairy Farm, Cockerells Farmhouse, Maltings Farmhouse)	<p>National Grid notes the respondent's feedback but also notes that it is the level of effects that are taken into consideration in siting decision making rather than the fact of whether infrastructure is or is not visible. The infrastructure may be visible but if this does not lead to a level of effect that, in policy terms, engages parts of policy (specifically National Policy Statement (NPS) EN-5) that would lead to a need for change, then there is no basis for the location of the infrastructure to be changed. In this case the effects on residential views, listed buildings, and the National Landscape amongst other factors do not justify the effects and additional costs from a change in Cable Sealing End (CSE) compound location. The Environmental Impact Assessment (EIA) has assessed the impact of the Project and identified any need for additional mitigation. The EIA can be found in the Environmental Statement (document reference Volume 6: Environmental Statement) as part of the Development Consent Order (DCO) application.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-5.411	Suggest that the B1070 should not be used for access for the Project, and that an alternative access to Notley Enterprise Park (Raydon Airfield) Acacia Road should be used, where infrastructure / machinery / equipment could be stored	National Grid has carefully considered the feedback received during the statutory consultation for this primary access route for construction vehicles and has identified an opportunity to utilise an offline temporary haul road located east of Holton St Mary from the B1070 to the construction corridor. It is proposed that this route would act as a bypass for Holton St Mary during construction. Through this process, National Grid has also considered alternative routes for this bypass, including the use of the historic railway alignment. These alternatives were discounted through assessment and identification of constraints and requirements.			X	X
9-5.412	Suggest that underground cables are used in the valley between West Bergholt (specifically around Hall Road, Stitching Wood and Hill House Wood) and Fordham prior to Fossetts Lane	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is " <i>that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Park, The Broads, or Area of Outstanding Natural Beauty)</i> ". Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25).</p> <p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project between West Bergholt and Fordham would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-5.413	<p>Criticism that National Grid did not consult or notify respondent on the change at Blackbrook Stream since the 2023 draft alignment from trenchless installation of underground cables to trenched installation of underground cables. With this, suggest that National Grid re-evaluate the proposed split corridor for the Project at the crossing of Blackbrook Stream and provide studies, reports and calculations regarding trenchless cabling vs trenched cabling at this location, including the following:</p> <ul style="list-style-type: none"> - an evaluation of the loss of habitat, including the important woodland which will be lost and can never be replaced; - the effect on wildlife, the environment, and local ecology; the potential for pollution and impact on water quality in the area; - the potential for change of water table and consequential flooding; the feasibility of trenched cabling through the Blackbrook Stream including the fact that the Boxted sewage works discharges into the stream; the necessary diversion of the Blackbrook while the operation is taking place; - that (respondent's parcel of land) is swampy / waterlogged at its eastern end with thick growths of bullrushes and an abundance of aquatic species. <p>National Grid must consider whether it is possible at all to install trenched cables under this area; and,</p> <ul style="list-style-type: none"> - the considerable undulations/ changes of level of the site from the land to the north of the Blackbrook 	<p>National Grid notes the respondent's feedback, the change from trenchless technique to a trenched installation was included in our 2024 preferred draft alignment and was consulted upon at our statutory consultation.</p> <p>The design for the split crossing at Black Brook has been removed to avoid encircling a property. Note that the split corridor has been found to be unsuitable for trenchless installation via Horizontal Directional Drilling (HDD) (based on current assumptions and unknowns). Trenchless installation via HDD is taken as a baseline across the Project – at present, and allowing for variability in site conditions, there is insufficient space to install using this method at Black Brook. Therefore trenchless installation would rely on alternative trenchless methods, which are more expensive than HDD.</p> <p>The impact on habitats, wildlife and ecology have been assessed by a team of specialists, who have inputted into the decision-making process.</p> <p>A detailed habitat survey on the woodland and grassland habitats either side of Black Brook and the brook itself has been undertaken. An assessment of impact on the habitats in this area as a result of the open cut cabling have been included within Chapter 8: Ecology and Biodiversity (document reference 6.8) and Appendices 8.1 to 8.16 (document reference 6.8.A1-6.8.A16) of the Environmental Statement (ES).</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	to the land to the south of (respondent's parcel of land) through which runs a high pressure trunk gas main	<p>Black Brook would be over-pumped during construction, minimising the impact on water flows, and a suite of measures would be put in place (detailed in the Outline Code of Construction Practice (CoCP) (document reference 7.2)) to prevent pollution and detriment to water quality, as well as changes in the water table and local land drainage regime to avoid increases in flood risk.</p> <p>National Grid is aware of land level differences and the presence of the high pressure gas main. The Outline CoCP (document reference 7.2) provides commitments to reduce construction impacts together with a framework for detailed management plans to be prepared at detailed design stage in order to reduce and mitigate potential impacts and/or disruptions that may arise during the construction phase. Pre-construction surveys would be undertaken to aid the detailed design development of the cable route, these would be completed prior to construction. National Grid works and consults with all third party statutory utility owners as well as the local water and electricity companies. Where required, appropriate mitigations would be agreed in order to negotiate such existing infrastructure.</p> <p>The crossing would be developed further during detailed design, impacts to the bank would be minimised where possible. The Environmental Statement (ES) (document reference Volume 6: Environmental Statement) of the DCO application provides an assessment of the Project including temporary construction impacts and any</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		permanent impacts. The detailed design for construction would consider the existing topography and would ensure a safe design is implemented to protect the bank. National Grid would continue to work with all affected landowners, where possible adapting the Project design or agreeing relevant mitigation. National Grid would seek to reinstate the affected land where possible to the same state prior to any works (or a condition agreed with the landowner).				
9-5.414	Suggest that the Cable Sealing End (CSE) compound situated north-east of Horkesley Plantation (Pylons TB33 and TB34) is relocated further east (e.g. to mitigate impact on the Dedham Vale National Landscape (previously known as the Dedham Vale Area of Outstanding Natural Beauty (AONB))	The respondent's preference is noted but no specific alternative has been suggested. With regards to the National Landscape the Cable Sealing End (CSE) compound site is considered by National Grid to be located where it is not necessary to mitigate effects by relocation. Nonetheless we have in response to other feedback considered whether other locations further east were more appropriate. Siting in the immediate field to the east is constrained by an existing high pressure gas pipeline and water main. Moving further east has also been considered with conclusions presented in the 2024 Design Development Report (DDR) and summarised as being that the level of effects on the National Landscape were not at a level to justify the additional cost (and effects arising) from extending the underground cable distance. In the absence of new evidence or the identification of further factors we continue to consider the proposed CSE compound site near Great Horkesley to be preferred and no change is proposed.	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-5.415	Suggest that Pylon TB39 is relocated away from Roman Kiln	<p>National Grid has undertaken a detailed routing and siting exercise to reduce, as far as practicable, the potential impacts of the Project on the historic environment. These considerations have been assessed and are presented in Chapter 11: Historic Environment (document reference 6.11) of the Environmental Statement (ES), which evaluates both the potential for direct physical impact and impacts arising from changes to the setting of heritage assets.</p> <p>The possible Roman kiln (4074), located along Colchester Road, lies outside of the Order Limits. As such, it has been concluded that there will be no direct physical impact on the asset during construction. Engagement has been undertaken with Historic England and relevant local planning authorities throughout the development of the Project to inform the assessment, including consideration of appropriate mitigation strategies. Their feedback has been taken into account during the refinement of the Project design.</p> <p>Accordingly, the potential effects on this asset have been fully considered and mitigation measures deemed proportionate. No relocation of Pylon TB39 is therefore proposed.</p>	X			
9-5.416	Suggest that the use of underground cables for the Project is extended from Little Horkesley to Pylon TB48	<p>National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of</p>	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is "<i>that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Park, The Broads, or Area of Outstanding Natural Beauty)</i>". Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25).</p> <p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project from Little Horkesley to TB48 would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
9-5.417	Suggest that the East Anglia Connection Node (EACN) is relocated adjacent to the A12 (e.g. to mitigate impact on environment and for easier access) / Suggest that the EACN is relocated to the west of the A12 (e.g. to mitigate impact on Ardleigh)	The development of the Project has considered whether other suitable sites were available for the siting of infrastructure. In general, such sites are few in number, of inappropriate size, have incompatible former uses (e.g. are made ground), are located remotely from the route such that for example they would require a diversion that would be less economic and efficient. We have considered the use of the former airfield at Boxted for the siting of the East Anglia Connection Node (EACN) substation but ruled it out as explained in the 2025 Design Development Report (document reference 5.15). This was due to the greater impact on the National Landscape from multiple underground corridors.			X	
9-5.418	Oppose the change to the Project near London Road / School Lane (e.g. as the Project is now routed all on the respondent's land at this location, compared to the two cable arrangement previously presented for consultation), and suggest that the Project should follow the original route at this location, or	The use of overhead lines in this location is not consistent with planning policy most notably National Policy Statement (NPS) EN-1 paragraph 5.10.34 as it would lead to levels of effects that were not compatible with the special qualities of the Dedham Vale National Landscape. The concentration into a single corridor was			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	alternatively suggest that overhead lines should be used at this location	made in response to the identification of the cable route being inadvertently routed through the garden of a private residence. This has not changed and therefore no change is proposed.				
9-5.419	Suggest that the haul road for the Project near London Road / School Lane should follow existing road (School Road) instead (e.g. to reduce impact on residents and business, and to reduce the length of the haul road) (plan provided by respondent), and that the Draft Order Limits (red line) are reduced accordingly	National Grid has carefully considered the feedback received, the cross over bellmouth location has driven the location of the haul road. We sought to keep the cross over on the west of the underground cable alignment along the route proposed by the respondent. Unfortunately, in this location it would not be possible to achieve the visibility required at a junction without impacting and potentially removing a private property. Therefore, it was necessary to locate the haul road and cross over on the eastern side of the underground cable alignment where the road is straighter and the required visibility can be provided without impacting on private properties.			X	
9-5.420	Concern about new permanent access road for the Project between Bentley Road and Ardleigh Road (e.g. as it is proposed through respondent's land in Little Bromley; due to impact on environment, such as noise, dust and disturbance; impact on agriculture and horses), and criticism of consultation on this access road (e.g. not enough information / contradictory information). With this, request for information on detailed plans for the access road (e.g. what is being proposed and how it will be used)	National Grid notes this comment. Impacts on noise, dust and disturbance, and agriculture and horses from the new permanent access road for the Project between Bentley Road and Ardleigh road are assessed as part of Chapter 6: Agriculture and Soils, Chapter 7: Air Quality, and Chapter 14: Noise and Vibration of the Environmental Statement (ES) (document reference Volume 6: Environmental Statement). Chapter 6: Agriculture and Soil (document reference 6.6) of the ES assesses the potential effects of			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>construction on agricultural land, agricultural landholdings and soil resources. Mitigation measures to protect soil resources and to allow for reinstatement of temporary land take to its pre-construction condition are presented within the Outline Code of Construction Practice (CoCP) (document reference 7.2).</p> <p>The new permanent access road is likely to cause severance of agricultural landholdings, as frequent access is required for grazing livestock (horses). To mitigate severance and fragmentation, measures such as the provision of new permanent access points and the restoration or installation of fencing where necessary will be implemented. As a result, the significance of the impact on agricultural landholdings affected by the proposed works is expected to be reduced.</p> <p>Chapter 7: Air Quality (document reference 6.7) of the ES considers the potential effects of construction and construction traffic associated with the Project and presents mitigation measures to be implemented to mitigate effects, which are presented within the Outline CoCP (document reference 7.2). No significant new effects are expected along Bentley Road or Ardleigh Road. Air quality modelling for the ES assessed 59 human receptor locations across three scenarios (Baseline, Do Minimum, and Do Something), and no exceedances of Air Quality Objectives (AQO) were predicted for any pollutants (NO₂, PM₁₀, and PM_{2.5}). The closest human receptor to Bentley Road is located</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>one km south-east, while the nearest receptor to Ardleigh Road is 650 m west. Modelled pollutant concentrations at these receptors remain well below AQO thresholds for all pollutants. Additionally, existing background pollutant levels in the area are already significantly lower than AQO limits. Therefore, the planned works near Bentley Road and Ardleigh Road are not expected to result in any exceedances of AQO limits for annual mean NO₂, PM₁₀, or PM_{2.5} at nearby human receptor locations.</p> <p>Chapter 14: Noise and Vibration (document reference 6.14) of the Environmental Statement (ES) considers the potential effects of construction and construction traffic associated with the Project and presents mitigation measures to be implemented to mitigate effects, which are presented within the Outline Code of Construction Practice (CoCP) (document reference 7.2). The assessment indicates that with suitable noise mitigation measures, significant adverse effects are not expected due to the construction or use of the proposed new permanent access road.</p> <p>The proposed permanent access road from Bentley Road to Ardleigh Road will be used by construction traffic. The Construction Routing Strategy is provided in the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).</p>				
9-5.421	Suggest that the Project is routed to the west of the National Landscape and High Voltage Direct Current	National Grid is constantly looking into new innovations and investigating alternative technology types. These			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	(HVDC) underground cables are used (e.g. if the Project came onshore at Bradwell)	are explored and assessed for suitability. Alternative technologies were investigated for the Project, these included an offshore connection using Direct Current (DC) technology, and various onshore connection options including: increasing operational voltages on existing network to above 400 kV; Alternating Current (AC) overhead lines (established technology); alternative pylon types; AC underground technology; HVDC overhead line and underground cables; and Gas Insulated Line (GIL). HVDC is not normally used across land as converting AC to DC and back again would require converter stations so it can be used in the rest of transmission network and the distribution network which is currently AC. These converter stations are a significant size and would be required at every interface with the wider AC network i.e. at Norwich, Bramford, East Anglia Connection Node (EACN) substation and Tilbury substations, the cost of these converter stations outweighs the benefits offered. Currently, overhead lines offer the most economic and efficient solution to transmit electricity over long distances.				
9-5.422	Suggest that underground cables for the Project south of Pylons JC33 and JC34 (south of Raydon Airfield and north of the industrial estate) are rerouted closer to the industrial estate (two alternatives routes on plan provided by respondent) (e.g. to mitigate impact on Woodlands Hall and other residences; to mitigate impact on Roydon Airfield; to	National Grid notes the respondent's feedback and has amended the route of the underground cables to be further to the east at this location, further from the Woodlands Hall as requested. However, the underground cable is still required to cross Raydon Airfield to connect to the Cable Sealing End (CSE) compound.			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	avoid land used by Anglian Water), and suggest that access to the underground cables (if the Project is changed) could be from the east rather than the west (e.g. to reduce compulsory purchase; to reduce impact on hedgerows; to reduce impact on residents)	The access has also been relocated to the east rather than west.				
9-5.423	Suggest that the set down area and construction compound either side of the A134 in Great Horkesley are relocated east of farm buildings to TL 98185 31054 (e.g. to reduce impact on residents and Chapel Cottage, a listed building)	Compounds to either side of the A134 are required to facilitate construction and are preferred to the compounds all being to the east as suggested in the feedback as it reduces the amount of crossing traffic. The laydown area which is primarily used for temporary storage of haul road construction materials needs to be located close to the access point to facilitate the haul road build so no change to this location is proposed. The construction compound has however been moved south to reduce effects identified in the feedback.		X		X
9-5.424	Suggest that the Project between Pylons TB1 and TB41/TB42 must be removed and underground cables used instead and that the East Anglia Connection Node (EACN) is relocated to a site which minimises harm to sensitive areas (e.g. to comply with the National Policy Statement for Energy (NPS-EN5))	National Grid has carefully considered the feedback proposing to extend the use of underground cable between Great Horkesley and the East Anglia Connection Node (EACN) substation, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>"that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated</i>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p><i>landscape (i.e. National Park, The Broads, or Area of Outstanding Natural Beauty)'. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project here is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in this location would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant level of landscape and visual effects from the Project. While we consider that landscape and visual effects between Great Horkeley and the EACN substation, may be widespread and therefore reach the threshold set out in NPS EN-5, there are also a range of technical difficulties (including restricted space between built developments and a reservoir to be passed beneath) and other considerations (such as a railway crossing to be crossed on 400 kV connection routes to</i></p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		and from the EACN substation and an area between the railway and the EACN substation potentially to be included in the next Essex Minerals Plan) meaning that we do not consider underground cable to be preferred through this section.				
9-5.425	Concern that the impact on Lark Hall has not been fully considered in the Environmental Statement, and suggest that the Project and associated construction/access areas should be relocated away from Lark Hall	<p>All listed buildings within 2 km of the Order Limits are considered in the Historic Environment assessment for the Project, such as Lark Hall (1036983). The impacts of the Project on the historic environment are assessed in Chapter 11: Historic Environment (document reference 6.11) of the Environmental Statement (ES). The assessment considers the potential impact on historic buildings and includes assessment of potential for physical impact and impact through change to setting that affects the value of a heritage asset. The assessment of listed buildings is supported by setting surveys, as documented in ES Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1). The Project has engaged with Historic England and relevant planning authorities on aspects relating to heritage, including appropriate mitigation measures and techniques and to take their views into account during Project development.</p> <p>Mitigation measures have been explored to mitigate identified impacts effectively. These actions have been documented and are presented in the Environmental Statement (ES), Chapter 11: Historic Environment (document reference 6.11), which forms an integral part</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>of the Environmental Impact Assessment (EIA) for the Project. The approach to assessment and mitigation presented in ES Chapter 11: Historic Environment (document reference 6.11) have been discussed and agreed with key heritage stakeholders</p> <p>All the assessments of heritage value presented is based on a thorough review of available sources, including historic mapping, archival research, and site-based observations.</p> <p>The assessment of Lark Hall concludes a temporary moderate adverse significance of effect during the construction phase and a neutral significance of effect during the operation phase. No additional mitigation measures are proposed as any measures designed to lessen the visual impact of the Project would be of a scale that would visually adversely alter the setting of the asset.</p>				
9-5.426	Criticism that National Grid have only identified one visual receptor for the Project in the Colne Valley and suggest that the impact of the Project on further visual receptors to 1.5 km, and further to 2 km, in the Colne Valley should be considered	A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the Environmental Impact Assessment (EIA), which includes an assessment of landscape and visual effects. The approach to the LVIA follows professional guidance as set out in the Environmental Statement (ES) Appendix 13.1: Landscape and Visual Methodology (document reference 6.13.A1). This includes Guidelines for Landscape and Visual Impact Assessment (GLVIA3), as prepared by the Landscape Institute and the Institute of Environmental Management and Assessment. The LVIA			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>is presented in the Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13).</p> <p>The methodology has been agreed with relevant stakeholders and the assessment prepared by qualified and experienced landscape professionals. The document sets out all data sources used to inform the baseline and the assessment of landscape effects.</p> <p>A selection of landscape and visual viewpoints have been selected for use in the assessment, to support the LVIA and assist stakeholders and ultimately the Planning Inspectorate to understand the likely effects of the Project on landscape character and on views from specific points. Some of these have been used to produce technical visualisations. We have engaged with a range of stakeholders (including Statutory Environmental Bodies (SEBs) and relevant local planning authorities) throughout the development of the Project design and environmental assessment work, including the selection of viewpoint locations.</p> <p>Viewpoint 4.24: Essex Way near Fordstreet (document reference 7.12) illustrates how the Project would appear in views from the landscape to the north of the Colne Valley from Fordstreet, the conservation area and the Public Rights of Way (PRoW) network. Viewpoint 4.25: Essex Way, Mill Road, south of Fordham (document reference 7.12) illustrates how the Project would appear in views from the landscape within the Colne Valley</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		near Mill House and Fordham Bridge where the overhead line crosses the river. Viewpoint 4.20 PRoW near Bullbanks Farm, west of Fordham Heath (Aldham 4) (document reference 7.12) considers views from south of the Colne Valley from the PRoW network. Further visual assessment work relating to this area can be found in Visual Receptor Area (VRA) VRA D5 (Fordham), VRA D6 (Fordham Heath and Eight Ash Green), VRA D7 (Fordstreet and Aldham), which can be found in Appendix 6.13.A3: Visual Baseline and Assessment. These assessments extend to the 3 km Study Area agreed with stakeholders and provide judgements of effects on visual receptors within the 3 km Study Area.				
9-5.427	Suggest the use of High Voltage Direct Current (HVDC) underground cables between Pylons TB41 and TB47 using trenchless construction (e.g. to mitigate impact on the Colne Valley)	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>"that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Park, The Broads, or Area of Outstanding Natural Beauty)"</i> . Where no such designations are present, nor is the area within the			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project between TB41 and TB47 would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-5.428	Suggest that Pylons TB39 and TB40 are relocated away from Coney Byes Farm and Coney Byes House, Highfield Farm, King's Farm, Kinckhams, Dunedin Cottages, Sprawls Farm and Pond Farm (e.g. due to impact on heritage)	The closest properties to pylons TB39 and TB40 are approximately 200 m to the west with some screening of pylon bases by existing woodland. Those properties to the east are in excess of 300 m from the alignment. Our heritage assessment does not show the effects to conflict with policy, nor at a level where there is a requirement to adjust the alignment. The effects of the Project are assessed and presented in the Environmental Statement (ES) and this has identified any need for additional mitigation.			X	
9-5.429	Suggest that the use of underground cables for the Project between Pylons TB35 and TB60 through Aldham (e.g. removing the Cable Sealing End (CSE) compound at Pylons TB35 and TB36), with High Voltage Direct Current (HVDC) underground cables used for this section	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>"that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Park, The Broads, or Area of Outstanding Natural Beauty)"</i> . Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-5.430	Concern that the haul road for the Project (near Pylons TB46 and TB47) will damage respondent's reservoir as the road cuts through the bank, and criticism that National Grid have not confirmed that the Project has been rerouted at Pylons TB46 and	<p>locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project between TB35 and TB60 through Aldham would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.</p> <p>National Grid acknowledges the respondents' feedback regards the reservoir at span TB46 to TB47. National Grid has positioned the pylons such that the reservoir is north of the overhead line, approximately mid span between the two pylons. It is overhead line over sail</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	TB47. With this, suggest that Pylons TB46 and TB47 should be relocated nearer to the river, and suggest that any damage or impact on the bank should be reinstated under the guidance of an Engineer to the standards of the 1975 Reservoirs Act / Concern that the Project between Pylons TB46 and TB47 and the subsequent haul road and construction area will cut through the banks of an agricultural reservoir	across the embankment only. We are not proposing any civil works on or close to the embankment. The closest working pads for the construction of the two pylons are approximately 80 m and 20 m away from the bottom of the embankment. Additionally, the proposed temporary haul road has been positioned to the south of the alignment, again approximately 30 m away from the bottom of the embankment. However, the design of the Project will incorporate suitable consideration of the ground conditions based on data from site specific ground investigation and assessment and therefore any risks from ground instability would be considered within the engineering design of the new infrastructure in accordance with best practice. This would mean the Project would be built with any required design and construction mitigation in place.				
9-5.431	Oppose the change to the Project in Aldham, and suggest that the Project should be changed back to the original route at this location (e.g. away from the north-west of respondent's property)	National Grid notes the respondent's preference to return to the original route (which is interpreted as the original graduated swathe – because the alignment has otherwise not changed). However, in the absence of new evidence or the identification of further factors the reasons for changing from the graduated swathe, which were to avoid the over sails of residential homes and gardens (or avoid multiple changes of direction) remain valid and an alignment more consistent with Holford Rules is preferred. A summary of the Holford Rules is provided within Appendix I22 of this report.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-5.432	Suggest alternative route for the Project between Pylons TB53 and TB68 (as per previous response from respondent) or, if this is not possible, suggest that Pylon TB64 is relocated further east (e.g. to mitigate impact on Little Tey House) and that Pylon TB63 is relocated further east onto the field boundary (e.g. to mitigate impact on farming) (plan provided by respondent)	The alternative route to the north between TB53 and TB68 is less preferred as it can only be achieved either through a route with a greater number of angle pylons (less consistent with Holford Rule 3 - A summary of the Holford Rules is provided within Appendix I22 of this report) and even then has increased effects on varying combinations of homes and environmental features either to route to the northwest side of Aldham (increased effects on residential amenity in a number of homes or over sails an extensive area of woodland close to a scheduled monument at Warren's Farm with increased tree loss. We have been able to move TB64 somewhat to the east to benefit from screening behind farm buildings. The change is limited by the potential knock-on effects to pylons to either side with any movement of TB65 (to allow greater movement of TB64 and potentially TB63) being to the benefit of the respondent but leading to increased effects for other residents. A small change to TB64 to move it to the east has been made.			X	X
9-5.433	Suggest that Pylon TB148 is relocated to field boundary (e.g. to mitigate impact on farming)	National Grid notes the respondent's feedback. TB148 (now TB150) is not able to be moved to the field boundary as it is an angle pylon and therefore space is required around the pylon for pulling the overhead conductors through during construction. The alignment at this location has also been routed to avoid the woodland to the north, to route between the properties and to avoid the equestrian menage at Mashbury Road as well as avoiding positioning a pylon on a landfill.			X

		Should any landowner have any specific queries regarding impacts to farming or compensation please contact the Project lands team to discuss: Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314. Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD.				
9-5.434	Suggest that the Project is rerouted to avoid/remove the Horne Street, Ardleigh, Boxted dog leg, instead being routed from Higham to the west of Boxted, joining and then running parallel to the Ardleigh to Fordham proposed route (e.g. to minimise disruption)	National Grid has reviewed the siting of the East Anglia Connection Node (EACN) substation in light of the feedback and new information about construction corridor widths from the windfarm customers. This is set out in the 2025 Design Development Report (document reference 5.15) which concludes that a relocation as requested remains less preferred because of the effects arising from the need to use multiple corridors for the customer connections leading to increased effects on the National landscape.			X	
9-5.435	Concern that the underground cable section between Dedham Road Langham and the A12 crossing involves felling significant numbers of trees that cannot be reinstated above the proposed trench, and these trees mitigate general sound and noise nuisance including traffic noise from the A12 / Suggest that if trees are removed, there should be noise reduction measures between the A12 and any residential properties adjacent to or within the swathe	In response to this and other feedback National Grid is progressing with an amended design for the Project with an underground cable corridor routed further to the west which substantially reduces the effects on woodland and trees raised by the respondent. The assessment of noise effects and requirements for mitigation is set out in the Environmental Statement (ES).			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-5.436	Concern that in the area around Springfield Farm, Glebe Farm and Black Brook, the water table is very high, and digging the trench with the consequent drainage mitigation, may disrupt the water table and hence local habitat / Concern that it may also disrupt the capacity of water in respondents well / Request that National Grid ensures that there is no deterioration in water quality or quantity	National Grid has conducted preliminary ground investigations in order to better understand the geology along the underground cable route, including ground water levels. This would be supplemented by more detailed investigations prior to construction. National Grid would assess the impact of the works on all identified ground water sources, including public and private extraction points, and take appropriate measures to avoid detriment to those water sources.			X	
9-5.437	Suggest that the underground section between Dedham Road Langham and the A12 crossing should be constructed via Horizontal Directional Drilling (HDD), or if this is not possible, open excavation and reinstatement should be completed in as short a period of time as possible, with no inactive periods while waiting for work to be completed on other sections	There is approximately 1.8 km between Dedham Road and the A12. The additional cost of utilising trenchless methods for this section is not justified in policy terms. However, like the respondent, National Grid remains keen to keep trenches open for the shortest practical length of time.			X	
9-5.438	Suggest that, instead of the current plan to create a compound and transport hub at the junction of Gun Hill and Dedham Road (AENC-NG-ENG-PLN-0024 sheet 5) which will create an unacceptable volume of traffic on surrounding roads, the compound should be created adjacent to the A12 with direct access and egress to the A12 to the North of Perry Lane	National Grid has reviewed the location of this construction compound and construction laydown area. The compound is located adjacent to the Primary Access Route (PAR). The Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) provides details about the proposed construction access strategy that has been developed to manage the impact of construction vehicles on the public highway and sensitive receptors. Considering the underground cable construction swathe, the required space for a safe access point off			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>the A12, the high pressure gas pipeline and the existing junction for Ipswich Road, it is deemed there is not sufficient space adjacent to the A12 to move the compounds.</p> <p>The Transport Assessment (document reference 7.11) includes junction capacity assessments for several junctions within the Strategic Road Network, Major Road Network and Local Road Network. The junctions with potential capacity issues due to the additional construction traffic were identified for a full assessment within the Transport Assessment. The duration of this impact is expected to be low, i.e. one week and therefore, not considered to be significant.</p>				
9-5.439	Request a weight limit of 6 tonnes for all vehicles using the Wick Road junction	<p>National Grid has reviewed this proposed Primary Access Route (PAR) on Wick Road. This PAR is required to have Abnormal Indivisible Load (AIL) vehicles required for the cabling works, and therefore it is not possible to limit Wick Road to 6 tonne vehicles only as the AIL vehicles will not be able to use this PAR. Moreover, Wick Road has not been identified to require a 6-tonne weight limit, and one does not exist currently. Additionally, no suitable alternative has been identified in our design development. The access from Perry Lane off the A12 is deemed unsafe from our highway assessment and based on feedback from local highway authorities and National Highways. Therefore, the only suitable access for construction traffic to this section of temporary haul road is using Wick Road.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		As part of the pre-application process National Grid has engaged with the relevant authorities, their highways teams, National Highways, and Anglian Water to understand and gain information on their local road networks and assets including section of the PAR on Wick Road. This information has been used to inform and guide the drafting of the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) for the Project that accompanies the Development Consent Order (DCO) application. The Outline CTMP (document reference 7.3) provides details about the proposed construction access strategy that has been developed to manage the impact of construction vehicles on the Public Highway and sensitive receptors. The Outline CTMP (document reference 7.3) highlights any restrictions to reduce impacts to other road users from construction traffic related to the Project.				
9-5.440	Request that all deliveries and operatives should report to the compound and be ferried to the appropriate work site to reduce congestion	As part of the pre-application process National Grid has engaged with the relevant authorities, and their highways teams and National Highways to understand and gain information on their local road networks. This information has been used to inform and guide the drafting of the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) for the Project that accompanies the Development Consent Order (DCO) application. The Outline CTMP (document reference 7.3) provides details about the proposed construction access strategy that has been developed to manage the impact of construction vehicles on the			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Public Highway and sensitive receptors. The Outline CTMP (document reference 7.3) highlights any restrictions to reduce impacts to other road users from construction traffic related to the Project.				
9-5.441	Suggest that noise reduction measures (e.g. restricting working hours to between 9 am and 4 pm on weekdays, restricting use of vehicles and plant working, the instillation of noise reduction barriers, the disabling of reversing beepers) should be used	<p>Chapter 4: Project Description of the Environmental Statement (ES) (document reference 6.4) provides detail of the construction working hours. It is assumed that the core working hours for construction would be:</p> <p>Mondays to Fridays: 07:00 - 19:00</p> <p>Saturdays, Sundays, Bank Holidays and other Bank Holidays: 07:00 - 17:00</p> <p>No percussive piling works would take place outside of the hours of 07:00 - 19:00 Monday to Friday and 07:00 - 17:00 on Saturdays</p> <p>Unless otherwise agreed with the Local Highway Authority, no HGV deliveries would be made to site outside the hours of 07:00 - 19:00 Monday to Friday and 07:00 - 17:00 on Saturdays.</p> <p>Chapter 14: Noise and Vibration of the ES (document reference 6.14) considers the potential effects of construction activities including construction traffic associated with the Project and presents mitigation measures to be implemented to mitigate effects. These mitigation measures are presented within the Outline Code of Construction Practice (CoCP) (document reference 7.2).</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-5.442	Suggest temporary access at Priory Lane should be constructed in such a way that it does not provide new lines of sight to existing properties, and thus reduce their level of privacy	National Grid notes the respondent's feedback and can confirm that it seeks to minimise the impacts of all of its works. Access arrangements must primarily allow for safe access and egress from and to the public highway and are selected where possible to reduce the requirement for any management of vegetation. In some cases, any potential for vegetation management may be reduced by the use of traffic management measures considered and designed on a case by case basis. Details would be discussed with relevant landowners.			X	
9-5.443	Suggest that in accordance with National Planning Policy Framework (NPPF) (para. 205) and the guidance in the Overarching National Policy Statement for Energy (ONPS - EN-1) (para. 5.9.12), National Grid undertake further viewpoint analysis to better understand this impact on St Mary's Church, Washbrook (e.g. as it is not possible to determine through the landscape and visual analysis presented in the Preliminary Environmental Information Report (PEIR)).	Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13) provides an assessment of landscape and visual effects. The Landscape and Visual Impact Assessment (LVIA) builds on the preliminary information and detail provided in the Preliminary Environmental Information Report (PEIR). An assessment of effects on visual receptors is provided in ES Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3). The area around St Mary's Church, Washbrook is within Visual Receptor Area (VRA) C2 Washbrook. Significant effects on visual receptors within VRA C2 are reported up to a distance of approximately 1.5 km from the Project. An assessment of effects on visual receptors at representative viewpoints is also provided in ES Appendix 13.3. Viewpoint 3.04 is located along Church Lane, Washbrook and near to St Marys Church (1194408), Washbrook (Figure 7.12.F74) (document reference 7.12).			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>An assessment of potential impacts of the Project on designated and non-designated heritage assets, including as a result of change to setting that affects an asset's value, has been undertaken and is reported in Environmental Statement (ES) Chapter 11: Historic Environment (document reference 6.11) and its appendices (document reference 6.11.A1 to 6.11.A7).</p> <p>A dedicated heritage photomontage (HE24) was produced from the south edge of St Mary's churchyard, c. 30m south to the asset, specifically to illustrate how the proposed alignment sits within the church's setting and views. The photomontage sequence (HE24) was taken from two representative spots within the churchyard of St Mary's. For each location an existing view (upper image of each pair) is followed by a proposed view (lower image) in which the modelled 400 kV overhead line has been added. Taken together, the montage shows that the proposed line would be perceptible from selected points in the churchyard but would appear as small, filtered elements on the remote skyline. The church's intimate, enclosed setting, framed by mature yews and gravestones, remains the key visual focus; the new infrastructure would introduce only a slight change to wider views, consistent with the conclusion of a minor adverse effect on the asset's setting during both construction and operation phases. The assessment considered all necessary evidence and factors to reach a robust and demonstrable conclusion on this heritage asset.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-5.444	Criticism of the desk study completed for the Project for Study Area 5.10.2 (e.g. does not show full impact on Ardleigh)	Chapter 14: Noise and Vibration (document reference 6.14) of the Environmental Statement (ES) considers the potential effects of noise and vibration associated with the Project and presents mitigation measures to be implemented to mitigate effects, which are presented within the Outline Code of Construction Practice (CoCP) (document reference 7.2). The study areas described in paragraph 5.10.2 of the Non-Technical Summary of the PEIR (and used in the ES) are based on applicable guidance for noise and vibration assessments. The Study Areas are of adequate size to cover the range of potential impacts from Large to Negligible (and therefore significant to not significant). Significant adverse effects are therefore not expected outside of the study areas. Parts of Ardleigh closest to the Project fall within the construction noise and vibration Study Area and are assessed accordingly. No significant adverse noise and vibration effects are expected in Ardleigh resulting from the Project where mitigation in the form of Best Practicable Means (BPM) are applied.			X	
9-5.445	Suggest that the Cable Sealing End (CSE) compound west of Little Horkesley is relocated further south to a location from which it and associated overhead lines are not visible from within the Dedham Vale, even if this results in a longer route (e.g. in line with National Policy) / Suggest that CSE compounds are relocated to locations which do not impact views in / out of the Dedham Vale National Landscape (previously known as the	The respondent's preference to relocate the Cable Sealing End (CSE) compound west of Little Horkesley further south is noted and has been considered. However, we do not consider the additional cost, given the low level of effects on the National Landscape (the policy in the National Policy Statement (NPS) EN-5 does not require there to be no visibility from the National Landscape) to justify the additional cost (and effects arising) from extending the underground cable	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	Dedham Vale Area of Outstanding Natural Beauty (AONB))	distance. In the absence of new evidence or the identification of further factors we continue to consider the proposed CSE compound site to the west of Great Horkesley to be preferred, and no change is proposed.				
9-5.447	Concern about impact of Pylons TB67 and TB68 on trees and residences, and suggest that existing overhead line should be replaced with underground cables as a mitigation for the Project in this location (plan provided by respondent)	<p>National Grid notes the feedback received and has taken it into consideration as part of the iterative design process. National Grid has liaised with UK Power Networks to understand opportunities for 132 kV network rationalisation. The Project includes proposals to replace certain sections of 132 kV overhead line connection with underground cable and also to remove some sections of 132 kV overhead line to rationalise the network and reduce potential for cumulative wirescape effects.</p> <p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the Environmental Impact Assessment (EIA). Existing infrastructure (such as existing overhead lines) has formed part of the baseline environment for the Project to be assessed against, to identify if significant landscape and / or visual effects are likely to arise. The LVIA presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) sets out potential landscape and visual effects. The rationalisation of the existing 132 kV network in some areas forms part of the embedded landscape mitigation, as set out in Chapter 13.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-5.448	Suggest that Pylon TB69 is relocated back to location originally proposed (e.g. to mitigate impact on public footpaths and the Kings Arms pub) (plan provided by respondent)	National Grid notes the respondent's feedback. TB69 was moved between the 2023 non statutory consultation and the statutory consultation. Due to long spans between pylons in this section, to move TB69 back to the west of the hedge would require taller pylons and therefore would increase visual impacts. Therefore, the current location of the pylon is preferred, and no change has been made.			X	
9-5.449	Concern about the impact of the Project on sand and gravel extraction site (property reference provided by respondent), and suggest that the Project is routed further north of the land promoted north of Wick Lane (e.g. to mitigate impact on mineral extraction)	National Grid has considered other routes in this area to seek to avoid the proposed minerals site but concluded that alternatives to north and south are less preferred. Those to the south are not deliverable due to existing and proposed water bodies, those to the north transfer effects to other receptors and position pylons closer to the Dedham Vale National Landscape. Nonetheless we have sought to reduce effects by positioning of TB17 to the eastern edge but acknowledge some restriction on extraction would occur in respect of TB18 should the site be taken forwards.			X	X
9-5.450	Suggest that Pylons JC19 to JC23, particularly Pylon JC21, are relocated to reduce visual impact (no location given)	National Grid has considered alternative alignments for the Project pylons indicated both to the north and south of the alignment (in place of existing 132 kV overhead lines though noting that the line to the north is being removed by the Bramford to Twinstead Reinforcement). Neither of these alternative routes is preferred because of greater effects on residential amenity through being closer to properties than the Project. Other in-line pylon moves were also considered but do not change the visual impact which is principally understood to be from			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		open views when leaving the village as a result of hedgerow removal.				
9-5.451	Concern that there is an area of land to the north of the road which is sterilised by the location (plan provided by respondent) / Suggest that this road is located at the boundary. If not possible, the land behind the road should be included in the purchase / compensation	National Grid notes the respondent's feedback and has reviewed the alternatives suggested. One suggestion to follow the eastern field boundary and the other to follow the northern field boundary adjacent to the properties within Little Bromley. Whilst potentially a reasonable option for very occasional AIL movements the potential for this to be used for construction HGV movements until the substation haul road becomes available raises the level of environmental effect for residential occupants meaning this is considered less preferred. National Grid recognises that decision making is influenced to an extent by factors that are as yet uncertain, such as potential use by construction HGVs which depends on when North Falls or Five Estuaries commence their works. Whilst still to be confirmed National Grid is aware of some calls from Local Planning Authorities involved with the windfarm Development Consent Orders (North Falls and Five Estuaries) for restrictions to be imposed to prevent wind farm construction before the Project is consented and free from judicial review risk. This increases the likelihood that the AIL route will be carrying construction HGVs. On this basis we propose to make no change at this stage to the route presented at the 2025 targeted consultations but we will continue to engage with the landowner(s) (as information continues to emerge) to either take forward the arrangements as proposed or,			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		subject to necessary permissions being secured, may adopt one of the alternatives.				
9-5.452	Concern about the impact of the split of underground cables within the southern part of Langham Hall Estate (e.g. two underground cable routes across Langham Hall Estate joining to the north of the River Stour across the Estate; impact on business and landscape), and criticism that the rationale for the split of underground cables is not clearly explained or assessed	The crossing of the River Stour is constrained by various existing features and conditions. This includes a gas main to the east of the corridor, a source protection zone 1 to the west of the corridor and various waterbodies and bends in the River Stour between the two proposed corridors. These constraints mean that there is not sufficient width in either corridor for a typical Horizontal Directional Drilling (HDD) installation of the proposed underground cables. Therefore, at statutory consultation, two corridors were presented, with the expectation that one cable circuit (nine cables) would use the western route and the other would use the eastern route. In response to feedback, National Grid has undertaken further review of options and assessment of site conditions, with the aim of reducing the works to one corridor only at this location. The results of these investigations do not provide a conclusive solution for either option (most notably because of ground conditions that appear unsuitable for HDD on the western corridor). Therefore, both corridors are retained, with the intent that either one or other is taken forward at detailed design stage.			X	
9-5.453	Suggest that Pylons TB41 to TB44 and the proposed haul road for the Project should be relocated further away from residences (e.g. due to visual impact)	Alternative alignments to increase the distance to the nearest properties around TB41 and TB44 have been considered and would have routed more directly south before turning to the west around Hillhouse wood and			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		passing south of King's Farm to reconnect the alignment either to the north or south of the river have been considered. These are less direct and less consistent with Holford Rule 3 and have similar effects to the shorter more direct alignment. A summary of the Holford Rules is provided within Appendix I22 of this report. Given also that separations from the alignment are at 200 m or greater it is concluded that the alignment is preferred, and no change is required.				
9-5.454	Suggest alternative route for the Project between Pylons TB36 and TB42, including an extension to the use underground cables, from where the Project crosses Crabtree Lane to follow a direct route to Pylons TB41 and TB42 (plan provided by respondent; e.g. to mitigate impact on farming)	National Grid has assessed the alternative submitted by the respondent to extend the underground cable and to site the Cable Sealing End (CSE) compound between TB41 and TB42 (now TB40 to TB41). This change has been considered previously as set out in the 2023 and 2024 Design Development Reports (available on the Project website). We do not consider this limited change to justify the additional cost for a longer length of underground cable. In the absence of new evidence or the identification of further factors we continue to consider the proposed Cable Sealing End (CSE) compound site to the west of Great Horkesley to be preferred, and no change is proposed.			X	
9-5.455	Suggest that Pylons TB59, TB60 and TB61 are relocated near to hedgerow (e.g. to mitigate impact on farming, potato crop and irrigation practices, such as boom irrigators, which occur in straight lines), and suggest that National Grid fully reinstate any drainage damaged by construction of the Project	National Grid notes the respondent's feedback. It is not possible to relocate the pylons to hedgerows for several reasons. The presence of a Site of Special Scientific Interest (SSSI) to the south and residential properties to the north limit opportunities for deviations to seek to position pylons to hedgerows without undue introduction of multiple angles. The presence of the railway also			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		requires the pylon to be set back away from the rail line a distance that allows for essential scaffolding to be constructed. This in turn limits the ability to reposition other pylons and in this case no change has been made.				
9-5.456	Respondent is open to accommodating the haul road on their land near Halstead Road, Colchester, and this can be using the existing access in the south-east corner of the field or by creating a new access. However, this is on the condition that the road must be shared with the respondent to ensure continued access to their farming operations in other fields. Therefore, it needs to be wide enough to accommodate two-way agricultural traffic and seamlessly connect with the wider farm track network. Assuming these conditions are met, the respondent would agree to the haul road becoming permanent. They therefore request that in the Development Consent Order (DCO) application, dual construction and use by the landowner be specified, and that National Grid obtain planning permission to retain the track as permanent after the project is completed. A suitable crossing point must be installed on the haul road to facilitate safe passage for pedestrians using the public footpath and preventing trespass on the respondent's land. The road construction must include a reinforced underground irrigation pipe capable of accommodating a 6-inch irrigation main or larger,	A suitable crossing point of the haul road or alternative diversion will be provided, details of which can be found within the Outline Public Rights of Way Management Plan (document reference 7.6) PRow Management Plan and Access, Rights of Way and Public Rights of Navigation Plans (document reference 2.5) submitted along with the Development Consent Order (DCO) application. The detailed design of the haul road with specific requirements such as irrigation will be undertaken post DCO submission. Discussions with landowners will continue following the DCO submission.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	ensuring uninterrupted irrigation capability on the farm (plan provided by respondent)					
9-5.457	Respondent is willing to host a compound on their land near Halstead Road, subject to agreed commercial terms. Upon initial review, they propose the hatched area on their plan (plan provided by respondent)	National Grid notes this offer but does not believe this site provides any particular advantage. The offer will be relayed to the appointed contractor who may have a different perspective.			X	
9-5.458	<p>National Grid considered alternative sites for the East Anglia Connection Node (EACN) substation in their Design Development Report 2023, including a site immediately north of Ardleigh and the former RAF Boxted site. These alternatives were limited in scope and insufficient to address the significant impacts on the Dedham Vale. The site north of Ardleigh is not large enough to accommodate all the combined substation elements, while the former RAF Boxted site would require an increased extent of underground cables through the Dedham Vale, resulting in greater environmental effects and construction risks.</p> <p>Given the constraints and the significant impacts on the Dedham Vale, National Grid should look further afield than they did in the Design Development Report 2023 to find an alternative location for the EACN substation that would minimise harm to these sensitive areas by allowing use of undergrounding for both incoming and emergent cable. For example, in their Strategic Options Back Check and Review, National Grid considered an expanded substation at</p>	The implications of substation siting and the need for the connections from the windfarms and interconnector formed an element of the decision making on the East Anglia Connection Node (EACN) substation siting. We have reviewed the appropriateness of the EACN substation site as information has emerged such as co-ordination between North Falls and in response to feedback. We do not consider that the levels of effect of the Project are sufficient to offset the broader factors, set out in the Corridor and Preliminary Routeing and Siting Study (CPRSS), the 2023 and 2024 Strategic Options Backcheck and Reviews (SOBR) (available on the Project website) and the 2025 SOBR (document reference 7.17), that guided decision making and the challenges to get multiple connection corridors through to any site further west. The 2025 Design Development Report (document reference 5.15) published with the Development Consent Order (DCO) submission considers the potential for the use of underground cable past Ardleigh but concludes it does not meet the decision making criteria set out in National Policy Statement (NPS) EN-5.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>Twinstead. They examined two options for the Southern route of Norwich to Tilbury: EAS1 Twinstead to Tilbury, and EAS2 Bramford to Twinstead (Strategic Options Back Check and Review, Chapter 15).</p> <p>In any event, any engineering constraints close to Ardleigh would not prevent undergrounding the section from Pylon TB8 onwards which would dramatically reduce harm to the Dedham Vale in the vicinity of Ardleigh, as well as along the whole southern edge through removal of pylons and the Cable Sealing End (CSE) compound east of Great Horkesley. This, of course, in addition to the benefits to community, landscape, and heritage in the areas of Ardleigh and Great Horkesley</p>					
9-5.459	<p>Save for the section between Pylons TB1 and TB7 none of the stated considerations for exemption apply and therefore the entire section from the East Anglia Connection Node (EACN) substation to the western Cable Sealing End (CSE) compound must be constructed using underground cable and the position of the western CSE compound must in policy terms be relocated to the area between Pylons TB41 and TB42.</p> <p>Undergrounding is technical infeasibility between Pylons TB1 and TB7 only due to an exceedingly poor choice of location for the EACN. An alternate location must be sought to remove this constraint and this section also uses underground cables.</p>	<p>National Grid appreciates that different respondents may have different interpretations of policy but has developed the Project based on its interpretation which is set out in the Planning Statement (document reference 5.6). We do not agree that the entire section should be underground, nor with the policy interpretation presented. More detail on the reasons for not changing to underground cable are set out within the 2025 Design Development Report (document reference 5.15).</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>In the terms of the National Policy Statement for Energy NPS-EN5 the changes outlined here are required and National Grid are precluded from arguing increased cost as a reason to construct pylons between TB1 and TB41.</p> <p>Even absent this requirement, there would be an extremely strong case for further use of underground cables in the vicinity of Ardleigh, for extension of the underground section at Great Horkesley both to the East and West, nevertheless. Such changes will dramatically reduce harm to Ardleigh and to the clusters of historic Listed Buildings near to both CSE compounds without increasing harm elsewhere. In respect of the western CSE compound, National Grid has wrongly computed the additional length of underground cable necessitated and, as a result, even on a cost-benefit basis its determination would be wrong</p>					
9-5.460	<p>The western Cable Sealing End (CSE) compound could be straightforwardly moved further south into a valley in order to take much better advantage of topography and existing screening. It and associated pylons may also be located against existing woodland, pockets of which are prevalent across this landscape, in order to screen and break up impact</p>	<p>The respondent's preference is noted and has been considered previously as set out in the 2023 and 2024 Design Development Reports (available on the Project website). However National Grid considers that the actual site level reduction would not substantially change the level of screening provided and do not consider this limited change to justify the additional cost for a longer length of underground cable. In the absence of new evidence or the identification of further factors we continue to consider the proposed Cable Sealing</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		End (CSE) compound site to the west of Great Horkesley to be preferred, and no change is proposed.				
9-5.461	Absent the East Anglia Connection Node (EACN) the route of pylons must, in accordance with National Policy, be moved away from the Dedham Vale National Landscape (previously known as the Dedham Vale Area of Outstanding Natural Beauty (AONB)) to one of the alternative routes already identified by National Grid and the Electricity System Operator (ESO) (e.g. given the savings highlighted by National Grid, they should consider doing this regardless)	National Grid appreciates that different respondents may have different interpretations of policy but has developed the Project based on its interpretation which is set out in the Planning Statement (document reference 5.6). In this case we do not agree with the respondent's assertion of the certainty about the use of underground cable. National Grid's technical experts have contributed to the identification of those areas where it is considered that the circumstances justify a change to underground cable with this information presented in the 2025 Design Development Report (document reference 5.15).			X	
9-5.462	Suggest that underground cables at the Black Brook watercourse and A12 crossing are installed via directional drilling over the ¾ mile stretch from A12 crossing through Glebe Farm to join the already proposed directional drilling at Langham Hall as the Project goes through the National Landscape (e.g. as per originally proposed for the Project)	National Grid has considered various alternative routes in the vicinity of Black Brook. Constructing a directional drill over approximately ¾ mile would be a very significant technical challenge. Whilst not impossible, this is substantially longer than would typically be considered feasible. Risks of installation failure are compounded by the need for 18 separate drills, one for each proposed cable. If this option were taken forward, alternative trenchless methods would likely be required (likely requiring a ventilated tunnel – this would be a substantial engineering project in its own right, the cost of which is not supported in policy terms). Various existing features, including the A12, residential properties, waterbodies, various gas pipelines, commercial properties/sites and some substantial level			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		changes preclude alternative cable routes outside of the current alignment.				
9-5.463	Criticism that National Grid has used incorrect / incomplete information on the respondent's property on Gun Hill (address provided by respondent) (e.g. National Grid's description does not highlight that the property sits within the Dedham Vale National Landscape (previously known as the Dedham Vale Area of Outstanding Natural Beauty (AONB)) / Concern about the impact of the Project on respondent's property (e.g. structural impact; health impacts if the building is disturbed as there is potential for dust due to age of the property and materials used). With this, suggest that the construction laydown area is relocated further away from respondent's property	<p>National Grid has considered various locations for each construction compound. The compound located near Gun Hill is positioned to be close to the public highway to support access to the section of underground cable between the A12 and the River Stour. The only reasonable access to this section is via Ipswich Road, meaning that there are few alternative compound locations available. The proposed location is one of a few accessible fields that are outside the designated National Landscape (albeit in close proximity to the designation). Alternative locations have been considered within the same field, but these simply transfer the effect.</p> <p>The proposed construction compound, haul road and bellmouth that are located near Gun Hill would comprise surface works only (i.e. removal of topsoil, spreading and compacting stone, etc.) rather than any activities that would require piling or other activities that may generate more notable vibrations). The nearest part of the proposed construction compound is approximately 90 m from the nearest property on Gun Hill. At this distance any vibrations would not be sufficient to cause damage (even cosmetic) to buildings. We have completed an Environmental Impact Assessment (EIA) which has assessed the impacts of the Project including dust and air quality and has included any mitigation required.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-5.464	Suggest that the haul road entrance off Ipswich Road is relocated further towards the Colchester direction and the construction laydown is relocated to the other side of the haul road (e.g. due to the Quarry, flooding risk, possible risk to impacting the water course feeding ponds, lakes, river)	<p>National Grid notes the respondent's feedback and is proposing to move the construction laydown area as far west into the field as possible to move away from Ipswich Road and the respondent's property. There has also been a change to the underground cable alignment in this area to also move further west.</p> <p>Relocating the access point further south has not been taken forward as it would transfer effects onto another property. The scope to reposition the access is also limited by the proximity to the junction with Coles Oak Lane, and the area of dense vegetation adjacent to the southern side of Copart Direct.</p> <p>Whilst not changing the access location, the red line boundary around the access and its visibility splays has been reviewed and amended and the Order Limits reduced.</p> <p>Additionally, the Order Limits along the property side of Ipswich Road has been adjusted to trace the carriageway edge based on our OS mapping. Therefore, the works on the property side of Ipswich Road shall be contained within the highway boundary and there will be no direct impact on properties.</p>			X	X
9-5.465	Criticism that the land take associated with Pylon TB76 seems excessive / Suggest that this pylon is reconsidered	National Grid notes the respondent's feedback. TB76 (now TB77) was previously an angle pylon, the working area around angle pylons is larger as more space is temporarily required around them to string and pull the overhead conductors through during construction. Due to a change in the alignment at this location, TB76 (now			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		TB77) is no longer an angle pylon and therefore the space required around it for construction has been reduced.				
9-5.466	Concern regarding the underground cables proposed by the Project where the new line crosses the existing overhead lines each side of Pylon TB75 (e.g. there are 5 existing pylons where underground cables as part of the Project cross the existing overhead lines at this location) / It is essential that the Project does not interfere with respondent's underground irrigation pipes from the reservoir	The lower voltage overhead lines that need to be replaced by underground cable would be installed in a manner that maintains existing connections of services and utilities. Irrigation pipes would be treated in the same manner such that legitimate existing services are maintained.			X	
9-5.467	Suggest that National Grid should collaborate with North Falls and Five Estuaries with respect to the construction phase and the transportation routes envisaged in order to minimise disruption and pollution to the residents of Tendring Village	National Grid has worked with North Falls and Five Estuaries as we developed our access proposals for the Project. Regular engagement has been maintained with them through the design process to minimise disruption to the local community. Further engagement would be maintained during construction, subject to consent being granted for the Project.		X		
9-5.468	Suggest that underground cables as part of the Project are extended just past Little Wenham (e.g. to mitigate visual impact and impact on heritage assets) or at least uses T-Pylons	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is " <i>that overhead lines should be the strong starting presumption for electricity networks developments in</i>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p><i>general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Park, The Broads, or Area of Outstanding Natural Beauty)'. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project between Raydon and Little Wenham would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy</i></p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.</p> <p>The latest independent report on the Comparison of Electricity Transmission Technologies: Costs and Characteristics (Institute of Engineering and Technology, 2025) confirms that whilst T-Pylons may in certain locations provide an alternative to conventional overhead lines with potential benefits in visual impact and reduced land-take, this is at a higher cost. The build cost is approximately 2 to 2.5 times that of an equivalently rated conventional overhead line, and the lifetime costs are around 1.6 to 1.7 times that of a conventional overhead line. The current arrangements for the oversight of funding by Ofgem requires that the lowest cost acceptable design is taken forward rather than a more expensive design even if that design is perceived to reduce the level of effect.</p> <p>As such consideration of their use follows after establishing a need to mitigate effects of the standard lattice design and after considering the benefit of adopting a low height lattice pylon design. T pylons themselves are also less adaptable to varied terrains and require more substantial access infrastructure. Furthermore, their resilience and environmental impact are comparable to conventional overhead lines, but with increased carbon intensity due to construction materials. Attention also needs to be given to the transitions</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>between pylon types. Given It is the surrounding context that drives the need for alternative design mitigation, where this is not required along the entire route, any visual break and transition in pylon design also needs to be carefully sited.</p> <p>Assessment findings have concluded that, where there is not a reversal of the presumption to use overhead lines, the use of lattice pylons (either standard or low height) is consistent with planning policy throughout the route. Whilst there may be some locations (for examples see appendix A of the 2024 Design Development Report) where there may be a design option for the use of T pylons, the need to mitigate for unacceptable effects from lattice pylons is not engaged. On this basis T pylons are not proposed for the Project.</p>				
9-5.469	Suggest that the Project is rerouted (brown route on plan provided by respondent) further to the north and following the line of existing 132 kV pylons, which are proposed to be removed as part of the Bramford to Twinstead project which has already been recommended for approval under a separate Development Consent Order (DCO) (e.g. to mitigate visual impact, minimise the need for more access tracks and an expansion of construction traffic by co-ordinating with Bramford to Twinstead, mitigate impact on residents, and make use of an already established route)	An alternative to route the alignment to the north of Chattisham following the 132 kV overhead line alignment has been considered. However, to adopt the alignment would require adoption of a route to the west of Brimlin Wood which would lead to greater effects on residential amenity (through closer proximity) particularly on properties to the west end of Hintlesham, certain properties on the route between the Project north-east from the Cable Sealing End (CSE) compound and on a scheduled monument. Additionally, National Grid considers it disingenuous to have confirmed the removal of the 132 kV overhead line as part of the Bramford to Twinstead reinforcement to then reintroduce an overhead line as part of this Project.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-5.470	Suggest that the Project is rerouted immediately to the north of Brimlin Wood (the yellow route on plan provided by respondent if brown route is not possible) rather than introducing a dog-leg and abrupt angle change to the south of the wood (e.g. to mitigate impact on Little Wenham Hall, visual impacts and public footpath, and to reduce the number of access tracks required across open farmland)	National Grid considers that the effects experienced at the Grade I listed buildings at Little Wenham are insufficient to justify a change to the alignment or fundamental arrangements for the Project. A diversion of the alignment to the north of Brimlin Wood would lead to increased effects to residential amenity and increased heritage effects due to the close proximity to properties and a moat to the immediate north of Brimlin Wood where it is further complicated by the need to reconnect to the current alignment, therefore no change is proposed.			X	
9-5.471	Suggest that if a trenchless crossing technique is not suitable at the St Mary's Church Wood, Langham, that a full assessment of the impacts of woodland removal should be made in reference to the defined special qualities of Dedham Vale National Landscape (previously the Dedham Vale Area of Outstanding Natural Beauty (AONB)) as part of the Landscape Visual Impact Assessment (LVIA)	National Grid notes the respondent's feedback. Although a trenchless crossing was proposed at this location, following feedback received at statutory consultation, we have made a change to the underground cable alignment at this location which would move the alignment to the west and therefore avoid St Mary's Church Wood.	X			X
9-5.472	Suggest relocating the Cable Sealing End (CSE) compound at Great Horkesley to the east by two fields as per plan provided by respondent, and suggest that the new access from the A134 is retained and that a new haul road to Broad Lane is provided as per plan provided by respondent, which should be retained after construction, with National Grid obtaining the necessary planning consent	National Grid has reviewed the positioning of the haul road and has made a change for the access off the A134 to route across to the farm track from where it turns to the south. This change aligns with the request. It is also noted that the access to the north to Broad Lane is a permanent right of access only and is not envisaged to be constructed as a haul road, but instead to utilise the existing road for infrequent maintenance visits. Construction works for the Project are all			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>temporary, but we are open to discussion about leaving elements of the temporary works (or the materials) for the benefit of the landowner subject to them securing the necessary permissions.</p> <p>In response to feedback, National Grid has considered whether the Cable Sealing End (CSE) compound location to the east of Great Horkeley could be moved further east. Relatively localised movement to the edge of the field or moving it one or two fields to the east are constrained by gas and water pipelines and the edge of properties and hedge lines to the north. Movement may be possible further east but this would increase the underground cable length. In all cases we concluded that the effects reported as driving the request for change did not, in the context of national policy or National Grid's statutory duties, justify the higher cost of underground cables to bill-paying consumers, and the environmental implications of installing and maintaining them.</p> <p>The effects of the Project are assessed and presented in the Environmental Statement and any need for additional mitigation identified.</p>				
9-5.473	Suggest National Grid use underground cables for Pylon TB47 (e.g. to mitigate the impact on the archaeological dig, as moving the Project further south would not be feasible due to the floodplain and Fiddlers Hill ancient woodland)	<p>National Grid notes the respondent's feedback, TB47 has been moved to the north-east into the next field to avoid having a pylon sited at the archaeological dig.</p> <p>National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>"that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Park, The Broads, or Area of Outstanding Natural Beauty)"</i>. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at TB47 would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.</p> <p>The impacts of the Project on the historic environment have been assessed in Chapter 11 (document reference 6.11) of the ES. The assessment considers the potential impact on buried archaeology and includes an assessment of potential impacts through change to setting that affects the value of a heritage asset. Due to the likelihood of impact that the buried archaeological asset would have experienced because of the former placement of TB47, the pylon was subsequently moved to the neighbouring field to the north-east, mitigating potential physical impacts.</p> <p>The Project has engaged with Historic England and relevant planning authorities on aspects relating to heritage, including appropriate mitigation measures and techniques and to take their views into account during Project development.</p>				
9-5.474	Suggest Construction Compound JC-CC2 be moved further north to align with a new access road, the Cable Sealing End (CSE) compound and the	National Grid has noted the respondent's feedback and has reviewed alternative locations for JC-CC02. The	X			X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	Construction Compound JC-CC1 / If Construction Compound JC-CC1 and JC-CC2 cannot be combined, suggest JC-CC2 is moved to Notley Enterprise Park, as per annotated map provided by respondent for the Dismantled Railway Line (e.g. this would allow easier access for the workers to and from the compound via the new access road and not add further traffic flow to the congestion through Holton St Mary)	<p>proposed compound between Raydon and Holton St Mary serves underground cabling works between the proposed Cable Sealing End (CSE) compound north of the Notley Enterprise Park and the River Stour. Moving the proposed compound to land adjacent to Notley Enterprise Park would increase the distance that construction vehicles must travel from the primary access route by approximately 1.5-1.8 km.</p> <p>Approximately two thirds of the cable section served by this compound is to the south of the current compound position, therefore moving the compound would also significantly increase construction vehicle movements from the compound to work sites along the cable alignment.</p> <p>In response to various pieces of feedback, National Grid has proposed the construction of a separate construction haul road to the north of Holton St Mary, to remove construction traffic from the majority of the B1070.</p>				
9-5.475	Concern that Pylons TB44 to TB50 will greatly impede natural baseflow and spring seepage to the river along the reach through Aldham and Fordham (e.g. construction of the haulage roads and sinking forty metre square, concrete pylon plinths, will significantly disrupt the natural and ancient shallow flow paths which, in non-indurated lithologies such as these, may not be able to re-establish themselves)	A review of the geology (superficial and bedrock) and hydrogeology of the study area is presented within Chapter 9 Contaminated Land, Geology and Hydrogeology of the Environmental Statement (ES) (document reference 6.9), together with an assessment of the potential effects on identified receptors including groundwater. The assessment is informed by a groundwater risk assessment, included as the ES Appendix 9.3: Groundwater Baseline and qualitative Groundwater Risk Assessment (document reference			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-5.476	Concern over that Pylon TB46 is sited along Fossetts Lane, where there is significant spring flow, which is essential to water dependent habitats which thrive in that area of shallow seepages (e.g. this could cause potentially irreversible damage)	<p>6.9.A3) which assess the potential effects on groundwater in relation to the specific geological/ hydrogeological setting. It is considered unlikely that pylon bases and foundations would significantly impede groundwater flow however Commitment GH02 included within the Outline Code of Construction Practice (CoCP) (document reference 7.2) requires a Foundation Works Risk Assessment to be undertaken where piled foundations are proposed, and at trenchless crossing locations.</p> <p>A review of the geology (superficial and bedrock) and hydrogeology of the study area is presented within Chapter 9 Contaminated Land, Geology and Hydrogeology of the Environmental Statement (ES) (document reference 6.9), together with an assessment of the potential effects on identified receptors including groundwater. The assessment is informed by a groundwater risk assessment, included as the ES Appendix 9.3: Groundwater Baseline and qualitative Groundwater Risk Assessment (document reference 6.9.A3) which assess the potential effects on groundwater in relation to the specific geological/ hydrogeological setting. It is considered unlikely that pylon bases and foundations would significantly impede groundwater flow however Commitment GH02, included in the Outline Code of Construction Practice (CoCP) (document reference 7.2), requires a Foundation Works Risk Assessment to be undertaken where piled</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		foundations are proposed, and at trenchless crossing locations. An assessment of potential impacts and effects on any Groundwater Dependent Terrestrial Ecosystems is presented in Chapter 8: Ecology and Biodiversity of the ES (document reference 6.8).				
9-5.477	Suggest that National Grid use a trenchless crossing technique within Church Wood adjacent to St Mary's Church, Langham (Grade I Listed) and Church Farm (formerly the Glebe Farm, Grade II Listed) within the Dedham Vale National Landscape (formerly the Dedham Vale Area of Outstanding Natural Beauty (AONB)) on the Langham Hall Estate	National Grid notes the respondent's feedback. Although a trenchless crossing was proposed at this location, following feedback received at statutory consultation, we have made a change to the underground cable alignment at this location which would move the alignment to the west and therefore avoid St Mary's Church Wood and move further away from Church Farm.	X			X
9-5.478	Suggest that three trees that are highly important landscape features and appear to be removed, require assessment for quality and the route should be reconfigured to retain these trees (at the northern section of CCC boundary as the undergrounding splits around the lake).	Detailed arboricultural surveys have been undertaken across the route and results have been used to inform the iterative design process, details of which are presented in Environmental Statement (ES) Appendix 13.6: Arboricultural Impact Assessment (AIA) (document reference 6.13.A6). The Ancient Woodland and Veteran Tree Strategy (see Appendix B of the Outline Landscape and Ecological Management Plan (document reference 7.4)) sets out the ancient woodland and veteran tree surveys undertaken on the Project, the impacts and proposed mitigation measures. The three veteran trees noted in the stakeholder's response are no longer inside have been removed from		X		X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		the Order Limits and Limits of Deviation; the unique Root Protection Zones have been used to determine an adequate buffer from each tree. Where possible the Project has removed veteran trees from the Order Limits.				
9-5.479	Suggest underground cables are used at Black Brook TM 03098 32454 to avoid the loss of 800+ trees in this section	<p>National Grid notes the respondent's feedback, National Grid assumes the respondent is requesting the use of a trenchless installation method at Black Brook.</p> <p>Trenchless installation via Horizontal Direction Drilling (HDD) is taken as a baseline across the Project – at present, and allowing for variability in site conditions, there is insufficient space to install using this method at Black Brook. Therefore, trenchless installation would rely on alternative trenchless methods, which are more expensive than HDD.</p> <p>National Grid and their contractors would seek to minimise the impact on the existing trees and vegetation by reducing the construction. Construction practices to manage access and further minimise disruption are also subject to discussion.</p> <p>The impact on habitats, wildlife and ecology have been assessed by a team of specialists, who have inputted into the decision-making process.</p> <p>A detailed habitat survey on the woodland and grassland habitats either side of Black Brook and the brook itself has been undertaken. An assessment of impact on the habitats in this area as a result of the open cut cabling have been included within Chapter 8:</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-5.480	Suggest the Public Right of Way (PRoW) route from Pepper Lane (off of Boxted Straight Road) then runs along a line of mature oaks which sit between pylons TB31 and TB32 just before the CSEC - in the position of the '99' on the OS base on Figure 4.1 pages 35 of 60, OS grid ref 98994 30484 - is amended	<p>Ecology and Biodiversity (document reference 6.8) and Appendices 8.1 to 8.16 (document reference 6.8.A1-6.8.A16) of the Environmental Statement (ES).</p> <p>The construction interactions identified for each affected Public Right of Way (PRoW) have determined the management regime applied but as noted previously, the intention has been to minimise the disruption to PRoW users as far as reasonably practicable. On this basis, the following hierarchy has been applied:</p> <p>Where options are identified to keep PRoWs open, these have been preferred in the first instance. This may include the use of physical management measures at access points to work areas, if considered to be required. The intent of the management approach would be to maintain access for PRoW users on the existing alignment, or along a temporary, short term, localised diversions around working areas in a safe and controlled manner</p> <p>Where it is not considered practicable to maintain access along the existing PRoW alignment, diversions have been considered. Where these are required, PRoW diversions have been proposed along the shortest identified suitable route, taking cognisance of existing land boundaries and features</p> <p>Where no suitable diversion routes are identified, temporary or permanent PRoW closures with no diversion route have been considered, but only as a last resort.</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		For more information refer to the Outline Public Rights of Way Management Plan (document reference 7.6).				
9-5.481	Suggest the alignment is amended to avoid the woodland at TL 92778 27278 / Suggest this woodland is assessed and catalogued to ensure adequate compensation noting this is all publicly accessible land	The impact on the woodland at TL 92778 27278 has been limited to the electrical clearance associated with the overhead line, with the pylon working areas and the construction haul road positioned outside of the woodland block. Given that the woodland is linear in nature, it has not been possible to avoid impacts completely. Potential impacts on the woodland have been quantified and included within the Biodiversity Net Gain (BNG) assessment (document reference 7.1). Appropriate mitigation/enhancement for woodland impact has therefore been included within the BNG assessment based on standard multipliers within the statutory BNG metric. National Grid are committed to delivering at least 10% BNG with environmental and societal benefits.		X		
9-5.482	Suggest sensible micro siting choices of construction access points at the crossing of Fordstreet Hill to enable some trees to remain, noting loss of the old tree hedge and excellent larger block of trees at TL 92238 26614 - especially since this construction swathe will have significant public visibility along the access points so any filtering that can be retained must be	The proposed vegetation clearance in this location is to ensure clear lines of visibility (pink and blue line) for the proposed junction. Unfortunately, some vegetation will be required to be removed. The proposed intention is to only clear vegetation in front of the visibility line i.e. between the road and the pink/blue lines. All vegetation behind this will remain untouched. Please refer to the drawings within the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).		X		
9-5.483	Suggest pylon TB69 is moved 20 m north to filter views from the Kings Head Public House Inn and the	National Grid notes the respondent's feedback. We have tried to route and site the Project in accordance		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	apex of two Public Rights of Way (PRoWs) and remove the conflict with the deep hedge/tree line	with the Holford Rules where possible and moving TB69 north would add an additional angle pylon. We are therefore not proposing a change to the location of TB69. A summary of the Holford Rules is provided within Appendix I22 of this report. We have undertaken an Environmental Impact Assessment (EIA) for the Project. The results of this assessment are provided in the Environmental Statement (ES) (document reference: Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application. The ES identifies and assesses the likely significant effects resulting from the construction and operation (and maintenance) of the Project and recommends appropriate mitigation measures to reduce potential effects.				
9-5.484	Suggestion that the Project is routed away from / the Project should not be located at a specific location	Further assessment and technical appraisal has been undertaken following feedback received from the statutory consultation and subsequent targeted consultations which has resulted in several changes. Further details on these changes can be found in this report and in the 2025 Design Development Report (document reference 5.15), published as part of the Development Consent Order (DCO) application.	X	X	X	
9-5.485	Suggestion that the Project is routed away from / the Project should not be located at Burstall	National Grid has considered the respondent's feedback highlighting a preference for an alternative moved away from Burstall In the absence of a specific basis for the change or a proposed alternative alignment, we have considered this feedback by following the	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		guidance in the Holford Rules in developing the alignment. Guidelines on overhead line routeing are known as the "Holford Rules" which remain a valuable tool in selecting and assessing potential overhead line route options as part of the options appraisal process. A summary of the Holford Rules is provided within Appendix I22 of this report. We are therefore not proposing a change to the alignment at Burstall.				
9-5.486	Suggestion that the Project is routed away from / the Project should not be located at Aldham	National Grid has considered the respondent's feedback highlighting a preference for an alternative moved away from Aldham. In the absence of a specific basis for the change or a proposed alternative alignment, we have considered this feedback by following the guidance in the Holford Rules in developing the alignment. Guidelines on overhead line routeing are known as the "Holford Rules" which remain a valuable tool in selecting and assessing potential overhead line route options as part of the options appraisal process. A summary of the Holford Rules is provided within Appendix I22 of this report. We are therefore not proposing a change to the alignment at Aldham.	X		X	
9-5.487	Suggestion that the Project is routed away from / the Project should not be located at Holton St Mary	National Grid has considered the respondent's feedback highlighting a preference for an alternative moved away from Holton St Mary. In the absence of a specific basis for the change or a proposed alternative alignment, we have considered this feedback by following the guidance in the Holford Rules in developing the alignment. Guidelines on overhead line routeing are known as the "Holford Rules" which remain a valuable	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		tool in selecting and assessing potential overhead line route options as part of the options appraisal process. A summary of the Holford Rules is provided within Appendix I22 of this report. We are therefore not proposing a change to the alignment at Holton St Mary.				
9-5.488	Suggestion that the Project is routed away from / the Project should not be located at Raydon and Raydon Airfield	<p>National Grid has considered the respondent's feedback highlighting a preference for an alternative moved away from Raydon. In the absence of a specific basis for the change or a proposed alternative alignment, we have considered this feedback by following the guidance in the Holford Rules in developing the alignment. Guidelines on overhead line routing are known as the "Holford Rules" which remain a valuable tool in selecting and assessing potential overhead line route options as part of the options appraisal process. A summary of the Holford Rules is provided within Appendix I22 of this report. We are therefore not proposing a change to the alignment at Raydon. National Grid has appointed an independent aviation consultancy which has engaged with the operators of Raydon Wings airfield (with National Grid also present) to inform their impact assessment.</p> <p>It is assessed that whilst the overhead line represents a new obstacle in the vicinity of the aerodrome, it is sufficiently distanced from the runway, take-off and landing paths, and flight circuits to the north to enable operations to continue safely, although minor changes to operational procedures may be undertaken by the</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		operator. We will continue to engage with the relevant parties to confirm the acceptability of the design. Further information on the assessment of airfields can be found in the Environmental Statement (ES) Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).				
9-5.489	Suggestion that the Project is routed away from / the Project should not be located at Chattisham	National Grid has considered the respondent's feedback highlighting a preference for an alternative moved away from Chattisham. In the absence of a specific basis for the change or a proposed alternative alignment, we have considered this feedback by following the guidance in the Holford Rules in developing the alignment. Guidelines on overhead line routeing are known as the "Holford Rules" which remain a valuable tool in selecting and assessing potential overhead line route options as part of the options appraisal process. A summary of the Holford Rules is provided within Appendix I22 of this report. We are therefore not proposing a change to the alignment at Chattisham.	X		X	
9-5.490	Suggestion that the Project is routed away from / the Project should not be located at Hillhouse Woods	National Grid has considered the respondent's feedback highlighting a preference for an alternative moved away from Hillhouse Woods. In the absence of a specific basis for the change or a proposed alternative alignment, we have considered this feedback by following the guidance in the Holford Rules in developing the alignment. Guidelines on overhead line routeing are known as the "Holford Rules" which remain a valuable tool in selecting and assessing potential			X

		alignment. Guidelines on overhead line routeing are known as the "Holford Rules" which remain a valuable tool in selecting and assessing potential overhead line route options as part of the options appraisal process. A summary of the Holford Rules is provided within Appendix I22 of this report. We are therefore not proposing a change to the alignment in the vicinity of Hintlesham.				
9-5.513	Suggestion that the Project is routed away from / the Project should not be located at Bacon's Green	National Grid has considered the respondent's feedback highlighting a preference for an alternative moved away from Bacon's Green. In the absence of a specific basis for the change or a proposed alternative alignment, we have considered this feedback by following the guidance in the Holford Rules in developing the draft alignment. Guidelines on overhead line routeing are known as the "Holford Rules" which remain a valuable tool in selecting and assessing potential overhead line route options as part of the options appraisal process. We are therefore not proposing a change to the alignment in this location. A summary of the Holford Rules is provided within Appendix I22 of this report.			X	
9-5.514	Suggestion that the Project is routed away from / the Project should not be located at Eight Ash Green (e.g. Pylons T46 and TB053)	National Grid has considered the respondent's feedback highlighting a preference for an alternative moved away from Eight Ash Green, specifically pylons TB46-TB53. In the absence of a specific basis for the change or a proposed alternative alignment, we have considered this feedback by following the guidance in the Holford Rules in developing the alignment. Guidelines on overhead line routeing are known as the "Holford Rules" which			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		remain a valuable tool in selecting and assessing potential overhead line route options as part of the options appraisal process. A summary of the Holford Rules is provided within Appendix I22 of this report. We are therefore not proposing a change to the alignment at this location.				
9-5.514-1	Suggest that the Project is routed to the west of Colchester (e.g. to avoid need for the underground section at the Dedham Vale National Landscape (formerly known as the Dedham Vale Area of Outstanding Natural Beauty (AONB))) (plan provided by respondent)	National Grid's consideration of corridor alternatives further to the west of the Area of Outstanding Natural Beauty (AONB) (now known as National Landscapes) was published within the Corridor and Preliminary Routeing and Siting Study (CPRSS) published as part of our 2022 non-statutory consultation. We have continued to backcheck the strategic connection proposal and siting of the East Anglia Connection Node (EACN) substation, which is part of the holistic consideration of the most appropriate form of the Project. In the absence of further information or new factors we continue to consider alternatives west of the National Landscape to be less preferred. Undergrounding through the National Landscape is consistent with National Policy Statement (NPS) EN-5. The siting of Cable Sealing End (CSE) compounds (the transition sites between the overhead line and underground cable) has identified locations to reduce effects on the designation and consider the use of trenchless techniques – subject to ground conditions – to reduce certain construction effects.			X	
9-5.514-2	Criticism that Perry Lane is not suitable as a storage road (e.g. due to the flood risk, single entry / exit,	The design proposed for this Primary Access Road (PAR) does not propose any widening or development			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	extensive widening works requiring water to be cut off to nearby residences) / Suggest that Perry Lane is not used as a storage road and / or construction access	<p>of an access, only use of Perry Road. A new direct access from the A12 in this location would not meet the National Highways criteria for an acceptable new direct access onto their Strategic Road Network and would be considered to represent a safety risk to a high-speed road.</p> <p>National Grid has carefully developed the proposals for access for Perry Lane. Our suggested mitigation is the use of temporary traffic management only. The proposed approach for management is set out in the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).</p>				
9-5.514-3	Suggest that National Grid carefully consider the access points for the underground section in Langham, as the distance from Gun Hill to the A12 crossover would be better served by coning off the A12 from the layby near Perry Lane to the next junction at Gun Hill (e.g. which would be more efficient and a less expensive avenue to the construction site)	<p>The design does not propose a new direct access from the A12 in this location as this would not meet the National Highways criteria for an acceptable new direct access onto their Strategy Road Network and would be considered to represent a safety risk to a high-speed road.</p> <p>National Grid has carefully developed the proposals for access for Perry Lane. Our suggested mitigation requirements are associated with the less frequent movements of cable drum vehicles, which are non-standard vehicles.</p> <p>National Grid has explored the opportunity to remove this access route from Perry Lane. However, we are unable to confirm that a suitable alternative is available. Therefore, the Primary Access Route using Perry Lane is required to be maintained.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-5.514-4	Suggest that the chosen crossing point on the River Stour is rerouted due to the likelihood of flooding (e.g. the area is a very active flood plain) and issues with the silt and soil being disturbed	The siting of the crossing of the River Stour needs to take into account the alignment to the north and south as well as the characteristics of the crossing site so it cannot easily be moved. It is possible to undertake the works in a manner that can provide effective pollution control and through timing or other protective measures can be resilient to flooding. No change is therefore proposed.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Draft Order Limits						
9-5.515	Criticism that the draft Order Limits around Raydon Wings Airstrip provides National Grid with permission to erect any structure within that area, and that building has already started in this location	National Grid is not currently constructing in this location. Norwich to Tilbury is still within the planning stages and no construction will start until development consent is obtained. The construction in this area is for the Anglian Water Bury St Edmunds to Colchester pipeline. The Order Limits do not allow us to construct any structure, only those outlined in our application for development consent. Further information on the assessment of airfields can be found in the Environmental Statement (ES) (ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and ES Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).			X	
Economic/Employment						
9-5.516	Concern about negative impact on businesses in the area	Through the routeing and siting exercise, National Grid has sought to reduce as far as practicable impacts to businesses. Impacts on local businesses within the Local Study Area (the Order Limits) and within the 3 km Study Area (where visual impact is likely to be an economic consideration) are assessed in Environmental Statement (ES) Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15). As part of this assessment, a range of mitigation measures have been considered to reduce disruption to businesses and their	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		users during the construction phase of the Project. These measures are identified in ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15), the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) which accompany the Development Consent Order (DCO) application.				
9-5.517	Concern that National Grid have not provided plans for weed control under the pylons, and concern that if these areas are not adequately maintained, the potential for ragwort to grow, seed and spread onto land is high (e.g. due to impact on horses and therefore the respondent's business)	National Grid carries out annual inspections of all pylons on the National Energy Transmission System. The inspection identifies vegetation within the base of the pylons which may cause damage to the pylon or provide unauthorised access above the pylon ranti climbing guard. The inspection does not identify the presence of weeds, nor do we control weeds on private land. National Grid does not take freehold ownership of the land and instead enters into an easement agreement with landowners to allow for the pylon to be installed, maintained and removed. Any vegetation under the pylon is still under the ownership and responsibility of the landowner.			X	
Environmental Impact						
9-5.518	Concern about negative impact of the Project on the Green Belt(s)	To facilitate the Project, it will be necessary to route through the Metropolitan Green Belt. National Grid has considered the effects on the Green Belt and all of the options connecting into Tilbury identified in the Corridor and Preliminary Routeing and Siting Study (CPRSS)		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>would result in new and upgraded infrastructure in the Green Belt.</p> <p>The National Electricity Transmission System (NETS) transports energy from where it is generated to where it is used, in homes, schools, hospitals, businesses, and factories. Electricity networks are an established feature in our landscapes, taking energy across open countryside to towns and cities where it is needed. To ensure the national electricity network can transport energy efficiently there are numerous electricity transmission connections crossing Green Belts. Many of these connections are by way of overhead lines. By their nature, electricity transmission infrastructure (overhead lines) within the Green Belt is inevitable due to the need to transport energy around the country and the need to avoid the most built-up areas around our towns and cities (Holford Rule Supplementary Note 1 - A summary of the Holford Rules is provided within Appendix I22 of this report).</p> <p>Some electricity infrastructure such as overhead lines, are considered to be engineering operations. By the nature of their design, and the sensitive siting, some of this infrastructure such as pylons and conductors may not be considered inappropriate development in the Green Belt as they do not conflict with Green Belt purposes and preserve openness. Although overhead lines may occupy long corridors within Green Belt, they involve little physical change to the land through which</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>they pass and leave a large majority of the land beneath them free from development and therefore open.</p> <p>The Planning Statement (document reference 5.6), submitted with the application for development consent, includes an assessment of the Project against Green Belt planning policy (as contained in National Policy Statement EN-1 and the National Planning Policy Framework).</p>				
9-5.519	Concern that the Project will impact SSSIs	<p>Through routeing, siting and design development National Grid has sought to reduce, as far as practicable, impacts on biodiversity and in particular features of high ecological value such as Sites of Special Scientific Interest (SSSI). Although there are 22 SSSI within the study area, current proposals avoid the majority of impacts on SSSIs, with no long-term negative impacts anticipated on any SSSIs as a result of the Project. Potential direct and indirect impacts on each SSSI within the study area have been considered within the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8) and any necessary mitigation detailed to ensure no significant residual effects.</p> <p>National Grid will continue to engage with Natural England.</p>	X	X	X	
9-5.520	Concern that the Project will impact ancient woodland	<p>Through routeing, siting and detailed design, National Grid has sought to reduce, as far as practicable, impacts on biodiversity and in particular features of high</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		ecological value, such as ancient woodland. A standard 15 m buffer from construction activities has been applied where practicable. Potential direct and indirect impacts on each block of ancient woodland within the study area have been considered within the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8) and any necessary mitigation detailed to ensure no significant residual effects. An ancient woodland and veteran tree mitigation strategy is included as part of the Outline Landscape and Ecological Management Plan (document reference 7.4). The Outline Landscape and Ecological Management Plan (document reference 7.4) has been developed in consultation with relevant stakeholders including Natural England.				
9-5.521	Concern that the Project will impact nature reserve / RSPB reserve / Special Protection Area (SPA)	Through routeing, siting and design development National Grid has sought to reduce, as far as practicable, impacts on biodiversity and in particular features of high ecological value, such as Royal Society for the Protection of Birds (RSPB) reserves. Potential direct and indirect impacts on RSPB reserves within the study area have been considered within the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8). No RSPB reserves are directly impacted by the Project.		X	X	
9-5.522	Concern that the Project will impact Ramsar site	Through routeing, siting and design development, National Grid has sought to reduce, as far as		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>practicable, impacts on biodiversity and in particular features of high ecological value, such as Ramsar sites.</p> <p>Although there are 13 Ramsar sites within the study area, current proposals avoid the majority of impacts, with no long-term negative impacts anticipated on any Ramsar site as a result of the Project. Potential direct and indirect impacts on each scoped in Ramsar site has been considered within the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8) and/or Habitats Regulations Assessment (HRA) depending on potential impact pathways. Any necessary mitigation has been detailed within the ES, HRA and the Outline Code of Construction Practice (CoCP) (document reference 7.2) to ensure no significant residual effects, as agreed with Natural England.</p>				
9-5.523	Concern that the Project will result in a negative impact on the environment / countryside generally	<p>National Grid has sought to reduce, as far as practicable, impacts on the environment / countryside through routeing and siting and an ongoing iterative design process which has taken on board feedback at different stages of the Project. The iterative design process sought to avoid areas of highest concern, for examples through changes to the route alignment or changes to the method e.g. trenchless crossings.</p> <p>National Grid have engaged with a range of stakeholders (including Statutory Environmental Bodies (SEBs) and relevant Local Planning Authorities)</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>throughout the development of the Project design and environmental assessment work.</p> <p>National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project. The results of this assessment are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation (and maintenance) of the Project and recommends appropriate mitigation measures to reduce potential effects.</p> <p>A number of mitigation measures have been incorporated into the Project design. Mitigation relevant to specific environmental topics (including Ecology and Biodiversity, Landscape and Visual and Historic Environment) are presented in the relevant ES chapters. The Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Code of Construction Practice (CoCP) (document reference 7.2) contain a list of relevant good practice measures to avoid or reduce risks to habitats and species.</p> <p>In addition to the EIA, National Grid has set itself a target of delivering 10% biodiversity net gain (BNG) with environmental and societal benefits on all construction projects, meaning that as a result of measures taken,</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		the biodiversity rating of the area will be enhanced by 10% greater than prior to the construction of the Project. The BNG target for the Project is currently voluntary and aligned with our corporate sustainability commitment.				
9-5.524	Suggest that areas other than the AONB should be protected / Criticism that only the AONB has been considered	<p>National Policy Statement (NPS) EN-5 states that the Government considers overhead lines to be appropriate and acceptable in most instances, although it recognises that there may be, at particularly sensitive locations, potential adverse landscape and visual impacts of overhead line infrastructure that make it inconsistent with our duties and relevant planning policy.</p> <p>The National Landscape designation is one such location where there is a presumption that underground cable technology is adopted with the extent of underground cabling extending beyond the boundary in response to the potential for the Project to affect National Landscapes. Our proposals include a total of approximately 20 km of underground cable through and in the vicinity of the Dedham Vale National Landscape, including a section at Great Horkesley to reduce the changes in views and setting of the National Landscape from within and adjacent to its designated boundary.</p> <p>Underground cabling is also proposed for short sections near Fairstead and North Tilbury.</p> <p>The higher cost of underground cables to bill paying consumers, and the environmental implications of installing underground cables and maintaining them elsewhere, are not considered to be justifiable in the</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-5.525	Concern that the Project will impact a conservation area/s	<p>context of national policy or National Grid's statutory duties, which include the need to be economic and efficient.</p> <p>A Landscape and Visual Impact Assessment (LVIA), presented in ES Chapter 13: Landscape and Visual (document reference 6.13), has been undertaken as part of the Environmental Impact Assessment (EIA). The LVIA sets out potential effects on landscape and visual receptors.</p> <p>Through routeing and siting, National Grid has sought to reduce as far as practicable potential effects on the historic environment, including conservation areas such as Great Waltham and Little Waltham, Ford Street and Ardleigh Conservation Areas. Where potential likely significant impacts on the historic environment are identified, we have explored a range of mitigation measures, such as pylon placement and screening for both new and existing structures, have been explored to mitigate identified impacts effectively where possible as detailed in the Outline Code of Construction Practice (CoCP) (document reference 7.2).</p> <p>National Grid has also conducted comprehensive assessments, including site visits and extensive desk-based research, to thoroughly evaluate the setting of these conservation areas and understand their value.</p> <p>Conservation areas within 2 km of the Order Limits are considered in the Historic Environment assessment for the Project, which considers both direct and indirect</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>impacts. The impacts of the Project on the historic environment are assessed in Chapter 11: Historic Environment (document reference 6.11) of the Environmental Statement (ES) and in ES Appendix 11.2: Historic Environment Assessment Tables (document reference 6.11.A2), forming part of the Environmental Impact Assessment (EIA). The assessment considers the potential impact on archaeology, historic buildings and historic landscapes and includes assessment of potential for physical impact and impact through change to setting that affects the value of a heritage asset. The assessment of conservation areas is supported by setting surveys, as documented in ES Appendix 11.1 Historic Environment Baseline Report (document reference 6.11.A1). The Project has engaged with Historic England and relevant planning authorities on aspects relating to heritage, including appropriate mitigation measures and techniques and to take their views into account during Project development.</p> <p>A Landscape and Visual Impact Assessment (LVIA) detailed in ES Chapter 13: Landscape and Visual (document reference 6.13) forms part of the Environmental Impact Assessment (EIA) for the Project.</p>				
9-5.526	Concern about the impact of the Project on the Stour Valley Project Area	<p>National Grid has sought to reduce environmental impacts in the Stour Valley, as far as practicable, through routeing and siting and an ongoing iterative design process which has taken on board feedback at different stages of the Project. The iterative design</p>		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>process sought to avoid areas of highest concern, for example through undergrounding and careful siting of Cable Sealing End (CSE) compounds and changes to the route alignment.</p> <p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the Environmental Impact Assessment (EIA). The approach to the LVIA follows professional guidance as set out in ES Appendix 13.1: Landscape and Visual Methodology (document reference 6.13.A1). The LVIA includes an assessment of the Project, including the underground cabling, on both landscape character and visual amenity and on the National Landscape and its special qualities. Impacts on landscape character consider the value placed on the non-designated but valued Stour Valley Project Area.</p> <p>The LVIA is presented in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13). As shown on ES Figure 13.1: LVIA Study Area and Landscape Designations (document reference 6.13.F1), the Project would pass between Dedham Vale National Landscape and part of the Stour Valley Project Area where it crosses the Black Brook. In this location the Project would be an underground cable, and there would be significant effects on landscape and visual receptors within the Stour Valley Project Area during construction and extending into the operational phase due to the loss of trees along the Black Brook. The majority of the Stour Valley Project Area is to the west of the National Landscape (west of Wormingford) and</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>would not be affected by the Project due to distance and limited theoretical visibility of the Project.</p> <p>The impacts of the Project on the water environment of the Stour Valley are assessed within the ES, Chapter 12: Hydrology, Land Drainage and Flood Risk (document reference 6.12) and its accompanying Flood Risk Assessment (document reference 7.9). These appraisals considered the potential for effects on surface water quality, hydromorphology, flood risk and land drainage and identified measures and controls to prevent adverse impacts on these elements of the water environment.</p> <p>The impacts of the Project on agricultural land (including Best and Most Versatile (BMV) land) and soil resources are assessed in full in Chapter 6: Agriculture and Soils (document reference 6.6) of the ES. The assessment is supported by detailed Agricultural Land Classification (ALC) surveys which were undertaken to understand the detail of soil characteristics within the Order Limits of the Stour Valley.</p> <p>The impacts of the Project on the historic environment are assessed in Chapter 11: Historic Environment (document reference 6.11) of the ES. The assessment considers the potential impact on archaeology, historic buildings and historic landscapes and includes assessment of potential for physical impact, impact through change to setting that affects the value of a heritage asset and impact through indirect factors such</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		as change in hydromorphology. In addition to the proposals in the Outline LEMP the Draft Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5) sets out appropriate mitigation for the historic environment.				
9-5.527	Concern about the impact of the Project on Fordham Hall Estate (e.g. given that it is Eastern England's largest woodland creation site; it is a habitat for a diverse range of wildlife; it is a valuable public amenity; part of the estate has also been designated as an "archaeological special area")	National Grid has worked to minimise potential impacts on the historic environment, including listed buildings such as Fordham Hall (1267740) and its setting, through strategic routeing and siting measures. Statutory consultation feedback and the results of archaeological fieldwork have been used to inform design development to reduce as far as practicable impacts to archaeological remains in this area. As a result of this information pylon TB47 was moved north-east to avoid direct physical impact to the archaeological site in this area. The impacts of the Project on the historic environment are assessed in Chapter 11: Historic Environment (document reference 6.11) of the Environmental Statement (ES). The assessment considers the potential impact on archaeology, historic buildings and historic landscapes, including Fordham Hall, and includes assessment of potential for physical impact, impact through change to setting that affects the value of a heritage asset and impact through indirect factors such as change in hydromorphology. The assessment is supported by walkover, setting and geophysical surveys, as documented in ES Appendix 11.1 Historic Environment Baseline Report (document reference			X	X

		<p>6.11.A1) and ES Appendix 11.4: Geophysical Survey Results Report (document reference 6.11.A4). In addition to the proposals in the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4), the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5) sets out appropriate mitigation for the historic environment.</p> <p>In relation to biodiversity, a suite of ecological surveys supported by a desk-based assessment established a biodiversity baseline to inform impact assessment. Potential direct and indirect impacts on important ecological features have been considered within ES Chapter 8: Ecology and Biodiversity (document reference 6.8) and any necessary mitigation detailed to ensure no significant residual effects.</p>				
9-5.528	Concern that the Project will impact flooding / drainage around Brook Road (a high risk flood area)	<p>The Project has sought to avoid development in areas that are at high risk of flooding where possible and would implement robust drainage systems to manage construction and operational surface water runoff so as not to contribute to or exacerbate existing flooding / drainage issues, such as those experienced around Brook Road.</p> <p>National Grid has submitted a detailed Flood Risk Assessment (FRA) (document reference 7.9) as part of its Development Consent Order (DCO) application. The FRA recommends measures to mitigate any effects on flooding and the land drainage regime, so that there is</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		no increase in flood risk to neighbouring land and infrastructure over the development lifetime, inclusive of allowances for the predicted effects of climate change.				
9-5.529	Concern about the impact of the Project (and the North Falls (NF) development) on water sources and supply at Little Bromley (e.g. given that Little Bromley has a high water table and many properties are on well water and have no sewage)	Appendix 9.3: Groundwater Baseline and Qualitative Groundwater Risk Assessment (document reference 6.9.A3) of the Environmental Statement (ES), provides an assessment of the potential effects of the Project on groundwater resources and includes an appraisal of the impacts on groundwater supplies, including those supported by the aquifers underlying Little Bromley. Mitigation measures have been included within the Outline Code of Construction Practice (CoCP) (document reference 7.2) regarding the prevention of groundwater pollution as well as measures specific to safeguarding groundwater fed water supplies.			X	
9-5.530	Concern about the impact of the haul road for the Project on flooding of field near Pylon TB58	Haul roads would include for suitable drainage provisions. Linear features, such as swales or filter drains would capture and convey runoff, directing it towards Sustainable Drainage System (SuDS) basins that would provide attenuation and treatment of runoff to ensure that flood risk and water quality impacts are managed.			X	
9-5.531	Concern that National Grid have not considered the impact that heavy rain could have on the construction of the Project (e.g. given the extent, frequency, flow and depth of water at Stratford St	A Flood Risk Assessment (FRA) (document reference 7.9) has been prepared for the Project to support and inform the Environmental Statement (ES) (document reference Volume 6: Environmental Statement). The ES includes consideration of potential impacts on flood risk			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	Mary, trenching or drilling may not be possible if the ground is waterlogged)	from all relevant sources, both temporary and permanent impacts, taking account of the effects of climate change over the Project's design life. The FRA describes the measures that would be put in place to manage construction and operational flood and land drainage impacts to ensure the development is safe from flooding over its lifetime and that off-site flood risk is not increased.				
9-5.532	Concern about the impact of the Project on geology and groundwater flow / interflow down to the River Colne at Fordham	Environment Statement (ES) Chapter 9: Contaminated Land, Geology and Hydrogeology (document reference 6.9) includes an assessment of the potential impacts of the Project on groundwater/hydrogeological receptors.			X	
9-5.533	Concern about the impact of the Project on the Colne Valley Surface Water Catchment (e.g. as Environmental Flow Indicator levels are already non-compliant with the Water Environment Regulations 2017 in this area)	Impacts on surface water receptors within the Colne valley catchment are presented in Chapter 12: Hydrology, Land Drainage and Flood Risk (document reference 6.12) of the Environmental Statement (ES). Effects on a range of attributes are appraised, including watercourse flow and land drainage regimes, water quality and hydro-morphology. Where potential effects are identified, controls and mitigation measures are identified and secured through inclusion in the Outline Code of Construction Practice (CoCP) (document reference 7.2). These include measures to prevent disruption to or depletion of surface and groundwater flows.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-5.534	Concern about light pollution caused by the security lighting required at the East Anglia Connection Node (EACN) substation (e.g. in the Little Bromley area)	Exterior and interior lighting would be provided at the substation sites to allow for safe movement and the operation of equipment. All lighting would be designed in accordance with the appropriate design standards and expected to include the use of motion detection triggered and directional lighting to reduce the potential effects of concern. Embedded mitigation details relating to lighting are presented in the Outline Code of Construction Practice (CoCP) (Document Reference 7.2). Any operational lighting associated with the permanent assets such as Cable Sealing End (CSE) compounds and the East Anglia Connection Node (EACN) substation have been considered within the Environmental Impact Assessment (EIA). Night-time effects on designated landscapes, landscape character and visual amenity during construction and operation are assessed in the Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13).	X			
9-5.535	Concern about the impact of the Project on Countryside Stewardship Schemes (CSS) and Sustainable Farming Incentive (SFI) schemes in this section (e.g. at farm on Fordham Road)	As outlined in Chapter 6: Agriculture and Soils (document reference 6.6) of the Environmental Statement (ES) and the Outline Code of Construction Practice (CoCP) (document reference 7.2), any land acquired temporarily during construction (including that for undergrounding) would be returned to its former land use/condition or a use/condition as discussed with the landowner (where practicable), meaning land quality and land management including Countryside Stewardship Schemes and Sustainable Farming Incentive schemes			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		should remain the same post construction. The permanent land take of agricultural land from pylon footings is relatively small proportional to field sizes.				
9-5.536	Concern about the impact of the Project on soil structure and flooding at the Blackbrook	National Grid would implement a soil management plan (Appendix C: Soil Resource Plan of the Outline Cod of Construction Practice (CoCP) (document reference 7.2) which would govern how soil is stored on site. This would include details of the topsoil strip and separate storage of topsoil and subsoil within the Project area, as well as details about reinstatement. All watercourses that are to be crossed by open cut methods would be dammed to create a dry working area with flows over-pumped. National Grid has conducted a Flood Risk Assessment (document reference 7.9) for the Project, which assesses the Project's impact on flood risk and proposes appropriate mitigations.			X	
9-5.537	Concern about the impact of Horizontal Directional Drilling (HDD), and adjacent haul road, for the Project at Langham Hall estate (e.g. impact on round vegetation, tree root systems, flood risk)	Following feedback, National Grid has developed an alternative route alignment to the west that avoids the trenchless crossing below the woodland.			X	X
9-5.538	Concern about noise pollution caused by the East Anglia Connection Node (EACN) / Concern about increase in noise pollution near to Great Bromley (e.g. in addition to the existing substation)	Chapter 14: Noise and Vibration (document reference 6.14) of the Environmental Statement (ES) considers the potential effects of operational noise associated with the Project, including the East Anglia Connection Node (EACN) substation, and presents mitigation measures to be implemented to mitigate effects. No significant adverse effects are expected at nearby noise sensitive			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		receptors, including those within Great Bromley, where appropriate noise mitigation are incorporated into the design.				
9-5.539	Concern about the increased rainwater runoff from the fields caused by the Project along the boundary of Highfield Farm next to King's Hall (e.g. further flooding may impact access to residences)	The Flood Risk Assessment (FRA) (document reference 7.9) that has been prepared appraises the effects of the Project on existing land drainage regimes and surface water flood risk, including at Highfield Farm and King's Hall. Measures (which are described within the FRA) to capture, convey and attenuate rainfall runoff from Project worksites are included within the design and would prevent increases to surface water flood risk to neighbouring land.			X	
9-5.540	Concern about the impact of the Project on flooding in Aldham	A Flood Risk Assessment (document reference 7.9) has been prepared that assesses flood risk to and arising from the Project (including in Aldham) during construction and over its operational lifetime. A range of potential sources of flooding have been assessed (including rivers, surface water and groundwater) and a suite of measures to avoid and mitigate impacts have been secured through Outline Code of Construction Practice (CoCP) (document reference 7.2).			X	
9-5.541	Concern about the impact of the Project on the Roman River Corridor proposal (information on the proposal provided by respondent)	The potential impacts of the Project on the Roman River are assessed in Chapter 12: Hydrology, Land Drainage and Flood Risk of the Environmental Statement (ES) (document reference 6.12) and the Flood Risk Assessment (document reference 7.9). Measures to avoid and mitigate effects on the river have been			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		identified and are secured through the Outline Code of Construction Practice (CoCP) (document reference 7.2).				
9-5.542	Suggest that National Grid consider emergency action plans in the event of a dam emergency at Ardleigh reservoir dam or the Ardleigh Wick Lane dam. Access to Wick Lane must not be stopped up temporarily in case of access needed in an emergency either at Ardleigh Reservoir (south of Wick Lane) or Ardleigh Wick Lane Reservoir (north of Wick Lane)	National Grid is not proposing the access to Wick Lane to be stopped up to ensure access to the reservoir is maintained.	X			
9-5.543	The Preliminary Environmental Information Report (PEIR) identifies that there is a Source Protection Zone SPZ1 and corresponding SPZ2 is located to the south of Higham around the River Stour within Section C, this area of the Draft Order Limits includes proposals for the use of underground cables. In addition, there are SPZ1 zones identified close to the Draft Order Limits at Cargate Common and Fordstreet (para 9.6.44). With this, suggest that embedded, standard and additional mitigation measures proposed should ensure the SPZ1 zones and our water abstraction points (including those outside SPZ1) are not impacted within Anglian Water's water resource zones. Whilst the SPZ1 south of Higham is within Anglian Water's statutory water supply boundary we have no abstraction points within this SPZ	Appendix 9.3: Groundwater Baseline and Qualitative Groundwater Risk Assessment (document reference 6.9.A3) of the Environmental Statement (ES) includes identification and assessment of groundwater abstractions and any Source Protection Zones. The risk assessment informs the impact assessment in ES Chapter 9: Contaminated Land, Geology and Hydrogeology (document reference 6.9) and the need for any additional mitigation (additional to the embedded and standard) so that significant effects are considered unlikely.	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-5.544	In relation to National Grid's response in the 2023 Non-Statutory Consultation Feedback Report regarding concerns raised about the impact of underground cables on the water table (e.g. given that residents use a water well / at Boxted) (Section 4.13.24), suggest that potential impacts to private water supplies should be assessed in the Hydrogeological Risk Assessment (HRA) to mitigate potential derogation of water quantity or quantity to private water supplies often, but not limited to, from wells sunk in shallow superficial sediments which are vulnerable to changes to the local groundwater regime. Given the large number of Private water supplies in this region (cf. Figure 9.5 - Contaminated Land, Geology and Hydrogeology - Hydrogeology and Hydrogeological Receptors Page 14 of 25) close to overhead, underground and a Cable Sealing End (CSE) compound, these supplies may be vulnerable and should be an area of focus for the HRA	Chapter 9: Contaminated Land, Geology and Hydrogeology (document reference 6.9) of the Environmental Statement (ES) includes an assessment of the potential for likely significant effects to groundwater and groundwater receptors including abstractions and private water supplies. The assessment is informed and supported by ES Appendix 9.3: Groundwater Baseline and Qualitative Groundwater Risk Assessment (document reference 6.9.A3). One of the standard mitigation measures, included within the Outline Code of Construction Practice (CoCP) (document reference 7.2) includes that a Hydrogeological Risk Assessment would be undertaken at trenchless crossings and where otherwise indicated in the ES to assess specific risks to groundwater and groundwater receptors, and identify any additional mitigation required following detailed design.	X			
9-5.545	Concern that the haul road crosses a significant archaeological dig in Fordham and Pylon TB47 is sited right next to the site / Suggest that this needs careful rerouting, as there is the floodplain area around the river, and the Essex Way and the Fiddlers Hill Wood (which is a designated ancient woodland)	National Grid notes this comment. The potential for effects where haul roads cross floodplains have been considered as part of the Flood Risk Assessment (document reference 7.9) and commitments are secured through the Outline Code of Construction Practice (CoCP) (document reference 7.2) to design of haul roads within floodplains, to ensure their resilience to inundation and to ensure key flow routes are not impeded.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>The potential effect on Essex Way has been considered as part of Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) assessment of the Environmental Statement (ES) and an Outline Public Rights of Way Management Plan (document reference 7.6) has been produced as part of the Development Consent Order (DCO) application.</p> <p>The current alignment has been carefully routed to avoid the Fiddlers Hill Wood Ancient Woodland site and a 30 m buffer to ensure no impacts.</p>				
9-5.546	Concern that the use of underground cables at the proposed Waveney and Stour crossings could mean there is a possibility of encountering shallow groundwater (Preliminary Environmental Information Report (PEIR) 4.9.12), which if encountered means ingress of groundwater may have to be removed / Suggest that in anticipation of this, National Grid refer to The Water Abstraction and Impounding (Exemptions) Regulations 2017 Regulation 5 which specifies limits under how much water can be dewatered without requiring an abstraction permit	Commitment GH07 in the Outline Code of Construction Practice (CoCP) (document reference 7.2) requires that any temporary dewatering activities be undertaken in accordance with Environment Agency guidance, which includes reference to the requirements of The Water Abstraction and Impounding (Exemptions) Regulations 2017. However, design changes since statutory consultation has removed undergrounding in the Waveney Valley.	X			
Financial Compensation						
9-5.547	Concern that the Project will devalue property / impact on property value in this section	Potential impact on property prices is not a material planning consideration for the purposes of a DCO application. Separate to this point, the Secretary of State has asked that the DCO application include an	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>assessment of the likely significant environmental effects in the form of potential impacts on property prices. The Environmental Statement (ES) contains an assessment on this. It concluded that there is no evidence of any significant environmental effects on house prices as a result of the Project. Although not part of the Environmental Impact Assessment (EIA) process it is relevant to observe that any impact of the Project on residential properties are potentially capable of being dealt with through statutory nuisance or compulsory purchase compensation regimes (subject to the requisite criteria being met).</p> <p>National Grid acknowledges that its proposals may cause concern to landowners. Diminishment of property value known as 'injurious affection' and any other appropriate heads of claim would be considered on an individual basis in accordance with current legislation. We would pursue a voluntary agreement with affected landowners, acquiring rights in accordance with our Land Rights Strategy (the strategy is subject to review). If a voluntary agreement cannot be reached, then the Compulsory Purchase Code allows for a claim of compensation for the loss that property owners may have suffered as a direct result of the retained part of your property ownership being worth less as a direct result of the works.</p> <p>If there are any specific concerns about the devaluation of property, National Grid would advise seeking third</p>

National Grid is committed to working with Ofgem, industry partners, local communities and their representatives to ensure community benefits are delivered fairly and effectively, driving lasting, positive</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>change for the people and places integral to our developing electricity network.</p> <p>Government has also announced its plans to introduce a bill discount scheme for households within 500 metres of new infrastructure, which it proposes to introduce through the Planning and Infrastructure Bill. This is evolving government policy. Government expects this scheme to be in place by 2026 and we would share further details as they emerge.</p> <p>National Grid is committed to providing a coordinated local and regional approach to community benefits. This would be delivered outside the development consent process, since this is not a material consideration in the decision on the proposed Project or a matter to be secured as part of the DCO, as per the Community Funds for Transmission Infrastructure: Guidance (DESNZ, 2025).</p>				
9-5.549	Request that National Grid purchase respondent's property / business	<p>National Grid is not required to purchase any properties or businesses as part of the Project.</p> <p>National Grid compensates landowners in line with the Compensation Code and any other relevant legislation.</p>			X	
9-5.550	Concern that underground cables as part of the Project pose a significant risk of rendering a substantial portion of mineral extraction area unusable (that has been earmarked for gravel	<p>It is acknowledged that mineral resources are present at specific locations, though there may be many potential sites. Those sites with consent or within the minerals plan were avoided, where possible, by the initial consultation corridor presented in 2022. Where not avoidable, National Grid sought to develop a design to</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	extraction by landowner) / Information provided that compensation for this loss will be significant	minimise interaction. The particular site subject to the feedback does not have planning approval, although it is one of a number that are the subject of a consultation launched in mid-2024 regarding an update to the Essex Minerals Plan. We have considered on a case-by-case basis the potential to respond but noting that until the plan is published, Essex County Council advised this may be mid-2025, the landowner aspiration carries limited weight. We are retaining some flexibility to amend pylon positions through widened Order Limits should the site be included within the minerals plan though other constraints, environmental features and residential properties limit options. We would engage with the landowner should the site be confirmed to establish an arrangement that allows both projects to progress but recognising the potential to compensate for any restriction to extraction that was as a consequence of the Project.				
9-5.551	Concern that underground cables as part of the Project are routed through landowners proposed vineyard near Sandpits Lane (which they have secured planning permission for) which will restrict yield (partially or completely) / Compensation for this loss will be significant	National Grid has considered the respondent's feedback and has assessed an alternative alignment to the west, however this alignment would be longer and less direct and would increase the amount of woodland removed in the National Landscape and is therefore less preferred. National Grid would compensate landowners in line with the Compensation Code, which includes crop loss permanently or temporarily affected.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Health Safety and Wellbeing						
9-5.552	Concern that the Project may result in a negative impact on mental health / wellbeing	<p>National Grid recognises people may have concerns about the health effects of living close to an overhead line, and that the uncertainty whilst the proposals are developed may cause anxiety.</p> <p>We have sought to reduce potential effects on communities and residents through routeing and design. We have also sought to reduce concern or uncertainty about the proposals through making timely design decisions and engaging with the people and stakeholders throughout the development of the Project.</p> <p>The Project team will continue to engage with people potentially affected during progress of the Project, through regular communication including letters, phone calls and meetings. This will enable concerns to be raised and discussed at an early opportunity and provide a regular point of contact to respond to queries and concerns.</p> <p>We urge anyone with concerns to get in touch through the Norwich to Tilbury Freephone number, address or email throughout the progress of the Project: Call our Community Helpline: 0800 915 2497 (Lines are open Monday to Friday 9:00am – 5:30pm) Email us: contact@n-t.nationalgrid.com Write to us: FREEPOST N TO T (No stamp or further address details are required)</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-5.553	Concern about health risks associated with the Project (please provide specifics in details sheet) / physical health risks associated with the Project	<p>The UK has a carefully thought-out set of policies for protecting us all against Electric and Magnetic Fields (EMFs), the main component of which is exposure guidelines. Those exposure guidelines are set by independent scientific bodies and are based on decades-long studies into the effects of EMFs and ill health. After those decades of research, the weight of evidence is against there being any health risks of EMFs below the guideline limits. These policies are incorporated into the decision-making process for Development Consent in National Policy Statement (NPS) EN-5. It is National Grid's policy to ensure that all of its equipment comply fully with those exposure limits.</p> <p>Health considerations are given a high priority in the process by which we arrive at any proposals for new electricity circuits. Assessment of compliance with Electric and Magnetic Field (EMF) guidelines and policies is key to National Grid's approach. The UK has a carefully thought-out set of policies for managing EMFs. There have been over four decades of research looking into whether EMF can cause health effects and there are no established effects below the exposure limits. When designing our overhead lines, substations and underground cables design criteria, we ensure they would not exceed those exposure limits, even when operating at 100% capacity. Additionally, the precautionary measures which the Government have adopted, are applied to the design which ensure the</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>EMFs reduce as quickly with distance as possible. Evidence of that compliance is presented in the Electric and Magnetic Field Compliance Report (document reference 7.8) submitted as part of the Development Consent Order (DCO) application.</p> <p>National Grid takes this issue very seriously and looks to authoritative and independent scientific organisations such as the World Health Organisation (WHO) and in the UK Health Security Agency (UKHSA) to review the worldwide body of scientific evidence on health. Important decisions on health are taken independently of industry, and National Grid have followed the guidance and policies adopted by Government on advice from their scientific experts. Each of these organisations have comprehensive reviews of EMF research available to view on their websites.</p>				
9-5.554	Concern that the Project poses a safety risk to aircraft (including balloons) in the area / Concern that the Project will impact airfields in this area	<p>National Grid recognises the need for the Project to be developed collaboratively alongside aviation stakeholders to identify, assess, and as appropriate mitigate, adverse impacts on aviation safety, in accordance with Government's Overarching National Policy Statement (NPS) EN-1.</p> <p>Our review of aerodromes potentially impacted by the Project identified 17 civil aerodromes (including 2 helipads) within 5 km of the preferred corridor and one military site (Wattisham Flying Station). We have also considered other airfields and flight activities where these have been identified through the 2022 and 2023</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>non-statutory, statutory consultation, targeted and landowner consultations including for ballooning and for model flying. As well as considering feedback, National Grid's aviation advisers (an independent aviation consultancy) have directly engaged with these parties (with National Grid present).</p> <p>A number of route alignment and pylon positioning changes have been made following consideration of feedback and in all but one case the assessment concludes that the airfields can continue to operate. In the remaining case of a private airstrip near Little Burstead, we continue to liaise with the operator to identify an appropriate solution.</p> <p>Specifically in respect of Wattisham Flying Station our proposals position the alignment onto relatively lower ground (to remove the potential for interference with Instrument Landing System (ILS) radar) and adopt an alignment closer to the existing 132 kV overhead line and include replacing part of the 132 kV line south of Offton by underground cable to avoid a new overhead line corridor being introduced.</p> <p>We will continue to engage with relevant parties as appropriate.</p> <p>Further information on the assessment of airfields can be found in the Environmental Statement (ES) (ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and ES Appendix 15.2:</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Review of Aviation Impact (document reference 6.15.A2)).				
9-5.555	Concern about construction traffic (e.g. lorries) for the Project being a danger to parents and children walking to school in Ardleigh	<p>Construction access routes are not proposed through Ardleigh for construction vehicle movements. Where the proposed temporary haul roads cross the existing public highway network, the proposed bellmouth junctions have undergone Road Safety Audits, and mitigation measures for road safety has been developed. This includes temporary traffic management measures such as speed limit reductions and/or temporary signals.</p> <p>A draft management strategy for Public Rights of Way (PRoW) was provided as part of the 2024 Statutory Consultation and includes further details of how interactions between the works and PRoW would be managed. This document has been developed and issued as an Outline Public Rights of Way Management Plan (document reference 7.6) that accompanies the Development Consent Order (DCO) application.</p>			X	
9-5.556	Concern about construction traffic (e.g. lorries) for the Project being a danger to children waiting for their school bus in Little Bromley (e.g. as school transport is a necessity in Little Bromley due to the rural nature of the area being unsafe for children to walk down the country lanes)	Construction Access Plans Section C Sheets 9 and 10, set out in the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), shows the proposed access arrangements in the vicinity of Little Bromley. Construction traffic is not proposed to pass through the village of Little Bromley and instead is proposed to be routed via a private access road between Bentley Road and Ardleigh Road. Proposals also include an off-carriageway cycleway/footway facility			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		along Bentley Road for use during construction, shown in the Access, Rights of Way and Public Rights of Navigation Plans (document reference 2.5).				
9-5.557	Concern that the Project may result in traffic using smaller roads due to safety (e.g. could cause fatalities)	<p>National Grid has worked with the local highway authorities and National Highways to develop our access proposals for the Project. Our assessments have included visibility and highway geometry.</p> <p>As part of the design of the access proposals we have agreed specific prescribed routes, known as Primary Access Routes (PARs) which the contractor would be required to use. They would not be permitted to use smaller roads outside of the PARs.</p> <p>A specific assessment has not been carried out of the potential traffic diversion onto smaller local roads of local traffic as a result of the increase of Heavy Goods Vehicle (HGV) movements on the PARs. The Transport Assessment (document reference 7.11), submitted with the Development Consent Order (DCO) application, examines capacity, safety, and operational efficiency of the network, identifying potential bottlenecks or safety concerns during construction. Mitigation measures are proposed to minimise likely adverse impacts such as driver delay and queueing at the junctions along the PARs.</p>	x			
9-5.558	Concern about the safety of the proposed cycling and walking track along Bentley Road which is	It is proposed to include an off-carriageway cycleway/footway facility along Bentley Road for use during construction, shown in the Access, Rights of Way	x			X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	proposed as part of the Project (e.g. due to lack of continuous provision)	and Public Rights of Navigation Plans (document reference 2.5).				
9-5.559	Concern about the impact of the Project on high-pressure gas main near Grove Hill, Langham (e.g. safety concerns)	National Grid has engaged with Cadent Gas regarding all interfaces with their assets. National Grid would comply with relevant working restrictions imposed by Cadent to maintain safe operation of the pipeline.			X	
9-5.560	Concern about the vulnerability of Bramford Substation (e.g. to fire / thermal runaway events / warfare / sabotage) / Concern about energy security should the function of Bramford Substation be impaired (e.g. as Bramford Substation transfers up to 20% of the entire UK's electricity consumption)	Bramford Substation along with all electricity substations across the National Energy Transmission System comply with the Electricity Safety, Quality and Continuity Regulations to ensure quality and continuity of supplies are maintained delivering safe, efficient and economic supplies for our customer. Bramford Substation is protected using the latest physical and cyber security technologies including, perimeter security, CCTV and access control as standard across National Grid.			X	
Heritage						
9-5.561	Concern about archaeological impacts	Through routeing and siting National Grid has sought to reduce as far as practicable potential impacts on the historic environment. The impacts of the Project on the historic environment are assessed in Chapter 11: Historic Environment of the Environmental Statement (ES) (document reference 6.11). The assessment considers the potential impact on archaeology, historic buildings and historic landscapes and includes assessment of potential for physical impact, impact through change to setting that affects the value of a	X	X	X

		approach taken has been discussed with relevant stakeholders and follows the guidance published by Defra in December 2024 'Guidance for relevant authorities on seeking to further the purposes of Protected Landscapes.				
9-5.564	Concern about impact of the Project on Local Green Spaces included within the Ardleigh Neighbourhood Plan 2020-2033	<p>National Grid is aware of the Local Green Space designations identified in the adopted Ardleigh Neighbourhood Plan.</p> <p>The assessment of recreational land (including Local Green Space) which falls within the study area is captured under Environmental Statement (ES) Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) and considered in the Planning Statement (document reference 5.6).</p> <p>The Project interacts with two areas of open / green space identified in the Ardleigh Neighbourhood Plan:</p> <ul style="list-style-type: none"> • Glebe Corner • Fishing Lake north of Colchester Road. <p>At Glebe Corner National Grid proposes to underground an existing UK Power Network 33 kV overhead line which is currently routed to the north.</p> <p>Regarding the Fishing Lake north of Colchester Road, as reported in Appendix B of the Planning Statement (document reference 5.6) the presence of a 400 kV overhead line and the need to maintain a 30 m</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		clearance for angling activities would prevent angling from continuing on this lake. National Grid has proposed to create a replacement fishing lake to the immediate east, however, there has been no agreement on this. National Grid has considered alternative alignments to avoid this site. The alternative alignments considered would necessitate multiple changes in direction which would reduce consistency with the Holford Rules and cannot be adopted. Alternative options which were considered following the statutory consultation are described in the 2025 Design Development Report (document reference 5.15). A summary of the Holford Rules is provided within Appendix I22 of this report.				
9-5.565	Concern about impact of the Project on Safeguarded Open Spaces included within the Ardleigh Neighbourhood Plan 2020-2033	<p>National Grid is aware of the Safeguarded Open Spaces designations identified in the adopted Ardleigh Neighbourhood Plan. These are identified on Figure 17 of the Neighbourhood Plan as:</p> <ul style="list-style-type: none"> • The Ardleigh Recreation Ground • Millennium Green • Churchyard • Allotments; and • Cemetery. <p>The Project does not directly impact any of the above Safeguarded Open Spaces.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-5.566	Concern about impact of the Project on the heritage assets included within the Ardleigh History and Heritage Survey (attached by respondent)	<p>National Grid, through the routeing and siting exercise, has sought to reduce the impact on landscape character, visual amenity and the historic environment. Schedule Monuments such as Crop mark site S of Ardleigh (1002146) within 3 km of the Order Limits, conservation areas such as Ardleigh (CA26) and the listed building Grade II such as New Hall (1112056) within 2 km of the Order Limits are considered in the Historic Environment assessment for the Project. The impacts of the Project on the historic environment are assessed in Chapter 11: Historic Environment (document reference 6.11) of the Environmental Statement (ES). The assessment considers the potential impact on archaeology, historic buildings and historic landscapes and includes assessment of potential for physical impact and impact through change to setting that affects the value of a heritage asset. The assessment of these heritage assets is supported by setting surveys, as documented in ES Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1). The Project has engaged with Historic England and relevant planning authorities on aspects relating to heritage, including appropriate mitigation measures and techniques and to take their views into account during Project development.</p> <p>Where significant effects are anticipated the assessments consider and identify areas for potential</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>mitigation as part of an iterative design and assessment process.</p> <p>Assessment of Crop mark site S of Ardleigh (1002146) concludes a temporary moderate adverse significance of effect during construction and a direct, permanent minor adverse significance of effect during operation. No additional mitigation measures are proposed as any measures designed to lessen the visual impact of the Project would be of a scale that would visually adversely alter the setting of the asset.</p> <p>Assessment of Ardleigh Conservation Area (CA26) concludes a temporary minor adverse significance of effect on the asset during construction and direct, permanent minor adverse significance of effect during operation. No additional mitigation measures are proposed as any measures designed to lessen the visual impact of the Project would be of a scale that would visually adversely alter the setting of the asset.</p> <p>Assessment of New Hall (1112056) concludes that its setting does not extend to the Order Limits and therefore the Project will not impact on it.</p>				
9-5.567	Criticism that the respondent has to request permission to make any changes to their Grade II listed property, yet National Grid propose the Project, which is impacting the landscape	National Grid has conducted thorough assessments, including site visits and extensive desk-based research, to comprehensively evaluate the Project setting and its historical importance. National Grid has been diligent in its efforts to mitigate potential impacts on the historic environment, specifically on listed buildings and their setting, through careful routing and siting practices.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Various mitigation measures have been explored to effectively address identified impacts.</p> <p>These efforts have been meticulously recorded within the Historic Environment Assessment detailed in Chapter 11: Historic Environment of the Environmental Statement (ES) (document reference 6.11). Continuous collaboration with Historic England and relevant planning authorities has ensured a well-rounded approach to heritage-related considerations, incorporating appropriate mitigation measures and techniques based on their insights.</p>				
9-5.568	Concern about the impact of the Project on protected lanes in Colchester, including Foxes Lane (COLLANE10)	National Grid, through the routeing and siting exercise, has sought to reduce the impact on the historic environment, including the protected lanes, such as Foxes Lane. The impacts of the Project on the historic environment are assessed in Chapter 11: Historic Environment (document reference 6.11) of the Environmental Statement (ES). The construction and operation phase management measures in relation to the protected lane are contained in the following documents: Mitigation measures / environmental commitments in Table 6.1 and Outline Archaeological Mitigation Strategy and Written Scheme of Investigation (document reference 7.5).			X	
9-5.569	Suggest a full archaeological survey of the areas identified in the Stratford St Mary Parish Council	First, in the Stratford St Mary area, a site walkover and setting survey of designated assets within the Study Areas has been undertaken to inform the baseline and	X

	report in response to the Project (plan provided by respondent)	assessment in the Environmental Statement (ES). Then, to support the Development Consent Order (DCO) application, and in consultation with the Archaeology Working Group, certain portions of the Project, such as the Stratford St Mary area, were identified as 'priority areas' for archaeological evaluation fieldwork. The selection of the priority areas was based on the scale of the potential impact of the Project construction works, and the future ability for detailed design to microsite to avoid or reduce impacts to archaeology. On this basis the underground cable, Cable Sealing End (CSE) compounds, substations and temporary construction compound works were identified as priority areas for geophysical survey and archaeological trial trenching (ATT). For geophysical survey, Historic Environment Records (HER) data and analysis of aerial photography and satellite imagery undertaken by the Project also identified areas that with high archaeological potential that may represent medium or high value below ground assets within the Order Limits and these locations were also identified as priority areas.				
9-5.570	Concern about the impact of foundations for Pylons TB1, TB2 and TB3 on Roman roads near Ardleigh	<p>National Grid, through the routing and siting exercise, has sought to reduce the impact on the historic environment, including non-designated assets in this area.</p> <p>All the non-designated assets within the Order Limits are considered in the Historic Environment assessment for the Project. The impacts of the Project on the historic</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>environment are assessed in Chapter 11: Historic Environment (document reference 6.11) of the Environmental Statement (ES). The assessment considers the potential impact on historic buildings and includes assessment of potential for physical impact and impact through change to setting that affects the value of a heritage asset. The assessment of listed buildings is supported by setting surveys, as documented in ES Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1). The Project has engaged with Historic England and relevant planning authorities on aspects relating to heritage, including appropriate mitigation measures and techniques and to take their views into account during Project development.</p> <p>Mitigation measures have been explored to mitigate identified impacts effectively. These actions have been documented and are presented in ES Chapter 11: Historic Environment (document reference 6.11), which forms an integral part of the Environmental Impact Assessment (EIA) for the Project. The approach to assessment and mitigation presented in ES Chapter 11: Historic Environment (document reference 6.11) have been discussed and agreed with key heritage stakeholders.</p> <p>The Roman road (3207) linking Mistley to Colchester and heading north-east through Ardleigh, bisects the Order Limits. The assessment of this asset concludes that all the impacts on asset (3207) would take place during the construction phase. From the commencement</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		of the operation phase there would be no more below ground impacts and so no further impacts on this asset. It has also been concluded that there will be negligible adverse significance of effect during construction. No additional mitigation measures are proposed during the construction phase as any measures designed to lessen the visual impact of the Project would be of a scale that would visually adversely alter the setting of the asset.				
9-5.571	Concern about the impact of Pylon TB7, the use of underground cables and associated works / haul roads at this location on archaeology (e.g. crop marks; plan provided by respondent), and Concern about the impact of underground cables and Pylons TB5, TB6, TB8 and TB9 on Scheduled Monument to the north of Little Bromley Road / Criticism that that National Grid have underestimated the impact of the Project on scheduled monument near Pylon TB7 in the baseline assessment / Suggest a full archaeological investigation of the land at this location	National Grid has worked to minimise potential impacts on the historic environment, including the scheduled monument Crop mark site S of Ardleigh (1002146) and its setting, through strategic routeing and siting measures. Statutory consultation feedback and the results of archaeological fieldwork have been used to inform design development to reduce as far as practicable impacts to archaeological remains in this area. The impacts of the Project on the historic environment are assessed in Chapter 11: Historic Environment of the Environmental Statement (ES) (document reference 6.11). The assessment considers the potential impact on archaeology, historic buildings and historic landscapes and includes assessment of potential for physical impact, impact through change to setting that affects the value of a heritage asset and impact through indirect factors such as change in hydromorphology. The assessment is supported by walkover, setting and geophysical surveys, as documented in ES Appendix 11.1: Historic Environment			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Baseline Report (document reference 6.11.A1) and ES Appendix 11.4 Geophysical Survey Results Report (document reference 6.11.A4). In addition to the proposals in the Outline Landscape and Ecological Management Plan (LEMP) the draft Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5) sets out appropriate mitigation for the historic environment.</p> <p>Geophysical surveys and archaeological trial trenching have been completed or are planned within this area.</p> <p>Assessment of Crop mark site S of Ardleigh (1002146) concludes a temporary moderate adverse significance of effect during construction and a direct, permanent minor adverse significance of effect during operation. No additional mitigation measures are proposed during the construction phase as any measures designed to lessen the visual impact of the Project would be of a scale that would visually adversely alter the setting of the asset.</p>				
9-5.572	<p>Criticism that National Grid have not assessed impact on all listed buildings in this section / Criticism of the assessment of listed buildings in this section (e.g. the Conservation Area which would be impacted by the Project is rated as "high value" in the baseline assessment, but this then became "medium value" when the impact was assessed; the Grade II* listed St. Mary's Church, Ardleigh (1112060), is assessed as being of "high value" in the Preliminary Environmental Information Report</p>	<p>The assessment of the impact of the Project on the historic environment has followed a robust and proportionate methodology, in line with current planning policy and guidance.</p> <p>The approach to the assessment — including the criteria used to determine heritage value, and the method for assessing change and significance of effect — was discussed and agreed with relevant stakeholders, including Historic England and local planning authorities,</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	(PEIR) but the significance of the negative impact of being surrounded by pylons is severely understated, noting for example its prominence as a "Landmark Building")	<p>during the scoping phase and subsequent thematic working group meetings.</p> <p>The assessments presented are appropriate, evidence-based, and reflect a considered understanding of both the heritage assets' significance and their settings. In all cases, judgments regarding significance of effect have been made by experienced heritage professionals, using all relevant baseline data, site visits, geophysical survey, Archaeological Trial Trench Survey, Geoarchaeological and Palaeoenvironmental Assessment, etc, and consideration of potential change.</p> <p>The assessment outcomes reflect professional planning judgment, including cases where changes in value classification between preliminary and final reporting reflect updated information or refined analysis.</p>				
9-5.573	Criticism that the 2024 Consultation drawings do not show all Roman Roads in Ardleigh (e.g. the only Roman Road shown in Figure A11.1: Historic Environment Designated and Non-Designated Heritage Assets on Page 13 of 25 is "3033/3035", which is shown to end to the east of the proposed East Anglia Connection Node (EACN) despite evidence that this road continued westwards, passing through the centre of Ardleigh; a further Roman Road ran from Hythe Quay in Colchester to Mistley on the River Stour, resulting in the two roads converging at the proposed EACN site), so the full impact of the Project on archaeology at this location	The assessment has taken into account the potential for Roman roads in the vicinity of Ardleigh. In addition to asset 3033, which represents a possible east-west aligned Roman road through Horsleycross Street, the Roman road recorded as asset 3207 — linking Mistley to Colchester and running north-east through Ardleigh — has been included in the baseline and assessed as it bisects the Order Limits. Furthermore, asset 3232, which comprises linear features interpreted as probable Roman field divisions associated with the road network, has also been considered in the assessment. The full baseline data has been used to inform the assessment, and the potential impact on archaeological remains in			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	has not been present despite evidence being available	this area, including those associated with the Roman road network, has been appropriately addressed.				
9-5.574	In relation to Paragraph 3.4.111 of the Historic Baseline Report for the Project, the cropmarks have been considered individually, however, when the information from the Heritage Environment Record (HER) is combined the concentration of cropmarks forming the cropmark complex should afford a higher heritage asset value. The purpose of this is to provide an assessment of the likely buried archaeological remains, indicated by the cropmarks	<p>The assessment of heritage asset value has been undertaken in line with the methodology set out in the Historic Environment Methodology, which follows relevant professional guidance, including the Guidelines for Cultural Heritage Impact Assessment (Conservation Principles, Policies and Guidance for the Sustainable Management of the Historic Environment) (Historic England, 2008), Guidance on Heritage Impact Assessments for Cultural World Heritage Properties (ICOMOS, 2011), Guidance and Toolkit for Impact Assessment in a World Heritage Context (UNESCO, ICCROM, ICOMOS and IUCN, 2022), Design Manual for Roads and Bridges (DMRB) LA 104: Environmental Assessment and Monitoring and LA 106: Cultural Heritage Assessment (National Highways, 2020), and professional judgement.</p> <p>The value of heritage assets has been assessed not only on an individual basis but also with consideration to their broader context, where appropriate. In this case, the cropmarks have been reviewed using available evidence from the Historic Environment Record (HER), aerial imagery, and supporting archaeological data. While we acknowledge the potential for these features to form a wider cropmark complex, the current assessment reflects the available evidence in relation to their extent, character and potential significance.</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		The scoping methodology and approach to assigning value were discussed and agreed with relevant stakeholders, including Historic England and the Local Planning Authorities, during the scoping phase and at thematic working group meetings. We are therefore confident that the value assigned in the baseline assessment is robust and appropriate, based on the evidence currently available.				
9-5.575	<p>Concern that National Grid have not considered respondent's feedback to previous consultations regarding the impact of the Project on archaeological sites in Fordham (Pylons TB43 to TB50) / Concern that though being informed of archaeological sites, National Grid have done the following (plan provided by respondent):</p> <ul style="list-style-type: none"> - Located a pylon directly on top of confirmed Roman archaeology in a field directly adjacent to an exceptional and active Roman dig with Stone Bronze and Iron Age finds, a bathhouse and Roman and Saxon burials. This includes one of only two 'piscina' (indoor fountain/water feature) known in the country; - Located the Draft Order Limit across the site of that Roman dig and covering cropmarks which show two rows of post holes and possible archaeology extending from the dig site; Located all of the following archaeological sites within the draft order limit: Roman Road; Prehistoric 	National Grid has worked to minimise potential impacts on the historic environment, including the non-designated heritage assets identified in the Essex and Colchester HERs in Fordham between pylons TB43 and TB50 through strategic routeing and siting measures. Statutory consultation feedback and the results of archaeological fieldwork have been used to inform design development to reduce as far as practicable impacts to archaeological remains in this area. The impacts of the Project on the historic environment are assessed in Chapter 11: Historic Environment of the Environmental Statement (ES) (document reference 6.11). The assessment considers the potential impact on archaeology, historic buildings and historic landscapes and includes assessment of potential for physical impact, impact through change to setting that affects the value of a heritage asset and impact through indirect factors such as change in hydromorphology. The assessment is supported by walkover, setting, geophysical surveys, Archaeological Trial Trench			X

	<p>site (extensive flint working); confirmed Roman site; Cropmarks suggesting building, period unknown; Likely Roman building; cropmarks suggesting enclosure and building in field called House Field;</p> <p>- Located a Cable Sealing End (CSE) compound on the site of a Roman slate kiln</p> <p>With this, concern that National Grid archaeology advisor at the Langham public information event on 16 May 24 had no knowledge of the above</p>	<p>Survey, as documented in ES Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1) and ES Appendix 11.4: Geophysical Survey Results Report (document reference 6.11.A4). In addition to the proposals in the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4), the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5) sets out appropriate mitigation for the historic environment.</p> <p>Mitigation measures have been explored to mitigate identified impacts effectively. These actions have been documented and are presented in the Environmental Statement (ES), Chapter 11: Historic Environment (document reference 6.11), which forms an integral part of the Environmental Impact Assessment (EIA) for the Project. The approach to assessment and mitigation presented in ES Chapter 11: Historic Environment (document reference 6.11) has been discussed and agreed with key heritage stakeholders.</p> <p>The respondent appears to be primarily concerned with assets (4081) and (4082), which represent Romano-British archaeological remains and cropmarks respectively in the same field as pylon TB48 and a section of the temporary haul road. The significance of these archaeological remains has been assessed as medium (regional) value and any areas of below ground impact within the Order Limits and have already been subject to geophysical survey. The extent of the</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		cropmarks and geophysical anomalies lie largely outside areas of below ground impact within the Order Limits; however, all such areas will be fully investigated to ensure preservation by record of any identified archaeological remains. The remaining heritage assets of concern to the respondent have been fully assessed and will be subject to appropriate mitigation as set out in the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5).				
Information						
9-5.576	The Project overlaps with an approved Battery Energy Storage Systems (BESS) scheme (plan provided by respondent) which will have already been built prior to the Project commencing	In response to the feedback, which was identified as a Battery Energy Storage Site overlapping with a proposed construction compound, National Grid has made a change and has re-positioned the compound to the south and east to avoid the overlap with the Battery Energy Storage System scheme.			X	X
9-5.577	There is a large amount of land owned by the National Trust in the Dedham Vale National Landscape (previously known as the Dedham Vale Area of Outstanding Natural Beauty (AONB)) (this has been sent to National Grid previously).	National Grid notes the respondent's feedback, we have consulted with the National Trust in all of our consultations, and the Project does not interact with any National Trust Land.			X	
9-5.578	Information provided that the location of the respondent's property (within vicinity of Valley Farm Drive) is incorrectly shown on Google Maps, and will be impacted by the Project	National Grid notes the respondent's feedback. We do not exclusively use Google Maps as a resource for assessing, mapping and presenting the Project. We use a mixture of Geographic Information System (GIS) and			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Ordnance Survey (OS) mapping, the data of which is provided by local authorities and Ordnance Survey. The properties either side of Valley Farm Drive are not crossed by the alignment and therefore no direct impacts to the respondent's property are expected, with the exception of the garden at a property to the west of Valley Farm Drive where works are required on the existing 11 kV wood pole that is situated in the garden.</p> <p>Valley Farm Drive itself is not proposed to be used during construction of the Project. However, Valley Farm Drive is proposed to be used for future survey and maintenance access to the pylons and overhead line in the future. This is an access right over land only and would not be subject construction works.</p> <p>The respondent's property itself is not within the Order Limits and other than the proposed permanent access route as described above is not directly impacted by the Project.</p>				
9-5.579	Information provided that there is an additional flood bank in Stratford St Mary which is no longer maintained by the Environment Agency - the flood bank runs along the edge of the respondents garden abutting the neighbouring land where the flooding can be extensive / Concern that the trenching as part of the Project will exasperate flooding which impact on the village / It is imperative that this is taken into account in relation to National Grid's calculations as	National Grid has completed the Environmental Impact Assessment (EIA) for the Project. The results of this assessment are provided in the Environmental Statement (ES) that accompanies the Development Consent Order (DCO) application. The ES identifies and assesses the likely significant effects on the environment resulting from the construction of the Project and recommends appropriate mitigation measures (in consultation with relevant stakeholders) to reduce potential effects.	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	to the implications the Project may have on flooding in Stratford St Mary	<p>A Flood Risk Assessment (FRA) (document reference 7.9) has been prepared for the Project to support and inform the EIA.</p> <p>The ES includes consideration of potential impacts on flood risk from all relevant sources, both temporary and permanent impacts, taking account of the effects of climate change over the Project's design life. The FRA describes the measures that would be put in place to manage construction and operational flood and land drainage impacts to ensure the development is safe from flooding over its lifetime and that off-site flood risk is not increased. Where construction work would commence in close proximity to existing flood defences, such as the flood bank in Stratford St Mary, the Project has made a specific commitment within the Outline Code of Construction Practice (document reference 7.2) to ensuring that, through appropriate monitoring, there would be no detriment to the standards of flood protection that these defences provide.</p>				
Mitigation						
9-5.580	Suggest mitigation measures	An Environmental Statement (ES) (document reference Volume 6: Environmental Statement) has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 ('the Infrastructure EIA Regulations'). The ES identifies and assesses the likely significant effects on the environment resulting from the construction,	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		operation and maintenance of the Project and recommends appropriate mitigation to reduce effects. Environmental mitigation measures have been defined within each environmental topic chapter and set out in relevant management documents submitted with the Development Consent Order (DCO) application, including the Outline Code of Construction Practice (CoCP) (document reference 7.2), the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Draft Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (WSI) (document reference 7.5).				
9-5.581	Request that National Grid put gates on their haul roads to prevent illegal trespassing / Concern that the area near Rivenhall Hall Farm already suffers from hare coursing which destroys their crops	National Grid proposes security fencing and gates for all site access points to secure the works area, the construction corridor and haul roads. Security gates are to be set back a minimum of 20 m from the edge of the carriageway to allow for vehicles transitioning between the works area and public highway to stop outside of the gate whilst not impeding the public highway. A typical site access point layout including tracking of construction vehicles, visibility splays and fencing arrangements can be found on Drawing AENC-NG-ENG-DWG-0002 within the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>In accordance with GG29 in Outline Code of Construction Practice (CoCP) (document reference 7.2), working areas would be appropriately fenced.</p> <p>Access controlled measures such as fencing and gated accesses to working areas would typically be in place for safety and security. Access and crossover points would be designed to reduce highway safety risks and congestion on the public highway by providing for the safe and efficient passage of construction traffic.</p> <p>National Grid usually fence out their construction working width to protect both members of the public and livestock. This also helps to avoid trespass. Unless otherwise agreed with the landowner/occupier, the method of fencing the construction working width would be livestock-proof to ensure exclusion of any stock kept on the adjoining land. Where no livestock is kept, post and rope fences or wire may be used. National Grid would exercise reasonable care and undertake practical measures to avoid entry by trespassers. Crossing points may be included within this fencing to facilitate the continuation of agricultural operations. The crossing points would be installed at appropriate locations to enable reasonable access across the construction working width. All temporary fencing would be maintained throughout construction works until the land has been reinstated, unless otherwise agreed with the landowner/occupier.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-5.582	Suggest that the visual impact of the East Anglia Connection Node (EACN) substation at Ardleigh should be mitigated (e.g. as small as possible) regardless of financial cost	<p>National Grid has sought to reduce environmental impacts, including visual impacts resulting from the introduction of the East Anglia Connection Node (EACN) substation, as far as practicable, through routeing and siting and an ongoing iterative design process which has taken on board feedback provided at different stages of the Project.</p> <p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the Environmental Impact Assessment (EIA). The approach to the LVIA follows professional guidance as set out in ES Appendix 13.1 Landscape and Visual Methodology (document reference 6.13.A1). The LVIA includes an assessment of the Project, including the East Anglia Connection Node (EACN) substation, on both landscape character and visual amenity and also on the National Landscape and its special qualities. The LVIA identifies areas for potential mitigation planting to reduce visual impacts to local receptors. This includes proposals for landscape mitigation around the EACN substation. The LVIA is presented in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13).</p> <p>The Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4)) includes details regarding the planting proposals which includes an area around the EACN substation. The proposed planting provides some filtering of views of the EACN substation.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-5.583	Request that if works do take place at Tunmers Farm, that these are carried out between July and September (as per advice from The Royal Society for the Protection of Birds (RSPB))	A range of ecological survey work has been undertaken in line with best practice guidelines across the Project. The results of these surveys inform the need for mitigation measures, including potential restrictions to timings of construction works. Survey results and agreed mitigation measures with Natural England have not identified the need for such restrictions, for bird mitigation, in the vicinity of Tunmers Farm. Further information is presented in Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8).			X	
9-5.584	<p>Concern about the impact of the Project on respondent's land and property near Grove Hill, Langham (e.g. security risks; access; electricity and water supply; safety concerns regarding high pressure gas main; creation of dust, noise and pollution during construction; devaluation of property; impact on trees and wildlife) and suggest the following mitigation measures:</p> <ul style="list-style-type: none"> - Suggest that the trench dug for underground cables for the Project at respondent's land (near Grove Hill, Langham) should be narrower than currently proposed (to mitigate damage on flora and fauna); - Suggest that National Grid provide ducting through respondent's land (near Grove Hill, Langham) for electricity, water and fibre-optic cable to the 	The standard underground cable cross section is intended to reflect typical installation conditions. In areas where other constraints exist, the trench spacing may vary or the construction methodology may change (e.g.: use of vertical excavations rather than battered excavations). The preferred approach for this Project is to use ducting, ducting is proposed as per the typical underground cable cross section. Where spoil is unsuitable for backfill it would be removed from site. National Grid would seek to reinstate the affected land where possible to the same state prior to any works (or a condition agreed with the landowner). Hedgerows, bushes and shrubs can be reinstated above the underground cables but trees cannot be planted over the top or within 10 m of underground cables. Mitigation planting would be included within the Project where trees need to be removed.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>beginning of respondent's drive (address and land parcel references provided by respondent);</p> <ul style="list-style-type: none"> - Suggest that that National Grid provide contingency ducting (e.g. two ducts, along the length of respondent's land to the beginning of the drive for any other services which may become available in the future with the ability for respondent to access the ducting as necessary; - Suggest that, if National Grid proceed by way of trenched cabling, then if the spoil removed when digging the trench is unsuitable for backfill, then it must be removed from the site; - Suggest that, after the completion of the operations, the drive through respondent's land must be re-laid with sufficient suitable material. If the drive and/or land sinks later, it must be further surfaced/filled and re-landscaped; - If National Grid or their contractors find that they cannot successfully trench and lay cables due to the undulations/changes of level of the site or for any other reason, and decide to change to trenchless cabling, suggest that National Grid should replace all trees and bushes already removed and re-seed the grassed areas and tend the trees/shrubs/grassed areas including watering until fully established and replace any failures within 5 years; - Suggest that National Grid return the land to the state in which it was before their operations began 	<p>Pre-construction surveys would be undertaken to aid the detailed design development of the cable route, these would be completed prior to construction.</p> <p>The haul road would be removed following completion of construction and the land reinstated. Where possible regular maintenance and upkeep would be completed via existing access routes.</p> <p>It is not anticipated that National Grid would install new services to individual properties, however some existing services may have to be diverted for construction works.</p> <p>National Grid works and consults with all third party statutory utility owners as well as the local water and electricity companies. Where required, appropriate mitigations would be agreed in order to negotiate such existing infrastructure.</p> <p>Locating existing water and electricity supplies is important to us; you may have knowledge of supply locations which we would be grateful if you could share with us. Having this information allows us to reduce the effects on your property and our Project.</p> <p>If we interrupt or accidentally damage any water supplies or other services in the land, we would repair the damage and/or provide an adequate alternative as soon as reasonably practicable.</p> <p>Access to the respondent's property would be maintained where possible, with suitable temporary measures being implemented.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>including the re-seeding of the grassed areas and the re-laying of the drive with suitable and sufficient material, taking into account the condition of the ground beneath which is swampy;</p> <ul style="list-style-type: none"> - Suggest that National Grid should indemnify the respondent in respect of any claims against the respondent or damage suffered which the respondent's insurers refuse to satisfy or indemnify us as a result of National Grid's operations rendering the respondent's insurance cover invalid; - Suggest the installation of electric gates across the entrance to respondent's garden leading to the house, CCTV and intercom, and also a large secure post box and anything else necessary to keep the property secure; - Suggest that the haul road through the property should remain open as it comes off the public highway, rather than National Grid using the respondent's land indefinitely to access the fields in Langford Hall Farm to the south and the woodland and other land to the north of the Blackbrook; - Suggest that respondent's drive be kept open 24 hours a day for access to and egress from the house (e.g. by the respondent, visitors, postman, wood deliveries, building materials and other deliveries, emergency service vehicles); - Suggest that National Grid should avoid any disruption to electricity supply, keep any power cuts 	<p>National Grid enters into private treaty agreements with landowners. We would indemnify landowners in respect of negligence or breach in the exercise of its rights over their land such to the usual conditions (such as the landowner's duty to mitigate its loss).</p> <p>Adequate security would be put in place where required and deemed appropriate for a specific location. Landowners would be informed and where reasonable and proportionate, their specific requirements/concerns would be incorporated.</p> <p>In the unlikely event it is deemed necessary and agreed between parties that a property is unsuitable to be lived in during construction, National Grid would compensate the affected party, to find suitable accommodation for an agreed period.</p> <p>National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project and the findings are presented in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that has been submitted with the Development Consent Order (DCO) application. The ES identifies and assesses the likely significant effects on the environment resulting from the construction of the Project and recommends appropriate mitigation to reduce effects.</p> <p>ES Chapter 8: Ecology and Biodiversity (document reference 6.8) and ES Appendices 8.1 to 8.16 (document reference 6.8.A1-6.8. A16) of the ES</p>

	<p>to an absolute minimum, give reasonable notice of any threatened power cuts and reinstate power within a reasonable time (details of supply provided by respondent);</p> <ul style="list-style-type: none"> - Suggest that in the event that National Grid's operations for any reason render Hill House uninhabitable for a period, National Grid should reimburse the respondent for all costs of alternative accommodation expense arising; - Suggest that water pipe (details provided by respondent) should be reinstated after the works are completed or some other suitable measures taken to avoid the consequent accumulation of high levels of water to the south of respondent's land parcel; - Suggest that any easement granted to National Grid includes a right for respondent to replant the trees removed; - Suggest that that a tree-root barrier or barriers should be laid/installed above the installed cables when laid through respondent's land to enable replacement trees and bushes to be planted after the operations are completed and to protect the cables from root damage from naturally occurring re-growth of trees and bushes; - Suggest that underground cables should be laid through permanent sheathing to enable easier access to the cables in the event of future repair or renewal of the cables or their replacement with 	<p>addresses the impact on vegetation and wildlife. Measures have been outlined which would mitigate for any impact.</p> <p>ES Chapter 7: Air Quality (document reference 6.7) of the ES includes an assessment of construction traffic emissions to determine any changes in air quality arising from construction phase. The ES also recommends best industry practices to mitigate the impact of the Project on air quality from construction.</p> <p>ES Chapter 14: Noise and Vibration (document reference 6.14) includes a Construction Noise Assessment. This assessment includes consideration of properties on and near Grove Hill, Langham. The assessment has not identified any potential significant adverse effects at this location. However, there are potential adverse effects. The contractor would employ Best Practicable Means (BPM) to reduce any potential effects from construction noise.</p> <p>Detailed Agricultural Land Classification (ALC) surveys have been undertaken to inform an Outline Soil Resource Plan (Appendix C of the Outline Code of Construction Practice (CoCP), (document reference 7.2)) which details key soil mitigation measures required to protect soil resources during construction. Implementation of these measures would allow land to be restored (i.e., following haul road removal) to its previous condition following the completion of the construction phase and any required aftercare period.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>substitute cables or other means of transmission, in order to avoid the significant disruption which would be caused if the underground cables should have to be re-excavated in the future;</p> <p>- Suggest that if respondent's fence is destroyed or damaged during the Project, National Grid should replace / reinstate it with a similar fence</p>	<p>Commitment GH06 of the Outline CoCP requires the control of earthworks or materials movements, including the re-use of materials, to be undertaken under the appropriate Environmental Permits, exemptions or CL:AIRE The definition of Waste: The development industry Code of Practice. This would include criteria for ensuring soils are suitable for use and a strategy for dealing with any excess soils.</p> <p>Mitigation measures for arboriculture include crown pruning, ground protection and arboricultural supervision when working within Root Protection Areas (RPAs) of retained trees. These mitigation measures are referenced within ES Appendix 13.6: Arboriculture Impact Assessment (AIA) (document reference 6.13.A6).</p> <p>Potential impact on property prices is not a material planning consideration for the purposes of a DCO application. Separate to this point, the Secretary of State has asked that the DCO application include an assessment of the likely significant environmental effects in the form of potential impacts on property prices. The ES contains an assessment on this. It concluded that there is no evidence of any significant environmental effects on house prices as a result of the Project. Although not part of the Environmental Impact Assessment process it is relevant to observe that any impact of the Project on residential properties are potentially capable of being dealt with through statutory</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		nuisance or compulsory purchase compensation regimes (subject to the requisite criteria being met).				
9-5.585	<p>Regardless of the location of the East Anglia Connection Node (EACN) and any Cable Sealing End (CSE) compounds, it is imperative that National Grid thoroughly screen these sites employing fast-growing tall native tree species on all sides to prevent views across what is very open landscape. This will need to take place around the site boundaries themselves as well as at strategic locations in between the sites and any protected landscapes, listed buildings, other heritage assets or important receptors as required in the National Policy Statement for Energy NPS-EN5 2.10.6. This must be conducted in each case to a standard defined by and agreed with the local community to ensure support. A company in the business of building industrial infrastructure is hardly best qualified to determine what constitutes 'acceptable' in this regard</p>	<p>National Grid has sought to reduce, as far as practicable, impacts on the environment/countryside through routeing and siting and an ongoing iterative design process which has taken on board feedback at different stages of the Project. The iterative design process sought to avoid areas of highest concern, for examples through changes to the route alignment or changes to the method e.g. trenchless crossings. We have engaged with a range of stakeholders (including Statutory Environmental Bodies (SEBs) and relevant local planning authorities) throughout the development of the Project design and environmental assessment work.</p> <p>National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project. The results of this assessment are provided in the Environmental Statement (ES) that accompanies the Development Consent Order (DCO) application. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation (and maintenance) of the Project and recommends appropriate mitigation measures to reduce potential effects.</p> <p>The Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) includes details regarding the planting proposals and has been prepared</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>by a team of ecologists and chartered landscape architects. This includes environmental mitigation areas and mitigation areas to address effects on landscape and visual receptors. Environmental mitigation measures have been described within each environmental topic chapter.</p> <p>Indicative landscape proposals are included in Appendix D of the Outline LEMP (document reference 7.4) and indicative species mixes are provided in Appendix C of the Outline LEMP (document reference 7.4). Landscape proposals around the EACN substation and CSE compounds include deciduous woodland, scrub and hedgerows. The impacts of the Project on the historic environment have been assessed in Chapter 11: Historic Environment (document reference 6.11) of the ES. The assessment considers the potential impact on archaeology, historic buildings and historic landscapes and includes assessment of potential impacts through change to setting that affects the value of a heritage asset. The Project has engaged with Historic England and relevant planning authorities on aspects relating to heritage, including appropriate mitigation measures and techniques and to take their views into account during Project development.</p>

National Landscape (AONB)						
9-5.586	Criticism of routing the Project through the Dedham Vale National Landscape (previously known as the Dedham Vale Area of Outstanding Natural Beauty (AONB))	National Grid's consideration of corridor alternatives further to the west of the National Landscape (previously known as an Area of Outstanding Natural Beauty (AONB)) was published within the Corridor and Preliminary Routeing and Siting Study (CPRSS) as part of our 2022 non-statutory consultation (available on the Project website). We have continued to backcheck the strategic connection proposal and siting of the East Anglia Connection Node (EACN) substation, which is part of the holistic consideration of the most appropriate form of the Project. In the absence of further information or new factors we continue to consider alternatives west of the National Landscape to be less preferred. On balance, these were less preferred as they would be longer and therefore lead to effects over a much greater length to other receptors at greater cost than the route through the National Landscape. Undergrounding through the National Landscape is consistent with National Policy Statement (NPS) EN-5. The siting of Cable Sealing End (CSE) compounds (the transition sites between the overhead line and underground cable) has identified locations to reduce effects on the designation and consider the use of trenchless techniques – subject to ground conditions – to reduce certain construction effects.	X	X	X	
9-5.587	Concern about the visual impact of overhead lines on the Dedham Vale National Landscape (previously	The relevant National Policy Statement (NPS) is EN-5 which makes it clear that the Government considers	X	X	X

	Landscape (previously known as the Dedham Vale Area of Outstanding Natural Beauty (AONB))					
9-5.591	Criticism that the 3 km and 5 km cut-off distances used for consultation maps prevent the full impact of the Project on the Dedham Vale National Landscape (previously known as the Dedham Vale Area of Outstanding Natural Beauty (AONB)) from being shown	<p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the Environmental Impact Assessment (EIA). The LVIA includes an assessment of the Project on landscape character and visual amenity including the consideration of Dedham Vale National Landscape (previously known as an Area of Outstanding Natural Beauty (AONB)). The approach to the LVIA follows professional guidance as set out in Appendix 13.1: Landscape and Visual Methodology (document reference 6.13.A1). This sets out the justification for the study area used for the assessment which has been determined by the nature and scale of the Project and the nature of the surrounding area and considers the landscape and/ or views that the Project may influence in a significant manner.</p> <p>The study area used in the assessment of landscape and visual effects in the LVIA prepared for the ES for the underground cable route through the Dedham Vale National Landscape has increased to 3 km in response to stakeholder feedback.</p> <p>The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and is supported by Appendix 13.5: National Landscape Assessment Study (document reference 6.13.A5) which considers impacts on the National Landscape and its special qualities. A Zone of</p>			X

		Theoretical Visibility (ZTV) map focused on Dedham Vale National Landscape is provided in ES Figure 13.19 (document reference 6.13.F19).				
9-5.592	Criticism that the 1.5 km cut-off distance used for the visual simulations used at consultation events does not present the full visual impact within the Dedham Vale National Landscape (previously known as the Dedham Vale Area of Outstanding Natural Beauty (AONB)) (given that pylons are proposed just over 1.5 km away from the Dedham Vale National Landscape) / Criticism that National Grid have changed criteria for the proposed route at the Dedham Vale National Landscape (e.g. that the visual impact at 1.5 km is negotiable of the surrounding pylons, when standard practice is to look at the visual impact at 3 km, which National Grid have used in their original proposals for this project and previous studies)	The 3D visualisation tool presented at statutory consultation public information events had a cut-off distance of 2.5 km either side of the proposed alignment, therefore views from the Dedham Vale National Landscape within this distance were captured within the study area used in the assessment of landscape and visual effects in the LVIA prepared for the ES for the underground cable route through the Dedham Vale National Landscape has increased to 3 km in response to stakeholder feedback.	X		X	
9-5.593	Concern that all roads into the Dedham Vale National Landscape (previously known as the Dedham Vale Area of Outstanding Natural Beauty (AONB)) will pass under overhead lines (e.g. amplifying the sense of industrialisation created by the Project), and that this concern has previously been dismissed by National Grid on the basis that roads are 1.5 to 2.5 km away where roads are	National Grid notes the feedback received and all feedback has been taken into consideration as part of the iterative design process. National Grid has sought to reduce, as far as practicable, impacts on Dedham Vale National Landscape and its setting through routeing and siting and an ongoing iterative design process which has taken on board feedback at different stages of the Project. The iterative design process sought to avoid areas of highest			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	actually as close as 1.3 km (e.g. a short distance to travel)	<p>concern, for examples through careful siting of Cable Sealing End (CSE) compounds and changes to the route alignment.</p> <p>The relevant National Policy Statement (NPS) is EN-5 which makes it clear that the Government considers overhead lines to be appropriate and acceptable in most instances, although it recognises that that there may be, at particularly sensitive locations, potential adverse landscape and visual impacts of overhead line infrastructure that make it inconsistent with our duties and relevant planning policy.</p> <p>Dedham Vale National Landscape (previously known as an Area of Outstanding Natural Beauty (AONB)) designation is one such location where there is a presumption that underground cable technology is adopted with the extent of underground cabling extending beyond the boundary in response to the potential for the Project to affect the natural beauty of the National Landscape. Our proposals include a total of approximately 20 km of underground cable through and in the vicinity of the Dedham Vale National Landscape, including a section at Great Horkesley to reduce the changes in views and setting of the National Landscape from within and adjacent to its designated boundary.</p> <p>Where there are proposed sections of overhead line north and south of Dedham Vale National Landscape the closest proposed pylon to the north is approximately 2.3 km, and to the south approximately 1.3 km. People</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		travelling along roads crossed by the proposed overhead line would be travelling for a range of distances and past other infrastructure elements before entering the National Landscape. Where roads pass underneath the Project, road users will experience significant visual effects. Further details are provided in Environmental Statement (ES) Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3).				
9-5.594	Criticism that National Grid have incorrectly justified the siting of overhead lines and Cable Sealing End (CSE) compounds adjacent to the Dedham Vale National Landscape (previously known as the Dedham Vale Area of Outstanding Natural Beauty (AONB)) using National Policy Statement (NPS) EN5	The National Policy Statements (NPS) EN-1 and EN-5 provide the policy context for the determination of the Project by the Secretary of State. Other policies are also relevant including the Countryside and Rights of Way Act 2000 which has recently been amended to amend the duties of relevant authorities (which include National Grid) to include the requirement ' <i>...to seek to further the purposes of the National Landscape.</i> ' National Grid has developed the Project on this basis utilising the guidance in the Horlock Rules (see Appendix I22 of this report) and in response to the potential effects on the National Landscape arising from the characteristics of the site of the Cable Sealing End (CSE) compound. In the absence of any indication of any alternative policy or interpretation of policy that would be more appropriate does not propose a change.	X		X	
9-5.595	Concern that the Project will encircle both the Dedham Vale National Landscape (previously known	National Grid has sought to reduce, as far as practicable, impacts on Dedham Vale National Landscape (previously known as Area of Outstanding			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	as the Dedham Vale Area of Outstanding Natural Beauty (AONB)) and Stour Valley Project Area	<p>Natural Beauty (AONB)) and its setting through routeing and siting and an ongoing iterative design process which has taken on board feedback at different stages of the Project. The iterative design process sought to avoid areas of highest concern, for examples through careful siting of Cable Sealing End (CSE) compounds and changes to the route alignment.</p> <p>The relevant National Policy Statement (NPS) EN-5 makes it clear that the Government considers overhead lines to be appropriate and acceptable in most instances, although it recognises that that there may be, at particularly sensitive locations, potential adverse landscape and visual impacts of overhead line infrastructure that make it inconsistent with our duties and relevant planning policy.</p> <p>Dedham Vale National Landscape designation is one such location where there is a presumption that underground cable technology is adopted with the extent of underground cabling extending beyond the boundary in response to the potential for the Project to affect the natural beauty of the National Landscape. Our proposals include a total of approximately 20 km of underground cable through and in the vicinity of the Dedham Vale National Landscape, including a section at Great Horkesley to reduce the changes in views and setting of the National Landscape from within and adjacent to its designated boundary.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the Environmental Impact Assessment (EIA). The LVIA includes an assessment of the Project on landscape character and visual amenity including the consideration of Dedham Vale National Landscape. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and is supported by Appendix 13.5: National Landscape Assessment Study (document reference 6.13.A5) which considers impacts on the National Landscape and its special qualities.</p> <p>As shown on ES Figure 13.1: LVIA Study Area and Landscape Designations (document reference 6.13.F1), the Project would pass between Dedham Vale National Landscape and part of the Stour Valley Project Area where it crosses the Black Brook. In this location the Project would be an underground cable, and there would be significant effects on landscape and visual receptors within the Stour Valley Project Area during construction and extending into the operational phase due to the loss of trees along the Black Brook. The majority of the Stour Valley Project Area is to the west of the National Landscape (west of Wormingford) and would not be affected by the Project due to distance and limited theoretical visibility of the Project.</p>				
9-5.596	Suggest that cost should not be a deciding factor with respect to use of underground cables in the Dedham Vale National Landscape (previously known	National Grid notes the respondent's feedback. Cost is not a deciding factor in the decision to utilise underground cable within the Dedham Vale National	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	as the Dedham Vale Area of Outstanding Natural Beauty (AONB)) (e.g. as NPS EN-5 sets out that only infeasibility and harm should be the only reasons that the use of underground cables is deemed inappropriate in the context of a National Landscape)	Landscape. We propose to utilise underground cables within the Dedham Vale National Landscape, as well as to the north to Raydon Airfield and to the south to the East Anglia Connection Node (EACN) substation and for a short section at Great Horkesley where these areas justify the use of underground cables.				
9-5.597	Suggest that the Colne Valley should be treated by National Grid as an extension of the neighbouring Dedham Vale National Landscape (previously known as the Dedham Vale Area of Outstanding Natural Beauty (AONB)) given the proximity of the Colne Valley to Dedham Vale and Stour Valley Project / Criticism that National Grid have considered the Dedham Vale National Landscape and Stour Valley deserving of protection but not the Colne Valley due to working from a now outdated version of NPS-EN5 in force at that time (i.e. when the 2022 Corridor Preliminary Routeing and Substation Siting study (CPRSS) was published)	The design for statutory consultation was developed with full consideration of the National Policy Statement (NPS) EN-1 and EN-5 as published in November 2023 and enacted in January 2024. National Grid consider each location on its individual merits. The Colne Valley is both outside and not within the setting of a National Landscape and as such the presumption in NPS EN-5 to utilise underground cables in such designated landscapes is not engaged. This is in contrast with the route passing through the Dedham Vale National Landscape and being considered to be within its setting near Great Horkesley. In respect of the Colne Valley, we also considered whether the level of effects more generally, even though outside a designated landscape, justified, in line with NPS EN-5 para 9.2.23, the different effects and costs of the use of underground cable and concluded that they did not and therefore that overhead line remained the preferred connection technology.			X	
9-5.598	Suggest that the Dedham Vale National Landscape (previously known as the Dedham Vale Area of Outstanding Natural Beauty (AONB)) is restored to	The installation of underground cabling would broadly adopt the following process, initially, the removal and storage of topsoil of a width sufficient to allow for construction machinery and the digging of the trenching			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	its current state following the installation of underground cables	required for underground cabling. The underground cables would then be laid in the trench, soils would be backfilled, and hedgerows and shrubs reinstated where practicable. At this point, an appropriate grass seed mixture would be sown to encourage regrowth. In some locations trenchless techniques are expected to be adopted to reduce effects. It is anticipated that after a period of time following completion of the construction of the underground cabling and replanting of hedgerows and vegetation there would be minimal visibility of the works at ground level. A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the Environmental Impact Assessment (EIA). This assesses the impact of the Project and identifies the need for additional mitigation if required. The LVIA is presented in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13).				
9-5.599	Concern about the cumulative impact of the Project, Bramford to Twinstead proposals and water pipe works on the Dedham Vale National Landscape (previously known as the Dedham Vale Area of Outstanding Natural Beauty (AONB)) (e.g. due to trenching)	Chapter 17: Cumulative Effects (document reference 6.17) of the Environmental Statement (ES) has been prepared in accordance with the 'Planning Inspectorate Advice Note: Nationally Significant Infrastructure Projects: Cumulative Effects Assessment' (September 2024)'. As part of this assessment, National Grid has engaged with other developers who are proposing development in proximity of the Project to understand their requirements. There are likely to be significant adverse cumulative effects during construction within Dedham Vale National			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Landscape, due to the large scale construction works associated with both projects, occurring alongside each other in these areas. There would be significant beneficial landscape effects within Dedham Vale National Landscape from the removal of the 132 kV overhead line within the Box and Stour Valleys.</p> <p>Landscape mitigation measures are summarised in ES Chapter 13: Landscape and Visual (document reference 6.13) and also detailed in the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4).</p>				
9-5.600	Suggest that the area to the south of Langham Estate down to the Black Brook should be considered as sensitively as the Dedham Vale National Landscape (previously known as the Dedham Vale Area of Outstanding Natural Beauty (AONB)) (e.g. given impact to the views from within the National Landscape; the area is also being considered for inclusion in the expanded National Landscape)	<p>National Grid has sought to reduce, as far as practicable, impacts on Dedham Vale National Landscape through routeing and siting and an ongoing iterative design process which has taken on board feedback at different stages of the Project. The iterative design process sought to avoid areas of highest concern, for examples through careful siting of Cable Sealing End (CSE) compounds, changes to the route alignment and proposals for trenchless crossings</p> <p>The relevant National Policy Statement (NPS) EN-5 makes it clear that the Government considers overhead lines to be appropriate and acceptable in most instances, although it recognises that that there may be, at particularly sensitive locations, potential adverse landscape and visual impacts of overhead line</p>			X

		<p>13.5 is supported by Annex A: National Landscape Setting Study.</p> <p>The Outline Landscape and Ecology Management Plan (LEMP) (document reference 7.4) includes details regarding the planting proposals which include areas around the proposed Cable Sealing End (CSE) compounds.</p> <p>The findings and conclusions of the LVIA and other topics assessments have been considered within the cumulative impact assessment for the Project. The list of developments as part of the cumulative assessment are presented in ES Chapter 17: Cumulative Effects (document reference 6.17). This chapter considers the landscape and visual effects of the Project cumulatively with other proposed developments that are being progressed, including the National Grid Bramford to Twinstead project and the Anglian Water Bury St Edmunds to Colchester pipeline.</p>				
9-5.615	Concern National Grid have shown an unexplained interest in property and land outside of the boundary of the Draft Order Limits (red line boundary) within the National Landscape (e.g. two properties identified with National Grid notices of interest in relation to the Project posted up outside them: Stratford St Mary Village Hall and playing field and the land around the water works next to the river)	National Grid does not have any interest in any land or property that sits outside of the Order Limits. There are notices placed along the length of the route which may be outside of the Order Limits. These will likely be unregistered land notices, where we are trying to determine who owns a piece of land. Or alternatively they may be notices advising of consultations.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-5.616	Oppose the change to the Project at the Black Brook Valley, and suggest that this section of the Project should be tunnelled as per the 2023 consultation (e.g. to mitigate impact on trees and visual impact)	<p>National Grid notes the respondent's feedback. The design for the split crossing at Black Brook has been removed to avoid encircling a property.</p> <p>The underground cable installation methodology at Black Brook, has been subject to significant consideration due to the high ecological value of the site. A range of construction methods and routes have been investigated for the area. However, the site is highly constrained with very limited space available between properties, including a property that is located immediately north of Black Brook, Black Brook local wildlife site (LWS) and priority woodland habitat. The use of Horizontal Directional Drilling (HDD) is not technically feasible due to these site constraints and alternative trenchless solutions are expected to require use of tunnelling methods, which would be substantially more expensive than HDD. National Grid does not consider that this can be justified in policy terms.</p> <p>The impact on habitats, wildlife and ecology have been assessed by a team of specialists, who have inputted into the decision-making process.</p> <p>Black Brook would be over-pumped during construction, minimising the impact on water flows, contamination and any changes in the water table.</p> <p>National Grid is aware of land level differences and the presence of the high pressure gas main.</p> <p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the Environmental Impact</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Assessment (EIA). The LVIA is presented in ES Chapter 6.13: Landscape and Visual (document reference 6.13).</p> <p>The Black Brook Valley is judged to form part of the setting of Dedham Vale National Landscape as set out in Appendix 13.5: National Landscape Assessment Study (document reference 6.13.A5).</p> <p>There would be significant effects on landscape and visual receptors around the Black Brook Valley during construction and extending into the operational phase due to the loss of trees along the Black Brook. Further detail is provided in ES Appendix 13.2: Landscape Baseline and Assessment (document reference 6.13.A2) and Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3). The Outline LEMP (document reference 7.4) and the Outline Code of Construction Practice (CoCP) (document reference 7.2) contain a list of relevant good practice measures to avoid or reduce risks to habitats and species. In addition, the Limits of Deviation (LoD) allows for some flexibility during design and construction to further avoid environmental constraints that may be identified later in the Project.</p> <p>In addition, National Grid has committed to delivering 10% Biodiversity Net Gain (BNG) with environmental and societal benefits. Details on the BNG assessment, proposed onsite mitigation and offsite enhancement are included within the Biodiversity Net Gain Report (document reference 7.1).</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-5.617	Criticism that National Grid has wrongly interpreted the requirements of the National Policy Statement for Energy and set out misleadingly narrow criteria. NPS-EN5 requires use of underground cable near to the Dedham Vale, making it clear that even residual impacts are unacceptable, and precludes arguments based on cost to avoid undergrounding near to a protected National Landscape (previously known as the Dedham Vale Area of Outstanding Natural Beauty (AONB))	National Grid appreciates that different respondents may have different interpretations of policy but has developed the Project based on its interpretation which is set out in the Planning Statement (document reference 5.6). We do not agree that policy requires the use of underground cables near the National Landscape, rather the adoption responds to the specific effects and a decision making balance.			X	
9-5.618	At section 5.3.6 and 5.3.7 of the Design Development Report, National Grid cite the National Policy Statement for Energy NPS-EN5 2.9.7 and NPS-EN5 2.9.20. However, they fail to highlight the prohibition on residual impact, fail to highlight the fact that NPS-EN5 2.9.20 is only the opening paragraph of a much greater section which details presumptions underground and, specifically, National Grid makes no mention of NPS-EN5 2.9.21 which expands the criteria to cover areas surrounding protected landscapes. Nor is mention made of the fact that the cost of the use of underground cables set out in NPS-EN5 2.9.24 is an exemption only in respect of routes which do not cross any part of a protected landscape (in relation to National Grid has wrongly interpreted the requirements of the National Policy Statement)	National Grid appreciates that different respondents may have different interpretations of policy but has developed the Project based on its interpretation which is set out in the Planning Statement (document reference 5.6). We note the respondent's interpretation but disagree that there is a prohibition on residual impact. The 2024 Design Development Report (available on the Project website) was also not intended to cover all aspects of the policy and of course we are aware of the need to consider all parts of the policy that apply.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-5.619	Criticism that at Section 5.3.9 of the Design Development Report, National Grid claim to have deployed underground cable where the draft alignment is in very close proximity to the Dedham Vale when in fact, they have done so in only a very short section preferring instead – but not making mention of – Pylons through the majority of the surrounding area despite the close proximity (in relation to National Grid has wrongly interpreted the requirements of the National Policy Statement)	National Grid appreciates that different respondents may have different interpretations of policy but has developed the Project based on its interpretation which is set out in the Planning Statement (document reference 5.6). In this case whether the proximity does or does not affect the National Landscape is a matter of opinion. National Grid's technical experts have contributed to the identification of those areas where it is considered that the circumstances justify a change to underground cable.			X	
9-5.620	Criticism that National Grid wrongly state at 5.4.121 of the Design Development Report that the sections near to the National Landscape (previously known as the Dedham Vale Area of Outstanding Natural Beauty (AONB)) are not subject to the presumption to the use of underground cables (in relation to National Grid has wrongly interpreted the requirements of the National Policy Statement)	National Grid appreciates that different respondents may have different interpretations of policy but has developed the Project based on its interpretation which is set out in the Planning Statement (document reference 5.6). In this case whether the proximity does or does not affect the National Landscape is a matter of opinion. National Grid's technical experts have contributed to the identification of those areas where it is considered that the circumstances justify a change to underground cable.		X	X	
9-5.621	Criticism that National Grid have detailed throughout the course of three consultations in numerous documents that rerouting the stretch which commences at Ardleigh and ends just beyond Little Horkesley is impossible, however this is contradicted by the work in the 'Strategic Options Backcheck and Review'	There is a misrepresentation of National Grid's comments, and we do not consider there to be a contradiction. The 2022 Corridor and Preliminary Routeing and Siting Study (CPRSS) and 2023 and 2024 Strategic Options Backcheck and Review (SOBR) (available on the Project website) have been clear that there are alternative ways of meeting the reinforcement need and alternative corridors and routes. These more			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		strategic alternatives have been carefully considered and a preferred solution identified based on a range of environmental, technical and cost aspects. The 2023 and 2024 Design Development Reports (DDR) (available on the Project website) set out the process of development of this strategic solution and in various parts identifies the limitations to route development at specific locations. In respect of Ardleigh the 2024 DDR wording is in the context of the specific location, noting that there are no alternative corridors for routeing the infrastructure, albeit a limited number of localised route modifications at a smaller scale have been made. The commentary must therefore be considered in the correct context, and it should not be interpreted as applying to the more strategic alternatives.				
9-5.622	National Grid are entitled to argue pursuant to the National Policy Statement for Energy NPS-EN5 2.9.22 that pylons can be used in respect of cables emergent from the East Anglia Connection Node (EACN) due to it being 'infeasible in engineering terms' to use underground cables. This might apply to the section in which it is required to route Pylons for emergent cable over the same course as the underground incoming cables. However, (i) this situation arises only because of the choice of location made for the EACN; and (ii) the exemption is in any event limited to the section which is	National Grid appreciates that different respondents may have different interpretations of policy but has developed the Project based on its interpretation which is set out in the Planning Statement (document reference 5.6).			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	infeasible in engineering terms and does not extend beyond it					
9-5.623	Criticism that the western Cable Sealing End (CSE) compound at Little Horkesley, together with the Project between Pylons TB35 and TB40 will be greatly visible across the Dedham Vale and Stour Valley Project, acting as a 'Gateway of Steel' to both as visitors using the B1508 for access will be required to pass beneath, in addition to causing damage to landscape and heritage assets in the immediate vicinity	<p>National Grid has sought to reduce, as far as practicable, impacts on the environment/countryside through routeing and siting and an ongoing iterative design process which has taken on board feedback at different stages of the Project.</p> <p>Paragraph 5.4.134 of the April 2024 Design Development Report (DDR) (available on the Project website) notes that 'An alternative location for the western Cable Sealing End (CSE) compound at Great Horkesley was raised in feedback with a preference for a location closer to TB40 (2023 preferred draft alignment). This site was considered as part of the development of the 2023 preferred draft alignment, but it was less preferred. Respondents providing feedback requested moving the location of the western CSE compound further to the south to reduce residential amenity effects to a number of residential properties and to reduce effects on the National Landscape (previously Area of Outstanding Natural Beauty (AONB)). Whilst acknowledging the reduction in effects from such a change, it is noted that the change would transfer such effects to other residential properties. It is also considered that any effects on the National Landscape in terms established in National Policy Statement (NPS) EN-5 section 2.9 do not occur at a level that would be considered to meet a threshold justifying the effects and</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>additional cost of additional 800 m of underground cable. In reviewing the previous decision making, no new material considerations nor change to factors considered has been identified. As a result, it is considered that the additional costs and effects to extend the underground cable to a different CSE compound location are not consistent with policy. In light of this and the transfer of effects to other receptors no change is currently proposed.' Any larger shifts in the location of the CSE compound would bring the compound closer to other residential receptors and/or could position the compound on higher ground making it more widely visible.</p> <p>Paragraph 5.4.136 notes that an alternative alignment for pylons TB35 to TB40 to the west of Fordstreet and Fordham was considered and sets out the reasoning why a western option was not preferred when compared to the proposed alignment. The report summarises that 'Overall whilst noting some potential for a reduction in the number of residential properties with potential amenity effects if the western alternative was taken forward, this would be a longer less economic and efficient route with more pylons and angle pylons. It would also potentially increase effects in respect of construction within a Flood Zone (but subject to micro-siting this difference may be avoided) and be likely to increase effects on heritage assets including a Grade I listed building and several moats associated with listed buildings. It is also noted that the 2023 preferred draft alignment is consistent with policy and overall, it is</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>considered that there would be insufficient benefits from potentially reduced residential amenity and landscape effects of the western alternative to offset the technical concerns and additional infrastructure required for delivery it. On that basis the 2023 preferred draft alignment, subject to localised modifications, remains preferred and has been taken forward as the 2024 preferred draft alignment.' The current alignment therefore seeks to follow a low-lying route on exit from the CSE compound to minimise wider visibility in the landscape, and to route as equidistant between properties as possible. As such, this alignment remained preferred and was assessed as part of the Environmental Impact Assessment (EIA) for the Project.</p> <p>The results of this assessment are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation (and maintenance) of the Project and recommends appropriate mitigation measures to reduce potential effects. This includes a Landscape and Visual Impact Assessment (LVIA), which includes an assessment of landscape and visual effects.</p> <p>The impacts of the Project on the historic environment have been assessed in Chapter 11: Historic Environment (document reference 6.11) of the ES. The assessment considers the potential impact on</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>archaeology, historic buildings and historic landscapes and includes assessment of potential for physical impact and impact through change to setting that affects the value of a heritage asset. Whilst the majority of heritage assets in this location will experience no more than a minor adverse significance of effect (not significant) from the Project, it is acknowledged that the Grade II listed King's Farmhouse will see a moderate adverse significance of effect (significant) during both construction and operation.</p> <p>The Project has engaged with Historic England and relevant planning authorities on aspects relating to heritage, including appropriate mitigation measures and techniques and to take their views into account during Project development.</p>				
9-5.624	Application of Holford and Horlock rules places further restrictions on the siting of East Anglia Connection Node (EACN) substation and both Cable Sealing End (CSE) compounds in proximity to the Dedham Vale and also dictates expansion of the underground section, a move to the south of the western CSE compound and significant screening measures around all three	National Grid appreciates that different respondents may have different interpretations of policy (which includes consideration of Holford and Horlock Rules as guidance to decision making) but has developed the Project based on its interpretation which is set out in the Planning Statement (document reference 5.6).			X	
9-5.625	In relation to the Dedham Vale National Landscape (previously known as the Dedham Vale Area of Outstanding Natural Beauty (AONB)), suggest that Table A13.1.10 of the Preliminary Environmental	National Grid has sought to reduce, as far as practicable, impacts on Dedham Vale National Landscape and its setting through routeing and siting and an ongoing iterative design process which has taken	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>Information Report (PEIR) should clearly set out any negative effects anticipated to arise during the construction period, to demonstrate that a full assessment of the effects arising from the project have been considered. A full assessment of effects should acknowledge both the construction stage impacts and operational impacts, this is the case even where no permanent operational stage effects arise. Accordingly, suggest that the assessment of effects is updated to clearly states the construction stage effects and operational stage effects for each of the special qualities. An example of where this has been carried out previously for the Bramford-Twinstead Reinforcement Nationally Significant Infrastructure Project (NSIP), can be seen in document reference BT-GLP-020631-500-000; 8.3.7 Dedham Vale AONB Special Qualities and Statutory Purpose, September 2023, Appendix A.</p>	<p>on board feedback at different stages of the Project. The iterative design process sought to avoid areas of highest concern, for examples through careful siting of Cable Sealing End (CSE) compounds, changes to the route alignment and proposals for trenchless crossings.</p> <p>National Policy Statement EN-5 makes it clear that the Government considers overhead lines to be appropriate and acceptable in most instances, although it recognises that that there may be, at particularly sensitive locations, potential adverse landscape and visual impacts of overhead line infrastructure that make it inconsistent with our duties and relevant planning policy.</p> <p>Dedham Vale National Landscape designation is one such location where there is a presumption that underground cable technology is adopted with the extent of underground cabling extending beyond the boundary in response to the potential for the Project to affect the natural beauty of the National Landscape. Our proposals include a total of approximately 20 km of underground cable through and in the vicinity of the Dedham Vale National Landscape, including a section at Great Horkesley to reduce the changes in views and setting of the National Landscape from within and adjacent to its designated boundary.</p> <p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the Environmental Impact Assessment. The LVIA includes an assessment of the Project on landscape character and visual amenity</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>during construction and operation. This includes the consideration of Dedham Vale National Landscape and identifies areas for potential mitigation planting to reduce visual impacts to local receptors. The approach to the LVIA follows professional guidance as set out in Appendix 13.1: Landscape and Visual Methodology of the Environmental Statement (ES) (document reference 6.13.A1). The LVIA is presented in ES Chapter 13: Landscape and Visual (document reference 6.13) and is supported by Appendix 6.13.A5: National Landscape Assessment Study (document reference 6.13.A5) which considers impacts on the National Landscape and its special qualities during construction and operation. Appendix 6.13.A5 is supported by Annex A: National Landscape Setting Study.</p> <p>The Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) includes details regarding the planting proposals which include areas around the proposed CSE compounds.</p> <p>Section 245 (Protected Landscapes) of the Levelling-up and Regeneration Act 2023 (LURA) places a duty on 'relevant authorities', which in this context includes National Grid as a statutory undertaker, to seek to further the statutory purposes of protected landscapes (referred to as the 'seek to further' duty). In relation to National Landscapes (which includes the Dedham Vale National Landscape), this requirement has been incorporated into Section 85 of the Countryside and Rights of Way (CRoW) Act, which states:</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p><i>'In exercising or performing any functions in relation to, or so as to affect, land in an area of outstanding natural beauty in England, a relevant authority other than a devolved Welsh authority must seek to further the purpose of conserving and enhancing the natural beauty of the area of outstanding natural beauty'.</i></p> <p>The approach National Grid is taking to meet the 'seek to further' duty in relation to the Project has been detailed in National Landscapes – Duty to Seek to Further the Purposes Report (s85 Countryside and Rights of Way Act 2000) (document reference 5.10). The document details how the National Landscape and 'seek to further' duty has been taken into consideration during Project development and highlights potential further measures. The overall approach has been, and continues to be, discussed with relevant stakeholders (which includes but is not limited to the Dedham Vale National Landscape and Stour Valley Partnership) and follows the guidance published by Defra in December 2024 'Guidance for relevant authorities on seeking to further the purposes of Protected Landscapes' (Defra, 2024). It is intended the finalised measures will be secured by an appropriate mechanism as part pursuant to the DCO process.</p>				

Primary Access Routes / Haul Road / Construction Compounds					
9-5.626	<p>Concern that construction traffic from construction compound JCC2 will impact the Dedham Vale National Landscape (previously known as the Dedham Vale Area of Outstanding Natural Beauty (AONB)) and local area (including Holton Saint Mary) / Request for confirmation that this was taken into consideration when siting construction compound JCC2 / Concern about the impact of construction traffic to 'construction hub' in Holton Saint Mary (e.g. due to safety and maintenance concerns)</p>	<p>Construction compound JCC02 is located between the Primary Access Route for construction and the proposed cable alignment which offers access and logistical benefits. National Grid has carefully considered the feedback received during the statutory consultation for this construction compound.</p> <p>The proposed compound between Raydon and Holton St Mary serves underground cabling works between the proposed Cable Sealing End (CSE) compound north of the Notley Enterprise Park and the River Stour. Moving the proposed compound to land adjacent to Notley Enterprise Park will increase the distance that construction vehicles must travel from the primary access route by approximately 1.5-1.8 km. Approximately two thirds of the cable section served by this compound is to the south of the current compound position, therefore moving the compound would also significantly increase construction vehicle movements from the compound to work sites along the cable alignment.</p> <p>National Grid has also carefully considered the feedback received during the statutory consultation for this Primary Access Route for construction vehicles and is proposing to utilise an offline temporary haul road located east of Holton St Mary from the B1070 to the construction corridor. It is proposed that this route would act as a bypass for Holton St Mary during construction.</p> <p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the Environmental Impact Assessment (EIA) and is presented in Chapter 13: Landscape and Visual of the Environmental Statement (ES) (document reference 6.13). An assessment of effects on people's views is provided in ES Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3). This includes effects relating to</p>			<p>X</p> <p>X</p>

	<p>construction compound JCC02 during construction. The assessment concludes that people in Visual Receptor Areas (VRA) C7 Holton St Mary and East Bergholt would experience significant effects during construction and operation, up to a distance of approximately 1.5 km from the Project.</p> <p>An assessment of effects on the special qualities of Dedham Vale National Landscape during construction and operation (and maintenance) is provided in Appendix 13.5: National Landscape Assessment Study (document reference 6.13.A5) of the ES. The assessment concludes that there would be significant effects on the special qualities of the National Landscape during construction, as a result of the proposed underground cable. Once the Project is operational and the land has been restored, effects on the special qualities of the National Landscape would not be significant.</p> <p>Chapter 16: Traffic and Transport (document reference 6.16) of the ES includes the assessment of the potential impacts of the Project including changes in traffic flow, delays, road safety and impact on walking, cycling and horse-riding modes on the roads along the Primary Access Routes (PAR) located in the Local Road Network. This includes the B1070 at Holton St Mary which provides access from the A12 Ipswich Road to the proposed haul road providing access to compound JCC02. The likely effects along the PAR along the B1070 are considered temporary and not significant with embedded mitigation in place, as identified within the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3). Haul road crossing points are proposed throughout the Dedham Vale National Landscape along the underground cable section crossing the local highway network. This includes a crossing point across the B1070 and on Arcadia Road near to the JCC02 compound which will be used by construction traffic in areas with no identified sensitive</p>				
--	---	--	--	--	--

		receptors. Typical mitigation measures are identified within the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) and aim to ensure the safe movement of construction vehicles along PAR, at Site Access Points and haul Road crossing points, with a suitable maintenance regime introduced.				
9-5.627	<p>Concern about the proposed haul road for the Project which connects to Mill Lane, Fordham (from Pylon TB49 to TB59) (e.g. safety concerns at junction due to the steep incline either side of Fordham Bridge and restricted visibility on the west side when descending from the south; required removal of trees in Fiddlers Wood for visibility; as it passes through a floodplain; impact on FP4 that passes north-south along the western boundary of Fiddlers Wood; proximity to the river and Ford Street Conservation Area; safety concerns at junction with the A1124 on Ford Street Hill; safety concerns at junction with Green Lane and associated construction works; impact on residents where the haul road is proposed to be sited to the west of the Project between Pylons TB54 and TB55; impact on listed buildings and residences at the Brook Road crossing between Aldham Hall and Brick Cottages)</p>	<p>National Grid has been working with the local highway authorities and National Highways as we develop our access proposals for the Project. Our assessments have included visibility and highway geometry. As part of the design development of the Project, the proposed bellmouth junctions have undergone Road Safety Audits, and mitigation measures have been developed to include temporary traffic management measures such as speed limit reductions and/or temporary signals. The visibility splays have been reduced to 50 mph to minimise tree removal on Fiddlers Hill.</p> <p>The effects of works in proximity to watercourses and in floodplains have been assessed in the Environmental Statement (ES), Chapter 12: Hydrology, Land Drainage and Flood Risk (document reference 6.12) and within the Flood Risk Assessment (document reference 7.9) and measures to mitigate any impacts are included within the Outline Code of Construction Practice (CoCP) (document reference 7.2).</p> <p>An Outline Public Rights of Way (PRoW) Management Plan (document reference 7.6) has been prepared and submitted with the application for development consent. Environmental Statement (ES) Chapter 16: Traffic and Transport (document reference 6.16) provides an assessment of the pedestrian, cyclist and horse-rider delays for the PRoW if it is expected that there would be a temporary maximum increase in journey length/time for more than four weeks in any 12-month period. The Outline PRoW Management Plan has defined the management of the PRoW in the area around pylons TB49 to TB59.</p>	X		X	

The PRow would be temporarily closed with managed access, that is, allowing a safe passage throughout for PRow users.

Additionally, during certain types of works, some of the PRow would be temporarily closed and diverted following a similar alignment to the existing PRow. Footpath Aldham 3 and 12 would be temporarily diverted. As a result, no significant increase in journey time and trip length is expected. Therefore, the magnitude of impact on the PRow is considered negligible or minor and the overall effect has been classified as not significant.

Environmental Statement (ES) Chapter 16: Traffic and Transport (document reference 6.16) and Transport Assessment (document reference 7.11) have included an analysis of the personal injury collision data along the full length of the links along Primary Access Routes (PARs) and junctions including A1124 Halstead Road to identify patterns in collision locations in order to establish any areas of safety concern. The analysis has not identified collision clusters or other areas of safety concern. Furthermore, the expected maximum number of construction vehicles during the construction peak period (worst-case) peak hour is of two-way 42 Heavy Goods Vehicles (HGVs) over a short duration of time e.g. 1 week.

The overall effects on road user safety from the construction phase would be short-term minor adverse and not significant. Therefore, it is reasonable to conclude that the Project would have no substantial adverse impact on road safety along the A1124 Halstead Road Conservation areas within 2 km of the Order Limits are considered in the historic environment assessment for the Project, Fordstreet Conservation Area is therefore included in the assessment, which considers both direct and indirect impacts. The impacts of the Project on the historic environment are assessed in Chapter 11: Historic Environment (document

		reference 6.11) of the Environmental Statement (ES). The assessment considers the potential impact on archaeology, historic buildings and historic landscapes and includes assessment of potential for physical impact and impact through change to setting that affects the value of a heritage asset. Regarding Fordstreet, both the construction and operation phases of the Project would have a significant impact on the conservation area. The assessment of conservation areas is supported by setting surveys, as documented in the ES, Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1). The Project has engaged with Historic England and relevant planning authorities on aspects relating to heritage, including appropriate mitigation measures and techniques and to take their views into account during Project development.				
9-5.628	Concern about impact of flooding on proposed access road for the Project at Ipswich Road / Gun Hill (e.g. as flooding is frequent)	<p>Prior to construction, surveys would be undertaken to identify drainage systems within working corridors. The Project would secure a commitment to maintain the functionality of these systems, or provide for temporary alternative drainage measures, such that there is no increase in surface water flood risk within or downstream of working areas.</p> <p>National Grid has engaged with the Environment Agency as part of the Project development. All works in the River Stour flood plain would be subject to a Flood Risk Activity Permit, which would require agreement with the Environment Agency.</p> <p>The design includes measures to mitigate flood risk, including an allowance for additional laydown areas to the north and south of the flood plain (e.g. for temporary soil storage). The design also includes space for drainage attenuation ponds, to control the rate of discharge of surface water from the works to a rate agreed with the relevant Lead Local Flood Authorities.</p>			X	
9-5.629	Suggest that the A134 should not be used for access for the Project and access should instead be direct	National Grid has been working with the local highway authorities and National Highways to develop access	X		X	

	from the A12 via a new temporary slip-road from the A12 at the point the route crosses the A12 between Colchester and Langham. If secondary access is required, suggest that the Project should be accessed from Colchester Park and Ride	<p>proposals for the Project. Our assessments have not identified a suitable alternative access route to this section of temporary haul road. As part of the pre-application process National Grid has engaged with the local authorities, and their highways teams and National Highways to understand and gain information on their local road networks including the A134 and A12.</p> <p>A new temporary slip-road from the A12 (strategic Road Network) is not acceptable to National Highways on highways safety grounds. of. A direct access from the A12 using Perry Lane was discounted through assessment as it did not comply with National Highways requirements of new accesses of their assets. As part of the design development of the Project, mitigation measures for road safety have been developed as the designs progress.</p>				
9-5.630	Suggest that farm machinery should be allowed to used the same tracks as the haul road at Pylons TB78 and TB79 where they utilise existing farm tracks (plan provided by respondent), and that crossing points are provided to enable access to the other half of respondent's farm. This access should be available during early and late hours, especially during critical harvest seasons	<p>There would be some periods during construction, where landowners would be unable to use access tracks and crossing points. The Project team would look to communicate these periods with the landowners and seek to avoid (or agree set times for access) times of harvest.</p> <p>Crossing points would be installed where required and reasonably practical. If a landowner would like to discuss this further, they should contact the Projects Lands Team.</p> <p>Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.</p> <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD.</p>			X	
Project Finance / Costs						
9-5.631	Suggest that the Secretary of State should weigh the cost-benefit of the use of underground cables in the	In line with paragraph 2.9.24 of National Policy Statement (NPS) EN-5, as part of determining the			X	

	Colne Valley, rather than National Grid, as per Section 2.9.24 of National Policy Statement (NPS) EN5 (e.g. even if determined that the relationship of the Colne Valley to the Dedham Vale is such that impacts do not also affect the National Landscape (formerly the Dedham Vale Area of Outstanding Natural Beauty (AONB))	application for development consent, the Secretary of State will consider undergrounding of cables only where the benefits, such as reduced visual or environmental impacts, clearly outweigh the additional costs and technical challenges.				
Public Right of Way (PRoW)						
9-5.632	Concern about negative impact on PROW / footpaths / cycle paths / bridleways	<p>Through routeing and siting, National Grid has sought to reduce, as far as practicable, impacts and disruption to Public Rights of Way (PRoW).</p> <p>The iterative design process identified the existing PRoW network and their wider connectivity and sought where practicable to reduce and where possible remove impacts to PRoW.</p> <p>Effects on PRoW would be mitigated where possible, maintaining access where practicable, with closures as a last resort. We will continue to engage with relevant stakeholders on the PRoW network to enable feedback and input to be considered as the Project progresses. An Outline Public Rights of Way (PRoW) Management Plan (document reference 7.6) is submitted with the Development Consent Order (DCO) application.</p>	X	X	X	
9-5.633	Concern about the impact of the Project on the Essex Way	<p>An Outline Public Rights of Way (PRoW) Management Plan (document reference 7.6) has been submitted as part of this Development Consent Order (DCO) application and sets out management measures and mitigation measures for each PRoW, including the Essex Way, affected by the construction activities and operation of the Project.</p> <p>The impact on PRoW (including Essex Way) from the construction and operation of the Project are presented in Environmental Statement (ES), Chapter 16: Traffic and Transport (document reference 6.16) and ES</p>	X	X	X	

		<p>Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15).</p> <p>The Outline PRow Management Plan has defined the management of the PRow along the Essex Way, in particular the PRow Langham 3, Great Horkesley 31, Fordham 33, Fordham 35, Great Tey 36, Great Tey 42, White Notley 15, Great And Little Leighs 29 and Great And Little Leighs 40.</p> <p>Most of the above PRow would be temporary closed for the duration of the works with managed access, that is, allowing a safe passage throughout of the PRow users.</p> <p>The footpaths Great Tey 36, Great Tey 42 and Great And Little Leighs 40, and bridleway White Notley 15 would be temporary diverted during the construction period. Footpath Great Tey 36 would have a diversion of less than 5 minutes during 2 days and Great Tey 42 would have a diversion of less than 2 minutes during 1 week. The diversion of Great And Little Leighs 40 would follow a similar alignment to the existing footpath, resulting in a minimum increase in journey time and distance.</p> <p>As a result, the magnitude of impact on the PRow along the Essex Way is considered negligible and the overall effect has been classified as not significant.</p>				
9-5.634	Suggest that a study on alternative routes and safety measures for impacted footpaths in Little Bromley is undertaken (Public Right of Way (PRow) 13, 14, 16, 17, 21) due to concerns that prosed footpath closures could harm residents' mobility and safety	<p>An Outline Public Rights of Way (PRow) Management Plan (document reference 7.6) has been submitted as part of the Development Consent Order (DCO) application. This document sets out management measures and mitigation measures for each PRow affected by the construction activities and operation of the Project.</p> <p>The Outline PRow Management Plan (document reference 7.6) currently proposes parts of some footpaths to be permanently stopped up i.e. footpaths Little Bromley 7 and Little Bromley 15. The permanent stopping up only relates to the short section at the end of</p>	X			

		<p>the PRow where it will tie into the widened carriageway. As such it is just shortening the PRow to meet the widened highway.</p> <p>While other footpaths will be stopped up with permanent diversions in place i.e. footpaths Little Bromley 13 and Little Bromley 14, which will be subject to a very minor diversion to connect with provided perpendicular crossing facilities, ensuring visibility and user safety.</p> <p>Both these diversions will be subject to Road Safety Audits (this has been requested by Essex County Council).</p> <p>It is also worth also noting that footpaths Little Bromley 16 and 17 will be managed during construction and will therefore remain open, with appropriate safety measures in place. Also, Little Bromley 21 will not be affected by the Project.</p> <p>As a result, the magnitude of impact on the PRow is considered negligible and the overall effect has been classified as not significant.</p>				
9-5.635	Criticism that Pylons JC9 and JC10 within the parish of Sproughton run parallel with a Public Right of Way (PRow) which also has extending views across the countryside	<p>National Grid has sought to reduce environmental impacts, as far as practicable, through routeing and siting and an ongoing iterative design process which has taken on board feedback at different stages of the Project. This includes landscape and visual impacts and impacts and disruption to Public Rights of Way (PRow) and cycle routes.</p> <p>The potential impacts and effects to PRow and cycle routes from the Project during the construction and operation have been assessed as part of the Environmental Impact Assessment (EIA) and are presented in the Environmental Statement (ES), Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) and ES Chapter 16: Traffic and Transport (document reference 6.16). Mitigation measures are identified within the Outline Public Rights of Way Management Plan (document reference 7.6)</p>			X	

		<p>Similarly, the impact of the pylons on views, including views from recreational receptors using PRoW and cycle routes, and views experienced by people moving, living and working within the Project's study area, are captured by the Landscape and Visual Impact Assessment (LVIA) which has also been undertaken as part of the EIA and presented in the ES Chapter 13: Landscape and Visual (document reference 6.13). The LVIA includes an assessment on both landscape character and visual amenity and sets out the potential landscape and visual effects (including those at Sproughton in Section C of the Study Area). It identifies areas for potential mitigation planting to reduce visual impacts to local receptors. The Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) includes details regarding the planting proposals.</p>				
9-5.636	<p>Criticism of the visual impact of Pylons JC11 and JC013 (from the brow of Burstall Lane) which is otherwise an uninterrupted skyline towards Hintlesham, and criticism that these overhead lines run parallel with a Public Right of Way (PRoW)</p>	<p>National Grid has sought to reduce environmental impacts, as far as practicable, through routeing and siting and an ongoing iterative design process which has taken on board feedback at different stages of the Project. This includes landscape and visual impacts, and impacts and disruptions to Public Rights of Way (PRoW) and cycle routes.</p> <p>The potential impacts and effects to on PRoW and cycle routes from the Project during the construction and operation have been assessed as part of the Environmental Impact Assessment (EIA).</p> <p>The impact of the pylons on views, including views from recreational receptors using PRoW and cycle routes, and views experienced by people moving, living and working within the Project's study area, are captured by the Landscape and Visual Impact Assessment (LVIA) which has also been undertaken as part of the EIA and presented in the Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13). The LVIA includes an assessment on both landscape character and visual amenity and sets out the potential</p>			X	

		landscape and visual effects (including those at Sproughton and near Burstall Lane in Section C of the Study Area). It identifies areas for potential mitigation planting to reduce visual impacts to local receptors. The Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) includes details regarding the planting proposals.				
Requests						
9-5.637	Request that consultation is rearranged for Colchester Football Stadium (i.e. to avoid traffic congestion and challenges with parking)	<p>The statutory consultation offered multiple ways for people from different demographics to get involved, including extensive online resources.</p> <p>Public information events were held at locations across the route in venues that were size appropriate, accessible and had availability for the length of time National Grid would need the space. The list of event venues and timings were shared with host local planning authorities ahead of statutory consultation. Access to and availability of public transport was one of a number of factors considered in venue choice.</p> <p>Three events were held until 7 pm, after traditional working hours. We also held six webinars for those who could not attend any of the in-person events as well as one youth webinar and two drop in events at the University of Essex and University of East Anglia. All events were signposted and had signage to the entrance which was placed as prominently as possible, while allowing for health and safety considerations.</p>			X	
9-5.638	Concern about the use of underground cables at respondent's property (address provided by respondent) due to the topography of the area, the high pressure gas main, and proximity to Blackbrook stream / Request for a qualified National Grid engineer to visit the respondents	Underground cables have been selected for this area to reduce the visual impact on Dedham Vale National Landscape. National Grid are aware of the high-pressure gas main and the design for the underground cables would be in accordance with standards and in consultation with the asset owner. The crossing of Black			X	

		<p>Brook has been carefully considered, and the Project has undertaken a Flood Risk Assessment (document reference 7.9) to ensure that any impacts on waterways are minimised where possible and mitigated when not. Should consent be granted for the Project, measures would be put in place by the contractor during construction to minimise impacts of the works.</p>				
9-5.639	<p>Request for information to understand if the deviation to the Project route either side of the A1124 is due to new housing, and whether new housing should instead not be agreed to in this location</p>	<p>There is new housing that already has planning consent and is being built to the southeast of the ancient woodland known as Fiddlers Wood which restricts routeing to the east of the woodland. There is no other housing proposal that is restricting routeing that National Grid is aware of, but we do note that alternatives to the east of Gallows Green are less preferred because it would result in much closer proximity to residential properties where there are reduced separations.</p>			X	
9-5.640	<p>Request for respondent to be kept up to date with construction timescales, request that the access routes are coordinated with the respondent (if access is needed), and request for clear communication regarding any potential disruptions and assurances that all activities will be conducted with minimal impact on respondent's property and operations</p>	<p>National Grid notes the respondent's feedback. Outline Code of Construction Practice Appendix E - Community Engagement and Public Information (document reference 7.2) sets out the communications channels and approach to community engagement during the construction of Norwich to Tilbury, should consent be obtained. A community relations team would be appointed to engage with local residents and provide dedicated community relations and external communications support. The Project website will be maintained and managed by the community relations team to continue to provide up to date information to stakeholders. The community relations team would work closely with the Main Works Contractors to ensure all information is up to date and communicated in a timely manner to interested parties, local communities and affected landowners. A dedicated team at Fisher German would manage engagement around land and property affected by the Project, including for when access may be required and will be contactable via a freephone telephone number (0808 175 3314), email</p>			X	

		(Norwich-Tilbury@fishergerman.co.uk) and post (Norwich to Tilbury Lands Team at Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD).				
9-5.641	Request for National Grid to confirm why there are two legs around Stratford St Mary, and why it is necessary to do two sides of a triangle to get to a station in Ardleigh	<p>A split in the Order Limits is necessary to ensure sufficient space is available for the installation of the necessary underground cables. The eastern corridor is constrained by a gas pipeline to one side and water body to the other and the western route by a Source Protection Zone for a water abstraction and the use of both corridors may well be necessary but is subject to conditions encountered during construction in the use of a trenchless installation technique. In terms of the siting of the East Anglia Connection Node (EACN) substation which provides a connection point for North Falls and Five Estuaries wind farms and the Tarchon project.</p> <p>National Grid has previously considered a number of alternative sites for the EACN substation during the initial siting work as set out in the Corridor and Preliminary Routeing and Siting Study (CPRSS). In response to feedback (as set out in the Design Development Reports published in 2023 and 2024 (available on the project website)) we also considered an alternative site to the west of the A12. The decision making about siting balances the environmental effects, technical consideration and cost arising from the substation and the connections to it for National Grid and the three customer's infrastructure. We have reviewed this again and as set out in the 2025 Design Development Report (document reference 5.15) continue to consider the EACN substation as proposed to be the preferred location on the basis that an alternative further west presents multiple aspects of uncertainty and construction risk, reduces future flexibility, increases risks to programme for the customers and National Grid with potential for substantial constraint costs if programme is delayed.</p>			X	

9-5.642	Request for National Grid to confirm the style of Pylon TB58, and request for National Grid to confirm why this pylon has been moved	All pylons for the Project would be lattice pylons. TB58 has not been moved since the 2023 preferred draft alignment.			X	
9-5.643	Request for National Grid to purchase respondent's property due to significant impact the Project would have on their business	All affected landowners would be compensated on a fair and reasonable basis for any land and/or rights acquired, and any impacts on any retained property would be considered in line with the Compensation Code. If a member of the public has a concern or queries on how the Project may or may not impact their business, they should contact the Project Lands Team to discuss: Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314. Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD.			X	
9-5.644	Request for National Grid to confirm how respondents property on Coggeshall Road, Kelvedon (address provided by respondent) is going to be affected by the Project / Request for National Grid to confirm the purpose of the draft order limits that overlap with respondents land, and request for National Grid to confirm there are no proposals to compulsory purchase any of the land within the red lines at the respondents property	There is the potential, based on induced currents from the 400 kV overhead line, that alternating current mitigation measures may need to be installed to the ferrous pipeline operated by Cadent G at Coggeshall Road. The scope and extent of such mitigation measures would be dependent on the final design arrangements of the Project which would continue to evolve within the parameters of confirmed Limits of Deviation. Factors including crossing angle and clearance height, length of parallelism, site specific soil resistivity etc combine to define the requirement for mitigation. The mitigation itself is typically achieved by the installation, alongside the ferrous pipeline (in an area which is likely to have been previously disturbed during construction), of additional earthing which extends away from the crossing point. Consultation between National Grid and the relevant utility providers is ongoing and will confirm the requirement for installed mitigation, based on the final Project design arrangements, which would			X	X

		<p>be implemented by the relevant utility provider under their existing utility operation and maintenance provisions. The assets in question are within the public highway therefore would not impact the respondent's property.</p> <p>The Order Limits have been amended to remove the respondent's property from the Order Limits and as such no rights will be sought over their land.</p>				
9-5.645	Request for National Grid to clarify what the constraint at the railway and road crossing is (near Ardleigh) / Criticism that the Project already crosses the railway line in two places (near Ardleigh)	<p>There is a need to utilise trenchless crossing techniques to pass the cables under the railway to the east of Ardleigh. The road would be crossed using open cut techniques with traffic management to maintain access. Techniques such as Horizontal Directional Drilling (HDD) require more space than is available to allow for two connections to be made by underground cable. The use of other trenchless techniques (potentially including headhouses for ventilation) may reduce the space required to allow cables both ways but bring risks of unacceptability to Network Rail. Considering the potential effects of overhead line for one of the connections against the policy tests of National Policy Statement (NPS) EN-5, we do not consider a change to underground cable for both connections past Ardleigh to be justified given the additional cost.</p>			X	
9-5.646	Request a full Environmental Impact Assessment (EIA) particularly focusing on groundwater and well water impacts, as well as a detailed traffic management plan that addresses the protection of the War Memorial (including the Heritage Hedgerow opposite) to ensure the proposed permanent access road in the centre of Little Bromley does not impact water supply, damage heritage, and cause unacceptable disruption to residents	<p>The Development Consent Order (DCO) application is accompanied by an Environmental Statement (ES) (document reference Volume 6: Environmental Statement) which has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 ('the Infrastructure EIA Regulations') and in consultation with the relevant local planning authorities and statutory environmental bodies. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation of the Project and recommends appropriate mitigation to reduce effects.</p>	X			

		<p>Appendix 9.3: Groundwater Baseline and Qualitative Groundwater Risk Assessment (document reference 6.9.A3) is included to support Chapter 9: Contaminated Land, Geology and Hydrogeology (document reference 6.9) of the ES which provides an assessment of the potential effects on groundwater from the Project and includes impacts on groundwater receptors such as water supplies.</p> <p>ES Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1) was updated to include the newly listed war memorial (Chapter 11: Historic Environment (document reference 6.11) and Appendix 11.2: Historic Environment Assessment Tables (document reference 6.11.A2)). The mitigation measures in the Outline Code of Construction Practice (CoCP) (document reference 7.2) would apply to the war memorial and historic hedge.</p> <p>During construction standard construction mitigation would be adopted as detailed in the Outline CoCP. Changes to the setting of the assets (both designated and non-designated) would be temporary and would be reversed once the construction phase is completed. No additional mitigation measures are proposed during the construction phase as any measures designed to lessen the visual impact of the Project would be of a scale that would visually adversely alter the setting of the asset. During the operation phase there is no proposed mitigation.</p>				
9-5.647	Request that National Grid investigate the long-term impact and anticipated changes to traffic behaviour based on the widening of Bentley Road	National Grid do not believe that the proposed widening on Bentley Road would lead to an increase in the long-term traffic. The short sections of selected widening where the road is narrow would only extend from the A120 up to the outer edge of Little Bromley, the roads north of the village would remain unchanged. None of the proposed mitigation works would lead to changing the classification of the C road to a B road and the B1035 would still remain the dominant connection route.	X			

9-5.648	Request for restrictions in the use of the roads in and around the area of Little Bromley and surrounding villages	<p>Following comments received at consultation, including feedback from the local highway authority, National Grid has reviewed this proposed Primary Access Route. Our assessments have not identified a suitable alternative access route to this section of temporary haul road. As part of the pre-application process National Grid has engaged with the relevant authorities, and their highways teams and National Highways to understand and gain information on their local road networks. This information has been used to inform and guide the drafting of the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) for the Project that accompanies the Development Consent Order (DCO) application. The Outline CTMP (document reference 7.3) provides details about the proposed construction access strategy that has been developed to manage the impact of construction vehicles on the Public Highway and sensitive receptors, using a combination of more suitable Local Road Network connections from the Strategic Road Network, and temporary haul roads for access along the proposed alignment. The Transport Assessment (document reference 7.11) has not identified any requirements for restrictions in the use of the roads around Little Bromley, refer to Chapter 16: Traffic and Transport (document reference 6.16) of the Environmental Statement (ES).</p> <p>National Grid has worked with the local highway authorities and National Highways to develop our access proposals for the Project. Our assessments have included visibility and highway geometry. The proposed access arrangements in the vicinity of Little Bromley is for construction traffic not to pass through the village of Little Bromley and instead is proposed to be routed via a private access road between Bentley Road and Ardleigh Road. Proposals also include an off-carriageway cycleway/footway facility along Bentley Road for use during construction.</p>	X			X
---------	--	--	---	--	--	---

9-5.649	Request that the Perry Lane Haul Road should remain open as it comes off the public highway, rather than National Grid using the respondents land indefinitely to access the fields in Langford Hall Farm to the south and the woodland and other land to the north of the Blackbrook	<p>The design proposals presented at statutory consultation did not propose a new direct access from the A12 in this location as this would not meet the National Highways criteria for an acceptable new direct access onto their Strategic Road Network and would be considered to represent a safety risk to a high speed road.</p> <p>National Grid has carefully developed the proposals for access for Perry Lane. Our suggested mitigation requirements at this stage are associated with the less frequent movements of cable drum vehicles, which are non-standard vehicles. In addition to being escorted, the anticipated mitigation works required at Perry Lane to allow for the movement of cable drums are limited to the temporary removal of a traffic island and traffic management.</p> <p>National Grid has explored opportunities to removing this access route from Perry Lane. However, an alternative is unavailable. Therefore, the Primary Access Route using Perry Lane is required to be maintained.</p>			X	
9-5.650	Request clarification on the underground cables proposed close to St Mary's Church as well as the Cultural Heritage Assessments that National Grid have undertaken (e.g. will National Grid use horizontal directional drilling under the ancient woods, and will there be trenchless crossing)	<p>Following feedback, National Grid has developed an alternative alignment that avoids the trenchless crossing below the woodland.</p> <p>National Grid has undertaken a detailed routeing and siting exercise to limit, as far as practicable, the effect of the Project on heritage assets, including the Grade II listed St Mary's Church (1223452). In response to statutory-consultation feedback and regular meetings of the Archaeology Working Group, the overhead alignment in this locality was refined and is now proposed for undergrounding. Placing this stretch underground removes the need for new lattice pylons in the immediate view of the church, thereby reducing visual change to its setting.</p> <p>The potential physical and setting impacts of the underground section were assessed in accordance with the methodology set out in ES Chapter 11: Historic</p>	X		X	

		<p>Environment (document ref 6.11) and the Historic Environment Baseline Report (Appendix 11.1, ref 6.11 A1). The assessment approach draws on established national guidance such as National Planning Policy Framework (NPPF), Historic England Good Practice Advice Note 3, and was developed through engagement with Historic England and the relevant Local Planning Authorities at scoping and subsequent thematic working-group meetings. Baseline data included HER records, historic mapping, LiDAR, targeted walk-over survey, geophysical survey and archaeological trial-trenching undertaken in the surrounding fields.</p> <p>Mitigation for archaeological remains potentially affected by cable-trench excavation would be secured through the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5) and the Outline Code of Construction Practice (CoCP) (document reference 7.2).</p> <p>The assessment for St Mary's Church concludes that there would be a temporary minor adverse significance of effect during the construction phase and a neutral significance of effect during operation.</p> <p>No additional mitigation measures are proposed during the construction phase as any measures designed to lessen the visual impact of the Project would be of a scale that would visually adversely alter the setting of the asset.</p>				
9-5.651	Request that access is maintained from Ardleigh Road to Hall Farm (location F on plan provided by respondent), requiring crossing points of the road if fenced or if the new road can be located on top of the existing track and the use shared	<p>National Grid notes the respondent's feedback. We've avoided located proposed haul roads over existing PRoWs as this creates a safety conflict point between pedestrians and construction works. The contractor would be required to maintain access to the fields throughout construction rather than causing more disruption by creating new entrances in field boundaries. Any deviation from this strategy would be agreed with the landowner.</p>			X	

9.5-652	Comment supportive of changes made to the Project made by National Grid so that underground cables are now being used to the south of Knowles Barn, as opposed to through respondent's paddocks and garden / Concern that if this change were to be reverted by National Grid, the respondent would be entitled to significant compensation	National Grid notes the respondent's feedback			X	
Substation						
9-5.653	Criticism that National Grid only show the East Anglia Connection Node (EACN) from their perspective and not the two other connection sites for the wind farms	National Grid has published and consulted on plans for the Project, including the proposed East Anglia Connection Node (EACN) substation. The wind farm connections, including the connection sites, do not form part of the Project.			X	
9-5.654	Suggest that the East Anglia Connection Node (EACN) is relocated further west (e.g. to allow the Project to adopt a more direct alignment) / Suggest that the East Anglia Connection Node (EACN) should be relocated on a more direct route, rather than the Project diverting to Ardleigh for the East Anglia Connection Node (EACN) / Criticism of "dog-leg" of the Project to Ardleigh / Little Bromley	<p>National Grid has previously considered a number of alternative sites for the East Anglia Connection Node (EACN) substation during the initial siting work as set out in the Corridor and Preliminary Routeing and Siting Study (CPRSS). It was also considered in response to feedback as set out in the Design Development Reports published in 2023 and 2024 (available on the Project website) where we considered an alternative site to the west of the A12. The decision making about siting balances the environmental effects, technical consideration and cost arising from the substation and the connections to it for both National Grid and the North Falls and Five Estuaries wind farms and the Tarchon project.</p> <p>We have reviewed this again and as set out in the 2025 Design Development Report (document reference 5.15) continue to consider the EACN substation as proposed to be the preferred location on the basis that an alternative further west presents multiple aspects of uncertainty and construction risk, reduces future flexibility, increases risks to programme for the</p>			X	

		customers and National Grid with potential for substantial constraint costs if programme is delayed.				
9-5.655	Suggest that the East Anglia Connection Node (EACN) is relocated from the east of Ardreigh to the west of Ardreigh (e.g. to remove the need to use underground cables between Langham and Ardreigh, and to avoid the need for a section of overhead line between Ardreigh and Great Horkesley, and to avoid the Project crossing the A12)	<p>National Grid has previously considered a number of alternative sites for the East Anglia Connection Node (EACN) substation during the initial siting work as set out in the Corridor and Preliminary Routeing and Siting study (CPRSS) and in response to feedback as set out in the Design Development Reports published in 2023 and 2024 (available on the Project website) considered an alternative site to the west of the A12. No other suitable sites west of Ardreigh have been identified. The decision making about siting balances the environmental effects, technical consideration and cost arising from the substation and the connections to it for National Grid and the North Falls and Five Estuaries wind farms and the Tarchon project.</p> <p>We have reviewed this again and as set out in the 2025 Design Development Report (document reference 5.15) and consider the EACN substation, as proposed, to be the preferred location on the basis that an alternative further west presents multiple aspects of uncertainty and construction risk, reduces future flexibility, increases risks to programme for the customers and National Grid with potential for substantial constraint costs if programme is delayed.</p>			X	
9-5.656	Criticism that the infrastructure requirements of moving power from the North Sea to the East Anglia Connection Node (EACN) Substation in Ardreigh is being treated as a completely different project to Norwich to Tilbury / Request from respondent to obtain a copy of the plans for this separate project	<p>National Grid has published and consulted on plans for the Project, including the proposed East Anglia Connection Node (EACN) substation. The infrastructure requirements of connecting electricity from the North Sea to the proposed EACN substation form parts of different projects and do not form part of the Project.</p> <p>Details of the separate projects proposed to connect into the EACN substation can be found on their websites. These include proposals by Tarchon Energy (tarchonenergy.net), Five Estuaries Offshore Wind Farm</p>			X	

		(fiveestuaries.co.uk), and North Falls Offshore Wind Farm (northfallsoffshore.com).				
Technology / Operations						
9-5.657	<p>Concern about the impact of the Project on the existing Lawford Substation, including the following:</p> <ul style="list-style-type: none"> - The impact (if any) on existing infrastructure of the Lawford substation following connection to the North Falls Windfarm (including the use of the existing overhead cabling between The Tendering Hall Estate and the Lawford substation that was configured to carry the power generated by the Gunfleet Windfarm) - The future load requirement of the area currently served by the existing 132 kV overhead lines from Bramford to the existing Lawford substation 	<p>No adverse impact stemming from the Project is anticipated to the existing infrastructure of the UK Power Network Lawford 132 kV substation or the 132 kV overhead lines terminating here. Any specific concerns around North Falls infrastructure should be directed to the North Falls project team.</p> <p>National Grid has collaborated closely with UK Power Network and the future load requirement of the area and its distribution network assets will not be adversely affected.</p>			X	
Tourism						
9-5.658	Concern about impact of the Project on tourism	<p>Through routeing and siting, National Grid has sought to avoid, as far as practicable, locations important for leisure and tourism.</p> <p>Environmental Statement (ES) Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) presents an assessment on the potential impacts on tourism economy (during construction) and tourism assets (during construction and operation), including visitor accommodations. As part of this assessment, a range of measures have been considered throughout the construction phase of the Project to minimise disruption on tourism. These include: traffic management, signage and routeing measures. These are identified within the ES Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15), the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the</p>	X	X	X	

		Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).				
Visual Impact						
9-5.659	Concern about cumulative visual impact of the Project alongside existing overhead lines / concern about wirescape	<p>National Grid notes the feedback received and has taken it into consideration as part of the iterative design process.</p> <p>National Grid has liaised with UK Power Networks to understand opportunities for 132 kV network rationalisation. The Project includes proposals to replace certain sections of 132 kV overhead line connection with underground cable to rationalise the network and reduce potential for cumulative wirescape effects.</p> <p>A Landscape and Visual Impact Assessment (LVIA), presented in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13), has been undertaken as part of the Environmental Impact Assessment (EIA). Existing infrastructure (such as existing overhead lines) has formed part of the baseline environment for the Project to be assessed against, to identify if significant landscape and / or visual effects are likely to arise. The LVIA presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (Document Reference 6.13) sets out potential landscape and visual effects. The rationalisation of the existing 132 kV network in some areas forms part of the embedded landscape mitigation, as set out in Chapter 13.</p> <p>The findings and conclusions of the LVIA and other topics assessments have been considered within the Cumulative Impact Assessment, presented in ES Chapter 17: Cumulative Effects Assessment (document reference 6.17), lists the developments as part of the cumulative assessment. This chapter considers the landscape and visual effects of the Project cumulatively with other proposed developments that are being progressed.</p>			X	

9-5.660	<p>Concern that the Project will be unsightly / visually intrusive (including overhead lines, CSE compounds and substations) / Concern that the Project will cause a negative impact on views</p>	<p>National Policy Statement (NPS) EN-5 makes it clear that the Government considers overhead lines to be appropriate and acceptable in most instances, although it recognises that there may be, at particularly sensitive locations, potential adverse landscape and visual impacts of an overhead line that make it inconsistent with our duties and relevant planning policy.</p> <p>The Dedham Vale National Landscape (previously an Area of Outstanding Natural Beauty (AONB)) designation is one such location where underground cable technology is proposed with the extent of underground cabling extending beyond the boundary in response to the potential for the Project to affect the National Landscape. Our proposals include a total of approximately 20 km of underground cable through and in the vicinity of the Dedham Vale National Landscape, including a section at Great Horkesley to reduce the changes in views and setting of the National Landscape from within and adjacent to its designated boundary.</p> <p>Underground cabling is also proposed for a short section of 400 kV overhead line crossing near Fairstead.</p> <p>Cable Sealing End (CSE) compounds are required to facilitate sections of underground cable, and the proposed East Anglia Connection Node (EACN) substation is required to connect to customers and the proposed Tilbury North Substation is required to connect the Project into the existing Tilbury Substation. These components have been carefully sited taking into consideration Horlock Rules including the potential for landscape and visual effects.</p> <p>The higher cost of underground cables to bill paying consumers, and the environmental implications of installing underground cables and maintaining them at locations outside the Dedham Vale National Landscape, are not considered to be justifiable in the context of national policy or National Grid's statutory duties, which include the need to be economical and efficient.</p>	X	X	X	
---------	---	--	---	---	---	--

		<p>A Landscape and Visual Impact Assessment (LVIA), presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13), has been undertaken as part of the Environmental Impact Assessment (EIA). The LVIA includes an assessment on both landscape character and visual amenity and identifies areas for potential mitigation planting around substations and CSE compounds to reduce visual impacts to local receptors. The Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) includes details regarding the planting proposals.</p>				
9-5.661	<p>Concern about wirescape / concentration of infrastructure at the southern boundary of the Dedham Vale National Landscape (previously known as the Dedham Vale Area of Outstanding Natural Beauty (AONB))</p>	<p>National Grid notes the feedback received and all feedback has been taken into consideration as part of the iterative design process.</p> <p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the Environmental Impact Assessment (EIA). Existing infrastructure (such as existing overhead lines) has formed part of the baseline environment for the Project to be assessed against, to identify if significant landscape and / or visual effects are likely to arise. The LVIA sets out the potential visual effects and identifies areas for potential mitigation planting to reduce visual impacts to local receptors, for example around the East Anglia Connection Node (EACN) substation. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13). The Landscape and Ecological Management Plan (LEMP) (document reference 7.4) includes details regarding the planting proposals around the EACN and Great Horkeley CSE compounds.</p> <p>Section 85 of the Countryside and Rights of Way (CROW) Act (2000) specifies relevant authorities must seek to further the purpose of conserving and enhancing the natural beauty of National Landscapes (Areas of Outstanding Natural Beauty) when carrying out functions</p>			X	

		<p>in relation to or affecting land within a National Landscape or its setting.</p> <p>National Landscapes – Duty to Seek to Further the Purposes Report (s85 Countryside and Rights of Way 2000) (document reference 5.10) sets out the current status of National Grid’s consideration of its duty as a relevant authority, in relation to the Project, to seek to further the purpose of the National Landscape. The approach taken has been discussed with relevant stakeholders and follows the guidance published by Defra in December 2024 ‘Guidance for relevant authorities on seeking to further the purposes of Protected Landscapes’.</p>				
9-5.662	Concern about the visual impact of Pylons JC27 to JC29 (e.g. on Chattisham, Raydon, Wenham Grange and Brimlin Wood)	<p>National Grid has sought to reduce, as far as practicable, impacts on the environment/countryside through routeing and siting and an ongoing iterative design process which has taken on board feedback at different stages of the Project. The iterative design process sought to avoid areas of highest concern, for examples through changes to the route alignment or changes to the method e.g. trenchless crossings. We have engaged with a range of stakeholders (including Statutory Environmental Bodies (SEBs) and relevant Local Planning Authorities) throughout the development of the Project design and environmental assessment work.</p> <p>The concerns raised relate to pylons JC27 to JC29 north of Little Wenham and south of Chattisham. Here, the alignment crosses a rural plateau landscape comprising arable farmland with blocks of woodland and scattered individual properties, such as those at Wenham Grange and Birch House Farm.</p> <p>It is unclear from the feedback what a preferred solution might be, other than not to have the alignment pass through this area. Paragraphs 5.4.105 - 5.4.114 of the April 2024 Design Development Report (available on the Project website) note that alternative alignments were</p>			X	

	<p>considered to the north, east and south, in addition to alternative locations for a Cable Sealing End (CSE) compound. The report summarises that 'Overall, it was concluded that a change of CSE compound location to the alternative site to the north of Wenham Grove but south of the disused railway is now preferred. This includes consequent adjustments to east and west overhead line and underground cable connections. The change reduces effects on the distant views from the National Landscape (previously Area of Outstanding Natural Beauty (AONB)), supports continued flight activity at Raydon Airfield as well as reducing effects on heritage assets. This reduction is considered to be required to be consistent with National Grids duties and relevant planning and heritage policies, with the Project representing the most economical way of achieving those aims locally.'</p> <p>Any shifts in the preferred alignment (north or south) would bring the alignment closer to nearby properties, potentially closer to the ancient woodland at Brimlin Wood in the north, or to the cluster of listed buildings at Little Wenham in the south. Routeing has sought to minimise effects on these where possible, including at the construction phase, by avoiding the highest areas of environmental value, such as ancient woodland. As such, this alignment remained preferred and was assessed as part of the Environmental Impact Assessment (EIA) for the Project.</p> <p>The results of this assessment are provided in the Environmental Statement (ES) that accompanies the Development Consent Order (DCO) application. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation (and maintenance) of the Project and recommends appropriate mitigation measures to reduce potential effects. This includes a Landscape and Visual Impact Assessment (LVIA), which includes an assessment of landscape and visual effects. The</p>				
--	--	--	--	--	--

	<p>approach to the LVIA follows professional guidance as set out in Appendix 13.1: Landscape and Visual Methodology (document reference 6.13.A1). This includes Guidelines for Landscape and Visual Impact (GLVIA3), as prepared by the Landscape Institute and the Institute of Environmental Management and Assessment. The LVIA is presented in ES Chapter 13: Landscape and Visual (document reference 6.13). The methodology and approach have been agreed with relevant stakeholders and the assessment prepared by qualified and experienced landscape professionals.</p> <p>Heritage Impact - National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project and has worked to minimise potential impacts on the historic environment, including listed buildings and conservation areas and their settings, landscape character and visual amenity through strategic routing and siting measures. Comprehensive assessments, including site visits and extensive desk-based research, to thoroughly evaluate the setting of the heritage assets and understand their value have been conducted. It has been assessed that Wenham Grange will only experience a minor adverse significance of effect (not significant) during both the construction and operation phases of the Project.</p> <p>Where impacts to heritage assets, including listed buildings and conservation areas, are expected during the construction phase, standard construction mitigation as outlined in the Outline Code of Construction Practice (CoCP) (document reference 7.2) will be implemented. The results of this assessment are provided in the Environmental Statement (ES) Chapter 11: Historic Environment (document reference 6.11). Ongoing collaboration with Historic England and relevant planning authorities has ensured a comprehensive approach to heritage-related matters, incorporating suitable mitigation measures and techniques based on their input.</p>				
--	--	--	--	--	--

9-5.663	<p>Criticism that the respondent has repeated National Grid's fall view analysis, and found that this under-represents the visual impact as only a subset of pylons are considered, but nevertheless clearly demonstrated the inadequacy of National Grid's assessment clearly showing that the visual impact of Pylons TB1-TB34 extends far beyond and much more widely than that set out by National Grid, affecting a significant portion of the National Landscape</p>	<p>A Zone of Theoretical Visibility (ZTV) map has been generated and illustrated to inform and accompany the Landscape and Visual Impact Assessment (LVIA) which includes an assessment of landscape and visual effects. The LVIA is presented in the Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13). The approach to the LVIA follows professional guidance as set out in Appendix 13.1: Landscape and Visual Methodology (document reference 6.13.A1). This includes Guidelines for Landscape and Visual Impact Assessment (GLVIA3), as prepared by the Landscape Institute and the Institute of Environmental Management and Assessment. The methodology and approach have been agreed with relevant stakeholders and the assessment prepared by qualified and experienced landscape professionals. The methodology sets out the approach to the production of the ZTVs and visualisations which accompany the LVIA.</p> <p>An appraisal of the theoretical extent to which the Project would be visible has been informed by establishing a ZTV, using specific computer software designed to calculate the theoretical visibility of the above ground elements of the Project including pylons, Cable Sealing End (CSE) compounds and substations.</p> <p>The ZTV has been used as a starting point in the assessment to provide an indication of theoretical visibility and has been ground truthed in the field so that the assessment conclusions better represent the potential visibility of the Project.</p> <p>Woodland blocks have been modelled into the ZTVs, using the National Forest Inventory mapping dataset which have been assigned a height of 15 m. This is considered a conservative approach to represent the likely screening/filtering effects of mature woodland. However, the ZTVs do not consider the additional screening and filtering effects of hedgerow and field trees, small copses or more recently planted trees,</p>			X	
---------	--	--	--	--	---	--

		<p>woodland and hedgerows which are found in many places throughout the Study Area. The ZTVs also will not account for any proposed planting within Environmental Areas around CSE compounds, substations and substation extensions.</p> <p>The ZTV of the proposed 400 kV overhead line (numbers of pylons) shows numbers of structures theoretically visible (within 10 km in each direction). The ZTV has been prepared based on proposed pylon positions. The theoretical visibility of individual pylons has been limited to a maximum distance of 10 km because this is considered to be a reasonable and proportionate and worst case approach for ZTV modelling. In most instances pylons are likely to be barely perceptible beyond 5 km and therefore unlikely to give rise to significant effects. This is because at 5 km distance, when viewed at arm's length, a 50 m tall pylon would appear to be approximately 6 mm high in the landscape. This is known as the apparent height of the pylon.</p> <p>Hence, whilst the ZTV indicates relatively widespread theoretical visibility, the subsequent assessment been refined by additional survey work to establish likely levels of visibility that are less than those illustrated by the ZTV.</p>				
9-5.664	<p>Criticism that the siting of the Cable Sealing End (CSE) compound at the junction of the B1508 and Crabtree Lane necessitates multiple gantries and pylons in a small area near to the Dedham Vale National Landscape (previously known as the Dedham Vale Area of Outstanding Natural Beauty (AONB)), and contrary to what is written in the 2023 Design Development Report is not sited within a valley (e.g. providing no significant screening for the National Landscape)</p>	<p>National Policy Statement (NPS) EN-5 states that the Government considers overhead lines to be appropriate and acceptable in most instances, although it recognises that that there may be, at particularly sensitive locations, potential adverse landscape and visual impacts of overhead line infrastructure that make it inconsistent with our duties and relevant planning policy.</p> <p>The National Landscape designation is one such location where there is a presumption that underground cable technology is adopted with the extent of underground cabling extending beyond the boundary in response to the potential for the Project to affect the</p>			X	

		<p>natural beauty of the National Landscape. Our proposals include a total of approximately 20 km of underground cable through and in the vicinity of the Dedham Vale National Landscape, including a section at Great Horkesley to reduce the changes in views and setting of the National Landscape from within and adjacent to its designated boundary.</p> <p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the Environmental Impact Assessment (EIA) which is provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application. The LVIA includes an assessment on both landscape character and visual amenity and sets out the potential landscape and visual effects of the Project, which includes consideration of the proposed Cable Sealing End (CSE) compound at the junction of the B1508 and Crabtree Lane. This also includes consideration of effects on Nationally Designated Landscapes. The LVIA is presented in ES Chapter 13: Landscape and Visual (document reference 6.13).</p>				
9-5.665	<p>Criticism that National Grid's conclusion that 'large skies' will be unimpacted is wrong due to proximity, and disagree that the Project will be screened due to trees (e.g. Crabtree Lane and Gladwins Farm are lower on the ridge and behind the Project)</p>	<p>National Policy Statement (NPS) EN-5 makes it clear that the Government considers overhead lines to be appropriate and acceptable in most instances, although it recognises that there may be, at particularly sensitive locations, potential adverse landscape and visual impacts of an overhead line that make it inconsistent with our duties and relevant planning policy.</p> <p>Dedham Vale National Landscape's designation is one such location where there is a presumption that underground cable technology is adopted with the extent of underground cabling extending beyond the boundary in response to the potential for the Project to affect the natural beauty of the National Landscape. Our proposals include a total of approximately 20 km of underground cable through and in the vicinity of the Dedham Vale</p>			X	

		<p>National Landscape, including a section at Great Horkesley to reduce the changes in views and setting of the National Landscape from within and adjacent to its designated boundary.</p> <p>Landscape and visual site surveys and viewpoint photography have been carried out, including the area around Little Horkesley and Great Horkesley. These surveys have informed the design of the Project and the landscape and visual impact assessment (LVIA) which has been undertaken as part of the EIA. The LVIA includes an assessment of the Project on landscape character and visual amenity including the consideration of Dedham Vale National Landscape. The LVIA is presented in ES Chapter 13: Landscape and Visual (document reference 6.13) and is supported by Appendix 13.5: National Landscape Assessment Study (document reference 6.13.A5) which considers impacts on the National Landscape and its special qualities. Appendix 13.5 is supported by Annex A: National Landscape Setting Study.</p> <p>The LVIA is supported by a viewpoint assessment from Crabtree Lane (Viewpoint 4.34, including a photomontage), and an assessment of effects in Visual Receptor Areas VRA D2 (Little Horkesley and Wormingford) and D3 (Great Horkesley and Horkesley Heath), which can be found in Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3). Viewpoint locations are shown on Figure 13.7 Visual Receptors and Viewpoints (document reference 6.13.F7). Landscape effects are presented in Appendix 13.2: Landscape Baseline and Assessment (document reference 6.13.A2).</p>				
9-5.666	<p>Criticism that National Grid documents state an average 1 to 40 Pylons will be visible from either side of the Dedham Vale with some areas being impacted with 40 to 60 Pylons visible (e.g. shown on page 65->67 of Volume II figures Part 10 of 27,</p>	<p>National Policy Statement (NPS) EN-5 states that the Government considers overhead lines to be appropriate and acceptable in most instances, although it recognises that that there may be, at particularly sensitive locations, potential adverse landscape and visual impacts of</p>			X	

Figure 13.8.1 to 13.811) / Concern that this is an understatement as there are artificial cut-offs meaning the true value looking out of the National Landscape could be more and all pylons on the opposite side of the Dedham Vale have been excluded due to this artificial cutoff

overhead line infrastructure that make it inconsistent with our duties and relevant planning policy.

Dedham Vale National Landscape designation is one such location where there is a presumption that underground cable technology is adopted with the extent of underground cabling extending beyond the boundary in response to the potential for the Project to affect the Natural Beauty of the National Landscape. Our proposals include a total of approximately 20 km of underground cable through and in the vicinity of the Dedham Vale National Landscape, including a section at Great Horkesley to reduce the changes in views and setting of the National Landscape from within and adjacent to its designated boundary.

A landscape and visual impact assessment (LVIA) presented in ES Chapter 13: Landscape and Visual (document reference 6.13) is also supported by Appendix 13.5: National Landscape Assessment Study (document reference 6.13.A5) which considers impacts on the National Landscape and its special qualities. The LVIA follows professional guidance as set out in Appendix 13.1: Landscape and Visual Methodology (document reference 6.13.A1), as agreed with relevant stakeholders and the assessment prepared by qualified and experienced landscape professionals. This includes GLVIA3, the 2013 third edition of the 'Guidelines for Landscape and Visual Impact Assessment' as prepared by the Landscape Institute and the Institute of Environmental Management and Assessment.

The methodology sets out the approach to the production of Zone of Theoretical Visibility (ZTV) mapping and visualisations which accompany the LVIA. The methodology also describes the LVIA study area and explains that more distant viewpoints up to 5 km from the Project have been considered where there is the potential for significant visual effects to arise beyond the 3 km study area buffer that has been applied to the proposed above ground infrastructure, for example

<p>where there are particularly sensitive visual receptors and where topography allows more far-reaching views including long distance views from Dedham Vale National Landscape.</p> <p>The ZTVs have been used as a starting point in the assessment to provide an indication of theoretical visibility and have been ground truthed in the field so that the assessment conclusions better represent the potential visibility of the above ground elements of the Project including pylons, Cable Seal Ending (CSE) compounds and substations.</p> <p>Woodland blocks have been modelled into the ZTVs, using the National Forest Inventory mapping dataset which have been assigned a height of 15 m. This is considered a conservative approach to represent the likely screening/filtering effects of mature woodland. However, the ZTVs do not consider the additional screening and filtering effects of hedgerow and field trees, small copses or more recently planted trees, woodland and hedgerows which are found in many places throughout the study area. The ZTVs also will not account for any proposed planting within Environmental Areas around CSE compounds, substations and substation extensions.</p> <p>The ZTV of the Proposed 400 kV Overhead Line (Numbers of Pylons) shows numbers of structures theoretically visible (within 10 km in each direction). The ZTV has been prepared based on proposed pylon positions. The theoretical visibility of individual pylons has been limited to a maximum distance of 10 km because this is considered to be a reasonable and proportionate and absolute worst case approach for ZTV modelling. In most instances pylons are likely to be barely perceptible beyond 5 km. This is because at 5 km distance, when viewed at arm's length (when arm's length is defined as 61 cm), a 50 m tall pylon would appear to be approximately 6 mm high in the landscape. This is known as the apparent height of the pylon. At a</p>				
--	--	--	--	--

		<p>distance of 3 km a 50 m tall pylon would appear approximately 1 cm when measured at arm's length.</p> <p>Whilst the ZTV indicates relatively widespread theoretical visibility, the subsequent assessment been refined by additional survey work to establish likely levels of visibility that are less than those illustrated by the ZTV.</p>				
9-5.667	Suggest that a viewpoint near Gosnalls Farm should be included in the Environmental Statement (ES) (south of viewpoint 3.20)	<p>We have engaged with a range of stakeholders (including Statutory Environmental Bodies (SEBs) and relevant Local Planning Authorities) throughout the development of the Project design and environmental assessment work, including the selection of viewpoint locations. The methodology detailing viewpoint selection is described in Environmental Statement (ES) Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3) Representative viewpoints have been used in places to inform the assessment, in this case VP3.20 Fenbridge Lane. Visualisations do not form the basis of professional judgements made in terms of anticipated significant effects, but they are useful tools in conveying examples of likely changes in views from a selected number of locations. Site survey work and desk top analysis have also informed the assessment of effects near Gosnalls Farm. This work has developed a greater understanding of the influence of the landscape on views.</p>		X		
9-5.668	Suggest that a viewpoint south of the cable Sealing End (CSE) compound should be included in the Environmental Statement (ES) (on the B1508)	<p>The viewpoint VP4.27: B1508 Colchester Road, near Grave Lodge, is located to the south of the Great Horkesley (Tilbury Side) CSE compound. The viewpoint assessment includes a photomontage visualisation of the Project and the compound, and has informed the assessment of effects presented in the Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13).</p>		X		
9-5.669	Suggest that a viewpoint south of Fordham is essential in the Environmental Statement (ES) /	<p>Appendix 13.6: Arboricultural Impact Assessment (AIA) of the Environmental Statement (ES) (document</p>		X		

	Criticism that it the noted safety implications are unclear	reference 6.13.A6) identifies all trees which have the potential to be affected by the Project (including those at TL 94729 29287). The AIA assesses the preliminary impact of the Project on those trees and recommends protection measures as are necessary to ensure the health of retained trees.				
9-5.670	Suggest that the Great Tey viewpoint is welcomed and should be included in the Environmental Statement (ES)	The viewpoint VP4.10: Moor Road, Great Tey, is located on the eastern edge of Great Tey. The viewpoint assessment includes a photomontage visualisation of the Project and has informed the assessment of effects presented in the Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13).		X		
9-5.671	Suggest an additional viewpoint from the Essex Way would be a more suitable approach (than relocating viewpoint 4.22), and request that both viewpoints are included in the Environmental Statement (ES)	VP4.22: Public Right of Way (PRoW) between Great Tey and Little Tey, is located on a PRoW which runs east of East Gores Road, to the north of the settlement at East Gores. The nearest there are viewpoints located along the Essex Way in Section D in proximity to including VP4.32: Essex Way, west of Teybrook Farm and VP4.26: Essex Way, East Gores (View Direction 109). Both of these viewpoints include photomontage visualisations and have informed the assessment of effects presented in the Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13).		X		
9-5.672	Suggest that an additional viewpoint from Marks Tey station is required due to frequent usage and elevated nature. Suggest this is included in the Environmental Statement (ES)	In the area around Marks Tey station, there are viewpoints at VP4.12: A120 Coggeshall Road, Marks Tey (photomontage viewpoint) and also near the station at VP4.33: North Road, east of Marks Tey Railway Station (baseline photograph viewpoint). Visualisations do not form the basis of professional judgements made in terms of anticipated significant effects, but they are useful tools in conveying examples of likely changes in views from a selected number of locations. Site survey work and desk top analysis have also informed the assessment of effects near Marks Tey, developing a		X		

greater understanding of the influence of the landscape on views.

Mitigation for non-licensable protected species has been included within the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4).				
9-5.677	Concern that the Project will have a negative impact on bees / Bees will be unable to navigate under high voltage overhead lines	<p>As well as possible effects on humans, possible effects of Electric and Magnetic Fields (EMFs) on various animals have been studied a number of times. No proven effects of EMFs have been found in any species at levels below the guidelines. This is confirmed in National Policy Statement (NPS) EN-5 which states: <i>"There is little evidence that exposure of crops, farm animals or natural ecosystems to transmission line EMFs has any agriculturally significant consequences."</i></p> <p>Beehives can become charged if directly under an overhead line because of the electric field it produces. For existing overhead lines, this can be eliminated by screening or earthing the hive, but for new overhead lines, embedded design measures and careful routeing will avoid any potential effects. There does not seem to be evidence of EMFs adversely affecting bees directly. In the United States of America, the strip of land along power lines has been shown to be particularly attractive to bees, with these areas being utilised by commercial bee farms. Additionally, National Grid has worked with</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		the British Beekeeping Association to establish hives around our sites, including high voltage substations, which have thrived.				
9-5.678	Concern that the Project will result in a negative impact on flora / plants / woodlands / hedgerows	<p>Through routeing, siting and detailed design, National Grid has sought to reduce, as far as practicable, potential impacts on biodiversity including priority grassland, wetland, woodland, and hedgerow habitats. The design process has taken account of existing biodiversity, the natural environment and, where practicable, seeks to reduce impacts on areas of ecological sensitivity, through avoidance or mitigation.</p> <p>Chapter 8: Ecology and Biodiversity of the Environmental Statement (ES) (document reference 6.8) assesses the effects on important ecological receptors (which includes grasslands, wetlands, woodlands and hedgerows).</p> <p>As part of the Environmental Impact Assessment (EIA) process for the Project, a suite of ecological surveys has been to be undertaken. The findings of which inform the design and approach to mitigation.</p> <p>The Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Code of Construction Practice (CoCP) (document reference 7.2) contain a list of relevant good practice measures to avoid or reduce impacts on valuable habitats.</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>The Environment Act 2021 introduces a mandatory requirement for 10% Biodiversity Net Gain (BNG) for new Development Consent Order (DCO) developments (which is not yet in force and not expected until May 2026). National Grid has committed to delivering 10% BNG with environmental and societal benefits on all construction projects. The BNG target for the Project is currently voluntary and aligned with our corporate sustainability commitment.</p> <p>As well as seeking to avoid and minimise impacts to nature, the Project considers the land required for mitigation, compensation and enhancement that can deliver BNG and wider environmental benefits. This will require delivery of offsite Biodiversity Units via habitat creation or enhancement actions in strategic areas, and we will consider all offsite options that are available to us.</p>				
9-5.679	Concern that the Project will result in a negative impact on rivers / other bodies of water	Through routeing, siting and detailed design National Grid has sought to reduce, as far as practicable, potential impacts on biodiversity including river ecology. The design process has taken account of existing biodiversity, the natural environment and, where practicable, has sought to reduce impacts on areas of ecological sensitivity such as river corridor habitats, through avoidance or mitigation. The same approach has been taken to account for rivers and their floodplains, seeking to avoid or reduce the footprint of the Project within floodplains.	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>As part of the Environmental Impact Assessment (EIA) process for the Project, a suite of ecological surveys has been undertaken, including along river corridors. The data has informed the assessment of effects on biodiversity, hydromorphology, water quality and flood risk presented in the Environmental Statement (ES), Chapter 8: Ecology and Biodiversity (document reference 6.8) and ES Chapter 12: Hydrology, Land Drainage and Flood Risk (document reference 6.12) and the Water Framework Directive Assessment (document reference 7.10).</p> <p>Further, the Project has engaged with Natural England, the Environment Agency and Local Planning Authorities on aspects relating to river ecology, water quality and flood risk, and appropriate mitigation measures and techniques have been secured, as detailed in the Outline Code of Construction Practice (CoCP) (document reference 7.2).</p> <p>The Environment Act 2021 introduces a mandatory requirement for 10% Biodiversity Net Gain (BNG) for new Development Consent Order (DCO) developments (which is not yet in force and expected May 2026). National Grid have committed to deliver 10% BNG with environmental and societal benefits on all construction projects including for river ecology. 		Biodiversity Units via habitat creation or enhancement actions in strategic areas, and we would consider all offsite options that are available to us.				
9-5.682	Criticism that a thorough and full analysis of the ecology and environment in the Stour Valley has not been carried out (e.g. given the that the conclusions within the ecology reports which state that the valley is an unsuitable habitat for otters and other endangered species and therefore no further research has been done, but residents regularly see otters and have proof of their presence in the area)	National Grid undertook otter surveys in 2024, which included an updated assessment of the Stour. Otter surveys were primarily looking to identify habitat with potential for otter holts with the presence of otters well documented across the Stour Valley. The report is included as Appendix 8.13: Otter and Water Vole Report (document reference 6.8.A13) of the Environmental Statement (ES).	X		X	
9-5.683	Suggest that mature oak trees should not be cut down at Rivenhall for the Project	National Grid has considered the respondent's feedback and a slight change to the alignment to move it slightly south has been made leading to some effects on a consented solar farm but retaining a veteran tree by the roadside that is associated with a historic entrance to the Grade II* Rivenhall Place. Some effects to some trees are unavoidable (ranging from removal to limited canopy management) but are dependent on the outcome of movements within the Limits of Deviation and the final positioning of bellmouths and associated visibility splays.			X	X
9-5.684	Concern about the impact of the Project on Gallows Green, as a Registered Village Green and County Wildlife Site, given that the Draft Order Limits extend a significant part of the Green (including a pond)	While not formally designated as a County Wildlife Site (CWS) based on information obtained from the local records centre, it is noted that Gallows Green is considered a valuable green space for the village offering ecological value. Impacts on Gallows Green	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		would be avoided where at all possible and any necessary mitigation implemented to ensure no long-term impacts.				
9-5.685	Suggest that the mature chestnut trees on the west side of Brook Road should not be removed for the haul road for the Project (e.g. removal may be required to improve visibility)	The Project aims to minimise impacts to trees including those that may be impacted for visibility splays. National Grid has completed an Arboricultural Impact Assessment (AIA) (document reference 6.13.A6) which has been submitted with the application for development consent.	X		X	
9-5.686	Concern about the impact of the haul road and Draft Order Limits for the Project on Church House Wood (a Natural England Priority Habitat) and between Pylon TB059 and the Marks Tey to Sudbury Branch Line (e.g. as this may require the removal of two ancient oak trees)	The Draft Order Limits avoid Church House Wood and any recorded (Ancient Tree Inventory) or surveyed veteran trees in this area.	X		X	
9-5.687	Concern about trees and hedgerows with Tree Preservation Orders (TPOs) on Bentley Road (details of locations and trees provided by respondent)	Environmental Statement (ES) Appendix 13.6: Arboricultural Impact Assessment (AIA) (document reference 6.13.A6) highlights where the Project impacts on Tree Preservation Order (TPO) trees and includes mitigation measures.	X			
9-5.688	Concern about the impact of Pylon TB29 on rabbits	Although rabbits have no specific legislative protection, the presence of rabbits would be a consideration during construction in line with the Wild Mammals (Protection) Act 1996 and Animal Welfare Act 2006.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-5.689	Concern about the impact of construction work and trenching for the Project around the Black Brook (e.g. how it may affect the flow of water and springs which feed into the reservoir, and potential impact on fish stocks and the viability for irrigation)	During construction, Black Brook would be over pumped to ensure that the water flows are maintained, minimising the effect on the reservoir and irrigation viability.			X	
9-5.690	Suggest that National Grid undertake a full two year survey of the Stour Valley and its ecology prior to full submission of the Development Consent Order (DCO) for the Project	A full suite of ecology surveys have been undertaken along the Stour Valley across the 2022-2024 survey period. This includes breeding bird and wintering bird surveys (see Environmental Statement (ES) Appendix 8.7: Breeding Bird Report (document reference 6.8.A7) and Appendix 8.8: Wintering Bird Report (document reference 6.8.A8 of the ES), the scope of which has been agreed with Natural England.	X			
9-5.691	Respondent has observed various bat species flying between two wooded areas either side of the Project near Chattisham / Request for National Grid to provide further information on surveys undertaken in this area, and mitigation for these bat colonies	A range of bat species surveys have been undertaken throughout the Project's proposed route. The results are outlined in Chapter 8: Ecology and Biodiversity (document reference 6.8) and Appendices 8.9 to 8.11 (document reference 6.8.A9 - 6.8.A11) of the Environmental Statement (ES). Appropriate mitigation will be implemented where impacts are identified as agreed with Natural England and the Local Planning Authority as relevant.			X	
9-5.692	Concern that National Grid has underestimated the environmental value of the Langham Hall Estate in analysis for the Project to date (e.g. consultation information refers to the estate as low-grade	A detailed Agricultural Land Classification (ALC) survey has been conducted in the area where the Project intersects with the Langham Hall Estate. The ALC survey contributed to the assessment of the impact on			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	farmland but does not mention the underlying Natural Capital value, the prospect of the emerging Ecosystem Services markets, critical interruptions to the drainage on the site and, overlaid on that, the unique business that operates there, which is, itself, built on the unique natural assets of the site)	<p>agricultural land, specifically confirming the ALC grade, and soil resources. The assessment is presented in Chapter 6: Agriculture and Soils (document reference 6.6) of the Environmental Statement (ES).</p> <p>Mitigation measures to protect soil resources and the natural capital of soils are presented within Appendix C: Soil Resource Plan of the Outline Code of Construction Practice (CoCP) (document reference 7.2).</p> <p>The assessment of businesses at the Langham Hall Estate (e.g. equestrian and simulated shoot, camping service) and respective mitigation measures are outlined in ES Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15).</p>				
9-5.693	Concern about the impact of the Project on respondent's ability to enter schemes such as the England Woodland Creation Offer woodland scheme and Biodiversity Net Gain (BNG) provision (at farm near Pylons TB59, TB60 and TB61) due to issues with access and easements. Particularly, concern about the proposed access to the south of the level Crossing Gate House, and suggest that National Grid access the field from the bottom instead	National Grid would not generally expect the Project to affect the ability to enter environmental schemes. Some restrictions to prevent trees being grown under the alignment are necessary for safety reasons but we would expect flexibility in most schemes allowing open space or Biodiversity Net Gain (BNG) in the areas to be kept free of trees. Specific plans that the respondent feels are curtailed should discuss with the land agents being used.			X	
9-5.694	Concern that under the Water Environment Regulations 2017 (previously Water Framework Directive), the status of the Colne surface water catchment is (Downstream of Does Corner) is non-compliant failing the Environmental Flow Indicator	The potential for the Project to impact on the surface water hydrology of the Colne catchment has been assessed in Chapter 12: Hydrology, Land Drainage and Flood Risk of the Environmental Statement (ES) (document reference 6.12) and would be safeguarded			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	(EFI) across the whole flow regime. The most important in this scenario is failure of the EFI at Q95, meaning there is a deficit required to meet the environmental needs of the ecology at the lowest most delicate flows, therefore any reduction in the natural seepage will further impact this stretch of river. It is these small margins which can make or break an area of natural beauty. Small in combination impacts are now being scrutinised in water regulation and construction practices should be held accountable for their part in impacting delicate ecosystems.	by several measures and controls to manage surface water runoff generated within the Order Limits and to protect existing land drainage routes and infrastructure. These measures are described in the Outline Code of Construction Practice (CoCP) (document reference 7.2).				
9-5.695	Suggest that assessment and justification of the removal of a significant amount of planting including the TPO'd line of trees along the driveway, south of the road crossing TM 03394 33344 is needed	Appendix 13.6: Arboricultural Impact Assessment (AIA) of the Environmental Statement (ES) (document reference 6.13.A6) identifies all trees which have the potential to be affected by the Project, assesses the preliminary impact of the Project on those trees, and recommends protection measures as are necessary to ensure the health of retained trees. Schedule 14 of the draft Development Consent Order (DCO) (document reference 3.1) highlights which TPO trees may be impacted by the Project.		X		
9-5.696	Suggest loss of trees south of Glebe House should be assessed and justified	Appendix 13.6: Arboricultural Impact Assessment (AIA) of the Environmental Statement (ES) (document reference 6.13.A6) identifies all trees - including those south of Glebe House - which have the potential to be affected by the Project, assesses the preliminary impact		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		of the Project on those trees, and recommends protection measures as are necessary to ensure the health of retained trees.				
9-5.697	Suggest that the block of trees at TM 03634 31823 and a larger block of trees along the A12 at TM 03495 31672 are assessed for their arboricultural quality and the larger block retained if one block must be felled to facilitate underground cables.	Appendix 13.6: Arboricultural Impact Assessment (AIA) of the Environmental Statement (ES) (document reference 6.13.A6) identifies all trees which have the potential to be affected by the Project (including the block of trees located at TM 03634 31823 and a larger block of trees along the A12 at TM 03495 31672), assesses the preliminary impact of the Project on those trees, and recommends protection measures as are necessary to ensure the health of retained trees. The comment relating to retention of the larger block is noted.		X		
9-5.698	Suggest that the fine roadside Oaks at the road crossing at East View on Langham Lane TM 00663 30226 and domestic gardens that extend into a landscaped piece of domesticated woodland are surveyed and methodology provided to ensure the least amount of trees are removed or pruned heavily for line clearance	Appendix 13.6: Arboricultural Impact Assessment (AIA) of the Environmental Statement (ES) (document reference 6.13.A6) identifies all trees which have the potential to be affected by the Project (including those at Langham Lane), provides a methodology to assess the preliminary impact of the Project on those trees, and recommends protection measures as are necessary to ensure the health of retained trees. Trees within domestic gardens have not been included within the arboricultural surveys as these will not be impacted by the Project.		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-5.699	Suggest the isolated open grown field trees at TL 94729 29287 are assessed and if possible, retained	Appendix 13.6: Arboricultural Impact Assessment (AIA) of the Environmental Statement (ES) (document reference 6.13.A6) identifies all trees which have the potential to be affected by the Project (including those at TL 94729 29287). The AIA assesses the preliminary impact of the Project on those trees and recommends protection measures as are necessary to ensure the health of retained trees.		X		
9-5.700	Suggest that the block of trees on the corner of the field boundary to the south of the field at TL 94687 29197 is assessed and retained where possible - they appear to be far enough from the alignment to be retained within a significant crown reduction	Appendix 13.6: Arboricultural Impact Assessment (AIA) of the Environmental Statement (ES) (document reference 6.13.A6) identifies all trees –which have the potential to be affected by the Project (including those south of the field boundary at TL 94687 29197), assesses the preliminary impact of the Project on those trees, and recommends protection measures as are necessary to ensure the health of retained trees. The block of trees noted in the stakeholder's response have been assessed in the AIA and will be retained.		X		
9-5.701	Suggest that the alignment of 4/5 Oak trees west of Fossetts Lane at TL 93644 28280 are assessed and retained	Appendix 13.6: Arboricultural Impact Assessment (AIA) of the Environmental Statement (ES) (document reference 6.13.A6) identifies all trees which have the potential to be affected by the Project (including those west of Fossetts Lane at TL 93644 28280), assesses the preliminary impact of the Project on those trees, and recommends protection measures as are necessary to ensure the health of retained trees. The trees noted in		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		the stakeholder's response have been assessed in the AIA and will be retained.				
9-5.702	Suggest that the prominent tree on the roadside furth along Fossetts Lane TL 93322 27971 is assessed	Appendix 13.6: Arboricultural Impact Assessment (AIA) of the Environmental Statement (ES) (document reference 6.13.A6) identifies all trees - including those west of Fossetts Lane at TL 93644 28280 - which have the potential to be affected by the Project, assesses the preliminary impact of the Project on those trees, and recommends protection measures as are necessary to ensure the health of retained trees.		X		
9-5.703	Suggest that significant tree loss at TL 92647 27191 adjacent to the river is assessed and the most important trees retained if possible	Appendix 13.6: Arboricultural Impact Assessment (AIA) of the Environmental Statement (ES) (document reference 6.13.A6) identifies all trees - including those at TL 92647 27191- which have the potential to be affected by the Project. The AIA assesses the preliminary impact of the Project on those trees, and recommends protection measures as are necessary to ensure the health of retained trees.		X		
9-5.704	Suggest that the tree block at TL 92497 26890 is assessed	Appendix 13.6: Arboricultural Impact Assessment (AIA) of the Environmental Statement (ES) (document reference 6.13.A6) identifies all trees - including those at TL 92497 26890 - which have the potential to be affected by the Project, assesses the preliminary impact of the Project on those trees, and recommends protection measures as are necessary to ensure the health of retained trees.		X

Braintree feedback (Statutory Consultation)

Table 9-6 Summary of consultee comments and National Grid's response

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Agricultural Land						
9-6.1	Concern that the Project will take away valuable agricultural land / disrupt farming operations	<p>During the construction stage of the Project, there would be areas of agricultural land that would be temporarily disrupted. National Grid would only use land that is required as part of the Project and would seek to minimise the use of agricultural land where reasonable and safe to do so.</p> <p>National Grid is and will continue to work with all landowners including farmers who may be affected by the proposals to understand the impacts on their operations and to work with them as the Project is developed. We would seek to work with the farming community to limit disruption where practicable. This includes providing prior warning of works which may result in the need to move livestock. Compensation claims for disturbance are considered on a case-by-case basis, if negative impact on farming operations can be proven. Particular agricultural matters can also be addressed through voluntary land agreements.</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-6.2	Concern that the Project will have a negative impact on agricultural livestock (e.g. type of livestock)	<p>National Grid is and will continue to work with all landowners including farmers and equestrian facilities who may be affected by the proposals to understand the impacts on their operations and to work with them as the Project progresses. We would seek to work with the farming community to limit disruption where practicable. This includes providing prior warning of works which may result in the need to move livestock. Compensation claims for disturbance are considered on a case-by-case basis, if negative impact on farming operations can be proven. Particular agricultural matters can also be written into voluntary land agreements. There will also be mitigation put in place where animal grazing maybe affected.</p> <p>As well as possible effects on humans, possible effects of Electric and Magnetic Fields (EMFs) on various animals have been studied. No detectable effects of EMFs have been found on, for example, health, milk production, fertility, and behaviour. This is confirmed in National Policy Statement (NPS) EN-5 which states: <i>"There is little evidence that exposure of crops, farm animals or natural ecosystems to transmission line EMFs has any agriculturally significant consequences."</i></p>			X	
9-6.3	Suggest that haul road, construction infrastructure and permanent infrastructure for the Project (near Fairstead Hall Road) is designed to minimise impact on agriculture, and request that National Grid present each temporary and permanent	<p>Routeing of access roads must balance costs with effects on attributes such as agricultural activity, ecology and heritage interests. In this location National Grid has made some changes to the route of some construction access roads to reduce effects on agricultural activity in</p>			X

	infrastructure that is proposed on respondent's land (address provided by respondent)	response to the feedback where this does not involve excessive cost from longer routes. Details are shared with landowners through engagement to secure necessary land rights.				
Airfields						
9-6.4	Concern about the impact of the Project on West Horndon Airfield / Suggestion that the Project is routed away from West Horndon Airfield	<p>National Grid has appointed an independent aviation consultancy which has engaged with (with National Grid also present) Barnards Farm airstrip located in West Horndon. Following discussion and further assessment, it has been determined, with the Project as currently proposed, that the airfield can continue to operate. We will continue to engage with nearby airfields as appropriate.</p> <p>Further information on the assessment of airfields can be found in the Environmental Statement (ES) (ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and ES Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2)).</p>	X	X		
9-6.5	Concern about the impact of the Project on Earls Colne Airfield / Suggestion that the Project is routed away from Earls Colne Airfield	<p>National Grid has appointed an independent aviation consultancy. Following further assessment, it has been determined that Earls Colne Airfield is located approximately 5 km from the Project and its operations will not therefore be impacted.</p> <p>We will continue to engage with nearby airfields as appropriate.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Further information on the assessment of airfields can be found in the Environmental Statement (ES) (ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and ES Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2)).				
Community / Social Impact						
9-6.6	Concern about impact of the Project on children / families / residents / communities	<p>National Grid recognises people may have concerns about the potential impacts of living close to an overhead line, and that the uncertainty whilst the proposals are developed may cause anxiety.</p> <p>We have sought to reduce potential effects on communities, residents – including children - through routeing and design. We have also sought to reduce concern or uncertainty about the proposals through making timely design decisions and engaging with people and stakeholders throughout the development of the Project. If the Project received Development Consent, the Project team would continue to engage with people potentially affected during construction, through regular communication including letters, phone calls and meetings, where necessary.</p> <p>We urge anyone with concerns to get in touch through the Norwich to Tilbury Freephone number, address or email, which will remain open throughout examination.</p> <p>National Grid is committed to working with local suppliers, facilitated by supporting forums (such as the</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>local Chambers), on electricity industry skills and workforce planning. National Grid is also committed to providing a coordinated regional approach to jobs and skills opportunities. This commitment is broader than the individual project and separate to any commitments under the proposed development consent order for this Project. The socio-economic effects of the project are assessed in Chapter 15: Socio-economics, Recreation and Tourism of the Environmental Statement (ES) (document reference 6.15). Post construction job opportunities are limited given the nature of the development however we will still work with Local Authorities (including facilitating local partners) to understand what is important to them around skills and employment to ensure we leave a lasting positive legacy in the communities where we operate.</p> <p>With regards to a delivery mechanism, the above measures will be delivered as part of our community benefit package, which will look at both local and regional initiatives. This will be delivered outside the development consent process and is not a material consideration in the decision on the proposed Project or a matter to be secured as part of the DCO, as per the Community Funds for Transmission Infrastructure: Guidance (DESNZ, 2025).</p>				
9-6.7	Concern about impact of the Project on school / educational facilities	Through routeing and siting, National Grid has sought to avoid, as far as practicable, locations of education establishments.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		ES Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) presents an assessment of the potential impacts on education facilities as a result of the Project. As part of the assessment, a range of measures are considered during the construction phase to reduce, where practicable, disruption to education establishments. These include traffic management, signage and routing measures to ensure access or partial access can be maintained where feasible. These are identified within ES Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15), the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) and the Outline Code of Construction Practice (CoCP) (document reference 7.2). The assessment concludes that there would be no significant effects on education facilities within the study area as a result of the construction and operation of the Project.				
9-6.8	Concern about impact of the Project on leisure	Through routeing and siting National Grid has sought to avoid, as far as practicable, locations important for leisure and tourism. Environmental Statement (ES) Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) presents an assessment on the potential impacts on leisure and tourism. As part of this assessment, a range of measures have been considered throughout the construction phase of the Project to minimise disruption on leisure and tourism. These include: traffic management, signage and	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		routing measures. These are identified within ES Chapter 15: Socio-economics, Recreation and Tourism, the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).				
9-6.9	Concern about over development of area / other works in the area	<p>A cumulative effects assessment has been undertaken in accordance with the Planning Inspectorate's Advice Note 17 'Cumulative Effects Assessment' and is presented in Environmental Statement (ES) Chapter 17: Cumulative Effects (document reference 6.17). The cumulative effects assessment has considered the effects of the Project in conjunction with other existing and, or approved developments in line with guidance. As part of this process, National Grid has engaged with other developers who are proposing development in proximity of the Project to understand their requirements. The cumulative assessment has been undertaken in accordance with the overarching NPS for Energy (EN-1) Paragraph 4.1.5 in EN-1 states:</p> <p><i>'In considering any proposed development, in particular when weighing its adverse impacts against its benefits, the Secretary of State should take into account: ... its potential adverse impacts, including on the environment, and including any long-term and cumulative adverse impacts, as well as any measures to avoid, reduce,</i></p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p><i>mitigate or compensate for any adverse impacts, following the mitigation hierarchy'.</i></p> <p>Paragraph 4.2.12 in EN-1 states: <i>'The cumulative impacts of multiple developments with residual impacts should also be considered.'</i></p> <p>Paragraph 4.3.3 in EN-1 states: <i>'The Regulations require an assessment of the likely significant effects of the proposed project on the environment, covering the direct effects and any indirect, secondary, cumulative, transboundary, short, medium, and long-term, permanent and temporary, positive and negative effects at all stages of the project, and also of the measures envisaged for avoiding or mitigating significant adverse effects'.</i></p> <p>Paragraph 4.3.19 of EN-1 states: <i>'The Secretary of State should consider how the accumulation of, and interrelationship between, effects might affect the environment, economy, or community as a whole, even though they may be acceptable when considered on an individual basis with mitigation measures in place'.</i></p> <p>Paragraph 4.4.5 in EN-1 states: <i>'The impacts of more than one development may affect people simultaneously, so the applicant should consider the cumulative impact on health in the ES where appropriate'.</i> The long list and short list of other existing</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		and, or approved developments considered for the Cumulative Effects Assessment is presented in ES Appendix 17.2: Long List and Short List of Other Developments (document reference 6.17.A2), detailing the other developments shortlisted for detailed assessment. The appendix provides details on other developments screened out of the assessment in accordance with the methodology presented in ES Chapter 17: Cumulative Effects (document reference 6.17). The detailed assessment of shortlisted other developments is presented in ES Appendix 17.3: Inter-Project Cumulative Effects Matrix (document reference 6.17.A3). Appendix 17.3: Inter-Project Cumulative Effects Matrix (document reference 6.17.A3) outlines the residual significance of cumulative effects for each development, for each environmental topic that has a Zone of Influence that overlaps with that development (i.e. socio-economics, recreation and tourism impacts).				
9-6.10	Concern about the Project being in too close proximity to recently built housing developments / using land being considered for future development (including residential, commercial, infrastructural, and employment sites)	<p>National Grid has obtained information on existing, under construction, consented but not built schemes as well as development proposals within the planning system. The Project design has responded to those that are confirmed through consideration of routeing.</p> <p>In the case of development proposals, some can be amended to be designed around our proposed infrastructure but in other cases our proposals may need to be amended at a corridor level, or proposed developments factored into our detailed route design.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Based on known information, and in light of changes made following consideration of feedback to the 2022 and 2023 non-statutory consultations, statutory consultation, targeted consultations and landowner consultation, we consider our proposals are consistent with relevant policy and guidelines and the alignment designed such that they do not prevent proposed housing developments from being successfully progressed. UK law does not prescribe minimum distances between overhead lines and homes, but any implications on landscape and visual receptors, residential amenity or from concerns about electromagnetic fields are robustly assessed as part of the Environmental Impact Assessment (EIA) and balanced as part of the decision-making process. We will continue to review planning applications and engage with developers as necessary.				
9-6.11	Concern about the Project causing communities to become encircled / surrounded by overhead lines	The alignment has been routed to achieve some separation from the existing 400 kV overhead line, such that villages are not encircled by overhead lines to both sides. Separation is inevitably reduced in certain locations due to the presence of constraints to routeing and environmental features. An Environmental Impact Assessment (EIA) has been undertaken and is presented in the Environmental Statement which identifies any measures considered to be necessary to reduce likely significant effects which will also consider the potential for effects potentially arising from close			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		paralleling existing 132 kV overhead line and new 400 kV overhead line infrastructure.				
9-6.12	Concerned that the Project will have a negative impact on domestic horses / equestrian activities	<p>As well as possible effects on humans, the possible effects of Electric and Magnetic Fields (EMFs) on various animals have been studied. No proven effects of EMFs have been found in any species at levels below the guidelines. This is confirmed in National Policy Statement (NPS) EN-5 which states: "<i>There is little evidence that exposure of crops, farm animals or natural ecosystems to transmission line EMFs has any agriculturally significant consequences.</i>" Although horses are not directly mentioned, there is no evidence to suggest they are any different to other farm animals.</p> <p>As well as the possible direct biological or health effects addressed above, indirect effects such as microshocks can occur as a result of electric fields. Microshocks are small spark discharges which are similar to a static shock after walking across a nylon carpet for example. The Project will be designed in accordance with the principles of the Governments Code of Practice 'Power Lines: Control of Microshocks and other indirect effects of public exposure to electric fields' to ensure these are mitigated, which include equestrian activities.</p>			X	
9-6.13	Concern about the impact of the Project on emergency services / ambulances / hospitals / health service	Through routing and siting National Grid has sought to avoid and reduce as far as practicable effects on identified healthcare facilities.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Environmental Statement (ES) Chapter 10: Health and Wellbeing (document reference 6.10) and ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) consider the potential impacts on, and access to, healthcare facilities, including emergency services, ambulances, hospitals and other NHS services associated with the construction of the Project, drawing on information from ES Chapter 16: Traffic and Transport (document reference 6.16). No health facilities are due to be directly impacted by the Project and where road diversions are required traffic management and mitigation measures will be in place to reduce impacts. These include traffic management, signage and routing measures to ensure access or partial access can be maintained where feasible. Further detail on proposed mitigation measures is presented in the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), which has been produced following engagement with stakeholders including the emergency services.				
9-6.14	Criticism that National Grid included the entirety of Park Road plus a wide swathe of the private woodland belt on the western side of the road opposite Waterfall Cottages within the red line of the application, and that when asked at the Witham consultation event why that was, National Grid said they think it is to allow for protection of the water pipe from induced currents / Criticism that National	There is the potential, based on induced currents from the 400 kV overhead line, that alternating current mitigation measures may need to be installed to the ferrous pipeline operated by Northumbrian Water at Park Road. The scope and extent of such mitigation measures would be dependent on the final design arrangements of the Project which would continue to evolve within the parameters of confirmed Limits of			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	Grid prioritise protecting a metal pipe in the road instead of properties or residents affected by Electromagnetic Field (EMF) radiation	<p>Deviation. Factors including crossing angle and clearance height, length of parallelism, site specific soil resistivity etc combine to define the requirement for mitigation. The mitigation itself is typically achieved by the installation, alongside the ferrous pipeline (in an area which is likely to have been previously disturbed during construction), of additional earthing which extends away from the crossing point. Consultation between National Grid and the relevant utility provider would confirm the requirement for installed mitigation, based on the final 400 kV design arrangements, which would be implemented by the relevant utility provider under their existing utility operation and maintenance provisions.</p> <p>This impact is unique to this type of asset (ferrous pipelines), the Project would be fully compliant with the UK Government policies on Electric Magnetic Fields (EMF). Specifically, all the EMF produced would be below the relevant exposure limits to meet National Policy Statement (NPS) EN-5 compliance and state, '<i>EMF effects are minimal</i>' and therefore, there would be no significant EMF effects resulting from the Project. As part of our Development Consent Order (DCO) documentation the Electric and Magnetic Field Compliance Report (document reference 7.8) demonstrates this compliance.</p>				
9-6.15	Criticism that Braintree is part of the Levelling Up project, yet is impacted by the Project / Request for National Grid to confirm the interaction between the	The Project is enabling the realisation of home-grown low carbon energy generation which will benefit UK consumers in the longer term. We monitor planning			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	Project and Levelling Up, and to explain what they will do to compensate Braintree for devaluing the town	<p>applications and the progress of sites through development and mineral planning processes and seek to respond where there may be potential interfaces. No conflict with sites within the plans have been identified. A possible conflict with a future minerals site has been identified but the retention of an extended Order Limit gives flexibility to reduce effects.</p> <p>National Grid invests in skills and supports its contractors to engage to the extent possible with local business. This may be through services to construction as well as engagement of local business directly in relevant aspects of the construction.</p>				
9-6.16	Criticism that Pylon TB96, draft Order Limits and haul road for the Project are located too close to respondent's residence (given that Pylon TB96 is proposed only 125 metres from residence and the draft Order Limits are 30 metres from residence)	<p>Neither UK law, National Policy Statements (NPS) nor the Holford Rules prescribe minimum distances between overhead lines and homes, nonetheless routeing seeks to reduce effects where possible by considering, for example positioning the alignment midway between properties or positioning properties mid span, all subject to the presence of other environmental features and constraints. In the absence of any specific request we do not consider the separation from residential properties to be inconsistent with policy. Any implications on landscape and visual receptors, residential amenity or from concerns about electric and magnetic fields are robustly assessed as part of the Environmental Impact Assessment (EIA) and balanced as part of the decision-making process. We will continue to review planning applications and engage with developers.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-6.17	Concern that National Grid have not considered creating social value outcomes in Greater Essex for the Project that relate to reducing geographical inequalities in education, skills, supply chain, employment, and climate action, and similarly concern that National Grid have not considered creating a package of financial benefits for local communities in Greater Essex to support equity of engagement in the development consent process and that recognises the vital role that local communities have in hosting energy infrastructure in the national interest of securing cheaper, greener, and more secure electricity	<p>The haul road in this location is on the northern side of the alignment with the property being on the southern side, we are unable to move the haul road further north as it needs to be located close to the alignment.</p> <p>National Grid is committed to working with local suppliers, facilitated by supporting forums (such as the local Chambers), on electricity industry skills and workforce planning. National Grid is also committed to providing a coordinated regional approach to jobs and skills opportunities. This commitment is broader than the individual project and separate to any commitments under the proposed development consent order for this Project. The socio-economic effects of the project are assessed in Chapter 15: Socio-economics, Recreation and Tourism of the Environmental Statement (document reference 6.15). Post construction job opportunities are limited given the nature of the development however we will still work with Local Authorities (including facilitating local partners) to understand what is important to them around skills and employment to ensure we leave a lasting positive legacy in the communities where we operate. With regards to a delivery mechanism, the above measures will be delivered as part of our community benefit package, which will look at both local and regional initiatives. This will be delivered outside the development consent process and is not a material consideration in the decision on the proposed Project or a matter to be secured as part of the DCO, as per the</p>		X

		Community Funds for Transmission Infrastructure: Guidance (DESNZ, 2025).				
9-6.18	Suggest that the private water supply and well for respondent's farm on Cressing Road that runs across field TL8018 7515 should be protected or relocated before construction of the Project commences	<p>All underground services would be identified on site and documented within the site-specific Risk Assessments /Method Statements for all work delivery. A permit to dig process would control the mitigation required to ensure underground services are not impacted by the construction works. If avoidance of the services cannot be maintained, then protection or relocation maybe required. Any damage to underground services or drainage systems would be rectified by the Principal Contractor on site.</p> <p>Landowners are encouraged to provide as much information as early as possible in relation to any private supplies, drainage and irrigation systems on their land so these can be factored in at the detailed design stage of the project ahead of construction starting on site, please raise this at any meeting with the National Grid lands team who will keep a record and pass on any information.</p>	X		X	
9-6.19	Concern about the impact of the Project on community transport and bus services in Terling and Fairstead (e.g. Braintree DigiGo bus service)	Chapter 16: Traffic and Transport of the Environmental Statement (document reference 6.16) assesses the impact on bus services along all Primary Access Routes (PARs). There are no expected temporary closures or diversions on the bus network as a result of the construction activities. However, there may be temporary traffic management on local roads such as at crossover	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>points. Temporary localised delay at junctions may also be expected over a short duration during peak construction activity. Traffic modelling has been undertaken on selected junctions connecting to or along the PARs as agreed with local highways authorities and National Highways. Findings can be found within the Transport Assessment (document reference 7.11) where it is identified whether the impact would be managed due to the temporary nature of the disruption, or through some form of mitigation at the junction.</p> <p>There are no PARs in the highway network of Fairstead and Terling and no increase of traffic as a result of construction activities is expected in those roads. Consequently, no delays to bus services operating in this area i.e. Braintree DigiGo are expected during the construction period.</p> <p>Short term temporary road closures associated with the open-cut cable swathe are expected on some of the roads, however these closures are expected to be for no more than four weeks and would be either managed or a Road Closure with a diversion. Other roads are expected to be managed through: Managed/ Road Open/ Single Lane Running/ Single Lane Running with widening. Minimal delay to bus services is therefore expected.</p>				
9-6.20	Concern that the construction commencement year of 2027 would conflict with the A12 widening project and the Longfield Solar Farm installation	Longfield Solar Farm has commenced construction activities with panels scheduled to be installed from early 2026 over a two to three-year period. The Longfield Solar Farm has been considered further in the	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Cumulative Effects Assessment for the Project. The assessment is presented in Chapter 17: Cumulative Effects of the Environmental Statement (ES) (document reference 6.17) and ES Appendix 17.3: Inter-Project Cumulative Effects Assessment (document reference 6.17.A3) that has been submitted with the DCO application.</p> <p>As of June 2025, the A12 project has been cancelled and will no longer be constructed. This development is therefore not considered further in the Cumulative Effects Assessment for the Project.</p>				
Construction impacts						
9-6.21	Concern about disruption from construction	<p>An Environmental Statement (ES) (document reference: Volume 6: Environmental Statement) has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 ('the Infrastructure EIA Regulations'). The ES identifies and assesses the likely significant effects on the environment resulting from the construction of the Project and recommends appropriate mitigation to reduce effects.</p> <p>Environmental mitigation measures have been defined within each environmental topic chapter and set out in relevant management documents submitted with the Development Consent Order (DCO) application, including the Outline Code of Construction Practice (CoCP) (document reference 7.2), the Outline</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Construction Traffic Management Plan (CTMP) (document reference 7.3), the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5).				
9-6.22	Concern about impact on traffic levels in local area caused by construction works	<p>As part of the pre-application process National Grid has engaged with the relevant authorities, their highways teams and National Highways to understand and gain information on their road networks. This information has been used to inform and guide the drafting of the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) for the Project that accompanies the Development Consent Order (DCO) application. A strategy has been developed to manage the impact of construction vehicles on the public highway and sensitive receptors, using suitable Local Road Network connections from the Strategic Road Network called Primary Access Routes. In addition, temporary haul roads for construction vehicles are proposed along the Project alignment, further reducing the impact of construction traffic on the local road network. Further details of the strategy can be found within the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).</p> <p>Environmental Statement (ES) Chapter 16: Traffic and Transport (Document Reference 6.16) includes the assessment of the potential impacts of the Project</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>including changes in traffic flow, delays, road safety and impact on Walking, Cycling and Horse-Riding modes on the roads along the Primary Access Routes located in the Local Road Network.</p> <p>The Transport Assessment (document reference 7.11), submitted with the Development Consent Order (DCO) application, examines capacity, safety, and operational efficiency of the network, identifying potential bottlenecks or safety concerns.</p> <p>Within the assessment of the ES and the Transport Assessment, mitigation measures are proposed to minimise likely adverse impacts.</p>				
9-6.23	Concern about noise and other issues resulting from construction (e.g. mud on roads, dust)	<p>An Environmental Statement (ES) (document reference: Volume 6: Environmental Statement) has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 ('the Infrastructure EIA Regulations'). The ES identifies and assesses the likely significant effects on the environment resulting from the construction of the Project and recommends appropriate mitigation to reduce effects.</p> <p>Specifically, a Construction Noise and Vibration Impact Assessment has been undertaken and is reported in Environmental Statement (ES) Chapter 14: Noise and Vibration (document reference 6.14). During construction, mitigation would be implemented to reduce noise and vibration impacts from construction activities and increased road traffic and vibration due to additional</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>movement from construction traffic. Mitigation measures are outlined in ES Chapter 14: Noise and Vibration (document reference 6.14) and the Outline Code of Construction Practice (CoCP) (document reference 7.2). This includes the assumption that construction working would be undertaken within the agreed working hours, construction traffic would be managed through the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), haul roads would be well maintained, and Best Practicable Means (BPM) would be employed to reduce construction noise and vibration.</p> <p>ES Chapter 7: Air Quality (document reference 6.7) presents an assessment of the potential impacts from the construction of the Project on air quality. During construction, mitigation would be implemented to reduce the impact of dust generation and construction vehicle emissions. Mitigation measures are outlined in ES Chapter 7: Air Quality (document reference 6.7), and the Outline CoCP (document reference 7.2). The dust-emitting activities can be greatly reduced or eliminated by applying the site-specific mitigation measures (see Outline CoCP) for high-risk sites following measures recommendations in the Institute of Air Quality Management (IAQM) guidance (IAQM, 2024). The IAQM guidance states that with the implementation of effective site-specific mitigation measures, the environmental effect would not be significant in most cases.</p> <p>In addition, National Grid has prepared an Outline CoCP (document reference 7.2). The Outline CoCP (document</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		reference 7.2) sets out the required mitigation measures and environmental commitments that will be implemented during the construction phase of the Project to avoid or reduce potential effects of the Project on the environment.				
9-6.24	Concern that local road infrastructure is not suitable for heavy construction vehicles and machinery (including damage in relation to this, e.g. to buildings)	<p>A strategy has been developed to manage the impact of construction vehicles on the public highway and sensitive receptors, using suitable Local Road Network connections from the Strategic Road Network called Primary Access Routes. In addition, temporary haul roads for construction vehicles are proposed along the Project alignment, further reducing the impact of construction traffic on the local road network. Further details of the strategy can be found within the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).</p> <p>The Project also requires the transportation of Abnormal Indivisible Loads (AIL). National Grid is developing specific routing proposals for AIL movements and is developing these through engagement with the relevant stakeholders including the Local Highway Authorities and National Highways. An AIL routing strategy containing details about these movements is submitted in support of the Development Consent Order (DCO) application.</p>	X		X	
9-6.25	Concern that the Project between Pylons TB77 and TB88 appears to intersect with possible quarry sites	National Grid adopts a consistent approach to development sites and in the case of minerals sites			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	being considered within the Essex Minerals Local Plan Review 2025-2040 / Request for clarification from National Grid on how would these two conflicting proposals be resolved	considers those that are allocated in the current plan. In this case the site is being consulted upon for potential inclusion in a future plan so may be confirmed at some stage or may not. In these cases, we are taking forward widened Order Limits to allow for a modified alignment given that the sites inclusion may be confirmed in mid-2025. The 2025 Design Development Report (document reference 5.15) provides detail of the alternative alignment if included which includes an alignment similar to that presented in the 2023 non-statutory consultation which would reduce the interaction between the proposals.				
9-6.26	Concern that the Project is going to worsen flooding at the River Brain, near Faulkbourne	National Grid would secure measures to maintain existing hydrological function and drainage regimes on land within the Project boundary. These measures would be informed by the assessments detailed in Chapter 6: Agriculture and Soils (document reference 6.6) and Chapter 12: Hydrology, Land Drainage and Flood Risk (document reference 6.12) of the Environmental Statement (ES). A Flood Risk Assessment (FRA) (document reference 7.9) has also been prepared, and this demonstrates how flood risk would be managed and describe the measures that would be put in place to ensure no increase to flood risk, which is a key requirement of the National Policy Statement (NPS) for Energy Infrastructure.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-6.27	Criticism that the Project proposes to close two of three access roads during construction (near Fairstead)	The proposed approach for road closures and management is set out in paragraph 5.7.3 of the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3). It is anticipated that roads would only be closed where this is required for safe working. Temporary closures may be required for works including the construction of bellmouth junctions, highway mitigation, installation of buried cabling, and stringing of overhead lines/netting. If no suitable existing alternative access provision is available, a temporary alternative access would be provided.			X	
9-6.28	Concern about the potential for localised flooding as a result of the Project near pylon TB116	National Grid would secure measures to maintain existing hydrological function and drainage regimes on land within the Project boundary. These measures would be informed by the assessments detailed in Chapter 6: Agriculture and Soils (document reference 6.6) and Chapter 12: Hydrology, Land Drainage and Flood Risk (document reference 6.12) of the Environmental Statement (ES). A Flood Risk Assessment (FRA) (document reference 7.9) has also been prepared, and this demonstrates how flood risk would be managed and describe the measures that would be put in place to ensure no increase to flood risk, which is a key requirement of the National Policy Statement (NPS) for Energy Infrastructure.			X	
9-6.29	Criticism that it is unclear why the proposed Development Consent Order (DCO) application	The Order Limits include all land where there may need to be works to implement the Project. There is the	X

	encloses all of Park Road and Church Road to as far as just south of Ford Farm, and approximately half of the entire area of the woodland belt along the western boundary of Rivenhall Place	<p>potential, based on induced currents from the 400 kV overhead line, that alternating current mitigation measures may need to be installed to ferrous pipelines such as the pipeline operated by Essex and Suffolk Water at Park Road, Church Road and Rivenhall Place. The scope and extent of such mitigation measures would be dependent on the final design arrangements of the Project which would continue to evolve within the parameters of confirmed Limits of Deviation. Factors including crossing angle and clearance height, length of parallelism, site specific soil resistivity etc combine to define the requirement for mitigation. The mitigation itself is typically achieved by the installation, alongside the ferrous pipeline (in an area which is likely to have been previously disturbed during construction), of additional earthing which extends away from the crossing point. Consultation between National Grid and the relevant utility provider would confirm the requirement for installed mitigation, based on the final 400 kV design arrangements, which would be implemented by the relevant utility provider under their existing utility operation and maintenance provisions.</p> <p>There is also an 11 kV UK Power Networks (UKPN) wood pole that needs to be placed underground and diverted to facilitate the Project. Subject to the final utility operators design a section of this underground cable may be installed within the carriageway for Church Road and Park Road.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-6.30	Criticism that Pylons TB100 and TB101 impact White Notley Football Club	National Grid has considered the respondent's feedback. At White Notley Football Club, we are avoiding locating a pylon on the football pitches and are looking at how related works – removing a lower voltage overhead line and access arrangements – can be planned to reduce any impact as much as possible. We do not envisage that the Football Club would be impacted by the Project beyond temporary works associated with construction.			X	
9-6.31	Concern about impact of the Project on the main Silver End to Rivenhall underground sewer at Pylon TB91 (e.g. due to impact on residents if the sewer is damaged)	There is the potential, based on induced currents from the 400 kV overhead line, that alternating current mitigation measures may need to be installed to the ferrous pipeline operated by Northumbrian Water at Park Road. The scope and extent of such mitigation measures will be dependent on the final design arrangements of the Project which will continue to evolve within the parameters of confirmed Limits of Deviation. Factors including crossing angle and clearance height, length of parallelism, site specific soil resistivity, etc. combine to define the requirement for mitigation. The mitigation itself is typically achieved by the installation, alongside the ferrous pipeline (in an area which is likely to have been previously disturbed during construction), of additional earthing which extends away from the crossing point. Consultation between National Grid and the relevant utility provider will confirm the requirement for installed mitigation, based on the final 400 kV design arrangements, which will be implemented by the relevant			X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-6.38	Concern that an increase in noise generated by construction activities will exceed those of safe levels / Criticism that it is not reasonable to propose a 7-day working week and the possibility of working overnight	<p>National Grid notes the respondent's feedback. Chapter 4: Project Description of the Environmental Statement (ES) (document reference 6.4) provides details of the construction working hours. It is assumed that the core working hours for construction would be:</p> <ul style="list-style-type: none"> • Mondays to Fridays: 07:00 –19:00 • Saturdays, Sundays, and Bank Holidays: 07:00 –17:00. <p>The core working hours exclude start up and close down activities, which can take place up to one hour either side of the core working hours.</p> <p>There is no intention for night working on the Project as standard. However, there would be occasions where night working is required – these are detailed in ES Chapter 4: Project Description (document reference 6.4). There is also the potential for the trenchless crossings to be undertaken at night as parts of the trenchless crossing operations require continuous working to achieve completion of the crossings as once started operations cannot safely stop. Some road works may also need to be undertaken at night to reduce effects on local traffic.</p> <p>A Construction Noise and Vibration Impact Assessment has been undertaken and is reported in Environmental Statement (ES) Chapter 14: Noise and Vibration (document reference 6.14). During construction, mitigation would be implemented to reduce noise and vibration impacts from construction activities and</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		increased road traffic noise and vibration due to additional movement from construction traffic. Mitigation measures are outlined in ES Chapter 14: Noise and Vibration (document reference 6.14) and the Outline Code of Construction Practice (CoCP) (document reference 7.2). This includes the assumption that construction working would be undertaken within the agreed working hours, construction traffic would be managed through the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), haul roads would be well maintained, and Best Practicable Means (BPM) would be employed to reduce construction noise and vibration.				
Consultation						
9-6.39	Comment supportive of engagement that has taken place / feel listened to	National Grid notes the respondent's feedback.			X	
9-6.40	Comment supportive of the Project in this section	National Grid notes the respondent's feedback.			X	
9-6.41	Criticism of consultation specific to this section	National Grid notes the respondent's feedback.	X		X	
9-6.42	Criticism that there were not many consultation events in close proximity to the parish of Kelvedon, and that these events were for only a short period during the day (e.g. the event hosted at Witham Town Hall was only from 11am to 4pm, preventing those who work from attending their closest venue)	National Grid held 14 events during statutory consultation at locations along the route, including several late and weekend events. We had to accommodate our events with availability of the local halls and capacity to fit enough people and materials. We also held six public webinars which were in the evening for those who could not attend one of the public	X

		<p>information events, at these we shared all the same information and had members of the Project team available to answer questions.</p> <p>Throughout the statutory consultation we had a dedicated phonenumber and email for people to get in touch with us if they had any questions.</p>				
Design Change (CR)						
9-6.43	Oppose the use of underground cables	<p>National Grid has carefully considered the feedback received during the 2022 and 2023 non-statutory consultations, the statutory consultation, targeted consultations and landowner consultation, the alternatives available, and other factors including our duties and obligations. These duties include balancing the need to be economic and efficient, which includes keeping costs down in the interests of the bill-paying consumers, with a duty to have regard to preserving amenity, which includes the natural environment, cultural heritage, landscape and visual quality, National Policy Statement (NPS) EN-5 makes clear that <i>'the government's position that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)'</i>. The NPS also confirms that widespread and significant adverse landscape and/or visual impacts in other locations may</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>also justify the use of undergrounding. We may also adopt underground cables in other circumstances such as to cross existing 400 kV overhead line infrastructure. Where the installation of underground cables is required in lieu of overhead lines, the design of the Project has incorporated suitable consideration of the existing environment, ecology and site ground conditions based on site specific survey data.</p>				
9-6.44	Suggest a minimum distance that the Project should be sited from residential areas / residences	<p>National Grid does not use standard minimum distances as a routeing consideration. Applying an arbitrary distance may be too big or too small for the specific circumstances. We utilise the Holford Rules (a description of the Holford Rules can be found in Appendix I22 of this report) informed by feedback and professional judgement to define appropriate corridors and alignments that are consistent with the relevant policy framework and duties. In response to feedback to the 2022 and 2023 non-statutory consultations, statutory consultation targeted consultations and landowner consultation, we have modified the alignment in various locations to increase separation to properties where this is possible without undue deviation or transfer of effects to other similar properties or other receptors. A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the Environmental Impact Assessment (EIA). The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13). This assesses</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		the impact of the Project and identifies the need for additional mitigation if required.				
9-6.45	Suggest that existing overhead lines in this section should be removed	<p>The existing electricity transmission network provides power, via the local distribution network, into the local area where it is used in homes and businesses. Such lines cannot just be removed as power supplies would not be maintained.</p> <p>The need case and funding for the Project is to deliver the new network reinforcement needed, rather than to remove existing overhead lines which would need to be replaced by another form of connection such as underground cables.</p> <p>Unless required for crossings or mitigation, undergrounding existing overhead lines on the transmission network would not be in accordance with National Policy Statement (NPS) EN-5 and would result in substantial cost to bill payers. There may also be significant environmental impacts due to the removal works on sensitive ecological and archaeological receptors as well as constraints from either existing buildings or unsuitable ground conditions.</p>			X	
9-6.46	Suggest that existing overhead lines in this section should be replaced by underground cables	National Policy Statement (NPS) EN-5 establishes the position that the starting basis for new connections is a presumption on the acceptability of overhead lines but with this presumption reversed within designated landscapes and in certain other circumstances.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>The existing electricity transmission network provides power, via the local distribution network, into the local area where it is used in homes and businesses. The need case and funding for the Project is to deliver the new network reinforcement needed, rather than to remove existing overhead lines by undergrounding them.</p> <p>We have identified a number of locations where we are proposing to place existing overhead lines underground. These locations are where existing 132 kV and lower voltage lattice pylon lines are crossed by the proposed 400 kV overhead line and / or mitigation of effects are considered necessary. This includes locations such as at Mellis, between Offton and Bramford Substation, to the south of Bramford Substation and near Fuller Street.</p> <p>Unless required for mitigation, undergrounding existing overhead lines on the transmission network would not be in accordance with NPS EN-5 and would result in substantial cost to bill payers. There may also be significant environmental impacts due to the removal works on sensitive ecological and archaeological receptors as well as constraints from either existing built form or unsuitable ground conditions.</p>				
9-6.47	Suggest that the existing overhead lines in this section are reinforced / upgraded instead	The existing transmission network in the region was upgraded during 2022 and 2023 to ensure the system is running at its most efficient performance. The existing assets / networks are not able to be upgraded sufficiently to cope with the new future demands expected on the network. As a result, new lines and			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		substations would be required to accommodate the changing demands on the network.				
9-6.48	Suggest that the Project is routed away from populated / residential areas	<p>Deciding where and how to build new high voltage electricity lines is a complex issue and National Grid is mindful of the potential effects this infrastructure may have on local communities and the concerns these may bring. We recognise that people living near our transmission infrastructure, including high voltage overhead lines, may have concerns about audible noise and potential health impacts. It has sometimes been suggested that minimum distances between properties and overhead lines should be prescribed.</p> <p>We do not consider this appropriate since each instance must be dealt with on its merits. However, we have always sought to route new lines away from residential property on grounds of general amenity where possible.</p> <p>We have undertaken a noise and vibration assessment which can be found in the Environmental Statement (ES), Chapter 14: Noise and Vibration (document reference 6.14) that forms part of the Environmental Impact Assessment (EIA) for the Project. Noise levels and the effect on residential properties as well as other sensitive areas, such as hospitals and schools, are carefully considered during planning, assessed according to the appropriate UK standards, and mitigated where necessary. We set strict technical standards for the equipment we install on our network. These will apply to the proposed new East Anglia</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Connection Node (EACN) substation, and extensions required to the existing Norwich Main, Bramford, and Tilbury Substations. These standards include requirements to ensure the occurrence of audible noise is eliminated or reduced as far as practicable. Therefore, significant adverse effects from noise are not expected.</p> <p>Noise from overhead lines is predominately determined by the conductor design, voltage and weather conditions. The overhead line will be designed using a relatively quiet conductor that meets the design specification required, and operational noise is not likely to be significant at nearby sensitive receptors under any weather conditions. Pylon fittings, such as insulators, dampers, spacers, and clamps, are also designed and procured in accordance with a series of National Grid Technical Specifications to reduce the potential for audible noise and tones to occur from all types of fittings. Where noise does occur, it is likely to be localised and of short duration. If this is due to a fault, action can be taken to rectify it. A technical note has been submitted as part of the application for development consent to support scoping out noise associated with overhead lines from the Environmental Statement (ES).</p> <p>In addition, we have undertaken a Landscape and Visual Impact Assessment (LVIA) for the Project.</p> <p>This includes an assessment on both landscape character and visual amenity. The LVIA is presented in</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13).</p> <p>The health and safety of the public, local communities and employees is central to everything that we do. The UK has a carefully thought-out set of policies for protecting us all against Electric and Magnetic Fields (EMFs), the main component of which is exposure guidelines. The exposure guidelines are set by independent scientific bodies and are based on decades-long studies into the effects of EMFs and ill health. After those decades of research, the weight of evidence is against there being any health risks of EMFs below the guideline limits. Our approach is to ensure that our network comply with those policies, which are set by Government on the advice of their independent advisors. The Project is designed to ensure it is fully compliant with these policies and guidelines. This ensures that health concerns are properly and adequately addressed.</p> <p>Policies for both noise and EMF are incorporated into the decision-making process for development consent as set out in National Policy Statement (NPS) EN-5. It is National Grid's policy to ensure that all its equipment complies fully with those policies and guidelines. The application for a Development Consent Order (DCO) includes assessments against these policies, including both construction and operational noise and EMF.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-6.49	Suggest that the Project should run in closer to / parallel to the existing overhead lines	<p>National Grid notes the potential for close paralleling existing overhead lines to reduce the level of effects that may arise from a new overhead line.</p> <p>However, where existing overhead lines are present along the proposed route, there are constraints and features that mean, overall, we consider close paralleling would lead to greater effects on receptors in the area and be less compliant with the Holford Rules or be less consistent with the policy to be economic and efficient. A summary of the Holford Rules is provided within Appendix I22 of this report. A number of residential properties are present in close proximity to the existing 400 kV overhead line meaning that if the overhead lines were close paralleled it would result in the properties having an overhead line close to both sides. There are also some locations where the combination of existing physical and environmental features (road infrastructure, commercial and residential properties etc) present very substantial challenges to routeing and siting. As a result, whilst close paralleling may appear beneficial in some sections, overall, the increased environmental effects where the overhead lines have to converge and diverge, and those increased effects on properties with overhead lines on both sides are considered greater than those introduced by a new overhead line separated from existing 400 kV overhead lines. Whilst crossings and use of underground cable technology may be able to address various constrained locations, we consider the costs and environmental effects arising from the</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		additional infrastructure required to be less compliant with our duties and relevant policies.				
9-6.50	Suggest that underground cables are used for the entirety of this section	<p>National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors.</p> <p>National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is '<i>that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)</i>'. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider this section in its entirety would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.</p> <p>Therefore, whilst undergrounding the whole of this section is not considered appropriate, our proposals do include underground cable within the Dedham Vale National Landscape (previously known as Area of Outstanding Natural Beauty (AONB)) in accordance with NPS EN-5. Prior to our 2023 non-statutory consultation we identified the need to extend the underground cable beyond the National Landscape boundary because of potential effects, we have further extended this section of underground cable following consideration of feedback on our 2023 non-statutory consultation and additional investigation into potential effects. We also</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		identified an approximately 4 km section near Great Horkesley as meeting the particularly sensitive criteria where underground cable is also proposed. Additionally, underground cable is proposed at Fairstead for a 400 kV overhead line crossing.				
9-6.51	Suggest that underground cables are used in populated / residential areas	<p>National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors.</p> <p>National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is '<i>that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)</i>'. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. 		significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at all populated or residential areas in this section would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
9-6.52	Suggest that Pylons TB79 and TB80 are relocated (e.g. to avoid impacting residential properties)	National Grid has considered the respondent's feedback alongside other feedback in this area. Due to certain constraints in this area including a vineyard, the road crossing and residential properties on both sides, we are restricted on where we can move the alignment, therefore we are not proposing to change the location of TB79 (now TB81), but TB80 (now TB82) has moved further west from Coggeshall Road.			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-6.53	Suggest that Pylon TB80 is rerouted to avoid being in close proximity to the B1024 (e.g. to avoid adding traffic to an already heavily trafficked route with existing safety issues)	<p>National Grid has considered the respondent's feedback alongside other feedback in this area. Due to constraints in this area including a vineyard, the road crossing and residential properties on both sides, we are restricted on where we can move the alignment, however we are proposing to move TB80 (now TB82) further west from Coggeshall Road.</p> <p>It is not proposed for the B1024 to be used as a Primary Access Route for construction vehicles. The bell mouths proposed are a crossover point arrangement on the B1024 for vehicles travelling east – west on the temporary haul road to cross the public highway and continue travelling along the temporary haul road. No vehicles are proposed to turn left or right at the proposed bell mouth and access the B1024.</p>		X	X	X
9-6.54	Suggest that the underground cables north of Fairstead are extended east to where the cable meets the A120 and west where the cable meets the A131	<p>National Grid has carefully considered the feedback proposing to extend the use of underground cable at Fairstead, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. The underground cable proposed at Fairstead is required to cross under the existing 400 kV overhead line. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is '<i>that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments</i></p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p><i>will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)'. No such designations are present at Fairstead nor is Fairstead within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether extending the use of underground cable was justified. Therefore, the starting presumption for the Project outside of the proposed underground cable section here is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in this location would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) (document reference 6.13) has been undertaken which assesses the level of effects from the Project. We do not consider that landscape and visual effects at Fairstead, are likely to be particularly significant; nor that there is a high potential for widespread and significant adverse landscape and/or visual impacts at this location. On this basis no change to the length of underground cable is proposed in this location. The LVIA is presented in the Environmental</i></p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Statement (ES) and this has identified any need for additional mitigation.				
9-6.56	Suggest that Pylons TB101 and TB102 are relocated to mitigate impact on residential properties in close proximity (distances provided by respondent)	The alignment cannot move further south without oversailing football pitches. National Grid has previously modified the alignment at this location to avoid such oversail and in doing so did not reduce the separation from the properties to the alignment. The specific pylons are at 150 m distance from residential properties. We do not consider this to be inconsistent with the Holford Rules Supplementary Notes in terms of effects on general amenity. For these reasons no change is proposed. A summary of the Holford Rules is provided within Appendix I22 of this report.			X	
9-6.58	Criticism of the revised alignment of the Project in the Monk's Farm area / Suggest that Pylons TB83 and TB84 are moved east and south, returning them to their previous positions (e.g. to avoid sterilising more sand and gravel reserves than they were before)	National Grid adopts a consistent approach to development sites and in the case of minerals sites considers those that are allocated in the current plan and develop alignments to reduce effects. In this case the site is being consulted upon for potential inclusion in a future plan so may be confirmed at some stage or may not. In these cases, we are taking forward widened Order Limits to allow for a modified alignment given that the sites inclusion may be confirmed in mid-2025. Various homes, listed buildings and other proposed development as well as less direct routeing are the reasons for options bypassing to the south being less preferred. The 2025 Design Development Report (document reference 5.15) provides details of the			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		alternative alignment which includes an alignment similar to that presented in the 2023 non-statutory consultation.				
9-6.59	Suggest that the pylon on the B1024 between Feering / Coggeshall and Kelvedon is relocated to mitigate impact on residents	National Grid has considered the respondent's feedback and made a change to pylon TB80 (TB82) to move it as far from the B1024 as possible along the alignment without the need to increase it in height.			X	X
9-6.60	Suggest that Pylons TB101 and TB102 are replaced by underground cables or relocated (e.g. to mitigate impact on farmland, residents, visual impact, and noise due to construction access)	<p>National Grid notes the respondent's feedback. TB101 and TB102 (now TB103 and TB104) have been sited to minimise disruption to the football club as well as balancing effects to residential properties and woodland. Moving the alignment at this location would result in a longer and less direct alignment which would be less consistent with the Holford Rules, we are therefore not proposing a change to the location of these pylons.</p> <p>National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National</i></p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p><i>Landscapes</i>}'. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at TB101 and TB102 would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN5. The LVIA is presented in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-6.61	Criticism of revised alignment of the Project at Pylons TB82, TB83 and TB84 due to this alignment sterilising significantly more mineral (sand and gravel) reserves / Suggest that National Grid revert to previous routing for Pylons TB82, TB83 and TB84 / Concern about the impact of the Project on mineral (sand and gravel) reserves at Pylon TB82 (e.g. oppose the change to the Project from the 2023 draft alignment at this location, as the pylon base will sterilise mineral reserves at a wider, deeper extent due to the requirement for support, preventing the removal of sand and gravel at depth), and suggest that the Project is routed away from the mineral extraction area (plan provided by respondent)	National Grid adopts a consistent approach to development sites and in the case of minerals sites considers those that are allocated in the current plan and develop alignments to reduce effects. In this case the site is being consulted upon for potential inclusion in a future plan so may be confirmed at some stage or may not. In these cases, we are taking forward widened Order Limits to allow for a modified alignment given that the sites inclusion may be confirmed in mid-2025. Various homes, listed buildings and other proposed development as well as less direct routeing are the reasons for options bypassing to the south being less preferred. The 2025 Design Development Report (document reference 5.15) provides detail of the alternative alignment which includes an alignment similar to that presented in the 2023 non-statutory consultation.			X	X
9-6.62	Suggest that the Project avoids mineral extraction areas (generally, no location given)	National Grid considers development proposals within the planning system (allocated in local plans, having a submitted screening / scoping request for Environmental Impact Assessment (EIA) or submitted applications) or as indicated by relevant local plan or mineral plan allocations. We have considered those developments known and are taking forward extended Order Limits to respond to scenarios with the site allocated and without the site allocated. It is also the case that mineral areas can be very extensive and avoidance require extensive diversions. On balance it is considered that attention to design around allocated or approved sites is reasonable			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		but with more speculative areas left to be considered when their status is more certain.				
9-6.63	Suggest the Project is rerouted to follow route provided by respondent which broadly follows the A12 whilst avoiding residential areas (map provided by respondent)	<p>The alternative route suggested provides an alternative end to end connection. To the south of Bramford Substation, the response suggests following an existing 132 kV overhead line before following the A12 to the East Anglia Connection Node (EACN) substation and then from the EACN substation follows the A12 to Feering. South of Feering it diverts towards Rayleigh to follow the existing 400 kV overhead line from Rayleigh through to Tilbury. The response also proposes several sections to be installed as underground cable including within the A12 carriageway to facilitate road improvement. The route and technology suggestions are considered less preferred and not taken forward as part of the proposals on the basis of the following reasons. Parts of the proposed route coincides with corridor sections considered previously as set out in the Corridor and Preliminary Routeing and Siting Study (CPRSS) published as part of the 2022 non-statutory consultation. The reasons for these continuing to be less preferred are unchanged as no new evidence or factors are provided. They include, for example, the route south from Feering to Rayleigh which amongst other constraints has the potential for greater interface with the Special Protection Area (SPA) designations and qualifying features and as such is less preferred to the Project which is at much greater distance from the designated areas. It is noted</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		that some sections of the proposed route are relatively unconstrained however there are also some sections that are heavily constrained. For example, installing as underground cable as part of improving the A12 has been raised by other feedback but would lead to substantial disruption to traffic movement during construction as well as during maintenance given that a requirement for excavation to repair underground cables can be envisaged at some stage. As such the combination of proposed route alignment and technology is considered less preferred. The response also proposes the use of underground cables to reduce effects on residential amenity in various locations or to facilitate installation in tandem with potential road improvements. This is inconsistent with policy on the use of underground cables as set out in National Policy Statement (NPS) EN-5 (the presumption to start with the assumed use of overhead line as per paragraph 2.9.10) and is also inconsistent with National Grids duties under the Electricity Act 1989 (to be economic and efficient and undergrounding where not required by policy would be less economic.).				
9-6.64	Suggest that Pylon TB115 is replaced with stays or some other design feature (e.g. currently Pylons TB114 to TB116 appear to be too close together)	There is not currently an approved design, or design feature, that would allow for this pylon to be constructed with stays in the way requested. When locating pylons, a large number of variables have been considered, in discussion with subject matter experts such as landscape architects. It may be that a			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>closer spacing of pylons with each smaller in height may be preferred to a bigger spacing but taller pylon. Each span is different and it is not a set distance that is applied to all, but all spacings need to ensure that appropriate clearances are maintained in the design.</p> <p>Pylon spacing varies to respond to the presence of various constraints and landform, but greater span distance requires the use of taller pylons (by the addition of multiples of 3 m extensions to the standard lattice pylon). The standard lattice pylon (around 50 m height) achieves a typical span of around 350 m which is considered to provide an appropriate balance between the number and height of pylons and the different effects arising from these aspects.</p>				
9-6.65	Criticism that the red line area in the Fairstead area appears to be wider in some parts and narrower in others, when the minimum amount of land should be used during construction / Suggest the red line area in Fairstead is updated to use the minimum amount of land	<p>National Grid agrees that the minimum amount of land should be used for construction. The nominal width of the Order Limits for overhead line sections is 100 m.</p> <p>The Order Limits are expanded to account for construction of the two Cable Sealing End (CSE) compounds and underground cables and vegetation planting in the surrounding field. Also included are areas for underground drainage, possible roadside vegetation management, future access routes, and temporary construction overhead line stringing positions.</p>			X	
9-6.66	Suggest the haul road running north of Pylons TB114 to TB116 should instead be routed to the south of Pylons TB114 to TB116 (e.g. where there is	National Grid notes the preference from certain landowners for haul roads to be situated along hedge lines where possible to reduce the impact on agricultural			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	appears to be adequate space, this would be on a field boundary, and would avoid significant temporary land take)	activities and reduce land take. We have assessed requests from landowners on an individual basis and have moved the haul road to the edges of fields where this can be achieved without undue diversion or introducing safety concerns. With regards to the haul road north of TB114 to TB116 (now TB116 to TB117), we have made a change to route the haul road to the south of the alignment adjacent to the woodland.				
9-6.67	Suggest that Pylons TB114 and TB116 should be relocated to be sited as close to the field boundary as possible to avoid unnecessary crop loss	National Grid notes the preference from certain landowners for pylons to be situated close to hedge lines where possible to reduce the impact on agricultural activities and reduce land take. We have assessed requests from landowners on an individual basis and have moved pylons to the edges of fields where this can be achieved. We have reviewed the pylons TB114-TB116 (now TB116 to TB117/TB118) and TB114 and TB115 remain along the field boundary as far as practicable. TB116 cannot be placed on a field boundary due to required span lengths and the need to keep the alignment as straight as possible to be consistent with the Holford Rules. A summary of the Holford Rules is provided within Appendix I22 of this report. We are also unable to position pylons close to the southern edge of the field due to the need to maintain adequate distance to Hallhook Row Ancient Woodland.			X	
9-6.68	Suggest that the haul road immediately south of Pylon TB117 instead runs to the north of Pylon	National Grid notes the preference from certain landowners for haul roads to be situated along hedge			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	TB117 (e.g. leaving the end of the affected field undisturbed) / Alternatively, if the haul road is to be left in its current location, suggest that it runs around the field edge rather than across a corner which will stop agricultural use of what will become an extremely small field corner	lines where possible to reduce the impact on agricultural activities and reduce land take. We have assessed requests from landowners on an individual basis and have moved the haul road to the edges of fields where this can be achieved without undue diversion or introducing safety concerns. National Grid has reviewed the haul road in this location and is proposing a change to the haul road to the south of TB117 (now TB118/TB119) to be aligned closer to the field boundary.				
9-6.69	Suggest that Pylon TB77 is relocated away from Threadkells, Old Mill Lane Feering, Feeringbury Barn, Littlebury and Feeringbury Lodge to south of Old Mill Lane to mitigate impact on views and landscape (plan provided by respondent)	National Grid has considered feedback requesting for pylon TB77 (as in between TB76 and TB81) to move away from certain properties to reduce visual impacts. We have made a change to the alignment between TB75 and TB79 (now TB76 and TB81) which moves TB77 to the south-east of Threadkells.			X	X
9-6.70	Suggest that Pylons TB201 and TB202 should be relocated away from residences, and / or that cable ploughing should be used for the Project instead (e.g. as this will allow 5-6 times more power to be transmitted; as these are cheaper; to mitigate impact on environment and landscape)	National Grid has considered feedback requesting that TB201 and TB202 (now TB204 and TB205) be located further away from residences. We have assessed multiple alternatives in this location and due to constraints such as ancient woodland, an existing sewerage treatment works, railway and road crossing and proposed development, we are not proposing a change to the alignment in this area. The maximum voltage for underground cables that can be laid using cable ploughing is 132 kV, and the underground cable size required for this Project is 400 kV, National Grid will continue to monitor advances in			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		technology innovations and exact methodologies may vary within the limits of the Development Consent Order (DCO). We are not proposing to utilise this method for installation of underground cables from Norwich to Tilbury at present.				
9-6.71	Suggest that the two terminal pylons and a ground station east of Fairstead Road (proposed to facilitate the crossing of an existing overhead line) are moved to either side of the road, or underground cables are used at this location instead	The requested change was consulted on as part of the 2023 non-statutory consultation with the western cable sealing end compound (CSEC) positioned to the west of the road and a more extended length of underground cable used between the eastern and western CSECs. In response to feedback a change was made to reduce various effects as set out in the 2024 Design Development Report. We consider this design, consulted upon as part of the statutory consultation to be preferred and no change is proposed. In more general terms the location is neither designated, within the setting of such a designated area nor experiences a level of effect that requires the use of underground cables more extensively as defined in National Policy Statement (NPS) EN-5 and EN-1.			X	
9-6.73	Concern that the Project will result in the permanent sterilisation of viable/winnable sand and gravel reserves (e.g. given that pylon bases would require support) near Monk's Farm, Pantling's Lane, Coggeshall Road, and suggest that the Project is rerouted to avoid the sand and gravel reserves	National Grid adopts a consistent approach to development sites and in the case of minerals sites considers those that are allocated in the current plan. In this case the Bradwell Quarry Monk's Farm site is being consulted upon for potential inclusion in a future plan so may be confirmed at some stage or may not. In these cases we are taking forward widened Order Limits to			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		allow for a modified alignment given that the sites inclusion may be confirmed in mid-2025. The 2025 Design Development Report (document reference 5.15) provides detail of the alternative alignment if included which includes an alignment similar to that presented in the 2023 non-statutory consultation which would reduce the interaction between the proposals.				
9-6.74	Suggest that underground cables are used for the Project at Pylons TB79 and TB80	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is ' <i>that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)</i> '. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		(i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at TB79 and TB80 would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
9-6.75	Suggest that T-pylons are used for the Project at Pylons TB79 and TB80	The latest independent report on the Comparison of Electricity Transmission Technologies: Costs and Characteristics (Institute of Engineering and Technology, 2025) confirms that whilst T-pylons may in certain locations provide an alternative to conventional overhead lines with potential benefits in visual impact and reduced land-take, this is at a higher cost. The build			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>cost is approximately 2 to 2.5 times that of an equivalently rated conventional overhead line, and the lifetime costs are around 1.6 to 1.7 times that of a conventional overhead line. The current arrangements for the oversight of funding by Ofgem requires that the lowest cost acceptable design is taken forward rather than a more expensive design even if that design is perceived to reduce the level of effect.</p> <p>As such consideration of their use follows after establishing a need to mitigate effects of the standard lattice design and after considering the benefit of adopting a low height lattice pylon design. T-pylons themselves are also less adaptable to varied terrains and require more substantial access infrastructure. Furthermore, their resilience and environmental impact are comparable to conventional overhead lines, but with increased carbon intensity due to construction materials. Attention also needs to be given to the transitions between pylon types. Given It is the surrounding context that drives the need for alternative design mitigation, where this is not required along the entire route, any visual break and transition in pylon design also needs to be carefully sited.</p> <p>Assessment findings have concluded that, where there is not a reversal of the presumption to use overhead lines, the use of lattice pylons (either standard or low height) is consistent with planning policy throughout the route. Whilst there may be some locations (for examples see Appendix A of the 2024 Design Development</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Report) where there may be a design option for the use of T pylons, the need to mitigate for unacceptable effects from lattice pylons is not engaged. On this basis T-pylons are not proposed for the Project.				
9-6.76	Suggest that underground cables are used for the Project between Pylons TB73 and TB75, to alleviate direct impacts to properties / Criticism that National Grid have not modelled and consulted on this already	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is ' <i>that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)</i> '. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		given to the costs and benefits of feasible alternatives to the overhead line; paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project between Pylons TB73 and TB75 would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN5. The LVIA is presented in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
9-6.77	Suggest the Project should be rerouted from Pylon TB71 where the route is proposed to divert south when running east to west, so that the Project is further away from heritage buildings in the area, particularly the Clock House, the Orangery and Felix Hall around Pylons TB83 and TB84 as well as on the woodland at the listed Porters Farm	The alignment must take account of many varied constraints, environmental features, listed buildings and residential properties. Deviating further to the north away from this location would increase conflict with existing and (if confirmed) allocated mineral extraction, and would either increase effects on woodland, lead to a less direct alignment with additional angles to avoid effects on various areas of woodland, or transfer effects to other homes and environmental features. These alternatives are considered less consistent with the Holford Rules			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		and are therefore less preferred. A summary of the Holford Rules is provided within Appendix I22 of this report. The effects to the heritage buildings are not considered to be inconsistent with Holford Rules or relevant planning policy and is reported in the Environmental Statement (ES). No change is proposed.				
9-6.78	Suggest that Pylon TB121 is relocated away from residence (e.g. as it is proposed less than 100 m away at present)	TB121/TB122 (now TB123/TB124) are currently located approximately midway (noting the position of Fuller Street) between properties along Boreham Road / Cole Hill. For these reasons we are not proposing a change to the alignment at this location.			X	
9-6.79	Criticism that the Project will divide the hamlets of Fuller Street, Ranks Green, and Fairstead (Church End)	An existing overhead lattice line is already present between Fairstead and the other hamlets. Whilst a further overhead line is proposed it is proposed to replace part of the existing 132 kV overhead line by underground cable to reduce the concern raised. Landscape and visual effects are reported in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13).			X	
9-6.80	Suggest that Pylon TB121 is relocated away from residence	TB121/TB122 (now TB123/TB124) are currently located approximately midway (noting the position of Fuller Street) between properties along Boreham Road / Cole Hill. For these reasons we are not proposing a change to the alignment at this location.			X	
9-6.81	Criticism of the revised alignment between Pylons TB111 and TB119 and associated haul road /	National Grid has considered feedback to revert back to the original alignment between TB111 to TB119 (now			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	Suggest that previous alignment of these pylons should be reinstated to reduce the impact on communities, properties, trees, wildlife, and listed buildings	TB113 to TB121), however, the reasons for changing the alignment, as set out in the 2024 Design Development Report (available on the Project website), still stand and this is still the preferred route. We are however proposing a slight change to the alignment to move it further south between TB116 and TB119 (now TB117/118 and TB121) which goes some way to responding to this request.				
9-6.82	Concern about the removal of mature oak trees to facilitate the construction of Pylon TB116	National Grid notes the respondent's feedback, a change has been made between TB114 and TB116 (now TB116 and TB118) which reduces impacts to the oak trees mentioned. Mitigation for the loss of trees and hedgerows forms part of Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13).			X	
9-6.83	Object to the use of a private road near Fairstead (location provided by respondent) as an access track for maintaining the pylons in future	National Grid notes the respondent's feedback. The access route proposed is for future maintenance if required and would not be used for construction. We are not proposing to construct anything for this permanent access route therefore existing tracks are being used where possible. Use of these access routes would be discussed with the landowner should this be required in the future.			X	
9-6.84	Criticism that the proposal to build a solar farm on the three fields to the south and the south west of Rivenhall Place was required during the planning process to exclude the field nearest to (and south of)	National Grid is unable to comment on the Novus Renewables Solar Farm planning application. Norwich to Tilbury is a Nationally Significant Infrastructure Project (NSIP). NSIPs are dealt with under the Planning Act	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	Rivenhall Place owing to the importance of the heritage assets of the Grade II* building as well as the grounds / Criticism that Pylons TB92 and TB93 which are proposed on Rivenhall Place are each 50m high compared with the solar panels that were removed and were of relatively low height	2008. Instead of applying to a local authority for planning permission, NSIP developers apply to the Planning Inspectorate for a Development Consent Order (DCO). The Planning Inspectorate is responsible for operating the planning process which includes examining an application and writing a report with recommendations to the relevant Secretary of State who then makes a decision on whether or not to grant consent. Section 104 of the Planning Act 2008 states, amongst other matters, that applications must be decided in accordance with any relevant National Policy Statement (NPS), except where the Secretary of State is satisfied that the adverse impact of the proposed development would outweigh its benefits. In determining an application, the Planning Inspectorate will need to appraise the proposal against NPS (in this case EN-1 and EN-5). National Grid has submitted a Planning Statement (document reference 5.6) and Policy Compliance Document (document reference 5.7) with its DCO application. The Planning Statement and Policy Compliance Document sets out the planning policy context and assesses how the Project complies with National Policy.				
9-6.85	Suggest that the Project uses underground cables through Rivenhall parish (e.g. to mitigate the impact on heritage assets, permanent landscape impacts, operational noise from overhead lines, and flying routes of bats and birds, etc)	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is '<i>that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)</i>'. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		(in environmental impact terms), we do not consider the Project through Rivenhall parish would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
9-6.86	Suggest that the Pylon TB92 is relocated to the south of its current position such that the cable line comes 'straight on' from Pylon TB91 and then the turn to connect to Pylon TB93 is simply slightly further down the line (plan provided by respondent)	National Grid has considered feedback and has made a change to the alignment between TB91 to TB95 (now TB93 to TB97) which would move TB92 (now TB94) south of the previously proposed location.			X	X
9-6.87	Suggest that the Project does not turn to go north of Rivenhall Thicks Wood, but carries on to the south of it, to come out at the B1018 near the reservoir (e.g. to mitigate the visual impact at Cressing Temple and Rivenhall Church)	Whilst noting the benefits of such a change to certain heritage features, the change would increase effects at the Grade I Listed Faulkbourne Hall, Grade I Church of St Germanus and Grade II Listed Faulkbourne Hall Registered Park and Garden. It is also likely to be slightly longer, less direct and less consistent with the Holford Rules. A summary of the Holford Rules is provided within Appendix I22 of this report. It is therefore less preferred, and no change is proposed.			X	
9-6.88	Suggest that the working width area from the corner of the Fairstead Road (heading north out of Fairstead) should be closer to the field edge to avoid unnecessary land take and loss of cropping area	National Grid has considered the feedback and notes that the working area within the Order Limits is not all subject to disturbance and some may just be oversailed by conductors. Working areas have been reduced as far as possible. Compensation is available to respond to the loss of cropped area which we seek to minimise within			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		the constraints and guidance on routeing and the requirements to ensure successful build.				
9-6.89	Suggest that Pylon TB107 should be placed as close as possible to the field boundary to avoid unnecessary land take and loss of cropping area	National Grid notes the preference from certain landowners for pylons to be situated along field boundaries where possible to reduce the impact on agricultural activities and reduce land take. We have assessed requests from landowners on an individual basis and have therefore moved TB107 (now TB109) slightly further to the west to be as close to the field boundary as possible.			X	X
9-6.90	Pylon TB107 is relatively close to Pylon TB108 - whilst this may be due to the adjacent Cable Sealing End Compound (CSEC), Suggest that the design should be challenged to understand if Pylon TB107 can be replaced with stays or an alternative design feature	Pylon TB107 (now TB109) has been moved west, closer to the field boundary and has been shortened by 3 m. It is not possible to remove TB107 as the resulting span of conductors would be too close to the ground and would overload the remaining pylons. The span lengths in this section, TB105-TB110 (now TB107-TB112), have been optimised to use the fewest number of pylons possible while maintaining required ground clearances.			X	X
9-6.91	Criticism that the haul road south east of Pylon TB107 has a pronounced kink in it for no apparent reason / Suggest that this is looked into and if possible the road straightened	National Grid has reviewed the haul road in this location, the presence of hedgerow in this field influenced the design of the haul road, however we have straightened the haul road between TB106 and TB107 (now TB108 and TB109).			X	X
9-6.92	Suggest that the haul road south of Pylon TB107 is relocated to be closer to the field edge to avoid unnecessary land take and loss of cropping area	National Grid has reviewed the haul road in this location, we have straightened the haul road towards the field edge between TB106 and TB107 (now TB108 and			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		TB109) as much as possible without increasing impacts on vegetation.				
9-6.93	The red line area appears to be wider in some parts and narrower in others (around Pylon TB107) / Suggest that this is reviewed such that the minimum amount of land should be used during construction and therefore the red line area, with its various kinks should be designed with this in mind	<p>National Grid agree that the minimum amount of land should be used for construction.</p> <p>The nominal width of the Order Limits for overhead line sections is 100 m.</p> <p>The Order Limits are expanded to account for construction of the two Cable Sealing End (CSE) compounds and underground cables and vegetation planting in the surrounding field. Also included are areas for underground drainage, possible roadside vegetation management, future access routes, and temporary construction overhead line stringing positions.</p>			X	
9-6.94	Criticism that Pylons TB100 to TB105 will surround respondent's property / Concern about destruction of respondent's garden as part of it falls within the draft Order Limits	National Grid has considered the respondent's feedback, while we are not proposing a change to the alignment at this location (TB100 to TB105) due to alternatives being less consistent with the Holford Rules or having greater impacts, we can confirm that the respondent's property has been removed from the Order Limits. A summary of the Holford Rules is provided within Appendix I22 of this report.			X	
9-6.95	Criticism that Pylons TB104 and TB105 will cross the Essex Way	An Outline Public Rights of Way Management Plan (document reference 7.6) has been submitted as part of the Development Consent Order (DCO) application. The Outline Public Rights of Way Management Plan (document reference 7.6) sets out management			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>measures and mitigation measures for each PRoW affected by the construction activities and operation of the Project.</p> <p>The impact on PRoW (including Essex Way) from the construction and operation of the Project are presented in the Environmental Statement (ES), Chapter 16: Traffic and Transport (document reference 6.16) and ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15).</p>				
9-6.96	Suggest that the pylon route is moved closer to Witham, just beyond Faulkbourne Village, where the land is mostly open farmland	National Grid has considered the respondent's preference for an alignment closer to Witham. Alternative alignments closer to Witham would transfer effects to a greater number of properties and would also increase effects to a number of properties that would be closer to the alignment. Alternatives would also be longer and less direct and therefore less consistent with the Holford Rules. Therefore, we have not adopted an alternative alignment at this location. A summary of the Holford Rules is provided within Appendix I22 of this report.			X	
9-6.97	Suggest that the Draft Order Limits (red line boundary) for the Project are amended so that they no longer fall within the boundary of respondent's property (near Boreham Road)	National Grid notes the respondent's feedback and has amended the Order Limits in this location to remove the respondent's property as requested.			X	X
9-6.98	Criticism of the siting of the Cable Sealing End (CSE) compounds in Braintree	The siting of the Cable Sealing End (CSE) compounds, to facilitate crossing of the existing 400 kV overhead line,			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		has responded to the presence of constraints, residential properties and environmental features. It has also responded to feedback received at the non-statutory and statutory consultations. The proposed site benefits from some existing vegetation screening that can be reinforced, reduces effects on landowner activities and is economic by minimising the length of underground cable. In the absence of new information or other factors no change is proposed.				
9-6.99	The Project, particularly in relation to Pylons TB81, TB82, TB83, TB84 and TB85, passes through the wider Kings Dene development proposition, with Pylons TB83 and TB84 in particular currently located within areas proposed for residential development / The respondent welcomes an opportunity the discuss this further with National Grid to identify opportunities to accommodate the Project, but opposes the Project as current	National Grid adopts a consistent approach to development sites and considers those that are allocated in any existing plans or with planning approval. In some cases, sites are being consulted upon for potential inclusion in a future minerals plan so may be confirmed at some stage, or may not. In these cases, we are taking forward widened Order Limits to allow for a modified alignment given that there is an ongoing minerals plan consultation which may lead to inclusion and be confirmed in mid-2025. The 2025 Design Development Report (document reference 5.15) provides detail of the alternative alignment. The residential development mentioned by the respondent has no such status and no planning application has been made and has therefore not been considered as a factor in route development.			X	X
9-6.100	Object to the location of Pylon TB91, removal of hedgerow for construction of the pylon and use of	Park Road is not proposed to be used by construction vehicles, though it is crossed using the existing			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	Park Road by construction traffic to either Witham or Silver End (e.g. due to impact on residence), and suggest that the Project should instead be rerouted between Pylons TB91 and TB94 (e.g. to mitigate impact on views at Rivenhall, wildlife including Sky Larks, residences, woodland, agriculture, aviation, heritage buildings and landscape) by a few metres to the south-east of existing trees at Rivenhall Place where the solar farm is planned to be located and where the access road is proposed (e.g. so that works for the Project could be completed alongside works for the solar farm, and the solar farm can be connected to the grid). With this, suggest that the Project should then cross the protected view closer to the north of Rivenhall Thicks Wood, until rejoining the proposed route at Pylon TB94	bellmouth also to be used by the solar farm project. Some works may be necessary to third party assets such as a wood pole overhead line which will need to be placed underground. A change to the alignment has been made in response to feedback that substantively achieves the changes sought. This changes TB91 (now TB93) to a suspension pylon. This moves the alignment to the south to some degree avoiding effects on the trees closest to Park Road but does lead to some effects on the solar farm. Further re-direction southwards is constrained by other residential properties to the south.				
9-6.101	Suggest that the proposed replacement of the existing Distribution Network Operator (DNO) 132 kV overhead line near Pylon TB120 is extended to PSB43, and request for information on the replacement (e.g. details of the proposal and timings of replacement)	National Grid has a mandate to be economic and efficient in its spend and so consideration of longer and more circuitous cable routes must be carefully considered against this mandate. In this instance, there is insufficient justification to increase the mitigation against the mandate. Should consent be granted in 2027, it is anticipated that construction of the Project would commence in 2027, likely starting with pre-commencement works including site clearance activities, the installation of temporary construction compounds and access roads. It is expected the main construction works will continue			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>through to 2031 (four years). Further details of the proposals and section specific timings will be determined at detailed design.</p> <p>Further details of the proposed cable route and limits of deviation are shown in Volume 2.3 Work Plans - Section E, F, G, H.</p> <p>The relevant utility provider will confirm the final requirements for the installed mitigation.</p>				
9-6.102	Suggest that the Project is rerouted further north between Pylons TB117 and TB120 (e.g. to mitigate impact on business, landscape, heritage, farmland and residents) (address provided by respondent)	The alignment in this location is approximately midway between properties to north and south subject to certain other environmental constraints. A change to the benefit of those to the south will transfer effects to those to the north. On this basis no change is proposed.			X	
9-6.103	Suggest that the Project is rerouted further east at Pylons TB72 and TB73 (e.g. away from the Surrex community)	National Grid has considered the respondent's feedback and we have made a change to the alignment in this area that moves TB72 and TB73 further east away from Surrex.			X	
9-6.104	Suggest that the Project is rerouted further north between Pylons TB76 and TB81 away from Feeringbury Manor, the Halfway Houses and Pound Farm area by crossing the Blackwater near the sewage treatment works	An alignment to the north of Feeringbury and Halfway Cottages was considered in the 2023 Design Development Report (DDR) (available on the Project website). Whilst potentially beneficially reducing some effects it transfers these to others. In the 2023 DDR it was considered less preferred due to effects on the connected heritage assets (various grade I, II* and II) at Feeringbury and Coggeshall Abbey. In the absence of			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		new information, no change is proposed in response to this feedback.				
9-6.105	Suggest the use of underground cables for the Project at Surrex, Feeringbury, and between the Halfway Houses and Pound Farm (e.g. Pylons TB72 and TB73, and between Pylons TB76 and TB81)	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is ' <i>that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)</i> '. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at Surrex, Feeringbury, and between the Halfway Houses and Pound Farm would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
9-6.106	Suggest the use of underground cables for the Project at heritage sites in this section, including at Felix Hall and Cressing Temple	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed</i>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)'. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. 		(document reference 6.13) and this has identified any need for additional mitigation.				
9-6.109	<p>Suggest that the Project is rerouted between Pylons TB96 and TB114 to remove the kink at TB103 (e.g. to reduce number of pylons needed and mitigate impact on agriculture and Faulkbourne and White Notley Football club), as follows:</p> <ul style="list-style-type: none"> - Suggest that Pylon TB98 is relocated out of the arable field to the area of rough ground to the north between the railway and the Cressing Road (51°49'49.0"N 0°36'52.6"E) (e.g. to allow access from Cressing Road and remove need for Pylon TB97); - Suggest that Pylon TB99 is relocated to the other side of the horse pasture field to 51°49'51.3"N 0°36'14.2"E (e.g. on the field boundary); - Suggest that Pylon TB100 is relocated to the other side of the horse pasture field to 51°49'54.1"N 0°35'42.5"E; - Suggest that Pylon TB101 to the side of Church Hill at 51°49'52.2"N 0°35'53.8"E (e.g. on the field boundary to mitigate impact on willow plantation); - Suggest removal of Pylon TB102; - Suggest that Pylon TB103 is relocated to 51°49'50.2"N 0°35'14.1"E; - Suggest removal of Pylon TB104; - Suggest that Pylon TB105 is relocated to 51°49'50.2"N 0°35'14.1"E (e.g. for access by 	The suggestion in the feedback would not lead to the removal of the kink to the south of the group of properties at Maltings Farm but would switch it to pass to the north of these properties. Whilst noting the assumed opportunity to reduce effects on agricultural activities this would only be achieved by increased effects to residential properties on the southern edge of White Notley reducing consistency with the Holford Rule Supplementary Notes. A summary of the Holford Rules is provided within Appendix I22 of this report. Overall, the proposed change is less preferred and no change has been made.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>existing farm track off Church Hill and located on field boundary to mitigate impact on agriculture);</p> <ul style="list-style-type: none"> - Suggest that Pylon TB106 is relocated to 51°49'47.4"N 0°34'59.7"E (e.g. for access by existing farm track off Pink Lane and located on field boundary to mitigate impact on agriculture); - Suggest that Pylon TB107 is relocated to 51°49'50.3"N 0°34'28.4"E (e.g. for access by existing farm track); - Suggest that Pylon TB108 is relocated to 51°49'50.3"N 0°34'28.4"E (e.g. for access by existing farm track); - Suggest that Pylons TB109 and TB110 are relocated to 51°49'50.8"N 0°34'03.6"E and use of underground cables for the Project from this location for the cross over; - Suggest that Pylons TB111 to TB113 are relocated to 51°49'51.2"N 0°33'39.2"E, with change from use of underground cables to overhead lines for the Project at this location. 					
9-6.110	Suggest that the Pylon TB77 is relocated away from Threadkells, Old Mill Lane Feering, Feeringbury Barn, Littlebury and Feeringbury Lodge to the north of Old Mill Lane, where it rejoins the overhead line at Coggeshall Hamlet	National Grid has considered feedback requesting for pylon TB77 to move away from certain properties to reduce visual impacts. We are proposing a change to the alignment between TB75 and TB79 which would move TB77 (now TB78) to the south-east of Threadkells.			X	X
9-6.111	Concern about impact of Pylons TB121, TB122 and TB123 at the proposed road crossing at Cole Hill in	A range of protected species surveys have been undertaken and the results are outlined in Chapter 8:			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	Great Leighs (e.g. impact on residents) / impact of Pylons TB121 to TB126 (e.g. impact on protected lanes, East Atlantic Flyway, bats south of Pylon TB122, deer), and suggest that T-pylons are used for the Project at this location (e.g. to mitigate impact on ancient woodland to the west of Cole Hill between Pylons TB123 and TB124)	<p>Ecology and Biodiversity (document reference 6.8) and Appendices 8.1 to 8.16 (document reference 6.8.A1-6.8.A16) of the Environmental Statement (ES). Appropriate mitigation would be implemented where impacts are identified as agreed with Natural England and the local planning authority as relevant.</p> <p>The impacts of the Project on the historic environment are assessed in Chapter 11: Historic Environment (document reference 6.11) of the ES. The assessment considers the potential impacts to heritage assets and includes assessment of potential for physical impact and impact through change to setting that affects the value of a heritage asset. The Project has engaged with Historic England and relevant planning authorities on aspects relating to heritage, including appropriate mitigation measures and techniques and to take their views into account during Project development.</p> <p>Further information on protected lanes can be found in the Historic Environment PEIR, included under Historic Landscape Characterisation and ES Chapter 13: Landscape and Visual (document reference 6.13). Additional information regarding impacts to the historic landscapes of the project can be found within the Outline Code of Construction Practice (CoCP) (document reference 7.2).</p> <p>Changes to people's views are considered in ES Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3). This includes the</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>consideration of changes in views from Fuller Street and Great Leighs. Consideration of changes in views experienced from private residencies has also been undertaken in a Residential Visual Amenity Assessment (RVAA) as set out in ES Appendix 13.4: Residential Visual Amenity Assessment (document reference 6.13.A4).</p> <p>The latest independent report on the Comparison of Electricity Transmission Technologies: Costs and Characteristics (Institute of Engineering and Technology, 2025) confirms that whilst T-pylons may in certain locations provide an alternative to conventional overhead lines with potential benefits in visual impact and reduced land-take, this is at a higher cost. The build cost is approximately 2 to 2.5 times that of an equivalently rated conventional overhead line, and the lifetime costs are around 1.6 to 1.7 times that of a conventional overhead line. The current arrangements for the oversight of funding by Ofgem requires that the lowest cost acceptable design is taken forward rather than a more expensive design even if that design is perceived to reduce the level of effect.</p> <p>As such consideration of their use follows after establishing a need to mitigate effects of the standard lattice design and after considering the benefit of adopting a low height lattice pylon design. T-pylons themselves are also less adaptable to varied terrains and require more substantial access infrastructure. Furthermore, their resilience and environmental impact</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>are comparable to conventional overhead lines, but with increased carbon intensity due to construction materials. Attention also needs to be given to the transitions between pylon types. Given it is the surrounding context that drives the need for alternative design mitigation, where this is not required along the entire route, any visual break and transition in pylon design also needs to be carefully sited.</p> <p>Assessment findings have concluded that, where there is not a reversal of the presumption to use overhead lines, the use of lattice pylons (either standard or low height) is consistent with planning policy throughout the route. Whilst there may be some locations (for examples see appendix A of the 2024 Design Development Report) where there may be a design option for the use of T-pylons, the need to mitigate for unacceptable effects from lattice pylons is not engaged. On this basis T-pylons are not proposed for the Project.</p>				
9-6.112	Suggest that the use of underground cables for the Project is extended to Pylon TB126 (rather than changing back to overhead line at Pylon TB114) (e.g. to mitigate impact on the Essex Way, Protected Lanes, monuments and residential properties in Cole Hill/Boreham Road)	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in</i>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p><i>general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)'. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line; paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project from TB114 to TB126 would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in Environmental</i></p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
9-6.113	Suggest that the permanent right of access proposed near to respondent's property (near Pylon TB122) is relocated to the farm track along the field edge, directly under the route of the Project (e.g to mitigate security risk to property and privacy breach)	National Grid notes the respondent's feedback. The access route proposed is for future maintenance and surveys if required and would not be used for construction. We are not proposing to construct anything for this permanent access route therefore existing tracks are being used where possible. Use of these access routes would be discussed with the landowner should this be required in the future. We have therefore not made a change to this permanent access route.			X	
9-6.114	Suggest the use of underground cables in the area near respondent's cottage (including Pylons TB100 to TB105) which is in an area identified as being of Special Landscape Value	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is ' <i>that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)</i> '. Where no such designations are present, nor is the area within the setting of such a designated			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at TB100 and TB105 (now TB102 to TB107) would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.</p> <p>In relation to Special Landscape Areas, these no longer form part of local planning policy within Braintree District</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		and are not considered in the assessment in ES Chapter 13: Landscape and Visual (document reference 6.13). An appraisal of landscape value was undertaken to inform the assessment for the Central Essex Farmland Landscape Character (LCA) and Blackwater and Brain Valley LCA and is presented in ES Appendix 13.2: Landscape Baseline and Assessment (document reference 6.13.A2).				
9-6.115	Suggest that the existing access off the A131 is used for the haul road at Pylon TB133, following the headland up to the scaffolding area (e.g. to reduce the area of field severed and taken out of production) (plan provided by respondent)	National Grid notes the respondent's feedback. Due to a change to the alignment between TB131 (now TB133) and TB141 (now TB143), TB135 has moved further north, and the haul road has been amended to utilise an existing access (gravel pit access) situated further north off the A131, removing the haul road to the south of the alignment. A permanent access easement is proposed along the existing the farm access track off the A131 lay-by.			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Design Change (CR)						
9-6.116	Suggest that construction compound on Pit Field (near Pylon TB66) is relocated (e.g. due to impact on farming)	<p>National Grid acknowledges the respondent's feedback and the temporary impact on farming, however the temporary overhead line satellite compound proposed adjacent TB66 is required in the vicinity of this area so it has easy access from a Primary Access Route (PAR), in this case off the A120 and Great Tey Road.</p> <p>The proposed temporary construction compounds have been sited considering sustainable considerations, for example, close to PARs, close to the core works they are supporting and where possible away from residential receptors. This satellite compound serves as a specific working area to provide local welfare facilities for staff and points for delivery of materials to the working areas.</p> <p>All affected landowners will be compensated for any temporary/permanent losses, and this will be dealt with on a case-by-case basis.</p> <p>If there are any specific concerns requiring compensation and how it will be assessed, please contact the Project lands team:</p> <p>Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.</p> <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-6.117	Concern that the proximity of Pylon TB96 to the respondents property means that no amount of screening and softening will reduce the impact to the landscape to an acceptable level (e.g. property value, noise, traffic, quality of life)	<p>National Grid notes this comment.</p> <p>National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project. The results of this assessment are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application. The ES identifies and assesses the likely significant effects on resulting from the construction and operation (and maintenance) of the Project and recommends appropriate mitigation measures where possible to reduce potential effects.</p> <p>Impacts on Noise and Vibration</p> <p>Chapter 14: Noise and Vibration of the ES (document reference 6.14) considers the potential effects of noise and vibration associated with the Project.</p> <p>Construction noise and vibration effects from works associated with Pylon TB96 (now TB98), as well as other nearby activities, have been assessed and no significant adverse effects are expected at nearby properties where best practicable means are employed to reduce effects.</p> <p>Operational noise from the proposed overhead line is scoped out of the ES on the basis that a low noise conducted system is proposed and significant adverse effects are not expected, even directly underneath the line. Although scoped out of the ES, information on operational noise from the proposed overhead line is</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>provided in Appendix 14.A5 Operational Noise from Overhead Lines) (document reference 6.14.A5).</p> <p>Impacts on Traffic</p> <p>The effects of the Project for traffic and transport during operation (and maintenance) have been scoped out of the assessment in accordance with the Environmental Impact Assessment (EIA) Scoping Opinion (document reference 6.20). Effects are considered to be negligible due to the low number of vehicles expected to service/maintain the pylon each year.</p> <p>Impacts on Landscape and Visual</p> <p>An assessment of landscape and visual effects is presented in ES Chapter 13: Landscape and Visual (document reference 6.13). Whitehead's Farm is located in Section E, in Visual Receptor Area (VRA) E2, and lies within approximately 200 m of the proposed alignment. Major and significant visual effects have been reported in the assessment at this location, as set out in Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3) due to the close proximity and open views across this arable landscape. The farm sits within the Central Essex Farmland landscape character area (LCA B1) near Silver End, and major and significant landscape effects have been reported in the assessment in this location, as set out in Appendix 13.2: Landscape Baseline and Assessment (document reference 6.13.A2).</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Consideration of changes in views experienced from private residencies has also been undertaken in a Residential Visual Amenity Assessment (RVAA) as set out in Appendix 13.4: Residential Visual Amenity Assessment (document reference 6.13.A4). This has identified a high magnitude of change at Whitehead's Farm, since the Project would be clearly visible from more than one viewing aspect around the property and in close proximity to receptors.</p> <p>Landscape compensation</p> <p>Any landscape softening that does not remove or reduce a significant residual effect but seeks to off-set the effect is classed as landscape compensation. Such landscape compensation measures (e.g. creating or enhancing natural landscape features outside of the Order Limits) are considered in relation to the mitigation hierarchy but there is no requirement under policy to compensate for all residual effects. The residual effects that remain following the application of the mitigation hierarchy and any compensation provided then falls to the Planning Balance.</p> <p>Impacts on property values</p> <p>Potential impact on property prices is not a material planning consideration for the purposes of a DCO application. Separate to this point, the Secretary of State has asked that the DCO application include an assessment of the likely significant environmental effects in the form of potential impacts on property prices. The</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		ES contains an assessment on this. It concluded that there is no evidence of any significant environmental effects on house prices as a result of the Project. Although not part of the Environmental Impact Assessment process it is relevant to observe that any impact of the Project on residential properties are potentially capable of being dealt with through statutory nuisance or compulsory purchase compensation regimes (subject to the requisite criteria being met).				
9-6.118	Concern that the proposed haul road joining Cressing Road (B1018) is on a particularly hazardous stretch of road that already has overtaking restrictions. National Grid cannot significantly improve the visibility, and it will be extremely difficult to create a safe junction / Suggest that the haul road should be relocated further north to reduce disturbance to horses and farmhouse and kept to headlands to reduce impact on farming operations (plan provided by respondent)	<p>National Grid has worked with the local highway authorities and National Highways as we develop our access proposals for the Project. Our assessments have included visibility and highway geometry at the crossing on Cressing Road B1018.</p> <p>As part of the design development of the Project, the proposed bellmouth junctions have undergone Road Safety Audits, and mitigation measures for road safety have been developed. This may include temporary traffic management measures such as speed limit reductions and/or temporary signals. The bellmouth access and haul road need to be placed in close proximity to the overhead alignment due to construction requirements and to avoid excessive land take. Based on the highway assessments completed and the Project needs, the current proposal is preferred.</p> <p>As the proposed haul road needs to tie in with the proposed bellmouth and facilitate access to pylon locations, it is not beneficial to move the haul road north</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		to headlands. In this scenario spurs would still be needed to the pylons, the length would be longer and the vehicles traversing the haul road would need to slow down and turn more frequently. All this together would create greater impacts compared to the relatively straight haul road alignment as proposed adjacent to the overhead line work areas.				
9-6.119	Suggest that the Project is relocated south-east of Rivenhall Thicks (plan provided by respondent)	A feasible alignment on the route proposed passing south of Rivenhall thicks, would have to divert from the south of Church Road and pass to the south of Rivenhall Thicks. This would increase the length of the route by around 600 m, with greater agricultural effects, at least one (and potentially two) additional pylons and would be expected to require an additional angle pylon (less consistent with Holford Rule 3). A summary of the Holford Rules is provided within Appendix I22 of this report. On balance the change is considered less preferred because any benefit arising from the change does not offset the additional effects caused by it.			X	
9-6.120	Suggest that Pylon TB96 and the haul road are relocated north, removing any oversail or encroachment on the paddocks (plan provided by respondent)	National Grid notes the respondent's feedback. Moving TB96 (now TB98) north would add an angle pylon into the alignment which would be less consistent with the Holford Rules. A summary of the Holford Rules is provided within Appendix I22 of this report. The haul road at this location has been moved as far north as possible, a localised commitment during construction is likely to be able to avoid impacts to the horse paddock			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		where possible. If you have specific concerns regarding the impact on your property, we encourage you to seek third party advice. Alternatively contact the Lands team, Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.				
9-6.121	Suggest that the existing Distribution Network Operator (DNO) 11 kV overhead line near Pylon TB118 is replaced by underground cables to accommodate the Project, and request details regarding plans for this existing 11 kV overhead line	The existing 11 kV overhead line will be placed underground to enable the Project. Details of the mitigation for the existing 11 kV overhead line can be found in the Environmental Statement Figure 4.1: Proposed Project Design (document reference 6.4.F1). The relevant utility provider will confirm the final requirements for and the precise location of the installed mitigation.			X	
9-6.122	Suggest that, if pylons are to be located in the same fields as currently proposed near Faulkbourne, pylons are relocated as follows: - Suggest that Pylon TB98 is relocated out of the arable field to the area of rough ground to the north between the railway and the Cressing Road (51°49'49.0"N 0°36'52.6"E); - Suggest that Pylon TB109 is relocated to corner of field (51°49'49.6"N 0°36'35.3"E); - Suggest that Pylon TB101 is relocated to corner of the field to 51°49'40.7"N 0°35'47.0"E; - Suggest that Pylon TB102 is relocated south to field corner 51°49'36.2"N 0°35'26.3"E (e.g. to mitigate impact on agriculture and avoid issues with	National Grid has considered this proposed change which would position the alignment close to the southern edge of White Notley and close to the Scheduled Monument and Grade I listed buildings at Cressing Temple. Whilst providing a similar route length to the 2023 preferred draft alignment, it would increase effects for residents at the southern edge of White Notley. In contrast, there are fewer residential receptors in close proximity to the alignment and it would be in excess of 1 km from the Grade I listed buildings at Faulkbourne. As such the alternative proposed would be less consistent with Holford Rule two and the supplementary notes and is therefore considered less preferred. No change is			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>drainage at Pink Lane);</p> <ul style="list-style-type: none"> - Suggest that Pylon TB103 is relocated to 51°49'36.4"N 0°35'08.0"E (e.g. to edge of Pink Lane) or to 51°49'28.5"N 0°35'10.4"E (e.g. to mitigate impact on field drains that flow towards the main ditch by Pink Lane and impact on agricultural operations); - Suggest that Pylon TB104 is relocated to 51°49'32.8"N 0°34'48.7"E (e.g. to mitigate impact on field drains that flow towards the main ditch by Pink Lane and impact on agricultural operations); - Suggest that Pylon TB105 should be removed (e.g. due to impact on agriculture and footpath); - Suggest that Pylon TB104 is relocated to TB104 to 51°49'32.8"N 0°34'48.7"E 	therefore proposed. A summary of the Holford Rules is provided within Appendix I22 of this report.				
9-6.123	<p>Concern about impact of Pylons TB108 to TB113 on Faulkebourne Estate and criticism that National Grid have used the shoot and willows of another local resident to justify the revised route of the Project at this location. With this, suggest the following to mitigate the impact of the Project (e.g. cumulative impact of the Project and existing overhead lines):</p> <ul style="list-style-type: none"> - Suggest that the existing 250 kV overhead line is replaced with underground cables from the pylon at 51°50'02.2"N 0°34'12.1"E to the pylon at 51°49'46.7"N 0°33'46.7"E; - Suggest that the existing 250 kV pylon at 51°49'54.1"N 0°33'59.4"E is removed; 	National Grid is mindful to avoid transfers based on a preference not to host infrastructure without a material reduction in the level of effects. In this case the consideration of alternative pylon positioning or routeing responded to material reduction in economic effects. In respect of further undergrounding, National Grid does not consider that the cumulative effects of the Project in combination with the existing 400 kV overhead line southwards from Braintree justify the use of underground cable with two Cable Sealing End (CSE) compounds on each of the existing and proposed 400 kV connections (i.e. four CSE compounds in total) given the additional effects from the CSE compounds			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	- Suggest new pylon for the Project should be located at 51°49'51.3"N 0°33'45.3"E.	unless the extent of cable is substantially extended at a cost not justifiable in terms of National Policy Statement (NPS) EN-5. The suggested pylon positions and alignment would not be deliverable due to excessive span lengths to meet the aspiration to position to hedgerows. Adding additional pylons would be possible but would oversail a number of areas of woodland and routes closer to a much greater number of residential properties at the south of White Notley and is thus less consistent with Holford Rule two and Holford Rule supplementary notes. A summary of the Holford Rules is provided within Appendix I22 of this report. An amended route to reduce the woodland effects may be possible but would require additional angle pylons (less consistent with Holford Rule three). The proposed repositioning of the CSE compound has also been considered but is less preferred due to the fields being of insufficient width and increased visual effects by the proximity immediately adjacent to the road. On balance no change is proposed.				
9-6.124	Suggest that construction lay down areas near the Faulkebourne Estate should be located at the edges of fields and away from main roads for security	National Grid notes the respondent's feedback, unfortunately we are unable to move the laydown area away from the road as we need close access to bring in HGV to unload.			X	
9-6.125	Concern about the haul road for the Project that turns off the Street towards the River Brain next to School House and opposite Hill Farm (e.g. due to	National Grid notes the respondent's feedback. It should be noted that the access off The Street onto Grove Track is to facilitate the construction of two pylons only,			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	safety, damage to Grove Track and adjacent utilities, impact on business, impact on wildlife at the River Brain, flooding, poor quality of track, impact on trees), and suggest that the haul road is not needed / that pylons can be approached and maintained in another way	<p>thus traffic numbers will be limited and condensed to specific periods of time (during the overall construction period). This would be communicated with the landowner and tenants in advance of the construction works commencing. Access to the properties would remain open throughout the works and the construction traffic managed accordingly.</p> <p>In lieu of using and upgrading the existing Grove Track, the alternative is to route the haul road directly along the overhead line alignment. The challenge with this is that to the east the railway line is a blocker and to the west a new crossing of the River Brain would need to be crossed, which would likely cause a greater impact to the environment then upgrading the existing track and the ford, with greater tree loss required and additional impact on the River Brain and its associated bankside habitat.</p> <p>The junction between Grove Track and the public highways has been assessed and a suitably designed access bellmouth has been proposed which consider the highway geometry, speed limits, speed survey data and vertical and horizontal visibility. The Bellmouth access has been road safety audited and no concerns have been identified.</p> <p>A Flood Risk Assessment (document reference 7.9) has also been prepared that has assessed the impacts of Project haul routes on flood risk and drainage,</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>identifying a range of design and mitigation measures to control and manage these impacts.</p> <p>As access to agricultural landholdings will remain open during construction, the impact on agricultural operations is anticipated to be minimal.</p> <p>Furthermore, no recreation or tourism business has been identified within this area, therefore, no impacts are anticipated in relation to recreation or tourism businesses.</p>				
9-6.126	<p>Suggest that the haul road for the Project opening between The Football Pitch and Maltings Cottages (what3words reference "elevates.kidney.outdoors") is not needed, and that access for the Project should be achieved by using upgraded existing farm tracks (e.g. to mitigate impact on football club), as follows:</p> <ul style="list-style-type: none"> - Suggest use of track going West opposite Oak Farm for access to pylons to the West of The Street (Pylons TB102 to TB106) (what3words references provided by respondent) that leads to Pink Lane; - Suggest that the haul road down the middle of the fields in which Pylons TB102 to TB108 are sited is not needed; - Suggest that a haul road that enters Oak Farm and runs to the north of the football pitch should be built for access to Pylon TB101 rather than the haul road currently proposed (what3words references provided by respondent); - Suggest alternative route for haul road to Pylon 	<p>Following review of the feedback National Grid proposes to adopt revisions to the construction access to follow the existing tracks where possible. This will substantially meet the request though does have to deviate in some locations due to limitations on pylon positioning.</p> <p>The Arboricultural Impact Assessment (document reference 6.13.A6) contains mitigation measures for working with the Root Protection Areas for retained trees, for example this may include the use of ground protection to limit soil compaction.</p>			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	TB100 (what3words references provided by respondent), with crossing of the River Brain at "promoting.trailer.scam" / "pose.trickling.portfolio" to avoid damage to the willow plantation; - Suggest access to Pylon TB109 by crossing into field at "marketing.exonerate.digits"					
9-6.127	Suggest that the construction track / site entrance for the Project near The Street, Faulkebourne should be routed further away respondent's residence	National Grid has worked with the local highway authorities and National Highways to develop our access proposals for the Project. Our assessments have included visibility and highway geometry and have included the access point at Faulkebourne. The bellmouth has been positioned here due to severance of haul road on the River Brain and uses the existing track which would be improved to accommodate for the construction vehicles. The access has been shifted further from the properties, however it was not possible to shift it further due to excessive land take resulting in sterilising the agricultural field. As part of the design development of the Project, the proposed bellmouth junctions Road Safety Audits have been undertaken, and mitigation measures for road safety have been developed. This includes temporary traffic management measures such as speed limit reductions and/or temporary signals.			X	
9-6.128	Concern that the Project from Pylon TB77 to TB80 will severely impact respondents farm (e.g. the haul road will bisect the farm impeding workers from	National Grid is aware of the existing infrastructure and is committed to ensuring that its activities do not unnecessarily impact such existing legitimate land uses.			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	accessing the Feering side of the farm from the Coggeshall side; the Project will destroy irrigation which is a continuous loop around the farm and rows of blackcurrant bushes will be destroyed resulting in penalties to the respondent; the haul road crosses the extremely important water catchment and drainage area which flows directly into the respondents reservoir enabling it to fill up; the haul road is shown as being built right next to respondents reservoir which may result in the destabilisation of the reservoir and subsequent cracking and leaking; there will be substantial harm to wildlife and the environment as the haul road will be situated on top of two very mature hedges which provide a haven for wildlife; and there are nearby newt ponds which have been built under a government wildlife scheme and which will be harmed by the building and the reverberation)	In cases where some interaction is unavoidable National Grid would provide alternative arrangements (e.g. diverting pipework, install access road crossing arrangements etc.) to reduce effects and/or compensate for losses. Effects on vegetation and wildlife are reduced where possible and whilst we may need to cross hedgerows we would seek to reduce effects by for example following a route offset alongside such features rather than following directly above their alignment. A change in alignment, based on other feedback, is proposed in this area which routes further from this reservoir with the realigned temporary construction access following the approach agreed with Local Planning Authorities (LPAs).				
9-6.129	Concern that the Project at Pylons TB92 and TB93 will impact site which respondent has planning permission at appeal for (Braintree application reference 21/03735/FUL) / Concern that the order limits including construction access tracks from Church Road past Rivenhall Thicks would require the removal of extensive areas of the consented solar farm, which will be built and energised by the time that this development commences, and the current routing and design has significant	National Grid has engaged with the solar farm developer and has modified the proposed access point and access road arrangements to reduce the effects as far as possible. Due to other factors one pylon has had to be located to the western edge of the most eastern part of the solar farm. This is not avoidable without undue diversion and multiple additional angle pylons. Other temporary construction access has been routed to avoid direct effects on the farm. National Grid continues to			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	implications and would if consented lead to substantial financial impacts and result in the removal of a consented and operational renewable energy generating station / Suggest an alternative routing and alignment is suggested to be explored by National Grid and presented for discussion (the respondent objects to the current proposal in relation to the section detailed above at Parkgate Solar Farm)	engage with the developer to establish an agreed Statement of Common Ground.				
9-6.130	Suggestion that the Project is routed away from / the Project should not be located at a specific location	Further assessment and technical appraisal has been undertaken following feedback received from the statutory consultation which has resulted in several changes to the alignment. Further details on these changes can be found in the 2025 Design Development Report (document reference 5.15), published as part of the Development Consent Order (DCO) application.	X		X	
9-6.131	Suggestion that the Project is routed away from / the Project should not be located at Kelvedon	National Grid has considered the respondent's feedback highlighting a preference for an alternative moved away from Kelvedon. In the absence of a specific basis for the change or a proposed alternative alignment, we have considered this feedback by following the guidance in the Holford Rules in developing the draft alignment. Guidelines on overhead line routeing are known as the "Holford Rules" which remain a valuable tool in selecting and assessing potential overhead line route options as part of the options appraisal process. A summary of the Holford Rules is provided within Appendix I22 of this			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		report. We are therefore not proposing a change to the alignment at Kelvedon.				
9-6.132	Suggestion that the Project is routed away from / the Project should not be located at Witham	National Grid has considered the respondent's feedback highlighting a preference for an alternative moved away from Witham. In the absence of a specific basis for the change or a proposed alternative alignment, we have considered this feedback by following the guidance in the Holford Rules in developing the draft alignment. Guidelines on overhead line routeing are known as the "Holford Rules" which remain a valuable tool in selecting and assessing potential overhead line route options as part of the options appraisal process. A summary of the Holford Rules is provided within Appendix I22 of this report. We are therefore not proposing a change to the alignment at Witham.			X	
9-6.133	Suggestion the Project is routed away from / the Project should not be located at the Blackwater River Valley	National Grid has considered the respondent's feedback highlighting a preference for an alternative moved away from the Blackwater River Valley. In the absence of a specific basis for the change or a proposed alternative alignment, we have considered this feedback by following the guidance in the Holford Rules in developing the draft alignment. Guidelines on overhead line routeing are known as the "Holford Rules" which remain a valuable tool in selecting and assessing potential overhead line route options as part of the options appraisal process. 		report. We are therefore not proposing a change to the alignment at Fairstead.				
9-6.140	Suggestion that the Project is routed away from / the Project should not be located at Great Leighs	National Grid has considered the respondent's feedback highlighting a preference for an alternative moved away from Great Leighs. In the absence of a specific basis for the change or a proposed alternative alignment, we have considered this feedback by following the guidance in the Holford Rules in developing the draft alignment. Guidelines on overhead line routeing are known as the "Holford Rules" which remain a valuable tool in selecting and assessing potential overhead line route options as part of the options appraisal process. A summary of the Holford Rules is provided within Appendix I22 of this report. We are therefore not proposing a change to the alignment at Great Leighs.			X	
9-6.141	Suggestion that the Project is routed away from / the Project should not be located at Howe Street village	National Grid has considered the respondent's feedback highlighting a preference for an alternative moved away from Howe Street village. In the absence of a specific basis for the change or a proposed alternative alignment, we have considered this feedback by following the guidance in the Holford Rules in developing the draft alignment. Guidelines on overhead line routeing are known as the "Holford Rules" which remain a valuable tool in selecting and assessing potential overhead line route options as part of the options appraisal process. A summary of the Holford Rules is provided within Appendix I22 of this report. We are			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		therefore not proposing a change to the alignment at Howe Street village.				
Economic / Employment impact						
9-6.142	Concern about negative impact on businesses in the area	<p>Through the routeing and siting exercise, National Grid has sought to reduce as far as practicable impacts to businesses.</p> <p>Impacts on local businesses within the Local Study Area (the Order Limits) and within the 3 km Study Area (where visual impact is likely to be an economic consideration) are assessed in Environmental Statement (ES) Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15). As part of this assessment, a range of mitigation measures have been considered to reduce disruption to businesses and their users during the construction phase of the Project. These measures are identified in ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15), the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) which accompany the Development Consent Order (DCO) application.</p>	X	X	X	
9-6.143	Concern about impact of the Project on mineral extraction area near Silver End and Rivenhall (plan provided by respondent)	National Grid has considered known consented mineral sites and is also considering those sites which may come forward in the Minerals Plan being consulted upon in 2024 / 25. In this location widened Order Limits would			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		allow for a modification to the alignment if the minerals site comes forwards which would reposition pylons to the edge of the potential area to reduce the level of effects. Other routes to completely avoid the site would transfer effects to residential properties and various listed heritage assets and were less preferred.				
9-6.144	Suggest that the construction of the Project (underground cables) through Fuller Street and construction of the haul road south of Ranks Green should not be concurrent (e.g. to mitigate impact on businesses)	<p>The specific phasing and construction sequencing has not been finalised at this stage, this will be done at detailed design. It is envisaged with this being a linear project that works will be undertaken in a way that different tasks will be undertaken along the route at different times and at different stages.</p> <p>We will always seek to undertake the work in a way that minimises disruption to the areas and minimise road closures. For details of temporary traffic management refer to the Outline Construction Traffic Management Plan (document reference 7.3)</p>	X			
Environmental impact						
9-6.145	Concern about negative impact of the Project on the Green Belt(s)	To facilitate the Project, it will be necessary to route through the Metropolitan Green Belt. National Grid has considered the effects on the Green Belt and all of the options connecting into Tilbury identified in the Corridor and Preliminary Routeing and Siting Study (CPRSS) (available on the Project website) would result in new and upgraded infrastructure in the Green Belt.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>The National Electricity Transmission System (NETS) transports energy from where it is generated to where it is used, in homes, schools, hospitals, businesses, and factories. Electricity networks are an established feature in our landscapes, taking energy across open countryside to towns and cities where it is needed. To ensure the national electricity network can transport energy efficiently there are numerous electricity transmission connections crossing Green Belts. Many of these connections are by way of overhead lines. By their nature, electricity transmission infrastructure (overhead lines) within the Green Belt is inevitable due to the need to transport energy around the country and the need to avoid the most built-up areas around our towns and cities (Holford Rule Supplementary Note 1 - A summary of the Holford Rules is provided within Appendix I22 of this report).</p> <p>Some electricity infrastructure such as overhead lines, are considered to be engineering operations. By the nature of their design, and the sensitive siting, some of this infrastructure such as pylons and conductors may not be considered inappropriate development in the Green Belt as they do not conflict with Green Belt purposes and preserve openness. Although overhead lines may occupy long corridors within Green Belt, they involve little physical change to the land through which they pass and leave a large majority of the land beneath them free from development and therefore open.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		The Planning Statement (document reference 5.6), submitted with the application for development consent, includes an assessment of the Project against Green Belt planning policy (as contained in National Policy Statement EN-1 and the National Planning Policy Framework).				
9-6.146	Concern that the Project will impact SSSIs	Through routing, siting and design development National Grid has sought to reduce, as far as practicable, impacts on biodiversity and in particular features of high ecological value such as Sites of Special Scientific Interest (SSSI). Although there are 22 SSSI within the study area, current proposals avoid the majority of impacts on SSSIs, with no long-term negative impacts anticipated on any SSSIs as a result of the Project. Potential direct and indirect impacts on each SSSI within the study area have been considered within the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8) and any necessary mitigation detailed to ensure no significant residual effects. National Grid will continue to engage with Natural England.			X	
9-6.147	Concern that the Project will impact ancient woodland	Through routing, siting and detailed design, National Grid has sought to reduce, as far as practicable, impacts on biodiversity and in particular features of high ecological value, such as ancient woodland. A standard 15 m buffer from construction activities has been applied	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		where practicable. Potential direct and indirect impacts on each block of ancient woodland within the study area have been considered within the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8) and any necessary mitigation detailed to ensure no significant residual effects. An ancient woodland and veteran tree mitigation strategy is included as part of the Outline Landscape and Ecological Management Plan (document reference 7.4). The Outline Landscape and Ecological Management Plan (document reference 7.4) has been developed in consultation with relevant stakeholders including Natural England.				
9-6.148	Concern that the Project will impact nature reserve / RSPB reserve / Special Protection Area (SPA)	Through routeing, siting and design development National Grid has sought to reduce, as far as practicable, impacts on biodiversity and in particular features of high ecological value, such as Royal Society for the Protection of Birds (RSPB) reserves. Potential direct and indirect impacts on RSPB reserves within the study area have been considered within the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8). No RSPB reserves are directly impacted by the Project.		X		
9-6.149	Concern that the Project will impact Ramsar site	Through routeing, siting and design development, National Grid has sought to reduce, as far as practicable, impacts on biodiversity and in particular features of high ecological value, such as Ramsar sites.		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Although there are 13 Ramsar sites within the study area, current proposals avoid the majority of impacts, with no long-term negative impacts anticipated on any Ramsar site as a result of the Project. Potential direct and indirect impacts on each scoped in Ramsar site has been considered within the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8) and/or Habitats Regulations Assessment Report (HRA) (document reference 7.1) depending on potential impact pathways. Any necessary mitigation has been detailed within the ES, HRA and the Outline Code of Construction Practice (CoCP) (document reference 7.2) to ensure no significant residual effects, as agreed with Natural England.				
9-6.150	Concern that the Project will result in a negative impact on the environment / countryside generally (no details given)	National Grid has sought to reduce, as far as practicable, impacts on the environment / countryside through routeing and siting and an ongoing iterative design process which has taken on board feedback at different stages of the Project. The iterative design process sought to avoid areas of highest concern, for examples through changes to the route alignment or changes to the method e.g. trenchless crossings. National Grid have engaged with a range of stakeholders (including Statutory Environmental Bodies (SEBs) and relevant Local Planning Authorities) throughout the development of the Project design and environmental assessment work.	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project. The results of this assessment are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation (and maintenance) of the Project and recommends appropriate mitigation measures to reduce potential effects.</p> <p>A number of mitigation measures have been incorporated into the Project design. Mitigation relevant to specific environmental topics (including Ecology and Biodiversity, Landscape and Visual and Historic Environment) are presented in the relevant ES chapters. The Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Code of Construction Practice (CoCP) (document reference 7.2) contain a list of relevant good practice measures to avoid or reduce risks to habitats and species.</p> <p>In addition to the EIA, National Grid has set itself a target of delivering 10% Biodiversity Net Gain (BNG) with environmental and societal benefits on all construction projects, meaning that as a result of measures taken, the biodiversity rating of the area will be enhanced by 10% greater than prior to the construction of the Project. The BNG target for the</p>

		Project is currently voluntary and aligned with our corporate sustainability commitment.				
9-6.151	Suggest that areas other than the AONB should be protected / Criticism that only the AONB has been considered	<p>National Policy Statement (NPS) EN-5 states that the Government considers overhead lines to be appropriate and acceptable in most instances, although it recognises that that there may be, at particularly sensitive locations, potential adverse landscape and visual impacts of overhead line infrastructure that make it inconsistent with our duties and relevant planning policy.</p> <p>The National Landscape designation is one such location where there is a presumption that underground cable technology is adopted with the extent of underground cabling extending beyond the boundary in response to the potential for the Project to affect National Landscapes. Our proposals include a total of approximately 20 km of underground cable through and in the vicinity of the Dedham Vale National Landscape, including a section at Great Horkesley to reduce the changes in views and setting of the National Landscape from within and adjacent to its designated boundary.</p> <p>Underground cabling is also proposed for short sections near Fairstead and North Tilbury.</p> <p>The higher cost of underground cables to bill paying consumers, and the environmental implications of installing underground cables and maintaining them elsewhere, are not considered to be justifiable in the context of national policy or National Grid's statutory</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>duties, which include the need to be economic and efficient.</p> <p>A Landscape and Visual Impact Assessment (LVIA), presented in ES Chapter 13: Landscape and Visual (document reference 6.13), has been undertaken as part of the Environmental Impact Assessment (EIA). The LVIA sets out potential effects on landscape and visual receptors.</p>				
9-6.152	Concern that the Project will impact conservation area	<p>Through routeing and siting, National Grid has sought to and will continue to reduce as far as practicable potential impacts on the historic environment, including conservation areas such as White Notley, Coggeshall, Cressing, Terling, Kelvedon, Chipping Hill, Feering Village, as well as the known heritage assets within these Conservation Areas and their setting. If potential impacts on the historic environment are identified, National Grid would explore a range of mitigation measures such as careful siting of pylons and screening (both new and existing) to reduce impacts where possible.</p> <p>This is presented in the Historic Environment assessment which has been completed as part of the Environmental Impact Assessment (EIA) for the Project. This assessment is detailed in Chapter 11: Historic Environment (document reference 6.11) of the Environmental Statement (ES).</p> <p>National Grid has engaged with Historic England and relevant planning authorities on aspects relating to</p>		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>heritage, including appropriate mitigation measures and techniques.</p> <p>National Grid has also conducted comprehensive assessments, including site visits and extensive desk-based research, to thoroughly evaluate the setting of these conservation areas and understand their value.</p> <p>During construction, standard construction mitigation as outlined in the Outline Code of Construction Practice (CoCP) (document reference 7.2) would be set up for these Conservation Areas except when there is not significant temporary negative effect.</p> <p>For the White Notley Conservation Area, the operation phase would cause no change to the rural aspect of the asset's setting, following reinstatement post-construction. However, reinstatement of any removed historic field boundaries and earthworks would be done.</p> <p>For the other conservation areas, their settings do not extend to the Order Limits and the impact of the Project would be negligible.</p>				
9-6.153	Concern about the impact of the Project on protected lanes in this area (including Cole Hill, Boreham Road, Goodman Lane, and Paul Hall Lane)	Protect Lanes have been considered as part of our assessment of potential impacts during construction and operation, detailed within the Environmental Statement (ES) Chapter 11: Historic Environment (document reference 6.11) and ES Chapter 13: Landscape and Visual (document reference 6.13) present the findings of the assessments of the impacts of the Project during construction and operation on protected lanes including	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		impacts on landscape character and on the visual amenity of people travelling along them. The assessment methodologies were discussed with key stakeholders, including Historic England and relevant local authorities. A range of measures have been incorporated into the design of the Project to avoid and reduce effects on protected lanes. These include strategic routeing and siting measures. Further assessment can be found within ES Chapter 11: Historic Environment (document reference 6.11) under Historic Landscape, and further mitigation details are presented in the Outline Code of Construction Practice (CoCP) (document reference 7.2).				
9-6.154	Concern about the impact on Pylon TB94 on an area of designated Ancient Woodland	<p>Detailed arboricultural surveys have been undertaken across the route and the results have been used to inform the iterative design process, details of which are presented in Environmental Statement (ES) Appendix 13.6: Arboricultural Impact Assessment (AIA) (document reference 6.13.A6).</p> <p>The Ancient Woodland and Veteran Tree Strategy (Appendix B of the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4)) sets out the ancient woodland and veteran tree surveys undertaken on the Project, the impacts and proposed mitigation measures.</p> <p>The AIA (document reference 6.13.A6) and the Outline Landscape and Ecological Management Plan (document</p>	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>reference 7.4) have been developed in consultation with relevant stakeholders.</p> <p>The current construction working area for pylon TB94 (now TB96) is approximately 68 m from the designated ancient woodland and thus falls outside of the standing advice minimum buffer of 15 m and therefore no impact is expected. National Grid acknowledge that the existing 33 kV overhead line may have a localised impact on the northern tip of the designated ancient woodland.</p>				
9-6.155	Concern about the impact of the project between Pylons TB116 and TB133 on public footpaths, protected roads, wildlife and agriculture, particularly the crossing of two protected roads and River Ter between Pylons TB125 and TB126	<p>Impacts on public footpaths, protected roads, wildlife, agriculture and the River Ter are assessed in the Agriculture and Soils, Ecology and Biodiversity, Historic Environment, Hydrology, Flood Risk and Land Drainage, Socio-Economics, Recreation and Tourism, and Traffic and Transport Chapters of the Environmental Statement (ES) (document reference Volume 6: Environmental Statement).</p> <p>The overall assessment considers impacts on these areas between pylons TB116 and TB133; and TB125 and TB126.</p> <p>The Outline Public Rights of Way Management Plan (document reference 7.6) also assesses the impacts between pylons TB116 and TB133; and TB125 and TB126.</p> <p>Environmental mitigation measures have been defined within each environmental topic chapter and set out in relevant management documents submitted with the</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Development Consent Order (DCO) application, including the Outline Code of Construction Practice (CoCP) (document reference 7.2), the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) and the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4).				
9-6.156	Concern that the Project will limit gravel and sand extraction from the resident's land in future	National Grid adopts a consistent approach to development sites and in the case of minerals sites considers those that are allocated in the current plan. In some cases sites are being consulted upon for potential inclusion in a future plan so may be confirmed at some stage or may not. In these cases we are taking forward widened Order Limits to allow for a modified alignment given that the sites inclusion may be confirmed in mid 2025. The 2025 Design Development Report provides detail of the alternative alignment in the Essex County Council Minerals consultation (document reference 5.15). On balance it is considered that attention to design around allocated or approved sites is reasonable but with more speculative areas, as appears to be the case for the respondent's site, left to be considered when their status is more certain. This may require future diversions or lead to some restrictions to maintain foundation integrity.			X

9-6.157	Request for a full Environmental Impact Assessment to be undertaken and published for Surrex and Coggeshall	<p>A complete Environmental Impact Assessment (EIA) has been carried out for the Project and the results are presented in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) which accompanies the Development Consent Order (DCO) application.</p> <p>The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation of the Project and recommends appropriate mitigation measures to reduce effects.</p> <p>Surrex and Coggeshall are located within the 3 km study area of the Landscape and Visual Impact Assessment (LVIA) which is presented in ES Chapter 13: Landscape and Visual (document reference 6.13).</p>			X	
Financial Compensation						
9-6.158	Concern that the Project will devalue property / impact on property value in this section	<p>Potential impact on property prices is not a material planning consideration for the purposes of a DCO application. Separate to this point, the Secretary of State has asked that the DCO application include an assessment of the likely significant environmental effects in the form of potential impacts on property prices. The ES contains an assessment on this. It concluded that there is no evidence of any significant environmental effects on house prices as a result of the Project. Although not part of the Environmental Impact Assessment process it is relevant to observe that any</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>impact of the Project on residential properties are potentially capable of being dealt with through statutory nuisance or compulsory purchase compensation regimes (subject to the requisite criteria being met).</p> <p>National Grid acknowledges that its proposals may cause concern to landowners. Diminishment of property value known as 'injurious affection' and any other appropriate heads of claim would be considered on an individual basis in accordance with current legislation. We would pursue a voluntary agreement with affected landowners, acquiring rights in accordance with our Land Rights Strategy (the strategy is subject to review). If a voluntary agreement cannot be reached, then the Compulsory Purchase Code allows for a claim of compensation for the loss that property owners may have suffered as a direct result of the retained part of your property ownership being worth less as a direct result of the works.</p> <p>If there are any specific concerns about the devaluation of property, National Grid would advise seeking third party advice. or alternatively please contact the Project team:</p> <p>Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.</p> <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business</p>

		Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD.				
9-6.159	Request for adequate financial compensation / Suggest that impacted individuals need to be compensated	<p>All affected landowners would be compensated for any temporary or permanent losses, and this would be dealt with on a case-by-case basis in line with the Compensation Code.</p> <p>If there are any specific concerns requiring compensation and how it would be assessed, please contact the Project team:</p> <p>Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.</p> <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD</p> <p>The Government has published its guidance on community funds for transmission infrastructure (DESNZ, 2025). National Grid is committed to working with Ofgem, industry partners, local communities and their representatives to ensure community benefits are delivered fairly and effectively, driving lasting, positive change for the people and places integral to our developing electricity network.</p> <p>Government has also announced its plans to introduce a bill discount scheme for households within 500 metres of new infrastructure, which it proposes to introduce through the Planning and Infrastructure Bill. This is</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>evolving government policy. Government expects this scheme to be in place by 2026 and we would share further details as they emerge.</p> <p>National Grid is committed to providing a coordinated local and regional approach to community benefits. This would be delivered outside the development consent process, since this is not a material consideration in the decision on the proposed Project or a matter to be secured as part of the DCO, as per the Community Funds for Transmission Infrastructure: Guidance (DESNZ, 2025).</p>				
9-6.160	Request that National Grid purchase respondent's property / business	<p>National Grid is not required to purchase any properties or businesses as part of the Project.</p> <p>National Grid compensates landowners in line with the Compensation Code and any other relevant legislation.</p>			X	
Health, Safety and Wellbeing						
9-6.161	Concern that the Project may result in a negative impact on mental health / wellbeing	<p>National Grid recognises people may have concerns about the health effects of living close to an overhead line, and that the uncertainty whilst the proposals are developed may cause anxiety.</p> <p>We have sought to reduce potential effects on communities and residents through routeing and design. We have also sought to reduce concern or uncertainty about the proposals through making timely design</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>decisions and engaging with the people and stakeholders throughout the development of the Project.</p> <p>The Project team will continue to engage with people potentially affected during progress of the Project, through regular communication including letters, phone calls and meetings. This will enable concerns to be raised and discussed at an early opportunity and provide a regular point of contact to respond to queries and concerns.</p> <p>We urge anyone with concerns to get in touch through the Norwich to Tilbury Freephone number, address or email throughout the progress of the Project:</p> <p>Call our Community Helpline: 0800 915 2497 (Lines are open Monday to Friday 9:00am – 5:30pm)</p> <p>Email us: contact@n-t.nationalgrid.com</p> <p>Write to us: FREEPOST N TO T (No stamp or further address details are required)</p> <p>The UK has a carefully thought-out set of policies for protecting us all against Electric and Magnetic Fields (EMFs), the main component of which is exposure guidelines. Those exposure guidelines are set by independent scientific bodies and are based on decades-long studies into the effects of EMFs and ill health. After those decades of research, the weight of evidence is against there being any health risks of EMFs below the guideline limits. These policies are incorporated into the decision-making process for Development Consent in National Policy Statement</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		(NPS) EN-5. It is National Grid's policy to ensure that all of its equipment comply fully with those exposure limits.				
9-6.162	Concern about health risks associated with the Project / physical health risks associated with the Project	<p>Health considerations are given a high priority in the process by which we arrive at any proposals for new electricity circuits. Assessment of compliance with Electric and Magnetic Field (EMF) guidelines and policies is key to National Grid's approach. The UK has a carefully thought-out set of policies for managing EMFs. There have been over four decades of research looking into whether EMF can cause health effects and there are no established effects below the exposure limits. When designing our overhead lines, substations and underground cables design criteria, we ensure they would not exceed those exposure limits, even when operating at 100% capacity. Additionally, the precautionary measures which the Government have adopted, are applied to the design which ensure the EMFs reduce as quickly with distance as possible. Evidence of that compliance is presented in the Electric and Magnetic Field Compliance Report (document reference 7.8) submitted as part of the Development Consent Order (DCO) application.</p> <p>National Grid takes this issue very seriously and look to authoritative and independent scientific organisations such as the World Health Organisation (WHO) and in the UK Health Security Agency (UKHSA) to review the worldwide body of scientific evidence on health. Important decisions on health are taken independently of</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		industry, and National Grid have followed the guidance and policies adopted by Government on advice from their scientific experts. Each of these organisations have comprehensive reviews of EMF research available to view on their websites.				
9-6.163	Concern that the Project poses a safety risk to aircraft (including balloons) in the area / Concern that the Project will impact airfields in this area	<p>National Grid recognises the need for the Project to be developed collaboratively alongside aviation stakeholders to identify, assess, and as appropriate mitigate, adverse impacts on aviation safety, in accordance with Government's Overarching National Policy Statement (NPS) EN-1.</p> <p>Our review of aerodromes potentially impacted by the Project identified 17 civil aerodromes (including 2 helipads)</p> <p>within 5 km of the preferred corridor and one military site (Wattisham Flying Station). We have also considered other airfields and flight activities where these have been identified through the 2022 and 2023 non-statutory, statutory consultation, targeted consultations and landowner consultation, including for ballooning and for model flying. As well as considering feedback, National Grid's aviation advisers (an independent aviation consultancy) have directly engaged with these parties (with National Grid present).</p> <p>A number of route alignment and pylon positioning changes have been made following consideration of feedback and in all but one case the assessment concludes that the airfields can continue to operate. In</p>			X	X

	<p>road is proposed through a Liquid Petroleum Gas (LPG) tank site and near a bio secure area surrounding a broiler chicken unit; impact on soils and croppable area; impact on trees and hedgerows; land to the north of the main farm access road used for straw bale storage will be unusable and there is no alternative site; impact on tenant businesses; impact on residential drive if main farm access is blocked; impact on telephone line that runs from the corner of Salmons Lane/East Gores Road, up towards the farm (plan provided by respondent)), and criticism that National Grid have not provided enough information about the Project at this location (e.g. no confirmation of how farm machinery and farm employees will move around the farm and across the haul road during the Project; information on alternative provision for impacted public footpaths (list of footpaths provided by respondent); impact on 24/7 access required for farm; information on how National Grid contractor vehicles will access the haul road, and whether there will be additional vehicle movements related to the project on Salmons Lane, East Gores Road, or Tey Road, which are all used by farm vehicles)</p>	<p>networks. This information has been used to inform and guide the drafting of the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) for the Project that accompanies the Development Consent Order (DCO) application.</p> <p>A strategy has been developed to manage the impact of construction vehicles on the public highway and sensitive receptors, using suitable Local Road Network connections from the Strategic Road Network called Primary Access Routes. In addition, temporary haul roads for construction vehicles are proposed along the Project alignment, further reducing the impact of construction traffic on the local road network. Further details of the strategy can be found within the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).</p> <p>An Outline Public Rights of Way PRow Management Plan (document reference 7.6) has been prepared and submitted as part of the Development Consent Order (DCO) application. The document details the mitigation strategy for Public Rights of Way (PRow) during construction and Access, Rights of Way and Public Rights of Navigation Plans (document reference 2.5 Rights of Way and Public Rights of Navigation Plans) have been prepared.</p> <p>Individual landowners will be able to engage directly on a one to one basis with the Project Lands team to</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>discuss site specific concerns and interactions with operations throughout the Project delivery phase.</p> <p>National Grid acknowledges the respondent's feedback and after further engineering assessment we have made a slight alteration to the overhead line alignment to the west of the farm and the Liquid Petroleum Gas (LPG) tanks. Pylon TB67 has been moved south and west approximately 45 m, which enables the overhead line alignment centerline to be located approximately 30 m west of the LPG tanks. This ensures that with full conductor swing the horizontal clearance is approximately 20 m to the tanks. This falls in line with the technical specifications National Grid must adhere to for electrical clearances but also "Code of Practice 1 – Part 1 – Bulk LPG Storage at fixed installations."</p> <p>Additionally, the overhead line proposed does not oversail the farmyard and the barns and the proposed temporary haul road is routed to the north of the LPG tanks and not through the farmyard. The access shown through the farmyard is for future operation and maintenance only and is a right of access (not physical new access tracks).</p> <p>The access to site for construction is along the haul road from either the northeast or southwest, the bellmouths at East Gores Road and Great Tey Road are crossing bellmouths only (not turn in and turn out). The crossings will be managed accordingly, and National Grid will continue to engage with the landowner to ensure that access to and across the farm is maintained during</p>

Requests						
9-6.178	Concern that the Project will exasperate traffic issues on the B1018 / Request for further information regarding mitigation, duration of works, and construction hours / Suggest that work should be carried out at non-peak times	<p>Should consent be granted in 2027, it is anticipated that construction of the Project would commence in 2027, likely starting with pre-commencement works, including site clearance activities, the installation of temporary construction compounds and access roads. It is expected the main construction works would continue through to 2031 (four years). This programme has informed the assessment of Project impacts, including traffic and transport.</p> <p>It is assumed that the core working hours for construction (as set out within a Requirement in the draft DCO (document reference 3.1)) would be:</p> <p>Mondays to Fridays: 07:00–19:00</p> <p>Saturdays, Sundays, and Bank Holidays: 07:00–17:00</p> <p>Full details of the construction working hours are set out in ES Chapter 4: Project Description (document reference 6.4) and the Outline Code of Construction Practice (CoCP) (document reference 7.2).</p> <p>The proposed working hours reflect the need to deliver the Project efficiently across its 184 km linear route, with construction taking place at multiple locations. Flexibility within these hours helps to optimise the sequencing of works and manage delivery within the overall construction programme.</p> <p>Traffic surveys and assessments of the road network, including the B1018, have been undertaken and are</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>reported in Chapter 16: Traffic and Transport of the ES (document reference 6.16). The assessment, following IEMA guidelines, concluded that no additional specific mitigation was identified as necessary for Braintree Road / B1018 Witham Road at this stage.</p> <p>However, National Grid is committed to continuing engagement with the relevant highway authority and to monitoring traffic conditions on the B1018 during construction.</p>				
9-6.179	Request for National Grid to clarify the specific area of the Order Limits for the Project (map provided by respondent)	The area within the Order Limits is provision to remove the existing 132 kV overhead line and install this underground where TB74 and TB75 (as in between TB70 and TB76) cross the existing overhead line.			X	
9-6.180	Request for National Grid to clarify their intentions for the area (near Witham Road) around the respondents property and their farmyard (address provided by respondent) within the draft Order Limits	National Grid notes the respondent's feedback. The access route which the respondent is referring to is to enable a permanent access route to the pylon once it is constructed should future maintenance or surveys be required. We are proposing to use existing tracks and access points for these access routes and therefore these occasionally pass through farmyards such as the respondents. There would be nothing constructed for this access and any use of it in the future would be discussed with the respondent.			X	
9-6.181	Request that should National Grid proceed with the proposed placement of Pylon TB96, they must bear	National Grid compensates landowners in line with the Compensation Code and any other relevant legislation.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	the financial responsibility of the costs of building new stables, paddocks and arena	If the stables, paddocks and arena are no longer able to operate due to the Project, National Grid would compensate the owners on submission of a justified and evidenced claim.				
9-6.182	<p>Criticism that National Grid's plans for the Project indicate that the construction route around respondents farmyard (near Pylon TB96) was needed for future access, but correspondence with National Grid confirmed that this would be used for the project, including for post construction.</p> <p>Request that any other proposed uses for this area are disclosed to respondent, otherwise they will not have been adequately consulted</p>	<p>National Grid notes the respondent's feedback. The access route previously proposed was for future survey and maintenance if required and would not have been used for construction. We are not proposing to construct anything for this permanent access route, existing tracks and roads are being used where possible.</p> <p>The permanent access for TB96 (now TB98) is now proposed to the north of the alignment and therefore is no longer around the respondent's farmyard.</p>			X	X
9-6.183	Request for justification of the proposed new direct access on to the A120 between Coggeshall and Marks Tey. Any access onto the Strategic Road Network (SRN) will be required to meet Design Manual for Roads and Bridges (DMRB) standards suitable for the proposed use and no relaxations based on temporary use will be permitted	<p>National Grid notes the feedback received and has worked with the local highway authorities and National Highways to develop our access proposals for the Project.</p> <p>A technical note was produced for the justification of the proposed new direct access onto the A120 which has been agreed within the Statement of Common Ground. An access point on the A120 is needed due to the length of the haul road and the lack of suitable alternatives to the Local and Major Road Networks. An assessment, following the Department for Transport's guidance, found a suitable location on the A120, which is a single carriageway not designed for high-speed traffic. The proposed temporary access, featuring a left-in, left-out</p>	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>arrangement, will minimise disruption and meet safety requirements. This arrangement is considered appropriate as it does not significantly affect the A120's operation and aligns with the guidance for less restrictive access to non-high-speed sections of the Strategic Road Network.</p> <p>The A120 access has been designed and is compliant to Design Manual for Roads and Bridges standard.</p>				
Tourism						
9-6.184	Concern about impact of the Project on tourism	<p>Through routeing and siting, National Grid has sought to avoid, as far as practicable, locations important for leisure and tourism.</p> <p>Environmental Statement (ES) Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) presents an assessment on the potential impacts on tourism economy (during construction) and tourism assets (during construction and operation), including visitor accommodations. As part of this assessment, a range of measures have been considered throughout the construction phase of the Project to minimise disruption on</p> <p>tourism. These include: traffic management, signage and routeing measures. These are identified within the ES Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15), the Outline Code of Construction Practice (CoCP) (document reference 7.2)</p>		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		and the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).				
Visual Impacts						
9-6.185	Concern about cumulative visual impact of the Project alongside existing overhead lines / concern about wirescape	<p>National Grid notes the feedback received and has taken it into consideration as part of the iterative design process.</p> <p>National Grid has liaised with UK Power Networks to understand opportunities for 132 kV network rationalisation. The Project includes proposals to replace certain sections of 132 kV overhead line connection with underground cable to rationalise the network and reduce potential for cumulative wirescape effects.</p> <p>A Landscape and Visual Impact Assessment (LVIA), presented in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13), has been undertaken as part of the Environmental Impact Assessment (EIA). Existing infrastructure (such as existing overhead lines) has formed part of the baseline environment for the Project to be assessed against, to identify if significant landscape and / or visual effects are likely to arise. The LVIA presented in Environmental Statement (ES) Chapter 13: Landscape and Visual (Document Reference 6.13) sets out potential landscape and visual effects. The rationalisation of the existing 132 kV network in some areas forms part of the embedded landscape mitigation, as set out in Chapter 13.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		The findings and conclusions of the LVIA and other topics assessments have been considered within the Cumulative Impact Assessment, presented in ES Chapter 17: Cumulative Effects Assessment (document reference 6.17), lists the developments as part of the cumulative assessment. This chapter considers the landscape and visual effects of the Project cumulatively with other proposed developments that are being progressed.				
9-6.186	Concern that the Project will be unsightly / visually intrusive (including overhead lines, CSECs and substations) / Concern that the Project will cause a negative impact on views	<p>National Policy Statement (NPS) EN-5 makes it clear that the Government considers overhead lines to be appropriate and acceptable in most instances, although it recognises that there may be, at particularly sensitive locations, potential adverse landscape and visual impacts of an overhead line that make it inconsistent with our duties and relevant planning policy.</p> <p>The Dedham Vale National Landscape (previously an Area of Outstanding Natural Beauty (AONB)) designation is one such location where underground cable technology is proposed with the extent of underground cabling extending beyond the boundary in response to the potential for the Project to affect the National Landscape. Our proposals include a total of approximately 20 km of underground cable through and in the vicinity of the Dedham Vale National Landscape, including a section at Great Horkesley to reduce the changes in views and setting of the National Landscape from within and adjacent to its designated boundary.</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Underground cabling is also proposed for a short section of 400 kV overhead line crossing near Fairstead.</p> <p>Cable Sealing End (CSE) compounds are required to facilitate sections of underground cable, and the proposed East Anglia Connection Node (EACN) substation is required to connect to customers and the proposed Tilbury North Substation is required to connect the Project into the existing Tilbury Substation. These components have been carefully sited taking into consideration Horlock Rules including the potential for landscape and visual effects.</p> <p>The higher cost of underground cables to bill paying consumers, and the environmental implications of installing underground cables and maintaining them at locations outside the Dedham Vale National Landscape, are not considered to be justifiable in the context of national policy or National Grid's statutory duties, which include the need to be economical and efficient.</p> <p>A Landscape and Visual Impact Assessment (LVIA), presented in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13), has been undertaken as part of the Environmental Impact Assessment (EIA). The LVIA includes an assessment on both landscape character and visual amenity and identifies areas for potential mitigation planting around substations and CSE compounds to reduce visual impacts to local receptors. The Outline Landscape and</p>

9-6.193	Concern that the Project will have a negative impact on bees / Bees will be unable to navigate under high voltage overhead lines	<p>As well as possible effects on humans, possible effects of Electric and Magnetic Fields (EMFs) on various animals have been studied a number of times. No proven effects of EMFs have been found in any species at levels below the guidelines. This is confirmed in National Policy Statement (NPS) EN-5 which states: <i>"There is little evidence that exposure of crops, farm animals or natural ecosystems to transmission line EMFs has any agriculturally significant consequences."</i></p> <p>Beehives can become charged if directly under an overhead line because of the electric field it produces. For existing overhead lines, this can be eliminated by screening or earthing the hive, but for new overhead lines, embedded design measures and careful routeing will avoid any potential effects. There does not seem to be evidence of EMFs adversely affecting bees directly. In the United States of America, the strip of land along power lines has been shown to be particularly attractive to bees, with these areas being utilised by commercial bee farms. Additionally, National Grid has worked with the British Beekeeping Association to establish hives around our sites, including high voltage substations, which have thrived.</p>			X	
9-6.194	Concern that the Project will result in a negative impact on flora / plants / woodlands / hedgerows	Through routeing, siting and detailed design, National Grid has sought to reduce, as far as practicable, potential impacts on biodiversity including priority grassland, wetland, woodland, and hedgerow habitats. The design process has taken account of existing	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>biodiversity, the natural environment and, where practicable, seeks to reduce impacts on areas of ecological sensitivity, through avoidance or mitigation.</p> <p>Chapter 8: Ecology and Biodiversity of the Environmental Statement (ES) (document reference 6.8) assesses the effects on important ecological receptors (which includes grasslands, wetlands, woodlands and hedgerows).</p> <p>As part of the Environmental Impact Assessment (EIA) process for the Project, a suite of ecological surveys has been to be undertaken. The findings of which inform the design and approach to mitigation.</p> <p>The Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Code of Construction Practice (CoCP) (document reference 7.2) contain a list of relevant good practice measures to avoid or reduce impacts on valuable habitats.</p> <p>The Environment Act 2021 introduces a mandatory requirement for 10% Biodiversity Net Gain (BNG) for new Development Consent Order (DCO) developments (which is not yet in force and not expected until May 2026). National Grid has committed to delivering 10% BNG with environmental and societal benefits on all construction projects. The BNG target for the Project is currently voluntary and aligned with our corporate sustainability commitment.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		As well as seeking to avoid and minimise impacts to nature, the Project considers the land required for mitigation, compensation and enhancement that can deliver BNG and wider environmental benefits. This will require delivery of offsite Biodiversity Units via habitat creation or enhancement actions in strategic areas, and we will consider all offsite options that are available to us.				
9-6.195	Concern that the Project will result in a negative impact on rivers / other bodies of water	<p>Through routeing, siting and detailed design National Grid has sought to reduce, as far as practicable, potential impacts on biodiversity including river ecology. The design process has taken account of existing biodiversity, the natural environment and, where practicable, has sought to reduce impacts on areas of ecological sensitivity such as river corridor habitats, through avoidance or mitigation. The same approach has been taken to account for rivers and their floodplains, seeking to avoid or reduce the footprint of the Project within floodplains.</p> <p>As part of the Environmental Impact Assessment (EIA) process for the Project, a suite of ecological surveys has been undertaken, including along river corridors. The data has informed the assessment of effects on biodiversity, hydromorphology, water quality and flood risk presented in the Environmental Statement (ES), Chapter 8: Ecology and Biodiversity (document reference 6.8) and ES Chapter 12: Hydrology, Land Drainage and Flood Risk (document reference 6.12) and</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>the Water Framework Directive Assessment (document reference 7.10).</p> <p>Further, the Project has engaged with Natural England, the Environment Agency and Local Planning Authorities on aspects relating to river ecology, water quality and flood risk, and appropriate mitigation measures and techniques have been secured, as detailed in the Outline Code of Construction Practice (CoCP) (document reference 7.2).</p> <p>The Environment Act 2021 introduces a mandatory requirement for 10% Biodiversity Net Gain (BNG) for new Development Consent Order developments (which is not yet in force and expected May 2026). National Grid have committed to deliver</p> <p>10% BNG with environmental and societal benefits on all construction projects including for river ecology. The BNG target for the Project is currently voluntary and aligned with National Grid's corporate sustainability commitment.</p> <p>As well as seeking to avoid and minimise our impacts on nature, the Project includes enhancement of watercourse habitats as part of BNG mitigation.</p>				
9-6.196	Concern that the Project will result in a negative impact on wildlife / biodiversity / ecology (generally)	Through routeing, siting and detailed design National Grid has sought to reduce, as far as practicable, potential impacts on biodiversity. The design process has taken account of existing biodiversity, the natural environment and, where practicable, has sought to	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>reduce impacts on areas of ecological sensitivity, through avoidance or mitigation.</p> <p>Chapter 8: Ecology and Biodiversity of the Environmental Statement (ES) (document reference 6.8) assesses the effects on important ecological receptors.</p> <p>As part of the Environmental Impact Assessment (EIA) process for the Project, a suite of ecological surveys has been to be undertaken over the 2022-2024 period. The findings of which inform the design and approach to mitigation.</p> <p>The Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Code of Construction Practice (CoCP) (document reference 7.2) contain a list of relevant good practice measures to avoid or reduce impacts on valuable habitats and species.</p> <p>The Environment Act 2021 introduces a mandatory requirement for 10% Biodiversity Net Gain (BNG) for new Development Consent Order (DCO) developments (which is not yet in force and expected May 2026). National Grid have committed to deliver 10% BNG with environmental and societal benefits on all construction projects. The 10% BNG target for the Project is currently voluntary and aligned with our corporate sustainability commitment.</p> <p>As well as seeking to avoid and minimise impacts to nature, the Project considers the land required for mitigation, compensation and enhancement that can</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		deliver BNG and wider environmental benefits. This would require delivery of offsite Biodiversity Units via habitat creation or enhancement actions in strategic areas, and we will consider all offsite options that are available to us.				
9-6.197	Suggest ecological enhancements as part of the Project	<p>The Environment Act 2021 introduces a mandatory requirement for 10% Biodiversity Net Gain (BNG) for new DCO developments (which is not yet in force and expected May 2026). National Grid has committed to deliver 10% BNG with environmental and societal benefits on all construction projects. The 10% BNG target for the Project is currently voluntary and aligned with our corporate sustainability commitment.</p> <p>As well as seeking to avoid and minimise our impacts to nature the Project considers the land required for mitigation, compensation and enhancement that can deliver BNG and wider environmental and societal benefits. This would require delivery of offsite Biodiversity Units via habitat creation or enhancement actions in strategic areas, and we would consider all offsite options that are available to us.</p>			X	
9-6.198	Criticism that the route has been chosen without complying with planning requirements in respect of Protected Species (e.g. as shown by the bat surveys undertaken at Rivenhall not being presented at the Witham consultation event)	Through routeing and siting, National Grid has sought to reduce as far as practicable impacts on biodiversity, including protected species. The process of routeing has taken into account existing biodiversity, the natural environment and, where practicable, sought to reduce impacts on areas of ecological sensitivity, including			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>protected species and their associated habitats, through avoidance or mitigation.</p> <p>At the time of the consultation events ecological surveys were still ongoing and therefore the results were not available to present. However, in line with planning requirements full protected species surveys (including bats) have now been completed and presented within the Environmental Statement (ES).</p> <p>ES Chapter 8: Ecology and Biodiversity (document reference 6.8) presents the findings of an assessment of the construction and operation of the Project on biodiversity and identifies appropriate mitigation measures. The assessment of effects on biodiversity has been undertaken using the standard industry approach as set out across a range of best practice guidelines (in this specific case the Bat Conservation Trust Guidelines for Professional Ecologists) and developed in consultation with statutory environmental bodies, including Natural England. A comprehensive survey effort for a range of protected species (including bats) has been undertaken and are detailed in ES Appendices 8.1 - 8.15 (document reference 6.8.A1 - 6.8.A15).</p>				
9-6.199	Concern about impact of the Project on ancient oak tree 'Henry' at Rivenhall Place (near Pylons TB91 to TB94)	In response to feedback and assessment findings, National Grid is taking forward a modification to the alignment at this location to pass to the south of this oak tree. Whilst noting it does not qualify as a 'veteran tree'			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		per se, it is associated with the historic entrance to the Grade II* Listed Rivenhall Place.				
9-6.200	Concern about the impact of Pylons TB80 and TB81 on birds (list of species provided by respondent) and other wildlife	A range of protected species and habitat surveys have been undertaken and the results are outlined in Chapter 8: Ecology and Biodiversity (document reference 6.8) and Appendices 8.1 to 8.16 (document reference 6.8.A1-6.8.A16) of the Environmental Statement (ES). Appropriate mitigation would be implemented where impacts are identified as agreed with Natural England and the Local Planning Authority (LPA) as relevant.			X	

Chelmsford feedback

Chelmsford feedback (Statutory Consultation)

Table 9-7 Summary of consultee comments and National Grid's response

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Agricultural Land						
9-7.1	Concern that the Project will take away valuable agricultural land / disrupt farming operations	<p>During the construction stage of the Project, there would be areas of agricultural land that would be temporarily disrupted. National Grid would only use land that is required as part of the Project and would seek to minimise the use of agricultural land where reasonable and safe to do so.</p> <p>National Grid is and will continue to work with all landowners including farmers who may be affected by the proposals to understand the impacts on their operations and to work with them as the Project is developed. We would seek to work with the farming community to limit disruption where practicable. This includes providing prior warning of works which may result in the need to move livestock. Compensation claims for disturbance are considered on a case-by-case basis, if negative impact on farming operations can be proven. Particular agricultural matters can also be addressed through voluntary land agreements.</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-7.2	Concern that the Project will have a negative impact on agricultural livestock (e.g. type of livestock)	<p>National Grid is and will continue to work with all landowners including farmers and equestrian facilities who may be affected by the proposals to understand the impacts on their operations and to work with them as the Project progresses. We would seek to work with the farming community to limit disruption where practicable. This includes providing prior warning of works which may result in the need to move livestock. Compensation claims for disturbance are considered on a case-by-case basis, if negative impact on farming operations can be proven. Particular agricultural matters can also be written into voluntary land agreements. There would also be mitigation put in place where animal grazing maybe affected.</p> <p>As well as possible effects on humans, possible effects of Electric and Magnetic Fields (EMFs) on various animals have been studied. No detectable effects of EMFs have been found on, for example, health, milk production, fertility, and behaviour. This is confirmed in National Policy Statement (NPS) EN-5 which states: <i>"There is little evidence that exposure of crops, farm animals or natural ecosystems to transmission line EMFs has any agriculturally significant consequences."</i></p>			X	
Airfields						
9-7.3	Concern about the impact of the Project on Broomfield Hospital (helipad) / Suggestion that the	National Grid has appointed an independent aviation consultancy which has engaged the principal air ambulance operator from Broomfield Hospital with	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	Project is routed away from Broomfield Hospital (helipad)	<p>regards to the helipad. Following discussion and assessment it has been determined, with the Project as currently proposed, that the helipad can continue to operate.</p> <p>Further information on the assessment of airfields can be found in Environmental Statement (ES) Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and ES Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).</p>				
9-7.4	Concern about the impact of the Project on light aircraft (including hot air balloons) taking off from Hylands House and Park Estate (as they have previously)	<p>National Grid has appointed an independent aviation consultancy, who have assessed potential aviation impacts, including on ballooning activities, across the Project. Hot air balloons take off vertically and then travel with the wind. There is some control on landing e.g. to avoid obstacles or to locate a suitable landing area by firing the burners (to increase the altitude) or by opening the parachute valve to release hot air (to reduce the altitude). It is assessed that balloon pilots operating in the vicinity of the Project would have sufficient control to avoid the overhead line.</p> <p>The Project does not impose an unacceptable safety risk for balloons operating in the area. Further details on the consideration of aviation impacts can be found in Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) of the Environmental Statement (ES) that accompanies the Development Consent Order (DCO) application.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Further information on the assessment of airfields can be found in the Environmental Statement (ES) (ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and ES Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2)).				
9-7.5	Concern about the impact of the Project on Napps Field (airfield) / Suggestion that the Project is routed away from Napps Field (airfield)	<p>National Grid has considered the respondent's feedback and has identified that Napps Field (also known as Brock Farm airstrip) has now closed. Therefore no effects are expected.</p> <p>Further information on the assessment of airfields can be found in the Environmental Statement (ES) (ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and ES Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2)).</p>	X		X	
Community/Social Impact						
9-7.6	Concern about impact of the Project on children / families / residents / communities	<p>National Grid recognises people may have concerns about the potential impacts of living close to an overhead line, and that the uncertainty whilst the proposals are developed may cause anxiety.</p> <p>We have sought to reduce potential effects on communities, residents – including children - through routeing and design. We have also sought to reduce concern or uncertainty about the proposals through making timely design decisions and engaging with</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>people and stakeholders throughout the development of the Project. If the Project received Development Consent, the Project team would continue to engage with people potentially affected during construction, through regular communication including letters, phone calls and meetings, where necessary.</p> <p>We urge anyone with concerns to get in touch through the Norwich to Tilbury Freephone number, address or email, which will remain open throughout examination.</p> <p>National Grid is committed to working with local suppliers, facilitated by supporting forums (such as the local Chambers), on electricity industry skills and workforce planning. National Grid is also committed to providing a coordinated regional approach to jobs and skills opportunities. This commitment is broader than the individual Project and separate to any commitments under the proposed development consent order for this Project. The socio-economic effects of the Project are assessed in Chapter 15: Socio-economics, Recreation and Tourism of the Environmental Statement (ES) (document reference 6.15). Post construction job opportunities are limited given the nature of the development however we will still work with Local Authorities (including facilitating local partners) to understand what is important to them around skills and employment to ensure we leave a lasting positive legacy in the communities where we operate.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-7.7	Concern about impact of the Project on school / educational facilities	<p>With regards to a delivery mechanism, the above measures will be delivered as part of our community benefit package, which will look at both local and regional initiatives. This will be delivered outside the development consent process and is not a material consideration in the decision on the proposed Project or a matter to be secured as part of the Development Consent Order (DCO), as per the Community Funds for Transmission Infrastructure: Guidance (DESNZ, 2025).</p> <p>Through routeing and siting, National Grid has sought to avoid, as far as practicable, locations of education establishments.</p> <p>Environmental Statement (ES) Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) presents an assessment of the potential impacts on education facilities as a result of the Project. As part of the assessment, a range of measures are considered during the construction phase to reduce, where practicable, disruption to education establishments. These include traffic management, signage and routing measures to ensure access or partial access can be maintained where feasible. These are identified within ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15), the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) and the Outline Code of Construction Practice (CoCP) (document reference 7.2). The assessment concludes that there would be no</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		significant effects on education facilities within the study area as a result of the construction and operation of the Project.				
9-7.8	Concern about impact of the Project on leisure	Through routeing and siting National Grid has sought to avoid, as far as practicable, locations important for leisure and tourism. Environmental Statement (ES) Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) presents an assessment on the potential impacts on leisure and tourism. As part of this assessment, a range of measures have been considered throughout the construction phase of the Project to minimise disruption on leisure and tourism. These include: traffic management, signage and routeing measures. These are identified within ES Chapter 15: Socio-economics, Recreation and Tourism, the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).	X	X	X	
9-7.9	Concern about over development of area / other works in the area (e.g. cumulative impact of existing overhead lines, A12 widening and Longfield Solar Farm installation)	A cumulative effects assessment has been undertaken in accordance with the Planning Inspectorate's Advice Note 17 'Cumulative Effects Assessment' and is presented in Environmental Statement (ES) Chapter 17: Cumulative Effects (document reference 6.17). The cumulative effects assessment has considered the effects of the Project in conjunction with other existing and, or approved developments in line with guidance. As	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>part of this process, National Grid has engaged with other developers who are proposing development in proximity of the Project to understand their requirements.</p> <p>The cumulative assessment has been undertaken in accordance with the overarching National Policy Statement (NPS) for Energy (EN-1)</p> <p>Paragraph 4.1.5 in EN-1 states:</p> <p><i>'In considering any proposed development, in particular when weighing its adverse impacts against its benefits, the Secretary of State should take into account: ... its potential adverse impacts, including on the environment, and including any long-term and cumulative adverse impacts, as well as any measures to avoid, reduce, mitigate or compensate for any adverse impacts, following the mitigation hierarchy'.</i> Paragraph 4.2.12 in EN-1 states:</p> <p><i>'The cumulative impacts of multiple developments with residual impacts should also be considered.'</i></p> <p>Paragraph 4.3.3 in EN-1 states:</p> <p><i>'The Regulations require an assessment of the likely significant effects of the proposed project on the environment, covering the direct effects and any indirect, secondary, cumulative, transboundary, short, medium, and long-term, permanent and temporary, positive and negative effects at all stages of the Project, and also of</i></p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p><i>the measures envisaged for avoiding or mitigating significant adverse effects'.</i></p> <p>Paragraph 4.3.19 of NPS EN-1 states: <i>'The Secretary of State should consider how the accumulation of, and interrelationship between, effects might affect the environment, economy, or community as a whole, even though they may be acceptable when considered on an individual basis with mitigation measures in place'.</i></p> <p>Paragraph 4.4.5 in EN-1 states: <i>'The impacts of more than one development may affect people simultaneously, so the applicant should consider the cumulative impact on health in the ES where appropriate'.</i></p> <p>The long list and short list of other existing and, or approved developments considered for the Cumulative Effects Assessment is presented in ES Appendix 17.2: Long List and Short List of Other Developments (document reference 6.17.A2), detailing the other developments shortlisted for detailed assessment. The appendix provides details on other developments screened out of the assessment in accordance with the methodology presented in ES Chapter 17: Cumulative Effects</p> <p>(document reference 6.17). The detailed assessment of shortlisted other developments is presented in ES Appendix 17.3: Inter-Project Cumulative Effects Matrix (document reference 6.17.A3). ES Appendix 17.3: Inter-</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Project Cumulative Effects Matrix (document reference 6.17.A3) outlines the residual significance of cumulative effects for each development, for each environmental topic that has a Zone of Influence that overlaps with that development (i.e. socio-economic, recreation and tourism impacts).				
9-7.10	Concern about the Project being in too close proximity to recently built housing developments / using land being considered for future development (including residential, commercial, infrastructural, and employment sites)	<p>National Grid has obtained information on existing, under construction, consented but not built schemes as well as development proposals within the planning system. The Project design has responded to those that are confirmed through consideration of routeing.</p> <p>In the case of development proposals, some can be amended to be designed around our proposed infrastructure but in other cases our proposals may need to be amended at a corridor level, or proposed developments factored into our detailed route design.</p> <p>Based on known information, and in light of changes made following consideration of feedback to the 2022 and 2023 non-statutory consultations, statutory consultation, targeted consultations and landowner consultation, we consider our proposals are consistent with relevant policy and guidelines and the alignment designed such that they do not prevent proposed housing developments from being successfully progressed. UK law does not prescribe minimum distances between overhead lines and homes, but any implications on landscape and visual receptors, residential amenity or from concerns about</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		electromagnetic fields are robustly assessed as part of the Environmental Impact Assessment (EIA) and balanced as part of the decision making process. We will continue to review planning applications and engage with developers as necessary.				
9-7.11	Concern about the Project causing communities to become encircled / surrounded by overhead lines	The alignment has been routed to achieve some separation from the existing 400 kV overhead line, such that villages are not encircled by overhead lines to both sides. Separation is inevitably reduced in certain locations due to the presence of constraints to routeing and environmental features. Detailed assessment reported in the Environmental Impact Assessment (EIA) identifies any measures considered to be necessary to reduce likely significant effects which would also consider the potential for effects potentially arising from close paralleling existing 132 kV overhead line and new 400 kV overhead line infrastructure.	X		X	
9-7.12	Concerned that the Project will have a negative impact on domestic horses / equestrian activities	As well as possible effects on humans, the possible effects of Electric and Magnetic Fields (EMFs) on various animals have been studied. No proven effects of EMFs have been found in any species at levels below the guidelines. This is confirmed in National Policy Statement (NPS) EN-5 which states: <i>"There is little evidence that exposure of crops, farm animals or natural ecosystems to transmission line EMFs has any agriculturally significant consequences."</i> Although	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>horses are not directly mentioned, there is no evidence to suggest they are any different to other farm animals.</p> <p>As well as the possible direct biological or health effects addressed above, indirect effects such as microshocks can occur as a result of electric fields. Microshocks are small spark discharges which are similar to a static shock after walking across a nylon carpet for example. The Project would be designed in accordance with the principles of the Governments Code of Practice 'Power Lines: Control of Microshocks and other indirect effects of public exposure to electric fields' to ensure these are mitigated, which include equestrian activities.</p>				
9-7.13	Concern about the impact of the Project on emergency services / ambulances / hospitals / health service	<p>Through routeing and siting National Grid has sought to avoid and reduce as far as practicable effects on identified healthcare facilities.</p> <p>Environmental Statement (ES) Chapter 10: Health and Wellbeing (document reference 6.10) and ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) consider the potential impacts on, and access to, healthcare facilities, including emergency services, ambulances, hospitals and other NHS services associated with the construction of the Project, drawing on information from ES Chapter 16: Traffic and Transport (document reference 6.16). No health facilities are due to be directly impacted by the Project and where road diversions are required traffic management and mitigation measures would be in place</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		to reduce impacts. These include: traffic management, signage and routing measures to ensure access or partial access can be maintained where feasible. Further detail on proposed mitigation measures are presented in the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), which has been produced following engagement with stakeholders including the emergency services.				
9-7.14	Concern about negative impact on Quiet Lane/s	<p>National Grid has considered the respondent's feedback and does not consider that the presence of quiet lanes is a barrier to routeing. The potential effects of their use for construction access is noted and has informed the access arrangements proposed.</p> <p>Quiet lanes (minor rural roads/lanes designated to pay special attention to the needs of walkers, cyclists, runners, horse riders and other vulnerable road users, providing a shared space with protection from speeding traffic) have been given consideration as part of the Landscape and Visual Impact Assessment (LVIA), which has been undertaken as part of the Environmental Impact Assessment (EIA). The LVIA sets out the potential landscape and visual effects, including consideration of visual amenity of people travelling along quiet lanes and also impacts on landscape character which may for example be influenced by vegetation loss along quiet lanes during construction. The LVIA is presented in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13).</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-7.15	Concern that the pathway between Broads Green and Woodhouse Lane / Broomfield Hospital / Chelmer Valley High School (e.g. which is a school route for the all the children from the surrounding villages to Chelmer Valley High School) may be blocked during construction and potentially beyond construction / Request for National Grid to clarify how children affected are going to get to school safely / Concern about the safety impact on children getting to Chelmer Valley High School / Concern about the impact of the Project between Pylons TB143 and TB144 on pedestrian/cycle track from Broads Green to Partridge Green (e.g. as used as a direct route from Broads Green and Great Waltham Chelmer Valley High School, and to Broomfield Hospital which is a hub for buses to Stansted/Chelmsford/Braintree and surrounding areas)	<p>Selected Public Rights of Way (PRoW) between Broads Green and Chelmer Valley School have been surveyed to understand the number of users. The surveyed PRoWs were agreed with the LHA. Footpath Great Waltham 74 registered 5 users during the weekday and 11 users during the weekend.</p> <p>Footpath Broomfield 1 had 92 users during the weekday and 41 users during the weekend. The Outline Public Rights of Way Management Plan (document reference 7.6) submitted as part of the Development Consent Order (DCO) application, sets out management measures and mitigation measures for each PRoW affected by the construction activities and operation of the Project.</p> <p>Environmental Statement (ES) Chapter 16: Traffic and Transport (document reference 6.16) present an assessment on the potential impacts on PRoW as a result of the Project.</p> <p>Footpath Great Waltham 74 will be temporary closed for the duration of the works with managed access, that is, allowing a safe passage throughout of the PRoW users. In addition, during periods of approximately 8 to 15 weeks the footpath will be temporary diverted. The diversion length will slightly increase the journey time by approximately 4-5 minutes. As part of the diversion, the PRoW users will walk along Lark's Lane to access Footpath Great Waltham 78 from the east.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Footpath Broomfield 3 will in general be temporarily closed for the duration of the works with managed access, which will allow safe passage throughout for users. However, there will be temporary diversion required for a period of approximately 8 to 15 weeks with an increase in journey time of less than 5 minutes.</p> <p>Footpath Broomfield 1 will in general be temporarily closed for the duration of the works with managed access, which will allow safe passage throughout for users. However, a temporary diversion will be required for a period of approximately 3 days.</p> <p>Footpath Great Waltham 77 will be temporarily closed for the duration of the works with managed access, which will allow safe passage throughout for users.</p> <p>As a result, the magnitude of impact on the PRow is considered minor and the overall effect has been classified as not significant for these PRow users.</p> <p>The Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) includes as a mitigation measure the preparation of a Driver's pack, which will identify locations where pedestrians may be walking either on the verge or in the carriageway.</p>				
9-7.16	Criticism that the Project will hinder Chelmsford from meeting any housing targets	National Grid notes this comment. National Grid has taken into consideration the location of planning applications and housing allocations in establishing the baseline as part of the routeing and siting studies to			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>minimise any potential for direct impacts on housing development site, where possible.</p> <p>Chapter 3: Alternatives of the Environmental Statement (document reference 6.3) and the 2025 Design Development Report (DDR) (document reference 5.15) (as well as the 2023 and 2024 Design Development Reports which are available on the Project website) describe the iterative development of the Project from the strategic proposal, draft alignment and documents the changes to the Project following the 2024 statutory consultation and additional 2025 targeted consultations. At all stages in the development of the Project, National Grid has taken into consideration local plan allocations (both adopted and emerging) as well as planning applications along the route. The 2025 Design Development Report (document reference 5.15) and the Planning Statement (document reference 5.6) outline where the Project has the potential to impact proposed or consented developments.</p>				
9-7.17	Concern that the construction activities as part of the Project would reduce the security of the respondent's property (e.g. thieves attracted, security compromised by cutting of hedges, etc) / Concern that no measures have been communicated to the respondent about how their property and safety will be assured	<p>Temporary construction compounds, including offices, are secured to protect the public and prevent unauthorised entry to site. Access to temporary construction compounds would be limited to specific entry points and personnel entries/exits would be recorded and monitored for both security and health and safety purposes.</p> <p>Working areas would be appropriately fenced. The type of fencing installed would depend on the area to be</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>fenced and would take into consideration the level of security required in relation to the surrounding land and public access, rural or urban environment and arable or stock farming. For some locations the fence used may also serve to provide acoustic and visual screening of the work sites and reduce the potential for disturbance of users in the surrounding areas. Fencing would be regularly inspected and maintained and removed as part of the demobilisation unless otherwise specified.</p> <p>The Projects lands team would discuss and agree fencing requirements with landowners and would record any commitments i.e. retained fencing etc.as part of those discussions.</p> <p>If there are specific concerns any landowner has in relation to specific activities on their land, then these should be discussed and raised with the lands team.</p>				
9-7.18	Concern that the Project will require an additional access to be provided at respondent's farm at Ramsey Tyrrells, Stock, and that this will increase security risk to the farm (e.g. risk of being robbed / trespassing)	The Project does not propose any new accesses to the respondent's farm or any of the associated farm tracks. We are seeking access rights over the existing junction between the farm track, Stock Lane and Ingatestone Road. We are not proposing anything here and access would only be in the permanent for inspection of the pylons. There will be no construction access at this point and the existing gates will remain locked.			X	
9-7.19	Concern the Project will divide the communities of Great and Little Waltham (e.g. at Pylon TB146) / and Howe Street (e.g. only village shop and a post office	Whilst noting the feedback, National Grid does not consider that the positioning of one or other service or function in one or other village is so materially affected			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	in Great Waltham, and the only doctor's surgery in Little Waltham; the local vicar takes care of both churches - St Mary's in Great Waltham and St Martin's in Little Waltham; the local Guides group is in Little Waltham and the Scouts is in Great Waltham; nursery) / Concern that Pylons TB136 to TB140 at the Waltham Gap will divide Great Waltham and Little Waltham	by the proposals that it overcomes the balanced decision making not to take forward the alternative.				
9-7.20	Concern that the Project will exasperate traffic issues on the A12 near respondent's village (e.g. an incident recently took place during which an angered driver attempted grievous bodily harm	<p>Environmental Statement (ES) Chapter 16: Traffic and Transport (document reference 6.16) includes the assessment of the potential impacts of the Project including changes in traffic flow, delays, road safety and impact on Walking, Cycling and Horse-Riding modes on the roads along the Primary Access Routes located in the Local Road Network. Mitigation measures are proposed to minimise likely adverse impacts.</p> <p>The Transport Assessment (document reference 7.11), submitted with the Development Consent Order (DCO) application, examines capacity, safety, and operational efficiency of the network, identifying potential bottlenecks or safety concerns.</p> <p>The maximum increase during the peak hour is estimated to be of 1.5% of the total traffic volume on the A12 near Chelmsford. The duration of this maximum increase is expected to be of five weeks and for the remainder of the construction period the percentage increase in traffic is projected to be lower.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-7.21	Concern about the impact of the construction routes for Project in the area around Copfold Hall (Pylons TB177 and TB178) on residents	<p>National Grid is committed to minimising the impact that construction would have on local residents and landowners.</p> <p>Where possible, National Grid has sought to keep access and construction activities away from residential properties, however in this area there are several existing constraints, such as woodland and infrastructure that the proposed construction access has been routed to avoid.</p> <p>We will work with landowners and residents to ensure that access to properties, agricultural land and business is maintained throughout construction, should consent be obtained.</p>		X		
9-7.22	Concern / objection to relocation of animals at the Remus Horse Sanctuary for the Project (due to animal health impact, unique logistical needs and financial concerns)	<p>National Grid has noted the respondent's feedback and we have amended the alignment in this location so that there is no oversail or construction works in Remus Horse Sanctuary. As well as possible effects on humans, possible effects of Electric and Magnetic Fields (EMFs) on various animals have been studied a number of times. No detectable effects of EMFs have been found on, for example, health, milk production, fertility, and behaviour. This is confirmed in National Policy Statement (NPS) EN-5 which states: "<i>There is little evidence that exposure of crops, farm animals or natural ecosystems to transmission line EMFs has any agriculturally significant consequences.</i>"</p>			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>National Grid however acknowledges that landowners may still have concerns regarding potential effects on behaviour of their animals during construction. Where this is the case National Grid will work with landowners to explore options including temporary relocation of animals [where practicable].</p> <p>National Grid will also compensate landowners in line with the compensation code, which covers compensation for loss, damage and disturbance.</p>				
9-7.23	Concern that the Project will impact charity fundraising at the Remus Horse Sanctuary (e.g. deterring visitor and impacting events)	<p>National Grid acknowledges that the Project, especially through construction might have an impact on planned private and public events. National Grid would like to work with affected landowners to agree mitigation where possible. Where a landowner has a concern over a particular event they should contact the Project lands team:</p> <p>Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.</p> <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD</p>			X	
9-7.24	Concern about the impact of Pylon TB149 on cycling on Chignal Road and the Ride London-Essex cycle route	The assessment of recreational routes (e.g. The Ford Ride London-Essex 60) are outlined in the Environmental Statement (ES) Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) with the Outline Public Rights of Way			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Management Plan (document reference 7.6) submitted along with the Development Consent Order (DCO) application.				
9-7.25	Concern about behaviour of construction workers for the Project in relation to students at Anglia Ruskin University (ARU) Writtle, and suggest that all workers/contractors for the Project will need Disclosure and Barring Service (DBS) clearance and training on how and how not to exchange with students	<p>The alignment was carefully considered and, in this location, an oversail of the north-eastern corner of the college grounds was preferred over more western alternatives (for example an alignment directly north from TB164). The alternatives would have increased effects on residential amenity and lead to more woodland loss. We have reviewed this alignment and consider the decision making to remain appropriate and therefore no change is proposed.</p> <p>National Grid works closely with its contractors to ensure high standards are adhered to throughout the Project lifecycle. If consent is obtained, National Grid will work with its contractors and the university to ensure that any requirements deemed necessary for example Disclosure and Barring Service (DBS) clearance are implemented.</p> <p>However, National Grid proposes security fencing and gates for all site access points to secure the works area, the construction corridor and haul roads so the work area would not be expected to have direct interactions with students in the first instance.</p> <p>National Grid works closely with contractors working on its behalf and ensures that they adhere to all required safety standards.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		National Grid and its contractors would engage with affected parties to ensure emergency response plans consider occupants and usage of the area.				
9-7.26	Concern about the impact of the Project on animals at Anglia Ruskin University (ARU) Writtle, including the following: 'spooking' from construction activities; security of fields and stabling; access to grazing areas, water sources, or shelter; excavation work may disturb soil, potentially exposing horses to contaminants; Restricted movement during the construction period will affect access to exercise and mental stimulation; Construction materials can release harmful chemicals or pose physical risk; Horses may become anxious due to unfamiliar sights, sounds, and disruptions, posing risk to themselves, students and staff; Dust and pollutants from construction sites can impact respiratory health	<p>National Grid would work with all landowners, businesses and other organisations to understand the possible impacts on them and where suitable, agree and put in place mitigation to remove or minimise the effects.</p> <p>National Grid is aware of the specific circumstances at Anglia Ruskin University (ARU) Writtle and would be seeking to engage further with the university to agree suitable mitigation.</p> <p>At present the main construction works, including the haul road, avoid the university grounds and minimal access / disruption would be required to run the conductors (overhead line) over the land. Due to the proximity of the universities land to a road crossing a temporary scaffold may be required on the university land. With regards to the use of scaffolding, we are proposing to utilise a road closure and traffic management measures to remove the requirement for scaffolding over the road. Providing this can be agreed with the highways authority, this would reduce impacts to the stable yard and would remove the required access route through the campus.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Construction impacts						
9-7.27	Concern about disruption from construction	<p>An Environmental Statement (ES) (document reference: Volume 6: Environmental Statement) has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 ('the Infrastructure EIA Regulations'). The ES identifies and assesses the likely significant effects on the environment resulting from the construction of the Project and recommends appropriate mitigation to reduce effects.</p> <p>Environmental mitigation measures have been defined within each environmental topic chapter and set out in relevant management documents submitted with the Development Consent Order (DCO) application, including the Outline Code of Construction Practice (CoCP) (document reference 7.2), the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5).</p>	X	X	X	
9-7.28	Concern about impact on traffic levels in the local area caused by construction works	As part of the pre-application process National Grid has engaged with the relevant authorities, their highways teams and National Highways to understand and gain information on their road networks. This information has been used to inform and guide the drafting of the Outline	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Construction Traffic Management Plan (CTMP) (document reference 7.3) for the Project that accompanies the Development Consent Order (DCO) application.</p> <p>A strategy has been developed to manage the impact of construction vehicles on the public highway and sensitive receptors, using suitable Local Road Network connections from the Strategic Road Network called Primary Access Routes. In addition, temporary haul roads for construction vehicles are proposed along the Project alignment, further reducing the impact of construction traffic on the local road network. Further details of the strategy can be found within the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).</p> <p>Environmental Statement (ES) Chapter 16: Traffic and Transport (document reference 6.16) includes the assessment of the potential impacts of the Project including changes in traffic flow, delays, road safety and impact on Walking, Cycling and Horse-Riding modes on the roads along the Primary Access Routes located in the Local Road Network.</p> <p>The Transport Assessment (document reference 7.11), submitted with the DCO application, examines capacity, safety, and operational efficiency of the network, identifying potential bottlenecks or safety concerns.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Within the assessment of the ES and the Transport Assessment, mitigation measures are proposed to minimise likely adverse impacts.				
9-7.29	Concern about noise and other issues resulting from construction (e.g. the closure of public rights of way, construction materials releasing harmful chemicals, spooking horses and the impact to commuters)	<p>An Environmental Statement (ES) (document reference: Volume 6: Environmental Statement) has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 ('the Infrastructure EIA Regulations'). The ES identifies and assesses the likely significant effects on the environment resulting from the construction of the Project and recommends appropriate mitigation to reduce effects.</p> <p>Specifically, a Construction Noise and Vibration Impact Assessment has been undertaken and is reported in ES Chapter 14: Noise and Vibration (document reference 6.14). During construction, mitigation would be implemented to reduce noise and vibration impacts from construction activities and increased road traffic and vibration due to additional movement from construction traffic. Mitigation measures are outlined in ES Chapter 14: Noise and Vibration (document reference 6.14) and the Outline Code of Construction Practice (CoCP) (document reference 7.2). This includes the assumption that construction working would be undertaken within the agreed working hours, construction traffic would be managed through the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), haul roads would be well maintained, and Best</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Practicable Means (BPM) would be employed to reduce construction noise and vibration.</p> <p>ES Chapter 7: Air Quality (document reference 6.7) presents an assessment of the potential impacts from the construction of the Project on air quality. During construction, mitigation would be implemented to reduce the impact of dust generation and construction vehicle emissions. Mitigation measures are outlined in ES Chapter 7: Air Quality (document reference 6.7), and the Outline CoCP (document reference 7.2). The dust-emitting activities can be greatly reduced or eliminated by applying the site-specific mitigation measures (see Outline CoCP (document reference 7.2)) for high risk sites following measures recommendations in the Institute of Air Quality Management (IAQM) guidance (IAQM, 2024). The IAQM guidance states that with the implementation of effective site-specific mitigation measures, the environmental effect would not be significant in most cases.</p> <p>In addition, National Grid has prepared an Outline CoCP (document reference 7.2). The Outline CoCP (document reference 7.2) sets out the required mitigation measures and environmental commitments that would be implemented during the construction phase of the Project to avoid or reduce potential effects of the Project on the environment.</p>				
9-7.30	Concern that local road infrastructure is not suitable for heavy construction vehicles and machinery	A strategy has been developed to manage the impact of construction vehicles on the public highway and	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	(including the consideration that local roads are too narrow and bridges not strong enough)	<p>sensitive receptors, using suitable Local Road Network connections from the Strategic Road Network called Primary Access Routes. In addition, temporary haul roads for construction vehicles are proposed along the Project alignment, further reducing the impact of construction traffic on the local road network. Further details of the strategy can be found within the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).</p> <p>The Project also requires the transportation of Abnormal Indivisible Loads (AIL). National Grid is developing specific routing proposals for AIL movements and is developing these through engagement with the relevant stakeholders including the local highway authorities and National Highways. An AIL routing strategy containing details about these movements has been submitted in support of the Development Consent Order (DCO) application.</p>				
9-7.31	Concern that the Project will impact the tributary between the garage and school at Margaretting which is liable to road flooding	Where the Project needs to cross existing watercourses, crossings would be designed in line with the criteria that have been agreed with the relevant flood risk management authorities, to maintain existing flow conveyance properties. The Project would also put in place a number of measures to capture and control surface water runoff from its footprint. These measures would ensure that the land drainage function of the watercourse at Margaretting would not be adversely impacted and that the risk of flooding of the road would			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		not be increased. The flood risk and drainage control measures that would be put in place are described in the Flood Risk Assessment (FRA) (document reference 7.9) and the Outline Code of Construction Practice (CoCP) (document reference 7.2).				
9-7.32	Criticism of the amount of potential hard access area needed for the Project	All aspects of the design (including the amount of hard access areas) take into account minimising the impact on the local environment and surroundings. The "Hard Access" areas are required for the construction activities to be completed and also in part service as permanent access roads for ease of maintenance activities.			X	
9-7.33	Criticism that the Draft Order Limits (red line boundary) in Chignall St James included the presence of utilities such as high pressure gas mains that will require safeguarding with faraday cages, further impacting landowners	National Grid has engaged with all known utility asset owners contained within the Order Limits in order to agree safe working methodologies and Electric and Magnetic Field (EMF) mitigations across Alternating Current (AC) corrosion and induced voltages required for both existing and proposed assets to operate safely in tandem with each other. The extent of these additional safeguarding works are considered minor construction activities and the existing utility providers would utilise their existing powers to undertake such works.	X		X	
9-7.34	Concern that the Project will worsen flooding along Mashbury Road / Criticism that whilst National Grid have said that there will be adequate provision, detailed plans have not been shared to support this	National Grid has completed an Environmental Impact Assessment (EIA) for the Project. The results are presented in the Environmental Statement (ES) that accompanies the Development Consent Order (DCO) application. The ES identifies and assesses the likely significant effects on the environment resulting from the			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>construction of the Project and recommends appropriate mitigation measures (in consultation with relevant stakeholders) to reduce potential effects.</p> <p>A Flood Risk Assessment (FRA) (document reference 7.9) has been prepared for the Project to support and inform the EIA. The FRA describes the measures that will be put in place to manage construction and operational flood risk and land drainage impacts to ensure the development is safe from flooding over its lifetime and that off-site flood risk is not increased. Through capture, storage and attenuation of rainfall runoff from all new impermeable areas of land cover using suitable sustainable drainage measures, the Project would not contribute to existing surface water flooding issues at Mashbury Road.</p> <p>ES, Chapter 12: Hydrology, Land Drainage and Flood Risk (document reference 6.12) includes consideration of potential impacts on flood risk from all relevant sources, including both temporary and permanent impacts, taking account of the effects of climate change over the Project's design life.</p>				
9-7.35	Concern about the impact of the Project on access to property near to Pylon TB173 (e.g. due to impact on business)	<p>The only proposed access to TB173 is from the temporary haul road to the south which would be accessible during construction and then removed or the permanent access from the east and Margaretting Road. The permanent access is only for annual inspections and surveys and would typically be accessed by 4x4 or pick-up style vehicles or by foot.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Access to any properties or businesses would remain unaffected. If any losses are incurred by a business due to a direct impact from the Project, this would be dealt with through compensation on a case-by-case basis.				
9-7.36	Concern that there is a risk of flooding in the area of The Walthams	A Flood Risk Assessment (FRA) (document reference 7.9) has been produced to address the risks of flooding that may be generated from construction of the Project and its operation. The FRA (document reference 7.9) assesses flood risk from the River Chelmer and its tributaries that drain the land local to The Walthams and also assesses surface water and groundwater sources of risk. It describes the measures that are embedded into the Project design and that would be put in place to manage construction and operational flood and land drainage impacts. These controls have been devised in consultation with relevant flood risk and land drainage authorities to ensure the development is safe from flooding over its lifetime and that off-site flood risk is not increased.			X	
9-7.37	Concern that the village of Little Waltham is known to flood from the River Chelmer and that more groundwork in the area could cause additional flood risks	National Grid has completed the Environmental Impact Assessment (EIA) for the Project. The results of this assessment are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application. The ES identifies and assesses the likely significant effects on the environment resulting from the construction of the			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Project and recommends appropriate mitigation measures (in consultation with relevant stakeholders) to reduce potential effects.</p> <p>A Flood Risk Assessment (FRA) (document reference 7.9) has been prepared for the Project to support and inform the ES. The ES includes consideration of potential impacts on flood risk from all relevant sources, both temporary and permanent impacts, taking account of the effects of climate change over the Project's design life.</p> <p>The FRA (document reference 7.9) describes the measures that would be put in place to manage construction and operational flood and land drainage impacts to ensure the development is safe from flooding over its lifetime and that off-site flood risk is not increased.</p>				
9-7.38	Concern that existing gas pipelines run through the site proposed for the Project (near Roxwell)	National Grid take the utmost care in interacting with third party assets such as gas pipelines, we have engaged and are collaborating with all known pipeline owners (Exolum and National Gas in this specific interaction near Roxwell) within the Order Limits to negotiate and agree safe working methodologies during design and construction.			X	
9-7.39	Concern that the Limits of Deviation go over a floodplain, resulting in safety issues for workers, the residents of Little Waltham, and the environment	National Grid has completed the Environmental Impact Assessment (EIA) for the Project. The results of this assessment will be provided in the Environmental			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Statement (ES) (document reference Volume 6: Environmental Statement) that will accompany the Development Consent Order (DCO) application. The ES identifies and assesses the likely significant effects on the environment resulting from the construction of the Project and recommends appropriate mitigation measures (in consultation with relevant stakeholders) to reduce potential effects.</p> <p>A Flood Risk Assessment (FRA) (document reference 7.9) has been prepared for the Project to support and inform the EIA. 9-7.40	Criticism that the B1002 will be used by construction traffic to build haul roads / The B1002 was once designated a protected road, runs through a conservation area, and fronts the local village primary school	<p>Following comments received at consultation, including feedback from the Local Highway Authority, National Grid has reviewed this proposed Primary Access Route. Our assessments have not identified a suitable alternative access route to this section of temporary haul road.</p> <p>As part of the pre-application process National Grid has engaged with the relevant authorities, and their</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>highways teams and National Highways to understand and gain information on their local road networks. This information has been used to inform and guide the drafting of the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) for the Project that accompanies the Development Consent Order (DCO) application.</p> <p>A strategy has been developed to manage the impact of construction vehicles on the public highway and sensitive receptors, using suitable Local Road Network connections from the Strategic Road Network called Primary Access Routes. In addition, temporary haul roads for construction vehicles are proposed along the Project alignment, further reducing the impact of construction traffic on the local road network. Further details of the strategy can be found within the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).</p> <p>Local village primary schools in Ingatestone and Margaretting fall beyond the Local Study Area for community facility assessment in the Environmental Statement (ES) Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15). No assessment has been undertaken on the receptors as no direct land take or disruption to direct access are anticipated from the community facilities.</p> <p>Environmental Statement (ES) Chapter 16: Traffic and Transport (document reference 6.16) includes the</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>assessment of the potential impacts of the Project on the roads forming the Primary Access Routes located on the Local Road Network. This assessment uses the changes in traffic flow to identify the effects on vehicle/passenger delays, road safety, and impact on pedestrians, cyclists and horse-riders including severance, amenity and fear and intimidation. The assessment of the B1002 found there would be temporary slight adverse residual effects resulting from the Project which would not be significant with the proposed mitigation measures introduced. This includes mitigation outlined within the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) and includes construction traffic along the B1002 avoiding school pick-up and drop-off times past Margaretting Church of England Primary School.</p> <p>The Margaretting conservation area and associated buildings were assessed as part of the Environmental Impact Assessment (EIA), and findings are documented in Chapter 11: Historic Environment of the Environmental Statement (ES) (document reference 6.11) and supported by ES Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1). The assessment concludes that the Project would have no impact on the conservation area and associated buildings.</p> <p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the EIA and reported in ES Chapter 13: Landscape and Visual (document reference</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		6.13). The LVIA sets out the potential landscape and visual effects, which includes consideration of visual amenity of visual receptor areas (including, for example, people in communities and using public rights of way). Chapter 13: Landscape and Visual (document reference 6.13) is supported by ES Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3). This appendix sets out the assessment for visual receptor areas including F11 Margaretting and Stock, which is relevant to this feedback relating to the section of the Project near Margaretting and the B1002. The assessment reported that visual effects are most likely to be significant from within Margaretting, noting there would be very limited visibility of the proposed overhead line from Margaretting, including its conservation area, due to the dense woodland cover in this area, and vegetation along the A12. This includes the B1002 and the school.				
9-7.41	Concern that Roxwell has flooded since the brook was straightened a few hundred years ago, and despite funding being secured to stop this flooding, this has still not been actioned / Criticism that now National Grid propose the Project in the area	As demonstrated in the Flood Risk Assessment (FRA) (document reference 7.9) that has been undertaken and submitted with the Development Consent Order (DCO) application, proposed pylons in the vicinity of Roxwell have been positioned to avoid fluvial floodplains. The FRA assesses flood risk from a range of sources and identifies the flood risk management and control measures that are either integrated into the Project's design e.g. runoff capture and attenuation features or secured via the Outline Code of Construction Practice			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		(CoCP) (document reference 7.2) to be put in place by the appointed contractor(s). These measures would ensure that the Project does not contribute to local flooding issues at Roxwell.				
9-7.42	Suggest that the temporary haul road between Pylons TB181 and TB182 should utilise the existing culvert for access to the adjoining field to the south (e.g. to mitigate impact on trees) (plan provided by respondent)	National Grid welcomes this detail and has reorientated the haul road to utilise this existing crossing.			X	X
9-7.43	Concern about the impact of the Project on access to respondent's farm on Back Lane, Stock (e.g. as this is the only way in and out of the property and is used by business and residents)	National Grid notes the respondents feedback and is committed to minimising the impact that construction will have on local residents and landowners. We will work with landowners and residents to ensure that access to properties and business is maintained throughout construction, should consent be obtained.			X	
9-7.44	Criticism that the Wash already regularly suffers from floods, both winter and summer, as do all the land and lanes around Wardrobers, Lawness Barns and along the Wid / Concern that the Project will contribute to the flooding of the whole area, yet delays due to flood being classed as low risk	National Grid has completed the Environmental Impact Assessment (EIA) for the Project. The results of this assessment are provided in the Environmental Statement (ES) that will accompany the Development Consent Order (DCO) application. The ES identifies and assesses the likely significant effects on the environment resulting from the construction of the Project and recommends appropriate mitigation measures (in consultation with relevant stakeholders) to reduce potential effects.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>A Flood Risk Assessment (FRA) (document reference 7.9) has assessed the potential impacts of the Project on flood risk in the area surrounding Lawness Barns and the Wid. This includes consideration of all relevant sources of flooding, including surface water and fluvial risk. Based on modelling and national flood mapping, these receptors are not located within areas of high flood risk, but National Grid recognises that local feedback has identified seasonal flooding concerns.</p> <p>The FRA concludes that the Project will not increase flood risk to these receptors and includes mitigation measures such as controlled drainage design and surface water management to prevent any off-site impacts. These measures will be secured through the design process and are reflected in the Environmental Statement. National Grid will continue to engage with relevant stakeholders to ensure that the final design responds appropriately to localised flood concerns.</p>				
9-7.45	Suggest that any upgrades to existing tracks to provide haul roads for the Project near Anglia Ruskin University (ARU) Writtle should be solid surfaced (e.g. not gravel or Type 1 surfaces) to mitigate damage to horses' feet	National Grid is not expecting to construct any roads within the university grounds. If this access is required, we would use the existing access through the site and may need trackway across the paddocks to the proposed scaffold position. We would discuss any requirements with the university. With regards to the use of scaffolding, we are proposing to utilise a road closure and traffic management measures to remove the requirement for scaffolding over the road. Providing this can be agreed with the highways authority, this would			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		reduce impacts to the stable yard and would remove the required access route through the campus.				
9-7.46	Concern that the Project may result with non-compliance with education regulations for Anglia Ruskin University (ARU) Writtle (e.g. Education and Skills Funding Agency (ESFA) and Office for Students (OFS) regulations) due to disruption from construction	National Grid does not expect any impact on the universities compliance with education regulations because of construction of the Project. If consent is obtained, we would discuss any requirements with the university prior to construction.			X	
9-7.47	Concern about impact of the Project on drainage ditch into which the fields to the west and north of respondent's property on Mashbury Road (address provided by respondent). This ditch links with the roadside ditch to the north and feeds a culverted drain which runs along the road facing boundary of the respondent's property and then continues below ground, parallel and adjacent to the water main, before emptying into the ditch further to the south on Mashbury Road. Concern that any damage or blockage to this drain could cause dangerous flooding on Mashbury Road, and request that, in the event any work is done to or around this drain, National Grid should provide clarity as to who is responsible for ensuring the drain is suitably maintained in the future	<p>National Grid will instruct a drainage consultant to provide pre and post construction drainage plans to identify existing drainage</p> <p>Where it is reasonable and proportionate to do so, the construction working width will be restored to a condition no worse than recorded at the pre-construction drainage assessment.</p> <p>The pre-construction drainage assessment will be undertaken immediately prior to the commencement of construction. If land drainage cannot be provided to reinstate the land to the same standard as the pre-construction drainage assessment, the landowner will be compensated.</p>			X	
9-7.48	Criticism that pylon has been relocated into respondents field to avoid floodplain and horses at a horse sanctuary, yet respondents suffer from	Pylons can be positioned within floodplains but there is a preference to avoid this where possible. In this location the alignment was changed following the 2023 non-			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	flooding too, and pylons as part of the Project are located in a flood plain further up the line	statutory consultation to move pylons out of mapped floodplain to reduce construction risk and in doing so, reduced oversail of the sanctuary. Further adjustment moved the pylons within the field to reduce the risk of construction areas being within flood zones. The pylons as proposed are not within mapped floodplain areas and no change is proposed. National Grid has completed the Environmental Impact Assessment (EIA) for the Project including a Flood Risk Assessment (document reference 7.9). The results of this assessment are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application. The ES identifies and assesses the likely significant effects on the environment resulting from the construction of the Project and recommends appropriate mitigation measures (in consultation with relevant stakeholders) to reduce potential effects.				
9-7.49	The track over which National Grid proposes to cross with the haul road into respondent's neighbour's fields two sides is a main use track in use every day for purposes of farm business, private and personal use and our business / Request that the respondent is always granted priority right of way	Priority to the track would be maintained and the construction traffic crossing it would be required to give way.			X	
9-7.50	Concern that closing of public road outside of respondent's farm will impact daily business / Request that the road outside of respondent's farm	The proposed approach for road closures and management (including in relation to the public road outside the respondent's farm) is set out in approach for			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	remains open 24 hours 7 days each week so there is no impact on respondent's daily business	road closures and management is set out in the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3). It is anticipated that roads would only be closed where this is required for safe working. Temporary closures may be required for works including the construction of bellmouth junctions, highway mitigation, installation of buried cabling, and stringing of overhead lines / netting. If no suitable existing alternative access provision is available, a temporary alternative access would be provided.				
9-7.51	Request for National Grid to confirm that all of the stone will be removed and that the top soil will not be contaminated and densely compacted by their actions, machines and the transportation of loads across respondent's field (e.g. which the respondent has been informed will service the building of 15 pylons)	Details of the proposed haul road arrangement are provided in Section 5.6 of the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3). This includes a standard detail showing the typical layout of the haul road is shown on drawing AENC-NG-ENG-DWG-0003. It is proposed that the haul road allows for associated features such as storage of topsoil and subsoil. It is proposed that these are stored separately to reduce the risk of contamination and would be reinstated at the end of construction.			X	
9-7.52	Concern about issues for construction of the Project through Margaretting (e.g. due to many underground streams down the hills which together with the heavy Essex clay)	National Grid has secured measures to maintain existing hydrological function and drainage regimes within the Project boundary, through inclusion of a range of commitments within the Outline Code of Construction Practice (document reference 7.2). These measures have been informed by the hydrology and soils impact assessments that have been undertaken to inform the			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Environmental Statement (ES). The confirmation of soil types through Margaretting has been supported by detailed Agricultural Land Classification (ALC) surveys, with full details provided in ES Appendix 6.1 Agricultural Land Classification Report (document reference 6.6.A1). A Flood Risk Assessment (FRA) (Document reference 7.9) has also been prepared, and this demonstrates how flood risk and land drainage will be managed and describes how existing land drainage routes will be maintained and the measures that will be put in place to ensure no increase to flood risk, which is a key requirement of the National Policy Statement (NPS) for Energy Infrastructure.				
9-7.53	Concern that the Project passes through a large hazardous substance site safeguarding zone near Newney Green. This is likely to be a former gravel pit and now contains two areas of hazardous waste, with a contaminated land category 4. The proposed route contains four additional large areas of contaminated land in the middle or on the edge of the proposed route as well as several small sites. The final route needs to be very carefully planned to avoid disrupting any of these sites. National Grid should liaise directly with Essex County Council (ECC) on this matter, as the waste and minerals authority. It may also be necessary to liaise with the Health and Safety Executive (HSE).	<p>Geotechnical risk assessment in the Newney Green area has identified the Newney Green East Landfill within proximity to TB167 and TB168, the pylon positions proposed remain outside the zone of hazardous waste.</p> <p>National Grid will continue to engage with the owner of the Newney Green landfills to verify their site boundaries and to agree construction and access methodologies in proximity to the sites.</p> <p>All pylons have been sited to fall outside of the known boundary of historic landfill sites. Pylons within these areas have been assessed through our geotechnical risk assessment of the route.</p> <p>Landfill owners have been contacted by the Projects land agents as parts of the geotechnical investigations</p>		x		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		completed to date. Environmental testing was also undertaken at the proposed pylon positions to assess for any contamination leakage that may be occurring from the landfill site (none were found).				
9-7.54	Concern that the presence of construction vehicles along with associated construction equipment, will inevitably generate pollution, which will naturally drain into the Roxwell Brook, causing polluting water to flow into the Chelmer River and subsequently into the Hanningfield Reservoir / Concern that the proposed Access Road near the Roxwell Brook, is prone to flooding and the Project which further increases the risk of pollution / Criticism that for these reasons, this is an environmentally suitable location for pylons or haul and access roads	The potential for construction activities to generate pollution and impact water environment receptors is assessed in Chapter 12: Hydrology, Land Drainage and Flood Risk (document reference 6.12) of the Environmental Statement (ES). The assessment describes a range of measures that would be put in place to manage and treat construction worksite runoff/drainage and to ensure suitable storage, use and monitoring of potentially polluting construction materials and activities. These mitigation measures are secured through inclusion within the Outline Code of Construction Practice (CoCP) (document reference 7.2) and would safeguard the quality of watercourses and waterbodies. A range of measures specific to working in areas that are prone to flooding and drainage issues are also secured and are detailed in the Outline CoCP.	X			
9-7.55	Request that National Grid assure that all construction traffic will be prevented from using local roads including within or at the parish of Roxwell (e.g. beyond the identified A roads within the Parish)	National Grid is not proposing to route through Roxwell. National Grid has worked with the local highway authorities and National Highways to develop the access proposals for the Project. Our assessments have included visibility and highway geometry. As part of the design of the access proposals we are agreeing specific prescribed routes, known as Primary	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Access Routes (PARs) which the contractor would be required to use. Routes not prescribed as a PAR would not be used for construction access.				
9-7.56	Concerns about Vicarage Lane being unavailable during construction, as it is needed for access when there is flooding in the Roxwell area	National Grid has carefully considered the feedback. Vicarage Lane would not be used for construction access or during construction. Construction traffic would only be permitted to use the prescribed Primary Access Routes to access the haul roads sections.	X			
9-7.57	Request that National Grid provide a written commitment to not utilise any of the small lanes within Roxwell Parish for any works traffic for the duration of the Project, beyond the already identified A roads within the Parish	National Grid has worked with the Local Highway Authorities and National Highways to develop our access proposals for the Project. As part of the design of the access proposals we have agreed specific prescribed routes, known as Primary Access Routes (PARs) which the contractor will be required to use. This has been noted in the Driver Information pack which all vehicles attending site will be required to follow additionally all vehicles are to be fitted with GPS. We are not proposing to use any of the small lanes in the Parish of Roxwell for access to or from the haul road. The roads within the Parish of Roxwell proposed to be used are the ones highlighted as Primary Access Routes.	X			
9-7.58	Concern about the impact of construction traffic on Cow Watering Lane leading from Lordship Road to the Equine Unit on Anglia Ruskin University (ARU) Writtle student minibus route from the main campus	National Grid has carefully reviewed the comments. It is not proposed to use Cow Watering Lane for construction access, and no bellmouths are proposed at this location during the construction. However, as part of the enabling			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	to both Sturgeons Farm and the Equine Unit which operates on an hourly basis, and suggest that construction traffic for the Project should not use this route (e.g. due to safety risk and disruption to class attendance)	works, Cow Watering Lane would be required for a temporary shutdown of approximately one or two days while the scaffolding is installed to allow for the overhead lines to span across the road. This would be done with engagement with the Local Authority and the nearby college to find a suitable time and date. Prior notice to the closure would be given beforehand.				
9-7.59	Request that no construction traffic is allowed within the Writtle village envelope nor use at any time be made of Cow Watering Lane, Victoria Road, Newney Green Road, Highwood Road, Nathan's Lane and any access to Margaretting Road is from the south and the A12 (e.g. as such construction traffic should be restricted totally to the A1060 and the A414 along Greenbury Way)	National Grid has carefully reviewed the comments. As part of the design of the access proposals we have agreed specific prescribed routes, known as Primary Access Routes (PARs) which the contractor would be required to use during construction. This routes and associated management and mitigations to ensure they are used are set out within the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3). It is not proposed to use Cow Watering Lane, Newney Green Road, Highwood Road, and Nathan's Lane for construction access. However, as part of the enabling works, Cow Watering Lane would be required for a temporary closure to vehicles while the scaffolding is installed to allow for the overhead lines to span across the road, for approximately one - two days. This would be done with engagement with the local authority and the nearby college to find a suitable time and date. Prior notice to the closure would be given beforehand. Furthermore, construction traffic would not be using Margaretting Road as an access point for construction vehicles. Construction access is limited to the PAR	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		which uses A414 and A1060 to access the haul road. The associated impact of which is outlined within the Chapter 16: Traffic and Transport.				
Consultation						
9-7.60	Comment supportive of engagement that has taken place / feel listened to	National Grid notes the respondent's feedback.		X	X	
9-7.61	Comment supportive of the Project in this section	National Grid notes the respondent's feedback.			X	
9-7.62	Criticism of consultation specific to this section	National Grid notes the respondent's feedback.	X		X	
9-7.63	Larks Lane is a protected lane, but it is not included in the April 2024 report which indicates the volume of listed, protected properties and environmental locales that would be affected by the Project	<p>National Grid has carefully collected data, including protected lanes data (including Larks Lane) from relevant local authorities, to inform the Historic Environment Assessment, found in the Environmental Statement (ES), Chapter 11: Historic Environment (document reference 6.11), which forms an integral part of the Environmental Impact Assessment (EIA) for the Project. The historic landscapes which include elements such as protected lanes, have been assessed through site visits and extensive desk-based research.</p> <p>A Landscape and Visual Impact Assessment (LVIA) has also been undertaken as part of the EIA. The LVIA sets out the potential landscape and visual effects, including consideration of visual amenity of people travelling along protected lanes and also impacts on landscape character which may for example be influenced by vegetation loss along protected lanes during</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		construction. The LVIA is presented in ES Chapter 13: Landscape and Visual (document reference 6.13).				
9-7.64	Concern about the analysis of landscape, visual and historic environment (e.g. locally valued landscapes have not been considered in the GIS mapping; landscape character assessment data has not been reviewed), including inconsistencies between the assessment of Section K and Section L (e.g. in relation to 'grain' of the landscape; woodland planting was mentioned as a mitigation measure for Section K but not Section L; the proposed country park at RAF Boreham was referred to for Section L, but Public Rights of Way (PRoWs) and long distance routes were not mentioned for Section K; in relation to Conservation Areas), and criticism that National Grid have used this inconsistent information to select the preferred route for the Project	It is not clear whether the respondent's comments are comparing like with like given that there is now more detail available for corridor K than was available when the selection of corridor K over others (including L occurred). The preference for corridor K was determined with comparable data for corridors L and K amongst others. As the Project developed and new information became available, we backchecked previous decisions but did not consider the additional detail for corridor K to alter the previous decisions.			X	
9-7.65	Paragraph 156 of the National Planning Policy Framework (NPPF), agrees that elements of many renewable energy projects, such as this project to transfer energy from wind farms across the country, will comprise inappropriate development, and paragraph 5.11.36 of the National Policy Statement for Energy (NPS EN-1) states that when located in the Green Belt, energy infrastructure projects may comprise 'inappropriate development' and	The Development Consent Order (DCO) application is accompanied by a Planning Statement (document reference 5.6). The Planning Statement includes an assessment in accordance with National Policy Statement (NPS) EN-1 (para 5.11.20) to determine whether the Project may be inappropriate development within the meaning of Green Belt policy; and if the Project (or any part of it) may be inappropriate development, and demonstrating that very special circumstances exist, meaning that the harm by reason of		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	inappropriate development is by definition harmful to the Green Belt with references to the NPPF	<p>inappropriateness and any other harm, is outweighed by other considerations.</p> <p>To connect a new transmission connection to Tilbury Substation, it will be necessary to route through the Metropolitan Green Belt. National Grid has considered the effects on the Green Belt and all of the options connecting into Tilbury identified in the Corridor and Preliminary Routeing and Siting Study (CPRSS) would result in new and upgraded infrastructure in the Green Belt.</p> <p>The National Electricity Transmission System (NETS) transports energy from where it is generated to where it is used, in homes, schools, hospitals, businesses, and factories. Electricity networks are an established feature in our landscapes, taking energy across open countryside to towns and cities where it is needed. To ensure the national electricity network can transport energy efficiently there are numerous electricity transmission connections crossing Green Belts. Many of these connections are by way of overhead lines. By their nature, electricity transmission infrastructure (overhead lines) within the Green Belt is inevitable due to the need to transport energy around the country and the need to avoid the most built-up areas around our towns and cities (Holford Rule Supplementary Note 1 - A summary of the Holford Rules is provided within Appendix I22 of this report).</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Some electricity infrastructure such as overhead lines, are considered to be engineering operations. By the nature of their design, and the sensitive siting, some of this infrastructure such as pylons and conductors may not be considered inappropriate development in the Green Belt as they do not conflict with Green Belt purposes and preserve openness. Although overhead lines may occupy long corridors within Green Belt, they involve little physical change to the land through which they pass and leave a large majority of the land beneath them free from development and therefore open.				
9-7.66	Paragraph 5.11.37 of the National Policy Statement for Energy (NPS EN-1) states that very special circumstances are not defined in national planning policy as it is for the individual decision maker to assess each case on its merits and give relevant circumstances their due weight. However, it does state that substantial weight is given to any harm to the Green Belt when considering any application for such development, while taking account, in relation to renewable and linear infrastructure, of the extent to which its physical characteristics are such that it has limited or no impact on the fundamental purposes of the Green Belt designation. Very special circumstances may include the wider environmental benefits associated with increased production of energy from renewables and other low carbon sources	<p>National Grid notes this comment. The consideration of Green Belt matters is principally set out within the Planning Statement (document reference 5.6). The Planning Statement (document reference 5.6) sets out how the Green Belt designation were taken into account in the consideration of alternatives and options through the strategic options and more detailed corridor and routeing and siting studies.</p> <p>National Grid considers that the benefits of the Project significantly outweigh any potential harm predicted. As required by Section 104(7) of the Planning Act 2008, the benefits of the Project must be outweighed against any adverse impacts identified in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) The Planning Statement (document reference 5.6) demonstrates that any unavoidable adverse environmental effects which may</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		remain following mitigation are outweighed by the public benefit that would accrue as a result of the Project and, for the purposes of Section 104(7) of the Planning Act 2008, that any adverse impacts would not outweigh the benefits of the Project.				
9-7.67	Criticism that National Grid have not requested an access licence to assess the impact of the Project on respondent's property	<p>National Grid is currently and will continue to carry out survey works across the Project where required.</p> <p>The types of surveys required in each area of land will vary and may be determined by a number of different factors i.e., permanent or temporary works, type of land and seasonal requirements.</p> <p>If a landowner is concerned that National Grid has not carried out survey works on their land and would like to confirm why, they should contact the Project's lands team.</p> <p>If National Grid has not contacted you regarding carrying out surveys on your land, then access is not required.</p>			X	
9-7.68	Concern that the Chelmsford Local Plan has not been considered for the Project (e.g. impact on proposed residential development not addressed in the April 2024 Design Development Report (DDR))	National Grid has carefully considered the identified feedback and engaged with the relevant authorities and developers in respect of the housing proposals coming forward. In the Chelmsford Local Plan - Adopted 2020 and Pre-Submission (Regulation 19) Document from February 2025 there is no interaction/overlap with housing allocations along the route. More generally we consider it possible for the overhead line to substantially co-exist with the housing proposals by attention to routeing. In one location in Brentwood we have no	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		option but to route through an area allocated but have sought to reduce the interaction by routeing within the 80 m wide safety zone associated with the high pressure gas pipeline to the western edge of the housing proposals. In that case no alternative connection route is available and the use of underground cable leads to a direct loss of development area in contrast with the proposed overhead line design. We have available a guide for developers which identifies opportunities to closely position housing in the immediate vicinity of an alignment.				
9-7.69	Criticism that National Grid have changed the Project to be further away from Ingatestone Hall but have not done the same for Langleys despite both properties being Grade I listed (e.g. National Grid have accepted the additional cost and environmental impact of a longer route at Ingatestone Hall but not at Langleys despite comparable impact on heritage)	The change at Ingatestone responds to a range of factors including effects on the Grade I Listed St Giles Church and the relationship between Buttsbury Church and the valley. A change in design would not lead to a design inconsistent with policy in the Wid Valley and the slight realignment is necessary. At Langleys the revisions to the Project (adopting a number of low height pylons) following statutory consultation do lead to a design consistent with policy without a need for substantive change of route. No change is therefore proposed.			X	
9-7.70	Concern that the development guidelines and principles set out by English Heritage and the Landscape Character Assessment produced for Chelmsford City Council and neighbouring districts has not been considered for the Project	A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the Environmental Impact Assessment (EIA), which includes an assessment of landscape and visual effects. The approach to the LVIA follows professional guidance as set out in Appendix			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>13.1: Landscape and Visual Methodology (document reference 6.13.A1). This includes Guidelines for Landscape and Visual Impact Assessment (GLVIA3), as prepared by the Landscape Institute and the Institute of Environmental Management and Assessment. The LVIA is presented in ES Chapter 13: Landscape and Visual (document reference 6.13) and builds on the preliminary information and detail provided in the Preliminary Environmental Information Report (PEIR).</p> <p>The methodology has been agreed with relevant stakeholders and the assessment prepared by qualified and experienced landscape professionals. The document sets out all data sources used to inform the baseline and the assessment of landscape effects. This includes a range of detailed landscape character sources from national to local level, and designated landscape publications, including the Braintree, Brentwood, Chelmsford, Maldon and Uttlesford LCAs (CBA, 2006). The methodology also sets out how value judgements are made and explains that the judgements give consideration to the natural heritage, cultural heritage, landscape condition, associations, distinctiveness, recreational, perceptual (scenic and tranquillity) and functional qualities of the landscape. Valued features are considered when making these judgments.</p> <p>A historic landscape characterisation section was written for each section of the Order Limits within the document 6.11.A1 Historic Environment Baseline Report. 		stakeholders and the assessment prepared by qualified and experienced landscape professionals. The document sets out all data sources used to inform the baseline and the assessment of landscape effects. This includes a range of detailed landscape character sources from national to local level, and designated landscape publications, and the East Anglia Green Energy Enablement Consultation – June 2022 Review of Consultation Documentation in Relation to Sections K (ET1) and L (ET5), (Alison Farmer Associates, 2022).				
9-7.72	Comment supportive of National Grid's decision that the Project does not follow a more western alternative towards Pleshey, as noted in the Design Development Report at sections 5.4.179 to 5.4.186 inclusive (e.g. reduced heritage impact, reduced visual impact, cheaper, shorter)	National Grid notes the respondent's feedback.			X	
9-7.73	Criticism that the following baseline evidence has not been referenced in the Preliminary Environmental Information Report (PEIR): - Chelmsford Local Character Assessment (LCA) (2006) which is more recent than the Essex assessment and provides greater detail on key characteristics and sensitivity, noting especially skyline development and church towers. - Valued qualities of the valley as set out in Great Waltham Village Design Statement, including Special Landscape Area and key views.	A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the Environmental Impact Assessment (EIA), which includes an assessment of landscape and visual effects. The approach to the LVIA follows professional guidance as set out in Appendix 13.1: Landscape and Visual Methodology (document reference 6.13.A1). This includes Guidelines for Landscape and Visual Impact Assessment (GLVIA3), as prepared by the Landscape Institute and the Institute of Environmental Management and Assessment. The LVIA is presented in ES Chapter 13: Landscape and Visual			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>- Importance of relationship between key built heritage, parkland and valley setting which is not fully explored (although it is noted in heritage assessment).</p> <p>- Limited reference to tranquillity and effects of the proposed development on this quality due to scale of the landscape and proposed development.</p> <p>The nature of the characterising effects described in the PEIR is currently limited. The significance of effects and likely difficulties in satisfactorily mitigating these effects should be explored further (in relation to the PEIR Landscape Character - Volume III Part 4)</p>	<p>(document reference 6.13) and builds on the preliminary information and detail provided in the Preliminary Environmental Information Report (PEIR).</p> <p>The methodology and approach is set out in Appendix 13.1: Landscape and Visual Methodology (document reference 6.13.A1) and has been agreed with relevant stakeholders and the assessment prepared by qualified and experienced landscape professionals. The document sets out all data sources used to inform the baseline and the assessment of landscape effects. This includes a range of detailed landscape character sources from national to local level, and designated landscape publications, including the Chelmsford Local Character Assessment (2006). We note the reference to the Great Waltham Village Design Statement. The methodology also sets out how value judgements are made, and explains that the judgements give consideration to the natural heritage, cultural heritage, landscape condition, associations, distinctiveness, recreational, perceptual (scenic and tranquillity) and functional qualities of the landscape. Valued features are considered when making these judgments.</p>				
9-7.74	<p>The following criticisms were made regarding the viewpoints 6.18 from Langleys which are representative of the effect in the Chelmer Valley:</p> <p>- It is not clear if this viewpoint and wireline takes account of lower height pylons. It would be useful if the pylons shown on the wireline are numbered, so</p>	National Grid has engaged with a range of stakeholders including Statutory Environmental Bodies (SEBs) and relevant local planning authorities throughout the development of the Project design and environmental assessment work, including the selection of viewpoint locations, and these have been agreed as far as			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>that they can be cross referenced with the plans.</p> <ul style="list-style-type: none"> - Churches are local landmarks and contribute to local distinctiveness and sense of place as noted in the Chelmsford Local Character Assessment (LCA). Given they are highlighted in the heritage assessment it would be expected that their contribution to sense of place is noted in the landscape character effects as well as key views. - Additional viewpoints from Main Street looking south towards church at Great Waltham and also from Wheelers Hill looking southwest towards the church at Little Waltham within the context of rural view to the west, should be considered in order to more fully explore the nature and extent of effects of the proposed development on the wider area, given the range of constraints and sensitivities. 	<p>possible.</p> <p>A selection of viewpoints have been used to produce technical visualisations to support the Landscape and Visual Impact Assessment (LVIA) in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13). Technical visualisations illustrate the Project design, which includes low height pylons on the eastern edge of Langley's Park near Great Waltham. These visualisations will assist stakeholders and ultimately the Planning Inspectorate in understanding the likely effects of the Project on landscape character and on views from specific points. The technical visualisations (document reference 7.12) are accompanied by maps illustrating the viewpoint location and viewing directions in relation to the Project. Pylons are numbered on the accompanying map pages and the location of low height pylons is identified.</p> <p>Viewpoint 6.18: Langley's Park, north of Great Waltham (document reference 7.12.F174) illustrates how the Project would appear in views from the landscape to the north of Great Waltham. Other nearby viewpoints include: Viewpoint 6.16 Chatham Hall Lane, north of Little Waltham (document reference 7.12.F172), which illustrates how the overhead line would appear to the west of Langley's Park; Viewpoint 6.13 B1008, Little Waltham (document reference 7.12.F169), which illustrates how the overhead line would appear to the west of Little Waltham; and Viewpoint 6.04 Public Right of Way, Broad's Green (Great Waltham 85) (document</p>

		<p>A complete Environmental Impact Assessment (EIA) has now been carried out and the results are presented in Environmental Statement (ES) (document reference Volume 6: Environmental Assessment) which accompanies the Development Consent Order (DCO) application.</p> <p>The ES identifies and assesses the likely significant effects on the environment, resulting from the construction and operation of the Project and recommends appropriate mitigation measures to reduce effects.</p>				
9-7.76	Concern that National Grid did not take into account the relative ease of undergrounding the Distribution Network Operator (DNO) 132 kV line when considering ET5 from the Corridor Preliminary Routeing and Substation Siting study (CPRSS) / Suggest that the Project is rerouted as per ET5 from the CRPSS (Corridors Q and L from the CPRSS) instead of following ET1 (Corridor K from the CPRSS) / Suggest that National Grid take into account that the section of the 132 kV line crossing the Longfield Solar Farm could potentially be undergrounded and replaced by the Project (Norwich to Tilbury (N2T))	The potential to parallel the existing overhead lines (including by replacing the 132 kV overhead line with underground cable has been considered previously. It is acknowledged that there are some locations where this would be achievable but equally there are locations where effects are increased and also locations such as near Sandon where the presence of homes and other features and constraints does not provide sufficient space for the routeing of either a 400 kV overhead line or underground cable.	X		X	
9-7.77	Criticism that the short distance from the southern end of Corridor L to Corridor S near Runwell (from the Corridor Preliminary Routeing and Substation	Regardless of the ability to get to Rayleigh in the manner described, National Grid has previously reported on the challenges of progressing a connection from Rayleigh to	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	Siting study (CPRSS)) was not examined by National Grid (e.g. Runwell is very close to Rayleigh main station, so linking Corridor L seems an obvious option to examine, particularly with regard to the possibility of undergrounding the 132 kV line and replacing it with the Project) / Suggest that the possibility of routing the Project along corridor L and then via Rayleigh must be thoroughly considered and consulted upon	complete the requirement to connect to Tilbury. The main reasons remain valid which is the interface with Special Protection Areas (SPA) and Special Areas of Conservation (SAC) and their associated species. The relevant legislation requires alternatives (where they are available) to be followed and the alignment to the west of Chelmsford provides that alternative. Over and above this there are also considerable route constraints which would make the connection to Tilbury Substation or Tilbury North substation challenging.				
9-7.78	Suggest that National Grid consider Broomfield Neighbourhood Plan and related documents (e.g. in order to gain a good understanding of the landscape and natural environment setting of Broomfield)	National Grid notes this comment. Whilst the Project would be considered against the policy context contained in National Policy Statements (NPS) EN-1 and EN-5, consideration has been given to the submission version of the Broomfield Neighbourhood Plan (January 2024). Further details are presented in the Planning Statement (document reference 5.6) and Policy Compliance Document (document reference 5.7).	X			
9-7.79	Criticism that the amendment of the Project in 2023 to avoid running parallel to Hylands House and Park is not sufficient mitigation and it means the overhead line would run on to higher land, closer to a number of woodland tracts and footpaths around Edney Common and Highwood (including the publicly accessible land at Millgreen Common)	National Grid has considered alternatives further to the west, further from Hylands Park, and utilising in part shorter routes within shallow valleys. None can be taken forward as they are not preferred due to the crossing, to varying degrees of ancient woodland. In the absence of any new evidence no change is proposed to the previous conclusions drawn.	X			
9-7.80	Concern that the adopted Writtle Neighbourhood Plan (and AECOM Writtle Design Guide) has not	The Writtle Neighbourhood Plan forms part of the statutory Development Plan for Chelmsford and	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	been taken into consideration (e.g. which identifies landscape views as highly valued by the community through in-depth public consultation)	<p>accordingly has been subject to review. This is reported in the Policy Compliance Document (document reference 5.7).</p> <p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the Environmental Impact Assessment (EIA). The approach to the LVIA follows professional guidance as set out in ES Appendix 13.1: Landscape and Visual Methodology (document reference 6.13.A1. The LVIA has been produced by Chartered Landscape Architects, based on findings of desk top research and backed up by numerous site visits as outlined within this methodology. The LVIA includes an assessment on both landscape character and visual amenity and sets out the potential landscape and visual effects of the Project, including consideration of relevant policies within adopted Local and Neighbourhood Plans such as Key Views. The LVIA is presented in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13).</p>				
9-7.81	Criticism that there was not a consultation event in Writtle, and suggest that an event should be held at Writtle College or the Equine Unit / Writtle Village Hall	During National Grid's statutory consultation, we held 14 public information events at locations along the route. This included an event at Chelmsford Racecourse. When deciding on the venues for these events we had to consider capacity, accessibility, and availability. If anyone was unable to attend our events, we also held six public webinars where we presented the same information that was available at the events and had			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		members of the Project team available to answer questions.				
9-7.82	Criticism that the postcode provided for the Chelmsford consultation event was incorrect (e.g. directed attendees to the incorrect racecourse entrance)	The post code we provided for Chelmsford Racecourse was consistent with the address they have listed on their website. If people could not locate the event, we had signage around the site and members of staff outside the event. If anyone was unable to attend our events, we also held six public webinars where we presented the same information that was available at the events and had members of the Project team available to answer questions.			X	
9-7.83	Criticism that 20 public notices for the Project were attached to a pole with a single cable tie at Little Waltham two miles from where they should have been displayed at several locations near Chatham Green and Great Leighs	All public notices are placed as close as reasonably practicable to the location they refer to. In some instances, notices are placed in multiple locations to ensure that the public see them. Once put in place, notices are checked weekly, replaced where needed and then removed when no longer required. If a member of the public believes a notice has been placed in the incorrect location, they should contact the Projects lands team.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Design Change						
9-7.84	Oppose the use of underground cables	<p>National Grid has carefully considered the feedback received during the 2022 and 2023 non-statutory consultations, the statutory consultation, targeted consultations and landowner consultation, the alternatives available, and other factors including our duties and obligations. These duties include balancing the need to be economic and efficient, which includes keeping costs down in the interests of the bill-paying consumers, with a duty to have regard to preserving amenity, which includes the natural environment, cultural heritage, landscape and visual quality, National Policy Statement (NPS) EN-5 makes clear that 'the government's position that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)'. The NPS also confirms that widespread and significant adverse landscape and/or visual impacts in other locations may also justify the use of undergrounding. We may also adopt underground cables in other circumstances such as to cross existing 400 kV overhead line infrastructure.</p> <p>Where the installation of underground cables is required in lieu of overhead lines, the design of the Project has incorporated suitable consideration of the existing</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		environment, ecology and site ground conditions based on site specific survey data.				
9-7.85	Suggest a minimum distance that the Project should be sited from residential areas / residences	National Grid does not use standard minimum distances as a routeing consideration. Applying an arbitrary distance may be too big or too small for the specific circumstances. We utilise the Holford Rules (a description of the Holford Rules can be found in Appendix I22 of this report) informed by feedback and professional judgement to define appropriate corridors and alignments that are consistent with the relevant policy framework and duties. In response to feedback to the 2022 and 2023 non-statutory consultations, statutory consultation, targeted consultations and landowner consultation, we have modified the alignment in various locations to increase separation to properties where this is possible without undue deviation or transfer of effects to other similar properties or other receptors. A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the Environmental Impact Assessment (EIA). The LVIA is presented in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13). This assesses the impact of the Project and identifies the need for additional mitigation if required.			X	
9-7.86	Suggest that existing overhead lines in this section should be removed	The existing electricity transmission network provides power, via the local distribution network, into the local area where it is used in homes and businesses. Such		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>lines cannot just be removed as power supplies would not be maintained.</p> <p>The need case and funding for the Project is to deliver the new network reinforcement needed, rather than to remove existing overhead lines which would need to be replaced by another form of connection such as underground cables.</p> <p>Unless required for crossings or mitigation, undergrounding existing overhead lines on the transmission network would not be in accordance with National Policy Statement (NPS) EN-5 and would result in substantial cost to bill payers. There may also be significant environmental impacts due to the removal works on sensitive ecological and archaeological receptors as well as constraints from either existing buildings or unsuitable ground conditions.</p>				
9-7.87	Suggest that existing overhead lines in this section should be replaced by underground cables	<p>National Policy Statement (NPS) EN-5 establishes the position that the starting basis for new connections is a presumption on the acceptability of overhead lines but with this presumption reversed within designated landscapes and in certain other circumstances.</p> <p>The existing electricity transmission network provides power, via the local distribution network, into the local area where it is used in homes and businesses. The need case and funding for the Project is to deliver the new network reinforcement needed, rather than to</p>			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>remove existing overhead lines by undergrounding them.</p> <p>We have identified a number of locations where we are proposing to place existing overhead lines underground. These locations are where existing 132 kV and lower voltage lattice pylon lines are crossed by the proposed 400 kV overhead line and / or mitigation of effects are considered necessary. This includes locations such as at Mellis, between Offton and Bramford Substation, to the south of Bramford Substation and near Fuller Street.</p> <p>Unless required for mitigation, undergrounding existing overhead lines on the transmission network would not be in accordance with NPS EN-5 and would result in substantial cost to bill payers. There may also be significant environmental impacts due to the removal works on sensitive ecological and archaeological receptors as well as constraints from either existing built form or unsuitable ground conditions.</p>				
9-7.88	Suggest that the existing overhead lines in this section are reinforced / upgraded instead	The existing transmission network in the region was upgraded during 2022 and 2023 to ensure the system is running at its most efficient performance. The existing assets / networks are not able to be upgraded sufficiently to cope with the new future demands expected on the network. As a result, new lines and substations would be required to accommodate the changing demands on the network.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-7.89	Suggest that the Project is routed away from populated / residential areas	<p>Deciding where and how to build new high voltage electricity lines is a complex issue and National Grid is mindful of the potential effects this infrastructure may have on local communities and the concerns these may bring. We recognise that people living near our transmission infrastructure, including high voltage overhead lines, may have concerns about audible noise and potential health impacts. It has sometimes been suggested that minimum distances between properties and overhead lines should be prescribed.</p> <p>We do not consider this appropriate since each instance must be dealt with on its merits. However, we have always sought to route new lines away from residential property on grounds of general amenity where possible.</p> <p>We have undertaken a noise and vibration assessment which can be found in Environmental Statement (ES) Chapter 14: Noise and Vibration (document reference 6.14) that forms part of the Environmental Impact Assessment (EIA) for the Project. Noise levels and the effect on residential properties as well as other sensitive areas, such as hospitals and schools, are carefully considered during planning, assessed according to the appropriate UK standards, and mitigated where necessary. We set strict technical standards for the equipment we install on our network. These will apply to the proposed new East Anglia Connection Node (EACN) substation, and extensions required to the existing Norwich Main, Bramford, and Tilbury Substations. These</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>standards include requirements to ensure the occurrence of audible noise is eliminated or reduced as far as practicable. Therefore, significant adverse effects from noise are not expected.</p> <p>Noise from overhead lines is predominately determined by the conductor design, voltage and weather conditions. The overhead line would be designed using a relatively quiet conductor that meets the design specification required, and operational noise is not likely to be significant at nearby sensitive receptors under any weather conditions. Pylon fittings, such as insulators, dampers, spacers, and clamps, are also designed and procured in accordance with a series of National Grid Technical Specifications to reduce the potential for audible noise and tones to occur from all types of fittings. Where noise does occur, it is likely to be localised and of short duration. If this is due to a fault, action can be taken to rectify it. A technical note has been submitted as part of the application for development consent to support scoping out noise associated with overhead lines from the Environmental Statement (ES).</p> <p>In addition, we have undertaken a Landscape and Visual Impact Assessment (LVIA) for the Project.</p> <p>This includes an assessment on both landscape character and visual amenity. The LVIA is presented in</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13).</p> <p>The health and safety of the public, local communities and employees is central to everything that we do. The UK has a carefully thought-out set of policies for protecting us all against Electric and Magnetic Fields (EMFs), the main component of which is exposure guidelines. The exposure guidelines are set by independent scientific bodies and are based on decades-long studies into the effects of EMFs and ill health. After those decades of research, the weight of evidence is against there being any health risks of EMFs below the guideline limits. Our approach is to ensure that our network comply with those policies, which are set by Government on the advice of their independent advisors. The Project is designed to ensure it is fully compliant with these policies and guidelines. This ensures that health concerns are properly and adequately addressed.</p> <p>Policies for both noise and EMF are incorporated into the decision-making process for development consent as set out in National Policy Statement (NPS) EN-5. It is National Grid's policy to ensure that all its equipment complies fully with those policies and guidelines. The application for a Development Consent Order (DCO) includes assessments against these policies, including both construction and operational noise and EMF.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-7.90	Suggest that the Project should run in closer to / parallel to the existing overhead lines	<p>National Grid notes the potential for close paralleling existing overhead lines to reduce the level of effects that may arise from a new overhead line.</p> <p>However, where existing overhead lines are present along the proposed route, there are constraints and features that mean, overall, we consider close paralleling would lead to greater effects on receptors in the area and be less compliant with the Holford Rules or be less consistent with the policy to be economic and efficient. A summary of the Holford Rules is provided within Appendix I22 of this report. A number of residential properties are present in close proximity to the existing 400 kV overhead line meaning that if the overhead lines were close paralleled it would result in the properties having an overhead line close to both sides. There are also some locations where the combination of existing physical and environmental features (road infrastructure, commercial and residential properties etc) present very substantial challenges to routeing and siting. As a result, whilst close paralleling may appear beneficial in some sections, overall, the increased environmental effects where the overhead lines have to converge and diverge, and those increased effects on properties with overhead lines on both sides are considered greater than those introduced by a new overhead line separated from existing 400 kV overhead lines. Whilst crossings and use of underground cable technology may be able to address various constrained locations, we consider the costs and environmental</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		effects arising from the additional infrastructure required to be less compliant with our duties and relevant policies.				
9-7.91	Suggest that underground cables are used for the entirety of this section	<p>National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors.</p> <p>National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is '<i>that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)</i>'. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in NPS EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider this section in its entirety would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation. Therefore, whilst undergrounding the whole of this section is not considered appropriate, our proposals do include underground cable within the Dedham Vale National Landscape (previously known as Area of Outstanding Natural Beauty (AONB)) in accordance with NPS EN-5. Prior to our 2023 non-statutory consultation we identified the need to extend the underground cable beyond the National Landscape boundary because of potential effects, we have further extended this section of underground cable following consideration of feedback on our 2023 non-statutory consultation and</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		additional investigation into potential effects. We also identified an approximately 4 km section near Great Horkesley as meeting the particularly sensitive criteria where underground cable is also proposed. Additionally, underground cable is proposed at Fairstead for a 400 kV overhead line crossing.				
9-7.92	Suggest that underground cables are used in populated / residential areas	<p>National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors.</p> <p>National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)'</i>. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at all populated or residential areas in this section would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
9-7.93	Suggest that Project follows railway lines in this section instead / Suggest that overhead lines for rail are upgraded instead	It is not possible to upgrade the overhead wires above the railway to carry the amount of power that the Project is required to be designed to transmit. No change is proposed to this aspect of the feedback. Whilst there could be potential benefits from infrastructure being concentrated geographically, i.e., by			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>routeing the Project in close proximity to existing road and rail infrastructure, National Grid does not consider these benefits arise for the whole route. Rail lines or roads potentially align (at least in part) with the general routeing of the Project. However, there are constraints and features that mean that we do not consider close paralleling would reduce environmental effects or improve compliance with the Holford Rules or be more consistent with the policy requirement to be economic and efficient.</p> <p>A number of residential properties, as well as hamlets, villages and towns, are present in close proximity to the existing transport infrastructure which would necessitate multiple diversions of an overhead line. There are also some locations where the combination of existing physical and environmental features (railway and road infrastructure, commercial and residential properties, woodlands and orchards) present very substantial challenges to routeing and siting. As a result, whilst close paralleling of transport infrastructure may appear beneficial in some short sections, overall, the increased environmental effects from multiple changes of direction are considered greater and less compliant with the Holford Rules than those that are associated with a new route alignment. A summary of the Holford Rules is provided within Appendix I22 of this report. The Design Development Reports for 2023 and 2024 which can be found on the Project website, and the 2025 Design Development Report (document reference 5.15) present</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		further detail on the reasons for not routeing as suggested as well as the justification for the preferred arrangements.				
9-7.94	Suggest that where the Project crosses the A12, alternative pylon designs that are visually enhanced are used	<p>The latest independent report on the Comparison of Electricity Transmission Technologies: Costs and Characteristics (Institute of Engineering and Technology, 2025) confirms that whilst T-pylons may in certain locations provide an alternative to conventional overhead lines with potential benefits in visual impact and reduced land-take, this is at a higher cost. The build cost is approximately 2 to 2.5 times that of an equivalently rated conventional overhead line, and the lifetime costs are around 1.6 to 1.7 times that of a conventional overhead line. The current arrangements for the oversight of funding by Ofgem requires that the lowest cost acceptable design is taken forward rather than a more expensive design even if that design is perceived to reduce the level of effect.</p> <p>As such consideration of their use follows after establishing a need to mitigate effects of the standard lattice design and after considering the benefit of adopting a low height lattice pylon design. T-pylons themselves are also less adaptable to varied terrains and require more substantial access infrastructure. Furthermore, their resilience and environmental impact are comparable to conventional overhead lines, but with increased carbon intensity due to construction materials. Attention also needs to be given to the transitions</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>between pylon types. Given It is the surrounding context that drives the need for alternative design mitigation, where this is not required along the entire route, any visual break and transition in pylon design also needs to be carefully sited.</p> <p>Assessment findings have concluded that, where there is not a reversal of the presumption to use overhead lines, the use of lattice pylons (either standard or low height) is consistent with planning policy throughout the route. Whilst there may be some locations (for examples see appendix A of the 2024 Design Development Report) where there may be a design option for the use of T-pylons, the need to mitigate for unacceptable effects from lattice pylons is not engaged. On this basis T-pylons are not proposed for the Project.</p>				
9-7.95	Suggest that the alternative route proposed at Little Waltham and Great Waltham is reconsidered to reduce impact on heritage, conservation areas, and properties provided by respondent / Disagree with National Grid's decision to reject route provided by respondents previously	National Grid considered a more westerly alignment, which is preferred by the respondent, which is routed away from Little Waltham diverting from the south of Great Leighs towards Pleshey and then southwards towards Chignal Smealey. In the Corridor and Preliminary Routing and Siting Study (CPRSS) published as part of the 2022 non-statutory consultation and in the 2023 and, 2024 Design Development Reports published in subsequent consultations, found on the Project website, and the 2025 Design Development Report (document reference 5.15), National Grid set out the challenges associated with routeing either further to the west or to the east of Chelmsford parallel to the		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>existing 400 kV overhead line. Whilst noting the respondent's preference for one of these alternatives, no new factors have been identified nor new evidence provided nor identified to remove the basis for previous decision making. Firstly, it is noted that our assessments of the Project alignment are that it is not unacceptable in policy terms and there is no specific need therefore to change, nonetheless we have reviewed other route alternatives. The eastern route around Chelmsford remains less preferred and no change to the fundamental constraints to successful routeing have been identified or proposed. We have also previously reviewed a more westerly alignment which is preferred by the respondent. Whilst noting a reduction in some effects for this more western alternative, it would be a longer route by 2.5 km to 3 km with a degree of transfer of effects. Given that none of the effects arising for the Project alignment are considered to be at a level which is unacceptable in policy terms, National Grid continues to prefer the Project alignment and for the reasons stated the eastern and western alternatives are not progressed.</p> <p>No change is proposed. An Environmental Impact Assessment has been undertaken and the findings are presented in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement), which has identified any need for additional mitigation.</p>

9-7.96	Suggest that Project uses underground cables around Ingatestone	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)'</i> . Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at Ingatestone would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
9-7.97	Suggest that the Project uses underground cables at the Walthams (e.g. to avoid impacting conservation areas)	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is ' <i>that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)</i> '. 		<p>area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at Great and Little Waltham would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-7.98	Suggest that haul roads are routed away from Anglia Ruskin University (ARU)'s equine campus fields (e.g. to avoid negative impacts on horses, education, and business)	<p>This feedback has been implemented. The proposed haul road does not pass through Anglian Ruskin University's (ARU's) equine campus fields.</p> <p>With regards to vehicular access requirements for the construction of the proposed scaffold tower required for the stringing activities, the Project proposes to temporarily close the eastern section of Cow Watering Lane to allow for two methods of construction;</p> <p>1) Temporary closure for the duration of the stringing removing the need to the scaffold towers.</p> <p>2) Temporary closure for a short period of time to unload scaffold into the adjacent fields, access into those fields would still be required in agreement with the landowner, however the number of people accessing the site would be reduced.</p> <p>National Grid would do its utmost to work with the college to minimise impact and disruption. This is reflected in a commitment within the Outline Code of Construction Practice (CoCP) (document reference 7.2).</p> <p>As well as possible effects on humans, possible effects of Electric and Magnetic Fields (EMFs) on various animals have been studied a number of times. No proven effects of EMFs have been found in any species at levels below the guidelines. This is confirmed in National Policy Statement (NPS) EN-5 which states: <i>"There is little evidence that exposure of crops, farm animals or natural ecosystems to transmission line EMFs has any agriculturally significant consequences."</i></p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Although horses are not directly mentioned, there is no evidence to suggest they are any different to other farm animals.</p> <p>In addition to the potential direct biological or health effects addressed above, indirect effects such as microshocks can occur as a result of electric fields. Microshocks are small spark discharges which are similar to a static shock after walking across a nylon carpet for example. The Project will be designed in accordance with the principles of the Governments Code of Practice 'Power Lines: Control of Microshocks and other indirect effects of public exposure to electric fields' to ensure these are mitigated, with particular focus on equestrian activities.</p> <p>Furthermore, an assessment on potential effects of the Project on health and wellbeing is included within Environmental Statement (ES) Chapter 10: Health and Wellbeing (document reference 6.10). This chapter considers the perception of impacts arising from EMFs of the Project in relation to mental health and wellbeing</p>				
9-7.99	Suggest that the Project uses underground cables near Writtle (e.g. to prevent the Project from surrounding the village with overhead lines on three sides)	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position			X

		<p>Project alignment and for the reasons stated the eastern and western alternatives are not progressed.</p> <p>We have also considered pylon type and localised alignment variations responding to feedback from Historic England and other stakeholders. This includes the stakeholder feedback in this case to re-route TB138 to TB140. We do consider that a low height lattice pylon will be beneficial for a section of the route north of the River Chelmer. This is a revision aimed specifically to reduce impacts on nearby designated heritage assets, including Little and Great Waltham Conservation Areas and a designed garden avenue view from the Grade I Langleys listed building. As part of this refinement, the alignment has been adjusted in combination with some use of lower-profile pylons to reduce visibility and reduce the impact of the infrastructure on the historic landscape and its setting. To the south of the river we have considered feedback on arrangements including standard lattice pylons (requires two pylons) as well as arrangements with low height lattice pylons (which requires three pylons). The latter positions a pylon close to Chelmsford Road and a relatively direct view from a home and for these reasons is less preferred. The Project, subject to confirming certain technical details, would progress using the defined Limits of Deviation (LoD) with the use of two standard pylons between TB143 and the river with four low height pylons to the north of the river in place of three low height pylons shown on the works plans.</p>

To the south of the river we have considered feedback on arrangements including standard lattice pylons (requires two pylons) as well as arrangements with low height lattice pylons (which requires three pylons). The latter positions a pylon close to Chelmsford Road and a relatively direct view from a home and for these reasons is less preferred. The Project, subject to confirming certain technical details, will progress using the defined LoD with the use of two standard pylons between TB143 and the river with four low height pylons to the north of the river in place of three low height pylons shown on the works plans.</p> <p>An Environmental Impact Assessment of the Project has been undertaken and the findings (including effects on residents) are presented in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement), which has identified any need for additional mitigation.</p>				
9-7.107	Suggest the use of underground cables for the Project to the west side of the Waltham pinch point,	National Grid has carefully considered the feedback proposing the use of underground cable along the route,			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	possibly adjacent to or overlapping the eastern edge of Langely Park to avoid the Ash Tree Corner site (the unsuitability of this pinch point has been recognised by National Grid in their 2024 Design Development Report)	the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is " <i>that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)</i> ". Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at Great and Little Waltham nor to the west of the Walthams would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
9-7.108	Suggest that Pylon TB139 is relocated to mitigate impact on ancient village site / iron age settlements, which would otherwise be destroyed / Concern about the impact of Pylon TB139 on the remains of ancient settlements at Ash Tree Corner, Little Waltham and Listed Buildings / Suggest that archaeological digging and preservation works will be required in the area around Pylon TB139	<p>National Grid has worked to minimise potential impacts on the historic environment through strategic routeing and siting measures. The results of archaeological fieldwork and heritage assessments, including a review of known archaeological sites such as the pre-Belgic Iron Age remains identified in the early 1970s, have informed the design process.</p> <p>We have engaged with Historic England and relevant planning authorities on aspects relating to heritage, including appropriate mitigation measures and techniques and have taken their views into account as the Project has developed. National Grid has completed a thorough assessment of the historic environment and cultural heritage assets. Based on this review there is no current evidence of significant archaeology located within the Order Limits in this location'. We have also</p>	X		X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>conducted assessments, including site visits and desk-based research, to evaluate the setting of the heritage assets surrounding the pylon TB139 (now TB140) to understand their value.</p> <p>The adjacent route and pylon siting is material to the positioning of pylons near Ash Tree Corner. We have considered pylon type and localised alignment variations responding to feedback from Historic England and other stakeholders. We consider that a low height lattice pylon will be beneficial for a section of the route north of the River Chelmer. This is a revision aimed specifically to reduce impacts on nearby designated heritage assets, including Little and Great Waltham Conservation Areas and a designed garden avenue view from the grade I Langleys listed building. As part of this refinement, the alignment has been adjusted in combination with some use of lower-profile pylons to reduce visibility and reduce the impact of the infrastructure on the historic landscape and its setting. To the south of the river we have considered feedback on arrangements including standard lattice pylons (requires two pylons) as well as arrangements with low height lattice pylons (which requires three pylons). The latter positions a pylon close to Chelmsford Road and a relatively direct view from a home and for these reasons is less preferred. The Project, subject to confirming certain technical details, will progress using the defined LoD with the use of two standard pylons between TB143 and the river with four</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>low height pylons to the north of the river in place of three low height pylons shown on the works plans.</p> <p>The revised alignment represents a considered response to consultation feedback, balancing the need to reduce heritage impacts with other environmental and technical constraints. The potential impact of the Project on heritage assets such as Scheduled Monument at Ash Tree Corner (1002140) and the conservation areas of Great and Little Waltham has been fully assessed. The assessment of the historic environment for the Project has been undertaken in line with relevant heritage legislation, national and local planning policy, and established technical guidance. The methodology has been developed with reference to best practice. A full list of sources is provided in Chapter 11: Historic Environment (document reference 6.11) of the Environmental Statement (ES). The assessment methodology and scoping approach were discussed and agreed with key stakeholders during the scoping process and through thematic working group meetings, including regular engagement with Historic England and relevant local planning authorities. The impact of the Project on the has been assessed. As detailed in the ES, Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1) and ES Appendix 11.2: Historic Environment Assessment Tables (document reference 6.11.A2), the assessment concludes that during the construction phase, there</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>would be a not significant adverse effect on the asset at Ash Tree Corner.</p> <p>Required mitigation measures for below ground archaeological remains potentially associated with the asset are located within the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5), and further mitigation is outlined in the Outline Code of Construction Practice (CoCP) (document reference 7.2). These documents also include provisions should unexpected archaeological remains be identified during construction.</p>				
9-7.109	<p>Suggest that Pylons TB137, TB138 and TB139 are moved away from Little Waltham (e.g. in particular suggest that Pylon TB138 is moved 300 – 400 metres into or near to the wood where it would be screened from Little Waltham and from the houses on the Chelmsford Road and Chatham Hall Lane) / Concern about the impact of Pylons TB137, TB138, TB139, and TB140 on Little Waltham and Great Waltham (e.g. impact on archaeology; visual impact of Pylon TB137 on the White Hart Pub and Taylor's Park; Pylons TB138, TB139 and TB140 are located within Drury's 500 m archaeologically sensitive zone)</p>	<p>In response to feedback received during the 2024 statutory consultation and the 2025 targeted consultation, National Grid has considered alternative alignments to the east and west of Chelmsford, modifications to the alignment consulted upon along with the selection of pylon type as well as the justification for the use of underground cable. We have also considered pylon type and localised alignment variations responding to feedback from Historic England and other stakeholders. This includes the stakeholder feedback in this case for various changes around TB137 to TB140. In terms of the specific change proposed, this would move the alignment to a position where it would be within the Grade II registered park and garden at Langleys and would lead to direct loss of some trees. This is considered to be in conflict with the relevant policy in the National Planning Policy Framework as it</p>	X		X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>would be expected to be potentially considered as substantial harm. As such this particular change is not proposed.</p> <p>We do consider that a low height lattice pylon would be beneficial for a section of the route north of the River Chelmer. This is a revision aimed specifically to reduce impacts on nearby designated heritage assets, including Little and Great Waltham Conservation Areas and a designed garden avenue view from the Grade I Langleys listed building. As part of this refinement, the alignment has been adjusted in combination with some use of lower-profile pylons to reduce visibility and reduce the impact of the infrastructure on the historic landscape and its setting. To the south of the river we have considered feedback on arrangements including standard lattice pylons (requires two pylons) as well as arrangements with low height lattice pylons (which requires three pylons). The latter positions a pylon close to Chelmsford Road and a relatively direct view from a home and for these reasons is less preferred. The Project, subject to confirming certain technical details, would progress using the defined Limits of Deviation with the use of two standard pylons between TB143 and the river with four low height pylons to the north of the river in place of three low height pylons shown on the works plans.</p> <p>The assessment of the historic environment for the Project has been undertaken in line with relevant heritage legislation, national and local planning policy, and established technical guidance. The methodology</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		has been developed with reference to best practice, including the National Planning Policy Framework (NPPF), the Planning (Listed Buildings and Conservation Areas) Act 1990, the Ancient Monuments and Archaeological Areas Act 1979, and applicable local development plan policies. A full list of sources is provided in Chapter 11: Historic Environment (document reference 6.11) of the Environmental Statement. The assessment methodology and scoping approach were discussed and agreed with key stakeholders during the scoping process and through thematic working group meetings, including regular engagement with Historic England and relevant local planning authorities. Should the Project encounter archaeological remains during ground works or during archaeological assessment activities i.e. geophysical survey or archaeological trial trenching (should the local planning authorities archaeological advisor deem it necessary as the areas in question is within an archaeologically sensitive area), then any required mitigation measures would be put into place. These are located within the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5), and further mitigation is in the Outline Code of Construction Practice (CoCP) (document reference 7.2).				
9-7.110	Suggest that Pylons TB138 and TB139 are shortened to 35 m or less to minimise the impact on	Firstly, it should be noted that in the statutory consultation TB135 to TB137 were standard lattice pylons so whilst their particular positioning allowed the	X		X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	Little Waltham village (like TB135, TB136 and TB137 have been)	height to be kept down they were not as low as 35 m. We have also considered pylon type and localised alignment variations responding to feedback from Historic England and other stakeholders. This includes the stakeholder feedback in this case to reduce the height of TB138 and TB139. We do not consider that T pylons are an appropriate design selection, as in this case they would be viewed against vegetation and appear more stark than the alternative lower height lattice pylon. We do however consider that a low height lattice pylon would be beneficial for a section of the route north of the River Chelmer. This is a revision aimed specifically to reduce impacts on nearby designated heritage assets, including Little and Great Waltham Conservation Areas and a designed garden avenue view from the Grade I Langleys listed building. As part of this refinement, the alignment has been adjusted in combination with some use of lower-profile pylons to reduce visibility and reduce the impact of the infrastructure on the historic landscape and its setting. To the south of the river we have considered feedback on arrangements including standard lattice pylons (requires two pylons) as well as arrangements with low height lattice pylons (which requires three pylons). The latter positions a pylon close to Chelmsford Road and a relatively direct view from a home and for these reasons is less preferred. The Project, subject to confirming certain technical details, would progress using the defined Limits of Deviation with the use of two standard				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>pylons between TB143 and the river with four low height pylons to the north of the river in place of three low height pylons shown on the works plans.</p> <p>This includes TB138 as a low height design lattice pylons.</p> <p>Lower height lattice pylons have the potential to be positioned at the same span lengths as standard lattice pylons, though in practice some adjustments are required because of the wider lower crossarm and its interaction with terrain and potential additional vegetation clearance requirements. It is also relevant to note additional construction and maintenance risks associated with the use of a low height lattice design are amongst factors guiding their relatively infrequent use.</p> <p>The main reason for considering the change of pylon type was to reduce the visibility of pylons from the Grade I Listed Langleys House, in particular from the rear of the house down a designed avenue, and reduce effects on the Grade II Registered Park and Garden. Whilst noting that the effects arising from an overhead line using standard lattice pylons on heritage assets comprise less than substantial harm, it was noted that for the Grade II Registered Park and Garden at Langleys the effects that could overall be considered to be in the higher range of less than substantial harm. With the use of low height lattice pylons the effects were reduced into lower range of less than substantial harm.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>In terms of landscape and visual considerations, lower height lattice pylons are useful where a reduction in the height of a pylon, as seen in views from visual receptors such as residents or communities, leads to a lesser effect. When considering lower height pylons, careful thought should be given to the effects resulting from the greater footprint that is occupied by a lower height pylon, in addition to their generally bulkier and more dense profile. Lower height pylons can provide landscape and visual benefits in some scenarios, for example where a reduction in pylon height means that views of the tops of pylons are screened by intervening woodland. In other scenarios they can increase adverse visual effects, for example where they are located relatively close to visual receptors without intervening filtering vegetation and are likely to appear bulkier and more noticeable in views. In the area between the Walthams both standard lattice pylons and low height lattice pylons have been tested. There are benefits for potential heritage effects from low height pylons (low height required from north of the river). The closest residential receptors would be unlikely to experience an overall benefit from lower height pylons and effects are likely to remain similar to full height pylons (subject to individual receptor positioning and intervening screening). Subtle shifts in pylon locations can provide benefits for visual receptors at a location, these shifts can conversely result in a transfer of effects onto other visual receptors. This would sometimes be the case in the settled area between the Walthams,</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>where residential properties are scattered along the study area.</p> <p>In terms of landscape, effects on landscape character are likely to be similar or greater due to the introduction of lower height pylons into the shallow valley area between Little Waltham and Great Waltham. The increased width of the structure mean greater levels of tall vegetation clearance could be required, subject to pylon positioning.</p> <p>Overall, there is no ecology reason in policy terms, to trigger the need to change the route from the 2024 preferred draft alignment nor adopt a different pylon design. Overall whilst there is no positive benefit in landscape and visual terms, the weight in policy terms given to heritage assets leads to a conclusion that the use of a section of low height pylons is preferred for the north of the river. This includes TB138 from the statutory consultation. Feedback leads to the conclusion that pylons south of the river including TB139 from the statutory consultation are more appropriate as standard lattice to reduce visual effects for those in nearby properties and travelling between the villages.</p>				
9-7.111	Suggest that the Project should be undergrounded between Little Waltham and Great Waltham conservation areas	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering	X		X

The LVIA is presented in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-7.113	Support the 'Alternative Western Route' at Chelmsford as per the Design Development Report / Criticism that that National Grid dismissed the 'Alternative Western Route' due to the cost associated with the longer length, even though this route would reduce the impact on residential and heritage amenity (e.g. listed buildings, archaeology, conservation areas, scheduled ancient monument, listed park and garden)	In response to feedback received during the 2024 statutory consultation and the 2025 targeted consultation, National Grid has considered alternative alignments (which includes that suggested by the respondent to adopt the western alternative) to the east and west of Chelmsford, modifications to the alignment consulted upon along with the selection of pylon type as well as the justification for the use of underground cable. In the Corridor and Preliminary Routing and Siting Study (CPRSS) published as part of the 2022 non-statutory consultation and in the Design Development Reports, National Grid set out the challenges associated with routeing either further to the west or to the east of Chelmsford parallel to the existing 400 kV overhead line. Whilst noting the respondent's preference for one of these alternatives, no new factors have been identified nor new evidence provided nor identified to remove the basis for previous decision making. Firstly, it is noted that our assessments of the Project alignment are that it is not unacceptable in policy terms and there is no specific need therefore to change, nonetheless we have reviewed other route alternatives. The eastern route around Chelmsford remains less preferred and no change to the fundamental constraints to successful routeing have been identified or proposed. We have also previously reviewed a more westerly alignment which would be routed away from Little Waltham diverting from the south of Great Leighs towards Pleshey and then southwards past Great Waltham towards Chignal	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Smealey. Whilst noting a reduction in some effects for this more western alternative, it would be a longer route by 2.5km to 3km with a degree of transfer of effects. Given that none of the effects arising for the Project alignment are considered to be at a level which is unacceptable in policy terms, National Grid continues to prefer the Project alignment and for the reasons stated the eastern and western alternatives are not progressed. An Environmental Impact Assessment of the Project has been undertaken and the findings are presented in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement), which has identified any need for additional mitigation.				
9-7.114	Suggest that Pylons TB99, TB100, TB101 and TB102 are relocated (i.e. to mitigate impact on residents, leisure, agriculture, and the environment) / Concern about impact of Pylons TB99, TB100, TB101 and TB102 on Faulkbourne	National Grid has considered the respondent's feedback, we have routed and sited the alignment in accordance with the Holford Rules (provided in Appendix I22). In order to change the location of TB99 to TB102 (TB101 to TB104), we would have to increase the length of the overhead line and increase the number of angle pylons, which would be less consistent with the Holford Rules. We are therefore not proposing to make a change to the alignment at this location. An Environmental Impact Assessment has been undertaken and the findings are presented in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement), which has identified any need for additional mitigation.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-7.115	Suggest that Pylons TB169 and TB170 are relocated (e.g. to mitigate impact on residences, heritage, property value, and visual impact)	National Grid has reviewed the alignment between TB169 and TB176 (now TB171 and TB178), including a backcheck on the alternatives assessed prior to the statutory consultation. All alternative routeing options which would straighten the draft alignment between TB168 and TB176 (now TB170 and TB178) would result in direct impacts to and loss of ancient woodland, because of these impacts these alternatives are not being taken forward at this stage. On this basis no change has been proposed to the alignment at this location.			X	
9-7.116	Suggest that the Project uses the alternative route to the west of Great Waltham (e.g. to mitigate impact on heritage) / Suggest that the Project should be routed further West at Little Waltham and Great Waltham	In response to feedback received during the 2024 statutory consultation and the 2025 targeted consultation, National Grid has considered alternative alignments (which includes that suggested by the respondent to go further west at Little Waltham and Great Waltham) to the east and west of Chelmsford, modifications to the alignment consulted upon along with the selection of pylon type as well as the justification for the use of underground cable. In the Corridor and Preliminary Routing and Siting Study (CPRSS) published as part of the 2022 non-statutory consultation and in the Design Development Reports, National Grid set out the challenges associated with routeing either further to the west or to the east of Chelmsford parallel to the existing 400 kV overhead line. Whilst noting the respondent's preference for one of these alternatives, no new factors have been identified nor new evidence			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>provided nor identified to remove the basis for previous decision making. Firstly, it is noted that our assessments of the Project alignment are that it is not unacceptable in policy terms and there is no specific need therefore to change, nonetheless we have reviewed other route alternatives. The eastern route around Chelmsford remains less preferred and no change to the fundamental constraints to successful routeing have been identified or proposed. We have also previously reviewed a more westerly alignment which would be routed away from Little Waltham diverting from the south of Great Leighs towards Pleshey and then southwards past Great Waltham towards Chignal Smealey. Whilst noting a reduction in some effects for this more western alternative, it would be a longer route by 2.5km to 3km with a degree of transfer of effects. Given that none of the effects arising for the Project alignment are considered to be at a level which is unacceptable in policy terms, National Grid continues to prefer the Project alignment and for the reasons stated the eastern and western alternatives are not progressed. An Environmental Impact Assessment of the Project has been undertaken and the findings are presented in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement), which has identified any need for additional mitigation.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-7.117	Suggest that Pylon TB139 is relocated as far as possible north-east to make it more obscured by trees, at least in summer	National Grid notes the respondent's feedback, whilst any individual pylon can be moved to a degree independently of the ones adjacent to it, movement beyond a few metres has the potential to have knock on effects. In considering the feedback we also responded to a preference to avoid veteran trees by a slight change to the alignment. We have moved TB139 (now TB140) to the north somewhat but cannot move it to the north of the river to benefit from screening without the pylon to the south moving to the north side of the road just south of TB139's original position but defeating the object of the move. The change we have made moves TB139 closer to the river where it would benefit from being backclothed (reducing the visibility of the pylon) but without requiring the pylon to the south to move to the north of the road. This change in combination with a change to a low height pylon design to the north of the river is considered to go some way to meet the request.			X	X
9-7.118	Suggest the Project is rerouted to be south of Colchester (e.g. to save cost due to a shorter route, and to mitigate the impact on villages and transport)	National Grid's consideration of the strategic proposal that meets the identified needs of the Project was set out in the Corridor and Preliminary Routeing and Siting Study (CPRSS) in 2022 and has been backchecked in the Strategic Option Backcheck and Reviews (SOBR) published in 2023 and 2024. In the absence of new evidence or further factors being identified this remains National Grid's preferred strategic proposal for the Development Consent Order (DCO) submission. Consideration of other route and corridor alternatives			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>was published within the CPRSS as part of our 2022 non-statutory consultation with routes to the north of Colchester favoured because of the potential effects on designations such as Special Protection Areas (SPA). Alternative corridors and routes east and south of Colchester were considered and present challenge to the success through their effects on ecologically important areas. The constraints of the SPA designations unchanged and are still considered to require the adoption of a route not affecting these designations if one is available. Such a route is adopted by the Project.</p>				
9-7.119	<p>Suggest Pylon TB139 is relocated north-east and reduced in height (e.g. to mitigate impact on village)</p>	<p>National Grid notes the respondent's feedback, whilst any individual pylon can be moved to a degree independently of the ones adjacent to it, movement beyond a few metres has the potential to have knock on effects. In considering the feedback we also responded to a preference to avoid veteran trees by a slight change to the alignment. We have moved TB139 (now TB140) to the north somewhat but cannot move it to the north of the river to benefit from screening without the pylon to the south moving to the north side of the road just south of TB139's original position but defeating the object of the move. The change we have made moves TB139 closer to the river where it would benefit from being backclothed (reducing the visibility of the pylon) but without requiring the pylon to the south to move to the north of the road.</p>			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>We have also considered pylon type. We do not consider that T pylons are an appropriate design selection, as in this where they will be viewed in most cases against vegetation and appear more stark than the alternative lower height lattice pylon. We do however consider that a low height lattice pylon will be beneficial for a section of the route north of the River Chelmer.</p> <p>This is a revision aimed specifically to reduce impacts on nearby designated heritage assets, including Little and Great Waltham Conservation Areas and a designed garden avenue view from the Grade I Langleys listed building. As part of this refinement, the alignment has been adjusted in combination with some use of lower-profile pylons to reduce visibility and reduce the impact of the infrastructure on the historic landscape and its setting. To the south of the river we have considered feedback on arrangements including standard lattice pylons (requires two pylons) as well as arrangements with low height lattice pylons (which requires three pylons). The latter positions a pylon close to Chelmsford Road and a relatively direct view from a home and for these reasons is less preferred. The Project, subject to confirming certain technical details, will progress using the defined LoD with the use of two standard pylons between TB143 and the river with four low height pylons to the north of the river in place of three low height pylons shown on the works plans.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-7.120	Criticism that National Grid have not used a direct straight line between Pylons TB144 and TB155 / Suggest that Pylon TB148 is moved westwards, so this line of pylons can be straightened (e.g. to move this line of pylons further away from residential properties, Broomfield hospital, Chelmer Valley High School, Broomfield Primary School, and new housing development)	National Grid has reviewed the alignment between TB144 and TB155 (now TB146 and TB157), in the vicinity of Bushy Wood and the request to move the alignment to the north-west of the wood. Following further assessment, if the alignment was to move to the north-west of the woodland it would be closer to properties on Woodhall Hill than the properties at Beaumont Otes Farm on the alignment, therefore it is proposed that the alignment remain to the south-east of Bushy Wood. We had previously proposed a slight change to the alignment to move closer to Bushy Wood and straighten the overhead line, removing the angle pylon at TB150 (now TB152), this moved the alignment slightly further away from properties at Beaumont Otes Farm. We are therefore not proposing a change to the alignment at this location.			X	
9-7.121	Suggest the Project is rerouted to run across undeveloped farmland to the west of the Walthams (e.g. locating the Project further away from Broomfield Hospital, Farleigh Hospice, King Edwards Grammar School sports field, and the villages of Parsonage Green, Broads Green, Patridge Green, St Andrews and Melbourne)	In response to feedback received during the 2024 statutory consultation and the 2025 targeted consultation, National Grid has considered alternative alignments (which includes that suggested by the respondent to go west of the Walthams to avoid areas such as Broomfield Hospital and villages such as Parsonage Green) to the east and west of Chelmsford, modifications to the alignment consulted upon along with the selection of pylon type as well as the justification for the use of underground cable. In the Corridor and Preliminary Routing and Siting Study (CPRSS) published as part of the 2022 non-statutory consultation			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>and in the Design Development Reports, National Grid set out the challenges associated with routeing either further to the west or to the east of Chelmsford parallel to the existing 400 kV overhead line. Whilst noting the respondent's preference for one of these alternatives, no new factors have been identified nor new evidence provided nor identified to remove the basis for previous decision making. Firstly it is noted that our assessments of the Project alignment are that it is not unacceptable in policy terms and there is no specific need therefore to change, nonetheless we have reviewed other route alternatives. The eastern route around Chelmsford remains less preferred and no change to the fundamental constraints to successful routeing have been identified or proposed. We have also previously reviewed a more westerly alignment which would be routed away from Little Waltham diverting from the south of Great Leighs towards Pleshey and then southwards past Great Waltham towards Chignal Smealey. Whilst noting a reduction in some effects for this more western alternative, it would be a longer route by 2.5 km to 3 km with a degree of transfer of effects. Given that none of the effects arising for the Project alignment are considered to be at a level which is unacceptable in policy terms, National Grid continues to prefer the Project alignment and for the reasons stated the eastern and western alternatives are not progressed. An Environmental Impact Assessment of the Project has been undertaken and the findings are presented in the</p>

		Environmental Statement (ES) (document reference Volume 6: Environmental Statement), which has identified any need for additional mitigation.				
9-7.124	Suggest Pylons TB155 and TB156 are relocated further away from residential properties / Concern that Pylon TB155 covers a high mound	<p>National Grid has considered the respondent's feedback, we have routed and sited the alignment in accordance with the Holford Rules (provided in Appendix I22 of this report). In order to change the location of TB155 and TB156 (now TB157 and TB158), and to move TB155 off higher ground we would have to increase the length of the overhead line and increase the number of angle pylons, which would be less consistent with the Holford Rules. We are therefore not proposing to make a change to the alignment at this location.</p> <p>An Environmental Impact Assessment has been undertaken and the findings are presented in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement), which has identified any need for additional mitigation.</p>			X	
9-7.125	Suggest that Pylon TB190 is relocated west to TQ66594 98563 (grid reference) and TB191 is relocated west to TQ66545 98268 (grid reference) to allow a straight line to be achieved to the next change of direction at approx TQ6631 97643 (grid reference) so this pylon would not need to be moved (e.g. to mitigate the impact of the Project on farming, with one less field affected and the new locations on	We have considered this feedback in conjunction with other feedback about the positioning of pylons relative to Buttsbury Church. As a result of this we have modified the position and a number of pylons to achieve the change sought. The effects of the Project are assessed and presented in the Environmental Impact Assessment (EIA) and this has identified any need for additional mitigation. The results of the EIA are provided in the			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	field boundaries which do not interfere with farming to the same extent)	Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application.				
9-7.126	Suggest that the Project uses underground cables over the ridgeline and for the diversion the Project takes to avoid Ingatestone Hall	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is " <i>that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)</i> ". Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at Ingatestone and the surrounding area would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
9-7.127	Suggest that the Project uses underground cables within vicinity of the two cottages at CM4 9PA	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is " <i>that overhead lines should be the strong starting presumption for electricity networks developments in</i>			X

		of Policy EN-5. The LVIA is presented in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
9-7.128	Suggest that the Project is extended higher halfway between Stock and Ingatestone and continuing through to the A12 access point at the bottom of Three Mile Hill just after Margaretting (e.g. to mitigate impact on residents, schools and birds, and to provide a straighter more direct link up to the section going around Writtle)	<p>This alternative alignment was considered within the 2024 Design Development Report from paragraphs 5.4.197 which can be found on the Project website. National Grid do not consider these to provide a more direct route once the range of constraints to routeing are taken into account. As set out in the 2024 Design Development Report effects are transferred by the change of alignment and in some cases increased. Given that the shortest option is around 1 km longer and thus less consistent with the Holford Rules (which guide to the use of the most direct and thus shortest routes) it was considered less preferred. A summary of the Holford Rules is provided within Appendix I22 of this report.</p> <p>In the absence of new evidence or the identification of further factors we consider the suggested alternative to be less preferred and no change is proposed.</p> <p>An Environmental Impact Assessment has been undertaken and the findings are presented in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement), which has identified any need for additional mitigation.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-7.129	Suggest that Pylons TB144 to TB140 are relocated further away from Great and Little Waltham	In response to feedback received during the 2024 statutory consultation and the 2025 targeted consultation, National Grid has considered alternative alignments (which includes that suggested by the respondent to relocate TB140 to TB144 further away from Great Waltham and Little Waltham) to the east and west of Chelmsford, modifications to the alignment consulted upon along with the selection of pylon type as well as the justification for the use of underground cable. In the Corridor and Preliminary Routing and Siting Study (CPRSS) published as part of the 2022 non-statutory consultation and in the Design Development Reports, National Grid set out the challenges associated with routeing either further to the west or to the east of Chelmsford parallel to the existing 400 kV overhead line. Whilst noting the respondent's preference for one of these alternatives, no new factors have been identified nor new evidence provided nor identified to remove the basis for previous decision making.
