9-7.131	Suggest that the Project is rerouted between Pylons TB150 and TB155 to be at least 1km further north west (e.g. to mitigate impact on future housing)	<p>The route development has considered allocated housing sites as well as sites coming forward within Regulation 18 consultation exercises for the next local plan. No such sites are crossed by the Project alignment. There is also no guidance that specifies that overhead pylons need to be at a specific distance from residential property and nothing that identifies a distance in excess of 1 km from future housing. On this basis no change is proposed.</p> <p>An Environmental Impact Assessment has been undertaken and the findings are presented in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement), which has identified any need for additional mitigation.</p>			X	
9-7.132	Suggest that the Project is rerouted to skirt around to the north of Howe Street and further to the north-west of Chelmsford (e.g. to mitigate the impact on Great Waltham and Little Waltham)	In response to feedback received during the 2024 statutory consultation and the 2025 targeted consultation, National Grid has considered alternative alignments (which includes that suggested by the respondent to go to the north of Howe Street and further north west of Chelmsford) to the east and west of Chelmsford, modifications to the alignment consulted upon along with the selection of pylon type as well as the justification for the use of underground cable. In the Corridor and Preliminary Routing and Siting Study (CPRSS) published as part of the 2022 non-statutory consultation and in the Design Development Reports, National Grid set out the challenges associated with routeing either further to the west or to the east of			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Chelmsford parallel to the existing 400 kV overhead line. Whilst noting the respondent's preference for one of these alternatives, no new factors have been identified nor new evidence provided nor identified to remove the basis for previous decision making. Firstly, it is noted that our assessments of the Project alignment are that it is not unacceptable in policy terms and there is no specific need therefore to change, nonetheless we have reviewed other route alternatives. The eastern route around Chelmsford remains less preferred and no change to the fundamental constraints to successful routeing have been identified or proposed. We have also previously reviewed a more westerly alignment which would be routed away from Little Waltham diverting from the south of Great Leighs towards Pleshey and then southwards past Great Waltham towards Chignal Smealey. Whilst noting a reduction in some effects for this more western alternative, it would be a longer route by 2.5 km to 3 km with a degree of transfer of effects. Given that none of the effects arising for the Project alignment are considered to be at a level which is unacceptable in policy terms, National Grid continues to prefer the Project alignment and for the reasons stated the eastern and western alternatives are not progressed. An Environmental Impact Assessment of the Project has been undertaken and the findings are presented in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement), which has identified any need for additional mitigation.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-7.133	Suggest that Pylon TB139 is relocated as far as possible to the north-east (rerouting to the West of Great Waltham) to mitigate impact on property, and to avoid likely impact on the remains of pre-Belgic Iron Age settlements dating from 3rd to 1st centuries BC (identified and recorded as part of investigations undertaken in the early 1970s)	<p>National Grid does not consider a deviation from TB139 (now TB140) to the west to be appropriate as the route would have to turn northwest (the feedback states both north-east and to the west but the west is more likely). to bypass properties and would be longer with greater effects than an alternative that was looked into. In response to feedback received during the 2024 statutory consultation and the 2025 targeted consultation, National Grid has worked to minimise potential impacts on the historic environment through strategic routeing and siting measures. The results of archaeological fieldwork and heritage assessments, including a review of known archaeological sites such as the pre-Belgic Iron Age remains identified in the early 1970s, have informed the design process.</p> <p>National Grid has considered alternative alignments (which includes that suggested by the respondent to go to the west of Great Waltham) to the east and west of Chelmsford, modifications to the alignment consulted upon along with the selection of pylon type as well as the justification for the use of underground cable. In the Corridor and Preliminary Routing and Siting Study (CPRSS) published as part of the 2022 non-statutory consultation and in the Design Development Reports, National Grid set out the challenges associated with routeing either further to the west or to the east of Chelmsford parallel to the existing 400 kV overhead line. Whilst noting the respondent's preference for one of these alternatives, no new factors have been identified</p>			X	X

		<p>nor new evidence provided nor identified to remove the basis for previous decision making. Firstly, it is noted that our assessments of the Project alignment are that it is not unacceptable in policy terms and there is no specific need therefore to change, nonetheless we have reviewed other route alternatives. The eastern route around Chelmsford remains less preferred and no change to the fundamental constraints to successful routeing have been identified or proposed. We have also previously reviewed a more westerly alignment which would be routed away from Little Waltham diverting from the south of Great Leighs towards Pleshey and then southwards past Great Waltham towards Chignal Smealey. Whilst noting a reduction in some effects for this more western alternative, it would be a longer route by 2.5 km to 3 km with a degree of transfer of effects. Given that none of the effects arising for the Project alignment are considered to be at a level which is unacceptable in policy terms, National Grid continues to prefer the Project alignment and for the reasons stated the eastern and western alternatives are not progressed.</p> <p>In response to feedback received during the statutory consultation, including comments from Historic England and other stakeholders, the alignment in the area surrounding Great Waltham, where Pylon TB139 (now TB140) is located, was revised in March 2025. These revisions aimed specifically to reduce impacts on nearby designated heritage assets, including Little and Great Waltham conservation areas. As part of this refinement,</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>the alignment was shifted and lower-profile pylons were introduced to minimise visibility and reduce the impact of the infrastructure on the historic landscape and its setting.</p> <p>Environmental Statement (ES) Chapter 11: Historic Environment (document reference 6.11), provides a detailed assessment of potential effects on both designated and non-designated heritage assets, including those of archaeological interest. Where non-designated assets have been assessed as being of medium or high value and within the 250 m study area, their settings and potential for significant effects have been considered in accordance with the agreed methodology. Where impacts to archaeological remains are assessed in ES Chapter 11: Historic Environment (document reference 6.11) these would be subject to archaeological mitigation as set out and secured in the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5). The Outline CoCP (document reference 7.2) and Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5) include provision for appropriate action should unexpected archaeological remains be found during construction.</p>				
9-7.134	Suggest that the Project is rerouted to an alternative route (as suggested by Little Waltham Parish Council) and further from the Ash Tree Corner	In response to feedback received during the 2024 statutory consultation and the 2025 targeted consultation, National Grid has considered alternative			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	Scheduled Monument, or at the very least that the height of the pylons is reduced	alignments (which includes that suggested by Little Waltham Parish Council and further from Ash Tree Corner) to the east and west of Chelmsford, modifications to the alignment consulted upon along with the selection of pylon type as well as the justification for the use of underground cable. In the Corridor and Preliminary Routing and Siting Study (CPRSS) published as part of the 2022 non-statutory consultation and in the Design Development Reports, National Grid set out the challenges associated with routeing either further to the west or to the east of Chelmsford parallel to the existing 400 kV overhead line. Whilst noting the respondent's preference for one of these alternatives, no new factors have been identified nor new evidence provided nor identified to remove the basis for previous decision making. Firstly, it is noted that our assessments of the Project alignment are that it is not unacceptable in policy terms and there is no specific need therefore to change, nonetheless we have reviewed other route alternatives. The eastern route around Chelmsford remains less preferred and no change to the fundamental constraints to successful routeing have been identified or proposed. We have also previously reviewed a more westerly alignment which would be routed away from Little Waltham diverting from the south of Great Leighs towards Pleshey and then southwards past Great Waltham towards Chignal Smealey. Whilst noting a reduction in some effects for this more western alternative, it would be a longer route by 2.5 km to 3 km				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>with a degree of transfer of effects. Given that none of the effects arising for the Project alignment are considered to be at a level which is unacceptable in policy terms, National Grid continues to prefer the Project alignment and for the reasons stated the eastern and western alternatives are not progressed.</p> <p>We have also considered pylon type and localised alignment variations responding to feedback from Historic England and other stakeholders. We do not consider that T pylons are an appropriate design selection, as in this where they will be viewed in most cases against vegetation and appear more stark than the alternative lower height lattice pylon. We do however consider that a low height lattice pylon will be beneficial for a section of the route north of the River Chelmer. This is a revision aimed specifically to reduce impacts on nearby designated heritage assets, including Little and Great Waltham Conservation Areas and a designed garden avenue view from the Grade I Langleys listed building. As part of this refinement, the alignment has been adjusted in combination with some use of lower-profile pylons to reduce visibility and reduce the impact of the infrastructure on the historic landscape and its setting. To the south of the river we have considered feedback on arrangements including standard lattice pylons (requires two pylons) as well as arrangements with low height lattice pylons (which requires three pylons). The latter positions a pylon close to Chelmsford Road and a relatively direct view from a home and for</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>these reasons is less preferred. The Project, subject to confirming certain technical details, will progress using the defined LoD with the use of two standard pylons between TB143 and the river with four low height pylons to the north of the river in place of three low height pylons shown on the works plans.</p> <p>An Environmental Impact Assessment of the Project has been undertaken and the findings are presented in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement), which has identified any need for additional mitigation.</p>				
9-7.135	Suggest the Project is rerouted east of Chelmsford to follow route provided by respondent (map provided by respondent)	<p>In response to feedback received during the 2024 statutory consultation and the 2025 targeted consultation, National Grid has considered alternative alignments (which includes that suggested by the respondent to go east of Chelmsford) to the east and west of Chelmsford, modifications to the alignment consulted upon along with the selection of pylon type as well as the justification for the use of underground cable. In the Corridor and Preliminary Routing and Siting Study (CPRSS) published as part of the 2022 non-statutory consultation and in the 2023 and 2024 Design Development Reports (available on the Project website), National Grid set out the challenges associated with routeing either further to the west or to the east of Chelmsford parallel to the existing 400 kV overhead line. Whilst noting the respondent's preference for one of these alternatives, no new factors have been identified</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>nor new evidence provided nor identified to remove the basis for previous decision making. Firstly, it is noted that our assessments of the Project alignment are that it is not unacceptable in policy terms and there is no specific need therefore to change, nonetheless we have reviewed other route alternatives. 		<p>alternative, it would be a longer route by 2.5 km to 3 km with a degree of transfer of effects. Given that none of the effects arising for the Project alignment are considered to be at a level which is unacceptable in policy terms, National Grid continues to prefer the Project alignment and for the reasons stated the eastern and western alternatives are not progressed.</p> <p>An Environmental Impact Assessment of the Project has been undertaken and the findings are presented in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement), which has identified any need for additional mitigation.</p>				
9-7.137	Suggest that underground cables are used for the Project between Great Waltham and Little Waltham	<p>National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)'</i>. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at Great and Little Waltham would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-7.138	Suggest that Pylon TB139 is relocated to mitigate heritage impact	<p>National Grid has worked to minimise potential impacts on the historic environment through strategic routing and siting measures. The results of archaeological fieldwork and heritage assessments, including a review of known archaeological sites such as the pre-Belgic Iron Age remains identified in the early 1970s, have informed the design process. Environmental Statement (ES) Chapter 11: Historic Environment (document reference 6.11), provides a detailed assessment of potential effects on both designated and non-designated heritage assets, including those of archaeological interest. Where assets have been assessed as being of medium or high value and within the 250 m study area, their settings and potential for significant effects have been thoroughly considered in accordance with the agreed methodology.</p> <p>The revised alignment (including movement of TB139) represents a considered response to consultation feedback, balancing the need to reduce heritage impacts with other environmental and technical constraints. The potential impact of the Project on heritage assets such as settlement site at Ash Tree Corner and the conservation areas of Great and Little Waltham has been fully assessed and details can be found in ES Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1) and ES Appendix 11.2: Historic Environment Assessment Tables (document reference 6.11.A2). Other effects have been assessed and are presented in the Environmental Statement (ES)</p>			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		(document reference Volume 6: Environmental Statement) and this has identified any need for additional mitigation.				
9-7.139	Suggest that Pylon TB147 is relocated to mitigate impact on roman temple site in Dragonsfoot Field, Broomfield / Concern about the impact of Pylon TB147 on roman temple	<p>National Grid has sought to reduce, as far as practicable, impacts on the historic environment including through routeing and siting and an ongoing iterative design process which has taken on board feedback at different stages of the Project. The iterative design process sought to avoid areas of highest concern, for examples through changes to the route alignment.</p> <p>Following design refinements, the pylon previously referenced as TB147 is now TB149. As part of the Environmental Impact Assessment (EIA), National Grid has undertaken a robust and proportionate assessment of the impact of the Project on the Roman temple (6062). This assessment was undertaken in accordance with a methodology developed in line with best practice and discussed and agreed with key stakeholders, including Historic England, during the scoping process and subsequent thematic working group meetings.</p> <p>The assessment is documented within ES Chapter 11: Historic Environment (document reference 6.11), ES Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1), ES Appendix 11.2: Historic Environment Assessment Tables of the Environmental Statement (ES). It concluded that during the construction and operation phase, there will be a</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		significant effect on the asset due to changes in its setting. Required mitigation measures are presented in the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5) and the Outline Code of Construction Practice (document reference 7.2).				
9-7.140	Criticism that Pylons TB152 and TB151 will be highly visible from Public Rights of Way (including Footpath 26) having an impact on leisure and mental health and wellbeing	<p>Impacts on Public Rights of Way (PRoW) as a result of the construction and operation of the Project are assessed in Chapter 13: Landscape and Visual (document reference 6.13), Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) and Chapter 16: Traffic and Transport (document reference 6.16) of the Environmental Statement (ES).</p> <p>Through routeing and siting, National Grid has sought to reduce as far as practicable potential impacts on the landscape and on views and visual amenity, including careful siting of pylons and screening (both new and existing) to reduce impacts where possible.</p> <p>A visual assessment of likely views from Chignall Saint James, near pylons TB152 and TB151 (now TB154 and TB153), has been carried out as part of the Landscape and Visual Impact Assessment (LVIA) which has been undertaken as part of the Environmental Impact Assessment (EIA). The approach to the LVIA follows professional guidance as set out in ES Appendix 13.1: Landscape and Visual Methodology (document reference 6.13.A1), which includes the 3rd Edition</p>	X		X

		<p>Guidelines on Landscape and Visual Impact Assessment (GLVIA3). The LVIA is presented in ES Chapter 13: Landscape and Visual (document reference 6.13).</p> <p>Impacts on health and wellbeing (physical and mental) arising from changes to PRow and other health-related environmental change (such as views and visual amenity) are considered in Chapter 10: Health and Wellbeing (document reference 6.10). Taking account of the information provided in Chapter 13: Landscape and Visual, no permanent likely significant effects on health and wellbeing (physical or mental) are identified.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-7.141	Concern that Pylons TB147 to TB150 would negatively impact eight footpaths, one bridleway and Bushy Wood	<p>In the Environmental Statement (ES), Chapter 16: Traffic and Transport (document reference 6.16) provides an assessment of the pedestrian, cyclist and horse-rider delays for the Public Rights of Way (PRoW). In the ES, Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) provides an assessment of the accessibility of PRoW that fall within the Order Limits. The ES is submitted as part of the Development Consent Order (DCO) application and includes details about the level of impact created and the mitigation proposed.</p> <p>The Outline Public Rights of Way (PRoW) Management Plan (document reference 7.6) submitted as part of the DCO application sets out management measures and mitigation measures for each PRoW affected by the construction activities and operation of the Project.</p> <p>The Outline PRoW Management Plan (document reference 7.6) has defined the management of the PRoW in the vicinity of Pylons TB147 and TB150. The PRoW would be temporarily closed for the duration of the works with managed access, that is, allowing a safe passage throughout of the PRoW users.</p> <p>Footpaths FP 214 5, FP 214 31 and FP 214 9 would be temporarily diverted to avoid crossing the Project during construction. The diversion route is expected to have variable durations between 2-2.5 months for footpaths FP 214 5 and FP 214 31 and for the whole duration of works for FP 214 9. However, the diversion routes follow</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		a similar alignment to the existing footpath, resulting in a minimum increase in journey time and distance. As a result, no significant effects are expected. The proposed diversions would not impact access to Bushy Wood. As a result, the magnitude of impact on the PRow is considered negligible and the overall effect has been classified as not significant.				
9-7.142	Concern that Pylons TB151 to TB154 would negatively impact footpaths 21, 27 and 26 in Chignall Parish	<p>In the Environmental Statement (ES), Chapter 16: Traffic and Transport (document reference 6.16) provides an assessment of the pedestrian, cyclist and horse-rider delays for the Public Rights of Way (PRow). In the ES, Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) provides an assessment of the accessibility of PRow that fall within the Order Limits. The ES is submitted as part of the Development Consent Order (DCO) application and includes details about the level of impact created and the mitigation proposed.</p> <p>The Outline Public Rights of Way (PRow) Management Plan (document reference 7.6) submitted as part of the DCO application sets out management measures and mitigation measures for each PRow affected by the construction activities and operation of the Project.</p> <p>The Outline PRow Management Plan (document reference 7.6) has defined the management of the PRow in the vicinity of Pylons TB151 and TB154. The PRow would be temporary closed for the duration of the</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		works with managed access, that is, allowing a safe passage throughout of the PRoW users. Footpath FP 216 26 would be temporarily diverted to avoid Pylon TB153. The diversion route is expected to have durations of 6-8 days and follows a similar alignment to the existing footpath, resulting in a minimum increase in journey time and distance. As a result, no significant effects are expected. FP 216 26 and FP 216 27 would both have access managed across the Project during construction. No significant effects are expected. A temporary scaffold access would connect the Project to Chignall Road. Where Footpath FP 216 21 connects to Chignall Road at this location, access would be managed. As a result, the magnitude of impact on the PRoW is considered negligible and the overall effect has been classified as not significant.				
9-7.143	Concern that Pylon TB150 near Chignall Road would impact tourism from cyclists taking part in the Ford London Ride	The assessment of businesses, recreation and tourism assets (including Ford Ride London-Essex 100) which fall within the study areas are presented in the Environmental Statement (ES), Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15). The ES includes details about the level of impact created and the mitigation proposed in relation to the Project.	X		X	
9-7.144	Concern that Pylons TB155 and TB156 will impact wildlife (including impact on hunting and breeding) in the area of the restored landfill near Chignall St	The nature park (area around TB155-TB156) is included within the ecological survey area for the Project. The results of the ecological surveys can be found in the	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	James which is now a Nature Park / Concern about the impact of Pylons TB155 and TB156 as they are located on a site which holds hazardous waste (e.g. there is a high risk of breaking the cap and allowing the contents into the local water systems causing significant contamination and impacting ecology and water quality)	<p>Environmental Statement (ES), Appendices 8.1 to 8.15 (document reference 6.8.A1 – 6.8.A15) which supports the ES, Chapter 8: Ecology and Biodiversity (document reference 6.8). Chapter 8: Ecology and Biodiversity (document reference 6.8) of the ES presents the results of the assessment on ecology (including animals and wildlife) and measures to avoid or reduce impacts where possible.</p> <p>Assessment of the potential contamination risk from the restored landfills at Chignall St James are included within ES Appendix 9.1: Baseline Information and Preliminary Contamination Risk Assessment (document reference 6.9.A1). The assessment concluded that whilst the restored landfills are located within the Order Limits, ground disturbance is not anticipated as the pylons are located outside of the landfill boundary and therefore a generally low/very low risk has been assigned to potential receptors such as groundwater and surface water. In addition, commitment GH02 of the Outline Code of Construction Practice (document reference 7.2) requires a Foundation Works Risk Assessment to be undertaken where piled foundations are likely to be required, such as at pylon bases following detailed design, to ensure that new pathways for any contamination present would not be created.</p>				
9-7.145	Concern about the impact Pylons TB152 and TB151 will have on the setting of three listed buildings: Chobbings Farmhouse (Grade II*); Granary	Through routeing and siting, National Grid has sought to reduce as far as practicable potential impacts on the historic environment, including listed buildings and non-	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	Chobbings (Grade II); and Chopyns Barn (Grade II), as well as the setting of 8 converted historic barns	<p>designated historic buildings. Following design refinements, the pylons previously referenced as TB150 - TB151 is now designated as TB152 and TB153. National Grid has carefully considered the potential impact of the Project on designated heritage assets, including the setting of Chobbings Farmhouse (Grade II*), the Granary at Chobbings (Grade II), and Chobbings Barn (Grade II), as well as other historic buildings in the vicinity.</p> <p>National Grid has conducted comprehensive assessments, including site visits and extensive desk-based research, to thoroughly evaluate the setting of these three listed buildings and understand their values. The assessment is presented within the Historic Environment Assessment which has been undertaken as part of the Environmental Impact Assessment (EIA) for the Project. The assessment is informed by a robust heritage assessment methodology, which was developed in accordance with national policy and guidance, including the National Planning Policy Framework (NPPF) and Historic England's Good Practice Advice Note 3: The Setting of Heritage Assets (2017). This methodology was also discussed and agreed with key heritage stakeholders throughout the scoping and thematic working group stages.</p> <p>The conclusions of the assessment are documented in Chapter 11 of the Environmental Statement (document reference 6.11), supported by ES Appendix 11.1: Historic Environment Baseline Report (document</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>reference 6.11.A1) and ES Appendix 11.2: Historic Environment Assessment Tables (document reference 6.11.A2), which provide detailed analysis of both direct and setting impacts.</p> <p>The assessment of these three listed buildings concludes that their setting does not extend to the Order Limits and therefore there will not be a significant impact on these assets. Although it is not clear which converted barns are being referred to, it remains the case that distance from the Project and intervening development and vegetation would also prevent the setting from extending as far as the Project.</p>				
9-7.146	Concern that Pylons TB155 and TB154 would impact the views from St James Church and the Green, public open space and bridleway 33	<p>Through routeing and siting National Grid has sought to reduce as far as practicable potential impacts on the historical environment, including listed buildings and known heritage assets; and landscape, views and visual amenity, including careful siting of pylons and screening (both new and existing) to reduce impacts where possible. This includes siting away from, or equidistant between residential properties and areas of settlement, where feasible.</p> <p>National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project. The results of this assessment are provided in the Environmental Statement (ES) (document reference: Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application. The ES identifies and assesses the likely significant effects on</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>visual amenity resulting from the construction and operation (and maintenance) of the Project and recommends appropriate mitigation measures to reduce potential effects.</p> <p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the EIA, which includes an assessment of effects on visual receptors including from Chignall St James and the surrounding Public Rights of Way (PRoW) network in Visual Receptor Area F5. The approach to the LVIA follows professional guidance as set out in ES Appendix13.1: Landscape and Visual Methodology (document reference 6.13.A1), which includes the 3rd Edition Guidelines on Landscape and Visual Impact Assessment (GLVIA3). The LVIA is presented in the ES, Chapter 13: Landscape and Visual (document reference 6.13).</p> <p>Following design refinements, the pylons previously referenced as TB154 - TB155 are now designated as TB156 and TB157. National Grid has carefully considered the potential impact of the Project on designated heritage assets, including the setting of the Former St James Church (1122199), as well as other historic buildings in the vicinity. The assessment of setting effects has considered factors such as visibility, character, intervisibility with surrounding assets, and the extent to which setting contributes to the significance of each heritage asset. It included desk-based research,</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>field surveys, photographic viewpoints, and consultation with statutory consultees.</p> <p>The conclusions of the assessment are documented in Chapter 11: Historic Environment of the Environmental Statement (ES) (document reference 6.11), supported by the ES Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1) and ES Appendix 11.2: Historic Environment Assessment Tables (document reference 6.11.A2), which provide detailed analysis of both direct and setting impacts.</p> <p>The assessment of the former St James church (1122199) concludes there would be not significant effects on the asset during the construction an operation phase. Standard construction mitigation would be adopted as detailed in the Outline CoCP (document reference 7.2). Changes to the setting would be temporary and would be reversed once the construction phase is completed. No additional mitigation measures are proposed as any measures designed to lessen the visual impact of the Project would be of a scale that would visually adversely alter the setting of the asset.</p>				
9-7.147	Concern that Pylons TB154 and TB153 would impact the settings of Brittons Hall Farmhouse and The Three Elms	<p>Following design refinements, the pylons previously referenced as TB153 - TB154 are now designated as TB155 and TB156.</p> <p>National Grid acknowledges the concern raised regarding the potential impact of Pylons TB155 and TB156 on the settings of Brittons Hall Farmhouse and The Three Elms. In accordance with the agreed and</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>established assessment methodology, locally listed buildings are considered non-designated heritage assets (see ES Chapter 11: Historic Environment (document reference 6.11) and ES Appendix 11.1 Historic Environment Baseline Report (document reference 6.11.A1)). Where such assets are of low value and located outside the Order Limits, their settings have not been assessed further, as there is no potential for significant effects to arise from the Project.</p> <p>This approach, including the criteria for scoping assets in or out of further assessment, has been developed in line with national policy and guidance and has been discussed and agreed with relevant stakeholders.</p>				
9-7.148	Concern that Pylons TB150 and TB149 would be impact views of Broomwood Manor	<p>National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project. The results of this assessment are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application. The ES identifies and assesses the likely significant effects on visual amenity resulting from the construction and operation (and maintenance) of the Project and recommends appropriate mitigation measures to reduce potential effects.</p> <p>Through routeing and siting, National Grid has sought to reduce as far as practicable potential impacts on the landscape and on views and visual amenity, including careful siting of pylons and screening (both new and</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>existing) to reduce impacts where possible. This includes siting away from, or equidistant between residential properties where feasible.</p> <p>A visual assessment of likely views to the west of Broomfield and Chelmsford, near Broomwood Manor and pylons TB149 and TB150 (now TB151 and TB152), has been carried out as part of the Landscape and Visual Impact Assessment (LVIA), which has been undertaken as part of the EIA. It is noted that Broomwood Manor lies some 450 m from the Project, with some intervening screening from vegetation on field boundaries to the north that lie between the property and the Project. Likely effects on visual receptors within 500 m of the Project are set out in the assessment. The approach to the LVIA follows professional guidance as set out in ES Appendix 6.13: Landscape and Visual Methodology (document reference 6.13.A1), which includes the 3rd Edition Guidelines on Landscape and Visual Impact Assessment (GLVIA3). The LVIA is presented in ES, Chapter 13: Landscape and Visual (document reference 6.13).</p>				
9-7.149	Concern that Pylons TB158 and TB157 would impact views from Pengy Mill on the banks of the River Can	National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project. The results of this assessment are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application. The ES identifies and assesses the likely significant effects on	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>visual amenity resulting from the construction and operation (and maintenance) of the Project and recommends appropriate mitigation measures to reduce potential effects.</p> <p>Through routeing and siting, National Grid has sought to reduce as far as practicable potential impacts on the landscape and on views and visual amenity, including careful siting of pylons and screening (both new and existing) to reduce impacts where possible. This includes siting away from, or equidistant between residential properties where feasible.</p> <p>A visual assessment of likely views to the west of Chelmsford, near Pengy Mill and pylons TB157 and TB158 (now TB159 and TB160), has been carried out as part of the Landscape and Visual Impact Assessment (LVIA) which has been undertaken as part of the EIA. It is noted that Pengy Mill lies some 300 m from the Project, with some intervening screening from mature strips and blocks of trees along the riverbank and on field boundaries to the south and east, that lie between the property and the Project. Likely effects on visual receptors within 500 m of the Project are set out in the assessment, which includes views from the local community and PRow on the banks of the River Can. The approach to the LVIA follows professional guidance as set out in ES Appendix 13.1: Landscape and Visual Methodology (document reference 6.13.A1), which includes the 3rd Edition Guidelines on Landscape and Visual Impact Assessment (GLVIA3). The LVIA is</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		presented in ES Chapter 13: Landscape and Visual (document reference 6.13).				
9-7.150	Concern about the impact of Pylon TB159 on the gas compressor station and bridleway 42, near the A1060	<p>National Grid is aware of the National Gas compressor station; we have coordinated with National Gas to agree interactions with all their assets and have taken measures in the design to eliminate safety concerns to the compressor station. Likewise National Grid adhere to National Policy Statements (NPS) EN-5 ensuring exposure limits from Electric and Magnetic Fields (EMF) are below those mandated by UK policy and safety guidelines.</p> <p>All Project impacts and mitigations to Public Rights of Way (PRoW), including the bridleway at TB159, have been assessed and can be found within the Outline Public Rights of Way Management Plan (document reference 7.6) submitted as part of the Development Consent Order (DCO) application.</p>	X		X	
9-7.151	Suggest that Pylons TB185, TB186, and TB187 are relocated (e.g. to mitigate impact on the landscape, environment, surrounding communities, and heritage)	National Grid has considered the respondent's feedback, alternative alignments in the area of Ingatestone and Margaretting have been assessed, however these are all either longer and less direct, transfer effects to other receptors or increase effects on other receptors. The location of pylons TB185, TB186 and TB187 (now TB187, TB188 and TB189) are restricted by the required span lengths to cross the A12 and the railway as well as maintaining required			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		distances from the gas pipeline. We are therefore not proposing a change to the alignment in this location.				
9-7.152	Suggest that Pylons TB141, TB142 and TB143 are relocated to mitigate visual impact on residents	<p>National Grid has considered the respondent's feedback, we have routed and sited the alignment in accordance with the Holford Rules (provided in Appendix I22 of this report). We have reviewed the alignment in the vicinity of Broads Green. Due to several constraints in the area such as Sparrowhawk Wood, school playing fields and residential properties, the alignment has remained as proposed in the statutory consultation.</p> <p>We have also considered pylon type and localised alignment variations responding to feedback from Historic England and other stakeholders. This includes the stakeholder feedback in this case. To the south of the River Chelmer, we have considered feedback on arrangements including standard lattice pylons (requires two pylons) as well as arrangements with low height lattice pylons (which requires three pylons). The latter positions a pylon close to Chelmsford Road and a relatively direct view from a home and for these reasons is less preferred. The Project, subject to confirming certain technical details, will progress using the defined Limits of Deviation (LoD) with the use of two standard pylons between TB143 and the river with four low height pylons to the north of the river in place of three low height pylons shown on the works plans.</p>			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-7.153	Criticism that Pylon TB190 is just 200 metres from the Grade II* listed 14th Century St Mary's Church at Buttsbury, and that pylons TB188 and TB189 are in close proximity with the Grade II listed Bridge over the River Wid / Suggest that pylons TB188, TB189 and TB190 are re-located to mitigate impact on listed buildings / structures	<p>National Grid have reviewed the feedback and in particular considered views from Public Rights of Way (PRoW) to the north side of Ingatestone Hall looking to the Church from the west. As a result of this we have modified the design introducing an additional pylon but with the consequence that pylons themselves are of reduced height and can be positioned such that they are to either side of the church rather than directly behind it in those views from the west.</p> <p>An Environmental Impact Assessment (EIA) has been undertaken for the Project. The findings of the EIA are presented in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application.</p>			X	X
9-7.154	Suggest that the Project is rerouted by moving slightly away from Writtle (closer to Roxwell) then following a straighter route to the crossing at the A12	<p>National Grid has considered the respondent's feedback and has reviewed multiple alternative alignments in the vicinity of Writtle. Due to the presence of gas and oil pipelines, woodland, an historic landfill and various Grade II listed buildings and residential properties, the current alignment is preferred and we are not proposing a change to the alignment in the vicinity of Writtle.</p> <p>Further down the alignment towards the A12, all alternative routeing options which would straighten the alignment between TB168 and TB176 (now TB170 and TB178) would result in direct impacts to and loss of ancient woodland, because of these impacts these alternatives are not being taken forward.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-7.155	Suggest that Pylon TB172 is relocated (e.g. to mitigate impact on residents, businesses, the community and the environment)	National Grid has reviewed the alignment between TB171 and TB173 (now TB173 and TB175) in light of the change requested by the respondent to move TB172 (now TB174). The western edge of this field contains an oil pipeline and a sewage pipeline which we need to maintain an appropriate distance from. Moving TB172 to the western edge of the field would also move the draft alignment closer to the properties to the west, increasing potential effects. We therefore are not proposing a change to the alignment in this location.			X	
9-7.156	Suggest that the Project between the Essex Regiment Way and Pylon TB146 is rerouted to mitigate negative impact (including on heritage assets) / Criticism that the Preliminary Environmental Impact Assessment (PEIR) records 70 permanent negative effects in Section F which is by far the most in any of the eight sections (with 16 of these being significant)	In response to feedback received during the 2024 statutory consultation and the 2025 targeted consultations, National Grid has considered alternative alignments (which includes that suggested by the respondent to re-route away from the section south of the Essex Regiment Way) to the east and west of Chelmsford, modifications to the alignment consulted upon along with the selection of pylon type as well as the justification for the use of underground cable. In the Corridor and Preliminary Routing and Siting Study (CPRSS) published as part of the 2022 non-statutory consultation and in the Design Development Report's, National Grid set out the challenges associated with routeing either further to the west or to the east of Chelmsford parallel to the existing 400 kV overhead line. Whilst noting the respondent's preference for one of these alternatives, no new factors have been identified nor new evidence provided nor identified to remove the			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>basis for previous decision making. Firstly it is noted that our assessments of the Project alignment are that it is not unacceptable in policy terms and there is no specific need therefore to change, nonetheless we have reviewed other route alternatives. The eastern route around Chelmsford remains less preferred and no change to the fundamental constraints to successful routeing have been identified or proposed. We have also previously reviewed a more westerly alignment which would be routed away from Little Waltham diverting from the south of Great Leighs towards Pleshey and then southwards past Great Waltham towards Chignal Smealey. Whilst noting a reduction in some effects for this more western alternative, it would be a longer route by 2.5 km to 3 km with a degree of transfer of effects. Given that none of the effects arising for the Project alignment are considered to be at a level which is unacceptable in policy terms, National Grid continues to prefer the Project alignment and for the reasons stated the eastern and western alternatives are not progressed.</p> <p>National Grid has sought to reduce, as far as practicable, impacts on the historic environment including listed buildings and known heritage assets through routeing and siting and an ongoing iterative design process which has taken on board feedback at different stages of the Project. The iterative design process sought to avoid areas of highest concern, for example through changes to the route alignment. We have engaged with Historic England and relevant</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>planning authorities on aspects relating to heritage, including appropriate mitigation measures and techniques, and have taken their views into account as the Project continues has developed. National Grid has completed a thorough and robust assessment of the historic environment and cultural heritage assets which is detailed within the Environmental Impact Assessment (EIA). We are confident that the methodology applied is robust, proportionate, and has given appropriate weight to the potential impacts of the Project on both designated and non-designated heritage assets, including effects from physical change and change to setting. The results are presented in Environmental Statement (ES) Chapter 11: Historic Environment (document reference 6.11), that accompanies the Development Consent Order (DCO) application. The ES identifies and assesses the likely significant effects on the environment resulting from the construction of the Project and recommends appropriate mitigation measures (in consultation with relevant stakeholders) to reduce potential effects.</p>				
9-7.157	<p>Suggest that the Project is routed away from / the Project should not be located the Wid Valley / Concern about impact of the Project on the Wid Valley</p>	<p>Whilst noting the preference for a route away from the Wid Valley, the reasons for a preference for the current alignment remain, which were to reduce effects on various heritage assets most notably the Grade I Listed Ingatestone Hall and Grade I Listed St Giles Church. In the absence of further evidence National Grid consider</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>the alignment to be consistent with our duties and relevant policies and for this still to be preferred.</p> <p>We have undertaken an Environmental Impact Assessment (EIA) which has assessed the potential impacts of the Project and has identified any need for additional mitigation. The results of the EIA are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application.</p>				
9-7.158	<p>Suggest that T-pylons are used for Pylons TB187 to TB199 (across the Wid Valley section, as described in the 'Consideration of Alternative Pylons for The Project' appendix to the April 2024 Design Development Report) / Suggest the use of T-pylons for the Project at the Wid Valley</p>	<p>The latest independent report on the Comparison of Electricity Transmission Technologies: Costs and Characteristics (Institute of Engineering and Technology, 2025) confirms that whilst T-Pylons may in certain locations provide an alternative to conventional overhead lines with potential benefits in visual impact and reduced land-take, this is at a higher cost. The build cost is approximately 2 to 2.5 times that of an equivalently rated conventional overhead line, and the lifetime costs are around 1.6 to 1.7 times that of a conventional overhead line. The current arrangements for the oversight of funding by Ofgem requires that the lowest cost acceptable design is taken forward rather than a more expensive design even if that design is perceived to reduce the level of effect.</p> <p>As such consideration of their use follows after establishing a need to mitigate effects of the standard lattice design and after considering the benefit of</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>adopting a low height lattice pylon design. T pylons themselves are also less adaptable to varied terrains and require more substantial access infrastructure. Furthermore, their resilience and environmental impact are comparable to conventional overhead lines, but with increased carbon intensity due to construction materials. Attention also needs to be given to the transitions between pylon types. Given It is the surrounding context that drives the need for alternative design mitigation, where this is not required along the entire route, any visual break and transition in pylon design also needs to be carefully sited.</p> <p>Assessment findings have concluded that, where there is not a reversal of the presumption to use overhead lines, the use of lattice pylons (either standard or low height) is consistent with planning policy throughout the route. Whilst there may be some locations (for examples see appendix A of the 2024 Design Development Report) where there may be a design option for the use of T pylons, the need to mitigate for unacceptable effects from lattice pylons is not engaged. On this basis T pylons are not proposed for the Project.</p>				
9-7.159	Suggest that the Project uses underground cables at the Broads Green and land at Langley (e.g. in addition to at the Walthams)	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is "<i>that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)</i>". Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at Broads Green and land at Langley as well as Great and Little Waltham would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
9-7.160	Suggest that the Project is rerouted from the Waltham Gap / Waltham Conservation Areas / Chelmer Valley crossing (e.g. to avoid the Ash Tree Corner Site) / Suggest that the Project is routed away from the Chelmer Valley between Pylons TB134 and TB141	In response to feedback received during the 2024 statutory consultation and the 2025 targeted consultation, National Grid has considered alternative alignments (which includes that suggested by the respondent to go north of Great Waltham) to the east and west of Chelmsford, modifications to the alignment consulted upon along with the selection of pylon type as well as the justification for the use of underground cable. In the Corridor and Preliminary Routing and Siting Study (CPRSS) published as part of the 2022 non-statutory consultation and in the Design Development Report's, National Grid set out the challenges associated with routeing either further to the west or to the east of Chelmsford parallel to the existing 400 kV overhead line. Whilst noting the respondent's preference for one of these alternatives, no new factors have been identified nor new evidence provided nor identified to remove the basis for previous decision making. Firstly it is noted that our assessments of the Project alignment are that it is			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>not unacceptable in policy terms and there is no specific need therefore to change, nonetheless we have reviewed other route alternatives. The eastern route around Chelmsford remains less preferred and no change to the fundamental constraints to successful routeing have been identified or proposed. We have also previously reviewed a more westerly alignment which would be routed away from Little Waltham diverting from the south of Great Leighs towards Pleshey and then southwards past Great Waltham towards Chignal Smealey. Whilst noting a reduction in some effects for this more western alternative, it would be a longer route by 2.5 km to 3 km with a degree of transfer of effects. Given that none of the effects arising for the Project alignment are considered to be at a level which is unacceptable in policy terms, National Grid continues to prefer the Project alignment and for the reasons stated the eastern and western alternatives are not progressed. National Grid has worked to minimise potential impacts on the historic environment through strategic routeing and siting measures. The results of archaeological fieldwork and heritage assessments, including a review of known archaeological sites such as the pre-Belgic Iron Age remains identified in the early 1970s, have informed the design process. The Environmental Statement (ES), Chapter 11: Historic Environment (document reference 6.11), provides a detailed assessment of potential effects on both designated and non-designated heritage assets, including those of</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>archaeological interest. Where assets have been assessed as being of medium or high value and within the 250 m study area, their settings and potential for significant effects have been thoroughly considered in accordance with the agreed methodology.</p> <p>The revised alignment represents a considered response to consultation feedback, balancing the need to reduce heritage impacts with other environmental and technical constraints. The potential impact of the Project on heritage assets such as settlement site at Ash Tree Corner and the conservation areas of Great and Little Waltham has been fully assessed and details can be found the Historic Environment Baseline Report (document reference 6.11.A1) and Appendix 11.2: Historic Environment Assessment Tables (document reference 6.11.A2). Other effects are assessed and presented in the EIA and this has identified any need for additional mitigation. The results of the EIA are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application.</p>				
9-7.161	Suggest that the Project between Pylons TB142 and TB148 is relocated (to mitigate impact on views, residents, pathways, visual impacts, impacts on residents, safety, access to schools, etc)	National Grid has considered the respondent's feedback, we have routed and sited the alignment in accordance with the Holford Rules (provided in Appendix I22 of this report). We have reviewed the alignment in the vicinity of Broads Green (around TB142 and TB148). Due to several constraints in the			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>area such as Sparrowhawk Wood, school playing fields and residential properties, the alignment has remained as proposed in the statutory consultation.</p> <p>An Environmental Impact Assessment (EIA) has been undertaken for the Project. The findings of the EIA are presented in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application.</p>				
9-7.162	<p>Suggest that the Project is rerouted to pass to the east of Chelmsford following the existing overhead lines, rather than to the west of Chelmsford</p>	<p>In response to feedback received during the 2024 statutory consultation and the 2025 targeted consultations, National Grid has considered alternative alignments (which includes that suggested by the respondent to go to the east of Chelmsford following the overhead lines) to the east and west of Chelmsford, modifications to the alignment consulted upon along with the selection of pylon type as well as the justification for the use of underground cable. In the Corridor and Preliminary Routing and Siting Study (CPRSS) published as part of the 2022 non-statutory consultation and in the Design Development Report's, National Grid set out the challenges associated with routeing either further to the west or to the east of Chelmsford parallel to the existing 400 kV overhead line. Whilst noting the respondent's preference for one of these alternatives, no new factors have been identified nor new evidence provided nor identified to remove the basis for previous decision making. Firstly it is noted that our assessments</p>			X

		<p>of the Project alignment are that it is not unacceptable in policy terms and there is no specific need therefore to change, nonetheless we have reviewed other route alternatives. The eastern route around Chelmsford remains less preferred and no change to the fundamental constraints to successful routeing have been identified or proposed. We have also previously reviewed a more westerly alignment which would be routed away from Little Waltham diverting from the south of Great Leighs towards Pleshey and then southwards past Great Waltham towards Chignal Smealey. Whilst noting a reduction in some effects for this more western alternative, it would be a longer route by 2.5 km to 3 km with a degree of transfer of effects. Given that none of the effects arising for the Project alignment are considered to be at a level which is unacceptable in policy terms, National Grid continues to prefer the Project alignment and for the reasons stated the eastern and western alternatives are not progressed. Effects are assessed and presented in the EIA and this has identified any need for additional mitigation. The results of the EIA are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application.</p>				
9-7.163	Suggest that Pylons TB153 and TB154 are relocated to mitigate the impact on Brittons Hall Farmhouse	National Grid has considered the respondent's feedback, we have routed and sited the alignment in accordance with the Holford Rules. Alternatives moving			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		TB153 and TB154 (now TB155 and TB156) away from Brittons Hall Farmhouse would be longer and less direct and therefore less consistent with the Holford Rules (provided in Appendix I22 of this report). Due to the required span length to cross Mashbury Road, the location of pylons TB153 and TB154 are restricted, however we have moved these as far from Brittons Hall Farm as possible without transferring effects to other residential properties.				
9-7.164	Suggest that Pylon TB154 is relocated further from residential properties (e.g. such as Brittons Hall Farm, Harry's Farm, and Braddocks)	National Grid has considered the respondent's feedback, we have routed and sited the alignment in accordance with the Holford Rules (provided in Appendix I22 of this report). Alternatives moving TB153 and TB154 (now TB155 and TB156) away from Brittons Hall Farm, Harry's Farm, and Braddocks would be longer and less direct and therefore less consistent with the Holford Rules. Due to the required span length to cross Mashbury Road, the location of pylons TB153 and TB154 are restricted, however we have moved these as far from Brittons Hall Farm, Harry's Farm, and Braddocks as possible without transferring effects to other residential properties.			X	
9-7.165	Suggest that Pylons TB174 and TB173 are relocated further into the fields (e.g. further away from residence)	National Grid has reviewed the alignment between TB171 and TB174 (now TB173 and TB176) in light of the change requested by the respondent. The western edge of the field where TB173 and TB174 (now TB175 and TB176) are located contains an oil pipeline and a			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		sewage pipeline which we need to maintain an appropriate distance from. Moving these pylons to the western or eastern edge of the field would also move the alignment closer to the properties to the west or east, similarly, increasing potential effects. We therefore are not currently proposing a change to the alignment in this location.				
9-7.166	Suggest that access / construction road is moved further away from residence (e.g. to minimise disruption)	National Grid has considered the respondent's feedback and has reviewed the Project in this area. There are no access roads proposed to the east of the alignment in the vicinity of TB174 and TB173 (now TB176 and TB175) towards Margaretting Road. The construction haul road is proposed to the west of the alignment at TB174 and TB173 away from Margaretting Road until it crosses Nathan's Lane and continues north. There is a permanent access road to TB174 proposed from Margaretting road, however this would not be used for construction, only future survey and maintenance access when required. Therefore no disruption from the construction haul road is expected at this residence.			X	
9-7.167	Suggest that the Project uses underground cables through the Waltham Gap	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>clear (paragraph 2.9.20) that the government's position is “that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)’. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		impact terms), we do not consider the Project at Great and Little Waltham would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
9-7.168	Criticism that National Grid did not consider extending Corridor L of the Corridor Preliminary Routeing and Substation Siting study (CPRSS) (2022) down to Rayleigh / Suggest that National Grid extend Corridor L to Rayleigh (e.g. as subject to further investigation, the Rayleigh / Tilbury section of line may have capacity for greater transmission without major upgrading)	National Grid have considered this suggestion, but it appears to have been provided without the benefit of an understanding of the existing capacity of certain overhead lines. Existing power flows on the connections from Rayleigh mean the line does not have sufficient spare capacity to also accommodate the Project. Therefore it is not possible for the Project to meet the reinforcement need by connecting into Rayleigh substation and using the Rayleigh to Tilbury connection for the Project. On this basis no change is proposed.	X		X	
9-7.169	Suggest that land near Scravels Cottages will be inappropriate as an access route for construction machinery (e.g. as it is a narrow and muddy footpath)	It is not proposed for this route to be used as a Primary Access Route for construction. For this section of temporary haul road, the Primary Access Routes are from the B1008 to the north-east, and A1060 from the south-west. The temporary haul road in this section follows closely the route of the overhead line and does not use the track adjacent to Scravels Cottages. The access track referred to in the respondent's feedback is for future surveys and maintenance if required and would not be used for construction.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		National Grid are not proposing to construct anything for this permanent access route, existing tracks and roads are being used where possible.				
9-7.170	Suggest that proposed access road to Roxwell Village is rerouted (e.g. as is over a narrow bridge using the main road to Chelmsford)	<p>Following comments received at consultation, including feedback from the Local Highway Authority, National Grid has reviewed this proposed Primary Access Route. Our assessments have not identified a suitable alternative access route to this section of temporary haul road. As part of the pre-application process National Grid has engaged with the relevant authorities, and their highways teams and National Highways to understand and gain information on their local road networks. This information has been used to inform and guide the drafting of the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) for the Project that accompanies the Development Consent Order (DCO) application.</p> <p>A strategy has been developed to manage the impact of construction vehicles on the public highway and sensitive receptors, using suitable Local Road Network connections from the Strategic Road Network called Primary Access Routes. In addition, temporary haul roads for construction vehicles are proposed along the Project alignment, further reducing the impact of construction traffic on the local road network. Further details of the strategy can be found within the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-7.171	Suggest that Pylon TB139 is relocated due to being too close to a flood plain, and very close to the 5,000 year-old neolithic settlement in Little Waltham	<p>National Grid's preference is to avoid positioning infrastructure within floodplains where possible, but decision making is also influenced by other factors. In this case the pylon has actually been moved closer to the river in response to an alignment adjustment to avoid veteran trees and reduce community effects by positioning a pylon further from the road where it would be more back-clothed (reducing the visibility of the pylon). National Grid has worked to minimise potential impacts on the historic environment through strategic routeing and siting measures. The results of archaeological fieldwork and heritage assessments, including a review of known archaeological sites such as the pre-Belgic Iron Age remains identified in the early 1970s, have informed the design process. The Environmental Statement (ES), Chapter 11: Historic Environment (document reference 6.11), provides a detailed assessment of potential effects on both designated and non-designated heritage assets, including those of archaeological interest. Where assets have been assessed as being of medium or high value and within the 250 m study area, their settings and potential for significant effects have been thoroughly considered in accordance with the agreed methodology.</p> <p>The revised alignment represents a considered response to consultation feedback, balancing the need to reduce heritage impacts with other environmental and technical constraints. The potential impact of the Project on heritage assets such as settlement site at Ash Tree</p>			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Corner and the conservation areas of Great and Little Waltham has been fully assessed and details can be found in ES Chapter 11: Historic Environment (document reference 6.11), ES Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1) and ES Appendix 11.2: Historic Environment Assessment Tables (document reference 6.11.A2).				
9-7.172	Suggest that the Project is rerouted further west of Great Waltham, between Howe Street and Ford End (e.g. to mitigate impact at the Waltham Gap)	In response to feedback received during the 2024 statutory consultation and the 2025 targeted consultations, National Grid has considered alternative alignments (which includes that suggested by the respondent to go west of Great Waltham) to the east and west of Chelmsford, modifications to the alignment consulted upon along with the selection of pylon type as well as the justification for the use of underground cable. In the Corridor and Preliminary Routing and Siting Study (CPRSS) published as part of the 2022 non-statutory consultation and in the 2023 and, 2024 Design Development Reports published in subsequent consultations (available on the Project website), and the 2025 Design Development Report (document reference 5.15), National Grid set out the challenges associated with routeing either further to the west or to the east of Chelmsford parallel to the existing 400 kV overhead line. Whilst noting the respondent's preference for one of these alternatives, no new factors have been identified nor new evidence provided nor identified to remove the basis for previous decision making. Firstly, it is noted			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		that our assessments of the Project alignment are that it is not unacceptable in policy terms and there is no specific need therefore to change, nonetheless we have reviewed other route alternatives. The eastern route around Chelmsford remains less preferred and no change to the fundamental constraints to successful routeing have been identified or proposed. We have also previously reviewed a more westerly alignment which would be routed away from Little Waltham diverting from the south of Great Leighs towards Pleshey and then southwards past Great Waltham towards Chignal Smealey. Whilst noting a reduction in some effects for this more western alternative, it would be a longer route by 2.5 km to 3 km with a degree of transfer of effects. Given that none of the effects arising for the Project alignment are considered to be at a level which is unacceptable in policy terms, National Grid continues to prefer the Project alignment and for the reasons stated the eastern and western alternatives are not progressed. An Environmental Impact Assessment (EIA) has been undertaken for the Project. The findings of the EIA are presented in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application.				
9-7.173	Criticism that the realignment in the southern section will cause more disruption than the original position, due to Ingatstone Hall intervention	Decision making in regard to route changes is evidence based and in this case based on the building being a Grade I listed building. As such National Grid can			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>confirm there has been no intervention as suggested. Feedback from the respondent to reduce disruption would be considered in the same way.</p> <p>An Environmental Impact Assessment (EIA) has been undertaken for the Project. The findings of the EIA are presented in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application.</p>				
9-7.174	Suggest that the Project is rerouted further east at Pylons TB183, TB184, and TB185 to be further away from Seymour Field playing field and the sports fields for the Anglo European School	National Grid has considered the respondent's feedback, alternative alignments in the area of Ingatestone and Margaretting have been assessed, however these are all either longer and less direct, transfer effects to other receptors or increase effects on other receptors. The location of pylons TB185, TB186 and TB187 (now TB187, TB188 and TB189) are restricted by the required span lengths to cross the A12 and the railway as well as maintaining required distances from the gas pipeline. We are therefore not proposing a change to the alignment in this location.			X	
9-7.175	Suggest that Pylons TB185 to TB187 are relocated more easterly towards Church Lane and deeper into the fields away so that they are further away from residences	National Grid has considered the respondent's feedback, alternative alignments in the area of Ingatestone and Margaretting have been assessed, however these are all either longer and less direct, transfer effects to other receptors or increase effects on other receptors. The location of pylons TB185, TB186 and TB187 (now TB187, TB188 and TB189) are			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		restricted by the required span lengths to cross the A12 and the railway as well as maintaining required distances from the gas pipeline. We are therefore not proposing a change to the alignment in this location.				
9-7.176	Suggest that the alignment is straightened between Pylons TB186 and TB197 in a north-south line (e.g. removing the dogsleg that unnecessary climbs hills, increases the length, and includes unnecessary river crossings)	Whilst noting the preference for to straighten the alignment between TB186 and TB197 (now TB188 and TB200) the reasons for a preference for the current alignment remain, which were mainly to reduce effects on various heritage assets most notably the Grade I Listed Ingatestone Hall and Grade I Listed St Giles Church. In the absence of further evidence National Grid considers the alignment to be consistent with our duties and relevant policies and for this still to be preferred. We have undertaken an Environmental Impact Assessment (EIA) which has assessed the potential impacts of the Project and this has identified any need for additional mitigation. The results of the EIA are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application.			X	
9-7.177	Suggest that the pylon directly opposite St Mary's Church Buttsbury is relocated (e.g. as it is adjacent to the historic church)	National Grid has undertaken a routeing and siting exercise to reduce, as far as practicable, the potential impacts of the Project on the historic environment, including designated assets such as St Mary's Church (1264434), Buttsbury (Grade I). This process has been informed by a robust assessment methodology that was developed in line with relevant national policy and			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>guidance and agreed through engagement with key heritage stakeholders. The alignment and siting of pylons, including TB193, reflect a careful balance between environmental, technical and heritage considerations. Routing changes have included the addition of a pylon to allow pylon heights to be reduced and pylons positioned in a way that they are not sited directly behind the church in views from the Public Rights of Way approaching from the north of Ingatestone Hall from the west. The updates to the routing of the pylons were discussed with relevant stakeholders including the Local Planning Archaeologist and Historic England.</p> <p>National Grid has conducted comprehensive assessments, including site visits and extensive desk-based research, to thoroughly evaluate the setting of the Grade II* listed Church of St Mary (1264434) and understand its value. The setting of the church has been assessed as part of the Environmental Impact Assessment (EIA), and findings are documented in Chapter 11: Historic Environment of the Environmental Statement (ES) (document reference 6.11), supported by ES Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1) and ES Appendix 11.2: Historic Environment Assessment Tables (document reference 6.11.A2). The assessment concludes that during both the construction and operation (and maintenance) phases there will be significant effect on St Mary's Church. Standard</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		construction mitigation would be adopted as detailed in the Outline Code of Construction Practice (document reference 7.2). Changes to the setting would be temporary and would be reversed once the construction phase is completed. No additional mitigation measures are proposed during the construction and operation (and Maintenance) phases as any measures designed to lessen the visual impact of the Project would be of a scale that would visually adversely alter the setting of the asset.				
9-7.178	Suggest that the Project is routed further north of the built-up area around Melbourne	The route development in the area of TB150 to TB157 has considered proximity to existing housing on the north-western edge of Chelmsford by the Melbourne area as well as allocated housing sites and sites coming forward within consultation exercises for the next plan. No such sites are crossed by the alignment. Alternative alignments to the north of Bushey wood have been considered but would be closer to other existing residential properties) approximately 150 m compared with approximately 300 m on the alignment) and are therefore less preferred. There is also no guidance that specifies that overhead pylons need to be at a specific distance from residential property but in this case the separation is not considered to lead to effects that are inconsistent with policy. On this basis no change is proposed.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-7.179	Suggest that Pylon TB153 is relocated to be nearer to TB152 (to mitigate impact on residential property), or that Pylons TB152, TB153 and TB154 are re-spaced to move TB153 further away from residential property (address provided by respondent)	The respondent's property is positioned mid-span with the pylon at around 200 m distance. Moving an individual pylon can only be done independently over relatively few metres without a need to move adjacent pylons and / or increase pylon heights. On this basis no change is proposed.			X	
9-7.180	Criticism that the Project cuts through extensive areas of Grade 2 land from west Chelmsford to north Colchester, transitioning to Grade 1 land around Boxted and Ardleigh, where a Cable Sealing End (CSE) compound and the new substation are planned / Suggest that based on land grade alone, it would be far more logical to stay south of Chelmsford, where the land is largely Grade 3 and 4	Corridors to the south of Colchester were considered but are restricted by designations such as Special Protection Areas (SPAs). The legislation is such that other corridors / routes must be taken where these are available and avoid or reduce the effects on the SPAs. This was reported in the Corridor and Preliminary Routeing and /siting Study (CPRSS) published in 2022 and subsequently reviewed and confirmed as still valid in 2023 and 2024 Design Development Reports. The agricultural grade of land within the Project's Order Limits was confirmed by detailed Agricultural Land Classification (ALC) surveys and is detailed in full in Environmental Statement (ES), Chapter 6: Agriculture and Soils (document reference 6.6). The permanent land take of agricultural land from pylon footings is also relatively small; pylon footings cover a relatively small percentage of land proportional to field sizes. The permanent footprint of the Cable Sealing End (CSE) compounds and substations was rationalised through the design process to minimise the total amount of land required.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-7.181	Oppose the changes the Project at Ingatestone	Whilst noting the preference to straighten the alignment between TB186 and TB197 the reasons for a preference for the current alignment remain, which were mainly to reduce effects on various heritage assets most notably the Grade I Listed Ingatestone Hall and Grade I Listed St Giles Church. In the absence of further evidence National Grid consider the current alignment to be consistent with our duties and relevant policies and for this still to be preferred. We have undertaken an Environmental Impact Assessment (EIA) which has assessed the potential impacts of the Project, and this has identified any need for additional mitigation. The results of the EIA are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application.			X	
9-7.182	Criticism of the Project between Pylons TB124 and TB149, which divides Little Waltham and Great Waltham	In response to feedback received during the 2024 statutory consultation and the 2025 targeted consultation, National Grid has considered alternative alignments (which includes those avoiding the area between TB124 and TB149 as identified by the respondent) to the east and west of Chelmsford, modifications to the alignment consulted upon along with the selection of pylon type as well as the justification for the use of underground cable. In the Corridor and Preliminary Routing and Siting Study (CPRSS) published as part of the 2022 non-statutory consultation and in the 2023 and, 2024 Design Development			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Reports published in subsequent consultations (available on the Project website), and the 2025 Design Development Report (document reference 5.15), National Grid set out the challenges associated with routeing either further to the west or to the east of Chelmsford parallel to the existing 400 kV overhead line. Whilst noting the respondent's preference for one of these alternatives, no new factors have been identified nor new evidence provided nor identified to remove the basis for previous decision making. Firstly it is noted that our assessments of the Project alignment are that it is not unacceptable in policy terms and there is no specific need therefore to change, nonetheless we have reviewed other route alternatives. The eastern route around Chelmsford remains less preferred and no change to the fundamental constraints to successful routeing have been identified or proposed. We have also previously reviewed a more westerly alignment which would be routed away from Little Waltham diverting from the south of Great Leighs towards Pleshey and then southwards past Great Waltham towards Chignal Smealey. Whilst noting a reduction in some effects for this more western alternative, it would be a longer route by 2.5 km to 3 km with a degree of transfer of effects. Given that none of the effects arising for the Project alignment are considered to be at a level which is unacceptable in policy terms, National Grid continues to prefer the Project alignment and for the reasons stated the eastern and western alternatives are not progressed.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		An Environmental Impact Assessment (EIA) has been undertaken for the Project. The findings of the EIA are presented in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application.				
9-7.183	Suggest that Pylon TB161 is relocated away from Hoe Street and Gravelly Lane (to mitigate impact on heritage and listed buildings)	National Grid has considered the respondent's feedback and has reviewed multiple alternative alignments in this area. TB161 (now TB163) is currently approximately midway between listed properties on Hoe Street and Gravelly Lane and those on Roxwell Road. Moving TB161 further east would transfer increase effects to other properties and would require an additional angle pylon, due to the location of the crossing of Roxwell Road which is the preferred crossing location. We are therefore not proposing a change to the location of TB161.			X	
9-7.184	Suggest that Pylons TB129, TB130 and TB131 are relocated further to the north-east / east (i.e. increasing the distance from Braintree Road and directly away from the nine residences), and at the very least that National Grid consider relocating Pylon TB130 to be less central in view of residences, or having longer spans between pylons	National Grid notes the respondent's feedback. Siting of these pylons is constrained by the need to cross the approved Chelmsford Northern Relief Road and the preference to maintain a straight alignment where possible. TB130 (now TB132) cannot therefore move to the extent that would move it out of the view in the manner suggested. The required span length between pylons would not be acceptable and, even if it were, would require substantially taller pylons to achieve necessary safety clearances. Additionally the move			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		suggested would require additional angle pylons and is not considered to be justified given the separation already achieved and would move the pylon closer to other residential properties to the east. This balance is modified if there is a change in factors. There is a possibility that a minerals extraction site may secure approval within an updated minerals plan. This adds additional weight to decision making to seek to reduce effects on the minerals resource which is considered to justify a move of the alignment to the east to reduce effects on the minerals resource. Whilst not meeting the feedback request directly, some increase in separation would occur in this alternative condition. The Environmental Statement (ES) Chapter 4: Project Description (document reference 6.4), includes a list of scenarios (this is scenario 6) where further details on this can be found.				
9-7.185	Suggest that the underground cables should be used from current the proposed Pylon TB026 through to where the Little Waltham Parish Council (LWPC) submission proposes that under cables starts (e.g. to mitigate impact on farmland, the rural / scenic character of the area, and to avoid the blight on the residences along the whole length of Braintree Road and Strawbrook Hill)	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>"that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed</i>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p><i>developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)'. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at TB126 to Little Waltham would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES),</i></p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
9-7.186	Suggest that National Grid use the 'Alternative Western Route' (proposed by the Little Waltham Parish Council (LWPC)) / Criticism that National Grid's arguments for rejecting the 'Alternative Western Route' do not stand up to objective scrutiny / Criticism of Paragraphs 5.4.180 – 5.4.186 of National Grid's Design Development Report April 2024 in relation to dismissal of the route to the west of Great Waltham as an alternative to crossing the River Chelmer at Little Waltham and Great Waltham (table provided by respondent)	In response to feedback received during the 2024 statutory consultation and the 2025 targeted consultations, National Grid has considered alternative alignments (which includes the alternative western route preferred by the respondent) to the east and west of Chelmsford, modifications to the alignment consulted upon along with the selection of pylon type as well as the justification for the use of underground cable. In the Corridor and Preliminary Routing and Siting Study (CPRSS) published as part of the 2022 non-statutory consultation and in the 2023 and, 2024 Design Development Reports published in subsequent consultations, found on the Project website, and the 2025 Design Development Report (document reference 5.15), National Grid set out the challenges associated with routeing either further to the west or to the east of Chelmsford parallel to the existing 400 kV overhead line. Whilst noting the respondent's preference for one of these alternatives, no new factors have been identified nor new evidence provided nor identified to remove the basis for previous decision making. Firstly it is noted that our assessments of the Project alignment are that it is not unacceptable in policy terms and there is no specific need therefore to change, nonetheless we have reviewed other route alternatives. The eastern route			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>around Chelmsford remains less preferred and no change to the fundamental constraints to successful routeing have been identified or proposed. We have also previously reviewed a more westerly alignment which would be routed away from Little Waltham diverting from the south of Great Leighs towards Pleshey and then southwards past Great Waltham towards Chignal Smealey. Whilst noting a reduction in some effects for this more western alternative, it would be a longer route by 2.5 km to 3 km with a degree of transfer of effects. Given that none of the effects arising for the Project alignment are considered to be at a level which is unacceptable in policy terms, National Grid continues to prefer the Project alignment and for the reasons stated the eastern and western alternatives are not progressed. Effects are assessed and presented in the (Environmental Impact Assessment (EIA) and this has identified any need for additional mitigation. The results of the EIA are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application.</p>				
9-7.187	Criticism that the Project from White Notley to Margaretting is virgin greenbelt countryside	National Grid has submitted a Planning Statement (document reference 5.6) and Policy Compliance Document (document reference 5.7) with its Development Consent Order (DCO) application. The Planning Statement sets out the planning policy context and assesses the Project against policy requirements			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>including an assessment of the overall planning balance and includes an assessment in accordance with National Policy Statement (NPS) EN-1 (para 5.11.20) to determine whether the Project may be inappropriate development within the meaning of Green Belt policy; and if the Project (or any part of it) may be inappropriate development, demonstrate that very special circumstances exist, meaning that the harm by reason of inappropriateness and any other harm, is outweighed by other considerations.</p> <p>National Grid considers that the benefits of the Project significantly outweigh any potential harm predicted. As required by Section 104(7) of the Planning Act 2008, the benefits of the Project must be outweighed against any adverse impacts identified in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement). The Planning Statement demonstrates that any unavoidable adverse environmental effects which may remain following mitigation are outweighed by the public benefit that would accrue as a result of the Project and, for the purposes of Section 104(7) of the Planning Act 2008, that any adverse impacts would not outweigh the benefits of the Project.</p>				
9-7.188	Suggest that the Project is rerouted to pass north of Great Waltham over open farmland (e.g. to avoid bisecting Little and Great Waltham, to mitigate impact on Chignall St James, to mitigate impact on	In response to feedback received during the 2024 statutory consultation and the 2025 targeted consultations, National Grid has considered alternative alignments (which includes that suggested by the			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	historic site at Little Waltham, and to mitigate impact on the busy junction of the A131 and B1008)	respondent to go north of Great Waltham to mitigate various potential effects) to the east and west of Chelmsford, modifications to the alignment consulted upon along with the selection of pylon type as well as the justification for the use of underground cable. In the Corridor and Preliminary Routing and Siting Study (CPRSS) published as part of the 2022 non-statutory consultation and in the 2023 and, 2024 Design Development Reports published in subsequent consultations (available on the Project website), and the 2025 Design Development Report (document reference 5.15), National Grid set out the challenges associated with routeing either further to the west or to the east of Chelmsford parallel to the existing 400 kV overhead line. Whilst noting the respondent's preference for one of these alternatives, no new factors have been identified nor new evidence provided nor identified to remove the basis for previous decision making. Firstly it is noted that our assessments of the Project alignment are that it is not unacceptable in policy terms and there is no specific need therefore to change, nonetheless we have reviewed other route alternatives. The eastern route around Chelmsford remains less preferred and no change to the fundamental constraints to successful routeing have been identified or proposed. We have also previously reviewed a more westerly alignment which would be routed away from Little Waltham diverting from the south of Great Leighs towards Pleshey and then southwards past Great Waltham towards Chignal

		Smealey. Whilst noting a reduction in some effects for this more western alternative, it would be a longer route by 2.5 km to 3 km with a degree of transfer of effects. Given that none of the effects arising for the Project alignment are considered to be at a level which is unacceptable in policy terms, National Grid continues to prefer the Project alignment and for the reasons stated the eastern and western alternatives are not progressed. An Environmental Impact Assessment (EIA) has been undertaken for the Project. The findings of the EIA are presented in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application.				
9-7.189	Oppose the change to the Project near Back Lane, Stock as pylon has been relocated into respondent's field (e.g. to be away from horse sanctuary and a possible floodplain), and criticism of National Grid's justification of this change (e.g. the field also experiences flooding). With this, suggest that the pylon (near Back Lane, Stock) is relocated away from respondent's field (e.g. to mitigate impact on farm and health)	National Grid notes the respondent's feedback. The change was made based on flood zone data which indicates that the pylon has been moved just outside the flood zone. We note the preference from the respondent but consider the move appropriate to seek to reduce construction and pollution risk as well as future operational impacts. The move also means the alignment now avoids over sail of a horse sanctuary which was also requested in consultation feedback. We are therefore not proposing to move this pylon back to impact these areas.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-7.190	Suggest that the Project should cross Ingatestone Road east of White Tyrrells Farm, further away from Buttsbury Church	This alternative was considered in the 2024 Design Development Review at paragraph 5.4.200 but was less preferred due to being a less direct and longer route (less consistent with Holford Rule 3 - A summary of the Holford Rules is provided within Appendix I22 of this report). Heritage effects have also been reduced by a change to pylon positioning relative to Buttsbury Church. The Church has a visual relationship to the Wid Valley to the west. In the absence of new evidence or identification of further factors, no change to the alignment is proposed.			X	X
9-7.191	Suggest that the Project uses underground cables between Pylons TB135 and TB142	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>"that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)"</i> . Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at TB135 to TB142 would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.</p>				
9-7.192	Suggest the Project is routed westward from south of Great Leighs, north of Howe Street and Great	National Grid has considered alternative alignments in the vicinity of Little and Great Waltham that would move			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	Waltham before going southwards to the proposed Project alignment eastward of Writtle (e.g. to mitigate impact on residents and Border Wood)	the alignment further from Border Wood near Broad's Green, but they are less preferred. In the Corridor and Preliminary Routing and Siting Study (CPRSS) published as part of the 2022 non-statutory consultation and in the Design Development Report's, National Grid set out the challenges associated with routeing either further to the west or to the east of Chelmsford parallel to the existing 400 kV overhead line. Whilst noting the respondent's preference for the project to be routed westwards, no new factors have been identified nor new evidence provided nor identified to remove the basis for previous decision making. Firstly, it is noted that our assessments of the Project alignment are that it is not unacceptable in policy terms and there is no specific need therefore to change, nonetheless we have reviewed other route alternatives. The eastern route around Chelmsford remains less preferred and no change to the fundamental constraints to successful routeing have been identified or proposed. We have previously reviewed a more westerly alignment which would be routed away from Little Waltham diverting from the south of Great Leighs towards Pleshey and then southwards past Great Waltham towards Chignal Smealey. Whilst noting a reduction in some effects for this more western alternative, it would be a longer route by 2.5 km to 3 km with a degree of transfer of effects. Given that none of the effects arising for the Project alignment are at a level which is unacceptable in policy terms, National Grid continues to prefer the Project				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>alignment and for the reasons stated the eastern and western alternatives are not progressed.</p> <p>In response to feedback received during the 2024 statutory consultation and 2025 targeted consultations we have considered the application of the mitigation hierarchy including alternative pylon types and the case for the use of underground cable. In respect of the use of underground cable, the location is not designated in terms that engage a switch from the starting presumption in NPS EN-5 of the acceptability of overhead line. Nor do we consider that the effects engage with the thresholds associated with paragraph 2.9.23 of NPS EN-5 to also prompt to the use of underground cable in certain other areas. Even if the thresholds were met a likely design requirement would be Cable Sealing End (CSE) compounds somewhere northwards of TB136 and southwards of TB143 which bring their own effects and would be at an additional cost that we do not consider to be justified given the levels of effect.</p> <p>We have also considered pylon type and localised alignment variations responding to feedback from Historic England and other stakeholders. This includes the stakeholder feedback in this case to reduce effects on residents. We do not consider that T pylons are an appropriate design selection, as in this where they will be viewed in most cases against vegetation and appear more stark than the alternative lower height lattice pylon. We do however consider that a low height lattice pylon</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>will be beneficial for a section of the route north of the River Chelmer. This is a revision aimed specifically to reduce impacts on nearby designated heritage assets, including Little and Great Waltham Conservation Areas and a designed garden avenue view from the grade I Langleys listed building. As part of this refinement, the alignment has been adjusted in combination with some use of lower-profile pylons to reduce visibility and reduce the impact of the infrastructure on the historic landscape and its setting. To the south of the river we have considered feedback on arrangements including standard lattice pylons (requires two pylons) as well as arrangements with low height lattice pylons (which requires three pylons). The latter positions a pylon close to Chelmsford Road and a relatively direct view from a home and for these reasons is less preferred. The Project, subject to confirming certain technical details, will progress using the defined LoD with the use of two standard pylons between TB143 and the river with four low height pylons to the north of the river in place of three low height pylons shown on the works plans.</p>				
9-7.193	<p>Suggest that the Project is rerouted between Essex Regiment Way and Pylon TB145 to avoid the Waltham Gap</p>	<p>In response to feedback received during the 2024 statutory consultation and the 2025 targeted consultations, National Grid has considered alternative alignments (which includes that suggested by the respondent to re-route away from the section south of the Essex Regiment Way) to the east and west of Chelmsford, modifications to the alignment consulted</p>			X

		<p>upon along with the selection of pylon type as well as the justification for the use of underground cable. In the Corridor and Preliminary Routing and Siting Study (CPRSS) published as part of the 2022 non-statutory consultation and in the 2023 and, 2024 Design Development Reports published in subsequent consultations, found on the Project website, and the 2025 Design Development Report (document reference 5.15), National Grid set out the challenges associated with routeing either further to the west or to the east of Chelmsford parallel to the existing 400 kV overhead line. Whilst noting the respondent's preference for one of these alternatives, no new factors have been identified nor new evidence provided nor identified to remove the basis for previous decision making. Firstly it is noted that our assessments of the Project alignment are that it is not unacceptable in policy terms and there is no specific need therefore to change, nonetheless we have reviewed other route alternatives. The eastern route around Chelmsford remains less preferred and no change to the fundamental constraints to successful routeing have been identified or proposed. We have also previously reviewed a more westerly alignment which would be routed away from Little Waltham diverting from the south of Great Leighs towards Pleshey and then southwards past Great Waltham towards Chignal Smealey. Whilst noting a reduction in some effects for this more western alternative, it would be a longer route by 2.5 km to 3 km with a degree of transfer of effects.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Given that none of the effects arising for the Project alignment are considered to be at a level which is unacceptable in policy terms, National Grid continues to prefer the Project alignment and for the reasons stated the eastern and western alternatives are not progressed.</p> <p>National Grid has sought to reduce, as far as practicable, impacts on the historic environment including listed buildings and known heritage assets through routeing and siting and an ongoing iterative design process which has taken on board feedback at different stages of the Project. The iterative design process sought to avoid areas of highest concern, for example through changes to the route alignment. We have engaged with Historic England and relevant planning authorities on aspects relating to heritage, including appropriate mitigation measures and techniques, and have taken their views into account as the Project continues has developed. National Grid has completed a thorough and robust assessment of the historic environment and cultural heritage assets which is detailed within the Environmental Impact Assessment (EIA). We are confident that the methodology applied is robust, proportionate, and has given appropriate weight to the potential impacts of the Project on both designated and non-designated heritage assets, including effects from physical change and change to setting. The results are presented in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement), Chapter 11: Historic</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Environment (document reference 6.11), that accompanies the Development Consent Order (DCO) application. The ES identifies and assesses the likely significant effects on the environment resulting from the construction of the Project and recommends appropriate mitigation measures (in consultation with relevant stakeholders) to reduce potential effects.				
9-7.194	Suggest that T-pylons are used for Pylons TB129, TB130 and TB131 (e.g. to mitigate impact on residences)	<p>The latest independent report on the Comparison of Electricity Transmission Technologies: Costs and Characteristics (Institute of Engineering and Technology, 2025) confirms that whilst T-Pylons may in certain locations provide an alternative to conventional overhead lines with potential benefits in visual impact and reduced land-take, this is at a higher cost. The build cost is approximately 2 to 2.5 times that of an equivalently rated conventional overhead line, and the lifetime costs are around 1.6 to 1.7 times that of a conventional overhead line. The current arrangements for the oversight of funding by Ofgem requires that the lowest cost acceptable design is taken forward rather than a more expensive design even if that design is perceived to reduce the level of effect.</p> <p>As such consideration of their use follows establishing a need to mitigate effects of the standard lattice design and after considering the benefit of adopting a low height lattice pylon design. T pylons themselves are also less adaptable to varied terrains and require more substantial access infrastructure. Furthermore, their resilience and</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>environmental impact are comparable to conventional overhead lines, but with increased carbon intensity due to construction materials. Attention also needs to be given to the transitions between pylon types. Given that the surrounding context drives the need for alternative design mitigation, where this is not required along the entire route, any visual break and transition in pylon design also needs to be carefully sited.</p> <p>Assessment findings have concluded that, where there is not a reversal of the presumption to use overhead lines, the use of lattice pylons (either standard or low height) is consistent with planning policy throughout the route. Whilst there may be some locations (for examples see appendix A of the 2024 Design Development Report) where there may be a design option for the use of T pylons, the need to mitigate for unacceptable effects from lattice pylons is not engaged. On this basis T pylons are not proposed for the Project.</p>				
9-7.195	Suggest that underground cables are used for the Project or that an alternative form of mitigation in the form of cabling used between the villages of Great Waltham and Little Waltham (e.g. to protect the sensitive area where the route passes between the two Conservation Areas, close to the Langleys Registered Park and Garden and within the setting of the Grade I listed house Langleys, near to the Ash Tree Corner Scheduled Monument, the Church of St	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>"that overhead lines should be the strong starting presumption for electricity networks developments in</i>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	Mary and St Lawrence (grade I) and 65 Grade II listed and 2 Grade II* buildings within 1km)	<p><i>general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)'. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at Great and Little Waltham would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy</i></p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation. The mentioned listed buildings, and the nearby conservation areas have been fully assessed. Details can be found in the ES, Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1) and ES Appendix 11.2: Historic Environment Assessment Tables (document reference 6.11.A2).				
9-7.196	Suggest that the Project should be routed further west between Little Oxney Green and the A12 (between Pylons TB168 and TB183; plan provided by respondent) (e.g. to mitigate impact on respondent's property and protected lanes, including Nathans Lane)	Alternative alignments to the west of the Nathan's Lane area have been considered by National Grid. The 2024 Design Development Report (available on the Project website) considered a number of more westerly options but all lead to effects on areas of ancient woodland. Whilst it has been noted that some parts have been coppiced the frequent coppicing needed under the overhead line will affect the habitats and is not compatible with the preservation of the ancient woodland and remains less preferred. No change is proposed.			X	
9-7.197	Suggest the use of High Voltage Direct Current (HVDC) underground cables through the Waltham Gap / between Little Waltham and Great Waltham	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is "<i>that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)</i>". Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at the Walthams would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
9-7.198	Suggest that the Project should be rerouted to go through the solar farm development along a corridor to the east of Chelmsford both north and south of the A12, or follow the existing overhead line to the east of Chelmsford (e.g. to reduce the impact on the environment and views)	In the Corridor and Preliminary Routing and Siting Study (CPRSS) published as part of the 2022 non-statutory consultation and in the 2023 and 2024 Design Development Reports (available on the Project website), National Grid set out the challenges associated with routeing to the east of Chelmsford parallel to the existing 400 kV overhead line. Whilst noting the respondent's preference, no new factors have been identified nor new evidence is provided nor has been identified to reduce the greater effects or address the constraints to routeing. As such the eastern alignment remains less preferred and no change has been proposed.			X	
9-7.199	Concern about the impact of Pylons TB157, TB158 and TB159 on the Essex International Scout Jamboree (held in the field; e.g. due to health and safety concerns; construction of the Project may prevent the 2028 and 2032 events from taking place; interference with the operation of equipment used at the event including electrical ring main and lighting,	National Grid has considered alternative routes but concluded that none provide an appropriate way forward to avoid the site of a scout jamboree used every four years. The area is not of a type or designation that engages the criteria to justify undergrounding set out in National Policy Statement (NPS) EN-5 and would be at a cost not considered to be justified when there are			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	as well as temporary structures including an entertainment stage, climbing tower, lighting towers, marquees, Wi-Fi and other communications equipment), and suggest that the Project is either relocated further east at this location or that underground cables are used for the Project at this location (plan provided by respondent)	other mitigation options available. National Grid is working with representatives to explore short term measures to allow the 2028 event to proceed and to identify a suitable alternative site for subsequent events.				
9-7.200	Suggest that Pylon TB152 is relocated to the field boundary / field corner (e.g. to mitigate impact on farming; as any potential flooding occurs on the other side of the stream) (plan provided by respondent), and suggest that Pylon TB154 is relocated to the field boundary margin (e.g. to mitigate impact on farming, impact on the mineral extraction area and impact on tree shelter belt). With this, suggest that any pylons that cannot be placed in the hedgerow are correctly spaced to accommodate the 40-metre sprayer tramlines, maintaining the necessary distance from the edge of the field to the pylon (e.g. to mitigate impact on farming)	<p>The design was modified after landowner feedback. TB154 (previously TB152) is positioned adjacent to the field boundary, maintaining adequate clearance to the adjacent watercourse and flood zone during construction.</p> <p>TB156 (previously TB154) was moved 10 m to the field boundary, with the proposed pylon leg adjacent to the field boundary. Further movement would impact the Public Right of Way (PRoW) and the hedgerow on the boundary. Therefore no change is proposed.</p>			X	
9-7.201	Suggest reducing the area covered by the Draft Order Limits for the Project near to Pylons TB152 to TB159 (areas to remove from Order Limits marked on plan provided by respondent), and suggest that all proposed future access routes for the Project should be removed (e.g. as they have been drawn	National Grid notes the respondent's feedback. We require permanent rights of access to each pylon for future maintenance and surveys, the access tracks referred to in the feedback would not be used for construction. We are not proposing to construct anything for these permanent access routes, existing tracks and			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	without input from the respondent and permanent rights significantly restrict future uses of the land, including sales and diversification). With this, request for further discussion on access routes, haul road route and compound (e.g. to mitigate impact on business)	roads are being used where possible. We are therefore not proposing to remove these access routes, however National Grid will look to agree the most suitable access route at that point, taking into account the landowner and National Grid's requirements. The other areas highlighted by the respondent include a small area for environmental mitigation. The area requested to be removed adjacent to TB158 (now TB160) was included to maintain flexibility in the positioning of the laydown area, the Order Limits have now been refined in this area.				
9-7.202	Concern about impact of Pylons TB141 and TB142 (e.g. on protected lanes, kestrels, barn owls, bats, Sparrowhawk Wood, heritage, and The Walnut Tree public house)	<p>National Grid has sought to reduce, as far as practicable, impacts on the environment through routeing and siting and an ongoing iterative design process which has taken on board feedback at different stages of the Project.</p> <p>The impacts to protected lanes, wildlife, heritage and The Walnut Tree Public House are assessed in Chapter 8: Ecology and Biodiversity, Chapter 11: Historic Environment and Chapter 13: Landscape and Visual of the Environmental Statement (document reference Volume 6: Environmental Statement).</p> <p>Impacts to birds have been considered throughout the route on all sites that may have value, and a range of bird surveys have been conducted throughout the Project route. The results are outlined in Chapter 8: Ecology and Biodiversity (document reference 6.8) and Appendices 8.7 to 8.8 (document reference 6.8.A7 -</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>6.8.A8) of the Environmental Statement (ES). Appropriate mitigation will be implemented where impacts are identified as agreed with Natural England and the Local Planning Authority as relevant.</p> <p>A Landscape and Visual Impact Assessment (LVIA) presented in Chapter 13: Landscape and Visual (document reference 6.13) sets out the potential landscape and visual effects, which includes consideration of visual amenity of visual receptor areas (including communities and people travelling along protected lanes) and also impacts on landscape character which may for example be influenced by vegetation loss along protected lanes during construction.</p> <p>The Outline Landscape and Ecology Management Plan (LEMP) (document reference 7.4) and the Outline Code of Construction Practice (CoCP) (document reference 7.2) contain a list of relevant good practice measures to avoid or reduce impacts. In addition, the Limits of Deviation (LoD) allows for some flexibility during design and construction to further avoid environmental constraints that may be identified later in the Project.</p>				
9-7.203	Concern about the impact of Pylons TB145 to TB150 (e.g. on public footpaths; on two ancient woods, Border Wood and Bushy Wood, which contain wildlife including deer, and bats; on Tufnell Mere, which contains waterfowl and is a migration site for Greylag and Canada Geese; on helicopter flight-	The Project design does not impact Border Wood or Bushy Wood directly. Any potential indirect impacts will be considered in Chapter 8: Ecology and Biodiversity (document reference 6.8) of the Environmental Statement (ES).			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	path, small plane pilot test-path, and London fly-pass path; on the Essex Air Ambulance service, which goes over Broads Green to land at Broomfield Hospital)	<p>A range of protected species surveys have been undertaken throughout the route and the results are outlined in Chapter 8: Ecology and Biodiversity (document reference 6.8) and Appendices 8.1 to 8.16 (document reference 6.8.A1-6.8.A16) of the ES. Appropriate mitigation will be implemented where impacts are identified as agreed with Natural England and the Local Planning Authority as relevant.</p> <p>National Grid has appointed an independent aviation consultancy which has engaged with the operators of this Airstrip (with National Grid also present). Following discussion and further assessment of alternatives it is not possible to route the alignment away from the airstrip at a distance that allows the continued safe use of the airstrip at its current position. We are engaging and will continue to engage with the owner of the airstrip to find an appropriate solution. Further information on the assessment of airfields can be found in the Environmental Statement (ES) (see ES Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) and ES Appendix 15.2: Summary of Aviation Impact (document reference 6.15.A2)).</p>				
9-7.204	Criticism that National Grid have provided no reassurance or technical response regarding the health and safety implications of holding the Essex International Jamboree (EIJ) near the Project and suggest that National Grid should work with the respondent to find a suitable alternative site. This	National Grid is working with the Essex International Jamboree (EIJ) to see whether suitable mitigation can be put in place or an alternative site sort for future events. Members of the Project team also attended the site during the event in 2024 to meet with the organisers			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	must commence promptly following the 2024 EIJ event as alternative comparable sites are challenging to find in Essex given the specific requirements of the event. Such a long lead time is required as EIJ is organised by volunteers over a three-year period. With this, suggest that National Grid should also compensate the charities for the loss of infrastructure on the existing site and compensate them re-establishing an alternative site, including covering the costs of installing the required infrastructure (e.g. in the region of £500k: underground septic tanks, a water ring main, tracks and access, equipment storage)	<p>of the event and better understand the specific circumstances.</p> <p>National Grid will continue to work with the organisation and support with compensation where suitable and justified.</p>				
9-7.205	Suggest that the Project is routed to the east of Chelmsford from Fairstead south and following the line of the A12 and passing south of Margaretting	In the Corridor and Preliminary Routing and Siting Study (CPRSS) published as part of the 2022 non-statutory consultation and in the Design Development Report's published as part of the 2023 non-statutory and statutory consultations (available on the Project website), and the 2025 Design Development Report (document reference 5.15), National Grid set out the challenges associated with routeing to the east of Chelmsford parallel to the existing 400 kV overhead line. Whilst noting the respondent's preference, no new factors have been identified nor new evidence provided nor identified to reduce the greater effects or address the constraints to routeing. As such the eastern alignment remains less preferred and no change has been proposed.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-7.206	Suggest that Pylon TB137 is relocated away from residence	<p>When considering this change along with others responding to protected species and identified veteran tree, National Grid has repositioned the pylons in this section slightly further to the east with the pylons to the north and south of Chatham Hall Lane (previously numbered TB136 and TB137 respectively) both moved southwards and renumbered as TB138 and TB139 respectively. This moves both pylons relative to the properties though the separation to the property is unchanged. We have also considered pylon type and localised alignment variations responding to feedback from Historic England and other stakeholders. We do not consider that T pylons are an appropriate design selection, as they would be viewed in most cases against vegetation and appear starker than the alternative lower height lattice pylon. We do however consider that a low height lattice pylon would be beneficial for a section of the route north of the River Chelmer. This is a revision aimed specifically to reduce impacts on nearby designated heritage assets, including Little and Great Waltham Conservation Areas and a designed garden avenue view from the Grade I Langleys listed building. As part of this refinement, the alignment has been adjusted in combination with some use of lower-profile pylons to reduce visibility and reduce the impact of the infrastructure on the historic landscape and its setting of the registered park and garden and views from Langleys Grade I listed building.</p>			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		An Environmental Impact Assessment (EIA) has been undertaken for the Project. The findings of the EIA are presented in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application.				
9-7.207	Suggest that the Project should follow the A12 around the south of Chelmsford	In the Corridor and Preliminary Routing and Siting Study (CPRSS) published as part of the 2022 non-statutory consultation and in the Design Development Report's published as part of the 2023 non-statutory and statutory consultations (available on the Project website), and the 2025 Design Development Report (document reference 5.15), National Grid set out the challenges associated with routeing to the east and south of Chelmsford closely following the corridor with the existing 400 kV overhead line and the A12. Whilst noting the respondent's preference, no new factors have been identified nor new evidence provided nor identified to reduce the greater effects or address the constraints to routeing that are associated with following existing infrastructure. As such passing to the eastern or southern side of Chelmsford remains less preferred and no change has been proposed.			X	
9-7.208	Suggest relocation of Pylons TB134 to TB144 / TB145 (e.g. to mitigate impact on the environment, heritage, residents, emergency services, farmland, and schools, health)	In response to feedback received during the 2024 statutory consultation and the 2025 targeted consultations, National Grid has considered alternative alignments (which includes relocation of the section from			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>TB134 to TB144/TB145) to the east and west of Chelmsford, modifications to the alignment consulted upon along with the selection of pylon type as well as the justification for the use of underground cable. In the Corridor and Preliminary Routing and Siting Study (CPRSS) published as part of the 2022 non-statutory consultation and in the Design Development Report's published as part of the 2023 non-statutory and statutory consultations (available on the Project website), and the 2025 Design Development Report (document reference 5.15), National Grid set out the challenges associated with routeing either further to the west or to the east of Chelmsford parallel to the existing 400 kV overhead line. Whilst noting the respondent's preference for one of these alternatives, no new factors have been identified nor new evidence provided nor identified to remove the basis for previous decision making. Firstly it is noted that our assessments of the Project alignment are that it is not unacceptable in policy terms and there is no specific need therefore to change, nonetheless we have reviewed other route alternatives. The eastern route around Chelmsford remains less preferred and no change to the fundamental constraints to successful routeing have been identified or proposed. We have also previously reviewed a more westerly alignment which would be routed away from Little Waltham diverting from the south of Great Leighs towards Pleshey and then southwards past Great Waltham towards Chignal Smealey. Whilst noting a reduction in some effects for</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>this more western alternative, it would be a longer route by 2.5 km to 3 km with a degree of transfer of effects. Given that none of the effects arising for the Project alignment are considered to be at a level which is unacceptable in policy terms, National Grid continues to prefer the Project alignment and for the reasons stated the eastern and western alternatives are not progressed.</p> <p>An Environmental Impact Assessment (EIA) has been undertaken for the Project. The findings of the EIA are presented in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application.</p>				
9-7.209	<p>Criticism that the Project changes direction four times within 2km west of Chelmsford Road (e.g. close to protected assets)</p>	<p>Route design aims to achieve as straight and direct alignment as possible. However route design is also influenced by a range of constraints, environmental features and homes with a balanced decision made between the level of effects to the receptor and consistency with Holford Rules. A summary of the Holford Rules is provided within Appendix I22 of this report. In this case the additional effects to listed buildings from the direction changes are balanced against a need to find a route through with reduced direct and indirect effects. A straight alignment would increase the heritage effects and also be very close to residential properties and is less favoured. Environmental and other studies have not identified any further information to alter this previous conclusion and</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		no new evidence is provided by the respondent nor further decision making factors identified therefore, no change is proposed. National Grid has completed the Environmental Impact Assessment (EIA) for the Project. The results of this assessment are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application. The ES identifies and assesses the likely significant effects on the environment resulting from the construction of the Project and recommends appropriate mitigation measures (in consultation with relevant stakeholders) to reduce potential effects.				
9-7.210	Criticism that National Grid have rejected a 2.5 to 3km longer westward route through Section F for being less compliant with Holford Rule 3, although this route would avoid considerable cumulative negative heritage effects and reduce effects on residential properties in accordance with the Holford Rules, National Policy Statement for Energy (NPS EN-5) para 2.9.14 and the Electricity Act Section 9 / Suggest westward route through Section F	In response to feedback received during the 2024 statutory consultation and the 2025 targeted consultations, National Grid has considered alternative alignments (which includes that suggested by the respondent which goes to the north of Great Waltham) to the east and west of Chelmsford, modifications to the alignment consulted upon along with the selection of pylon type as well as the justification for the use of underground cable. In the Corridor and Preliminary Routing and Siting Study (CPRSS) published as part of the 2022 non-statutory consultation and in the Design Development Report's published as part of the 2023 non-statutory and statutory consultations (available on the Project website), and the 2025 Design Development Report (document reference 5.15), National Grid set out			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>the challenges associated with routeing either further to the west or to the east of Chelmsford parallel to the existing 400 kV overhead line. Whilst noting the respondent's preference for one of these alternatives, no new factors have been identified nor new evidence provided nor identified to remove the basis for previous decision making. Firstly it is noted that our assessments of the Project alignment are that it is not unacceptable in policy terms and there is no specific need therefore to change, nonetheless we have reviewed other route alternatives. The eastern route around Chelmsford remains less preferred and no change to the fundamental constraints to successful routeing have been identified or proposed. We have also previously reviewed a more westerly alignment which would be routed away from Little Waltham diverting from the south of Great Leighs towards Pleshey and then southwards past Great Waltham towards Chignal Smealey. Whilst noting a reduction in some effects for this more western alternative, it would be a longer route by 2.5 km to 3 km with a degree of transfer of effects. Given that none of the effects arising for the Project alignment are considered to be at a level which is unacceptable in policy terms, National Grid continues to prefer the Project alignment and for the reasons stated the eastern and western alternatives are not progressed. Effects are assessed and presented in the EIA and this has identified any need for additional mitigation. The results of the Environmental Impact Assessment (EIA) are</p>

		provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application.				
9-7.211	Suggest relocation of Pylons TB141 to TB144 to mitigate health and safety concerns for children travelling to Chelmer Valley High School	National Grid has considered the respondent's feedback, we have routed and sited the alignment in accordance with the Holford Rules. A summary of the Holford Rules is provided within Appendix I22 of this report. We have reviewed the alignment in the vicinity of Broads Green. Due to several constraints in the area such as Sparrowhawk Wood, school playing fields and residential properties, the alignment has remained as proposed in the statutory consultation. We have undertaken an Environmental Impact Assessment (EIA). The results of this assessment are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application, which includes an assessment of traffic on Public Rights of Way (PRoW) as well as impacts to health and has included requirements for mitigation.			X	
9-7.212	Concern about the impact of the Project on a swathe of land designated Minerals and Waste in the Chelmsford Local Plan 2020 (in Section F between Essex Regiment Way and Pylon TB146, Little Waltham from Great Waltham)	Such minerals and waste sites (in this case the emphasis is on minerals) identify areas of potential extraction but whether they will actually be utilised is far less certain. There are no relevant planning applications and the Essex County Council (ECC) minerals planning			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		team have not made comment on the routeing at this location. On this basis no change is proposed.				
9-7.213	Concern that the proposed haul roads and construction lay down area in the field near Pylon TB180 will impact on flooding (e.g. exacerbates existing flooding issues on Ivy Barn Lane and concern that respondent's basement may get flooded)	<p>Prior to construction, surveys will be undertaken to identify drainage systems within working corridors. The Project will secure a commitment to maintain the functionality of these systems, or provide for temporary alternative drainage measures, such that there is no increase in surface water flood risk within or downstream of working areas.</p> <p>National Grid has engaged with the Environment Agency (EA) as part of the project development. All works in the River Stour flood plain would be subject to a Flood Risk Activity Permit, which would require agreement with the Environment Agency.</p> <p>The design includes measures to mitigate flood risk, including an allowance for additional laydown areas to the north and south of the flood plain (e.g.: for temporary soil storage). The design also includes space for drainage attenuation ponds, to control the rate of discharge of surface water from the works to a rate agreed with the relevant Lead Local Flood Authorities.</p>			X	
9-7.214	Suggest that representatives from National Grid visit the area from Margaretting to Padhams Green to fully evaluate the landscape and historical value of the area with a view to conducting a feasibility study for the use of underground cables from Margaretting to Padhams Green / Suggest the use of	National Policy Statement (NPS) EN-5 states that the Government considers overhead lines to be appropriate and acceptable in most instances, although it recognises that there may be, at particularly sensitive locations, potential adverse landscape and visual impacts of			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	underground cables for the Project from Margaretting to Padhams Green, or alternatively that smaller pylons are used for the Project between Margaretting and Padhams Green	<p>overhead line infrastructure that make it inconsistent with our duties and relevant planning policy.</p> <p>The National Landscape (formerly Area of Outstanding Natural Beauty (AONB) designation is one such location where there is a presumption that underground cable technology is adopted with the extent of underground cabling extending beyond the boundary in response to the potential for the Project to affect the Natural Beauty of the designation. Our proposals include a total of approximately 20 km of underground cable through and in the vicinity of the Dedham Vale National Landscape, including a section at Great Horkesley to reduce the changes in views and setting of the National Landscape from within and adjacent to its designated boundary.</p> <p>Underground cabling is also proposed for short section to facilitate a 400 kV overhead line crossing near Fairstead.</p> <p>The higher cost of underground cables elsewhere to bill paying consumers, are not considered to be justifiable in the context of national policy or National Grid's statutory duties, which include the need to be economic and efficient.</p> <p>A landscape and visual impact assessment has been undertaken as part of the Environmental Impact Assessment (EIA). The Landscape and Visual Impact Assessment (LVIA) sets out the potential landscape effects and identifies areas of mitigation planting to reduce visual impacts. The landscape and visual</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>assessment, including effects on the National Landscape, is presented in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13). The Outline LEMP (document reference 7.4) includes details regarding the planting proposals.</p> <p>Appendix 11.1: Historic Environment Baseline Report (document reference 6.1.A1) includes a walkover survey (see Annex D Walkover Survey) and a setting survey of all designate heritage assets was undertaken. These documents required an extensive assessment of the Margaretting and Padham Green area. The historic background was researched and assessed, and a historic landscape characterisation sub chapter was created. The walkover survey allowed for the area to be ground truthed; any potential archaeological assets not previously identified from desk-based sources that were identified during the walkover were logged and added to the baseline for assessment. The setting survey allowed for the setting of all designated heritage assets to be in person assessed. This allowed for the wider landscape to be viewed and assessed by the project team. These surveys were crucial to the Baseline Report and assessment which then fed into the ES chapter 11.</p>				
9-7.215	Concern about the impact of the Project between Pylons TB179 and TB188 and the associated haul road on respondent's property	<p>National Grid is committed to minimising the impact that construction will have on local residents and landowners.</p> <p>Where possible, National Grid has sought to keep access and construction activities away from residential</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>properties, however in this area there are several existing constraints, such as woodland and infrastructure that the haul road has been routed to avoid.</p> <p>We will work with landowners and residents to ensure that access to properties, agricultural land and business is maintained throughout construction, should consent be obtained.</p>				
9-7.216	<p>Criticism of National Grid's reasoning for retaining the original proposed route for the Project at Anglia Ruskin University (ARU) Writtle (previously known as Writtle Agricultural College) rather than changing the Project to follow one of the alternative routes suggested by the respondent at the 2023 Non-Statutory Consultation (e.g. as the impact of the Project on ARU Writtle outweighs the impact of an alternative route on residents and woodland; as the alternative routes would not impact residents and woodland much more than the original route) / Suggest that the Project is routed further west so that it does not oversail ARU Writtle and passes over arable land and woodland instead (plan provided by respondent, with two alternative routes) (e.g. to mitigate impact on education at the Equine Unit on Cow Watering Lane)</p>	<p>National Grid notes the respondent's feedback. We have reviewed multiple alternative alignments in this area, however no change is proposed as the alignment oversailing the furthest north-eastern corner of the university grounds is preferred when compared to a permanent loss of woodland and a transfer of effects to residential properties as well as a listed building to the west if the alignment was to continue directly north from TB164 (now TB166).</p> <p>With regards to vehicular access requirements for the construction of the proposed scaffold tower required for the stringing activities, the project proposes to temporarily close the eastern section of Cow Watering Lane to allow for two methods of construction;</p> <ul style="list-style-type: none"> • Temporary closure for the duration of the stringing removing the need to the scaffold towers. • Temporary closure for a short period of time to unload scaffold into the adjacent fields, access into those fields will still be required in 			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		agreement with the landowner, however the number of people accessing the site would be reduced.				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Design Change (continued)						
9-7.217	Suggest the use of underground cables at Anglia Ruskin University (ARU) Writtle with the use of horizontal drilling under Victoria Road (west of ARU Writtle's land) (e.g. to mitigate impact on education at the Equine Unit on Cow Watering Lane). With this, suggest that National Grid reconsider use of scaffolding and the scaffolding rig on the adjoining road to ARU Writtle (e.g. to mitigate impact on the working stable yard of 70 horses)	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>"that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)"</i> . Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at Anglia Ruskin University (ARU) would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.</p> <p>With regards to the use of scaffolding, we are proposing to utilise a road closure and traffic management measures to remove the requirement for scaffolding over the road. Providing this can be agreed with the highways authority, this would reduce impacts to the stable yard and would remove the required access route through the campus.</p>				
9-7.218	<p>Suggest that Project is too close / routed further away from residences at the following locations:</p> <ul style="list-style-type: none"> - Pylon TB141 – 136m from Balls Farm - Pylon TB142 – 143m from Annex at Two Hoots - Pylon TB153 – 190m from Springwood, Mashbury 	<p>There is no minimum distance specified in policy or guidance that must be achieved between the overhead lines and residential properties. We note the concern of proximity but welcome the recognition of efforts to position pylons carefully as alternative routes move</p>		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>Road</p> <ul style="list-style-type: none"> - Pylon TB154 – 150m from Brittons Hall Farm - Pylon TB160 – 174m from The Haven - Pylon TB167 - 144m from Range Cottage - Pylon TB169 – 129m from Annex at Halfway House - Pylon TB172 – 173m from Greenacre, Bumpsteads Farm - Pylon TB178 – 150m from Inner Lodge Writtle Road - Pylon TB179 – 177m from Hoopers, Ivy Barn Lane - Pylon TB180 – 127m from Marshalls Farm - Pylon TB190 – 86m from White Tyrrells Cottages <p>It is recognised and welcomed that most of the pylons have been sited so that they are not positioned either directly in front of or directly to the rear of residential properties (e.g. to limit the possibility of the pylons being in the direct line of sight from front and rear facing windows). However, concern that this is not the case for Pylon TB180, which would be in the direct line of sight of Marshalls Farm, and suggest that Pylon TB180 should be relocated</p>	<p>pylons closer to other properties or require additional changes of direction. With regards to TB180 the alternative to seek to reduce effects is to move further south by around 60 m. This would increase and unbalance span length and is not preferred. The position chosen should provide some screening with views limited to the north-eastern edge of the property and in the absence of any policy inconsistency of this no change is proposed.</p>				
9-7.219	<p>Concern that Pylon TB190 is sited too close to White Tyrrells Cottages, causing health concerns due to proximity of Electric and Magnetic Fields (EMF) and visual impact to residents</p>	<p>The UK has a carefully thought-out set of policies for protecting us all against Electric and Magnetic Fields (EMFs), the main component of which is exposure guidelines. Those exposure guidelines are set by independent scientific bodies and are based on</p>		X		X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>decades-long studies into the effects of EMFs and ill health. After those decades of research, the weight of evidence is against there being any health risks of EMFs below the guideline limits. These policies are incorporated into the decision-making process for Development Consent in National Policy Statement (NPS) EN-5. All the equipment which forms part of this Project, will be fully compliant with these policies, set to protect everyone. This is documented in the Electric and Magnetic Field Compliance Report (document reference 7.8) submitted as part of the Development Consent Order (DCO) application.</p> <p>Notwithstanding the above, TB190 (now TB193) has been moved further to the west of the respondent's property as part of another requested change to reduce impacts on Grade II* Listed Church of St Mary at Buttsbury.</p> <p>We have completed an Environmental Impact Assessment (EIA) which assesses the visual impact of the Project within the Landscape and Visual Impact Assessment which can be found in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13) as well as the ES Chapter 10: Health and Wellbeing (document reference 6.10), including the perceptions of impacts from Electric and Magnetic Fields (EMFs) arising from the Project, and details and mitigation required.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-7.220	Suggest that construction traffic use the existing slip road on the A12 instead of routing through Margaretting, and consider whether access could be achieved from Writtle Road rather than using Ivy Barns Lane, which is unsuitable	<p>Following comments received at consultation, including feedback from the Local Highway Authority, National Grid has reviewed this proposed Primary Access Route (PAR). Our assessments take into account the preferable traffic and transport perspective which is to use the full junction on the A12 at J15, thus routing through Margaretting.</p> <p>This route would be the worst-case scenario and has the greatest number of sensitive receptors. We have assessed this option to ensure it is feasible if the slip road off existing A12 J14 (which has reduced receptors) is inaccessible. The option to use J14 slip road will remain.</p> <p>Access from Ivy Barns Lane is preferred over Writtle Road because Ivy Barns Lane directly intersects the haul road whereas Writtle Road is located over half a kilometer away and would require additional haul road to connect the public highway and the haul together. Impacting more land owners.</p>		X		
9-7.221	Concern about the impact of Pylon TB166, as it is proposed less than 300m from land at Ongar Road, Writtle, and request for confirmation on whether the pylon would be outside the Safety Clearance Zone for proposed residential development. With this, suggest that the Project at the west of Writtle should be rerouted to allow for an equal buffer to the rest of built-up areas in Chelmsford, with the Project relocated at least 1km to the west from the existing	<p>There is no safety clearance zone between overhead lines and residential zones that is comparable to those around gas pipelines although electrical safety clearances must be achieved but represent only a 30 m corridor based on the pylon centreline. National Grid does not use standard minimum distances from residential properties or new developments such as at Ongar Road near Writtle as a routeing consideration. Applying an arbitrary distance may be too big or too</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	and proposed built-up area of Writtle (e.g. to mitigate impact on landscape, visual and amenity for residence of Writtle). Additionally, concern about the proximity of the draft order limits and permanent access route for the Project to land at Ongar Road (e.g. impact on future residential development)	small for the specific circumstances. We utilise the Holford Rules (a description of the Holford Rules can be found in Appendix I22 of this report) informed by feedback and professional judgement to define appropriate corridors and alignments that are consistent with the relevant policy framework and duties.				
9-7.222	Suggest that Pylon TB164 is relocated away from respondent's properties at Newney Green, with an alternative route for Pylons TB164 and TB165 which involves only a minor adjustment (e.g. benefits include a straighter and simplified engineering solution, the potential to have one less pylon, and mitigation to impacts on a listed building and residential property, reduced compensation costs, and improved site access) / Request for a response / Suggest that the Project should cross the protected lane at the more screened location to the west of Chelmsford (plans provided by respondent and change previously requested by respondent; e.g. to mitigate impact on protected lanes and listed buildings)	National Grid has considered the respondent's feedback and has reviewed multiple alternative alignments in the vicinity of Writtle, including TB164 and TB165 (now TB166 and TB167). Due to the presence of gas and oil pipelines, an agricultural college, woodland, an historic landfill and various Grade II listed buildings and residential properties, the alignment requested by the respondent is not preferred either technically nor environmentally and we are therefore not proposing a change in this location. National Grid has completed the Environmental Impact Assessment (EIA) for the Project. The results of this assessment are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application. The ES identifies and assesses the likely significant effects on the environment, including on protected lanes, and listed buildings, resulting from the construction of the Project and recommends appropriate mitigation measures (in consultation with relevant stakeholders) to reduce potential effects.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-7.223	Suggest that the Project should be routed along the A12 corridor between Colchester and Ingatestone	In the Corridor and Preliminary Routing and Siting Study (CPRSS) published as part of the 2022 non-statutory consultation and in the Design Development Report's published as part of the 2023 non-statutory and statutory consultations, which can be found on the Project website, and the 2025 Design Development Report (document reference 5.15), National Grid set out the challenges associated with routeing to the east of Chelmsford parallel to the existing 400 kV overhead line and the A12. Whilst noting the respondent's suggestion and after consideration, no new factors have been identified nor new evidence provided nor identified to reduce the greater effects or address the constraints to routeing. As such the eastern alignment remains less preferred and no change has been proposed.			X	
9-7.224	Suggest that the Project should pass to the north of Chatham Green before turning south near Pleshy and passing through the gap between Mashbury and Chignal Smealey (e.g. for a straighter alignment that enables use of lower pylons / T-pylons, as the use of T-pylons in the section around North Chelmsford and Writtle was previously dismissed by National Grid on the basis that their preferred route has many changes of direction and as such was not suitable for T-pylons)	In the Corridor and Preliminary Routing and Siting Study (CPRSS) published as part of the 2022 non-statutory consultation and in the Design Development Report's, National Grid set out the challenges associated with routeing either further to the west or to the east of Chelmsford parallel to the existing 400 kV overhead line. Whilst noting the respondent's preference for one of these alternatives, no new factors have been identified nor new evidence provided nor identified to remove the basis for previous decision making. Firstly it is noted that our assessments of the Project alignment are that it is not unacceptable in policy terms and there is no specific need therefore to change, nonetheless we have			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>reviewed other route alternatives. The eastern route around Chelmsford remains less preferred and no change to the fundamental constraints to successful routeing have been identified or proposed. We have also previously reviewed a more westerly alignment which would be routed away from Little Waltham diverting from the south of Great Leighs towards Pleshey and then southwards past Great Waltham towards Chignal Smealey. Whilst noting a reduction in some effects for this more western alternative, it would be a longer route by 2.5 km to 3 km with a degree of transfer of effects. Given that none of the effects arising for the Project alignment are considered to be at a level which is unacceptable in policy terms, National Grid continues to prefer the Project alignment and for the reasons stated the eastern and western alternatives are not progressed.</p> <p>In response to feedback received during the 2024 statutory consultation and 2025 targeted consultations we have considered the application of the mitigation hierarchy including alternative pylon types and the case for the use of underground cable. In respect of the use of underground cable, the location is not designated in terms that engage a switch from the starting presumption in NPS EN-5 of the acceptability of overhead line. Nor do we consider that the effects engage with the thresholds associated with paragraph 2.9.23 of NPS EN-5 to also prompt to the use of underground cable in certain other areas. Even if the thresholds were met a likely design requirement would</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>be Cable Sealing End (CSE) compounds somewhere northwards of TB136 and southwards of TB143 which bring their own effects and would be at an additional cost that we do not consider to be justified given the levels of effect.</p> <p>We have also considered pylon type and localised alignment variations responding to feedback from Historic England and other stakeholders. This includes the stakeholder feedback in this case to consider a western alternative route and alternative pylons. We do not agree that T pylons are an appropriate design selection, as in this where they will be viewed in most cases against vegetation and appear more stark than the alternative lower height lattice pylon. We do however consider that a low height lattice pylon will be beneficial for a section of the route north of the River Chelmer. This is a revision aimed specifically to reduce impacts on nearby designated heritage assets, including Little and Great Waltham Conservation Areas and a designed garden avenue view from the grade I Langleys listed building. As part of this refinement, the alignment has been adjusted in combination with some use of lower-profile pylons to reduce visibility and reduce the impact of the infrastructure on the historic landscape and its setting. To the south of the river we have considered feedback on arrangements including standard lattice pylons (requires two pylons) as well as arrangements with low height lattice pylons (which requires three pylons). The latter positions a pylon close to Chelmsford</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Road and a relatively direct view from a home and for these reasons is less preferred. The Project, subject to confirming certain technical details, will progress using the defined LoD with the use of two standard pylons between TB143 and the river with four low height pylons to the north of the river in place of three low height pylons shown on the works plans.				
9-7.225	Suggest that the Project should be routed to the west of the Chignals, including the Westerly alternative and any different westerly alignments not picked up on in the Design Development Report (DDR). With this, suggest that the Project should be routed parallel to Fox Road/Mashbury Road to the west of Great Waltham before turning south through a gap between Chignal Smealey and Mashbury (e.g. to reduce impact on great crested newts at respondent's property without substantially adding to the length of the route or creating technical issues)	In response to feedback received during the 2024 statutory consultation and the 2025 targeted consultations, National Grid has considered alternative alignments (which includes that suggested by the respondent to go north of Great Waltham) to the east and west of Chelmsford, modifications to the alignment consulted upon along with the selection of pylon type as well as the justification for the use of underground cable. In the 2022 Corridor and Preliminary Routing and Siting Study (CPRSS) available on the Project website and in the Design Development Report's, National Grid set out the challenges associated with routeing either further to the west or to the east of Chelmsford parallel to the existing 400 kV overhead line. Whilst noting the respondent's preference for one of these alternatives, no new factors have been identified nor new evidence provided nor identified to remove the basis for previous decision making. Firstly it is noted that our assessments of the Project alignment are that it is not unacceptable in policy terms and there is no specific need therefore to change, nonetheless we have reviewed other route			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		alternatives. The eastern route around Chelmsford remains less preferred and no change to the fundamental constraints to successful routeing have been identified or proposed. We have also previously reviewed a more westerly alignment which would be routed away from Little Waltham diverting from the south of Great Leighs towards Pleshey and then southwards past Great Waltham towards Chignal Smealey. Whilst noting a reduction in some effects for this more western alternative, it would be a longer route by 2.5 km to 3 km with a degree of transfer of effects. Given that none of the effects arising for the Project alignment are considered to be at a level which is unacceptable in policy terms, National Grid continues to prefer the Project alignment and for the reasons stated the eastern and western alternatives are not progressed. Effects are assessed and presented in the EIA and this has identified any need for additional mitigation. The results of the EIA are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application.				
9-7.226	Oppose the change to the Project at Chignal St James (Para 4.15.52 of the April 2024 Non-Statutory Consultation Feedback Report) as Pylon TB154 has been moved from a well screened location into a field adjacent to Mashbury Road (right next to the respondent's property (address provided by	The change is actually described from para 5.4.188 52 of the 2024 Non-Statutory Consultation Feedback Report and is related to a slight straightening of the alignment to reduce from four angle pylons to two angle pylons to increase consistency with Holford Rule 3 and also seek to balance the position of pylons so that the			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	respondent) where it will be clearly visible from first floor windows) and the benefit of moving Pylon TB153 further from the road on the other side is minimal (as it is still sited in clear view in the centre of an open field) / Suggest that Pylon TB154 is relocated back to the previously proposed location (e.g. to mitigate impact on residence)	distance to properties is more equidistant. A summary of the Holford Rules is provided within Appendix I22 of this report. On the 2024 preferred draft alignment, the properties to north and south are each approximately 190 m from the nearest pylon (now numbered TB155 and TB156. A move to the original position of TB156 (previously TB153) to the original position would not be possible due to unbalanced span lengths and would only be achieved by increasing effects on an adjacent residential property. No change is therefore proposed.				
9-7.227	Suggest relocation of Pylons TB120 to TB123 away from Boreham Road (e.g. to mitigate impact on heritage, the environment, business and property) (address provided by respondent)	National Grid has considered the respondent's feedback, due to multiple constraints in this area such as woodland, residential properties and listed buildings, it is not possible to move the alignment between TB120 and TB123 (now TB122 and TB125) further south away from the respondent's property without transferring or increasing effects on other properties or increasing woodland loss. We are therefore not proposing a change to the alignment at this location. National Grid has completed the Environmental Impact Assessment (EIA) for the Project. The results of this assessment are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application. The ES identifies and assesses the likely significant effects on the environment resulting from the construction of the Project and recommends appropriate mitigation measures (in			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		consultation with relevant stakeholders) to reduce potential effects				
9-7.228	Request that Pylon TB167 is moved further west away from the respondent's property	National Grid has reviewed the location of TB167 (now TB169) following feedback to move this pylon further west. In order to move TB167 further west, TB168 (now TB170) would have to move north-west, which would then require an additional pylon between TB168 and TB169 (now TB171) in order to maintain the span length required for the road crossing. This route would also be slightly longer and less direct, therefore less consistent with the Holford Rules (see Appendix I22 of this report). Due to the additional pylon which would increase effects on other properties, we are therefore not proposing to change the location of this pylon.			X	
9-7.229	Suggest that the Project is routed in the 'white land' to the east of the A120 (e.g. the direct routes between the Boreham and Rawreth substations) and that underground cables are used at this location (e.g. to mitigate impact on Chelmsford in Metropolitan Green Belt)	In the Corridor and Preliminary Routing and Siting Study (CPRSS) and in the 2023 and 2024 -Design Development Report's (available on the Project website), National Grid sets out the challenges associated with routing to the east of Chelmsford parallel to the existing 400 kV overhead line, which is the design solution required to achieve the direct route between the two substations the respondent notes. Whilst noting the respondent's preference, no new factors have been identified nor new evidence provided to reduce the greater effects or address the constraints			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		to routeing. As such the eastern alignment remains less preferred and no change has been proposed.				
9-7.230	Suggest that the Project should follow a more direct route between Pylon TB160 and TB168 (plan and visualisations provided by respondent; e.g. for cost saving to National Grid through a more direct route, removing a turning point and reducing the number of pylons needed; to mitigate impact on listed lane, listed building, residents, farming; for improved site access for construction period; given that this change required little change to published draft orders). Although the area is constrained due to existing gas and oil pipelines on site measurement suggests that the revised siting of Pylon TB164 is viable and access is practical. With this, suggest that an engineer or designer from National Grid should visit the site to assess this change request (e.g. as a desktop assessment is insufficient)	National Grid has considered the respondent's feedback and has reviewed multiple alternative alignments in the vicinity of Writtle, including between TB160 and TB168 (now TB162 – TB170). Due to the presence of gas and oil pipelines, woodland, an historic landfill and various Grade II listed buildings and residential properties, the current alignment is preferred, and we are not proposing a change to the alignment in this location.			X	
9-7.231	Suggest that the Project should follow a north-western route around Great Waltham (plan provided by respondent, e.g. to mitigate impact on residences and listed properties)	In response to feedback received during the 2024 statutory consultation and the 2025 targeted consultations, National Grid has considered alternative alignments (which includes that suggested by the respondent to go north of Great Waltham) to the east and west of Chelmsford, modifications to the alignment consulted upon along with the selection of pylon type as well as the justification for the use of underground cable. In the Corridor and Preliminary Routing and Siting Study			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>(CPRSS) published as part of the 2022 non-statutory consultation and in the Design Development Report's, National Grid set out the challenges associated with routeing either further to the west or to the east of Chelmsford parallel to the existing 400 kV overhead line. Whilst noting the respondent's preference for one of these alternatives, no new factors have been identified nor new evidence provided nor identified to remove the basis for previous decision making. Firstly it is noted that our assessments of the Project alignment are that it is not unacceptable in policy terms and there is no specific need therefore to change, nonetheless we have reviewed other route alternatives. The eastern route around Chelmsford remains less preferred and no change to the fundamental constraints to successful routeing have been identified or proposed. We have also previously reviewed a more westerly alignment which would be routed away from Little Waltham diverting from the south of Great Leighs towards Pleshey and then southwards past Great Waltham towards Chignal Smealey. Whilst noting a reduction in some effects for this more western alternative, it would be a longer route by 2.5 km to 3 km with a degree of transfer of effects. Given that none of the effects arising for the Project alignment are considered to be at a level which is unacceptable in policy terms, National Grid continues to prefer the Project alignment and for the reasons stated the eastern and western alternatives are not progressed. Effects are assessed and presented in the EIA and this</p>

		has identified any need for additional mitigation. The results of the EIA are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application.				
9-7.233	Oppose the change to the location of Pylon TB160 as it has been moved to the centre of respondent's field (e.g. concern about impact on farming and soil compaction from the haul road), and suggest that Pylon TB160 is relocated back to its previous location on the northern boundary of the field (plan provided by respondent)	<p>National Grid notes the respondent's feedback. TB160 was moved to its current location as it is further from properties on Roxwell Road as well as technical issues requiring more space for stringing of the overhead conductors, as well as addressing flood risk concerns, by moving the pylon out of the flood zone associated with Roxell Brook. We therefore are not proposing a change to the alignment in this location. The haul road is temporary for construction and land will be reinstated after construction is completed. Should any landowner have any specific queries regarding impacts to farming or compensation please contact the Project lands team to discuss:</p> <p>Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.</p> <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD.</p>			X	
9-7.234	Criticism that the Preliminary Environmental Report (PEIR) Volume 3, Technical Appendices 3-4, Section	ES Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1) looked more in-			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	3.7.84-87 – pp 705 ff – contains inaccurate, out of date, incorrect information on the roman site near to Pylon TB147 / Criticism that the assessment is based on the Heritage Gateway entry from 1993 (Heritage Environment Record 1013) which is 30 years old and does not account for the more recent archaeological investigations reported on last year / Suggest that National Grid contact landscape archaeologist (contact details provided to National Grid) about the roman site	depth at this asset with data received from the HER. The information from the HER was detailed and was part of the December 2024 data batch. As the asset was located towards the periphery of the 250 m study area for non-designated heritage assets, and that the HER reports that the asset was most likely quarried away from later extraction activities and therefore destroyed, the asset was given a proportional assessment and not taken forward to the Environmental Statement assessment stage.				
9-7.235	Concern that Pylons TB157, TB158 and TB159 are located at old Roxwell Quarry, Roxwell Landfill at Boyton Hall Farm (e.g. as they are sited on the landfill cap and are likely to fail)	<p>Roxwell Quarry is located between pylons TB155 (now TB157) and TB156 (now TB158).</p> <p>Boyton Cross Landfill is located between pylon TB159 (now TB161) and Roxwell Road.</p> <p>TB155 (now TB157), TB156 (now TB158) and TB159 (now TB161) are located within 50m of historic landfill sites. TB157 (now TB159) and TB158 (now TB160) are not within proximity of historic landfill sites. National Grid will continue to engage with the owner of the Roxwell Quarry and Boyton cross landfills to verify their site boundaries and to agree constriction and access methodologies in proximity to the sites.</p> <p>All pylons have been sited to fall outside of the known boundary of historic landfill sites. Pylons within these areas have been assessed through our geotechnical risk assessment of the route. Landfill owners have been contacted by the Projects land agents as parts of the geotechnical investigations completed to date.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Environmental testing was also undertaken at the proposed pylon positions to assess for any contamination leakage that may be occurring from the landfill site (none were found).				
9-7.236	Suggest alternative route for the Project between Pylons TB159 and TB164 (shown on plan as west of the currently proposed route), so that Pylons TB160 to TB163 are relocated further away from footpaths and residences along the A1060 (plan provided by respondent)	National Grid has considered the respondent's feedback and has reviewed multiple alternative alignments in the vicinity of Writtle, including a more western alignment between TB159 and TB164 (now TB161 and TB166). Due to the presence of gas and oil pipelines, woodland, an historic landfill and various Grade II listed buildings and residential properties, the alignment requested by the respondent is not preferred either technically nor environmentally and we are therefore not proposing a change in this location.			X	
9-7.237	Suggest alternative route for the Project in Section F to follow alongside the A12 and existing overhead lines (plan provided by respondent)	In the Corridor and Preliminary Routing and Siting Study (CPRSS) and in the 2023 and 2024 Design Development Reports (available on the Project website), National Grid sets out the challenges associated with routeing to the east of Chelmsford parallel to the existing 400 kV overhead line. Whilst noting the respondent's preference, no new factors have been identified nor new evidence provided nor identified to reduce the greater effects or address the constraints to routeing. As such the eastern alignment remains less preferred and no change has been proposed.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-7.238	Suggest the use of underground cables for the Project at the Chelmer Valley Crossing	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is " <i>that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)</i> ". Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at the Chelmer Valley crossing would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
9-7.239	Suggest that the Project is routed further west of Chelmsford and the Chignalls villages (e.g. to reduce impact on residents)	In response to feedback received during the 2024 statutory consultation and the 2025 targeted consultations, National Grid has considered alternative alignments (which includes that suggested by the respondent to go north of Great Waltham) to the east and west of Chelmsford, modifications to the alignment consulted upon along with the selection of pylon type as well as the justification for the use of underground cable. In the Corridor and Preliminary Routing and Siting Study (CPRSS) published as part of the 2022 non-statutory consultation and in the Design Development Report's, National Grid set out the challenges associated with routeing either further to the west or to the east of Chelmsford parallel to the existing 400 kV overhead line.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Whilst noting the respondent's preference for the western alternative, no new factors have been identified nor new evidence provided nor identified to remove the basis for previous decision making. Firstly it is noted that our assessments of the Project alignment are that it is not unacceptable in policy terms and there is no specific need therefore to change, nonetheless we have reviewed other route alternatives. The eastern route around Chelmsford remains less preferred and no change to the fundamental constraints to successful routeing have been identified or proposed. We have also previously reviewed a more westerly alignment which would be routed away from Little Waltham diverting from the south of Great Leighs towards Pleshey and then southwards past Great Waltham towards Chignal Smealey. Whilst noting a reduction in some effects for this more western alternative, it would be a longer route by 2.5 km to 3 km with a degree of transfer of effects. Given that none of the effects arising for the Project alignment are considered to be at a level which is unacceptable in policy terms, National Grid continues to prefer the Project alignment and for the reasons stated the eastern and western alternatives are not progressed. Effects are assessed and presented in the EIA and this has identified any need for additional mitigation. The results of the EIA are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-7.240	Concern about the impact of Pylons TB189, TB190 and TB191 will have on sheep farm / Oppose the change to the Project at this location as five of the respondent's fields are now impacted and suggest that pylons should be relocated to field boundaries. Specifically, suggest that Pylon TB190 is relocated westward to approximately grid ref. TQ66594 98563 and that Pylon TB191 is relocated westward to grid ref. TQ6654598268 (e.g. to reduce the number of fields to be crossed by the Project; avoid the removal of large oak tree; to mitigate impact on residents; though it would move the Project closer to the church, it would be preferable to the original planned route in the Wid Valley to the west of the churches)	A change has been made in this location to respond to the respondent's feedback and also to requests to reposition pylons to either side of Buttsbury Church and to reduce visual effects. TB190 and TB191 (now TB192 and TB194) have been moved to the west and south and as close to field boundaries as possible. The respondent's preference for the original positioning of the graduated swathe in the 2022 non-statutory consultation is noted, but in the absence of new evidence or the identification of further factors it is considered that the reasons for change, most notably effects on Grade I listed heritage assets, remain valid and no change back to that position is proposed.			X	X
9-7.241	Suggest alternative route for the Project to the west of Writtle (map provided by respondent), and criticism that National Grid say that they have considered and rejected the alternative route but have not provided evidence as to why the change request has not been proceeded with (e.g. no relocation of pylons to mitigate impact on farming; no survey on alternative route; no proposed relocation of the haul road; no ability to negotiate licence agreements that fit respondent's specific farm, so National Grid have served Section 174 Compulsory Notices)	National Grid has carefully considered the alternative routes proposed and acknowledges some improved compliance with some aspects of the Holford Rules in some cases but has also identified aspects where there is reduced compliance for those routes. A summary of the Holford Rules is provided within Appendix I22 of this report. Most notably and through discussion with Natural England are the potential effects on ancient woodland. Whilst noting that some parts have been coppiced, the advice received is that more regular coppicing (as required to maintain clearances) would be incompatible with the retention of the habitat as ancient woodland through change of regime. Further detail on the reasons is set out in the Design Development Report (DDR)			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>published in 2023 (paragraph 5.5.129) and in the DDR published in 2024 (paragraph 5.4.196).</p> <p>In light of the feedback from Natural England there was no justification for completing surveys on an alternative route that was not able to be taken forwards. On the other points we have to balance the potential for effects on a range of factors. In this case the route is approximately mid-way between properties and a change around TB175 to TB176 to follow field boundaries would position the line much closer to a number of residential properties potentially oversailing gardens with increased vegetation loss and the pylons would still be within fields slightly away from the field edge to avoid construction works within gardens if possible. This may actually lead to increased effects on farming compared with a more midfield position. Temporary construction access is routed, in the main, along the alignment and usually set back from hedgelines to protect any tree root zones, as otherwise route length and effects are increased by the need for additional spurs out to pylon works locations.</p>				
9-7.242	Concern that the access routes over private land would impact the respondent's security by providing three accesses onto private land / Request information relating to how the access will be secured / Oppose additional access options and routes onto respondent's farm	During construction and maintenance of the overhead line, both National Grid operational teams and the construction Principal Contractor have a duty to control construction access to the work site. In order to comply with this requirement a detailed plan would be developed which demonstrates how site access would be controlled. During this time, Access Accommodation			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Engineers would engage with landowners to review the plans on a site-by-site basis. The measures for controlling and securing access points during construction are set out in the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) and will be implemented by the Principal Contractor in line with Project requirements.</p> <p>Any site specific considerations relating to landowner activities and concerns can be flagged during engagements with our lands team who will pass on the relevant information to the delivery contractors.</p> <p>National Grid notes the respondent's feedback with regards to the permanent access route and also notes that the most appropriate route also varies in response to seasonal variation in land uses. As the Project progresses into the heads of terms and voluntary agreement stage there will be an opportunity to discuss and agree permanent access rights in more detail. No physical works are required for this permanent access route as part of the Project as this will not be used for construction. Access may be required in the future, for maintenance and surveys and therefore National Grid will look to agree the most suitable access route at that point, taking into account the landowner and National Grid's requirements.</p>				
9-7.243	Criticism of the placement of a pylon in the middle of respondents field (e.g. due to the impact on the productivity of the land, including concern that	National Grid notes the respondent's feedback. In the case of pylon TB188 (as numbered in the statutory consultation) this was moved from the north of the river			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	National Grid will to take out insurance insure cover the restoring / rebuilding a pylon and the overhead lines, loss of power to the consumers affected, repairs / replacement of the tractor and equipment and potentially loss of life	<p>to south of the river in response to technical review by the engineering team and an identified need to reduce construction risk by moving it out of an area at increased risk of flooding. We note the respondent's feedback regarding concern about the impact on productivity of the land, when requested, we do try to position pylons at the edges of fields along hedgelines where possible including when positioning TB188 (now TB190), which is as far into the corner of the field as possible.</p> <p>The location of pylons is carefully considered so as to balance the needs of landowners and occupiers against the need to build an economic, efficient and coordinated network for electricity transmission.</p> <p>National Grid has insurance arrangements, including public liability insurance, to cover the potential liabilities arising from the construction, operation, and maintenance of the network.</p>				
9-7.244	Suggest that the haul road is relocated further west away from respondent's property near Ingatestone Road (e.g. to mitigate the noise, dust and visual impact on residence), and suggest that Pylon TB190 is relocated further north and/or west away from the respondent's property	National Grid notes the respondent's feedback, TB190 (now TB193) has been moved further west and south away from the respondent's property as requested. The haul road in this location remains to the east of the alignment due to the need to tie in with the cross over bellmouth which is positioned in a location that meets highways safety requirements. We have moved the haul road as far west as possible.			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-7.245	Suggest underground High Voltage Direct Current (HVDC) cables through Roxwell Parish (e.g. due to its character landscape features)	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is " <i>that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)</i> ". Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at Roxwell would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
9-7.246	Criticism of the Project between Pylons TB129 and TB131, due to the negative impact on the nine residences on Braintree Road impacting views and footpaths / Request these pylons are moved further northeast / east to the open land, to increase the distance from Braintree Road (at the least request Pylon TB130 is moved to reduce impact on views or have longer spans between pylons)	The alignment is more than 400 m from the properties indicated on Braintree Road, a distance that is not considered to lead to effects that are inconsistent with NPS EN-5. A change to move the pylons further away would require additional angle pylons or a longer route to be adopted and be less consistent with Holford Rule 3. A summary of the Holford Rules is provided within Appendix I22 of this report. No specific change in response to this feedback is proposed. However, we note that subject to the outcome of the Minerals Plan consultation, pylons northwards of TB131 (now pylon TB133) may be moved to the east to reduce effects on minerals extraction.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-7.247	Suggest that the Project is routed to the east of Chelmsford (e.g. to protect The Chignalls) / Suggest that the Project is routed to the eastern side of Chelmsford where the presence of wooded river valleys could host the line and provide topographical mitigation	In the Corridor and Preliminary Routing and Siting Study (CPRSS) published as part of the 2022 non-statutory consultation and in the 2023 and 2024 Design Development Report's (available on the Project website), National Grid sets out the challenges associated with routeing to the east of Chelmsford parallel to the existing 400 kV overhead line. Whilst noting the respondent's preference, no new factors have been identified nor new evidence provided nor identified to reduce the greater effects or address the constraints to routeing. As such the eastern alignment remains less preferred and no change has been proposed.	X		X	
9-7.248	Suggest that Pylons TB160, TB161 and TB162 are relocated further away from respondent's property on Roxwell Road (address provided by respondent), behind the row of poplars / to the west, or suggest the use of underground cables for the Project at this location	National Grid has considered positions further to the west but the layout of two pipelines running broadly north to south restricts the positioning of pylons without requiring additional angle pylons less consistent with Holford Rule 3. A summary of the Holford Rules is provided within Appendix I22 of this report. In respect of underground cables, we are guided by the position set out in National Policy Statement (NPS) EN-5 which identifies the presumed acceptability of overhead lines supported on pylons as the appropriate technology. The other conditions that may change this presumption, as set out in the NPS, do not apply in this location.			X	
9-7.249	Suggest that reinstated groundworks for the Project at Anglia Ruskin University (ARU) Writtle need to be	Soil surveys would be undertaken along the route of the Project to identify the nature of the soils present, to include soil texture, topsoil horizon thickness and			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	exceptional to withstand equine movement without causing potential hazards	sensitivity in relation to soil handling and reinstatement. This information would be detailed within the Soil Management Plan (forming part of the Construction Environmental Management Plan (CEMP)) which would set out how different soils (topsoil and subsoil) would be handled and reinstated where applicable to ensure they are restored to as close to their pre-construction condition.				
9-7.250	Suggest that the Project is rerouted between Pylons TB120 and TB132 away from Fuller Street and Chatham Green (e.g. to mitigate impact on commercial value)	National Grid has considered the respondent's feedback highlighting a preference for an alternative alignment between TB120 and TB132 away from Fuller Street and Chatham Green. In the absence of a specific basis for the change or a proposed alternative alignment, we have considered this feedback by following the guidance in the Holford Rules in developing the draft alignment. Guidelines on overhead line routeing are known as the "Holford Rules" which remain a valuable tool in selecting and assessing potential overhead line route options as part of the options appraisal process. We are therefore not proposing a change to the alignment at this location, A summary of the Holford Rules is provided within Appendix I22 of this report.			X	
9-7.251	Suggest an alternative route for the Project east of Chelmsford from Pylon TB91, South of Kelvedon, through rural area to Boreham and then along present infrastructure of roads and railways and	In response to feedback received during the 2024 statutory consultation and the 2025 targeted consultations, National Grid has considered alternative alignments (which includes that suggested by the respondent to go east of Chelmsford from Pylon TB91			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	rejoining the proposed route for the Project around Pylon TB189, near Ingatestone	following roads and railways to rejoin near TB189) to the east and also to the west of Chelmsford, modifications to the alignment consulted upon along with the selection of pylon type as well as the justification for the use of underground cable. In the Corridor and Preliminary Routing and Siting Study (CPRSS) published as part of the 2022 non-statutory consultation and in the Design Development Report's, National Grid set out the challenges associated with routeing either further to the west or to the east of Chelmsford parallel to the existing 400 kV overhead line. Whilst noting the respondent's preference for one of these alternatives, no new factors have been identified nor new evidence provided nor identified to remove the basis for previous decision making. Firstly it is noted that our assessments of the Project alignment are that it is not unacceptable in policy terms and there is no specific need therefore to change, nonetheless we have reviewed other route alternatives. The eastern route around Chelmsford remains less preferred and no change to the fundamental constraints to successful routeing have been identified or proposed. There are some locations where there is no available space for overhead line or underground cable and following roads and railways transfers effects to other receptors. We have also previously reviewed a more westerly alignment which would be routed away from Little Waltham diverting from the south of Great Leighs towards Pleshey and then southwards past Great Waltham towards Chignal Smealey. Whilst noting a				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		reduction in some effects for this more western alternative, it would be a longer route by 2.5 km to 3 km with a degree of transfer of effects. Given that none of the effects arising for the Project alignment are considered to be at a level which is unacceptable in policy terms, National Grid continues to prefer the Project alignment and for the reasons stated the eastern and western alternatives are not progressed. Effects are assessed and presented in the EIA and this has identified any need for additional mitigation. The results of the EIA are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application.				
9-7.252	Suggest that the Project follows the Great Waltham Alternative Route (as on page 58 of the National Grid Design Development Report June 2023)	In response to feedback received during the 2024 statutory consultation and the 2025 targeted consultations, National Grid has considered alternative alignments (which includes that preferred by the respondent to go on the alternative route to the west of Great Waltham) to the east and west of Chelmsford, modifications to the alignment consulted upon along with the selection of pylon type as well as the justification for the use of underground cable. In the Corridor and Preliminary Routing and Siting Study (CPRSS) published as part of the 2022 non-statutory consultation and in the Design Development Report's, National Grid set out the challenges associated with routeing either further to the west or to the east of Chelmsford parallel			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>to the existing 400 kV overhead line. Whilst noting the respondent's preference for one of these alternatives, no new factors have been identified nor new evidence provided nor identified to remove the basis for previous decision making. Firstly it is noted that our assessments of the Project alignment are that it is not unacceptable in policy terms and there is no specific need therefore to change, nonetheless we have reviewed other route alternatives. The eastern route around Chelmsford remains less preferred and no change to the fundamental constraints to successful routeing have been identified or proposed. We have also previously reviewed a more westerly alignment which would be routed away from Little Waltham diverting from the south of Great Leighs towards Pleshey and then southwards past Great Waltham towards Chignal Smealey. Whilst noting a reduction in some effects for this more western alternative, it would be a longer route by 2.5 km to 3 km with a degree of transfer of effects. Given that none of the effects arising for the Project alignment are considered to be at a level which is unacceptable in policy terms, National Grid continues to prefer the Project alignment and for the reasons stated the eastern and western alternatives are not progressed. Effects are assessed and presented in the EIA and this has identified any need for additional mitigation. The results of the EIA are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental</p>

Effects are assessed and presented in the EIA and this has identified any need for additional mitigation. The results of the EIA are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-7.255	Suggest an alternative route for the Project east of Sandy Wood from around Pylon TB111, Fairstead Station, turning south-west, past east of Sandy Wood, across Longfield Solar Farm (Secretary of State approved) to above Noakes Farm and turn west South of Lyons Hall Wood, crossing the A131 and rejoining the proposed route for the Project at around Pylon TB132 or TB133, Great Waltham	This alternative route east of Sandy Wood is around 15 % longer (approximately seven km compared with around 6 km) than the alignment and is considered likely to require several more angle pylons to route around several areas of ancient woodland and many dispersed residential properties, therefore less consistent with Holford Rule 3. A summary of the Holford Rules is provided within Appendix I22 of this report. Whilst removing or reducing effects experienced at some residential properties these would be transferred to other residential properties near the alternative alignment with no material benefit.			X	
9-7.256	Suggest that the Project is rerouted to run east and south of Chelmsford running in close-parallel with either existing electricity infrastructure or more general infrastructure such as major roads (e.g. to restrict impacts to areas already affected by its infrastructure, in order to reduce adverse landscape, visual and other harms overall) / Suggest that the Project is rerouted through Grades 3 and 4 land to the south and east of Chelmsford / Suggest that the Project is re-routed to the south and east of Chelmsford or slightly closer to Bushy Wood (map provided by respondent)	In response to feedback received during the 2024 statutory consultation and the 2025 targeted consultations, National Grid has considered alternative alignments (which includes that preferred by the respondent to go to the east of Chelmsford in close parallel to existing overhead lines or transport infrastructure) to the east and west of Chelmsford, modifications to the alignment consulted upon along with the selection of pylon type as well as the justification for the use of underground cable. In the Corridor and Preliminary Routing and Siting Study (CPRSS) published as part of the 2022 non-statutory consultation and in the Design Development Report's, National Grid set out the challenges associated with routing either further to the west or to the east of Chelmsford parallel to the existing 400 kV overhead line. Whilst noting the	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>respondent's preference for one of these alternatives, no new factors have been identified nor new evidence provided nor identified to remove the basis for previous decision making. Firstly it is noted that our assessments of the Project alignment are that it is not unacceptable in policy terms and there is no specific need therefore to change, nonetheless we have reviewed other route alternatives. The eastern route around Chelmsford remains less preferred and no change to the fundamental constraints to successful routeing have been identified or proposed with other challenges to following existing infrastructure also still present leading to a route no better performing even if the challenges could be overcome. We have also previously reviewed a more westerly alignment which would be routed away from Little Waltham diverting from the south of Great Leighs towards Pleshey and then southwards past Great Waltham towards Chignal Smealey. Whilst noting a reduction in some effects for this more western alternative, it would be a longer route by 2.5 km to 3 km with a degree of transfer of effects. Given that none of the effects arising for the Project alignment are considered to be at a level which is unacceptable in policy terms, National Grid continues to prefer the Project alignment and for the reasons stated the eastern and western alternatives are not progressed. Effects are assessed and presented in the EIA and this has identified any need for additional mitigation. The results of the EIA are provided in the Environmental Statement</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		(ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application.				
9-7.257	Suggest that the Project follow a more western alignment (as per the Design Development Report (April 2024) at 5.4.179 and Fig. 5.25 Alignment at Great Waltham) diverting west from Pylons TB024/TB025 on the 2024 preferred draft alignment, passing to the north of Warner's Farm before turning south (e.g. to mitigate impact on heritage and residents at Braintree Road and between Little Waltham and Great Waltham)	National Grid has considered alternative alignments in the vicinity of Little and Great Waltham, but they are less preferred. A more westerly alignment was routed away from Little Waltham diverting towards Pleshey and then southwards towards Chignal Smealey, avoiding residential properties on Braintree Road. Whilst noting some reduction in effects for some environmental topics, the alternative is a longer route and overall is considered less preferred. In making the decision, National Grid is mindful that the design of the Project, as refined following statutory consultation and targeted consultations, is consistent with relevant policy. Environmental assessment has not identified any further information to alter the preference for the route and no new evidence is provided by the respondent nor further decision making factors identified. More locally in this section we took forward a slight change of alignment following statutory consultation. The change adjusts some pylon positions, along with a change of pylon type to low height lattice pylon for a section of the alignment to the north and south of the River Chelmer. The alignment and pylon type change collectively reduce effects on heritage assets (particularly from a view from the rear of the Grade I Listed Langleys), veteran trees and reduce community effects in line with the feedback.			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		The effects of the Project are assessed and presented in the Environment Statement (ES) and this has identified any need for additional mitigation.				
9-7.258	Suggest that the Project uses underground cables between Little Waltham and Great Waltham, extending to include Larks Lane and Broads Green	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is " <i>that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)</i> ". Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at the Walthams would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
9-7.259	Criticism that the Project runs close to an existing redundant overhead line through the area of South Woodham Ferrers (e.g. the overhead line was due to be removed but has not been due to lack of funding, so criticism that National Grid have not removed this and are also going to impact the environment further with the Project)	The overhead line referred to is around 12 km to the east and is the connection to the Bradwell Nuclear site. It is not functionally connected to the Project so it is not for the Project to review the status of these assets. Alternative connections potentially using this route (subject to upgrade) were considered but are less preferred as they would require more infrastructure than proposed for the Project.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-7.260	Suggest the Project should follow the A131 to Rettendon Common (e.g. a direct route)	National Grid has considered this feedback and the detail of the proposed route via the Rettendon Common area which has similarities with alternatives routeing to the east of Chelmsford and potentially via Rayleigh. Whilst noting the opportunity in some sections to adopt an alignment close to the existing 400 kV overhead line (potentially in place of an undergrounded 132 kV connection) the route is not achievable due to the absence of space for either a 400 kV overhead line or underground cable at Sandon. Adopting the route of the 132 kV is not possible as it would require oversail of either the UK Power Networks substation or the adjacent school, neither of which are considered appropriate. Even if this was able to be addressed, any such route would have its own effects with the potential for these effects to be greater because of the restrictions by routeing alongside another overhead line. In the absence of new evidence or further information on new factors we continue in our view that this alternative is not deliverable, therefore no change is proposed.			X	
9-7.261	Suggest the use of underground cables for the Project between Chatham Green and Writtle	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>is “that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)’. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project between</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Chatham Green and Writtle would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
9-7.262	<p>Suggest that the Project is transposed to the existing 400kV overhead line (south) at Pylon TB108 (e.g. the existing 400kV overhead line is used for the Project at this location) with a new route for the existing overhead line to the west of its current position (plans provided by respondent) (e.g. to avoid the need to use underground cables for the Project to go under the existing 400kV overhead line), as follows:</p> <ul style="list-style-type: none"> - Suggest that the new overhead line is then either routed across the existing 132kV overhead line to the south of Fuller Street and then along the eastern border of Longfield, or that the new overhead line is routed to the south across Longfield with the existing 132kV overhead cables replaced by underground cables when the new overhead line; - Then, suggest a single route for the new overhead line from near Waltham Road to the south (e.g. both route options join here), with the existing 132kV underground cables changing back to overhead line at this location should the second route option be chosen; 	National Grid has considered this feedback and the detail of the proposed route which has similarities with corridors L and Q that were considered in the 2022 Corridor and Preliminary Routeing and Siting Study (CPRSS) (available on the Project website). Whilst noting the opportunity in some sections to adopt an alignment close to the existing 400 kV overhead line (in place of an undergrounded 132 kV connection) the challenge of the absence of space for either a 400 kV overhead line or underground cable at Sandon remains. Adopting the route of the 132 kV overhead line is not possible as it would require oversail of either the UK Power Networks substation or the adjacent school, neither of which are considered appropriate. In the absence of new evidence or further information on new factors we continue in our view that this alternative is not deliverable, therefore no change is proposed.	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<ul style="list-style-type: none"> - At Boreham, suggest that the existing 132kV overhead line should be replaced by underground cables and the new overhead line is routed in its place; - To the south of Boreham, suggest that the new overhead line could follow parallel to the existing 400kV overhead line rather than following the existing route of the 132kV overhead line (e.g. to mitigate impact on the Conservation Area; - At Howe Green, suggest that the new overhead line either follows the route of the existing 132kV overhead line (which should be replaced by underground cables), or that if transposing of the lines is possible, that the new overhead line should be routed to the east of the A12 (e.g. to mitigate impact on Sandon Village); - Suggest that the new overhead line rejoins the currently proposed Project at Pylon TB189 near Ingatestone 					
9-7.263	Suggest alternative route for the Project around the east of Chelmsford (to Pylon TB189 near Ingatestone) (plans provided by respondent), with use of underground cables where the Project would cross the existing 400kV overhead line near Howe Green	In response to feedback received during the 2024 statutory consultation and the 2025 targeted consultations, National Grid has considered alternative alignments (which includes that suggested by the respondent to go to the east of Chelmsford as well as alternatives to the west of Chelmsford, modifications to the alignment consulted upon along with the selection of pylon type as well as the justification for the use of underground cable. In the Corridor and Preliminary	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Routing and Siting Study (CPRSS) published as part of the 2022 non-statutory consultation and in the Design Development Report's, National Grid set out the challenges associated with routeing either further to the west or to the east of Chelmsford parallel to the existing 400 kV overhead line. Whilst noting the respondent's preference for one of these alternatives, no new factors have been identified nor new evidence provided nor identified to remove the basis for previous decision making. Firstly it is noted that our assessments of the Project alignment are that it is not unacceptable in policy terms and there is no specific need therefore to change, nonetheless we have reviewed other route alternatives. The eastern route around Chelmsford remains less preferred and no change to the fundamental constraints to successful routeing have been identified or proposed. The feedback did note the use of underground cable to cross an existing 400kV route however that becomes superceded given that this alternative is not taken forwards. We have also previously reviewed a more westerly alignment which would be routed away from Little Waltham diverting from the south of Great Leighs towards Pleshey and then southwards past Great Waltham towards Chignal Smealey. Whilst noting a reduction in some effects for this more western alternative, it would be a longer route by 2.5 km to 3 km with a degree of transfer of effects. Given that none of the effects arising for the Project alignment are considered to be at a level which is unacceptable in</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		policy terms, National Grid continues to prefer the Project alignment and for the reasons stated the eastern and western alternatives are not progressed. Effects are assessed and presented in the EIA and this has identified any need for additional mitigation. The results of the EIA are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application.				
9-7.264	Suggest that Pylon TB188 is relocated away from respondent's land near Stock, Essex (e.g. to mitigate impact on farming and protected species (list provided by respondent)) / Oppose the change to the location of Pylon TB188 from the previous consultation / Criticism that the 2024 Design Development Report does not mention the change of positioning of Pylon TB188 onto respondent's property or provide a justification for the change, and the change was not discussed or agreed with the respondent / Criticism that National Grid have justified the change with Pylon TB188 being in moved out of an area of increased flood risk, but the respondent's land also frequently floods	<p>National Grid notes the respondent's feedback. In the case of pylon TB188 (now TB190) this was moved from the north of the river to south of the river in response to technical review by the engineering team and an identified need to reduce construction risk by moving it out of an area at increased risk of flooding.</p> <p>A Flood Risk Assessment (document reference 7.9) has been prepared that assesses the impacts of the Project on flood risk from a range of sources during its construction and operation. The FRA (document reference 7.9) includes an assessment of the impact of flooding.</p> <p>With regards to the 2024 Design Development Report (available on the Project website), this report does not describe every change made to the Project, rather focusses on a high-level description of how the Project has developed and the reasons why. The changed position of TB188 was consulted on at our statutory</p>			X

9-7.283	Concern that Pylons TB152, TB153, TB154 and TB155 are located on fields adjacent to a former mineral quarry site which are safeguarded in the Essex County Council Minerals Plan due to their significant potential for future extraction of sand and gravel / Suggest that National Grid should consider the Essex Mineral Plan Review and that the Project should be routed away from the identified mineral site at The Chignals (as in the Essex Mineral Plan Review)	Minerals can only be extracted where they are present and as a result extensive areas are identified as minerals safeguarded areas. As they are so extensive and may not actually progress, the approach taken is to consider those which have reached a particular stage within the planning system (see paragraph 5.4.4 of the 2024 Design Development Report (available on the Project website) and covering screening / scoping, allocated, being consulted upon as Regulation 18 sites. The area identified does not meet these criteria and therefore has not been avoided.			X	
9-7.284	Concern about impact of Project on respondent's estate in Margaretting (which contains residential let property, commercial let property, rented fishing lake, turkey rearing business and private run game shoot) due to impact on business, impact to the estate as a filming location, and impact to security and disturbance of woodland turkey business	Through routing and siting, National Grid has sought to avoid, as far as practicable, locations of businesses. The Development Consent Order (DCO) application is accompanied by an Environmental Statement (ES) prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 ('the Infrastructure EIA Regulations'). The ES identifies and assesses the likely significant effects on the environment, resulting from the construction and operation of the Scheme and recommends appropriate mitigation to reduce effects. ES Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) presents an assessment on the potential impacts on businesses (e.g. Furness Farm House) where visual impact would be an economic concern as a result of the Project within the study area. As part of the assessment, a range of			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>measures are considered throughout the construction phase of the Project to reduce, where practicable, disruption on businesses. These include traffic management, signage and routing measures to ensure access or partial access could be maintained where feasible. These are identified within the ES, Chapter 15: Socio-economics, Recreation and Tourism, the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).</p> <p>A landscape and visual impact assessment (LVIA) has been undertaken as part of the EIA and reported in ES Chapter 13: Landscape and Visual (document reference 6.13). The LVIA sets out the potential landscape and visual effects, which includes consideration of visual amenity of visual receptor areas (including, for example, people in communities and using public rights of way). ES Chapter 13: Landscape and Visual (document reference 6.13) is supported by ES Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3). This appendix sets out the assessment for visual receptor areas including F9 Edney Common and F10 Hylands Park which are relevant to this feedback relating to the section of the Project near Margaretting.</p> <p>Within this area the Project falls within the Brentwood Hills Landscape Character Area (LCA). The landscape assessment within ES Appendix 13.2: Landscape Baseline and Assessment (document reference 6.13.A2)</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>contains detail on the assessment of effects of the Project on landscape character.</p> <p>In regard to the Project position on landscape compensation for the landscape and visual impacts of the Project, any landscape softening that does not remove or reduce a significant residual effect but seeks to off-set the effect is classed as landscape compensation. Such landscape compensation measures (e.g. creating or enhancing natural landscape features outside of the Order Limits) are considered in relation to the mitigation hierarchy but there is no requirement under policy to compensate for all residual effects. The residual effects that remain following the application of the mitigation hierarchy and any compensation provided then falls to the Planning Balance.</p> <p>ES Chapter 6: Agriculture and Soils (document reference 6.6) presents an assessment on the potential impacts on agricultural landholdings (e.g. Furness Farm), where potential effects on agricultural operations include disturbance (where livestock are present), fragmentation, access restrictions or disruption to water supplies or land drainage. The Outline Code of Construction Practice (CoCP) (document reference 7.2) sets out the commitments to minimise the effects on agricultural landholdings, including maintaining access throughout construction. Potential effects on land drainage and water environment features are covered in</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>ES Chapter 12: Hydrology, Land Drainage and Flood Risk (document reference 6.12).</p> <p>Security is a key consideration in the planning and delivery of the Project. All construction sites will be subject to site-specific security assessments, and proportionate measures will be implemented to deter unauthorised access and theft. Where works require the temporary removal or alteration of existing gates, fences or other boundary features, arrangements will be made to maintain appropriate site security for the duration of the works. This may include temporary fencing, secure gates, or other agreed measures to ensure the property remains protected.</p>				
Environmental Impact						
9-7.285	Concern about negative impact of the Project on the Green Belt(s)	<p>To facilitate the Project, it would be necessary to route through the Metropolitan Green Belt. National Grid has considered the effects on the Green Belt and all of the options connecting into Tilbury identified in the Corridor and Preliminary Routeing and Siting Study (CPRSS) (available on the Project website) would result in new and upgraded infrastructure in the Green Belt.</p> <p>The National Electricity Transmission System (NETS) transports energy from where it is generated to where it is used, in homes, schools, hospitals, businesses, and factories. Electricity networks are an established feature in our landscapes, taking energy across open countryside to towns and cities where it is needed. To</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>ensure the national electricity network can transport energy efficiently there are numerous electricity transmission connections crossing Green Belts. Many of these connections are by way of overhead lines. By their nature, electricity transmission infrastructure (overhead lines) within the Green Belt is inevitable due to the need to transport energy around the country and the need to avoid the most built-up areas around our towns and cities (Holford Rule Supplementary Note 1 - A summary of the Holford Rules is provided within Appendix I22 of this report).</p> <p>Some electricity infrastructure such as overhead lines, are considered to be engineering operations. By the nature of their design, and the sensitive siting, some of this infrastructure such as pylons and conductors may not be considered inappropriate development in the Green Belt as they do not conflict with Green Belt purposes and preserve openness. Although overhead lines may occupy long corridors within Green Belt, they involve little physical change to the land through which they pass and leave a large majority of the land beneath them free from development and therefore open.</p> <p>The Planning Statement (document reference 5.6), submitted with the application for development consent, includes an assessment of the Project against Green Belt planning policy (as contained in National Policy Statement EN-1 and the National Planning Policy Framework).</p>

9-7.286	Concern that the Project will impact SSSIs	<p>Through routeing, siting and design development National Grid has sought to reduce, as far as practicable, impacts on biodiversity and in particular features of high ecological value such as Sites of Special Scientific Interest (SSSI). Although there are 22 SSSI within the study area, current proposals avoid the majority of impacts on SSSIs, with no long-term negative impacts anticipated on any SSSIs as a result of the Project. Potential direct and indirect impacts on each SSSI within the study area have been considered within the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8) and any necessary mitigation detailed to ensure no significant residual effects.</p> <p>National Grid will continue to engage with Natural England.</p>	X	X	X	X
9-7.287	Concern that the Project will impact ancient woodland	<p>Through routeing, siting and detailed design, National Grid has sought to reduce, as far as practicable, impacts on biodiversity and in particular features of high ecological value, such as ancient woodland. A standard 15 m buffer from construction activities has been applied where practicable. Potential direct and indirect impacts on each block of ancient woodland within the study area have been considered within the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8) and any necessary mitigation detailed to ensure no significant residual effects. An ancient woodland and veteran tree mitigation strategy is</p>	X	X	X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		included as part of the Outline Landscape and Ecological Management Plan (LEMP) (see Appendix B of the Outline LEMP (document reference 7.4)). The Outline LEMP has been developed in consultation with relevant stakeholders including Natural England.				
9-7.288	Concern that the Project will impact nature reserve / RSPB reserve / Special Protection Area (SPA)	<p>Through routing, siting and design development National Grid has sought to reduce, as far as practicable, impacts on biodiversity and in particular features of high ecological value, such as Royal Society for the Protection of Birds (RSPB) reserves.</p> <p>Potential direct and indirect impacts on RSPB reserves within the study area have been considered within the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8). No RSPB reserves are directly impacted by the Project.</p>	X	X	X	X
9-7.289	Concern that the Project will impact Ramsar site	<p>Through routing, siting and design development, National Grid has sought to reduce, as far as practicable, impacts on biodiversity and in particular features of high ecological value, such as Ramsar sites.</p> <p>Although there are 13 Ramsar sites within the study area, current proposals avoid the majority of impacts, with no long-term negative impacts anticipated on any Ramsar site as a result of the Project. Potential direct and indirect impacts on each scoped in Ramsar site has been considered within the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8) and/or Habitats Regulations Assessment</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Report (HRA) (document reference 5.3) depending on potential impact pathways. Any necessary mitigation has been detailed within the ES, HRA and the Outline Code of Construction Practice (CoCP) (document reference 7.2) to ensure no significant residual effects, as agreed with Natural England.				
9-7.290	Concern that the Project will result in a negative impact on the environment / countryside generally (no details given)	<p>National Grid has sought to reduce, as far as practicable, impacts on the environment/countryside through routeing and siting and an ongoing iterative design process which has taken on board feedback at different stages of the Project. The iterative design process sought to avoid areas of highest concern, for examples through changes to the route alignment or changes to the method e.g. trenchless crossings. National Grid have engaged with a range of stakeholders (including Statutory Environmental Bodies (SEBs) and relevant local planning authorities) throughout the development of the Project design and environmental assessment work.</p> <p>National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project. The results of this assessment are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation (and maintenance) of the Project and</p>	X	X	X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>recommends appropriate mitigation measures to reduce potential effects.</p> <p>A number of mitigation measures have been incorporated into the Project design. Mitigation relevant to specific environmental topics (including Ecology and Biodiversity, Landscape and Visual and Historic Environment) are presented in the relevant ES chapters. The Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Code of Construction Practice (CoCP) (document reference 7.2) contain a list of relevant good practice measures to avoid or reduce risks to habitats and species.</p> <p>In addition to the EIA, National Grid has set itself a target of delivering 10% biodiversity net gain (BNG) with environmental and societal benefits on all construction projects, meaning that as a result of measures taken, the biodiversity rating of the area will be enhanced by 10% greater than prior to the construction of the Project. The BNG target for the Project is currently voluntary and aligned with our corporate sustainability commitment.</p>				
9-7.291	Suggest that areas other than the AONB should be protected / Criticism that only the AONB has been considered	National Policy Statement (NPS) EN-5 states that the Government considers overhead lines to be appropriate and acceptable in most instances, although it recognises that that there may be, at particularly sensitive locations, potential adverse landscape and visual impacts of overhead line infrastructure that make it inconsistent with our duties and relevant planning policy.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>The National Landscape designation is one such location where there is a presumption that underground cable technology is adopted with the extent of underground cabling extending beyond the boundary in response to the potential for the Project to affect National Landscapes. Our proposals include a total of approximately 20 km of underground cable through and in the vicinity of the Dedham Vale National Landscape, including a section at Great Horkesley to reduce the changes in views and setting of the National Landscape from within and adjacent to its designated boundary.</p> <p>Underground cabling is also proposed for short sections near Fairstead and North Tilbury.</p> <p>The higher cost of underground cables to bill paying consumers, and the environmental implications of installing underground cables and maintaining them elsewhere, are not considered to be justifiable in the context of national policy or National Grid's statutory duties, which include the need to be economic and efficient.</p> <p>A Landscape and Visual Impact Assessment (LVIA), presented in ES Chapter 13: Landscape and Visual (document reference 6.13), has been undertaken as part of the Environmental Impact Assessment (EIA). The LVIA sets out potential effects on landscape and visual receptors.</p>

9-7.292	Concern about the impact of the Project on protected lanes in this area	<p>National Grid has sought to reduce, as far as practicable, impacts on protected lanes through routeing and siting and an ongoing iterative design process which has taken on board feedback at different stages of the Project.</p> <p>Further details on the impact of the Project on protected lanes can be found in the Environmental Statement (ES), Chapter 11: Historic Environment (document reference 6.11) and the ES, Chapter 13: Landscape and Visual (document reference 6.13).</p>	X		X	X
9-7.293	Concern that the Project will impact conservation area	<p>National Grid, through the routeing and siting activities, has sought to reduce the impact on landscape character, visual amenity and the historic environment. National Grid has also conducted comprehensive assessments, including site visits and extensive desk-based research, to thoroughly evaluate the setting of these conservation areas and understand their value. Chapter 11: Historic Environment (document reference 6.11), Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1), Appendix 11.2: Historic Environment Assessment Tables (document reference 6.11.A2), in addition to other topic specific assessments in the Environmental Statement (ES) forms part of the Environmental Impact Assessment (EIA) for the Project.</p> <p>Conservation areas within 2 km of the Order Limits, including conservation areas such as Margaretting; Langley; Great Waltham, Little Waltham; Ingatestone;</p>	X	X	X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>near Fryerning and Pleshey Conservation Area, are considered in the Historic Environment assessment for the Project see ES Chapter 11 Historic Environment (document reference 6.11), ES Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1), and ES Appendix 11.2: Historic Environment Assessment Tables (document reference 6.11.A2). The assessment considers the potential impact on archaeology, historic buildings and historic landscapes and includes assessment of potential for physical impact and impact through change to setting that affects the value of a heritage asset. The assessment of conservation areas is supported by setting surveys, as documented in ES Appendix 11.1 Historic Environment Baseline Report (document reference 6.11.A1). Where significant effects are anticipated the assessments consider and identify areas for potential mitigation as part of an iterative design and assessment process. Such mitigation measures are not limited to but include careful siting of pylons and screening (both new and existing) to reduce impacts where possible. During the construction phase, standard construction mitigation as outlined in the Outline Code of Construction Practice (CoCP) (document reference 7.2) would be set up for these conservation areas except when there are not significant temporary negative effects. The Project has engaged with Historic England and relevant planning authorities on aspects relating to heritage, including appropriate mitigation measures and</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		techniques and to take their views into account during Project development.				
9-7.294	Pylon TB138 is located in Flood Zone 2 / Concern that Pylon TB138 is located on a floodplain	National Grid has reviewed the alignment in this area and TB138 (now TB139) has moved further north and is therefore no longer in Flood Zone 2.			X	X
9-7.295	Concern about the impact of the Project on flooding at Ivy Barn Lane (e.g. the parking area for materials in the field bordering the lane will worsen the flooding that is already happening at this location)	<p>The proposed area in the field bordering Ivy Barns Lane is for a temporary highways compound which would serve the widening enabling works on Ivy Barns Lane and will only be there temporarily. It is not proposed to increase the impermeable areas therefore increasing potential flooding.</p> <p>Where possible the proposed widening works will be programmed to be undertaken during low rainfall months where the risk of flooding is significantly reduced. A range of controls and mitigations for flood risk and drainage impacts, defined based on the findings of the Flood Risk Assessment (document reference 7.9) are detailed in and secured by the Outline Code of Construction Practice (document reference 7.2).</p>			X	
9-7.296	Concern about the impact of Pylon TB172 on Nathan's Lane (Protected Lane)	<p>National Grid, through the routeing and siting exercise, has sought to reduce as far as practicable potential impacts on the historic environment, including the protected lanes.</p> <p>National Grid has carefully collected data, including protected lanes data from relevant local authorities, to inform the Historic Environment Assessment for the</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Project which is presented in Chapter 11: Historic Environment (document reference 6.11) of the Environmental Statement (ES). The historic landscapes which include elements such as protected lanes, have been assessed through site visits and extensive desk-based research. However, Nathan's Lane is outside of our study area and would not experience an impact from the Project.</p> <p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the EIA, which includes an assessment of landscape and visual effects. The landscape character assessment identifies relevant protected lanes, including Nathan's Lane, taking them into consideration when assessing the level of effects on landscape character. The visual assessment takes these into account when assessing likely visual effects, including for example, where there are particularly scenic or notable views. The approach to the LVIA follows professional guidance as set out in ES Appendix 13.1: Landscape and Visual Methodology (document reference 6.13.A1), which includes the 3rd Edition Guidelines on Landscape and Visual Impact Assessment (GLVIA3). The LVIA is presented in ES Chapter 13: Landscape and Visual (document reference 6.13).</p> <p>Nathan's Lane sits within Visual Receptor Area (VRA) F9: Edney Common, with visual effects reported in ES Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3) and is identified as being</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		of high susceptibility to the introduction of linear energy infrastructure. Major and significant (adverse) visual effects are reported during construction and operation within 0.5km of the Project, reducing to moderate and significant (adverse) from near Bakers Wood, Copford Hall and along Nathan's Lane. From 0.5 km to 1.5 km from the Project, moderate and significant (adverse) visual effects are reported, reducing to minor and not significant (adverse) in the south of the VRA and south of Nathan's Lane at Little Edney Wood.				
9-7.297	Concern that pylon proposed on the south side of Roxwell Road is in the middle of a floodplain	As illustrated in the Figures accompanying the Flood Risk Assessment (document reference 7.9), proposed pylons in the vicinity of Roxwell Road (TB161, TB162 and TB163) are situated outside of the mapped flood extents associated with the Roxwell Brook, so as to avoid effects on this receptor and prevent flood risk impacts in the locality.			X	
9-7.298	Concern about impact on existing issues with flooding at Margaretting	A Flood Risk Assessment (FRA) (document reference 7.9) has been undertaken, drawing on a range of data sources and informed by engagement with key flood risk management authorities. The FRA appraises flood risk from the River Wid and its catchment, which includes Margaretting, as well as flooding from surface and groundwater. It identifies the flood risk management and control measures that need to be put in place to manage surface water runoff and prevent increases in flood risk from these sources. These measures are both			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		integrated into the Project's design e.g. runoff capture and attenuation features and secured via the Outline Code of Construction Practice (CoCP) (document reference 7.2) and would be put in place by the appointed contractor(s). In combination, the measures and controls would prevent exacerbation of the flooding issues at Margaretting.				
9-7.299	Concern about impact on existing issues with flooding at Buttsbury	A Flood Risk Assessment (FRA) (document reference 7.9) has been undertaken, drawing on a range of data sources and informed by engagement with key flood risk management authorities. The FRA appraises flood risk from the River Wid and its catchment, which includes Buttsbury, as well as flooding from surface and groundwater. It identifies the flood risk management and control measures that need to be put in place to manage and prevent increases in flood risk from these sources. These measures are both integrated into the Project's design e.g. runoff capture and attenuation features and secured via the Outline Code of Construction Practice (CoCP) (document reference 7.2) and would be put in place by the appointed contractor(s). In combination, the measures and controls would prevent exacerbation of the flooding issues at Buttsbury.			X	
9-7.300	Criticism that the Registered Park and Garden at Langleys, Great Waltham will be the only Registered Park and Garden permanently negatively impacted by the Project	National Grid has sought to reduce, as far as practicable, impacts on the historic environment including the registered park and gardens, through routeing and siting and an ongoing iterative design			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>process which has taken on board feedback at different stages of the Project. The iterative design process sought to avoid areas of highest concern, for examples through changes to the route alignment.</p> <p>In response to feedback received during the statutory consultation, including comments from Historic England and other stakeholders, the alignment in the vicinity of Great Waltham and Little Waltham was revised in March 2025 to reduce potential impacts on the historic environment, including the registered park and garden at Langleys (1000241). As part of this design refinement, low-height pylons are now proposed in this area to reduce visibility and visual impact on nearby designated heritage assets. This design change reduces views of pylons or the proportion of the structure visible from key viewpoints, including from within both Conservation Areas, from that of the previous design.</p> <p>The setting of the registered park and gardens has been assessed as part of the Environmental Impact Assessment (EIA), and findings are documented in Chapter 11: Historic Environment (document reference 6.11) of the Environmental Statement (ES), ES Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1) and ES Appendix 11.2: Historic Environment Assessment Tables (document reference 6.11.A2). The assessment concludes a significant effect during construction and operation on Langleys registered park and gardens (1000241). No additional mitigation measures are proposed during the</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		construction phase as any measures designed to lessen the visual impact of the Project would be of a scale that would visually adversely alter the setting of the asset.				
9-7.301	Concern that Pylon TB188 is located on a floodplain, and with this criticism that National Grid have relocated Pylon TB188 away from floodplain on other side of river to this location (which is also on floodplain)	National Grid notes the respondent's feedback. TB188 (now TB190) was moved out of Flood Zone 2 and 3 prior to statutory consultation. TB190 is now out of Flood Zone 3 and is on the edge of Flood Zone 2 (indicative of the 0.1% annual chance flood extent) in its current location. Noting the respondent's concern about flooding, a Flood Risk Assessment (document reference 7.9) has been prepared, informed by data from and engagement with the Environment Agency and Essex County Council as Lead Local Flood Authority. In the very small number of locations where pylons are located in floodplains, buffers between the works and watercourses would be maintained and mitigation would be put in place to compensate for minor floodplain storage losses and to prevent increases in flood risk.			X	
9-7.302	Concern that the Project is located in the floodplain at Ingatestone / Concern that consultation maps do not show the full floodplain. Specifically, concern that Pylons TB192, TB193 and TB194 are too close to the floodplain in the area of Buttsbury Ford, and concern that Pylons TB204 and TB205 on either side of the A129 (Rayleigh Road) are in fields that are regularly waterlogged (e.g. so construction will	Fluvial floodplains and surface water flood extents defined using Environment Agency and Lead Local Flood Authority datasets are presented in Figure 12.2: Flood Risk Areas (document reference 6.12.F2) The figure shows that Pylons TB192, 193 and 194 are more than 150 m outside of Flood Zone 2 (indicative flood extent in the 0.1% annual chance flood). With regard to TB204 and TB205, whilst areas known to be prone to waterlogging have sought to be avoided for construction			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	require more than the expected preparation and groundwork)	of pylons, where this has not been possible, measures to manage such conditions would be put in place (described in the Outline Code of Construction Practice (document reference 7.2) and works programmed as far as is practicable, to avoid working during periods of waterlogging.				
9-7.303	The route crosses the River Chelmer in the north and River Can and Wid and their tributaries in the west and south. The rivers and riverbeds are located within Flood Zone 3 and this needs to be considered when finding safe grounds for positioning of pylons, footing and maintenance. National Grid is encouraged to liaise directly with the Environment Agency and Essex County Council (ECC) Local Lead Flood Authority	A Flood Risk Assessment (FRA) (document reference 7.9) has been prepared for the Project and submitted as part of the Development Consent Order (DCO) application. The FRA has been informed by data from and engagement with the Environment Agency (EA) and Essex County Council (ECC) as Lead Local Flood Authority. The Project has sought to avoid locating pylons within Flood Zone 3 and has done so, with a very small number of exceptions. In these locations, buffers between the works and watercourses would be maintained and mitigation would be put in place to compensate for minor floodplain storage losses and to prevent increases in flood risk.		X		
9-7.304	Suggest that whilst it is accepted that the landscape of the Chelmer Valley is not a national significant landscape, it should be protected (e.g. overlapping values include heritage and perceptual qualities) / Request that the following the impact of the Project on protected lanes, historic settlement, invisibility of features, composition of elements, landmarks and tranquillity at the Chelmer Valley is taken into	A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the Environmental Impact Assessment (EIA), which includes an assessment of landscape and visual effects. The approach to the LVIA follows professional guidance as set out in ES Appendix 13.1: Landscape and Visual Methodology (document reference 6.13.A1). This includes Guidelines for Landscape and Visual Impact Assessment (GLVIA3), as			X

	account by National Grid (in relation to the Preliminary Environmental Information Report (PEIR) Landscape Character - Volume III Part 4)	<p>prepared by the Landscape Institute and the Institute of Environmental Management and Assessment. The LVIA is presented in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13).</p> <p>The methodology and approach is set out in ES Appendix 13.1: Landscape and Visual Methodology (document reference 6.13.A1) and has been agreed with relevant stakeholders and the assessment prepared by qualified and experienced landscape professionals. The methodology sets out how value judgements are made and explains that the judgements give consideration to the natural heritage, cultural heritage, landscape condition, associations, distinctiveness, recreational, perceptual (scenic and tranquillity) and functional qualities of the landscape. Valued features such as protected lanes, historic elements and landmarks are considered when making these judgments.</p> <p>Through routing and siting, National Grid has sought to reduce as far as practical, the potential impacts of the historic environment, including that of non-nationally significant landscapes such as the Chelmer Valley. The Chelmer Valley was included within the Historic Landscape Character section of the Historic Baseline Report (6.11.A1) and is mentioned several times in relation to designated and non-designated heritage assets that sit within its boundaries. This assessment takes into consideration its value as a non-designated asset but does not take it further into assessment. The assessment of impact to the heritage resource was</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		undertaken in terms of proportionality based on the National Planning Policy 2024, Paragraph 207.				
9-7.305	Concern that the Project does not meet development guidelines within the Pleshey Farmland Plateau Chelmsford Character Landscape (near Pylons TB145 to TB154), which stipulate that any new development in this character landscape should be small-scale, responding to the historic settlement pattern, landscape setting and locally distinctive building styles	<p>Chapter 13: Landscape and Visual (document reference 6.13) of the Environmental Statement (ES) includes an assessment of landscape and visual effects. The Landscape and Visual Impact Assessment (LVIA) builds on the preliminary information and detail provided in the Preliminary Environmental Information Report (PEIR).</p> <p>The approach to the LVIA follows professional guidance as set out in ES Appendix 13.1: Landscape and Visual Methodology (document reference 6.13.A1) as agreed with relevant stakeholders and prepared by qualified and experienced landscape professionals. This includes Guidelines for Landscape and Visual Impact Assessment (GLVIA3), as prepared by the Landscape Institute and the Institute of Environmental Management and Assessment.</p> <p>The LVIA sets out all data sources used to inform the baseline and the assessment of landscape effects. This includes a range of detailed landscape character sources from national to local level, and designated landscape publications, including the Braintree, Brentwood, Chelmsford, Maldon and Uttlesford Landscape Character Assessments (LCAs) (CBA, 2006). We note areas A-H identified in the Broomfield Community Landscape Character Assessment (2010) and the significance and special features described in the document. The Project passes through the western</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>part of area H (identified as Pleshey Farmland Plateau in the document) and close to area F. Area H sits within Central Essex Farmland LCA, and Chelmer Valley LCA, which sit within the wider Glacial Till Plateau Landscape Character Type (LCT) and River Valley Landscapes LCT. Area F sits within Central Essex Farmland LCA, and Chelmsford & Environs LCA, which sit within the wider Glacial Till Plateau LCT and Urban Landscapes LCT. The assessment has taken the landscape characteristics of these into consideration in the assessment. The methodology also sets out how value judgements are made and explains that the judgements give consideration to the natural heritage, cultural heritage, landscape condition, associations, distinctiveness, recreational, perceptual (scenic and tranquillity) and functional qualities of the landscape. Valued features are considered when making these judgments.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Financial compensation						
9-7.306	Concern that the Project will devalue property / impact on property value in this section	<p>National Grid acknowledges that its proposals may cause concern to landowners. Diminishment of property value known as 'injurious affection' and any other appropriate heads of claim would be considered on an individual basis in accordance with current legislation. We would pursue a voluntary agreement with affected landowners, acquiring rights in accordance with our Land Rights Strategy (the strategy is subject to review). If a voluntary agreement cannot be reached, then the Compulsory Purchase Code allows for a claim of compensation for the loss that property owners may have suffered as a direct result of the retained part of your property ownership being worth less as a direct result of the works.</p> <p>If there are any specific concerns about the devaluation of property, National Grid would advise seeking third party advice, or alternatively please contact the Project team:</p> <p>Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.</p> <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD.</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-7.307	Request for adequate financial compensation / Suggest that impacted individuals need to be compensated	<p>All affected landowners would be compensated for any temporary/permanent losses, and this would be dealt with on a case-by-case basis in line with the Compensation Code.</p> <p>If there are any specific concerns requiring compensation and how it would be assessed, please contact the Project team:</p> <p>Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.</p> <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD</p> <p>The Government has published its guidance on community funds for transmission infrastructure (DESNZ, 2025). National Grid is committed to working with Ofgem, industry partners, local communities and their representatives to ensure community benefits are delivered fairly and effectively, driving lasting, positive change for the people and places integral to our developing electricity network.</p> <p>Government has also announced its plans to introduce a bill discount scheme for households within 500 metres of new infrastructure, which it proposes to introduce through the Planning and Infrastructure Bill. This is evolving government policy. Government expects this</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>scheme to be in place by 2026, and we would share further details as they emerge.</p> <p>National Grid is committed to providing a coordinated local and regional approach to community benefits. This would be delivered outside the development consent process, since this is not a material consideration in the decision on the proposed Project or a matter to be secured as part of the DCO, as per the Community Funds for Transmission Infrastructure: Guidance (DESNZ, 2025).</p>				
9-7.308	Request that National Grid purchase respondent's property / business	<p>National Grid is not required to purchase any properties or businesses as part of the Project.</p> <p>National Grid compensates landowners in line with the Compensation Code and any other relevant legislation.</p>			X	
9-7.309	Suggest that locals are compensated for fuel cost associated with additional mileage whilst Larks Lane is closed for the Project	<p>The proposed approach for road closures and management is set out in the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3). It is anticipated that roads would only be closed where this is required for safe working. Temporary closures may be required for works including the construction of bellmouth junctions, highway mitigation, installation of buried cabling, and stringing of overhead lines/netting. If no suitable existing alternative access provision is available, a temporary alternative access would be provided.</p> <p>National Grid is not intending for Larks Lane to be closed; however, the contractor retains the right to close</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		the road should it be required. National Grid is not required to compensate residents for fuel and any additional mileage due to any diversions required should be minimal.				
Health, Safety & Wellbeing						
9-7.310	Concern that the Project may result in a negative impact on mental health / wellbeing	<p>National Grid recognises people may have concerns about the health effects of living close to an overhead line, and that the uncertainty whilst the proposals are developed may cause anxiety.</p> <p>We have sought to reduce potential effects on communities and residents through routeing and design. We have also sought to reduce concern or uncertainty about the proposals through making timely design decisions and engaging with the people and stakeholders throughout the development of the Project.</p> <p>The Project team will continue to engage with people potentially affected during progress of the Project, through regular communication including letters, phone calls and meetings. This will enable concerns to be raised and discussed at an early opportunity and provide a regular point of contact to respond to queries and concerns.</p> <p>We urge anyone with concerns to get in touch through the Norwich to Tilbury Freephone number, address or email throughout the progress of the Project:</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Call our Community Helpline: 0800 915 2497 (Lines are open Monday to Friday 9:00am – 5:30pm)</p> <p>Email us: contact@n-t.nationalgrid.com</p> <p>Write to us: FREEPOST N TO T (No stamp or further address details are required)</p> <p>The UK has a carefully thought-out set of policies for protecting us all against Electric and Magnetic Fields (EMFs), the main component of which is exposure guidelines. Those exposure guidelines are set by independent scientific bodies and are based on decades-long studies into the effects of EMFs and ill health. After those decades of research, the weight of evidence is against there being any health risks of EMFs below the guideline limits. These policies are incorporated into the decision-making process for Development Consent in National Policy Statement (NPS) EN-5. It is National Grid's policy to ensure that all of its equipment comply fully with those exposure limits.</p>				
9-7.311	Concern about health risks associated with the Project / physical health risks associated with the Project	<p>Health considerations are given a high priority in the process by which we arrive at any proposals for new electricity circuits. Assessment of compliance with Electric and Magnetic Field (EMF) guidelines and policies is key to National Grid's approach. The UK has a carefully thought-out set of policies for managing EMFs. There have been over four decades of research looking into whether EMF can cause health effects and there are no established effects below the exposure limits. When designing our overhead lines, substations</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>and underground cables design criteria, we ensure they would not exceed those exposure limits, even when operating at 100% capacity. Additionally, the precautionary measures which the Government have adopted, are applied to the design which ensure the EMFs reduce as quickly with distance as possible. Evidence of that compliance is presented in the Electric and Magnetic Field Compliance Report (document reference 7.8) submitted as part of the Development Consent Order (DCO) application.</p> <p>National Grid takes this issue very seriously and looks to authoritative and independent scientific organisations such as the World Health Organisation (WHO) and in the UK Health Security Agency (UKHSA) to review the worldwide body of scientific evidence on health. Important decisions on health are taken independently of industry, and National Grid have followed the guidance and policies adopted by Government on advice from their scientific experts. Each of these organisations have comprehensive reviews of EMF research available to view on their websites.</p>				
9-7.312	Concern that the Project poses a safety risk to aircraft / Concern that the Project will impact airfields in this area	National Grid recognises the need for the Project to be developed collaboratively alongside aviation stakeholders to identify, assess, and as appropriate mitigate, adverse impacts on aviation safety, in accordance with Government's Overarching National Policy Statement (NPS) EN-1.	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Our review of aerodromes potentially impacted by the Project identified 17 civil aerodromes (including 2 helipads) within 5 km of the preferred corridor and one military site (Wattisham Flying Station). We have also considered other airfields and flight activities where these have been identified through the 2022 and 2023 non-statutory, statutory consultation, targeted consultations and landowner consultation, including for ballooning and for model flying. As well as considering feedback, National Grid's aviation advisers (an independent aviation consultancy) have directly engaged with these parties (with National Grid present).</p> <p>A number of route alignment and pylon positioning changes have been made following consideration of feedback and in all but one case the assessment concludes that the airfields can continue to operate. In the remaining case of a private airstrip near Little Burstead, we continue to liaise with the operator to identify an appropriate solution.</p> <p>Specifically in respect of Wattisham Flying Station our proposals position the alignment onto relatively lower ground (to remove the potential for interference with Instrument Landing System (ILS) radar) and adopt an alignment closer to the existing 132 kV overhead line and include replacing part of the 132 kV line south of Offton by underground cable to avoid a new overhead line corridor being introduced.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>We will continue to engage with relevant parties as appropriate.</p> <p>Further information on the assessment of airfields can be found in the Environmental Statement (ES) (ES Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) and ES Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2)).</p>				
9-7.313	Concern that the Project runs over the NATO pipeline causing a risk of an oil and gas explosion	National Grid take the utmost care in interacting with third party assets such as oil and gas pipelines, we have engaged and are collaborating with all known pipeline owners within the Development Consent Order's (DCO) Order Limits to agree safe working methodologies during design and construction. National Grid contractors would operate in line with HSG47 Avoiding Danger From Underground Services.			X	
9-7.314	Concern that the Project is routed very close to the gas station / facility near Roxwell	National Grid notes the respondent's feedback and has taken measures in the design to eliminate safety concerns to the compressor station (the nearest pylon is +150 m from the gas compressor station boundary). Based on professional expertise and a recommended separation distance of 10 m between overhead lines greater than 1 kV and fixed gas installations according to the Bulk LPG Storage at Fixed Locations Code of Practice 01 Part 1 2017, this separation distance is considered to be adequate. Likewise National Grid adhere to National Policy Statements (NPS) EN-5			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>ensuring exposure limits from Electric and Magnetic Fields (EMFs) are below those mandated by UK policy and safety guidelines.</p> <p>Our contractor would coordinate to ensure that access and construction works do not interfere to the detriment of the facility.</p>				
9-7.315	Concern about the impact of the Project on emergency access to the Remus Horse Sanctuary (e.g. animal welfare emergencies)	The proposed approach for road closures and management is set out in the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3). It is anticipated that roads would only be closed where this is required for safe working. Temporary closures may be required for works including the construction of bellmouth junctions, highway mitigation, installation of buried cabling, and stringing of overhead lines / netting. If no suitable existing alternative access provision is available, a temporary alternative access would be provided.			X	
9-7.316	Concern about emergency access to the Project for National Grid at Remus Horse Sanctuary, such as in the event that cables spark in high winds or flooding (given that Buttsbury Lane is prone to flooding)	National Grid continuously monitors the National Electricity Transmission System (NETS). The system is designed to withstand significant events and will automatically switch out of service if under significant duress. In some circumstances a fault may develop where the local overhead line team will need access to the overhead line system to inspect for signs of damage or failure. The teams can call upon a wide range of access equipment. Prior to access, National Grid will			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		liaise with local landowners to agree the most suitable means of access and implement any mitigation required.				
9-7.317	Concern that construction activities for the Project may impact emergency evacuation plans for students, staff and animals at Anglia Ruskin University (ARU) Writtle	<p>National Grid works closely with contractors working on its behalf and ensures that they adhere to all required safety standards.</p> <p>National Grid and their contractors would engage with affected parties to ensure emergency response plans consider occupants and usage of the area.</p>			X	
Heritage						
9-7.318	Concern about archaeological impacts	Through routeing and siting National Grid has sought to reduce as far as practicable potential impacts on the historic environment. The impacts of the Project on the historic environment are assessed in Chapter 11: Historic Environment of the Environmental Statement (ES) (document reference 6.11). The assessment considers the potential impact on archaeology, historic buildings and historic landscapes and includes assessment of potential for physical impact, impact through change to setting that affects the value of a heritage asset and impact through indirect factors such as change in hydromorphology. The assessment is supported by walkover, setting and geophysical surveys, as documented in ES Appendix 11.1 Historic Environment Baseline Report (document reference 6.11.A1) and ES Appendix 11.4 Geophysical Survey Results Report (document reference 6.11.A4).	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Archaeological trial trench evaluation has also been undertaken and is reported in ES Appendix 11.5 Trial Trenching Results Report (document reference 6.11.A5). In addition to the proposals in the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4), the Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (AMS-OWSI) (document reference 7.5) sets out appropriate mitigation for the historic environment. The Project has engaged with Historic England and relevant planning authorities on aspects relating to heritage, including appropriate mitigation measures and techniques and to take their views into account during Project development which are detailed in ES Chapter 11: Historic Environment (document reference 6.11).				
9-7.319	Concern about negative impact on heritage / Suggest that the Project should be routed away from heritage buildings / listed buildings / historical site	Through routeing and siting National Grid has sought to reduce as far as practicable potential impacts on the historic environment. The impacts of the Project on the historic environment are assessed in Chapter 11: Historic Environment of the Environmental Statement (ES) (document reference 6.11). The assessment considers the potential impact on archaeology, historic buildings and historic landscapes and includes assessment of potential for physical impact, impact through change to setting that affects the value of a heritage asset and impact through indirect factors such as change in hydromorphology. The assessment is supported by walkover, setting and geophysical surveys,	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		as documented in ES Appendix 11.1 Historic Environment Baseline Report (document reference 6.11.A1) and ES Appendix 11.4 Geophysical Survey Results Report (document reference 6.11.A4). Archaeological trial trench evaluation has also been undertaken and is reported in ES Appendix 11.5 Trial Trenching Results Report (document reference 6.11.A5). In addition to the proposals in the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4), the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (AMS-OWSI) (document reference 7.5) sets out appropriate mitigation for the historic environment. The Project has engaged with Historic England and relevant planning authorities on aspects relating to heritage, including appropriate mitigation measures and techniques and to take their views into account during Project development.				
9-7.320	Criticism that only Pleshey Castle has been considered, but not respondent's property	The village of Pleshey, the scheduled monument Pleshey Castle and town enclosure (1002191), the Grade I Listed building Pleshey Castle Bridge (1235567) and the known heritage assets around are outside the 3 km study area for the Project and therefore have not been considered as part of the environment assessment within the Environmental Statement (ES), Chapter 11: Historic Environment (document reference 6.11). However, the presence of heritage features was a factor considered as part of the review of an alternative			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		alignment to the west of Great Waltham. Given the comparative nature of the review a full listing of all relevant heritage features was not considered necessary within the reporting albeit the presence of all informed the decision making.				
9-7.321	Criticism that non-designated heritage assets have not been adequately considered in the assessment work to date / Suggest that given Chelmsford's rich historic environment and the fact that there was no listing resurvey, there are potentially many non-designated heritage assets of low-moderate value, which should be identified and the impacts on their settings fully considered / Suggest that locally listed buildings, protected lanes, designed and historic landscapes and other buildings and features of sufficient interest to be considered as non-designated heritage assets should also fully inform assessment work	<p>National Grid has undertaken a detailed assessment of the historic environment which considers the potential for impact on designated and non-designated heritage assets, including locally listed buildings, protected lanes, designed and historic landscapes, and other features of heritage interest. This is presented in Environmental Statement (ES) Chapter 11: Historic Environment (document reference 6.11).</p> <p>The assessment and mitigation measures have been developed in consultation with relevant stakeholders during the scoping process and at subsequent thematic working group meetings, including engagement with Historic England and the relevant local planning authorities, including Chelmsford City Council. The methodology applied follows relevant heritage legislation, including the Planning (Listed Buildings and Conservation Areas) Act 1990 and the Ancient Monuments and Archaeological Areas Act 1979, as well as national and local planning policy and established technical guidance, such as the National Planning Policy Framework (NPPF).</p> <p>ES Chapter 11: Historic Environment (document reference 6.11), ES Appendix 11.1: Historic Environment</p>		X

	<p>heritage assessment (due to impact on setting);</p> <ul style="list-style-type: none"> - Suggest that the outbuildings at Lyons Hall (1122128) should be considered curtilage listed, rather than non-designated, due to their ancillary functional relationship with the listed building; - The Church of St Mary and St Lawrence (1122058) at Great Waltham is a notable feature in the landscape, the proposed routing would form a backdrop to the tower in views from the north/northwest/northeast and the order limit should be considered to include its wider setting with the impacts assessed accordingly; - Hoe Street Farmhouse (1235763), its associated group of buildings and remains of the moat, represent an important group, together with the association with James I should be considered to be of high (rather than medium) heritage value. The impact on setting is assessed as negligible, which is not agreed; - Bishops Hall (1171200), Bishops Hall Cottage (1122129), 1 and 2 Larks Lane (122083) and Ramsey Tyrells' (1236593) are in reasonably close proximity to the order area. It is considered that the rural context forms part of the setting to these listed buildings. At present these buildings are scoped out, but there would be an impact on their settings', which should be scoped into the assessment. - Short term construction impacts should also take account of the considerable removal of hedgerows 	<p>cases, judgments regarding significance of effect have been made by experienced heritage professionals, using all relevant baseline data, site visits, viewpoints etc., and consideration of potential change.</p> <p>The assessment outcomes reflect professional planning judgment, including cases where changes in value classification between preliminary and final reporting reflect updated information or refined analysis. Consultation responses regarding specific heritage assets and conclusion of assessment have been considered to inform the baseline and assessment presented in Environmental Statement (ES) Chapter 11: Historic Environment (document reference 6.11).</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>and vegetation, which would have a notable impact on setting. Whilst mitigation re-planting can limit this impact, it would take many years to mature to a level where the pre-existing conditions are reinstated. This is particularly the case in the section of the routing at Great Waltham.</p> <p>Also, criticism that National Grid have underestimated the level of impact of the following buildings in the assessment, and suggest the below amendments:</p> <ul style="list-style-type: none"> - Balls Farmhouse (1305428) – high impact on setting (rather than medium) - Hole Farmhouse (1338437) – medium impact on setting (rather than low) - Barn at Hole Farm (1171364) – medium impact on setting (rather than low) - Vault West of Partridge Green Farm (1306289) – High impact of impact on setting (rather than medium) - Rose and Crown (1122116) – medium impact on setting (rather than low) - Coptfold Hall Barn (1247784) – medium impact (rather than low) 					
9-7.326	Concern about the impact of Pylon TB136 and TB137 on Chatham Hall (e.g. as the Project is only 300 m away)	National Grid has made efforts to minimise impacts on the historic environment through careful routeing, siting, and an iterative design process that incorporates stakeholder feedback at various stages. This design approach specifically aimed to avoid areas of highest			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>concern, including adjustments to the route alignment to lessen potential impacts.</p> <p>We conducted comprehensive assessments (documents 6.11.A1 Historic Environment Baseline Assessment, visited the asset during a setting survey (data from which fed into Baseline Report, and the asset is assessed in ES chapter 11 appendix 11.2). It is anticipated that both the construction and operation phases result in no significant effects.</p>				
9-7.327	<p>Concern about the impact of Pylon TB141 on Balls Farmhouse (e.g. visual impact), and suggest that Pylon TB141 should be relocated northwest to increase the distance from Balls Farmhouse /</p> <p>Suggest that the Project between Pylons TB139 and TB142 is relocated to the north along the field boundaries (plan provided by respondent; e.g. to mitigate impact on Balls Farmhouse and properties on Larks Lane)</p>	<p>National Grid has routed and sited the alignment in accordance with the Holford Rules. A summary of the Holford Rules is provided within Appendix I22 of this report. TB141 (now TB143) is proposed to be approximately midway between properties along Lark's Lane, therefore, to move this pylon further away from one property would move them closer to another. To move TB139-TB142 (now TB140-TB144) further north would also move the alignment closer to properties north along Chelmsford Road where we are currently crossing at an approximately equal distance between properties. We therefore are not proposing a change to the alignment in this location.</p>			X	
9-7.328	<p>Concern about the impact of the Project at Pylons TB140, TB141 and TB142 on Larks Lane (Protected Lane)</p>	<p>National Grid has sought to reduce, as far as practicable, impacts on protected lanes such as Larks Lane through routeing and siting and an ongoing iterative design process which has taken on board feedback at different stages of the Project.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>National Grid has carefully collected data, including protected lanes data from relevant Local Authorities, to inform the historic environment assessment presented in Chapter 11: Historic Environment of the Environmental Statement (ES) (document reference 6.11). The historic landscapes which include elements such as protected lanes have been assessed through site visits and extensive desk-based research.</p> <p>National Grid has given careful consideration to protected lanes as part of the design development of the Project. Protected lanes have also been included within the assessment of likely environmental effects as a result of the introduction of the Project.</p> <p>A Landscape and Visual Impact Assessment (LVIA) (document reference 6.13) has been undertaken as part of the EIA, which includes an assessment of landscape and visual effects. The landscape character assessment identifies relevant protected lanes, taking them into consideration when assessing the level of effects on landscape character. The visual assessment takes these into account when assessing likely visual effects, including for example, where there are particularly scenic or notable views. The approach to the LVIA follows professional guidance as set out in ES Appendix 13.1: Landscape and Visual Methodology (document reference 6.13.A1), which includes the 3rd Edition Guidelines on Landscape and Visual Impact Assessment (GLVIA3).</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-7.329	Concern that the area scheduled (near Little Waltham) is an old County number and has no details on how its extent was determined / Concern that recent excavations and geophysics indicates that there is a major settlement surviving over a considerable period on the western side of the Chelmsford Road and suggests that the occupation may be wider than was suggested at the time of the excavation publication	The Project acknowledges below ground archaeological remains associated with the scheduled monument 'Settlement Site at Ash Tree Corner' (1002140) are very likely to extend beyond the extent of the monument as suggested by the HER monument MEX1037202 (6020). All the non-designated assets within the Order Limits, including asset (6020), are considered in the Historic Environment assessment for the Project. The impacts of the Project on the historic environment are assessed in Chapter 11: Historic Environment (document reference 6.11) of the Environmental Statement (ES). The Project has engaged with Historic England and relevant planning authorities on aspects relating to heritage, including appropriate mitigation measures and techniques. An Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (AMS-OWSI) (document reference 7.5) sets out procedures for safeguarding any buried remains encountered during the works.		X		
9-7.330	Criticism that it is unacceptable that the settings of any Listed Buildings listed in a historic area of Roxwell are to incur a 'Significant Negative Effect', or incur the lesser 'Not Significant Negative Effect', which, at National Grid's own admission, cannot be mitigated	National Grid has assessed each listed building in the Roxwell area in accordance with the methodology agreed with Historic England and the relevant Local Planning Authorities during the Project's Historic Environment Working Group meetings. Detailed walkovers, Zone of Theoretical Visibility (ZTV) analysis, Viewpoint (VP) and photomontages were used to determine the magnitude of change and the resulting significance of effect for the closest assets, including	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Little Thatchers (Grade II, 1235775), the Granary (1247675), Hoestreet Farmhouse (Grade II, 1235763), Thatcher's Farmhouse (Grade II, 1235835) and Newney Hall (Grade II, 1237228).</p> <p>National Grid's design process has already embedded a number of heritage-led adjustments to minimise those effects, and further measures are secured through the Outline Code of Construction Practice (CoCP) (document reference 7.2), the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (AMS-OWSI) (document reference 7.5), and the Outline Landscape and Ecological Management Plan (document reference 7.4).</p> <p>These assets have been assessed against the heritage policy tests in the National Planning Policy Framework and EN-1. The outcome is that Little Thatchers, the Granary, Hoestreet Farmhouse and Thatcher's Farmhouse would each experience Lower Less-than-Substantial Harm during the construction phase and the same level of harm once the line is operating. Newney Hall, because of its slightly wider outlook across the valley floor, would experience Mid Less-than-Substantial Harm during construction but Lower Less-than-Substantial Harm during operation. In every case, the standard mitigation measures secured through the Outline CoCP (document reference 7.2) and the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5) will be implemented to make sure that no avoidable damage</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		occurs and that any remaining change is kept to the minimum practicable.				
9-7.331	Reference to historic maps also indicates that the extent of parkland landscape at Langleys once extended across a wider area than the Registered Park and Garden. The adjoining landscape is therefore relevant to understanding the historical evolution of the parkland and contributes to its significance. Criticism that National Grid have not taken this into account (in relation to the Preliminary Environmental Information Report (PEIR) Heritage Vol III Part 3)	<p>The Registered Park and Garden at Langleys has been assessed using a methodology that was developed in accordance with established best practice and agreed through consultation with relevant stakeholders, including Historic England, during the scoping process and thematic working group meetings. The assessment approach considers the elements that contribute to the significance of the designated asset, in line with national guidance. Consideration of the historical context and evolution of the surrounding landscape has informed our understanding of the Registered Park and Garden's setting and significance.</p> <p>Also, in response to feedback received during the statutory consultation, including comments from Historic England and other stakeholders, the alignment in this area was revised in March 2025 to reduce impacts on Little Waltham and by extension Langleys. Low height pylons are now used in this area, following discussions with heritage stakeholders, in order to reduce the visibility and visual impact on nearby designated assets. This design change significantly reduces views of pylons or the proportion of the structure visible from key viewpoints, including from within both Conservation Areas and the register park and garden.</p> <p>Therefore, the overall magnitude of these impacts has been reduced. The heritage assessment (Environmental</p>			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Statement (ES) Chapter 11: Historic Environment (document reference 6.11) concludes that the harm resulting from the revised alignment is 'less than substantial' in the context of NPS EN-1. Any remaining harm has been, and continues to be, weighed against the wider public benefits of the Project in accordance with national planning policy. The current alignment and design therefore reflect a considered response to consultation feedback and a commitment to minimising impacts on the historic environment.				
9-7.332	<p>Within 1 km of the proposed development, National Grid acknowledges that the effects on cultural heritage would be significant adverse both during construction and operation.</p> <p>It is not clear if this assessment is based on smaller scale pylons within the valley and which pylons would be smaller in scale. If this judgement is based on smaller scale pylons, then this mitigation measure does not reduce effects to an acceptable level, as they remain significant</p>	<p>In response to feedback received during the statutory consultation, including comments from Historic England and other stakeholders, the alignment in the area surrounding Great Waltham and Little Waltham was revised in March 2025 and introduced low-height pylons. These revisions aimed specifically to reduce impacts on nearby designated heritage assets, including Great and Little Waltham Conservation Areas (CA55 and CA56), and Langleys RPG (1000241). As part of this refinement, the alignment was shifted, and lower-profile pylons were introduced to minimise visibility and reduce the impact of the infrastructure on the historic landscape and its setting.</p> <p>The heritage assessment reported in Environmental Statement (ES) Chapter 11: Historic Environment (document reference 6.11) is based on this revised, low-height design. The assessment of effects on these assets has been undertaken in line with relevant policy</p>			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>and guidance, including the National Planning Policy Framework (2023), Historic England's Good Practice Advice Note 3: The Setting of Heritage Assets (2017), and the National Policy Statement EN-1. The methodology was discussed and agreed through regular engagement with key stakeholders, including Historic England and the relevant local planning authorities, as part of the archaeological working group meetings.</p> <p>Effects were evaluated from field-verified viewpoints using wire-line studies and photomontages prepared in accordance with Historic England's Good Practice Advice Note 3 (2017).</p> <p>The assessment concludes that for Great Waltham Conservation Area (CA55), there will be a temporary minor adverse significance of effect during the construction phase, and a permanent minor adverse significance of effect during the operational phase. For Little Waltham Conservation Area (CA56), the effects are also temporary minor adverse during construction and permanent minor adverse during operation. In both cases, these effects are not considered significant in Environmental Impact Assessment (EIA) terms, and they would then experience Lower Less Than Substantial Harm.</p> <p>For the Registered Park and Garden at Langleys (1000241), the assessment concludes a temporary moderate adverse significance of effect during the construction phase and a permanent moderate adverse</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>significance of effect during operation. These are considered significant effects within the ES and therefore, the asset would experience Mid Less Than Substantial Harm.</p> <p>However, a range of mitigation is already embedded in the design: the low-height pylons themselves, set-backs from the park boundary and the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (AMS/OWSI) (document reference 7.5) sets out procedures for safeguarding any buried remains encountered during the works. These measures meet the requirements of the National Policy Statement for Energy (EN-1), the National Planning Policy Framework (2023, paragraphs 200-208) and relevant Chelmsford local-plan heritage policies.</p> <p>Therefore, the low-height design would reduce impacts so that harm to Langleys registered park and garden would be categorised as 'less than substantial', while effects on both conservation areas would be not significant.</p>				
9-7.333	Concern about the impacts of Pylons TB163 and TB164 on Sturgeons House, as the pylons will be located on this land and will alter its landscape and views of surrounding listed buildings	Through routing and siting National Grid has sought to reduce as far as practicable potential impacts on the landscape and on views and visual amenity, including careful siting of pylons to reduce impacts where possible. This includes siting away from, or equidistant between residential properties where feasible. A number of technical constraints such as existing services has	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>also influenced the route. In this location a high-pressure gas main has constrained routeing to some degree.</p> <p>National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project. The results of this assessment are provided in the Environmental Statement (ES) that accompanies the Development Consent Order (DCO) application. The ES identifies and assesses the likely significant effects on visual amenity resulting from the construction and operation (and maintenance) of the Project and recommends appropriate mitigation measures where possible to reduce potential effects.</p> <p>The approach to the Landscape and Visual Impact Assessment (LVIA) follows professional guidance as set out in ES Appendix 13.1: Landscape and Visual Methodology (document reference 6.3.A1), which includes Guidelines for Landscape and Visual Impacts Assessment (GLVIA3). The LVIA is presented in ES Chapter 13: Landscape and Visual (document reference 6.13).</p> <p>National Grid has undertaken a detailed routeing and siting exercise to reduce, as far as practicable, the potential impacts of the Project on the historic environment, including designated assets such as Sturgeons House (List Entry 1237071). This process has been informed by a robust assessment methodology that was developed in line with relevant national policy</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>and guidance and agreed through engagement with key heritage stakeholders.</p> <p>Following the design refinement, the nearest pylon to Sturgeons House is now TB165. The alignment and siting of pylons, including TB165, reflect a careful balance between environmental, technical and heritage considerations.</p> <p>The assessment of Sturgeons House, as outlined in Chapter 11: Historic Environment of the Environmental Statement (ES) (document reference 6.11) concludes that there will be a temporary moderate adverse significance of effect on the asset during the construction phase, and a permanent minor adverse significance of effect during the operation phase.</p> <p>No additional mitigation measures are proposed during the construction phase as any measures designed to lessen the visual impact of the Project would be of a scale that would visually adversely alter the setting of the asset.</p> <p>Required mitigation measures are located within the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5), and further mitigation is set out in the Outline Code of Construction Practice (document reference 7.2).</p>				
9-7.334	Concern about the impacts of Pylons TB171 and TB172 on Montpelier's Farm as a large area of land will be permanently altered	Chapter 6: Agriculture and Soils of the Environmental Statement (ES) (document reference 6.6) assesses the impact of permanent land lost as a result of the Project	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>on agricultural land, agricultural landholdings and soil resources. Permanent land loss can result from pylon footprints, with Pylons TB171 and TB172 being considered in the assessment.</p> <p>National Grid would compensate for both temporary and permanent impacts on land. For information on how landowners would be compensated, please refer to the National Grid Land Rights Strategy, which can be found on the Project website. Alternatively, please contact the Project lands team:</p> <p>Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.</p> <p>Alternatively, you can write to Norwich to Tilbury Lands Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD.</p>				
9-7.335	Criticism that National Grid have underestimated the impact of the Project on the scheduled monument at Ash Tree Corner, Great Waltham/Little Waltham in the baseline assessment (Pages 108 and 388 of the Preliminary Environmental Information Report (PEIR) Vol 3 Tech Apps 3 of 4) (e.g. identified a “not significant” negative effect despite being a high value asset), and that, despite this, National Grid has identified a significant effect during construction works (e.g. it does not make sense that construction	The assessment of the impact of the Project on the historic environment, including the scheduled Ash Tree Corner (1002140), has followed a robust and proportionate methodology, in line with current planning policy and guidance, including the National Planning Policy Framework (NPPF) and associated Historic England Advice Notes. The approach to the assessment, including the criteria used to determine heritage value, and the method for assessing change and significance of effect, was discussed and agreed with relevant stakeholders, including Historic England			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	will have a significant effect but not the Project once completed)	<p>and local planning authorities, during the scoping phase and subsequent thematic working group meetings.</p> <p>The assessments presented in the Environmental Statement (ES) Chapter 11: Historic Environment (document reference 6.11) and its appendices (document reference 6.11.A1 to 6.11.A7) are appropriate, evidence-based, and reflect a considered understanding of both the heritage assets' significance and their settings. In all cases, judgments regarding significance of effect have been made by experienced heritage professionals, using all relevant baseline data, site visits, historic research, and consideration of potential change. The assessment outcomes reflect professional planning judgment, including cases where changes in value classification between preliminary and final reporting reflect updated information or refined analysis.</p> <p>Assessment of Ash Tree Corner (1002140) concludes a temporary minor adverse significance of effect on the asset during construction and a permanent minor adverse significance of effect during operation. No additional mitigation measures are proposed as any measures, such as screen planting, designed to lessen the visual impact of the Project would be of a scale that would visually adversely alter the setting of the asset.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Information						
9-7.336	Land close to and around the Green near Chignall St James has the River Can running through it and much of the land either side of that river is flood plain, and there is a large area that is 'reclaimed' land (landfill) following years of gravel extraction (this land contains methane)	<p>National Grid has completed the Environmental Impact Assessment (EIA) for the Project. The results of this assessment are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application. The ES identifies and assesses the likely significant effects on the environment resulting from the construction, operation (and maintenance) of the Project and recommends appropriate mitigation measures (in consultation with relevant stakeholders) to reduce potential effects.</p> <p>A Flood Risk Assessment (FRA) (document reference 7.9) has been prepared for the Project to support and inform the ES. The ES includes consideration of potential impacts on flood risk from all relevant sources, both temporary and permanent impacts, taking account of the effects of climate change over the Project's design life.</p> <p>The FRA describes the measures that would be put in place to manage construction and operational flood and land drainage impacts to ensure the development is safe from flooding over its lifetime and that off-site flood risk is not increased. The measures are secured through their inclusion within the Outline Code of Construction Practice (CoCP) (document reference 7.2).</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>With regard to interactions with the River Can through Chignall St James, proposed pylons TB158 and TB159 and their associated construction working areas would not encroach into the floodplain of the River Can. A temporary haul road is routed through the floodplain and the impacts of this would be mitigated through avoiding any temporary ground raising along the haul road route, avoiding stockpiling/storage of construction materials and soil within the floodplain and implementation of a Flood Warning and Evacuation Plan at this worksite.</p> <p>National Grid notes the respondent's feedback and is aware of the historic landfill site adjacent the River Can and assessment of this landfill is included within ES Appendix 9.1: Baseline Information and Preliminary Contamination Risk Assessment (document reference 6.9.A1) and the assessment of potential impacts from contamination are considered within ES Chapter 9: Contaminated Land, Geology and Hydrogeology (document reference 6.9). The Project has proposed pylons TB157 and TB158 outside of the extents of the historic landfill to the north and south respectively, ground investigation would be undertaken at this location to ensure the pylons are within natural ground and would inform appropriate geotechnical design in relation to adverse ground conditions and ground gases in accordance within commitment GH01 of the Outline CoCP (document reference 7.2). A temporary haul road is required to cross the site with which detailed surveys and engineering assessments would be undertaken at</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		detailed design to account for the historic landfill accordingly in accordance within commitment GH01 within the Outline CoCP (document reference 7.2).				
Mitigation						
9-7.337	Suggest mitigation measures (including through planting and screening measures, replanting, rewilding, habitats replacement)	<p>An Environmental Statement (ES) (document reference Volume 6: Environmental Statement) has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 ('the Infrastructure EIA Regulations'). The ES identifies and assesses the likely significant effects on the environment resulting from the construction, operation and maintenance of the Project and recommends appropriate mitigation to reduce effects.</p> <p>Environmental mitigation measures have been defined within each environmental topic chapter and set out in relevant management documents submitted with the Development Consent Order (DCO) application, including the Outline Code of Construction Practice (CoCP) (document reference 7.2), the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Draft Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (WSI) (document reference 7.5).</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-7.338	Request for National Grid to provide stock proof fencing of the haul road at respondents farm / Request for National Grid to provide permanently fenced boundaries when the Project crosses arable fields (e.g. the respondent currently uses electric fencing, but this is not appropriate under high voltage lines)	<p>As detailed in commitment GG29 of the Outline Code of Construction Practice (CoCP) (document reference 7.2), National Grid would appropriately fence working areas. The type of fencing installed would depend on the area to be fenced and would take into consideration the level of security required in relation to the surrounding land and public access, rural or urban environment and arable or stock farming. For some locations the fence used may also serve to provide acoustic and visual screening of the work sites and reduce the potential for disturbance of users in the surrounding areas. Fencing would be regularly inspected and maintained and removed as part of the demobilisation unless otherwise specified.</p> <p>National Grid would exercise reasonable care and undertake practical measures to avoid entry by trespassers. Crossing points may be included within this fencing to facilitate the continuation of agricultural operations. The crossing points would be installed at appropriate locations to enable reasonable access across the construction working width. All temporary fencing would be maintained throughout construction works until the land has been reinstated, unless otherwise agreed with the landowner/occupier.</p> <p>Where crossing points are installed, they will be designed to be stock-proof where required, in agreement with the landowner/occupier, to ensure livestock is contained and farming activities can continue safely. The</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		measures for controlling and securing access points during construction are also set out in the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3). These commitments are secured through the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the Outline CTMP (document reference 7.3), which will be implemented and prepared by the appointed Principal Contractor in compliance with the DCO requirements.				
Primary Access Routes / Haul Road / Construction Compounds						
9-7.339	Suggest that the haul road (near Ivy Barns Lane) should be relocated from straddling the field boundary to run along the headland instead (e.g. to mitigate impact on trees and hedgerows; to mitigate impact of farming) (plan provided by respondent), and suggest that the track could be kept permanently for the use of the respondent, if the hedge is not removed and subject to its condition	We would not propose to establish such routes straddling boundaries to avoid unnecessarily impacting trees and hedgerows. We would respond by localised adjustment within the limits of deviation. National Grid is open to discussion about leaving access routes in as a legacy benefit to landowners, but it would be for those landowners to secure any necessary permissions.			X	
9-7.340	Suggest that Footpath 5 should not be used as a Permanent Access Point for the maintenance of Pylon TB148 (e.g. to mitigate impact on heritage and archaeology; as the footpath is frequently used; as the bridge put in by Essex County Council over area of excess seepage is intended only for pedestrian use; as the path is muddy, especially after rain, and unsuitable for motor vehicles, including maintenance vehicles; as widening the path to provide access for	The access track referred to in the respondent's feedback is for future surveys and maintenance if required and will not be used for construction. We are not proposing to use the public footpath in this location but are proposing to use the track in the field next to it. We are not proposing to construct anything for this permanent access route, existing tracks and roads are proposed to be used where possible.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	maintenance vehicles would require removal of trees and increase the visual impact of the Project; as there are inspection chambers at intervals along Footpath 5 for the waste systems (cesspit) that serve properties on Hollow Lane) / Concern that this maintenance road will also be built within respondent's property boundaries (e.g. impact on garage, mature trees including an ancient Scots pine, hedgerow, and respondent's garden)					
9-7.341	Criticism of the haul road proposed for the Project that runs from Church Lane in Ingatestone (e.g. due to impact on trees and hedgerows)	National Grid notes the respondent's feedback. The location of the haul road has been positioned to minimise impacts on trees.			X	
9-7.342	Suggest that the highways compound and construction laydown area (near Ivy Barns Lane) should be located in the same section of the field (e.g. to mitigate impact on farming) / Suggest that the highways compound is relocated west to use same area as construction laydown area (plan provided by respondent)	<p>The highways compound is required for the highway mitigation works on Primary Access Routes (PARs) for mitigations such as widening, passing places etc. These need to be located close to the mitigation works and are required as part of the enabling works. Whereas the construction laydown areas (also known as material laydown areas) are required for storage of materials for the construction of the project. Therefore, the current location of the highways compound is the preferred location.</p> <p>As part of design development, the material laydown areas original positioning (west of the alignment and south of Ivy Barns Lane) was changed. Concerns were raised regarding the field south of Ivy Barns Lane and to the west of the pylon alignment, which is prone to</p>			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		surface water flooding. Therefore, an alternative has been used, utilising the field north of Ivy Barns Lane for the Haul Road Construction Laydown areas, which is strategically beneficial due to the predominantly northern PAR movements.				
9-7.343	Suggest that the new access point on Ivy Barn Lane and the access at Handley Green to the respondent's two fields should be gated (e.g. to prevent unauthorised entry and fly-tipping)	<p>National Grid proposes security fencing and gates during construction for all site access points to secure the works area, the construction corridor and haul roads. A typical site access point layout including tracking of construction vehicles, visibility splays and fencing arrangements can be found within the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3). In accordance with GG29 in the Outline Code of Construction Practice (CoCP) (document reference 7.2), working areas would be appropriately fenced.</p> <p>Access control measures such as fencing and gated accesses to working areas would typically be in place for safety and security during the period of construction.</p> <p>The access track referred to in the respondent's feedback is also proposed for future surveys and maintenance if required and will not be used for construction. We are not proposing to construct anything for this permanent access route therefore existing field entrances, tracks and roads are being used where possible.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
PRoW (Public Rights of Way)						
9-7.344	Concern about negative impact on PRoW / footpaths / cycle paths / bridleways	<p>Through routeing and siting, National Grid has sought to reduce, as far as practicable, impacts and disruption to Public Rights of Way (PRoW).</p> <p>The iterative design process identified the existing PRoW network and their wider connectivity and sought where practicable to reduce and where possible remove impacts to PRoW.</p> <p>Effects on PRoW would be mitigated where possible, maintaining access where practicable, with closures as a last resort. We will continue to engage with relevant stakeholders on the PRoW network to enable feedback and input to be considered as the Project progresses. An Outline Public Rights of Way Management Plan (document reference 7.6) is submitted with the Development Consent Order (DCO) application.</p>	X	X	X	
Requests						
9-7.345	Request for 24/7 access for residents near Pylon TB180 during both the construction and operation of the Project, and request that the access roads impacted in this area are resurfaced and maintained	It is not proposed to close any roads in this area however, the proposed approach for road closures and management is set out in the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3). It is anticipated that roads would only be closed where this is required for safe working. Temporary closures may be required for works including the construction of bellmouth junctions, highway mitigation, installation of buried cabling, and stringing of overhead			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>lines/netting. If no suitable existing alternative access provision is available, a temporary alternative access would be provided.</p> <p>The Outline CTMP (document reference 7.3) includes details of proposed pre-condition and post-condition surveys and includes allowance for remediation works where changes to the condition have occurred.</p>				
9-7.346	Request for information on National Grids reason for marking an area near Chignall St James (location provided by respondent) to confirm the Project won't be interacting with the gas main for East London which is located here	<p>There is the potential, based on induced currents from the 400 kV overhead line, that alternating current mitigation measures may need to be installed to the ferrous pipeline operated by National Gas at Chignall St James. The scope and extent of such mitigation measures would be dependent on the final design arrangements of the Project which would continue to evolve within the parameters of confirmed Limits of Deviation. Factors including crossing angle and clearance height, length of parallelism, site specific soil resistivity etc combine to define the requirement for mitigation. The mitigation itself is typically achieved by the installation, alongside the ferrous pipeline (in an area which is likely to have been previously disturbed during construction), of additional earthing which extends away from the crossing point. Consultation between National Grid and the relevant utility provider would confirm the requirement for installed mitigation, based on the final 400 kV design arrangements, which would be implemented by the relevant utility provider under their existing utility operation and maintenance provisions.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-7.347	Request for further information regarding the extra work and necessary surveys undertaken in order to change the Project which is now routed around the west side of Chelmsford (deviated from National Grid's initially proposed route) / Criticism that National Grid propose these changes without fully surveying the area	The Project has not changed in the manner suggested by the feedback so it is not possible to respond to the specific question. The 2022 consultation corridor and graduated swathe presented at Scoping went to the west of Chelmsford. The draft alignments presented in 2023 and 2024 Design Development Reports (found on the Project website) were within the same corridor, so has not changed through the development of the Project, albeit specific detail regarding the pylon positions and alignment has responded to feedback and the findings from various field surveys.			X	
9-7.348	Request that National Grid clarify whether they will need continued access to the Remus Horse Sanctuary for the Project (including following construction completion) and how advance notice for maintenance and emergency access to the Remus Horse Sanctuary will be provided	<p>The access track referred to in the respondent's feedback is for future surveys and maintenance if required and would not be used for construction. National Grid are not proposing to construct anything for this permanent access route, existing tracks and roads are being used where possible.</p> <p>Once the overhead line is operational and future access is required for inspection, and maintenance, notice would be given to the affected landowner in at least several weeks in advance to allow for the temporary removal of horses and any other requirements.</p> <p>If emergency access is required, National Grid would contact the landowner immediately to advise them that access is required and put in place any immediate requirements.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-7.349	Request that National Grid carry put a full study of geological site near Pylon TB147 to establish its extent, nature and importance	A baseline assessment has identified sites of geological importance within 250 m of the Order Limits and an assessment undertaken on the likely impacts to these sites; however this baseline assessment has not identified any sites of geological importance within the vicinity of pylon TB147. A more detailed and intrusive geological survey would take place prior to the main construction works.	X			
Tourism						
9-7.350	Concern about impact of the Project on tourism	Through routeing and siting, National Grid has sought to avoid, as far as practicable, locations important for leisure and tourism. Environmental Statement (ES) Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) presents an assessment on the potential impacts on tourism economy (during construction) and tourism assets (during construction and operation), including visitor accommodations. As part of this assessment, a range of measures have been considered throughout the construction phase of the Project to minimise disruption on tourism. These include: traffic management, signage and routeing measures. These are identified within the ES Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15), the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).				
Visual impact						
9-7.351	Concern about cumulative visual impact of the Project alongside existing overhead lines / concern about wirescape	<p>National Grid notes the feedback received and has taken it into consideration as part of the iterative design process.</p> <p>National Grid has liaised with UK Power Networks to understand opportunities for 132 kV network rationalisation. The Project includes proposals to replace certain sections of 132 kV overhead line connection with underground cable to rationalise the network and reduce potential for cumulative wirescape effects.</p> <p>A Landscape and Visual Impact Assessment (LVIA), presented in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13), has been undertaken as part of the Environmental Impact Assessment (EIA). Existing infrastructure (such as existing overhead lines) has formed part of the baseline environment for the Project to be assessed against, to identify if significant landscape and / or visual effects are likely to arise. The LVIA presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) sets out potential landscape and visual effects. The rationalisation of the existing 132 kV network in some areas forms part of the embedded landscape mitigation, as set out in Chapter 13.</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		The findings and conclusions of the LVIA and other topics assessments have been considered within the Cumulative Impact Assessment, presented in ES Chapter 17: Cumulative Effects Assessment (document reference 6.17), lists the developments as part of the cumulative assessment. This chapter considers the landscape and visual effects of the Project cumulatively with other proposed developments that are being progressed.				
9-7.352	Concern that the Project will be unsightly / visually intrusive (including overhead lines, CSE compounds and substations) / Concern that the Project will cause a negative impact on views	<p>National Policy Statement (NPS) EN-5 makes it clear that the Government considers overhead lines to be appropriate and acceptable in most instances, although it recognises that there may be, at particularly sensitive locations, potential adverse landscape and visual impacts of an overhead line that make it inconsistent with our duties and relevant planning policy.</p> <p>The Dedham Vale National Landscape (previously an Area of Outstanding Natural Beauty (AONB)) designation is one such location where underground cable technology is proposed with the extent of underground cabling extending beyond the boundary in response to the potential for the Project to affect the National Landscape. Our proposals include a total of approximately 20 km of underground cable through and in the vicinity of the Dedham Vale National Landscape, including a section at Great Horkesley to reduce the changes in views and setting of the National Landscape from within and adjacent to its designated boundary.</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Underground cabling is also proposed for a short section of 400 kV overhead line crossing near Fairstead.</p> <p>Cable Sealing End (CSE) compounds are required to facilitate sections of underground cable, and the proposed East Anglia Connection Node (EACN) substation is required to connect to customers and the proposed Tilbury North Substation is required to connect the Project into the existing Tilbury Substation. These components have been carefully sited taking into consideration Horlock Rules including the potential for landscape and visual effects.</p> <p>The higher cost of underground cables to bill paying consumers, and the environmental implications of installing underground cables and maintaining them at locations outside the Dedham Vale National Landscape, are not considered to be justifiable in the context of national policy or National Grid's statutory duties, which include the need to be economical and efficient.</p> <p>A Landscape and Visual Impact Assessment (LVIA), presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13), has been undertaken as part of the Environmental Impact Assessment (EIA). The LVIA includes an assessment on both landscape character and visual amenity and identifies areas for potential mitigation planting around substations and CSE compounds to reduce visual impacts to local receptors. The Outline Landscape and Ecological Management Plan (LEMP)</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		(document reference 7.4) includes details regarding the planting proposals.				
9-7.353	Criticism of the assessment of the visual impact of the 'Alternative Western Route' at Chelmsford	The 2023 and 2024 Design Development Reports can be found on the Project website and the 2025 Design Development Report (document reference 5.15) submitted as part of the Development Consent Order (DCO) application have all considered this alternative and set out the main reasons for decision making. As such they do not provide detail on all environmental topics nor in the depth set out in the Environmental Statement. In this case the 2024 Design Development Report (available on the Project website) identified that a change to the western alternative would not mean that the visual effects of the project disappear but are transferred, to at least some degree, to other visual receptors. The 2024 Design Development Report (available on the Project website) at paragraph 5.4.185 notes the western alternative has a beneficial effect on residential amenity but also that on balance and due to other factors, the change is not taken forwards. Whilst the respondent may have a different perception of the visual impact (though the detail of this is not specified) we do not consider, even if there was a greater beneficial change, that this would outweigh the other factors counting against the western alternative.	X		X	
9-7.354	Criticism of National Grid's claim (within the 2024 Design Development Report) that the bypass and	Paragraph 5.4.182 of the 2024 Design Development Report (found on the Project website) notes that the	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	the screening from trees would reduce potential effects on Little Waltham	<p>2023 preferred draft alignment routes between conservation areas and past the eastern edge of the Langleys Registered Park and Garden, though screening by the bypass and from trees would reduce potential effects on Little Waltham. In addition, the trees in the extensive parkland would provide filtering of views at Great Waltham and to direct views from the Grade I Listed Langleys.</p> <p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the Environmental Impact Assessment (EIA). The LVIA sets out the potential landscape and visual effects, including consideration of visual amenity of people in and around settlements such as Little Waltham and Great Waltham, and also impacts on landscape character. The approach to the LVIA follows professional guidance as set out in ES Appendix 13.1: Landscape and Visual Methodology (document reference 6.13.A1), which includes the 3rd Edition Guidelines on Landscape and Visual Impact Assessment (GLVIA3). The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13). The assessment is in agreement that existing vegetation along the eastern edge of Langleys registered park and garden, and existing vegetation along field and road boundaries to the west of Little Waltham would provide some filtering of views towards the Project and therefore reduce visual effects on receptors within Little Waltham.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-7.355	Criticism of National Grid's argument that trees will mitigate the impact (e.g. by offering a permanent and reliable barrier) of the Project on Little Waltham and Great Waltham	<p>National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project. The results of this assessment are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation (and maintenance) of the Project and recommends appropriate mitigation measures to reduce potential effects.</p> <p>Paragraph 5.4.182 of the 2024 Design Development Report (available on the Project website) notes that '<i>The 2023 preferred draft alignment routes between conservation areas and past the eastern edge of the Langleys Registered Park and Garden, though screening by the bypass and from trees would reduce potential effects on Little Waltham. In addition, the trees in the extensive parkland would provide filtering of views at Great Waltham and to direct views from the Grade I Listed Langleys.</i>'</p> <p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the EIA. The LVIA sets out the potential landscape and visual effects, including consideration of visual amenity of people in and around settlements such as Little Waltham and Great Waltham, and also impacts on landscape character. The approach to the LVIA follows professional guidance as set out in</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>the ES, Appendix 13.1: Landscape and Visual Methodology (document reference 6.13.A1), which includes the 3rd Edition Guidelines on Landscape and Visual Impact Assessment (GLVIA3). The LVIA is presented in the ES, Chapter 13: Landscape and Visual (document reference 6.13). The assessment is in agreement that existing vegetation along the eastern edge of Langleys Registered Park and Garden, and existing vegetation along field and road boundaries to the west of Little Waltham would provide some screening of the Project and therefore reduce visual effects on receptors to the west of the alignment (in the direction of Great Waltham and Langleys) and to the east of the alignment (in the direction of Little Waltham).</p> <p>Whilst National Grid does not have direct control of the existing vegetation that would provide the screening mentioned above, much of the vegetation lies within the conservation areas of Little Waltham and Great Waltham, and within the Langleys Registered Park and Garden, both of which afford greater protection to trees and vegetation.</p> <p>In response to concerns raised regarding the reliance on existing vegetation as mitigation, National Grid acknowledges that while existing trees and woodland have been referenced within the assessment, these features have not been solely relied upon to mitigate potential impacts on the historic environment. Rather, they form part of a wider suite of measures that have</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>been developed in consultation with statutory consultees, including Historic England.</p> <p>The alignment through the Little Waltham and Great Waltham area was revised following statutory consultation in March 2025, specifically in response to feedback concerning potential impacts on heritage assets. This has included siting the alignment further from the edge of the Langley's Registered Park and Garden and the use of lower-profile pylons to reduce visual prominence. These design refinements were made with the intention of reducing visibility from key heritage receptors, including both Little and Great Waltham Conservation Areas, and from listed buildings such as Chatham Hall and Langleys House.</p> <p>The Historic Environment Assessment, presented in Chapter 11: Historic Environment (document reference 6.11) of the ES, confirms that the revised alignment has reduced the overall magnitude of impact on nearby heritage assets. The remain impact of the Project on heritage assets such as Langleys listed building, Langleys Registered Park and Garden, and the conservation areas of Great and Little Waltham has been fully assessed and details can be found in ES Chapter 11: Historic Environment (document reference 6.11), ES Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1) and ES Appendix 11.2: Historic Environment Assessment Tables</p>

9-7.362	Concern that National Grid have not taken sufficient account of topography / Criticism that contours do not appear on the interactive map as a base feature / Criticism that relief (topography) are not illustrated under the Constraints level	<p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the Environmental Impact Assessment (EIA), which includes an assessment of landscape and visual effects. The approach to the LVIA follows professional guidance as set out in Environmental Statement (ES) Appendix 13.1: Landscape and Visual Methodology (document reference 6.13.A1). This includes Guidelines for Landscape and Visual Impact Assessment (GLVIA3), as prepared by the Landscape Institute and the Institute of Environmental Management and Assessment. The LVIA is presented in ES Chapter 13: Landscape and Visual (document reference 6.13).</p> <p>The methodology and approach is set out in ES Appendix 13.1: Landscape and Visual Methodology (document reference 6.13.A1) and has been agreed with relevant stakeholders and the assessment prepared by qualified and experienced landscape professionals. Constraints information includes landform, which is taken into full consideration in the assessment, and presented in the accompanying landscape and visual figures, in ES Figure 13.2: Landform and Drainage (document reference 6.13.F2).</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-7.363	Criticism that the impact of the Project on the setting of the churches of Great and Little Waltham does not appear to have been assessed, especially in views along thoroughfares / Criticism that no assessment has been made of the effects from within Little Waltham and in particular from Wheelers Hill looking towards the church with views to the wider valley landscape to the west (in relation to the Preliminary Environmental Information Report (PEIR) Heritage Vol III Part 3)	A selection of landscape and visual viewpoints have been used to produce technical visualisations to support the Landscape and Visual Impact Assessment (LVIA) and assist stakeholders and ultimately the Planning Inspectorate to understand the likely effects of the Project on landscape character and on views from specific points. This includes viewpoints near Little Waltham and Great Waltham. Viewpoint 6.18: Langley's Park (document reference 7.12), illustrates how the Project will appear in views from the landscape to the north of Great Waltham. It is intended to capture how the overhead line (around TB139) will appear in this area. Viewpoint 6.16 Chatham Hall Lane illustrates how the overhead line will appear to the west of Langley's Park, Viewpoint 6.13 B1008 illustrates how the overhead line will appear to the west of Little Waltham, and Viewpoint 6.04 PRoW at Broad's Green (Great Waltham 85) illustrates how the overhead line will appear at Broad's Green. We have engaged with a range of stakeholders (including Statutory Environmental Bodies (SEBs) and relevant Local Planning Authorities) throughout the development of the Project design and environmental assessment work, including the selection of viewpoint locations, and these have been agreed. Additional historic environment viewpoints have been prepared from within the grounds of Langley's Park (HE7 and HE8). Technical visualisation, including at Great Waltham, have been prepared using the latest design,			X

Wildlife/ Ecology impact						
9-7.366	Concern about impact of the Project on flightpaths for birds	Chapter 8: Ecology and Biodiversity of the Environmental Statement (ES) (document reference 6.8) considers potential impacts during the construction and operational phase of the Project on birds. Bird surveys have been undertaken across the route between 2022-2024 to determine an accurate baseline value, the scope of which has been agreed with Natural England and Local Planning Authorities. The potential for bird collision risk impact during the operational phase has been assessed within the ES and Habitats Regulations Assessment (HRA) (document reference 5.3) and	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		agreed with Natural England. Any adverse impacts identified have been minimised as far as possible, where practicable, and mitigation in the form of bird diverters proposed.				
9-7.367	Concern about impact of the Project on birds	<p>Chapter 8: Ecology and Biodiversity of the Environmental Statement (ES) (document reference 6.8) considers potential impacts during the construction and operational phase of the Project on birds. Bird surveys have been undertaken across the route between 2022-2024 to determine an accurate baseline value, the scope of which has been agreed with Natural England and Local Planning Authorities. The potential for bird collision risk impact during the operational phase has been assessed within the ES and Habitats Regulations Assessment (HRA) (document reference 5.3) and agreed with Natural England. Any adverse impacts identified have been minimised as far as possible, where practicable, and mitigation in the form of bird diverters proposed.</p> <p>It is noted that birds are a mobile species, and it is likely that active nests for common and widespread species may be encountered during the construction phase. Precautionary working methods for breeding birds are included within the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the Outline Landscape Ecological Management Plan (LEMP) (document reference 7.4), accompanying the Development Consent Order (DCO) application.</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-7.368	Concern that the Project will result in a negative impact on species (protected status not specified)	Through routeing, siting and detailed design National Grid has sought to reduce, as far as practicable, potential impacts on biodiversity including protected species. The design process has taken account of existing biodiversity, the natural environment and, where practicable, has sought to reduce impacts on areas of ecological sensitivity including protected species and their associated habitats, through avoidance or mitigation. A comprehensive survey effort for a range of protected species was completed over the 2023 – 2024 period. Chapter 8: Ecology and Biodiversity of the Environmental Statement (ES) (document reference 6.8) assesses the effects on protected species based on this baseline information and where/if required appropriate mitigation measures are detailed. Suitable mitigation for protected species has been developed in consultation with Natural England to ensure legal compliance and best practice guidelines are adhered to. Where necessary, draft licence applications have been drafted and National Grid is in the process of agreeing the detail within the licence documents with Natural England, in order to obtain the relevant Letters of No Impediment (LoNI). Mitigation for non-licensable protected species has been included within the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4).	X	X	X	
9-7.369	Concern that the Project will result in a negative impact on protected species	Through routeing, siting and detailed design, National Grid has sought to reduce, as far as practicable,	X		X

Mitigation for non-licensable protected species has been included within the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4).				
9-7.370	Concern that the Project will have a negative impact on bees / Bees will be unable to navigate under high voltage overhead lines	As well as possible effects on humans, possible effects of Electric and Magnetic Fields (EMFs) on various animals have been studied a number of times. No proven effects of EMFs have been found in any species	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>at levels below the guidelines. This is confirmed in National Policy Statement (NPS) EN-5 which states: <i>"There is little evidence that exposure of crops, farm animals or natural ecosystems to transmission line EMFs has any agriculturally significant consequences."</i></p> <p>Beehives can become charged if directly under an overhead line because of the electric field it produces. For existing overhead lines, this can be eliminated by screening or earthing the hive, but for new overhead lines, embedded design measures and careful routeing will avoid any potential effects. There does not seem to be evidence of EMFs adversely affecting bees directly. In the United States of America, the strip of land along power lines has been shown to be particularly attractive to bees, with these areas being utilised by commercial bee farms. Additionally, National Grid has worked with the British Beekeeping Association to establish hives around our sites, including high voltage substations, which have thrived.</p>				
9-7.371	Concern that the Project will result in a negative impact on flora / plants / woodlands / hedgerows	Through routeing, siting and detailed design, National Grid has sought to reduce, as far as practicable, potential impacts on biodiversity including priority grassland, wetland, woodland, and hedgerow habitats. The design process has taken account of existing biodiversity, the natural environment and, where practicable, seeks to reduce impacts on areas of ecological sensitivity, through avoidance or mitigation.	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Chapter 8: Ecology and Biodiversity of the Environmental Statement (ES) (document reference 6.8) assesses the effects on important ecological receptors (which includes grasslands, wetlands, woodlands and hedgerows).</p> <p>As part of the Environmental Impact Assessment (EIA) process for the Project, a suite of ecological surveys has been to be undertaken. The findings of which inform the design and approach to mitigation.</p> <p>The Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Code of Construction Practice (CoCP) (document reference 7.2) contain a list of relevant good practice measures to avoid or reduce impacts on valuable habitats.</p> <p>The Environment Act 2021 introduces a mandatory requirement for 10% Biodiversity Net Gain (BNG) for new Development Consent Order (DCO) developments (which is not yet in force and not expected until May 2026). National Grid has committed to delivering 10% BNG with environmental and societal benefits on all construction projects. The BNG target for the Project is currently voluntary and aligned with our corporate sustainability commitment.</p> <p>As well as seeking to avoid and minimise impacts to nature, the Project considers the land required for mitigation, compensation and enhancement that can deliver BNG and wider environmental benefits. This</p>

9-7.375	Concern that wildlife is already being displaced by the Project / Request for National Grid to confirm what they are doing to mitigate this displacement	<p>The application for development consent is supported by an Environmental Impact Assessment (EIA), which considers the effects of the Project on biodiversity and identifies if mitigation is required (see the Environmental Statement (ES), Chapter 8: Ecology and Biodiversity (document reference 6.8)). A suite of surveys has been undertaken to support the assessment which are presented in Appendix 8.1 - Appendix 8.15 (document reference 6.8.A1 – 6.8.A15). Mitigation, relevant to biodiversity, is set out within the Outline Landscape and Ecological Management Plan (LEMP) (document</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		reference 7.4) in line with the assessment undertaken within the ES.				
9-7.376	Concern about the impact of the Project on bee hives near Pylon TB180 (location provided by respondent), including proposed large works site and proposed works road close to the rear of the hives (e.g. due to dust and dirt from the construction works)	<p>Mitigation measures to reduce dust/dirt transfer during construction would be implemented and are outlined within the Outline Code of Construction Practice (CoCP) (document reference 7.2).</p> <p>If it is deemed necessary by mutual agreement for bee hives to be relocated temporarily or permanently, National Grid would compensate the affected party.</p>			X	
9-7.377	Concern about the impact of Pylons TB161, TB162, TB163, TB164 and TB165 on wildlife	A range of protected species and habitat surveys have been undertaken and the results are outlined in Chapter 8: Ecology and Biodiversity (document reference 6.8) and Appendices 8.1 to 8.16 (document reference 6.8.A1-6.8.A16) of the Environmental Statement (ES). Appropriate mitigation will be implemented where impacts are identified as agreed with Natural England (NE) and the Local Planning Authority as relevant.			X	
9-7.378	Concern that the Project will disrupt the culling and control of deer at Margaretting	<p>During the construction phase of the Project there may be some disruption caused to culling activities in the immediate area of the works. National Grid will work with all landowners and individuals to understand where this disruption may occur and agree if any mitigation can be put in place to lessen the impact.</p> <p>If a landowner has concerns over how their farming practices may be affected, or if they would like to advise</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>the Project team of any culling or shoot activities, they should contact the Project lands team to discuss: Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.</p> <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD.</p>				
9-7.379	Criticism that whilst bat surveys have been undertaken, only the desk study report is available at present as the results of the data collected during the 2023 surveys and the results of the Ground Level Tree Assessments undertaken between November 2023 and March 2024 (referenced in the Preliminary Environmental Impact Report (PEIR)) have not been provided	A suite of surveys was undertaken from September 2022 to November 2024. The results of the bat surveys are outlined in Chapter 8: Ecology and Biodiversity (document reference 6.8) and Appendices 8.9 to 8.11 (document reference 6.8.A9 - 6.8.A11) of the Environmental Statement (ES). Appropriate mitigation would be implemented where impacts are identified as agreed with Natural England and the Local Planning Authority (LPA) as relevant.		X		
9-7.380	No 'Key Reptile Sites' have been identified from across the draft Order Limits within Chelmsford, but six locations have been identified as having suitability for reptiles: River Ter; River Chelmer; River Can and Former Brittons Hall Farm Landfill site; Chelmsford Compressor Station; Land off Roxwell Road; Willowmere Lake and Associated Habitat; Writtlepark and Associated Woodlands. These six sites have been ruled out from further presence / likely absence surveys, either because	<p>Reptile habitat suitability assessments were undertaken on sites across the Project route. Multiple Key Reptile Sites were identified and received dedicated surveys. The results are outlined in Chapter 8: Ecology and Biodiversity (document reference 6.8) and Appendix 8.6: Reptile Report (document reference 6.8.A6) of the Environmental Statement (ES).</p> <p>ES Chapter 8: Ecology and Biodiversity (document reference 6.8) and the Outline Landscape and Environmental Management Plan (LEMP) (document</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	impacts are considered avoidable or because displacement by habitat manipulation is the most appropriate mitigation solution regardless of survey result. Whilst the logic of this approach is understood in principle, National Grid will need to provide a supported argument as to why this is the best approach for reptile species. This should include demonstrating how effective mitigation will be achievable in all instances	reference 7.4) provide an explanation of the mitigation approach at relevant sites identified as offering suitability for reptiles and at key reptile sites.				
9-7.381	Request that it is demonstrated that sites worthy of survey within Chelmsford for breeding birds has not been overlooked, and request that there will be a well-reasoned estimate of the potential overall cumulative impact on breeding birds from the Project	Impacts to breeding birds have been considered across the route at all sites that may have value and a range of breeding bird surveys have been conducted across the route. The results are outlined in Chapter 8: Ecology and Biodiversity (document reference 6.8) and Appendix 8.7: Breeding Bird Report (document reference 6.8.A7) of the Environmental Statement (ES). Appropriate mitigation would be implemented where impacts are identified as agreed with Natural England and the Local Planning Authority (LPA) as relevant. Chapter 17: Cumulative Effects of the ES includes consideration of cumulative impacts on breeding birds.		X		
9-7.382	Concern that Bushy Wood would be impacted by the Project / Suggest that a thorough impact assessment is undertaken for this site, along with appropriate application of the mitigation hierarchy, and this needs to be included in the Statement of Common Ground (SoCG)	The Project does not impact Bushy Wood directly. However, any potential indirect impacts on Bushy Wood are considered in Chapter 8: Ecology and Biodiversity (document reference 6.8) of the Environmental Statement (ES). Appropriate mitigation would be implemented where impacts are identified as agreed		X

		<p>with Natural England and the Local Planning Authority (LPA) as relevant.</p> <p>National Grid is preparing draft Statements of Common Ground (SoCG) with relevant stakeholders and these will be developed further during the Development Consent Order (DCO) examination phase.</p>				
9-7.383	Suggest that the Project is rerouted at Pylon TB156 to avoid the clearance of preserved trees (e.g. to mitigate impact on preserved woodland)	The current location of TB156 impacts field boundary vegetation. According to information presently available this linear feature is not legally protected by a Tree Preservation Order (TPO). We have not made a change to the position of this pylon.		X		

Basildon and Brentwood feedback

Basildon and Brentwood (Statutory Consultation)

Table 9-8 Summary of consultee comments and National Grid's response

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Agricultural Land						
9-8.1	Concern that the Project will take away valuable agricultural land / disrupt farming operations	<p>During the construction stage of the Project, there would be areas of agricultural land that would be temporarily disrupted. National grid would only use land that is required as part of the Project and would seek to minimise the use of agricultural land where reasonable and safe to do so.</p> <p>National Grid is and will continue to work with all landowners including farmers who may be affected by the proposals to understand the impacts on their operations and to work with them as the Project is developed. We would seek to work with the farming community to limit disruption where practicable. This includes providing prior warning of works which may result in the need to move livestock. Compensation claims for disturbance are considered on a case-by-case basis, if negative impact on farming operations can be proven. Particular agricultural matters can also be addressed through voluntary land agreements.</p>	X	X	X	

9-8.2	Concern that the Project will have a negative impact on agricultural livestock (e.g. type of livestock)	<p>National Grid is and will continue to work with all landowners including farmers and equestrian facilities who may be affected by the proposals to understand the impacts on their operations and to work with them as the Project progresses. We would seek to work with the farming community to limit disruption where practicable. This includes providing prior warning of works which may result in the need to move livestock. Compensation claims for disturbance are considered on a case-by-case basis, if negative impact on farming operations can be proven. Particular agricultural matters can also be written into voluntary land agreements. There will also be mitigation put in place where animal grazing maybe affected.</p> <p>As well as possible effects on humans, possible effects of Electric and Magnetic Fields (EMFs) on various animals have been studied. No detectable effects of EMFs have been found on, for example, health, milk production, fertility, and behaviour. This is confirmed in National Policy Statement (NPS) EN-5 which states: <i>"There is little evidence that exposure of crops, farm animals or natural ecosystems to transmission line EMFs has any agriculturally significant consequences."</i></p>			X	X
Airfields						
9-8.3	Concern about the impact of the Project on Chase Farm Airstrip / Suggestion that the Project is routed away from Chase Farm Airstrip	<p>National Grid has appointed an independent aviation consultancy which has engaged with the operators of this Airstrip (with National Grid also present). Following discussion and further assessment of alternatives it is not possible to route the alignment away from the airstrip at a distance that allows the continued safe use of the airstrip at its current position. We are engaging and will continue to engage with the owner of the airstrip to find an appropriate solution. Further information on the assessment of airfields can be found in the Environmental Statement (ES) (see ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and ES Appendix 15.2:</p>	X		X	

		Review of Aviation Impact (document reference 6.15.A2)).				
9-8.4	Concern about the impact of the Project on Barnard's Farm / Suggestion that the Project is routed away from Barnard's Farm	National Grid has appointed an independent aviation consultancy which has engaged with the operators of this Airstrip (with National Grid also present). Following discussion and with consideration of the flying activities at the site and pylon heights and positions we do not consider it necessary to route away from the airstrip. The Project is at a distance that allows the continued safe use of the airstrip at its current position. We are engaging and will continue to engage with the owner of the airstrip as the Project develops. Further information on the assessment of airfields can be found in the Environmental Statement (ES) (see ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and ES Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2)).			X	
9-8.5	Concern about the impact of the Project on London Southend Airport / Suggestion that the Project is routed away from London Southend Airport	London Southend Airport is at around 20 km distance with a number of existing overhead lines between it and the Project. No impact on the airport activities would occur and no change is proposed.	X		X	
9-8.6	Concern about the impact of the Project on Laindon Airfield / Suggestion that the Project is routed away from Laindon Airfield	In accordance with its responsibilities as an applicant as described within the Government's Overarching National Policy Statement for Energy (NPS EN-1) National Grid has appointed an independent aviation consultancy to develop a methodology to assess the potential impacts of the Project on aviation including airfields in close proximity. The assessment methodology enables risk-based site-specific assessment of a range of criteria, including but not limited to, lateral and vertical clearance margins, aircraft types, airfield operational activities and procedures, and the surrounding context. The approach is informed by Civil Aviation Authority (CAA) regulations and guidance as well as ongoing consultation with airfield owners and operators.	X	X	X	

		<p>In relation to Laindon Farm airfield, our impact assessments recognise that the airfield is sufficiently distanced from the overhead line (by approx. 4.2 km) for aircraft using the airfield to avoid overflying the overhead line in all circumstances. We therefore assess that the Project will not impact airfield operations. Proposed changes to the Project design are therefore not justified on this basis.</p> <p>Further information on the assessment of airfields can be found in the Environmental Statement (ES) (see ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and ES Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2)).</p>				
9-8.7	<p>Concern about the pylon height in relation to the impact of the Project on Barnard's Farm (e.g. reference points) and suggest that the normal glide slope of 3.5 degrees from the airfield to the pylons should be used to project the clearance for an aircraft to the pylons, with worst-case allowable instrument error taken into account. With this, suggest that a computer-generated view from the centre of the airfield runway towards Langdon Hills should be provided by National Grid (e.g. to show the visual impact of the Project from the airfield).</p>	<p>National Grid has appointed independent aviation consultants to assess the potential impacts of the Project on aviation. Their assessment methodology incorporates a range of assumption parameters regarding take-offs and approaches by different aircraft performance classes, including maximum gradient angles. The assessment considers whether the Project alignment infringes Obstacle Limitation Surfaces (OLS) as specified under the Civil Aviation Authority's (CAA's) CAP 168 regulations for licensed aerodromes, recognising this to be a best practice measure for obstacle assessment and treatment, albeit not a regulatory requirement for unlicensed aerodromes such as Barnard's Farm. In this instance, CAP168 measures are calculated to have been met, and clearance margins to the overhead line are therefore assessed to be sufficient in terms of safety.</p> <p>National Grid continues to engage with the operator to confirm the acceptability of Project design and support their consideration of reasonable changes to operating procedures. It is understood that a computer-generated view from the airfield has been shared with the operator to this end.</p>	X		X	

		Further information on the assessment of airfields can be found in the Environmental Statement (ES) (see ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and ES Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2)).				
9-8.8	Concern about the impact of the Project on Brock Farm Airstrip / Suggestion that the Project is routed away from Brock Farm Airstrip	<p>National Grid has appointed an independent aviation consultancy which has engaged with (with National Grid also present) Brock Airfield. Feedback determined that the airstrip has been sold to a new owner (the adjacent carp fishery) who advised that the airstrip has now been closed. Thus, there is no conflict between the Project, and this now closed airstrip.</p> <p>We will continue to engage with nearby airfields as appropriate.</p> <p>Further information on the assessment of airfields can be found in the Environmental Statement (ES) (see ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and ES Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2)).</p>	X	X	X	
Community / Social impact						
9-8.9	Concern about impact of the Project on children / families / residents / communities	<p>National Grid recognises people may have concerns about the potential impacts of living close to an overhead line, and that the uncertainty whilst the proposals are developed may cause anxiety.</p> <p>We have sought to reduce potential effects on communities, residents – including children - through routeing and design. We have also sought to reduce concern or uncertainty about the proposals through making timely design decisions and engaging with people and stakeholders throughout the development of the Project. If the Project received Development Consent, the Project team would continue to engage with people potentially affected during construction,</p>	X	X	X	

		<p>through regular communication including letters, phone calls and meetings, where necessary.</p> <p>We urge anyone with concerns to get in touch through the Norwich to Tilbury Freephone number, address or email, which will remain open throughout examination.</p> <p>National Grid is committed to working with local suppliers, facilitated by supporting forums (such as the local Chambers), on electricity industry skills and workforce planning. National Grid is also committed to providing a coordinated regional approach to jobs and skills opportunities. This commitment is broader than the individual project and separate to any commitments under the proposed development consent order for this Project. The socio-economic effects of the project are assessed in Chapter 15: Socio-economics, Recreation and Tourism of the Environmental Statement (ES) (document reference 6.15). Post construction job opportunities are limited given the nature of the development however we will still work with Local Authorities (including facilitating local partners) to understand what is important to them around skills and employment to ensure we leave a lasting positive legacy in the communities where we operate.</p> <p>With regards to a delivery mechanism, the above measures will be delivered as part of our community benefit package, which will look at both local and regional initiatives. This will be delivered outside the development consent process and is not a material consideration in the decision on the proposed Project or a matter to be secured as part of the DCO, as per the Community Funds for Transmission Infrastructure: Guidance (DESNZ, 2025).</p>				
9-8.10	Concern about impact of the Project on school / educational facilities	<p>Through routeing and siting, National Grid has sought to avoid, as far as practicable, locations of education establishments.</p> <p>ES Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) presents an</p>			X	

		assessment of the potential impacts on education facilities as a result of the Project. As part of the assessment, a range of measures are considered during the construction phase to reduce, where practicable, disruption to education establishments. These include traffic management, signage and routing measures to ensure access or partial access can be maintained where feasible. These are identified within ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15), the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) and the Outline Code of Construction Practice (CoCP) (document reference 7.2). The assessment concludes that there would be no significant effects on education facilities within the study area as a result of the construction and operation of the Project.				
9-8.11	Concern about impact of the Project on leisure	Through routeing and siting National Grid has sought to avoid, as far as practicable, locations important for leisure and tourism. Environmental Statement (ES) Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) presents an assessment on the potential impacts on leisure and tourism. As part of this assessment, a range of measures have been considered throughout the construction phase of the Project to minimise disruption on leisure and tourism. These include: traffic management, signage and routeing measures. These are identified within ES Chapter 15: Socio-economics, Recreation and Tourism, the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).	X		X	
9-8.12	Concern about over development of area / other works in the area (e.g. cumulative impact)	A cumulative effects assessment has been undertaken in accordance with the Planning Inspectorate's Advice Note 17 'Cumulative Effects Assessment' and is presented in Environmental Statement (ES) Chapter 17: Cumulative Effects (document reference 6.17). The	X		X	

	<p>cumulative effects assessment has considered the effects of the Project in conjunction with other existing and, or approved developments in line with guidance. As part of this process, National Grid has engaged with other developers who are proposing development in proximity of the Project to understand their requirements.</p> <p>The cumulative assessment has been undertaken in accordance with the overarching NPS for Energy (EN-1)</p> <p>Paragraph 4.1.5 in EN-1 states:</p> <p><i>‘In considering any proposed development, in particular when weighing its adverse impacts against its benefits, the Secretary of State should take into account: ... its potential adverse impacts, including on the environment, and including any long-term and cumulative adverse impacts, as well as any measures to avoid, reduce, mitigate or compensate for any adverse impacts, following the mitigation hierarchy’.</i></p> <p>Paragraph 4.2.12 in EN-1 states:</p> <p><i>‘The cumulative impacts of multiple developments with residual impacts should also be considered.’</i></p> <p>Paragraph 4.3.3 in EN-1 states:</p> <p><i>‘The Regulations require an assessment of the likely significant effects of the proposed project on the environment, covering the direct effects and any indirect, secondary, cumulative, transboundary, short, medium, and long-term, permanent and temporary, positive and negative effects at all stages of the project, and also of the measures envisaged for avoiding or mitigating significant adverse effects’.</i></p> <p>Paragraph 4.3.19 of EN-1 states:</p> <p><i>‘The Secretary of State should consider how the accumulation of, and interrelationship between, effects might affect the environment, economy, or community as a whole, even though they may be acceptable when</i></p>				
--	---	--	--	--	--

		<p><i>considered on an individual basis with mitigation measures in place’.</i></p> <p>Paragraph 4.4.5 in EN-1 states: <i>‘The impacts of more than one development may affect people simultaneously, so the applicant should consider the cumulative impact on health in the ES where appropriate’.</i></p> <p>The long list and short list of other existing and, or approved developments considered for the Cumulative Effects Assessment is presented in ES Appendix 17.2: Long List and Short List of Other Developments (document reference 6.17.A2), detailing the other developments shortlisted for detailed assessment. The appendix provides details on other developments screened out of the assessment in accordance with the methodology presented in ES Chapter 17: Cumulative Effects (document reference 6.17). The detailed assessment of shortlisted other developments is presented in ES Appendix 17.3: Inter-Project Cumulative Effects Matrix (document reference 6.17.A3). Appendix 17.3: Inter-Project Cumulative Effects Matrix (document reference 6.17.A3) outlines the residual significance of cumulative effects for each development, for each environmental topic that has a Zone of Influence that overlaps with that development (i.e. socio-economics, recreation and tourism impacts).</p>				
9-8.13	Concern about the Project being in too close proximity to recently built housing developments / using land being considered for future development (including residential, commercial, infrastructural, and employment sites)	<p>National Grid has obtained information on existing, under construction, consented but not built schemes as well as development proposals within the planning system. The Project design has responded to those that are confirmed through consideration of routeing.</p> <p>In the case of development proposals, some can be amended to be designed around our proposed infrastructure but in other cases our proposals may need to be amended at a corridor level, or proposed developments factored into our detailed route design.</p>	X		X	

		Based on known information, and in light of changes made following consideration of feedback to the 2022 and 2023 non-statutory consultations, statutory consultation, targeted consultations and landowner consultation, we consider our proposals are consistent with relevant policy and guidelines and the alignment designed such that they do not prevent proposed housing developments from being successfully progressed. UK law does not prescribe minimum distances between overhead lines and homes, but any implications on landscape and visual receptors, residential amenity or from concerns about electromagnetic fields are robustly assessed as part of the Environmental Impact Assessment (EIA) and balanced as part of the decision making process. We will continue to review planning applications and engage with developers as necessary.				
9-8.14	Concern about the Project causing communities to become encircled / surrounded by overhead lines	The alignment has been routed to achieve some separation from the existing 400 kV overhead line, such that villages are not encircled by overhead lines to both sides. Separation is inevitably reduced in certain locations due to the presence of constraints to routeing and environmental features. Detailed assessment reported in the Environmental Impact Assessment (EIA) identifies any measures considered to be necessary to reduce likely significant effects which will also consider the potential for effects potentially arising from close paralleling existing 132 kV overhead line and new 400 kV overhead line infrastructure.			X	
9-8.15	Concerned that the Project will have a negative impact on domestic horses / equestrian activities	As well as possible effects on humans, the possible effects of Electric and Magnetic Fields (EMFs) on various animals have been studied. No proven effects of EMFs have been found in any species at levels below the guidelines. This is confirmed in National Policy Statement (NPS) EN-5 which states: <i>"There is little evidence that exposure of crops, farm animals or natural ecosystems to transmission line EMFs has any agriculturally significant consequences."</i> Although			X	

		<p>horses are not directly mentioned, there is no evidence to suggest they are any different to other farm animals.</p> <p>As well as the possible direct biological or health effects addressed above, indirect effects such as microshocks can occur as a result of electric fields. Microshocks are small spark discharges which are similar to a static shock after walking across a nylon carpet for example. The Project will be designed in accordance with the principles of the Governments Code of Practice 'Power Lines: Control of Microshocks and other indirect effects of public exposure to electric fields' to ensure these are mitigated, which include equestrian activities.</p>				
9-8.16	Concern about the impact of the Project on emergency services / ambulances / hospitals / health service	<p>Through routeing and siting National Grid has sought to avoid and reduce as far as practicable effects on identified healthcare facilities.</p> <p>Environmental Statement (ES) Chapter 10: Health and Wellbeing (document reference 6.10) and ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) consider the potential impacts on, and access to, healthcare facilities, including emergency services, ambulances, hospitals and other NHS services associated with the construction of the Project, drawing on information from ES Chapter 16: Traffic and Transport (document reference 6.16). No health facilities are due to be directly impacted by the Project and where road diversions are required traffic management and mitigation measures will be in place to reduce impacts. These include: traffic management, signage and routing measures to ensure access or partial access can be maintained where feasible. Further detail on proposed mitigation measures is presented in the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), which has been produced following engagement with stakeholders including the emergency services.</p>			X	

9-8.17	Request for assurance that the Project will not affect the TV signal for TV reception in this area (signal from "Sudbury" in the Anglian region)	Radiofrequency emissions can interfere with electrical equipment, telecommunication. WiFi and broadcast equipment. These emissions are limited from overhead lines by design set out in National Grid's Technical Specifications, which include the requirements of British standards minimising the generation of radio interference. All the equipment used would meet the requirements in these standards, which are in place to prevent interference issues. These are the same good engineering practices that are applied to the existing transmission system assets, including existing 400 kV overhead lines, which cause no interference issues for electrical equipment, telecommunication, WiFi and broadcast equipment under normal operating conditions. Therefore, no significant interference issues would result from the Project's operation.			X	
9-8.18	Criticism that respondent was advised by a water company that they were not allowed to dig under the A127, yet National Grid is proposing to dig through the respondent's property and onto the A127	<p>At this location National Grid is not proposing to dig through the respondent's property. The access shown through the property drive is a permanent right of access route only, potentially required to install scaffold crossing protection netting under the overhead line if works to the overhead conductors are required. In this scenario nothing would need to be dug along the driveway, it is just an access route (potential for trackway) to the overhead line conductors.</p> <p>At statutory consultation the pipeline was also shown as potentially requiring mitigation. There is the potential, based on induced currents from the 400 kV overhead line, that alternating current mitigation measures may need to be installed to the pipelines in this location. The scope and extent of such mitigation measures would be dependent on the final design arrangements of the Project which would continue to evolve within the parameters of confirmed Limits of Deviation. Factors including crossing angle and clearance height, length of parallelism, site specific soil resistivity etc combine to define the requirement for mitigation. The mitigation itself is typically achieved by</p>			X	

		the installation, alongside the ferrous pipeline (in an area which is likely to have been previously disturbed during construction), of additional earthing which extends away from the crossing point. Consultation between National Grid and the relevant utility provider would confirm the requirement for installed mitigation, based on the final 400 kV design arrangements, which would be implemented by the relevant utility provider under their existing utility operation and maintenance provisions.				
9-8.19	Concern that Pylon TB226 may be relocated due to impact on listed buildings given that relocation may have a greater negative impact on Dunton Hills Garden Village (DHGV), and suggest that any future changes to the location of Pylon TB226 should be consulted on with the developers	National Grid has carefully considered the re-location of pylon TB226 but its relocation would transfer or increase impacts on other environmental receptors and therefore a change is not proposed.			X	
9-8.20	Concern about the Project causing a severing effect / barrier between Hutton and Havering's Grove and suggest that the Project is routed away from these areas	National Grid has considered the respondent's feedback highlighting a preference for an alternative moved away from Hutton and Havering's Grove. In the absence of a specific basis for the change or a proposed alternative alignment, we have considered this feedback by following the guidance in the Holford Rules in developing the alignment. Guidelines on overhead line routeing are known as the "Holford Rules" which remain a valuable tool in selecting and assessing potential overhead line route options as part of the options appraisal process. A summary of the Holford Rules is provided within Appendix I22 of this report. While the alignment is routed between Hutton and Havering's Grove, it is not anticipated to become a barrier nor create any movement restrictions between the two settlements. We are therefore not proposing a change to the alignment at Hutton and Havering's Grove.			X	

Construction Impacts					
9-8.21	Concern about disruption from construction	<p>An Environmental Statement (ES) (document reference: Volume 6: Environmental Statement) has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 ('the Infrastructure EIA Regulations'). The ES identifies and assesses the likely significant effects on the environment resulting from the construction of the Project and recommends appropriate mitigation to reduce effects.</p> <p>Environmental mitigation measures have been defined within each environmental topic chapter and set out in relevant management documents submitted with the Development Consent Order (DCO) application, including the Outline Code of Construction Practice (CoCP) (document reference 7.2), the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5).</p>		X	
9-8.22	Concern about impact on traffic levels in local area caused by construction works	<p>As part of the pre-application process National Grid has engaged with the relevant authorities, their highways teams and National Highways to understand and gain information on their road networks. This information has been used to inform and guide the drafting of the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) for the Project that accompanies the Development Consent Order (DCO) application. The Outline CTMP (document reference 7.3) provides details about a strategy that has been developed to manage the impact of construction vehicles on the public highway and sensitive receptors, using suitable Local Road Network connections from the Strategic Road Network called Primary Access Routes. In addition, temporary haul roads for</p>			X

		<p>construction vehicles are proposed along the Project alignment, further reducing the impact of construction traffic on the local road network. Further details of the strategy can be found within the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).</p> <p>Environmental Statement (ES) Chapter 16: Traffic and Transport (Document Reference 6.16) includes the assessment of the potential impacts of the Project including changes in traffic flow, delays, road safety and impact on Walking, Cycling and Horse-Riding modes on the roads along the Primary Access Routes located in the Local Road Network.</p> <p>The Transport Assessment (Document Reference 7.11), submitted with the Development Consent Order (DCO) application, examines capacity, safety, and operational efficiency of the network, identifying potential bottlenecks or safety concerns.</p> <p>Within the assessment of the ES and the Transport Assessment, mitigation measures are proposed to minimise likely adverse impacts.</p>				
9-8.23	Concern about noise and other issues resulting from construction (e.g. mud on roads, dust)	<p>An Environmental Statement (ES) (document reference: Volume 6: Environmental Statement) has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 ('the Infrastructure EIA Regulations'). The ES identifies and assesses the likely significant effects on the environment resulting from the construction of the Project and recommends appropriate mitigation to reduce effects.</p> <p>Specifically, a Construction Noise and Vibration Impact Assessment has been undertaken and is reported in Environmental Statement (ES) Chapter 14: Noise and Vibration (document reference 6.14). During construction, mitigation would be implemented to reduce noise and vibration impacts from construction activities and increased road traffic and vibration due to</p>			X	

<p>additional movement from construction traffic. Mitigation measures are outlined in ES Chapter 14: Noise and Vibration (document reference 6.14) and the Outline Code of Construction Practice (CoCP) (document reference 7.2). This includes the assumption that construction working would be undertaken within the agreed working hours, construction traffic would be managed through the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), haul roads would be well maintained, and Best Practicable Means (BPM) would be employed to reduce construction noise and vibration.</p> <p>ES Chapter 7: Air Quality (document reference 6.7) presents an assessment of the potential impacts from the construction of the Project on air quality. During construction, mitigation would be implemented to reduce the impact of dust generation and construction vehicle emissions. Mitigation measures are outlined in ES Chapter 7: Air Quality (document reference 6.7), and the Outline CoCP (document reference 7.2). The dust-emitting activities can be greatly reduced or eliminated by applying the site-specific mitigation measures (see Outline CoCP (document reference 7.2)) for high risk sites following measures recommendations in the Institute of Air Quality Management (IAQM) guidance (IAQM, 2024). The IAQM guidance states that with the implementation of effective site-specific mitigation measures, the environmental effect would not be significant in most cases.</p> <p>In addition, National Grid has prepared an Outline CoCP (document reference 7.2). The Outline CoCP (document reference 7.2) sets out the required mitigation measures and environmental commitments that will be implemented during the construction phase of the Project to avoid or reduce potential effects of the Project on the environment.</p>				
--	--	--	--	--

9-8.24	Concern that local road infrastructure is not suitable for heavy construction vehicles and machinery	<p>A strategy has been developed to manage the impact of construction vehicles on the public highway and sensitive receptors, using suitable Local Road Network connections from the Strategic Road Network called Primary Access Routes. In addition, temporary haul roads for construction vehicles are proposed along the Project alignment, further reducing the impact of construction traffic on the local road network. Further details of the strategy can be found within the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).</p> <p>The Project also requires the transportation of Abnormal Indivisible Loads (AIL). National Grid is developing specific routing proposals for AIL movements and is developing these through engagement with the relevant stakeholders including the Local Highway Authorities and National Highways. An AIL routing strategy containing details about these movements are submitted in support of the Development Consent Order (DCO) application.</p>			X	
9-8.25	Concern that deep foundations will be required for pylons due to the Project being sited within floodplains, causing a significant impact to the environment and nearby wildlife	<p>National Grid has completed the Environmental Impact Assessment (EIA) for the Project. The results of this assessment are provided in the Environmental Statement (ES) that accompanies the Development Consent Order (DCO) application. The ES identifies and assesses the likely significant effects on the environment resulting from the construction of the Project and recommends appropriate mitigation measures (in consultation with relevant stakeholders) to reduce potential effects.</p> <p>A Flood Risk Assessment (FRA) (document reference 7.9) has been prepared for the Project to support and inform the EIA. The ES includes consideration of potential impacts on flood risk from all relevant sources, both temporary and permanent impacts, taking account of the effects of climate change over the Project's design life.</p>			X	

		The FRA (document reference 7.9) describes the measures that would be put in place to manage construction and operational flood and land drainage impacts to ensure the development is safe from flooding over its lifetime and that off-site flood risk is not increased.				
9-8.26	Concern about the damage and disruption caused by the access roads	<p>A strategy has been developed to manage the impact of construction vehicles on the public highway and sensitive receptors, using suitable Local Road Network connections from the Strategic Road Network called Primary Access Routes. In addition, temporary haul roads for construction vehicles are proposed along the Project alignment, further reducing the impact of construction traffic on the local road network. Further details of the strategy can be found within the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).</p> <p>The Outline CTMP (document reference 7.3) includes details of proposed pre-condition and post-condition surveys and includes allowance for remediation works where changes to the condition have occurred due to the Project construction work.</p> <p>Environmental Statement, Chapter 16: Traffic and Transport (document reference 6.16) includes the assessment of the residual impacts of the Project including changes in traffic flow, delays, road safety and impact on walking, cycling and horse-riding modes along the Primary Access Routes (PARs) located on the Local Road Network. This document sets out mitigation measures which are proposed to minimise negative impacts.</p>			X	
9-8.27	Concern that the Project between Ingatestone and Billericay appears to run close to the River Wid, which is notorious for winter flooding / Request for National Grid to confirm whether this has been considered with regards to the siting of the pylons, and possible disruption due to flooded access /	National Grid has considered alternative routes in this area within the constraints, environmental features and residential properties that are present including the sewage treatment works, listed buildings including Grade I listed heritage assets at Ingatestone Hall and St Giles Church Mountnessing and ancient woodland.	X	X	X	

	<p>Concern about impact on existing issues with flooding at Billericay / in the area between Ingatestone and Haverings Green (e.g. impact of construction and permanent access roads for the Project)</p>	<p>The rationale for the alignment was set out in the 2024 Design Development Report, which can be found on the Project website, and in the absence of new information or new factors being identified, those conclusions remain valid and the general alignment unchanged subject to small modifications to individual pylon positioning. Proposed infrastructure has either been positioned outside Flood Zones or can be designed in a way that would be resilient to risk of damage from flooding and designed so as not to exacerbate flood risk nor cause damage to the river and its ecosystem. Pylon TB190 was moved south of the River Wid to a location outside of the Flood Zone after the non-statutory consultation in 2023. Pylon TB198 was moved to west outside of the Flood Zones after the non-statutory consultation in 2023. Finally, pylon TB202 was moved slightly north after the statutory consultation to be located outside of the Flood Zones. A Flood Risk Assessment (FRA) (document reference 7.9) has been prepared for the Project which has informed the Environmental Impact Assessment (EIA) and that has identified the mitigation measures necessary to prevent the Project from increasing fluvial flood risk.</p> <p>The FRA (document reference 7.9) describes the measures that would be put in place to manage construction/operational flood risk and land drainage to ensure the development is safe from flooding over its lifetime and off-site flood risk is not increased.</p>				
9-8.28	<p>Request for further information regarding the length of time that the temporary roads will be in place for</p>	<p>Information regarding the construction programme is included in the Environmental Statement (ES), Chapter 4: Project Description (document reference 6.4) and the Outline Code of Construction Practice (CoCP) (document reference 7.2), an estimated construction period is between 2027 and 2031.</p> <p>Typically, the haul roads would be in place throughout the construction period of the Project (2027 to 2031) and removed post completion. The exact time each</p>	X		X	

		part of the haul road will be in place will vary depending on the specific construction program for each section and how early removal of sections of haul road can commence.				
9-8.29	Request for details as to where construction fences will be sited (and their alignment) and whether farmer / and landowners will be able to cross the tracks to reach isolated areas of farmland or whether the whole length of the track is going to be fenced	<p>National Grid proposes security fencing and gates for all site access points to secure the works area, the construction corridor and haul roads. Security gates are to be set back a minimum of 20 m from the edge of the carriageway to allow for vehicles transitioning between the works area and public highway to stop outside of the gate whilst not impeding the public highway. A typical site access point layout including tracking of construction vehicles, visibility splays and fencing arrangements can be found on the Design and Layout Drawings (document reference 2.6.3). In accordance with GG29 in the Outline Code of Construction Practice (CoCP) (document reference 7.2), working areas would be appropriately fenced.</p> <p>Access control measures such as fencing and gated accesses to working areas would typically be in place for safety and security. Access and crossover points would be designed to reduce highway safety risks and congestion on the public highway by providing for the safe and efficient passage of construction traffic.</p> <p>National Grid usually fences out their construction working width to protect both members of the public and livestock. This also helps to avoid trespass. Unless otherwise agreed with the landowner/occupier, the method of fencing the construction working width would be livestock-proof to ensure exclusion of any stock kept on the adjoining land. Where no livestock is kept, post and rope fences or wire may be used. National Grid would exercise reasonable care and undertake practical measures to avoid entry by trespassers. Crossing points may be included within this fencing to facilitate the continuation of agricultural operations. The crossing points would be installed at appropriate locations to enable reasonable access across the</p>	X	X	X	

		<p>construction working width. All temporary fencing would be maintained throughout construction works until the land has been reinstated, unless otherwise agreed with the landowner/occupier.</p> <p>It is anticipated that existing access would only be closed where this is required for safe working. In accordance with measure AS03 in the Outline Code of Construction Practice (CoCP) (document reference 7.2), where practicable and safe to do so, existing access to and from residential, commercial, community and agricultural land uses would be maintained throughout the construction period, or as agreed through landowner discussions.</p>				
9-8.30	Concern that the Project runs alongside a busy route used as an alternative to reach the Dartford Crossing / Request for National Grid to confirm how long this this disruption will affect locals	<p>Without knowing exactly which route is being referred to, it is only possible to provide a general response (rather than a specific duration), which is that the construction phase of the Project would last approximately four years in total (2027 to 2031). Regarding the Dartford Crossing, analysis conducted by the Project to date suggests that the main source of materials would be from the north / north-west of the study area and that the transport of these materials would not involve use of the Dartford Crossing.</p>	X	X	X	
9-8.31	Criticism that the area surrounding Horndon-on-the-Hill is agricultural fields, so there is no suitable location for National Grid to provide an environmental asset	<p>Areas of agricultural land surrounding Horndon-on-the-Hill acquired for temporary construction activities related to the Project would be reinstated post-construction in line with good practice soil handling measures, to protect the quality of soil resources and maintain land quality. Areas of agricultural land surrounding Horndon-on-the-Hill which are taken permanently out of agricultural production is limited to pylon bases which cover relatively small percentages of land proportional to field sizes. Surplus soil produced from areas of permanent land take would be reused where appropriate to reduce any environmental loss/provide an environmental asset i.e., for landscaping purposes.</p>			X	

9-8.32	<p>Concern that the proposed haul road for the Project which utilises the existing access route from Tilbury Road to the Dunton Hill Family Golf Centre will impact on construction of the Dunton Hills Garden Village (DHGV) and suggest that an alternative route is used for the Project (no alternative provided). If use of this route for the haul road is deemed necessary, request for confirmation on how DHGV construction traffic will share this access road and how health and safety will be managed, and request plan for visitor access to the Dunton Hill Family Golf Centre clubhouse during the construction period to avoid disruptions</p>	<p>National Grid notes the feedback received. The access from Tilbury Road is not proposed as an access point to the haul road. National Grid has assessed multiple options and there are not any suitable alternatives other construction access being provided from the access bellmouth off Lower Dunton Road.</p> <p>As part of the pre-application process National Grid has engaged with the relevant authorities, their highways teams, and other affected stakeholders to understand and gain information on their local road networks and other developments in the area. Coordination and further engagement will be ongoing.</p> <p>The proposed temporary haul road will still need to route through the eastern edge of the Dunton Hills Garden Village (DHGV / Dunton Hill Family Golf Centre to enable access to construct pylons TB229, TB230 and TB231. This access route will be managed by National Grid accordingly which will continue to engage with DHGV and Dunton Hill Family Golf Centre to ensure impacts are kept to a minimum.</p>			X	
9-8.33	<p>Suggest that the haul road near Rayleigh Road is relocated to the headland (e.g. to mitigate impact on farming), and suggest that the track could be retained for future use if suitably constructed, subject to further discussion with the respondent</p>	<p>National Grid notes the respondent's feedback, however the bellmouth access (from the public highway) and haul road need to be placed in close proximity to the alignment due to construction requirements and to avoid excessive land take. Based on the highway assessments completed and the Project needs, the current proposal is preferred. As the proposed haul road needs to tie in with the proposed bellmouths and facilitate access to pylon locations, it is not beneficial to move the haul road to headlands. In this scenario spurs would still be needed to the pylons, the length would be longer and the vehicles traversing the haul road would need to slow down and turn more frequently. All this together would create greater impacts compared to the relatively straight haul road alignment as proposed adjacent to the overhead line work areas.</p>	X		X	

9-8.34	Suggest that the proposed construction compound near Rayleigh Road is relocated west onto respondent's land, subject to commercial terms (e.g. to minimise impact on residential properties) (plan provided by respondent)	National Grid notes the respondent's feedback. The construction compound has been relocated as suggested by the respondent.			X	X
9-8.35	Suggest that pylon foundations and fuel storage should be located away from the River Wid (e.g. to avoid contamination)	Between Ingatestone and Billericay multiple pylons are located within the vicinity of the River Wid and the river is crossed by the overhead line multiple times. The positioning of pylons has been determined by many factors: including design and safety requirements alongside the consideration of consultation and stakeholder feedback and the positioning of a varying degree of receptors. Whereby we have sought to minimise impacts accordingly to all receptors. In this location all of the pylons have been positioned to ensure they are set back from the River Wid itself and are located outside of the flood zone 2 and 3 areas. During construction and future maintenance, contractors would adhere to environmental management plans (EMPs) to reduce the risk of, and mitigate, and spillages of contaminants, including storage of materials away from waterways.			X	
9-8.36	Concern that pylons are proposed to be very close to the River Wid, close to Buckwyns Chase and Wardropers on Mountnessing Road, and that this will exasperate flooding issues which already have a significant impact	National Grid has considered alternative routes in this area within the constraints, environmental features and residential properties that are present including the sewage treatment works, listed buildings including Grade I listed heritage assets at Ingatestone Hall and St Giles Church Mountnessing and ancient woodland. The rationale for the alignment was set out in the 2024 Design Development Report (published on the Project website) and in the absence of new information or new factors being identified, those conclusions remain valid and the general alignment unchanged subject to small modifications to individual pylon positions. Proposed infrastructure has either been positioned outside Flood Zones or can be designed in a way that would be			X	

		resilient to risk of damage from flooding and designed so as not to exacerbate flood risk nor cause damage to the river and its ecosystem. Design has also taken into consideration the potential for effects on the general amenity of occupiers of residential property noting that such properties are at around 200 m or more from the nearest pylon, a distance not considered inconsistent with the Holford Rules Supplementary Note. A Flood Risk Assessment (FRA) (document reference 7.9) has been prepared for the Project which has informed the Environmental Impact Assessment (EIA), and that has identified the mitigation measures necessary to prevent the Project from increasing fluvial flood risk.				
9-8.37	Concern that the underground services near Pylon TB229 may be a hazard for construction of the Project, and suggest measures to guarantee compensation to the respondent in case of damages, including that an insurance policy for damages and loss of revenue is contracted by National Grid to the benefit of the respondent during construction (or equivalent or superior guarantee)	In planning the Project, National Grid considers all existing utilities and agrees to interface and mitigation arrangements (where required) with their owners. We also consider any such future installations where planning applications are in the system and likewise as part of the consultation process, we contact all third-party utility providers in the area.			X	
9-8.38	Suggest that if National Grid require a compound near the A13, the respondent is open to accommodating this, subject to commercial terms, and suggest that a location near the existing entrance may be suitable for contractors	National Grid has identified compounds to meet the requirements of the Project and is proposing a site further north for a compound, approximately midway through this section of pylons. The site proposed by the respondent is to one end of a section and therefore less preferred. Nonetheless the offer is noted and may be of future interest to our contractors once they are appointed, subject to appropriate consent and commercial arrangements.			X	
Consultation						
9-8.39	Comment supportive of engagement that has taken place / feel listened to	National Grid notes the respondent's feedback.			X	

9-8.40	Comment supportive of the Project in this section	National Grid notes the respondent's feedback.			X	
9-8.41	Criticism of consultation specific to this section	National Grid notes the respondent's feedback.			X	
9-8.42	Criticism that National Grid contradict their own 'Design Guidelines for Development near High Voltage Overhead Lines' by the way in which they avoid the Dunton Hills Garden Village (DHGV) site by instead having significant impact on Dunton	Development of the Project design balances a range of different factors. National Grid does not agree that the design contradicts our own guidelines. National Grid has to take into account the potential effect of its proposals when developing the route alignment. In this location we have to work within the context of the planning status of projects and in this case take account of the fact that planning consent has been granted for the Dunton Hills Garden Village proposals. Adopting the 132 kV alignment (north to south) would interact far more extensively with the proposals than is proposed by the route through the Garden Village being within the safety zone around the gas pipeline. Even if that were not the case, the presence of ancient woodland to the north of the site and other factors, would position the 400 kV route further to the east requiring more angles and a less direct route to divert to the 132 kV alignment which would be less consistent with Holford Rule 3. A summary of the Holford Rules is provided within Appendix I22 of this report. Overall, the alignment, subject to localised modification, remains preferred over the adoption of the 132 kV alignment. The residual effects in the area around Dunton are reported in the Environmental Statement (ES), Chapter 11: Historic Environment (document reference 6.11) supporting the Development Consent Order (DCO) application.			X	
9-8.43	Concern that National Grid has not considered reducing the scale of the Project to mitigate landscape and visual effects in the area around Blind Lane to any significant extent, and request that this is given further consideration in light of paragraph 5.10.26 in EN-1	The scale of Project is dictated by the technology and the need for the Project, in this case a 400 kV overhead line. Reducing the scale of the Project is not feasible. Alternative structures such as low height or T-pylons have been considered and discounted in this location. The latest independent report on the Comparison of Electricity Transmission Technologies: Costs and Characteristics (Institute of Engineering and			X	

<p>Technology, 2025) confirms that whilst T-Pylons may in certain locations provide an alternative to conventional overhead lines with potential benefits in visual impact and reduced land-take, this is at a higher cost. The build cost is approximately 2 to 2.5 times that of an equivalently rated conventional overhead line, and the lifetime costs are around 1.6 to 1.7 times that of a conventional overhead line. The current arrangements for the oversight of funding by Ofgem requires that the lowest cost acceptable design is taken forward rather than a more expensive design even if that design is perceived to reduce the level of effect.</p> <p>As such consideration of their use follows after establishing a need to mitigate effects of the standard lattice design and after considering the benefit of adopting a low height lattice pylon design. T pylons themselves are also less adaptable to varied terrains and require more substantial access infrastructure. Furthermore, their resilience and environmental impact are comparable to conventional overhead lines, but with increased carbon intensity due to construction materials. Attention also needs to be given to the transitions between pylon types. Given It is the surrounding context that drives the need for alternative design mitigation, where this is not required along the entire route, any visual break and transition in pylon design also needs to be carefully sited.</p> <p>Assessment findings have concluded that, where there is not a reversal of the presumption to use overhead lines, the use of lattice pylons (either standard or low height) is consistent with planning policy throughout the route. Whilst there may be some locations (for examples see appendix A of the 2024 Design Development Report) where there may be a design option for the use of T pylons, the need to mitigate for unacceptable effects from lattice pylons is not engaged. On this basis T pylons are not proposed for the Project.</p>				
--	--	--	--	--

		<p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the EIA. The LVIA includes an assessment on both landscape character and visual amenity. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13). The landscape assessment is set out in Appendix 13.2: Landscape Baseline and Assessment (document reference 6.13.A2) and concludes that there would be significant effects on the Burstead Sloping Farmland Landscape Character Area (LCA) and Brentwood Hills LCA within the vicinity of Blind Lane, west of Little Burstead. The visual assessment is set out in Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3) and concludes that there would be significant effects on people's views within Visual Receptor Area (VRA) G4 Ingrave and Herongate, including from the local road network, PRow and properties on Blind Lane. To the north of Blind Lane, west of Havering's Grove, part of an existing overhead line would be removed and undergrounded to accommodate the Project.</p>				
9-8.44	Concern that "Green Belt" is not listed as one of the environmental constraints in the area around Blind Lane or shown on any maps for the Project	National Grid notes this comment. The Green Belt is a planning policy designation rather than an environmental constraint. However, the extent of the Metropolitan Green Belt has been an important consideration for the Project. An assessment of the impact on the Green Belt forms part of the Planning Statement (document reference 5.6) which has been submitted as part of the application for development consent.			X	
9-8.45	Comment supportive that the Project has been rerouted to the east of the public bridleway at Hutton Manor	National Grid notes the respondent's feedback.			X	
9-8.46	Concern that the proposed Order Limits / red line boundary covers various area of land that are promoted by the respondent, and it is unclear	National Grid notes the respondent's feedback. In terms of permanent assets these comprise the 400 kV overhead line which is located within a safety zone			X	

	whether that land is required temporarily, or permanently, or precisely for what purpose	around a high pressure gas pipeline and would not reduce developable area. Other permanent assets relate to the replacement of a 132 kV overhead line by underground cable, to achieve necessary electrical clearances, with the route proposed by UK Power Networks (UKPN) following just beyond the boundary of existing properties and being outside other areas of development including other planning applications. Other works, with the exception of rights for maintenance aspects are temporary. We do not consider the works prevents future development. Details were published as part of the statutory consultation and been updated in response to feedback where change has been accepted. Details are on plans published as part of the Development Consent Order (DCO) submission.				
9-8.47	Comment supportive of the intention to dismantle and remove the existing pylons in the area (shown by Pylons PSC8, PSC9, PSC10 and PSC11 in particular)	National Grid notes the respondent's feedback.			X	
9-8.48	Suggest that the Project is routed away from listed buildings in Dunton, and criticism that National Grid rerouted the Project at least 1km away from listed buildings at Ingatestone based on feedback from the 2022 Non-Statutory Consultation but did not do the same at Dunton (as suggested by respondent in the 2022 Non-Statutory Consultation)	The listed buildings at Ingatestone are both Grade I listed (St Giles Church and Ingatestone Hall) whereas those at Dunton are of lower Grade II (there is a third Grade II* between Grade I and Grade II). There is no set distance at which it is considered appropriate to route overhead lines, with site-by-site context critical to what is appropriate. In the case of the Grade I listed buildings the separation distance is considered to be appropriate when it is far enough for residual heritage effects to be considered acceptable whilst also taking into account the effects on homes, environmental features and other constraints. Evaluation by technical experts considers the effects on the Grade II listed buildings at Dunton to be consistent with relevant policy. No change is therefore proposed.			X	
9-8.49	Concern about the impact of the Project on delivery of the Basildon Local Plan / Criticism that National	National Grid has carefully considered the identified feedback and engaged with the relevant authorities and			X	

	Grid have not taken into account the planning process as it pertains to Basildon Borough Council and the issue of development viability has not been addressed in any of National Grid's supporting material	developers in respect of the housing proposals coming forward. We consider it possible for the overhead line to substantially co-exist with the housing proposals and have sought to reduce the interaction by routeing within the 80 m wide safety zone associated with the high-pressure gas pipeline to the western edge of the housing proposals. No alternative connection route is available, and the use of underground cable leads to a direct loss of development area in contrast with the proposed overhead line design. We also shared our guide for developers which identifies opportunities to closely position housing in the immediate vicinity of the alignment.				
9-8.50	Request that National Grid fund bespoke evidence (concentrating in particular on areas around Basildon borough's boundaries with Brentwood and Thurrock), through the Planning Performance Agreement (PPA) to support Basildon Council's Local Plan to assist in ascertaining what the likely effects on land values will be, and help assess whether site allocations for either residential or industrial purposes could therefore be viably developed (with regard to the Local Plan) / Criticism that National Grid do not agree that this work is necessary, and have not explained why	The relevant planning policy (NPS EN-1 and EN-5) does not preclude development within close proximity of residential property and there are numerous examples of residential development in close proximity to 400 kV overhead lines with detailed masterplanning reducing the potential for effects. On this basis National Grid is therefore of the view that development close to its overhead line infrastructure remains viable. National Grid will continue to engage with the council.			X	
9-8.51	Concern about the impact of the Project on delivery of the Brentwood Local Plan	National Grid has carefully considered feedback and engaged with relevant authorities and developers. While the application for development consent will be considered by the Secretary of State primarily against the policies in the relevant National Policy Statements (NPS) (EN-1 and EN-5), the Secretary of State must also take Development Plans into consideration if they are 'both important and relevant to the Secretary of State's decision' (Section 104 of the Planning Act 2008). Accordingly, National Grid has taken into consideration the relevant development plans (both adopted and emerging) which have been prepared by all of the relevant Local Planning Authorities, including			X	

		Brentwood Borough Council, along the route of the Project. Further details are provided in the Planning Statement (document reference 5.6) and Policy Compliance Document (document reference 5.7) which have been submitted as part of the Development Consent Order (DCO) application.				
9-8.51-1	Criticism that there is an error on the labelling of the 2023 and 2024 draft alignment and pylons shown in the map in Figure 5.32 that paragraph 5.4.210 of the Design Development Report, given that it states 'In response to localised feedback to seek to reduce effects on residential amenity in the vicinity of TB210, the angle pylon to the north has been moved by one span, to TB209. Although the position of TB210 has not changed the larger angle pylon has been moved further from the closest residential properties'	There may be a misunderstanding caused by a change to pylon numbering between that published in the 2023 non-statutory consultation and those published as part of the 2024 statutory consultation. The pylon numbered TB210 in the 2024 Design Development Report (DDR) (available on the Project website) is a suspension pylon but was previously (in 2023) an angle pylon. The change to a suspension moves the angle further to the north-west to the position identified as TB209. It is our understanding that this is consistent with the text within the 2024 DDR. No change is proposed.			X	
Design Change						
9-8.52	Oppose the use of underground cables	National Grid has carefully considered the feedback received during the 2022 and 2023 non-statutory consultations, the statutory consultation, targeted consultations and landowner consultation, the alternatives available, and other factors including our duties and obligations. These duties include balancing the need to be economic and efficient, which includes keeping costs down in the interests of the bill-paying consumers, with a duty to have regard to preserving amenity, which includes the natural environment, cultural heritage, landscape and visual quality, National Policy Statement (NPS) EN-5 makes clear that 'the government's position that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)'. The NPS also confirms that widespread and significant adverse			X	

		<p>landscape and/or visual impacts in other locations may also justify the use of undergrounding. We may also adopt underground cables in other circumstances such as to cross existing 400 kV overhead line infrastructure.</p> <p>Where the installation of underground cables is required in lieu of overhead lines, the design of the Project has incorporated suitable consideration of the existing environment, ecology and site ground conditions based on site specific survey data.</p>				
9-8.53	Suggest a minimum distance that the Project should be sited from residential areas / residences	<p>National Grid does not use standard minimum distances as a routeing consideration. Applying an arbitrary distance may be too big or too small for the specific circumstances. We utilise the Holford Rules (a description of the Holford Rules can be found in Appendix I22 of this report) informed by feedback and professional judgement to define appropriate corridors and alignments that are consistent with the relevant policy framework and duties. In response to feedback to the 2022 and 2023 non-statutory consultations, statutory consultation, targeted consultations, and landowner consultation, we have modified the alignment in various locations to increase separation to properties where this is possible without undue deviation or transfer of effects to other similar properties or other receptors. A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the Environmental Impact Assessment (EIA). The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13). This assesses the impact of the Project and identifies the need for additional mitigation if required.</p>		X		
9-8.54	Suggest that existing overhead lines in this section should be removed	<p>The existing electricity transmission network provides power, via the local distribution network, into the local area where it is used in homes and businesses. Such lines cannot just be removed as power supplies would not be maintained.</p>	X			

		<p>The need case and funding for the Project is to deliver the new network reinforcement needed, rather than to remove existing overhead lines which would need to be replaced by another form of connection such as underground cables.</p> <p>Unless required for crossings or mitigation, undergrounding existing overhead lines on the transmission network would not be in accordance with National Policy Statement (NPS) EN-5 and would result in substantial cost to bill payers. There may also be significant environmental impacts due to the removal works on sensitive ecological and archaeological receptors as well as constraints from either existing buildings or unsuitable ground conditions.</p>				
9-8.55	Suggest that existing overhead lines in this section should be replaced by underground cables	<p>National Policy Statement (NPS) EN-5 establishes the position that the starting basis for new connections is a presumption on the acceptability of overhead lines but with this presumption reversed within designated landscapes and in certain other circumstances.</p> <p>The existing electricity transmission network provides power, via the local distribution network, into the local area where it is used in homes and businesses. The need case and funding for the Project is to deliver the new network reinforcement needed, rather than to remove existing overhead lines by undergrounding them.</p> <p>We have identified a number of locations where we are proposing to place existing overhead lines underground. These locations are where existing 132 kV and lower voltage lattice pylon lines are crossed by the proposed 400 kV overhead line and / or mitigation of effects are considered necessary. This includes locations such as at Mellis, between Offton and Bramford Substation, to the south of Bramford Substation and near Fuller Street.</p> <p>Unless required for mitigation, undergrounding existing overhead lines on the transmission network would not</p>	X			X

		be in accordance with NPS EN-5 and would result in substantial cost to bill payers. There may also be significant environmental impacts due to the removal works on sensitive ecological and archaeological receptors as well as constraints from either existing built form or unsuitable ground conditions.				
9-8.56	Suggest that the existing overhead lines in this section are reinforced / upgraded instead	The existing transmission network in the region was upgraded during 2022 and 2023 to ensure the system is running at its most efficient performance. The existing assets / networks are not able to be upgraded sufficiently to cope with the new future demands expected on the network. As a result, new lines and substations would be required to accommodate the changing demands on the network.	X			
9-8.57	Suggest that the Project is routed away from populated / residential areas	Deciding where and how to build new high voltage electricity lines is a complex issue and National Grid is mindful of the potential effects this infrastructure may have on local communities and the concerns these may bring. We recognise that people living near our transmission infrastructure, including high voltage overhead lines, may have concerns about audible noise and potential health impacts. It has sometimes been suggested that minimum distances between properties and overhead lines should be prescribed. We do not consider this appropriate since each instance must be dealt with on its merits. However, we have always sought to route new lines away from residential property on grounds of general amenity where possible. We have undertaken a noise and vibration assessment which can be found in the Environmental Statement (ES), Chapter 14: Noise and Vibration (document reference 6.14) that forms part of the Environmental Impact Assessment (EIA) for the Project. Noise levels and the effect on residential properties as well as other sensitive areas, such as hospitals and schools, are	X			

<p>carefully considered during planning, assessed according to the appropriate UK standards, and mitigated where necessary. We set strict technical standards for the equipment we install on our network. These will apply to the proposed new East Anglia Connection Node (EACN) substation, and extensions required to the existing Norwich Main, Bramford, and Tilbury Substations. These standards include requirements to ensure the occurrence of audible noise is eliminated or reduced as far as practicable. Therefore, significant adverse effects from noise are not expected.</p> <p>Noise from overhead lines is predominately determined by the conductor design, voltage and weather conditions. The overhead line will be designed using a relatively quiet conductor that meets the design specification required, and operational noise is not likely to be significant at nearby sensitive receptors under any weather conditions. Pylon fittings, such as insulators, dampers, spacers, and clamps, are also designed and procured in accordance with a series of National Grid Technical Specifications to reduce the potential for audible noise and tones to occur from all types of fittings. Where noise does occur, it is likely to be localised and of short duration. If this is due to a fault, action can be taken to rectify it. A technical note has been submitted as part of the application for development consent to support scoping out noise associated with overhead lines from the Environmental Statement (ES).</p> <p>In addition, we have undertaken a Landscape and Visual Impact Assessment (LVIA) for the Project.</p> <p>This includes an assessment on both landscape character and visual amenity. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13).</p>				
--	--	--	--	--

		<p>The health and safety of the public, local communities and employees is central to everything that we do. The UK has a carefully thought-out set of policies for protecting us all against Electric and Magnetic Fields (EMFs), the main component of which is exposure guidelines. The exposure guidelines are set by independent scientific bodies and are based on decades-long studies into the effects of EMFs and ill health. After those decades of research, the weight of evidence is against there being any health risks of EMFs below the guideline limits. Our approach is to ensure that our network comply with those policies, which are set by Government on the advice of their independent advisors. The Project is designed to ensure it is fully compliant with these policies and guidelines. This ensures that health concerns are properly and adequately addressed.</p> <p>Policies for both noise and EMF are incorporated into the decision-making process for development consent as set out in National Policy Statement (NPS) EN-5. It is National Grid's policy to ensure that all its equipment complies fully with those policies and guidelines. The application for a Development Consent Order (DCO) includes assessments against these policies, including both construction and operational noise and EMF.</p>				
9-8.58	Suggest that the Project should run in closer to / parallel to the existing overhead lines	<p>National Grid notes the potential for close paralleling existing overhead lines to reduce the level of effects that may arise from a new overhead line.</p> <p>However, where existing overhead lines are present along the proposed route, there are constraints and features that mean, overall, we consider close paralleling would lead to greater effects on receptors in the area and be less compliant with the Holford Rules or be less consistent with the policy to be economic and efficient. A summary of the Holford Rules is provided within Appendix I22 of this report. A number of residential properties are present in close proximity to the existing 400 kV overhead line meaning that if the</p>			X	

		<p>overhead lines were close paralleled it would result in the properties having an overhead line close to both sides. There are also some locations where the combination of existing physical and environmental features (road infrastructure, commercial and residential properties etc) present very substantial challenges to routeing and siting. As a result, whilst close paralleling may appear beneficial in some sections, overall, the increased environmental effects where the overhead lines have to converge and diverge, and those increased effects on properties with overhead lines on both sides are considered greater than those introduced by a new overhead line separated from existing 400 kV overhead lines. Whilst crossings and use of underground cable technology may be able to address various constrained locations, we consider the costs and environmental effects arising from the additional infrastructure required to be less compliant with our duties and relevant policies.</p>				
9-8.59	Suggest that underground cables are used for the entirety of this section	<p>National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors.</p> <p>National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)'</i>. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting</p>	X			

<p>presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider this section in its entirety would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.</p> <p>Therefore, whilst undergrounding the whole of this section is not considered appropriate, our proposals do include underground cable within the Dedham Vale National Landscape (previously known as Area of Outstanding Natural Beauty (AONB)) in accordance with NPS EN-5. Prior to our 2023 non-statutory consultation we identified the need to extend the underground cable beyond the National Landscape boundary because of potential effects, we have further extended this section of underground cable following consideration of feedback on our 2023 non-statutory consultation and additional investigation into potential effects. We also identified an approximately 4 km</p>				
---	--	--	--	--

		section near Great Horkesley as meeting the particularly sensitive criteria where underground cable is also proposed. Additionally, underground cable is proposed at Fairstead for a 400 kV overhead line crossing.				
9-8.60	Suggest that underground cables are used in populated / residential areas	<p>National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors.</p> <p>National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)'</i>. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact</p>		X	X	

		<p>Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at all populated or residential areas in this section would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.</p>				
9-8.61	Suggest that Pylons TB215 and TB216 are relocated to mitigate impact on residents (e.g. views, property value and health)	<p>National Grid notes the respondent's feedback and the potential for close paralleling the existing 132 kV overhead line to reduce the level of effects that may arise from a new overhead line. However, there are constraints and features adjacent to the existing overhead line that mean that overall, we consider close paralleling would lead to greater effects on receptors in the area and be less compliant with the Holford Rules or be less consistent with the policy to be economic and efficient. A summary of the Holford Rules is provided within Appendix I22 of this report.</p> <p>In particular we identified a particularly constrained location along Billericay Road around the Herongate Wood Woodland Cemetery. The alignment of the existing 132 kV overhead line passes between residential properties where, even if the 132 kV overhead line was replaced by underground cable, we consider there to be insufficient space for the larger scale infrastructure associated with the 400 kV overhead line. An alternative route offset from the 132 kV overhead line to the east was also considered. However, whilst the Herongate Wood Woodland Cemetery appears to provide space for an overhead line to its western edge, routeing is constrained by a gas pipeline and would need to pass over (with a pylon within) the Woodland Cemetery (inconsistent with</p>			X	

		<p>Holford Rule 2) or pass over a residential property and were therefore considered inconsistent with National Grid's duties and relevant planning policy. We have undertaken an Environmental Impact Assessment (EIA) which has assessed the impact of the Project and recommended mitigation where required.</p> <p>TB215 and TB216 (now TB218 and TB219) have been moved slightly to the east away from Botney Hill, going someway in reducing effects to properties.</p>				
9-8.62	Suggestion that the Project should use the current pylons in place at Billericay instead	<p>The existing transmission network in the region is currently being upgraded to ensure the system is running at its most efficient performance. The existing assets networks are not able to be upgraded sufficiently to cope with the new future demands expected on the network, upgrading the conductor currently fitted to the circuit to the east of Billericay would provide only a small uplift in capacity. As a result, new lines and substations would be required to accommodate the changing demands on the network. The existing overhead lines cannot be further adapted safely and securely to enable them to carry more power or additional conductors (wires) added to take the amount of power being proposed in East Anglia.</p>	X		X	
9-8.63	Criticism that the haul road between Pylons TB196 and TB197 takes a significant detour away from the pylon line impacting respondents land / Suggest that the haul road is moved to be adjacent to the pylon route (as per the approach taken elsewhere)	<p>National Grid has considered the feedback regarding the haul road between TB196 and TB197 (now TB199 and TB200) and the impacts on the respondent's land. It is not possible to route the haul road directly adjacent to the alignment in this location due to the presence of a gas pipeline and the requirement to maintain the space around TB197 for stringing of the overhead line, we have moved the haul road as close to the alignment as possible.</p>			X	
9-8.64	Suggest that the Project uses underground cables at the Wid Valley (to mitigate environmental impact)	<p>National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing</p>			X	

<p>consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is '<i>that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)</i>'. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at the Wid Valley would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.</p>				
--	--	--	--	--

9-8.65	Suggest the Project is relocated between Pylons TB185 and TB187 (e.g. to mitigate impact on the environment, communities, heritage, residents, and traffic safety)	National Grid has considered the feedback to move TB185 to TB187 (now TB187-TB189) by assessing a change to the alignment to the east, towards Church Lane. However, moving the alignment further east would mean that the overhead line would be closer to the church and woodland, but further from residential properties. The presence of ancient woodland between TB181 to TB183 (now TB183-TB185) restricts routing to both the east and west and the alignment is currently approximately midway between properties. Therefore, we have not made a change to the alignment in this location.		X		
9-8.66	Criticism that Pylons TB213 and TB214 will impact views from Grade II listed building / Suggest that Pylon TB213 and / or TB214 are relocated away from residential area	<p>National Grid, through the routing and siting exercise, has sought to reduce the impact on the historic environment, including grade II listed buildings in this area.</p> <p>All listed buildings within 2 km of the Order Limits are considered in the Historic Environment assessment for the Project. The impacts of the Project on the historic environment are assessed in Chapter 11: Historic Environment (document reference 6.11) of the ES. The assessment considers the potential impact on historic buildings and includes assessment of potential for physical impact and impact through change to setting that affects the value of a heritage asset. The assessment of listed buildings is supported by setting surveys, as documented in ES Appendix 11.1 Historic Environment Baseline Report (document reference 6.11.A1). The Project has engaged with Historic England and relevant planning authorities on aspects relating to heritage, including appropriate mitigation measures and techniques and to take their views into account during Project development.</p> <p>The assessment of Sudbury's Farmhouse concludes a significant effect during construction and a not significant effect during operation. The assessment of Botney Hill Farmhouse concludes a significant effect</p>		X		

		during construction and operation. No additional mitigation measures are proposed as any measures designed to lessen the visual impact of the Project would be of a scale that would visually adversely alter the setting of the asset.				
9-8.67	Suggest that Pylons TB200 to TB203 are relocated west onto unproductive scrub land and horse grazing pasture to mitigate impact on arable land (also Pylons TB200 and TB201 are located on a location that has been identified for a new solar farm)	Following consideration of feedback to the statutory consultation National Grid has reviewed alternative route alignments to respond to the requested changes. In this area the route alignment is restricted to passing to the east or west of the Treatment Works and adjacent ancient woodland. Alternative routes to the west would lead to greater heritage effects on the Grade I Listed St Giles Church compared with the 2024 preferred draft alignment and be less consistent with Holford Rule 2. A summary of the Holford Rules is provided within Appendix I22 of this report. Moving the pylons to the west to be out of the arable fields would require two larger changes of direction in order for TB202 (now TB205) to be positioned around 350 m to the west. This creates additional construction risk because of the proximity of an ancient woodland restricting the space for stringing conductors and is less consistent with Holford Rule 3 by increasing the length of the overhead line and the number and scale of direction change of angle pylons. For these reasons National Grid considers the 2024 preferred draft alignment remains the preferred route. The position of TB200 and TB201 (now TB203 and TB204) have been modified to reduce the potential effect on the proposed solar farm. TB200 has been positioned on a boundary between panel areas and TB201 moved to the corner of a field. Existing utilities and the constraints over crossing angle at the railway restrict further reduction.			X	X
9-8.68	Suggest that the Project between Ingatestone and Havering's Grove is relocated further west to run alongside existing overhead lines	National Grid notes the potential for close paralleling the existing 132 kV overhead line to reduce the level of effects that may arise from a new overhead line. However, there are constraints and features adjacent to the existing overhead line that mean that overall, we	X		X	

		<p>consider close paralleling would lead to greater effects on receptors in the area and be less compliant with the Holford Rules or be less consistent with the policy to be economic and efficient. A summary of the Holford Rules is provided within Appendix I22 of this report.</p> <p>In particular we identified a particularly constrained location along Billericay Road around the Herongate Wood Woodland Cemetery. The alignment of the existing 132 kV overhead line passes between residential properties where, even if the 132 kV overhead line was replaced by underground cable, we consider there to be insufficient space for the larger scale infrastructure associated with the 400 kV overhead line. An alternative route offset from the 132 kV overhead line to the east was also considered. However, whilst the Herongate Wood Woodland Cemetery appears to provide space for an overhead line to its western edge, routeing is constrained by a gas pipeline and would need to pass over (with a pylon within) the Woodland Cemetery (inconsistent with Holford Rule 2) or pass over a residential property and were therefore considered inconsistent with National Grid's duties and relevant planning policy. We have undertaken an Environmental Impact Assessment (EIA) to assess the potential impact of the Project, and this has identified any need for additional mitigation.</p>				
9-8.69	Suggest that the Project at the A129 should run alongside the empty fields, away from the residential area of Havering's Grove	National Grid notes the preference for moving the alignment further from Havering's Grove. We have considered several alternatives in this area to move the alignment further west. We are proposing to underground part of the 132 kV overhead line in this area which therefore facilitates the change to the alignment slightly further to the west.			X	X
9-8.70	Suggest that Pylon TB206 is moved or screened / disguised	National Grid has considered several alternatives in this area to move the alignment further west. We are now proposing to underground part of the 132 kV overhead line in this area which therefore facilitates the			X	X

		proposed change to the alignment slightly further to the west, which has then resulted in TB206 (now TB209) moving approximately 170 m further west.				
9-8.71	Suggest that the Project is rerouted at Pylons TB206, TB207 and TB208 to the west of Creasey's Farm (e.g. to minimise impact on wildlife, avoid archaeological works and a major gas main, and reduce impact on residents in Havering's Grove and Tally Ho Drive whilst not impacting residents to the west of Hutton)	National Grid notes the preference for moving the alignment further from Havering's Grove. We have considered several alternatives in this area to move the alignment further west. We are proposing to underground part of the 132 kV overhead line in this area which therefore facilitates a proposed change to the alignment slightly further to the west closer to Creasey's Farm (between TB205 and TB209) (now TB208 and TB212). A move further to the west beyond Creasey's Farm is constrained to the south by the absence of a route past Herongate Wood Woodland Cemetery. As such the connection would have to revert to the 2024 preferred draft alignment around TB209 (now TB212). Such a route would be less direct, with additional and larger changes of direction and less consistent with the Holford Rules and was therefore less preferred. A summary of the Holford Rules is provided within Appendix I22 of this report.			X	X
9-8.72	Suggest that underground cables are used for the Project through Brentwood	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is ' <i>that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)</i> '. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also			X	

		<p>consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project through Brentwood meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.</p>				
9-8.73	Suggest the Project is rerouted to cross the A1245 at Rawreth and follow the A130, avoiding Bowers Gifford (map provided by respondent)	<p>Alternative corridors on the East Anglia Connection Node (EACN) substation to Tilbury section of the Project have been considered and found less preferred as set out in the Corridor and Preliminary Routeing and Siting Study (CPRSS) and Design Development Report's published in the 2022, 2023 and 2024 consultations which can be found on the Project website. In the absence of new information or new factors being identified those conclusions are unchanged. In some locations we do not consider there to be the necessary space for a new 400 kV connection and more generally effects transfer to other receptors.</p>			X	

		In the case of ecology, effects would increase because the Project would be closer to a Special Protection Area (SPA).				
9-8.74	Suggest that Pylons TB251, TB252 and TB253 are relocated away from residential properties with the Project rerouted to follow the existing pylons which are set further back in the fields (e.g. to mitigate impact on residents, views and property value)	National Grid has considered feedback suggesting rerouting the alignment further to the west away from properties and closer to the existing 132 kV overhead line. Overall, the alternative is less preferred because of the increased effects on heritage assets and additional technical complexity as the alternative would require two additional crossings of the gas pipeline and has therefore not been taken forward.			X	
9-8.75	Suggest that the Project is rerouted between Pylons TB199 and TB206 near the River Wid / Little Cowbridge Wood / Little Burstead (e.g. to mitigate impact on environment, wildlife, footpaths, woodland and people)	National Grid has considered alternative routes in this area within the constraints, environmental features and residential properties that are present including the sewage treatment works, listed buildings including Grade I heritage assets at Ingatestone Hall and St Giles Church Mountnessing and ancient woodland. The rationale for the alignment was set out in the 2024 Design Development Report, which can be found on the Project website, and was developed to reduce the impact on environment, wildlife, footpaths, woodland and people. For example pylon moved adjacent to Buttsbury Church in response to views from Public Rights of Way (PRoW) near Ingatestone Hall. In the absence of new information or new factors being identified those conclusions remain valid and the general alignment unchanged subject to small modifications to individual pylon positioning.	X		X	
9-8.76	Suggest that Pylons TB199 and TB200 and their maintenance corridor are relocated as currently they pass through a floodplain and an environmental biodiversity rich area that has many scattered and mainly standalone veteran oak trees	TB200 (now TB203) is located outside of Flood Zones 3 and 2 and therefore is not at risk of flooding in the 0.1% (1 in 1000) chance flood event. TB199 (now TB202) has been located on the outer edge of Flood Zone 3 and compensation for the very small loss of floodplain storage associated with the footprint of the pylon would be provided, as detailed in the Flood Risk Assessment (FRA) (document reference 7.9).	X		X	

		Appendix 13.6: Arboricultural Impact Assessment (AIA) (document reference 6.13.A6) of the Environmental Statement (ES), details mitigation for working near to trees and includes veteran trees in the assessment.				
9-8.77	Suggest that the Project is rerouted between Pylons TB73 and TB80 to mitigate impact on views and to stop the Project from having a significant negative impact on the Coggeshall Neighbourhood Plan, Local Planning Policy and the core Green Buffer policy	The previously published Corridor and Preliminary Routeing and Siting Study (CPRSS) (2022) and the 2023 and 2024 Design Development Reports (which can be found on the Project website) set out the reasons for preferring this general route over alternatives and in the absence of new information or further factors consider these to remain valid. National Grid has modified the alignment in this location between TB70 and TB79 (now TB70 and TB81) in response to feedback to reduce effects on general amenity of residents and reduce socio-economic effects. Distances to residential properties around TB72 have been increased from around 150 m to around 300 m and at TB77 the alignment has been re-routed to the rear of properties and removed from what was advised as a principal view. We do not consider that 400 kV overhead lines are inconsistent with the principles of the Green Buffer policy nor with the aims of the neighbourhood plan to prevent coalescence of villages.	X		X	X
9-8.78	Suggest that underground cables are used for the Project between the A12 and the A129	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is ' <i>that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)</i> '. Where no such designations are present, nor is the area within the	X			

		<p>setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project between the A12 and the A129 would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.</p>				
9-8.79	Suggest that the Project is routed east of Chelmsford, following the A130 and A13 corridor (e.g. to make use of existing pylons and mitigate impact on leisure)	<p>In the Corridor and Preliminary Routing and Siting Study (CPRSS) published as part of the 2022 non-statutory consultation and in the Design Development Report published as part of the 2023 non-statutory and statutory consultations which can be found on the Project website and the 2025 Design Development Report (document reference 5.15), National Grid sets out the challenges associated with routeing to the east of Chelmsford parallel to the existing 400 kV overhead</p>	X			

		line. Whilst noting the respondent's preference, no new information or further factors have been provided or been identified to reduce the greater effects or address the constraints to routeing. As such the eastern alignment remains less preferred and no change is proposed.				
9-8.80	Suggest that underground cables are used for the Project between Billericay and Brentwood	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is ' <i>that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)</i> '. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has	X			

		<p>been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project between Billericay and Brentwood would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.</p>				
9-8.81	Suggest that underground cables are used for the Project west of Laindon and Langdon Hills	<p>National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)'</i>. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the</p>			X	

		overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project west of Laindon and Langdon Hills would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
9-8.82	Suggest the Project is routed further west in this section	National Grid notes the respondent's preference but in the absence of new information or further factors having been provided or been identified to reduce the greater effects or address the constraints to routeing we consider these alternatives to be less preferred. The reasons vary throughout the section but include greater effects on ancient woodland, greater effects on residential amenity by closer proximity amongst others. These reasons are set out in various previously published material including the 2022 Corridor and Preliminary Routeing and Siting Study (CPRSS) and the 2023 and 2024 Design Development Reports (available on the Project website). No change is therefore proposed.			X	
9-8.83	Suggest that the Project is rerouted to be further west of Horndon-on-the-Hill making use of farmland instead, or that underground cables are used (e.g. to mitigate impact on the historic village and on the three listed cottages in Pump Street)	Diverting the overhead line into open farmland to the west is constrained in respect of onward routeing to both the north and south. To the north, Thurrock airfield necessitates the alignment being routed to the east of the existing 132 kV overhead line. To the south, routeing into farmland is constrained by a need to cross the A13 around the position of TB254. Deviation within			X	

	<p>these restrictions would lead to an alignment that is less direct with additional crossings of the existing 132 kV overhead line and as such would be less consistent with Holford Rule 3 and less economic. A summary of the Holford Rules is provided within Appendix I22 of this report. Some reduction of effects to some residential properties is offset by the alignment moving closer to others with the same for other environmental features. We have previously considered routeing to the west near Cholley's Farm. This would reduce effects to listed buildings on Pump Street but transfer them to other listed buildings including similarly graded Cholley's and Saffron Gardens. No change is therefore proposed.</p> <p>National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)'</i>. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts</p>				
--	--	--	--	--	--

		(such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at Horndon-on-the-Hill would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
9-8.84	Suggest that the Project is rerouted 1 km further west (past the high pressure gas pipeline) to mitigate impact on Dunton and listed buildings	The presence of ancient woodland and the now approved Dunton Hills Garden Village proposals mean that there is no available corridor to allow modification of the route in the manner suggested. The effects on Dunton and the listed buildings are reported in the Environmental Statement (ES), Chapter 11: Historic Environment (document reference 6.11) supporting the Development Consent Order (DCO) application.			X	
9-8.85	Criticism that National Grid's decision to position the Project to avoid the site of the anticipated Dunton Hills Garden Village (DHGV) has maximised the environmental impact on Dunton / Suggest that the Project is rerouted alongside the existing north to south overhead lines which are already located at the DHGV site	National Grid has to take into account the potential effect of its proposals when developing the route alignment. In this location we have to work within the context of the planning status of projects and in this case take account of the fact that planning consent has been granted. Adopting the 132 kV alignment (north to south) would interact far more extensively with the proposals than is proposed by the route through the Garden Village being within the safety zone around the gas pipeline. Even if that were not the case, the presence of ancient woodland to the north of the site			X	

		and other factors, would position the 400 kV route further to the east requiring more angles and a less direct route which would be less consistent with Holford Rule 3. A summary of the Holford Rules is provided within Appendix I22 of this report. Overall, the alignment, subject to localised modification, remains preferred over the adoption of the 132 kV alignment. The residual effects on Dunton and the listed buildings are reported in the Environmental Statement (ES), Chapter 11: Historic Environment (document reference 6.11) supporting the Development Consent Order (DCO) application.				
9-8.86	Suggest that National Grid reroute the Project between Pylons TB218 and TB234, so that as it enters the Dunton area from the North, would run along the perimeter of and to the west of the Crouch Solar Farm. It would then join the existing north / south power line and run parallel to, and to the west of, the existing line for its entire route through the Dunton area (detailed proposal including maps sent to National Grid on 17th November 2023)	Development of the Project design balances a range of different factors with the majority being factors to consider as part of a balanced decision. In this location National Grid has to work within the context of the planning status of projects and in this case take account of the fact that planning consent has been granted for the Dunton Hills Garden Village proposals. Adopting the 132 kV alignment (north to south) would interact far more extensively with the housing proposals than is proposed by the route through the Garden Village being within the safety zone around the gas pipeline. Further south, positioning to the west of the 132 kV line would require additional crossing or the replacement of 132 kV overhead lines by underground cable to move the alignment to the west. Ultimately the 400 kV alignment needs to then return to the east to cross the A13 and connect into the proposed Tilbury north substation. An alignment further to the west requires more angles and is a less direct route which would be less consistent with Holford Rule 3. A summary of the Holford Rules is provided within Appendix I22 of this report. It is also notable that the effects arising from the alignment are not considered to be inconsistent with planning policy albeit for some individual features and from some perspectives (e.g. occupants of residential property at Chadville) may be		X	X	

		<p>considered lower if the 400 kV overhead line was further west. The change incurs additional cost to cross or underground the 132 kV infrastructure (over several additional km to the west of Blind Lane through to Dunton Hills area) and is therefore a less economic and efficient solution. Therefore, the alignment, subject to localised modification, remains preferred over the adoption of an alignment following or routed to the west of the existing 132 kV alignment. The residual effects in the area around Dunton are reported in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) supporting the Development Consent Order (DCO) application.</p>				
9-8.87	<p>Suggest that the Project uses underground cables and follows the A12 trunk road for the majority of the route to mitigate the impact of flooding at the area around Buttsbury (e.g. the area towards Haverings Grove floods every year which would make any maintenance impossible during the weeks it usually floods)</p>	<p>There could be potential benefits from infrastructure being concentrated geographically, i.e. by routeing the Project in close proximity to existing road infrastructure. However, there are constraints and features that mean that National Grid does not consider close paralleling existing roads such as the A12 would reduce environmental effects or improve compliance with the Holford Rules or be more consistent with the policy requirement to be economic and efficient. A summary of the Holford Rules is provided within Appendix I22 of this report.</p> <p>Several residential properties, as well as hamlets, villages and towns, are present in close proximity to the existing transport infrastructure necessitating multiple diversions of an overhead line. There are also some locations where the combination of existing physical and environmental features (railway and road infrastructure, commercial and residential property, woodlands and orchards) present very substantial challenges to routeing and siting. As a result, whilst close paralleling of transport infrastructure may appear beneficial in some short sections, overall, the increased environmental effects from multiple changes of direction are considered greater and less compliant</p>			X	

<p>with the Holford Rules than those that are associated with a new route alignment.</p> <p>A Flood Risk Assessment (FRA) (document reference 7.9) has been prepared for the Project which has informed the Environmental Impact Assessment (EIA) and that has identified the mitigation measures where necessary.</p> <p>National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)'</i>. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A</p>				
---	--	--	--	--

		Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at locations throughout Basildon and Brentwood would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
9-8.88	Suggest the Project is routed further west near Basildon and Laindon (e.g. away from built up area)	National Grid notes the respondent's preference but in the absence of new evidence or new information, we consider these alternatives to be less preferred for the reasons set out in various previously published material including the 2022 Corridor and Preliminary Routeing and Siting Study (CPRSS) and the 2023 and 2024 Design Development Reports (available on the Project website). Depending on the design, such routes would increase effects such as on Thurrock airfield and ancient woodland. No change is therefore proposed.			X	
9-8.89	Suggest that the Project does not use respondent's private lane near Pylon TB192, and that Pylons TB192 to TB194 are relocated away from respondents' property	The access proposed at TB192 (now TB195) is for future survey and maintenance access only and would not be used for construction purposes for the Project. National Grid has considered the feedback to move TB192 to TB194 (now TB195 to 197) away from the respondent's property, however alternatives would be longer, would transfer effects to other properties or would increase heritage impacts, therefore we have not proposed a change to the alignment in this area.			X	
9-8.90	Oppose the change to the Project route at Blind Lane compared to the 2023 draft alignment / Suggest that the 2023 draft alignment at Blind Lane is used instead (e.g. to be further away from residential properties), given that National Grid has	Having reviewed the feedback, it is unclear to National Grid which residential property the change between TB207 and TB210 (now TB210 and TB213) has actually moved closer to. There may have been a misunderstanding that the western edge of the previous	X		X	X

<p>not yet reached a conclusion as to whether the cumulative effects on residential amenity, to the residential properties at and on the road to Bushwood Farm, of a 400 kV overhead line to one side and the 132 kV overhead line to the rear necessitate consideration of any additional mitigation (potentially including replacement of the 132 kV overhead line by underground cable) (as per paragraph 5.4.207 of the Design Development Report)</p>	<p>2022 consultation corridor (marked in red within the 2024 Design Development Report) was the alignment but that is not the case. The alignment was marked in blue on the 2024 Design Development Report Figure 5.32 (available on the Project website). On the broader point we have responded to feedback and are taking forward the design based on replacing a section of 132 kV lattice pylon by underground cable from the north-west of Bushwood Farm to the south of Creasey's Farm to reduce cumulative and community effects. This also allows for repositioning of the 400 kV pylons and movement of the angle pylon generally further from residential properties to reduce overall visual effects. Properties along Blind Lane benefit from the presence of trees and woodland filtering views to the extent that we do not consider effects arising from the existing 132 kV to the west and the 400 kV alignment to the east to require further undergrounding of the 132 kV infrastructure.</p>

		<p>setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at Dunton would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-8.93	Suggest that the overhead lines and haul road are relocated further to the left at Arterial Road, Dunton to mitigate impact on respondents' property (e.g. to avoid encroaching on respondent's garden)	National Grid has considered the respondent's feedback and we have assessed alternative alignments in this area. We have shifted the alignment as far west as possible while still maintaining an appropriate crossing of the road and not encroaching on woodland to the west including Friern Manor Wood Ancient Woodland. The haul road does not cross through the respondent's garden as we are not proposing to cross South Arterial Road with the haul road. There may be temporary works within the respondent's land to facilitate scaffolding for when the overhead line cables are strung.			X	X
9-8.94	Request for National Grid to clarify whether the 'Proposed UK Power Networks (UKPN) cable construction swathe' is intended to provide an alternative underground cable route for the overhead lines being removed in the area (e.g. associated with overhead lines removed with the dismantling of Pylons PSC8, PSC9, PSC10 and PSC11) / If this is the case, then request that measures (and the route) of the underground cable should be such that it does not obstruct the proper and comprehensive planning of the area	National Grid has considered a wide range of alternatives in this location as presented in the 2023 and 2024 Design Development Reports (available on the Project website). The main constraints to routeing, over and above various residential properties, are the Grade I Listed St Giles Church, extensive areas of ancient woodland around the north and west of the sewage treatment works, the sewage treatment work and a network of gas pipelines. Taken together with finding an appropriate crossing point over the railway we conclude that other alternatives are less preferred, and we consider the alignment to be an appropriate basis to progress the Project.			X	
9-8.95	The Project is located on the existing floodplain of the River Wid which already has serious issues with flooding on a regular basis / Suggest that National	National Grid has considered alternative routes in this area within the constraints, environmental features and residential properties that are present including the		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	Grid reconsiders the siting of Pylons TB198, TB199, and TB200 due to the instability of the locations and the damage that the Project could cause to the river and its ecosystems / Concern about the impact of Pylon TB199 and adjacent pylons on flooding of the River Wid	sewage treatment works, listed buildings including Grade I listed heritage assets at Ingatestone Hall and St Giles Church Mountnessing and ancient woodland. The rationale for the alignment was set out in the 2024 Design Development Report (available on the Project website) and in the absence of new information or new factors being identified, those conclusions remain valid and the general alignment unchanged subject to small modifications to individual pylon positioning. Proposed infrastructure has either been positioned outside Flood Zones or can be designed in a way that would be resilient to risk of damage from flooding and designed so as not to exacerbate flood risk nor cause damage to the river and its ecosystem. A Flood Risk Assessment (FRA) (document reference 7.9) has been prepared for the Project which has informed the Environmental Impact Assessment (EIA) and that has identified the mitigation measures necessary to prevent the Project from increasing fluvial flood risk.				
9-8.96	Suggest that the Project is routed away from respondent's land / farm at Pylons TB239, TB240 and TB241, along one of the three alternative routes (plan provided by respondent): either with the Project taking a direct route between Pylons TB236 and TB243; with the Project taking a direct route between Pylons TB238 and TB243; or, with the Project taking a direct route between Pylons TB239 and TB243, and suggest that pylons should be located at field boundaries and with respect to	As a result of considering this feedback along with feedback around flight activity, we have made a change to the alignment that adopts the suggestion of straightening between TB236 and TB243 (now TB237-TB244), albeit the change is made from closer to what was referred to as TB235. The change has therefore been taken forward.			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	the current access point between the respondents' properties, with an appropriate pylon height (e.g. to mitigate visual impact). Alternatively, suggest the use of underground cables at Pylons TB239, TB240 and TB241					
9-8.97	Suggest the use of underground cables at Chase Farm Airstrip, or alternatively, if use of underground cables at this location is not feasible, suggest that the Project is rerouted further west at this location (e.g. to mitigate impact on Chase Farm Airstrip)	<p>The relevant planning policy guiding on technology selection is National Planning Statement (NPS) EN-5 which has a clear presumption for the use of overhead line at this location which has no landscape designation. National Grid has also considered alternative alignments to the west, but these are constrained by the location of ancient woodland, the presence of residential properties and the Park Solar Farm which would require some removal of panels. The constraints restrict the movement of the pylon much further west, but even then would not allow for sufficient clearance to be achieved to allow continued flight activity. There is the potential for flight activity to continue but it would require a slight re-orientation of the runway. National Grid is in discussion with the airfield operator to agree the appropriate course of action.</p> <p>Further information on the assessment of airfields can be found in the Environmental Statement (ES) (see ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and ES Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2)).</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-8.98	Suggest that Pylon TB226 should be relocated to the east of the existing gas pipe (e.g. to prevent crossing the gas pipe twice; to mitigate impact on Dunton Hills Garden Village (DHGV))	Pylon TB226 (now TB229) was positioned to the west of the gas pipeline to respond to the presence of listed buildings to the east. It was also located based on information from the developer to avoid direct impact on development areas from pylon base or oversail by conductors. Given the limited effect on Dunton Hills Garden Village (DHGV) we do not consider that there is a basis to justify a move of the pylon to the east with the additional effects this would lead to on residential amenity and on the listed buildings. Positioning to the east of the gas pipeline would position the alignment at around 60 m to the centreline with potential oversail of gardens and this is less preferred. No change is therefore proposed.			X	
9-8.99	Suggest that the Project is rerouted between TB206 and TB211 (e.g. to follow a more direct route; plan provided by respondent) with pylons relocated to field boundaries (e.g. to mitigate impact on farming)	National Grid notes the respondent's feedback. The proposed alternative would reduce the number of pylons. In some cases the desired positioning of pylons would lead to excessive span lengths and taken as a whole it is not possible to support such a sequence of relatively long span lengths as it would not meet technical standards. Additionally, this change would reverse a change made after receiving previous feedback and would increase effects to a residential property replacing the nearest pylon with an angle pylon compared with a suspension pylon that is less visually intrusive. National Grid also considered other routes in this area further to the east between TB200 and TB211, but these route much closer to a greater number of residential properties and are considered			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		less consistent with Holford Rule supplementary notes. No change is therefore proposed.				
9-8.100	Suggest that the Project should follow more built up areas, and follow the M25 more closely	The 2022 Corridor and Preliminary Routing and Siting Study (CPRSS) along with the 2023 and 2024 Design Development Reports (available on the Project website) and the 2025 Strategic Options and Backcheck Review (SOBR) (document reference 7.17) have considered alternative connection routeing. This included alternative corridors further to the west that might have followed the M25 more closely. These alternatives, reported in the CPRSS, are considered to transfer effects to other receptors and be less economic and efficient, and they were not taken forward. In the absence of new evidence or further information or factors, no change is proposed.			X	
9-8.101	Suggest that the Project is routed further to the west over open farmland away from Billericay Marshes / Suggest that Pylon TB199 is relocated further west away from Billericay Marshes (including the need to widen approach roads and clearing areas to facilitate construction), with Pylon TB199 located on farmland between Grade I Listed Building and Billericay Marshes (with construction area also located away from Billericay Marshes)	National Grid has considered various alternative alignments to position pylon TB199 (now TB202) to the west for example in the 2024 Design Development Report (available on the Project website) from paragraph 5.4.201. Those to the west were less preferred as a result of various combinations of effects including increased effects on the setting of the Grade I Listed St Giles Church, effects on ancient woodland, oversail of third party infrastructure assets. In the absence of new evidence nor the identification of further factors the previous conclusions remain valid and no change is proposed.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-8.102	Suggest the use of underground cables for the Project between the area slightly north of Buttsbury and Little Burstead	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is ' <i>that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)</i> '. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project between north of Buttsbury and Little Burstead would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
9-8.103	Suggest that Pylon TB199 is relocated by a few metres so that it is not located in respondent's field and the pylon base will all be located within one field. With this, oppose relocation of Pylon TB199 to within respondent's field (e.g. due to impact on wildlife)	National Grid notes the respondent's feedback. TB199 (now TB202) has been moved north to be within one field as requested.			X	
9-8.104	Suggest that the Project is rerouted from Pylon TB204 to pass Clapgate Wood on the right, and then continue between the unnamed wood on the left and past Widwood on the right, with a pylon located around Widwood (so that the Project is located approximately 300 metres from St. Giles Church), and that the Project is then routed across	National Grid has considered various alternative alignments to position pylon TB204 to the west for example in the 2024 Design Development Report (available on the Project website) from paragraph 5.4.201. Those to the west including consideration of the alternative identified by the respondent were less preferred as a result of various combinations of effects			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	the field, away from St. Giles Church, to Pylon TB196 (e.g. so that the Project is routed all across open arable fields on a more direct route, to mitigate impact on residences and allow for quicker and cheaper construction; as the Project could be routed this close to St Giles Church as this has been done at another Grade II listed building, St, Marys Church Buttsbury, near Pylon TB190)	including increased effects on the setting of the Grade I listed St Giles Church, effects on ancient woodland and oversail of third party infrastructure assets. In the absence of new evidence nor the identification of further factors the previous conclusions remain valid and no change is proposed. The assessment of effects on the two churches respond to their specific setting with for example Buttsbury Church being connected to views to the valley to the west, whereas St Giles Church has a more isolated position.				
9-8.105	Concern that Pylons TB199 and TB200 are sited directly in the area of Billercay Marshes and that Pylon TB199 is located very close to the River Wid, and that a pylon placed in this area will exasperate flooding issues and lead to contamination due to the concrete footings / Suggest that the field between the marshes and St Giles Church which does not have the same wildlife or amenity value for local people and is currently used for growing crops is used for these pylons instead	National Grid has considered alternative routes in this area including the suggestion to move the alignment between the marshes and St Giles Church. There are multiple constraints to routeing in this area including, environmental features and residential properties that are present including the sewage treatment works, listed buildings including Grade I listed heritage assets at Ingatestone Hall and St Giles Church Mountnessing and ancient woodland. The rationale for the alignment was set out in the 2024 Design Development Report (available on the Project website) and in the absence of new information or new factors being identified, those conclusions remain valid and the general alignment unchanged subject to small modifications to individual pylon positioning. Proposed infrastructure has either been positioned outside Flood Zones or can be designed in a way that would be resilient to risk of damage from flooding and designed so as not to exacerbate flood risk nor cause damage to the river			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>and its ecosystem. A Flood Risk Assessment (FRA) (document reference 7.9) has been prepared for the Project which has informed the Environmental Impact Assessment (EIA) that has identified the mitigation measures necessary to prevent the Project from increasing fluvial flood risk.</p> <p>The pylon foundation type and design is based on ground investigation and risk assessments undertaken, to inform the detailed design of the Project, which includes what type of concrete that would be used. In addition, a Foundation Works Risk Assessment will be undertaken, in accordance with commitment GH02 of the Outline Code of Construction Practice (CoCP) (document reference 7.2) where piled foundations are required, such as at pylon bases, which would assess (amongst other scenarios) the potential for contamination of groundwater and subsequently surface waters by turbidity, drilling support fluids, concrete, cement paste or grout.</p> <p>Appendix C: Outline Soil Resource Plan of the Code of Construction Practice (CoCP) (document reference 7.2) details soil handling during construction in line with good practice measures, to ensure the protection of soil resources associated with the marshes.</p>				
9-8.106	Suggest that Pylon TB190 is relocated away from St Marys Church at Buttsbury	National Grid has carefully considered the position of this pylon relative to the church, adjacent residential properties and views from Public Rights of Way (PRoW) near Ingatestone Hall. We have introduced an			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		additional pylon to allow pylon heights to be reduced somewhat; allow the repositioning of pylons to avoid TB190 appearing immediately behind the church from the PRow to the west; whilst carefully positioning pylons to reduce effects on residential amenity which includes a slight realignment to the west closer to the church to the benefit of increased separation of the alignment from the nearest residential properties.				
9-8.107	Suggest the use of underground cables for the Project at Dunton Hills Garden Village (e.g. to mitigate impact on development)	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is ' <i>that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)</i> '. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at Dunton Hills Garden Village would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
9-8.108	Suggest that the use of underground cables for the Project should start north of the A12 near Pylon TB183, then run under the A12 and parallel to the B1002, and then under the Greater Anglia railway line (e.g. to mitigate impact on landscape and listed properties), with underground cables installed via	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	the boring of tunnels rather than trenching (e.g. to mitigate impact on traffic using the A12). With this, suggest the use of underground cables for the Project is continued south of the railway line, with tunnelling under the River Wid (in two locations), Stock Brook and the stream that feeds into the Wid (at grid reference TQ654961), if the Project were to follow the currently proposed route with the use of underground cables until Pylon TB201. For the remainder of this section of the Project, suggest that underground cables should be constructed via trenching (with disruption to residents and farmers minimised)	and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is ' <i>that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)</i> '. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse				

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		effects (in environmental impact terms), we do not consider the Project from south of the A12 onwards <i>would</i> meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
9-8.109	Suggest that the Project is rerouted further west between Pylons TB223 and TB225 to avoid going across lake near Duke Farm	National Grid notes the respondent's feedback and has considered the route requested. The alternative route further to the west would impact a greater area of proposed development at Dunton Hills Garden Village. We have undertaken an Environmental Impact Assessment (EIA) which includes an assessment of access to recreation business in Chapter 15: Socio-economics, Recreation and Tourism of the Environmental Statement (ES) (document reference 6.15) and a significant adverse effect has been identified. National Grid will continue to engage with the landowner with regards to the lake.	X		X	
9-8.110	Suggest that the section of the Project to the east of Buttsbury Church is rerouted to follow a more direct route in the valley to the west (e.g. to mitigate impact on views and risk to flights from Napps Field)	National Grid has confirmed with the landowners that Napps Field Airstrip has not been used for the last few years and they have no plans to restart flights, so this is not a factor in decision making. National Grid has considered alternative routes in this area within the constraints, environmental features and residential properties that are present including the sewage treatment works, listed buildings including Grade I	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>listed heritage assets at Ingatestone Hall and St Giles Church Mounthessing and ancient woodland. The rationale for the alignment was set out in the 2024 Design Development Report (available on the Project website) and in the absence of new information or new factors being identified, those conclusions remain valid and the general alignment unchanged subject to small modifications to individual pylon positioning.</p> <p>Further information on the assessment of airfields can be found in the Environmental Statement (ES) (see ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and ES Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2)).</p>				
9-8.111	Concern about impact of Pylons TB224 to TB245 on Dunton Hills Garden Village (DHGV), Langdon Hills, Plotlands Avenue (Pylon TB231), golf courses, wedding venues, businesses including Friern Manor, and St Luke's Hospital	<p>A number of changes have been made in response to feedback and careful consideration given to the potential socio-economic effects of the Project amongst other factors influencing routeing. For example at Dunton Hills Garden Village (DHGV) routeing the alignment within the corridor provided by a gas pipeline and its safety zone, along with detailed design, has avoided direct effects on the development and has the potential to reduce residual effects. Langdon Hills is not directly affected, and a further change has been made moving the alignment further from the edge of the golf course. Direct effects on other locations have been avoided where possible or minimised through careful siting.</p>	X		X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-8.112	Suggest that the Project is rerouted further west between Pylons TB221 and TB224, and suggest that the strategic open space on the eastern edge of Dunton Hills Garden Village (DHGV) in Brentwood Council's area could accommodate the Project without the use of additional land in either Brentwood or Basildon	National Grid notes the respondent's feedback and has reviewed alternative alignments in this area as set out in the 2023, and 2024 Design Development Reports (available on the Project website), and the 2025 Design Development Report (document reference 5.15). The alignment has been positioned to route within a safety zone around the high pressure gas pipeline that runs north/south through this area to the east of the Dunton Hills Garden Village. To the north, existing woodland (including ancient woodland) is present close to the pipeline. The route we are proposing to the east of the pipeline avoids effects on the woodland and is more consistent with Holford Rule 2. It also does not directly overlap with areas likely to be developed due to the safety zone around the pipeline. The alignment is routed as straight as possible but must cross the pipeline to reduce effects at residential properties and on listed buildings to the east of TB226. The alignment does this without reducing the development areas which have planning consent in the Dunton Hills Garden Village development. To achieve the change suggested would directly affect parts of the approved development and is therefore less preferred and hasn't been taken forward.	X		X	
9-8.113	Suggest that underground cables are used for the Project from Pylon TB261 to north of the A13	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)'</i>. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project from TB261 to north of the A13 would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
9-8.114	Suggest that National Grid use the current access point off Buckingham Road (next to Stanford Road) for the Project, but request that access is shared with respondent to ensure that agricultural machinery can still reach the rest of the field (e.g. to enable the haul road to be positioned closer to the boundary, reducing the land area taken and saving National Grid the expense of installing a new entrance). However, if a new entrance is necessary for the Project, request that National Grid obtain planning permission to retain existing entrance for future use, and suggest that the haul road is retained if it is positioned close to the headland (plan provided by respondent)	<p>National Grid has reviewed this location as part of the design development following consultation. The use of the existing access point on the junction of Buckingham Hill Road and Stanford Road has been discounted due to the safety impacts of siting a construction access on an existing junction.</p> <p>The permanent retention of any temporary alterations to the public highway networks to facilitate the construction of the Project are subject to agreement with the Local Highway Authority and/or National Highways. During construction, these alterations would typically operate under traffic management, and therefore to keep the alterations permanently once traffic management is removed may result in these not being acceptable to the responsible authorities.</p>			X	
9-8.115	Suggest that the Project is rerouted to follow existing tree line at Pylons TB220 and TB221 (plan provided by respondent) (e.g. to mitigate impact on residence)	Routeing in this location is constrained by numerous features as well as homes. The presence of a gas pipeline provides some limitation as do other residential properties and the presence of areas of woodland,			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		which include some areas classified as ancient woodland. Having identified the residential occupancy of a previously commercial use building, we have repositioned the overhead line as far west as possible (moving it west by 25 m) but without requiring removal of trees or compromising gas pipeline integrity. Pylon positioning previously positioned the property at approximately mid-span and no change is therefore proposed.				
9-8.116	Suggest that Pylon TB205 is relocated as far west as possible (e.g. to mitigate impact on residence and visual impact), and request that guaranteed access is available to respondent's property at all times during construction of the Project	National Grid notes the respondent's feedback. TB205 (now TB208) cannot be moved further west without additional angle pylons which is both less preferred and consistent with the Holford Rules. It would also transfer effects to other residential receptors. A summary of the Holford Rules is provided within Appendix I22 of this report. If consent is obtained, National Grid will discuss access arrangements with the respondent and will ensure that access is available.			X	
9-8.117	Suggest that the construction laydown area for the Project near Pylon TB222, and associated statutory undertaker works, haul roads and site access, crossover points and visibility splays, located to the east of the gas pipeline are relocated to the west of the gas pipeline (in Brentwood Borough Council) on land identified as multifunctional open space or development parcels scheduled to come forward	Routeing and siting in this location is constrained by the presence of a number of features as well as existing and proposed homes. We have engaged with the developer for this land and understand the potential implications for the arrangements proposed in the statutory consultation. We have made a change though still based on access taken from the A127 via the B148 to the east. The alternative access bellmouth positioned slightly to the south is proposed with an			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	post-2031 at Dunton Hills Garden Village (e.g. to mitigate impact on residential development)	alternative compound area closer to the alignment but to the east of the pipeline. We do not consider that this arrangement would conflict with the development aspirations and it reduces the length of access road required compared with the alternative proposed.				
9-8.118	Suggest that the Project should be routed further away from Billericay between the Wid and St Giles Church through farmers fields (e.g. to mitigate impact on habitats and environment)	The suggestion to route to the west of the River Wid is constrained by the presence of areas of ancient woodland (with similar habitats also present in some of the intervening area) and infrastructure such as the sewage works. This would position the pylons close to Grade I Listed St Giles Church, where effects were considered likely to be at an unacceptable level of harm. As such we have not taken this change forward.			X	
9-8.119	Support that the Project has been rerouted further to the east between the A12 Ingatestone Bypass the A129 Rayleigh Road (e.g. away from the Grade I listed Ingatestone Hall) from the 2023 draft alignment	National Grid notes the respondent's feedback.			X	
9-8.120	Suggest the compound, construction access and easement access near Lower Dunton Road are relocated as follows (plan provided by respondent: - Suggest that the construction compound is relocated nearer to Lower Dunton Road (location hatched blue/shaded pink on the plan provided by respondent); - Suggest that access to the relocated compound is provided through an existing gateway; - Suggest that access to the main works on the	National Grid has been able to accommodate some of these changes to reduce effects on the use of the land subject to certain limitations to ensure highway safety is not compromised. We have moved the compound to the requested position and realigned the haul road to follow the headland route. Access off Lower Dunton Road to the compound is not preferred for highway safety reasons, though the Permanent Right of Access for future maintenance inspections is taken forwards using the existing field gate.			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	alignment should follow the headland route (shown in green on the plan provided by respondent); - Suggest that the east-west construction access is removed (hatched blue on the plan provided by respondent); - Suggest that the proposed long term easement access is removed (edged red on the original NG map; hatched blue on the plan provided by respondent)					
9-8.121	Suggestion that the Project is routed away from / the Project should not be located at a specific location	Further assessment and technical appraisal has been undertaken following feedback received from the statutory consultation and subsequent targeted consultations which has resulted in several changes. Further details on these changes can be found in this report and in the 2025 Design Development Report (document reference 5.15), published as part of the Development Consent Order (DCO) application.			X	
9-8.122	Suggestion that the Project is routed away from / the Project should not be located at Ingatestone	National Grid has considered the respondent's feedback highlighting a preference for an alternative moved away from Ingatestone. In the absence of a specific basis for the change or a proposed alternative alignment, we have considered this feedback by following the guidance in the Holford Rules in developing the draft alignment. Guidelines on overhead line routeing are known as the "Holford Rules" which remain a valuable tool in selecting and assessing potential overhead line route options as part of the options appraisal process. A summary of the Holford			X

Economic/Employment						
9-8.137	Concern about negative impact on businesses in the area	<p>Through the routeing and siting exercise, National Grid has sought to reduce as far as practicable impacts to businesses.</p> <p>Impacts on local businesses within the Local Study Area (the Order Limits) and within the 3 km Study Area (where visual impact is likely to be an economic consideration) are assessed in Environmental Statement (ES) Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15). As part of this assessment, a range of mitigation measures have been considered to reduce disruption to businesses and their users during the construction phase of the Project. These measures are identified in ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15), the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) which accompany the Development Consent Order (DCO) application.</p>			X	
9-8.138	Request that National Grid commission an external consultant to assess the impact (losses and extra costs) of the Project on solar site (near Langdon	National Grid has engaged with the Solar Farm operator to ensure any impact is identified and suitably			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	Hills; site specified by respondent) both at construction stage and operational stage, and request for compensation accordingly. For the construction stage, suggest that impacts to be evaluated should include increased soiling due to dust generation, extra costs due to additional plant-wide module cleaning(s), maintenance services non-performance due to access restriction to the north portion of the site, increased unavailability due to repair delays caused by access to the north portion of the site. For the operational stage, suggest that impacts to be evaluated should include shadowing due to the pylons and overhead line and accelerated photovoltaic (PV) panel degradation due to hard shadows onto the modules	mitigated and managed through localised siting of pylons to reduce over sail of panels. National grid would compensate solar farm operators / developers in line with the Compensation Code and on submission of a justified / evidenced claim.				
Environmental Impact						
9-8.139	Concern about negative impact of the Project on the Green Belt(s)	To facilitate the Project, it will be necessary to route through the Metropolitan Green Belt. National Grid has considered the effects on the Green Belt and all of the options connecting into Tilbury identified in the Corridor and Preliminary Routeing and Siting Study (CPRSS) would result in new and upgraded infrastructure in the Green Belt. The National Electricity Transmission System (NETS) transports energy from where it is generated to where it is used, in homes, schools, hospitals, businesses, and factories. Electricity networks are an established feature in our landscapes, taking energy across open			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)(b	S42(1)(d) and S47	Resulted in Design Change
		<p>countryside to towns and cities where it is needed. To ensure the national electricity network can transport energy efficiently there are numerous electricity transmission connections crossing Green Belts. Many of these connections are by way of overhead lines. By their nature, electricity transmission infrastructure (overhead lines) within the Green Belt is inevitable due to the need to transport energy around the country and the need to avoid the most built-up areas around our towns and cities (Holford Rule Supplementary Note 1 - A summary of the Holford Rules is provided within Appendix I22 of this report).</p> <p>Some electricity infrastructure such as overhead lines, are considered to be engineering operations. By the nature of their design, and the sensitive siting, some of this infrastructure such as pylons and conductors may not be considered inappropriate development in the Green Belt as they do not conflict with Green Belt purposes and preserve openness. Although overhead lines may occupy long corridors within Green Belt, they involve little physical change to the land through which they pass and leave a large majority of the land beneath them free from development and therefore open.</p> <p>The Planning Statement (document reference 5.6), submitted with the application for development consent, includes an assessment of the Project against Green Belt planning policy (as contained in National</p>

		Policy Statement EN-1 and the National Planning Policy Framework).				
9-8.140	Concern that the Project will impact SSSIs	<p>Through routeing, siting and design development National Grid has sought to reduce, as far as practicable, impacts on biodiversity and in particular features of high ecological value such as Sites of Special Scientific Interest (SSSI). Although there are 22 SSSI within the study area, current proposals avoid the majority of impacts on SSSIs, with no long-term negative impacts anticipated on any SSSIs as a result of the Project. Potential direct and indirect impacts on each SSSI within the study area have been considered within the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8) and any necessary mitigation detailed to ensure no significant residual effects.</p> <p>National Grid will continue to engage with Natural England.</p>	X		X	
9-8.141	Concern that the Project will impact ancient woodland	<p>Through routeing, siting and detailed design, National Grid has sought to reduce, as far as practicable, impacts on biodiversity and in particular features of high ecological value, such as ancient woodland. A standard 15 m buffer from construction activities has been applied where practicable. Potential direct and indirect impacts on each block of ancient woodland within the study area have been considered within the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8) and any</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		necessary mitigation detailed to ensure no significant residual effects. An ancient woodland and veteran tree mitigation strategy is included as part of the Outline Landscape and Ecological Management Plan (see Appendix B of the Outline LEMP (document reference 7.4)). The Outline Landscape and Ecological Management Plan (document reference 7.4) has been developed in consultation with relevant stakeholders including Natural England.				
9-8.142	Concern that the Project will impact nature reserve / RSPB reserve / Special Protection Area (SPA)	Through routeing, siting and design development National Grid has sought to reduce, as far as practicable, impacts on biodiversity and in particular features of high ecological value, such as Royal Society for the Protection of Birds (RSPB) reserves. Potential direct and indirect impacts on RSPB reserves within the study area have been considered within the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8). No RSPB reserves are directly impacted by the Project.	X		X	
9-8.143	Concern that the Project will impact Ramsar site	Through routeing, siting and design development, National Grid has sought to reduce, as far as practicable, impacts on biodiversity and in particular features of high ecological value, such as Ramsar sites. Although there are 13 Ramsar sites within the study area, current proposals avoid the majority of impacts, with no long-term negative impacts anticipated on any Ramsar site as a result of the Project. Potential direct	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		and indirect impacts on each scoped in Ramsar site has been considered within the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8) and/or Habitats Regulations Assessment (HRA) depending on potential impact pathways. Any necessary mitigation has been detailed within ES Chapter 8: Ecology and Biodiversity (document reference 6.8), Habitats Regulations Assessment Report (document reference 5.3) and the Outline Code of Construction Practice (CoCP) (document reference 7.2) to ensure no significant residual effects, as agreed with Natural England.				
9-8.144	Concern that the Project will result in a negative impact on the environment / countryside generally (no details given)	<p>National Grid has sought to reduce, as far as practicable, impacts on the environment / countryside through routeing and siting and an ongoing iterative design process which has taken on board feedback at different stages of the Project. The iterative design process sought to avoid areas of highest concern, for examples through changes to the route alignment or changes to the method e.g. trenchless crossings. National Grid have engaged with a range of stakeholders (including Statutory Environmental Bodies (SEBs) and relevant Local Planning Authorities (LPAs) throughout the development of the Project design and environmental assessment work.</p> <p>National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project. The results of this assessment are provided in the Environmental Statement (ES) (document reference Volume 6:</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Environmental Statement) that accompanies the Development Consent Order (DCO) application. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation (and maintenance) of the Project and recommends appropriate mitigation measures to reduce potential effects.</p> <p>A number of mitigation measures have been incorporated into the Project design. Mitigation relevant to specific environmental topics (including Ecology and Biodiversity, Landscape and Visual and Historic Environment) are presented in the relevant ES chapters. The Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Code of Construction Practice (CoCP) (document reference 7.2) contain a list of relevant good practice measures to avoid or reduce risks to habitats and species.</p> <p>In addition to the EIA, National Grid has set itself a target of delivering 10% biodiversity net gain (BNG) with environmental and societal benefits on all construction projects, meaning that as a result of measures taken, the biodiversity rating of the area will be enhanced by 10% greater than prior to the construction of the Project. The BNG target for the Project is currently voluntary and aligned with our corporate sustainability commitment.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-8.145	Suggest that areas other than the AONB should be protected / Criticism that only the AONB has been considered	<p>National Policy Statement (NPS) EN-5 states that the Government considers overhead lines to be appropriate and acceptable in most instances, although it recognises that that there may be, at particularly sensitive locations, potential adverse landscape and visual impacts of overhead line infrastructure that make it inconsistent with our duties and relevant planning policy.</p> <p>The National Landscape designation is one such location where there is a presumption that underground cable technology is adopted with the extent of underground cabling extending beyond the boundary in response to the potential for the Project to affect National Landscapes. Our proposals include a total of approximately 20 km of underground cable through and in the vicinity of the Dedham Vale National Landscape, including a section at Great Horkesley to reduce the changes in views and setting of the National Landscape from within and adjacent to its designated boundary.</p> <p>Underground cabling is also proposed for short sections near Fairstead and North Tilbury.</p> <p>The higher cost of underground cables to bill paying consumers, and the environmental implications of installing underground cables and maintaining them elsewhere, are not considered to be justifiable in the context of national policy or National Grid's statutory</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>duties, which include the need to be economic and efficient.</p> <p>A Landscape and Visual Impact Assessment (LVIA), presented in the Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13), has been undertaken as part of the Environmental Impact Assessment (EIA). The LVIA sets out potential effects on landscape and visual receptors.</p>				
9-8.146	Concern that the Project will impact conservation area	<p>National Grid, through the routeing and siting exercise, has sought to reduce the impact on landscape character, visual amenity and the historic environment.</p> <p>A Historic Environment Assessment has been undertaken and is presented in Chapter 11: Historic Environment (document reference 6.11) of the Environmental Statement (ES) (document reference Volume 6: Environmental Statement).</p> <p>Conservation areas within 2 km of the Order Limits are considered in the Historic Environment assessment for the Project. The impacts of the Project on the historic environment are assessed in Chapter 11: Historic Environment (document reference 6.11) of the ES. The assessment considers the potential impact on archaeology, historic buildings and historic landscapes and includes assessment of potential for physical impact and impact through change to setting that affects the value of a heritage asset. The assessment of conservation areas is supported by setting surveys,</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		as documented in ES Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1). The Project has engaged with Historic England and relevant planning authorities on aspects relating to heritage, including appropriate mitigation measures and techniques and to take their views into account during Project development.				
9-8.147	Concern that the Project will impact the "Great Eastern Forest" strategic afforestation scheme that is soon to launch	<p>National Grid understands the afforestation scheme provides financial support to encourage people to develop and manage sustainable forests. National Grid would work with those involved with the Great Eastern Forest during the Development Consent Order (DCO) process.</p> <p>National Grid has committed to a 3:1 replacement for individual trees and individual trees within small groups. The Project will prioritise the replanting for individual trees and small groups of individual trees within the Order Limits, although offsite provision may however be required.</p> <p>Details of the onsite tree planting will be provided in accordance with the final Landscape and Ecological Management Plan (LEMP) or the Reinstatement Planting Plan secured in the draft DCO (document reference 3.1).</p>	X		X	
9-8.148	Criticism that the mitigation measures set out in the Preliminary Environmental Information Report (PEIR) have not been considered at the Blind Lane area	The Preliminary Environmental Information Report (PEIR) was a preliminary document that reflected the Project's proposals at the time it was completed.	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>A complete Environmental Impact Assessment (EIA) has been carried out and the results are presented in Environmental Statement (ES) (document reference: Volume 6: Environmental Statement) which accompanies the Development Consent Order (DCO) application.</p> <p>The ES identifies and assesses the likely significant effects on the environment (including the Blind Lane Local Wildlife Site (LWS)) resulting from the construction and operation of the Project and recommends appropriate mitigation measures to reduce effects.</p> <p>Any likely significant negative effects are avoided, reduced, mitigated or compensated for, following the mitigation hierarchy aligning with Paragraph 5.4.42 of the Overarching National Policy Statement (NPS) for Energy (EN-1) (DESNZ, 2024a).</p> <p>Mitigation measures for the LWS are summarised in the ES, Chapter 8: Ecology and Biodiversity (document reference 6.8) and are also detailed in the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4).</p>				
9-8.149	Concern about the impact of the Project on Parcel 10 of the Green Belt (e.g. as it is sensitive to change)	National Grid has submitted a Planning Statement (document reference 5.6) with its Development Consent Order (DCO) application. The Planning Statement sets out the planning policy context and	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>assesses the Project against policy requirements including an assessment of the overall planning balance and includes an assessment in accordance with Overarching National Policy Statement (NPS) for energy (EN-1) (para 5.11.20) to determine whether the Proposed Development may be inappropriate development within the meaning of Green Belt policy.</p> <p>An assessment of the impact on the Green Belt forms part of the Planning Statement (document reference 5.6) which has been submitted as part of the application for development consent. National Grid understands that the reference to Parcel 10 relates to a Green Belt review undertaken by Basildon in 2017. The Project does route through this parcel between Blind Lane and the settlement of Little Burstead. National Grid does not consider that there is viable alternative alignment available.</p> <p>National Grid considers that the benefits of the Project significantly outweigh any potential harm predicted. As required by Section 104(7) of the Planning Act 2008, the benefits of the Project must be outweighed against any adverse impacts identified in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement). The Planning Statement (document reference 5.6) demonstrates that any unavoidable adverse environmental effects which may remain following mitigation are outweighed by the public benefit that would accrue as a result of the Project and, for the purposes of Section 104(7) of the</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Planning Act 2008, that any adverse impacts would not outweigh the benefits of the Project.</p> <p>To connect a new transmission connection into Tilbury Substation it would be necessary to route through the Metropolitan Green Belt. National Grid has considered the effects on the Green Belt and all of the options connecting into Tilbury identified in the Corridor and Preliminary Routeing and Siting Study (CPRSS) would result in new and upgraded infrastructure in the Green Belt.</p> <p>The National Electricity Transmission System (NETS) transports energy from where it is generated to where it is used, in homes, schools, hospitals, businesses, and factories. Electricity networks are an established feature in our landscapes, taking energy across open countryside to towns and cities where it is needed. To ensure the national electricity network can transport energy efficiently there are numerous electricity transmission connections crossing Green Belts. Many of these connections are by way of overhead lines. By their nature, electricity transmission infrastructure (overhead lines) within the Green Belt is inevitable due to the need to transport energy around the country and the need to avoid the most built-up areas around our towns and cities (Holford Rule Supplementary Note 1 as found in Appendix I22 of this report).</p> <p>Some electricity infrastructure such as overhead lines, are considered to be engineering operations. 		this infrastructure such as pylons and conductors may not be considered inappropriate development in the Green Belt as they do not conflict with Green Belt purposes and preserve openness. Although overhead lines may occupy long corridors within Green Belt, they involve little physical change to the land through which they pass and leave a large majority of the land beneath them free from development and therefore open.				
9-8.150	Criticism that information in the Preliminary Environmental Information Report (PEIR) on the impact on the setting of conservation areas is contradictory in parts. On one hand, the PEIR states that the setting of the Little Burstead Conservation Area is vital to the significance of the conservation area and makes a considerable contribution to the value of the conservation area. However, the PEIR then states that the setting only makes a moderate contribution to its value. Given that Little Burstead Conservation Area is only 830m from the Draft Order Limits, together with almost unobstructed views between the Conservation Area and the Project through Section G, the setting of a Conservation Area is of considerable importance and will be negatively affected to a significant extent by the proposed development	<p>Since production of the Preliminary Environmental Information Report (PEIR), ES Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1) has been updated due to the evolution of the Project design and study areas and in response to statutory consultation responses. Every effort has been made to correct inconsistencies. The preliminary assessment presented in the PEIR has been superseded by the assessment in the Environmental Statement (ES).</p> <p>The assessment presented in ES Chapter 11: Historic Environment (document reference 6.11) has concluded a not significant effect to Little Burstead Conservation Area during construction and operation.</p>	X		X	
9-8.151	Criticism that the Preliminary Environmental Information Report (PEIR) contains conflicting	Since production of the Preliminary Environmental Information Report (PEIR), ES Appendix 11.1: Historic			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	information on the impact on the setting of Hutton Village Conservation Area. The PEIR states that the setting of Hutton Village Conservation Area makes a considerable contribution to the value of the Conservation Area, however, the summary table also in the PEIR states the setting makes a minor contribution to its value. Given there are some pleasing views over fields and green space from the southern end of the conservation area from the Church of All Saints (as noted in the PEIR), and given there are views with the south-east and eastern sides of the conservation area overlooking the draft Order Limits, the setting of the Conservation Area is vital to the significance of the Conservation Area, and will be negatively affected to a significant effect by the Project	<p>Environment Baseline Report (document reference 6.11.A1) has been updated due to the evolution of the Project design and study areas and in response to statutory consultation responses. Every effort has been made to correct inconsistencies. The preliminary assessment presented in the PEIR has been superseded by the assessment in the Environmental Statement (ES).</p> <p>The assessment presented in Environmental Statement Chapter 11: Historic Environment (document reference 6.11) has concluded a significant effect to Hutton Village Conservation Area during construction, due to the scale of work including dismantling and undergrounding of an existing 132 kV overhead line and a not significant effect during operation, as the existing 132 kV overhead line would be removed and replaced with the larger 400 kV overhead line.</p>				
Financial Compensation						
9-8.152	Concern that the Project will devalue property / impact on property value in this section	National Grid acknowledges that its proposals may cause concern to landowners. Diminishment of property value known as 'injurious affection' and any other appropriate heads of claim would be considered on an individual basis in accordance with current legislation. We would pursue a voluntary agreement with affected landowners, acquiring rights in accordance with our Land Rights Strategy (the strategy is subject to review). If a voluntary agreement cannot be reached, then the Compulsory Purchase Code			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>allows for a claim of compensation for the loss that property owners may have suffered as a direct result of the retained part of your property ownership being worth less as a direct result of the works.</p> <p>If there are any specific concerns about the devaluation of property, National Grid would advise seeking third party advice. or alternatively please contact the Project team:</p> <p>Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.</p> <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD.</p> <p>Potential impact on property prices is not a material planning consideration for the purposes of a DCO application. Separate to this point, the Secretary of State has asked that the DCO application include an assessment of the likely significant environmental effects in the form of potential impacts on property prices. The ES contains an assessment on this. It concluded that there is no evidence of any significant environmental effects on house prices as a result of the Project. Although not part of the Environmental Impact Assessment process it is relevant to observe that any impact of the Project on residential properties are potentially capable of being dealt with through statutory</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		nuisance or compulsory purchase compensation regimes (subject to the requisite criteria being met).				
9-8.153	Request for adequate financial compensation / Suggest that impacted individuals need to be compensated	<p>All affected landowners would be compensated for any temporary/permanent losses, and this would be dealt with on a case-by-case basis in line with the Compensation Code.</p> <p>If there are any specific concerns requiring compensation and how it would be assessed, please contact the Project team:</p> <p>Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.</p> <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD</p> <p>The Government has published its guidance on community funds for transmission infrastructure (DESNZ, 2025). National Grid is committed to working with Ofgem, industry partners, local communities and their representatives to ensure community benefits are delivered fairly and effectively, driving lasting, positive change for the people and places integral to our developing electricity network.</p> <p>Government has also announced its plans to introduce a bill discount scheme for households within 500 metres of new infrastructure, which it proposes to introduce through the Planning and Infrastructure Bill. This is evolving government policy. Government</p>			X

		<p>expects this scheme to be in place by 2026 and we would share further details as they emerge.</p> <p>National Grid is committed to providing a coordinated local and regional approach to community benefits. This would be delivered outside the development consent process, since this is not a material consideration in the decision on the proposed Project or a matter</p> <p>to be secured as part of the Development Consent Order (DCO), as per the Community Funds for Transmission Infrastructure: Guidance (DESNZ, 2025).</p>				
9-8.154	Request that National Grid purchase respondent's property / business	<p>National Grid is not required to purchase any properties or businesses as part of the Project.</p> <p>National Grid compensates landowners in line with the Compensation Code and any other relevant legislation.</p>			X	
Health, Safety & Wellbeing						
9-8.155	Concern that the Project may result in a negative impact on mental health / wellbeing	<p>National Grid recognises people may have concerns about the health effects of living close to an overhead line, and that the uncertainty whilst the proposals are developed may cause anxiety.</p> <p>We have sought to reduce potential effects on communities and residents through routeing and design. We have also sought to reduce concern or uncertainty about the proposals through making timely design decisions and engaging with the people and</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>stakeholders throughout the development of the Project.</p> <p>The Project team will continue to engage with people potentially affected during progress of the Project, through regular communication including letters, phone calls and meetings. This will enable concerns to be raised and discussed at an early opportunity and provide a regular point of contact to respond to queries and concerns.</p> <p>We urge anyone with concerns to get in touch through the Norwich to Tilbury Freephone number, address or email throughout the progress of the Project:</p> <p>Call our Community Helpline: 0800 915 2497 (Lines are open Monday to Friday 9:00am – 5:30pm)</p> <p>Email us: contact@n-t.nationalgrid.com</p> <p>Write to us: FREEPOST N TO T (No stamp or further address details are required)</p> <p>The UK has a carefully thought-out set of policies for protecting us all against Electric and Magnetic Fields (EMFs), the main component of which is exposure guidelines. Those exposure guidelines are set by independent scientific bodies and are based on decades-long studies into the effects of EMFs and ill health. After those decades of research, the weight of evidence is against there being any health risks of EMFs below the guideline limits. These policies are incorporated into the decision-making process for Development Consent in National Policy Statement</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		(NPS) EN-5. It is National Grid's policy to ensure that all of its equipment comply fully with those exposure limits.				
9-8.156	Concern about health risks associated with the Project / physical health risks associated with the Project	<p>Health considerations are given a high priority in the process by which we arrive at any proposals for new electricity circuits. Assessment of compliance with Electric and Magnetic Field (EMF) guidelines and policies is key to National Grid's approach. The UK has a carefully thought-out set of policies for managing EMFs. There have been over four decades of research looking into whether EMF can cause health effects and there are no established effects below the exposure limits. When designing our overhead lines, substations and underground cables design criteria, we ensure they would not exceed those exposure limits, even when operating at 100% capacity. Additionally, the precautionary measures which the Government have adopted, are applied to the design which ensure the EMFs reduce as quickly with distance as possible. Evidence of that compliance is presented in the Electric and Magnetic Field Compliance Report (document reference 7.8) submitted as part of the Development Consent Order (DCO) application.</p> <p>National Grid takes this issue very seriously and look to authoritative and independent scientific organisations such as the World Health Organisation (WHO) and in the UK Health Security Agency (UKHSA) to review the worldwide body of scientific evidence on health. Important decisions on health are taken independently</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		of industry, and National Grid have followed the guidance and policies adopted by Government on advice from their scientific experts. Each of these organisations have comprehensive reviews of EMF research available to view on their websites.				
9-8.157	Concern that the Project poses a safety risk to aircraft (including balloons) in the area / Concern that the Project will impact airfields in this area	<p>National Grid recognises the need for the Project to be developed collaboratively alongside aviation stakeholders to identify, assess, and as appropriate mitigate, adverse impacts on aviation safety, in accordance with Government's Overarching National Policy Statement (NPS) EN-1.</p> <p>Our review of aerodromes potentially impacted by the Project identified 17 civil aerodromes (including 2 helipads) within 5 km of the preferred corridor and one military site (Wattisham Flying Station). We have also considered other airfields and flight activities where these have been identified through the 2022 and 2023 non-statutory, statutory consultation, targeted consultations and landowner consultation, including for ballooning and for model flying. As well as considering feedback, National Grid's aviation advisers (an independent aviation consultancy) have directly engaged with these parties (with National Grid present).</p> <p>A number of route alignment and pylon positioning changes have been made following consideration of feedback and in all but one case the assessment concludes that the airfields can continue to operate. In</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>the remaining case of a private airstrip near Little Burstead, we continue to liaise with the operator to identify an appropriate solution.</p> <p>Specifically in respect of Wattisham Flying Station our proposals position the alignment onto relatively lower ground (to remove the potential for interference with Instrument Landing System (ILS) radar) and adopt an alignment closer to the existing 132 kV overhead line and include replacing part of the 132 kV line south of Offton by underground cable to avoid a new overhead line corridor being introduced.</p> <p>We will continue to engage with relevant parties as appropriate.</p> <p>Further information on the assessment of airfields can be found in the Environmental Statement (ES) (see ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and ES Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2)).</p>				
Heritage						
9-8.158	Concern about archaeological impacts	<p>Through routeing and siting National Grid has sought to reduce as far as practicable potential impacts on the historic environment. The impacts of the Project on the historic environment are assessed in Chapter 11: Historic Environment of the Environmental Statement (ES) (document reference 6.11). The assessment considers the potential impact on archaeology, historic buildings and historic landscapes and includes</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>assessment of potential for physical impact, impact through change to setting that affects the value of a heritage asset and impact through indirect factors such as change in hydromorphology. The assessment is supported by walkover, setting and geophysical surveys, as documented in ES Appendix 11.1 Historic Environment Baseline Report (document reference 6.11.A1) and ES Appendix 11.4 Geophysical Survey Results Report (document reference 6.11.A4).</p> <p>Archaeological trial trench evaluation has also been undertaken and is reported in ES Appendix 11.5 Trial Trenching Results Report (document reference 6.11.A5). In addition to the proposals in the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4), the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5) sets out appropriate mitigation for the historic environment. The Project has engaged with Historic England and relevant planning authorities on aspects relating to heritage, including appropriate mitigation measures and techniques and to take their views into account during Project development which are detailed in ES Chapter 11: Historic Environment (document reference 6.11).</p>				
9-8.159	Concern about negative impact on heritage / Suggest that the Project should be routed away from heritage buildings / listed buildings / historical site	Through routeing and siting National Grid has sought to reduce as far as practicable potential impacts on the historic environment. The impacts of the Project on the historic environment are assessed in Chapter 11: Historic Environment of the Environmental Statement			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>(ES) (document reference 6.11). The assessment considers the potential impact on archaeology, historic buildings and historic landscapes and includes assessment of potential for physical impact, impact through change to setting that affects the value of a heritage asset and impact through indirect factors such as change in hydromorphology. The assessment is supported by walkover, setting and geophysical surveys, as documented in ES Appendix 11.1 Historic Environment Baseline Report (document reference 6.11.A1) and ES Appendix 11.4 Geophysical Survey Results Report (document reference 6.11.A4). Archaeological trial trench evaluation has also been undertaken and is reported in ES Appendix 11.5 Trial Trenching Results Report (document reference 6.11.A5). In addition to the proposals in the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4), the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5) sets out appropriate mitigation for the historic environment. The Project has engaged with Historic England and relevant planning authorities on aspects relating to heritage, including appropriate mitigation measures and techniques and to take their views into account during Project development.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-8.160	Concern about Roman settlement with several wells to the east of Pylon TB206, south of Tally Ho Drive	No historical records are present in the Historic Environment Record (HER) for the specified area described. However, National Grid has worked to minimise potential impacts on the historic environment through strategic routeing and siting measures. These have been documented and are presented in the Environmental Statement (ES), Chapter 11: Historic Environment (document reference 6.11), which forms an integral part of the Environmental Impact Assessment (EIA) for the Project. The approach to assessment and mitigation presented in ES Chapter 11: Historic Environment (document reference 6.11) have been discussed and agreed with key heritage stakeholders.			X	
Information						
9-8.161	Information provided to National Grid regarding that the whole Buttsbury area floods	National Grid has noted the respondent's feedback.			X	
Mitigation						
9-8.162	Suggest mitigation measures	An Environmental Statement (ES) (document reference Volume 6: Environmental Statement) has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 ('the Infrastructure EIA Regulations'). The ES identifies and assesses the likely significant effects on the environment resulting from the construction,			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		operation and maintenance of the Project and recommends appropriate mitigation to reduce effects. Environmental mitigation measures have been defined within each environmental topic chapter and set out in relevant management documents submitted with the Development Consent Order (DCO) application, including the Outline Code of Construction Practice (CoCP) (document reference 7.2), the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (WSI) (document reference 7.5).				
9-8.163	Suggest that the access road and bridge built by National Grid for construction traffic parallel with the existing Buckwyns Chase access road is left in place after the construction of the Project, for use by the local community in order to access their homes (e.g. the existing bridge used to access this community is near collapse due to frequently flooding)	National Grid has considered this request and is continuing to work with the local community to identify the appropriate means to hand over the asset to them. The bridge has been included within the Order Limits as a permanent asset to allow for this to happen should an agreement be reached. Should agreement not be reached and the bridge not be required for operation and maintenance purposes then it would be removed post construction.			X	
9-8.164	Suggest mitigation measures for the construction of the Project at solar site (near Langdon Hills; site specified by respondent), including protective measures where existing underground cables are crossed by construction roads for the Project (e.g. a	National Grid notes the respondent's feedback. The detailed design of the haul road, and any utility protection, will be developed at the next stage; however, we have no issue with providing protection where utilities are crossed.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	reinforced section of the road being installed to prevent damage to underground services, or equivalent or superior protective measures) and mitigation measures for dust generation (e.g. humidifying road areas in dry weather, covering with tarpaulin any open top containers transporting sand in the site's vicinity or other equivalent or superior protective measures)	<p>National Grid would continue collaborating with the solar site (near Langdon Hills) to determine if and where additional protective measures for cable crossings are required. Such measures would be holistic in design, encompassing all requirements in the area to progress safely and with considering all operational requirements of the solar site.</p> <p>During construction, mitigation would be implemented to reduce the impact of dust generation and construction vehicle emissions. The Environmental Statement (ES) Chapter 7: Air Quality (document reference 6.7) and the Outline Code of Construction Practice (CoCP) (document reference 7.2) outlines mitigation measures. The dust-emitting activities can be significantly reduced or eliminated by applying the site-specific mitigation measures (see Outline CoCP (document reference 7.2)) for high-risk sites following measures recommended in the Institute of Air Quality Management (IAQM) guidance (IAQM, 2024). The IAQM guidance states that with the implementation of effective site-specific mitigation measures, the environmental effect would not be significant in most cases.</p>				
Needs case						
9-8.165	Suggest that road and rail infrastructure is prioritised over the Project in this section	National Grid's proposals respond to the need to overhaul and upgrade the electricity transmission network to accommodate the changes in how we produce and use energy, including the increase in			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>offshore wind needing to connect in 2030. We are already carrying out work to reinforce and upgrade the existing network in East Anglia, but even with these upgrades, the network will not be sufficient for the amount of new electricity connecting to it. As a result, our proposals for a new overhead line between Norwich and Tilbury are essential in supporting the wider UK transition to renewable energy.</p> <p>Our proposals were developed following discussions with the local highways authorities, National Highways, and Network Rail.</p>				
PROW (Public Right of Way)						
9-8.166	Concern about negative impact on PROW / footpaths / cycle paths / bridleways	<p>Through routeing and siting, National Grid has sought to reduce, as far as practicable, impacts and disruption to Public Rights of Way (PROW).</p> <p>The iterative design process identified the existing PROW network and their wider connectivity and sought where practicable to reduce and where possible remove impacts to PROW.</p> <p>Effects on PROW would be mitigated where possible, maintaining access where practicable, with closures as a last resort. We will continue to engage with relevant stakeholders on the PROW network to enable feedback and input to be considered as the Project progresses. An Outline Public Rights of Way Management Plan (document reference 7.6) is submitted with the Development Consent Order (DCO) application.</p>			X

Requests						
9-8.167	Request for National Grid to confirm whether the plans for the Project near the respondent's property have changed due to the construction of Dunton Hills Garden Village (DHGV) on Green Belt Land and further homes being built across from the respondent on the A127 / Criticism that this was not drawn to the attention of the residents of Basildon	The proposals National Grid presented for statutory consultation were designed to reduce interaction with the Dunton Hills Garden Village development by restricting the alignment to the eastern edge of the proposed corridor. The consideration we gave to Dunton Hills Garden Village was outlined in our 2024 Design Development Report that was presented at statutory consultation from Section 5.4.211. At the launch of statutory consultation, we wrote to residents within a 1 km zone from the 2024 preferred draft alignment. This included residents in the Basildon area. National Grid is not responsible for the communication of other projects with residents.	X		X	
9-8.168	Request that National Grid provide detailed construction schedules and timelines as early as possible to facilitate discussions and coordination between National Grid and Dunton Hills Garden Village (DHGV) developers	At present it is not possible to provide a detailed programme of construction work. Should consent be granted in 2027, it is anticipated that construction of the Project would commence in 2027, likely starting with pre-commencement works including site clearance activities, the installation of temporary construction compounds and access roads. It is expected the main construction works would continue through to 2031 (four years). An indicative construction phasing is presented in Image 4.1 of the Environmental Statement (ES) Chapter 4: Project Description (document reference 6.4), The phasing would be programmed and	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		sequenced to reduce disruption to the local surroundings and the environment, residents, businesses and roads users as far as practicable.				
9-8.169	Request further assessment of the impact on Blind Lane Local Wildlife Site following completion of ecology surveys which are regarded as required mitigation within the Preliminary Environmental Information Report (PEIR)	A full range of ecology surveys in and around the Blind Lane and Little Bladen Wood Local Wildlife Sites have also been undertaken across the 2023-2025 period, including habitat, bat, badger, water vole and otter surveys. Results of these baseline surveys, an impact assessment and any proposed mitigation have been detailed within Chapter 8: Ecology and Biodiversity (document reference 6.8) of the Environmental Statement (ES). Detailed mitigation measures are also set out within the Outline Code of Construction Practice (CoCP) (document reference 7.2) which contains a list of relevant good practice measures to avoid or reduce impacts on valuable habitats and locally designated sites.			X	
9-8.170	Request that National Grid conduct a site visit to Blind Lane before any further design work on the Project takes place	National Grid has sought to reduce, as far as practicable, impacts on the environment/countryside through routeing and siting and an ongoing iterative design process, which has been informed by both desktop and site-based work. National Grid has also undertaken an Environmental Impact Assessment (EIA) for the Project. The results of this assessment are provided in the Environmental Statement (ES) that accompanies the Development Consent Order (DCO) application. A Landscape and Visual Impact Assessment (LVIA) has been undertaken			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>as part of the EIA. The LVIA sets out the potential landscape effects and identifies areas for potential mitigation planting to reduce visual impacts to local receptors. The LVIA is presented in the ES, Chapter 13: Landscape and Visual (document reference 6.13).</p> <p>Surveys have been carried out in the area around Blind Lane to inform the design and the LVIA, including landscape and visual site surveys and viewpoint photography. Results of the assessment are presented as part of the findings in Section G of the LVIA. They include a viewpoint assessment from Little Burstead (Viewpoint 7.05, including a photomontage), and an assessment of effects in Visual Receptor Areas (VRA) G4 (Ingrave and Herongate) and VRA G5 (Little Burstead), which can be found in ES Appendix 13.3 Visual Baseline and Assessment (document reference 6.13.A3). Landscape effects are presented in Landscape Character Type (LCT): Wooded Farmlands, Landscape Character Assessment (LCA) 11: West Billericay Wooded Farmlands in ES Appendix 13.2 Landscape Baseline and Assessment (document reference 6.13.A2).</p> <p>A full range of ecology surveys in and around the Blind Lane and Little Bladen Wood Local Wildlife Sites have also been undertaken across the 2023-2025 period, including habitat, bat, badger, water vole and otter surveys. Results of these baseline surveys, an impact assessment and any proposed mitigation have been detailed within Chapter 8: Ecology and Biodiversity</p>

	the south Essex Council area to fully assess impacts	<p>Dunton Hills Garden Village and Essex areas. The survey scope for the Project has been agreed with stakeholders (including Statutory Environmental Bodies and Local Planning Authorities) following the Scoping Opinion (document reference 6.20) to ensure a robust baseline assessment. National Grid has undertaken an Environmental Impact Assessment (EIA) informed by the environmental surveys undertaken for the Project. Full results and impact assessments conducted as a result of these surveys are included within the Appendices of the respective topic chapters of the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application.</p> <p>The Outline Code of Construction Practice (CoCP) (document reference 7.2) sets out the required mitigation measures and environmental commitments that will be implemented during the construction phase of the Project to avoid or reduce potential effects on the environment, including commitments to undertake further surveys</p>				
Tourism						
9-8.172	Concern about impact of the Project on tourism	<p>Through routeing and siting, National Grid has sought to avoid, as far as practicable, locations important for leisure and tourism.</p> <p>Environmental Statement (ES) Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) presents an assessment on the</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		potential impacts on tourism economy (during construction) and tourism assets (during construction and operation), including visitor accommodations. As part of this assessment, a range of measures have been considered throughout the construction phase of the Project to minimise disruption on tourism. These include: traffic management, signage and routing measures. These are identified within the ES Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15), the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).				
Visual Impact						
9-8.173	Concern about cumulative visual impact of the Project alongside existing overhead lines / concern about wirescape	<p>National Grid notes the feedback received and has taken it into consideration as part of the iterative design process.</p> <p>National Grid has liaised with UK Power Networks to understand opportunities for 132 kV network rationalisation. The Project includes proposals to replace certain sections of 132 kV overhead line connection with underground cable to rationalise the network and reduce potential for cumulative wirescape effects.</p> <p>A Landscape and Visual Impact Assessment (LVIA), presented in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13), has been undertaken as part of the Environmental</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Impact Assessment (EIA). Existing infrastructure (such as existing overhead lines) has formed part of the baseline environment for the Project to be assessed against, to identify if significant landscape and / or visual effects are likely to arise. The LVIA presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) sets out potential landscape and visual effects. The rationalisation of the existing 132 kV network in some areas forms part of the embedded landscape mitigation, as set out in ES Chapter 13: Landscape and Visual (document reference 6.13).</p> <p>The findings and conclusions of the LVIA and other topics assessments have been considered within the Cumulative Impact Assessment, presented in ES Chapter 17: Cumulative Effects Assessment (document reference 6.17), lists the developments as part of the cumulative assessment. This chapter considers the landscape and visual effects of the Project cumulatively with other proposed developments that are being progressed.</p>				
9-8.174	Concern that the Project will be unsightly / visually intrusive (including overhead lines, CSE compounds and substations) / Concern that the Project will cause a negative impact on views	National Policy Statement (NPS) EN-5 makes it clear that the Government considers overhead lines to be appropriate and acceptable in most instances, although it recognises that there may be, at particularly sensitive locations, potential adverse landscape and visual impacts of an overhead line that make it			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>inconsistent with our duties and relevant planning policy.</p> <p>The Dedham Vale National Landscape (previously an Area of Outstanding Natural Beauty (AONB)) designation is one such location where underground cable technology is proposed with the extent of underground cabling extending beyond the boundary in response to the potential for the Project to affect the National Landscape. Our proposals include a total of approximately 20 km of underground cable through and in the vicinity of the Dedham Vale National Landscape, including a section at Great Horkesley to reduce the changes in views and setting of the National Landscape from within and adjacent to its designated boundary.</p> <p>Underground cabling is also proposed for a short section of 400 kV overhead line crossing near Fairstead.</p> <p>Cable Sealing End (CSE) compounds are required to facilitate sections of underground cable, and the proposed East Anglia Connection Node (EACN) substation is required to connect to customers and the proposed Tilbury North Substation is required to connect the Project into the existing Tilbury Substation. These components have been carefully sited taking into consideration Horlock Rules including the potential for landscape and visual effects.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>The higher cost of underground cables to bill paying consumers, and the environmental implications of installing underground cables and maintaining them at locations outside the Dedham Vale National Landscape, are not considered to be justifiable in the context of national policy or National Grid's statutory duties, which include the need to be economical and efficient.</p> <p>A Landscape and Visual Impact Assessment (LVIA), presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13), has been undertaken as part of the Environmental Impact Assessment (EIA). The LVIA includes an assessment on both landscape character and visual amenity and identifies areas for potential mitigation planting around substations and CSE compounds to reduce visual impacts to local receptors. The Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) includes details regarding the planting proposals.</p>				
9-8.175	<p>Criticism that the Preliminary Environmental Information Report (PEIR) confirms that there will be negative residual effects to residential dwellings in the vicinity of Blind Lane during construction and operation phases of the Project</p>	<p>The Preliminary Environmental Information Report (PEIR) presented at the statutory consultation included a preliminary Landscape and Visual Impact Assessment (LVIA), that follows professional guidance set out in Guidelines for Landscape and Visual Impact Assessment (GLVIA) 3, as prepared by the Landscape Institute and the Institute of Environmental Management and Assessment.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>The assessment of visual effects is presented in ES Appendix 13.2 Landscape Baseline and Assessment (document reference 6.13.A2). The assessment has been prepared by qualified and experienced landscape professionals. Blind Lane sits within Visual Receptor Area (VRA) G4 Ingrave and Herongate, which was presented on page 156 of the document. The preliminary assessment of visual effects identified that significant (negative) effects are likely during construction and operation within 1 km of the draft Order Limits, including visual receptors from properties along Blind Lane.</p> <p>A negative effect is considered adverse rather than beneficial, as set out in paragraph 13.5.18 of Volume I – Main Text, i.e., 'The direction of landscape and visual effects (positive, negative, or neutral – the terms used in this PEIR) are determined in relation to the degree to which the Project fits with the existing character of the landscape or view and the contribution that the Project makes, even if it contrasts with the existing character of the landscape or view. About transmission infrastructure, potential landscape and visual effects have been assumed to be negative and were determined as such within the assessment unless otherwise stated.'</p> <p>The PEIR was a preliminary document and reflected the Project proposals at the time. The Development Consent Order (DCO) application is accompanied by an Environmental Statement (ES) (document reference</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Volume 6: Environmental Statement) which has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 ('the Infrastructure EIA Regulations') and in consultation with the relevant local planning authorities and statutory environmental bodies. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation of the Project and recommends appropriate mitigation to reduce effects. Further details are presented in ES Chapter 13: Landscape and Visual (document reference 6.13) in regard to a full assessment on visual effects from the Project.</p> <p>Surveys have been carried out in the area around Blind Lane to inform the design and the LVIA, including landscape and visual site surveys and viewpoint photography. Results of the assessment are presented as part of the findings in Section G of the LVIA. They include a viewpoint assessment from Little Burstead (Viewpoint 7.05, including a photomontage), and an assessment of effects in Visual Receptor Areas (VRA) in ES Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3). Landscape effects are presented in Landscape Character Type (LCT): Wooded Farmlands, Landscape Character Assessment (LCA) 11: West Billericay Wooded Farmlands in ES Appendix 13.2 Landscape Baseline and Assessment (document reference 6.13.A2).</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Residential receptors are considered to be of high sensitivity to the linear energy development, including those found to the east of VRA G4 along Blind Lane. Properties on Blind Lane are set back from the road, and hedgerows and mature trees along the road would provide some screening. However, although filtered through vegetation, some residents would have very close views of the Project. The magnitude of change within this VRA would be large, with major significant (negative/adverse) effects predicted during construction and operation. No additional mitigation planting is proposed since there is existing tall mature vegetation between the properties on Blind Lane and the Project.				
Wildlife / Ecology impact						
9-8.176	Concern about impact of the Project on flightpaths for birds	Chapter 8: Ecology and Biodiversity of the Environmental Statement (ES) (document reference 6.8) considers potential impacts during the construction and operational phase of the Project on birds. Bird surveys have been undertaken across the route between 2022-2024 to determine an accurate baseline value, the scope of which has been agreed with Natural England and Local Planning Authorities. The potential for bird collision risk impact during the operational phase has been assessed within the ES and Habitat Regulations Assessment Report (HRA) (document reference 5.3) and agreed with Natural England. Any adverse impacts identified have been minimised as far			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		as possible, where practicable, and mitigation in the form of bird diverters proposed.				
9-8.177	Concern about impact of the Project on birds	<p>Chapter 8: Ecology and Biodiversity of the Environmental Statement (ES) (document reference 6.8) considers potential impacts during the construction and operational phase of the Project on birds. Bird surveys have been undertaken across the route between 2022-2024 to determine an accurate baseline value, the scope of which has been agreed with Natural England and Local Planning Authorities. The potential for bird collision risk impact during the operational phase has been assessed within ES Chapter 8: Ecology and Biodiversity (document reference 6.8) and Habitat Regulations Assessment Report (HRA) (document reference 5.3) and agreed with Natural England. Any adverse impacts identified have been minimised as far as possible, where practicable, and mitigation in the form of bird diverters proposed.</p> <p>It is noted that birds are a mobile species, and it is likely that active nests for common and widespread species may be encountered during the construction phase. 9-8.180	Concern that the Project will have a negative impact on bees / Bees will be unable to navigate under high voltage overhead lines	<p>As well as possible effects on humans, possible effects of Electric and Magnetic Fields (EMFs) on various animals have been studied a number of times. No proven effects of EMFs have been found in any species at levels below the guidelines. This is confirmed in National Policy Statement (NPS) EN-5 which states: <i>"There is little evidence that exposure of crops, farm animals or natural ecosystems to transmission line EMFs has any agriculturally significant consequences."</i></p> <p>Beehives can become charged if directly under an overhead line because of the electric field it produces. For existing overhead lines, this can be eliminated by screening or earthing the hive, but for new overhead lines, embedded design measures and careful routeing will avoid any potential effects. There does not seem to be evidence of EMFs adversely affecting bees directly. In the United States of America, the strip of land along power lines has been shown to be particularly attractive to bees, with these areas being utilised by commercial bee farms. Additionally, National Grid has worked with the British Beekeeping Association to establish hives around our sites, including high voltage substations, which have thrived.</p>			X	
9-8.181	Concern that the Project will result in a negative impact on flora / plants / woodlands / hedgerows	Through routeing, siting and detailed design, National Grid has sought to reduce, as far as practicable, potential impacts on biodiversity including priority grassland, wetland, woodland, and hedgerow habitats.			X

		<p>The design process has taken account of existing biodiversity, the natural environment and, where practicable, seeks to reduce impacts on areas of ecological sensitivity, through avoidance or mitigation.</p> <p>Chapter 8: Ecology and Biodiversity of the Environmental Statement (ES) (document reference 6.8) assesses the effects on important ecological receptors (which includes grasslands, wetlands, woodlands and hedgerows).</p> <p>As part of the Environmental Impact Assessment (EIA) process for the Project, a suite of ecological surveys has been to be undertaken. The findings of which inform the design and approach to mitigation.</p> <p>The Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Code of Construction Practice (CoCP) (document reference 7.2) contain a list of relevant good practice measures to avoid or reduce impacts on valuable habitats.</p> <p>The Environment Act 2021 introduces a mandatory requirement for 10% Biodiversity Net Gain (BNG) for new Development Consent Order (DCO) developments (which is not yet in force and not expected until May 2026). National Grid has committed to delivering 10% BNG with environmental and societal benefits on all construction projects. The BNG target for the Project is currently voluntary and aligned with our corporate sustainability commitment.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		As well as seeking to avoid and minimise impacts to nature, the Project considers the land required for mitigation, compensation and enhancement that can deliver BNG and wider environmental benefits. This will require delivery of offsite Biodiversity Units via habitat creation or enhancement actions in strategic areas, and we will consider all offsite options that are available to us.				
9-8.182	Concern that the Project will result in a negative impact on rivers / other bodies of water	<p>Through routeing, siting and detailed design National Grid has sought to reduce, as far as practicable, potential impacts on biodiversity including river ecology. The design process has taken account of existing biodiversity, the natural environment and, where practicable, has sought to reduce impacts on areas of ecological sensitivity such as river corridor habitats, through avoidance or mitigation. The same approach has been taken to account for rivers and their floodplains, seeking to avoid or reduce the footprint of the Project within floodplains.</p> <p>As part of the Environmental Impact Assessment (EIA) process for the Project, a suite of ecological surveys has been undertaken, including along river corridors. The data has informed the assessment of effects on biodiversity, hydromorphology, water quality and flood risk presented in the Environmental Statement (ES), Chapter 8: Ecology and Biodiversity (document reference 6.8) and ES Chapter 12: Hydrology, Land Drainage and Flood Risk (document reference 6.12)</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>and the Water Framework Directive Assessment (document reference 7.10).</p> <p>Further, the Project has engaged with Natural England, the Environment Agency and Local Planning Authorities on aspects relating to river ecology, water quality and flood risk, and appropriate mitigation measures and techniques have been secured, as detailed in the Register of Environmental Actions and Commitments, which forms part of the Outline Code of Construction Practice (CoCP) (document reference 7.2).</p> <p>The Environment Act 2021 introduces a mandatory requirement for 10% Biodiversity Net Gain (BNG) for new Development Consent Order (DCO) developments (which is not yet in force and expected May 2026). National Grid have committed to deliver 10% BNG with environmental and societal benefits on all construction projects including for river ecology. The BNG target for the Project is currently voluntary and aligned with National Grid's corporate sustainability commitment.</p> <p>As well as seeking to avoid and minimise our impacts on nature, the Project includes enhancement of watercourse habitats as part of BNG mitigation.</p>				
9-8.183	Concern that the Project will result in a negative impact on wildlife / biodiversity / ecology (generally)	Through routeing, siting and detailed design National Grid has sought to reduce, as far as practicable, potential impacts on biodiversity. The design process has taken account of existing biodiversity, the natural			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>environment and, where practicable, has sought to reduce impacts on areas of ecological sensitivity, through avoidance or mitigation.</p> <p>Chapter 8: Ecology and Biodiversity of the Environmental Statement (ES) (document reference 6.8) assesses the effects on important ecological receptors.</p> <p>As part of the Environmental Impact Assessment (EIA) process for the Project, a suite of ecological surveys has been to be undertaken over the 2022-2024 period. The findings of which inform the design and approach to mitigation.</p> <p>The Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Code of Construction Practice (CoCP) (document reference 7.2) contain a list of relevant good practice measures to avoid or reduce impacts on valuable habitats and species.</p> <p>The Environment Act 2021 introduces a mandatory requirement for 10% Biodiversity Net Gain (BNG) for new Development Consent Order (DCO) developments (which is not yet in force and expected May 2026). National Grid have committed to deliver 10% BNG with environmental and societal benefits on all construction projects. The 10% BNG target for the Project is currently voluntary and aligned with our corporate sustainability commitment.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		As well as seeking to avoid and minimise impacts to nature, the Project considers the land required for mitigation, compensation and enhancement that can deliver BNG and wider environmental benefits. This would require delivery of offsite Biodiversity Units via habitat creation or enhancement actions in strategic areas, and we will consider all offsite options that are available to us.				
9-8.184	Suggest ecological enhancements as part of the Project	<p>The Environment Act 2021 introduces a mandatory requirement for 10% Biodiversity Net Gain (BNG) for new Development Consent Order (DCO) developments (which is not yet in force and expected May 2026). National Grid has committed to deliver 10% BNG with environmental and societal benefits on all construction projects. The 10% BNG target for the Project is currently voluntary and aligned with our corporate sustainability commitment.</p> <p>As well as seeking to avoid and minimise our impacts to nature the Project considers the land required for mitigation, compensation and enhancement that can deliver BNG and wider environmental and societal benefits. This would require delivery of offsite Biodiversity Units via habitat creation or enhancement actions in strategic areas, and we would consider all offsite options that are available to us.</p>			X	
9-8.185	Concern about badger sett within the draft Order Limits for the Project in this section	Badgers are considered through extensive survey work over the 2023-2025 period and a robust mitigation strategy to ensure legal compliance has been			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)a	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		prepared. The Project design has looked to avoid impacts to badger setts wherever possible. A draft badger licence has been prepared and mitigation approach agreed with Natural England. Reference to this draft badger licence has been included within the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and delivery of the mitigation measures outlined within the license will ensure no detrimental impact on badgers.				
9-8.186	Concern about badger sett near to pylon for the Project in this section	<p>Badgers are considered through extensive survey work over the 2023-2025 period and a robust mitigation strategy to ensure legal compliance has been prepared.</p> <p>Known badger setts would be closely monitored up until pre-construction due to the mobility of badgers to reduce impacts, where possible. A draft badger licence has been prepared and mitigation approach agreed with Natural England. Reference to this draft badger licence has been included within the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and delivery of the mitigation measures outlined within the license will ensure no detrimental impact on badgers.</p>			X	

Thurrock feedback

Thurrock feedback (Statutory Consultation)

Table 9-9 Summary of consultee comments and National Grid's response

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Agricultural Land						
9-9.1	Concern that the Project will take away valuable agricultural land / disrupt farming operations	<p>During the construction stage of the Project, there would be areas of agricultural land that would be temporarily disrupted. National grid would only use land that is required as part of the Project and would seek to minimise the use of agricultural land where reasonable and safe to do so.</p> <p>National Grid is and will continue to work with all landowners including farmers who may be affected by the proposals to understand the impacts on their operations and to work with them as the Project is developed. We would seek to work with the farming community to limit disruption where practicable. This includes providing prior warning of works which may result in the need to move livestock. Compensation claims for disturbance are considered on a case-by-case basis, if negative impact on farming operations can be proven. Particular agricultural matters can also be addressed through voluntary land agreements.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-9.2	Concern that the Project will have a negative impact on agricultural livestock (e.g. type of livestock)	<p>National Grid is and will continue to work with all landowners including farmers and equestrian facilities who may be affected by the proposals to understand the impacts on their operations and to work with them as the Project progresses. We would seek to work with the farming community to limit disruption where practicable. This includes providing prior warning of works which may result in the need to move livestock. Compensation claims for disturbance are considered on a case-by-case basis, if negative impact on farming operations can be proven. Particular agricultural matters can also be written into voluntary land agreements. There will also be mitigation put in place where animal grazing maybe affected.</p> <p>As well as possible effects on humans, possible effects of Electric and Magnetic Fields (EMFs) on various animals have been studied. No detectable effects of EMFs have been found on, for example, health, milk production, fertility, and behaviour. This is confirmed in National Policy Statement (NPS) EN-5 which states: "There is little evidence that exposure of crops, farm animals or natural ecosystems to transmission line EMFs has any agriculturally significant consequences."</p>			X	
Airfields						
9-9.3	Concern about the impact of the Project on Thurrock Airfield / Suggestion that the Project is routed away from Thurrock Airfield	National Grid has appointed an independent aviation consultancy who has engaged with Thurrock Airfield (with National Grid also present) to inform their impact	X	X	X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		assessment. As a result, changes have been made in this area by altering the design to lower height pylons running parallel to the existing 132 kV overhead line. Given the existence of the 132 kV overhead line, the addition of the proposed National Grid pylons is not deemed detrimental to the operability of Thurrock Airfield. We will continue to engage with the operators to confirm the acceptability of the proposals. Further information on the assessment of airfields can be found in the Environmental Statement (ES) Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).				
Community / Social Impact						
9-9.4	Concern about impact of the Project on children / families / residents / communities	National Grid recognises people may have concerns about the potential impacts of living close to an overhead line, and that the uncertainty whilst the proposals are developed may cause anxiety. We have sought to reduce potential effects on communities, residents – including children - through routeing and design. We have also sought to reduce concern or uncertainty about the proposals through making timely design decisions and engaging with people and stakeholders throughout the development of the Project. If the Project received Development Consent, the Project team would continue to engage with people potentially affected during construction,	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>through regular communication including letters, phone calls and meetings, where necessary.</p> <p>We urge anyone with concerns to get in touch through the Norwich to Tilbury Freephone number, address or email, which will remain open throughout examination.</p> <p>National Grid is committed to working with local suppliers, facilitated by supporting forums (such as the local Chambers), on electricity industry skills and workforce planning. National Grid is also committed to providing a coordinated regional approach to jobs and skills opportunities. This commitment is broader than the individual project and separate to any commitments under the proposed development consent order for this Project. The socio-economic effects of the project are assessed in Chapter 15: Socio-Economics, Recreation and Tourism of the Environmental Statement (ES) (document reference 6.15). Post construction job opportunities are limited given the nature of the development however we will still work with Local Authorities (including facilitating local partners) to understand what is important to them around skills and employment to ensure we leave a lasting positive legacy in the communities where we operate.</p> <p>With regards to a delivery mechanism, the above measures will be delivered as part of our community benefit package, which will look at both local and regional initiatives. This will be delivered outside the development consent process and is not a material</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		consideration in the decision on the proposed Project or a matter to be secured as part of the DCO, as per the Community Funds for Transmission Infrastructure: Guidance (DESNZ, 2025).				
9-9.5	Concern about impact of the Project on school / educational facilities	<p>Through routeing and siting, National Grid has sought to avoid, as far as practicable, locations of education establishments.</p> <p>Environmental Statement (ES) Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) presents an assessment of the potential impacts on education facilities as a result of the Project. As part of the assessment, a range of measures are considered during the construction phase to reduce, where practicable, disruption to education establishments. These include traffic management, signage and routing measures to ensure access or partial access can be maintained where feasible. These are identified within ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15), the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) and the Outline Code of Construction Practice (CoCP) (document reference 7.2). The assessment concludes that there would be no significant effects on education facilities within the study area as a result of the construction and operation of the Project.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-9.6	Concern about impact of the Project on leisure	Through routeing and siting National Grid has sought to avoid, as far as practicable, locations important for leisure and tourism. Environmental Statement (ES) Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) presents an assessment on the potential impacts on leisure and tourism. As part of this assessment, a range of measures have been considered throughout the construction phase of the Project to minimise disruption on leisure and tourism. These include: traffic management, signage and routeing measures. These are identified within ES Chapter 15: Socio-Economics, Recreation and Tourism, the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).		X	X	
9-9.7	Concern about over development of area / other works in the area (e.g. cumulative impact)	A cumulative effects assessment has been undertaken in accordance with the Planning Inspectorate's Advice Note 17 'Cumulative Effects Assessment' and is presented in Environmental Statement (ES) Chapter 17: Cumulative Effects (document reference 6.17). The cumulative effects assessment has considered the effects of the Project in conjunction with other existing and, or approved developments in line with guidance. As part of this process, National Grid has engaged with other developers who are proposing development in proximity of the Project to understand their requirements.	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>The cumulative assessment has been undertaken in accordance with the overarching NPS for Energy (EN-1) Paragraph 4.1.5 in EN-1 states:</p> <p><i>"In considering any proposed development, in particular when weighing its adverse impacts against its benefits, the Secretary of State should take into account: ... its potential adverse impacts, including on the environment, and including any long-term and cumulative adverse impacts, as well as any measures to avoid, reduce, mitigate or compensate for any adverse impacts, following the mitigation hierarchy".</i></p> <p>Paragraph 4.2.12 in EN-1 states:</p> <p><i>"The cumulative impacts of multiple developments with residual impacts should also be considered."</i></p> <p>Paragraph 4.3.3 in EN-1 states:</p> <p><i>"The Regulations require an assessment of the likely significant effects of the proposed project on the environment, covering the direct effects and any indirect, secondary, cumulative, transboundary, short, medium, and long-term, permanent and temporary, positive and negative effects at all stages of the project, and also of the measures envisaged for avoiding or mitigating significant adverse effects".</i></p> <p>Paragraph 4.3.19 of EN-1 states:</p> <p><i>"The Secretary of State should consider how the accumulation of, and interrelationship between, effects might affect the environment, economy, or community as</i></p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p><i>a whole, even though they may be acceptable when considered on an individual basis with mitigation measures in place</i>".</p> <p>Paragraph 4.4.5 in EN-1 states:</p> <p><i>"The impacts of more than one development may affect people simultaneously, so the applicant should consider the cumulative impact on health in the ES where appropriate"</i>. The long list and short list of other existing and, or approved developments considered for the Cumulative Effects Assessment is presented in ES Appendix 17.2: Long List and Short List of Other Developments (document reference 6.17.A2), detailing the other developments shortlisted for detailed assessment. The appendix provides details on other developments screened out of the assessment in accordance with the methodology presented in ES Chapter 17: Cumulative Effects (document reference 6.17). The detailed assessment of shortlisted other developments is presented in Appendix 17.3: Inter-Project Cumulative Effects Matrix of the ES (document reference 6.17.A3). ES Appendix 17.3: Inter-Project Cumulative Effects Matrix (document reference 6.17.A3) outlines the residual significance of cumulative effects for each development, for each environmental topic that has a Zone of Influence that overlaps with that development (i.e. socio-economics, recreation and tourism impacts).</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-9.8	Concern about the Project being in too close proximity to recently built housing developments / using land being considered for future development (including residential, commercial, infrastructural, and employment sites)	<p>National Grid has obtained information on existing, under construction, consented but not built schemes as well as development proposals within the planning system. The Project design has responded to those that are confirmed through consideration of routeing.</p> <p>In the case of development proposals, some can be amended to be designed around our proposed infrastructure but in other cases our proposals may need to be amended at a corridor level, or proposed developments factored into our detailed route design.</p> <p>Based on known information, and in light of changes made following consideration of feedback to the 2022 and 2023 non-statutory consultations, statutory consultation, targeted consultations, and landowner consultation, we consider our proposals are consistent with relevant policy and guidelines and the alignment designed such that they do not prevent proposed housing developments from being successfully progressed. UK law does not prescribe minimum distances between overhead lines and homes, but any implications on landscape and visual receptors, residential amenity or from concerns about electromagnetic fields are robustly assessed as part of the Environmental Impact Assessment (EIA) and balanced as part of the decision-making process. We will continue to review planning applications and engage with developers as necessary.</p>		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-9.9	Concern about the Project causing communities to become encircled / surrounded by overhead lines	The alignment has been routed to achieve some separation from the existing 400 kV overhead line, such that villages are not encircled by overhead lines to both sides. Separation is inevitably reduced in certain locations due to the presence of constraints to routing and environmental features. Detailed assessment reported in the Environmental Impact Assessment (EIA) identifies any measures considered to be necessary to reduce likely significant effects which will also consider the potential for effects potentially arising from close paralleling existing 132 kV overhead line and new 400 kV overhead line infrastructure.			X	
9-9.10	Concerned that the Project will have a negative impact on domestic horses / equestrian activities	As well as possible effects on humans, the possible effects of Electric and Magnetic Fields (EMFs) on various animals have been studied. No proven effects of EMFs have been found in any species at levels below the guidelines. This is confirmed in National Policy Statement (NPS) EN-5 which states: " <i>There is little evidence that exposure of crops, farm animals or natural ecosystems to transmission line EMFs has any agriculturally significant consequences.</i> " Although horses are not directly mentioned, there is no evidence to suggest they are any different to other farm animals. As well as the possible direct biological or health effects addressed above, indirect effects such as microshocks can occur as a result of electric fields. Microshocks are small spark discharges which are similar to a static shock after walking across a nylon carpet for example.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		The Project will be designed in accordance with the principles of the Governments Code of Practice 'Power Lines: Control of Microshocks and other indirect effects of public exposure to electric fields' to ensure these are mitigated, which include equestrian activities.				
9-9.11	Concern about the impact of the Project on emergency services / ambulances / hospitals / health service	<p>Through routeing and siting National Grid has sought to avoid and reduce as far as practicable effects on identified healthcare facilities.</p> <p>Environmental Statement (ES) Chapter 10: Health and Wellbeing (document reference 6.10) and ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) consider the potential impacts on, and access to, healthcare facilities, including emergency services, ambulances, hospitals and other NHS services associated with the construction of the Project, drawing on information from ES Chapter 16: Traffic and Transport (document reference 6.16). No health facilities are due to be directly impacted by the Project and where road diversions are required traffic management and mitigation measures will be in place to reduce impacts. These include traffic management, signage and routing measures to ensure access or partial access can be maintained where feasible. Further detail on proposed mitigation measures is presented in the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), which has been produced following engagement with stakeholders including the emergency services.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-9.12	Concern about the impact of the Project on residential properties / structural damage at Horndon on the Hill (given that this area is prone to subsidence)	<p>Construction noise and vibration would be managed in accordance with the measures set out in the Outline Code of Construction Practice (CoCP) (document reference 7.2). Contractors would be required to follow good construction practices (referred to as Best Practicable Means (BPM)) as outlined in British Standard (BS) 5228-1 and BS 5228-2 to control noise and vibration respectively.</p> <p>BS 5228-1 and BS 5228-2 have Approved Code of Practice status (in England) under the powers conferred by Sections 71(1)(b), (2) and (3) of the Control of Pollution Act 1974, as enacted under The Control of Noise (Code of Practice for Construction and Open Sites) (England) Order 2015. Compliance with the good practice noise and vibration requirements stated therein became a statutory obligation under the Act.</p> <p>National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project. The results of this assessment are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the application for development consent. The EIA identifies and assesses the likely significant effects on the environment (including from lighting and noise and vibration) during the construction and operation of the Project and recommends appropriate mitigation measures to reduce potential effects. Any specific</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		mitigations identified around Horndon on the Hill will be adhered to in delivery.				
9-9.13	Concern over the negative impact the Project will have on the achievement of the Freeport policy ambitions to bring investment and development to the area / Port of Tilbury London Limited (PoTLL) support the aims and outcomes of the Project, but it is imperative that critical upgrades to electricity infrastructure are designed so as not to interfere with or directly obstruct regeneration and economic delivery efforts	The Order Limits of the Project no longer extend to the Port of Tilbury. As such there are no potential effects of the Project on Freeport ambitions.			X	
Construction Impacts						
9-9.14	Concern about disruption from construction	<p>An Environmental Statement (ES) (document reference: Volume 6: Environmental Statement) has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 ('the Infrastructure EIA Regulations'). The ES identifies and assesses the likely significant effects on the environment resulting from the construction of the Project and recommends appropriate mitigation to reduce effects.</p> <p>Environmental mitigation measures have been defined within each environmental topic chapter and set out in relevant management documents submitted with the Development Consent Order (DCO) application, including the Outline Code of Construction Practice</p>		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		(CoCP) (document reference 7.2), the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (WSI) (document reference 7.5).				
9-9.15	Concern about impact on traffic levels in local area caused by construction works	<p>As part of the pre-application process National Grid has engaged with the relevant authorities, their highways teams and National Highways to understand and gain information on their road networks. This information has been used to inform and guide the drafting of the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) for the Project that accompanies the Development Consent Order (DCO) application. The Outline CTMP (document reference 7.3) provides details about the proposed construction access strategy that has been developed to manage the impact of construction vehicles on the Public Highway and sensitive receptors, using a combination of more suitable Local Road Network connections from the Strategic Road Network, and temporary haul roads for access along the proposed alignment. The Outline CTMP (document reference 7.3) highlight any measures to reduce impacts to other road users from construction traffic related to the Project.</p> <p>Environmental Statement (ES) Chapter 16: Traffic and Transport (document reference 6.16) includes the</p>		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>assessment of the potential impacts of the Project including changes in traffic flow, delays, road safety and impact on Walking, Cycling and Horse-Riding modes on the roads along the Primary Access Routes located in the Local Road Network.</p> <p>The Transport Assessment (document reference 7.11), submitted with the Development Consent Order (DCO) application, examines capacity, safety, and operational efficiency of the network, identifying potential bottlenecks or safety concerns.</p> <p>Within the assessment of the ES and the Transport Assessment, mitigation measures are proposed to minimise likely adverse impact.</p>				
9-9.16	Concern about noise and other issues resulting from construction (e.g. mud on roads, dust)	<p>An Environmental Statement (ES) (document reference: Volume 6: Environmental Statement) has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 ('the Infrastructure EIA Regulations'). The ES identifies and assesses the likely significant effects on the environment resulting from the construction of the Project and recommends appropriate mitigation to reduce effects.</p> <p>Specifically, a Construction Noise and Vibration Impact Assessment has been undertaken and is reported in Environmental Statement (ES) Chapter 14: Noise and Vibration (document reference 6.14). During construction, mitigation would be implemented to reduce noise and vibration impacts from construction activities</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>and increased road traffic and vibration due to additional movement from construction traffic. Mitigation measures are outlined in ES Chapter 14: Noise and Vibration (document reference 6.14) and the Outline Code of Construction Practice (CoCP) (document reference 7.2). This includes the assumption that construction working would be undertaken within the agreed working hours, construction traffic would be managed through the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), haul roads would be well maintained, and Best Practicable Means (BPM) would be employed to reduce construction noise and vibration.</p> <p>ES Chapter 7: Air Quality (document reference 6.7) presents an assessment of the potential impacts from the construction of the Project on air quality. During construction, mitigation would be implemented to reduce the impact of dust generation and construction vehicle emissions. Mitigation measures are outlined in ES Chapter 7: Air Quality (document reference 6.7), and the Outline CoCP (document reference 7.2). The dust-emitting activities can be greatly reduced or eliminated by applying the site-specific mitigation measures (see Outline CoCP (document reference 7.2)) for high-risk sites following measures recommendations in the Institute of Air Quality Management (IAQM) guidance (IAQM, 2024). The IAQM guidance states that with the implementation of effective site-specific mitigation measures, the environmental effect would not be significant in most cases.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		In addition, National Grid has prepared an Outline CoCP (document reference 7.2). The Outline CoCP sets out the required mitigation measures and environmental commitments that will be implemented during the construction phase of the Project to avoid or reduce potential effects of the Project on the environment.				
9-9.17	Concern that local road infrastructure is not suitable for heavy construction vehicles and machinery	<p>The Construction Access Strategy has been developed to manage the impact of construction vehicles on the Public Highway and sensitive receptors, using a combination of more suitable Local Road Network connections from the Strategic Road Network, and temporary haul roads for access along the alignment. Further details of the Construction Routing Strategy are included within the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).</p> <p>The Project also requires the transportation of Abnormal Indivisible Loads (AIL). National Grid is developing specific routing proposals for AIL movements and is developing these through engagement with the relevant stakeholders including the Local Highway Authorities and National Highways. An AIL routing strategy containing details about these movements are submitted in support of the Development Consent Order (DCO) application.</p>		X	X	
9-9.18	Concern about the impact of Pylon TB257, the proposed haul road and scaffold construction area on Orsett Quarry (e.g. impacts on operational	National Grid have made a slight alteration to the design and pylon TB258 (TB257 at statutory consultation) has been moved north outside of the Orsett Quarry extents.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	efficiency such as delays and temporary closures, ecology, future expansion of the quarry, financial implications, health and safety impacts given cumulative traffic volumes for the quarry and the Project), including impact on compound area (e.g. unable to rearrange infrastructure within the compound area to make space for National Grid traffic without significant impact)	<p>However, we will still need temporary access to the site during construction for stringing the overhead line conductors and for installing scaffold crossing protection of Buckingham Hill.</p> <p>National Grid and their contractors would work closely in collaboration with the operations team at Orsett Quarry to ensure disruption to site activities is kept to a minimum. However, the size of work areas, access and egress can impact the safety of both operations and therefore it would be necessary to develop a site-specific plan agreed by both parties prior to access.</p>				
9-9.19	Criticism that the Project will interfere with operations of the Port of Tilbury and is unacceptable / Suggest National Grid review the Project and identify alternative primary access routes to construct the Project without the use of Substation Road (Tilbury 2 Access Road)	Following consideration of feedback, direct engagement with relevant parties and further technical review, National Grid has modified the connection arrangements at Tilbury. We now propose to connect to the National Electricity Transmission System by establishing a new 'Tilbury North' substation to the south of Orsett Golf Course which would be connected into the existing 400 kV overhead line (running north from the existing Tilbury Substation). As such the concerns raised will not arise, so the feedback has been superseded by a change to the Project.			X	
9-9.20	Suggest that National Grid undertake a baseline road condition survey prior to commencement of the Project, and undertake further road condition surveys every four weeks for the duration of construction traffic utilising the route for construction	The Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) includes details of proposed pre-condition and post-condition surveys and includes allowance for remediation works where changes to the condition have occurred. This process		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>of the Project, including the following roads: Doesgate Lane; A128 Brentwood Road; Orsett Road; A1013 Stanford Road; Buckingham Hill Road; Muckingford Road; Church Road; St. Andrew's Road - boundary of Highways England Asset to Fort Road (including spur road); Fort Road - from St. Andrew's Road to Coopers Shaw Road; Coopers Shaw Road - from fort Road to Station Road; Station Road - from Fort Road to site entrance. With this, suggest that a clear set of intervention levels should be agreed between the applicant and the Local Highway Authority (LHA) prior to commencement for the baseline survey and subsequent review surveys. Any intervention should be funded by National Grid to ensure that the road is not materially impacted upon by the increase in HGV movements. This can be in the form of direct remediation by the applicant or through direct funding for the local highway authority to implement.</p> <p>Likewise, suggest that a protective provision to prevent traffic using routes off the haul roads should be made to ensure that all traffic entering and leaving the site do not bypass the prescribed route and rat-run through villages such as Bulphan, East Tilbury, Horndon on the Hill, West Tilbury. This can be in the form of temporary road closure notices and appropriate hard barrier measures at the junction points with light measures at the other extents. Again, this can either be directly implemented by</p>	<p>has been agreed though discussions with the Local Highways Authorities (LHAs). The Outline CTMP (document reference 7.3) has be developed following consultation and issued as an Outline CTMP (document reference 7.3), which accompanies the DCO application.</p> <p>In order to manage construction traffic to ensure it sticks to the Primary Access Routes and does not use rat runs a suit of mitigation are proposed which have been agreed with the LHAs and are set out within the Outline CTMP (document reference 7.3).</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	National Grid or funding provided to the local highway authority to secure the necessary road closure notices and Traffic Management measures.					
9-9.21	Concern about abnormal load movements in Thurrock and suggest that protective provision is provided to ensure that pedestrian and cycle links along the river frontage are not prejudiced both during the construction phase and during the operation phase by abnormal load vehicle (AIL). If any AIL movements are required on the network, suggest that these should be restricted to outside the peak hours so to not affect the link and junction capacities	National Grid has engaged with Thurrock Council and Thurrock Constabulary on the proposed Abnormal Indivisible Load (AIL) movements and routes. Their inputs have led to amending AIL routes and developing an AIL movement strategy detailed within the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).		X		
9-9.22	Suggest that construction traffic for the Project should be prevented from using routes off the haul roads (e.g. to ensure that all traffic entering and leaving the site do not bypass the prescribed route and mitigate the impact on villages such as Bulphan, East Tilbury, Horndon on the Hill, West Tilbury). This could be in the form of temporary road closure notices and appropriate hard barrier measures at the junction points with light measures at the other extents. This could either be directly implemented by National Grid or funding provided to the local highway authority to secure the necessary road closure notices and Traffic Management measures	National Grid notes the respondent's feedback. The enforcement measures and management measures have been included in the Outline Construction Traffic Management Plan CTMP (document reference 7.3) for the Project that accompanies the Development Consent Order (DCO) application.		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-9.23	<p>Concern about the use of Fort Road (and then Substation Road) and Stanford Road/Buckingham Hill Road as primary access routes for the Project as these routes overlap with those proposed for the Lower Thames Crossing (LTC) (notably the A1089 corridor (and the ASDA roundabout) which is of particular sensitivity with the Port of Tilbury London Limited), and suggest that National Grid coordinate with the LTC project team by exploring the traffic flows on Substation Road and Station Road, in particular the phasing of critical works supporting traffic over the LTC project life, to improve the resilience and efficient working of the LTC construction access via Substation Road and Station Road alongside neighbours and stakeholders. With this, request for further details on the use of both access routes (regarding spread of HGV movements across the day), and suggest further assessment to include around Orsett Cock, as all the Stanford Road trips would appear to route via this junction. In addition, an assessment the ASDA roundabout may be necessary given that all of the Fort Road trips will pass through this junction</p>	<p>As part of the design development of the Project, the concerns raised have been considered and a new substation named Tilbury North is now proposed. This would no longer use Fort Road, Station Road or Substation Road as a Primary Access Route (PAR). Revised access options to this new location have been considered to accommodate for Lower Thames Crossing (LTC).</p> <p>National Grid has been working with the local highway authorities and National Highways to develop our access proposals for the Project. National Grid is continuing to coordinate with LTC regarding the location of all PARs (either Buckingham Hill Road or Brentwood Road), access points and crossover bellmouths to ensure that the designs are coordinated and feasible.</p> <p>Details of the Heavy Goods Vehicle (HGV) movements is noted within the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) for the Project that accompanies the Development Consent Order (DCO) application.</p> <p>The cumulative impact of LTC with the Project is assessed within Chapter 16: Traffic and Transport (document reference 6.16) of the Environmental Statement (ES) and the Transport Assessment (document reference 7.11) where the impact at the Orsett Cock junction is assessed for peak hours.</p> <p>The A1089 Asda Roundabout has been modelled as part of the assessment of the multimodal strategy that</p>	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		considers the transportation of construction materials from ports / sidings to the construction Primary Access Sites, including the Port of Tilbury. The results of the modelling have been discussed with National Highways and Thurrock Council, and presented in the Transport Assessment (document reference 7.11).				
Consultation						
9-9.24	Comment supportive of engagement that has taken place / feel listened to	National Grid notes the respondent's feedback.			X	
9-9.25	Comment supportive of the Project in this section	National Grid notes the respondent's feedback.		X	X	
9-9.26	Criticism of consultation specific to this section	National Grid notes the respondent's feedback.		X	X	
9-9.27	Concern that National Grid reference restrictions around Orsett Golf Course in three different documents which are incorrect	National Grid has considered feedback from Orsett Golf Course and has reviewed multiple alternative alignments. A route to the east of the golf club would increase interaction with the quarry, would introduce additional angle pylons in order to divert around the course which would be less compliant with the Holford Rules, introducing engineering complexities and increasing environmental impacts due to the requirement to cross a section of woodland. A summary of the Holford Rules is provided within Appendix I22 of this report. A route round the east of the course is therefore less preferred and is not being taken forward. We have proposed a slight change to the alignment between TB260-TB261 which would cross the course at			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		a location further north and at an increased height, which we believe mitigates impacts to the playability of the course.				
9-9.28	Criticism that Orsett Golf Club's ground was incorrectly labelled as a Site of Special Scientific Interest (SSSI) by National Grid, which as a result has hindered the ability of local residents to propose viable alternative routes and solutions / Criticism that National Grid have not considered alternative routes for the Project at Orsett Golf Club's ground due to incorrect designations shown on the maps provided for consultation	The area marked as proposed Sites of Special Scientific Interest (SSSI) on the Project plans relates to a potential proposal for a new SSSI designation along the Thames Estuary by Natural England – the body responsible for landscape designations of this type. Natural England has subsequently confirmed that the plans won't move forwards. The designation status was not a factor in our decision making as any alternatives that cross this section of woodland are less preferred.			X	
9-9.29	Concern over the drainage interface between TB-CC11 and the wider area as this will impact Port of Tilbury London Limited's (PoTLL) development Tilbury3 proposals and the use of this land as a construction compound will conflict with PoTLL's earthworks masterplan / Criticism that National Grid have not engaged with PoTLL to understand if its proposed use of land held for the purpose of its statutory undertaking for the proposed compound is viable	The Order Limits of the Project no longer extend to the Port of Tilbury.			X	
9-9.30	Concern the Preliminary Environmental Impact Report (PEIR) has not sufficiently acknowledged the development context and the network of ecological requirements and licenses in the area of the Tilbury Substation (e.g. continuing legal obligations and	The Order Limits of the Project no longer extend to the Port of Tilbury.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	commitments associated with the Tilbury2 DCO and Thurrock Flexible Generation Plant projects)					
9-9.31	Suggest within the Preliminary Environmental Information Report (PEIR) Chapter 16: Traffic and Transport, the Study Area must be expanded to encompass the M25 J30, A13, Orsett Cock junction, A1089 and the A1089 ASDA roundabout to ensure any likely significant effects are identified	As requested by Thurrock Council, these junctions have been included as part of the assessment in the Transport Assessment (document reference 7.11). Chapter 16: Traffic and Transport (document reference 6.16) of the Environmental Statement (ES) focuses on the analysis of the road links forming the Primary Access Routes (PAR).			X	
9-9.32	Criticism that this section of the proposal shows bias to certain areas where the use of underground cables has been granted / Suggest that this option should be available to all landowners and communities affected by the Project	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is ' <i>that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or Areas of Outstanding Natural Beauty (AONB))</i> '. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>justified. Therefore, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at other locations in this section which are proposed as overhead line would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.</p>				
9-9.33	The Preliminary Environmental Information Report (PEIR) (Table 15.15) states that land at St Clere's	There were third party works proposed within both the golf club and an area south of the golf club at the time of			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	Hall Golf Club would be temporarily acquisitioned 'for the creation of temporary drainage, temporary access and third-party works' relating to a pipeline, as well as 'permanent acquisition of rights of access to an existing track' (no physical works proposed). Criticism that Table 15.15 incorrectly refers to the country park as being part of the St Clere's Hall Golf Club, and suggest that this should be clarified to differentiate between works proposed within the Redrow site (e.g. the pipeline works only), and works that are proposed within the country park	writing the Preliminary Environmental Information Report (PEIR) assessment. Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) of the Environmental Statement (ES) includes a review of the design and the assessment on St Clere's Hall Golf Club following the design update. The proposed third-party works are no longer within the Order Limits or the golf club. However, there will be permanent access of rights within the western extent of the golf club with no physical work proposed.				
9-9.34	Concern that the optioneering process for the Project was not in accordance with the Infrastructure Planning (Environmental Impact Assessment) Regulations 2017 as the Preliminary Environmental Information Report (PEIR) did not assess the impact of temporary land take and severance and the associated socio-economic impact of the Project on farm businesses (including respondent's farm in Thurrock), and suggest that an assessment of the socio-economic impact of temporary land take must now be undertaken to inform the route of the Project	As per the Scoping Opinion (document reference 6.20), the impacts on agricultural operations were considered to be limited during the operational phase of the Project as any maintenance or repair works required which would result in disturbance to agricultural operations would be undertaken in accordance with standard practice. Disturbance to agricultural operations during the construction phase are assessed in full in Chapter 6: Agriculture and Soils (document reference 6.6) of the Environmental Statement (ES). Potential effects on land drainage are covered in ES Chapter 12: Hydrology, Land Drainage and Flood Risk (document reference 6.12). The financial effects on individual businesses are being addressed through separate discussions/negotiations which lie outside the scope of the ES (as agreed in the Scoping Opinion (document reference 6.20)). Therefore,			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		the financial effects on individual businesses have not been assessed in Chapter 6: Agriculture and Soils of the ES (document reference 6.6) or Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15).				
9-9.35	The risks and issues identified in the report provided by the respondent in relation to the Project being installed at Bulphan will also need to be addressed in the preparation of the Environmental Statement for the Development Consent Order (DCO) pursuant to the Infrastructure Planning (Environmental Impact Assessment) Regulations 2017/572	All the feedback we received at the statutory consultation will be considered and submitted as part of our Development Consent Order (DCO) application. An Environmental Statement (ES) is included as part of the DCO application and National Grid notes the respondents feedback on including risks and issues of the Project being installed at Bulphan.			X	
9-9.36	Request that the roundtable discussion in relation to the Project being installed at Bulphan should also consider alternate routes for the Project or the possibility of the diverting it underground	<p>Following the statutory consultation, National Grid read and considered all the feedback we received. We assessed the alternatives suggested, and where feasible amended our proposals to reflect this. This included considering several alternative options around the Bulphan area. When considering alternative options, such as undergrounding, we also had to consider the additional cost and environmental constraints that these might have associated with them.</p> <p>National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or Areas of Outstanding Natural Beauty (AONB))'</i>. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified. Therefore, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at Bulphan would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
9-9.37	<p>Criticism that the following legislation, guidelines, codes of practice and international standards have not been considered in relation to the Project being installed at Bulphan:</p> <ul style="list-style-type: none"> - Health and Safety Executive Guidance GS 6 (Avoiding danger from overhead power lines) and HSG 47 (Avoiding danger from underground services); - The Pipeline Safety Regulations 1996; - Management of Health and Safety Regulations 1999; - British Standards in BS EN 50122-1 (Fixed installations. Electrical safety, earthing and the return circuit) and BS EN ISO 18086 (Determination of AC Corrosion Risk) 	<p>National Grid acknowledges the need to adhere to the relevant legislation, guidelines, codes of practice, and international standards for the Project. Necessary precautions have been taken, and these addressed comprehensively throughout the planning and execution phases of the Project. Specifically:</p> <ul style="list-style-type: none"> • HSE Guidance GS6 (Overhead Power Lines) and HSG47 (Underground Services): A thorough survey identifying and mapping all overhead power lines and underground services was undertaken. Safe working distances were maintained by the proposed design and will be strictly enforced during construction. • The Pipeline Safety Regulations 1996: We are aware of the requirement not to cause any damage to pipelines that could cause the release of dangerous fluids. Where we have not been able to mitigate potential damage by routeing, we will be looking to install other active mitigation measures. We have also contacted all relevant pipeline operators for information and 			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>are working with them to develop adequate mitigations for long term and temporary construction risks.</p> <ul style="list-style-type: none"> • Management of Health and Safety Regulations 1999: National Grid operates a comprehensive health and safety management system, compliant with the 1999 regulations. This included detailed risk assessments, method statements, and ongoing monitoring of safety performance. All our contractors are expected to be appropriately trained and supplied with personal protective equipment. • British Standards BS EN 50122-1: We are working with Network Rail to ensure that the electrical design and installation of the Project will adhere to BS EN 50122-1, ensuring electrical safety, proper earthing, and a safe return circuit and mitigating any risk of induced voltages in their assets. • BS EN ISO 18086: Regarding BS EN ISO 18086, a detailed AC corrosion study is underway. There is the potential, based on induced currents from the 400 kV overhead line, that alternating current mitigation measures may need to be installed to pipeline. The scope and extent of such mitigation measures will be dependent on the final design arrangements of the Project which will continue to evolve within the parameters of confirmed Limits of Deviation. 				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Consultation between National Grid and the relevant utility provider will confirm the requirement for installed mitigation, based on the final 400kV design arrangements, which will be implemented by the relevant utility provider under their existing utility operation and maintenance provisions.</p> <p>We are confident that the Project has been and will continue to be executed with the highest regard for safety and in full compliance with all relevant regulations and standards.</p>				
9-9.38	<p>Suggest collaborative and coordinated approach between National Grid for the Project and National Highways on the Lower Thames Crossing (LTC) (e.g. to mitigate impacts to affected parties including users of the road and rail networks, local businesses and communities and those customers of NGET's own and other affected utility networks), including the following:</p> <ul style="list-style-type: none"> - Suggest that both parties should enter a Statement of Common Ground at the earliest reasonable opportunity to discuss and develop overlapping matters; - To manage alignment with the LTC Development Consent Order (DCO) Control Plan, suggest that National Grid attend appropriate forums such as the Traffic Management Forum and Travel Plan Liaison Group at the earliest opportunity, and that both 	<p>National Grid has taken into consideration all consultation representation submitted to the Project by Lower Thames Crossing (LTC) and have collaborated to agree interface documents detailing how the two projects propose to mitigate impacts to each other and affected stakeholders. To support coordinated delivery and ensure these interface points are fully understood, National Grid is proposing to hold an initial joint workshop with LTC to discuss and work to resolve the issues. From there it is expected both parties will enter into a Statement of Common Ground.</p>	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>parties engage with each other on relevant Control Plans to mitigate impacts to the residents of Thurrock and the wider Essex communities;</p> <ul style="list-style-type: none">- Suggest that it will be critical to understand the extent of the LTC's Nitrogen Deposition mitigation areas impacted by the Project, in order for National Grid to establish the scale of replacement mitigation required;- Requirements, with regard to the LTC DCO including its own Requirements and its Control Plan (assuming the LTC DCO is made prior to the Norwich to Tilbury DCO being submitted), and also with regard to the need for the Norwich to Tilbury Project to consult and manage its interface with the LTC as it develops its final proposals;- Protective Provisions, for the benefit of National Highways, which will address both interfaces with the operational strategic road network and with the construction programme. These Protective Provisions should contain measures that integrate the National Grid works into the relevant forums as noted above, contain processes to manage the interfaces when works are being undertaken in close proximity, address matters relating to land transfers during construction, and require that National Highways be a consultee on relevant control documents;- Furthermore, the LTC requires works to other National Grid Electricity Transmission (NGET)					

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	networks as part of the delivery of its own Project. It is assumed that the Norwich to Tilbury Project has the potential to introduce additional constraints on the LTC programme of works. The LTC requires this understanding to develop its detailed planning					
9-9.39	<p>Suggest the following in relation to the Draft Outline Construction Management Plan to ensure coordination between the Project and Lower Thames Crossing (LTC):</p> <ul style="list-style-type: none"> • Section 2.4 - Consents, Licenses and Permits - any Traffic Regulation Orders, Temporary Traffic Regulation Orders, permits or other licenses applied for must be coordinated (where relevant) with the LTC (and in accordance with its Development Consent Order (DCO)) so as to not give rise to any detrimental impact on the deliverability of the LTC • Section 5.2 - Pre-Construction Surveys - where there is an interface with LTC works, parties are to ensure adequate discussion to ensure that the Abnormal Invisible Load (AIL) and HGV routes consider the new or modified structures proposed by the LTC. • Table 5.1 and Section 5.3.2-5.3.9 - Those AILs (and other Norwich to Tilbury related vehicle movements) proposed moving within Sections G and H require coordinating between with the LTC to ensure the deliverability of both projects, and to ensure synergies are developed to mitigate impacts 	<p>The Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) for the Project that accompanies the Development Consent Order (DCO) application has been updated to capture the points raised. The Outline CTMP (document reference 7.3) highlights any restrictions from construction traffic related to the Project. Consents, license and permits would be obtained where required. National Grid has been coordinating with Lower Thames Crossing (LTC) to mitigate against detrimental impact and this is noted in the Outline CTMP (document reference 7.3). Pre-construction surveys have been proposed and would be undertaken later in the construction stage, should the DCO be granted consent.</p> <p>National Grid has coordinated with LTC to ensure that Abnormal Indivisible Load (AIL) and Heavy Goods Vehicle (HGV) routes consider any new and/or modified structures proposed by LTC. AIL and HGV routes have been developed with consideration for LTC and regular engagement has been undertaken. Project specific signage is proposed to clearly define the construction routes for Norwich to Tilbury vehicles. The Outline CTMP (document reference 7.3) has a section called</p>	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>on local road users or unnecessary re-works regarding street furniture removal / replacement</p> <ul style="list-style-type: none"> • Section 5.4.15 - Construction route signage, where overlapping with the LTC order limits and access routes, will need to clearly define that it is for Norwich to Tilbury vehicles, owing to the substantial overlap in geography and time. • Section 5.7 - workforce on the road network - in all instances where the LTC and the Norwich to Tilbury Project interface with regards to traffic management, the Norwich to Tilbury Project will have to liaise with the LTC, attend forums where relevant to consult on traffic management proposals proposed by LTC, as per the LTC DCO. • Section 6.3 - Management Plan - at the earliest opportunity, the LTC project team would like to develop those proposals of Norwich to Tilbury with them as part of both parties traffic management plans, ensuring consistency and deliverability of both projects, whilst omitting conflicting proposals or undue impacts on the local residents and users of those services. • Section 7.2.7 - Where the two projects interface, the LTC has preference for robust monitoring by Norwich to Tilbury and reporting of construction related movements to and from site. In the eventuality that anything was to happen, discussions with the Local Authority, Local Highway Authority and/or affected party(s) are attributable to data and 	<p>'6.6 Coordination with other developments' where National Grid will ensure that liaisons will take place between the Main Works Contractor(s) where construction is assumed at the same time.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	evidence. In addition, this provides data to identify negative trends on the network and effectiveness of controls implemented by the project as well data to support future plans such as critical deliveries					
9-9.40	<p>Suggest the following in relation to the Construction Access Plans – Section H to ensure coordination between the Project and Lower Thames Crossing (LTC):</p> <ul style="list-style-type: none"> • Sheet 1 - H35-A1 (TB-B128) - it is perceived that this bellmouth would be a modification of the existing layby and therefore have minor impact on the traffic using the A128 Brentwood Road, however details regarding any Temporary Traffic Management would be required to be made known for the consideration of the LTC. • Sheet 2 - The LTC has works in the vicinity of H1 through H5 proposed on the northern side of the A1013 which are proposed within the Norwich to Tilbury construction period. These works will be supported via a temporary compound (known as Stanford Road Utility Logistic Hub in the LTC Development Consent Order (DCO)) opposite the residents of Southfields, east of marker H5. Both parties will have to develop programmes of works together to ensure no impediment to the delivery of either project. • Sheet 2 - Buckingham Hill Road is proposed as Utility Logistic Hub access routes for specific LTC 	<p>National Grid welcomes Lower Thames Crossing's (LTC's) request for early engagement on the development of Protective Provisions to support coordinated delivery of the Norwich to Tilbury Project and the Lower Thames Crossing, and fully supports the principle that any modifications required to the LTC Development Consent Order (DCO) to enable delivery of the Norwich to Tilbury Project will be developed, agreed and secured through the Norwich to Tilbury DCO.</p> <p>National Grid is committed to working with LTC at the earliest opportunity to develop appropriate Protective Provisions and to ensure that any modifications to the LTC DCO are clearly identified, agreed with LTC and appropriately secured. This process will be supported through ongoing programme coordination and the development of an agreed Statement of Common Ground.</p> <p>National Grid has been working with the local highway authorities and National Highways to develop its access proposals for the Project. Our assessments have included visibility and highway geometry.</p> <p>As part of the design development of the Project, the proposed bellmouth junctions have undergone Road Safety Audits, and mitigation measures for road safety</p>	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>utility works, and as the main works short term main access route. The LTC and Norwich to Tilbury Project will have to develop programmes of works together to ensure no impediment to the delivery of either project, or develop opportunities when and if they should arise</p> <ul style="list-style-type: none"> • Sheet 2 - As part of the LTC's proposals for Work No G6a, a new access from the A1013 Stanford Road is proposed, east of marker H5. The Norwich to Tilbury Project may need to consider modifications to that other street furniture that may be required to be installed, or existing street furniture modified, as part of those developing proposals. • Sheet 2 - The Norwich to Tilbury Project is proposing bellmouths to be constructed along Buckingham Hill Road, H36-A1 (TB-B131), H36-A1 (TB-B132) and H36-A1 (TB-B133). Details regarding any Temporary Traffic Management required for the construction of these bellmouths would be required to be made known for the consideration of the LTC. • Sheet 3 - Works are proposed along Fort Road and Coopers Shaw Road from the A1089 St Andrews Road. This route is proposed as a secondary access route for the LTC. Details regarding H13 through H24, including the TTM associated with the construction of bellmouth H37-A1 (TB-B140) and H37-A1 (TB-B141) would be required to be made known for the consideration of the LTC. • Sheet 3 - The bellmouth provision in the vicinity of 	<p>have been developed. This may include temporary traffic management measures such as speed limit reductions and/or temporary signals, traffic islands. Details of temporary traffic management and mitigation works required at bellmouths including on Buckingham Hill Road, A128 Brentwood Road, and A1013 Stanford Road are detailed in the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) for the Project that accompanies the DCO application and the Construction Access Plans.</p> <p>Engagement with other projects including Lower Thames Crossing (LTC) has been occurring, and further engagement would continue into the construction phase of the Project, should the DCO be granted consent.</p> <p>As part of the design development of the Project, a new substation named Tilbury North is proposed. This no longer uses Fort Road and Cooper Shaw Road as primary access routes. The bellmouth which had been proposed at the existing Tilbury Substation is no longer proposed. This avoids interaction with LTC proposals at this location. The revised access options to this new substation location have been considered to accommodate for LTC. An assessment is provided in Chapter 16: Traffic and Transport of the Environmental Statement (ES) (document reference 6.16).</p>

	<p>LTC proposals at the A122, Hoford Road, Muckingford Road, Coopers Shaw Road, Church Road, the Tilbury Loop Railway and in the land east and northeast of Tilbury Substation. The LTC project team require further details regarding timing and design to determine (and ensure) that both projects can be constructed, operated and maintained at the same time.</p> <ul style="list-style-type: none"> • Sheet 6 - The cable routes interface with the Tilbury Loop Railway. It is assumed that to construct this section of overhead line that there would be a restriction, or closure of the railway line temporarily to complete these works. The LTC would require details regarding those restrictions for its consideration of its own proposals. • Sheet 7 - The works being carried out by LTC will be supported by high voltage (HV) power supply that is drawn from the Tilbury Substation adjacent to the Norwich to Tilbury Project worksites. This HV power supply crosses the northwest corner of the TB-CC12/adjacent construction zone and similarly with the area labelled TB-CC11. The LTC will seek to coordinate with Norwich to Tilbury to efficiently install the required HV power supply, primarily through coordination of works phases in close discussion with the Norwich to Tilbury Project team 	<p>the Distribution Network Operator (DNO) have the capacity. Coordinating & sharing outages would be beneficial - assuming both works are of a similar scale and would not introduce delays or extended outages. Any proposal should go through the DNO for agreement who have been made aware of the opportunity for coordination.</p> <p>With regards to Coopers Shaw Road, Church Road and the Tilbury Loop these will no longer be crossed by the project.</p> <p>Hoford Road, Muckingford Road and others will still be impacted. We are continuing to work with LTC coordinating interfaces, timings and details. This approach will continue through construction.</p>				
9-9.43	Suggest the following in relation to the Site Layout Drawings – 400 kV Cable Sealing End Compound	Additional areas within the Project Order Limits have been included to accommodate any loss of the LTC	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>Tilbury Proposed Site Layout_0 to ensure coordination between the Project and Lower Thames Crossing (LTC):</p> <ul style="list-style-type: none"> • Sheet 1 - The temporary and permanent proposed surface water attenuation drainage ponds are proposed within the LTC's Nitrogen Deposition mitigation areas. LTC will work to align the programme with the timing of the delivery of LTC mitigation, noting that LTC have committed to delivering the mitigation at the earliest point possible within the programme. If the mitigation is already in place, replacement mitigation would be required prior to the use of the mitigation land, in this case it would be advisable to minimise the construction footprint within the mitigation land 	<p>nitrogen deposition mitigation areas. Further information is provided within Chapter 8: Ecology and Biodiversity (document reference 6.8) and the Outline Landscape and Ecological Management Plan (document reference 7.4).</p> <p>Discussions regarding the programme for the implementation of mitigation, where relevant, are ongoing with the LTC and Norwich to Tilbury Project teams.</p>				
9-9.44	<p>Suggest the following in relation to the Typical Drawings - Typical HV Cable Direct Buried Cross Section and Construction Easement to ensure coordination between the Project and Lower Thames Crossing (LTC):</p> <ul style="list-style-type: none"> • Sheet 1 - In areas where the LTC and the Project interface, the typical 120 m open cut construction swathe will have to be coordinated to ensure it does not give rise to any detrimental impact on the deliverability of the LTC 	<p>National Grid notes the respondent's response. National Grid continues to engage with Lower Thames Crossing (LTC) to coordinate successful delivery of both projects. Where LTC and the project interface the typical 120 m open cut construction swathe will need to be coordinated, this will include measures such as relocating spoil bunds.</p> <p>Close coordination between both parties will ensure that ducts are installed during construction of the LTC to avoid the need for open cut and trenchless crossing methods in the close vicinity of the LTC.</p>	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-9.45	<p>Suggest the following in relation to the Preliminary Environmental Information Report – Volume 1 to ensure coordination between the Project and Lower Thames Crossing (LTC):</p> <ul style="list-style-type: none"> • Paragraph 8.6.83 - The Norwich to Tilbury and LTC project teams have previously discussed the conflict between mitigation for the LTC and the Norwich to Tilbury route. The Norwich to Tilbury Project would be required to provide equivalent mitigation in the locality of any reduction in LTCs identified mitigation as the LTC Development Consent Order (DCO) application is currently being determined by the Secretary of State. Identification of this mitigation should follow the methodology included with the LTC Project Air Quality Action Plan [APP-350]. National Grid should explore opportunities to avoid, reduce or mitigate the impact on areas of habitat created by LTC 	<p>National Grid notes the respondent's response. Proposed alternative mitigation sites for impacts on Lower Thames Crossing's (LTC's) nitrogen deposition and ancient woodland mitigation around Orsett Golf Club, are included within the Project's Order Limits. The alternative nitrogen deposition land is in line with the LTC site selection methodology included within the LTC Project Air Quality Action Plan (LTC Appendix 5.6 of the Environmental Statement) (LTC document reference TR010032/APP/6.3).</p> <p>The alternative land for both the nitrogen deposition and ancient woodland is in close proximity to the originally proposed location, of low existing ecological baseline value (arable) and of at least the same size. Further consultation with the LTC team is ongoing with a specific focus on phasing of works and programme.</p>	X			
9-9.46	<p>Concern about National Grid's approach to risk management in relation to UK Oil Pipeline (UKOP) Pipeline crossing of the Project at Bulphan, including the following:</p> <ul style="list-style-type: none"> - Concern that the method of mitigation has been determined before the results of the ERM study quantifying risk has been released; - Concern that, consequently, National Grid is not prepared for the ERM study to find that the use of underground cables is not sufficient mitigation (e.g. 	<p>National Grid acknowledges the need to balance national planning policy and engineering requirements while adhering to the relevant legislation and standards for the Project.</p> <ol style="list-style-type: none"> 1. The Alternate Current (AC) interference has been quantified through modelling and shared with British Pipeline Association (BPA), all mitigation options will be considered in developing an acceptable solution. 			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>which could delay the Project, or threatens public health and safety and the integrity of critical national infrastructure if the Project was proceeded with regardless);</p> <p>- National Grid's approach to risk mitigation deviates from accepted risk management procedure as it opts for mitigation rather than avoidance and there has been no engagement with the respondent to consider constraints collaboratively and identify optimal solutions in light of them</p>	<ol style="list-style-type: none"> ERM's experience with similar applications and discussions with industry experts would indicate that the preliminary results show that the order of magnitude of AC interference anticipated is in a range that can be successfully mitigated by conventional means. In deciding the proposed route, National Grid has made a judgement on balance of all impacts to receptors and the ensuing probability of the Development Consent Order (DCO) being granted. We feel that a robust hierarchy of constraints was considered, acknowledging that a reasonable AC interference mitigation solution was possible and providing the best route options for the Bulphan area. There has been engagement with the respondent throughout the Project development and we will continue to engagement with them as the Project continues. 				
9-9.47	<p>Criticism that National Grid say it is possible that ecological constraints in the Thurrock area south of the A1013 would have been removed by the Lower Thames Crossing (LTC), as this does not reflect the status and content of the LTC examination, nor subsequent discussions about wider developments / Suggest that should the alignment be required to traverse this zone, there is a reasonable prospect of</p>	<p>National Grid has revised its proposals and made a change to the means to connect to Tilbury Substation. As such no works to the south of West Tilbury are now envisaged and this change is no longer relevant to the Project being progressed.</p>	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	an engineering solution which leaves, in particular, the triangular pulverised fuel ash (PFA) habitats (centred on TQ6651076412) intact (such as via a trenchless technique) / Suggest that the Project follows the alternative route alignments that National Grid are exploring to avoid this area / Criticism that the important habitats in this area have not been marked on the statutory consultation plans					
9-9.48	Suggest that National Grid to contribute to working groups in the Tilbury area (given that there are multiple major infrastructure and other development projects converging within the Tilbury area, many of which have ecological impacts and associated requirements, and it is increasingly important that all stakeholders with an interest in this area fully engage in collaborative working which seeks to find solutions that can meet the needs of both environment and economy), and suggest that National Grid should collaborate with others in regard to data sharing (e.g. third party data sources should be used to supplement National Grid's own data collection)	Throughout the development of National Grid's proposals, we have contacted a range of other operators in the area, including other statutory undertakers and project developers. Where reasonable, we look to consider how to reduce cumulative impacts on communities through our process of routeing and siting and always consider, and mitigate for, any environmental and ecological impacts that our proposals may have. We have employed a wide range of data sources in the design of the Project, including information received from other development projects in the area. Our routeing and siting considerations can be found in the 2025 Design Development Report (document reference 5.15) submitted as part of our application for Development Consent. A cumulative impact assessment has been undertaken and is presented in Chapter 17: Cumulative Effects of the Environmental Statement (ES) (document reference 6.17). We will continue to engage with other developers as the Project progresses.	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-9.49	Concern that National Grid provided incorrect time for the Grays consultation event in information pack sent to respondent (e.g. the pack said 4pm-7pm rather than 2pm-7pm)	When National Grid launched the statutory consultation, we advertised this through several channels such as letters to residents, advertising in national and local newspapers, and on social media. The date and time for the Grays public information event were published correctly in these and we had dedicated communications channels available to the public if anyone had any questions.			X	
9-9.50	Criticism that the Preliminary Environmental Information and the proposed scope of the Environmental Statement is inadequate, as it does not reflect and is not in accordance with the Scoping Opinion / Criticism that it does not enable the identification of likely significant effects (LSEs) of concern to the existing and future operations of the Port of Tilbury and the management of ecological impacts in and around it, and does not provide confidence that the design of the Project that is to be included within an application for development consent reliant on and in the form consulted on will be informed by the findings of the identified approach to environmental assessment	<p>The Preliminary Environmental Impact Report (PEIR) was prepared in accordance with the Nationally Significant Infrastructure Projects: Advice Note Seven (June 2020) and was a preliminary document that reflected the Project's proposals at the time of statutory consultation.</p> <p>National Grid submitted an Environmental Impact Assessment (EIA) Scoping Report (document reference 6.19) to the Planning Inspectorate on 7 November 2022. The Planning Inspectorate (on behalf of the Secretary of State) formally adopted its Scoping Opinion (document reference 6.20) on 14 December 2022 which has informed the scope of the EIA for the Project, which is presented in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement).</p> <p>The Order Limits of the Project no longer extend to the Port of Tilbury.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-9.51	The area shown by the Consultation Plan to be subject to permanent National Grid Electricity Transmission (NGET) infrastructure that is potentially incompatible with Freeport development is around 51 per cent of the Tilbury Tax Site (including easements and electrical cabling radiating electromagnetic interference) and represents total investment in Thurrock of some £663 million and will provide and sustain more than 8,500 jobs	The Order Limits of the Project no longer extend to the Port of Tilbury.			X	
9-9.52	In order for the Project to connect to Tilbury Substation, it will need to cross the high voltage cables being laid as part of the Lower Thames Crossing (LTC), adjacent to the railway line – this is Work No. MU27 in the LTC proposals and is shown as the yellow line on Plan 4. It is not clear whether National Grid are aware of this, and that MU27 will also be undergrounded. Specific consideration must be given to the potential effects of this crossing and the need to manage electromagnetic compatibility issues	<p>National Grid notes the respondent's feedback. When designing the Project for both the permanent and temporary works the Project team have considered known third-party developments that are within the planning system. At this location National Grid has engaged directly with Lower Thames Crossing (LTC) to coordinate the respective project designs. As such we are aware of all the utility diversion and mitigation work required for LTC and have design the Project with them in mind.</p> <p>At our statutory consultation Work No. MU27 in the LTC proposals was proposed to be crossed via trenchless underground cables as part of the Project, thus it would have been unaffected.</p> <p>However, considering the refined Project proposals to connect into a new Tilbury North substation further north, the Project no longer interacts with LTC Work No. MU27.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-9.53	<p>Port of Tilbury London Limited (PoTLL) acknowledge that, due to the location of the Tilbury Substation, some limited access may be necessary in relation to works to the Substation itself. Any proposal to use the Tilbury2 access and Substation Road for such limited purposes will require National Grid to comply with all Port regulations and byelaws and to enter into an agreement with PoTLL that includes:</p> <p>(a) regular information sharing of anticipated construction traffic volumes;</p> <p>(b) a commitment to proactively engage with and agree shared access arrangements with other stakeholders (e.g. LTC), in particular where the combined construction traffic flows exceed the permitted capacity of the road;</p> <p>(c) monitoring of construction traffic flows, including on the strategic highway network leading to the Tilbury2 access and within the Port, through the implementation of a protocol equivalent to that agreed with National Highways to manage LTC construction traffic and a commitment to joint working to manage the cumulative effects of construction traffic from both LTC and N2T;</p> <p>(d) a commitment to use other routes if the N2T flows will mean construction traffic cannot be effectively managed on Substation Road;</p> <p>(e) a rail crossing risk assessment;</p>	The Order Limits of the Project no longer extend to the Port of Tilbury. National Grid continues to engage with National Highways, Thurrock Highway Authority and others regarding transport routes and will engage with Port of Tilbury London Limited (PoTLL) as appropriate.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>(f) measures to manage the potential for N2T traffic to restrict access to or block accesses within and exits from the Port;</p> <p>(g) detailed proposals for where vehicles will be gated, assessment of the impact of this to Port operations, and binding commitments the ensure construction traffic does not interfere with the use of the Port;</p> <p>(h) payment of an access fee for the use of Port infrastructure and contribution to maintenance costs.</p> <p>In addition, for any works that are proposed to be carried out to Port infrastructure, including roads, a commuted sum will be payable to cover the long-term maintenance costs of altered infrastructure</p>					
9-9.54	<p>To the extent that, following engagement with Port of Tilbury London Limited (PoTLL), it is agreed that PoTLL's land may be required to be used for the Project, the draft Development Consent Order (DCO) and management plans submitted with the Application must include clear restrictions and controls in relation to this land. Whilst flexibility is typically sought in DCO applications, and is understandable to a degree, the corollary of flexibility is uncertainty. This uncertainty will harm investment and development potential, even if land and rights over that land are not being acquired directly, due to</p>	<p>The Order Limits of the Project no longer extend to the Port of Tilbury.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	the risk of impacts to the Port from improper management of the Project					
9-9.55	Criticism the Preliminary Environmental Information Report (PEIR) does not fully identify and consider the relevance and applicability of important legislation and policy that applies in the vicinity of the Tilbury Substation and in relation to direct and indirect impacts of the Project (in relation to Chapter 2)	The Order Limits of the Project no longer extend to the Port of Tilbury. Legislation and policy and how it applies in the Project is outlined in the Planning Statement (document reference 5.6) and Policy Compliance Document (document reference 5.7).			X	
9-9.56	Criticism that the Project falls short of achieving the broader Government policies in how it interacts with the Port and the national networks close to the Port of Tilbury (in particular, National Grid have not engaged with the policy in the National Policy Statement for Energy (NPS EN-5) at paragraph 2.7.1)	The Order Limits of the Project no longer extend to the Port of Tilbury. Potential interactions with Port of Tilbury may include engagement where potential transport interfaces are identified or regarding commercial arrangements to import construction material via Port facilities.			X	
9-9.57	Suggest that in order to mitigate the impact of the Project on the Port of Tilbury, National Grid proactively engage with developers of overlapping and adjacent major projects and National Significant Infrastructure Projects (NSIPs) to the Project (such as through the Thames Estuary Working Group)	National Grid has engaged with the Thames Estuary Working Group and other developers to the extent relevant to the Project or which has been achievable or accepted by the third parties. The Order Limits of the Project no longer extend to the Port of Tilbury and National Grid has adjusted its participation in such discussions accordingly.			X	
9-9.58	Criticism that Port of Tilbury London Limited (PoTLL) have not been consulted for the route of the cable into the Tilbury Substation, and criticism that	National Grid disagrees with the respondent's view on consultation and notes a number of direct engagements as well as the provision of printed material. Regardless			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	National Grid do not seem to have considered publicly available information in relation to the Port of Tilbury, such as the Freeport designation and the designation of that Freeport land as a Tier 1 employment site in the Emerging Thurrock Local Plan / Criticism that the routing options have not been adequately assessed as a result, with the Project set to harm the Thames Freeport and have potential consequential operational effects and costs on the Port of Tilbury as a whole and economic performance and outputs for the UK economy	of this the Order Limits of the Project no longer extend to the Port of Tilbury.				
9-9.59	Criticism of Optioneering Process for the Project / Port of Tilbury London Limited (PoTLL) has been unable to find any detailed information setting out how the potential options for the cable route approaching Tilbury Substation were assessed (e.g. this is the case from both a technical feasibility perspective, and when considering the environmental effects of the route options) / Criticism that The Design Development Report and appendices, updated for statutory consultation, do not provide any information about routing into the Tilbury Substation, south of the railway line (e.g. there is simply no information about what " <i>further detailed investigation</i> " was carried out in the two years since the 2022 Report or what factors were identified (or not identified) as being relevant to this routing)	The Order Limits of the Project no longer extend to the Port of Tilbury.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-9.60	Criticism made in relation to the Port of Tilbury, that the Preliminary Environmental Information Report (PEIR) does not meet Regulation 12 of the Infrastructure Planning (Environmental Impact Assessment) Regulations 2017 which requires that the preliminary environmental information that is consulted on must be that which <i>"is required for the consultation bodies to develop an informed view of the likely significant effects (LSEs) of the development (and of any associated development)"</i>	The Order Limits of the Project no longer extend to the Port of Tilbury.			X	
9-9.61	Criticism a number of key requirements identified in the Scoping Opinion have not been implemented by National Grid in the Preliminary Environmental Information Report (PEIR), such as: any cumulative assessment of the Freeport (at Tilbury); the parameters of environmental assessment have been narrowed for some chapters, including the exclusion of construction traffic impacts to the strategic and major road network that will be utilised; updated guidance has not been used, resulting in misleading findings, in particular the continued use of legacy Institute of Environmental Management and Assessment (IEMA) 1993 traffic assessment guidance; and there are a number of errors that raise questions about the adequacy of the way the assessments are being carried out, including finding no evidence of water voles despite water vole	<p>The assessment of the strategic road network (SRN) and Major Road Network (MRN) has been included in the Transport Assessment (document reference 7.11) and Chapter 16: Traffic and Transport (document reference 6.16) of the Environmental Statement (ES).</p> <p>Cumulative impact from other planning applications has also been considered in both the Transport Assessment (document reference 7.11) and Chapter 16: Traffic and Transport (document reference 6.16) of the ES.</p> <p>The latest Institute of Environmental Management and Assessment Guidance (2023) has been considered for the traffic and transport assessment, as agreed with Local Highways Authorities and National Highways.</p> <p>Water vole surveys had not been completed at the time of drafting the Preliminary Environmental Information Report (PEIR).</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	compensation habitat being located adjacent to Tilbury Substation	Water vole surveys have now been completed and are presented within Appendix 8.13: Otter and Water Vole Surveys (document reference 6.8.13) of ES Chapter 8: Ecology and Biodiversity (document reference 6.8). The land around the Tilbury Substation no longer falls within the Project Order Limits.				
9-9.62	Concern that the project timeline does not include sufficient time for alternatives to be considered and additional environmental assessments to be carried out and for the outcomes of this to inform the location and design of the Project and the mitigation and compensation required. This work must be carried out urgently, with changes made to the design to mitigate the likely significant effects (LSEs) of the Project and avoid serious detriment being caused to Port of Tilbury London Limited's (PoTLLs) statutory undertaking	Following consideration of feedback, direct engagement with relevant parties and further technical review, National Grid has modified the connection arrangements at Tilbury. We now propose to connect to the National Electricity Transmission System by establishing a new 'Tilbury North' substation to the south of Orsett Golf Course which would be connected into the existing 400 kV overhead line (running north from the existing Tilbury Substation). The Order Limits of the Project no longer extend to the Port of Tilbury. As such the concerns raised will not arise, so the feedback has been superseded by a change to the Project.			X	
9-9.63	Criticism that National Grid are not following the principles of good design identified in the new Pre-Application Guidance, namely that a diverse range of people including environmental specialists and community groups should be involved in informing the project vision, narrative, design principles and project design process (criticism made in relation to the Port of Tilbury)	In May 2024 the Planning Inspectorate published Nationally Significant Infrastructure Projects: 2024 Pre-application Prospectus. Since its publication National Grid has transitioned to aligning with this document, despite beginning development prior to its publication. Prior to its publication National Grid developed the Project in line with all relevant policy and guidance that was relevant which has included extensive consultation			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>with a wide range of stakeholder groups including technical specialists and local communities.</p> <p>National Grid has carefully considered the feedback received during the 2022 and 2023 non-statutory consultations, and the statutory consultation, targeted consultations, and landowner consultation, the alternatives available, and other factors including our duties and obligations.</p>				
9-9.64	Criticism that the Preliminary Environmental Information Report (PEIR) documentation focusing on ecology does not have relevant or important details within it that are readily available, thus the conclusions are unreliable (in relation to the Port of Tilbury) / Request that the Project is designed in a way that demonstratively applies the mitigation hierarchy and that the Project is delivered in an environmentally responsible manner and in a manner that takes due account of the multi-layered constraints and development pressures applying to the land in the vicinity of the Tilbury Substation	<p>Following consideration of feedback, direct engagement with relevant parties and further technical review, National Grid has modified the connection arrangements at Tilbury. We now propose to connect to the National Electricity Transmission System by establishing a new 'Tilbury North' substation to the south of Orsett Golf Course which would be connected into the existing 400 kV overhead line (running north from the existing Tilbury Substation). The Order Limits of the Project no longer extend to the Port of Tilbury.</p> <p>As such the concerns raised will not arise, so the feedback has been superseded by a change to the Project.</p>			X	
9-9.65	Criticism made in relation to the Port of Tilbury, that within the Preliminary Environmental Information Report (PEIR), National Grid describe that the study area that is a 1 km radius from the Local Study Area as only being for " <i>the assessment of potential effects on businesses where visual effects are an economic</i>	National Grid submitted an Environmental Impact Assessment (EIA) Scoping Report (document reference 6.19) to the Planning Inspectorate on 7 November 2022. The Planning Inspectorate (on behalf of the Secretary of State) formally adopted its Scoping Opinion (document			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<i>consideration"</i> (in relation to paragraph 15.5.2 of the PEIR) / Criticism that this suggests that National Grid has considered that there is a potential for only the visual effects of the Project during construction to give rise to impacts that extend beyond the boundary of the proposed Norwich to Tilbury (N2T) Order Limits (e.g. this is wholly unsustainable given the extensive effects of the construction of the Project that will occur beyond the proposed Order Limits)	reference 6.20) on 14 December 2022 which has informed the scope of the EIA for the Project. Local Study Areas for the Project have also been defined and agreed with the relevant stakeholders. Land within the ownership of the Port of Tilbury is no longer within 1 km of the Order Limits of the Project.				
9-9.66	Request that in relation to the Preliminary Environmental Information Report (PEIR) Chapter 16: Traffic and Transport, the Construction Traffic Management Plan (CTMP) must include Port of Tilbury London Limited (PoTLL) as a stakeholder	The Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) submitted with the Development Consent Order (DCO) application names the Port of Tilbury London Limited (PoTLL) as a consultee for the CTMP to be developed by the Main Works Contractor(s).			X	
9-9.67	Request that in relation to the Preliminary Environmental Information Report (PEIR) Chapter 16: Traffic and Transport, the cumulative assessment must include Thurrock Flexible Generation Plant (TFGP), Lower Thames Crossing (LTC), the Thames Freeport (including Tilbury 3) and National Grids Grain to Tilbury Tunnel Replacement	National Grid has liaised with Local Planning Authorities including Thurrock Council to confirm which development proposals it should include as part of the cumulative assessment relevant to the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) Chapter 16: Traffic and Transport (document reference 6.16).			X	
9-9.68	Criticism made in relation to the Port of Tilbury, that within the Preliminary Environmental Information Report (PEIR), paragraph 16.5.2, the study area has been limited to only the Primary Access Routes (PAR), excluding the Strategic Road Network (SRN)	The updated study area includes the wider road network (SRN/MRN) that might experience changes in traffic patterns resulting from the Project. This is set out in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) Chapter 16: Traffic			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	and Major Road Network (MRN) which construction traffic must utilise in order to access the PAR, with no explanation is provided for why the SRN and MRN have been excluded from assessment	and Transport (document reference 6.16), submitted with the Development Consent Order (DCO) application.				
9-9.69	Criticism made in relation to the Port of Tilbury that National Grid have only considered a 150m radius of the primary access routes (in relation to paragraph 16.5.3 of the Preliminary Environmental Information Report (PEIR)) / Suggest that the full route that must be taken by construction traffic must be assessed to ensure that impacts from construction traffic on the highway network are identified, particularly given the baseline, future baseline and likely cumulative position on the Strategic Road Network (SRN) in and around Tilbury	The Environmental Statement (ES) (document reference Volume 6: Environmental Statement) Chapter 16: Traffic and Transport (document reference 6.16), submitted with the Development Consent Order (DCO) application, assesses the full route of each Primary Access Route (PAR). The 150 m radius refers to the lateral extent of the assessment corridor along each PAR.			X	
9-9.70	Criticism that National Grid have regarded within the Preliminary Environmental Information Report (PEIR) that the Tilbury2 access road it is not a sensitive link and as the increase is below the Rule 1 30% threshold there is no need for further assessment / Criticism that this shows that National Grid have applied the 1993 Institute of Environmental Management and Assessment (IEMA) Guidance as opposed to the 2023 revised IEMA Guidance	The Project is no longer proposing to use the Tilbury2 access road. Note also that the Order Limits of the Project no longer extend to the Port of Tilbury.			X	
9-9.71	Request that National Grid should take forward the Thurrock Flexible Generation Project (TFGP) to the	National Grid has liaised with Local Planning Authorities including Thurrock Council to confirm which			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	Stage 2 Short List for full assessment, as the construction timeframes of TFGP have previously been delayed and the construction of TFGP is due to be completed just six months prior to the start of the construction of the Project	development proposals it should include as part of the cumulative assessment relevant to the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) Chapter 16: Traffic and Transport (document reference 6.16).				
9-9.72	Request that National Grid consider the National Policy Statement for Ports (NPSP) for the Project	National Grid has considered the National Planning Statement (NPS) for Ports within the development of the Project and within the Planning Statement (document reference 5.6). Additionally, there has been a change to the means of connecting at Tilbury such that there are no direct interfaces with the port or the Freeport, so effects covered by the NPS for ports are minimal.			X	
Design Change						
9-9.73	Oppose the use of underground cables	National Grid has carefully considered the feedback received during the 2022 and 2023 non-statutory consultations, the statutory consultation, targeted consultations, and landowner consultation, the alternatives available, and other factors including our duties and obligations. These duties include balancing the need to be economic and efficient, which includes keeping costs down in the interests of the bill-paying consumers, with a duty to have regard to preserving amenity, which includes the natural environment, cultural heritage, landscape and visual quality, National Policy Statement (NPS) EN-5 makes clear that <i>'the government's position that overhead lines should be the strong starting presumption for electricity networks</i>		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p><i>developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or Area of Outstanding Natural Beauty (AONB))'. The NPS also confirms that widespread and significant adverse landscape and/or visual impacts in other locations may also justify the use of undergrounding. We may also adopt underground cables in other circumstances such as to cross existing 400 kV overhead line infrastructure.</i></p> <p>Where the installation of underground cables is required in lieu of overhead lines, the design of the Project has incorporated suitable consideration of the existing environment, ecology and site ground conditions based on site specific survey data.</p>				
9-9.74	Suggest a minimum distance that the Project should be sited from residential areas / residences	National Grid does not use standard minimum distances as a routeing consideration. Applying an arbitrary distance may be too big or too small for the specific circumstances. We utilise the Holford Rules (a description of the Holford Rules can be found in Appendix I22 of this report) informed by feedback and professional judgement to define appropriate corridors and alignments that are consistent with the relevant policy framework and duties. In response to feedback to the 2022 and 2023 non-statutory consultations, statutory consultation, targeted consultations, and landowner consultation, we have modified the alignment in various locations to increase separation to properties where this			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		is possible without undue deviation or transfer of effects to other similar properties or other receptors. A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the Environmental Impact Assessment (EIA). The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13). This assesses the impact of the Project and identifies the need for additional mitigation if required.				
9-9.75	Suggest that existing overhead lines in this section should be removed	<p>The existing electricity transmission network provides power, via the local distribution network, into the local area where it is used in homes and businesses. Such lines cannot just be removed as power supplies would not be maintained.</p> <p>The need case and funding for the Project is to deliver the new network reinforcement needed, rather than to remove existing overhead lines which would need to be replaced by another form of connection such as underground cables.</p> <p>Unless required for crossings or mitigation, undergrounding existing overhead lines on the transmission network would not be in accordance with National Policy Statement (NPS) EN-5 and would result in substantial cost to bill payers. There may also be significant environmental impacts due to the removal works on sensitive ecological and archaeological receptors as well as constraints from either existing buildings or unsuitable ground conditions.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-9.76	Suggest that existing overhead lines in this section should be replaced by underground cables	<p>National Policy Statement (NPS) EN-5 establishes the position that the starting basis for new connections is a presumption on the acceptability of overhead lines but with this presumption reversed within designated landscapes and in certain other circumstances.</p> <p>The existing electricity transmission network provides power, via the local distribution network, into the local area where it is used in homes and businesses. The need case and funding for the Project is to deliver the new network reinforcement needed, rather than to remove existing overhead lines by undergrounding them.</p> <p>We have identified a number of locations where we are proposing to place existing overhead lines underground. These locations are where existing 132 kV and lower voltage lattice pylon lines are crossed by the proposed 400 kV overhead line and / or mitigation of effects are considered necessary. This includes locations such as at Mellis, between Offton and Bramford Substation, to the south of Bramford Substation and near Fuller Street.</p> <p>Unless required for mitigation, undergrounding existing overhead lines on the transmission network would not be in accordance with NPS EN-5 and would result in substantial cost to bill payers. There may also be significant environmental impacts due to the removal works on sensitive ecological and archaeological receptors as well as constraints from either existing built form or unsuitable ground conditions.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-9.77	Suggest that the existing overhead lines in this section are reinforced / upgraded instead	The existing transmission network in the region was upgraded during 2022 and 2023 to ensure the system is running at its most efficient performance. The existing assets / networks are not able to be upgraded sufficiently to cope with the new future demands expected on the network. As a result, new lines and substations would be required to accommodate the changing demands on the network.			X	
9-9.78	Suggest that the Project is routed away from populated / residential areas	<p>Deciding where and how to build new high voltage electricity lines is a complex issue and National Grid is mindful of the potential effects this infrastructure may have on local communities and the concerns these may bring. We recognise that people living near our transmission infrastructure, including high voltage overhead lines, may have concerns about audible noise and potential health impacts. It has sometimes been suggested that minimum distances between properties and overhead lines should be prescribed.</p> <p>We do not consider this appropriate since each instance must be dealt with on its merits. However, we have always sought to route new lines away from residential property on grounds of general amenity where possible.</p> <p>We have undertaken a noise and vibration assessment which can be found in the Environmental Statement (ES), Chapter 14: Noise and Vibration (document reference 6.14) that forms part of the Environmental Impact Assessment (EIA) for the Project. Noise levels and the effect on residential properties as well as other</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>sensitive areas, such as hospitals and schools, are carefully considered during planning, assessed according to the appropriate UK standards, and mitigated where necessary. We set strict technical standards for the equipment we install on our network. These will apply to the proposed new East Anglia Connection Node (EACN) substation and Tilbury North substation and extensions required to the existing Norwich Main, Bramford, and Tilbury Substations. These standards include requirements to ensure the occurrence of audible noise is eliminated or reduced as far as practicable. Therefore, significant adverse effects from noise are not expected.</p> <p>Noise from overhead lines is predominately determined by the conductor design, voltage and weather conditions. The overhead line will be designed using a relatively quiet conductor that meets the design specification required, and operational noise is not likely to be significant at nearby sensitive receptors under any weather conditions. Pylon fittings, such as insulators, dampers, spacers, and clamps, are also designed and procured in accordance with a series of National Grid Technical Specifications to reduce the potential for audible noise and tones to occur from all types of fittings. Where noise does occur, it is likely to be localised and of short duration. If this is due to a fault, action can be taken to rectify it. A technical note has been submitted as part of the application for development consent to support scoping out noise</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>associated with overhead lines from the Environmental Statement (ES).</p> <p>In addition, we have undertaken a Landscape and Visual Impact Assessment (LVIA) for the Project. This includes an assessment on both landscape character and visual amenity. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13).</p> <p>The health and safety of the public, local communities and employees is central to everything that we do. The UK has a carefully thought-out set of policies for protecting us all against Electric and Magnetic Fields (EMFs), the main component of which is exposure guidelines. The exposure guidelines are set by independent scientific bodies and are based on decades-long studies into the effects of EMFs and ill health. After those decades of research, the weight of evidence is against there being any health risks of EMFs below the guideline limits. Our approach is to ensure that our network comply with those policies, which are set by Government on the advice of their independent advisors. The Project is designed to ensure it is fully compliant with these policies and guidelines. This ensures that health concerns are properly and adequately addressed.</p> <p>Policies for both noise and EMF are incorporated into the decision-making process for development consent as set out in National Policy Statement (NPS) EN-5. It is</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		National Grid's policy to ensure that all its equipment complies fully with those policies and guidelines. The application for a Development Consent Order (DCO) includes assessments against these policies, including both construction and operational noise and EMF.				
9-9.79	Suggest that the Project should run in closer to / parallel to the existing overhead lines	<p>National Grid notes the potential for close paralleling existing overhead lines to reduce the level of effects that may arise from a new overhead line.</p> <p>However, where existing overhead lines are present along the proposed route, there are constraints and features that mean, overall, we consider close paralleling would lead to greater effects on receptors in the area and be less compliant with the Holford Rules or be less consistent with the policy to be economic and efficient. A summary of the Holford Rules is provided within Appendix I22 of this report. A number of residential properties are present in close proximity to the existing 400 kV overhead line meaning that if the overhead lines were close paralleled it would result in the properties having an overhead line close to both sides. There are also some locations where the combination of existing physical and environmental features (road infrastructure, commercial and residential properties etc) present very substantial challenges to routeing and siting. As a result, whilst close paralleling may appear beneficial in some sections, overall, the increased environmental effects where the overhead lines have to converge and diverge, and those increased</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		effects on properties with overhead lines on both sides are considered greater than those introduced by a new overhead line separated from existing 400 kV overhead lines. Whilst crossings and use of underground cable technology may be able to address various constrained locations, we consider the costs and environmental effects arising from the additional infrastructure required to be less compliant with our duties and relevant policies.				
9-9.80	Suggest that underground cables are used for the entirety of this section	<p>National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors.</p> <p>National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is "<i>that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or Area of Outstanding Natural Beauty)</i>". Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was</p>		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>justified. Therefore, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider this section in its entirety would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.</p> <p>Therefore, whilst undergrounding the whole of this section is not considered appropriate, our proposals do include underground cable within the Dedham Vale National Landscape (previously known as Area of</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Outstanding Natural Beauty (AONB)) in accordance with NPS EN-5. Prior to our 2023 non-statutory consultation we identified the need to extend the underground cable beyond the National Landscape boundary because of potential effects, we have further extended this section of underground cable following consideration of feedback on our 2023 non-statutory consultation and additional investigation into potential effects. We also identified an approximately 4 km section near Great Horkesley as meeting the particularly sensitive criteria where underground cable is also proposed. Additionally, underground cable is proposed at Fairstead for a 400 kV overhead line crossing.				
9-9.81	Suggest that underground cables are used in populated / residential areas	<p>National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors.</p> <p>National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is '<i>that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or Area of Outstanding Natural Beauty (AONB))</i>'. 		<p>undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project from Stanford-le-Hope north to the A127 would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.</p> <p>In relation to potential aviation impacts, National Grid has appointed an independent aviation consultancy who has engaged with Thurrock Airfield (with National Grid also present) to inform their impact assessment. As a result, changes have been made in this area by altering the design to lower height pylons running parallel to the existing 132 kV overhead line. Given the existence of the 132 kV overhead line, the addition of the proposed National Grid pylons is assessed to not be detrimental to the operability of Thurrock Airfield. The need for underground cables is not justified in the grounds of aviation impacts.</p> <p>We are continuing to engage with the operators to confirm the acceptability of the proposals. Further information on the assessment of airfields can be found</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		in the Environmental Statement (ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).				
9-9.83	Suggest that the use of underground cables should be extended north in this section to the A13 crossing (e.g. to reduce the potential impact to the Site of Special Scientific Interest (SSSI) habitats located east of East Tilbury where migrating birds would be travelling to those marshes)	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>"that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or Area of Outstanding Natural Beauty (AONB))"</i> . Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project from Tilbury North substation to the A13 crossing would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
9-9.84	Suggest that the Project is routed through the Fens at Orsett (instead of near Horndon on the Hill)	The exact route proposed in the respondent's feedback is not clear, however alternative routes passing to the west of the Project have been considered but considered to be less preferred. Whilst noting effects at Horndon on the Hill may be reduced, a route west of Bulphan was less preferred, as set out in the 2023 Design Development Report (available on the Project website), due to a transfer of effects and increased effects on the Grade I listed church at Bulphan. It is also			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		expected to lead to greater effects on Thurrock Airfield likely to lead to either its closure or a section of underground cable at much greater cost. Routes further west into Orsett Fen present technical challenges for onwards routing past Orsett and are constrained to the same general corridor to cross the A13. Some reduction in effects may occur at Horndon on the Hill but is matched (or exceeded) by a transfer of effects to other receptors on a route that is longer, less direct and less consistent with Holford Rule 3. Therefore, no change is proposed.				
9-9.85	Suggest that the Project uses underground cables at Orsett Golf Club	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is " <i>that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or Area of Outstanding Natural Beauty (AONB))</i> ". Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at Orsett Golf Course would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
9-9.86	Suggest that the Project is rerouted to the area to the east of Orsett Golf Club / Disagree with National	National Grid has considered the respondent's feedback and has reviewed multiple alternative alignments in this			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	Grid regarding this not being possible due to the presence of a landfill site, as further research has indicated that this is not the case, and that the land is much lower than the course and is not landfill, and disagree that the Project could not be located on an industrial area (rather than on greenfield)	area. We have proposed a slight change to the alignment between TB260-TB261 which would cross the course at a location further north and at an increased height, which we believe mitigates impacts to the playability of the course. A route to the east of the golf club would increase interaction with the quarry, would introduce additional angle pylons in order to divert around the course, introducing engineering complexities and increasing environmental impacts due to the requirement to cross a section of woodland. A route round the east of the course is therefore less preferred and is not being taken forward.				
9-9.87	Suggest that the Project is relocated further west to follow the existing lines (plan provided by respondent) to mitigate impact on residential properties along Horndon Road	National Grid has considered alternatives to the west of Saffron Gardens or following the existing 132 kV connection as set out in the 2023 and 2024 Design Development Reports but considered them less preferred due to transfer of effects and greater heritage effects for the former and insufficient space between existing residential properties for the latter. In the absence of new evidence or the identification of further factors no change is proposed.			X	
9-9.88	Suggest that the Project is rerouted to follow the A13	The 2022 Corridor and Preliminary Routeing and Siting Study considered alternative corridors including a corridor via Rayleigh Substation and broadly following the A13 and existing overhead lattice pylon line. This was less preferred due to very constrained routeing at some locations and also because of greater effects on			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		areas designated for ecological interest such as Special Protection Areas (SPA). Legislation is such that where available, other corridors should be followed where effects on the SPA are reduced. In the absence of new evidence or the identification of further factors there is no change in these factors and no change is proposed.				
9-9.89	Suggest that the Project is rerouted to avoid the loss of trees that have recently been planted around Orsett Golf Club by the Thames Chase Trust	<p>National Grid has considered feedback from Orsett Golf Course and has reviewed multiple alternative alignments. A route to the east of the golf club would increase interaction with the quarry, would introduce additional angle pylons in order to divert around the course which would be less compliant with the Holford Rules, introducing engineering complexities and increasing environmental impacts due to the requirement to cross a section of woodland. A summary of the Holford Rules is provided within Appendix I22 of this report. A route round the east of the course is therefore less preferred and is not being taken forward. We have proposed a slight change to the alignment between TB260-TB261 which would cross the course at a location further north and at an increased height, which we believe mitigates impacts to the playability of the course.</p> <p>We have undertaken an Environmental Impact Assessment (EIA) which has assessed impacts of the Project and recommended mitigation where required.</p>			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-9.90	Suggest that the pylons at Orsett Golf Club are instead sited to the back of the 16th green and 17th tee on farmland and landfill areas / Suggest that if the land is not stable enough then the pylons are seated on a pile foundation	National Grid has considered feedback from Orsett Golf Course and has reviewed multiple alternative alignments. A route to the east of the golf club would increase interaction with the quarry, would introduce additional angle pylons in order to divert around the course which would be less compliant with the Holford Rules, introducing engineering complexities and increasing environmental impacts due to the requirement to cross a section of woodland. A summary of the Holford Rules is provided within Appendix I22 of this report. A route round the east of the course is therefore less preferred and is not being taken forward. We have proposed a slight change to the alignment between TB260-TB261 which would cross the course at a location further north and at an increased height, which we believe mitigates impacts to the playability of the course.			X	X
9-9.91	Suggest that the Project is rerouted further by Cholleys Farmhouse (e.g. this is derelict and will mitigate impact on views and on residents)	National Grid has reviewed the respondent's suggestion for the alignment to either follow the 132 kV overhead line, or alternatively, to pass to the western side of Saffron Gardens noting that Cholley's Farm (a Grade II Listed building) was in their opinion derelict. In the absence of new evidence, the reasons for not preferring a route close to or adopting the 132 kV overhead line, as set out in the 2023 Design Development Report (available on the Project website), remain valid. There is insufficient space between residential properties as well as constraints from previous minerals and landfill			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		workings and the routing of a gas pipeline. The state of repair of the listed building also has no bearing on the validity of the listing. For these reasons, no change is proposed.				
9-9.92	Suggest that at Orsett Golf Club, the Project is relocated by 100 yards onto a gravel pit (which runs directly behind the Project)	National Grid has considered feedback from Orsett Golf Course and has reviewed multiple alternative alignments. A route to the east of the golf club would increase interaction with the quarry, would introduce additional angle pylons in order to divert around the course which would be less compliant with the Holford Rules, introducing engineering complexities and increasing environmental impacts due to the requirement to cross a section of woodland. A summary of the Holford Rules is provided within Appendix I22 of this report. A route round the east of the course is therefore less preferred and is not being taken forward. We have proposed a slight change to the alignment between TB260-TB261 which would cross the course at a location further north and at an increased height, which we believe mitigates impacts to the playability of the course.			X	X
9-9.93	Suggest that the Project is rerouted approximately 150 m south of the current proposal at Orsett Golf Club (e.g. to mitigate impact on this historical local asset)	National Grid has considered feedback from Orsett Golf Course and has reviewed multiple alternative alignments. A route to the east of the golf club would increase interaction with the quarry, would introduce additional angle pylons in order to divert around the course which would be less compliant with the Holford			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Rules, introducing engineering complexities and increasing environmental impacts due to the requirement to cross a section of woodland. A summary of the Holford Rules is provided within Appendix I22 of this report. A route round the east of the course is therefore less preferred and is not being taken forward.				
9-9.94	Suggest that underground cables are used as the Project passes under Orsett Golf Club, and that these are undertaken through the use of micro-tunnelling (instead of cut and cover excavation technique)	<p>National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>"that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or Area of Outstanding Natural Beauty (AONB))"</i>. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified.</p> <p>Therefore, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25).</p> <p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at Orsett Golf Course would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.</p>				
9-9.95	Suggest that the Pylon TB260 and / or TB261 is relocated to mitigate impact on Orsett Golf Club	National Grid has considered feedback from Orsett Golf Course and has reviewed multiple alternative alignments. We have proposed a slight change to the alignment between TB260-TB261 which would cross the course at a location further north and at an increased			X	X

9-9.98	Suggest that Pylons TB259, TB260 and TB261 are relocated with the Project instead utilising the existing route south-east of the club then connecting to Pylons TB262 and TB263 as proposed by	National Grid has considered feedback from Orsett Golf Course and has reviewed multiple alternative alignments. A route to the east of the golf club would increase interaction with the quarry, would introduce			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	National Grid (e.g. to bypass and mitigate impact on Orsett Golf Club)	additional angle pylons in order to divert around the course which would be less compliant with the Holford Rules, introducing engineering complexities and increasing environmental impacts due to the requirement to cross a section of woodland. A summary of the Holford Rules is provided within Appendix I22 of this report. A route round the east of the course is therefore less preferred and is not being taken forward. We have proposed a slight change to the alignment between TB260-TB261 which would cross the course at a location further north and at an increased height, which we believe mitigates impacts to the playability of the course.				
9-9.99	Suggest that the Project is re-routed to the west in conjunction with the proposed Lower Thames Crossing which would avoid impact on Orsett Golf Course	With two existing overhead lines immediately adjacent to the proposed Lower Thames Crossing and various heritage assets and residential property to either side of these infrastructure elements, there is insufficient space to also route the Project. This suggestion is therefore not viable and not taken forward.			X	
9-9.100	Criticism that the Project transitions to underground cables immediately after the practice area / Suggest that the substation is relocated north by 400 yards (e.g. to mitigate visual impact)	The transition to underground cable was located in response to the need to cross the Lower Thames Crossing (LTC) proposals with underground cables due to insufficient space being available to cross with overhead line. National Grid's duties to be economic and efficient guide the need to ensure the length of the 400 kV cable is designed to be as short as possible. Extending the underground cable to the north of the golf			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		course would increase costs by several million pounds and would also require the use of open cut trenches to install cables across the golf course with closure of the crossed holes over many months and with increased requirement for tree removal. On this basis, no change is proposed.				
9-9.101	Suggest the Project is rerouted to follow route provided by respondent (plan provided by respondent)	<p>The route and technology parts of the response are considered less preferred and not taken forward as part of the proposals on the basis of the following reasons.</p> <p>Parts of the proposed route coincides with corridor sections considered previously as set out in the Corridor and Preliminary Routeing and Siting Study (CPRSS) published as part of the 2022 non-statutory consultation. The reasons for these continuing to be less preferred are unchanged as no new evidence is provided. They include, for example, the route south from Feering to Rayleigh which amongst other constraints has the potential for greater interface with the Special Protection Area (SPA) designations and qualifying features, and as such is less preferred to the Project which is at much greater distance from the designated areas.</p> <p>It is noted that some sections of the proposed route are relatively unconstrained however there are also some sections that are heavily constrained. Some examples of these constraint areas include the following: the crossing of the Waveney is still required (contrary to the respondents assertion) and is in the vicinity of Scole with a range of constraints to routeing; the section around</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Yaxley and Eye is also very constrained by the extent of existing residential properties and built development; installing as underground cable as part of improving the A12 has been raised by other feedback but would lead to substantial disruption to traffic movement during construction as well as during maintenance given that a requirement for excavation to repair cables can be envisaged at some stage. As such the combination of proposed route alignment and technology is considered less preferred.</p> <p>The response also proposes the use of underground cables to reduce effects on residential amenity in various locations or to facilitate installation in tandem with potential road improvements. This is inconsistent with policy on the use of underground cables as set out in National Policy Statement (NPS) EN-5 and is also inconsistent with National Grid's duties under the Electricity Act 1989.</p>				
9-9.102	Suggest that the Project is rerouted to continue south from Stanford-le-Hope between Linford and Mucking and then around East Tilbury in order to reach Tilbury Substation	<p>National Grid notes the respondent's feedback. Alternative corridors following the Rayleigh to Tilbury overhead line and to the east of Tilbury have been considered previously but are less preferred. The reasons are reported within the Corridor and Preliminary Routing & Siting Study (CPRSS) published in 2022 and within the 2023 Design Development Report (available on the Project website). The main reason for not preferring the Rayleigh to Tilbury corridor was impacts on ecological designations including Special Protection</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Area (SPA) with other routes to be taken forward in preference if they avoid or have reduced interface with the SPA and to not route to the east of East Tilbury due to the corridor being overly constrained by other infrastructure and made ground in addition to increasing community effects. In the absence of new evidence or the identification of further factors there is no change proposed.				
9-9.103	Suggest that taller pylons are used at Orsett Golf Club to mitigate the impact of golfers inadvertently striking the overhead lines	National Grid has considered feedback from Orsett Golf Course and has reviewed multiple alternative alignments. We have proposed a slight change to the alignment between TB260-TB261 which would cross the course at a location further north and at an increased height, which we believe mitigates impacts to the playability of the course.			X	X
9-9.104	Suggest that underground cables are considered for Orsett Golf Club, and that a fast track, low impact approach is taken to burying cables at / within vicinity of the golf club to minimise disruption	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>"that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated</i>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p><i>landscape (i.e. National Parks, The Broads, or Area of Outstanding Natural Beauty (AONB))". Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25).</i></p> <p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at Orsett Golf Course would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		(document reference 6.13) and this has identified any need for additional mitigation.				
9-9.105	Suggest that the Project is rerouted to take a more easterly / southerly route after Pylon TB259, such that Pylons TB260 and TB161 are relocated to an industrial brownfield site, before skirting to the southern end across the Golf Club practice area, or if this is not possible, suggest relocating Pylon TB260 at the extreme westerly corner of the Golf Club, before skirting the southerly end across the Golf Club practice area	National Grid has considered feedback from Orsett Golf Course and has reviewed multiple alternative alignments. A route to the east of the golf club would increase interaction with the quarry, would introduce additional angle pylons in order to divert around the course which would be less compliant with the Holford Rules, introducing engineering complexities and increasing environmental impacts due to the requirement to cross a section of woodland. A summary of the Holford Rules is provided within Appendix I22 of this report. A route round the east of the course is therefore less preferred and is not being taken forward. We have proposed a slight change to the alignment between TB260-TB261 which would cross the course at a location further north and at an increased height, which we believe mitigates impacts to the playability of the course.			X	X
9-9.106	Suggest that the Project is routed south-east (of Thurrock) until the land is passed, and then the Project is routed north	National Grid are unsure which part of the Project the respondent is referring to and without further details we are unable to comment further.			X	
9-9.107	Suggest that underground cables are used from Orsett Golf Club to Tilbury Substation	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>cost, environment, socio-economic and engineering factors.</p> <p>National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>"that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or Area of Outstanding Natural Beauty (AONB))"</i>. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at Orsett Golf Course would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
9-9.108	Suggest that underground cables are used in the area on the approach to and departure of Thurrock Airfield (known as Runway 25)	<p>National Grid has appointed an independent aviation consultancy who has engaged with Thurrock Airfield (with National Grid also present) to inform their impact assessment. As a result, changes have been made in this area by altering the design to lower height pylons running parallel to the existing 132 kV overhead line. Given the existence of the 132 kV overhead line, the addition of the proposed National Grid pylons is assessed to not be detrimental to the operability of Thurrock Airfield. The need for underground cables is not justified in the grounds of aviation impacts. Further information on the assessment of airfields can be found in the Environmental Statement (ES) Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).</p> <p>We will continue to engage with the airfield operators to confirm the acceptability of the proposals.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-9.109	Suggest that either the Project line is straightened between Pylons TB255 and TB258, keeping the line to the west side of Buckingham Hill Road (as this land may be landfill), or that the line is straightened between Pylons TB255 and TB258, with the pylon situated on the hardcore yard on the west side of the road to avoid encroaching upon the Thames Estuary Site of Special Scientific Interest (SSSI) notification project area (e.g. potentially removing the need for an additional pylon, offering a potential cost-saving opportunity for National Grid; to eliminate the necessity for substantial disturbance compensation payments; to remove impact from Maple Park to the north, a valued public open space that is scarce in this part of Essex; to increase the distance from the gas pipe, reducing health and safety concerns)	National Grid has considered the respondent's feedback, and we have reviewed multiple alternative alignments in this location. Due to the presence of Buckingham Hill Road landfill, which does not provide suitable ground conditions for pylon construction, we do not consider it possible to avoid a route to the east of the road. We do not consider that either the Sites of Special Scientific Interest (SSSI) possible notification, nor the use as a community space would be materially compromised by the routeing. We do propose to progress with an extended Order Limit to the west to retain the potential to position a pylon on the household recycling site (which may not be made ground) but this would only progress if an alternative site for such a facility comes forward in an appropriate timescale and if the recycling site is confirmed to have suitable ground conditions.			X	
9-9.110	Suggest that the Project is rerouted north of Horndon-on-the-Hill from Pylon TB233 further west closer to the existing UK Power Networks (UKPN) 132kV line, and away from east facing view of Langdon Ridge Site of Special Scientific Interest (SSSI), into a lower elevation where it does not impose upon the views. The Project should then continue until Pylon TB260/261 (plan provided by respondent)	In response to feedback, National Grid has made a change to the route published at the statutory consultation to closely parallel the 132 kV overhead line in this area immediately to the west of Langdon Hills Golf and Country Club. This includes changing a number of pylons to low height lattice pylons to retain appropriate clearance for flight activity from Thurrock Airfield. Effects from the new infrastructure are not assessed to be at a level to justify replacing the 132 kV overhead line with underground cable. Further information on the assessment of airfields can be found			X	X

		in the Environmental Statement (ES) Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).				
9-9.111	Suggest that Pylons TB248 to TB261 are relocated to reduce the impact on Horndon on the Hill / Suggest that Pylons TB248, TB259, TB260 and TB261 are relocated away from Horndon Village (e.g. to mitigate impact on heritage and views)	National Grid has reviewed the suggestion for the alignment to be moved further from Horndon on the Hill and Horndon Village. Alternatives are either to follow the 132 kV overhead line, or alternatively, to pass to the western side of Saffron Gardens. In the absence of new evidence or the identification of further factors, the reasons for not preferring a route close to or adopting the 132 kV overhead line, as set out in the 2023 and 2024 Design Development Reports (available on the Project website) remain valid. There is insufficient space between residential properties as well as constraints from previous minerals and landfill workings and the routeing of a gas pipeline. Routeing closer to Cholley's Farm increases heritage effects and transfers community impacts to other residential properties. For these reasons no change is proposed.			X	
9-9.112	Suggest that underground cables are used for the Project between Pylons TB244 and TB254	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>clear (paragraph 2.9.20) that the government's position is “that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or Area of Outstanding Natural Beauty (AONB))”. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. 		<p>justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at Orsett Golf Course would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.</p>				
9-9.116	Suggest that proposed access road from North Hill (B1007) which is planned to the east of the Project on land adjacent to the B1007 is rerouted to the west	Following a change to the alignment between TB234 and TB243 (now TB237 and TB244) the access from			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	of the Project for access from Brentwood Road rather than North Hill (plan provided by respondent) (e.g. to mitigate impact on respondents' land)	North Hill has been amended as requested by the respondent.				
9-9.117	Suggest that Pylons TB255 to TB261 are relocated away from Orsett Golf Club (e.g. to mitigate impact on views, business and health and safety issues from the likelihood of balls striking on the cables)	National Grid has considered feedback from Orsett Golf Course and has reviewed multiple alternative alignments. A route to the east of the golf club would increase interaction with the quarry, would introduce additional angle pylons in order to divert around the course which would be less compliant with the Holford Rules, introducing engineering complexities and increasing environmental impacts due to the requirement to cross a section of woodland. A summary of the Holford Rules is provided within Appendix I22 of this report. A route round the east of the course is therefore less preferred and is not being taken forward. We have proposed a slight change to the alignment between TB260-TB261 which would cross the course at a location further north and at an increased height, which we believe mitigates impacts to the playability of the course.			X	X
9-9.118	Suggest the project reverts to original plan, routing directly from the north into Tilbury Substation, as this would move the tunnelling start / end areas to approximately 700 m away from the closest properties, mitigating the potential impact on the environment, such as noise and dust, on local residents and the impact on the Port of Tilbury	National Grid notes the respondent's feedback but considers that the very substantial challenges to connect to Tilbury substation outweigh the benefits perceived by the respondent. Through careful design and construction the effects of noise and dust and other environmental effects can be managed to be at acceptable levels whilst keeping costs low and avoiding the potential for effects			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		on the growth potential and economic activity at the Port of Tilbury and associated developments. Tunnelling as suggested adds substantially to costs and presents technical risk through the tunnel head being within a flood storage area. No change to the Project has been made in response to this feedback				
9-9.119	Suggest the project is underground into the Tilbury Substation as surface-level restrictions exist north of the Tilbury Substation, such as the purpose-built water vole mitigation area, required by the Port of Tilbury (Expansion) Order 2019, which means a trenchless undergrounding method would be necessary	Following consideration of feedback, direct engagement with relevant parties and further technical review, National Grid has modified the connection arrangements at Tilbury. We now propose to connect to the National Electricity Transmission System by establishing a new 'Tilbury North' substation to the south of Orsett Golf Course which would be connected into the existing 400 kV overhead line (running north from the existing Tilbury Substation). As such the concerns raised will not arise, so the feedback has been superseded by a change to the Project.			X	X
9-9.120	Suggest the Project uses underground cables into the Tilbury Substation, using Tunnel Boring Machine (TBM) undergrounding method as Lower Thames Crossing (LTC) is using this method nearby and so there is potential for a coordinated approach to the management of TBM waste arisings, and TBM has lower ongoing maintenance costs when compared with Horizontal Directional Drilling (HDD)	Following consideration of feedback, direct engagement with relevant parties and further technical review, National Grid has modified the connection arrangements at Tilbury. We now propose to connect to the National Electricity Transmission System by establishing a new 'Tilbury North' substation to the south of Orsett Golf Course which would be connected into the existing 400 kV overhead line (running north from the existing Tilbury Substation). As such the concerns raised will not arise,			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		so the feedback has been superseded by a change to the Project.				
9-9.121	Request that TB-CC11 is relocated as under the PA08, compulsory acquisition would not be granted to National Grid due to the land being held for the purposes of a statutory undertaking, as the statutory harbour authority is holding the land for future development purposes, therefore an alternative location must be identified	The Order Limits of the Project no longer extend to the Port of Tilbury.			X	X
9-9.122	Suggest National Grid find an alternative location for TB-CC12 to mitigate impact on Port of Tilbury London Limited (PoTLL) proposal for Tilbury3 and limiting Port development in the area / Criticism that the Project is already having a direct impact on investment activity due to National Grid failing to adequately engage with PoTLL about this proposed use of land / National Grid must review its proposals and identify an alternative location for TB-CC12 that will not cause serious detriment to PoTLL's statutory undertaking, and which does not fetter or limit Port development in the area	The Order Limits of the Project no longer extend to the Port of Tilbury.			X	X
9-9.123	Concern about the impact of the Project on Orsett North and South Services (twin petrol filling station sites), particularly the diversion of services immediately to the east of the sites, and request that the Project will not impact the service stations or their access and egress arrangements (e.g. in	It is not expected that the services will need to be diverted. There is the potential, based on induced currents from the 400 kV overhead line, that alternating current mitigation measures may need to be installed to the ferrous pipeline operated by National Gas and Cadent running adjacent to the petrol stations. The			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	relation to diversions, welfare of road users, road safety). With this, suggest that specialist engineering solutions in relation to electric surge protection and electrostatic discharges are considered for the Project at Orsett North and South Services (e.g. to mitigate impact on business), and request that further engagement is undertaken with the service operator	<p>scope and extent of such mitigation measures will be dependent on the final design arrangements of the Project which will continue to evolve. Factors including, length of parallelism, site specific soil resistivity etc combine to define the requirement for mitigation. The mitigation itself is typically achieved by the installation, alongside the ferrous pipeline (in an area which is likely to have been previously disturbed during construction), of additional earthing which extends away from the crossing point. Consultation between National Grid and the relevant utility provider will confirm the requirement for installed mitigation, based on the final 400 kV design arrangements, which will be implemented by the relevant utility provider under their existing utility operation and maintenance provisions.</p> <p>Impact due to new overhead powerlines (electric surge and electrostatic discharges)</p> <p>National Grid have engaged electrical earthing specialist consultants to assess this. Because petrol stations are considered 'Knowledgeable Authorities' under ENA ERec S41, we aim to try and keep them out of the 650V earth potential rise (EPR) contour created by any nearby pylon during a fault. We have determined through modelling that the lowest EPR contour of concern is typically 200 m away from a pylon. The petrol station properties fall outside of this.</p> <p>Furthermore, we will request and review your ATEX zoning drawings in order to make a site-specific</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>assessment of contour extents to ensure that faults on the pylons do not cause spark risks.</p> <p>We expect a short road closure on the A13 (approximately up to four hours at night) to get scaffold nets across the A13 and later to remove the nets. Other than this and the aforementioned impact on your slip roads and the A13 to install the AC mitigation, we don't foresee any further interference.</p> <p>If a third party has concerns and wishes to discuss further with the Project team, please do not hesitate to contact the Project lands team to discuss: Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.</p> <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD.</p>				
9-9.124	Suggest that the Project at Horndon on the Hill should be rerouted between the two listed buildings known as Cholleys Farmhouse and Saffron Gardens Farm (e.g. behind the modern barns to the west of Saffron Gardens Farm to mitigate impact on views of the green belt from Orsett Road, Pump Street and Horndon Road, and to reduce number of pylons required, and subsequent cost)	<p>National Grid has reviewed the suggestion for the alignment to pass between Saffron Gardens and Cholley's Farmhouse. In the absence of new evidence or the identification of further factors, the reasons for not preferring the proposed route or a route close to or adopting the existing 132 kV overhead line, as set out in the 2023 and 2024 Design Development Reports (available on the Project website) remain valid.</p> <p>There is insufficient space between the residential properties as well as constraints from previous minerals</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		and landfill workings and the routeing of a high-pressure gas pipeline. The state of repair of the listed building (Cholley's Farmhouse) also has no bearing on the validity of the listing and routeing closer to these properties transfers community impacts to other residential properties. For these reasons, no change is proposed.				
9-9.125	Suggest that Pylons TB258 and TB259 are relocated away from respondent's land near Stanford Road / Buckingham Hill Road, Thurrock (plan provided by respondent) (e.g. to mitigate impact on future residential development), and request that National Grid support the respondent in obtaining changes to the Lower Thames Crossing Scheme regarding a second land holding on Holford Road (plan provided by respondent)	National Grid is not able to get involved in discussions between third parties. The position of the pylons referred to (TB258 and TB259 which are now TB259 and TB260) are in part informed by the connection required south of the golf course and to the extent possible are positioned within an approximately 80 m wide safety zone from a gas pipeline, free from built development. Routes to the east are restricted by the historic landfill or interact with other quarrying/processing and to the south also interact with other made ground and secondary aggregate processing and require a large change of direction and are considered less consistent with Holford Rule 3. A summary of the Holford Rules is provided within Appendix I22 of this report.			X	
9-9.126	Suggest alternative route for the Project between Pylons TB240 and TB244 (e.g. to mitigate impact on respondent's oil recycling business), with Pylon TB244 becoming the turning point. With this, suggest an alternative access route using the lane between the B188 and Black Bush Lane	The alignment of TB240 to TB244 has been modified in this area with the principle influence being establishing an arrangement to allow for continued flight activity at Thurrock airfield. The Project alignment also meets previously expressed preferences for a parallel arrangement with existing overhead line to reduce			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		landscape effects. Further engagement with the respondent has proposed specific arrangements which allow for continued use of the majority of the landholding for the business activity subject to specific arrangements to deal with limited periods when restrictions may be required. National Grid is continuing to develop the detail of the arrangements with the landowner. An amendment to access arrangements has been incorporated.				
9-9.127	<p>Concern about pylons located in Flood Zone 3 of the Tilbury Flood Storage Area, and suggest that justification should be provided in the Flood Risk Assessment (FRA) as to why the pylons cannot be relocated into Flood Zone 1. If they are to remain in Flood Zone 3 then level for level compensatory flood storage should be provided for the volume of storage taken up by each tower, to the height of the 1% AEP with climate change, to ensure the towers do not increase flood risk elsewhere, as required by the Exception Test. The flood storage should be provided by lowering higher land down to the level at which the flood storage was removed by the construction of the towers. This is particularly important in Flood Zone 3b where development should not result in a net loss of floodplain storage. The towers should also be designed to remain operational in a flood.</p> <p>Similarly, concern that, the substation at Tilbury is located in Flood Zone 3 and its location appears to</p>	<p>As detailed in the Flood Risk Assessment (FRA) (document reference 7.9) that has been prepared, Project design changes since statutory consultation have removed all works (both temporary and permanent) from the Tilbury Flood Storage Area and the defended floodplain of the River Thames (Flood Zone 2 and Flood Zone 3).</p> <p>Proposals to extend the existing Tilbury Substation have also been removed from the Project, with the alternative, a new substation at Tilbury North, adjacent to Orsett Golf Course and situated in Flood Zone 1.</p>	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	overlay many ordinary watercourses. The impacts on the ordinary watercourses should be assessed in the FRA and permits for the works should be obtained from the LLFA. The flood zones in this location are defended tidal flood zones so an assessment of the impacts of the removal of flood storage on the breach flood risk within the area should be undertaken, and flood compensation provided if the impacts are not insignificant. The FRA should also detail how the substation would remain resilient and operational in a flood resulting from a breach of the flood defences					
9-9.128	Concern about compounds for the Project within the Tilbury Flood Storage Area, and oppose these unless offset capacity, temporary or otherwise, is provided for lost storage. Request for further details on these proposals	As detailed in the Flood Risk Assessment (FRA) (document reference 7.9) that has been prepared, Project design changes since statutory consultation have removed all proposed works (both temporary and permanent) from the Tilbury Flood Storage Area.	X			X
9-9.129	Suggest that trenchless crossing methods should be used for the Project across main river crossings within the Tilbury Flood Storage Area as once complete underground structures would have less effect on flood risk/flow routes. However, either method would require permits for all works within 8 m of fluvial main rivers and 16 m of tidal main rivers. For the proposed trenchless crossing to qualify for Flood Risk Activity Permit Exemption FRA3 then the cables should be laid at least 1.5 m below the hard	As detailed in the Flood Risk Assessment (FRA) (document reference 7.9) that has been prepared, Project design changes since statutory consultation have removed all proposed works (both temporary and permanent) from the Tilbury Flood Storage Area.	X			X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	bed of the river and should remain at this depth for a distance of 5 m beyond the banks of the river, among other requirements					
9-9.130	Suggest the use of underground cables between Pylons TB249 and TB255 (plan provided by respondent)	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is " <i>that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or Area of Outstanding Natural Beauty (AONB))</i> ". Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project between TB249 and TB255 would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
9-9.131	Suggest the Project is routed directly between Pylons TB249 and TB255 (plan provided by respondent)	National Grid has reviewed the respondent's suggestion for the alignment to either follow the 132 kV overhead line, or alternatively, to pass to the western side of Saffron Gardens. In the absence of new evidence, the reasons for not preferring a route close to or adopting the 132 kV overhead line, as set out in the 2023 and 2024 Design Development Report (available on the Project website), remain valid. There is insufficient space between residential properties as well as constraints from previous minerals and landfill workings			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		and the routing of a gas pipeline. The state of repair of the listed building at Cholley's Farm also has no bearing on the validity of the listing and therefore impacts to the setting of this building need to be taken into account. For these reasons, no change is proposed.				
9-9.132	Suggest the use of trenchless construction methods for underground cables for the Project near the Tilbury Loop Railway and A13 / Site of Special Scientific Interest (SSSI) enlargement project	National Grid has revised its proposals and made a change to the means to connect to Tilbury Substation. As such no works to the south of West Tilbury are now envisaged. Through engagement with Natural England, we are also advised that the focus of the Site of Special Scientific Interest (SSSI) enlargement project is to the east of the railway, and the alignment does not interact with areas under current consideration. As such this change is no longer relevant to the Project being progressed.	X			X
9-9.133	Suggestion that the Project is routed away from / the Project should not be located at a specific location	Further assessment and technical appraisal has been undertaken following feedback received from the statutory consultation and subsequent targeted consultations which has resulted in several changes. Further details on these changes can be found in this report and in the 2025 Design Development Report, published as part of the Development Consent Order (DCO) application.	X		X	
9-9.134	Suggestion that the Project is routed away from / the Project should not be located at Linford	National Grid has considered the respondent's feedback highlighting a preference for an alternative moved away from Linford. In the absence of a specific basis for the change or a proposed alternative alignment, we have			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		considered this feedback by following the guidance in the Holford Rules in developing the alignment. Guidelines on overhead line routeing are known as the 'Holford Rules' which remain a valuable tool in selecting and assessing potential overhead line route options as part of the options appraisal process. A summary of the Holford Rules is provided within Appendix I22 of this report. We are therefore not proposing a change to the alignment at Linford.				
9-9.135	Suggestion that the Project is routed away from / the Project should not be located at East Tilbury	National Grid has considered the respondent's feedback highlighting a preference for an alternative moved away from East Tilbury. Due to a change to the Project this change is no longer relevant to the Project being progressed.			X	
9-9.136	Suggestion that the Project is routed away from / the Project should not be located at Horndon on the Hill	National Grid has considered the respondent's feedback highlighting a preference for an alternative moved away from Horndon on the Hill. In the absence of a specific basis for the change or a proposed alternative alignment, we have considered this feedback by following the guidance in the Holford Rules in developing the alignment. Guidelines on overhead line routeing are known as the 'Holford Rules' which remain a valuable tool in selecting and assessing potential overhead line route options as part of the options appraisal process. A summary of the Holford Rules is provided within Appendix I22 of this report. We are therefore not		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		proposing a change to the alignment at Horndon on the Hill.				
9-9.137	Suggestion that the Project is routed away from / the Project should not be located at Stanford-le-Hope	National Grid has considered the respondent's feedback highlighting a preference for an alternative moved away from Stanford-le-Hope. In the absence of a specific basis for the change or a proposed alternative alignment, we have considered this feedback by following the guidance in the Holford Rules in developing the alignment. Guidelines on overhead line routeing are known as the 'Holford Rules' which remain a valuable tool in selecting and assessing potential overhead line route options as part of the options appraisal process. A summary of the Holford Rules is provided within Appendix I22 of this report. We are therefore not proposing a change to the alignment at Stanford-le-Hope.			X	
9-9.137-1	Suggest that the Project is rerouted around Horndon on the Hill to the south-east of the village	Re-routeing the Project to the south-east of Horndon on the Hill would require additional angle changes, be less direct and be less consistent with Holford Rule 3. A summary of the Holford Rules is provided within Appendix I22 of this report. It would also require the alignment to pass much more closely between residential properties and therefore is less consistent with Holford Rule Supplementary Notes. National Grid has also considered other alternatives including for the alignment to either follow the 132 kV overhead line, or alternatively, to pass to the western side of Saffron			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Gardens. In the absence of new information or new factors, both options are less preferred as the reasons set out in the 2023 and 2024 Design Development Report (available on the Project website), remain valid. There is insufficient space between residential properties as well as constraints from previous minerals and landfill workings and the routeing of a gas pipeline to follow in parallel or adopt the alignment of the existing 132 kV overhead line. Alternatives west of Saffron Gardens would increase heritage effects (including to Cholley's Farm despite its disrepair) and increase effects on general amenity by being routed close to and in main views from residential properties at Saffron Gardens. For these reasons no change is proposed.				
9-9.137-2	Oppose (if the Project were to change) the Project moving further west into respondent's land between Doesgate Lane and south of the railway line (as the land been identified for residential and commercial development) (plan showing land boundary provided by respondent), and request that respondent is informed as early as possible if statutory undertaker works will impact their land (between Doesgate Lane and south of the railway line)	National Grid notes the respondent's feedback. The alignment in this section has not changed since the statutory consultation.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Economic / Employment Impact						
9-9.138	Concern about negative impact on businesses in the area	<p>Through the routeing and siting exercise, National Grid has sought to reduce as far as practicable impacts to businesses.</p> <p>Impacts on local businesses within the Local Study Area (the Order Limits) and within the 3 km Study Area (where visual impact is likely to be an economic consideration) are assessed in Environmental Statement (ES) Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15). As part of this assessment, a range of mitigation measures have been considered to reduce disruption to businesses and their users during the construction phase of the Project. These measures are identified in ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15), the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) which accompany the Development Consent Order (DCO) application.</p>			X	
9-9.139	Concern about impact of the Project on delivery of the Thames Freeport, particularly at the Tilbury Tax Site / Criticism that impact of the Project on the Thames Freeport has not been assessed or considered	National Grid considers that there may be potential for the Project and Freeport to co-exist, though recognises that some restriction may be likely and decision making is inherently limited by uncertainty over freeport requirement. Having reviewed the requirements National Grid is taking forward an alternative connection arrangement that avoids interaction with the Freeport.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		This comprises a new substation to the south of Orsett Golf Course and connection into the existing YYJ overhead line.				
9-9.140	Concern about the impact of the Project access to and from the Port of Tilbury / Suggest that the Project should not access to and from the Port of Tilbury	Access road use by HGVs depends on various aspects including design of the Project along with how bulk materials are delivered to site. There has been a change to the connection arrangements into Tilbury with the connection now made into the overhead line some 3 to 4 km to the north of the port of Tilbury. This inherently reduces the demand for materials deliveries near the existing substation with the need for HGV movements in the vicinity of the port reduced and only occurring under certain scenarios. These are when bulk materials are imported to the Port of Tilbury albeit at volumes and rates well within the licensed tonnages that the port has historically supplied. There are also other import facilities available so the likelihood of an effect occurring is far from certain and is in the context of known issues (under some time and activity combinations), particularly around the so called 'Asda roundabout'. The roads in question are also public highways, so it is not possible to exclude use of the road.			X	
9-9.141	Concern that compound TB-CC12, south of Tilbury Substation, is located on land proposed for development for the Port of Tilbury (further details provided by respondent) / Concern about the impact of the Project on the feasibility and viability of Port	Following consideration of feedback, direct engagement with relevant parties and further technical review, National Grid has modified the connection arrangements at Tilbury. We now propose to connect to the National Electricity Transmission System by establishing a new			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>development plans / Concern about the impact of access and temporary infrastructure including construction compounds on the current operation and planned development of Port of Tilbury, through the following:</p> <ul style="list-style-type: none"> - by blocking and delaying the development, thereby negatively impacting the Port's function of meeting economic needs resiliently, and its future growth as an important element of the UK's economy, contrary to the NPSP, Freeport and wider delivery; - lead to a serious detriment to current and future operations by causing delays on its only road access point and within the Port, through the volume of construction and construction worker traffic, proposed traffic management measures, and works proposed to Substation Road; - as the Project will be an agent of change to the area that, without appropriate mitigation, will disrupt the Port's established use, operations and business; and - by putting Port of Tilbury London Limited (PoTLL) in the position where it will be seen to be causing impacts to the existing road network (as a receptor) when taken cumulatively with construction traffic associated with the Project, whilst at the same time, the impacts of the Project are not proposed on the same parts of the road network have not been and are not proposed to be assessed, with any delay to 	<p>'Tilbury North' substation to the south of Orsett Golf Course which would be connected into the existing 400 kV overhead line (running north from the existing Tilbury Substation). This was identified following review of several alternative locations which were less preferred. Sites further south would require additional underground cabling and are therefore less economic, sites to the north-west lead to additional constraints costs far exceeding any benefit due to further survey requirements and sites elsewhere on the overhead line section would require a parallel overhead line connection increasing impacts on Orsett golf course and to other residential receptors. The new connection arrangement into Tilbury North substation achieves the same (or under some circumstances improved) system performance as if connecting into the existing Tilbury Substation. The main reasons for making the change are that it removes the potential effects on important economic development sites (such as Freeport) where restrictions on development potential would be expected on part of the site with potentially regionally significant economic effects, reduces technical risks associated with installation of approximately 4.6 km of underground cable under a variety of existing infrastructure and is expected to be cost neutral and potentially cost beneficial. The change also simplifies the interface with the proposed Lower Thames Crossing (now crossed as overhead line) but does interact with an area under consultation for housing to the east of Chadwell St Mary,</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	construction only exacerbating this issue given the timelines of the cumulative projects	however there may be opportunities for site masterplanning to reduce the level of effect.				
9-9.142	Concern over the potential loss which could be caused by the incompatibility of the Project with Freeport Development, which represents between 6% and 16.5% of the claimed total economic benefit estimated for the entire Great Grid Upgrade, and between 6.5% and 17% of the total estimated number of the total estimated jobs created by decarbonisation of the whole National Grid / Criticism that this level of socio-economic harm cannot be justified or sustained when assessed against the benefits of all projects in the Great Grid Upgrade and are wholly disproportionate in the context of the last mile of the cable route approach to a single substation, particularly when an alternative exists that provides opportunities for coexistence and minimisation of impacts, reducing risk and maintaining delivery programme	The Order Limits of the Project no longer extend to the Port of Tilbury.			X	X
Environmental Impact						
9-9.143	Concern about negative impact of the Project on the Green Belt(s)	To facilitate the Project, it will be necessary to route through the Metropolitan Green Belt. National Grid has considered the effects on the Green Belt and all of the options connecting into Tilbury identified in the Corridor and Preliminary Routeing and Siting Study (CPRSS)			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>would result in new and upgraded infrastructure in the Green Belt.</p> <p>The National Electricity Transmission System (NETS) transports energy from where it is generated to where it is used, in homes, schools, hospitals, businesses, and factories. Electricity networks are an established feature in our landscapes, taking energy across open countryside to towns and cities where it is needed. To ensure the national electricity network can transport energy efficiently there are numerous electricity transmission connections crossing Green Belts. Many of these connections are by way of overhead lines. By their nature, electricity transmission infrastructure (overhead lines) within the Green Belt is inevitable due to the need to transport energy around the country and the need to avoid the most built-up areas around our towns and cities (Holford Rule Supplementary Note 1 - A summary of the Holford Rules is provided within Appendix I22 of this report).</p> <p>Some electricity infrastructure, such as overhead lines, are considered to be engineering operations. By the nature of their design, and the sensitive siting, some of this infrastructure such as pylons and conductors may not be considered inappropriate development in the Green Belt as they do not conflict with Green Belt purposes and preserve openness. Although overhead lines may occupy long corridors within Green Belt, they involve little physical change to the land through which</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>they pass and leave a large majority of the land beneath them free from development and therefore open.</p> <p>The Planning Statement (document reference 5.6), submitted with the application for development consent, includes an assessment of the Project against Green Belt planning policy (as contained in National Policy Statement EN-1 and the National Planning Policy Framework).</p>				
9-9.144	Concern that the Project will impact SSSIs	<p>Through routeing, siting and design development National Grid has sought to reduce, as far as practicable, impacts on biodiversity and in particular features of high ecological value such as Sites of Special Scientific Interest (SSSI). Although there are 22 SSSIs within the study area, current proposals avoid the majority of impacts on SSSIs, with no long-term negative impacts anticipated on any SSSIs as a result of the Project. Potential direct and indirect impacts on each SSSI within the study area have been considered within the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8) and any necessary mitigation detailed to ensure no significant residual effects.</p> <p>National Grid will continue to engage with Natural England.</p>			X	
9-9.145	Concern that the Project will impact ancient woodland	<p>Through routeing, siting and detailed design, National Grid has sought to reduce, as far as practicable, impacts on biodiversity and in particular features of high</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		ecological value, such as ancient woodland. A standard 15 m buffer from construction activities has been applied where practicable. Potential direct and indirect impacts on each block of ancient woodland within the study area have been considered within the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8) and any necessary mitigation detailed to ensure no significant residual effects. An ancient woodland and veteran tree mitigation strategy is included as part of the Outline Landscape and Ecological Management Plan (document reference 7.4). The Outline Landscape and Ecological Management Plan (document reference 7.4) has been developed in consultation with relevant stakeholders including Natural England.				
9-9.146	Concern that the Project will impact nature reserve / RSPB reserve / Special Protection Area (SPA)	Through routeing, siting and design development National Grid has sought to reduce, as far as practicable, impacts on biodiversity and in particular features of high ecological value, such as Royal Society for the Protection of Birds (RSPB) reserves. Potential direct and indirect impacts on RSPB reserves within the study area have been considered within the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8). No RSPB reserves are directly impacted by the Project.			X	
9-9.147	Concern that the Project will impact Ramsar site	Through routeing, siting and design development, National Grid has sought to reduce, as far as			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>practicable, impacts on biodiversity and in particular features of high ecological value, such as Ramsar sites.</p> <p>Although there are 13 Ramsar sites within the study area, current proposals avoid the majority of impacts, with no long-term negative impacts anticipated on any Ramsar site as a result of the Project. Potential direct and indirect impacts on each scoped in Ramsar site has been considered within the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8) and/or Habitats Regulations Assessment (HRA) depending on potential impact pathways. Any necessary mitigation has been detailed within the ES, HRA and the Outline Code of Construction Practice (CoCP) (document reference 7.2) to ensure no significant residual effects, as agreed with Natural England.</p>				
9-9.148	Concern that the Project will result in a negative impact on the environment / countryside generally (no details given)	<p>National Grid has sought to reduce, as far as practicable, impacts on the environment / countryside through routeing and siting and an ongoing iterative design process which has taken on board feedback at different stages of the Project. The iterative design process sought to avoid areas of highest concern, for examples through changes to the route alignment or changes to the method e.g. trenchless crossings.</p> <p>National Grid have engaged with a range of stakeholders (including Statutory Environmental Bodies (SEBs) and relevant Local Planning Authorities)</p>		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>throughout the development of the Project design and environmental assessment work.</p> <p>National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project. The results of this assessment are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation (and maintenance) of the Project and recommends appropriate mitigation measures to reduce potential effects.</p> <p>A number of mitigation measures have been incorporated into the Project design. Mitigation relevant to specific environmental topics (including Ecology and Biodiversity, Landscape and Visual and Historic Environment) are presented in the relevant ES chapters. The Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Code of Construction Practice (CoCP) (document reference 7.2) contain a list of relevant good practice measures to avoid or reduce risks to habitats and species.</p> <p>In addition to the EIA, National Grid has set itself a target of delivering 10 per cent biodiversity net gain (BNG) with environmental and societal benefits on all construction projects, meaning that as a result of</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		measures taken, the biodiversity rating of the area will be enhanced by 10 per cent greater than prior to the construction of the Project. The BNG target for the Project is currently voluntary and aligned with our corporate sustainability commitment.				
9-9.149	Suggest that areas other than the AONB should be protected / Criticism that only the AONB has been considered	<p>National Policy Statement (NPS) EN-5 states that the Government considers overhead lines to be appropriate and acceptable in most instances, although it recognises that that there may be, at particularly sensitive locations, potential adverse landscape and visual impacts of overhead line infrastructure that make it inconsistent with our duties and relevant planning policy.</p> <p>The National Landscape designation is one such location where there is a presumption that underground cable technology is adopted with the extent of underground cabling extending beyond the boundary in response to the potential for the Project to affect National Landscapes. Our proposals include a total of approximately 20 km of underground cable through and in the vicinity of the Dedham Vale National Landscape, including a section at Great Horkesley, to reduce the changes in views and setting of the National Landscape from within and adjacent to its designated boundary.</p> <p>Underground cabling is also proposed for short sections near Fairstead and North Tilbury.</p> <p>The higher cost of underground cables to bill paying consumers, and the environmental implications of installing underground cables and maintaining them</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>elsewhere, are not considered to be justifiable in the context of national policy or National Grid's statutory duties, which include the need to be economic and efficient.</p> <p>A Landscape and Visual Impact Assessment (LVIA), presented in the Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13), has been undertaken as part of the Environmental Impact Assessment (EIA). The LVIA sets out potential effects on landscape and visual receptors.</p>				
9-9.150	Concern that the Project will impact conservation area	<p>Through routeing and siting National Grid has sought to reduce as far as practicable potential impacts on the historic environment. The impacts of the Project on the historic environment are assessed in Chapter 11: Historic Environment of the Environmental Statement (ES) (document reference 6.11). This assessment considers the potential impacts to conservation areas such as Horndon-on-the-Hill, West Tilbury, East Tilbury and Orsett as well as the known heritages assets within these conservation areas. In addition to the proposals in the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4), the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5) sets out appropriate mitigation for the historic environment.</p> <p>Ongoing collaboration with Historic England and Local Planning Authorities has ensured a comprehensive approach to heritage-related matters, incorporating</p>		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>suitable mitigation measures and techniques based on their input.</p> <p>During the construction phase, standard construction mitigation as outlined in the Outline Code of Construction Practice (CoCP) (document reference 7.2) will be set up for these conservation areas where a significant temporary negative effect is predicted. No significant effects to these conservation areas are assessed for the operation (and maintenance) phase.</p>				
Financial Compensation						
9-9.151	Concern that the Project will devalue property / impact on property value in this section	<p>National Grid acknowledges that its proposals may cause concern to landowners. Diminishment of property value known as 'injurious affection' and any other appropriate heads of claim would be considered on an individual basis in accordance with current legislation. We would pursue a voluntary agreement with affected landowners, acquiring rights in accordance with our Land Rights Strategy (the strategy is subject to review). If a voluntary agreement cannot be reached, then the Compulsory Purchase Code allows for a claim of compensation for the loss that property owners may have suffered as a direct result of the retained part of your property ownership being worth less as a direct result of the works.</p> <p>If there are any specific concerns about the devaluation of property, National Grid would advise seeking third</p>			X

		<p>line, and that the uncertainty whilst the proposals are developed may cause anxiety.</p> <p>We have sought to reduce potential effects on communities and residents through routeing and design. We have also sought to reduce concern or uncertainty about the proposals through making timely design decisions and engaging with the people and stakeholders throughout the development of the Project.</p> <p>The Project team will continue to engage with people potentially affected during progress of the Project, through regular communication including letters, phone calls and meetings. This will enable concerns to be raised and discussed at an early opportunity and provide a regular point of contact to respond to queries and concerns.</p> <p>We urge anyone with concerns to get in touch through the Norwich to Tilbury Freephone number, address or email throughout the progress of the Project:</p> <p>Call our Community Helpline: 0800 915 2497 (Lines are open Monday to Friday 9:00am – 5:30pm)</p> <p>Email us: contact@n-t.nationalgrid.com</p> <p>Write to us: FREEPOST N TO T (No stamp or further address details are required)</p> <p>The UK has a carefully thought-out set of policies for protecting us all against Electric and Magnetic Fields (EMFs), the main component of which is exposure guidelines. Those exposure guidelines are set by</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		independent scientific bodies and are based on decades-long studies into the effects of EMFs and ill health. After those decades of research, the weight of evidence is against there being any health risks of EMFs below the guideline limits. These policies are incorporated into the decision-making process for Development Consent in National Policy Statement (NPS) EN-5. It is National Grid's policy to ensure that all of its equipment comply fully with those exposure limits.				
9-9.155	Concern about health risks associated with the Project / physical health risks associated with the Project	Health considerations are given a high priority in the process by which we arrive at any proposals for new electricity circuits. Assessment of compliance with Electric and Magnetic Field (EMF) guidelines and policies is key to National Grid's approach. The UK has a carefully thought-out set of policies for managing EMFs. There have been over four decades of research looking into whether EMF can cause health effects and there are no established effects below the exposure limits. When designing our overhead lines, substations and underground cables design criteria, we ensure they would not exceed those exposure limits, even when operating at 100 per cent capacity. Additionally, the precautionary measures which the Government have adopted, are applied to the design which ensure the EMFs reduce as quickly with distance as possible. Evidence of that compliance is presented in the Electric and Magnetic Field Compliance Report (document			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>reference 7.8) submitted as part of the Development Consent Order (DCO) application.</p> <p>National Grid takes this issue very seriously and looks to authoritative and independent scientific organisations such as the World Health Organisation (WHO) and in the UK Health Security Agency (UKHSA) to review the worldwide body of scientific evidence on health. Important decisions on health are taken independently of industry, and National Grid has followed the guidance and policies adopted by Government on advice from their scientific experts. Each of these organisations have comprehensive reviews of EMF research available to view on their websites.</p>				
9-9.156	Concern that the Project poses a safety risk to aircraft (including balloons) in the area / Concern that the Project will impact airfields in this area	<p>National Grid recognises the need for the Project to be developed collaboratively alongside aviation stakeholders to identify, assess, and as appropriate mitigate, adverse impacts on aviation safety, in accordance with Government's Overarching National Policy Statement (NPS) EN-1.</p> <p>Our review of aerodromes potentially impacted by the Project identified 17 civil aerodromes (including 2 helipads) within 5 km of the preferred corridor and one military site (Wattisham Flying Station). We have also considered other airfields and flight activities where these have been identified through the 2022 and 2023 non-statutory, statutory consultation, targeted consultations, and landowner consultation, including for ballooning and for model flying. As well as considering</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>feedback, National Grid's aviation advisers (an independent aviation consultancy) have directly engaged with these parties (with National Grid present).</p> <p>A number of route alignment and pylon positioning changes have been made following consideration of feedback and in all but one case the assessment concludes that the airfields can continue to operate. In the remaining case of a private airstrip near Little Burstead, we continue to liaise with the operator to identify an appropriate solution.</p> <p>Specifically in respect of Wattisham Flying Station our proposals position the alignment onto relatively lower ground (to remove the potential for interference with Instrument Landing System (ILS) radar) and adopt an alignment closer to the existing 132 kV overhead line and include replacing part of the 132 kV line south of Offton by underground cable to avoid a new overhead line corridor being introduced.</p> <p>We will continue to engage with relevant parties as appropriate.</p> <p>Further information on the assessment of airfields can be found in the Environmental Statement (ES) Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-9.157	Concern that golf balls will strike the overhead lines the Project proposes at Orsett Golf Club, causing a health and safety risk	<p>National Grid notes the respondent's concerns. It is quite common for overhead lines to traverse golf courses around the UK. Under normal operation, there are no health and safety concerns.</p> <p>If during maintenance of the overhead line, operatives are required to climb the pylons and are directly in the path of play, then precautions might be taken to temporarily suspend the hole until operatives are out of harm's way.</p> <p>We have proposed a slight change to the alignment between TB260-TB261 which would cross the course at a location further north and at an increased height, which we believe mitigates impacts to the playability of the course.</p>			X	X
9-9.158	Concerns about the potential interference of overhead lines as part of the Project being installed at Bulphan due to the acute angle that the power lines have been proposed to cross the high pressure multi product fuel pipeline between Canvey Island and Hemel Hempstead (specific concerns provided by respondent including risk of death to workers in the event of a current surge)	<p>There is the potential, based on induced currents from the 400 kV overhead line, that alternating current mitigation measures may need to be installed to the Canvey Island to Hemel Hempstead ferrous pipeline operated by British Pipeline Authority (BPA) at Bulphan. The scope and extent of such mitigation measures will be dependent on the final design arrangements of the Project which will continue to evolve within the parameters of confirmed Limits of Deviation. Factors including crossing angle and clearance height, length of parallelism, site specific soil resistivity etc combine to define the requirement for mitigation. The mitigation itself is typically achieved by the installation, alongside the ferrous pipeline (in an area which is likely to have</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>been previously disturbed during construction), of additional earthing which extends away from the crossing point. Consultation between National Grid and the relevant utility provider will confirm the requirement for installed mitigation, based on the final 400 kV design arrangements, which will be implemented by the relevant utility provider under their existing utility operation and maintenance provisions.</p> <p>The angle of the pipeline crossing in this location has been modified in response to engagement to date with the pipeline operator.</p>				
9-9.159	<p>Suggest that a site-specific Flood Warning and Evacuation Plan (FWEP) should be maintained for the duration of the Project detailing worst-case scenarios (Flood breach/overtop), given that the Project lies within Flood Zone 3 areas. The FWEP should cover how a potential flood warning is disseminated across the Project, and how the contractors should respond to a flood warning during the Project work. The FWEP should give clear information to the contractors and visitors (e.g. "what you should do/not do in the event of your site or the immediate areas being flooded"). In addition, each contractor and visitor must be made aware of the content of the FWEP and the likely flood risk. The FWEP should detail the provisions to be made for a safe evacuation of the site including Safe Access/Egress for contractors or for persons to seek</p>	<p>Appendix G: Outline Flood Warning and Evacuation Plan (FWEP) of the Outline Code of Construction Practice (CoCP) (document reference 7.2) has been prepared, and will be developed into a detailed, site specific FWEP by the appointed Main Works Contractor(s).</p> <p>In line with commitment W09 in the Outline Code of Construction Practice (document reference 7.2), where construction activities take place within surface water flood zones - including statutory undertaker works - prior to works commencing, appropriate site drainage will be put in place to reduce the risk of standing water and avoid substantial delays to the construction programme, as well as to prevent offsite increases in surface water flood risk.</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>and remain for a period of days in a Safe Refuge during flood conditions.</p> <p>The FWEP should be written to embrace the detailed requirements of National Policy Planning Statement 25 (PPS 25) (section 7) the key elements of which are now contained in the National Planning Policy Framework (NPPF), as follows:</p> <p>How flood warnings are to be provided:</p> <ul style="list-style-type: none">- Availability of existing flood warning systems;- Rate of onset of flooding and available flood warning time;- How flood warnings are given;- Flood breach without no notice event <p>Ensuring safe occupancy and access to and from the Project:</p> <ul style="list-style-type: none">- Contractors' awareness of the likely frequency and duration of flood events;- Expected duration of the flood event; <p>Depth and velocity of water;</p> <ul style="list-style-type: none">- Safe dry access/egress to and from the development;- Adequate provision should be made for a safe evacuation of the site including safe dry access/egress for contractors or, for persons to seek and remain for a period of days in a safe refuge during flood conditions;- Vulnerability of contractors, and whether rescue by emergency services will be necessary and feasible;- Adequate provision must be made for safe					

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	access/egress for the emergency services should rescue of persons be necessary; - The availability and adequacy of a safe refuge above flood levels if rescue is not an option					
9-9.160	Criticism of National Grid's hierarchy of priorities given the respondent's pipeline's status as a piece of critical national infrastructure and the potential harm that may be caused if it is jeopardised. Specifically, criticism that arable convenience and private leisure facilities are given precedence over threats to public health and safety and disruptions to the continuity of oil supply – which has been identified as a matter of national concern by Part 12 of the Energy Act 2023	National Grid has collaborated with pipeline operators across temporary and permanent construction impacts as well as AC interference impacts. The results of this collaboration are a defined understanding of the impacts and negotiations, where able, to agree suitable mitigations ensuring all stakeholders are fairly considered in routing and siting.			X	
Heritage						
9-9.161	Concern about archaeological impacts	Through routeing and siting National Grid has sought to reduce as far as practicable potential impacts on the historic environment. The impacts of the Project on the historic environment are assessed in Chapter 11: Historic Environment of the Environmental Statement (ES) (document reference 6.11). The assessment considers the potential impact on archaeology, historic buildings and historic landscapes and includes assessment of potential for physical impact, impact through change to setting that affects the value of a heritage asset and impact through indirect factors such as change in hydromorphology. The assessment is supported by walkover, setting and geophysical surveys,	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>as documented in Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1) and Appendix 11.4: Geophysical Survey Results Report (document reference 6.11.A4) of the ES.</p> <p>Archaeological trial trench evaluation has also been undertaken and is reported in Appendix 11.5: Trial Trenching Results Report (document reference 6.11.A5). In addition to the proposals in the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4), the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5) sets out appropriate mitigation for the historic environment. The Project has engaged with Historic England and relevant planning authorities on aspects relating to heritage, including appropriate mitigation measures and techniques and to take their views into account during Project development which are detailed in ES Chapter 11 (document reference 6.11).</p>				
9-9.162	Concern about negative impact on heritage / Suggest that the Project should be routed away from heritage buildings / listed buildings / historical site	Through routeing and siting National Grid has sought to reduce as far as practicable potential impacts on the historic environment. The impacts of the Project on the historic environment are assessed in Chapter 11: Historic Environment of the Environmental Statement (ES) (document reference 6.11). The assessment considers the potential impact on archaeology, historic buildings and historic landscapes and includes assessment of potential for physical impact, impact	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		through change to setting that affects the value of a heritage asset and impact through indirect factors such as change in hydromorphology. The assessment is supported by walkover, setting and geophysical surveys, as documented in Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1) and Appendix 11.4: Geophysical Survey Results Report of the ES (document reference 6.11.A4). Archaeological trial trench evaluation has also been undertaken and is reported in ES Appendix 11.5: Trial Trenching Results Report (document reference 6.11.A5). In addition to the proposals in the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4), the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5) sets out appropriate mitigation for the historic environment. The Project has engaged with Historic England and relevant planning authorities on aspects relating to heritage, including appropriate mitigation measures and techniques and to take their views into account during Project development.				
9-9.163	Concern the Project from Pylon TB248 to TB255 will impact historic farmstead, Saffron Garden Farm, and large open fields surrounding small historic hamlets (e.g. it will impact three of the four visual aspects of this Listed Building and affect the views of many Listed Buildings in Horndon-on-the-Hill).	A Landscape and Visual Impact Assessment (LVIA) has also been undertaken as part of the Environmental Impact Assessment (EIA). The LVIA sets out the potential landscape and visual effects, including consideration of visual amenity of people living in communities and areas of settlement. Saffron Gardens and its associated buildings lie within 360 m of the			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>centre line of the alignment of the overhead line, within Visual Receptor Area (VRA) H3 Orsett. Representative Viewpoints (VP) within VRA H3 include VP 8.07: Rectory Road Orsett, and VP 8.10: Orsett Fen (PRoW No 90). The assessment identifies that the introduction of the overhead line would result in major and significant visual effects in the area around Saffron Gardens. The LVIA is presented in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13).</p> <p>The Listed Buildings within Horndon-On-The-Hill (with the exception of the Grade I listed 'Church of St Peter and Paul' (1337109)) were scoped out of the ES assessment based on their fulfilment of the criteria detailed in Appendix 11.1: Historic Environment Baseline Report (see Annex E - Scoped Out Listed Buildings) (document reference 6.11.A1). Please refer to that document which explains the reasons for their scoping out. Saffron Garden (1111557) and the 'Walls at Saffron Garden' (1111558) were both scoped into the ES assessment based on them not fulfilling the 'scoping out' criteria which is stated in Appendix 11.1: Historic Environment Baseline Report (see Annex E - Scoped Out Listed Buildings) (document reference 6.11.A1). The ES statement notes that both assets are predicted to experience a medium adverse magnitude of impact which is significant, during the construction phase. The significance of effect for both assets was noted as 'minor adverse (not significant)' during the operation phase.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Mitigation						
9-9.164	Suggest mitigation measures	<p>An Environmental Statement (ES) (document reference Volume 6: Environmental Statement) has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 ('the Infrastructure EIA Regulations'). The ES identifies and assesses the likely significant effects on the environment resulting from the construction, operation and maintenance of the Project and recommends appropriate mitigation to reduce effects.</p> <p>Environmental mitigation measures have been defined within each environmental topic chapter and set out in relevant management documents submitted with the Development Consent Order (DCO) application, including the Outline Code of Construction Practice (CoCP) (document reference 7.2), the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5).</p>	X	X	X	
Primary Access Routes / Haul Road / Construction Compounds						
9-9.165	Criticism as National Grid have proposed compound TB-CC12 to be on Area 1 Land which was (until April 2024) part of the Lower Thames Crossing (LTC)	The Order Limits of the Project no longer extend to the Port of Tilbury.			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	Development Consent Order (DCO) application, leased to National Highways for use during the construction of LTC, the construction periods for LTC and N2T would have made it impossible for National Grid to use this land without directly interfering with the construction of a Nationally Significant Infrastructure Project (NSIP) scale strategic highways project / Further to this, the Project also includes large areas where the construction proposals overlap with those for LTC, including TB-CC11, the laydown area and the proposed Norwich to Tilbury (N2T) haul road, all of which will disrupt the use of this land by National Highways, including blocking the haul road required as part of the LTC Scheme / Criticism that the cumulative assessment provided as part of this statutory consultation shows the consideration of projects at the Port of Tilbury to be inadequate, with National Grid failing to consider the Freeport at all					
Project Finance / Costs						
9-9.166	Criticism that currently significant doubt and uncertainty exists as to the economic justification for the proposed cable route to the Tilbury Substation / Request that the cost of the Project must be considered against the protection afforded to maintaining the competitiveness and resilience of	In response to feedback and additional information, along with engagement with the Port of Tilbury there has been a change to the means of connection at Tilbury. This removes the interaction between the Project and the Freeport so achieves the change being sought.			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	national ports in National Policy Statement for Ports (NPSP)					
Public Rights of Way (PRoW)						
9-9.167	Concern about negative impact on Public Rights of Way (PRoW) / footpaths / cycle paths / bridleways	<p>Through routeing and siting, National Grid has sought to reduce, as far as practicable, impacts and disruption to Public Rights of Way (PRoW).</p> <p>The iterative design process identified the existing PRoW network and their wider connectivity and sought where practicable to reduce and where possible remove impacts to PRoW.</p> <p>Effects on PRoW would be mitigated where possible, maintaining access where practicable, with closures as a last resort. We will continue to engage with relevant stakeholders on the PRoW network to enable feedback and input to be considered as the Project progresses. An Outline Public Rights of Way Management Plan (document reference 7.6) is submitted with the Development Consent Order (DCO) application.</p>		X	X	
Requests						
9-9.168	Request for National Grid to confirm which pylons are to be reduced in height at Thurrock Airfield (e.g. the reason for this question is that the approach and departure will not always be straight in line with runway heading and an arc is usually used in calculations, meaning that pylons should also be	National Grid has appointed an independent aviation consultancy who has engaged with Thurrock Airfield (with National Grid also present) to inform their impact assessment. As a result, changes have been made in this area by altering the design to lower height pylons running parallel to the existing 132 kV overhead line.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	reduced in height in an arc from the runway heading and not just in a straight line)	<p>Given the existence of the 132 kV overhead line, the addition of the proposed National Grid pylons is not deemed detrimental to the operability of Thurrock Airfield. Proposed pylons TB238 to TB243 (as in between TB237 and TB244) are low height lattice pylons.</p> <p>We are continuing to engage with the operators to confirm the acceptability of the proposals. Further information on the assessment of airfields can be found in the Environmental Statement (ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).</p>				
9-9.169	Request that for National Grid to use the Tilbury 2 access road (which is an important part of the operational Port of Tilbury) they must provide suitable and appropriate measures to prioritise Port traffic (both road and rail) and engage Port of Tilbury London Limited (PoTLL) and other developers to ensure that potential impacts of the Project are minimised and integrate with existing commitments, enabling effective oversight and traffic management by PoTLL in the controlled operational port environment	<p>The Order Limits of the Project no longer extend to the Port of Tilbury.</p> <p>Grid has worked with the local highway authorities and National Highways as we develop our access proposals for the Project.</p> <p>As part of the design development of the Project, the concerns raised around Tilbury Substation have been considered and a new substation named Tilbury North is now proposed. This would no longer use Tilbury2 access route (Fort Road) as a primary access route. Revised access options to this new location have been considered to accommodate for Lower Thames Crossing.</p>			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		National Grid has worked with the port authorities to mitigate impacts on the operation of the Port. Continuous engagement would be maintained as the detailed design stage progresses.				
9-9.170	The Environmental Constraints Plan (Section H, Sheet 4 of 7) suggests that a new Site of Special Scientific Interest (SSSI) is proposed which would extend to include Maple Country Park. Natural England have confirmed that this SSSI extent is no longer accurate, with the actual area of interest for a new SSSI being much smaller and focused to the south and east of the railway line. Suggest that this information should be updated on all relevant plans and reports	National Grid notes the respondent's feedback. National Grid is in regular contact with Natural England on the development of the potential new Site of Special Scientific Interest (SSSI) around Tilbury. There has been no official release of the final boundary of this SSSI so is not included within our maps although the potential areas of interest have been considered. It is our understanding that the actual area is now south and east of the railway line and there is no overlap with the Project.			X	
9-9.171	Request for confirmation as to when the independent survey reviewing potential alternating current (AC) interference from the Project to the high pressure multi product fuel pipeline between Canvey Island and Hemel Hempstead will be carried out and by when the results will be available / Request for a round table with National Grid regarding the high pressure multi product fuel pipeline between Canvey Island and Hemel Hempstead	National Grid has since, and upon completion, made the results of the AC Interference Study available to the pipeline owner and operator for discussion. There is the potential, based on induced currents from the 400 kV overhead line, that alternating current mitigation measures may need to be installed to the Canvey Island to Hemel Hempstead ferrous pipeline operated by British Pipeline Authority (BPA) at Bulphan. The scope and extent of such mitigation measures will be dependent on the final design arrangements of the Project which will continue to evolve within the parameters of confirmed Limits of Deviation. Factors including crossing angle and clearance height, length of			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>parallelism, site specific soil resistivity, etc. combine to define the requirement for mitigation. The mitigation itself is typically achieved by the installation, alongside the ferrous pipeline (in an area which is likely to have been previously disturbed during construction), of additional earthing which extends away from the crossing point. Consultation between National Grid and the relevant utility provider will confirm the requirement for installed mitigation, based on the final 400 kV design arrangements, which will be implemented by the relevant utility provider under their existing utility operation and maintenance provisions.</p> <p>The angle of the pipeline crossing in this location has been modified in response to engagement to date with the pipeline operator.</p> <p>Initial surveys and assessments have been undertaken and communicated with BPA across various meetings to date. National Grid will continue to engage with BPA as the Project develops.</p>				
Tourism						
9-9.172	Concern about impact of the Project on tourism	<p>Through routeing and siting, National Grid has sought to avoid, as far as practicable, locations important for leisure and tourism.</p> <p>Environmental Statement (ES) Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) presents an assessment on the potential impacts on tourism economy (during construction) and</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>tourism assets (during construction and operation), including visitor accommodations. As part of this assessment, a range of measures have been considered throughout the construction phase of the Project to minimise disruption on tourism.</p> <p>These include: traffic management, signage and routeing measures. These are identified within the ES Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15), the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).</p>				
Visual Impact						
9-9.173	Concern about cumulative visual impact of the Project alongside existing overhead lines / concern about wirescape	<p>National Grid notes the feedback received and has taken it into consideration as part of the iterative design process.</p> <p>National Grid has liaised with UK Power Networks to understand opportunities for 132 kV network rationalisation. The Project includes proposals to replace certain sections of 132 kV overhead line connection with underground cable to rationalise the network and reduce potential for cumulative wirescape effects.</p> <p>A Landscape and Visual Impact Assessment (LVIA), presented in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13), has been undertaken as part of the Environmental Impact Assessment (EIA). Existing infrastructure (such as</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>existing overhead lines) has formed part of the baseline environment for the Project to be assessed against, to identify if significant landscape and / or visual effects are likely to arise. The LVIA presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (Document Reference 6.13) sets out potential landscape and visual effects. The rationalisation of the existing 132 kV network in some areas forms part of the embedded landscape mitigation, as set out in Chapter 13.</p> <p>The findings and conclusions of the LVIA and other topics assessments have been considered within the Cumulative Impact Assessment, presented in ES Chapter 17: Cumulative Effects Assessment (document reference 6.17), lists the developments as part of the cumulative assessment. This chapter considers the landscape and visual effects of the Project cumulatively with other proposed developments that are being progressed.</p>				
9-9.174	<p>Concern that the Project will be unsightly / visually intrusive (including overhead lines, CSE compounds and substations) / Concern that the Project will cause a negative impact on views</p>	<p>National Policy Statement (NPS) EN-5 makes it clear that the Government considers overhead lines to be appropriate and acceptable in most instances, although it recognises that that there may be, at particularly sensitive locations, potential adverse landscape and visual impacts of an overhead line that make it inconsistent with our duties and relevant planning policy.</p> <p>The Dedham Vale National Landscape (previously an Area of Outstanding Natural Beauty (AONB))</p>		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>designation is one such location where underground cable technology is proposed with the extent of underground cabling extending beyond the boundary in response to the potential for the Project to affect the National Landscape. Our proposals include a total of approximately 20 km of underground cable through and in the vicinity of the Dedham Vale National Landscape, including a section at Great Horkesley to reduce the changes in views and setting of the National Landscape from within and adjacent to its designated boundary.</p> <p>Underground cabling is also proposed for a short section of 400 kV overhead line crossing near Fairstead.</p> <p>Cable Sealing End (CSE) compounds are required to facilitate sections of underground cable, and the proposed East Anglia Connection Node (EACN) substation is required to connect to customers, and the proposed Tilbury North Substation is required to connect the Project into the existing Tilbury Substation. These components have been carefully sited taking into consideration Horlock Rules including the potential for landscape and visual effects.</p> <p>The higher cost of underground cables to bill paying consumers, and the environmental implications of installing underground cables and maintaining them at locations outside the Dedham Vale National Landscape, are not considered to be justifiable in the context of national policy or National Grid's statutory duties, which include the need to be economical and efficient.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		A Landscape and Visual Impact Assessment (LVIA), presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13), has been undertaken as part of the Environmental Impact Assessment (EIA). The LVIA includes an assessment on both landscape character and visual amenity and identifies areas for potential mitigation planting around substations and CSE compounds to reduce visual impacts to local receptors. The Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) includes details regarding the planting proposals.				
Wildlife / Ecology Impact						
9-9.175	Concern about impact of the Project on flightpaths for birds	Chapter 8: Ecology and Biodiversity of the Environmental Statement (ES) (document reference 6.8) considers potential impacts during the construction and operational phase of the Project on birds. Bird surveys have been undertaken across the route between 2022-2024 to determine an accurate baseline value, the scope of which has been agreed with Natural England and Local Planning Authorities. The potential for bird collision risk impact during the operational phase has been assessed within the ES and Habitat Regulations Assessment Report (HRA) (document reference 5.3) and agreed with Natural England. Any adverse impacts identified have been minimised as far as possible, where			X

9-9.177	Concern that the Project will result in a negative impact on species (protected status not specified)	Through routeing, siting and detailed design National Grid has sought to reduce, as far as practicable, potential impacts on biodiversity including protected species. The design process has taken account of existing biodiversity, the natural environment and, where practicable, has sought to reduce impacts on areas of ecological sensitivity including protected species and their associated habitats, through avoidance or mitigation. A comprehensive survey effort for a range of protected species was completed over the 2023 – 2024 period. Chapter 8: Ecology and Biodiversity of the Environmental Statement (ES) (document reference 6.8) assesses the effects on protected species based on this baseline information and where/if required appropriate mitigation measures are detailed. Suitable mitigation for protected species has been developed in consultation with Natural England to ensure legal compliance and best practice guidelines are adhered to. Where necessary, draft licence applications have been drafted and National Grid is in the process of agreeing the detail within the licence documents with Natural England, in order to obtain the relevant Letters of No Impediment (LoNI). Mitigation for non-licensable protected species has been included within the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4).			X	
9-9.178	Concern that the Project will result in a negative impact on protected species	Through routeing, siting and detailed design, National Grid has sought to reduce, as far as practicable,			X

Mitigation for non-licensable protected species has been included within the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4).				
9-9.179	Concern that the Project will have a negative impact on bees / Bees will be unable to navigate under high voltage overhead lines	As well as possible effects on humans, possible effects of Electric and Magnetic Fields (EMFs) on various animals have been studied a number of times. No proven effects of EMFs have been found in any species			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>at levels below the guidelines. This is confirmed in National Policy Statement (NPS) EN-5 which states: <i>"There is little evidence that exposure of crops, farm animals or natural ecosystems to transmission line EMFs has any agriculturally significant consequences."</i></p> <p>Beehives can become charged if directly under an overhead line because of the electric field it produces. For existing overhead lines, this can be eliminated by screening or earthing the hive, but for new overhead lines, embedded design measures and careful routeing will avoid any potential effects. There does not seem to be evidence of EMFs adversely affecting bees directly. In the United States of America, the strip of land along power lines has been shown to be particularly attractive to bees, with these areas being utilised by commercial bee farms. Additionally, National Grid has worked with the British Beekeeping Association to establish hives around our sites, including high voltage substations, which have thrived.</p>				
9-9.180	Concern that the Project will result in a negative impact on flora / plants / woodlands / hedgerows	Through routeing, siting and detailed design, National Grid has sought to reduce, as far as practicable, potential impacts on biodiversity including priority grassland, wetland, woodland, and hedgerow habitats. The design process has taken account of existing biodiversity, the natural environment and, where practicable, seeks to reduce impacts on areas of ecological sensitivity, through avoidance or mitigation. 9-9.184	Concern that Orsett Golf Club has been selected as a site to house 'bat boxes' to mitigate the damage on the environment during and after the construction of the Lower Thames Crossing (LTC)	<p>The interaction between Norwich to Tilbury and Lower Thames Crossing has been carefully considered and any potential cumulative impacts between projects has been included within Chapter 17: Cumulative Effects (document reference 6.17) submitted as part of National Grid's Development Consent Order (DCO) application. The Project would have no impact on the proposed location of Lower Thames Crossing's mitigation bat boxes within Orsett Golf Club.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
9-9.185	Confirmation that the North Thames Estuary & Marshes proposed Site of Special Scientific Interest (SSSI) Extension will be going ahead, and suggest that this is consider for the Project (though no draft boundary can be shared at this point and the maps within the Preliminary Environmental Information Report (PEIR) annotated as 'North Thames Estuary and Marshes Proposed SSSI' should not be interpreted to be a draft boundary, but rather an area of interest)	National Grid has considered the presence of the North Thames Estuary & Marshes Site of Special Scientific Interest (SSSI) extension area of interest as part of the design process based on initial mapping provided by Natural England and looked to avoid and reduce impacts where possible. However, since then, despite multiple requests for more information, no site boundary or additional information has been provided by Natural England or any timeframes on the designation process. In the absence of information it is assumed the area is no longer being considered for SSSI designation or the process has been significantly delayed and has therefore been removed from our assessment.	X			
9-9.186	With regard to the Project between River Thames north to A13, suggest that relevant third-party data sources for the area in the vicinity of the Tilbury Ashfields should be obtained to understand the qualities of these habitats and species, given concerns that the desk study maps of 'important species' do not properly convey the importance of habitats in this area. When surveying for Open Mosaic Habitats (OMH), it should be recognised that this is a broad habitat classification, and that considerable variation in type and quality is typically encountered. The survey should therefore seek to include a more nuanced layer of detail which aims to understand the underlying conditions upon which such OMH has developed (such as substrates,	National Grid has revised its proposals and made a change to the means to connect to Tilbury Substation. As such no works to the south of West Tilbury are included within this application and this change is no longer relevant to the Project being progressed. While the majority of land between the A13 and north of the River Thames is now excluded from proposals due to the design change, Tilbury North substation and the connections in (north and south) are located just to the south of the A13. A range of protected species and other ecological surveys, including detailed habitat surveys, have been undertaken in this area and the results are outlined in Chapter 8: Ecology and Biodiversity (document reference 6.8) and Appendices 8.1 to 8.16 (document reference 6.8.A1 - 6.8.A16) of the	X			

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>influences, history, balances within the mosaic etc.). This should in particular seek to identify any areas of Pulverised Fuel Ash (PFA), which is an especially valuable substrate delivering uniquely for invertebrates and any such areas should be specifically surveyed and mapped, if necessary, as a sub-set of the over-arching 'open mosaic habitat' type.</p> <p>It should further be noted that the Priority Habitat Inventory (PHI) is regarded as incomplete in this area, and contains gaps where PH is known to be present. The PHI should therefore be treated as a guide and should be ground-truthed for accuracy</p>	<p>Environmental Statement (ES). However, unlike land further south, this area is dominated by arable land and does not contain open mosaic habitat.</p>				

9.7 Summary of Changes made Following Feedback Received from Statutory Consultation

- 9.7.1 Following the close of the statutory consultation in July 2024, a number of design changes have been incorporated into the proposals in response to feedback received. Proposed design amendments were carefully considered in the context of environmental constraints and opportunities, engineering feasibility and cost, planning policy and other relevant considerations. Proposed design amendments were considered from the phases of consultation and continued design and development as well as through feedback and ongoing engagement with stakeholders and landowners.
- 9.7.2 The process of considering design changes comprised of an initial filter for benefit and feasibility, an assessment incorporating inputs from relevant technical experts, and further stages of additional study if required. The outcome of the consideration of potential design changes was either that a change was included in the Project design, or that the change was not made following balanced and informed consideration.
- 9.7.3 **Section 9.6** of this report details the feedback raised during the statutory consultation, including any design changes and how National Grid has considered or addressed this. This includes any feedback that led to no change being made to the Project design and an explanation of why no change to the Project was made.
- 9.7.4 Figure 9.10 of this report demonstrates National Grid's design change request process.

Figure 9.10 National Grid's design change request process

- 9.7.5 The design changes have been summarised below:

Swardeston

- Changes to the location of the temporary construction laydown areas on the land around Norwich Main substation and related haul roads. This included moving the temporary construction laydown areas to land west of pylons RG3 and RG5.

- These proposed changes would allow our proposals to avoid conflicting with the construction of other proposed developments in the area.
- Proposed other changes to the temporary works to accommodate the positioning of soil storage and associated landscaping works at Norwich Main substation, as well as other minor amendments to the draft Order Limits.

Forncett St Mary

- Proposed to move a line of pylons near Forncett St Mary to the west of its previous location. The proposed change would affect the location of the pylons between RG30 and RG39.
- The proposed change in alignment would include RG30 and RG33 becoming angle pylons to help reduce the impacts on the site used for flying model aircraft. Angle pylons are used where the route changes direction. These pylons may be heavier and need larger foundations to carry the stresses of the change of direction.
- Change would also move pylon RG39 closer to a field boundary and adjust the alignment closer to the mid-point between properties along Northfield Road. To accommodate this change in alignment, we are proposing to move the haul road and the bellmouths – where project traffic would cross public highways or enter the project site - along with other minor amendments to the draft Order Limits.
- The crossing at Stickfer Lane would move north-west to Hurn Lane in order to follow the pylon alignment, the bellmouth on Cheney's Lane would shift to the east, and the crossing on Northfield Road would move west.

Cargate Common

- Proposal to reposition a line of pylons between Tibenham and Bunwell Hill to the west of the location that was proposed at statutory consultation. The change would affect the location of the pylons between RG46 and RG52.
- We are proposing that pylons RG48 and RG49 would be relocated roughly 60 m to the west of the location presented at statutory consultation in 2024, and associated pylons to the north and south would also be slightly adjusted. This would also avoid a veteran tree. To accommodate this change, pylon RG48 would become an angle pylon. Angle pylons are used where the route changes direction. These pylons may be heavier and need larger foundations to carry the stresses of the change of direction.
- This proposed change would also require several changes to related temporary and permanent accesses, along with other minor amendments to the draft Order Limits. The proposed permanent access would use a longer stretch of Brick Kiln Lane and, instead of creating a new access off to the east through farmland, would make use of an existing track, which is located along the northern edge of existing woodland.
- We would also reposition the haul road to follow this amended alignment. The haul road alongside RG48 and RG49 would be repositioned west to an area of the woodland which was previously cleared. This would allow the haul road to

avoid a field used for livestock over-wintering and would limit the amount of tree removal required. The temporary access to the north and south would also be repositioned to follow the alignment. This would move the bellmouth where project traffic would cross the lane leading to Old Hall to a location 100 m further east from the location presented at statutory consultation in summer 2024.

- We are also proposing to amend our proposals to replace a section of the existing lower voltage electricity overhead line with underground cables. The removal of the wooden poles between RG48 and RG49 would be extended further north to the field boundary, with more wooden poles remaining to the south than was proposed at our statutory consultation in summer 2024. The proposed underground cables would follow field boundaries and the haul road alignment to minimise the need for tree removal.

Winfarthing

- Proposal to relocate a temporary construction laydown area near Winfarthing, to the south of the location that was proposed at statutory consultation. The temporary laydown area would be relocated south of the B1134 close to RG58. The proposed change would not affect the overhead alignment.
- Access for the temporary construction laydown area would still be from the B1134, as was presented at our statutory consultation in summer 2024. We are also proposing other minor amendments to the draft order limits.

Palgrave and Mellis

- Proposal to reposition a line of pylons between Palgrave and Mellis to the south-east of the location that was proposed at our statutory consultation in summer 2024.
- This would affect the pylons between RG94 and RG102 (previously presented at statutory consultation as RG095 and RG102).
- The proposed change would include removing approximately a further 2 km of the 132 kV pylon line and replacing it with underground cable (with the total length of underground cable increased to around 5 km in this section), routed where possible to follow field boundaries. This would allow pylons RG95 to RG101 to more closely follow the alignment of the existing 132 kV line. This would reduce visual impact through positioning of the line using existing trees to screen views. We propose that from RG94 (previously presented during statutory consultation as RG95), the line would go south before turning southwest and following the existing 132kV line alignment before connecting to RG102 at a slightly reduced angle.
- This change would reduce visual impact on nearby properties and allow flight activity at the nearby airstrip to continue.
- Alongside the alignment shift, the proposed change would also require amendments to temporary and permanent access arrangements along with other minor amendments to the draft order limits. We are proposing to reposition the

temporary construction compound and the associated construction access further north towards the A143.

- To accommodate this proposed change in alignment, we are also proposing to move the haul road and the bellmouths - where project traffic would cross public highways or enter the project site. We're now proposing to reposition the bellmouth that would cross the A143 Old Bury Road to the east of its previously proposed location.
- The temporary construction compound for undergrounding the UK Power Networks (UKPN) line would be accessed via the A143 Old Bury Road (identified as Primary Access Routes (PARs) H05-A2 and H06-A1 in the previous statutory consultation).

Gislingham

- Proposal to reposition the overhead line alignment further away from the village of Gislingham and to the west of the railway track. The proposed change would affect the location of the pylons between RG114 and RG119 (previously presented at statutory consultation as RG114 to RG118).
- The proposed change involves the addition of one pylon, and the relocation of the angle tower further east to increase its distance from residential properties.
- This proposed alignment change would result in the angle tower being positioned behind an established woodland, which would provide screening to the closest properties. As a result of the proposed alignment change, we are also proposing to reposition the construction compound to the north of Thornham Road to allow for better screening and reduce potential impacts on veteran trees. For more information on the construction access plans we presented at our statutory consultation, please visit our [document library](#). A change to the proposed permanent access route for light maintenance activities would also follow the repositioned alignment.
- To accommodate the proposed change in alignment, we are also proposing to move two bellmouths in the area - where project traffic would cross public highways or enter the project site - along with other minor amendments to the draft Order Limits. This includes the movement of the bellmouth on Burgate Road 110 m further south than was proposed at statutory consultation, and on Major Lane 200 m further east.

Mendlesham

- Proposal to move a line of pylons near Cay Hill to the west of the location that was proposed at our statutory consultation in summer 2024. This proposed change would affect the locations of the pylons between RG136 and RG142 (previously presented at statutory consultation as RG135 to RG141).
- Moving these pylons to the west would increase the distance to properties without the need to materially lengthen the route or introduce any additional angle pylons. The pylons would also be located to the edge of main sight lines from some

properties compared with the alignment presented at statutory consultation in 2024.

- This proposed change also allows us to relocate the temporary access arrangements in this location to more closely follow field boundaries except where it would be unsafe to do so. We are also proposing to modify the diversions of lower voltage electricity connections to follow field edges, along with other minor amendments to the draft Order Limits.
- To accommodate this proposed change, we are also proposing to reposition the haul road and the bellmouths. The crossing over the unnamed lane north of RG137 (previously RG136) which was proposed at statutory consultation in 2024 would move to the west, and the former crossing on Lamberts Lane would move to follow the proposed alignment, crossing Lamberts Lane to the north-west near Elden's Lane.

Needham Market

- Proposal to add a temporary 132 kV construction compound near Needham Market to facilitate the undergrounding of the existing UKPN 132 kV overhead line.
- The proposed change would introduce a new construction compound near pylon RG173 (previously presented at statutory consultation as RG172) but would not affect the proposed location of the overhead line as presented at statutory consultation.
- The map showing our proposed changes ([included within consultation leaflet Suffolk 4](#)) also shows an extended access route. This is an update in line with information on public highway boundaries and is not a change to the access route proposed at our statutory consultation in summer 2024.
- It is proposed that this access route would remain the permanent access route for inspection and light maintenance, as presented at statutory consultation.
- We are proposing that construction traffic for the 132 kV undergrounding works would access the site via Hill House Lane and connect to the B1113 Stowmarket Road. The B1113 forms part of PAR H10-A1, as presented in the previous statutory consultation.
- Construction access for the Project would remain via the temporary construction haul road, as presented at statutory consultation.

Offton

- Proposal to reposition the route for 132 kV underground cables near Offton. The new route would follow field boundaries more closely than was proposed at our statutory consultation in summer 2024.
- This 132 kV underground cable route would replace the existing 132 kV pylons that are owned by UKPN. We need to take down the UKPN pylons to accommodate the Norwich to Tilbury overhead line.

Raydon and Holton St Mary

- Proposal to reposition the underground cable alignment near Raydon to the east of the location that was presented at statutory consultation, and near Manor Farm to the south-east of the location presented at our statutory consultation. We are also proposing to reposition the temporary works access and compound near Holton St Mary to avoid passing through the centre of the village.
- The proposed change would result in the underground cables passing to the east of Wenham Grove and allowing for more extensive screening of the CSE compound through more effective planting. The alignment would move closer to Manor Farm and Bottle Bridge Cottages, where there would be some temporary construction effects.
- The proposed change would lessen the impact on agricultural activity by reducing the number of fields affected by construction, compared to the previous proposal. The proposed change would also include moving the underground cabling at the south east of Raydon to reduce effects on residential properties, along with other minor amendments to the draft order limits.
- We are proposing a temporary construction access road which would turn off the B1070 to the east of Holton St Mary via a new bellmouth. It would cross agricultural fields to the north of the village to access the construction compound located to the northwest near Raydon. The proposed route would reduce the effects of construction Heavy Goods Vehicles (HGVs) at Holton St Mary and follow field boundaries where possible to reduce agricultural impacts.

Langham

- Proposal to reposition the underground cable route near Langham to the west of the previous alignment proposed at statutory consultation.
- The proposed alignment would divert west after crossing the River Stour, avoiding parts of the Langham Hall Estate, and continue southwest before turning southeast near Alderton's Cottages and rejoining the route presented at statutory consultation to the north of Black Brook.
- The proposed change would remove the need for one section of trenchless crossing near Langham Church, reduce disturbance to wildlife and mature woodland, and would reduce tree removal along a number of tree lined avenues.
- To accommodate the change, we are also proposing to reposition the haul road and the bellmouths, where project traffic would cross public highways or enter the project site, from the locations presented at statutory consultation. The haul road would follow the new proposed alignment, with project traffic crossing the unnamed track northwest of Whalebone Corner. The haul road and bellmouths associated with the compound west of Ipswich Road would remain as presented previously.
- We are also proposing other minor amendments to the draft Order Limits as well as repositioning the temporary construction compound and laydown area.

Ardleigh

- Proposal to reposition the underground cable and overhead line alignments before they enter the East Anglia Connection Node (EACN) substation east of Ardleigh. The proposed change would not affect the location of the underground cable or the overhead line at the substation.
- The proposed change would locate the underground cables predominantly to the north of Little Bromley Road and passing to the south of the lake at Home Farm, with the overhead line to the south of the road. Use of the lake and its immediate surroundings (beyond the construction area) would not be restricted, though the proposed repositioning of the cable would increase the impact on horticultural land during the construction stage, as a wider swathe of land would need to be cleared. However, once site restoration is complete, horticultural uses could be reestablished.
- The proposed change in alignment, compared to the design presented at statutory consultation, would introduce an additional angle pylon and pass closer to properties along Morrow Lane. Vegetation loss and effects on recreation at the lake would be reduced.
- To accommodate the proposed change in alignment, we are also proposing to move the associated haul road and bellmouth - where construction traffic would cross public highways or enter the project site - from its location as presented at statutory consultation. We are proposing an additional bellmouth on Home Farm Lane, and the bellmouth on Morrow Lane would be moved 20 m further south of the location previously proposed at statutory consultation to facilitate construction access to the site.
- We are also proposing other minor amendments to the draft Order Limits, including repositioning the temporary construction compound to the east.

Little Bromley

- Proposal to reposition a section of permanent private access near Little Bromley, to the south of the location proposed at statutory consultation. This access is the proposed permanent access to the EACN substation near Ardleigh. Traffic would continue to join Bentley Road and Ardleigh Road in the previously proposed locations.
- This change is being proposed in response to landowner feedback asking us to consider moving the track to follow the edge of a landholding. The proposed plans move the section of permanent private access closer to this boundary and avoids crossing a larger field.

Ardleigh

- Proposal to reposition the temporary construction access on Wick Lane near Ardleigh, to the west of the location proposed at statutory consultation.

- This change is being proposed in response to consultation feedback which asked us to consider repositioning the access in order to reduce its impact on a property.
- The proposed location would continue to meet highway safety standards and ensure construction traffic could safely leave and access the proposed haul road. We are also proposing to reposition the haul road to use this relocated temporary construction access, as well as other minor amendments to the draft order limits.

Surrex

- Proposal to reposition a line of pylons near Surrex, to the east of the position presented at statutory consultation. The proposed change would affect the location of the pylons TB71 to TB75 (previously TB71 to TB74).
- The proposed change would include the addition of one further angle pylon to position the line more evenly between residential properties in the settlement of Surrex and the residential properties at Skye Green. This would remove the need for the haul road to cross the horse paddocks to the south of Surrex. We are also proposing to change the haul roads associated with these pylons so that they follow field boundaries where possible, reducing the impacts on land uses and agricultural activity, along with other minor amendments to the draft order limits.
- To accommodate the proposed repositioning of pylons, we are also proposing to move the bellmouth on Old Road, where project traffic would cross the road, to the east of the location we presented at statutory consultation. This would facilitate access to the construction sites for the relocated pylons.

Feering

- In response to feedback from statutory consultation, we are proposing to reposition a line of pylons near Feering, further to the southeast. The proposed change would affect the location of the pylons between TB77 and TB81 (previously TB76 and TB79).
- To reduce close views of pylon TB78 (previously TB77) from nearby homes, it would be positioned to the southeast of its previous location, on lower ground, and would become an angle pylon. The alignment would then run west, including an additional pylon to facilitate the proposed repositioning of TB78. TB80 (previously TB78) would also shift to the south, connecting to TB81 (previously TB79) at a slight angle.
- The proposed pylon positioning would maintain the field edge positioning presented in the draft alignment presented at statutory consultation. Access arrangements would also use existing tracks and field boundaries as far as practicable.
- To accommodate this proposed change in alignment, we are also proposing to make changes to the haul road and the bellmouths – where project traffic would cross public highways or enter the Project site. The crossing on Coggeshall Road (Feering) would be repositioned slightly to the north of where it was proposed at statutory consultation, and the crossing over the B1024 Coggeshall Road would

move 130 m south. We are also proposing a new cross over bellmouth on Old Mill Lane, along with other minor amendments to the draft Order Limits.

Great Leighs

- Proposal to extend the draft order limits south of Great Leighs, between pylons TB128 and TB133 (previously TB126 to TB131).
- We are proposing this change as Essex County Council has recently consulted on its draft updated Essex Minerals Plan and identified that this land could be allocated as a mineral site.
- Extending the draft Order Limits in this area to the south-east would allow for flexibility if the site is allocated in the updated Essex Minerals Plan.
- We are also proposing other minor amendments to the draft Order Limits, including repositioning the temporary construction laydown area.

Great and Little Waltham

- Proposal to change the alignment of pylons between Great Waltham and Little Waltham. In the same area, we are also proposing to change the pylon design from full height lattice pylons to lower height lattice pylons. There is an illustrative image of a low-height lattice pylon within our consultation leaflet available [here](#).
- This change is being proposed following feedback received at statutory consultation, which asked us to consider reducing the visual impact of the pylons on conservation areas.
- The proposed use of low height pylons is expected to remove or reduce the visibility of pylons from within the Great Waltham and Little Waltham conservation areas, and Langleys and associated park and garden.
- While the new pylons would be shorter, they are also wider, potentially increasing the visual impact to properties within the immediate area.
- We are also proposing adjustments to the alignment that was presented at our statutory consultation. This includes repositioning pylons between TB135 and TB142 (previously TB133 to TB140) to avoid veteran trees and protected species. This follows feedback received on the proposed positioning of the pylon to the south of the River Chelmer.
- We are also proposing other minor amendments to the draft Order Limits.

Margaretting

- Proposal to move a temporary construction laydown area from a site close to Ivy Barns Lane to the north-west of the location proposed at statutory consultation, in response to feedback from nearby residents.
- The proposed change would not move the construction laydown area any closer to residential properties. The nearest residential property would benefit from improved screening from trees and vegetation as a result of the proposed change

in location of the construction laydown area, compared to the screening available at the location proposed at statutory consultation.

Haivering's Grove

- Proposal to take down a section of the existing 132 kV overhead line and replace it with underground cable to allow us to move a line of pylons and a temporary construction compound near Haivering's Grove to the west of its previous location. This would affect the pylons from TB208 to TB211 (previously TB205 to TB208).
- The proposed change would replace approximately 2 km - from north of Bushwood Farm to south of Creasey's Farmhouse - of the existing 132 kV overhead line with underground cable. This would reduce cumulative effects and facilitate the repositioning of the proposed 400 kV overhead line. We are proposing that TB206 would be repositioned to the west as angle pylon TB209 and that the line would turn southeast to reconnect with TB212 (previously TB209).
- This proposed change would remove an angle pylon, reduce visual effects on nearby properties, and would also move further away from St James' Wood Local Wildlife Site. It would avoid the need for tree removal around a pond to the west of St James's Wood.
- We are also proposing that the temporary construction laydown area is relocated to the west (into the next field) to increase the distance from the nearest residential properties. This compound would be accessed from the same location as previously proposed.

Little Burstead

- Proposal to move a line of pylons near Little Burstead to the east of the alignment proposed at statutory consultation and also make some adjustments to the haul road and access arrangements. This would affect the alignment of the pylons TB217 to TB220 (previously presented TB214 to TB217).
- We are proposing to reposition TB218 (previously TB215), so it is sited on lower ground to the south east as an angle pylon. Pylon TB217 (previously TB214) is now proposed to be changed from an angle pylon to a suspension pylon. The line would then continue from TB218 in a straight line to the southwest. This change has been proposed to reduce the impact on residential properties at Botney Hill.
- We are proposing to reposition the haul road to the north-east to follow field boundaries. We are also proposing to move the haul road crossing bellmouth to the existing farm access to the south of Botney Hill Road. This access is already used by HGVs. To allow HGVs to cross Botney Hill Road without needing to travel along it, the temporary bellmouth access to the north would also be repositioned directly opposite the existing farm access.
- We are also proposing other minor amendments to the draft Order Limits.

Dunton Wayletts

- Proposal to reposition the temporary construction access and laydown area location near Dunton Wayletts to the south of its location presented at statutory consultation.
- The proposed change would affect access to pylons TB225 and TB226 (previously TB222 and TB223).
- This change is being proposed following feedback which asked us to consider that future built development could be in the construction stage at the same time as the project and could therefore conflict with the proposed temporary access and compound arrangements presented at statutory consultation.
- The proposed change involves relocating the construction access road to TB226 (previously TB223), and a new construction laydown area for this pylon. The proposed laydown area would be temporary, and the land would be returned to its original use after construction.
- As there is some uncertainty over the timing of the built development, we propose to include both access arrangements. Our preferred access route remains the northern access at TB225 presented at statutory consultation. This proposed access arrangement would be used in the event that the land used for the northern access at TB225 is being developed and cannot be used.

Dunton

- Proposal to reposition the existing UKPN 132 kV line close to Lower Dunton Road. This 132 kV connection is currently above ground and carried on lattice pylons but, to allow Norwich to Tilbury to come forward, it would need to be moved and placed underground. In the statutory consultation, we presented an underground route for the 132 kV connection. We are now proposing to reposition this underground route to follow more closely follow existing field boundaries on either side of Lower Dunton Road.
- This change is being proposed following feedback received at statutory consultation, which asked us to consider the impacts on farming and to take account of housing development proposals.
- To facilitate these works, we are also proposing temporary UKPN compounds at each end of the undergrounding route, which would be accessed via Lower Dunton Road. We are also proposing other minor amendments to the draft Order Limits.

Langdon Hills

- Proposal to reposition a temporary construction compound near Dunton to the east.
- This change is being proposed following a request from the landowner to move the construction compound from the western end of the field to the eastern end of the field to reduce effects on agricultural activity.

- The construction haul road would be extended to the east to allow access to the new construction compound.

Bulphan

- Proposal to reposition the alignment of the overhead line to allow the close paralleling of the existing 132 kV overhead line near Langdon Hills Golf Club. The proposed change involves the relocation of pylons TB238 to TB244 (previously TB235 to TB243) to more closely follow the route of the 132 kV overhead line.
- We are also proposing to use lower height lattice pylons from TB238 to TB243 (previously presented at statutory consultation as TB235 to TB242) to reduce the impacts on Thurrock Airfield.
- The draft Order Limits have also been widened in some locations where the overhead line would cross existing infrastructure in response to ongoing engagement with the infrastructure providers. We are also proposing other minor amendments to the draft Order Limits.

Proposed changes to connection at Tilbury

- Change to the substation connection point at the southern end of the route. Rather than connecting at the existing Tilbury Substation, we are now proposing to build a new Tilbury North Substation 5 km to the north, close to Orsett and between the villages of Linford and Chadwell St Mary. The substation would be located where we had previously proposed to build a CSE compound.
- The proposed change removes the need to construct approximately 4.5 km of underground cabling and we would no longer need to extend the existing Tilbury Substation.
- The Project would connect into the national electricity transmission system through the new substation and a modification of the existing overhead line (known as YYJ). The YYJ line already connects to the existing Tilbury substation.
- We would also need to underground a section of a second existing overhead line (known as ZB) to avoid crossing with the new lines coming out of the substation.

9.8 Ongoing engagement

- 9.8.1 **Appendix A** of this report provides an overview of engagement activities with stakeholders held prior to and during the 2022 and 2023 non-statutory consultations and the 2024 statutory consultation.
- 9.8.2 A summary of responses raised through feedback received after the close of the 2024 statutory consultation (26 July 2024) up to and including the day before the 2025 targeted consultations (30 January 2025) is included in **Table 9-10** of this report.

Table 9.10 Summary of Headline Issues Raised Between 26 July 2024 and 30 January 2025

Headline Issue	Matters Raised	How National Grid had regard to headline issues raised
South Norfolk		
Community / Social impact	Feedback concerning the impact of the Project on children / families / residents / communities and becoming encircled / surrounded by overhead lines	<p>National Grid recognises people may have concerns about the potential impacts of living close to an overhead line, and that the uncertainty whilst the proposals are developed may cause anxiety.</p> <p>We have sought to reduce potential effects on communities, residents – including children - through routeing and design. We have also sought to reduce concern or uncertainty about the proposals through making timely design decisions and engaging with people and stakeholders throughout the development of the Project. If the Project received Development Consent, the Project team would continue to engage with people potentially affected during construction, through regular communication including letters, phone calls and meetings, where necessary. We urge anyone with concerns to get in touch through the Norwich to Tilbury Freephone number, address or email, which will remain open throughout examination. National Grid is committed to working with local suppliers, facilitated by supporting forums (such as the local Chambers), on electricity industry skills and workforce planning. National Grid is also committed to providing a coordinated regional approach to jobs and skills opportunities. This commitment is broader than the individual project and separate to any commitments under the proposed development consent order for this Project. The socio-economic effects of the project are assessed in Chapter 15 of the Environmental Statement (document reference 6.15). Post</p>

Headline Issue	Matters Raised	How National Grid had regard to headline issues raised
		<p>construction job opportunities are limited given the nature of the development however we will still work with Local Authorities (including facilitating local partners) to understand what is important to them around skills and employment to ensure we leave a lasting positive legacy in the communities where we operate. With regards to a delivery mechanism, the above measures will be delivered as part of our community benefit package, which will look at both local and regional initiatives. This will be delivered outside the development consent process and is not a material consideration in the decision on the proposed Project or a matter to be secured as part of the DCO, as per the Community Funds for Transmission Infrastructure: Guidance (DESNZ, 2025).</p>
Construction impacts	Feedback concerning construction impact on local residents and amenities	<p>An Environmental Statement (ES) (document reference: Volume 6: Environmental Statement) has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 ('the Infrastructure EIA Regulations'). The ES identifies and assesses the likely significant effects on the environment resulting from the construction of the Project and recommends appropriate mitigation to reduce effects.</p> <p>Environmental mitigation measures have been defined within each environmental topic chapter and set out in relevant management documents submitted with the Development Consent Order (DCO) application, including the Outline Code of Construction Practice (CoCP) (document reference 7.2), the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), the Outline Landscape and Ecological Management Plan (LEMP) (document</p>

Headline Issue	Matters Raised	How National Grid had regard to headline issues raised
Consultation	Feedback concerning consultation venue locations, criticisms that materials lacked detail and that the consultation was not accessible to those without IT capability	reference 7.4) and the Draft Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (WSI) (document reference 7.5).
		<p>Before the start of the statutory consultation, National Grid discussed its approach with officers from the Local Planning Authorities and prepared a Statement of Community Consultation (SOCC). This document set out how we were planning to consult on the project and is published on the project website.</p> <p>From experience we find an informal approach works best for people who attend consultation events. It allows them to take their time in viewing the information available and when they are ready, to spend some time talking to a member of the project team. We recognise that some of the events were very well attended, although our team worked to ensure that the capacity of venues was not exceeded at any time. We also held six online webinar events to provide information to those who felt more comfortable with online meetings or were unable to attend one of our in-person events.</p> <p>Before the start of the statutory consultation, National Grid discussed its approach with officers from the Local Planning Authorities and prepared a Statement of Community Consultation (SOCC). This document set out how we were planning to consult on the project and is published on the project website.</p> <p>To help ensure the consultation was accessible, we wrote to approximately 77,000 properties with details of our proposals and held 14 face-to-face events and six webinars. We also made a freephone and freepost service available for people to contact us with any queries. This provided an alternative option for those</p>

Headline Issue	Matters Raised	How National Grid had regard to headline issues raised
		<p>who may have difficulty accessing other engagement channels or were less comfortable with online technology. National Grid is happy to discuss any special requirements for marginalised groups for consultation and implement these where practicable. The Statement of Community Consultation is available as Appendix A to this report.</p>
DESIGN CHANGE (CR)	<p>Feedback suggesting that underground cables are used in this section / the underground cables as part of the Waveney Valley Alternative are extended</p>	<p>National Grid has considered the justification for the use of underground cable for the crossing of the Waveney Valley and on the matter of extending the underground cable throughout Norfolk raised in the respondent's feedback. The starting presumption in National Policy Statement (NPS) EN-5 paragraph 2.9.20 in a location such as the Waveney Valley which, although valued is not designated, is that overhead line is the appropriate 400 kV connection technology. We have also considered whether the effects from the overhead line are at a level that engages other parts of NPS EN-5 (such as paragraph 2.9.23) to prompt consideration of whether the benefits of undergrounding outweigh any extra economic, social or environmental impacts. At the Waveney we conclude that the benefits from a change to underground cable, do not justify the additional cost that would be incurred. The use of underground cable would lead to a lowering of effects on the setting of the Grade I Listed St Remegius Church, albeit the effects of progressing with an overhead line are assessed as less than substantial harm and don't themselves require a change in technology. In terms of community effects, existing trees would provide some screening and filtering of views of an overhead line for those in residential areas and on recreational routes. A change from overhead</p>

Headline Issue	Matters Raised	How National Grid had regard to headline issues raised
		<p>line to underground cable would reduce these community effects but bring disbenefits, most notably increased ecological effects from installation within peaty soils and increased technical risk to cable integrity from the WaLOR channel naturalisation and landscape recovery plans. Conversely there may be compromise to the WALOR project by measures to ensure cable integrity. After consideration of the decision making guidance at paragraph 2.9.25 of NPS EN-5, National Grid concludes that whilst effects from overhead lines to individual receptors may be significant in Environmental Impact Assessment (EIA) terms they do not justify the potential for compromise to the WALOR project, the effects on peaty soils which would arise with an underground cable design nor justify the expected cost of an underground cable design. On this basis, National Grid concludes that the use of an overhead line should be taken forward for the crossing of the Waveney Valley. Prior to making this decision we had considered whether requests to relocate the Cable Sealing End (CSE) compounds and extend the cable both to the north and the south may alter the decision making balance. Such extensions would bring benefits to various residential receptors but with the additional cost of longer length of cables. We conclude that given the absence of any designated status pertinent to NPS EN-5, and the extent to which some views from residential areas are filtered and screened and lower the level of adverse effects from the overhead line, we do not consider the additional cost associated with extending the underground cable would be justified.</p>

Headline Issue	Matters Raised	How National Grid had regard to headline issues raised
Economic / Employment impact	Feedback concerning negative impact on businesses	<p>Through the routeing and siting exercise, National Grid has sought to reduce as far as practicable impacts to businesses.</p> <p>Impacts on local businesses within the Local Study Area (the Order Limits) and within the 3 km Study Area (where visual impact is likely to be an economic consideration) are assessed in Environmental Statement (ES) Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15). As part of this assessment, a range of mitigation measures have been considered to reduce disruption to businesses and their users during the construction phase of the Project. These measures are identified in ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15), the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) which accompany the Development Consent Order (DCO) application</p>
Environmental impact	Feedback concerning negative impact on the environment	<p>National Grid has sought to reduce, as far as practicable, impacts on the environment / countryside through routeing and siting and an ongoing iterative design process which has taken on board feedback at different stages of the Project. The iterative design process sought to avoid areas of highest concern, for examples through changes to the route alignment or changes to the method e.g. trenchless crossings.</p> <p>National Grid have engaged with a range of stakeholders (including Statutory Environmental Bodies (SEBs) and relevant Local Planning Authorities)</p>

Headline Issue	Matters Raised	How National Grid had regard to headline issues raised
		<p>throughout the development of the Project design and environmental assessment work.</p> <p>National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project. The results of this assessment are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation (and maintenance) of the Project and recommends appropriate mitigation measures to reduce potential effects.</p> <p>A number of mitigation measures have been incorporated into the Project design. Mitigation relevant to specific environmental topics (including Ecology and Biodiversity, Landscape and Visual and Historic Environment) are presented in the relevant ES chapters. The Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Code of Construction Practice (CoCP) (document reference 7.2) contain a list of relevant good practice measures to avoid or reduce risks to habitats and species. In addition to the EIA, National Grid has set itself a target of delivering 10% biodiversity net gain (BNG) with environmental and societal benefits on all construction projects, meaning that as a result of measures taken, the biodiversity rating of the area will be enhanced by 10% greater than prior to the construction of the Project. The BNG target for the Project is currently voluntary and aligned with our corporate sustainability commitment.</p>

Headline Issue	Matters Raised	How National Grid had regard to headline issues raised
Financial compensation	Feedback concerning negative impact on property value	<p>National Grid acknowledges that its proposals may cause concern to landowners. Diminishment of property value known as ‘injurious affection’ and any other appropriate heads of claim would be considered on an individual basis in accordance with current legislation. We would pursue a voluntary agreement with affected landowners, acquiring rights in accordance with our Land Rights Strategy (the strategy is subject to review). If a voluntary agreement cannot be reached, then the Compulsory Purchase Code allows for a claim of compensation for the loss that property owners may have suffered as a direct result of the retained part of your property ownership being worth less as a direct result of the works.</p> <p>If there are any specific concerns about the devaluation of property, National Grid would advise seeking third party advice. or alternatively please contact the Project team:</p> <ul style="list-style-type: none"> • <u>Norwich-Tilbury@fishergerman.co.uk</u> or by calling us on Freephone 0808 175 3314. <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD.</p>
Health, Safety & Wellbeing	Feedback concerning negative impacts to health and wellbeing in this area (such as electromagnetic fields (EMF))	<p>Health considerations are given a high priority in the process by which we arrive at any proposals for new electricity circuits. Assessment of compliance with Electric and Magnetic Field (EMF) guidelines and policies is key to National Grids approach. The UK has a carefully thought-out set of policies for managing EMFs. There have been over four decades of research looking into whether EMF can cause health effects and</p>

Headline Issue	Matters Raised	How National Grid had regard to headline issues raised
		<p>there are no established effects below the exposure limits. When designing our overhead lines, substations and underground cables design criteria, we ensure they would not exceed those exposure limits, even when operating at 100% capacity. Additionally, the precautionary measures which the Government have adopted, are applied to the design which ensure the EMFs reduce as quickly with distance as possible. Evidence of that compliance is presented in the EMF compliance report (document reference 7.8) submitted as part of the Development Consent Order (DCO) application.</p> <p>National Grid takes this issue very seriously and look to authoritative and independent scientific organisations such as the World Health Organisation (WHO) and in the UK Health Security Agency (UKHSA) to review the worldwide body of scientific evidence on health. Important decisions on health are taken independently of industry, and National Grid have followed the guidance and policies adopted by Government on advice from their scientific experts. Each of these organisations have comprehensive reviews of EMF research available to view on their websites.</p>
Visual Impact	Feedback concerning visual impact / height of pylons	<p>National Policy Statement (NPS) EN-5 makes it clear that the Government considers overhead lines to be appropriate and acceptable in most instances, although it recognises that that there may be, at particularly sensitive locations, potential adverse landscape and visual impacts of an overhead line that make it inconsistent with our duties and relevant planning policy.</p>

Headline Issue	Matters Raised	How National Grid had regard to headline issues raised
		<p>The Dedham Vale National Landscape (previously an Area of Outstanding Natural Beauty (AONB)) designation is one such location where underground cable technology is proposed with the extent of underground cabling extending beyond the boundary in response to the potential for the Project to affect the National Landscape. Our proposals include a total of approximately 20 km of underground cable through and in the vicinity of the Dedham Vale National Landscape, including a section at Great Horkesley to reduce the changes in views and setting of the National Landscape from within and adjacent to its designated boundary.</p> <p>Underground cabling is also proposed for a short section of 400 kV overhead line crossing near Fairstead.</p> <p>Cable Sealing End (CSE) compounds are required to facilitate sections of underground cable, and the proposed East Anglia Connection Node (EACN) substation is required to connect to customers and the proposed Tilbury North Substation is required to connect the Project into the existing Tilbury Substation. These components have been carefully sited taking into consideration Horlock Rules including the potential for landscape and visual effects.</p> <p>The higher cost of underground cables to bill paying consumers, and the environmental implications of installing underground cables and maintaining them at locations outside the Dedham Vale National Landscape, are not considered to be justifiable in the context of national policy or National Grid's statutory duties, which include the need to be economical and efficient.</p>

Headline Issue	Matters Raised	How National Grid had regard to headline issues raised
		<p>A Landscape and Visual Impact Assessment (LVIA), presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13), has been undertaken as part of the Environmental Impact Assessment (EIA). The LVIA includes an assessment on both landscape character and visual amenity and identifies areas for potential mitigation planting around substations and CSE compounds to reduce visual impacts to local receptors. The Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) includes details regarding the planting proposals.</p>
Wildlife / Ecology impact	Feedback concerning negative impact on flora / plants / woodlands / hedgerows	<p>Through routeing, siting and detailed design, National Grid has sought to reduce, as far as practicable, potential impacts on biodiversity including priority grassland, wetland, woodland, and hedgerow habitats. The design process has taken account of existing biodiversity, the natural environment and, where practicable, seeks to reduce impacts on areas of ecological sensitivity, through avoidance or mitigation.</p> <p>Chapter 8: Ecology and Biodiversity of the Environmental Statement (ES) (document reference 6.8) assesses the effects on important ecological receptors (which includes grasslands, wetlands, woodlands and hedgerows).</p> <p>As part of the Environmental Impact Assessment (EIA) process for the Project, a suite of ecological surveys has been to be undertaken. The findings of which inform the design and approach to mitigation.</p> <p>The Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Code of Construction Practice (CoCP) (document reference 7.2) contain a list of relevant</p>

Headline Issue	Matters Raised	How National Grid had regard to headline issues raised
		<p>good practice measures to avoid or reduce impacts on valuable habitats.</p> <p>The Environment Act 2021 introduces a mandatory requirement for 10% Biodiversity Net Gain (BNG) for new Development Consent Order (DCO) developments (which is not yet in force and not expected until May 2026). National Grid have committed to delivering 10% BNG with environmental and societal benefits on all construction projects. The BNG target for the Project is currently voluntary and aligned with our corporate sustainability commitment.</p> <p>As well as seeking to avoid and minimise impacts to nature, the Project considers the land required for mitigation, compensation and enhancement that can deliver BNG and wider environmental benefits. This will require delivery of offsite Biodiversity Units via habitat creation or enhancement actions in strategic areas, and we will consider all offsite options that are available to us.</p>
Question	Query regarding proposals in this area	Queries sent to the Project team were responded to directly or are responded to within this report.
Airfields	Feedback concerning impact to aircraft / airfields	<p>National Grid recognises the need for the Project to be developed collaboratively alongside aviation stakeholders to identify, assess, and as appropriate mitigate, adverse impacts on aviation safety, in accordance with Government's Overarching National Policy Statement (NPS) EN-1.</p> <p>Our review of aerodromes potentially impacted by the Project identified 17 civil aerodromes (including 2 helipads) within 5 km of the preferred corridor and one military site (Wattisham Flying Station). We have also considered other airfields and flight activities where these have been identified through the 2022 and 2023</p>

Headline Issue	Matters Raised	How National Grid had regard to headline issues raised
		<p>non-statutory, statutory consultation and targeted consultations including for ballooning and for model flying. As well as considering feedback, National Grid's aviation advisers (an independent aviation consultancy) have directly engaged with these parties (with National Grid present).</p> <p>A number of route alignment and pylon positioning changes have been made following consideration of feedback and in all but one case the assessment concludes that the airfields can continue to operate. In the remaining case of a private airstrip near Little Burstead, we continue to liaise with the operator to identify an appropriate solution. Specifically in respect of Wattisham Flying Station our proposals position the alignment onto relatively lower ground (to remove the potential for interference with Instrument Landing System (ILS) radar) and adopt an alignment closer to the existing 132 kV overhead line and include replacing part of the 132 kV line south of Offton by underground cable to avoid a new overhead line corridor being introduced. We will continue to engage with relevant parties as appropriate.</p> <p>Further information on the assessment of airfields can be found in the Environmental Statement (ES Chapter 15: Socio-Economic, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).</p>
Needs case	Feedback suggesting other routes / alternatives to be considered	<p>National Grid notes the respondent's feedback. Strategic alternatives for the Project, including underground cables and offshore cables, have been considered and are set out in the published Strategic Options Backcheck and Reviews (SOBR) published in</p>

Headline Issue	Matters Raised	How National Grid had regard to headline issues raised
		<p>2023 and 2024 (available on the Project website) and the 2025 SOBR (document reference 7.17). This sets out the need case for the Project and the reasoning why an onshore solution (including a mix of overhead lines and underground cable) has been taken forward.</p> <p>National Grid has a statutory duty to facilitate new connections and maintain a safe National Electricity Transmission System (NETS). The Project would facilitate the connection agreements that are in place with two offshore wind farm projects and an interconnector project based on their connection into a new East Anglia Connection Node (EACN) substation. The Project would also reinforce the local transmission network which currently does not have the capacity needed to reliably and securely transport all the energy that is likely to be connected in the future – driven by the Government’s plan to increase offshore wind from the current 8.5 GW to 50 GW by 2030 to meet the increased demand. This ambition has been emphasised in the National Energy System Operator’s (NESO) Clean Power 2030 report published in November 2024.</p>
Project Finance / Costs	Feedback concerning project costs and the cost of underground cables	<p>National Grid has carefully considered the feedback received during the 2022 and 2023 non-statutory consultations, the statutory consultation and targeted consultations, the alternatives available, and other factors including our duties and obligations. These duties include balancing the need to be economic and efficient, which includes keeping costs down in the interests of the bill-paying consumers, with a duty to have regard to preserving amenity, which includes the natural environment, cultural heritage, landscape and visual quality, National Policy Statement (NPS) EN-5</p>

Headline Issue	Matters Raised	How National Grid had regard to headline issues raised
		<p>makes clear that ‘the government’s position that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes)’. The NPS also confirms that widespread and significant adverse landscape and/or visual impacts in other locations may also justify the use of undergrounding. We may also adopt underground cables in other circumstances such as to cross existing 400 kV overhead line infrastructure. Where the installation of underground cables is required in lieu of overhead lines, the design of the Project has incorporated suitable consideration of the existing environment, ecology and site ground conditions based on site specific survey data.</p>
Mid Suffolk		
No responses		
Babergh, Colchester and Tendring		
Community / Social impact	Feedback concerning impact on children / families / residents / communities	<p>National Grid recognises people may have concerns about the potential impacts of living close to an overhead line, and that the uncertainty whilst the proposals are developed may cause anxiety.</p> <p>We have sought to reduce potential effects on communities, residents – including children - through routeing and design. We have also sought to reduce concern or uncertainty about the proposals through making timely design decisions and engaging with people and stakeholders throughout the development of the Project. If the Project received Development Consent, the Project team would continue to engage with people potentially affected during construction, through regular communication including</p>

Headline Issue	Matters Raised	How National Grid had regard to headline issues raised
		<p>letters, phone calls and meetings, where necessary. We urge anyone with concerns to get in touch through the Norwich to Tilbury Freephone number, address or email, which will remain open throughout examination.</p> <p>National Grid is committed to working with local suppliers, facilitated by supporting forums (such as the local Chambers), on electricity industry skills and workforce planning. National Grid is also committed to providing a coordinated regional approach to jobs and skills opportunities. This commitment is broader than the individual project and separate to any commitments under the proposed development consent order for this Project. The socio-economic effects of the project are assessed in Chapter 15 of the Environmental Statement (document reference 6.15). Post construction job opportunities are limited given the nature of the development however we will still work with Local Authorities (including facilitating local partners) to understand what is important to them around skills and employment to ensure we leave a lasting positive legacy in the communities where we operate. With regards to a delivery mechanism, the above measures will be delivered as part of our community benefit package, which will look at both local and regional initiatives. This will be delivered outside the development consent process and is not a material consideration in the decision on the proposed Project or a matter to be secured as part of the DCO, as per the Community Funds for Transmission Infrastructure: Guidance (DESNZ, 2025).</p>
Consultation	Feedback requesting engagement in this area	National Grid has held three consultations for the Project; two non-statutory in 2022 and 2023 and a statutory consultation in 2024. At all of these, we have

Headline Issue	Matters Raised	How National Grid had regard to headline issues raised
DESIGN CHANGE (CR)	Suggest that underground cables are used	<p>engaged directly with affected landowners, stakeholders, and local residents with an interest in the Project. We also held targeted consultations in key areas along the route where our proposals changed following the statutory consultation. In this we engaged directly with those most affected by the changes in alignment or access and took their feedback into account.</p> <p>National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is 'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes'. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified. Therefore, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due</p>

Headline Issue	Matters Raised	How National Grid had regard to headline issues raised
		<p>consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider this section in its entirety would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.</p> <p>Therefore, whilst undergrounding the whole of this section is not considered appropriate, our proposals do include underground cable within the Dedham Vale National Landscape (previously known as Area of Outstanding Natural Beauty (AONB)) in accordance with NPS EN-5. Prior to our 2023 non-statutory consultation we identified the need to extend the underground cable beyond the National Landscape boundary because of potential effects, we have further extended this section of underground cable following consideration of feedback on our 2023 non-statutory consultation and additional investigation into potential effects. We also identified an approximately 4 km section near Great Horkesley as meeting the</p>

Headline Issue	Matters Raised	How National Grid had regard to headline issues raised
Environmental impact	<ul style="list-style-type: none"> Feedback concerning negative impact on the environment / countryside Suggest that areas other than the AONB should be protected (such as the Fordham Valley) 	<p>particularly sensitive criteria where underground cable is also proposed. Additionally, underground cable is proposed at Fairstead for a 400 kV overhead line crossing.</p> <p>National Grid has sought to reduce, as far as practicable, impacts on the environment / countryside through routeing and siting and an ongoing iterative design process which has taken on board feedback at different stages of the Project. The iterative design process sought to avoid areas of highest concern, for examples through changes to the route alignment or changes to the method e.g. trenchless crossings. National Grid have engaged with a range of stakeholders (including Statutory Environmental Bodies (SEBs) and relevant Local Planning Authorities) throughout the development of the Project design and environmental assessment work.</p> <p>National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project. The results of this assessment are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation (and maintenance) of the Project and recommends appropriate mitigation measures to reduce potential effects.</p> <p>A number of mitigation measures have been incorporated into the Project design. Mitigation relevant to specific environmental topics (including Ecology and Biodiversity, Landscape and Visual and Historic</p>

Headline Issue	Matters Raised	How National Grid had regard to headline issues raised
		<p>Environment) are presented in the relevant ES chapters. The Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Code of Construction Practice (CoCP) (document reference 7.2) contain a list of relevant good practice measures to avoid or reduce risks to habitats and species. In addition to the EIA, National Grid has set itself a target of delivering 10% biodiversity net gain (BNG) with environmental and societal benefits on all construction projects, meaning that as a result of measures taken, the biodiversity rating of the area will be enhanced by 10% greater than prior to the construction of the Project. The BNG target for the Project is currently voluntary and aligned with our corporate sustainability commitment.</p>
Heritage	Feedback concerning negative impact on heritage sites / archaeology (including Roman Tile kiln / Roman site and medieval sites)	<p>Through routeing and siting National Grid has sought to reduce as far as practicable potential impacts on the historic environment. The impacts of the Project on the historic environment are assessed in Chapter 11: Historic Environment of the Environmental Statement (ES) (document reference 6.11). The assessment considers the potential impact on archaeology, historic buildings and historic landscapes and includes assessment of potential for physical impact, impact through change to setting that affects the value of a heritage asset and impact through indirect factors such as change in hydromorphology. The assessment is supported by walkover, setting and geophysical surveys, as documented in Appendix 11.1 Historic Environment Baseline Report (document reference 6.11.A1) and Appendix 11.4 Geophysical Survey Results Report (document reference 6.11.A4). Archaeological trial trench evaluation has also been</p>

Headline Issue	Matters Raised	How National Grid had regard to headline issues raised
		<p>undertaken and is reported in Appendix 11.5 Trial Trenching Results Report (document reference 6.11.A5). In addition to the proposals in the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4), the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (AMS-OWSI) (document reference 7.5) sets out appropriate mitigation for the historic environment. The Project has engaged with Historic England and relevant planning authorities on aspects relating to heritage, including appropriate mitigation measures and techniques and to take their views into account during Project development.</p>
Visual Impact	Feedback concerning negative impact on landscape / views	<p>National Policy Statement (NPS) EN-5 makes it clear that the Government considers overhead lines to be appropriate and acceptable in most instances, although it recognises that there may be, at particularly sensitive locations, potential adverse landscape and visual impacts of an overhead line that make it inconsistent with our duties and relevant planning policy.</p> <p>The Dedham Vale National Landscape (previously an Area of Outstanding Natural Beauty (AONB)) designation is one such location where underground cable technology is proposed with the extent of underground cabling extending beyond the boundary in response to the potential for the Project to affect the National Landscape. Our proposals include a total of approximately 20 km of underground cable through and in the vicinity of the Dedham Vale National Landscape, including a section at Great Horkesley to reduce the changes in views and setting of the National</p>

Headline Issue	Matters Raised	How National Grid had regard to headline issues raised
		<p>Landscape from within and adjacent to its designated boundary.</p> <p>Underground cabling is also proposed for a short section of 400 kV overhead line crossing near Fairstead.</p> <p>Cable Sealing End (CSE) compounds are required to facilitate sections of underground cable, and the proposed East Anglia Connection Node (EACN) substation is required to connect to customers and the proposed Tilbury North Substation is required to connect the Project into the existing Tilbury Substation. These components have been carefully sited taking into consideration Horlock Rules including the potential for landscape and visual effects.</p> <p>The higher cost of underground cables to bill paying consumers, and the environmental implications of installing underground cables and maintaining them at locations outside the Dedham Vale National Landscape, are not considered to be justifiable in the context of national policy or National Grid's statutory duties, which include the need to be economical and efficient.</p> <p>A Landscape and Visual Impact Assessment (LVIA), presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13), has been undertaken as part of the Environmental Impact Assessment (EIA). The LVIA includes an assessment on both landscape character and visual amenity and identifies areas for potential mitigation planting around substations and CSE compounds to reduce visual impacts to local receptors. The Outline Landscape and Ecological Management</p>

Headline Issue	Matters Raised	How National Grid had regard to headline issues raised
Wildlife / Ecology impact	Feedback concerning negative impact on wildlife / habitats / flora / plants / woodlands / hedgerows	<p>Plan (LEMP) (document reference 7.4) includes details regarding the planting proposals.</p> <p>Through routeing, siting and detailed design National Grid has sought to reduce, as far as practicable, potential impacts on biodiversity. The design process has taken account of existing biodiversity, the natural environment and, where practicable, has sought to reduce impacts on areas of ecological sensitivity, through avoidance or mitigation.</p> <p>Chapter 8: Ecology and Biodiversity of the Environmental Statement (ES) (Document Reference 6.8) assesses the effects on important ecological receptors.</p> <p>As part of the Environmental Impact Assessment (EIA) process for the Project, a suite of ecological surveys has been to be undertaken over the 2022-2024 period. The findings of which inform the design and approach to mitigation.</p> <p>The Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Code of Construction Practice (CoCP) (document reference 7.2) contain a list of relevant good practice measures to avoid or reduce impacts on valuable habitats and species.</p> <p>The Environment Act 2021 introduces a mandatory requirement for 10% Biodiversity Net Gain (BNG) for new Development Consent Order (DCO) developments (which is not yet in force and expected May 2026). National Grid have committed to deliver 10% BNG with environmental and societal benefits on all construction projects. The 10% BNG target for the Project is</p>

Headline Issue	Matters Raised	How National Grid had regard to headline issues raised
		<p>currently voluntary and aligned with our corporate sustainability commitment.</p> <p>As well as seeking to avoid and minimise impacts to nature, the Project considers the land required for mitigation, compensation and enhancement that can deliver BNG and wider environmental benefits. This would require delivery of offsite Biodiversity Units via habitat creation or enhancement actions in strategic areas, and we will consider all offsite options that are available to us.</p>
Request	Request for National Grid to respond to landowners	<p>National Grid consults with all landowners and persons with an interest in a piece of land impacted by the Project. If a landowner or a person with an interest in the land feels that they have not been consulted or if they require a response they should make contact with the Project lands team to discuss: Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314. Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD</p>

		<p>the individual project and separate to any commitments under the proposed development consent order for this Project. The socio-economic effects of the project are assessed in Chapter 15 of the Environmental Statement (document reference 6.15). Post construction job opportunities are limited given the nature of the development however we will still work with Local Authorities (including facilitating local partners) to understand what is important to them around skills and employment to ensure we leave a lasting positive legacy in the communities where we operate. With regards to a delivery mechanism, the above measures will be delivered as part of our community benefit package, which will look at both local and regional initiatives. This will be delivered outside the development consent process and is not a material consideration in the decision on the proposed Project or a matter to be secured as part of the DCO, as per the Community Funds for Transmission Infrastructure: Guidance (DESNZ, 2025).</p>
Construction impacts	<p>Feedback concerning impact on traffic levels in local area caused by construction works (e.g. construction traffic travelling along local roads, road closures, etc.)</p>	<p>As part of the pre-application process National Grid has engaged with the relevant authorities, their highways teams and National Highways to understand and gain information on their road networks. This information has been used to inform and guide the drafting of the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) for the Project that accompanies the Development Consent Order (DCO) application. The Outline CTMP provides details about the proposed construction access strategy that has been developed to manage the impact of construction vehicles on the Public Highway and sensitive receptors, using a combination of more suitable Local Road</p>

Headline Issue	Matters Raised	How National Grid had regard to headline issues raised
		<p>Network connections from the Strategic Road Network, and temporary haul roads for access along the proposed alignment. The Outline CTMP highlight any measures to reduce impacts to other road users from construction traffic related to the Project.</p> <p>Environmental Statement (ES) Chapter 16: Traffic and Transport (Document Reference 6.16) includes the assessment of the potential impacts of the Project including changes in traffic flow, delays, road safety and impact on Walking, Cycling and Horse-Riding modes on the roads along the Primary Access Routes located in the Local Road Network.</p> <p>The Transport Assessment (Document Reference 7.11), submitted with the Development Consent Order (DCO) application, examines capacity, safety, and operational efficiency of the network, identifying potential bottlenecks or safety concerns.</p> <p>Within the assessment of the ES and the Transport Assessment, mitigation measures are proposed to minimise likely adverse impacts</p>
Consultation	Request for further consultation in this area such as a presentation to local councillors from National Grid	<p>National Grid held 14 events during our statutory consultation at locations along the route, including several late and weekend events. We had to accommodate our events with availability of the local halls and capacity to fit enough people and materials.</p> <p>We also held six public webinars which were in the evening for those who could not attend one of the public information events, at these we shared all the same information and had members of the Project team available to answer questions.</p>

Headline Issue	Matters Raised	How National Grid had regard to headline issues raised
		Throughout the statutory consultation we had a dedicated phonenumber and email for people to get in touch with us if they had any questions.
DESIGN CHANGE (CR)	Suggest the route follows south of Old Mill Lane	National Grid has considered feedback requesting for the alignment (as in between TB76 and TB81) to move away from certain properties to reduce visual impacts. We have proposed a change to the alignment between TB75 and TB79 (now TB76 and TB81) which would move TB77 to the south-east of Old Mill Lane.
Economic / Employment impact	Feedback concerning negative impact on businesses	<p>Through the routeing and siting exercise, National Grid has sought to reduce as far as practicable impacts to businesses.</p> <p>Impacts on local businesses within the Local Study Area (the Order Limits) and within the 3 km Study Area (where visual impact is likely to be an economic consideration) are assessed in Environmental Statement (ES) Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15). As part of this assessment, a range of mitigation measures have been considered to reduce disruption to businesses and their users during the construction phase of the Project. These measures are identified in ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15), the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) which accompany the Development Consent Order (DCO) application.</p>
Environmental impact	Feedback concerning negative impact on the environment	National Grid has sought to reduce, as far as practicable, impacts on the environment / countryside

Basildon and Brentwood		
Agricultural land	Feedback concerning the removal of valuable agricultural land / disruption to farming operations	<p>During the construction stage of the Project, there would be areas of agricultural land that would be temporarily disrupted. National grid would only use land that is required as part of the Project and would seek to minimise the use of agricultural land where reasonable and safe to do so.</p> <p>National Grid is and will continue to work with all landowners including farmers who may be affected by the proposals to understand the impacts on their operations and to work with them as the Project is developed. We would seek to work with the farming community to limit disruption where practicable. This includes providing prior warning of works, which may result in the need to move livestock. Compensation claims for disturbance are considered on a case-by-case basis, if negative impact on farming operations can be proven. Particular agricultural matters can also be addressed through voluntary land agreements.</p>
Consultation	Request targeted consultation in areas that have not been included e.g. Ingatestone and Fryerning	National Grid carried out targeted consultations on localised changes that would potentially alter the Order Limits for the Project where there were new or different impacts on landowners, communities and/or the environment. There were some further changes to our proposals, such as the movement of pylons within the Order Limits presented and

Headline Issue	Matters Raised	How National Grid had regard to headline issues raised
		<p>minor amendments where it was considered that consultation was proportionate to the change suggested.</p> <p>The approach we took followed the latest guidance issued by the Government's Planning Inspectorate, which makes it clear that targeted consultation can be bespoke and proportionate to the type of change proposed.</p>
DESIGN CHANGE (CR)	Suggest that underground cables are used	<p>National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is 'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes'. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified. Therefore, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph</p>

Headline Issue	Matters Raised	How National Grid had regard to headline issues raised
		<p>2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider this section in its entirety would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.</p> <p>Therefore, whilst undergrounding the whole of this section is not considered appropriate, our proposals do include underground cable within the Dedham Vale National Landscape (previously known as Area of Outstanding Natural Beauty (AONB)) in accordance with NPS EN-5. Prior to our 2023 non-statutory consultation we identified the need to extend the underground cable beyond the National Landscape boundary because of potential effects, we have further extended this section of underground cable following consideration of feedback on our 2023 non-statutory consultation and additional investigation into potential effects. We also identified an approximately 4 km section near Great Horkesley as meeting the particularly sensitive criteria where underground cable is also proposed. Additionally, underground cable is</p>

		proposed at Fairstead for a 400 kV overhead line crossing.
Economic / Employment impact	Feedback concerning negative impact on business operations	<p>Through the routing and siting exercise, National Grid has sought to reduce as far as practicable impacts to businesses.</p> <p>Impacts on local businesses within the Local Study Area (the Order Limits) and within the 3 km Study Area (where visual impact is likely to be an economic consideration) are assessed in Environmental Statement (ES) Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15). As part of this assessment, a range of mitigation measures have been considered to reduce disruption to businesses and their users during the construction phase of the Project. These measures are identified in ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15), the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) which accompany the Development Consent Order (DCO) application.</p>
Heritage	Feedback concerning negative impact heritage sites / listed buildings	<p>Through routing and siting National Grid has sought to reduce as far as practicable potential impacts on the historic environment. The impacts of the Project on the historic environment are assessed in Chapter 11: Historic Environment of the Environmental Statement (ES) (document reference 6.11). The assessment considers the potential impact on archaeology, historic buildings and historic landscapes and includes assessment of potential for physical impact, impact through change to setting that affects the value of a</p>

Headline Issue	Matters Raised	How National Grid had regard to headline issues raised
		<p>heritage asset and impact through indirect factors such as change in hydromorphology. The assessment is supported by walkover, setting and geophysical surveys, as documented in Appendix 11.1 Historic Environment Baseline Report (document reference 6.11.A1) and Appendix 11.4 Geophysical Survey Results Report (document reference 6.11.A4). Archaeological trial trench evaluation has also been undertaken and is reported in Appendix 11.5 Trial Trenching Results Report (document reference 6.11.A5). In addition to the proposals in the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4), the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (AMS-OWSI) (document reference 7.5) sets out appropriate mitigation for the historic environment. The Project has engaged with Historic England and relevant planning authorities on aspects relating to heritage, including appropriate mitigation measures and techniques and to take their views into account during Project development.</p>
Visual Impact	Feedback concerning negative impact on landscape / views	<p>National Policy Statement (NPS) EN-5 makes it clear that the Government considers overhead lines to be appropriate and acceptable in most instances, although it recognises that there may be, at particularly sensitive locations, potential adverse landscape and visual impacts of an overhead line that make it inconsistent with our duties and relevant planning policy.</p> <p>The Dedham Vale National Landscape (previously an Area of Outstanding Natural Beauty (AONB)) designation is one such location where underground cable technology is proposed with the extent of</p>

Headline Issue	Matters Raised	How National Grid had regard to headline issues raised
		<p>underground cabling extending beyond the boundary in response to the potential for the Project to affect the National Landscape. Our proposals include a total of approximately 20 km of underground cable through and in the vicinity of the Dedham Vale National Landscape, including a section at Great Horkesley to reduce the changes in views and setting of the National Landscape from within and adjacent to its designated boundary.</p> <p>Underground cabling is also proposed for a short section of 400 kV overhead line crossing near Fairstead.</p> <p>Cable Sealing End (CSE) compounds are required to facilitate sections of underground cable, and the proposed East Anglia Connection Node (EACN) substation is required to connect to customers and the proposed Tilbury North Substation is required to connect the Project into the existing Tilbury Substation. These components have been carefully sited taking into consideration Horlock Rules including the potential for landscape and visual effects.</p> <p>The higher cost of underground cables to bill paying consumers, and the environmental implications of installing underground cables and maintaining them at locations outside the Dedham Vale National Landscape, are not considered to be justifiable in the context of national policy or National Grid's statutory duties, which include the need to be economical and efficient.</p> <p>A Landscape and Visual Impact Assessment (LVIA), presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13), has been undertaken as part of the</p>

Headline Issue	Matters Raised	How National Grid had regard to headline issues raised
Thurrock		Environmental Impact Assessment (EIA). The LVIA includes an assessment on both landscape character and visual amenity and identifies areas for potential mitigation planting around substations and CSE compounds to reduce visual impacts to local receptors. The Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) includes details regarding the planting proposals.
Consultation	Request for further consultation in this area	National Grid has held three consultations for the Project; two non-statutory in 2022 and 2023 and a statutory consultation in 2024. At all of these, we have engaged directly with affected landowners, stakeholders, and local residents with an interest in the Project. We also held targeted consultations in key areas along the route where our proposals changed following the statutory consultation. In this we engaged directly with those most affected by the changes in alignment or access and took their feedback into account.
Economic / Employment impact	Feedback concerning negative impact on businesses	Through the routeing and siting exercise, National Grid has sought to reduce as far as practicable impacts to businesses. Impacts on local businesses within the Local Study Area (the Order Limits) and within the 3 km Study Area (where visual impact is likely to be an economic consideration) are assessed in Environmental Statement (ES) Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15). As part of this assessment, a range of mitigation measures have been considered to reduce disruption to

Headline Issue	Matters Raised	How National Grid had regard to headline issues raised
Environmental impact	Feedback concerning negative impact on the environment	<p>businesses and their users during the construction phase of the Project. These measures are identified in ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15), the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) which accompany the Development Consent Order (DCO) application.</p> <p>National Grid has sought to reduce, as far as practicable, impacts on the environment / countryside through routeing and siting and an ongoing iterative design process which has taken on board feedback at different stages of the Project. The iterative design process sought to avoid areas of highest concern, for examples through changes to the route alignment or changes to the method e.g. trenchless crossings. National Grid have engaged with a range of stakeholders (including Statutory Environmental Bodies (SEBs) and relevant Local Planning Authorities) throughout the development of the Project design and environmental assessment work.</p> <p>National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project. The results of this assessment are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation (and maintenance) of the Project and</p>

Headline Issue	Matters Raised	How National Grid had regard to headline issues raised
		<p>recommends appropriate mitigation measures to reduce potential effects.</p> <p>A number of mitigation measures have been incorporated into the Project design. Mitigation relevant to specific environmental topics (including Ecology and Biodiversity, Landscape and Visual and Historic Environment) are presented in the relevant ES chapters. The Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Code of Construction Practice (CoCP) (document reference 7.2) contain a list of relevant good practice measures to avoid or reduce risks to habitats and species. In addition to the EIA, National Grid has set itself a target of delivering 10% biodiversity net gain (BNG) with environmental and societal benefits on all construction projects, meaning that as a result of measures taken, the biodiversity rating of the area will be enhanced by 10% greater than prior to the construction of the Project. The BNG target for the Project is currently voluntary and aligned with our corporate sustainability commitment.</p>
AONB	Feedback concerning negative impact to the AONB and SSSI	<p>Through routeing, siting and design development, National Grid has sought to reduce, as far as practicable, impacts on biodiversity and in particular features of high ecological value such as Sites of Special Scientific Interest (SSSI). Although there are 22 SSSI within the study area, current proposals avoid the majority of impacts on SSSIs, with no long-term negative impacts anticipated on any SSSIs as a result of the Project. Potential direct and indirect impacts on each SSSI within the study area have been considered within the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8) and</p>

Headline Issue	Matters Raised	How National Grid had regard to headline issues raised
		<p>any necessary mitigation detailed to ensure no significant residual effects.</p> <p>National Grid will continue to engage with Natural England.</p>
No Location		
Agricultural land	Feedback concerning disruption to farming operations	<p>During the construction stage of the Project, there would be areas of agricultural land that would be temporarily disrupted. National grid would only use land that is required as part of the Project and would seek to minimise the use of agricultural land where reasonable and safe to do so.</p> <p>National Grid is and will continue to work with all landowners including farmers who may be affected by the proposals to understand the impacts on their operations and to work with them as the Project is developed. We would seek to work with the farming community to limit disruption where practicable. This includes providing prior warning of works, which may result in the need to move livestock. Compensation claims for disturbance are considered on a case-by-case basis, if negative impact on farming operations can be proven. Particular agricultural matters can also be addressed through voluntary land agreements.</p>
AONB	Feedback concerning negative impact on the AONB and SSSIs generally	<p>Through routeing, siting and design development, National Grid has sought to reduce, as far as practicable, impacts on biodiversity and in particular features of high ecological value such as Sites of Special Scientific Interest (SSSI). Although there are 22 SSSI within the study area, current proposals avoid the majority of impacts on SSSIs, with no long-term negative impacts anticipated on any SSSIs as a result</p>

Headline Issue	Matters Raised	How National Grid had regard to headline issues raised
Community / Social impact	Feedback concerning negative impact on communities and community amenities	<p>of the Project. Potential direct and indirect impacts on each SSSI within the study area have been considered within the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8) and any necessary mitigation detailed to ensure no significant residual effects.</p> <p>National Grid will continue to engage with Natural England.</p> <p>National Grid recognises people may have concerns about the potential impacts of living close to an overhead line, and that the uncertainty whilst the proposals are developed may cause anxiety.</p> <p>We have sought to reduce potential effects on communities, residents – including children - through routeing and design. We have also sought to reduce concern or uncertainty about the proposals through making timely design decisions and engaging with people and stakeholders throughout the development of the Project. If the Project received Development Consent, the Project team would continue to engage with people potentially affected during construction, through regular communication including letters, phone calls and meetings, where necessary.</p> <p>We urge anyone with concerns to get in touch through the Norwich to Tilbury Freephone number, address or email, which will remain open throughout examination.</p> <p>National Grid is committed to working with local suppliers, facilitated by supporting forums (such as the local Chambers), on electricity industry skills and workforce planning. National Grid is also committed to providing a coordinated regional approach to jobs and skills opportunities. This commitment is broader than the individual project and separate to any commitments under the proposed development consent order for this Project. The socio-economic effects of the project are assessed in Chapter 15 of the Environmental</p>

Headline Issue	Matters Raised	How National Grid had regard to headline issues raised
		<p>Statement (document reference 6.15). Post construction job opportunities are limited given the nature of the development however we will still work with Local Authorities (including facilitating local partners) to understand what is important to them around skills and employment to ensure we leave a lasting positive legacy in the communities where we operate. With regards to a delivery mechanism, the above measures will be delivered as part of our community benefit package, which will look at both local and regional initiatives. This will be delivered outside the development consent process and is not a material consideration in the decision on the proposed Project or a matter to be secured as part of the DCO, as per the Community Funds for Transmission Infrastructure: Guidance (DESNZ, 2025).</p>
Construction impacts	<ul style="list-style-type: none"> • Feedback concerning project maintenance and the upkeep of pylons • Feedback concerning impact of construction works generally (construction taking a long time, construction workers working on pylons from 10am-7pm) 	<p>An Environmental Statement (ES) (document reference: Volume 6: Environmental Statement) has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 ('the Infrastructure EIA Regulations'). The ES identifies and assesses the likely significant effects on the environment resulting from the construction of the Project and recommends appropriate mitigation to reduce effects.</p> <p>Environmental mitigation measures have been defined within each environmental topic chapter and set out in relevant management documents submitted with the Development Consent Order (DCO) application, including the Outline Code of Construction Practice (CoCP) (document reference 7.2), the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), the Outline Landscape and</p>

Headline Issue	Matters Raised	How National Grid had regard to headline issues raised
DESIGN CHANGE (CR)	<p>Suggest that the Project uses alternatives such as underground cables / HDVC transmission / be offshore</p> <p>Suggest the Project uses different style pylons (T-Pylons)</p> <p>Suggest that the existing overhead lines are reinforced / upgraded / removed</p>	<p>National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is 'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or National Landscapes'. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified. Therefore, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which</p>

Headline Issue	Matters Raised	How National Grid had regard to headline issues raised
		<p>assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider this section in its entirety would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.</p> <p>Therefore, whilst undergrounding the whole of this section is not considered appropriate, our proposals do include underground cable within the Dedham Vale National Landscape (previously known as Area of Outstanding Natural Beauty (AONB)) in accordance with NPS EN-5. Prior to our 2023 non-statutory consultation we identified the need to extend the underground cable beyond the National Landscape boundary because of potential effects. We have further extended this section of underground cable following consideration of feedback on our 2023 non-statutory consultation and additional investigation into potential effects. We also identified an approximately 4 km section near Great Horkesley as meeting the particularly sensitive criteria where underground cable is also proposed. Additionally, underground cable is proposed at Fairstead for a 400 kV overhead line crossing.</p> <p>The existing transmission network in the region was upgraded during 2022 and 2023 to ensure the system is running at its most efficient performance. The existing assets / networks are not able to be upgraded</p>

Headline Issue	Matters Raised	How National Grid had regard to headline issues raised
		sufficiently to cope with the new future demands expected on the network. As a result, new lines and substations would be required to accommodate the changing demands on the network.
Economic / Employment impact	<p>Feedback concerning negative impact on the economy generally</p> <p>Feedback concerning negative impact on business operations</p>	<p>Through the routeing and siting exercise, National Grid has sought to reduce as far as practicable impacts to businesses.</p> <p>Impacts on local businesses within the Local Study Area (the Order Limits) and within the 3 km Study Area (where visual impact is likely to be an economic consideration) are assessed in Environmental Statement (ES) Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15). As part of this assessment, a range of mitigation measures have been considered to reduce disruption to businesses and their users during the construction phase of the Project. These measures are identified in ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15), the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) which accompany the Development Consent Order (DCO) application.</p>
Environmental impact	<p>Feedback concerning negative impact on the environment / countryside generally</p> <p>Feedback concerning the sustainability of the Project</p>	<p>National Grid has sought to reduce, as far as practicable, impacts on the environment / countryside through routeing and siting and an ongoing iterative design process which has taken on board feedback at different stages of the Project. The iterative design process sought to avoid areas of highest concern, for examples through changes to the route alignment or changes to the method e.g. trenchless crossings.</p>

Headline Issue	Matters Raised	How National Grid had regard to headline issues raised
		<p>National Grid have engaged with a range of stakeholders (including Statutory Environmental Bodies (SEBs) and relevant Local Planning Authorities) throughout the development of the Project design and environmental assessment work. National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project. The results of this assessment are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation (and maintenance) of the Project and recommends appropriate mitigation measures to reduce potential effects. A number of mitigation measures have been incorporated into the Project design. Mitigation relevant to specific environmental topics (including Ecology and Biodiversity, Landscape and Visual and Historic Environment) are presented in the relevant ES chapters. The Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Code of Construction Practice (CoCP) (document reference 7.2) contain a list of relevant good practice measures to avoid or reduce risks to habitats and species. In addition to the EIA, National Grid has set itself a target of delivering 10 biodiversity net gain (BNG) with environmental and societal benefits on all construction projects, meaning that as a result of measures taken, the biodiversity rating of the area will be enhanced by 10% greater than prior to the construction of the Project. The BNG target</p>

Headline Issue	Matters Raised	How National Grid had regard to headline issues raised
		for the Project is currently voluntary and aligned with our corporate sustainability commitment.
Financial compensation	Request for financial compensation / Request for cheaper energy bills Feedback concerning devaluation of property	<p>All affected landowners would be compensated for any temporary/permanent losses, and this would be dealt with on a case-by-case basis in line with the Compensation Code.</p> <p>If there are any specific concerns requiring compensation and how it would be assessed, please contact the Project team:</p> <ul style="list-style-type: none"> • <u>Norwich-Tilbury@fishergerman.co.uk</u> or by calling us on Freephone 0808 175 3314. <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD</p> <p>The Government has published its guidance on community funds for transmission infrastructure (DESNZ, 2025). National Grid is committed to working with Ofgem, industry partners, local communities and their representatives to ensure community benefits are delivered fairly and effectively, driving lasting, positive change for the people and places integral to our developing electricity network.</p> <p>Government has also announced its plans to introduce a bill discount scheme for households within 500 m of new infrastructure, which it proposes to introduce through the Planning and Infrastructure Bill. This is evolving government policy. Government expects this scheme to be in place by 2026 and we would share further details as they emerge.</p>

Headline Issue	Matters Raised	How National Grid had regard to headline issues raised
		<p>National Grid is committed to providing a coordinated local and regional approach to community benefits. This would be delivered outside the development consent process, since this is not a material consideration in the decision on the proposed Project or a matter to be secured as part of the DCO, as per the Community Funds for Transmission Infrastructure: Guidance (DESNZ, 2025).</p> <p>National Grid acknowledges that its proposals may cause concern to landowners. Diminishment of property value known as ‘injurious affection’ and any other appropriate heads of claim would be considered on an individual basis in accordance with current legislation. We would pursue a voluntary agreement with affected landowners, acquiring rights in accordance with our Land Rights Strategy (the strategy is subject to review). If a voluntary agreement cannot be reached, then the Compulsory Purchase Code allows for a claim of compensation for the loss that property owners may have suffered as a direct result of the retained part of your property ownership being worth less as a direct result of the works.</p> <p>If there are any specific concerns about the devaluation of property, National Grid would advise seeking third party advice. or alternatively please contact the Project team:</p> <ul style="list-style-type: none"> • <u>Norwich-Tilbury@fishergerman.co.uk</u> or by calling us on Freephone 0808 175 3314. <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business</p>

Headline Issue	Matters Raised	How National Grid had regard to headline issues raised
Health, Safety & Wellbeing	Feedback concerning health risks (e.g. EMF, cancer) and safety risks (e.g. currents and static) associated with the Project	<p>Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD.</p> <p>Health considerations are given a high priority in the process by which we arrive at any proposals for new electricity circuits. Assessment of compliance with Electric and Magnetic Field (EMF) guidelines and policies is key to National Grid's approach. The UK has a carefully thought-out set of policies for managing EMFs. There have been over four decades of research looking into whether EMF can cause health effects and there are no established effects below the exposure limits. When designing our overhead lines, substations and underground cables design criteria, we ensure they would not exceed those exposure limits, even when operating at 100% capacity. Additionally, the precautionary measures which the Government have adopted, are applied to the design which ensure the EMFs reduce as quickly with distance as possible. Evidence of that compliance is presented in the EMF compliance report (document reference 7.8) submitted as part of the Development Consent Order (DCO) application.</p> <p>National Grid takes this issue very seriously and look to authoritative and independent scientific organisations such as the World Health Organisation (WHO) and in the UK Health Security Agency (UKHSA) to review the worldwide body of scientific evidence on health. Important decisions on health are taken independently of industry, and National Grid have followed the guidance and policies adopted by Government on advice from their scientific experts. Each of these</p>

Wildlife / Ecology impact	Feedback concerning the impact on ecology and wildlife	<p>reference 6.13), has been undertaken as part of the Environmental Impact Assessment (EIA). The LVIA includes an assessment on both landscape character and visual amenity and identifies areas for potential mitigation planting around substations and CSE compounds to reduce visual impacts to local receptors. The Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) includes details regarding the planting proposals.</p> <p>Through routeing, siting and detailed design National Grid has sought to reduce, as far as practicable, potential impacts on biodiversity. The design process has taken account of existing biodiversity, the natural environment and, where practicable, has sought to reduce impacts on areas of ecological sensitivity, through avoidance or mitigation.</p> <p>Chapter 8: Ecology and Biodiversity of the Environmental Statement (ES) (Document Reference 6.8) assesses the effects on important ecological receptors.</p> <p>As part of the Environmental Impact Assessment (EIA) process for the Project, a suite of ecological surveys has been to be undertaken over the 2022-2024 period. The findings of which inform the design and approach to mitigation.</p> <p>The Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Code of Construction Practice (CoCP) (document reference 7.2) contain a list of relevant good practice measures to avoid or reduce impacts on valuable habitats and species.</p>

Headline Issue	Matters Raised	How National Grid had regard to headline issues raised
AONB	Feedback concerning the impact on the AONB generally	<p>The Environment Act 2021 introduces a mandatory requirement for 10% Biodiversity Net Gain (BNG) for new Development Consent Order (DCO) developments (which is not yet in force and expected May 2026). National Grid have committed to deliver 10% BNG with environmental and societal benefits on all construction projects. The 10% BNG target for the Project is currently voluntary and aligned with our corporate sustainability commitment.</p> <p>As well as seeking to avoid and minimise impacts to nature, the Project considers the land required for mitigation, compensation and enhancement that can deliver BNG and wider environmental benefits. This would require delivery of offsite Biodiversity Units via habitat creation or enhancement actions in strategic areas, and we will consider all offsite options that are available to us.</p> <p>National Policy Statement (NPS) EN-5 states that the Government considers overhead lines to be appropriate and acceptable in most instances, although it recognises that that there may be, at particularly sensitive locations, potential adverse landscape and visual impacts of overhead line infrastructure that make it inconsistent with our duties and relevant planning policy.</p> <p>The National Landscape designation is one such location where there is a presumption that underground cable technology is adopted with the extent of underground cabling extending beyond the boundary in response to the potential for the Project to affect National Landscapes. Our proposals include a total of approximately 20 km of underground cable through and</p>

Headline Issue	Matters Raised	How National Grid had regard to headline issues raised
		<p>in the vicinity of the Dedham Vale National Landscape, including a section at Great Horkesley to reduce the changes in views and setting of the National Landscape from within and adjacent to its designated boundary.</p> <p>Underground cabling is also proposed for short sections near Fairstead and North Tilbury.</p> <p>The higher cost of underground cables to bill paying consumers, and the environmental implications of installing underground cables and maintaining them elsewhere, are not considered to be justifiable in the context of national policy or National Grid's statutory duties, which include the need to be economic and efficient.</p> <p>A Landscape and Visual Impact Assessment (LVIA), presented in ES Chapter 13: Landscape and Visual (document reference 6.13), has been undertaken as part of the Environmental Impact Assessment (EIA). The LVIA sets out potential effects on landscape and visual receptors.</p>
Technology and Operations	Concern that overhead lines are vulnerable to weather events	<p>National Grid's 400 kV overhead lines are designed to remain robust and operational in the worst weather conditions in the UK. Although overhead lines are more susceptible to disruption from lightning and high winds, they are also comparatively easy and cost-effective to repair and maintain compared to underground cables.</p> <p>The majority of the existing National Grid transmission network is constructed from overhead lines; these are a demonstrated and reliable form of electricity transmission in the UK. They are designed to meet current design and safety standards and to operate in a range of typical and abnormal weather conditions found</p>

Headline Issue	Matters Raised	How National Grid had regard to headline issues raised
		<p>in the UK. Standards are regularly reviewed and any adjustments to these standards (for example with regards to climate change) would need to be applied to the entire network. At this stage no known changes are required for a new overhead line Project.</p> <p>Unforeseen events of sufficient severity to cause damage to infrastructure are very rare in the UK but do occur. Overhead lines could be subject to adverse weather conditions such as high wind speeds and lightning strikes.</p> <p>In the unlikely event an overhead line was to be damaged, a network wide monitoring system would detect the fault almost immediately and the circuit would be tripped, and the live current stopped.</p> <p>At the point of repairing any damage, overhead lines are comparatively easier and more cost-effective to repair and maintain than alternative transmission technology.</p> <p>We also undertake regular ground based inspections of the overhead line using thermal imaging to assess damage to the overhead line and utilise helicopters and drones equipment with high definition and thermal imaging cameras to assess damage to the overhead line from weather or other causes. This means low level damage caused would be identified and repaired prior to failure of the line.</p>
Needs case	Oppose the Project as currently proposed (e.g. use of overhead lines and / or underground cables generally)	National Grid notes the respondent's feedback. Strategic alternatives for the Project, including underground cables and offshore cables, have been considered and are set out in the published Strategic Options Backcheck and Reviews (SOBR) published in 2023 and 2024 (available on the Project website) and

Headline Issue	Matters Raised	How National Grid had regard to headline issues raised
		<p>the 2025 SOBR (document reference 7.17). This sets out the need case for the Project and the reasoning why an onshore solution (including a mix of overhead lines and underground cable) has been taken forward. National Grid has a statutory duty to facilitate new connections and maintain a safe National Electricity Transmission System (NETS). The Project would facilitate the connection agreements that are in place with two offshore wind farm projects and an interconnector project based on their connection into a new East Anglia Connection Node (EACN) substation. The Project would also reinforce the local transmission network which currently does not have the capacity needed to reliably and securely transport all the energy that is likely to be connected in the future – driven by the Government’s plan to increase offshore wind from the current 8.5 GW to 50 GW by 2030 to meet the increased demand. This ambition has been emphasised in the National Energy System Operator’s (NESO) Clean Power 2030 report published in November 2024.</p> <p>The needs case is reviewed at each critical stage of the Project’s development and without a robust demonstrable need the Project would be revised or fall away. Currently, the contracted generation shows a clear need for the Project.</p>
Project Finance / Costs	<p>Criticism that there are cheaper alternatives to the Project that National Grid has not considered (e.g. offshore) / Concern the proposed option will be expensive / Criticism that National Grid has underestimated the cost of the proposal</p>	<p>Throughout the development of our proposals, we have carried out as full costing analysis of both overhead line and alternative options. Our initial assessments have concluded that the costs for an offshore grid would be around £4 billion, with lifetime costs of £4.5 billion. Whereas the costs of pursuing the onshore option</p>

Headline Issue	Matters Raised	How National Grid had regard to headline issues raised
	<p>Suggest that an alternative solution is used for the Project with the cost of this covered by people and businesses in London</p> <p>Request for a breakdown of costs</p>	<p>would be £895 million, and lifetime costs of £1,231 million. When developing proposals for new transmission connections, we need to consider National Policy Statements which are set by government. The National Policy Statement (NPS) EN-5 covers the development of new energy infrastructure. This policy concludes that in most cases, the government expects that overhead lines will be appropriate and should be used as standard to reinforce the grid. The proposals to use overhead line technology for the Project is in line with this policy and with our statutory duty as a company. In addition to cost, there are a range of environmental factors and other onshore and offshore impacts which need to be considered for alternatives. Taking all these considerations into account, we have concluded that an onshore connection is the most appropriate solution for the Project. Further information regarding the potential alternatives, including discussion of costs, and how we came to our conclusion that our proposed connection is the most appropriate solution, is available in the 2025 Strategic Options Backcheck and Review (document reference 7.17) and the 2023 and 2024 Design Development Reports (available on the Project website) and the 2025 Design Development Report (document reference 5.15).</p> <p>The cost of the Project would be shared by all billpayers. National Grid is funded by a price control mechanism which is agreed with and set by the regulator, the Office of Gas and Electricity Markets (Ofgem). National Grid pays up front for the costs to build a new power transmission line. The cost is then gradually passed to consumers through their electricity</p>

Headline Issue	Matters Raised	How National Grid had regard to headline issues raised
		bills over the next 40 years or so. Any alternative option would also be funded in this way, and so we are required to pursue the cheapest option as all costs ultimately go onto the billpayer.

10. Targeted Consultations

10.1 Introduction

10.1.1 In Spring 2025, National Grid held further targeted consultations to provide stakeholders and the public the opportunity to provide feedback on proposed changes to the proposals in specific areas, before finalising proposals for submission.

10.1.2 As the proposed changes would not fundamentally change the Project as a whole, a targeted consultation approach was used, in line with guidance in paragraph 020 of the Planning Act (PA) 2008: Pre-application stage for Nationally Significant Infrastructure Projects issued in April 2024 by the Department for Levelling Up, Housing and Communities (DLHC) (now Ministry of Housing, Communities and Local Government (MHCL)):

- ‘Once applicants have completed the consultation process set out in their SoCC, where a proposed application is amended in the light of responses to consultation then, unless those amendments materially and substantially change the proposed application or materially changes its effects as a whole, the amendments themselves should not trigger a need for further consultation. The amendments can be reported as part of the consultation report submitted with the application.
- Only where the project taken as a whole changes very significantly, and to such a large degree that what is being taken forward is fundamentally different from what was previously consulted on, should re-consultation on the proposed application as a whole be considered.
- In understanding whether there has been a material and substantial change, applicants should take into account the following guiding factors:
 - *the degree of change as compared to the proposals previously consulted upon as a whole;*
 - *the number of materially worse environmental effects as compared to what has been the subject of previous consultations; and*
 - *the level of public interest, and the likelihood that such interest would merit further consideration in the context of that change.*

‘For any material change to a part of the proposed application where the project as a whole is not fundamentally changed, for example in the case of linear aspects where new information leads to a new alignment for a particular section of the proposal, a bespoke and targeted approach to further consultation can be adopted, which can address the specific consultation obligations arising proportionately.’

‘Targeted consultation can be statutory or non-statutory or a combination of the two depending on whether new persons needing to be consulted under section 42 of the Planning Act have been identified, but such targeted consultation will not require the production of PEI [preliminary environmental information] provided proportionate and

appropriate information on environmental implications of any changes, where necessary, is provided.'

- 10.1.3 Drawing on the wording within the guidance, each proposed change was reviewed by the project team to determine whether it would be appropriate to undertake further bespoke and targeted community consultation on the change, either individually or collectively if multiple proposed changes were grouped geographically. The locations where the project team judged that it would be appropriate to undertake additional targeted community consultation were due to the degree of change, potentially different environmental effects compared to those described in the PEIR and/or the likely level of public interest.
- 10.1.4 In addition to the areas identified for targeted community consultation, landowner consultation with those affected by the accepted changes outside the targeted consultation areas was undertaken as detailed in **Chapter 11** of this Consultation Report.
- 10.1.5 In terms of the provision of environmental information, Paragraph 20 of the guidance is clear that *"targeted consultation will not require the production of PEI provided proportionate and appropriate information on environmental implications of any changes, where necessary, is provided"*. In accordance with this, each targeted community consultation was accompanied by an Environmental Implications of Change document, setting out the project team's review of the proposed change and its likely environmental implications against the assessment reported in the Preliminary Environmental Information Report (PEIR) published as part of the 2024 route-wide statutory consultation.
- 10.1.6 This chapter summarises the targeted consultations held by National Grid in 2025. It details the approach to the targeted consultations, who was consulted, and how. This chapter also details ways that stakeholders could respond, how many did, and also summarises the feedback received, and changes made as a result.
- 10.1.7 **Appendix K** of this report includes supporting information on the targeted consultations.

10.2 Targeted Consultations Approach

- 10.2.1 National Grid took a combined approach of carrying out targeted consultations on a non-statutory and statutory basis as follows:
- Norfolk and Suffolk targeted non-statutory consultations: Thursday 30 January to Monday 3 March 2025;
 - Essex and Thurrock targeted non-statutory consultations: Tuesday 25 February to Thursday 27 March 2025; and
 - Thurrock 3 targeted statutory consultation: Tuesday 18 March to Thursday 17 April 2025.
- 10.2.2 The targeted community consultation for Thurrock 3 was undertaken on a statutory basis as it was deemed that the proposed changes to existing overhead lines and primary access routes (PARs) in Tilbury may affect new communities, residents and landowners in the area.

- 10.2.3 The targeted consultations had the following aims:
- Provide an overview of the updated proposals to local communities and stakeholders in locations where changes were being considered to the Project;
 - Explain why changes were being suggested to the Project since the 2024 statutory consultation;
 - Outline the environmental implications of the proposed changes (EIC);
 - Ensure local stakeholders and consultees had the opportunity to provide feedback on the work to date; and
 - Outline the next steps and the programme and how the proposals will be further developed and how feedback has been taken into account.

10.3 ‘Targeted Consultation Strategy’ document

- 10.3.1 The approach to the Norfolk, Suffolk, Essex and Thurrock targeted non-statutory community consultations was set out in the draft Targeted Consultation Strategy document. This outlined why further targeted consultations were taking place, who and how National Grid were consulting and how feedback could be shared.
- 10.3.2 Local Planning Authorities within areas in which National Grid was to hold targeted consultations were invited to briefing sessions on the strategy for the targeted community consultations. These briefing sessions took place on 19, 20 and 27 November 2024. Further to these briefings, LPAs were provided with the draft Targeted Consultation Strategy document via email on 4 December 2024 and were asked to provide feedback on the proposed approach. All feedback was considered and where practicable taken on board by National Grid. A copy of the feedback received and actions taken can be found in **Appendix K** of this report.
- 10.3.3 A final version of the Targeted Consultation Strategy document, including maps of the consultation zones in Norfolk, Suffolk, Essex and Thurrock was published on the Project website on 30 January 2024 and can be found in **Appendix K** of this report.
- 10.3.4 The non-statutory targeted consultations in Norfolk, Suffolk, Essex and Thurrock were undertaken in accordance with the commitments outlined in the Targeted Consultation Strategy document. This is detailed in a compliance table included in **Appendix K** of this report.

10.4 ‘Targeted Statutory Consultation Strategy’ document

- 10.4.1 The approach to the targeted statutory consultation for Thurrock 3 was set out in the Targeted Statutory Consultation Strategy document. This outlined why targeted statutory consultation was taking place, with whom and how National Grid was consulting and how to provide feedback. It included a map of the targeted statutory consultation zone, as well as a copy of the Statement of Community Consultation (SoCC) and the consultation zone for the 2024 statutory consultation.
- 10.4.2 On 6 March 2025 the draft Targeted Statutory Consultation Strategy document was provided to Thurrock Council for their feedback and the council confirmed that they had no comments.

- 10.4.3 A final version of the Targeted Statutory Consultation Strategy was published on the Project website as part of the suite of materials provided as part of the 2025 Thurrock 3 targeted statutory consultation and can be found in **Appendix C** of this report.
- 10.4.4 The statutory targeted consultation for Thurrock 3 was undertaken in accordance with the commitments outlined in the Targeted Consultation Strategy document. This is detailed in a compliance table included in **Appendix K** of this report.

10.5 Norfolk and Suffolk Targeted Consultations

Introduction

- 10.5.1 National Grid held further targeted consultations to provide stakeholders and the public the opportunity to provide feedback on proposed changes to the Project proposals in Norfolk and Suffolk.
- 10.5.2 A non-statutory targeted consultation approach was considered appropriate, in line with guidance as set out in paragraph 10.1.2 in this chapter, as the changes did not fundamentally change the Project as a whole.
- 10.5.3 The Norfolk and Suffolk targeted consultations took place between 12:00 noon on 30 January 2025 and 11:59pm on 3 March 2025.

Who National Grid Consulted

- 10.5.4 The Norfolk and Suffolk targeted consultations were open to anyone with an interest in the Project. Bespoke consultation zones were developed to assist engagement with the local communities where proposed changes were being consulted upon.
- 10.5.5 Bespoke consultation zones were produced to include nearby properties which were likely to be affected. These were created following the principle that each consultation zone should be appropriate and proportionate in relation to the type and potential impact of the change. Where it was appropriate to do so, potential changes were grouped with a single consultation zone covering the grouped changes.
- 10.5.6 Four community consultation zones were established in Norfolk and six community consultation zones were created in Suffolk. The consultation zone maps can be found in the Targeted Consultation Strategy document (**Appendix K** of this report).
- 10.5.7 During the Norfolk and Suffolk targeted consultations, in addition to the properties within the bespoke consultation zones receiving the relevant consultation information in the post, the following groups and stakeholders were consulted with:
- Parish councils representing parishes where any proposed changes fall within their parish boundary;
 - MPs representing constituencies where the location of proposed changes falls into all or part of the constituency;
 - Elected representatives in LPAs where the location of proposed changes falls into all or part of the their ward;
 - Persons with interest in lands (PILs) within the draft Order Limits of the relevant consultation zones;

- ‘Seldom heard groups’ within the relevant consultation zones, representing people who are unlikely to respond to traditional consultation techniques and may need additional support to access materials; and
- Local interest groups, such as residents’ associations, community groups and groups with particular specialisms, such as local heritage or wildlife.

10.5.8 **Appendix F1** of this report contains the full list of prescribed consultees that were contacted, with the exception of the parish councils. The host parish councils from Norfolk and Suffolk that were contacted are listed in **Table 10.1** of this report. **Appendix I10** of this report contains the full list of non-prescribed consultees that were contacted.

Table 10.1 Parish Councils Consulted

Norfolk Parish Councils		
Swardeston	Swainsthorpe	Ashwellthorpe and Fundenhall
Tacolneston	Forncett	Bunwell
Carleton Rode	Tibenham	Heywood
Bracon Ash	Bressingham	Flordon
Mulbarton	Newton Flotman	Roydon
Shelfanger	Stoke Holy Cross	Tharston and Hapton
Winfarthing		
Suffolk Parish Councils		
Palgrave	Thrandeston	Wortham and Burgate
Mellis	Gislingham	Mendlesham
Gipping	Cotton	Battisford
Barking	Offton and Willisham	Somersham
Raydon	Wenham Magna	Holton St Mary
Badley	Creeping St. Peter	Earl Stonham
Finningham	Great Bricett	Little Blakenham
Ringshall	Stowupland	Wickham Skeith
Burstall	Chattisham	Copdock and Washbrook
Higham	Hintlesham	Sproughton
Stoke-by-Nayland	Stratford St. Mary	Wenham Parva

- 10.5.9 On 30 January 2025 a consultation letter was sent to notify the prescribed and non-prescribed consultees to of the targeted consultations. **Appendix K** details the letters and materials that were sent to the consultees.

How National Grid Consulted

- 10.5.10 National Grid is committed to ensuring that any consultation process and associated communication is made accessible to as many parts of the community as possible. National Grid's consultation activities included:

- Setting up a project specific website, email, and dedicated telephone information line;
- Mailing a consultation pack directly to properties in the relevant consultation zones;
- Mailing the Community Newsletter to approximately 77,000 properties along the route to notify the wider community of the targeted consultations;
- Producing materials to support consultation, including the Targeted Consultation Strategy document, consultation leaflets specific to each location reference including the relevant maps, Environmental Implication of Change (EIC) documents relevant to each location reference, and a feedback questionnaire;
- Notifying the contact database via the regular Project update email newsletter;
- Holding online events, including webinars and telephone appointments; and
- Local and regional media promotional activity.

Project Website, Email and Information Line

- 10.5.11 National Grid set up a website to publish information on the Project along with consultation materials and historical Project information. Information on the Project website included:

- Public consultation pages – with details of dates and timings of public webinars;
- Frequently Asked Questions (FAQs);
- Consultation leaflets specific for each location reference;
- EIC documents specific for each location reference;
- Feedback questionnaire; and
- Contact details.

- 10.5.12 The Project website URL is: www.nationalgrid.com/electricity-transmission/network-and-infrastructure/infrastructure-projects/norwich-to-tilbury

- 10.5.13 A dedicated email and telephone information line were set up and publicised:

- **Email:** contact@n-t.nationalgrid.com; and
- **Telephone:** 0800 151 0992 (lines open Monday to Friday 9.00am – 5.30pm).

- 10.5.14 During the targeted consultations period (30 January 2025 to 17 April 2025) the Project website received 17,319 views.

Direct Mailing to the Consultation Zones

- 10.5.15 All residential and business addresses within the consultation zones (see 10.3.6 of this chapter) were contacted directly. On 30 January 2025 a consultation pack was direct mailed to all properties – approximately 196 addresses - within the relevant consultation zones.
- 10.5.16 The consultation pack included:
- A letter setting out information on the targeted consultation and inviting the recipient to provide feedback;
 - A consultation leaflet explaining the proposals in the area and why;
 - A map showing the proposed change in their area (as well as what had been previously presented at statutory consultation where applicable);
 - Information on how people could take part and provide their feedback;
 - An EIC document setting out appropriate and proportionate environmental information on the implications of the proposed change; and
 - A feedback questionnaire and a freepost envelope.
- 10.5.17 The consultation leaflets and EIC documents specific to each location reference can be found in **Appendix K** of this report.
- 10.5.18 In January 2025, National Grid also directly mailed the Community Newsletter to approximately 77,000 properties along the route within the Statutory Consultation Primary Consultation Zone (PCZ) to notify the wider community of the targeted consultations. A copy of the Community Newsletter can be found in **Appendix K** of this report.

Consulting PILs under Section 42(1)(d) and Section 44

- 10.5.19 Section 42(1)(d) and Section 44 of the PA 2008 sets out how a project must consult with PILs, i.e. those who own, occupy, have an interest in, or are able to make certain claims for compensation in respect of, land affected by a project. Under Section 44, PILs are split into three categories. More information about the three categories is available in **Section 10.7.20** of this report.
- 10.5.20 National Grid consulted with Category 1 and Category 2 PILs during the targeted consultations. Consultation with Category 3 PILs was undertaken during the 2025 further landowner consultation, as detailed in **Chapter 11** of this report.
- 10.5.21 A consultation pack was mailed to Section 42(1)(d) and Section 44 consultees to inform them of the targeted consultation (see **Appendix F** of this report for letter sent and the list of consultees). Details about the consultation pack can be found in **Section 10.5.16** of this chapter. More information about consulting PILs under Section 42(1)(d) and Section 44 can found in **Section 8.7** of this report.
- 10.5.22 **Appendix K** of this report includes the return to sender information and land agent correspondence.

- 10.5.23 230 Category 1 and Category 2 PILs were written to in letters posted week commencing 28 January 2025. Two newly identified PILs were written to during the week commencing 10 February 2025, and 1 newly identified PIL was written to in the week commencing 24 February 2025.
- 10.5.24 The letter included in the consultation pack invited all PILs to have a one-to-one meeting with Fisher German to discuss the proposed change. A total of 26 meetings were requested and held.
- 10.5.25 A summary of how many PILs fell into each category is shown in **Table 10.2** of this report.
- 10.5.26 Consultation responses from Section 42(1)(d) PILs were analysed and headline issues are presented in **Section 10.8** of this report.

Table 10.2 Number of PILs Consulted

Date (w/c)	Category 1	Category 2	Letters sent to Individual PILs*
28 January 2025	122	120	230
10 February 2025	0	2	2
24 February 2025	1	0	1
Total	123	122	233

*The number of letters sent are lower than the total of PILs in each row as some PILs had an interest in more than one Category of land. Where this was the case, PILs were only sent one letter that covered all interests.

- 10.5.27 On 31 January National Grid became aware some detail on the Suffolk 1 map showing the re-routed 132 kV line was missing. This was due to a desire to increase the scale of the map to zoom in on the bigger changes in the north of the route. The full change to the 132 kV line was described in the text and in the EIC but was not included in the Suffolk 1 map and leaflet. A Suffolk 1a leaflet and EIC document were produced to include the full area and uploaded to the Project website. The EIC is identical to the Suffolk 1 EIC.
- 10.5.28 The Suffolk 1a leaflet and EIC were sent to the 16 people with addresses or land interests in the area which was not shown on the plan. **Appendix K** of this report includes the letter that was sent to the 16 affected properties. This letter included an extension to the deadline for feedback up to 10 March 2025 and feedback was accepted from any stakeholder that provided comments on Suffolk 1a.
- 10.5.29 **Appendix K** of this report includes both the Suffolk 1 and Suffolk 1a leaflets and EIC documents.
- 10.5.30 National Grid also acknowledges that there was a slight inconsistency in the consultation documents produced for Suffolk 3 regarding the number of angle pylons in the proposed change. The annotated maps and EIC document were both correct and did not impact the ability to provide feedback.

Materials Produced to Support Consultation

- 10.5.31 A range of consultation materials were provided as part of the consultation which included varying levels of technical detail. These include:
- Targeted Consultation Strategy document;
 - Project website;
 - Feedback questionnaire: an online and paper feedback questionnaire to gather responses throughout the targeted consultation period;
 - Consultation leaflets specific to each location reference, including maps; and
 - EIC documents specific to each location reference.

Webinars

- 10.5.32 Online public webinars were organised to enable the Project team to present information about the proposed changes and enable those interested to put their questions to them. Information included an overview and background to the Project, context and need; the changes to the proposals in the area and why these had been made; and the environmental implications of the proposed changes.
- 10.5.33 Following this, members of the public could write questions to National Grid during the webinar for the Project team to answer.
- 10.5.34 Members of the public were invited to register to attend a webinar by signing up via the Project website or by calling the Project telephone information line. They were then sent details through email of how to join the webinar via a desktop, tablet, or mobile device.
- 10.5.35 A total of three public webinars were held during the Norfolk and Suffolk targeted consultation. For those who could not attend the live webinar sessions, a recording was made available on the Project website for playback.
- 10.5.36 A total of 49 stakeholders and members of the public attended the webinars. The attendance at each is set out in **Table 10.3** of this report.

Table 10.3 Schedule of Online Public Webinars

Topic	Date and Time	Attendees
Norfolk	6pm-7pm, Tuesday 11 February 2025	11
Norfolk and Suffolk	12pm-1pm, Wednesday 12 February 2025	23
Suffolk	6pm-7pm, Thursday 13 February 2025	15
Total		49

Media - Promotional Activity

- 10.5.37 The Norfolk and Suffolk targeted consultations were promoted through various online methods including:

- Placing advertisements in local and regional newspapers providing information about the Norfolk and Suffolk targeted consultations. See **Table 10.4** of this report for the schedule of adverts and **Appendix C** of this report for copies of the adverts;
- Publishing full details of the Norfolk and Suffolk targeted consultations and public webinars on the Project website; and
- Providing contact details for queries and how to request paper copies of the targeted consultation materials.

Table 10.4 Newspaper Adverts Schedule

Publication	Paper copy / online	Date(s)
Eastern Daily Press	Paper	30 January 2025
East Anglian Daily Times	Paper	30 January 2025

Additional Engagement Activities Undertaken

- 10.5.38 National Grid undertook several engagement activities leading up to and throughout the Norfolk and Suffolk targeted consultations.
- 10.5.39 Briefings were offered to all district and unitary councils (two county councils and three district councils) within the consultation zone. Briefings took place with four councils and two parish councils, which is outlined in Table 10.5 of this report.
- 10.5.40 Briefings were given to those who accepted the offer and provided an overview and background to the Project; context and need; the proposed changes to the proposals in the area and why; and the environmental implications of the proposed changes. There were also question and answers sessions at the end of each briefing.

Table 10.5 Briefings to Stakeholders

Dates	Council meetings (County/ District/ Parish)	Attendees
30 January 2025	Babergh and Mid Suffolk Council	17
30 January 2025	Norfolk County Council	5
30 January 2025	Suffolk County Council	6
3 February 2025	South Norfolk District Council	13
6 February 2025	Norfolk Parish Council	0
6 February 2025	Suffolk County Council	4
12 February 2025	Palgrave Parish Council	2

10.6 Essex and Thurrock Targeted Consultations

Introduction

- 10.6.1 National Grid held further targeted consultations to provide stakeholders and the public the opportunity to provide feedback on proposed changes to the Project proposals in Essex and Thurrock.
- 10.6.2 A targeted non-statutory consultation approach was considered appropriate, in line with guidance as set out in paragraph 10.1.2 in this chapter, as the changes did not fundamentally change the Project as a whole.
- 10.6.3 The Essex and Thurrock targeted consultations on proposed changes took place between 12:00 noon 25 February 2025 and 11:59pm 27 on March 2025.

Who National Grid Consulted

- 10.6.4 The Essex and Thurrock targeted consultations were open to anyone with an interest in the Project. Bespoke consultation zones were developed to assist engagement with the local communities where proposed changes were being consulted upon.
- 10.6.5 Bespoke consultation zones were produced to include nearby properties which were likely to be affected. These were created following the principle that each consultation zone should be appropriate and proportionate in relation to the type and potential impact of the change. Where it was appropriate to do, potential changes were grouped with a single consultation zone covering the grouped changes.
- 10.6.6 13 community consultation zones were established in Essex and two community consultation zones were created in Thurrock. The consultation zone maps can be found in **Appendix K** of this report.
- 10.6.7 During the Essex and Thurrock targeted consultations, in addition to the properties within the bespoke consultation zones receiving the relevant consultation information in the post, the following groups and stakeholders were consulted with:
- Parish councils representing parishes where any proposed changes fell within their parish boundary;
 - Members of Parliament (MPs) representing constituencies where the location of proposed changes fell into all or part of the constituency;
 - PILs within the draft Order Limits within the relevant consultation zones;
 - Elected representatives in LPAs where the location of proposed changes fell into all or part of their ward;
 - 'Seldom heard groups' within the relevant consultation zones, representing people who are unlikely to respond to traditional consultation techniques and may need additional support to access materials; and
 - Local interest groups, such as residents' associations, community groups and groups with particular specialisms, such as local heritage or wildlife.
- 10.6.8 **Appendix F1** of this report contains the full list of prescribed consultees that were contacted, with the exception of the parish councils. The host parish councils from

Essex that were contacted and listed in **Table 10.6** of this report. **Appendix I10** of this report contains the full list of non-prescribed consultees that were contacted.

Table 10.6 Parish Councils Consulted

Essex Parish Councils		
Ardleigh	Billericay	Coggeshall
Feering	Great and Little Leighs	Great Tey
Great Waltham	Herongate and Ingrave	Kelvedon
Langham	Little Bromley	Little Burstead
Little Waltham	Margaretting	Aldham
Boxted	Broomfield	Chignal
Cressing	Dedham	Eight Ash Green
Fordham	Great Bromley	Great Horkesley
Rivenhall	Lawford	Little Horkesley
Marks Tey	Mountnessing	Ingatestone and Fryering
Roxwell	Silver End	Stock
Terling and Fairstead	West Bergholt	West Horndon
Wormingford	Witham	White Notley and Faulkbourne
Writtle		

- 10.6.9 On 25 February 2025 a consultation letter was sent to notify the prescribed and non-prescribed consultees of the targeted consultation. **Appendix K** of this report contains the letters and materials that were sent to the consultees.

How National Grid Consulted

- 10.6.10 National Grid is committed to ensuring that any consultation process and associated communication is made accessible to as many parts of the community as possible. National Grid's consultation activities included:
- Setting up a project specific website, email, and dedicated telephone information line;
 - Mailing a consultation pack directly to properties in the relevant consultation zones;
 - Mailing the Community Newsletter to approximately 77,000 properties along the route to notify the wider community of the targeted consultations;
 - Producing materials to support consultation;
 - Notifying the contact database via the regular Project update email newsletter,
 - Holding online events, including webinars and telephone appointments; and

- Local and regional media promotional activity.

Project Website, Email and Information Line

- 10.6.11 National Grid updated the Project website with information on the targeted consultations along with consultation materials and historical Project information. Information on the Project website included:
- Public consultation pages – with details of dates and timings of public webinars;
 - FAQs;
 - Consultation leaflets specific for each location reference;
 - EIC documents specific for each location reference;
 - Feedback questionnaire; and
 - Contact details.
- 10.6.12 The Project website URL is: www.nationalgrid.com/electricity-transmission/network-and-infrastructure/infrastructure-projects/norwich-to-tilbury
- 10.6.13 A dedicated email and telephone information line were set up and publicised:
- **Email:** contact@n-t.nationalgrid.com; and
 - **Telephone:** 0800 151 0992 (lines open Monday to Friday 9.00am – 5.30pm).
- 10.6.14 During the targeted consultation period (30 January 2025 to 17 April 2025) the Project website received 17,319 views.

Direct Mailing to the Consultation Zones

- 10.6.15 All relevant stakeholders within the consultation zones (see 10.4.6 of this report) were consulted, including contacting each residential and business address directly. On 25 February 2025 a consultation pack was directly mailed to all properties – approximately 1,124 addresses - within the relevant consultation zones.
- 10.6.16 The consultation pack included:
- A letter setting out information on the targeted consultation and inviting the recipient to take part;
 - A consultation leaflet explaining the proposals in the area and why;
 - A map showing the proposed change in their area (as well as what had been previously presented at statutory consultation where applicable);
 - Information on how people could take part and provide their feedback;
 - An EIC document setting out appropriate and proportionate environmental information on the implications of the proposed change; and
 - A feedback questionnaire and a freepost envelope.
- 10.6.17 The consultation leaflets and EIC documents specific to each location reference can be found in **Appendix K** of this report.

- 10.6.18 In January 2025, National Grid also directly mailed the Community Newsletter to approximately 77,000 properties along the route within the Statutory Consultation PCZ to notify the wider community of the targeted consultations. A copy of the Community Newsletter can be found in **Appendix K** of this report.

Consulting PILs under Section 42(1)(d) and Section 44

- 10.6.19 Section 42(1)(d) and Section 44 of the PA 2008 sets out how a project must consult with PILs, i.e. those who own, occupy, have an interest in, or are able to make certain claims for compensation in respect of, land affected by a project. Under Section 44, PILs are split into three categories. More information about the three categories is available in **Section 10.7.20** of this report.
- 10.6.20 National Grid consulted with Category 1 and Category 2 PILs during the targeted consultations. Consultation with Category 3 PILs was undertaken during the 2025 further landowner consultation, as detailed in **Chapter 11** of this report.
- 10.6.21 A consultation pack was mailed to Section 42(1)(d) and Section 44 consultees (see **Appendix FK** of this report for letter sent and the list of consultees). Details about the consultation pack can be found in **Section 10.6.16** of this report. More information about consulting PILs under Section 42(1)(d) and Section 44 can found in **Section 8.7** of this report.
- 10.6.22 **Appendix K** of this report also includes the return to sender information and land agent correspondence.
- 10.6.23 310 PILs were written to (informing them of the targeted consultation) in letters posted week commencing 24 February 2025. One newly identified PIL was written to during the week commencing 3 March 2025.
- 10.6.24 The letter invited all PILs to have a one-to-one meeting with Fisher German to discuss the proposed change. A total of 25 meetings were requested and held.
- 10.6.25 A summary of how many PILs fell into each category is shown in **Table 10.7** of this report.
- 10.6.26 Consultation responses from Section 42(1)(d) PILs were analysed and headline issues are presented in **Section 10.8** of this report.

Table 10.7 Number of PILs Consulted

Date (w/c)	Category 1	Category 2	Letters sent to Individual PILs*
24 February 2025	310	308	310
3 March 2025	0	2	1
Total	310	310	311

**The number of letters sent are lower than the total of PILs in each row as some PILs had an interest in more than one Category of land. Where this was the case, PILs were only sent one letter that covered all interests.*

Materials Produced to Support Consultation

- 10.6.27 A range of consultation materials were provided as part of the consultations which included varying levels of technical detail. These include:
- Targeted Consultation Strategy document;
 - Project website;
 - Feedback questionnaire: an online and paper feedback questionnaire to gather responses throughout the targeted consultation period;
 - Consultation leaflets specific to each location reference, including maps; and
 - EIC documents specific to each location reference.

Consultation Activities

- 10.6.28 Online webinars and local media provided stakeholders opportunities to find out more about the proposals and to provide feedback.

Webinars

- 10.6.29 Online public webinars were organised to enable the Project team to present information about the proposed changes to people and for them to be able to ask the team questions. Information included an overview and background to the Project, context and need; the proposed changes to the proposals in the area and why; and the environmental implications of the proposed changes.
- 10.6.30 Following this, members of the public could write questions to National Grid during the webinar for the Project team to answer.
- 10.6.31 Members of the public were invited to register to attend a webinar via the Project website or by calling the Project telephone information line. They were then sent details through email of how to join the webinar via a desktop, tablet, or mobile device.
- 10.6.32 Three public webinars were held during the Essex and Thurrock targeted consultations. For those who could not attend the live webinar sessions, a recording was made available on the Project website for playback.
- 10.6.33 A total of 46 stakeholders and members of the public attended the webinars. The attendance at each is set out in **Table 10.8** of this report.

Table 10.8 Schedule of Online Public Webinars

Topic	Date and Time	Attendees
Essex	6pm-7pm, Monday 17 March 2025	34
Essex and Thurrock	12pm-1pm, Tuesday 18 March 2025	10
Thurrock	6pm-7pm, Thursday 18 March 2025	2
Total		46

Bookable In-Person Sessions

- 10.6.34 National Grid held bookable in-person sessions to provide an opportunity for the local community to view 3D visualisations of how changes to the low height lattice pylons proposed at Great Waltham, Little Waltham and near Thurrock Airfield would look in the landscape.
- 10.6.35 Members of the public and stakeholders were asked to book in order to attend a session to ensure attendees would have an opportunity to view the 3D model. Sessions could be booked by contacting National Grid by phone, freepost and email. Walk-ins were accepted where possible.
- 10.6.36 More information about the public information events can be found in the **Table 10.9** of this report.

Table 10.9 Summary of Bookable In-Person Sessions

Date and Time	Venue	Attendees
Wednesday 12 March, 2pm-5pm	Bulphan Village Hall, Church Road, Bulphan, Upminster, RM14 3RU	14
Friday 14 March, 6pm-8:30pm	Great Waltham Village Hall, The pavilion, South Street, Great Waltham, Chelmsford, CM3 1DF	33
Saturday 15 March, 10am-2pm	Little Waltham Primary School, The St, Chelmsford, CM3 3NY	30

- 10.6.37 Consultation leaflets Essex 8 and Thurrock 2, and the Annexes, contained details of the events and images of the 3D visualisations (see **Appendix K** of this report).

Media - Promotional Activity

- 10.6.38 The Essex and Thurrock targeted consultations were promoted via online methods which comprised of:
- Placing advertisements in local and regional newspapers providing information about the Essex and Thurrock targeted consultations. See **Table 10.10** of this report for the schedule of adverts and **Appendix C** of this report for copies of the adverts;
 - Publishing full details of the Essex and Thurrock targeted consultations and public webinars on the Project website; and
 - Providing contact details for queries and how to request paper copies of the targeted consultation materials.

Table 10.10 Newspaper Adverts Schedule

Publication	Paper copy / online	Date(s)
Eastern Daily Press	Paper	25 February 2025
East Anglian Daily Times	Paper	25 February 2025

Additional Engagement Activities Undertaken

- 10.6.39 National Grid undertook several engagement activities leading up to and throughout the Essex and Thurrock targeted consultations.
- 10.6.40 Briefings were offered to all district and unitary councils (one county council, one unitary council, and six district councils) within the consultation zone. Briefings took place with elected representatives from seven councils and one parish council, which is outlined in **Table 10.11** of this report.
- 10.6.41 The briefings were given to those who accepted the offer and provided an overview and background to the Project; context and need; the proposed changes to the proposals in the area and why; and the environmental implications of the proposed changes. There were also question and answers sessions at the end of each briefing.

Table 10.11 Briefings to Stakeholders

Dates	Council meetings (County/ District/ Parish)	Attendees
21 February 2025	Colchester City Council	2
24 February 2025	Thurrock Council	3
26 February 2025	Braintree District Council	10
26 February 2025	Chelmsford City Council	3
28 February 2025	Brentwood Council	6
28 February 2025	Tendring Council	13
4 March 2025	Colchester City Council	2
6 March 2025	Essex Parish Councils	15
10 March 2025	Essex County Council	28
18 March 2025	Basildon Council	6

10.7 Thurrock 3 Targeted Statutory Consultation

Targeted Statutory Consultation Approach

- 10.7.1 National Grid held a targeted statutory consultation in Thurrock to provide stakeholders and the public the opportunity to provide feedback on proposed changes to the Project.
- 10.7.2 A targeted statutory consultation approach was considered appropriate as whilst the changes would not fundamentally change the Project as a whole, changes to existing overhead lines and primary access routes would affect new communities, residents and landowners in the area that had not been consulted before.
- 10.7.3 The Thurrock targeted statutory consultation on proposed changes took place between 12:00 noon 18 March 2025 and 11:59pm on 17 April 2025.
- 10.7.4 The statutory consultation was open to anyone who was interested in the Project. National Grid welcomed all views and has had regard to all comments and feedback when developing the design.
- 10.7.5 Under Section 47 of the PA 2008, National Grid has a duty to consult the local community. A two-tier consultation zone was developed to assist engagement with the local community where changes were being considered. This involved a 1 km consultation zone around the proposed new substation location, permanent assets and changes to the overhead lines, a 250 m zone from the proposed Order Limits for the modifications to the existing overhead lines, and a 250 m zone from PARs.
- 10.7.6 In addition to the local community, National Grid consulted with prescribed bodies and local authorities under Section 42(1)(a), (b) and (c) of the PA 2008. PILs, under Section 42(1)(d) and Section 44 were also consulted with.

What National Grid Consulted on

- 10.7.7 The targeted statutory consultation sought views and feedback on proposed changes to the Project presented to the public at the 2024 statutory consultation, including:
- Connecting into a new substation near Orsett, which would be located where a CSE compound had been proposed. This would remove the need to build approximately 4.5 km of underground cable and would no longer require an extension to the existing substation at Tilbury; and
 - Modifications to the existing overhead lines in the area to enable the electrical connection into the existing Tilbury Substation.

Consulting Prescribed Consultees Under Section 42(1)(a)

- 10.7.8 Section 42(1)(a) of the PA 2008 requires Applicants to consult with all applicable 'prescribed' bodies. Persons prescribed under Section 42(1)(a) are listed in column 1 of Schedule 1 of the Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2009 (as amended) (the "APFP Regulations").
- 10.7.9 In April 2024, The Infrastructure Planning (Miscellaneous Provisions) Regulations 2024 detailed amendments to Schedule 1. For the targeted statutory consultation,

National Grid consulted with all applicable ‘prescribed’ bodies in accordance with the 2024 amendments to Schedule 1.

- 10.7.10 A full list of the bodies consulted under Section 42(1)(a), as identified through Schedule 1 of the 2019 and 2024 APFP Regulations can be found at **Appendix F1** of this report.
- 10.7.11 On 18 March 2025 a consultation letter (see **Appendix K** of this report) was sent to the Section 42(1)(a) consultees, along with a copy of the project community newsletter (see **Appendix IK** of this report).
- 10.7.12 An email containing the letter was also sent to the Section 42(1)(a) consultees on the 18 March 2025 (see **Appendix K** of this report).
- 10.7.13 The responses from Section 42(1)(a) consultees responses have been analysed and headline issues are presented in **Section 10.8** of this Chapter.

Consulting Prescribed Consultees Under Section 42(1)(b) and Section 43

- 10.7.14 A full list of the bodies consulted under Section 42(1)(b) and Section 43 is included in **Appendix F2** of this report.
- 10.7.15 On 18 March 2025 a consultation letter was sent to Section 42(1)(b) consultees (see **Appendix FK** of this report). Along with the letter, consultees were also sent a copy of the Project Community Newsletter.
- 10.7.16 An email containing the letter was also sent to the Section 42(1)(b) consultees on the 18 March 2025 (see **Appendix F** of this report).
- 10.7.17 The responses from Section 42(1)(b) consultees have been analysed and headline issues are presented in **Section 10.8** of this Chapter.

Consulting Prescribed Consultees Under Section 42(1)(c)

- 10.7.18 Section 42(1)(c) requires consultation with the Greater London Authority (GLA) if the land is in Greater London.
- 10.7.19 The project is not within the GLA area and did not require consultation with the Section 42(1)(c) consultee. Nonetheless, the GLA was consulted in any case under Section 42(1)(b) on a precautionary basis.

Consulting PILs Under Section 42(1)(d) and Section 44

- 10.7.20 Section 42(1)(d) and Section 44 of the PA 2008 sets out how a project must consult with PILs, i.e. those who own, occupy, have an interest in, or are able to make certain claims for compensation in respect of, land affected by a project. Under Section 44, PILs are split into three categories:
 - **Category 1:** Where the Applicant, after making diligent inquiry, knows that the person is an owner, lessee, tenant (whatever the tenancy period) or occupier of the land;

- **Category 2:** Where the Applicant, after making diligent inquiry, knows that the person is interested in the land, or has power to sell and convey the land, or to release the land;
- **Category 3:** Where the Applicant thinks that, if the order sought by the proposed application were to be made and fully implemented, the person would or might be entitled to make a relevant claim:
 - As a result of the implementing of the order;
 - As a result of the order having been implemented; or
 - As a result of use of the land once the order has been implemented.

- 10.7.21 National Grid consulted with Category 1 and Category 2 PILs during the targeted consultations. Consultation with Category 3 PILs was undertaken during the 2025 further landowner consultation, as detailed in **Chapter 11** of this report.
- 10.7.22 **Appendix K** of this report includes the consultation letter that was sent to the list of Section 42(1)(d) and Section 44 consultees, the consultee list, the return to sender information and the cover letter sent to land agents.
- 10.7.23 86 PILs were written to, that were within the draft Order Limits of the consultation zone, informing them of the targeted consultation in letters posted week commencing 14 March 2025.
- 10.7.24 The letter invited all PILs to have a one-to-one meeting with Fisher German to discuss the proposed change. A total of four meetings were requested and held.
- 10.7.25 A summary of how many PILs fell into each category is shown in **Table 10.12** of this report.
- 10.7.26 Consultation responses from Section 42(1)(d) PILs were analysed and headline issues are presented in **Section 10.8** of this report.

Table 10.12 Number of PILs Consulted

Date (w/c)	Category 1	Category 2	Letters sent to Individual PILs*
14 March 2025	63	30	86

**The number of letters sent are lower than the total of PILs in each row as some PILs had an interest in more than one Category of land. Where this was the case, PILs were only sent one letter that covered all interests.*

Notifying the Secretary of State Under Section 46

- 10.7.27 Section 46 of the PA 2008 places a duty on an Applicant to notify the Secretary of State on or before commencing consultation under Section 42. This duty was complied with ahead of statutory consultation in 2024.

Consulting Non-Prescribed Consultees

- 10.7.28 On 18 March 2025 an email containing a consultation letter was sent to all identified non-prescribed consultees. The letter provided details about the targeted consultation, the Project and how to respond (see **Appendix K** of this report).
- 10.7.29 The responses from non-prescribed consultees have been analysed and the headline issues are presented in **Section 10.8** of this report.

Consulting the Local Community Under Section 47

- 10.7.30 Section 47 of the PA 2008 sets out an Applicant's duty to consult the local community about a proposed application.
- 10.7.31 This was done in line with the Project SoCC, which was published on 10 April 2024. The SoCC allowed for future targeted consultations to be held in accordance with the principles and methods set out in the SoCC. The SoCC can be found in **Appendix E** of this report.
- 10.7.32 The Section 47 notice was published in three local newspapers between 18 March 2025 and 27 March 2025. See **Table 10.13** of this report for more details and the notice is available in **Appendix K** of this report.

Table 10.13 Newspapers where the Section 47 Notice was published

Newspaper	Dates
East Anglian Daily Times	Tuesday 18 March 2025 Tuesday 25 March 2025
Eastern Daily Press	Tuesday 18 March 2025 Tuesday 25 March 2025
Essex Chronicle	Thursday 20 March 2025 Thursday 27 March 2025

- 10.7.33 A two-tier consultation zone was developed to assist engagement with the local community where changes were being considered. This involved a 1 km consultation zone around the proposed new substation location, permanent assets and changes to the overhead lines, a 250 m zone from the proposed Order Limits for the modifications to the existing overhead lines, and a 250 m zone from PARs. Where appropriate, the consultation was extended to include whole streets.
- 10.7.34 A map of the consultation zone can be found in the Targeted Consultation Strategy in **Appendix K** of this report.

Publicising Pursuant to Section 48

- 10.7.35 Section 48 of the PA 2008 places a duty on an Applicant to publicise the proposed application in the prescribed manner, including a deadline for receipt by the Applicant

of responses to the publicity. This duty was complied with ahead of statutory consultation in 2024.

- 10.7.36 Notwithstanding this, awareness of each series of targeted consultations, including start and end dates, was raised in accordance with the published targeted consultation strategies. This included notifying the local and regional media via press release, notifying the local parish / parish councils, publishing full details of the targeted consultations on the project website, running an advert in local media titles on / following consultation launch and notifying hard to reach groups as identified within the SoCC. **Appendix K** details how the targeted consultations were undertaken in accordance with the published targeted consultation strategies.

Engagement with the Public

Consultation Zone

- 10.7.37 The consultation zone included people and businesses with properties postcodes within 1 km of the proposed new substation location, permanent assets and changes to the overhead lines. The zone also included postcodes 250 m from the Order Limits for the modifications to the existing overhead lines, and postcodes 250 m from PARs. This included approximately 5,344 addresses.
- 10.7.38 On 18 March 2025, a consultation pack was sent by post to all the properties within the consultation zone including the details of how to get involved in the consultation. The consultation pack included:
- A letter setting out information on the targeted statutory consultation and inviting feedback;
 - A consultation leaflet that explained the proposals, a map showing the proposed change in the area (including what had been previously presented at the 2024 statutory consultation, where applicable), and how people could take part and provide feedback; and
 - A feedback questionnaire and freepost envelope.
- 10.7.39 A copy of the consultation leaflets issued to the consultation zone can be found in **Appendix K** of this report.
- 10.7.40 In January 2025, National Grid also directly mailed the Community Newsletter to approximately 77,000 properties along the route to notify the wider community in the full PCZ of the targeted consultations. A copy of the Community Newsletter can be found in **Appendix K** of this report.

Project Update Subscribers

- 10.7.41 Since the launch of the Project, members of the public have been able to sign-up on the website with their email address to receive Project updates as the programme progresses. To raise awareness of the targeted statutory consultation, a Project update was sent to those who had subscribed to receive them.
- 10.7.42 An email containing the Project update was sent to approximately 2,641 email addresses.

10.7.43 A copy of the Project update notification can be found in **Appendix K** of this report.

Materials Produced to Support Consultation

10.7.44 A collection of consultation materials were published on the Project website at the launch of the Thurrock 3 targeted consultation to ensure there was enough information available to enable people and organisations to understand and comment on any aspect of the Projects' development and design.

10.7.45 The consultation materials included:

- Targeted Statutory Consultation Strategy document: outline of the strategy to consult stakeholders and the public on the proposed changes to the connection at Tilbury;
- A consultation leaflet: information about the proposed changes and how to get involved in the consultation;
- Consultation Summary Document: information about the proposed changes to the connection at Tilbury, including maps;
- EIC document: information about the potential for any different likely significant environmental effects associated with the proposed changes around the Tilbury connection; and
- Feedback questionnaire: an online and paper feedback questionnaire to gather responses to throughout the targeted consultation period.

10.7.46 **Appendix K** of this report includes a copy of the consultation materials.

10.7.47 A Design Development Report addendum for the proposed changes to the connection at Tilbury was also produced. This can be found in the Document Library on the Project website.

10.7.48 National Grid gave stakeholders and local community digital and non-digital opportunities to engage with the consultation materials through a dedicated website, public events and webinar events as well as via email, phone and Freepost.

Online Activities

10.7.49 National Grid was committed to ensuring that the consultation process and associated communication was made accessible to as many parts of the community as possible.

Project Website

10.7.50 National Grid published information on the Project website along with consultation materials as well as historical Project information.

10.7.51 During the targeted consultation period (30 January 2025 to 17 April 2025) the Project website received 17,319 views.

10.7.52 Features of the Project website can be found in **Table 10.14** of this report.

Table 10.14 Website Features

Function	Rationale
Interactive project map	The interactive project map was not updated to include the proposals being consulted on at the targeted statutory consultation. However, it remained available to enable members of the public to see how different components of the project fit together and included an explanation of where the latest proposals could be viewed.
Document library	<p>The document library including the following documents:</p> <ul style="list-style-type: none"> • Targeted Statutory Consultation Strategy; • Targeted consultation feedback questionnaire; • Targeted consultation overview map; • Thurrock 3 S47 notice; • Thurrock 3 Consultation Summary Document; • Thurrock 3 consultation leaflet; • Design Development Report – Addendum for Proposed Changes at Tilbury Connection; • Thurrock 3 EIC; • Thurrock 3 construction access plans; • Statutory Consultation Plan for Thurrock 3; and • Thurrock 3 proposed site layout. <p>All historic project documents from previous consultations (including the SoCC) were also available in the document library</p>
FAQs	To provide answers to FAQs without the need to contact the team or attend an in-person event
Online feedback questionnaire	To enable members of the public to submit their feedback online
Webinar sign-up form	To enable members of the public to sign up to webinars
Get in Touch	National Grid made a phone, email address and Freepost available for the public to provide their feedback during the consultation period. Contact details for landowners were also available on the Project website

10.7.53 **Appendix K** of this report includes screenshots of the Project website during the targeted consultations.

Project Webinars

10.7.54 Two online webinars were held during the consultation period to provide more information about the proposals. These webinars were available to the general public

and were advertised on the Project website and through the consultation materials. More information about the webinars can be found in **Table 10.15** of this report.

- 10.7.55 These webinars were also recorded, and the recordings were available on the Project website.

Table 10.15 Summary of Project Webinars

Date	Number of attendees
Wednesday 2 April 2025, 6pm-7pm	2
Tuesday 8 April 2025, 12pm-1pm	6
Total	8

- 10.7.56 **Appendix K** of this report includes a copy of the webinar material.

Public Information Events

- 10.7.57 National Grid held two in-person events during the consultation period, providing an opportunity for those who were interested to view the consultation materials and speak to members of the Project team. Information about the proposed changes was on display, as well as copies of maps and technical documents. Members of the Project team were available to talk through the proposals and answer any questions.
- 10.7.58 The public information events were held across the local area and were accessible and inclusive to the public. More information about the public information events can be found in **Table 10.16** of this report.

Table 10.16 Summary of Public Information Events

Date and Time	Venue	Number of attendees
Tuesday 25 March, 10:30am-3:30pm	Chadwell St Mary Village Hall, Waterson Road, Grays RM16 4NX	18
Thursday 27 March, 11:30am-4:30pm	West Tilbury Village Hall, Rectory Road, West Tilbury RM18 8UD	7

- 10.7.59 A copy of the consultation banners used at the Public Information Events can be found in **Appendix K** of this report.

Inspection Points

- 10.7.60 Paper copies of the targeted statutory consultation leaflet and feedback questionnaire were made available to collect at three public inspection points during the consultation. In addition to this, reference copies of the Consultation Summary

Document, EIC documents, the Targeted Statutory Consultation Strategy and SoCC were also available at the inspection points.

- 10.7.61 A list of inspection point locations available during the targeted statutory consultation can be found in **Table 10.17** of this report.

Table 10.17 Inspection Points

Location	Address	Opening hours
Tilbury Library	Civic Square, Tilbury RM18 8AD	Monday – 10am-5pm Tuesday – 10am-7pm Wednesday – 10am-5pm Thursday – 10am-7pm Friday – 10am-5pm Saturday – 10am-1pm Sunday - Closed
Chadwell Library	Brentwood Road. Chadwell St Mary RM16 4JP	Monday – 10am-5pm Tuesday – 10am-5pm Wednesday – Closed Thursday – 10am-5pm Friday – 10am-5pm Saturday – 10am-1pm Sunday - Closed
East Tilbury Hub and Library	Princess Avenue, East Tilbury RM18 8ST	Monday – Closed Tuesday – 10am-1pm and 2pm-5pm Wednesday – Closed Thursday – 10am-1pm and 2pm-5pm Friday – Closed Saturday – 10am-1pm Sunday - Closed

Promotional Activity

- 10.7.62 All members of the public, including those within the targeted statutory consultation zone, could register on the Project website to receive all Project information and engage as they wished.
- 10.7.63 National Grid raised awareness of the Project and targeted statutory consultation with wider stakeholders through the broad dissemination of information. This included placing advertisements in local and regional newspapers providing information about the targeted statutory consultation and how to get involved. See **Table 10.18** of this report for the schedule of adverts and **Appendix I** of this report for copies of the adverts.

Table 10.18 Newspaper Adverts Schedule

Publication	Paper copy / online	Date(s)
East Anglian Daily Times	Paper	18 March 2025
Eastern Daily Press	Paper	18 March 2025
Essex Chronicle	Paper	20 March 2025

Additional Engagement Activities Undertaken

- 10.7.64 In addition to in-person, online events and inspection points, a briefing was arranged with Thurrock Council during the consultation period. There were three attendees.
- 10.7.65 The briefing showed the proposed changes in the area and how National Grid consulted with local communities. The briefing took place on 24 March 2025.

10.8 Responses Received to the 2025 Targeted Consultation

Response Methods

- 10.8.1 Consultees could respond to the targeted non-statutory consultations and the targeted statutory consultation by completing the feedback questionnaire (online and paper copies were available), through email to the Project email address or by sending a response directly to the Project postal address:
- **Email** via Email: contact@n-t.nationalgrid.com; and
 - **Postal** Freepost N TO T (no stamp or further address needed).
- 10.8.2 The same feedback questionnaire was used throughout the targeted consultation period, applicable to all non-statutory and statutory targeted consultations.
- 10.8.3 A dedicated freephone community telephone information line 0800 151 0992 (lines were open Monday to Friday 9am-5:30pm) was also set up for people to call if they had any queries.
- 10.8.4 Feedback from the targeted consultations has been collected and analysed together to accommodate the overlapping consultation periods, where responses were not directly related to a specific change, and to allow for responses to feedback to be presented together in **Section 10.8** of this report.

Response Rate

- 10.8.5 A total of 900 feedback submissions were received across the three targeted consultation periods from local communities, stakeholders, and other consultees. This comprised of paper response forms, online response forms, emails, and letters as detailed in **Table 10.19** of this report. Feedback sent directly to National Grid in these formats has been accounted for in the relevant categories within this table.

Table 10.19 Breakdown of Responses Received to the 2025 targeted consultations

Response Method	Number of responses
Online feedback questionnaire	138
Paper feedback questionnaire (via post/events)	121
Free text response (letter)	10
Free text response (email)	631
Total	900

Feedback Questionnaire

- 10.8.6 The feedback questionnaire asked a total of seven questions, including a mix of closed and open questions.
- 10.8.7 The feedback questionnaire can be found in **Appendix K** of this report and consisted of two sections as detailed in **Table 10.20** of this report.

Table 10.20 Targeted Consultations Questionnaire Sections and Question Types

Section	Question	Type
About You	Your Details	Closed Questions
	Q1	Closed / Open
	Q2 and Q3	Open
Equality and Diversity	Q4, Q5, Q6 and Q7	Closed

- 10.8.8 The results of both the closed (quantitative) and open (qualitative) questions are further detailed in from paragraph 10.8.12 onwards in this chapter.

Analysing Responses to the Targeted Consultations

- 10.8.9 Feedback on the Project could be provided through the questions and comment boxes in the feedback questionnaire (either online or in hard copy) or otherwise as a bespoke response issued by email or letter.
- 10.8.10 All feedback, regardless of origin, has been analysed as per the methodology detailed in **Section 9.4** of this report.
- 10.8.11 Feedback from all targeted consultations has been collected and analysed together to accommodate the overlapping consultation periods, where responses were not directly related to a specific change, and to allow for responses to feedback to be presented together in **Section 10.8** of this report.

Responses to Questions

- 10.8.12 This section presents feedback gathered through the questions on the feedback questionnaire (**Table 10.20** of this report) during the targeted consultation periods.
- 10.8.13 National Grid has had regard to the feedback provided through the response questions, using these to help guide understanding of public sentiment and the key areas of interest to assist as the proposals have been further developed.

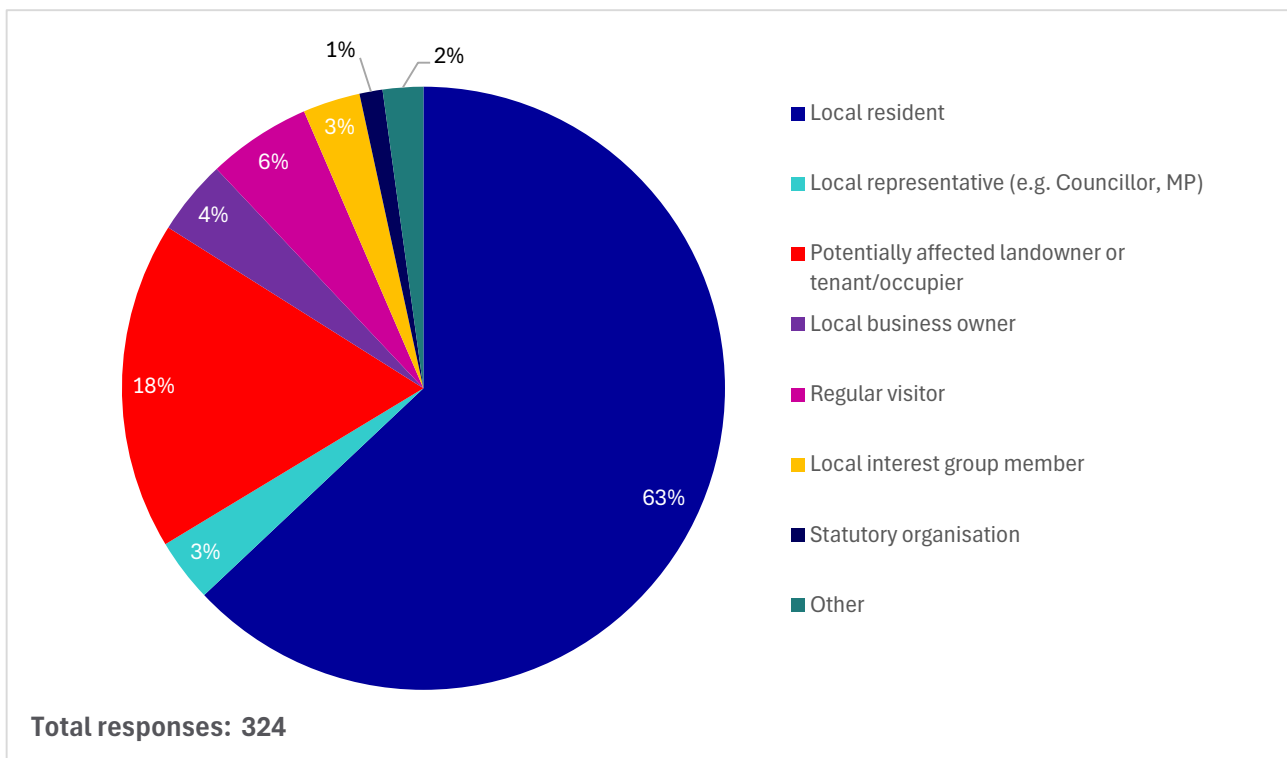

Question 1

- 10.8.14 Question 1 of the feedback questionnaire (**Appendix K** of this report) asked respondents:

‘How would you describe your interest in Norwich to Tilbury?’

- 10.8.15 Respondents could select more than one option. A total of 259 respondents answered this question, resulting in 324 responses. See **Figure 10.1** in this chapter.
- 10.8.16 The largest category of responses was ‘Local resident’, with 63% of responses selecting this option. The next most frequent category was ‘Potentially affected landowner or tenant/occupier’ with 18% of responses for this option. A small percentage of responses were received from ‘Regular visitor’ (6%), ‘Local business owner’ (4%), ‘Local representative’ (3%), and ‘Local interest group’ (3%). The final small number of responses were for ‘Other’ (2%) and ‘Statutory organisation’ (1%).

Figure 10.1 Question 1: How would you describe your interest in Norwich to Tilbury

Question 2

- 10.8.17 Question 2 of the feedback questionnaire (**Appendix K** of this report) asked respondents:

‘Which change are you providing feedback on – please provide the location reference.’
- 10.8.18 This question was optional, and respondents could reference more than one change. Respondents could use free-text to answer this question so not all responses related to a one of the changes being consulted on.
- 10.8.19 A total of 212 respondents answered this question. This resulted in 158 identifiable responses. See **Figure 10.2** in this chapter.
- 10.8.20 Responses to the points raised through this question, and other open written feedback have been summarised in **Section 10.9** of this chapter.

Figure 10.2 Question 2: Which change are you providing feedback on

Question 3

- 10.8.21 Question 3 of the feedback questionnaire (**Appendix K** of this report) asked respondents:

‘Do you have any comments about the change or any other features or factors we should consider in this location?’
- 10.8.22 Responses to the points raised through this question, and other open written feedback have been summarised in **Section 10.9** of this report.

Question 4

- 10.8.23 Question 4 of the feedback questionnaire (**Appendix K** of this report) asked respondents:

‘What is your gender?’
- 10.8.24 A total of 239 respondents answered this question, see **Figure 10.3** of this report.

- 10.8.25 In response to question 4, 54% of responses came from males, and 37% of responses were from females. The remaining 9% of respondents did not wish to provide their gender. No respondents categorised themselves as 'Non-binary'.

Figure 10.3 Question 4: What is your gender

Question 5

- 10.8.26 Question 5 of the feedback questionnaire (**Appendix K** of this report) asked respondents:
- 'Do you consider yourself a person with a disability?'*
- 10.8.27 A total of 236 respondents answered this question, see **Figure 10.4** of this report.
- 10.8.28 In response to question 5, the majority of respondents (80%) answered 'No' whilst a small proportion (7%) of respondents answered 'Yes'. The remaining 13% of respondents did not wish to answer.

Figure 10.4 Question 5: Do you consider yourself a person with a disability

Question 6

10.8.29 Question 6 of the feedback questionnaire (**Appendix K** of this report) asked respondents:

'How would you describe your ethnic background?'

10.8.30 A total of 241 respondents answered this question, see **Figure 10.5** of this report.

10.8.31 In response to question 6, the majority of respondents (86%) indicated they were 'White English, Welsh, Scottish, Northern Irish or British'. This was followed by 11% of respondents who did not wish to express their ethnic background.

10.8.32 1% of respondents described their ethnic background as 'Black, African, Caribbean or Black British'.

10.8.33 <1% of respondents indicated the following ethnic backgrounds:

- Any other white background;
- Mixed or Multiple ethnic groups;
- White and Asian;
- African; and
- Other.

Figure 10.5 Question 6: How would you describe your ethnic background

Question 7

10.8.34 Question 7 of the feedback questionnaire (**Appendix K** of this report) asked respondents:

‘What is your age?’

10.8.35 A total of 243 respondents answered this question, see **Figure 10.6**.

10.8.36 In response to question 7, the highest number of responses were from the ‘65+’ category, representing a 38% share of the responses received. This was closely followed by the ‘55-64’ age bracket which represented 24% of responses. The ‘45-54’ category had a 13% share of responses, whilst 7% of responses were from respondents within the ‘35-44’ age range.

10.8.37 The least represented age groups were ‘25-34’, ‘16-24’ and ‘Under 16’ with 1% of responses each. The remaining 15% of respondents did not wish to provide their age.

Figure 10.6 Question 7: What is your age

10.9 Findings from the targeted consultations

- 10.9.1 National Grid has complied with Section 49 of the PA 2008 by demonstrating in this chapter that it has had regard to all of the responses received at both non-statutory and statutory targeted consultations and the comments raised. This Consultation Report has also been prepared in fulfilment of Section 37(3)(c) of the PA 2008.
- 10.9.2 This section presents and discusses the feedback gathered via the open questions on the feedback questionnaire, or via other open formats provided by respondents (e.g., letters/emails).
- 10.9.3 Feedback from all targeted consultations has been collected and analysed together to accommodate the overlapping consultation periods, where responses were not directly related to a specific change, and to allow for responses to feedback to be presented together.
- 10.9.4 All responses, regardless of their origin (including those received after the consultation period), were analysed using the methodology as described in **Section 9.4** of this report.
- 10.9.5 **Table 10.21** to **Table 10.54** below contains a summary of the feedback raised during the targeted consultations and how National Grid has considered or addressed this.
- 10.9.6 Each row of feedback and response contains a unique reference number, 'X' marks to indicate which stakeholder type the feedback came from (s42(1)(a), (b), (d) or s47), and whether a change to the design has been made including reasons why changes have, or have not, been made.

- 10.9.7 National Grid's responses to consultation feedback are drafted with reference to the route option or alignment shown plans relevant to the relevant stage of consultation, in respect of the most recent consultations responses in 2025 this is the alignment shown on the Works Plans in the application (document reference 2.3). Save for the commitments within the Code of Construction Practice (document reference 7.2) which expressly secure the position of certain specified pylons on the alignment, the alignment shown on the Works Plans is subject to limits of deviation as specified in the draft development consent order that is provided with the DCO application.

Non-section specific feedback

Non-section specific feedback (Targeted Consultation)

Table 10-21 Summary of consultee comments and National Grid's response

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Agricultural Land						
10-21.1	Concern that the Project will take away valuable agricultural land / disrupt farming operations	<p>During the construction stage of the Project, there would be areas of agricultural land that would be temporarily disrupted. National Grid would only use land that is required as part of the Project and would seek to minimise the use of agricultural land where reasonable and safe to do so.</p> <p>National Grid is and would continue to work with all landowners including farmers who may be affected by the proposals to understand the impacts on their operations and to work with them as the Project progresses. We would seek to work with the farming community to limit disruption where practicable. This includes providing prior warning of works which may result in the need to move livestock. Compensation claims for disturbance are considered on a case-by-case basis, if negative impacts on farming operations can be proven. Particular agricultural matters can also be addressed through voluntary land agreements.</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-21.2	Concern that the Project will have a negative impact on agricultural livestock (e.g. type of livestock)	<p>National Grid is and would continue to work with all landowners, including farmers and equestrian facilities who may be affected by the proposals to understand the impacts on their operations and to work with them as the Project progresses. We would seek to work with the farming community to limit disruption where practicable. This includes providing prior warning of works which may result in the need to move livestock. Compensation claims for disturbance are considered on a case-by-case basis, if the negative impact on farming operations can be proven. Particular agricultural matters can also be written into voluntary land agreements. There would also be mitigation put in place where animal grazing may be affected.</p> <p>As well as possible effects on humans, possible effects of Electric and Magnetic Fields (EMFs) on various animals have been studied. No detectable effects of EMFs have been found on, for example, health, milk production, fertility, and behaviour. This is confirmed in National Policy Statement (NPS) EN-5 which states: <i>'There is little evidence that exposure of crops, farm animals or natural ecosystems to transmission line EMFs has any agriculturally significant consequences'</i>.</p>			X	
Airfields						
10-21.3	Concern that National Grid has not considered guidelines / policy for aviation / Civil Aviation Publications (CAP)	In accordance with its responsibilities as an applicant as described within the Government's Overarching National Policy Statement for Energy (NPS) (EN-1) National Grid			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		has appointed an independent aviation consultancy to develop a methodology to assess the potential impacts on airfields (licensed and unlicensed) in close proximity to the Project, and consider appropriate mitigations. The assessment methodology enables risk-based site-specific assessment of a range of criteria, including but not limited to, lateral and vertical clearance margins, aircraft types, airfield operational activities and procedures, and the surrounding context. The approach is informed by Civil Aviation Authority regulations and guidance, including that relating to both licensed and unlicensed airfields, as well as ongoing consultation with airfield owners and operators to agree the acceptability of proposed mitigations in relation to their safeguarding responsibilities and operational activities. Further information on the assessment of airfields can be found in the Environmental Statement (ES), Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).				
10-21.4	Concern that the Project does not comply with the Air Navigation Order 2016	We understand that the Air Navigation Order (ANO) 2016 (as amended) provides the legislative basis for civil aviation and safety regulation, and this context is recognised within our approach to the assessment of potential impacts to aviation from the Project, as well as consideration of appropriate mitigations. We do not anticipate that potential impacts of the Project will result in non-compliance with the Order. We would be grateful			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		for more specific information on any particular aspects of the ANO of concern to the respondent. Further information on the assessment of airfields can be found in the Environmental Statement (ES) Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).				
10-21.5	Suggest it should not be assumed that aerodromes have not already achieved adequate levels of safeguarding. Or, that any changes to their environment caused by development, will not adversely impact their operation. Suggest safeguarding is there to assess the implications of any development being proposed within the vicinity of an established aerodrome to ensure, as far as practicable, that the aerodrome and its surrounding airspace is not adversely impacted by the proposal, thus ensuring the continued safety of aircraft operating at the location	National Grid's approach to the assessment of potential impacts from the Project to aviation, and aerodromes specifically, has involved direct consultation with the operators of aerodromes likely to be affected by the proposed development, in accordance with the requirements of the Overarching National Policy Statement for Energy (NPS EN-1). This is in recognition that responsibility for the safeguarding of General Aviation aerodromes lies with the aerodrome operator. Furthermore, National Grid's approach is informed by the Civil Aviation Authority (CAA) regulations and guidance for both licensed and unlicensed aerodromes. The CAA's CAP738 'Safeguarding of Aerodromes' publication describes the process by which operators can protect the environment surrounding aerodromes from development that has the potential to impact on safe operations through the production of a Safeguarding Map to prompt consultation. Where Safeguarding Maps have been developed, these have informed engagement with operators and ultimately National Grid's impact assessments. Further information	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		on the assessment of airfields can be found in the Environmental Statement (ES) Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).				
Community / Social impact						
10-21.6	Concern about impact of the Project on children / families / residents / communities	<p>National Grid recognises people may have concerns about the potential impacts of living close to an overhead line, and that the uncertainty whilst the proposals are developed may cause anxiety.</p> <p>We have sought to reduce potential effects on communities, residents – including children - through routeing and design. We have also sought to reduce concern or uncertainty about the proposals through making timely design decisions and engaging with people and stakeholders throughout the development of the Project. If the Project received Development Consent, the Project team would continue to engage with people potentially affected during construction, through regular communication including letters, phone calls and meetings, where necessary.</p> <p>We urge anyone with concerns to get in touch through the Norwich to Tilbury Freephone number, address or email, which will remain open throughout examination.</p> <p>National Grid is committed to working with local suppliers, facilitated by supporting forums (such as the local Chambers), on electricity industry skills and</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>workforce planning. National Grid is also committed to providing a coordinated regional approach to jobs and skills opportunities. This commitment is broader than the individual project and separate to any commitments under the proposed development consent order for this Project. The socio-economic effects of the project are assessed in Chapter 15: Socio-Economics, Recreation and Tourism of the Environmental Statement (ES) (document reference 6.15). Post construction job opportunities are limited given the nature of the development however we will still work with Local Authorities (including facilitating local partners) to understand what is important to them around skills and employment to ensure we leave a lasting positive legacy in the communities where we operate.</p> <p>With regards to a delivery mechanism, the above measures will be delivered as part of our community benefit package, which will look at both local and regional initiatives. This will be delivered outside the development consent process and is not a material consideration in the decision on the proposed Project or a matter to be secured as part of the DCO, as per the Community Funds for Transmission Infrastructure: Guidance (DESNZ, 2025).</p>				
10-21.7	Concern about impact of the Project on school / educational facilities	Through routeing and siting, National Grid has sought to avoid, as far as practicable, locations of education establishments.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		The Environmental Statement (ES) Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) presents an assessment on the potential impacts on education facilities as a result of the Project. As part of the assessment, a range of measures are considered throughout the construction phase of the Project to reduce, where practicable, disruption on education establishments. These include: traffic management, signage and routing measures to ensure access or partial access can be maintained where feasible. These are identified within the ES Chapter 15: Socio-Economics, Recreation and Tourism, the Outline Code of Construction Practice (CoCP) (document reference 7.2), and the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).				
10-21.8	Concern about impact of the Project on leisure	Through routeing and siting National Grid has sought to avoid, as far as practicable, locations that are important for leisure and tourism. Environmental Statement (ES) Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) presents an assessment on of the potential impacts on sports clubs, recreational land and recreational routes located within the Order Limits. As part of this assessment, a range of measures have been considered throughout the construction phase of the Project to minimise disruption on leisure and tourism. These include: traffic management, signage and routeing measures. These are identified within ES Chapter 15: Socio-economics, Recreation and	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Tourism (document reference 6.15), the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).				
10-21.9	Concern about over development of area / other works in the area (e.g. cumulative impact)	<p>A cumulative effects assessment has been undertaken in accordance with the Planning Inspectorate's Advice Note 17 'Cumulative Effects Assessment' and is presented in Environmental Statement (ES) Chapter 17: Cumulative Effects (document reference 6.17). The cumulative effects assessment has considered the effects of the Project in conjunction with other existing and, or approved developments in line with guidance. As part of this process, National Grid has engaged with other developers who are proposing development in proximity of the Project to understand their requirements.</p> <p>The cumulative assessment has been undertaken in accordance with the overarching National Policy Statement (NPS) for Energy (EN-1). Paragraph 4.1.5 in EN-1 states:</p> <p><i>'In considering any proposed development, in particular when weighing its adverse impacts against its benefits, the Secretary of State should take into account: ... its potential adverse impacts, including on the environment, and including any long-term and cumulative adverse impacts, as well as any measures to avoid, reduce, mitigate or compensate for any adverse impacts, following the mitigation hierarchy'.</i></p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Paragraph 4.2.12 in EN-1 states: <i>'The cumulative impacts of multiple developments with residual impacts should also be considered.'</i></p> <p>Paragraph 4.3.3 in EN-1 states: <i>'The Regulations require an assessment of the likely significant effects of the proposed project on the environment, covering the direct effects and any indirect, secondary, cumulative, transboundary, short, medium, and long-term, permanent and temporary, positive and negative effects at all stages of the project, and also of the measures envisaged for avoiding or mitigating significant adverse effects'.</i></p> <p>Paragraph 4.3.19 of EN-1 states: <i>'The Secretary of State should consider how the accumulation of, and interrelationship between, effects might affect the environment, economy, or community as a whole, even though they may be acceptable when considered on an individual basis with mitigation measures in place'.</i></p> <p>Paragraph 4.4.5 in EN-1 states: <i>'The impacts of more than one development may affect people simultaneously, so the applicant should consider the cumulative impact on health in the ES where appropriate'.</i></p> <p>The long list and short list of other existing and, or approved developments considered for the Cumulative Effects Assessment is presented in Appendix 17.2: Long</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		List and Short List of Other Developments (document reference 6.17.A2), detailing the other developments shortlisted for detailed assessment. The appendix provides details on other developments screened out of the assessment in accordance with the methodology presented in ES Chapter 17: Cumulative Effects (document reference 6.17). The detailed assessment of shortlisted other developments is presented in ES Appendix 17.3: Inter-Project Cumulative Effects Matrix (document reference 6.17.A3). Appendix 17.3: Inter-Project Cumulative Effects Matrix (document reference 6.17.A3) outlines the residual significance of cumulative effects for each development, for each environmental topic that has a Zone of Influence that overlaps with that development (i.e. socio-economic, recreation and tourism impacts).				
10-21.10	Concern about the Project being in too close proximity to recently built housing developments / using land being considered for future development (including residential, commercial, infrastructural, and employment sites)	National Grid has obtained information on existing, under construction, consented but not built schemes as well as development proposals within the planning system. The Project design has responded to those that are confirmed through consideration of routeing. In the case of development proposals, some can be amended to be designed around our proposed infrastructure but in other cases our proposals may need to be amended at a corridor level, or proposed developments factored into our detailed route design. Based on known information, and in light of changes made following consideration of feedback to the 2022			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		and 2023 non-statutory consultations, statutory consultation, targeted consultations, and landowner consultation, we consider our proposals are consistent with relevant policy and guidelines and the alignment designed such that they do not prevent proposed housing developments from being successfully progressed. UK law does not prescribe minimum distances between overhead lines and homes, but any implications on landscape and visual receptors, residential amenity or from concerns about electromagnetic fields are robustly assessed as part of the Environmental Impact Assessment (EIA) and balanced as part of the decision making process. We will continue to review planning applications and engage with developers as necessary.				
10-21.11	Concern about the Project causing communities to become encircled / surrounded by overhead lines	The alignment has been routed to achieve some separation from the existing 400 kV overhead line, such that villages are not encircled by overhead lines to both sides. Separation is inevitably reduced in certain locations due to the presence of constraints to routing and environmental features. Detailed assessment reported in the Environmental Impact Assessment (EIA) identifies any measures considered to be necessary to reduce likely significant effects which would also consider the potential for effects potentially arising from close paralleling existing 132 kV overhead line and new 400 kV overhead line infrastructure.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-21.12	Concern about the impact of the Project on emergency services / ambulances / hospitals / health service	<p>Through routeing and siting National Grid has sought to avoid and reduce as far as practicable effects on identified healthcare facilities.</p> <p>Environmental Statement (ES) Chapter 10: Health and Wellbeing (document reference 6.10) consider the potential impacts on, and access to, healthcare facilities, including emergency services, ambulances, hospitals and other NHS services associated with the construction of the Project, drawing on information from ES Chapter 16: Traffic and Transport (document reference 6.16). No health facilities are due to be directly impacted by the Project and where road diversions are required traffic management and mitigation measures would be in place to reduce impacts. These include: traffic management, signage and routing measures to ensure access or partial access can be maintained where feasible. Further detail on proposed mitigation measures are presented in the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), which has been produced following engagement with stakeholders including the emergency services.</p>		X	X	
10-21.13	Criticism of surveys undertaken for the Project in this Section	There is a staged approach to the process of collection of environmental data as any major project develops. National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project. The assessment is informed by a suite of field surveys and desk studies and results are presented in an Environmental Statement (ES) (document reference Volume 6: Environmental	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Statement) that accompanies the application for development consent. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation (and maintenance) of the Project and recommends appropriate mitigation measures to reduce potential adverse impacts.</p> <p>The scope of the EIA is included in the Scoping Report (document reference 6.19) which was submitted to the Planning Inspectorate in November 2022 and their Scoping Opinion (document reference 6.20) received in December 2022. This provided the opportunity for statutory bodies to comment on the scope of the EIA which included our approach on study areas, data collection and baseline conditions for a range of environmental topics. We also discussed and agreed survey scope with stakeholders (including Statutory Environmental Bodies and Local Planning Authorities) following the Scoping Opinion (document reference 6.20) to ensure a robust baseline assessment.</p> <p>National Grid has prepared an Outline Code of Construction Practice (CoCP) (document reference 7.2) which sets out the required mitigation measures and environmental commitments that would be implemented during the construction phase of the Project to avoid or reduce potential effects of the Project on the environment, including commitments to undertake further surveys.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-21.14	Concern that the Project could disrupt telecommunications / broadcast signals / electrical equipment / GPS	<p>Radio frequency emissions can interfere with electrical equipment, telecommunication, WiFi and broadcast equipment. These emissions are limited from overhead lines by design set out in National Grid's Technical Specifications, which include the requirements of British Standards minimising the generation of radio interference. All the equipment used will meet the requirements in these standards, which are in place to prevent interference issues. These are the same good engineering practices that are applied to the existing transmission system assets, including existing 400 kV overhead lines, which cause no interference issues for electrical equipment, telecommunication, WiFi and broadcast equipment under normal operating conditions. Therefore, we also expect no interference issues as a result of the Project.</p> <p>Global Positioning Systems (GPS) are increasingly being used to provide accurate position information such as in precision farming. It uses a radio receiver to receive the transmitted radio signals from a number of satellites orbiting the earth. Additional accuracy is used in differential GPS (DGPS) which involves the use of signals transmitted from a local fixed transmitter (or another satellite). Close to a pylon, there might be some degradation in GPS performance, just as there can be some degradation close to buildings and trees. The thickness of individual wires means that they do not cause a problem.</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Any radio interference emitted by the line is too small to have any effect. Other than that, there is no evidence of power lines interfering with GPS used in precision farming.				
10-21.15	Criticism that the Project only benefits those living elsewhere (e.g. London, exports to Europe)	There is a need to reinforce the existing high voltage electricity network in the East Anglia region. It does not currently have the capability needed to transport reliably and securely the electricity that will be generated and connected to the electricity transmission network by 2030, while working to the required standards. The Project would benefit the UK as a whole, including local communities, by enabling the connection of new sources of renewable energy and by contributing to our energy security in the future, helping the country to achieve the government's Net Zero target and ensuring that the national grid meets future power demands.	X		X	
10-21.16	Request that benefits are contributed to communities that are impacted by the Project	<p>The Government has published its guidance on community funds for transmission infrastructure (DESNZ, 2025). National Grid is committed to working with Ofgem, industry partners, local communities and their representatives to ensure community benefits are delivered fairly and effectively, driving lasting, positive change for the people and places integral to our developing electricity network.</p> <p>Government has also announced its plans to introduce a bill discount scheme for households within 500 metres of new infrastructure, which it proposes to introduce</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>through the Planning and Infrastructure Bill. This is evolving government policy. Government expects this scheme to be in place by 2026 and we will share further details as they emerge.</p> <p>National Grid is committed to providing a coordinated local and regional approach to community benefits. This will be delivered outside the development consent process, since this is not a material consideration in the decision on the proposed Project or a matter to be secured as part of the Development Consent Order (DCO), as per the Community Funds for Transmission Infrastructure: Guidance (DESNZ, 2025).</p>				
Construction Impacts						
10-21.19	Concern about disruption from construction	<p>An Environmental Statement (ES) (document reference: Volume 6: Environmental Statement) has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 ('the Infrastructure EIA Regulations'). The ES identifies and assesses the likely significant effects on the environment resulting from the construction of the Project and recommends appropriate mitigation to reduce effects.</p> <p>Environmental mitigation measures have been defined within each environmental topic chapter and set out in relevant management documents submitted with the Development Consent Order (DCO) application, including the Outline Code of Construction Practice</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		(CoCP) (document reference 7.2), the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5).				
10-21.20	Concern about impact on traffic levels in local area caused by construction works (generally - no location given)	As part of the pre-application process National Grid has engaged with the relevant authorities, their highways teams and National Highways to understand and gain information on their road networks. This information has been used to inform and guide the drafting of the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) for the Project that accompanies the Development Consent Order (DCO) application. The Outline CTMP (document reference 7.3) provides details about the proposed construction access strategy has been developed to manage the impact of construction vehicles on the public highway and sensitive receptors, using suitable Local Road Network connections from the Strategic Road Network called Primary Access Routes. In addition, temporary haul roads for construction vehicles are proposed along the Project alignment, further reducing the impact of construction traffic on the local road network. Further details of the strategy can be found within the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Environmental Statement (ES) Chapter 16: Traffic and Transport (document reference 6.16) includes the assessment of the potential impacts of the Project including changes in traffic flow, delays, road safety and impact on Walking, Cycling and Horse-Riding modes on the roads along the Primary Access Routes located in the Local Road Network.</p> <p>The Transport Assessment (document reference 7.11), submitted with the DCO application, examines capacity, safety, and operational efficiency of the network, identifying potential bottlenecks or safety concerns.</p> <p>Within the assessment of the ES and the Transport Assessment, mitigation measures are proposed to minimise likely adverse impacts</p>				
10-21.21	Concern about noise and other issues resulting from construction (e.g. mud on roads, dust)	<p>An Environmental Statement (ES) (document reference: Volume 6: Environmental Statement) has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 ('the Infrastructure EIA Regulations'). The ES identifies and assesses the likely significant effects on the environment resulting from the construction of the Project and recommends appropriate mitigation to reduce effects.</p> <p>Specifically, a Construction Noise and Vibration Impact Assessment has been undertaken and is reported in ES Chapter 14: Noise and Vibration (document reference 6.14). During construction, mitigation would be implemented to reduce noise and vibration impacts from</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>construction activities and increased road traffic noise and vibration due to additional movement from construction traffic. Mitigation measures are outlined in ES Chapter 14: Noise and Vibration (document reference 6.14) and the Outline Code of Construction Practice (CoCP) (document reference 7.2). This includes the assumption that construction working would be undertaken within the agreed working hours, construction traffic would be managed through the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), haul roads would be well maintained, and Best Practicable Means (BPM) would be employed to reduce construction noise and vibration.</p> <p>ES Chapter 7: Air Quality (document reference 6.7) presents an assessment of the potential impacts from the construction of the Project on air quality. During construction, mitigation would be implemented to reduce the impact of dust generation and construction vehicle emissions. Mitigation measures are outlined in ES Chapter 7: Air Quality (document reference 6.7), and the Outline CoCP (document reference 7.2). The dust-emitting activities can be greatly reduced or eliminated by applying the site-specific mitigation measures (see Outline CoCP) for high risk sites following measures recommendations in the Institute of Air Quality Management (IAQM) guidance (IAQM, 2024). The IAQM guidance states that with the implementation of effective site-specific mitigation measures, the environmental effect would not be significant in most cases.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		In addition, National Grid has prepared an Outline CoCP (document reference 7.2). The Outline CoCP (document reference 7.2) sets out the required mitigation measures and environmental commitments that would be implemented during the construction phase of the Project to avoid or reduce potential effects of the Project on the environment.				
10-21.22	Concern that local road infrastructure is not suitable for heavy construction vehicles and machinery (generally - no location given) (including damage in relation to this, e.g. to buildings)	<p>The Construction Access Strategy has been developed to manage the impact of construction vehicles on the Public Highway and sensitive receptors, using a combination of more suitable Local Road Network connections from the Strategic Road Network, and temporary haul roads for access along the alignment. Further details of the Construction Routing Strategy are included within the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).</p> <p>The Project also requires the transportation of Abnormal Indivisible Loads (AIL). National Grid is developing specific routing proposals for AIL movements and is developing these through engagement with the relevant stakeholders including the local highway authorities and National Highways. An AIL routing strategy containing details about these movements are submitted in support of the Development Consent Order (DCO) application.</p>			X	
10-21.23	Suggest that consideration is given to the carbon footprint of the Project during construction (e.g. construction methods, materials, transport, concrete,	National Grid has set challenging targets to reduce the carbon emissions of our organisation, including a specific commitment to deliver carbon neutral	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	steel) / Concern about carbon footprint of the Project (including survey work)	<p>construction by 2025/26. Key to the delivery of this commitment is to measure the carbon footprint of our projects through concept, detailed design and into delivery and construction using a range of best practice carbon tools and data sets.</p> <p>Prior to construction, and as part of our procurement process, carbon management and carbon reduction forms a key award criteria for all projects. At tender stage, we require all contractors to calculate a detailed carbon footprint of the Project using our Carbon Interface Tool (CIT), this provides a Capital Carbon baseline in Tonnes of CO2e* from which the contractors are then incentivised (via Key Performance Indicators) and quarterly reviews to reduce the Carbon Footprint of the Project during construction. Contractors are contractually required to provide carbon data on a quarterly basis to demonstrate performance against carbon reduction commitments agreed at contract award.</p> <p>We also have a range of Net Zero working groups within National Grid Electricity Transmission (NGET) that explore low carbon innovations and approaches. These groups bring together our contractors and our supply chain to help to reduce the carbon footprint of the materials and resources required to deliver our projects. These groups are: Low-carbon concrete, Low-carbon steel and aluminium, Net Zero construction and Low</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Carbon cables. These working groups all report progress to an overarching Net Zero forum.</p> <p>The carbon calculations derived from the CIT are used to inform progress against our overall strategic commitments to reducing carbon emissions across its portfolio of projects and meeting its Net Zero targets for construction projects'.</p> <p>*CO2e/ Carbon Dioxide equivalent: is the number of metric tons of CO2 emissions with the same global warming potential as one metric ton of another greenhouse gas.</p> <p>In addition, National Grid has prepared a Greenhouse Gas (GHG) Assessment (see Environmental Statement (ES) Appendix 4.1: Greenhouse Gas Assessment (document reference 6.4.A1). The assessment provides a simple estimate of the greenhouse gas emissions associated with the construction phase of the Project, comparing this against UK emissions to determine if the Project is likely to have a material impact on the ability of the Government to meet its carbon reduction targets.</p> <p>Alongside the GHG Assessment, Appendix H: Outline Greenhouse Gas Reduction Strategy of the Outline Code of Construction Practice (document reference 7.2) presents how National Grid should effectively manage GHG emissions throughout the Proposed Project lifecycle in line with National Grid's net zero goals. This strategy encourages early consideration of GHG</p>

		<p>emissions and creation of appropriate governance structures and processes.</p> <p>This approach is in accordance with the Environment Impact Assessment (EIA) Scoping Report (document reference 6.19) and Scoping Opinion (document reference 6.20).</p>				
10-21.24	Criticism that National Grid has already started / commenced works in preparation for constructing the Project / Suggest that National Grid pause works until the consultation is complete	<p>National Grid has not started any construction work for Norwich to Tilbury. We have been carrying out various archaeological surveys along the route of the Project to inform the design and environmental assessments. National Grid is carrying out several other developments in the area that are undergoing construction work such as the Bramford to Twinstead Reinforcement and works at our Norwich Main Substation.</p> <p>These projects have been consented and are being developed separately to our proposals for Norwich to Tilbury and are part of the wider Great Grid Upgrade to connect new sources of renewable energy into the grid.</p>	X		X	
10-21.25	Concern that operatives will not be careful based on previous experiences of operatives - impinge on land, parked cars and leave equipment without permission on the respondent's land	<p>When taking access to land, National Grid and their appointed contractors will seek to advise relevant landowners of the purpose for taking access, what equipment and vehicles will be needed and where possible agree access routes. If a landowner believes that access has been taken without permission or without the serving of an access notice, they should contact the Project's lands team.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Consultation						
10-21.26	Comment supportive of engagement that has taken place / feel listened to	National Grid notes the respondent's feedback.	X	X	X	
10-21.27	Comment supportive of the Project (generally - no location given)	National Grid notes the respondent's feedback.	X		X	
10-21.28	Criticism of consultation (generally - no location given)	National Grid notes the respondent's feedback.	X	X	X	
10-21.29	Criticism of consultation events (generally - no location given)	<p>To support the non-statutory targeted consultations on Essex 8 – Great Waltham and Little Waltham and Thurrock 2 – Bulphan, National Grid held three bookable sessions to view the updated 3D model. To support the targeted statutory consultation Thurrock 3 – proposed changes to connection at Tilbury, we also held two public information events where people could view the proposals, ask the project team questions and view the updated 3D model.</p> <p>We had to balance a number of factors when booking the consultation venues, including availability and proximity to the proposed change. As part of our risk assessment of these venues, we made sure that they had full disabled access and bathroom facilities as well as adequate capacity for the expected number of people attending to be comfortably accommodated for.</p> <p>We also held a series of online webinars for each set of targeted consultations which explained the proposed</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>changes and how people could take part in the consultations. These provided further opportunities for people to find out the same information and ask the Project team questions. The webinars were recorded and uploaded to the Project website.</p> <p>There were also opportunities to engage with the Project team via phone, email and freepost.</p>				
10-21.30	Comment supportive of the Projects aims (e.g. investment in offshore / nuclear / low carbon energy)	National Grid notes the respondent's feedback.	X	X	X	
10-21.31	Criticism of the government / local government / the Prime Minister (PM)	This comment is noted. This is not a matter for National Grid.	X		X	
10-21.32	Criticism of National Grid	National Grid notes all comments and feedback. We are progressing with our proposals in line with our duties and all relevant policies.	X	X	X	
10-21.33	Criticism that National Grid has misled respondents	National Grid disagrees that consultation or its content has been misleading and we believe we have been clear about the Project, the rationale behind it, how we've developed the design, and the changes we consulted on during the targeted consultations. This information is set out within the materials presented at previous consultations and the targeted consultations. We believe that all the relevant information required for the public to make informed decisions on the proposals was made available.	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		We had a dedicated phoneline and email address if anyone had questions on the documents produced or the proposed changes.				
10-21.34	Criticism that consultation is biased towards what National Grid want	<p>National Grid disagrees that consultation or its content has been misleading and we believe we have been clear about the Project, the rationale behind it, how we've developed the design, and the changes we consulted on during the targeted consultations. The changes were proposed after considering the feedback received during previous consultations alongside the results of surveys and assessments. These reasons were set out in the consultation materials presented during the targeted consultations. We believe that all the relevant information required for the public to make informed decisions on the proposals was made available.</p> <p>National Grid is not biased towards any particular technology solution but operates within clear policy and funding guidance. How these have been factored in can be found within the consultation materials published in 2022 and 2023 non-statutory consultations and at the 2024 statutory consultation, targeted consultations, landowner consultation and the Development Consent Order (DCO) application.</p> <p>In terms of capturing specific feedback, we have captured all comments and feedback received at all consultations irrespective of how an individual submits it. Comments via the website questionnaire are treated in</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		the same way as an email, letter or hard copy feedback form.				
10-21.35	Comment supportive of consultation team (e.g. well informed)	National Grid notes the respondent's feedback.	X		X	
10-21.36	Criticism of consultation team	The National Grid Project team has been and continues to be available to engage with both the public and stakeholders about the Project. The members of the Project team have developed the proposals and are therefore well placed to answer questions that may arise. We encourage anyone with any concerns or questions to contact us directly.	X		X	
10-21.37	Criticism of previous consultations (Norwich to Tilbury Non-Statutory Consultation / East Anglia GREEN (EAG) consultation / Statutory Consultation)	This Project comprises a proposed overhead line connection over 2 km in length and therefore it is classified as a Nationally Significant Infrastructure Project (NSIP). Therefore, the Project would require consent under the Planning Act 2008. An NSIP application is submitted to the Planning Inspectorate and examined by an independent panel of inspectors. The Planning Inspectorate will decide if our consultation has been adequate and will measure it against statutory guidance and other legal requirements. This will include an assessment on the extent to which National Grid has carried out consultation in accordance with the Gunning Principles (to the extent applicable). National Grid considers that we have developed our proposals and carried out consultation in accordance with the Gunning	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Principles where applicable. The Gunning Principles set out four principles for consultation as follows:</p> <ol style="list-style-type: none"> 1. Consultation must be at a point when proposals are still at a formative stage. A final decision has not yet been made, or predetermined, by the decision makers. All of our consultations were held at a formative stage where no final decisions had been made and we took on board feedback on our proposals at each stage. This includes the targeted consultations. 2. There is sufficient information to give 'intelligent consideration'. The information provided must relate to the consultation and must be available, accessible, and easily interpretable for consultees to provide an informed response. We published a considerable amount of information to support the targeted consultations. For the targeted consultations this included a summary of the proposed changes, maps showing the 2024 proposals and the proposed changes, and accompanying environmental information for each proposed change of significance. This information was available in various forms including online and in paper copy at our public information events 				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>during consultation and upon request, and remains available on the Project website.</p> <p>3. There is adequate time for consideration and response. There must be sufficient opportunity for consultees to participate in the consultation. Our targeted consultations ran for a period of at least 30 days each. When considering the smaller scale of changes we were consulting on, this was a proportionate and appropriate timeframe for consultation. This also gave sufficient time for people to review the information provided, attend a webinar, attend a face-to-face event where these were available, or contact the Project team with any questions to enable them to provide an informed response. We follow advice and guidance provided in relation to consultation for a Project of this nature and are confident we go over and above any statutory requirements to engage fully with all stakeholders.</p> <p>4. Conscientious consideration must be given to the consultation responses before a decision is made. Decision makers should be able to provide evidence that they took consultation responses into account.</p> <p>In response to the targeted consultations, we received over 700 pieces of feedback. Responses were received</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>from members of the public, elected members, Local Planning Authorities and technical stakeholders. All responses received have been read and carefully considered by the Project team. Information from the feedback has been considered and changes have been made as we have developed the alignment.</p> <p>Evidence of how we carefully considered the feedback submitted during the 2022 and 2023 non-statutory consultations is detailed in our previous consultation feedback reports, which are available on the Project website.</p>				
10-21.38	Criticism that National Grid has not considered feedback from previous consultations (including verbal feedback)	<p>Feedback does make a difference. Many of the changes presented at the statutory consultation and targeted consultations were as a direct result of the information and feedback we received at previous consultations.</p> <p>National Grid has continued to have regard to all feedback received. During the consultations, we asked for feedback on the draft alignment, including pylon positions, the locations of underground cables, Cable Sealing End (CSE) compounds, the East Anglia Connection Node (EACN) substation and the changes that were made to the route since the last consultation alongside issues of access and permanent and temporary haul roads.</p> <p>We also wanted to know about any concerns or questions about the proposals, or if there were any local factors that should be considered.</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-21.39	Criticism that consultation will not make a difference (e.g. respondents feedback will not be listened to)	<p>The feedback received through this consultation has informed how the proposals have been developed. How feedback has influenced the changes which have been made is set out in this report and in the 2025 Design Development Report (document reference 5.15).</p> <p>Feedback does make a difference. Many of the changes presented at the statutory consultation and targeted consultations were as a direct result of the information and feedback we received at previous consultations.</p> <p>National Grid has continued to have regard to all feedback received. During the consultations, we asked for feedback on the draft alignment, including pylon positions, the locations of underground cables, Cable Sealing End (CSE) compounds, the East Anglia Connection Node (EACN) substation and the changes that were made to the route since the last consultation alongside issues of access and permanent and temporary haul roads.</p> <p>We also wanted to know about any concerns or questions about the proposals, or if there were any local factors that should be considered.</p> <p>The feedback received through this consultation has informed how the proposals have been developed. All responses received have been read and carefully considered by the Project team. Information from the feedback has been considered and changes have been made as we have developed the alignment.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Evidence of how we carefully considered the feedback submitted during the 2022 and 2023 non-statutory consultations is detailed in our previous consultation feedback reports, which are available on the Project website.				
10-21.44	Criticism that Holford Rules have not been considered	National Grid disagrees that the Holford Rules have not been considered. The Corridor and Preliminary Routeing and Siting Study (CPRSS) published in 2022 and the Design Development Reports (DDR) published as part of the 2023 non-statutory consultation, 2024 statutory consultation and with the 2025 Development Consent Order (DCO) submission, all set out how the Holford Rules informed decision making. A summary of the Holford Rules is provided within Appendix I22 of this report. We use the Environmental Impact Assessment process to inform the balance and define our proposals that we take forward, and which are also informed by feedback. A balanced decision is taken which is not the same as not considering the Holford Rules. For example routeing over relatively higher ground rather than in an adjacent valley may conflict with Rule 4 and 5 but may be appropriate if the valley contains extensive areas of unavoidable ancient woodland, effects on which would conflict with Rule 2.	X	X	X	
10-21.45	Criticism that Horlock Rules have not been considered	National Grid disagrees that the Horlock Rules have not been considered. The Corridor and Preliminary Routeing and Siting Study (CPRSS) published in 2022 and the			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		2023 and 2024 Design Development Reports (DDR) (available on the Project website) and the 2025 DDR (document reference 5.15) published with the Development Consent Order (DCO) submission, all set out how the Horlock Rules informed decision making. We use the Environmental Impact Assessment (EIA) process to inform the balance and define our proposals that we take forward, and which are also informed by feedback. We would note that application of the Horlock Rules typically involves balancing alternative solutions which can present conflicting Horlock Rule compliance albeit that all aspects have been considered.				
10-21.46	Criticism that the National Planning Policy Framework (NPPF) has not been considered / Criticism that the Project does not abide with the NPPF	The National Planning Policy Framework (NPPF) (Department of Levelling Up, Housing and Communities, 2025) sets out the Government's planning policies for England and how these are expected to be applied. The weight of the NPPF relating to Nationally Significant Infrastructure Project (NSIP) is clarified in paragraph 5 of the NPPF, which states: <i>'The Framework does not contain specific policies for nationally significant infrastructure projects. These are determined in accordance with the decision-making framework in the Planning Act 2008 (as amended) and relevant national policy statements for major infrastructure, as well as any other matters that are relevant (which may include the National Planning Policy Framework). National policy statements form part of the overall framework of national planning policy, and may be a material consideration in</i>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p><i>preparing plans and making decisions on planning applications.'</i></p> <p>National Grid considers that the NPPF is, therefore, capable of being an important and relevant consideration in decision making for NSIP but the prime documents to be considered and given appropriate weight are the Overarching National Policy Statement for Energy (EN-1) (2023) and the National Policy Statement for Electricity Networks Infrastructure (EN-5) (2023). However, National Grid has taken the NPPF into consideration and demonstrates how the Project is in general accordance with the policies of the NPPF within the Planning Statement (document reference 5.6) and Policy Compliance Document (document reference 5.7).</p>				
10-21.47	Suggest that the Project should follow the HM Treasury Green Book / Criticism that HM Treasury Green Book has not been followed	<p>National Grid is confident that the process we follow to identify and then assess potential strategic options is robust and the most appropriate. This has been tried and tested through numerous previous projects, the formal examination process and ultimately decided by the relevant Secretary of State.</p> <p>The Treasury Green Book provides guidance on the interpretation by public servants of public spending, assets and resources for projects, policies and spend from the public purse. That is not relevant for National Grid Electricity Transmission (NGET).</p> <p>There is no requirement in the Planning Act 2008 for developers to have to submit a Treasury Green Book</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>assessment as part of a Development Consent Order (DCO) application.</p> <p>NGET is an Ofgem regulated business, with obligations to consider customer, environmental and other considerations as outlined in the Electricity Act 1989 and in its licence commitments. Consideration of the costs of a project and the funding it should receive via the regulatory settlement is the subject of a separate regulatory process, and it is not appropriate for the Planning Inspectorate, Examining Authority or the Secretary of State in their remit under the Planning Act to seek to duplicate other regimes.</p>				
10-21.48	Suggest that there is need for further consultation (generally)	<p>National Grid held two non-statutory consultations in 2022 and 2023, a statutory consultation in 2024, a series of targeted consultations in 2025 and a landowner consultation in 2025 where we presented our proposals for the Project. At each stage of consultation, we reviewed all the feedback we received and amended the Project, where feasible, in response to this. In response to feedback received during statutory consultation and the results of surveys and assessments, we held targeted consultations with directly affected properties where the alignment or access proposals have changed. We believe that this is adequate for a project of this size to allow the public time to carefully consider and engage with the proposals and leave meaningful feedback.</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-21.49	Criticism of meetings held with landowners	<p>All affected landowners were offered a meeting with Fisher German as part of the statutory consultation for the Project. At these meetings information / plans were shown to landowners, and the opportunity was given to provide feedback / change requests to be assessed by the Project team.</p> <p>Landowners were offered the opportunity to meet with Fisher German ahead of the general public consultation which allowed landowners the further opportunity to attend a consultation event and speak with other Project disciplines i.e. engineering, environmental and consents.</p>	X		X	
10-21.50	Criticism of consultation advertising / Consultation advertising was not adequate / More consultation advertising needed	<p>The targeted consultations were advertised in local newspapers in addition to writing to those properties which are likely to be impacted by the proposed changes. We also contacted all those who had requested to be kept in touch, announcing the beginning of each round of targeted consultation through project updates issued by email.</p> <p>Before the start of the targeted consultations, we prepared strategy documents to set out how we were planning to consult on proposed changes to the Project. National Grid shared these documents in draft with the potentially affected Local Planning Authorities who provided us with comments based on their knowledge and experience of consultation in the area. We incorporated these comments where practicable and information on this is available in this report. The Targeted Consultation Strategy and Targeted Statutory</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Consultation Strategy are available as appendices to this report and set out how we intended to consult at our targeted consultations.				
10-21.51	Criticism that it was difficult to find the consultation / feedback form / information on the Project	National Grid will continue to look at how we can optimise the user experience and make the website easy to navigate. Wherever possible we looked to signpost how to submit feedback and find information. All our consultation materials provided this information on where to find out more about the proposed changes and how to submit feedback. Our materials also provided details to contact us directly via our hotline number, email, or Freepost. All our consultation information remains available in the document library on the Project website.	X		X	
10-21.52	Criticism that there was not enough information available for the consultation	For our targeted consultations, National Grid produced consultation materials for each proposed change which explained the proposed change, including maps showing the area as presented in 2024 and the proposed change, and provided information on the environmental implications of the change compared to the information shown in the Preliminary Environmental Information Report (PEIR). We also had a Project hotline, Freepost and email address where members of the public and other stakeholders could get in touch to ask the Project team questions. All information relating to the Project remains available on the Project website.	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		We believe that all the relevant information required for the public to make informed decisions on the proposals was made available throughout the consultation periods. This information remains available on the Project website.				
10-21.53	Criticism that the consultation letter was not received / Criticism that respondent was not contacted directly by National Grid / Criticism that residents near the Project did not receive Project documentation / Criticism that the consultation letter was received too late	<p>We developed bespoke consultation zones for each targeted non-statutory consultation location to include nearby properties which are likely to be affected. These were developed following the principle that each consultation zone should be appropriate and proportionate in relation to the type and potential impact of the change.</p> <p>For the targeted statutory consultation at Tilbury, we developed a two-tier consultation zone. This included properties within a 1 km consultation zone of the proposed new permanent infrastructure and 250 m from the proposed order limits for temporary works and primary access routes.</p> <p>We wrote to properties within each zone providing information on the targeted consultation and inviting the recipient to provide feedback.</p> <p>National Grid also made copies of the consultation materials available at inspection points across the route, at public information events where these were held, and online. Printed copies of the targeted consultation materials were also available upon request.</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		In addition to raise awareness of the consultation, we published a series of newspaper advertisements setting out information on our consultation.				
10-21.54	Criticism that consultation was not accessible to those without IT access / internet access / IT capability	<p>Before the start of the targeted consultations, National Grid discussed its approach with officers from the Local Planning Authorities and prepared a Targeted Consultation Strategy and a Targeted Statutory Consultation Strategy. These documents set out how we were planning to consult on the project and are published on the project website.</p> <p>We wrote to properties within each consultation zone with copies of the consultation leaflet, including maps, and the Environmental Implications of Change (EIC) document.</p> <p>To support the proposed changes Essex 8 – Great Waltham and Little Waltham and Thurrock 2 – Bulphan, we also held bookable sessions where residents could view the 3D model and ask the project team questions. We also held two face-to-face events in relation to the targeted statutory consultation, Thurrock 3 – proposed changes to connection at Tilbury. We also made a freephone and freepost service available for people to contact us with any queries. This provided an alternative option for those who may have difficulty accessing other engagement channels or were less comfortable with online technology. National Grid is happy to discuss any special requirements for marginalised groups for consultation and implement these where practicable.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-21.55	Criticism that consultation was not accessible to those with limited literacy / reading skills	<p>Before the start of the targeted consultations, National Grid discussed its approach with officers from the Local Planning Authorities and prepared a Targeted Consultation Strategy and a Targeted Statutory Consultation Strategy. These documents set out how we were planning to consult on the project and are published on the Project website.</p> <p>We wrote to properties within each consultation zone with details of the proposed changes.</p> <p>Information in the consultation leaflets and website was written in non-technical language to help explain the proposed changes.</p> <p>National Grid also held online webinars with presentations explaining the proposed changes and maps. The webinars were recorded and were made available on the Project website. To support the proposed changes Essex 8 – Great Waltham and Little Waltham and Thurrock 2 – Bulphan, we also held bookable sessions where residents could view the 3D model and ask the project team questions. We also held two face-to-face events during the targeted statutory consultation, Thurrock 3 – proposed changes to connection at Tilbury.</p> <p>We also made a freephone and freepost service available for people to contact us with any queries. This provided an alternative option for those who may have difficulty accessing other engagement channels or were less comfortable with online technology. The project</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		team is happy to discuss any special requirements for marginalised groups for consultation and implement these where practicable.				
10-21.56	Criticism of consultation questionnaire (e.g. questions are misleading / form is cumbersome) / Criticism of process for respondents to submit feedback	<p>The feedback form provided as part of the targeted consultations was only a guide to enable the consultees to provide feedback on our proposals. The feedback form included a space for the location reference and then provided a free text box to enable people to provide any feedback they wanted about the proposed change. Respondents were free to answer any questions they felt most relevant. National Grid has found in the past, that people find a feedback form useful in structuring their responses and that the form has been helpful. However, feedback could be provided in any way that the consultee wished, either by using the feedback form template, by letter, or email. All feedback received from the targeted consultations has been read by the Project team and all feedback was considered as we finalised our proposals.</p> <p>We are sorry if anyone had issues accessing links to the feedback questionnaire. The questionnaire was available through our project website, and we had an email, phonenumber, and Freepost address which were available for any enquiries. We also accepted feedback submitted by email or through our Freepost address if any respondent was unable to use the online feedback questionnaire.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-21.57	Criticism of consultation materials	<p>Before the start of the targeted consultations, National Grid prepared a Targeted Consultation Strategy and a Targeted Statutory Consultation Strategy. These documents set out how we were planning to consult on the Project, including the materials to be presented.</p> <p>We aim to make consultations as accessible as possible and offer a range of materials to enable this, including a consultation leaflet for each proposed change, maps showing the proposed change compared to the proposals presented in 2024, and an accompanying Environmental Implications of Change document. We also offered ways to contact the Project team should someone need more information, or information in a different format.</p> <p>We will continue to assess how best to present information in an accessible way and format, but always recommend people contact the team directly via our hotline or email address if they have questions or concerns.</p> <p>We believe that all the relevant information required for the public to make informed decisions on the proposals was made available throughout the consultation period. This information remains available on our project website.</p>	X	X	X	
10-21.58	Criticism of Project Background Document / Design Development Report	All comments and feedback are welcomed and noted and National Grid will bear this in mind when developing	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>documents for future projects. All our documents were available in alternative formats by request.</p> <p>Before the start of the 2024 statutory consultation, National Grid prepared a Statement of Community Consultation (SOCC). This document set out how we were planning to consult on the Project, including the materials to be presented.</p> <p>We aim to make consultations as accessible as possible and offer a range of materials to enable this, including an overarching introduction to the Project and the consultation (the 2024 Project Background Document), an interactive map and more technical information. We also offer ways to contact the Project team should someone need more information, or information in a different format.</p> <p>We will continue to assess how best to present information in an accessible way and format, but always recommend people contact the team directly via our hotline or email address if they have questions or concerns.</p> <p>We believe that all the relevant information required for the public to make informed decisions on the proposals was made available throughout the consultation period. This information remains available on the Project website.</p>				
10-21.59	Criticism of consultation maps	National Grid notes the concerns about the mapping.	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>The maps we produced used data from the latest OS mapping software, however, we are aware that some more recent developments might not be fully shown on these maps. We use a wide range of sources when developing our proposals to ensure a thorough knowledge of the local area and how our proposals might impact communities. We apologise for any confusion caused by data shown on the maps and had a dedicated phoneline and email address if anyone had questions on the documents produced or the proposed changes.</p> <p>The interactive map was not updated for the targeted consultation as we were consulting on a small number of changes in order to refine and finalise the route. The interactive map has now been updated to reflect our finalised route and is available on the Project website.</p> <p>We believe that all the relevant information, including the maps, required for the public to make informed decisions on the proposals was made available throughout the consultation period. This information remains available on our Project website.</p>				
10-21.60	Criticism of imagery / photography / visualisations used for consultation materials	<p>To assist with the consultations relating to Essex 8 – Great Waltham and Little Waltham, Thurrock 2 – Bulphan and Thurrock 3 – proposed changes to connection at Tilbury, we updated the 3D visualisation tool used at the statutory consultation. This tool showed a visualisation of the proposals from any post code within a 2.5 km distance from the alignment and was</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>updated in these locations to reflect the proposed use of lower height pylons and Tilbury North substation. The model was intended to be illustrative and it was advised that it should be viewed in conjunction with the published consultation materials.</p> <p>The 3D visualisation tool was only available at these events and not online as the programme used a large amount of data and would therefore not be compatible being hosted on the Project website.</p> <p>In terms of data used for the 3D visualisation tool, The National Tree Map dataset was used to identify tree locations. The data set is limited to vegetation over three metres in height and does not record exact tree species. Regionally appropriate assumptions for typical tree species and structure were used.</p> <p>The 3D tool could be set to winter and summer seasons. Buildings, including domestic properties, were presented to illustrate their spatial location and footprint, rather than specific architecture. Building height shown was to eaves.</p> <p>Wireline visualisations were also developed as part of the Environmental Implications of Change documents for Essex 8 – Great Waltham and Little Waltham, Thurrock 2 – Bulphan, and Thurrock 3 – proposed changes to connection at Tilbury which showed what the overhead line and/or Tilbury North substation would look like in certain locations around those proposed changes.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		These visualisations were available on the Project website.				
10-21.61	Criticism of the Strategic Options Backcheck and Review (June 2023) document	<p>All the documents National Grid produced as part of the 2023 non-statutory and 2024 statutory consultation and subsequent targeted consultations have been informed by our assessments and surveys. The 2025 Strategic Options Backcheck and Review (document reference 7.17) sets out how we have considered alternatives and why we progressed with the overhead line option for Norwich to Tilbury. We believe that all the relevant information required for people to make informed decisions on our proposals, including on alternatives, was included in the 2024 Strategic Options Backcheck and Review, and other documents produced at our statutory and targeted consultations.</p> <p>All of the documents were available at our public information events and team members were available who could help members of the public and explain the more technical documents.</p>	X	X	X	
10-21.62	Criticism of accessibility to venue for public consultation events (e.g. for disabled people)	To support the non-statutory targeted consultations on Essex 8 – Great Waltham and Little Waltham and Thurrock 2 - Bulphan, National Grid held three bookable sessions to view the updated 3D model. To support the targeted statutory consultation Thurrock 3 – proposed changes to connection at Tilbury, we also held two public information events where people could ask the project team questions and view the updated 3D model.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>We had to balance a number of factors when booking the consultation venues, including availability and proximity to the proposed change. As part of our risk assessment of these venues, we made sure that they had full disabled access and bathroom facilities as well as adequate capacity for the expected number of people attending to be comfortably accommodated for.</p> <p>We also held a series of online webinars for each set of targeted consultations which explained the proposed changes and how people could take part in the consultations which provided further opportunities for people to find out the same information and ask questions. The webinars were recorded and uploaded to the Project website.</p> <p>There were also opportunities to engage with the Project team via phone, email and freepost.</p>				
10-21.63	Criticism of getting to the consultation venue (e.g. due to traffic / lack of transport options / lack of signage to venue)	<p>National Grid tried to find appropriate venues as close to the proposed changes as practicable to ensure that we reduced the distance people had to travel to the bookable sessions and public information events. We also considered the accessibility of the venues by foot, car and public transport.</p> <p>Where people were unable to attend our events, we also held a series of online webinar events and opportunities to engage with the Project team via phone, email and freepost.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-21.64	Criticism that consultation events are held during working hours / Suggest that more consultation events are held outside of working hours	<p>National Grid held three bookable sessions during the targeted consultations in Essex and Thurrock to support Essex 8 – Great Waltham and Little Waltham and Thurrock 2 – Bulphan. We also held two public information events for Thurrock 3 – proposed changes to connection at Tilbury.</p> <p>One of the bookable sessions was held on a Friday evening and another on a Saturday morning, both outside normal working hours.</p> <p>We also held a series of webinars providing information on the proposed changes and how to get involved in the consultation. The webinars were held at lunchtime and in the evenings, so that people could attend a webinar on the proposed change most relevant to them at either time. The webinars were also recorded and uploaded to the Project website.</p>	X		X	
10-21.65	Criticism that alternatives (e.g. offshore / underground cables / alternative routes) have not been presented for consultation / consulted on / Concern that National Grid has not considered / consulted on alternatives to the Project	<p>National Grid has considered a wide range of alternative means for the Project and set these out in the Corridor and Preliminary Routeing and Siting Study (CPRSS), published in support of the 2022 non-statutory consultation, and the 2023 and 2024 Strategic Options Backcheck and Reviews (SOBR), published in support of the 2023 non-statutory consultation and statutory consultation and the 2025 SOBR (document reference 7.17). This information remained available on the Project website throughout the targeted consultations. We have also considered feedback relating to suggested alternatives and set out responses within the 2022 and</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>2023 non-statutory consultation Feedback Report's and elsewhere within this report.</p> <p>Our job is to carefully consider the most feasible options and present proposals for public consultation. National Grid cannot present an alternative for consultation that would not meet the requirements placed on us by the government and our regulator Ofgem.</p>				
10-21.66	<p>Criticism that National Grid contradict their actions elsewhere (e.g. use of undersea cables / underground cables for other Projects) / Criticism that that the Project uses overhead lines, when these are being removed elsewhere in the UK / Criticism that the approach taken to the Great Grid Upgrade is piecemeal</p>	<p>National Grid assess projects on a case-by-case basis, taking into consideration various factors such as feasibility, cost, environmental impact, statutory duties and regulatory requirements. Each project is evaluated independently, and decisions are made based on the specific circumstances and needs of that project. While National Grid may use undersea cables or underground cables for certain projects, it does not necessarily mean that the same approach will be taken for all projects. The selection of technology type depends on a range of factors, including the specific requirements and constraints of each project.</p>		X	X	
10-21.67	<p>Criticism that National Grid published a video promoting an offshore grid (e.g. which contradicts their actions / responses on the Project; that National Grid have since removed from their website)</p>	<p>National Grid Ventures provides a number of resources on its website promoting its projects. This particular video shows how interconnectors between Britain and mainland Europe are an important part of our energy mix. The video was not produced by Norwich to Tilbury or by National Grid Electricity Transmission.</p> <p>We understand that National Grid Ventures took that video down to add more context to the script following</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		feedback from stakeholders. Across National Grid, we strive to provide the right technology in the right places so we can deliver a reliable grid and connect electricity from where it is generated to our homes and businesses in the most affordable and sustainable way for electricity bill payers.				
10-21.68	Criticism of the time taken by National Grid to respond to queries / Criticism that National Grid did not respond to queries	National Grid endeavours to respond to all enquiries within a reasonable time frame. However, in periods of high volume or when requiring technical information, it can take longer to respond to enquiries.			X	
10-21.69	Criticism that National Grid have not considered Lord Charles Banner KC's review(s) of the Project / Criticism that National Grid have not responded to Charles Banner KC	National Grid has reviewed and considered all feedback received on the Project, including the opinions of Lord Charles Banner KC.	X		X	
10-21.70	Criticism that the National Policy Statement (NPS) for electricity networks infrastructure (EN-5 and / or EN-3) has not been considered	National Grid disagrees with this response and notes for example that in Section 3 of the Corridor and Preliminary Routeing and Siting Study (CPRSS) the policy context set out and informing the development included EN-1, EN-5 (2011) with this position being updated in the 2024 Design Development Report (DDR) (available on the Project website) to respond to the updated NPS EN-1, EN-3 and EN-5). The current position and explanation of how policy has guided Project design is set out in the 2025 Design Development Report (document reference 5.15).		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-21.71	Suggest that the consultation process is restarted	<p>Before the targeted consultations, National Grid consulted on Targeted Consultation Strategy and Targeted Statutory Consultation Strategy with potentially affected local authorities along the route. They set out how we intended to consult communities living in the vicinity of the Project. Where practicable, we amended these strategies based on feedback from local authorities, and the Targeted Consultation Strategy was published at consultation launch on our Project website in January. An updated appendix was added in February, and the Targeted Statutory Consultation Strategy was published on the website when our targeted statutory consultation Thurrock 3 – proposed changes to connection at Tilbury started.</p> <p>These targeted consultations followed two non-statutory consultations, in 2022 and 2023, and our statutory consultation in 2024.</p> <p>As outlined by the Gunning Principles, our four principles of consultation include that consultation must be held at a point where proposals are in the formative stage; there is sufficient information for intelligent consideration; there is adequate time for response; consideration is given to consultation responses before a decision is made. We have followed these steps in line with national planning policy.</p> <p>During the targeted non-statutory consultations, we developed bespoke consultation zones which included properties which are likely to be affected. During the</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>targeted statutory consultation Thurrock 3 – proposed changes to connection at Tilbury, we contacted the residents in the consultation zone; an area of 1 km from proposed permanent infrastructure, and 250 m from proposed primary access routes and temporary works. We also wrote to the parish councils in the areas of the proposed changes during targeted non-statutory consultations, and parish councils along the route during the targeted statutory consultation. We also held a series of webinars as part of this consultation.</p> <p>We have held four stages of consultation in total, giving communities and stakeholders opportunities to provide feedback on different stages of the design process, and to see the updates we have made before an application is submitted. The first public consultation took place in early 2022, and we held the latest stage of targeted consultations in early 2025.</p>				
10-21.72	Criticism that the interactive map has not been updated for targeted consultation	<p>The interactive map was not updated for the targeted consultations as we were consulting on a small number of changes to allow us to refine and finalise the route. Maps showing the proposed changes compared with the proposals presented in 2024 were available in the accompanying consultation leaflets. The interactive map has now been updated and is available on the Project website.</p> <p>A disclaimer was placed on the interactive map during and after targeted consultation to provide an explanation</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		that it had not been updated and to direct to where the relevant information could be found.				
10-21.73	Criticism that the targeted consultation has been staggered / Criticism that changes in Suffolk and Norfolk were published / consulted on before Essex and Thurrock	When we opened the consultations regarding changes in Norfolk and Suffolk in January, we announced that the targeted consultations in Essex and Thurrock would follow, and at the beginning of consultations in Essex and Thurrock in February, we announced that a consultation on the connection at Tilbury would follow.			X	
10-21.74	Criticism of responses received from National Grid to respondent's queries / Criticism that National Grid has not replied to respondent	National Grid endeavours to respond to all enquiries in a reasonable time frame. During busy periods such as during targeted consultation, and when responding to enquiries which required technical information, it may have taken longer for us to respond.		X	X	
10-21.75	Criticism that costings and programme for the Project were not assessed independently / Suggest that costings and programme for the Project are independently assessed	<p>National Grid notes the respondent's feedback.</p> <p>The costs are independently benchmarked to the Institute of Engineering and Technology (IET) Report as set out in the 2025 Strategic Options Backcheck and Review (document reference 7.17).</p> <p>The programme considerations for the Project are based on high level programmes from previous delivered projects. Programme durations between strategic options at the point of progressing with a preferred solution wasn't a determining factor for which strategic option was taken forward.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-21.76	Criticism that National Grid met Parish Councils via Microsoft Teams, as for these to be official meetings they should have taken place in person and local people should have been given the opportunity to attend	<p>National Grid arranged three group briefings with parish councils via Microsoft Teams. We also offered briefings with parish councils who were unable to attend or who requested an additional briefing. At these briefings, members of the Project team provided information about the proposed changes and how to respond to the targeted consultations, as well as provide the opportunity to ask any questions.</p> <p>We also held a series of public webinars to support the targeted consultations, holding three webinars on the consultations in Norfolk and Suffolk, three on the consultations in Essex and Thurrock, and two in relation to Thurrock 3 – proposed changes to connection at Tilbury. These provided opportunities for local people to find out more about the proposed changes and to ask the Project team questions. These webinars were held at noon and in evenings, with the same information available at different times. During our targeted statutory consultation Thurrock 3 – proposed changes to connection at Tilbury, we held two public information events where local people could attend, see our consultation documents, and ask the Project team questions.</p>	X			
10-21.77	Suggest that local village names are labelled within consultation documents, in addition to the numbers	In response to feedback received during the first period of targeted consultation, the targeted consultation page of the Project website was updated to include local village names as part of the location references. We also uploaded a version of the 2024 route map with the			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		locations where we were consulting on proposed changes highlighted.				
10-21.78	Criticism that the targeted consultation does not include all the changes that are being proposed due to the minor nature that they have no material impact as experienced by residents / Suggest that whilst these changes may not be the most significant, local residents should be given an opportunity to comment on them / Concern about the impact on confidence in the process if residents subsequently identify these changes and raise concerns about their effect	National Grid held targeted consultation on localised changes to the draft order limits for the Project which could have new or different impacts on landowners, communities and/or the environment. Some of these were community consultations in which we wrote to local residents, and we also consulted with landowners on further, smaller changes that potentially affect specific landowners and their land interests.		X	X	
10-21.79	Threat of further legal action against the Project (e.g. judicial review)	National Grid notes the respondent's feedback. If the Project is accepted for Examination, the Planning Inspectorate and the Secretary of State will need to consider whether the Project has been developed in accordance with the requirements of the Planning Act 2008. It is these considerations and decisions of the Planning Inspectorate and the Secretary of State that can be considered by any judicial review. These bodies are independent, and National Grid cannot influence their work.	X		X	
10-21.80	Threat of action against the Project (e.g. physical action)	National Grid have, as part of the development of the project, considered the security measures required to ensure construction can be completed safely.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Temporary construction compounds, including offices, will be secured to protect the public and prevent unauthorised entry to site.</p> <p>Access to temporary construction compounds will be limited to specific entry points and personnel entries/exits will be recorded and monitored for both security and health and safety purposes.</p> <p>Security fencing and gates are proposed for all site access points to secure the works area, the construction corridor and haul roads.</p> <p>In the event that a haul road is blocked, resulting in a site location becoming inaccessible from a site access point, an alternative access shall be facilitated from a suitable crossover point.</p> <p>In the event of any incident occurring which impacts on the safe and efficient operation of the road network, additional mitigation measures will be considered, which could include contingency routes. Contingency routes will be provided by pre-established traffic diversions and diversions as set out by National Highways, the relevant highway authorities and the police.</p>				
10-21.81	Criticism that National Grid has not considered Andy Hirons' independent review (e.g. which demonstrates that the Project isn't needed until 2035) / Suggest that the Project is placed on hold until alternatives are fully considered	<p>National Grid notes the respondent's feedback.</p> <p>We have carefully reviewed the report mentioned and its appraisals, and we note that the report is a significant and independent study of our proposals. We welcome the report's support of the need for improvements to the transmission network and recognition that an offshore</p>		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>solution would result in significantly higher costs and provide lower capacity than the Norwich to Tilbury onshore proposals.</p> <p>However, we do not accept the report's conclusions around the timing of need for additional capacity being closer to 2035 than 2030. National Grid is legally obliged (under our Transmission Owner Licence) to provide capacity at the dates formally agreed in contracts with energy generators (or customers). Furthermore, the National Energy System Operator (NESO) clearly states the need for Norwich to Tilbury to be accelerated for delivery in 2030 to avoid significant constraint costs.</p>				
10-21.82	Criticism that when National Grid emailed respondents inviting them to respond to the targeted consultation, National Grid only provided a general link to the overall library for the Project (e.g. a link directly to the relevant information would have been more helpful for respondents)	National Grid notes the respondent's feedback. At the beginning of each set of targeted consultations, we wrote to properties within the bespoke consultation zones with the consultation materials for the proposed change in the area. When notifying others by email of the beginning of consultation, we provided a link to all the information related to our targeted consultations, including the consultation materials. This allowed respondents to choose which proposed changes were most relevant for them, as we do not have addresses for each individual who had signed up to be notified and were writing to organisations with interests in a wider area.			X	
10-21.83	Criticism that National Grid has not considered the Electricity Act 1989	National Grid follows a robust assessment process which we believe is appropriate for projects like this. Our	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		assessments, strategy, plans and recommendations all come under Ofgem regulation and approval. Ultimately our processes will be assessed by the Planning Inspectorate and the relevant Secretary of State. The Project has been developed in line with the requirements placed on us by relevant government acts and regulations, including the 1989 Electricity Act.				
10-21.84	Criticism that National Grid has not waited for the outcomes and recommendations of the Offshore Co-ordination Support Scheme (OCSS) before proceeding with the Project / Suggest that National Grid should wait for the outcome of the high-level study into the feasibility of coordinated options for offshore transmission infrastructure by the OCSS before proceeding with the Project	In September 2024 the Secretary of State for Energy Security and Net Zero decided not to grant further funding to the consortium. The consortium supported the Secretary of State's decision and won't be pursuing a coordinated offshore connection. During earlier periods of consultation, National Grid was awaiting the Government's decision on the outcome of the first phase of this Offshore Coordination Support Scheme (OCSS). To ensure we remained compliant with our legal obligations to connect customers and were aligned with the OCSS guidance, we continued to progress the development of the existing East Anglian network projects, including Norwich to Tilbury while awaiting the outcome of the OCSS.	X	X	X	
10-21.85	Criticism that the Project contradicts with National Grid's commitment declared in the Responsible Business Charter 2020 to supply energy in an equitable and affordable manner and their obligatory duty to develop and maintain an efficient, well-	National Grid believes that this Project is consistent with our commitments in the Responsible Business Charter. National Grid thoroughly accessed the scope, feasibility, and costs of alternatives and published this in our 2024 Strategic Options Backcheck Report (SOBR) which is			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	coordinated, and cost- effective network (e.g. by not thoroughly assessing the feasibility and costs associated with an integrated offshore approach)	<p>available on the Project website and the subsequent 2025 SOBR (document reference 7.17).</p> <p>We need to consider National Policy Statement (NPS) EN-5 which covers the development of new energy infrastructure. This policy concludes that, in most cases, the Government expects that new overhead lines would be appropriate and should be used as standard to reinforce the grid.</p> <p>National Grid carefully considers the most feasible options and presents proposals for public consultation. In doing this, we must consider impacts on local communities and the environment and deliver value for electricity consumers.</p> <p>We have assessed an equivalent offshore option and to deliver the same capacity as the overhead line, we would need to build three subsea cables and associated onshore infrastructure. This would mean significant extra cost to consumers, and that would not meet the requirements placed on us.</p> <p>In addition to cost, there are a range of environmental factors and other onshore and offshore impacts which need to be considered in this option. Taking all these considerations into account we have concluded that an onshore connection is the most appropriate solution.</p>				
10-21.86	Criticism that the mitigation measures proposed by National Grid within the Preliminary Environmental	The Environmental Statement (ES) Chapter 7: Air Quality (document reference 6.7) presents an			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	Information Report (April 24) at section 5.3.8 are insufficient (e.g. controlling speeds on haul roads won't make a difference), with National Grid's standard procedures being insufficient to control its construction teams and contractors to level required to adequately mitigate these issues (e.g. including at Gislingham)	<p>assessment of the potential impacts from the construction of the Project on air quality. During construction, mitigation would be implemented to reduce the impact of dust generation and construction vehicle emissions. Mitigation measures are outlined in ES Chapter 7: Air Quality (document reference 6.7), and the Outline Code of Construction Practice (CoCP) (document reference 7.2). The dust-emitting activities can be greatly reduced or eliminated by applying the site-specific mitigation measures (see the Outline CoCP (document reference 7.2)) for high risk sites following measures recommendations in the Institute of Air Quality Management (IAQM) guidance (IAQM, 2024). The IAQM guidance states that with the implementation of effective site-specific mitigation measures, the environmental effect would not be significant in most cases.</p> <p>The air quality construction traffic assessment is presented in ES Appendix 7.3: Air Quality Assessment Results (document reference 6.7.A3) concludes that significant adverse effects from construction traffic emissions are not expected in or around Gislingham. The nearest human receptor in this area is HR_6, located adjacent to Mill Street. Predicted pollutant concentrations at this location are well below the relevant air quality standards.</p> <p>In addition, National Grid has prepared an Outline CoCP (document reference 7.2). The Outline CoCP sets out the required mitigation measures and environmental commitments that will be implemented during the</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		construction phase of the Project to avoid or reduce potential effects of the Project on the environment.				
10-21.87	Criticism that the targeted consultation has not addressed compensation for residents and businesses adversely affected by the project either during or after construction	<p>Compensation is dealt with in line with the compensation code and any other relevant legislation. If a member of the public or a business owner would like to discuss compensation matters, then they should get in contact with the Project lands team. If a property owner is concerned about the impact of their property, they should seek third party advice and/or contact the Project lands team to discuss: Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.</p> <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD.</p>		X	X	
10-21.88	Request a construction traffic management plan (CTMP) is prepared and agreed with the Norfolk County Council as Highway Authority prior to any work being undertaken by National Grid	<p>National Grid notes the request from Norfolk County Council. Presently an Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) has been prepared.</p> <p>The appointed construction contractor will be required to develop this further and agree this with each Local Authority and National Highways.</p>		X	X	
10-21.89	Criticism that National Grid has chosen not to delay the consultation to consider the ESO report findings (March 2024)	National Grid considered the findings of the Electricity System Operator report when it was released in March 2024 and published our response to the findings of the	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>report in April 2024. Our response is available in our document library on our Project website.</p> <p>We were awaiting confirmation on whether the Government intended to take the Offshore Co-ordination Support Scheme (OCSS) forward, or if the customers involved wished to change their contracted arrangements. While waiting for that information, National Grid had a legal obligation to connect the customers and had to continue to progress the development of the existing East Anglian network projects.</p> <p>The Government later announced that, based on the findings of the feasibility work funded through the OCSS, they would not continue funding for the 2024 to 2025 financial year.</p>				
10-21.90	National Grid should consult with the Environment Agency, River Stour Trust, East Anglian Waterways Association and the Inland Waterways Association	Throughout the Project, including at the launch of our targeted consultations, we contacted key stakeholders, companies, and community groups to ensure that we are engaging with as many people as possible. This included statutory undertakers, utilities providers, and local community organisations, including the Environment Agency who are a statutory consultee.	X		X	
10-21.91	Request at the next consultation National Grid provide a clear combined order limits GIS file	We were unable to provide a GIS shapefile during the targeted consultations as our proposals were being refined in response to feedback and surveys.	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		The finalised information is shown on our interactive map, which is available on the Project website.				
10-21.92	Criticism that the Strategic Options Backcheck and Review 2023 documents do not take into account the compensation costs for the compulsory acquisition of land and rights	National Grid notes the respondent's feedback. At the initial appraisal stage, National Grid prepares indicative estimates of the capital costs. These indicative estimates are based on the high-level scope of works defined for each Strategic Option in respect of each technology option that is considered to be feasible. As these estimates are prepared before detailed design work has been carried out, National Grid takes account of equivalent assumptions for each option.			X	
10-21.93	Criticism that multiple parties have been involved in the Project requesting information with landowners and not providing guidance or advice as to how these requests should be handled	National Grid has appointed Fisher German to carry out landowner engagement on the Project, and through Fisher German has also appointed Terra Quest to carry out land referencing. All correspondence sent out by the Project's lands team has contained an explanation of the reason for making contact, and provided contact details should the recipient want to make contact with any queries or arrange a meeting with the lands team.			X	
10-21.94	Criticism that National Grid has not considered findings from the ESO's East Anglia Network Study (March 2024) which suggest underground HVDC cables would be preferable to a pylon solution if built before 2034 / Criticism that the ESO's East Anglia Network Study (March 2024) highlighted that there	The transmission network already uses Direct Current (DC) cables as part of its system to transmit power over long distances – Scotland to southern England or from England to the continent. The use of DC cables within the more local transmission network however creates constraints and increases costs due to the technology	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	were other options to achieve the same capacity, with potentially less significant environmental impacts than the Project	<p>that is required to convert the DC to Alternating Current (AC) for domestic transmission and household use. AC power is also easier to balance and distribute (especially with fluctuating power flows like from wind farms and solar).</p> <p>National Grid is constantly looking into new innovations and investigating alternative technology types. These are explored and assessed for suitability. Alternative technologies were investigated for the Project, these included an offshore connection using DC technology, and various onshore connection options including: increasing operational voltages on existing network to above 400 kV; alternating current AC overhead lines (established technology); alternative pylon types; AC underground technology; High Voltage Direct Current (HVDC) overhead line and underground cables; and Gas Insulated Line (GIL).</p> <p>Currently, overhead lines offer the most economic and efficient solution to transmit electricity over long distances.</p>				
10-21.95	Criticism that the respondent was not contacted about the targeted consultation most relevant to them e.g. contacted about a consultation in the next town but not the town where they live/operate	<p>We developed bespoke consultation zones for each targeted consultation area and wrote directly to properties within those areas. These areas included nearby properties which are likely to be affected, rather than following village or town boundaries.</p> <p>We also issued Project updates to all those who had requested to be kept in touch announcing the beginning</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>of each targeted consultation and directing to the Project website where more information could be found.</p> <p>For our targeted statutory consultation, Thurrock 3, we developed a wider consultation zone as our proposals included a new substation site. The consultation zone extended 1 km from proposed new infrastructure and 250 m from the order limits relating to restringing, primary access routes and other temporary works. We also issued a Project update to those who had registered and contacted prescribed and non-prescribed consultees across the route.</p>				
10-21.96	Suggest that the Centralised Strategic Network Plan (CSNP) must frontload more rigorous environmental assessments (SEA) to provide a more holistic analysis of onshore and offshore options / Suggest that the CSNP must be opened up to inputs from wider environmental and community stakeholders to provide better balancing of environmental and community constraints (Statutory Consultation - 2024)	<p>National Grid notes the respondent's feedback</p> <p>The methodologies for completing the Centralised Strategic Network Plan (CSNP) and other related exercises were the subject of public consultation by National Energy System Operator (NESO) between December 2024 and January 2025.</p> <p>NESO has stated "Beyond this consultation, there will be further opportunities to engage through the development of these plans and their outputs". The respondent may find that NESO's further engagement opportunities will enable the points raised in this representation to be considered by the body shaping the development of the CSNP.</p>	X		X	
10-21.97	Suggest that the Project is paused until the findings of the Winsor Report have been taken into consideration (e.g. including the development of a	National Grid will continue to consider new evidence and studies as we develop our proposals, but we need to progress our proposals to make sure we're able to meet	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	meaningful strategic assessment and plan) (Statutory Consultation - 2024)	our contractual obligations and keep to the Government's deadline to connect new sources of offshore wind to homes and businesses across the UK by 2030.				
10-21.98	Criticism of National Planning Policy / National Policy Statement (NPS) (e.g. the presumption of overhead lines), and suggest that the NPS is reworded to "The most appropriate technology for each situation should be selected and applying Treasury Green Book guidance in the selection of alternatives". With this, suggest that National Grid should pause the Project until policy has been reviewed in relation to the presumption of overhead lines / Suggest that Nation Policy Statement are changed (Statutory Consultation - 2024)	<p>It is indeed the case that National Policy Statement (NPS) for electricity networks infrastructure EN-5 (Department for Energy Security and Net Zero (DESNZ) 2024) doesn't specify application of the Treasury Green Book.</p> <p>In April 2025, the government launched a consultation on proposed changes to EN-5 that ended on 29 May 2025 - The Draft revised National Policy Statement for electricity networks infrastructure (EN-5) (Department for Energy Security and Net Zero, 2025). The amendment of a National Policy Statement is a matter for the Secretary of State subject to requirements concerning consultation, publicity and parliamentary scrutiny.</p> <p>The emerging draft EN-5 (2025) is generally consistent with the extant NPS EN-5 (2024). National Grid will continue to follow national guidance, primarily NPS EN-5 as it currently stands and should any new NPS come forward, a back check and review would be necessary. If the revised NPS EN-5 is designated prior to a decision being made on the application for development consent, assessment against the current presumption in favour of overhead lines will be reviewed with the newly designated NPS, and any additional requirements would be captured within an errata document post submission.</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		It is important that we continue to develop our proposals for the Project to meet our statutory duties and responsibilities to deliver the new renewable sources of energy to homes and business across the UK.				
10-21.99	Criticism that the consultation area has been confined to people living in close proximity to the proposed routes, ignoring thousands of people who will be affected and whose opinions should be considered	<p>We developed bespoke consultation zones for each targeted consultation area to include nearby properties which are likely to be affected. These zones were created following the principle that each consultation zone should be appropriate and proportionate in relation to the type and potential impact of the change. We wrote directly to properties within the consultation zones.</p> <p>We also issued Project updates to all those who had requested to be kept in touch announcing the beginning of each targeted consultation and directed people to the Project website where more information on all the targeted consultation areas could be found. The targeted consultations were also advertised in local media.</p> <p>Anyone was welcome to provide feedback during the consultations, and we considered all the feedback we received.</p>			X	
10-21.100	Criticism that consultations have been piecemeal around specific projects - which under states the total impact of all projects (North Falls, Five Estuaries, Tarchon, Norwich to Tilbury, plus all associated grids, substations, roads and other associated facilities)	National Grid is required to seek planning consent for its proposed infrastructure, which includes consulting on the Norwich to Tilbury proposals. Other projects are required to seek their own planning consent.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-21.101	Criticism that the Holistic Network Design and the Future Framework is not being applied in East Anglia, instead, Accelerated Strategic Transmission Investment (ASTI) has allowed National Grid to ignore viable competing options	National Grid notes the respondent's feedback The scope of the Holistic Network Design (HND) was set by NESO (the Energy Systems Operator (ESO) at the time) and the Government. East Anglia was excluded from the HND as the generation projects were already progressed too far for it to be beneficial to consider alternate designs. Any change would delay their delivery which would adversely affect meeting climate change objectives. The HND did however acknowledge the planned and existing transmission infrastructure in East Anglia and avoid further connections coming into the region.			X	
10-21.102	Suggest that demand growth forecast related to date centres for AI should be reviewed following the release of DeepSeek, taking into account loss of industry (Grangemouth, Tata Steel) resulting from policies	Whilst National Grid is continually encouraging consumers to use less energy, the modelling predictions stated in the Government's Energy White Paper (EWP) suggests that the overall electricity demand could double by 2050 largely as a result of the electrification of cars and vans and the increased use of clean electricity replacing gas for heating. The EWP states that "as a result, electricity could provide more than half of the final energy demand in 2050, up from 17% in 2019 and would require a four fold increase in clean electricity generation". In order to meet this demand, the Government's EWP has outlined a plan to increase energy from offshore wind to 40 GW by 2030 (target increased to 50 GW in April 2022). Furthermore, the National Energy System Operator (NESO) has more recently, in the Clean Power 2030			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		report, identified the Clean Power 2030 pathways assume high levels of societal change and digitalisation with a growing number of personal electronic devices and data service needs: <i>'We assume high levels of development in artificial intelligence and off-site computation needs for a wider economy. This means a fourfold growth in data centre electricity demand from today out to 2030. This investment will underpin the establishment of a smart energy system.'</i>				
10-21.103	Criticism that National Grid's Environmental Action Plan does not contain an evaluation of the natural capital and carbon and biodiversity impacts of their Projects or other options	National Grid notes this feedback. The Environmental Action Plan is not produced by the Project. The Project, however, has undertaken an Environmental Impact Assessment which is reported in an Environmental Statement as part of our Development Consent Order (DCO) submission, which includes information regarding carbon and biodiversity impacts.			X	
10-21.104	Criticism that National Grid has not published a biodiversity report in line with the Government's biodiversity duty	National Grid will deliver at least 10% Biodiversity Net Gain (BNG) with wider environmental and societal benefits on the Project at a time where there is no statutory requirement to deliver BNG for Nationally Significant Infrastructure Projects. National Grid would ensure 10% BNG is deliverable by ensuring a range of onsite and offsite BNG delivery options are available, including as a worst-case scenario (which we don't expect to use) statutory credits.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-21.105	<p>Suggest that National Grid should ask NESO to remodel options for East Anglia including the following:</p> <ul style="list-style-type: none"> • Tarchon as a multi-purpose interconnector (with Five Estuaries & North Falls connected) landing at Grain, Tilbury or Bradwell • Five Estuaries & North Falls connecting at an offshore platform and landing at one of the sites above • A reconductoring of the whole eastern region grid with TS Conductors • Norwich to Tilbury as HVDC (all the way from offshore wind farm to converter station at Tilbury) 	<p>National Grid notes the respondent's feedback</p> <p>As part of the National Energy System Operator's (NESO) East Anglia Network Study conducted in March 2024, these options were screened against the following criteria:</p> <p>Is this proposal within the scope of the study's Terms of Reference?</p> <p>Would the proposal require a change in connection location for projects not exploring voluntary coordination through the Offshore Coordination Support Scheme (OCSS)?</p> <p>Is the proposal technically feasible in the timescales the capacity is needed?</p> <p>Where the proposed option met the required criteria, it was taken forward to the next stage of assessment, so has already been considered as part of their study.</p> <p>The only exception to this is the TS conductor option which is not currently a deployable technology that could be considered to meet network reinforcement needs. Superconductor technology remains in its infancy and has only been trialled in a limited number of circumstances globally. The technology is not at a level of development maturity where it can provide the capacity, voltage level or distance required for this Project.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-21.106	Criticism of the consultation venues chosen (generally)	We selected consultation venues on the basis of size, accessibility (on foot and by public transport), availability, and their proximity to the proposed change and the potentially affected community.			X	
10-21.107	Criticism that the Infrastructure Planning (Decisions) Regulation 2010 (Reg 3) has not been considered	The assessment of the impact of the Project on the historic environment has been carried out in accordance with relevant legislation, including the Infrastructure Planning (Decisions) Regulations 2010 (Regulation 3), The Environmental Statement (ES), particularly Chapter 11: Historic Environment (document reference 6.11), and the Planning Statement demonstrates how these requirements have been considered in assessing impacts on listed buildings, their settings, and conservation areas. The approach taken has been discussed and agreed with statutory consultees, including Historic England and the relevant Local Planning Authorities.	X		X	
10-21.108	Request for National Grid to confirm within the Environmental Net Gain Report (January 2025) that they are looking at emerging Local Nature Recovery Strategies and habitat banks across the three counties, directing funds towards priority areas (e.g. in line with good practice)	The draft Local Nature Recovery Strategies (LNRS) for Essex, Norfolk and Suffolk have been reviewed and included within the Biodiversity Net Gain (BNG) Report (document reference 7.1) with regard to the approach to strategic significance (no Environmental Net Gain Report will be submitted). At the time of drafting the BNG report final versions of the LNRS's had not been published. However, the BNG report outlines how they will be taken into consideration within the BNG metric	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		during the re-run of the metric post consent (should consent be granted).				
10-21.109	There is limited information on hedgerow and watercourse losses which we understand is to follow, but the respondent notes that they understand this is to follow. Any potential losses in high distinctiveness habitats (e.g. floodplain mosaic) will require a bespoke approach irrespective of mandatory requirements for Biodiversity Net Gain (BNG). Impacts on habitat condition / distinctiveness should be avoided, minimised, mitigated or compensated in accordance with the mitigation hierarchy	<p>The impacts of the Project on watercourses, including those associated with the temporary effects of watercourse crossings, are assessed within Chapter 12: Hydrology, Land Drainage and Flood Risk of the Environmental Statement (ES) (document reference 6.12). The assessment describes a range of measures, e.g linked to crossing designs, and reinstatement, which are secured via the Outline Code of Construction Practice (document reference 7.2). The assessment concludes that there would be no likely significant permanent residual effects.</p> <p>Impacts on habitats (including high distinctiveness habitats), hedgerows and watercourses are quantified within the ES Chapter 8: Ecology and Biodiversity (document reference 6.8). Habitat impacts are also quantified within the Biodiversity Net Gain (BNG) Report (document reference 7.1) which identifies the habitat type, condition and associated distinctiveness value of area habitats, hedgerows and watercourses. Mitigation in line with the BNG mitigation hierarchy has been applied. National Grid are committed to delivering 10% BNG for the Project.</p>	X		X	
10-21.110	Suggest that National Grid are mindful of additionality rules and avoid double counting when	The additionality rule has been applied throughout and all mitigation proposed is considered additional. This is specifically addressed with regard to the Environmental	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	seeking to secure environmental areas in 30-year management	Areas within the Biodiversity Net Gain (BNG) Report (document reference 7.1), to ensure no overlap between our proposed mitigation (habitat creation and enhancement) and other Town & Country Planning Applications or Development Consent Order (DCO) proposals.				
10-21.111	Criticism the Targeted Consultation has not considered the Governments recently published Community Funds for Transmission Infrastructure	<p>The Government has published its guidance on community funds for transmission infrastructure (DESNZ, 2025). National Grid is committed to working with Ofgem, industry partners, local communities and their representatives to ensure community benefits are delivered fairly and effectively, driving lasting, positive change for the people and places integral to our developing electricity network.</p> <p>Government has also announced its plans to introduce a bill discount scheme for households within 500 metres of new infrastructure, which it proposes to introduce through the Planning and Infrastructure Bill. This is evolving government policy. Government expects this scheme to be in place by 2026 and we will share further details as they emerge.</p> <p>National Grid is committed to providing a coordinated local and regional approach to community benefits. This will be delivered outside the development consent process, since this is not a material consideration in the decision on the proposed Project or a matter to be secured as part of the Development Consent Order</p>		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		(DCO), as per the Community Funds for Transmission Infrastructure: Guidance (DESNZ, 2025).				
10-21.112	Criticism that the National Policy Statement (NPS) Energy (EN-1) has not been considered	National Grid disagrees with this response and notes for example that in Section 3 of the Corridor and Preliminary Routeing and Siting Study (CPRSS) (available on the Project website) the policy context set out and informing the development included EN-1, EN-5 (2011) with this position being updated in the 2024 Design Development Report (DDR) (available on the Project website) to respond to the updated NPS EN-1, EN-3 and EN-5. The current position and explanation of how policy has guided Project design is set out in the 2025 DDR (document reference 5.15).	X	X	X	
10-21.113	Concern that there won't be enough time to consult on alternatives once the detail of private loss to be suffered to landowners is determined - based on 2022 response	National Grid has considered a wide range of alternative means for the Project and set these out in the Corridor and Preliminary Routeing and Siting Study (CPRSS), published in support of the 2022 non-statutory consultation, and the 2023 and 2024 Strategic Options Backcheck and Reviews (available on the Project website), published in support of the 2023 non-statutory consultation and statutory consultation. This information remained available on the Project website throughout the targeted consultations. We have also considered feedback relating to suggested alternatives and set out responses within the 2022 and 2023 Non-Statutory Consultation Feedback Reports and elsewhere within this report.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-21.114	Criticism that National Grid should have shared reasoning for rejecting suggested changes so that new changes can be considered accordingly	National Grid notes the respondent's feedback. All changes requested have been reviewed by the Project team and have either been taken forward in the design or not based on a balanced evaluation. Responses to changes requested in feedback are included in this report and the previous non-statutory consultation feedback reports published at statutory consultation and the 2023 non-statutory consultation. The publication of changes that have been rejected was not possible until the submission of the Development Consent Order (DCO) application, however landowners and any other stakeholder were encouraged to submit feedback on any aspect of the Project and this feedback was all taken into account when developing the final design.			X	
10-21.115	Suggest that a pause to the scheme is necessary to enable alternatives to be considered and consulted upon and that this rational delay would be more likely to enable delivery of the objectives of this and other projects whilst minimising the impacts of such developments on communities and environment	National Grid notes the respondent's feedback. National Grid is legally obliged (under our Transmission Owner Licence) to provide capacity at the dates formally agreed in contracts with energy generators (or customers), therefore pausing the Project would not align with the 2030 target date. Furthermore, the National Energy System Operator (NESO) clearly states the need for Norwich to Tilbury to be accelerated for delivery in 2030 to avoid significant constraint costs. As a regulated business, we need to consider a range of factors to put forward the right solution and ensure good value for UK bill payers. We believe the current proposal		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>provides this solution and is appropriate and consistent with Government policy.</p> <p>We present our assessment of all the different strategic options which include different technology types in our 2025 Strategic Options Backcheck and Review (document reference 7.17) but it would be disingenuous to put forward an option that doesn't comply with our statutory duties and regulatory obligations for consultation.</p>				
10-21.116	Suggest National Grid consult with Colchester City Council and Langham Hall Estate to discuss biodiversity net gain within the National Landscape to protect the impacted environment and enhance biodiversity	National Grid is committed to delivering 10% Biodiversity Net Gain (BNG) with environmental and societal benefits for the project. Due to the scale of the Project it will not be possible to deliver all habitat creation and enhancement onsite and therefore National Grid are seeking agreements with third parties, to deliver any deficit in biodiversity units, in order to achieve the targeted 10% BNG. National Grid are open to all off-site options with registered BNG providers, and open to discussing potential off-site BNG sites with Colchester City Council and Langham Hall Estate.			X	
10-21.117	Request Host Authorities and other relevant stakeholders be consulted on any further changes to the proposal that fall outside the scope of the Targeted and Statutory consultations. This will allow to assess the acceptability of changes in planning terms and consider alternative options or develop	<p>Following our targeted consultation, we considered all the feedback received. Where this would have resulted in the need for further targeted consultation, we would have communicated this with the relevant Local Authorities and elected representatives.</p> <p>During this process, we did not identify any areas of change where further consultation was necessary, and</p>		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	necessary mitigation prior to the submission of the Development Consent Order (DCO)	so no further engagement with the Local Authorities on this was carried out.				
10-21.118	Request that the proposal provides community funding in accordance with the guidance from the Community Funds for Transmission Infrastructure (March 2025) by the Department of Energy Security and Net Zero, and that this funding is separate from the delivery fund	<p>The Government has published its guidance on community funds for transmission infrastructure (DESNZ, 2025). National Grid is committed to working with Ofgem, industry partners, local communities and their representatives to ensure community benefits are delivered fairly and effectively, driving lasting, positive change for the people and places integral to our developing electricity network.</p> <p>Government has also announced its plans to introduce a bill discount scheme for households within 500 metres of new infrastructure, which it proposes to introduce through the Planning and Infrastructure Bill. This is evolving government policy. Government expects this scheme to be in place by 2026 and we will share further details as they emerge.</p> <p>National Grid is committed to providing a coordinated local and regional approach to community benefits. This will be delivered outside the development consent process, since this is not a material consideration in the decision on the proposed Project or a matter to be secured as part of the Development Consent Order (DCO), as per the Community Funds for Transmission Infrastructure: Guidance (DESNZ, 2025).</p>		X	X	
10-21.119	Criticism that the respondent is having to deal with and respond to multiple companies	National Grid is responsible for Norwich to Tilbury , alongside several other developments in the area such			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	regarding development in the area / Request that respondent is given a single body as a main point of contact	as Bramford to Twinstead Reinforcement and SeaLink. There are other projects which are being developed by other third party developers and which are not associated with National Grid. We encourage everyone to look on the relevant project websites to know which developer to contact for further information.				
10-21.120	Request that the Project bring socio-economic benefits to the host communities / Concern that social value opportunities (such as skills, training and future employment) have not been assessed	National Grid is committed to working with local suppliers, facilitated by supporting forums (such as the local Chambers of Commerce), on electricity industry skills and workforce planning. National Grid is also committed to providing a coordinated regional approach to jobs and skills opportunities. This commitment is broader than the individual project and separate to any commitments under the proposed development consent order for this Project. Our commitments include the Grid for Good programme, a global community investment programme. It connects young people between the ages 16-25 with upskilling and job opportunities in the energy industry. The socio-economic effects of the Project are assessed in Chapter 15: Socio-economics, Recreation and Tourism of the Environmental Statement (ES) (document reference 6.15). Post construction job opportunities are limited given the nature of the development however we will still work with Local Authorities		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		(including facilitating local partners) to understand what is important to them around skills and employment to ensure we leave a lasting positive legacy in the communities where we operate. With regards to a delivery mechanism, the above measures will be delivered as part of our community benefit package, which will look at both local and regional initiatives. This will be delivered outside the development consent process and is not a material consideration in the decision on the proposed Project or a matter to be secured as part of the Development Consent Order (DCO), as per the Community Funds for Transmission Infrastructure: Guidance (DESNZ, 2025).				
10-21.121	Concern for the Target Consultation relating to habitats and land use, as they do not appear to comply with the revised duty of section 85 of the Countryside and Rights of Way Act (2000) / Request that greater weight be given to the revised section 85 of the Countryside and Rights of Way Act (2000) if the National Landscape is to be crossed in the manner outlined in the Targeted Consultation	Section 245 (Protected Landscapes) of the Levelling-up and Regeneration Act 2023 (LURA) places a duty on 'relevant authorities', which in this context includes National Grid as a statutory undertaker, to seek to further the statutory purposes of protected landscapes (referred to as the 'seek to further' duty). In relation to National Landscapes (which includes the Dedham Vale National Landscape), this requirement has been incorporated into Section 85 of the Countryside and Rights of Way (CRoW) Act, which states: <i>'In exercising or performing any functions in relation to, or so as to affect, land in an area of outstanding natural beauty in England, a relevant authority other than a</i>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p><i>devolved Welsh authority must seek to further the purpose of conserving and enhancing the natural beauty of the area of outstanding natural beauty'.</i></p> <p>The approach National Grid is taking to meet the 'seek to further' duty in relation to the Project has been detailed in National Landscapes - Duty to Seek to Further the Purposes Report (s85 Countryside and Rights of Way Act 2000) (document reference 5.10). The document details how the National Landscape and 'seek to further' duty has been taken into consideration during Project development and highlights potential further measures. The overall approach has been, and continues to be, discussed with relevant stakeholders (which includes but is not limited to the Dedham Vale National Landscape and Stour Valley Partnership) and follows the guidance published by Defra in December 2024 'Guidance for relevant authorities on seeking to further the purposes of Protected Landscapes' (Defra, 2024). It is intended the finalised measures would be secured by an appropriate mechanism as part pursuant to the Development Consent Order (DCO) process.</p>				
10-21.122	Request that the current purpose of the existing 132kV line be reconsidered if the Project is built. If the 132kV line becomes redundant, a method to secure the benefits of its removal should be considered, ideally as part of the DCO or through another legal agreement. This would demonstrate compliance with section 85 of the Countryside and	Section 245 (Protected Landscapes) of the Levelling-up and Regeneration Act 2023 (LURA) places a duty on 'relevant authorities', which in this context includes National Grid as a statutory undertaker, to seek to further the statutory purposes of protected landscapes (referred to as the 'seek to further' duty). In relation to National Landscapes (which includes the Dedham Vale			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>Rights of Way Act (2000)</p> <p>Removing the 132kV line would significantly demonstrate compliance with the duty to 'seek to conserve and enhance natural beauty' in decision-making. This potential benefit would be particularly important for highly sensitive receptors near Willy Lott's Cottage (depicted in John Constable's painting, 'The Haywain')</p>	<p>National Landscape), this requirement has been incorporated into Section 85 of the Countryside and Rights of Way (CROW) Act, which states:</p> <p><i>'In exercising or performing any functions in relation to, or so as to affect, land in an area of outstanding natural beauty in England, a relevant authority other than a devolved Welsh authority must seek to further the purpose of conserving and enhancing the natural beauty of the area of outstanding natural beauty'.</i></p> <p>The approach National Grid is taking to meet the 'seek to further' duty in relation to the Project has been detailed in National Landscapes – Duty to Seek to Further the Purposes Report (s85 Countryside and Rights of Way Act 2000) (document reference 5.10). The document details how the National Landscape and 'seek to further' duty has been taken into consideration during Project development and highlights potential further measures. The overall approach has been, and continues to be, discussed with relevant stakeholders (which includes but is not limited to the Dedham Vale National Landscape and Stour Valley Partnership) and follows the guidance published by Defra in December 2024 'Guidance for relevant authorities on seeking to further the purposes of Protected Landscapes' (Defra, 2024). It is intended the finalised measures would be secured by an appropriate mechanism as part pursuant to the Development Consent Order (DCO) process.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		One of the measures National Grid is proposing is the preparation of an initial feasibility study to assess the potential feasibility for the PJ Line removal in the longer term. The PJ Line is an existing 132 kV overhead line between Bramford and Lawford. This work would be limited to a feasibility exercise and any steps beyond that regarding potential removal would be for future consideration with relevant stakeholders entirely outside of the Project and DCO. Further detail is available in National Landscapes – Duty to Seek to Further the Purposes Report (s85 Countryside and Rights of Way Act 2000) (document reference 5.10).				
10-21.123	Request that National Grid consider the rapid development of electrical transmission capacity capability (link provided by respondent), which enables tripling of transmission capability, 40% capital expenditure costs, rapid deployment, and reuse of existing infrastructure, while preventing increased infrastructure, network redesign, excessive cost, and local resentment	National Grid notes the respondent's feedback. Alternating Current (AC) High Temperature Superconductors (HTS) cannot currently provide the capacity, voltage level, or distance required by Norwich to Tilbury. Norwich to Tilbury would operate at 400 Kilovolts (kV) and HTS technology operates at voltages well below 400 kV. It is also generally more suited to urban constrained environments.			X	
10-21.124	Request National Grid have a Discretionary Purchase Scheme as other Statutory providers do	National Grid does not currently have a Discretionary Purchase Scheme, and under current legislation is not required to. National Grid will continue to work with members of the public that have concerns over property prices and will also continue to review government legislation should anything change.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-21.125	Criticism that respondent has requested access multiple times to the survey reports covering the surveys undertaken at their land, but these have not been provided by National Grid / Suggest that landowners and the public are given access to post survey reports (and any reports generated in the future)	National Grid has made survey data and reports available to the public through the Environmental Statement, as part of the Development Consent Order application.			X	
10-21.126	Criticism that National Grid have been serving S172 notices on landowners (e.g. while crucial questions regarding licences remained unanswered) / Criticism that National Grid have been using Section 172 notices instead of arranging access with landowners (e.g. therefore denying landowners opportunity to liaise with contractors to ensure optimum access routes and times for the landowner)	<p>National Grid will always make reasonable and proportionate attempts to agree voluntary access before using S172 notices.</p> <p>The Project's lands team has extensively engaged with landowners on the need for survey licenses and survey requirements. Where possible and justified National Grid can amend the survey license to take into account specific landowner requirements. If amendments cannot be made the reasons for this will be explained.</p> <p>Where voluntary agreement cannot be reached and access is required to carry out survey work that will inform design and the Environmental Impact Assessment (EIA), notices will be relied upon. When a notice has been served, the Project's lands team will still endeavour to liaise with landowners on the details and timing of the survey, but this is not always achievable.</p>			X	
10-21.127	Criticism that National Grids contractors have been arriving on site without providing the required notice as stipulated in the licence agreements	National Grid has a team of land agents appointed, and one of their roles is to provide landowners with the required / agreed notice before taking access for			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>surveys. National Grid's appointed contractors are also made aware of any requirements, i.e. notice periods.</p> <p>If a landowner feels that access has been taken without the required / agreed notice period, they should make contact with the Project's lands team to discuss: Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.</p> <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD.</p>				
10-21.128	Criticism that National Grid has been parking vehicles, welfare equipment, and materials on sites, contrary to provisions agreed upon licence terms	<p>National Grid has a team of land agents appointed, and one of their roles is to agree survey requirements with affected landowners.</p> <p>National Grid's appointed contractors are also made aware of any requirements, including where to park and what equipment can or cannot be left on site.</p> <p>If a landowner feels that the conditions within the survey license have not been met for any reason, they should contact the Projects lands team to discuss: Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.</p> <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-21.129	Criticism that National Grid has been withholding raw survey data, which was agreed to be supplied in the licences	<p>Surveys have been ongoing across the Project and given the vast amount of surveys undertaken and the scale of the Project there is a large amount of raw data captured. This raw survey data is not in a suitable format to be issued to landowners and takes a considerable amount of processing following the completion of surveys.</p> <p>National Grid has made survey data and reports available to the public through the Environmental Statement, as part of the Development Consent Order application.</p>			X	
10-21.130	Criticism that National Grid have been delaying payment of agent fees, placing landowners at significant financial risk	<p>Appointed land agent's fees are paid through Fisher German on National Grid's behalf.</p> <p>Fees can either be paid directly to the land agent or the landowner depending on what the prior agreement is.</p> <p>Land agent fees are paid on submission of a valid invoice and accompanying timesheets.</p> <p>Delays in payment can be caused by the need to clarify elements of the invoice with the land agent or time claimed that is not covered by National Grid.</p>			X	
10-21.131	Criticism that the Project as currently proposed contravenes the Government's 25 Year Environment Plan and contravenes efforts to achieving Net Zero by 2050	A Green Future: Our 25 Year Plan (2018) highlights the Government's support for the reduction in the United Kingdom (UK)'s carbon footprint. The Project is critical to the rapid decarbonisation of the National Grid and the principle of the Project is therefore supported by the Plan.	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>The Overarching National Policy Statement for Energy EN-1 (Department for Energy Security and Net Zero (DESNZ) 2024) states in paragraph 5.4.39 that '<i>The government's 25 Year Environment Plan and the Environment Act 2021 mark a step change in ambition for wildlife and the natural environment. The Secretary of State should have regard to the aims and goals of the government's Environmental Improvement Plan 2023... and any relevant measures and targets, including statutory targets set under the Environment Act or elsewhere.</i>'</p> <p>Our position that the Project is compliant with the Governments 25 Year Environmental Plan insofar as it is relevant to the Project is set out in the Planning Statement (document reference 5.6).</p> <p>The Project has been identified by the National Energy System Operator (NESO) as critical to delivering a network which supports the clean power pathways for 2030 delivery. Meeting the Clean Power 2030 goal and the shift to a clean power system by 2030 forms the backbone of the transition to net zero.</p>				
10-21.132	Concern that the Project / consultation does not comply with the Planning Act (2008)	<p>This application for development consent is submitted in accordance with the requirements of the Planning Act 2008, which provides the legal framework for the consenting process for Nationally Significant Infrastructure Projects (NSIPs). The Project is defined as an NSIP, under Section 14(1)(b) and Section 16 of the Planning Act 2008 and the Planning Act 2008 (Electric</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Lines) Order 2013, as it involves the installation of an electric line above ground of more than 2km, which will operate at 400 kV in England.</p> <p>In accordance with Section 37 of the Act, the application includes all required documents, including a draft Development Consent Order (DCO), an Environmental Statement (prepared in accordance with the Planning (Environmental Impact Assessment) Regulations 2017) and supporting assessments.</p> <p>The application has fulfilled all relevant pre-application procedures as set out under Part 5 of the Planning Act 2008, including:</p> <p>Section 42 consultation with prescribed bodies, local authorities and relevant landowners</p> <p>Section 47 consultation with the local community in accordance with the published Statement of Community Consultation (SoCC)</p> <p>Section 48 publication of the notice of the proposed application in the manner required by the Act.</p> <p>The Project has also taken into account the relevant National Policy Statements: Overarching National Policy Statement for Energy (EN-1) (2023) and the National Policy Statement for Electricity Networks Infrastructure (EN-5) (2023) in accordance with Section 104 of the Act.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Design Change						
10-21.133	Oppose the use of underground cables (generally - no location given) / Concern about the use of underground cables (e.g. due to impact of construction)	<p>National Grid has carefully considered the feedback received during the 2022 and 2023 non-statutory consultations, the statutory consultation, targeted consultations, and landowner consultation, the alternatives available, and other factors including our duties and obligations. These duties include balancing the need to be economic and efficient, which includes keeping costs down in the interests of the bill-paying consumers, with a duty to have regard to preserving amenity, which includes the natural environment, cultural heritage, landscape and visual quality, National Policy Statement (NPS) EN-5 makes clear that <i>'the government's position that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments would cross part of a nationally designated landscape (i.e. National Parks, The Broads, or Area of Outstanding Natural Beauty (AONB))'</i>. The NPS also confirms that widespread and significant adverse landscape and/or visual impacts in other locations may also justify the use of undergrounding. We may also adopt underground cables in other circumstances such as to cross existing 400 kV overhead line infrastructure.</p> <p>Where the installation of underground cables is required in lieu of overhead lines, the design of the Project has incorporated suitable consideration of the existing</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		environment, ecology and site ground conditions based on site specific survey data. We have undertaken an Environmental Impact Assessment (EIA) which includes a baseline of the existing environment as well as site specific information and survey data.				
10-21.134	Suggest that existing overhead lines should be replaced by underground cables (generally - no location given)	<p>National Policy Statement (NPS) EN-5 establishes the position that the starting basis for new connections is a presumption on the acceptability of overhead lines but with this presumption reversed within designated landscapes and in certain other circumstances.</p> <p>The existing electricity transmission network provides power, via the local distribution network, into the local area where it is used in homes and businesses. The need case and funding for the Project is to deliver the new network reinforcement needed, rather than to remove existing overhead lines by undergrounding them.</p> <p>We have identified a number of locations where we are proposing to place existing overhead lines underground. These locations are where existing 132 kV and lower voltage lattice pylon lines are crossed by the proposed 400 kV overhead line and / or mitigation of effects are considered necessary. This includes locations such as at Mellis, between Offton and Bramford Substation, to the south of Bramford Substation and near Fuller Street.</p> <p>Unless required for mitigation, undergrounding existing overhead lines on the transmission network would not be in accordance with NPS EN-5 and would result in</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		substantial cost to bill payers. There may also be significant environmental impacts due to the removal works on sensitive ecological and archaeological receptors as well as constraints from either existing built form or unsuitable ground conditions.				
10-21.135	Suggest that the existing overhead lines are reinforced / upgraded instead (generally - no location given)	The existing transmission network in the region was upgraded during 2022 and 2023 to ensure the system is running at its most efficient performance. The existing assets / networks are not able to be upgraded sufficiently to cope with the new future demands expected on the network. As a result, new lines and substations would be required to accommodate the changing demands on the network.	X		X	
10-21.136	Suggest that the Project is routed away from populated / residential areas (generally - no location given)	Deciding where and how to build new high voltage electricity lines is a complex issue and National Grid is mindful of the potential effects this infrastructure may have on local communities and the concerns these may bring. We recognise that people living near our transmission infrastructure, including high voltage overhead lines, may have concerns about audible noise and potential health impacts. It has sometimes been suggested that minimum distances between properties and overhead lines should be prescribed. We do not consider this appropriate since each instance must be dealt with on its merits. However, we have always sought to route new lines away from residential property on grounds of general amenity where possible.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>We have undertaken a noise and vibration assessment which can be found in the Environmental Statement (ES), Chapter 14: Noise and Vibration (document reference 6.14) that forms part of the Environmental Impact Assessment (EIA) for the Project. Noise levels and the effect on residential properties as well as other sensitive areas, such as hospitals and schools, are carefully considered during planning, assessed according to the appropriate UK standards, and mitigated where necessary. We set strict technical standards for the equipment we install on our network. These will apply to the proposed new East Anglia Connection Node (EACN) substation, and extensions required to the existing Norwich Main, Bramford, and Tilbury Substations. These standards include requirements to ensure the occurrence of audible noise is eliminated or reduced as far as practicable. Therefore, significant adverse effects from noise are not expected.</p> <p>Noise from overhead lines is predominately determined by the conductor design, voltage and weather conditions. The overhead line would be designed using a relatively quiet conductor that meets the design specification required, and operational noise is not likely to be significant at nearby sensitive receptors under any weather conditions. Pylon fittings, such as insulators, dampers, spacers, and clamps, are also designed and procured in accordance with a series of National Grid Technical Specifications to reduce the potential for audible noise and tones to occur from all types of</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>fittings. Where noise does occur, it is likely to be localised and of short duration. If this is due to a fault, action can be taken to rectify it. A technical note has been submitted as part of the application for development consent to support scoping out noise associated with overhead lines from the ES.</p> <p>In addition, we have undertaken a Landscape and Visual Impact Assessment (LVIA) for the Project. This includes an assessment on both landscape character and visual amenity. The LVIA is presented in the ES, Chapter 13: Landscape and Visual (document reference 6.13).</p> <p>The health and safety of the public, local communities and employees is central to everything that we do. The UK has a carefully thought-out set of policies for protecting us all against Electric and Magnetic Fields (EMFs), the main component of which is exposure guidelines. The exposure guidelines are set by independent scientific bodies and are based on decades-long studies into the effects of EMFs and ill health. After those decades of research, the weight of evidence is against there being any health risks of EMFs below the guideline limits. Our approach is to ensure that our network comply with those policies, which are set by Government on the advice of their independent advisors. The Project is designed to ensure it is fully compliant with these policies and guidelines. This ensures that health concerns are properly and adequately addressed.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Policies for both noise and EMF are incorporated into the decision-making process for development consent as set out in National Policy Statement (NPS) EN-5. It is National Grid's policy to ensure that all its equipment complies fully with those policies and guidelines. The application for a Development Consent Order (DCO) includes assessments against these policies, including both construction and operational noise and EMF.				
10-21.137	Suggest that the Project should run in closer to / parallel to the existing overhead lines (generally - no location given)	<p>National Grid notes the potential for close paralleling existing overhead lines to reduce the level of effects that may arise from a new overhead line.</p> <p>However, where existing overhead lines are present along the proposed route, there are constraints and features that mean, overall, we consider close paralleling would lead to greater effects on receptors in the area and be less compliant with the Holford Rules or be less consistent with the policy to be economic and efficient. A summary of the Holford Rules is provided within Appendix I22 of this report. A number of residential properties are present in close proximity to the existing 400 kV overhead line meaning that if the overhead lines were close paralleled it would result in the properties having an overhead line close to both sides. There are also some locations where the combination of existing physical and environmental features (road infrastructure, commercial and residential properties etc) present very substantial challenges to routeing and siting. As a result, whilst close paralleling</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		may appear beneficial in some sections, overall, the increased environmental effects where the overhead lines have to converge and diverge, and those increased effects on properties with overhead lines on both sides are considered greater than those introduced by a new overhead line separated from existing 400 kV overhead lines. Whilst crossings and use of underground cable technology may be able to address various constrained locations, we consider the costs and environmental effects arising from the additional infrastructure required to be less compliant with our duties and relevant policies.				
10-21.138	Suggest that underground cables are used (generally / for entire of the Project)	<p>National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors.</p> <p>National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is '<i>that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments would cross part of a nationally designated landscape (i.e. National Parks, The Broads, or Area of Outstanding Natural Beauty (AONB))</i>'. Where no such designations are present, nor is the area within</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified. Therefore the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider this section in its entirety would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Therefore, whilst undergrounding the whole of this section is not considered appropriate, our proposals do include underground cable within the Dedham Vale National Landscape (previously known as Area of Outstanding Natural Beauty (AONB)) in accordance with NPS EN-5. Prior to our 2023 non-statutory consultation we identified the need to extend the underground cable beyond the National Landscape boundary because of potential effects, we have further extended this section of underground cable following consideration of feedback on our 2023 non-statutory consultation and additional investigation into potential effects. We also identified an approximately 4 km section near Great Horkesley as meeting the particularly sensitive criteria where underground cable is also proposed. Additionally, underground cable is proposed at Fairstead for a 400 kV overhead line crossing.				
10-21.139	Suggest that the Project should use lower height pylons	Consideration has been given to the use of low height pylons in circumstances where standard lattice pylons are considered to be inconsistent with policy. These low height design lattice pylons are useful where height is a strong consideration, however they also occupy a greater footprint and have a bulkier and denser profile. They can therefore provide visual benefits in some scenarios, for example where a reduction in pylon height means that views of the tops of pylons are screened by intervening woodland. In other scenarios they can increase adverse visual effects, for example where	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		relatively close to visual receptors without intervening filtering vegetation where they are likely to appear more noticeable in views from residential receptors. Low height lattice pylons have been proposed as necessary to reduce effects in two locations, to the north-west of Little Waltham and to the east of Thurrock airfield.				
10-21.140	Suggest that the Project should use T-pylons	<p>The latest independent report on the Comparison of Electricity Transmission Technologies: Costs and Characteristics (Institute of Engineering and Technology, 2025) confirms that whilst T-Pylons may in certain locations provide an alternative to conventional overhead lines with potential benefits in visual impact and reduced land-take, this is at a higher cost. The build cost is approximately 2 to 2.5 times that of an equivalently rated conventional overhead line, and the lifetime costs are around 1.6 to 1.7 times that of a conventional overhead line. The current arrangements for the oversight of funding by Ofgem requires that the lowest cost acceptable design is taken forward rather than a more expensive design even if that design is perceived to reduce the level of effect.</p> <p>As such consideration of their use follows after establishing a need to mitigate effects of the standard lattice design and after considering the benefit of adopting a low height lattice pylon design. T pylons themselves are also less adaptable to varied terrains and require more substantial access infrastructure. Furthermore, their resilience and environmental impact</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>are comparable to conventional overhead lines, but with increased carbon intensity due to construction materials. Attention also needs to be given to the transitions between pylon types. Given it is the surrounding context that drives the need for alternative design mitigation, where this is not required along the entire route, any visual break and transition in pylon design also needs to be carefully sited.</p> <p>Assessment findings have concluded that, where there is not a reversal of the presumption to use overhead lines, the use of lattice pylons (either standard or low height) is consistent with planning policy throughout the route. Whilst there may be some locations (for examples see appendix A of the 2024 Design Development Report) where there may be a design option for the use of T pylons, the need to mitigate for unacceptable effects from lattice pylons is not engaged. On this basis T pylons are not proposed for the Project.</p>				
10-21.141	Suggest that the capacity of the Project is increased	The Project would be constructed at the highest capacity currently available. This would be in line with the existing networks that are being updated in East Anglia including the existing Norwich to Bramford circuit and the Bramford to Rayleigh circuit.			X	
10-21.142	Suggest that the Project should be offshore / Suggest an offshore grid is used instead (including partial offshore option)	The Government has set a target that by 2050 the UK will have net zero carbon emissions. In order to achieve this, and hit the targets along the way, such as connecting 40 GW of offshore wind by 2030, new	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>infrastructure will be needed to deliver the increased energy production. This will include new overhead lines, underground cables, Cable Sealing End (CSE) compounds (where underground cables meet overhead lines) and substations.</p> <p>Offshore solutions were considered as part of our strategic proposal to upgrade the network in East Anglia. The Corridor and Preliminary Routeing and Siting Study (CPRSS) (available on the Project website) examines several strategic options that were considered for the Project that might achieve the required reinforcement including offshore and subsea options. These options were not taken forward as they did not fully address technical or physical/geographical constraints or enable the network to operate to the required standards.</p> <p>A subsea connection would have a third of the capacity of the proposed overhead line connection and therefore to transfer the anticipated levels of power generation, three subsea connections would be required including associated infrastructure such as convertor stations. This would make the connection significantly more costly to energy bill payers.</p> <p>In addition, an offshore option would still require development of onshore infrastructure. This would include onshore connections to the coast. The onshore work is required to reinforce the existing onshore transmission network and ensure that National Grid can continue to operate the transmission network safely and</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>securely with the increase of generation connecting into the East Anglia area.</p> <p>The National Electricity System Operator (NESO (formerly ESO)), leads an annual process looking at how the electricity transmission network might need to adapt to likely changes to where the electricity we all use will come from. That starts with stakeholder discussions and analysis about potential Future Energy Scenarios (FES) which are published each summer. NESO takes those different scenarios and looks at what that might mean for the transmission network over the next ten years, publishing an Electricity Ten Year Statement (ETYS) each November. The transmission network owners, including National Grid, respond to the issues outlined in the ETYS with suggestions as to how those can be addressed. Then in January each year, NESO publishes a document known as the Network Options Assessment (NOA), which outlines their recommendations as to which reinforcement projects should be taken forward during the coming year to meet the future network requirements.</p> <p>A need was identified to resolve electrical boundary issues in East Anglia. There are three onshore power boundaries where additional system flexibility is required to ensure that power generated in the area from offshore wind farms and nuclear generation has more ways to flow into the wider transmission network during maintenance or faults on the system.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>In addition, two new offshore wind farms off the Suffolk/Essex coast are currently proposed to be connected to the transmission network to transport the low carbon energy they will produce to the homes and businesses where it will be used along with an interconnector from the European continent.</p> <p>The NOA 2021 identified need for an upgrade to the existing line in East Anglia in all FES and this was confirmed in NOA 22.</p>				
10-21.143	Suggest that energy is generated near to where it is needed instead (e.g. London) / Criticism that energy is being generated far from where it is needed	National Grid does not determine or implement policies that influence the form and location of energy developments. Those matters are for Government to take forward. Our role is to respond to the connection requirements for projects that are developed in line with Government Policy to integrate them into the National Transmission System (NETS) in a timely, economic and efficient manner in line with relevant policies and our statutory duties under Section 9 of the Electricity Act 1989.			X	
10-21.144	Suggest that underground cables are installed using Horizontal Directional Drilling (HDD) rather than open trenches (cut and cover)	Trenchless installation techniques, such as Horizontal Directional Drilling (HDD), can be used as an alternative to a trenched (cut and cover) approach to install underground cables. It is usually the choice of methodology where minimal disturbance to above ground features is required, given trenched methods are more disruptive in terms of the level of disturbance to the landscape and environment. The benefits of using HDD	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>need to be carefully considered to ensure ground conditions are suitable and that the balance of potential environmental effects is achieved.</p> <p>When utilising HDD the underground cables need to be installed at a greater depth to provide adequate protection against inadvertent excavation strikes as this method doesn't allow us to install warning tapes/tiles above the cables. Furthermore, local constraint features that interface with the route such as water courses or other buried infrastructure may require the cables to be installed deeper to avoid clashes. The deeper the underground cables are installed, the wider they need to be spaced to allow for suitable thermal dissipation (avoiding overheating) and so a wider below ground asset corridor needs to be present to allow for the permanent underground cable corridor, this can be quite difficult to ascertain.</p> <p>HDD as a methodology increases complexities with regards to engineering, programme and in turn increase cost hence why HDD is not the preferred methodology of underground cable installation but more so an alternative means where National Grid needs to negotiate the route close to environmental sensitive receptors.</p> <p>We fully assess the underground cable routes in detail considering the route incumbent features and potential effects of installation by open trench method. Where such methodology is deemed not preferred then</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>installation by HDD methods will also be assessed before deciding on where HDD would be used.</p> <p>There is approximately 21.5 km of underground cable on the scheme. The additional cost of utilising trenchless methods for this section is not practical or justified in policy terms. However, National Grid remains keen to keep trenches open for the shortest practical length of time.</p>				
10-21.145	Suggest the use of 'Superconducting cable' technology	<p>National Grid is monitoring how this technology develops in the future, but for the moment it is not a deployable technology that could be considered for any current Projects.</p> <p>Superconductor technology remains in its' infancy and has only been trialled in a limited number of circumstances globally. The technology is not at a level of development maturity where it can provide the capacity, voltage level or distance required for this Project.</p>			X	
10-21.146	Suggest schemes to reduce energy consumption / other energy saving schemes	<p>Whilst National Grid is continually encouraging consumers to use less energy, the modelling predictions stated in the Government's Energy White Paper (EWP) suggests that the overall electricity demand could double by 2050 largely as a result of the electrification of cars and vans and the increased use of clean electricity replacing gas for heating. The EWP states that "<i>as a result, electricity could provide more than half of the final energy demand in 2050, up from 17% in 2019 and would</i></p>		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p><i>require a four fold increase in clean electricity generation</i>". In order to meet this demand, the Government's EWP has outlined a plan to increase energy from offshore wind to 40 GW by 2030 (target increased to 50 GW in April 2022).</p> <p>Notwithstanding this predicted increase in electricity demand, the Government recognises that smart technologies will need to be implemented to reduce electricity consumption, for example in buildings, the use of smart meters and appliances and energy storage. The recently published Clean Power 2030 report (Annex 1: Electricity demand and supply analysis) calls for the widespread adoption of efficient products and energy efficiency measures to manage the electrification of demand.</p>				
10-21.147	Suggest that alternative energy sources are used instead of nuclear / wind (e.g. Tidal, hydrogen)	To meet the predicted doubling in electricity demand by 2050 and the Government's 2050 Net Zero target, the Government Energy White Paper (EWP), whilst not planning for a specific technology solution, predicts that <i>"a low cost, Net Zero consistent system is likely to be composed predominantly by wind and solar"</i> but also complementing intermittent renewables with technologies including nuclear and gas with carbon capture and storage. Under its transmission licence, National Grid has a statutory duty to respond to generation customers wanting to connect to the transmission network. As well as the Tarchon Interconnector, the Project will also fulfil connection		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		offers for two offshore wind farms - North Falls and Five Estuaries - which will contribute to the Government's 50 GW offshore wind target. The advantages of offshore wind farms compared to onshore are that they are considered more efficient (with higher wind speeds and consistency in direction) and are further away from local populations. The Project will also provide increased capacity for future generation from various generators.				
10-21.148	Suggest the use of High Voltage Direct Current (HVDC) cables for the Project / Suggest that HVDC cables are used as opposed to Alternating Current (AC) cables	<p>The transmission network already used Direct Current (DC) cables as part of its system to transmit power over long distances – Scotland to southern England or from England to the continent. The use of DC cables within the more local transmission network however creates constraints and increases costs due to the technology that is required to convert the DC to Alternating Current (AC) for domestic transmission and household use. AC power is also easier to balance and distribute (especially with fluctuating power flows like from wind farms and solar).</p> <p>National Grid is constantly looking into new innovations and investigating alternative technology types. These are explored and assessed for suitability. Alternative technologies were investigated for the Project, these included an offshore connection using DC technology, and various onshore connection options including: increasing operational voltages on existing network to above 400 kV; AC overhead lines (established technology); alternative pylon types; AC underground</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>technology; High Voltage Direct Current (HVDC) overhead line and underground cables; and Gas Insulated Line (GIL).</p> <p>Currently, overhead lines offer the most economic and efficient solution to transmit electricity over long distances</p>				
10-21.149	<p>Suggest that the Project should utilise existing (disused) infrastructure at Bradwell (e.g. having been brought onshore at this location) / Suggest that existing unused 132 kV transmission between Bradwell and Rayleigh and the existing unused substation at Bradwell are upgraded to 400 kV and utilised instead of the Project (e.g. in line with National Grid's Electricity Act Duties under Schedule 9, and in line with National Policy Statement (NPS) EN-5; to reduce cost and environmental impact, such as by reusing existing concrete foundations; given that National Grid possesses pre-existing relationships with landowners in these regions, simplifying the process of negotiating access and easement agreements; given that there is no conflict with the future development of Bradwell B and opportunity to connect Bradwell B to an upgraded 400 kV line; given that the surrounding areas of Bradwell are already acclimatised to the presence of pylons, so upgrading the existing line would have a lesser impact on property valuations and therefore compensation for private loss payable by National</p>	<p>In respect of connecting at the old Bradwell power station, there is an existing overhead line connection to the Bradwell B site. This has been operating at lower voltage (132 kV) and has not been used for a few years and is in generally poor condition. This overhead line would need to be rebuilt, however, this onward connection via Rayleigh to Tilbury is also constrained by urban development and further designations and some sections may need to be re-routed if connections were made at Bradwell. Additionally, any connection point also requires two points of connection to the National Electricity Transmission System (NETS) (to meet compliance standards) requiring either a double overhead line through the Bradwell peninsula and onwards to separate locations or a connection back to Bramford (in addition to one towards Tilbury). A connection to Bramford would require connections to cross the Special Protection Area (SPA) designated Blackwater Estuary (3 km to 7 km tunnel likely to be required at much greater cost) as well as interact with other Special Area of Conservation (SAC) and SPA designations.</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	Grid would be significantly less; to reduce impact on heritage and ecology; given that the impact of upgrading infrastructure at Bradwell on the Blackwater SSSI and Ramsar sites would be minor compared to the environmental impact across Essex, Suffolk and Norfolk	The existing network through Norfolk, Suffolk and Essex would also still need to be upgraded to transport the electricity due to come onto the network in the Norwich area and provide the necessary two points of connection to the NETS. Taken together a Bradwell point of connection requires a greater amount of new infrastructure and is therefore less economic and efficient and expected to be associated with greater environmental effects.				
10-21.150	Suggest that the Project uses brownfield sites / brownfield land	Routeing and siting studies that have been undertaken for the Project have considered whether brownfield sites provided suitable opportunities for the siting of the East Anglia Connection Node (EACN) substation. Responsibility for the Landing Sites as noted by the respondent rests with 3 rd party developers and not with National Grid. No sites were identified that met the requirements for the Project. This was reviewed after feedback was considered from the 2022 and 2023 non-statutory consultations, statutory consultation and targeted consultations where alternative EACN substation locations were proposed. Reasons for not preferring alternative brownfield locations have been set out within the 2023 and Design Development Reports published on the Project website and the 2025 Design Development Report (document reference 5.15).	X		X	
10-21.151	Criticism that 2030 is not realistic / necessary for the Project, so alternatives should be used instead (e.g.	National Grid is legally obliged (under its Transmission Owner Licence) to provide capacity at the dates formally	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	the Project should be offshore / underground / use High Voltage Direct Current (HVDC) cables) / Suggest that delivery date for National Grid to provide additional capacity on the network is changed to a later date (e.g. 2034) so that alternatives could be used instead of the Project / Criticism that National Grid have accelerated the Project to meet 2030 deadline (e.g. lack of consideration of alternatives)	<p>agreed in contracts with energy generators (or customers). Contract dates are set out by National Energy System Operator (NESO), independent of National Grid</p> <p>It is also responsible for delivering major new projects to connect more clean, low-carbon power to the transmission network in England and Wales.</p> <p>These projects play a vital part in achieving the UK Government's ambition of connecting 50 GW of offshore wind by 2030. They will be delivered under the regulator's Accelerated Strategic Transmission Investment (ASTI) framework.</p> <p>Strategic alternatives for the Project, including underground cables and offshore cables, have been considered and are set out in the published Strategic Options Backcheck and Reviews (SOBR) published in 2023 and 2024 (available on the Project website) and the 2025 SOBR (document reference 7.17).</p>				
10-21.152	Suggest the use of energy islands / platforms	Offshore solutions to meet the need case have been considered and are set out in the 2023 and 2024 Strategic Options Backcheck and Reviews (SOBR) (available on the Project website) and the 2025 SOBR (document reference 7.17). The design solution for an offshore solution could, in practice, include the use of energy islands and offshore platforms but these would add significant complexity and cost. These features would not be required, in any event, to provide a suitable			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		offshore solution to meet the specific requirements of the Project.				
10-21.153	Criticism that National Grid told the National Electricity System Operator (NESO) about a shortage of High Voltage Direct Cable (HVDC) cable, despite their purchase of 14000km of HVDC cable and that National Grid's main supplier is ramping up production	National Grid notes the respondent's feedback. The availability of High Voltage Direct Current (HVDC) cable was not a determining factor for which strategic option was taken forward.	X		X	
10-21.154	Request that the Project use AC underground cables	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is ' <i>that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments would cross part of a nationally designated landscape (i.e. National Parks, The Broads, or Area of Outstanding Natural Beauty (AONB))</i> '. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified. Therefore the starting presumption for the	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at other locations proposed as overhead line would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.</p>				
10-21.155	Suggest underground cables are used for the entire route which would eliminate the need for interconnectors	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments would cross part of a nationally designated landscape (i.e. National Parks, The Broads, or Area of Outstanding Natural Beauty (AONB))'</i>. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified. Therefore the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project in its entirety would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
Economic / Employment Impact						
10-21.156	Concern about negative impact on businesses	<p>Through the routeing and siting exercise, National Grid has sought to reduce as far as practicable impacts to businesses.</p> <p>Impacts on local businesses within the Local Study Area (the Order Limits) and within the 3 km Study Area (where visual impact is likely to be an economic consideration) are assessed in Environmental Statement (ES) Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15). As part of this assessment, a range of mitigation measures have been considered to reduce disruption to businesses and their users during the construction phase of the Project. These measures are identified in ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15), the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) which accompany the Development Consent Order (DCO) application.				
10-21.157	Concern about impact of the Project on the economy	<p>Chapter 15: Socio-economics, Recreation and Tourism assessment of the Environmental Statement (ES) (document reference 6.15) assesses the potential construction effect on the local economy and tourism economy.</p> <p>A temporary, short-term, negligible to minor beneficial and not significant effect is anticipated on the local economy during construction from the Project's direct, indirect and induced contribution to the local economy.</p> <p>Following construction good practices and mitigation measures outlined in the Outline Code of Construction Practice (document reference 7.2), Outline Construction Traffic Management Plan (document reference 7.3) and Outline Public Right of Way (PRoW) Management Plan (document reference 7.6) to mitigate potential air quality, noise, traffic and effects on accessibility, a temporary, short-term, negligible adverse and not significant effect is anticipated on the tourism economy during construction.</p> <p>Economic effects during operation have been scoped out of the EIA as agreed in the Scoping Opinion.</p>			X	
10-21.158	Suggest that job / employment opportunities should be offered as part of the Project	National Grid is committed to working with local suppliers, facilitated by supporting forums (such as the local Chambers), on electricity industry skills and		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		workforce planning. National Grid is also committed to providing a coordinated regional approach to jobs and skills opportunities. This commitment is broader than the individual project and separate to any commitments under the proposed development consent order for this Project. The socio-economic effects of the project are assessed in Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) of the Environmental Statement. Post construction job opportunities are limited given the nature of the development however we will still work with Local Authorities (including facilitating local partners) to understand what is important to them around skills and employment to ensure we leave a lasting positive legacy in the communities where we operate. With regards to a delivery mechanism, the above measures will be delivered as part of our community benefit package, which will look at both local and regional initiatives. This will be delivered outside the development consent process and is not a material consideration in the decision on the proposed Project or a matter to be secured as part of the DCO, as per the Community Funds for Transmission Infrastructure: Guidance (DESNZ, 2025).				
Environmental Impact						
10-21.159	Concern about negative impact of the Project on the Green Belt(s) (generally - no location given)	To facilitate the Project, it would be necessary to route through the Metropolitan Green Belt. National Grid has			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>considered the effects on the Green Belt and all of the options connecting into Tilbury identified in the Corridor and Preliminary Routeing and Siting Study (CPRSS) would result in new and upgraded infrastructure in the Green Belt.</p> <p>The National Electricity Transmission System (NETS) transports energy from where it is generated to where it is used, in homes, schools, hospitals, businesses, and factories. Electricity networks are an established feature in our landscapes, taking energy across open countryside to towns and cities where it is needed. To ensure the national electricity network can transport energy efficiently there are numerous electricity transmission connections crossing Green Belts. Many of these connections are by way of overhead lines. By their nature, electricity transmission infrastructure (overhead lines) within the Green Belt is inevitable due to the need to transport energy around the country and the need to avoid the most built-up areas around our towns and cities (Holford Rule Supplementary Note 1 - A summary of the Holford Rules is provided within Appendix I22 of this report).</p> <p>Some electricity infrastructure such as overhead lines, are considered to be engineering operations. By the nature of their design, and the sensitive siting, some of this infrastructure such as pylons and conductors may not be considered inappropriate development in the Green Belt as they do not conflict with Green Belt purposes and preserve openness. Although overhead</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>lines may occupy long corridors within Green Belt, they involve little physical change to the land through which they pass and leave a large majority of the land beneath them free from development and therefore open.</p> <p>The Planning Statement (document reference 5.6), submitted with the application for development consent, includes an assessment of the Project against Green Belt planning policy (as contained in National Policy Statement EN-1 and the National Planning Policy Framework).</p>				
10-21.160	Concern that the Project will impact SSSIs (generally - no location given)	<p>Through routeing, siting and design development, National Grid has sought to reduce, as far as practicable, impacts on biodiversity and in particular features of high ecological value such as Sites of Special Scientific Interest (SSSI). The Project avoids all direct impacts on SSSIs, with no long-term negative impacts anticipated on any SSSIs as a result of the Project. Potential direct and indirect impacts on each SSSI within the study area have been considered within the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8) and any necessary mitigation detailed to ensure no significant residual effects.</p> <p>National Grid will continue to engage with Natural England.</p>			X	
10-21.161	Concern that the Project will impact ancient woodland (generally - no location given)	Through routeing, siting and detailed design, National Grid has sought to reduce, as far as practicable, impacts			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		on biodiversity and in particular features of high ecological value, such as ancient woodland. A standard 15 m buffer from construction activities has been applied where practicable. Potential direct and indirect impacts on each block of ancient woodland within the study area have been considered within the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8) and any necessary mitigation detailed to ensure no significant residual effects. An Ancient Woodland and Veteran Tree Strategy is included as part of the Outline Landscape and Ecological Management Plan (see Appendix B of the LEMP (document reference 7.4)). The Outline LEMP (document reference 7.4) has been developed in consultation with relevant stakeholders including Natural England and local planning authorities.				
10-21.162	Concern that the Project will result in a negative impact on the environment / countryside generally (generally - no location given)	National Grid has sought to reduce, as far as practicable, impacts on the environment / countryside through routeing and siting and an ongoing iterative design process which has taken on board feedback at different stages of the Project. The iterative design process sought to avoid areas of highest concern, for example through changes to the route alignment or changes to the method e.g. trenchless crossings. National Grid have engaged with a range of stakeholders (including Statutory Environmental Bodies (SEBs) and relevant local planning authorities)	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>throughout the development of the Project design and environmental assessment work.</p> <p>National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project. The results of this assessment are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation (and maintenance) of the Project and recommends appropriate mitigation measures to reduce potential effects.</p> <p>A number of mitigation measures have been incorporated into the Project design. Mitigation relevant to specific environmental topics (including Ecology and Biodiversity, Landscape and Visual and Historic Environment) are presented in the relevant ES chapters. The Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Code of Construction Practice (CoCP) (document reference 7.2) contain a list of relevant good practice measures to avoid or reduce risks to habitats and species.</p> <p>In addition to the EIA, National Grid has set itself a target of delivering 10% biodiversity net gain (BNG) with environmental and societal benefits on all construction projects, meaning that as a result of measures taken,</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		the biodiversity rating of the area will be enhanced by 10% greater than prior to the construction of the Project. The BNG target for the Project is currently voluntary and aligned with our corporate sustainability commitment.				
10-21.163	Suggest that areas other than the AONB should be protected / Criticism that only the AONB has been considered	<p>National Policy Statement (NPS) EN-5 states that the Government considers overhead lines to be appropriate and acceptable in most instances, although it recognises that there may be, at particularly sensitive locations, potential adverse landscape and visual impacts of overhead line infrastructure that make it inconsistent with our duties and relevant planning policy.</p> <p>The National Landscape designation is one such location where there is a presumption that underground cable technology is adopted with the extent of underground cabling extending beyond the boundary in response to the potential for the Project to affect National Landscapes. Our proposals include a total of approximately 20 km of underground cable through and in the vicinity of the Dedham Vale National Landscape, including a section at Great Horkesley to reduce the changes in views and setting of the National Landscape from within and adjacent to its designated boundary. Underground cabling is also proposed for short sections near Fairstead and North Tilbury.</p> <p>The higher cost of underground cables to bill paying consumers, and the environmental implications of installing underground cables and maintaining them elsewhere, are not considered to be justifiable in the</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>context of national policy or National Grid's statutory duties, which include the need to be economic and efficient.</p> <p>A Landscape and Visual Impact Assessment (LVIA), presented in ES Chapter 13: Landscape and Visual (document reference 6.13), has been undertaken as part of the Environmental Impact Assessment (EIA). The LVIA sets out potential effects on landscape and visual receptors.</p>				
10-21.164	Concern that the Project will impact conservation area (generally - no location given)	<p>The potential for the Project to affect the setting and significance of Conservation Areas has been comprehensively assessed in accordance with established best practice and guidance such as Good Practice Advice Note 3: The Setting of Heritage Assets (Historic England, 2017) and other relevant policy and guidance such as Conservation Principles (Historic England, 2008) and relevant planning policies including the Overarching National Policy Statement for Energy (EN-1).</p> <p>The assessment methodology and its application have been discussed with and agreed by key heritage stakeholders, including Historic England and relevant local planning authorities, through the Scoping process and subsequent thematic working group meetings. This collaborative approach has ensured that the assessment is robust, proportionate, and in line with expectations.</p> <p>Each Conservation Area potentially affected by the Project has been individually assessed for both direct</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>and indirect effects, including impacts arising from change to setting. These assessments are presented in Chapter 11: Historic Environment of the Environmental Statement (ES) (document reference 6.11), supported by detailed mapping and analysis in the Historic Environment Baseline Report (ES Appendix 11.1, document reference 6.11.A1). The methodology considers all relevant aspects of significance, including historical, architectural, and evidential values, as well as the contribution of setting to that significance.</p> <p>Where adverse effects on the setting of Conservation Areas have been identified, the Project has sought to reduce these through route refinement and design evolution. This includes, where appropriate, adjustments to pylon locations, alignment shifts, and the development of mitigation proposals in the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5).</p> <p>We are therefore confident that the assessment of impacts on Conservation Areas has been carried out to a high standard and that appropriate measures have been taken to mitigate any identified adverse effects.</p>				
10-21.165	Concern about the impact of the Project on flooding (generally - no location given)	A detailed Flood Risk Assessment (FRA) has been prepared (document reference 7.9). The FRA assesses flood risk to the Project and the impacts that the Project's construction and operation would have on flood risk from a wide range of sources. The assessment has been informed by a wide range of data sets, including	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		the January and March 2025 data from the Environment Agency, and by engaging with the Environment Agency and all of the relevant Lead Local Flood Authorities and Drainage Boards. The FRA (document reference 7.9) has identified a range of controls and mitigation measures to prevent flood risk impacts, which have been secured through a range of commitments set out in the Outline Code of Construction Practice (CoCP) (document reference 7.2). The FRA (document reference 7.9) also describes the measures and strategy that would be put in place to manage surface water runoff arising from Project construction worksites and operational infrastructure.				
10-21.166	Concern about the impact of the Project on soils	The impact of the Project on soil resources and agricultural land is assessed in full in Chapter 6: Agriculture and Soils (document reference 6.6) of the Environmental Statement (ES). Appendix C: Outline Soil Resource Plan of the Outline Code of Construction Practice (CoCP) (document reference 7.2) provides details of the approach to soil handling which would be adopted during construction by the Main Works Contractor(s) (a requirement in the Development Consent Order (DCO) for compliance with the CoCP(s)) to protect and avoid damage to soil resources in line with the Department for Environment, Food and Rural Affairs (DEFRA) Code and other good practice guidance.		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-21.167	Criticism that the 2030 grid decarbonisation target is unachievable / realistic (e.g. so alternatives should be used for the Project instead)	<p>In November 2024, the National Energy System Operator (NESO) published its independent analysis on how the Department of Energy Security and Net Zero can achieve its ambitious clean power goal. The report identifies the Project as critical to delivering a network which supports the clean power pathways, but at present has a delivery date after 2030. The report recognises support is needed to bring the Project forward for 2030 delivery.</p> <p>In April 2025, the government launched a consultation on proposed changes to National Policy Statement EN-1, EN-3 and EN-5 that ended on 29 May 2025. The consultation covers updates to all three NPSs for new energy infrastructure. The key changes consulted upon in the draft 2025 updates include alignment with Clean Power 2030 targets. Through these updates, the Government has strengthened the process for delivering major new infrastructure in England and Wales, reinforcing the government's ambition to deliver Clean Power by 2030 and net zero. The approach to alternatives at this stage of the project will be considered in line with Clean Power 2030.</p>		X	X	
10-21.168	Suggest that permits are required for any works near a main river	Qualifying works near main rivers would be subject to a Flood Risk Activity Permit from the Environment Agency. These permits would be secured by the Main Works Contractor(s) post consent, as secured by commitment W01 within the Outline Code of Construction Practice (CoCP) (document reference 7.2).	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-21.169	Criticism that the Project fails to include Biodiversity Net Gain	<p>The Environment Act 2021 introduces a mandatory requirement for 10% Biodiversity Net Gain (BNG) for development (subject to certain exemptions), however this requirement is not yet in force for development consented pursuant to a Development Consent Order (DCO). Current indications are that it will apply to DCO applications submitted from May 2026 however this is yet to be confirmed.</p> <p>However, National Grid has committed to deliver Net Gain of at least 10% for BNG on all construction projects including Norwich to Tilbury. The 10% BNG target for the Project is currently voluntary and aligned with our corporate sustainability commitment.</p> <p>As well as avoiding and minimising our impacts to nature, the Project considers the land required for mitigation, compensation and enhancement that can deliver BNG and wider environmental and societal benefits. Off-site BNG will be delivered in strategic areas, and all options have been considered in the Biodiversity Net Gain Report (document reference 7.1).</p>		X	X	
10-21.170	Criticism that National Grid is not meeting obligations under s.85 to 'conserve and enhance' National Landscapes and National Parks, as all official bodies must do in their decisions, as the Dedham Vale Society demonstrated in its successful case against the Secretary of State for Housing, Communities and Local Government	Section 245 (Protected Landscapes) of the Levelling-up and Regeneration Act 2023 (LURA) places a duty on 'relevant authorities', which in this context includes National Grid as a statutory undertaker, to seek to further the statutory purposes of protected landscapes (referred to as the 'seek to further' duty). In relation to National Landscapes (which includes the Dedham Vale National Landscape), this requirement has been			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>incorporated into Section 85 of the Countryside and Rights of Way (CRoW) Act, which states: <i>'In exercising or performing any functions in relation to, or so as to affect, land in an area of outstanding natural beauty in England, a relevant authority other than a devolved Welsh authority must seek to further the purpose of conserving and enhancing the natural beauty of the area of outstanding natural beauty'</i>.</p> <p>The approach National Grid is taking to meet the 'seek to further' duty in relation to the Project has been detailed in National Landscapes – Duty to Seek to Further the Purposes Report (s85 Countryside and Rights of Way Act 2000) (document reference 5.10). The document details how the National Landscape and 'seek to further' duty has been taken into consideration during Project development and highlights potential further measures. The overall approach has been, and continues to be, discussed with relevant stakeholders (which includes but is not limited to the Dedham Vale National Landscape and Stour Valley Partnership) and follows the guidance published by Defra in December 2024 'Guidance for relevant authorities on seeking to further the purposes of Protected Landscapes' (Defra, 2024). It is intended the finalised measures would be secured by an appropriate mechanism as part pursuant to the Development Consent Order (DCO) process.</p> <p>National Grid has committed to underground cables in areas of highest amenity value (including through and in the vicinity of the Dedham Vale National Landscape)</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		which will further reduce the effects of the Project. A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the Environmental Impact Assessment (EIA). The LVIA includes an assessment on both landscape character and visual amenity and sets out the potential landscape and visual effects of the Project, including consideration of effects on nationally designated landscapes. The full assessment of the effects on the National Landscape can be found in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13) and supporting appendix (ES Appendix 13.5: National Landscape Assessment Study (document reference 6.13.A5)).				
10-21.171	Concern the project crosses three Important Invertebrate Areas (IIAs): Little Ouse & Waveney Headwaters IIA, Essex Coast IIA and the Thames North Estuary IIA	The presence of terrestrial and aquatic invertebrates across the project has been considered and full desktop studies and field surveys at targeted locations were undertaken in 2024. The presence of Important Invertebrate Areas (IIA) have been identified. Survey results (including the presence of IIA's) have informed the design and impacts have been reduced where practicable. The results are outlined in Chapter 8: Ecology and Biodiversity (document reference 6.8) and specifically in Appendices 8.4 and 8.5 (document reference 6.8.A4 - 6.8.A5) of the Environmental Statement (ES).			X

Financial Compensation						
10-21.172	Concern that the Project will devalue property / impact on property value (generally - no location given)	<p>National Grid acknowledges that its proposals may cause concern to landowners. Diminishment of property value known as 'injurious affection' and any other appropriate heads of claim would be considered on an individual basis in accordance with current legislation. We would pursue a voluntary agreement with affected landowners, acquiring rights in accordance with our Land Rights Strategy (the strategy is subject to review). If a voluntary agreement cannot be reached, then the Compulsory Purchase Code allows for a claim of compensation for the loss that property owners may have suffered as a direct result of the retained part of your property ownership being worth less as a direct result of the works.</p> <p>If there are any specific concerns about the devaluation of property, National Grid would advise seeking third party advice. or alternatively please contact the Project team:</p> <p>Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.</p> <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD.</p>	X	X	X

		<p>line, and that the uncertainty whilst the proposals are developed may cause anxiety.</p> <p>We have sought to reduce potential effects on communities and residents through routeing and design. We have also sought to reduce concern or uncertainty about the proposals through making timely design decisions and engaging with the people and stakeholders throughout the development of the Project.</p> <p>The Project team will continue to engage with people potentially affected during progress of the Project, through regular communication including letters, phone calls and meetings. This would enable concerns to be raised and discussed at an early opportunity and provide a regular point of contact to respond to queries and concerns.</p> <p>We urge anyone with concerns to get in touch through the Norwich to Tilbury Freephone number, address or email throughout the progress of the Project:</p> <p>Call our Community Helpline: 0800 915 2497 (Lines are open Monday to Friday 9:00am – 5:30pm)</p> <p>Email us: contact@n-t.nationalgrid.com</p> <p>Write to us: FREEPOST N TO T (No stamp or further address details are required)</p> <p>The UK has a carefully thought-out set of policies for protecting us all against Electric and Magnetic Fields (EMFs), the main component of which is exposure guidelines. Those exposure guidelines are set by</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		independent scientific bodies and are based on decades-long studies into the effects of EMFs and ill health. After those decades of research, the weight of evidence is against there being any health risks of EMFs below the guideline limits. These policies are incorporated into the decision-making process for Development Consent in National Policy Statement (NPS) EN-5. It is National Grid's policy to ensure that all of its equipment comply fully with those exposure limits.				
10-21.178	Concern about health risks associated with the Project / physical health risks associated with the Project	Health considerations are given a high priority in the process by which we arrive at any proposals for new electricity circuits. Assessment of compliance with Electric and Magnetic Field (EMF) guidelines and policies is key to National Grid's approach. The UK has a carefully thought-out set of policies for managing EMFs. There have been over four decades of research looking into whether EMF can cause health effects and there are no established effects below the exposure limits. When designing our overhead lines, substations and underground cables design criteria, we ensure they would not exceed those exposure limits, even when operating at 100% capacity. Additionally, the precautionary measures which the Government have adopted, are applied to the design which ensure the EMFs reduce as quickly with distance as possible. Evidence of that compliance is presented in the Electric and Magnetic Field Compliance Report (document			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>reference 7.8) submitted as part of the Development Consent Order (DCO) application.</p> <p>National Grid takes this issue very seriously and look to authoritative and independent scientific organisations such as the World Health Organisation (WHO) and in the UK Health Security Agency (UKHSA) to review the worldwide body of scientific evidence on health. Important decisions on health are taken independently of industry, and National Grid have followed the guidance and policies adopted by Government on advice from their scientific experts. Each of these organisations have comprehensive reviews of EMF research available to view on their websites.</p>				
10-21.179	Concern that the Project poses a safety risk to aircraft (including balloons) / Concern that the Project will impact airfields (generally - no location given)	<p>National Grid recognises the need for the Project to be developed collaboratively alongside aviation stakeholders to identify, assess, and as appropriate mitigate, adverse impacts on aviation safety, in accordance with Government's Overarching National Policy Statement (NPS) EN-1.</p> <p>Our review of aerodromes potentially impacted by the Project identified 17 civil aerodromes (including two helipads) within 5 km of the preferred corridor and one military site (Wattisham Flying Station). We have also considered other airfields and flight activities where these have been identified through the 2022 and 2023 non-statutory, statutory consultation and targeted consultations including for ballooning and for model flying. As well as considering feedback, National Grid's</p>		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>aviation advisers (an independent aviation consultancy) have directly engaged with these parties (with National Grid present).</p> <p>A number of route alignment and pylon positioning changes have been made following consideration of feedback and in all but one case the assessment concludes that the airfields can continue to operate. In the remaining case of a private airstrip near Little Burstead, we continue to liaise with the operator to identify an appropriate solution.</p> <p>Specifically in respect of Wattisham Flying Station our proposals position the alignment onto relatively lower ground (to remove the potential for interference with Instrument Landing System (ILS) radar) and adopt an alignment closer to the existing 132 kV overhead line and include replacing part of the 132 kV line south of Offton by underground cable to avoid a new overhead line corridor being introduced. We will continue to engage with relevant parties as appropriate.</p> <p>Further information on the assessment of airfields can be found in the Environmental Statement (ES) Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).</p>				
10-21.180	Concern about construction and maintenance of the Project for health and safety of workers / operatives	Any form of construction has built in risk associated with different activities. All National Grid contractors undertake risk assessments and follow safe systems of work as per the specific Method Statement regardless of		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		technology type being constructed, which in turn will be independently reviewed and monitored by National Grid. This Risk Assessment and Method Statement (RAMS) will follow industry standard practice.				
10-21.181	Criticism that the current safety guidelines for electromagnetic fields (EMFs) exposure seems inadequate for protecting people from the hazardous effects the Project (e.g. recent information published in <i>"The International Journal of Occupational and Environmental medicine"</i> cites a study made between 2014 and 2016 which concluded that he current safety guidelines for electromagnetic fields exposure seems to be not adequate for protecting people from the hazardous effects of the field")	<p>Electric and magnetic fields (EMFs) are produced wherever electricity is used, and there have been suggestions that exposure to these fields might be a cause of ill health. National Grid takes this issue very seriously and relies on authoritative and independent scientific organisations such as the World Health Organization (WHO) and UK Health Security Agency to review the worldwide body of scientific evidence on EMFs and health. The reviews take account of the body of scientific research and the quality of each publication to produce recommendations. We believe it is right that the decision on what is acceptable or not is made independently of industry.</p> <p>Health considerations are given a high priority in the process by which we arrive at any proposals for new electricity circuits. Assessment of compliance with EMF guidelines and policies is key to our approach. The UK has a carefully thought-out set of policies for managing EMFs. There have been over four decades of research looking into whether EMF can cause health effects and there are no established effects below the exposure limits. When we design our overhead lines, substations and cables we do so to ensure they will not exceed those exposure limits, even when operating at 100%</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		capacity, and we also ensure that the precautionary measures are also applied to the design where required. Demonstration of compliance with the Government EMF guidelines and policies will be submitted as part of the DCO application.				
10-21.182	Concern that the Project may cross or run parallel to electrified railways, resulting in a risk of inducing electrical energy into the electrified railway systems. Request that National Grid contact Network Rail to find out what distance from the railway the power cables can be installed to avoid induction. If this is not possible, then Network Rail may have to introduce additional arrangements to manage induced voltages	The Project team have engaged with Network Rail engineers on this matter and have conducted technical studies detailing the risks of inducing electrical energy on Network Rail equipment, this has been provided to Network Rail for review and comment. If any such interactions cross acceptable safety thresholds then National Grid shall undertake mitigation works as part of the Project, in the event of the studies detailing impacts beyond acceptable safety thresholds then necessary mitigation measures for Network Rail assets shall be allowed for in the protective provisions.	X		X	
10-21.183	Criticism that Section 5.6 of the PIER focuses almost entirely on the perceived short terms effects from construction and fails to address the real concerns of residents relating to the growing evidence on long term health effects from radiation	Environmental Statement (ES) Chapter 10: Health and Wellbeing (document reference 6.10) includes an assessment of the potential impacts of the Project on health and wellbeing. The chapter makes reference to the Electric and Magnetic Field Compliance Report (document reference 7.8) which provides an assessment and conclusions of the compliance of EMFs produced by the Project with the requirements of NPS EN-5 (DESNZ, 2023b). Compliance with the relevant guidelines and practices in force in the UK ensures that there would be no significant health or environmental effects of EMFs.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Chapter 10: Health and Wellbeing of the ES (document reference 6.10) also specifically considers impacts on mental health and wellbeing arising from perceived impacts associated with EMFs.				
10-21.184	Concern that the Project presents increased biosecurity risks	During construction, good practice biosecurity measures will be in place, as detailed in the Outline Code of Construction Practice (CoCP) (document reference 7.2). Specific measures for biosecurity around Schedule 9 invasive plant species, are also included within the Outline Landscape and Ecological Management Plan (document reference 7.4).			X	
10-21.185	Concern that the Project will impact safety in the event that action is taken to abort an aerotow (list of factors influencing this provided by respondent) / Disagreement with National Grid's reasoning that there is a lack of documentary proof, as the respondent has faced these issues previously	In accordance with its responsibilities as an applicant as described within the Government's Overarching National Policy Statement for Energy (NPS EN-1) National Grid has appointed an independent aviation consultancy to develop a methodology to assess the potential impacts of the Project on aviation including airfields in close proximity. The assessment methodology enables risk-based site-specific assessment of a range of criteria, including but not limited to, lateral and vertical clearance margins, aircraft types, airfield operational activities and procedures (including those related to gliding), and the surrounding context. The approach is informed by Civil Aviation Authority (CAA) regulations and guidance as well as ongoing consultation with airfield owners and operators.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Our aviation consultants have specifically considered potential impacts associated with aborted glider aerotows and assess them to be similar in practice to engine failure after take-off (EFATO) considerations. We are continuing to engage with aviation stakeholders, including the British Gliding Association (BGA), to discuss our assessment assumptions and findings. Further information on the assessment of airfields can be found in the Environmental Statement (ES) Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).				
10-21.186	To ensure a high level of safety and reliability in operation, National Gas Transmission's assets are protected by a cathodic protection system. It is essential that buried steel pipework associated with the transmission and distribution of natural gas is designed, installed, commissioned and maintained to withstand the potentially harmful effects of corrosion and that the corrosion control systems employed are monitored to ensure continued effectiveness. Installations in the vicinity of National Gas Transmission's assets which may potentially interfere with the cathodic protection system must be assessed and approved by National Gas Transmission, and appropriate control measures must be put in place where required	Based on induced currents from the 400 kV overhead line, alternating current mitigation measures will need to be installed on the ferrous pipelines operated by National Gas Transmission across the Project. The scope and extent of such mitigation measures will depend on the Project's final design arrangements which will continue to evolve within the parameters of confirmed Limits of Deviation. Factors including crossing angle and clearance height, length of parallelism, site-specific soil resistivity, etc, combine to define the requirement for mitigation. The mitigation itself is typically achieved by the installation, alongside the ferrous pipeline (in an area likely to have been previously disturbed during construction), of zinc strips. Consultation between National Grid and the relevant utility provider will confirm the requirement for installed	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		mitigation, based on the final Project design arrangements, which will be implemented by the relevant utility provider under their existing utility operation and maintenance provisions.				
10-21.187	Where National Grid intends to acquire land, extinguish rights, or interfere with any of National Gas Transmission's (NGT's) apparatus, NGT will require appropriate protection and further discussion on the impact to its apparatus and rights including adequate Protective Provisions. A Deed of Consent will also be required for any works proposed within the easement strip	National Grid and National Gas Transmission are collaborating on Protective Provisions which will detail an agreed position to National Gas Transmission's asset rights within the Order Limits.	X		X	
10-21.188	<p>The following key considerations need to be taken into account by National Grid in relation to National Gas Transmission's (NGT's) high pressure gas pipeline:</p> <ul style="list-style-type: none"> - NGT has a Deed of Grant of Easement for each pipeline, which prevents the erection of permanent / temporary buildings, or structures, change to existing ground levels, storage of materials etc. - Written permission is required before any works commence within the NGT easement strip. <p>Furthermore a Deed of Consent will be required prior to commencement of works within NGT's easement strip subject to approval by NGT's plant protection team.</p> <ul style="list-style-type: none"> - Any large installations which may result in a large 	<p>We note National Gas Transmission (NGT)'s Deed of Grant Easement. In some cases, we will need to build a haul road which alters the exiting ground level within the easement. For these and similar scenarios, we will agree and observe Protective Provisions with NGT.</p> <p>This is expected to form part of our Principal Contractor's standard ways of working. Details on the NGT stated requirement for a Deed of Consent will be addressed within an agreed set of Protective Provisions.</p> <p>We do not expect that any of our works will result in a large population increase in any location.</p> <p>We are engaged in ongoing consultation with NGT.</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>population increase in the vicinity of a high pressure gas pipeline must comply with the Health and Safety Executive (HSE)'s Land Use Planning methodology, and the HSE response should be submitted to National Gas Transmission for review</p> <p>- All works in the vicinity of NGT's asset shall be subject to review and approval from NGT's plant protection team in advance of commencement of works on site</p>					
10-21.189	National Grid need to ensure that National Gas Transmission's (NGT's) pipelines remain accessible during and after completion of the works	National Grid will ensure that National Gas Transmission (NGT)'s pipelines are always accessible and will work with NGT to coordinate Construction, Design and Management (CDM) working areas. If during construction a location is temporarily inaccessible, National Grid will liaise with NGT to restore access as soon as possible or provide alternative access.	X		X	
10-21.190	National Gas Transmission's (NGT's) pipelines are normally buried to a depth cover of 1.1 metres, however, actual depth and position must be confirmed on site by trial hole investigation under the supervision of a NGT representative. Ground cover above NGT pipelines should not be reduced or increased	National Grid notes this requirement, and should the Project obtain consent, further details would be worked up by the Contractor at the construction stage through further engagement. We expect that adherence will form part of our Contractor's standard ways of working. Furthermore, where a temporary construction feature, e.g. a haul road crossing, might temporarily change the cover depth, we are in consultation with National Gas Transmission (NGT)'s plant protection team and will develop and agree protective provisions.	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-21.191	If any excavations are planned within 3 metres of National Gas Transmission (NGT's) High Pressure Pipeline or, within 10 metres of an Above Ground Installation (AGI), or if any embankment or dredging works are proposed then the actual position and depth of the pipeline must be established on site in the presence of a NGT representative. A safe working method agreed prior to any work taking place in order to minimise the risk of damage and ensure the final depth of cover does not affect the integrity of the pipeline	Such excavations are expected by our Project (in proximity to National Gas Transmission (NGT) easements) and National Grid notes this requirement. Should the Project obtain consent, further details would be worked up by the Contractor at the construction stage through further engagement. We expect that adherence will form part of our contractor's standard ways of working.	X		X	
10-21.192	In relation to traffic crossings within vicinity of National Gas Transmission's (NGT's) high pressure gas pipelines, National Grid need to take the following into consideration: - Where existing roads cannot be used, construction traffic should only cross the pipeline at agreed locations - Permanent road crossings will require a surface load calculation, and will require a deed of consent - The pipeline shall be protected, at the crossing points, by temporary rafts constructed at ground level. The third party shall review ground conditions, vehicle types and crossing frequencies to determine the type and construction of the raft required - The type of raft shall be agreed with NGT prior to installation - No protective measures including the installation of	National Grid is in consultation with National Gas Transmission (NGT) to manage and agree protective provisions for haul road crossings. No alterations to existing or any new permanent road crossings are anticipated. National Grid and our Contractors will develop and agree crossing protections with NGT as required by the protective provisions.	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>concrete slab protection shall be installed over or near to the NGT pipeline without the prior permission of NGT</p> <ul style="list-style-type: none">- NGT will need to agree the material, the dimensions and method of installation of the proposed protective measure- The method of installation shall be confirmed through the submission of a formal written method statement from the contractor to NGT- An NGT representative shall monitor any works within close proximity to the pipeline to comply with NGT specification T/SP/SSW22					
10-21.193	<p>In relation to New Asset Crossings within vicinity of National Gas Transmission's (NGT's) high pressure gas pipelines, National Grid need to take the following into consideration:</p> <ul style="list-style-type: none">- New assets (cables / pipelines etc) may cross the pipeline at perpendicular angle to the pipeline i.e. 90 degrees- The separation distance for a cable >33 kV is 1000 mm and pre- and post- energisation surveys may be required at NGT's discretion. A risk assessment / method statement will need to be provided to, and accepted by NGT prior to the deed of consent being agreed. Where a new asset is to cross over the pipeline, a clearance distance of 0.6 metres between the crown of the pipeline and underside of the service should be maintained. If this cannot be	<p>National Grid understands that this feedback relates to underground cables crossing pipelines. We are not anticipating any 400kV underground cable crossings. We do however have several overhead line crossings which are not limited to 90°, these have been considered within the ongoing AC Interference studies.</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>achieved the service shall cross below the pipeline with a clearance distance of 0.6 metres</p> <ul style="list-style-type: none">- A new service should not be laid parallel within an easement strip- Clearance must be at least 600 mm above or below the pipeline- An NGT representative shall approve and supervise any cable crossing of a pipeline- A Deed of Consent is required for any cable crossing the easement					
10-21.194	Where the promoter intends to acquire land, extinguish rights, or interfere with any of National Gas Transmission (NGT's) apparatus, protective provisions will be required in a form acceptable to it to be included within the Development Consent Order (DCO). NGT requests to be consulted at the earliest stages to ensure that the most appropriate protective provisions are included within the DCO application to safeguard the integrity of NGT apparatus and to remove the requirement for objection	Such interactions are captured within a draft Statement of Common Ground to be included within the DCO at submission. National Grid and National Gas Transmission are engaging in agreeing a set of Protective Provisions for Norwich to Tilbury.	X			
10-21.195	Adequate access to National Gas Transmission (NGT's) pipelines must be maintained at all times during construction and post construction to ensure the safe operation of our network	National Grid will ensure that NGT's pipelines are always accessible and will work with National Gas Transmission (NGT) to coordinate Construction, Design and Management (CDM) working areas. If during construction a location is temporarily inaccessible,	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		National Grid will liaise with NGT to restore access as soon as possible or provide alternative access.				
10-21.196	<p>The respondent has many feeder mains located within or in proximity to the Order limits. Details of this infrastructure is as follows:</p> <ul style="list-style-type: none"> - Feeder Main – FM05 – Yelverton to Stowmarket - Feeder Main – FM05 – Braintree to Horndon (the proposed 'Essex 10' change will expand the order limits and will impact more of Feeder Main 05 – Braintree to Horndon) - Feeder Main – FM05 – Roxwell to Abridge - Feeder Main – FM05 – Horndon to Tilbury Thames (N) - Feeder Main – FM18 – Stapleford Tawney to Tilbury Thames North - NGT Freehold – EX991889 - NGT Freehold – EX657488 - Cathodic Protection Groundbeds/TR - Ancillary apparatus <p>The respondent has existing easements for these pipelines which provides rights for ongoing access and prevents the erection of permanent / temporary buildings/structures, change to existing ground levels or storage of materials etc within the easement strip. The respondent provides their guidance for working in proximity to their assets</p>	<p>The interactions detailed are noted by National Grid. National Grid is engaging with National Gas Transmissions plant protection team to detail the extent of the proposed interactions and agree mitigations where required to. Each of these interactions will be discussed within a draft Statement of Common Ground noting outstanding interactions to be resolved and the context or mitigations around those which are agreed.</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Heritage						
10-21.197	Concern about archaeological impacts (generally - no location given)	<p>Through routeing and siting National Grid has sought to reduce as far as practicable potential impacts on the historic environment. The impacts of the Project on the historic environment are assessed in Chapter 11: Historic Environment (document reference 6.11) of the Environmental Statement (ES). The assessment considers the potential impact on archaeology, historic buildings and historic landscapes and includes assessment of potential for physical impact, impact through change to setting that affects the value of a heritage asset and impact through indirect factors such as change in hydromorphology. The assessment is supported by walkover, setting and geophysical surveys, as documented in Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1) and Appendix 11.4: Geophysical Survey Results Report (document reference 6.11.A4) of the ES.</p> <p>Archaeological trial trench evaluation has also been undertaken and is reported in ES Appendix 11.5: Trial Trenching Results Report (document reference 6.11.A5). In addition to the proposals in the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4), the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5) sets out appropriate mitigation for the historic environment. The Project has engaged with Historic England and relevant</p>			X

		Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5) sets out appropriate mitigation for the historic environment. The Project has engaged with Historic England and relevant planning authorities on aspects relating to heritage, including appropriate mitigation measures and techniques and to take their views into account during Project development.				
Information						
10-21.199	Information provided that National Grid should be aware of the Health and Safety Executive (HSE)'s guidance document HS(G) 47 "Avoiding Danger from Underground Services", and National Gas Transmission's (NGT's) Dial Before You Dig Specification for Safe Working in the Vicinity of NGT Assets. There will be additional requirements dictated by NGT's plant protection team	National Grid is aware of HS(G)47 and NGT's specifications and we expect that adherence will form part of our Principal Contractor's standard ways of working. Furthermore, we are in consultation with NGT's plant protection team and will develop and agree protective provisions.	X		X	
10-21.200	Gravesham Borough Council has approved planning permission for works in Kent, with a pre-commencement condition (7) for archaeology (Decision Notice provided by respondent)	National Grid notes this comment. An Outline Archaeology Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5) has been prepared and submitted with the application for development consent. This document sets out the process, guiding principles and methods for the planning and implementation of additional archaeological mitigation works associated with the construction of the Project. The implementation of this document will be secured through a Requirement in the draft		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Development Consent Order (DCO) (document reference 3.1).				
10-21.201	Criticism National Grid have not provided respondents with information which they were promised including access to discussion and consultation meetings with statutory consultees, survey data, access dates and reasonings used to inform the proposed changed route	<p>For each of the targeted consultations National Grid has developed an overview leaflet, which included information on why the changes were being considered, and Environmental Implication of Change (EIC) document. These were sent to properties within the bespoke consultation zone for the relevant change. We also published a consultation strategy and overview map. All these documents remain available on the Project website. The information provided at the targeted consultations was considered proportionate to the changes being consulted upon.</p> <p>All the information on our final proposed route has been made available as part of our application for Development Consent.</p>			X	
Mitigation						
10-21.202	Suggest mitigation measures (generally - no location given)	An Environmental Statement (ES) (document reference Volume 6: Environmental Statement) has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 ('the Infrastructure EIA Regulations'). The ES identifies and assesses the likely significant effects on the environment resulting from the construction, operation and maintenance of the Project and recommends appropriate mitigation to reduce effects.	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Environmental mitigation measures have been defined within each environmental topic chapter and set out in relevant management documents submitted with the Development Consent Order (DCO) application, including the Outline Code of Construction Practice (CoCP) (document reference 7.2), the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5).				
10-21.203	Criticism of mitigation plans / measures (e.g. mitigation is not enough)	<p>An Environmental Statement (ES) (document reference Volume 6: Environmental Statement) has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 ('the Infrastructure EIA Regulations'). The ES identifies and assesses the likely significant effects on the environment resulting from the construction, operation (and maintenance) of the Project and recommends appropriate mitigation to reduce effects.</p> <p>In line with the approach set out in Environmental Statement (ES) Chapter 5: EIA Approach and Method (document reference 6.5) and in accordance with National Policy Statement EN-1 and EN-5 (Department for Energy Security and Net Zero, 2024) the mitigation hierarchy has been applied during the iterative design process to, in the first instance, avoid creating adverse</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>effects, prevent, reduce and finally, where appropriate, offset adverse effects.</p> <p>Environmental appraisal has been an integral part of the Project design process since conception, which has meant that the Project has been able to avoid environmentally sensitive features as far as reasonably practicable. National Grid has also embedded mitigation measures into the design of the Project to avoid or reduce significant effects that may otherwise be experienced during construction and operation (and maintenance) of the Project. Embedded mitigation measures are those that are intrinsic to and built into the design of the Project. ES Chapter 4: Project Description (document reference 6.4) provides information on the key embedded mitigation measures included.</p> <p>Standard measures, comprising management activities and techniques, would be implemented throughout construction of the Project to limit effects through adherence to good site practices. These are included in the Outline Code of Construction Practice (CoCP) (document reference 7.2). Each mitigation measure has been assigned a specific reference, and these are referenced in each environmental topic chapter (Chapters 6 to 16 (document references 6.6 - 6.16)).</p> <p>Additional mitigation comprises measures over and above embedded and standard mitigation measures to reduce environmental effects. This includes, but is not limited to, mitigation required for protected species.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Where applicable, additional mitigation measures are identified within Section 6 of each environmental topic chapter (Chapters 6 to 16 (document references 6.6 - 6.16)) within the ES (Volume 6 of the DCO application) and replicated in the Outline CoCP (document reference 7.2) which is secured through a Requirement in the draft DCO (document reference 3.1).</p> <p>Mitigation measures are also set out in the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), the Outline Public Rights of Way Management Plan (document reference 7.6), the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5). These management plans are secured through a requirement in the draft DCO (document reference 3.1).</p> <p>Although not a statutory requirement for Development Consent Order projects submitted to the Planning Inspectorate prior to May 2026, National Grid has committed to deliver 10% Biodiversity Net Gain (BNG) with wider environmental and societal benefits on all construction projects requiring formal planning or consent, including Norwich to Tilbury. Further information is provided in the Biodiversity Net Gain Report (document reference 7.1).</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Needs Case						
10-21.204	Criticism of government green agenda / policy	<p>The UK Government is committed to achieving clean electricity by 2030 as set out in the Clean Power 2030 Action Plan (DESNZ, 2024). Clean Power 2030 is considered key to accelerating and reaching net zero by 2050. This represents the latest Government policy and position on clean energy.</p> <p>Under its transmission licence, National Grid has a statutory duty to respond to generation customers wanting to connect to the transmission network, whether this be for wind, solar, nuclear, tidal or from other forms of generation.</p>			X	
10-21.205	Criticism of needs case for the Project	<p>National Grid has a statutory duty to facilitate new connections and maintain a safe National Electricity Transmission System (NETS). The Project would facilitate the connection agreements that are in place with two offshore wind farm projects and an interconnector project based on their connection into a new East Anglia Connection Node (EACN) substation. The Project would also reinforce the local transmission network which currently does not have the capacity needed to reliably and securely transport all the energy that is likely to be connected in the future – driven by the Government's plan to increase offshore wind from the current 8.5 GW to 50 GW by 2030 to meet the increased demand.</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>The needs case has been reviewed at each stage of the Project's development.</p> <p>The UK Government is committed to achieving clean electricity by 2030 as set out in the Clean Power 2030 Action Plan (DESNZ, 2024). In November 2024, National Energy System Operator (NESO) published its independent analysis on how the Government can achieve its ambitious clean power goal. The report identifies the Project as critical to delivering a network which supports the clean power pathways.</p> <p>The technical need for the Project is included in the Strategic Options Backcheck Review (document reference 7.17) and a statement on need in relation to policy is included in the Planning Statement (document reference 5.6), both documents have been submitted with the application for development consent.</p>				
10-21.206	Oppose the Project as currently proposed (e.g. use of overhead lines and / or underground cables generally)	<p>National Grid notes the respondent's feedback. Strategic alternatives for the Project, including underground cables and offshore cables, have been considered and are set out in the published Strategic Options Backcheck and Reviews (SOBR) published in 2023 and 2024 (available on the Project website) and the 2025 SOBR (document reference 7.17). This sets out the need case for the Project and the reasoning why an onshore solution (including a mix of overhead lines and underground cable) has been taken forward.</p> <p>National Grid has a statutory duty to facilitate new connections and maintain a safe National Electricity</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Transmission System (NETS). The Project would facilitate the connection agreements that are in place with two offshore wind farm projects and an interconnector project based on their connection into a new East Anglia Connection Node (EACN) substation. The Project would also reinforce the local transmission network which currently does not have the capacity needed to reliably and securely transport all the energy that is likely to be connected in the future – driven by the Government's plan to increase offshore wind from the current 8.5 GW to 50 GW by 2030 to meet the increased demand. This ambition has been emphasised in the National Energy System Operator's (NESO) Clean Power 2030 report published in November 2024.</p> <p>The needs case is reviewed at each stage of the Project's development and without a robust demonstrable need the Project would be revised or fall away. Currently, the contracted generation shows a clear need for the Project.</p>				
Primary Access Routes / Haul Road / Construction Compounds						
10-21.207	<p>Request the following detailed information is provided within the DCO submission;</p> <ul style="list-style-type: none"> • Visibility splays within the DCO redline or public highway based on the road speed limit or surveyed speed data • Vehicle swept paths • Traffic Management 	This information has been provided within the Development Consent Order (DCO) application. Project Finance / Costs						
10-21.208	Criticism of using financial compensation to go ahead with the Project / Criticism of National Grid for using compulsory purchase orders / Criticism that insufficient evidence has been provided by National Grid to justify using compulsory purchase orders	<p>Compensation is available where prescribed by statute. Those directly affected by the Compulsory Acquisition or Temporary Possession Powers in the Order (i.e. the ordinarily landowners and those with other interests in the land required for the Project) would in principle be entitled to statutory compensation in accordance with the statutes known as 'the Compensation Code'.</p> <p>National Grid may have to rely on compulsory purchase powers as a last resort, if voluntary agreements for land rights cannot be reached with landowners. We will continue discussions with landowners and try to acquire land and rights over land through voluntary agreements with landowners. When submitting the Development Consent Order (DCO) application, National Grid will also apply for compulsory purchase powers. This would ensure that, if the DCO is granted, National</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Grid would be able to obtain all land rights needed to construct and subsequently operate the new electricity transmission assets in a reasonable timescale where voluntary acquisition of land or rights is ultimately unsuccessful.				
10-21.209	Criticism that too much weight has been given to keeping the cost of the Project low / Criticism that National Grid has gone with the cheapest option (e.g. initial costs) / Criticism that the project only benefits National Grid's bottom line / shareholders	<p>National Grid notes the respondent's feedback. Cost is one of the factors that needs to be considered in making decisions on the Project as guided by our duties under the Electricity Act 1989.</p> <p>The relevant National Policy Statement (NPS) EN-5 makes it clear that the Government considers overhead lines to be appropriate and acceptable in most instances. However, the Government is aware that overhead lines may not be appropriate in particularly sensitive areas. The process of appraising different identified options is undertaken using guidance (National Grid's Approach to Consenting). Its aim is to ensure that decisions regarding the project's design (route, location, or technology option) are based on a full understanding and balance of the technical, socio-economic, environmental, and cost implications of each option. Once all identified options have been appraised, the option or options that best meet National Grid's statutory duties and obligations are selected as the preferred option or options. These duties include balancing the need to be economic and efficient, which includes keeping costs down in the interests of the bill-paying consumers to whom the costs are eventually passed,</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>with a duty to have regard to preserving amenity, which includes the natural environment, cultural heritage, landscape, and visual quality.</p> <p>The consideration of cost within the decision-making process is therefore one of our statutory duties and is not something that we could make representation to the Office of Gas and Electricity Markets (Ofgem) to waive.</p>				
10-21.210	Criticism of the costings provided by National Grid for the Project and alternative options / Criticism that the cost savings for alternative options (e.g. an integrated offshore ring main / use of High Voltage Direct Current (HVDC) underground cables) has not been considered / Criticism that there are cheaper alternatives to the Project that National Grid has not considered	<p>National Grid notes the respondent's feedback. Construction costs are included in the overall estimated costs of each strategic option. This is set out in the 2025 Strategic Options Backcheck and Review (SOBR) document reference 7.17). This document takes account of any new cost or technology information, for instance along with any other changes in the planning and regulatory framework. Where the cost of more minor elements of each strategic option are unlikely to distinguish between options, these are not necessarily included. We will continue to engage with the government and our regulators regarding policy and costs for new infrastructure and will adjust our approach if necessary.</p> <p>National Grid is constantly looking into new innovations and investigating alternative technology types. These are explored and assessed for suitability. Alternative technologies were investigated for the Project, these included an offshore connection using direct current (DC) technology, and various onshore connection options including: increasing operational voltages on</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		existing network to above 400 kV; Alternating Current (AC) overhead lines (established technology); alternative pylon types; AC underground technology; High Voltage Direct Current (HVDC) overhead line and underground cables; and Gas Insulated Line (GIL). Currently, overhead lines offer the most economic and efficient solution to transmit electricity over long distances.				
10-21.211	Request for transparent costings for Project and alternative options / Criticism that transparent costings for the Project and alternative options have not been provided	National Grid notes the respondent's feedback. Construction costs are included in the overall estimated costs of each strategic option. This is set out in the 2025 Strategic Options Backcheck and Review (SOBR) document (document reference 7.17). This document takes account of any new cost or technology information, for instance along with any other changes in the planning and regulatory framework. Where the cost of more minor elements of each strategic option are unlikely to distinguish between options, these are not necessarily included. We will continue to engage with the government and our regulators regarding policy and costs for new infrastructure and will adjust our approach if necessary.	X	X	X	
10-21.212	Criticism that impact on property value / private loss has not been included in the costings provided for different options by National Grid for the consultation / Criticism that National Grid has not provided	Potential impact on property prices is not a material planning consideration for the purposes of a DCO application. Separate to this point, the Secretary of State has asked that the DCO application include an assessment of the likely significant environmental effects	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	analysis on the impact of the Project and alternatives on house prices	in the form of potential impacts on property prices. The ES contains an assessment on this. It concluded that there is no evidence of any significant environmental effects on house prices as a result of the Project. Although not part of the Environmental Impact Assessment process it is relevant to observe that any impact of the Project on residential properties are potentially capable of being dealt with through statutory nuisance or compulsory purchase compensation regimes (subject to the requisite criteria being met).				
10-21.213	Concern about the cost to the consumer for financing the Project / Request for information on the cost of Project for consumers	National Grid is funded by a price control mechanism which is agreed with and set by the Office of Gas and Electricity Markets (Ofgem). We pay up front the cost to build a new power transmission line. The cost is then gradually passed on to customers through their electricity bills over the next 40 years or so. The funding for these up-front costs comes from our shareholders and the institutions that lend us money. Across all our investments in our vital infrastructure, this amounts to many billions of pounds. They invest in us because they expect that we will make a sufficient profit to provide an appropriate return on their investment and eventually pay them back. This brings a major benefit to electricity bill payers as it allows the recovery of the cost of our investment to be spread out over many years, rather than having a spike in electricity bills when we build a large new transmission connection.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		In response to a request by Essex County Council on behalf of all host Local Planning Authorities, we agreed to fund an independent review of cost options. This review has been completed and can be found on the Project website.				
10-21.214	Criticism that impact of the Project (e.g. impact on the environment, impact on residents, impact on traffic, impact on tourism, impact on health/mental health, impact on businesses) has not been included in the costings provided for different options by National Grid for the consultation / Suggest that impact of the Project (e.g. impact on the environment, impact on residents, impact on traffic, impact on tourism, impact on health/mental health, impact on businesses) is included in the costings	National Grid notes the respondent's feedback. The 2025 Strategic Options Backcheck Review (SOBR) (document reference 7.17) sets out the methodology for the costings for the Project and the alternatives. Accurate costings for environmental impacts and mitigation cannot be included within the costings for any project, including alternatives until an environmental assessment including surveys has been undertaken. These are therefore not included in the costing comparisons between options. Costs for environmental impacts and mitigation would be covered by the Project should consent be granted.	X	X	X	
10-21.215	Criticism that too much money is being / has been spent on consultation	Public consultation is important to inform people of the proposals and to allow stakeholders an opportunity to provide feedback and influence the plans. After considering feedback received during previous consultations as well as the results of surveys and assessments, we proposed some possible changes to the proposals in early 2025. Before we made any final decisions, we wanted to give nearby residents and local communities the opportunity to provide feedback on the proposed changes.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>National has provided accurate and representative information on its proposals to provide local residents with accurate and representative information on our proposals. This included holding three sets of bookable sessions to view the updated 3D visualisation tool in locations where we were proposing to use lower height pylons. An updated 3D visualisation and our consultation documents were also available at our two public information events held to support our targeted consultation Thurrock 3 – proposed changes to connection at Tilbury.</p> <p>We also provided both digital and printed materials to allow people the choice of how to interact with the consultation.</p>				
10-21.216	Concern about the cost of the Project (generally)	<p>National Grid notes the respondent's feedback. National Grid is legally obliged (under our Transmission Owner Licence) to provide capacity at the dates formally agreed in contracts with energy generators (or customers). Furthermore, the National Energy System Operator (NESO) clearly states the need for Norwich to Tilbury to be accelerated for delivery in 2030 to avoid significant constraint costs.</p> <p>As a regulated business, we need to consider a range of factors to put forward the right solution and ensure good value for UK bill payers. We believe the current proposal provides this solution and is appropriate and consistent with Government policy.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-21.217	Criticism that the Project fails to include socio-economic and natural capital inputs	<p>The scope of the Environmental Impact Assessment (EIA) is included in the Scoping Report (document reference 6.19) which was submitted to the Planning Inspectorate in November 2022 and their Scoping Opinion (document reference 6.20) received in December 2022. This provided the opportunity for statutory bodies to comment on the scope of the EIA which included our approach on study areas, data collection and baseline conditions for a range of environmental topics. We also discussed and agreed survey scope with stakeholders (including Statutory Environmental Bodies and Local Planning Authorities) following the Scoping Opinion (document reference 6.20) to ensure a robust baseline and assessment.</p> <p>Chapter 15: Socio-economics, Recreation and Tourism assessment of the Environmental Statement (ES) (document reference 6.15) assesses the potential effects on local economy, local employment and tourism economy during construction.</p> <p>Although not a statutory requirement for Development Consent Order projects submitted to the Planning Inspectorate prior to May 2026, National Grid has committed to deliver 10% Biodiversity Net Gain (BNG) with wider environmental and societal benefits on all construction projects requiring formal planning or consent, including Norwich to Tilbury. Further information is provided in the Biodiversity Net Gain</p>		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Report (document reference 7.1). This contributes to natural capital through enhancing ecological assets.</p> <p>The Government has published its guidance on community funds for transmission infrastructure (DESNZ, 2025). National Grid is committed to working with Ofgem, industry partners, local communities and their representatives to ensure community benefits are delivered fairly and effectively, driving lasting, positive change for the people and places integral to our developing electricity network.</p> <p>Government has also announced its plans to introduce a bill discount scheme for households within 500 metres of new infrastructure, which it proposes to introduce through the Planning and Infrastructure Bill. This is evolving government policy. Government expects this scheme to be in place by 2026 and we will share further details as they emerge.</p> <p>National Grid is committed to providing a coordinated local and regional approach to community benefits. This will be delivered outside the development consent process, since this is not a material consideration in the decision on the proposed Project or a matter to be secured as part of the DCO, as per the Community Funds for Transmission Infrastructure: Guidance (DESNZ, 2025).</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-21.218	Criticism that cost of mitigation has not been included in the costings provided for different options by National Grid for the consultation (e.g. offshore)	For the statutory consultation, National Grid prepared indicative estimates of the capital costs involved in the options we considered. These indicative estimates were based on the high-level scope of works defined for each strategic option in respect of each technology option that is considered to be feasible, these were presented in the 2024 Strategic Options Backcheck and Review (SOBR) (available on the Project website) and updated in the 2025 Strategic Options Backcheck and Review (document reference 7.17). As these estimates were prepared before detailed design work had been carried out, we made equivalent assumptions for each option. This methodology ensured that all options for appraisal proposed were compared on a like for like basis			X	
10-21.219	Criticism that the cost of compensation and programme delays associated with crossing the DHGV site (that could be under construction and occupied by residents) have not been captured - 2022 response	In response to feedback the arrangements for access have been changed and the Project no longer crosses the phase 1 parts of the Dunton Hill Garden Village (DHGV) site. Infrastructure is proposed on the edge of the phase 2 /3 parts of DHGV but based on the timing advised to us there would not be any construction overlap with the Project works complete before work commenced on those parts of DHGV.			X	
Project History						
10-21.220	Concern about impact of the Project on future generations / Suggest that National Grid need to	In terms of the benefits to future generations, sustainability and the legacy of the Project, the need case refers to the British Energy Security Strategy which	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	consider the sustainability / legacy of the Project for the future	sets targets for the connection of up to 50 GW of offshore wind by 2030 and is a key part of a strategy for secure, clean and affordable British energy for the long term. The key role of National Grid's transmission system is to connect where energy is generated to where it is needed. This means that more homes and businesses can be powered by renewable and sustainable energy sources to meet the needs of present and future generations. National Grid has undertaken an Environmental Impact Assessment for the Project. The results of this assessment are provided in the Environmental Statement (ES) (Volume 6) that accompanies the application for development consent. The ES identifies and assesses the likely significant effects on the environment resulting from the Project and recommends appropriate mitigation measures (in consultation with relevant stakeholders) to reduce potential effects.				
PRoW (Public Rights of Way)						
10-21.221	Concern about negative impact on PRoWs / footpaths / cycle paths / bridleways (generally - no location given)	Through routeing and siting, National Grid has sought to reduce, as far as practicable, impacts and disruption to Public Rights of Way (PRoW). The iterative design process identified the existing PRoW network and their wider connectivity and sought where practicable to reduce and where possible remove impacts to PRoW.		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Effects on PRow would be mitigated where possible, maintaining access where practicable, with closures as a last resort. We will continue to engage with relevant stakeholders on the PRow network to enable feedback and input to be considered as the Project progresses. An Outline Public Rights of Way (PRow) Management Plan (document reference 7.6) is submitted with the Development Consent Order (DCO) application.				
10-21.222	Criticism that the PEIR fails to address the impact on footpaths, explain where these footpaths will be diverted, or what alternative routes will be provided	The Preliminary Environmental Information Report (PEIR) is a preliminary document and is now superseded by the Environmental Statement (ES). Chapter 15: Socio-economics, Recreation and Tourism assessment (document reference 6.15) and Chapter 16: Traffic and Transport (document reference 6.16) of the ES assesses the potential construction and operational effects on Public Rights of Way (PRow). An Outline PRow Management Plan (document reference 7.6) has been submitted as part of this Development Consent Order (DCO) application. This document sets out management measures and mitigation measures for each PRow affected by the construction activities and operation of the Project.		X		
Requests						
10-21.223	Request for further impact surveys in this section (generally - no location given)	National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project. The assessment is informed by a suite of field surveys and desk studies and	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>results are presented in an Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the application for development consent. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation (and maintenance) of the Project and recommends appropriate mitigation measures to reduce potential adverse impacts.</p> <p>The scope of the EIA is included in the Scoping Report (document reference 6.19) which was submitted to the Planning Inspectorate in November 2022 and their Scoping Opinion (document reference 6.20) received in December 2022. 		secured through a Requirement in the draft DCO (document reference 3.1). Detailed management plans will be submitted to and approved by the relevant planning authority or other discharging authority as may be appropriate to the relevant plan concerned before works can commence.				
10-21.226	Request for further information / Question about the Project	National Grid notes the respondent's feedback. All information about the Project can be found on the Project website. We will keep the public updated throughout the Development Consent Order (DCO) process.	X	X	X	
10-21.227	Request that National Grid assess the implications of the Environment Agency new data following the release of the National Assessment of Flood and Coastal Erosion Risk in England 2024 (released in December), including confirming to the Environmental Agency that the assessment has been completed and whether any additional assessments or changes to the proposed development are considered necessary in light of the new data	The Flood Risk Assessment that has been prepared (document reference 7.9) has been informed by the new Environment Agency data releases and the Project design has been reviewed against the new datasets, with changes made to avoid areas at high risk of flooding where practicable. Where this has not been feasible, a range of control and mitigation measures are secured to prevent flood risk impacts. These are set out in the Outline Code of Construction Practice (CoCP) (document reference 7.2).			X	
10-21.228	Request full disclosure of all the changes being proposed, including those considered to be non-material	Following statutory consultation in 2024, all feedback was reviewed and requests made for amendments to the design identified. Each request was considered, alongside the findings of ongoing environmental and engineering studies.		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Through this process, many changes have been taken forward, which led to proposed amendments to the project design. The accepted changes range in type, scale, effect, and geographical location.</p> <p>Each change taken forward was reviewed to determine whether it would be appropriate to undertake further consultation on the change, either individually or collectively. This review was undertaken in accordance with statutory requirements including the relevant legislation and guidance set out in Section 50 of the Planning Act 2008 and associated guidance published in April 2024 titled 'Planning Act 2008: Pre-application stage for Nationally Significant Infrastructure Projects'.</p> <p>Paragraph 020 of the guidance is clear that where a proposed application is amended in the light of responses to consultation then, unless those amendments materially and substantially change the proposed application or materially changes its effects as a whole, the amendments themselves should not trigger a need for further consultation. The amendments can be reported as part of the consultation report submitted with the application.</p> <p>Proposed changes were discussed with the technical officers at the host local authorities in confidence ahead of submission, alongside our approach to targeted consultations.</p> <p>This Consultation Report reports where design changes have been made. The final proposed design including</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		amendments made since the statutory consultation in 2024 are shown and described as appropriate in the Development Consent Order (DCO) application documents.				
10-21.229	Request that all locations that cross the SRN require an approval in principle and should enter a S169 licence	Where crossing protection (scaffolding and netting across the highway) is used to cross a public highway National Grid and our Contractors will engage the relevant highways authority and seek the appropriate licences and approvals for scaffolding protection as required.	X		X	
10-21.230	Request that landowners are informed of any rejected suggested changes so they can consider and respond accordingly to the new proposals	National Grid notes the respondent's feedback. All changes requested have been reviewed by the Project team and have either been taken forward in the design or not based on a balanced evaluation. Responses to changes requested in feedback are included in this report and the previous non-statutory consultation feedback reports published at statutory consultation and the 2023 non-statutory consultation. The publication of changes that have been rejected was not possible until the submission of the Development Consent Order (DCO) application, however landowners and any other stakeholder were encouraged to submit feedback on any aspect of the Project and this feedback was all taken into account when developing the final design.			X	
10-21.231	Request that existing wayleave payment is paid directly into respondent's account rather than via	The Project does not currently make any wayleave payments to landowners, and once at the agreement			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	cheque (wayleave reference provided by respondent)	stage would utilise easement agreements, which are one-off payment made by bank transfer. If a landowner has a query about a wayleave payment associated with an existing asset on their land, they should contact the National Grid grantors relations team: Phone: 0800 389 5113 Email: box.grantorrelations@nationalgrid.com				
10-21.232	Request that wayleave payment values are reviewed to be in-line with other providers	National Grid does not use wayleave agreements for new infrastructure and instead uses easement agreements. If a landowner would like to understand more about what agreements National Grid uses and how payments are made, then they should contact the Projects lands team: Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314. Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD. Or they should refer to the National Grid Land Rights Strategy which is available on the Project website.			X	
10-21.233	Request National Grid engages with and invests in Norfolk Fire & Rescue Service (NFRS) to help prepare crews for fires or rescues within high voltage electrical installations or around high voltage pylons,	Throughout National Grid's consultation process, we have engaged with the Essex, Suffolk, and Norfolk Fire services. We have considered any feedback that we received and would continue to consult with the Fire		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	this may include training exercises or equipment purchases (NFRS would be looking at developer funding for these items through a s106 agreement)	Services as we develop our proposals and would ensure that any construction is carried out in line with safety regulations should consent be granted for the Project. The request for community funding and schemes is not linked to our proposals for Norwich to Tilbury, all enquiries relating to funding are handled through National Grid's Community Grant Programme with Local Giving, who assess individual schemes for eligibility. S106 agreements are between developers and local authorities. Any requests by local authorities are considered.				
10-21.234	Request National Grid make contact with H&S site operators (list provided by respondent), to inform an assessment of whether or not the proposed development is vulnerable to a possible major accident	National Grid and our Contractors are aware of relevant Health and Safety best practice and requirements. Additionally, we have been engaging with known existing utility asset providers and/or vulnerable sites affected by or near the Project. This engagement and coordination will be required as the Project progresses to detailed design and construction to ensure all existing assets or sensitive sites are identified, assessed, protected or diverted as required.	X		X	
10-21.235	Request National Grid contact the pipeline operators (list provided by respondent) to confirm and to inform an assessment of whether the proposed development is vulnerable to a possible major accident from their pipelines. Due to: i) The pipeline operator may have a legal interest in developments in the vicinity of the pipeline. This may	National Grid and our Contractors are aware of relevant Health and Safety best practice and requirements. Additionally, we have been engaging with known existing utility asset providers and/or vulnerable sites affected by or near the Project. This engagement and coordination will be required as the Project progresses to detailed design and construction to ensure all existing	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>restrict developments within a certain proximity of the pipeline.</p> <p>ii) The standards to which the pipeline is designed and operated may restrict major traffic routes within a certain proximity of the pipeline. Consequently, there may be a need for the operator to modify the pipeline or its operation if the development proceeds.</p> <p>iii) To establish the necessary measures required to alter/upgrade the pipeline to appropriate standards</p>	assets or sensitive sites are identified, assessed, protected or diverted as required.				
10-21.236	Request if any of the Categories of Substances or Named Hazardous Substances set out in Schedule 1 of The Planning (Hazardous Substances) Regulations 2015 are present on, over or under the land at or above the controlled quantities (there is an "addition rule" in Part 4 of Schedule 1 for below-threshold substances) then a hazardous substances consent is required	<p>The Main Works Contractor will adhere to all Health and Safety Executive (HSE) requirements in relation to hazardous substance. Potentially hazardous materials used or encountered during construction (e.g., paints, solvents, sealants, fuel etc) would be safely and securely stored including use of secondary containment where appropriate (to avoid contaminating other material and waste streams).</p> <p>National Grid would adopt good construction and management practices to ensure waste is minimised as far as possible and that the storage, transport and eventual disposal of any waste have limited environmental effects. The management and collection of waste arisings would be carried out under the requirements of the UK waste regulatory regime.</p> <p>The Main Works Contractor(s) would produce a Site Waste Management Plan (SWMP) prior to construction (an Outline SWMP is provided as Appendix B to the Outline Code of Construction Practice (CoCP)</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		(document reference 7.2)). The Outline SWMP (document reference 7.2) provides a framework to reduce the generation of waste in the first place and appropriate measures to reuse and recycle materials where practicable. The SWMP would identify appropriate waste facilities to dispose of materials.				
10-21.237	Suggest consideration of risk assessments arising from the development's vulnerability to major accidents, in line with Advice Note 11 Annex on the Planning Inspectorate's website - Annex G – The Health and Safety Executive as per the Regulation 5(4) of the Infrastructure Planning (Environmental Impact Assessment) Regulations 2017	National Grid notes the respondent's feedback. The Environmental Impact Assessment (EIA) regulations require the environmental assessment to identify, describe and assess major accidents and / or disasters. All potential effects were scoped out from further assessment, as there are no likely significant effects (as described in the EIA Scoping Report (document reference 6.19)) A standalone major accident and / or disasters chapter is therefore not included within the ES (Volume 6 of the Development Consent Order (DCO) application). Where appropriate, relevant environmental aspects have identified the likely risks to the Project in relation to potential areas of vulnerability. For example, any flood risk concerns are considered within Chapter 12: Hydrology, Land Drainage and Flood Risk of the Environmental Statement (ES) (document reference 6.12) and are addressed as part of the Flood Risk Assessment (document reference 7.9).	X		X	
10-21.238	Request that no construction should begin until National Grids own DCO is approved, even if individual DOCs are approved	National Grid notes the respondent's feedback. No construction work has started on Norwich to Tilbury, the only work being completed prior to our Development			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Consent Order (DCO) application and possible consent is survey work to inform the design and the Environmental Impact Assessment (EIA).				
10-21.239	Concern about the number of trips that will travel to/ from Kent via the Dartford Crossing, during peak hours / Request that predicted AM and PM peak hour flows at the A282 to/from Kent are provided to determine whether there would be any significant impact during the four years of construction	Regarding the Dartford Crossing, analysis conducted by the Project to date suggests that the main source of materials would be from the north / northwest of the study area and that the transport of these materials would not involve use of the Dartford Crossing. The impact of the construction traffic along the Strategic Road Network has been assessed in the Transport Assessment (document reference 7.11). The Dartford Crossing has not been identified as a potential route to access the construction Site Access Points.		X	X	
Technology / Operations						
10-21.240	Comment supportive of use of underground cables (generally)	National Grid notes the respondent's feedback.	X	X	X	
10-21.241	Concern about ongoing maintenance for the Project (e.g. disruption / cost)	National Grid has thousands of kilometers of overhead lines, underground cable and supporting infrastructure such as Cable Sealing End (CSE) compounds. We have well established and standardised practices to undertake maintenance works on these assets. By the implementation and adherence to such practices, cost and time efficiencies across the network have been identified and maximised where possible.	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>The typical lifespan of an overhead line and the underground cable elements of a project would be approximately 40 years, depending on use and location.</p> <p>Maintenance inspections of overhead line routes are typically undertaken on an annual basis by ground based operatives walking through the route identifying and recording any faults or defects. In addition a helicopter or small aircraft/drone equipped with a high definition camera is used to monitor their condition on a regular basis.</p> <p>Additionally, thermal images are taken which capture high-definition imagery of high resistance joints or defects on each pylon.</p> <p>To supplement the aerial photography and inspections, routine ground level walking inspections are also undertaken.</p> <p>The CSE compounds would contain equipment that can be accessed remotely to monitor the condition of the underground cabling.</p>				
10-21.242	Concern that overhead lines are vulnerable to malicious activities (e.g. terrorism / warfare / sabotage)	<p>Each pylon on the National Grid Transmission System is risk assessed in relation to vulnerability of unauthorised access. To reduce unauthorised access/sabotage from the ground as far as practicable, we install anti-climb measures such as barb-wiring to the bases of pylons in order to prevent access by members of the public. Clear signage is installed warning of the dangers of high voltages and regular inspections are undertaken</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>depending on the level of vulnerability. However, the possibility of interference remains as pylons are typically situated in isolated locations where constant surveillance is impractical.</p> <p>We also undertake regular inspections of the overhead line using thermal imaging to assess damage to the overhead line from weather or other causes. This means low level damage caused would be identified and repaired prior to failure of the line.</p>				
10-21.243	Concern that overhead lines are vulnerable to weather events	<p>National Grid's 400 kV overhead lines are designed to remain robust and operational in the worst weather conditions in the UK. Although overhead lines are more susceptible to disruption from lightning and high winds, they are also comparatively easy and cost-effective to repair and maintain compared to underground cables.</p> <p>The majority of the existing National Grid transmission network is constructed from overhead lines, these are a demonstrated and reliable form of electricity transmission in the UK. They are designed to meet current design and safety standards and to operate in a range of typical and abnormal weather conditions found in the UK. Standards are regularly reviewed and any adjustments to these standards (for example with regards to climate change) would need to be applied to the entire network. At this stage no known changes are required for a new overhead line Project.</p> <p>Unforeseen events of sufficient severity to cause damage to infrastructure are very rare in the UK but do</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>occur. Overhead lines could be subject to adverse weather conditions such as high wind speeds and lightning strikes.</p> <p>In the unlikely event an overhead line was to be damaged, a network wide monitoring system would detect the fault almost immediately and the circuit would be tripped, and the live current stopped.</p> <p>At the point of repairing any damage, overhead lines are comparatively easier and more cost-effective to repair and maintain than alternative transmission technology.</p> <p>We also undertake regular ground based inspections of the overhead line and utilise helicopters and drones equipment with high definition and thermal imaging cameras to assess damage to the overhead line from weather or other causes. This means low level damage caused would be identified and repaired prior to failure of the line.</p>				
10-21.244	Criticism of wind power / Criticism of providing infrastructure that facilitates the use of wind power	<p>Under its transmission licence, National Grid has a statutory duty to respond to generation customers wanting to connect to the transmission network, whether this be for wind, solar, nuclear, tidal or from other forms of generation.</p> <p>The use of energy storage solutions to manage variation/ unpredictability in generation and demand will increase as Great Britain becomes more reliable on renewables in the future, replacing the flexibility provided by fossil fuel generation. In their Smart Systems and</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Flexibility Plan 2021, Department for Business, Energy and Industrial Strategy (now known as the Department for Energy Security and Net Zero) and the Office of Gas and Electricity Markets propose that by 2030 and beyond energy storage solutions will be deployed in 'optimal locations and at all scales'. The Plan states that storage will provide significant flexibility (approximately 13 GW) and address challenges associated with low carbon system, including maintaining energy security and integrating and maximizing the use of the Government's plan for 40 GW (target increased to 50 GW in April 2022) of offshore wind by 2030 and other low carbon generation.</p> <p>The Government's Energy White Paper (EWP) states that '<i>renewables now account for over one third of electricity generation, up from 7% in 2010</i>'. To meet the predicted doubling in electricity demand by 2050 and the Government's 2050 Net Zero target, the EWP, whilst not planning for a specific technology solution predicts that '<i>a low cost, Net Zero consistent system is likely to be composed predominantly by wind and solar</i>' but also complementing intermittent renewables with technologies including nuclear.</p> <p>The Project is currently proposed to fulfil connection offers for two offshore wind farms, North Falls and Five Estuaries which will contribute to the Government's 50 GW target. The advantages of offshore wind farms compared to onshore are that they are considered more efficient (with higher wind speeds and consistency in</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		direction) and are further away from local populations. Assessment and mitigation of impacts relating to offshore wind farms on the seabed would be addressed as part of any Environmental Impact Assessment) carried out by the developer.				
10-21.245	Criticism of use of overhead lines	National Grid has developed the project in line with the relevant planning policy which is set out in the National Policy Statement EN-5 for Electricity Networks Infrastructure. At paragraph 2.9.20 this policy sets out the strong starting presumption for the use of overhead lines for electricity network developments, a presumption which is reversed in nationally designated landscapes and certain other circumstances as set out at paragraph 2.9.23 and in EN-1 regarding the setting of National landscapes. National Grid has therefore developed the Project in a manner consistent with the relevant policy.		X	X	
10-21.246	Criticism that pylons / overhead lines are an outdated / inefficient technology	The respondent's view is noted, however National Grid must work within the confines of the relevant policy which is the current National Policy Statement (NPS) EN-5, this policy makes clear that <i>'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments would cross part of a nationally designated landscape (i.e. National Parks, The Broads, or Area of Outstanding Natural Beauty (AONB))'</i> .	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>The majority of the existing National Grid transmission network is constructed from pylons and overhead lines, these are a demonstrated and reliable form of electricity transmission in the UK. They are designed to meet current design and safety standards and to operate in a range of typical and abnormal weather conditions found in the UK. Standards are regularly reviewed and any adjustments to these standards (for example with regards to climate change) would need to be applied to the entire network.</p> <p>National Grid is constantly looking into new innovations and investigating alternative technology types. These are explored and assessed for suitability. Alternative technologies were investigated for the Project, these included an offshore connection using Direct Current (DC) technology, and various onshore connection options including:</p> <p>increasing operational voltages on existing network to above 400 kV;</p> <p>Alternating Current (AC) overhead lines (established technology);</p> <p>alternative pylon types;</p> <p>AC underground technology;</p> <p>High Voltage Direct Current (HVDC) overhead line and underground cables;</p> <p>and Gas Insulated Line (GIL).</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Currently, overhead lines offer the most economic and efficient solution to transmit electricity over long distances.				
10-21.247	Criticism of the Holford Rules (e.g. not sufficient / outdated)	National Grid disagrees that the Holford Rules are outdated as these are referenced within the policy framework which is relevant to the Project. They have and continue to be tested through a range of transmission reinforcement projects and feature in the 2023 National Policy Statement (NPS) EN-5 which was designated in January 2024. We would note that application of the Holford Rules typically involves balancing alternative solutions which can present conflicting Holford compliance. A summary of the Holford Rules is provided within Appendix I22 of this report. We use the Environmental Impact Assessment (EIA) process to inform the balance and define our proposals that we take forward, which are also informed by feedback. Further details on the proposed routeing and siting of the Project can be found in the Design Development Reports from 2023 and 2024 (available on the Project's website) and the 2025 Design Development Report (document reference 5.15) submitted as part of the Development Consent Order (DCO) application.			X	
10-21.248	Criticism that overhead lines are noisy in operation / Concern about noise impacts from overhead lines / Concern about vibration from overhead lines	National Grid has completed the Environmental Impact Assessment (EIA) for the Project. The results of this assessment are provided in the Environmental	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Statement (ES) that accompanies the Development Consent Order (DCO) application. The ES identifies and assesses the likely significant effects from the Project and recommends appropriate mitigation measures (in consultation with relevant stakeholders) to reduce potential effects.</p> <p>Operational noise from overhead lines is scoped out of the ES (document reference Volume 6 Environmental Statement), in accordance with the Scoping Opinion (document reference 6.20), on the basis that a low noise conductor system is proposed. However, information on noise from overhead lines is provided in ES Appendix 14.5: Operational Noise from Overhead Lines (Informative) (document reference 6.14.A5), which shows that overhead line noise screens out from further assessment at the first tier.</p> <p>The proposed overhead line conductor design is a relatively quiet conductor that National Grid uses for overhead lines operating at 400 kV. The proposed 'triple Araucaria' design ensures that the electrical stresses on the conductors/wires remain as low as practicable. Pylon fittings, such as insulators, dampers, spacers, and clamps, are designed and procured in accordance with a series of National Grid Technical Specifications to reduce the potential for audible noise and wind-induced noise to occur. Operational noise is not likely to be significant at nearby sensitive receptors under any weather conditions.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-21.249	Suggest the Project uses TS Conductors (e.g. to allow for the tripling of capacity and halving the line loss on existing pylons)	National Grid is monitoring how this technology develops in the future, but for the moment it is not a deployable technology that could be considered for any current projects. Superconductor technology remains in its infancy and has only been trialled in a limited number of circumstances globally. The technology is not at a level of development maturity where it can provide the capacity, voltage level or distance required for this Project.	X		X	
10-21.250	Criticism that the use of AC cabling is an outdated / inefficient technology	<p>National Grid have considered numerous different options including High Voltage Direct Current (HVDC) underground cables. HVDC would require large converter stations which would be impactful on the local ecology.</p> <p>National Grid is constantly looking into new innovations and investigating alternative technology types. These are explored and assessed for suitability. Alternative technologies were investigated for the Project, these included an offshore connection using Direct Current (DC) technology, and various onshore connection options including: increasing operational voltages on existing network to above 400 kV; Alternating Current (AC) overhead lines (established technology); alternative pylon types; AC underground technology; High Voltage Direct Current (HVDC) overhead line and underground cables; and Gas Insulated Line (GIL).</p> <p>HVDC is not normally used across land as converting AC to DC and back again would require converter</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		stations so it can be used in the rest of transmission network and the distribution network which is currently AC. These converter stations are a significant size and would be required at every interface with the wider AC network.				
10-21.251	Suggest the Project uses 'cable ploughing' to bury cables quicker and cause less damage to the environment	The maximum voltage for underground cables that can be laid using cable ploughing is 132 kV, and the underground cable size required for this Project is 400 kV, National Grid will continue to monitor advances in technology innovations and exact methodologies may vary within the limits of the Development Consent Order (DCO). We are not proposing to utilise this method for installation of underground cables from Norwich to Tilbury at present.			X	
Tourism						
10-21.252	Concern about impact of the Project on tourism (generally - no location given)	Through routeing and siting, National Grid has sought to avoid, as far as practicable, locations important for leisure and tourism. Environmental Statement (ES) Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) presents an assessment on the potential impacts on tourism economy (during construction) and tourism assets (during construction and operation), including visitor accommodations. As part of this assessment, a range of measures have been considered throughout the construction phase of the	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Project to minimise disruption on tourism. These include: traffic management, signage and routing measures. These are identified within the ES Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15), the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).				
Visual Impact						
10-21.253	Concern about cumulative visual impact of the Project alongside existing overhead lines / concern about wirescape (generally - no location given)	<p>National Grid notes the feedback received and has taken it into consideration as part of the iterative design process.</p> <p>National Grid has liaised with UK Power Networks to understand opportunities for 132 kV network rationalisation. The Project includes proposals to replace certain sections of 132 kV overhead line connection with underground cable to rationalise the network and reduce potential for cumulative wirescape effects.</p> <p>A Landscape and Visual Impact Assessment (LVIA), has been undertaken as part of the Environmental Impact Assessment (EIA). Existing infrastructure (such as existing overhead lines) has formed part of the baseline environment for the Project to be assessed against, to identify if significant landscape and / or visual effects are likely to arise. The LVIA presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) sets out potential landscape</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>and visual effects. The rationalisation of the existing 132 kV network in some areas forms part of the embedded landscape mitigation, as set out in Chapter 13.</p> <p>The findings and conclusions of the LVIA and other topics assessments have been considered within the Cumulative Impact Assessment, presented in ES Chapter 17: Cumulative Effects Assessment (document reference 6.17), lists the developments as part of the cumulative assessment. This chapter considers the landscape and visual effects of the Project cumulatively with other proposed developments that are being progressed.</p>				
10-21.254	Concern that the Project will be unsightly / visually intrusive (including overhead lines, CSECs and substations) / Concern that the Project will cause a negative impact on views (generally - no location given)	<p>National Policy Statement (NPS) EN-5 makes it clear that the Government considers overhead lines to be appropriate and acceptable in most instances, although it recognises that that there may be, at particularly sensitive locations, potential adverse landscape and visual impacts of an overhead line that make it inconsistent with our duties and relevant planning policy.</p> <p>The Dedham Vale National Landscape (previously an Area of Outstanding Natural Beauty (AONB)) designation is one such location where underground cable technology is proposed with the extent of underground cabling extending beyond the boundary in response to the potential for the Project to affect the National Landscape. Our proposals include a total of approximately 20 km of underground cable through and</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>in the vicinity of the Dedham Vale National Landscape, including a section at Great Horkesley to reduce the changes in views and setting of the National Landscape from within and adjacent to its designated boundary.</p> <p>Underground cabling is also proposed for a short section of 400 kV overhead line crossing near Fairstead.</p> <p>Cable Sealing End (CSE) compounds are required to facilitate sections of underground cable, and the proposed East Anglia Connection Node (EACN) substation is required to connect customers and the proposed Tilbury North Substation is required to connect the Project into the existing Tilbury Substation. These components have been carefully sited taking into consideration Horlock Rules including the potential for landscape and visual effects.</p> <p>The higher cost of underground cables to bill paying consumers, and the environmental implications of installing underground cables and maintaining them at locations outside the Dedham Vale National Landscape, are not considered to be justifiable in the context of national policy or National Grid's statutory duties, which include the need to be economical and efficient.</p> <p>A Landscape and Visual Impact Assessment (LVIA), presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13), has been undertaken as part of the Environmental Impact Assessment (EIA). The LVIA includes an assessment on both landscape character and visual</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		amenity and identifies areas for potential mitigation planting around substations and CSE compounds to reduce visual impacts to local receptors. The Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) includes details regarding the planting proposals.				
10-21.255	Request innovative design and approach to the external appearance of the pylons and converter stations so that they fit in with the existing character of the landscape - in line with EN-1	<p>National Grid has sought to develop a well-designed Project which responds positively to environmental constraints and comments from key stakeholders and the public.</p> <p>National Grid's design limitations are rooted in legal, safety, technical, cost effectiveness and policy frameworks (including NPS EN-1). While there is some room for minor aesthetic considerations, the overarching priority is the safe, secure and efficient delivery of infrastructure which significantly limits opportunities for design innovation especially in standard, non-protected locations.</p> <p>Details regarding the Project design (including the design principles and design evolution) are set out in the Design Development Report (document reference 5.15), Design and Access Statement (document reference 7.15) and Design Approach for Site Specific Infrastructure (document reference 7.16).</p>		X	X	

Wildlife / Ecology Impact

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change

		<p>design innovation especially in standard, non-protected locations.</p> <p>Details regarding the Project design (including the design principles and design evolution) are set out in the Design Development Report (document reference 5.15), Design and Access Statement (document reference 7.15) and Design Approach for Site Specific Infrastructure (document reference 7.16).</p>				
10-21.256	Concern about impact of the Project on flightpaths for birds (generally - no location given)	Chapter 8: Ecology and Biodiversity of the Environmental Statement (ES) (document reference 6.8) considers potential impacts during the construction and operational phase of the Project on birds. Bird surveys have been undertaken across the route between 2022-2024 to determine an accurate baseline value, the scope of which has been agreed with Natural England and Local Planning Authorities. The potential for bird collision risk impact during the operational phase has been assessed within the ES and Habitat Regulations Assessment (HRA) (document reference 5.3) and agreed with Natural England. Any adverse impacts identified have been minimised as far as possible, where practicable, and mitigation in the form of bird diverters proposed.			X	
10-21.257	Concern about impact of the Project on birds	Chapter 8: Ecology and Biodiversity of the Environmental Statement (ES) (document reference 6.8) considers potential impacts during the construction and operational phase of the Project on birds. Bird surveys			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>have been undertaken across the route between 2022-2024 to determine an accurate baseline value, the scope of which has been agreed with Natural England and Local Planning Authorities. The potential for bird collision risk impact during the operational phase has been assessed within the ES and Habitat Regulations Assessment (HRA) (document reference 5.3) and agreed with Natural England. Any adverse impacts identified have been minimised as far as possible, where practicable, and mitigation in the form of bird diverters proposed.</p> <p>It is noted that birds are a mobile species, and it is likely that active nests for common and widespread species may be encountered during the construction phase. Precautionary working methods for breeding birds are included within the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the Outline Landscape Ecological Management Plan (LEMP) (document reference 7.4). accompanying the Development Consent Order (DCO) application.</p>				
10-21.258	Concern that the Project will result in a negative impact on species (protected status not specified)	Through routeing, siting and detailed design National Grid has sought to reduce, as far as practicable, potential impacts on biodiversity including protected species. The design process has taken account of existing biodiversity, the natural environment and, where practicable, has sought to reduce impacts on areas of ecological sensitivity including protected species and their associated habitats, through avoidance or	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		mitigation. A comprehensive survey effort for a range of protected species was completed over the 2023 – 2024 period. Chapter 8: Ecology and Biodiversity of the Environmental Statement (ES) (document reference 6.8) assesses the effects on protected species based on this baseline information and where/if required appropriate mitigation measures are detailed. Suitable mitigation for protected species has been developed in consultation with Natural England to ensure legal compliance and best practice guidelines are adhered to. Where necessary, draft licence applications have been drafted and National Grid is in the process of agreeing the detail within the licence documents with Natural England, in order to obtain the relevant Letters of No Impediment (LoNI). Mitigation for non-licensable protected species has been included within the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4).				
10-21.259	Concern that the Project will result in a negative impact on protected species	Through routeing, siting and detailed design, National Grid has sought to reduce, as far as practicable, potential impacts on biodiversity including protected species. The design process has taken account of existing biodiversity, the natural environment and, where practicable, has sought to reduce impacts on areas of ecological sensitivity including protected species and their associated habitats, through avoidance or mitigation. A comprehensive survey effort for a range of protected species was completed over the 2023 – 2024			X

10-21.263	Concern that the Project will impact trees covered by Tree Preservation Orders / Tree Protection Orders (generally - no location given)	<p>The Project has carefully considered the impact on trees covered by Tree Preservation Orders (TPOs). The Environmental Statement Appendix 13.6: Arboricultural Impact Assessment (AIA) (document reference 6.13.A6) provides details of the TPOs impacted by the scheme together with Schedule 14: Trees Subject to TPOs of the draft Development Consent Order.</p> <p>Arboricultural mitigation measures including trees with TPOs are set out within the Outline Code of Construction Practice (CoCP) (document reference 7.2) and in the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4).</p> <p>The Arboricultural Clerk of Works will monitor works conducted by a suitably qualified and experienced arborist to trees / within proximity to all retained trees, including trees under Tree Preservation Orders and veteran trees, to ensure relevant control measures are in place to protect retained trees.</p> <p>National Grid has committed to a 3:1 replacement for individual trees and individual trees within small groups. The Project will prioritise the replanting for individual trees and small groups of individual trees within the Order Limits, offsite provision may however be required. Details of the onsite tree planting will be provided in accordance with the final LEMP or the Reinstatement Planting Plan secured in the draft DCO (document reference 3.1).</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-21.264	Suggest target for Biodiversity Net Gain for the Project	<p>The Environment Act 2021 introduces a mandatory requirement for 10% Biodiversity Net Gain (BNG) for development (subject to certain exemptions), however this requirement is not yet in force for development consented pursuant to a Development Consent Order (DCO). Current indications are that it will apply to DCO applications submitted from May 2026 however this is yet to be confirmed.</p> <p>National Grid has committed to deliver Net Gain of at least 10% for BNG on all construction projects. The 10% BNG target for the Project is currently voluntary and aligned with our corporate sustainability commitment. As well as avoiding and minimising our impacts to nature, the Project considers the land required for mitigation, compensation and enhancement that can deliver BNG and wider environmental and societal benefits. Off-site BNG will be delivered in strategic areas, and all options have been considered in the Biodiversity Net Gain Report (document reference 7.1).</p>		X	X	

South Norfolk

South Norfolk feedback (Targeted Consultation)

Table 10-22 Summary of consultee comments and National Grid's response

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Agricultural land						
10-22.1	Concern that the Project would take away valuable agricultural land / disrupt farming operations	<p>Agricultural land during the construction stage of the Project, there would be areas of agricultural land that would be temporarily disrupted. National Grid would only use land that is required as part of the Project and would seek to minimise the use of agricultural land where reasonable and safe to do so.</p> <p>National Grid is and would continue to work with all landowners including farmers who may be affected by the proposals to understand the impacts on their operations and to work with them as the Project progresses. We would seek to work with the farming community to limit disruption where practicable. This includes providing prior warning of works which may result in the need to move livestock. Compensation claims for disturbance are considered on a case-by-case basis, if negative impacts on farming operations can be proven. Particular agricultural matters can also be addressed through voluntary land agreements.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Airfields						
10-22.2	Concern about the impact of the Project on Tibenham Airfield / Suggestion that the Project is routed away from Tibenham Airfield	<p>National Grid has appointed an independent aviation consultancy which has engaged with Tibenham Airfield (with National Grid also present) to inform their impact assessment. Following consultation with the operators, it has been assessed that, with the Project as currently proposed, operations (including gliding) can continue at the airfield.</p> <p>We are continuing to engage with the operator to enable their review of the acceptability of the Project design and support their consideration of whether reasonable changes to operational procedures are required. Further information on the assessment of airfields can be found in the Environmental Statement (ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).</p>	X	X	X	
10-22.3	Concern about the impact of the Project on Old Buckenham Airfield / Suggestion that the Project is routed away from Old Buckenham Airfield	<p>National Grid has appointed an independent aviation consultancy which has engaged with (with National Grid also present) Old Buckenham Airfield and Priory Farm Airfield.</p> <p>As a Civil Aviation Authority (CAA) licensed airfield it has a defined safeguarding area within which all proposed developments within 13 nautical miles (24 km) and above 15 metres in height are subject to consultation with the airfield. Following discussion and further assessment it has been determined that the airfield can</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>continue to operate based on the Project design as per the proposed alignment. The overhead line will not breach the obstacle clearance surface limits required under its CAA aerodrome licence nor have any other operational impacts on the airfield.</p> <p>We will continue to engage with nearby airfields and associated stakeholders – such as the CAA and the Ministry of Defence, as appropriate. Further information on the assessment of airfields can be found in the Environmental Statement (ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).</p>				
10-22.4	Concern about the impact of the Project on Priory Farm Airfield / Suggestion that the Project is routed away from Priory Farm Airfield	<p>National Grid has appointed an independent aviation consultancy which has engaged with (with National Grid also present) Priory Farm Airfield. Following discussion and further assessment it has been determined, with the Project as currently proposed, that the airfield can continue to operate. We are continuing to engage with the operator to enable their review of the acceptability of the Project design and support their consideration of whether reasonable changes to operational procedures are required. Further information on the assessment of airfields can be found in the Environmental Statement (ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-22.5	Concern about the impact of the Project on Norfolk Gliding Club (also known as Tibenham Gliding Club)	<p>National Grid has appointed an independent aviation consultancy which has engaged with Tibenham Airfield (also known as Norfolk Gliding Club, with National Grid also present) to inform their impact assessment. Following consultation with the operator it is assessed that, with the Project as currently proposed, operations (including gliding) can continue at the airfield.</p> <p>We are continuing to engage with the operator to enable their review of the acceptability of the Project design and support their consideration of whether reasonable changes to operational procedures are required. Further information on the assessment of airfields can be found in the Environmental Statement (ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).</p>	X		X	
10-22.6	Concern about impact of the Project on Tacolneston Model Aircraft Flying Club / South Norfolk Model Flying Club / Suggest that the Project is routed away from Tacolneston Model Aircraft Flying Club / South Norfolk Model Flying Club	National Grid has considered this feedback in combination with feedback from residential property occupants and feedback about positioning pylons to field boundaries where possible. National Grid has appointed an independent aviation consultancy who has tried to engage with South Norfolk Model Air Flying Club and the British Model Flying Association but have received no official response. Following further assessment, it has been determined that the club can continue to operate based on the proposed Project design which, in response to this and other feedback, has moved the proposed overhead line further to the west between			X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>RG28 and RG39. This move increases separation from within the field to the overhead line to exceed the 150 metres away from residential, recreational, commercial and industrial sites as per the Civil Aviation Authorities (CAA) Drone and Model Aircraft Code (CAP2320).</p> <p>National Grid will continue to engage with nearby airfields as appropriate. Further information on the assessment of airfields can be found in the Environmental Statement (ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).</p>				
10-22.7	Criticism that Air Navigation Order (ANO) 2016 have not been considered	<p>National Grid recognises that the Air Navigation Order (ANO) 2016 (as amended) provides the legislative basis for civil aviation and safety regulation, and this context is recognised within the approach to the assessment of potential impacts to aviation from the Project, as well as within consideration of appropriate mitigations. We do not anticipate that the potential impact of the Project would result in non-compliance with the ANO. Further information on the assessment of airfields can be found in the Environmental Statement (ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-22.8	The Civil Aviation Authority (CAA) CAP 738 ("Safeguarding of Aerodromes") have not been considered	The Overarching National Policy Statement (NPS) EN-1, together with the NPS EN-5 are the primary determining policies for the Project. NPS EN-1 recognises aviation safeguarding systems and refers to Civil Aviation Authority (CAA) regulations and guidance for licensed and unlicensed aerodromes, as well as the responsibilities of aerodrome operators therein; in accordance, National Grid has ensured its approach appropriately considers aerodrome licensing and safeguarding requirements and parameters, including as described within Civil Aviation Publication (CAP) 168 (Licensing of Aerodromes), CAP 738 (Safeguarding of Aerodromes) and CAP 793 (Safe Operating Practices at Unlicensed Aerodromes). This is notwithstanding that CAP 738 is advisory for non-licensed aerodromes, such as those potentially affected by the Project. Further information on the assessment of airfields can be found in the Environmental Statement (ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).			X	
10-22.9	Concern about the impacts on Tibenham Airfield due to the new overhead lines and the impact of pylons RG45 - RG65 on the runway 26 which would have impacts on various clubs which use the site	National Grid has appointed an independent aviation consultancy which has engaged with Tibenham Airfield (also known as Norfolk Gliding Club, with National Grid also present) to inform their impact assessment. Following consultation with the operator it is assessed that, with the alignment operations (including gliding) can continue at the airfield.	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		We are continuing to engage with the operator to enable their review of the acceptability of the Project design and support their consideration of whether reasonable changes to operational procedures are required. Further information on the assessment of airfields can be found in the Environmental Statement (ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).				
10-22.10	Criticism that the project will be in conflict with the National Planning Policy Framework in relation to the Tibenham Airfield which is a designated National Significant Area for Sport	<p>Whilst the National Policy Statements (NPS) represent the primary planning policies for projects of this nature, National Grid acknowledges that account may be taken of the provisions of the National Planning Policy Framework (NPPF), including its recognition of the importance of maintaining a national network of General Aviation airfields, and their social and economic value.</p> <p>With regards to Tibenham aerodrome specifically, it is assessed that, with the Project as currently proposed, operations (including its gliding activities, relating to its Significant Area for Sport (SASP) designation) can continue. In view of these conclusions, no effects are anticipated in relation to the aerodrome's designated status. We are continuing to engage with the operator to enable their review of the acceptability of the Project design and support their consideration of whether reasonable changes to operational procedures are required. Further information on the assessment of airfields can be found in the Environmental Statement</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		(ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).				
10-22.11	Criticism that National Grid have not considered that the Civil Aviation Authority (CAA) state that Norfolk Gliding Club holds authority on safety with regard to obstacles, along with stating the proposed route represents an unacceptable increased safety risk to the operations at Tibenham Airfield / Criticism National Grid have not utilised experience and local knowledge from Norfolk Gliding Club	<p>The Overarching National Policy Statement for Energy (EN-1), together with the National Policy Statement for Electricity Networks Infrastructure (EN-5) are the primary determining policies for the Project. EN-1 recognises the responsibility of aerodrome operators for safeguarding. In accordance with EN-1, National Grid's approach has involved consulting with and considering the feedback of the operators at Tibenham aerodrome, as well as relevant aviation stakeholders including the Civil Aviation Authority's (CAA's) Airfield Advisory Team. Moreover, National Grid's approach appropriately considers aerodrome licensing and safeguarding requirements and parameters, including as described within the CAA's CAP 168 (Licensing of Aerodromes), CAP 738 (Safeguarding of Aerodromes) and CAP 793 (Safe Operating Practices at Unlicensed Aerodromes) publications.</p> <p>We are continuing to engage with the operator to enable their review of the acceptability of the Project design and support their consideration of whether reasonable changes to operational procedures are required. Further information on the assessment of airfields can be found in the Environmental Statement (ES Chapter 15: Socio-Economics, Recreation and Tourism (document</p>			X

		reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).				
10-22.12	Criticism that the advice provided to National Grid regarding the impact of the Project on Tibenham Airfield does not recognise the full nature and complexity of the aviation activities at the airfield and will impact safety of aircraft using the east/west runway	<p>National Grid has appointed an independent aviation consultancy who have developed an assessment methodology to enable site-specific impact assessment for aerodromes potentially impacted by the Project. This bespoke appraisal considers a range of factors including (but not limited to) aircraft types, performance, flight paths and operational procedures at each aerodrome (determined from published information, and via consultation with operators and relevant aviation stakeholders) as well as runway length, orientation and distance from the overhead line, and the surrounding context in terms of topography, existing obstacles and neighbouring aerodromes.</p> <p>In relation to Tibenham Airfield, it is assessed that overhead line overflight clearance margins for straight ahead take-offs (including for aerotows) and glider or powered aircraft approaches are adequate and that current circuits can continue to be used. Engagement with the operator is ongoing to confirm the acceptability of the Project and support their consideration of reasonable changes to operational procedures. We are also continuing to engage with other aviation stakeholders, including the British Gliding Association (BGA), to discuss our assessment assumptions and findings. Further information on the assessment of airfields can be found in the Environmental Statement</p>	X		X

		(ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).				
10-22.13	Suggest that the Project should be located at least 3.7 km (assuming a 40:1 glide ratio) or 4.6 km (assuming a 50:1 glide ratio) to the west of runway 08 at Norfolk Gliding Club (NGC) so that gliders can cross the Project at about 300 ft above ground level (200 ft plus 100 ft) to allow a degree of safety	<p>National Grid has appointed an independent aviation consultancy which has engaged with Tibenham Airfield (with National Grid also present) to inform their impact assessment. Following consultation with the operators, it is assessed that, with the Project as currently proposed, operations (including gliding) can continue at the airfield. Overhead line overflight clearance margins for straight ahead take-offs (including for aerotows) and glider or powered aircraft approaches are assessed as adequate, and current circuits can continue to be used.</p> <p>We will continue to engage with the operators and relevant aviation third party stakeholders, including the British Gliding Association (BGA), to review the assessment methodology and outcomes and support the operator's consideration of whether reasonable changes to operational procedures are required. Further information on the assessment of airfields can be found in the Environmental Statement (ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).</p>			X	
10-22.14	Criticism that National Grid's advisor's comments that un-licensed airfields attract less planning	The Overarching National Policy Statement for Energy (EN-1), together with the National Policy Statement for			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	protection than a licensed airfield do not align with CAP 793 Safe Operating Principles for Unlicensed Airfields	Electricity Networks Infrastructure (EN-5) are the primary determining planning policies for the Project. EN-1 recognises aviation safeguarding systems and refers to CAA regulations and guidance for licensed and unlicensed aerodromes, as well as the responsibilities of aerodrome operators therein; in accordance, we have ensured our approach appropriately considers aerodrome licensing and safeguarding requirements and parameters, as well as planning considerations, including as described within CAP 168 (Licensing of Aerodromes), CAP 738 (Safeguarding of Aerodromes) and CAP 793 (Safe Operating Practices at Unlicensed Aerodromes). Further information on the assessment of airfields can be found in the Environmental Statement (ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).				
10-22.15	Concern over National Grid suggestions that at Tibenham Airfield glider tow aircraft had the performance to climb clear of the proposed powerline infrastructure, as the performance of both glider tow aircraft and gliders, are variable and based on many factors including meteorological conditions such as wind vectors, air temperature and air pressure, gross weight of tow aircraft including pilot and of course the glider and pilot which is being towed. Furthermore, concern gliders returning to	National Grid's Aviation Impact Assessment methodology has been developed to enable site-specific impact assessments for aerodromes potentially impacted by the Project. The methodology entails a bespoke appraisal, appropriate to each aerodrome, that considers a range of factors in addition to the height and location of the proposed overhead line alignment, including: runway length and orientation in relation to the overhead line; aircraft types, performance, flight paths and operational procedures (determined from published	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	Tibenham will face challenges in clearing the proposed line for a variety of reasons. Energy management height, speed and range from Tibenham are of course variable and will be impacted by other factors. This has the potential to stop competition flying at Tibenham completely.	<p>information, as well as via consultation with operators and relevant aviation stakeholders); and the surrounding context in terms of topography, existing obstacles (including other overhead lines) and neighbouring aerodromes. It is recognised that other variables exist, which will be assessed by the operator and pilots as part of their operating practices.</p> <p>With regards to gliding-specific considerations, feedback from the operator and the British Gliding Association (BGA) has been considered, as well as account taken of current BGA guidance, including in relation to competition requirements. BGA engagement has also focused on the need for the development of guidance on an objective or standardised means of assessing potential gliding impacts in relation to obstacles (especially during take-off and approaches, and for competitions).</p> <p>We continue to engage with the operator and the BGA to review the assessment methodology and outcomes and support the operator's consideration of whether reasonable changes to operational procedures are required. Further information on the assessment of airfields can be found in the Environmental Statement (ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-22.16	Concern the routing of the 55 m high pylons 1.77 km to the west of Tibenham Airfield could impact the Norfolk Gliding Clubs ability to operate safely and would affect their ability to launch in certain weather conditions, reduce capacity and financial resilience. This could threaten the survival of the club to train pilots and host competitions	<p>National Grid has appointed an independent aviation consultancy which has engaged with Tibenham Airfield (with National Grid also present) to inform their impact assessment. Following consultation with the operators, it is assessed that, with the Project as currently proposed, operations (including gliding) can continue at the airfield. Overhead line overflight clearance margins for straight ahead take-offs (including for aerotows) and glider or powered aircraft approaches are assessed as adequate, and current circuits can continue to be used.</p> <p>In view of these conclusions, no effects are anticipated in relation Norfolk Gliding Club's operational capacity and associated business. We are continuing to engage with the operator to enable their review of the acceptability of the Project design and support their consideration of whether reasonable changes to operational procedures are required. Further information on the assessment of airfields can be found in the Environmental Statement (ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).</p>	X		X	
Community / Social Impact						
10-22.17	Concern about impact of the Project on children / families / residents / communities	National Grid recognises people may have concerns about the potential impacts of living close to an overhead line, and that the uncertainty whilst the proposals are developed may cause anxiety.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>We have sought to reduce potential effects on communities, residents – including children - through routeing and design. We have also sought to reduce concern or uncertainty about the proposals through making timely design decisions and engaging with people and stakeholders throughout the development of the Project. If the Project receives Development Consent, the Project team would continue to engage with people potentially affected during construction through regular communication including letters, phone calls and meetings, where necessary. We urge anyone with concerns to get in touch through the Norwich to Tilbury Freephone number, address or email, which would remain open throughout examination.</p> <p>National Grid is committed to working with local suppliers, facilitated by supporting forums (such as the local Chambers), on electricity industry skills and workforce planning. National Grid is also committed to providing a coordinated regional approach to jobs and skills opportunities. This commitment is broader than the individual project and separate to any commitments under the proposed development consent order for this Project. The socio-economic effects of the project are assessed in Chapter 15: Socio-economics, Recreation and Tourism of the Environmental Statement (document reference 6.15). Post construction job opportunities are limited given the nature of the development however we will still work with Local Authorities (including facilitating local partners) to understand what is important to them</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		around skills and employment to ensure we leave a lasting positive legacy in the communities where we operate. With regards to a delivery mechanism, the above measures will be delivered as part of our community benefit package, which will look at both local and regional initiatives. This will be delivered outside the development consent process and is not a material consideration in the decision on the proposed Project or a matter to be secured as part of the DCO, as per the Community Funds for Transmission Infrastructure: Guidance (DESNZ, 2025).				
10-22.18	Concern about impact of the Project on leisure	Through routeing and siting National Grid has sought to avoid, as far as practicable, locations that are important for leisure and tourism. Environmental Statement (ES) Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) presents an assessment of the potential impacts on sports clubs, recreational land and recreational routes located within the Order Limits. As part of this assessment, a range of measures have been considered throughout the construction phase of the Project to minimise disruption on leisure and tourism. These include traffic management, signage and routeing measures. These are identified within ES Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15), the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-22.19	Concern about over development of area / other works in the area (e.g. cumulative impact)	<p>A cumulative effects assessment has been undertaken in accordance with the Planning Inspectorate's Advice Note 17 'Cumulative Effects Assessment' and is presented in Environmental Statement (ES) Chapter 17: Cumulative Effects (document reference 6.17). The cumulative effects assessment has considered the effects of the Project in conjunction with other developments in line with guidance. As part of this process, National Grid has engaged with other developers who are proposing development in proximity of the Project to understand their requirements.</p> <p>The cumulative assessment has been undertaken in accordance with the overarching National Policy Statement (NPS) for Energy (EN-1)</p> <p>Paragraph 4.1.5 in EN-1 states:</p> <p><i>'In considering any proposed development, in particular when weighing its adverse impacts against its benefits, the Secretary of State should take into account: ... its potential adverse impacts, including on the environment, and including any long-term and cumulative adverse impacts, as well as any measures to avoid, reduce, mitigate or compensate for any adverse impacts, following the mitigation hierarchy.'</i></p> <p>Paragraph 4.2.12 in EN-1 states:</p> <p><i>'The cumulative impacts of multiple developments with residual impacts should also be considered.'</i></p> <p>Paragraph 4.3.3 in EN-1 states:</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p><i>'The Regulations require an assessment of the likely significant effects of the proposed project on the environment, covering the direct effects and any indirect, secondary, cumulative, transboundary, short, medium, and long-term, permanent and temporary, positive and negative effects at all stages of the project, and also of the measures envisaged for avoiding or mitigating significant adverse effects'.</i></p> <p>Paragraph 4.3.19 of EN-1 states:</p> <p><i>'The Secretary of State should consider how the accumulation of, and interrelationship between, effects might affect the environment, economy, or community as a whole, even though they may be acceptable when considered on an individual basis with mitigation measures in place'.</i></p> <p>Paragraph 4.4.5 in EN-1 states:</p> <p><i>'The impacts of more than one development may affect people simultaneously, so the applicant should consider the cumulative impact on health in the ES where appropriate'.</i></p> <p>The long list and short list of other existing and, or approved developments considered for the Cumulative Effects Assessment is presented in Appendix 17.2: Long List and Short List of Other Developments (document reference 6.17.A2), detailing the other developments shortlisted for detailed assessment. The appendix provides details on other developments screened out of the assessment in accordance with the methodology</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		presented in Chapter 17: Cumulative Effects (document reference 6.17). The detailed assessment of shortlisted other developments is presented in Appendix 17.3: Inter-Project Cumulative Effects Assessment (document reference 6.17.A3). Appendix 17.3 outlines the residual significance of cumulative effects for each development, for each environmental topic that has a Zone of Influence that overlaps with that development (i.e. socio-Economics, recreation and tourism impacts).				
10-22.20	Concern about the Project being in too close proximity to recently built housing developments / using land being considered for future development (including residential, commercial, infrastructural, and employment sites)	National Grid has obtained information on existing, under construction, consented but not built schemes as well as development proposals within the planning system. The Project design has responded to those that are confirmed through consideration of routeing. In the case of development proposals, some can be amended to be designed around our proposed infrastructure but in other cases our proposals may need to be amended at a corridor level, or proposed developments factored into our detailed route design. Based on known information, and in light of changes made following consideration of feedback to the 2022 and 2023 non-statutory consultations, statutory consultation, targeted consultations and landowner consultation, we consider our proposals are consistent with relevant policy and guidelines and the alignment designed such that they do not prevent proposed housing developments from being successfully progressed. UK law does not prescribe minimum distances between overhead lines and homes, but any implications on landscape and visual receptors,			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		residential amenity or from concerns about electromagnetic fields are robustly assessed as part of the Environmental Impact Assessment (EIA) and balanced as part of the decision making process. We will continue to review planning applications and engage with developers as necessary.				
10-22.21	Concern about the Project causing communities to become encircled / surrounded by overhead lines	The alignment has been routed to achieve some separation from the existing 400 kV overhead line, such that villages are not encircled by overhead lines to both sides. Separation is inevitably reduced in certain locations due to the presence of constraints to routing and environmental features. Detailed assessment reported in the Environmental Impact Assessment (EIA) identifies any measures considered to be necessary to reduce likely significant effects which would also consider the potential for effects potentially arising from close paralleling existing 132 kV overhead line and new 400 kV overhead line infrastructure.			X	
10-22.22	Concerned that the Project will have a negative impact on domestic horses / equestrian activities	As well as possible effects on humans, the possible effects of Electric and Magnetic Fields (EMFs) on various animals have been studied. No proven effects of EMFs have been found in any species at levels below the guidelines. This is confirmed in National Policy Statement (NPS) EN-5 which states: " <i>There is little evidence that exposure of crops, farm animals or natural ecosystems to transmission line EMFs has any agriculturally significant consequences.</i> " Although			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>horses are not directly mentioned, there is no evidence to suggest they are any different to other farm animals.</p> <p>As well as the possible direct biological or health effects addressed above, indirect effects such as microshocks can occur as a result of electric fields. Microshocks are small spark discharges which are similar to a static shock after walking across a nylon carpet for example. The Project would be designed in accordance with the principles of the Governments Code of Practice 'Power Lines: Control of Microshocks and other indirect effects of public exposure to electric fields' to ensure these are mitigated, which include equestrian activities.</p>				
10-22.23	Criticism of surveys undertaken for the Project in this Section	<p>There is a staged approach to the process of collection of environmental data as any major project develops. National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project. The assessment is informed by a suite of field surveys and desk studies and results are presented in an Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the application for development consent. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation (and maintenance) of the Project and recommends appropriate mitigation measures to reduce potential adverse impacts.</p> <p>The scope of the EIA is included in the Scoping Report (document reference 6.19) which was submitted to the Planning Inspectorate in November 2022 and their</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Scoping Opinion (document reference 6.20) received in December 2022. This provided the opportunity for statutory bodies to comment on the scope of the EIA which included our approach on study areas, data collection and baseline conditions for a range of environmental topics. We also discussed and agreed survey scope with stakeholders (including Statutory Environmental Bodies and Local Planning Authorities) following the Scoping Opinion (document reference 6.20) to ensure a robust baseline assessment.</p> <p>National Grid has prepared an Outline Code of Construction Practice (CoCP) (document reference 7.2) which sets out the required mitigation measures and environmental commitments that would be implemented during the construction phase of the Project to avoid or reduce potential effects of the Project on the environment, including commitments to undertake further surveys.</p>				
10-22.24	Concern about the impact of the Project on water supply	Appendix 9.3: Groundwater Baseline and Qualitative Groundwater Risk Assessment (document reference 6.9.A3) is included to support Chapter 9: Contaminated Land, Geology and Hydrogeology (document reference 6.9) which provides an assessment of the potential effects on groundwater from the Project and includes impacts on groundwater receptors such as water supplies (both with regard to quantity and quality), as required.	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Where the Project constitutes overhead lines, interaction with underlying aquifers would be limited. Any piling activities e.g., for pylon foundations, would be undertaken in accordance with good practice, and informed by Project Ground Investigation data.</p> <p>Where the Project constitutes underground cable, further to the above a hydrogeological risk assessments would be undertaken.</p> <p>These measures are described in the Outline Code of Construction Practice (CoCP) (document reference 7.2) and would be secured through the Development Consent Order (DCO), if granted.</p>				
10-22.25	Criticism that National Grid have not considered residential amenity including at Bressingham and Roydon, as National Grid did not provide impact mapping as part of any of their consultations or mitigation planning on impacted residential amenity, despite promising to do so	<p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the Environmental Impact Assessment (EIA). The approach to the LVIA follows professional guidance as set out in Appendix 13.1: Landscape and Visual Methodology (document reference 6.13.A1)) and considers impacts on visual amenity of people living and moving around communities. The LVIA is presented in ES Chapter 13: Landscape and Visual (document reference 6.13).</p> <p>Consideration of changes in views experienced from private residences within 200m of the Project overhead line alignment (including at Bressingham and Roydon) has also been undertaken in a Residential Visual Amenity Assessment (RVAA) as set out in Appendix 13.4: Residential Visual Amenity Assessment (document reference 6.13.A4). This assessment has been informed</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		by the approach detailed in Landscape Institute Technical Guidance Note 2/19 Residential Visual Amenity Assessment (RVAA).				
10-22.26	Concern about the impact of the Project on residents and businesses in South Norfolk due to disruption to planning activities that will be faced for years whilst the Project is constructed	<p>The Socio-economics, Recreation and Tourism assessment of the Environmental Statement (ES) (document reference 6.15) assesses the potential construction and operational effect on access to community facilities, built and other assets, recreational land and recreational routes within the Order Limits. Mitigation measures are set out in Outline Code of Construction Practice (CoCP) (document reference 7.2), Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) and Outline Public Rights of Way Management Plan (document reference 7.6) to mitigate potential adverse effects on businesses, recreation and tourism assets.</p> <p>An assessment of effects on visual receptors during construction and operation (including residents in local communities) is provided in ES Chapter 13: Landscape and Visual (document reference 6.13) and Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3).</p>			X	
Construction Impacts						
10-22.27	Concern about disruption from construction	An Environmental Statement (ES) (document reference: Volume 6: Environmental Statement) has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>2017 ('the Infrastructure EIA Regulations'). The ES identifies and assesses the likely significant effects on the environment resulting from the construction of the Project and recommends appropriate mitigation to reduce effects.</p> <p>Environmental mitigation measures have been defined within each environmental topic chapter and set out in relevant management documents submitted with the Development Consent Order (DCO) application, including the Outline Code of Construction Practice (CoCP) (document reference 7.2), the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5).</p>				
10-22.28	Concern about impact on traffic levels in local area caused by construction works	<p>As part of the pre-application process National Grid has engaged with the relevant authorities, their highways teams and National Highways to understand and gain information on their road networks. This information has been used to inform and guide the drafting of the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) for the Project that accompanies the Development Consent Order (DCO) application. A strategy has been developed to manage the impact of construction vehicles on the public highway and sensitive receptors, using suitable Local Road Network connections from the Strategic Road</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Network called Primary Access Routes. In addition, temporary haul roads for construction vehicles are proposed along the Project alignment, further reducing the impact of construction traffic on the local road network. Further details of the strategy can be found within the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).</p> <p>Environmental Statement (ES) Chapter 16: Traffic and Transport (document reference 6.16) includes the assessment of the potential impacts of the Project including changes in traffic flow, delays, road safety and impact on Walking, Cycling and Horse-Riding modes on the roads along the Primary Access Routes located in the Local Road Network.</p> <p>The Transport Assessment (document reference 7.11), submitted with the DCO application, examines capacity, safety, and operational efficiency of the network, identifying potential bottlenecks or safety concerns.</p> <p>Within the assessment of the ES and the Transport Assessment, mitigation measures are proposed to minimise likely adverse impacts.</p>				
10-22.29	Concern about noise and other issues resulting from construction (e.g. mud on roads, dust)	An Environmental Statement (ES) (document reference: Volume 6: Environmental Statement) has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 ('the Infrastructure EIA Regulations'). The ES identifies and assesses the likely significant effects on the environment resulting from the construction of the			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Project and recommends appropriate mitigation to reduce effects.</p> <p>Specifically, a Construction Noise and Vibration Impact Assessment has been undertaken and is reported in ES Chapter 14: Noise and Vibration (document reference 6.14). During construction, mitigation would be implemented to reduce noise and vibration impacts from construction activities and increased road traffic noise and vibration due to additional movement from construction traffic. Mitigation measures are outlined in ES Chapter 14: Noise and Vibration (document reference 6.14) and the Outline Code of Construction Practice (CoCP) (document reference 7.2). This includes the assumption that construction working would be undertaken within the agreed working hours, construction traffic would be managed through the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), haul roads would be well maintained, and Best Practicable Means (BPM) would be employed to reduce construction noise and vibration.</p> <p>ES Chapter 7: Air Quality (document reference 6.7) presents an assessment of the potential impacts from the construction of the Project on air quality. During construction, mitigation would be implemented to reduce the impact of dust generation and construction vehicle emissions. Mitigation measures are outlined in ES Chapter 7: Air Quality (document reference 6.7), and the Outline Code of Construction Practice (CoCP) (document reference 7.2). The dust-emitting activities</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>can be greatly reduced or eliminated by applying the site-specific mitigation measures (see Outline CoCP) for high risk sites following measures recommendations in the Institute of Air Quality Management (IAQM) guidance (IAQM, 2024). The IAQM guidance states that with the implementation of effective site-specific mitigation measures, the environmental effect would not be significant in most cases.</p> <p>In addition, National Grid has prepared an Outline Code of Construction Practice (CoCP) (document reference 7.2). The Outline CoCP (document reference 7.2) sets out the required mitigation measures and environmental commitments that would be implemented during the construction phase of the Project to avoid or reduce potential effects of the Project on the environment.</p>				
10-22.30	Concern that local road infrastructure is not suitable for heavy construction vehicles and machinery	<p>A strategy has been developed to manage the impact of construction vehicles on the public highway and sensitive receptors, using suitable Local Road Network connections from the Strategic Road Network called Primary Access Routes. In addition, temporary haul roads for construction vehicles are proposed along the Project alignment, further reducing the impact of construction traffic on the local road network. Further details of the strategy can be found within the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3). The Project also requires the transportation of Abnormal Indivisible Loads (AIL). National Grid is developing specific routing proposals for</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>AIL movements and is developing these through engagement with the relevant stakeholders including the Local Highway Authorities and National Highways. An AIL routing strategy containing details about these movements are submitted in support of the Development Consent Order (DCO) application.</p>				
10-22.31	Concern about vibrations from construction	<p>An assessment of construction vibration is presented in Environmental Statement (ES) Chapter 14 - Noise and Vibration (document reference 6.14).</p> <p>The assessment considers both the potential impact upon people within buildings (i.e. disturbance), and potential damage to buildings and structures.</p> <p>The assessment considers relatively worst-case construction methodologies and does not take account of potential mitigation. This is so that potential 'hot-spots' can be identified where there is the potential for significant adverse effects, without mitigation.</p> <p>The construction vibration assessment has identified 74 locations where there is potential disturbance to people within buildings from construction vibration. Of these, 72 relate to potential vibratory compaction activities which would be expected to be for a relatively short duration (i.e. less than day). The remaining two relate to potential piling activities for pylon foundation construction.</p> <p>With regards to potential damage to buildings and structures, the assessment highlights locations where there is a potential non-zero risk of damage. 14 locations</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>have been identified, all of which relate to potential vibratory compaction activities.</p> <p>In all cases, significant adverse effects, or potential structural damage, can be avoided with the use of best practicable means (BPM). This may include alternative methods, such as non-percussive/vibratory techniques.</p> <p>Additionally, prior to undertaking works, the Main Works Contractor(s) would conduct a detailed construction vibration assessment based on their specific methodologies and determine specific mitigation measures, where applicable.</p>				
Consultation						
10-22.32	Comment supportive of engagement that has taken place / respondent feels listened to	National Grid notes the respondent's feedback.			X	
10-22.33	Comment supportive of the Project in this section	National Grid notes the respondent's feedback.			X	
10-22.34	Criticism of consultation specific to this section	National Grid notes the respondent's feedback.	X		X	
10-22.35	Request for further information on why the Waveney Valley Alternative was withdrawn (e.g. meeting minutes) / Request for National Grid to justify their decision not to proceed with the Waveney Valley Alternative (the underground option)	<p>National Grid has considered the justification for the use of underground cable for the crossing of the Waveney Valley and on the matter of withdrawing the underground cable alternative raised in the respondent's feedback.</p> <p>The starting presumption in National Policy Statement (NPS) EN-5 paragraph 2.9.20 in a location such as the Waveney Valley which, although valued is not designated, is that overhead line is the appropriate 400 kV connection technology. We have also considered</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>whether the effects from the overhead line are at a level that engages other parts of NPS EN-5 (such as paragraph 2.9.23) to prompt consideration of whether the benefits of undergrounding outweigh any extra economic, social or environmental impacts. At the Waveney we conclude that the benefits from a change to underground cable, do not justify the additional cost that would be incurred. The use of underground cable would lead to a lowering of effects on the setting of the Grade I Listed St Remegius Church, albeit the effects of progressing with an overhead line are assessed as less than substantial harm and don't themselves require a change in technology. In terms of community effects, existing trees would provide some screening and filtering of views of an overhead line for those in residential areas and on recreational routes. A change from overhead line to underground cable would reduce these community effects but bring disbenefits, most notably increased ecological effects from installation within peaty soils and increased technical risk to cable integrity from the WaLOR channel naturalisation and landscape recovery plans. Conversely there may be compromise to the WALOR project by measures to ensure cable integrity. After consideration of the decision making guidance at paragraph 2.9.25 of NPS EN-5, National Grid concludes that whilst effects from overhead lines to individual receptors may be significant in Environmental Impact Assessment (EIA) terms they do not justify the potential for compromise to the WALOR project, the</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		effects on peaty soils which would arise with an underground cable design nor justify the expected cost of an underground cable design. On this basis, National Grid concludes that the use of an overhead line should be taken forward for the crossing of the Waveney Valley. Prior to making this decision we had considered whether requests to relocate the Cable Sealing End (CSE) compounds and extend the cable both to the north and the south may alter the decision making balance. Such extensions would bring benefits to various residential receptors but with the additional cost of longer length of cables. We conclude that given the absence of any designated status pertinent to NPS EN-5, and the extent to which some views from residential areas are filtered and screened and lower the level of adverse effects from the overhead line, we do not consider the additional cost associated with extending the underground cable would be justified.				
10-22.36	Criticism that National Grid have stated that following the existing route between Ipswich and Norwich is impossible for 'technical reasons' but National Grid have not clarified what these 'technical reasons' are and how they can be overcome	This information was set out in the Corridor and Preliminary Routeing and Siting Study published in 2022 and has also been backchecked in the subsequent 2023 and 2024 Design Development Reports (available on the Project website) and the 2025 Design Development Report (document reference 5.15) submitted as part of the Development Consent Order (DCO) application. In summary, these note a number of locations where there is insufficient space for the routeing of two overhead lines between the various homes, environmental features and other constraints. Additionally, elsewhere			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		the presence of homes, environmental features and other constraints require the new overhead line route to cross from one side to the other of the existing route in order to pass without unacceptable effects. Whilst this is technically possible the number of such crossings and the need for system outages to safely complete them cannot be accommodated within the operational parameters. National Grid continues with the view therefore that close paralleling is not an achievable solution for the Project.				
Design Change (CR)						
10-22.37	Oppose the use of underground cables	National Grid has carefully considered the feedback received during the 2022 and 2023 non-statutory consultations, the statutory consultation and targeted consultations and landowner consultation, the alternatives available, and other factors including our duties and obligations. These duties include balancing the need to be economic and efficient, which includes keeping costs down in the interests of the bill-paying consumers, with a duty to have regard to preserving amenity, which includes the natural environment, cultural heritage, landscape and visual quality, National Policy Statement (NPS) EN-5 makes clear that <i>'the government's position that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments would cross part of a nationally designated landscape'</i> . The NPS also			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		confirms that widespread and significant adverse landscape and/or visual impacts in other locations may also justify the use of undergrounding. We may also adopt underground cables in other circumstances such as to cross existing 400 kV overhead line infrastructure. Where the installation of underground cables is required in lieu of overhead lines, the design of the Project has incorporated suitable consideration of the existing environment, ecology and site ground conditions based on site specific survey data. We have undertaken an Environmental Impact Assessment (EIA) which includes a baseline of the existing environment as well as site specific information and survey data.				
10-22.38	Suggest a minimum distance that the Project should be sited from residential areas / residences	National Grid does not use standard minimum distances as a routeing consideration. Applying an arbitrary distance may be too big or too small for the specific circumstances. We utilise the Holford Rules (a description of the Holford Rules can be found in Appendix I22 of this report) informed by feedback and professional judgement to define appropriate corridors and alignments that are consistent with the relevant policy framework and duties. In response to feedback to the 2022 and 2023 non-statutory consultations, statutory consultation, and targeted consultations, we have modified the alignment in various locations to increase separation to properties where this is possible without undue deviation or transfer of effects to other similar properties or other receptors. A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		of the Environmental Impact Assessment (EIA). The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) This assesses the impact of the Project and identifies the need for additional mitigation if required.				
10-22.39	Suggest that existing overhead lines in this section should be removed	<p>The existing electricity transmission network provides power, via the local distribution network, into the local area where it is used in homes and businesses. Such lines cannot just be removed as power supplies would not be maintained.</p> <p>The need case and funding for the Project is to deliver the new network reinforcement needed, rather than to remove existing overhead lines which would need to be replaced by another form of connection such as underground cables.</p> <p>Unless required for crossings or mitigation, undergrounding existing overhead lines on the transmission network would not be in accordance with National Policy Statement (NPS) EN-5 and would result in substantial cost to bill payers. There may also be significant environmental impacts due to the removal works on sensitive ecological and archaeological receptors as well as constraints from either existing buildings or unsuitable ground conditions.</p>		X	X	
10-22.40	Suggest that existing overhead lines in this section should be replaced by underground cables	National Policy Statement (NPS) EN-5 establishes the position that the starting basis for new connections is a presumption on the acceptability of overhead lines but		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>with this presumption reversed within designated landscapes and in certain other circumstances.</p> <p>The existing electricity transmission network provides power, via the local distribution network, into the local area where it is used in homes and businesses. The need case and funding for the Project is to deliver the new network reinforcement needed, rather than to remove existing overhead lines by undergrounding them.</p> <p>We have identified a number of locations where we are proposing to place existing overhead lines underground. These locations are where existing 132 kV and lower voltage lattice pylon lines are crossed by the proposed 400 kV overhead line and / or mitigation of the combination of effects are considered necessary. This includes locations such as at Mellis, between Offton and Bramford Substation, to the south of Bramford Substation and near Fuller Street.</p> <p>Unless required for mitigation, undergrounding existing overhead lines on the transmission network would not be in accordance with NPS EN-5 and would result in substantial cost to bill payers. There may also be significant environmental impacts due to the removal works on sensitive ecological and archaeological receptors as well as constraints from either existing built form or unsuitable ground conditions.</p>				
10-22.41	Suggest that the existing overhead lines in this section are reinforced / upgraded instead	The existing transmission network in the region was upgraded during 2022 and 2023 to ensure the system is			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		running at its most efficient performance. The existing assets / networks are not able to be upgraded sufficiently to cope with the new future demands expected on the network. As a result, new lines and substations would be required to accommodate the changing demands on the network.				
10-22.42	Suggest that the Project is routed away from populated / residential areas	<p>Deciding where and how to build new high voltage electricity lines is a complex issue and National Grid is mindful of the potential effects this infrastructure may have on local communities and the concerns these may bring. We recognise that people living near our transmission infrastructure, including high voltage overhead lines, may have concerns about audible noise and potential health impacts. It has sometimes been suggested that minimum distances between properties and overhead lines should be prescribed.</p> <p>We do not consider this appropriate since each instance must be dealt with on its merits. However, we have always sought to route new lines away from residential property on grounds of general amenity where possible.</p> <p>We have undertaken a noise and vibration assessment which can be found in the Environmental Statement (ES), Chapter 14: Noise and Vibration (document reference 6.14) that forms part of the Environmental Impact Assessment (EIA) for the Project. Noise levels and the effect on residential properties as well as other sensitive areas, such as hospitals and schools, are carefully considered during planning, assessed</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>according to the appropriate UK standards, and mitigated where necessary. We set strict technical standards for the equipment we install on our network. These will apply to the proposed new East Anglia Connection Node (EACN) substation, and extensions required to the existing Norwich Main, Bramford, and Tilbury Substations. These standards include requirements to ensure the occurrence of audible noise is eliminated or reduced as far as practicable. Therefore, significant adverse effects from noise are not expected.</p> <p>Noise from overhead lines is predominately determined by the conductor design, voltage and weather conditions. The overhead line would be designed using a relatively quiet conductor that meets the design specification required, and operational noise is not likely to be significant at nearby sensitive receptors under any weather conditions. Pylon fittings, such as insulators, dampers, spacers, and clamps, are also designed and procured in accordance with a series of National Grid Technical Specifications to reduce the potential for audible noise and tones to occur from all types of fittings. Where noise does occur, it is likely to be localised and of short duration. If this is due to a fault, action can be taken to rectify it. A technical note has been submitted as part of the application for development consent to support scoping out noise associated with overhead lines from the ES.</p> <p>In addition, we have undertaken a Landscape and Visual Impact Assessment (LVIA) for the Project. This includes</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>an assessment on both landscape character and visual amenity. The LVIA is presented in the ES, Chapter 13: Landscape and Visual (document reference 6.13).</p> <p>The health and safety of the public, local communities and employees is central to everything that we do. The UK has a carefully thought-out set of policies for protecting us all against Electric and Magnetic Fields (EMFs), the main component of which is exposure guidelines. The exposure guidelines are set by independent scientific bodies and are based on decades-long studies into the effects of EMFs and ill health. After those decades of research, the weight of evidence is against there being any health risks of EMFs below the guideline limits. Our approach is to ensure that our network comply with those policies, which are set by Government on the advice of their independent advisors. The Project is designed to ensure it is fully compliant with these policies and guidelines. This ensures that health concerns are properly and adequately addressed.</p> <p>Policies for both noise and EMF are incorporated into the decision-making process for development consent as set out in National Policy Statement (NPS) EN-5. It is National Grid's policy to ensure that all its equipment complies fully with those policies and guidelines. The application for a Development Consent Order (DCO) includes assessments against these policies, including both construction and operational noise and EMF.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-22.43	Suggest that underground cables are used for the entirety of this section	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or Area of Outstanding Natural Beauty (AONB))'</i> . Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider this section in its entirety would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.</p> <p>Therefore, whilst undergrounding the whole of this section is not considered appropriate, our proposals do include underground cable within the Dedham Vale National Landscape (previously known as Area of Outstanding Natural Beauty (AONB)) in accordance with NPS EN-5. Prior to our 2023 non-statutory consultation we identified the need to extend the underground cable beyond the National Landscape boundary because of potential effects, we have further extended this section of underground cable following consideration of feedback on our 2023 non-statutory consultation and additional investigation into potential effects. We also identified an approximately 4 km section near Great Horkesley as meeting the particularly sensitive criteria where underground cable is also proposed. Additionally,</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		underground cable is proposed at Fairstead for a 400 kV overhead line crossing.				
10-22.44	Concern that the Project will impact electrically sensitive facility	National Grid has noted the concerns and performed an assessment of potential impacts on the facility. The proposed overhead line is located at a distance where the maximum Electric and Magnetic Fields (EMFs) produced will be below the background EMFs typically produced by an electrical supply. Given the distance and maximum exposures, the alignment presents no hazard to the facilities' operations, and no change is proposed at this location.			X	
10-22.45	Suggest National Grid consider the original proposed route to the west of roydon, the "Blue Corridor" (e.g., to mitigate impacts on health and wellbeing of residents) / Criticism that National Grid have not justified why this route was moved	National Grid has considered a variety of route options in this general area encompassing alternative routes to the east of Diss, further to the west of the alignment and then south over farmland along with other alternatives as well as a variety of localised amendments. The basis for selection of the route is as out in the 2023 and 2024 Design Development Reports (available on the Project website) and the 2025 Design Development Report (document reference 5.15). also setting out the decision making that leads to the Project progressing on the basis of overhead line. In the absence of new information or the identification of other factors, no change in response to this feedback is proposed. The Project is however progressing in a manner that avoids the construction effects that are of concern due to us not utilising underground cable.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-22.46	Suggest that the Project is re-routed between pylons RG27 to RG35 as per (plan provided by respondent and change request submitted by Fisher German) mitigating the impact to landowners and farmers farming and using machinery on the land. The new position of the pylons in the valley reduces the height of the pylons from 47 m to 34 m in some areas mitigating visibility in the local area	National Grid notes the respondent's feedback. The suggested route would take the alignment across the edge of Hapton Common County Wildlife Site, would move the alignment closer to properties at Fundenhall and would also take the alignment closer to South Norfolk Model Flying Club reintroducing potential interactions. We are therefore not proposing a further change to the alignment between RG27 and RG35. We have positioned pylons as close to field boundaries as possible to reduce impacts to agricultural operations where technically feasible whilst ensuring constructability of the Project.			X	
10-22.47	Criticism that National Grid have re-routed the Project further away from Gislingham (e.g. through Suffolk 2), yet pylons RG79 to RG87 are located less than 200 metres from residential properties / Request for National Grid to clarify why the pylons near Gislingham have now been re-located at least 200 metres away from residential properties, but no action is being taken for Roydon and Bressingham	National Grid notes the respondent's feedback. The alignment around Gislingham was not amended due to proximity to residential properties. The alignment was amended following the statutory consultation following feedback and further survey work. The alignment proposed at targeted consultation is preferred due to avoiding impacts on veteran trees as well as reducing visual effects on residential properties to the east of Gislingham without transferring or increasing effects, making the alignment considerably longer or reducing construction feasibility. Alternatives around the area of Diss including around Roydon and Bressingham are not preferred as set out in the 2023, 2024 Design Development Reports (available on the Project website) and the 2025 Design Development Report (document			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		reference 5.15). We are therefore not proposing a change to the alignment at Roydon and Bressingham.				
10-22.48	Suggest that at Roydon, the Project is re-routed west approximately 200 m south of the Project as currently proposed (e.g. to prevent interference with businesses and reduce impact on the environment)	<p>National Grid notes the respondent's feedback. Moving the alignment west and south at Roydon would introduce greater impacts to wetland habitats as well as potential impacts to Wortham Ling Site of Special Scientific Interest (SSSI). The proposed change would also have a greater impact on the Waveney and Little Ouse Recovery (WaLOR) project.</p> <p>Alternatives around the area of Diss including around Roydon are not preferred as set out in the 2023, 2024 Design Development Reports (available on the Project website) and 2025 Design Development Report (document reference 5.15). We are therefore not proposing a change to the alignment at Roydon and Bressingham.</p> <p>Chapter 15: Socio-economics, Recreation and Tourism assessment of the ES (document reference 6.15) assess the potential effect on access to businesses within the Local Study Area (Order Limits), and businesses where visual impact is likely to be an economic consideration within the 3 km Study Area. The proposed mitigations are set out in the Outline Code of Construction Practice (CoCP) (document reference 7.2) and submitted along with the Development Consent Order (DCO) application.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-22.49	Criticism that National Grid have not proceeded with the blue route, despite there being no observable activity on the wellness centre this year, having only been occupied a few days of the year and consisting of two tents and a shed, and routing the Project through the cabbage field would not impact businesses	The wellness centre is one of several factors that guided National Grid's decision making but in isolation was not determinative. Even if the wellness centre was not in place, other effects on the original route, including greater loss of woodland and greater effects on the Grade I Listed St Mary's Church, Wortham, would remain and still mean the graduated swathe as presented at the 2022 non-statutory consultation is less preferred.			X	
10-22.50	Request the project uses underground cables under the River Waveney	National Grid has considered the justification for the use of underground cable for the crossing of the Waveney Valley. The starting presumption in National Policy Statement (NPS) EN-5 paragraph 2.9.20 in a location such as the Waveney Valley which, although valued is not designated, is that overhead line is the appropriate 400 kV connection technology. We have also considered whether the effects from the overhead line are at a level that engages other parts of NPS EN-5 (such as paragraph 2.9.23) to prompt consideration of whether the benefits of undergrounding outweigh any extra economic, social or environmental impacts. At the Waveney we conclude that the benefits from a change to underground cable, do not justify the additional cost that would be incurred. The use of underground cable would lead to a lowering of effects on the setting of the Grade I Listed St Remegius Church, albeit the effects of progressing with an overhead line are assessed as less than substantial harm and don't themselves require a		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>change in technology. In terms of community effects, existing trees would provide some screening and filtering of views of an overhead line for those in residential areas and on recreational routes. A change from overhead line to underground cable would reduce these community effects but bring disbenefits, most notably increased ecological effects from installation within peaty soils and increased technical risk to cable integrity from the WaLOR channel naturalisation and landscape recovery plans. Conversely there may be compromise to the WALOR project by measures to ensure cable integrity. After consideration of the decision making guidance at paragraph 2.9.25 of NPS EN-5, National Grid concludes that whilst effects from overhead lines to individual receptors may be significant in Environmental Impact Assessment (EIA) terms they do not justify the potential for compromise to the WALOR project, the effects on peaty soils which would arise with an underground cable design nor justify the expected cost of an underground cable design. On this basis, National Grid concludes that the use of an overhead line should be taken forward for the crossing of the Waveney Valley. Prior to making this decision we had considered whether requests to relocate the Cable Sealing End (CSE) compounds and extend the cable both to the north and the south may alter the decision making balance. Such extensions would bring benefits to various residential receptors but with the additional cost of longer length of cables. We conclude that given the absence of any</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		designated status pertinent to NPS EN-5, and the extent to which some views from residential areas are filtered and screened and lower the level of adverse effects from the overhead line, we do not consider the additional cost associated with extending the underground cable would be justified.				
10-22.51	Request pylons RG18 to RG30 are underground to reduce the impact on the Flordon Common, the Norfolk Valley Fens and Registered Parks and Gardens (e.g. Rainthorpe Hall) (see map 2 within the Committee Papers (June 2024))	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or Area of Outstanding Natural Beauty (AONB))</i> . Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at RG18 to RG30 would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
10-22.52	Request pylons RG43 to RG48 are underground to reduce the impact on Ancient Woodland, Bunwell Wood (see map 3 within the Committee Papers (June 2024))	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting</i>		X	X

		consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project at RG50 to RG60 would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
10-22.54	Request underground cables are used in Diss and the Waveney Valley	National Grid has considered the justification for the use of underground cable for the crossing of the Waveney Valley. The starting presumption in National Policy Statement (NPS) EN-5 paragraph 2.9.20 in a location such as the Waveney Valley which, although valued is not designated, is that overhead line is the appropriate 400 kV connection technology. We have also considered whether the effects from the overhead line are at a level that engages other parts of NPS EN-5 (such as paragraph 2.9.23) to prompt consideration of whether		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>the benefits of undergrounding outweigh any extra economic, social or environmental impacts. At the Waveney we conclude that the benefits from a change to underground cable, do not justify the additional cost that would be incurred. The use of underground cable would lead to a lowering of effects on the setting of the Grade I Listed St Remegius Church, albeit the effects of progressing with an overhead line are assessed as less than substantial harm and don't themselves require a change in technology. In terms of community effects, existing trees would provide some screening and filtering of views of an overhead line for those in residential areas and on recreational routes. A change from overhead line to underground cable would reduce these community effects but bring disbenefits, most notably increased ecological effects from installation within peaty soils and increased technical risk to cable integrity from the WaLOR channel naturalisation and landscape recovery plans. Conversely there may be compromise to the WALOR project by measures to ensure cable integrity. After consideration of the decision making guidance at paragraph 2.9.25 of NPS EN-5, National Grid concludes that whilst effects from overhead lines to individual receptors may be significant in Environmental Impact Assessment (EIA) terms they do not justify the potential for compromise to the WALOR project, the effects on peaty soils which would arise with an underground cable design nor justify the expected cost of an underground cable design. On this basis, National</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Grid concludes that the use of an overhead line should be taken forward for the crossing of the Waveney Valley. Prior to making this decision we had considered whether requests to relocate the Cable Sealing End (CSE) compounds and extend the cable both to the north and the south may alter the decision making balance. Such extensions would bring benefits to various residential receptors but with the additional cost of longer length of cables. We conclude that given the absence of any designated status pertinent to NPS EN-5, and the extent to which some views from residential areas are filtered and screened and lower the level of adverse effects from the overhead line, we do not consider the additional cost associated with extending the underground cable would be justified.				
10-22.55	Request pylons RG19 to RG23 are moved north by north-west by 600 m to mitigate the impact on respondent's farm	National Grid has considered the respondent's feedback and has assessed multiple alternative alignments to the north of Flordon Hall. Alternatives to the north would impact more woodland and would also increase the impact on a proposed solar farm development, alternatives would also be longer and require additional angle pylons and would be therefore less consistent with the Holford Rules (these can be found in Appendix I22 of this report). We are therefore not proposing a change to the alignment in this location. Further information on alternative routes can be found in the 2023 and 2024 Design Development Reports (available on the Project website) and the 2025 Design Development Report (document reference 5.15). We have undertaken an			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Environmental Impact Assessment (EIA) which has assessed the impact of the Project, including heritage impacts, and recommended mitigation where required.				
10-22.56	Concern over impact of pylons RG21 and RG22 due to their potential impact on water supplies to 5 residential properties through bore hole pipes from Flordon Hall, as the supply would be cut by haulage roads and work compounds. Request further information on what will happen to the water quality when the aquafer runs from under the construction areas to the bore	National Grid and their contractors will work with the respondent to identify and take precautions to protect and avoid damage to existing underground infrastructure during construction. Where this is unavoidable, temporary measures or compensation will be agreed. Additionally National Grid are applying for Limits of Deviation. Therefore upon further pre-construction surveys and detailed liaison with the affected landowner if pylon RG21 or pylon RG22 are clashing with the existing underground assets they can be moved along the alignment accordingly to avoid such assets.			X	
10-22.57	Suggest that National Grid minimise haul road watercourse crossings wherever possible (in reference to Section 12.8.11 of the PEIR)	The Project design has sought to reduce the number of haul road crossings of watercourses through the selection of haul road alignments and by using existing crossings (with upgrades as necessary) where possible. Where new crossings are necessary, a range of commitments to the design of the crossings have been made to reduce the effects on watercourse flow regimes, hydromorphology, water quality and impacts on flood risk local to the crossing sites. These commitments are described in the Outline Code of Construction Practice (document reference 7.2).	X		X	
10-22.58	Request to discuss some watercourse crossings on a case-by-case basis, as the Watercourse Crossing	We acknowledge the Water Management Alliance's request to discuss individual water course crossings.	X		X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-22.71	Concern that the Project will impact Sites of Special Scientific Interest (SSSIs)	Through routeing, siting and design development, National Grid has sought to reduce, as far as practicable, impacts on biodiversity and in particular features of high ecological value such as Sites of Special Scientific Interest (SSSI). The Project avoids all direct impacts on SSSIs, with no long-term negative impacts anticipated on any SSSIs as a result of the Project. Potential direct and indirect impacts on each SSSI within the study area have been considered within the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8) and any necessary mitigation detailed to ensure no significant residual effects. National Grid will continue to engage with Natural England.	X	X	X	
10-22.72	Concern that the Project will impact ancient woodland	Through routeing, siting and detailed design, National Grid has sought to reduce, as far as practicable, impacts on biodiversity and in particular features of high ecological value, such as ancient woodland. A standard 15 m buffer from construction activities has been applied wherever practicable. Potential direct and indirect impacts on each block of ancient woodland within the study area have been considered within the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8) and any necessary mitigation detailed to ensure no significant residual effects. Appendix B: Ancient Woodland and Veteran Tree Strategy is included as part of the Outline Landscape and Ecological Management Plan (LEMP)		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		(document reference 7.4). The Outline LEMP (document reference 7.4) has been developed in consultation with relevant stakeholders including Natural England and local planning authorities.				
10-22.73	Concern that the Project will impact nature reserve / RSPB reserve / Special Protection Area (SPA)	Through routeing, siting and design development, National Grid has sought to reduce, as far as practicable, impacts on biodiversity and in particular features of high ecological value, such as local wildlife sites (LWS), Royal Society for the Protection of Birds (RSPB) reserves and Special Protection Area (SPA's). Whilst there are no impacts on RSPB reserves, potential direct and indirect impacts on LWS's and SPA's within the study area have been considered within the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8). SPA's and the associated impact on birds has also been considered within the Habitats Regulations Assessment Report (HRA) (document reference 5.3).			X	
10-22.74	Concern that the Project will result in a negative impact on the environment / countryside generally (no details given)	National Grid has sought to reduce, as far as practicable, impacts on the environment / countryside through routeing and siting and an ongoing iterative design process which has taken on board feedback at different stages of the Project. The iterative design process sought to avoid areas of highest concern, for example through changes to the route alignment or changes to the method e.g. trenchless crossings. National Grid has engaged with a range of stakeholders (including Statutory Environmental Bodies (SEBs) and		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>relevant local planning authorities) throughout the development of the Project design and environmental assessment work.</p> <p>National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project. The results of this assessment are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation (and maintenance) of the Project and recommends appropriate mitigation measures to reduce potential effects.</p> <p>A number of mitigation measures have been incorporated into the Project design. Mitigation relevant to specific environmental topics (including Ecology and Biodiversity, Landscape and Visual and Historic Environment) are presented in the relevant ES chapters. The Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Code of Construction Practice (CoCP) (document reference 7.2) contain a list of relevant good practice measures to avoid or reduce risks to habitats and species.</p> <p>In addition to the EIA, National Grid has set itself a target of delivering 10% biodiversity net gain (BNG) with environmental and societal benefits on all construction</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		projects, meaning that as a result of measures taken, the biodiversity rating of the area will be enhanced by 10% greater than prior to the construction of the Project. The BNG target for the Project is currently voluntary and aligned with our corporate sustainability commitment.				
10-22.75	Suggest that areas other than the AONB should be protected / Criticism that only the AONB has been considered	<p>National Policy Statement (NPS) EN-5 states that the Government considers overhead lines to be appropriate and acceptable in most instances, although it recognises that there may be, at particularly sensitive locations, potential adverse landscape and visual impacts of overhead line infrastructure that make it inconsistent with our duties and relevant planning policy.</p> <p>The National Landscape designation is one such location where there is a presumption that underground cable technology is adopted with the extent of underground cabling extending beyond the boundary in response to the potential for the Project to affect National Landscapes. Our proposals include a total of approximately 20 km of underground cable through and in the vicinity of the Dedham Vale National Landscape, including a section at Great Horkesley to reduce the changes in views and setting of the National Landscape from within and adjacent to its designated boundary.</p> <p>Underground cabling is also proposed for short sections near Fairstead and North Tilbury</p> <p>The higher cost of underground cables to bill paying consumers, and the environmental implications of installing underground cables and maintaining them</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>elsewhere, are not considered to be justifiable in the context of national policy or National Grid's statutory duties, which include the need to be economic and efficient</p> <p>A Landscape and Visual Impact Assessment (LVIA), presented in ES Chapter 13: Landscape and Visual (document reference 6.13), has been undertaken as part of the Environmental Impact Assessment (EIA). The LVIA sets out potential effects on landscape and visual receptors.</p>				
10-22.76	Concern that the Project will impact conservation area	<p>The potential for the Project to affect the setting and significance of Conservation Areas has been comprehensively assessed in accordance with established best practice and guidance such as Good Practice Advice Note 3: The Setting of Heritage Assets (Historic England, 2017) and other relevant policy and guidance such as Conservation Principles (Historic England, 2008) and relevant planning policies including the Overarching National Policy Statement for Energy (EN-1).</p> <p>The assessment methodology and its application have been discussed with and agreed by key heritage stakeholders, including Historic England and relevant local planning authorities, through the Scoping process and subsequent thematic working group meetings. This collaborative approach has ensured that the assessment is robust, proportionate, and in line with expectations.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Each Conservation Area potentially affected by the Project has been individually assessed for both direct and indirect effects, including impacts arising from change to setting. These assessments are presented in Chapter 11: Historic Environment of the Environmental Statement (document reference 6.11), supported by detailed mapping and analysis in Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1). The methodology considers all relevant aspects of significance, including historical, architectural, and evidential values, as well as the contribution of setting to that significance.</p> <p>Where adverse effects on the setting of Conservation Areas have been identified, the Project has sought to reduce these through route refinement and design evolution. This includes, where appropriate, adjustments to pylon locations, alignment shifts, and the development of mitigation proposals in the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5).</p> <p>We are therefore confident that the assessment of impacts on Conservation Areas has been carried out to a high standard and that appropriate measures have been taken to mitigate any identified adverse effects.</p>				
10-22.77	Concern about the impact of the Project on flooding	A detailed Flood Risk Assessment (FRA) has been prepared (document reference 7.9). The FRA assesses flood risk to the Project and the impacts that the Project's construction and operation would have on flood	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		risk from a wide range of sources. The assessment has been informed by a wide range of data sets, including the January and March 2025 data from the Environment Agency, and by engaging with the Environment Agency and all of the relevant Lead Local Flood Authorities and Drainage Boards. The FRA (document reference 7.9) has identified a range of controls and mitigation measures to prevent flood risk impacts, which have been secured through a range of commitments set out in the Outline Code of Construction Practice (document reference 7.2). The FRA (document reference 7.9) also describes the measures and strategy that would be put in place to manage surface water runoff arising from Project construction worksites and operational infrastructure.				
10-22.78	Suggest that the Project shows consideration for important peat soils where it crosses the river waveney through the WaLOR project area	Detailed peat surveys were undertaken where the Project crosses the Waveney Valley which confirmed the presence of organic-rich (peaty) soils. The results are presented in full in Appendix 6.1: Agricultural Land Classification (ALC) Report (document reference 6.6.A1) and the impacts of the project on organic-rich soils are assessed in Chapter 6: Agriculture and Soils (document reference 6.6) of the Environmental Statement (ES).			X	
10-22.79	Suggest that National Grid require Land Drainage Consent, including but not limited to: - Byelaw 3: Discharge of water to a watercourse	Any works with the potential to affect the floodplain or flow regime of a main river would be subject to consent under the Environmental Permitting (England and Wales) Regulations 2016. Powers to undertake works with potential to impede land drainage or the flow regime	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<ul style="list-style-type: none"> - Section 23: Land Drainage Act 1991 / Byelaw 4: Alteration of a watercourse - Byelaw 10: Works within 9 meters of an arterial watercourse - Byelaw 6: Diversion of flows 	of any ordinary watercourse would be within the draft DCO (document reference 3.1), following agreement of protective provisions with the land drainage authorities.				
Financial compensation						
10-22.80	Concern that the Project will devalue property / impact on property value in this section / Concern that the project will impact on being able to sell property	<p>National Grid acknowledges that its proposals may cause concern to landowners. Diminishment of property value known as 'injurious affection' and any other appropriate heads of claim would be considered on an individual basis in accordance with current legislation. We would pursue a voluntary agreement with affected landowners, acquiring rights in accordance with our Land Rights Strategy (the strategy is subject to review). If a voluntary agreement cannot be reached, then the Compulsory Purchase Code allows for a claim of compensation for the loss that property owners may have suffered as a direct result of the retained part of your property ownership being worth less as a direct result of the works.</p> <p>If there are any specific concerns about the devaluation of property, National Grid would advise seeking third party advice. or alternatively please contact the Project team:</p> <p>Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD.				
10-22.81	Request for adequate financial compensation / Suggest that impacted individuals need to be compensated	<p>All affected landowners would be compensated for any temporary/permanent losses, and this would be dealt with on a case-by-case basis in line with the Compensation Code.</p> <p>If there are any specific concerns requiring compensation and how it would be assessed, please contact the Project team:</p> <p>Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.</p> <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD</p> <p>The Government has published its guidance on community funds for transmission infrastructure (DESNZ, 2025). National Grid is committed to working with Ofgem, industry partners, local communities and their representatives to ensure community benefits are delivered fairly and effectively, driving lasting, positive change for the people and places integral to our developing electricity network.</p> <p>Government has also announced its plans to introduce a bill discount scheme for households within 500 m of new</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>infrastructure, which it proposes to introduce through the Planning and Infrastructure Bill. This is evolving government policy. Government expects this scheme to be in place by 2026 and we would share further details as they emerge.</p> <p>National Grid is committed to providing a coordinated local and regional approach to community benefits. This would be delivered outside the development consent process, since this is not a material consideration in the decision on the proposed Project or a matter to be secured as part of the DCO, as per the Community Funds for Transmission Infrastructure: Guidance (DESNZ, 2025).</p>				
10-22.82	Request that National Grid purchase respondent's property / business	<p>National Grid is not required to purchase any properties or businesses as part of the Project.</p> <p>National Grid compensates landowners in line with the compensation code and any other relevant legislation.</p>			X	
Health, Safety & Wellbeing						
10-22.83	Concern that the Project may result in a negative impact on mental health / wellbeing	<p>National Grid recognises people may have concerns about the health effects of living close to an overhead line, and that the uncertainty whilst the proposals are developed may cause anxiety.</p> <p>We have sought to reduce potential effects on communities and residents through routing and design. We have also sought to reduce concern or uncertainty about the proposals through making timely design</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>decisions and engaging with the people and stakeholders throughout the development of the Project.</p> <p>The Project team will continue to engage with people potentially affected during progress of the Project, through regular communication including letters, phone calls and meetings. This would enable concerns to be raised and discussed at an early opportunity and provide a regular point of contact to respond to queries and concerns.</p> <p>We urge anyone with concerns to get in touch through the Norwich to Tilbury Freephone number, address or email throughout the progress of the Project:</p> <p>Call our Community Helpline: 0800 915 2497 (Lines are open Monday to Friday 9:00am – 5:30pm)</p> <p>Email us: contact@n-t.nationalgrid.com</p> <p>Write to us: FREEPOST N TO T (No stamp or further address details are required)</p> <p>The UK has a carefully thought-out set of policies for protecting us all against Electric and Magnetic Fields (EMFs), the main component of which is exposure guidelines. Those exposure guidelines are set by independent scientific bodies and are based on decades-long studies into the effects of EMFs and ill health. After those decades of research, the weight of evidence is against there being any health risks of EMFs below the guideline limits. These policies are incorporated into the decision-making process for Development Consent in National Policy Statement</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		(NPS) EN-5. It is National Grid's policy to ensure that all of its equipment comply fully with those exposure limits.				
10-22.84	Concern about health risks associated with the Project / physical health risks associated with the Project	<p>Health considerations are given a high priority in the process by which we arrive at any proposals for new electricity circuits. Assessment of compliance with Electric and Magnetic Field (EMF) guidelines and policies is key to National Grid's approach. The UK has a carefully thought-out set of policies for managing EMFs. There have been over four decades of research looking into whether EMF can cause health effects and there are no established effects below the exposure limits. When designing our overhead lines, substations and underground cables design criteria, we ensure they would not exceed those exposure limits, even when operating at 100% capacity. Additionally, the precautionary measures which the Government have adopted, are applied to the design which ensure the EMFs reduce as quickly with distance as possible. Evidence of that compliance is presented in the Electric and Magnetic Field Compliance Report (document reference 7.8) submitted as part of the Development Consent Order (DCO) application.</p> <p>National Grid takes this issue very seriously and look to authoritative and independent scientific organisations such as the World Health Organisation (WHO) and in the UK Health Security Agency (UKHSA) to review the worldwide body of scientific evidence on health. Important decisions on health are taken independently of</p>			X

		industry, and National Grid have followed the guidance and policies adopted by Government on advice from their scientific experts. Each of these organisations have comprehensive reviews of EMF research available to view on their websites.				
10-22.85	Concern that the Project poses a safety risk to aircraft (including balloons) in the area / Concern that the Project will impact airfields in this area	<p>National Grid recognises the need for the Project to be developed collaboratively alongside aviation stakeholders to identify, assess, and as appropriate mitigate, adverse impacts on aviation safety, in accordance with Government's Overarching National Policy Statement (NPS) EN-1.</p> <p>Our review of aerodromes potentially impacted by the Project identified 17 civil aerodromes (including two helipads) within 5 km of the preferred corridor and one military site (Wattisham Flying Station). We have also considered other airfields and flight activities where these have been identified through the 2022 and 2023 non-statutory, statutory consultation and targeted consultations including for ballooning and for model flying. As well as considering feedback, National Grid's aviation advisers (an independent aviation consultancy) have directly engaged with these parties (with National Grid present).</p> <p>A number of route alignment and pylon positioning changes have been made following consideration of feedback and in all but one case the assessment concludes that the airfields can continue to operate. In the remaining case of a private airstrip near Little</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Burstead, we continue to liaise with the operator to identify an appropriate solution.</p> <p>Specifically in respect of Wattisham Flying Station our proposals position the alignment onto relatively lower ground (to remove the potential for interference with Instrument Landing System (ILS) radar) and adopt an alignment closer to the existing 132 kV overhead line and include replacing part of the 132 kV line south of Offton by underground cable to avoid a new overhead line corridor being introduced.</p> <p>We will continue to engage with relevant parties as appropriate.</p> <p>Further information on the assessment of airfields can be found in the Environmental Statement (ES) (see ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and ES Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2)).</p>				
Heritage						
10-22.86	Concern about archaeological impacts	Through routeing and siting National Grid has sought to reduce as far as practicable potential impacts on the historic environment. The impacts of the Project on the historic environment are assessed in Chapter 11: Historic Environment of the Environmental Statement (ES) (document reference 6.11). The assessment considers the potential impact on archaeology, historic buildings and historic landscapes and includes			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		assessment of potential for physical impact, impact through change to setting that affects the value of a heritage asset and impact through indirect factors such as change in hydromorphology. The assessment is supported by walkover, setting and geophysical surveys, as documented in Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1) and Appendix 11.4: Geophysical Survey Results Report (document reference 6.11.A4). Archaeological trial trench evaluation has also been undertaken and is reported in Appendix 11.5: Trial Trenching Results Report (document reference 6.11.A5). In addition to the proposals in the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4), the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5) sets out appropriate mitigation for the historic environment. The Project has engaged with Historic England and relevant planning authorities on aspects relating to heritage, including appropriate mitigation measures and techniques and to take their views into account during Project development which are detailed in ES Chapter 11: Historic Environment (document reference 6.11).				
10-22.87	Concern about negative impact on heritage / Suggest that the Project should be routed away from heritage buildings / listed buildings / historical site	Through routing and siting National Grid has sought to reduce as far as practicable potential impacts on the historic environment. The impacts of the Project on the historic environment are assessed in Chapter 11: Historic Environment (document reference 6.11) of the	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Environmental Statement (ES). The assessment considers the potential impact on archaeology, historic buildings and historic landscapes and includes assessment of potential for physical impact, impact through change to setting that affects the value of a heritage asset and impact through indirect factors such as change in hydromorphology. The assessment is supported by walkover, setting and geophysical surveys, as documented in Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1) and Appendix 11.4: Geophysical Survey Results Report (document reference 6.11.A4). In some areas archaeological trial trench evaluation has been undertaken and is reported in Appendix 11.5: Trial Trenching Results Report (document reference 6.11.A5). In addition to the proposals in the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4), the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5) sets out appropriate mitigation for the historic environment. The Project has engaged with Historic England and relevant planning authorities on aspects relating to heritage, including appropriate mitigation measures and techniques. and to take their views into account during Project development.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Mitigation						
10-22.88	Suggest mitigation measures	<p>An Environmental Statement (ES) (document reference Volume 6: Environmental Statement) has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 ('the Infrastructure EIA Regulations'). The ES identifies and assesses the likely significant effects on the environment resulting from the construction, operation (and maintenance) of the Project and recommends appropriate mitigation to reduce effects.</p> <p>Environmental mitigation measures have been defined within each environmental topic chapter and set out in relevant management documents submitted with the Development Consent Order (DCO) application, including the Outline Code of Construction Practice (CoCP) (document reference 7.2), the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5).</p>		X	X	
PROW (Public Right of Way)						
10-22.89	Concern about negative impact on Public Rights of Way (PROW) / footpaths / cycle paths / bridleways	Through routeing and siting, National Grid has sought to reduce, as far as practicable, impacts and disruption to Public Rights of Way (PROW).			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>The iterative design process identified the existing PRow network and their wider connectivity and sought where practicable to reduce and where possible remove impacts to PRow.</p> <p>Effects on PRow would be mitigated where possible, maintaining access where practicable, with closures as a last resort. We will continue to engage with relevant stakeholders on the PRow network to enable feedback and input to be considered as the Project progresses. An Outline Public Rights of Way Management Plan (document reference 7.6) is submitted with the Development Consent Order (DCO) application.</p>				
Requests						
10-22.90	Request for further impact surveys in this section	<p>National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project. The assessment is informed by a suite of field surveys and desk studies and results are presented in an Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the application for development consent. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation (and maintenance) of the Project and recommends appropriate mitigation measures to reduce potential adverse impacts.</p> <p>The scope of the EIA is included in the Scoping Report (document reference 6.19) which was submitted to the Planning Inspectorate in November 2022 and their</p>		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Scoping Opinion (document reference 6.20) received in December 2022. This provided the opportunity for statutory bodies to comment on the scope of the EIA which included our approach on study areas, data collection and baseline conditions for a range of environmental topics. We also discussed and agreed survey scope with stakeholders (including Statutory Environmental Bodies and Local Planning Authorities) following the Scoping Opinion (document reference 6.20) to ensure a robust baseline assessment.</p> <p>National Grid has prepared an Outline Code of Construction Practice (CoCP) (document reference 7.2) which sets out the required mitigation measures and environmental commitments that would be implemented during the construction phase of the Project to avoid or reduce potential effects of the Project on the environment, including commitments to undertake further surveys.</p>				
Tourism						
10-22.91	Concern about impact of the Project on tourism	<p>Through routeing and siting, National Grid has sought to avoid, as far as practicable, locations important for leisure and tourism.</p> <p>Environmental Statement (ES) Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) presents an assessment on the potential impacts on tourism economy (during construction) and tourism assets (during construction and operation),</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		including visitor accommodations. As part of this assessment, a range of measures have been considered throughout the construction phase of the Project to minimise disruption on tourism. These include: traffic management, signage and routeing measures. These are identified within the ES Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15), the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).				
Visual impact						
10-22.92	Concern that the Project will be unsightly / visually intrusive (including overhead lines, Cable Sealing End Compounds (CSE compounds) and substations) / Concern that the Project will cause a negative impact on views	National Policy Statement (NPS) EN-5 makes it clear that the Government considers overhead lines to be appropriate and acceptable in most instances, although it recognises that that there may be, at particularly sensitive locations, potential adverse landscape and visual impacts of an overhead line that make it inconsistent with our duties and relevant planning policy. The Dedham Vale National Landscape (previously an Area of Outstanding Natural Beauty (AONB)) designation is one such location where underground cable technology is proposed with the extent of underground cabling extending beyond the boundary in response to the potential for the Project to affect the National Landscape. Our proposals include a total of approximately 20 km of underground cable through and	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>in the vicinity of the Dedham Vale National Landscape, including a section at Great Horkesley to reduce the changes in views and setting of the National Landscape from within and adjacent to its designated boundary.</p> <p>Underground cabling is also proposed for a short section of 400 kV overhead line crossing near Fairstead.</p> <p>Cable Sealing End (CSE) compounds are required to facilitate sections of underground cable. The proposed East Anglia Connection Node (EACN) substation is required to connect customers and the proposed Tilbury North Substation is required to connect the Project into the existing Tilbury Substation These components have been carefully sited taking into consideration Horlock Rules including the potential for landscape and visual effects.</p> <p>The higher cost of underground cables to bill paying consumers, and the environmental implications of installing underground cables and maintaining them at locations outside the Dedham Vale National Landscape, are not considered to be justifiable in the context of national policy or National Grid's statutory duties, which include the need to be economical and efficient.</p> <p>A Landscape and Visual Impact Assessment (LVIA), presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13), has been undertaken as part of the Environmental Impact Assessment (EIA). The LVIA includes an</p>

		<p>assessment on both landscape character and visual amenity.</p> <p>Landscape mitigation is proposed within Environmental Areas around substations and CSE compounds. The Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) includes details regarding the planting proposals.</p>				
Waveney Valley Alternative						
10-22.93	Criticism that National Grid are not proceeding with the Waveney Valley Alternative (the underground option) / Suggest the Waveney Valley Alternative (the underground option)	National Grid has considered the justification for the use of underground cable for the crossing of the Waveney Valley. The starting presumption in National Policy Statement (NPS) EN-5 paragraph 2.9.20 in a location such as the Waveney Valley which, although valued is not designated, is that overhead line is the appropriate 400 kV connection technology. We have also considered whether the effects from the overhead line are at a level that engages other parts of NPS EN-5 (such as paragraph 2.9.23) to prompt consideration of whether the benefits of undergrounding outweigh any extra economic, social or environmental impacts. At the Waveney we conclude that the benefits from a change to underground cable, do not justify the additional cost that would be incurred. The use of underground cable would lead to a lowering of effects on the setting of the Grade I Listed St Remegius Church, albeit the effects of progressing with an overhead line are assessed as less than substantial harm and don't themselves require a change in technology. In terms of community effects,	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>existing trees would provide some screening and filtering of views of an overhead line for those in residential areas and on recreational routes. A change from overhead line to underground cable would reduce these community effects but bring disbenefits, most notably increased ecological effects from installation within peaty soils and increased technical risk to cable integrity from the WaLOR channel naturalisation and landscape recovery plans. Conversely there may be compromise to the WaLOR project by measures to ensure cable integrity. After consideration of the decision making guidance at paragraph 2.9.25 of NPS EN-5, National Grid concludes that whilst effects from overhead lines to individual receptors may be significant in Environmental Impact Assessment (EIA) terms they do not justify the potential for compromise to the WaLOR project, the effects on peaty soils which would arise with an underground cable design nor justify the expected cost of an underground cable design. On this basis, National Grid concludes that the use of an overhead line should be taken forward for the crossing of the Waveney Valley. Prior to making this decision we had considered whether requests to relocate the Cable Sealing End (CSE) compounds and extend the cable both to the north and the south may alter the decision making balance. Such extensions would bring benefits to various residential receptors but with the additional cost of longer length of cables. We conclude that given the absence of any designated status pertinent to NPS EN-5, and the extent</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		to which some views from residential areas are filtered and screened and lower the level of adverse effects from the overhead line, we do not consider the additional cost associated with extending the underground cable would be justified.				
10-22.94	Request for the Waveney Valley Alternative to be included in Targeted Consultation (e.g. including the areas of Roydon Fen and Wortham Ling SSSI) / Criticism that the Waveney Valley Alternative has not been included in the Targeted Consultation (e.g. despite the area immediately adjacent to Palgrave and Mellis having a consultation referenced Suffolk 1)	National Grid held targeted consultations in areas where we needed further information or feedback on proposed changes. We were not proposing any changes to the overhead line route consulted presented at our statutory consultation in summer 2024. We carefully considered the feedback we received from the public, stakeholders and the findings of our ground investigations and environmental surveys in the area. Based on this, we decided to take forward an overhead line.	X	X	X	
Wildlife / Ecology impact						
10-22.95	Concern about impact of the Project on birds	Chapter 8: Ecology and Biodiversity of the Environmental Statement (ES) (document reference 6.8) considers potential impacts during the construction and operational phase of the Project on birds. Bird surveys have been undertaken across the route between 2022-2025 to determine an accurate baseline value, the scope of which has been agreed with Natural England and Local Planning Authorities. The potential for bird collision risk impact during the operational phase has been assessed within the ES and Habitat Regulations Assessment Report (HRA) (document reference 5.3) and agreed with Natural England. Survey results have			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>identified no areas of significant bird collision risk across the Project.</p> <p>It is noted that birds are a mobile species, and it is likely that active nests for common and widespread species may be encountered during the construction phase. Precautionary working methods for breeding birds are included within the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the Outline Landscape Ecological Management Plan (LEMP) (document reference 7.4) accompanying the Development Consent Order (DCO) application.</p>				
10-22.96	Concern that the Project will result in a negative impact on species (protected status not specified)	<p>Through routeing, siting and detailed design National Grid has sought to reduce, as far as practicable, potential impacts on biodiversity including protected species. The design process has taken account of existing biodiversity, the natural environment and, where practicable, has sought to reduce impacts on areas of ecological sensitivity including protected species and their associated habitats, through avoidance or mitigation. A comprehensive survey effort for a range of protected species was completed over the 2023 – 2025 period. Chapter 8: Ecology and Biodiversity of the Environmental Statement (ES) (document reference 6.8) assesses the effects on protected species based on this baseline information and where/if required appropriate mitigation measures are detailed. Suitable mitigation for protected species has been developed in consultation with Natural England to ensure legal compliance and</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		best practice guidelines are adhered to. Where necessary, draft licence applications have been drafted and National Grid is in the process of agreeing the detail within the licence documents with Natural England, in order to obtain the relevant Letters of No Impediment (LoNI). Mitigation for non-licensable protected species has been included within the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4).				
10-22.97	Concern that the Project will result in a negative impact on protected species	Through routeing, siting and detailed design, National Grid has sought to reduce, as far as practicable, potential impacts on biodiversity including protected species. The design process has taken account of existing biodiversity, the natural environment and, where practicable, has sought to reduce impacts on areas of ecological sensitivity including protected species and their associated habitats, through avoidance or mitigation. A comprehensive survey effort for a range of protected species was completed over the 2023 – 2025 period. Chapter 8: Ecology and Biodiversity of the Environmental Statement (ES) (document reference 6.8) assesses the effects on protected species based on this baseline information and where/if required appropriate mitigation measures are detailed. 		within the licence documents with Natural England, in order to obtain the relevant Letters of No Impediment (LoNI). Mitigation for non-licensable protected species has been included within the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4).				
10-22.98	Concern that the Project will have a negative impact on bees / Bees will be unable to navigate under high voltage overhead lines	<p>As well as possible effects on humans, possible effects of Electric and Magnetic Fields (EMFs) on various animals have been studied a number of times. No proven effects of EMFs have been found in any species at levels below the guidelines. This is confirmed in National Policy Statement (NPS) EN-5 which states: 'There is little evidence that exposure of crops, farm animals or natural ecosystems to transmission line EMFs has any agriculturally significant consequences.'</p> <p>Beehives can become charged if directly under an overhead line because of the electric field it produces. For existing overhead lines, this can be eliminated by screening or earthing the hive, but for new overhead lines, embedded design measures and careful routing would avoid any potential effects. There does not seem to be evidence of EMFs adversely affecting bees directly. In the United States of America, the strip of land along power lines has been shown to be particularly attractive to bees, with these areas being utilised by commercial bee farms. Additionally, National Grid has worked with the British Beekeeping Association to</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		establish hives around our sites, including high voltage substations, which have thrived.				
10-22.99	Concern that the Project will result in a negative impact on flora / plants / woodlands / hedgerows	<p>Through routeing, siting and detailed design, National Grid has sought to reduce, as far as practicable, potential impacts on biodiversity including priority grassland, wetland, woodland, and hedgerow habitats. The design process has taken account of existing biodiversity, the natural environment and, where practicable, seeks to reduce impacts on areas of ecological sensitivity, through avoidance or mitigation.</p> <p>Chapter 8: Ecology and Biodiversity of the Environmental Statement (ES) (document reference 6.8) assesses the effects on important ecological receptors (which includes protected plants, woodlands and hedgerows).</p> <p>As part of the Environmental Impact Assessment (EIA) process for the Project, a suite of ecological surveys has been to be undertaken. The findings of which inform the design and approach to mitigation.</p> <p>The Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Code of Construction Practice (CoCP) (document reference 7.2) contain a list of relevant good practice measures to avoid or reduce impacts on valuable habitats.</p> <p>The Environment Act 2021 introduces a mandatory requirement for 10% Biodiversity Net Gain (BNG) for new Development Consent Order (DCO) developments</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>(which is not yet in force and not expected until May 2026). National Grid have committed to delivering 10% BNG with environmental and societal benefits on all construction projects. The BNG target for the Project is currently voluntary and aligned with our corporate sustainability commitment.</p> <p>As well as seeking to avoid and minimise impacts to nature, the Project considers the land required for mitigation, compensation and enhancement that can deliver BNG and wider environmental benefits. This will require delivery of offsite Biodiversity Units via habitat creation or enhancement actions in strategic areas, and we will consider all offsite options that are available to us.</p>				
10-22.100	Concern that the Project will result in a negative impact on rivers / other bodies of water	<p>Through routeing, siting and detailed design National Grid has sought to reduce, as far as practicable, potential impacts on biodiversity including river ecology. The design process has taken account of existing biodiversity, the natural environment and, where practicable, has sought to reduce impacts on areas of ecological sensitivity such as river corridor habitats, through avoidance or mitigation. The same approach has been taken to account for rivers and their floodplains, seeking to avoid or reduce the footprint of the Project within floodplains.</p> <p>As part of the Environmental Impact Assessment (EIA) process for the Project, a suite of ecological surveys has been undertaken, including along river corridors. The</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>data has informed the assessment of effects on biodiversity, hydromorphology, water quality and flood risk presented in the Environmental Statement (ES), Chapter 8: Ecology and Biodiversity (document reference 6.8) and ES Chapter 12: Hydrology, Land Drainage and Flood Risk (document reference 6.12) and the Water Framework Directive Assessment (document reference 7.10).</p> <p>Further, the Project has engaged with Natural England, the Environment Agency and Local Planning Authorities on aspects relating to river ecology, water quality and flood risk, and appropriate mitigation measures and techniques have been secured, as detailed in the Outline Code of Construction Practice (CoCP) (document reference 7.2).</p> <p>The Environment Act 2021 introduces a mandatory requirement for 10% Biodiversity Net Gain (BNG) for new Development Consent Order (DCO) developments (which is not yet in force and not expected until May 2026). Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Gain target for the Project is currently voluntary and aligned with our corporate sustainability commitment. As well as seeking to avoid and minimise impacts to nature, the Project considers the land required for mitigation, compensation and enhancement that can deliver BNG and wider environmental benefits. This would require delivery of offsite Biodiversity Units via habitat creation or enhancement actions in strategic areas, and we will consider all offsite options that are available to us.				
10-22.102	Suggest ecological enhancements as part of the Project	The Environment Act 2021 introduces a mandatory requirement for 10% Biodiversity Net Gain (BNG) for new Development Consent Order (DCO) developments (which is not yet in force and not expected until May 2026). National Grid has committed to delivering 10% BNG with environmental and societal benefits. The Net Gain target for the Project is currently voluntary and aligned with our corporate sustainability commitment. As well as seeking to avoid and minimise our impacts to nature the Project considers the land required for mitigation, compensation and enhancement that can deliver BNG and wider environmental benefits. This would require delivery of offsite Biodiversity Units via habitat creation or enhancement actions in strategic areas, and we would consider all offsite options that are available to us.		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-22.103	Concern that the Project will impact trees covered by Tree Preservation Orders / Tree Protection Orders	<p>The Project has carefully considered the impact on trees covered by Tree Preservation Orders (TPOs). The Environmental Statement Appendix 13.6: Arboricultural Impact Assessment (AIA) (document reference 6.13.A6) provides details of the TPOs impacted by the scheme together with Schedule 14: Trees Subject to TPOs of the draft Development Consent Order.</p> <p>Arboricultural mitigation measures including trees with TPOs are set out within the Outline Code of Construction Practice (CoCP) (document reference 7.2) and in the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4).</p> <p>The Arboricultural Clerk of Works will monitor works conducted by a suitably qualified and experienced arborist to trees / within proximity to all retained trees, including trees under Tree Preservation Orders and veteran trees, to ensure relevant control measures are in place to protect retained trees.</p> <p>National Grid has committed to a 3:1 replacement for individual trees and individuals trees within small groups. The Project will prioritise the replanting for individual trees and small groups of individual trees within the Order Limits, offsite provision may however be required. Details of the onsite tree planting will be provided in accordance with the final LEMP or the Reinstatement Planting Plan secured in the draft DCO (document reference 3.1).</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-22.104	Criticism of the term 'previously cleared woodland' when the this is not the case	National Grid notes the respondent's feedback. The area of woodland referred to as 'previously cleared' is the area proposed for the haul road. The area of woodland was previously cleared a number of years ago and has since been left to regenerate and is therefore a section of woodland of lesser value than others in this area. The haul road in this area has been narrowed to reduce the amount of area required, with the purpose of avoiding impacts to the more established trees to the edge of the woodland. We are also proposing to use trackway through this woodland in order to reduce impacts on tree roots where possible.	X		X	
10-22.105	Criticism that veteran oak trees will be destroyed by the project despite the fact the new alignment will miss some the oak trees	Appendix B: Ancient Woodland and Veteran Tree Strategy of the Outline Landscape and Ecology Management Plan (LEMP) (document reference 7.4) has been submitted with the application. This document details the measures that will be implemented to avoid, minimise, mitigate and compensate the ancient and/or veteran features likely to be impacted during construction and operation.			X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Community / Social impact						
10-23.1	The Norfolk 1 realignment conflicts with application 2024/3750 for the development of a 400 MW Energy Storage System, including a 132-400 kV substation and associated infrastructure at Hall Farm, Land North of Hickling Lane, Swainsthorpe Norfolk, NR14 8DS. It is expected that National Grid takes this into consideration and liaises with the developer, as it is likely a decision on this application will be made by this summer	Only in the event the Hall Farm Energy Storage Project doesn't progress would Norwich to Tilbury utilise the most eastern part of the Order Limits south of Norwich Main Substation which utilises land parcels identified by Innova within their planning application. The eastern most corridor is potentially preferred by the Project in the event Hall Farm Energy Storage project doesn't proceed. If the Hall Farm Energy Storage project proceeds as planned, then Norwich to Tilbury will utilise the most western part of the Order Limits south of Norwich Main Substation. National Grid will continue to liaise with the developer for timely awareness of the energy storage facilities project progression.		X	X	
Consultation						
10-23.2	Criticism of consultation materials on this change (Norfolk 1)	National Grid notes the respondent's feedback. For each of our targeted consultations we developed an overview leaflet and Environmental Implication of Change (EIC) document. These were sent to properties within the bespoke consultation zone for the relevant change. We			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		also published a consultation strategy and overview map. All these documents remain available on the Project website. The information provided at the targeted consultations was considered proportionate to the changes being consulted upon.				
Design Change (CR)						
10-23.3	Oppose the proposed change - Norfolk 1 (generally)	National Grid notes the respondent's feedback.			X	
10-23.4	Support the proposed change - Norfolk 1 (generally)	National Grid notes the respondent's feedback.			X	
10-23.5	Criticism that the proposed location of the temporary construction lay down areas, as they are in areas of higher archaeological potential and closer to the site of the deserted settlement of Bowthorpe	The settlement of Bowthorpe lies beyond the defined study area and therefore falls outside the scope of our historic environment assessment; as such, it is not included in the Baseline Report or any associated documentation.		X	X	
Environmental impact						
10-23.6	Concern that there has not been clarity on how the Environment Area around Norwich Main will be delivered - part of the strategy to compensate for habitat loss / deliver Biodiversity Net Gain	<p>An illustrative landscape plan for the Norwich Main Substation Environmental Area has been drafted and details on the planting proposals is included within the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4). This area will be owned in the long-term by National Grid, and habitats within these areas will be managed by National Grid's land and properties team.</p> <p>Further details on the proposed habitat creation and enhancement around Norwich Main Substation, as</p>		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		relevant to the Biodiversity Net Gain assessment, has been included within the Biodiversity Net Gain Report (document reference 7.1).				
Requests						
10-23.7	Request that National Grid investigate potential interaction with renewable projects so there is no issue with compensation levels being claimed if in future the renewable proposals are delayed or halted by the proposed National Grid works	National Grid has consulted with all known renewable schemes, including those existing and in the planning process. If the Project interacts with these schemes and causes any losses, then National Grid would compensate the relevant party in line with the compensation code, and on submission of a justified claim.			X	

Norfolk 2 Change feedback (Targeted Consultation)

Table 10-24 Summary of consultee comments and National Grid's response

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Community / Social impact						
10-24.1	Suggest National Grid provide community benefits in the form of alternative land or funding for the South Norfolk Model Aeroplane Club	<p>National Grid notes the respondent's feedback. South Norfolk Model Airplane Club is not affected by the Project so there is no requirement to provide alternative land or funding for the club.</p> <p><i>The Government has published its guidance on community funds for transmission infrastructure (DESNZ, 2025). National Grid is committed to working with Ofgem, industry partners, local communities and their representatives to ensure community benefits are delivered fairly and effectively, driving lasting, positive change for the people and places integral to our developing electricity network.</i></p> <p><i>Government has also announced its plans to introduce a bill discount scheme for households within 500 metres of new infrastructure, which it proposes to introduce through the Planning and Infrastructure Bill. This is evolving government policy. Government expects this scheme to be in place by 2026 and we will share further details as they emerge.</i></p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<i>National Grid is committed to providing a coordinated local and regional approach to community benefits. This will be delivered outside the development consent process, since this is not a material consideration in the decision on the proposed Project or a matter to be secured as part of the Development Consent Order (DCO), as per the Community Funds for Transmission Infrastructure: Guidance (DESNZ, 2025).</i>				
Consultation						
10-24.2	Criticism of consultation materials on this change (Norfolk 2)	<p>National Grid notes the respondent's feedback regarding tourism and surface water and considered this in the development of our proposals.</p> <p>For each of our targeted consultations we developed an overview leaflet and Environmental Implication of Change (EIC) document. These were sent to properties within the bespoke consultation zone for the relevant change. We also published a consultation strategy and overview map. All these documents remain available on the Project website. The information provided at the targeted consultations was considered proportionate to the changes being consulted upon.</p> <p>The maps we produced used data from the latest OS mapping software; however we are aware that some local landmarks and developments might not be fully shown on these maps. We use a wide range of sources when developing our proposals to ensure thorough knowledge of the local area and how our proposals</p>		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>might impact communities. We apologise for any confusion caused by data shown on the maps and had a dedicated phonenumber and email address if anyone had questions about the documents produced or the proposed changes.</p> <p>For each targeted non-statutory consultation area (including Norfolk 2), we developed a bespoke consultation zone to include nearby properties which are likely to be affected. These were created following the principle that each consultation zone should be appropriate and proportionate in relation to the type and potential impact of the change.</p>				
10-24.3	<p>The loss of veteran trees as a result of the Norfolk 2 changes is not supported by the respondent, however should National Grid decide to pursue this change the DCO will need to:</p> <ul style="list-style-type: none"> - clearly set out why the reasons for the realignment are wholly exceptional (e.g. consideration as to the loss against reducing the impact on flying model aircraft, reducing impact on residential properties, and to follow field boundaries), and - provide details as to what the suitable compensation strategy will be 	<p>The survey data identifies one veteran tree within the Order Limits. This is not affected by the overhead line as designed but may fall within the potentially affected category if the design moves within the Limits of Deviation (LoD). Given the categorisation of the tree and the greater mitigation requirement the change within LoD that would affect the tree is not expected to happen. We have sought to position additional pylons on field boundaries but this is not possible for all pylons and may not relate to those of concern to the individual landowner. The model flying club is a legitimate interest and therefore appropriate as a consideration to routing as is reducing impacts on residential properties.</p>		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Design Change (CR)						
10-24.4	Oppose the proposed change - Norfolk 2 (generally)	National Grid notes the respondent's feedback.	X		X	
10-24.5	Support the proposed change - Norfolk 2 (generally)	National Grid notes the respondent's feedback.			X	
10-24.6	Concern about the impact of Pylon RG32 if the Norfolk 2 change is adopted (to mitigate impact on due to small farming business, farming operations, heritage)	<p>Chapter 6: Agriculture and Soils (document reference 6.6) of the Environmental Statement (ES) assesses the impacts of permanent land lost as a result of the Project (i.e., pylon footprints) on agricultural land, agricultural landholdings and soil resources. The Norfolk 2 change positions Pylon RG32 towards the centre of an arable field. The pylon footing covers a relatively small area of land proportional to the field size; therefore, the impacts on farming activities and agricultural yields should be small.</p> <p>National Grid has sought to minimise potential impacts on the historic environment, including non-designated assets such as Asset 4082, through strategic routeing and siting informed by statutory consultation feedback and archaeological investigations. The potential impacts of Pylon RG32, in the context of the Norfolk 2 change, have been assessed as part of the Environmental Statement (ES) Chapter 11: Historic Environment (document reference 6.11), which includes consideration of both physical impacts and effects on setting. This assessment is supported by a programme of field surveys, including geophysical and archaeological trial trenching, and appropriate mitigation measures are</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		outlined in the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5). The approach and findings have been developed in agreement with key heritage stakeholders.				
10-24.7	Suggest the Project at Norfolk 2 is re-routed as per plan provided by respondent (e.g. to mitigate the impact on modern farming methods, utilise lower ground level to minimise impact on views, to better align with the Holford rules, to be located as close to the field boundaries as possible, minimise impact on businesses, minimise impact on tourism, minimise impact on recreational activities, to minimise the impact on the local environment)	National Grid notes the respondent's feedback. The suggested route would take the alignment across the edge of Hapton Common County Wildlife Site, would move the alignment closer to properties at Fundenhall and would also take the alignment closer to South Norfolk Model Flying Club reintroducing potential interactions. We are therefore not proposing a further change to the alignment between RG27 and RG35. We have positioned pylons as close to field boundaries as possible to reduce impacts to agricultural operations where technically feasible whilst ensuring constructability of the Project.			X	
10-24.8	Concern over the impact of pylon RG33 due to the impact this will have on 400 year old Oak tree, known as the 'Stickfer Oak', All Saints Church, the Tacolneston Conservation Area and reduce the side of the Construction Laydown Area (which is greater than was required for the original proposal) / Suggest Pylon RG33 is moved back to mitigate impact on the 'Stickfer Oak', All Saints Church, the Tacolneston Conservation Area and reduce the side of the Construction Laydown Area	Arboricultural mitigation measures are set out within the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the Outline Landscape and Ecological Management Plan (document reference 7.4). An Ancient Woodland and Veteran Tree Strategy (Appendix B of the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4)) has been developed and will be submitted as part of the application. This document details the environmental measures that would be implemented to avoid,	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>minimise, mitigate and compensate for ancient and/or veteran features likely to be impacted by the Project. The assessment shows the tree outside of the pulling area and is likely to be retained with no tree surgery required for the construction phase.</p> <p>National Grid has worked to minimise potential impacts on designated heritage assets, including All Saints Church and the Tacolneston Conservation Area, through routeing and siting informed by consultation feedback and heritage assessments. The potential impacts of Pylon RG33 and the associated Construction Laydown Area have been assessed in Chapter 11: Historic Environment of the Environmental Statement (document reference 6.11), including impacts on setting. The design development has considered heritage sensitivities in this area, and the assessment is supported by walkover surveys, geophysical survey and archaeological trial trenching. Appropriate mitigation measures are set out in the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5). The assessment approach and mitigation strategy have been discussed and agreed with relevant heritage stakeholders.</p> <p>Assessment of Tacolneston Conservation Area (CA19) concludes a temporary minor adverse significance of effect on the asset during construction and a permanent negligible adverse significance of effect during operation. No additional mitigation measures are proposed during the construction phase as any</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>measures designed to lessen the visual impact of the Project would be of a scale that would visually adversely alter the setting of the asset.</p> <p>Assessment of Church of All Saints (1178820) concludes a temporary minor adverse significance of effect on the asset during construction and a permanent minor adverse significance of effect during operation. No additional mitigation measures are proposed during the construction phase as any measures designed to lessen the visual impact of the Project would be of a scale that would visually adversely alter the setting of the asset.</p>				
10-24.9	Suggest that Pylon RG36 is re-located to be as near as possible to the field edge to Cheney's Lane and the field corner with Cheney's Lane to the east (map provided by respondent)	National Grid notes the respondent's feedback. RG36 is positioned as close as possible to Cheney's Lane as possible while allowing for space for scaffolding required for construction and to maintain span lengths such that taller pylons are not required. We are not able to move RG36 to the corner of the field as this would introduce an angle pylon and would therefore be less consistent with the Holford Rules. We are therefore not proposing a change to the location of RG36.			X	
10-24.10	Suggest that Pylon RG37 is relocated south to the field boundary, and the haul road constructed as near to the pylon line as possible	National Grid notes the respondent's feedback. RG37 is positioned as close as possible to the field boundary. The haul road is also positioned as close to the alignment as possible while allowing for the working area around the pylon for construction. We are therefore not proposing to change the location of RG37 or the haul road at this location.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-24.11	Suggest track from Northfield Road to the haul road should not be used as an access road as agreed during the 2024 consultation	National Grid notes the respondent's feedback. The track from Northfield Road to pylon RG38 is proposed to be a permanent access and is only proposed to be used for future maintenance for RG38 and surveys if required and not for construction. No works are proposed to be undertaken to this track, utilising only the existing track and would only be used as an access for 4x4 vehicles. No further changes to the Project in this area are proposed.			X	
10-24.12	Suggest an alternative route at Norfolk 2, running the Project along the base of the valley and the pylons are nearer the field boundaries, on lower ground (as opposed to National Grids proposed alignment which runs on the higher ground to the West) reducing impact on modern farming methods, listed properties, visibility, the model aircraft club and any other aircraft in the area. Suggest proposed angle pylon adjoining Stickfer Lane is positioned on the North/West side of the meadows to allow access to the remainder of the meadows to the North/East (map provided by respondent)	National Grid has considered this alternative alignment. Whilst noting the respondent's position, National Grid considers the alternative proposed to be less direct with more changes of direction. The proximity to the watercourse brings in risks from proximity to flood zones and practical challenges for stringing with access across the watercourse required. It also is expected to oversail common land and appears closer to residential properties. Considered as a whole we balance this reduced consistency with the relevant aspect of the Holford Rules against the increased consistency with the other aspects of the Holford Rules (see Appendix I22 of this report). On balance we continue to prefer the Project alignment and therefore no change is proposed.			X	
10-24.13	Criticism the alignment has been changed to appease model aircraft enthusiasts at the detriment of Tacolneston residents (as it has moved closed to homes and businesses) and conservation area	It is acknowledged that the proposed change would bring the alignment closer to Low Barn Farm (a wedding venue). However, no change to the type of significance of socio-economics, recreation and tourism effects			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	which has unique historic buildings and Grade I listed church	<p>anticipated as a result of the proposed change when compared to the design and PEIR presented at statutory consultation.</p> <p>The proposed change is likely to benefit the users of the South Norfolk Model Flying Club where a 300 m buffer can be kept between the flight path and the overhead line for safety reasons.</p> <p>National Grid has worked to minimise potential impacts on designated heritage assets, including All Saints Church and the Tacolneston Conservation Area, through routeing and siting informed by consultation feedback and heritage assessments. The potential impacts of Pylon RG33 and the associated Construction Laydown Area have been assessed in Chapter 11: Historic Environment of the Environmental Statement (document reference 6.11), including impacts on setting. The design development has considered heritage sensitivities in this area, and the assessment is supported by walkover surveys, geophysical survey and archaeological trial trenching. Appropriate mitigation measures are set out in the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5). The assessment approach and mitigation strategy have been discussed and agreed with relevant heritage stakeholders.</p> <p>Assessment of Tacolneston Conservation Area (CA19) concludes a temporary minor adverse significance of effect on the asset during construction and a permanent</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>negligible adverse significance of effect during operation. No additional mitigation measures are proposed during the construction phase as any measures designed to lessen the visual impact of the Project would be of a scale that would visually adversely alter the setting of the asset.</p> <p>Assessment of Church of All Saints (1178820) concludes a temporary minor adverse significance of effect on the asset during construction and a permanent minor adverse significance of effect during operation. No additional mitigation measures are proposed during the construction phase as any measures designed to lessen the visual impact of the Project would be of a scale that would visually adversely alter the setting of the asset.</p>				
10-24.14	Suggest the alignment is moved further to the east towards the bottom edges of the arable fields running in line with the valley and meadows beside them as this would be more compliant with the Holford Rules and more practical for farming practices. This would also bring the pylons 20 meters lower than the current Norfolk 2 proposals and with the tree line and hills behind the visibility could be reduced by 35 meters improving the views from a wedding venue, houses and local campsite	National Grid has considered the suggested alignment. Whilst this change of route would slightly lower the position of the pylons in accordance with some of the Holford Rules, it would reduce consistency with other Rules by requiring additional angle pylons. It would also increase effects on residential amenity by passing closer to a greater number of properties, be slightly closer to a listed building, and would lead to some ecological effects on Hapton Common County Wildlife Site (CWS) (as vegetation management would be likely to be required). As such this was less preferred, and no change has been made.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-24.15	Suggest that the route is moved to the valley as the proposed change is set on higher ground with only a sky background making the route seen from miles away. Moving the route will make the pylons less visually obstructive and appear less in height	National Grid notes the respondent's feedback. The suggested route would take the alignment across the edge of Hapton Common County Wildlife Site, would move the alignment closer to properties at Fundenhall and would also take the alignment closer to South Norfolk Model Flying Club reintroducing potential interactions. We are therefore not proposing a further change to the alignment between RG27 and RG35. We have positioned pylons as close to field boundaries as possible to reduce impacts to agricultural operations where technically feasible whilst ensuring constructability of the Project.			X	
10-24.16	Concern about the proximity of Pylons and haul roads to properties on Northfield Road and surrounding lanes as a result of Norfolk 2 change	National Grid notes the respondent's feedback. Part of the driver for the change was to move the alignment to be more equidistant between properties at Northfield Road in response to feedback from consultation. We have undertaken an Environmental Impact Assessment (EIA) which accompanies our Development Consent Order (DCO) application. This assesses the impacts of the Project on roads and residential properties.			X	
Wildlife/Ecology impact						
10-24.17	Concern that reference to a veteran oak tree with a circumference of 522 m has been omitted from consultation documents / The oak tree will be impacted or lost entirely because of the proposals	An Ancient Woodland and Veteran Tree Strategy (Appendix B of the Outline Landscape and Ecological Management Plan (document reference 7.4)) has been developed and submitted as part of the application. This document details the environmental measures that		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		would be implemented to avoid, minimise, mitigate and compensate for ancient and/or veteran features likely to be impacted by the Project. The tree mentioned in feedback is avoided by the alignment but may require some management during construction, it is not intended to be removed.				

Norfolk 3 Change feedback (Targeted Consultation)

Table 10-25 Summary of consultee comments and National Grid's response

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Consultation						
10-25.1	Criticism of consultation materials on this change (Norfolk 3)	<p>National Grid notes the respondent's feedback. For each of our targeted consultations we developed an overview leaflet and Environmental Implication of Change (EIC) document. These were sent to properties within the bespoke consultation zone for the relevant change. We also published a consultation strategy and overview map. All these documents remain available on our project website. The information provided at the Targeted consultations was considered proportionate to the changes being consulted upon.</p> <p>For each of the proposed changes we've opened targeted consultation on (including Norfolk 3), we've completed EIC documents.</p> <p>The Norfolk 3 EIC concluded that the change would not materially change the conclusions that were reported within the Preliminary Environmental Information Report (PEIR) that we published at statutory consultation. This means the environmental effects of our proposals would not differ from those we reported in the PEIR.</p>		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>We have undertaken this review against each of the technical topics covered by the PEIR, with respect to this location within the Project. This includes agriculture and soils; air quality; ecology and biodiversity; contaminated land, geology and hydrogeology; health and wellbeing; historic environment; hydrology, land drainage and flood risk; landscape and visual; noise and vibration; socio-economics, recreation and tourism; and traffic and transport.</p> <p>We have applied the same methodologies and principles set out in the PEIR based on the information available while recognising that the Project is the subject of ongoing consultation and environmental surveys. To be consistent we complete independent surveys to define methods (set out in the PEIR and the EIA Scoping Report) that provide comparable information to assist with decision making in the context of planning policy.</p> <p>Additional detailed ecological information provided by others (including from landowners) adds to this information.</p> <p>Not all trees within the Order Limits will need to be removed. Some tree removal will be necessary to provide clearance under the overhead line, but only the amount required to meet safe electrical clearance requirements.</p> <p>The Norfolk 3 proposals also include a change to the location of the haul road from the plans we presented at the 2024 statutory consultation. The change is being</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>proposed to avoid routeing within the open field used for livestock over-wintering.</p> <p>The proposed location for the haul road goes through a managed area of woodland, which would be narrowed to single track only and would use non-excavation measures to reduce impacts on root protection zones of adjacent trees. We are advised by the landowner that low level vegetation has re-established on an area previously cleared of trees.</p>				
10-25.2	Criticism that National Grid has not shown the change to pylons near Pylon RG52 on their proposed changes map / Criticism that National Grid don't provide all the information and hold back information that is vital to respondent's case	<p>National Grid carried out targeted consultations on localised changes that would potentially alter the draft Order Limits for the Project where there were new or different impacts on landowners, communities and/or the environment. There were some further changes to our proposals, such as the movement of pylons within the order limits presented and minor amendments where we did not feel that consultation was proportionate to the change suggested.</p> <p>The approach we are taking follows the latest guidance issued by the Government's Planning Inspectorate, which makes it clear that targeted consultation can be bespoke and proportionate to the type of change proposed.</p> <p>All the information for the changes we were consulting on was and remains available on the Project website.</p>			X	
10-25.3	Criticism as the materials state the haul road is depicted to be inside of wooded area and would	To the east of RG48 to RG49, the proposal is to use a previously cleared area within the woodland for the haul	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	need to cross a high-risk surface water flow path and at least three ordinary watercourses (one in the wooded area and two to the south). The information provided states this area was cleared of woodland, however, this is incorrect	<p>road to avoid routeing within the open field used for livestock over-wintering. In addition, other specific measures will be adopted to reduce woodland loss including the narrowing of the access road to a single way track and the use of trackway.</p> <p>Where haul roads cross watercourses and surface water flow paths a range of commitments have been secured in terms of crossings designs and measures to prevent flood risk increases , which are set out in the Outline Code of Construction Practice (document reference 7.2). These commitments have been formed through engagement with Norfolk County Council, as Lead Local Flood Authority, and the Environment Agency.</p>				
10-25.4	Suggest that all Norfolk 3 documentation should be corrected and re-issued to ensure respondents can understand the implications of the proposed change	<p>For each of the proposed changes National Grid opened targeted consultation on (including Norfolk 3) we've completed Environmental Implications of Change (EICs) documents.</p> <p>The Norfolk 3 EIC concluded that the change would not materially change the conclusions that were reported within the Preliminary Environmental Information Report (PEIR) that we published at statutory consultation. This means the environmental effects of our proposals would not differ from those we reported in the PEIR.</p> <p>We have undertaken this review against each of the technical topics covered by the PEIR, with respect to this location within the Project.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>The Norfolk 3 proposals also include a change to the location of the haul road from the plans we presented at the 2024 statutory consultation. The change is being proposed to avoid routeing within the open field used for livestock over-wintering. We are advised by the landowner that low level vegetation has re-established in an area previously cleared of trees.</p> <p>We do not believe that the information presented regarding the Norfolk 3 change was inaccurate or misleading, and so do not believe that any further consultation or amendment to material is required. We had a dedicated phone line and email address for any questions or comments on the consultation document presented or the proposed changes.</p>				
10-25.5	<p>With regard to the permanent access track associated with Norfolk 3:</p> <ul style="list-style-type: none"> - The DCO will need to be clear works would be required to enable Brick Kiln Lane (Road used as a public path (RUPP)) to be used as a permanent access track as there are several veteran trees along this track which could be impacted (root compaction) by increased vehicular use. - The DCO also will need to be clear as to why the final route has been selected but this needs to be informed by a comparison of the ecological, arboricultural and historical impacts of each option. 	<p>National Grid notes the respondent's feedback. The permanent access at Brick Kiln Lane is only proposed to be used for future maintenance for RG48 and surveys if required and not for construction. No works are proposed to be undertaken to Brick Kiln Lane, utilising only the existing track which would only be used as an access for 4x4 vehicles when required. This detail is included as part of our Development Consent Order (DCO) application. No additional ecological or arboricultural impacts are anticipated.</p> <p>From a heritage perspective, National Grid has worked to minimise potential impacts on heritage assets, such as all known non-designated heritage assets along Brick Kiln Lane, through routeing and siting informed by</p>		X		

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		consultation feedback and heritage assessments. The heritage assets have been appropriately considered and assessed as part of ES Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1) and ES Chapter 11: Historic Environment (document reference 6.11). The assessment followed a robust and proportionate methodology developed in line with established best practice, including Historic England's guidance (e.g. GPA3: The Setting of Heritage Assets, 2017) and DMRB LA 104 and LA 106. The approach was discussed and agreed with relevant stakeholders during the scoping process and subsequent thematic meetings. National Grid is confident that potential impacts on the historic environment, including those arising from the use of Brick Kiln Lane, have been thoroughly and appropriately assessed and, where relevant, mitigation measures are set out in the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5).				
Design Change (CR)						
10-25.6	Oppose the proposed change - Norfolk 3 (generally)	National Grid notes the respondent's feedback.			X	
10-25.7	Support the proposed change - Norfolk 3 (generally)	National Grid notes the respondent's feedback.			X	
10-25.8	Concern about the size of vehicle used for maintenance of the pylons. If larger than Quad ATV a significant widening of the footpath and pruning	We are not proposing to construct anything for this permanent access route to pylons, existing tracks and			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	and grubbing out of trees and vegetation would be required. This would be unacceptable in terms of landscape quality, biodiversity and local amenity (e.g impact on walkers, dog-walkers, horse riders and children who play in the lane)	roads are being proposed for use where possible for walking, small all-terrain vehicles or 4x4 where suitable. If significant refurbishment or maintenance works are required these will be surveyed and assessed at the time and relevant permissions obtained.				
10-25.9	Suggest the Project reverts back to the original proposal, using the area of grassland as the route for the servicing road rather than destroying woodland. The presence of an access road would not affect the ability of the landowner to use this field	<p>National Grid proposed a slight change to the alignment and haul road between RG46 and RG51 which takes the alignment to the west and avoids a County Wildlife site and veteran tree. The haul road was also moved to be closer to the alignment and utilises an area of woodland which is less mature. We have also narrowed the haul road and proposed the use of trackway to reduce impacts to trees in the woodland where possible. We are therefore not proposing a further change in this area.</p> <p>National Grid has submitted an Environmental Statement (ES) (document reference: Volume 6: Environmental Statement) which has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation of the Project and recommends appropriate mitigation to reduce effects. Specifically, ES Chapter 8: Ecology and Biodiversity (document reference 6.8) considers the effects on designations, habitats and species during construction and operation of the Project.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-25.10	Criticism the routing has changed and no longer turns before meadow wood. The proposals have changed from a temporary surface along old ancient Brick Kiln Lane to a permanent surface	National Grid notes the respondent's feedback. We proposed a slight change to the alignment and haul road between RG46 and RG51 which takes the alignment to the west and avoids a County Wildlife site and veteran tree. The permanent access along Brick Kiln Lane was proposed to be a permanent access at statutory consultation and targeted consultation, therefore this has not changed. Brick Kiln Lane is only proposed to be used for future maintenance for RG48 and surveys if required and not for construction. No works are proposed to be undertaken to Brick Kiln Lane, utilising only the existing track and would only be used as an access for 4x4 vehicles. No further changes to the Project in this area are proposed.			X	
10-25.11	Request that alternatives to extending the underground cables that are sensitive to existing ecological habitats are considered / Request that details of underground cables construction method and the ecological, arboricultural and historical implications of each method	The movement of the alignment in this location has modified the extent to which lower voltage infrastructure modifications are required, and which consequently responds to another change requested in previous feedback. The change in the alignment requires the 11 kV overhead line to be replaced by underground cable over a different section (where the alignment now crosses the existing assets). It requires less 11 kV removal to the south but more removal to the north and west. The removal of the wooden pole overhead line occurs to the field boundary to the north with the underground cable following alongside field boundaries and the haul road alignment, minimising the need for tree removal.		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>All the UK Power Network (UKPN) diversions as shown in the submission have been collaboratively designed and agreed with UKPN. In this case, the undergrounded length has been optimised to meet the minimum requirements of the network configuration while minimising impact to ecology, woodlands and hedgerows by utilising the proposed haul road corridor. There may be scope to agree voluntarily a different solution via National Grid Lands team and UK Power Network.</p> <p>Wherever undergrounding of third part assets is being considered, we need to ensure we're carefully considering the local environment too. This includes looking at local habitats, heritage, and other factors such as watercourses and rivers to reduce impacts.</p> <p>ES Chapter 4: Project Description (document reference 6.4) details the typical Third Party (Statutory Undertakers) Works. The Project retains the right to underground the existing UK Power Network overhead line in this area either along the line of the existing overhead line or via the diversion route shown. No decision on which route has been made at this time, and it is expected that UK Power Network will confirm at detailed design.</p> <p>If there was an environmental constraint or driver for one or the other route this would be factored into the choice. In terms of methodology, it would be expected that the</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>work would be undertaken using open-cut trenching techniques.</p> <p>National Grid has worked to minimise potential impacts on heritage assets, through routeing and siting informed by consultation feedback and heritage assessments.</p> <p>The Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5) for the Project, created to support the Development Consent Order (DCO) application, sets out the process, guiding principles and methods for the planning and implementation of additional archaeological mitigation works associated with the construction of the Project. For the purposes of the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5) archaeological mitigation works include mitigation on archaeology, historic buildings and historic landscapes where appropriate. This document follows the approach to mitigation set out in ES Chapter 11: Historic Environment (document reference 6.11) and mitigation measures in the Outline Code of Construction Practice (CoCP) (document reference 7.2).</p>				
10-25.12	<p>Oppose the proposed replacement of the existing lower voltage overhead line if the Norfolk 3 change is adopted, and suggest an alternative new route for the existing lower voltage overhead line is used instead to minimise the use of underground cables, with three locations for new telegraph poles</p>	<p>The movement of the alignment in this location has modified the extent to which lower voltage infrastructure modifications are required, and which consequently responds to another change requested in previous feedback. The change in the alignment requires the 11 kV overhead line to be replaced by underground cable</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	suggested by the respondent (section between Pylons RG58 and RG49, plan provided by respondent; e.g. to reduce the amount of undergrounding; to avoid a potential Tumulus / Burial mound; to mitigate impact on woodland and trees, including Alder Carr; to mitigate impact on ecology and meadows; to reduce the amount of hedgerow removal; to make it easier to cross the deep ditches for the lower voltage cable; and, to reduce the cost for underground cables). Alternatively suggest that the previous 2024 alignment would be less damaging	<p>over a different section (where the alignment now crosses the existing assets). It requires less 11 kV removal to the south but more removal to the north and west. The removal of the wooden pole overhead line occurs to the field boundary to the north with the underground cable following alongside field boundaries and the haul road alignment, minimising the need for tree and hedgerow removal.</p> <p>All the UK Power Network diversions as shown in the submission have been collaboratively designed and agreed with UK Power Network. In this case, the undergrounded cable length has been optimised to meet the minimum requirements of the network configuration while minimising impact to ecology, woodlands and hedgerows by utilising the proposed haul road corridor. There may be scope to agree voluntarily a different solution via National Grid Lands team and UK Power Network.</p> <p>No potential tumulus or burial mound was located within this area (see ES Chapter 11: Historic Environment (document reference 6.11) and ES Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1). The feature was examined on the ground during the walkover (see ES Chapter 11: Historic Environment (document reference 6.11) and ES Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1). It is our professional</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		judgement that the asset in question is modern and not archaeological in origin.				
10-25.13	The proposed Norfolk 3 realignment routes the Project through woodland and meadows (as per map provided by respondent) which contains numerous veteran / ancient trees, including very old Alder Carr coppice, pollarded Oaks, Ash and coppice Hazel (the respondent has provided photos). The respondent also suspects that part, if not all of this area should be classed as ancient woodland. As such, the respondent opposes this part of the change (e.g. to avoid a hugely detrimental impact)	<p>National Grid proposed a slight change to the alignment and haul road between RG46 and RG51 which takes the alignment to the west and avoids a County Wildlife site and veteran tree. The haul road was also moved to be closer to the alignment and utilise an area of woodland which is less mature. We have also narrowed the haul road and proposed the use of trackway (non-excavation) to reduce impacts to trees in the woodland where possible. We are therefore not proposing a further change in this area.</p> <p>National Grid has submitted an Environmental Statement (ES) (document reference: Volume 6: Environmental Statement) which has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation of the Project and recommends appropriate mitigation to reduce effects. Specifically, ES Chapter 8: Ecology and Biodiversity (document reference 6.8) considers the effects on designations, habitats and species during construction and operation of the Project.</p> <p>Detailed woodland habitat surveys of this area have been undertaken, and while it is acknowledged that some mature trees are present within the woodland</p>		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		these are located on the edge of the woodland and are being primarily avoided by proposals. The main extent of woodland does not qualify as ancient woodland in line with guidance.				
10-25.14	The location of a veteran (bee) tree in woodland that is impacted by Norfolk 3 is not shown on the plans provided so it is not clear where this tree is located. The veteran bee tree remains within the DCO corridor and therefore remains at risk depending on the wording of the DCO requirements. The requirements of the DCO will need to be specific about impacts on veteran/ancient trees and ancient woodland, as the respondent has noticed in previous DCOs that tree loss has only become apparent at the detailed design stage	National Grid notes the respondent's feedback. The veteran tree is avoided by the alignment and therefore will not be impacted by the Project. An Ancient Woodland and Veteran Tree Strategy, which is appended to the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4), has been submitted with the Environmental Statement (ES) (document reference Volume 6: Environment Statement).		X	X	
10-25.15	Concern that there are other veteran trees in the area impacted by Norfolk 3, but it is not clear if the proposed re-alignment has been informed by an AIA. In 2023 National Grid moved Pylons RG46 and RG50 further east to reduce potential effect on the woodland, however the current proposal to move Pylons RG48 and RG49 60 metres west of the 2024 statutory consultation contradicts this	The locations of surveyed and known veteran trees have been considered during design development and are reported in ES Appendix 13.6: Arboricultural Impact Assessment (AIA) (document reference 6.13.A6) together with an Ancient Woodland and Veteran Tree Strategy (see Appendix B of the Outline Landscape and Ecological Management Plan (document reference 7.4)) submitted with the application. Detailed design will look at the positioning of new infrastructure within the Project's Limits of Deviation (LOD).		X	X	
10-25.16	Request the route through Bunwell goes in a north to south direction across the grass pasture / meadows	National Grid proposed a slight change to the alignment and haul road between RG46 and RG51 which takes the			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	and avoiding the County Wildlife Site to preserve ecology, oak trees and the nature reserve. This would involve removing the 'Honey Bee Oak' and another oak pollard - as shown in respondents' attachment	<p>alignment to the west and avoids the County Wildlife site and veteran tree, as this alignment is preferred due to avoiding these assets we are not proposing to change the alignment at this location. The haul road was also moved to be closer to the alignment and utilise an area of woodland which is less mature. We have also narrowed the haul road and proposed the use of trackway to reduce impacts to trees in the woodland where possible.</p> <p>National Grid has submitted an Environmental Statement (ES) (document reference: Volume 6: Environmental Statement) which has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation of the Project and recommends appropriate mitigation to reduce effects. Specifically, ES Chapter 8: Ecology and Biodiversity (document reference 6.8) considers the effects on designations, habitats and species during construction and operation of the Project.</p>				
10-25.17	Request pylons RG48 and RG49 are sited to the north and south of the 'previously cleared woodland' using deviation pylons and avoid wet land to the south of the nature reserve - as shown in respondents' attachment	National Grid notes the respondent's feedback and proposed change. Additional angle pylons would be required in both the north and south of the woodland to adopt this change, which would be less preferred due to being less consistent with the Holford Rules as well as			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		increasing visual effects to the surrounding area. We are therefore not proposing to adopt this change.				
10-25.18	Request that deviation pylons are used at the southern end of the grassland meadow - as shown in respondents' attachment	National Grid notes the respondent's feedback and proposed change. Additional angle pylons would be required to the south of the woodland to adopt this change, which would be less preferred due to being less consistent with the Holford Rules (see Appendix I22 of this report) as well as increasing visual effects to the surrounding area. We are therefore not proposing to adopt this change.			X	
Environmental impact						
10-25.19	Concern that proposals are a breach of planning guidelines which require a 15ft clearance for root systems of veteran tree	<p>The National Planning Policy Framework (NPPF) standing advice is for a buffer zone either 15x stem diameter or 5 m beyond the canopy spread (whichever is the greater).</p> <p>Appendix 13.6: Arboricultural Impact Assessment (document reference 6.13.A6) confirms the methodology as 'By default, Root Protection Areas (RPAs) are calculated as an area equivalent to a circle with a radius 12 times the stem diameter and are capped at a distance of 15 m, unless the tree has been surveyed as a veteran, in which case the RPA is calculated at 15 times the stem diameter or 5 m beyond the canopy spread (whichever is the greater) and is not capped.'</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-25.20	Request that laws on nesting season are adhered to between the months of March - September - regarding protection of birds	As detailed within the Outline Landscape and Ecological Management Plan (LEMP) vegetation removal will be undertaken outside of the nesting bird season of March-August wherever possible. Where unavoidable, vegetation removal is permitted during the nesting bird season but only following a nesting bird check undertaken by a suitably experienced ecologist no more than 24 hours before. This approach to nesting birds is standard practice for construction projects.			X	
10-25.21	Concern as there is the potential for the displacement / disruption of surface water flow routes through the Cargate Common area (The Lead Local Flood Authority requires that surface water runoff from the proposed construction works (such as the haul road) does not enter the highway or increase flood risk elsewhere) Request careful consideration is given to the proposed design in this location to prevent an increase flood risk elsewhere	In consultation with Norfolk County Council as Lead Local Flood Authority, commitment GG32 within the Outline Code of Construction Practice (document reference 7.2) has been shaped. This states that run-off across the construction works sites will be controlled through a variety of methods including header drains, buffer zones around watercourses, on-site ditches, silt traps and bunding. There will be no intentional discharge of site runoff to ditches, watercourses, drains, including highways drainage systems, or sewers without appropriate treatment and agreement of the appropriate authority. The implementation of this approach will prevent displacement and disruption of surface water flow routes through the Cargate Common area and any increases in flood risk.	X		X	
10-25.22	Oppose the relocation of the haul road and Project route if Norfolk 3 change is adopted to reduce the effects of grazing. Suggest that ground mats could	National Grid notes the respondent's feedback. The haul road was also moved to be closer to the alignment and utilise an area of woodland which is less mature. We		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	be used to save permanent damage to the meadow instead of making a crushed granite haul road through the meadow, providing winder feed for grazing animals to compensate	<p>have also narrowed the haul road and proposed the use of trackway to reduce impacts to trees in the woodland where possible. We are therefore not proposing a further change in this area.</p> <p>National Grid has submitted an Environmental Statement (ES) (document reference: Volume 6: Environmental Statement) which has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation of the Project and recommends appropriate mitigation to reduce effects. Specifically, ES Chapter 8: Ecology and Biodiversity (document reference 6.8) considers the effects on designations, habitats and species during construction and operation of the Project.</p>				
10-25.23	Criticism that Norfolk 3 changes do not reduce the amount of tree removal required. Respondent suggests that the if adopted, the change would increase the amount of tree removal as it would require the removal of all trees in the respondents 1 acre class A3 woodland	National Grid does not agree with this characterisation and indeed notes that not all the woodland within the Order Limits will be affected. Some removal of trees and height reduction of some trees will be needed but this is reduced on the alignment being progressed compared with other alternatives. No change has been made.			X	
10-25.24	Concern that the Bunwell Hill area has a high water table, resulting in very wet lane, making it unsuitable for pylon placement and undergrounding of low	National Grid notes the respondent's feedback. Specific pylon placement can be influenced by local ground conditions, however pylon foundations will be designed to accommodate the ground conditions at each pylon			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	voltage powerlines or undergrounding of HVDC cabling	location. Piled foundations are generally used in wet areas. Similarly to the pylon installation, routing of the underground cable trenches can be influenced by local ground conditions. In areas with a high-water table installation would follow the methodologies as set out in the Outline Code of Construction Practice (CoCP) (document reference 7.2) which has been prepared and submitted with the Development Consent Order (DCO) application. This document provides commitments to reduce construction impacts together with a framework for detailed management plans to be prepared at detailed design stage in order to reduce and mitigate potential impacts and/or disruptions that may arise during the construction phase.				
Financial compensation						
10-25.25	Criticism that Pylon RG46, proposed in a field adjacent to respondent's property, would result in the working area being located within 50 m of respondent's property, impact on woodland, fields, wildlife, habitats, views, and property value. Request for National Grid to purchase respondent's property at market price if the Project goes ahead.	National Grid notes the respondent's feedback. The closest property to RG46 is approximately 200 m to the east and approximately 50 m from temporary working areas. We have submitted an Environmental Statement (ES) (document reference: Volume 6: Environmental Statement) which has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation of the Project and recommends appropriate mitigation to reduce effects. Specifically, ES Chapter 8:			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Ecology and Biodiversity (document reference 6.8) considers the effects on designations, habitats and species during construction and operation of the Project. Working areas for the construction of the overhead line will be temporary and be reinstated once the works are completed. There is no basis in legislation for compensation to be paid to third party property owners, if a view from a property has been altered. National Grid does not intend to purchase any properties along the alignment where views have been altered.</p> <p>Where a landowner has a concern about property values they should contact the Project lands team: Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.</p> <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD</p>				
10-25.26	Request for damage limitation in the form of ensuring that the respondent's company are the contractors for the Norfolk 3 section of the Project, and compensation through the compulsory purchase of nearby woodland to give to the respondent for their existing nature reserve	<p>National Grid cannot commit at this stage of the Project to specific contractors that will be used for vegetation clearance and management. All appointed contractors will be specialists in their field and will have relevant experience and required licenses or qualifications needed to carry out the task.</p> <p>National Grid can only apply for compulsory acquisition powers over land that is required for the construction and ongoing maintenance of the asset in the future.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Technology/Operations						
10-25.27	Criticism that the technology used for Norfolk 3 is outdated / inefficient	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or Area of Outstanding Natural Beauty (AONB))'</i> . Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project between RG46 and RG52 would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.				
Wildlife/Ecology impact						
10-25.28	Criticism that the 2022 route was changed to avoid the woodland based on Arboricultural surveys that classified the area as 'A3' but current proposals for the haul road realignment go against this advice	Design options have been considered, due to impacts on other receptors (i.e. a veteran tree), the current alignment is considered to have the least environmental impact.		X	X	

Norfolk 4 Change feedback (Targeted Consultation)

Table 10-26 Summary of consultee comments and National Grid's response

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Consultation						
10-26.1	Criticism of consultation materials on this change (Norfolk 4)	National Grid notes the respondent's feedback. For each of our targeted consultations we developed an overview leaflet and Environmental Implication of Change (EIC) document. These were sent to properties within the bespoke consultation zone for the relevant change. We also published a consultation strategy and overview map. All these documents remain available on the Project website. The information provided at the Targeted consultations was considered proportionate to the changes being consulted upon.		X	X	
Design Change						
10-26.2	Support the proposed change - Norfolk 4 (generally)	National Grid notes the respondent's feedback.			X	

Mid Suffolk

Mid Suffolk specific feedback (Targeted Consultation)

Table 10-27 Summary of consultee comments and National Grid's response

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Agricultural Land						
10-27.1	Concern that the Project will take away valuable agricultural land / disrupt farming operations	<p>Agricultural land during the construction stage of the Project, there would be areas of agricultural land that would be temporarily disrupted. National Grid would only use land that is required as part of the Project and would seek to minimise the use of agricultural land where reasonable and safe to do so.</p> <p>National Grid is and would continue to work with all landowners including farmers who may be affected by the proposals to understand the impacts on their operations and to work with them as the Project progresses. We would seek to work with the farming community to limit disruption where practicable. This includes providing prior warning of works which may result in the need to move livestock. Compensation claims for disturbance are considered on a case-by-case basis, if negative impacts on farming operations can be proven. Particular agricultural matters can also be addressed through voluntary land agreements.</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Airfields						
10-27.2	Concern about the impact of the Project on Raydon Wings / Suggestion that the Project is routed away from Raydon Wings	<p>National Grid has appointed an independent aviation consultancy which has engaged with Raydon Wings aerodrome (with National Grid also present) to inform their aviation impact assessment. Following consultation with the operator, it has been assessed that, with the Project as currently proposed, operations will be able to continue at the airfield once the Project is constructed and operational. It is recognised, however, that construction of the underground cable route is likely to temporarily disrupt the aerodrome. National Grid is engaging with the operator to enable their review of the acceptability of the design and explore potential mitigations to minimise temporary impacts on aviation operations.</p> <p>Further information on the assessment of airfields can be found in the Environmental Statement (ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).</p>	X	X	X	
10-27.3	Concern for Raydon wings, as Pilots here fly a military style circuit pattern which is ovular in shape, rather than a conventional rectangular pattern. This tends to exhibit greater form drag (aerodynamic) tendency, making optimised approaches important. The ability for the site to continue to operate as it does today, as well as to adapt and change over	National Grid has appointed an independent aviation consultancy which has engaged with the operators of Raydon Wings airfield (with National Grid also present) to inform their impact assessment. The overhead line alignment (including the Cable Sealing End (CSE) compound) is assessed to be at a sufficient distance to the north of the runway to ensure that overflight is not	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>time, (a key requirement set out in the NPPF and General Aviation Strategy), is not assured. Part of the issue seems to be the close proximity of the sealing end compound of the proposed scheme, and related pylons to the aerodrome, just 300 m</p> <p>Suggest an alternative location for the sealing end compound to provide greater vertical clearances by moving infrastructure away from sensitive aviation factors</p>	<p>required on take-off or landing (taking into account possible lateral deviation) and that existing flight paths are therefore not impacted. Furthermore, the alignment need not impact existing flying circuits to the north as overflight is assessed to be at a safe distance. We will continue to engage with the airfield operators to confirm the acceptability of the design and support their consideration of whether reasonable changes to operational procedures are required.</p> <p>Further information on the assessment of airfields can be found in the Environmental Statement (ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).</p>				
Community / Social Impact						
10-27.4	Concern about impact of the Project on children / families / residents / communities	<p>National Grid recognises people may have concerns about the potential impacts of living close to an overhead line, and that the uncertainty whilst the proposals are developed may cause anxiety.</p> <p>We have sought to reduce potential effects on communities, residents – including children - through routing and design. We have also sought to reduce concern or uncertainty about the proposals through making timely design decisions and engaging with people and stakeholders throughout the development of the Project. If the Project receives Development Consent, the Project team would continue to engage</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>with people potentially affected during construction through regular communication including letters, phone calls and meetings, where necessary. We urge anyone with concerns to get in touch through the Norwich to Tilbury Freephone number, address or email, which would remain open throughout examination.</p> <p>National Grid is committed to working with local suppliers, facilitated by supporting forums (such as the local Chambers), on electricity industry skills and workforce planning. National Grid is also committed to providing a coordinated regional approach to jobs and skills opportunities. This commitment is broader than the individual project and separate to any commitments under the proposed development consent order for this Project. The socio-economics effects of the project are assessed in ES Chapter 15: Socio-economics, Recreation and Tourism of the Environmental Statement (ES) (document reference 6.15). Post construction job opportunities are limited given the nature of the development however we will still work with Local Authorities (including facilitating local partners) to understand what is important to them around skills and employment to ensure we leave a lasting positive legacy in the communities where we operate. With regards to a delivery mechanism, the above measures will be delivered as part of our community benefit package, which will look at both local and regional initiatives. This will be delivered outside the development consent process and is not a material consideration in the</p>

		decision on the proposed Project or a matter to be secured as part of the DCO, as per the Community Funds for Transmission Infrastructure: Guidance (DESNZ, 2025).				
10-27.5	Concern about impact of the Project on school / educational facilities	<p>Through routeing and siting, National Grid has sought to avoid, as far as practicable, locations of education establishments.</p> <p>ES Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) presents an assessment of the potential impacts on education facilities as a result of the Project. As part of the assessment, a range of measures are considered during the construction phase to reduce, where practicable, disruption to education establishments. These include traffic management, signage and routing measures to ensure access or partial access can be maintained where feasible. These are identified within ES Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15), the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) and the Outline Code of Construction Practice (CoCP) (document reference 7.2). The assessment concludes that there would be no significant effects on education facilities within the study area as a result of the construction and operation of the Project.</p>	X	X	X	
10-27.6	Concern about impact of the Project on leisure	Through routeing and siting National Grid has sought to avoid, as far as practicable, locations that are important for leisure and tourism. Environmental Statement (ES)	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-27.7	Concern about over development of area / other works in the area (e.g. cumulative impact)	<p>Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) presents an assessment of the potential impacts on sports clubs, recreational land and recreational routes located within the Order Limits. As part of this assessment, a range of measures have been considered throughout the construction phase of the Project to minimise disruption on leisure and tourism. These include traffic management, signage and routeing measures. These are identified within ES Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15), the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).</p> <p>A cumulative effects assessment has been undertaken in accordance with the Planning Inspectorate's Advice Note 17 'Cumulative Effects Assessment' and is presented in Environmental Statement (ES) Chapter 17: Cumulative Effects (document reference 6.17). The cumulative effects assessment has considered the effects of the Project in conjunction with other developments in line with guidance. As part of this process, National Grid has engaged with other developers who are proposing development in proximity of the Project to understand their requirements.</p> <p>The cumulative assessment has been undertaken in accordance with the overarching National Policy Statement (NPS) for Energy (EN-1)</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Paragraph 4.1.5 in EN-1 states:</p> <p><i>'In considering any proposed development, in particular when weighing its adverse impacts against its benefits, the Secretary of State should take into account: ... its potential adverse impacts, including on the environment, and including any long-term and cumulative adverse impacts, as well as any measures to avoid, reduce, mitigate or compensate for any adverse impacts, following the mitigation hierarchy.'</i></p> <p>Paragraph 4.2.12 in EN-1 states:</p> <p><i>'The cumulative impacts of multiple developments with residual impacts should also be considered.'</i></p> <p>Paragraph 4.3.3 in EN-1 states:</p> <p><i>'The Regulations require an assessment of the likely significant effects of the proposed project on the environment, covering the direct effects and any indirect, secondary, cumulative, transboundary, short, medium, and long-term, permanent and temporary, positive and negative effects at all stages of the project, and also of the measures envisaged for avoiding or mitigating significant adverse effects.'</i></p> <p>Paragraph 4.3.19 of EN-1 states:</p> <p><i>'The Secretary of State should consider how the accumulation of, and interrelationship between, effects might affect the environment, economy, or community as a whole, even though they may be acceptable when</i></p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p><i>considered on an individual basis with mitigation measures in place'.</i></p> <p>Paragraph 4.4.5 in EN-1 states:</p> <p><i>'The impacts of more than one development may affect people simultaneously, so the applicant should consider the cumulative impact on health in the ES where appropriate'.</i></p> <p>The long list and short list of other existing and, or approved developments considered for the Cumulative Effects Assessment is presented in Appendix 17.2: ES Chapter 17.2: Long List and Short List of Other Developments (document reference 6.17.A2), detailing the other developments shortlisted for detailed assessment. The appendix provides details on other developments screened out of the assessment in accordance with the methodology presented in ES Chapter 17 (document reference 6.17). The detailed assessment of shortlisted other developments is presented in Appendix 17.3: Inter-Project Cumulative Effects Assessment (document reference 6.17.A3). Appendix 17.3 outlines the residual significance of cumulative effects for each development, for each environmental topic that has a Zone of Influence that overlaps with that development (i.e. socio-economic, recreation and tourism impacts).</p>				
10-27.8	Concern about the Project being in too close proximity to recently built housing developments / using land being considered for future development	National Grid has obtained information on existing, under construction, consented but not built schemes as well as development proposals within the planning			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	(including residential, commercial, infrastructural, and employment sites)	system. The Project design has responded to those that are confirmed through consideration of routeing. In the case of development proposals, some can be amended to be designed around our proposed infrastructure but in other cases our proposals may need to be amended at a corridor level, or proposed developments factored into our detailed route design. Based on known information, and in light of changes made following consideration of feedback to the 2022 and 2023 non-statutory consultations, statutory consultation, targeted consultations, and landowner consultation, we consider our proposals are consistent with relevant policy and guidelines and the alignment designed such that they do not prevent proposed housing developments from being successfully progressed. UK law does not prescribe minimum distances between overhead lines and homes, but any implications on landscape and visual receptors, residential amenity or from concerns about electromagnetic fields are robustly assessed as part of the Environmental Impact Assessment (EIA) and balanced as part of the decision making process. We will continue to review planning applications and engage with developers as necessary.				
10-27.9	Concern about the Project causing communities to become encircled / surrounded by overhead lines	The alignment has been routed to achieve some separation from the existing 400 kV overhead line, such that villages are not encircled by overhead lines to both sides. Separation is inevitably reduced in certain locations due to the presence of constraints to routeing and environmental features. Detailed assessment			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		reported in the Environmental Impact Assessment (EIA) identifies any measures considered to be necessary to reduce likely significant effects which would also consider the potential for effects potentially arising from close paralleling existing 132 kV overhead line and new 400 kV overhead line infrastructure.				
10-27.10	Concerned that the Project will have a negative impact on domestic horses / equestrian activities	<p>As well as possible effects on humans, the possible effects of Electric and Magnetic Fields (EMFs) on various animals have been studied. No proven effects of EMFs have been found in any species at levels below the guidelines. This is confirmed in National Policy Statement (NPS) EN-5 which states: "<i>There is little evidence that exposure of crops, farm animals or natural ecosystems to transmission line EMFs has any agriculturally significant consequences.</i>" Although horses are not directly mentioned, there is no evidence to suggest they are any different to other farm animals.</p> <p>As well as the possible direct biological or health effects addressed above, indirect effects such as microshocks can occur as a result of electric fields. Microshocks are small spark discharges which are similar to a static shock after walking across a nylon carpet for example. The Project would be designed in accordance with the principles of the Governments Code of Practice 'Power Lines: Control of Microshocks and other indirect effects of public exposure to electric fields' to ensure these are mitigated, which include equestrian activities.</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-27.11	Concern about the impact of the Project on emergency services / ambulances / hospitals / health service	<p>Through routeing and siting National Grid has sought to avoid and reduce as far as practicable effects on identified healthcare facilities.</p> <p>Environmental Statement (ES) Chapter 10: Health and Wellbeing (document reference 6.10) considers the potential impacts on, and access to, healthcare facilities, including emergency services, ambulances, hospitals and other NHS services associated with the construction of the Project, drawing on information from ES Chapter 16: Traffic and Transport (document reference 6.16). No health facilities are due to be directly impacted by the Project and where road diversions are required traffic management and mitigation measures would be in place to reduce impacts. These include traffic management, signage and routing measures to ensure access or partial access can be maintained where feasible. Further detail on proposed mitigation measures is presented in Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), which has been produced following engagement with stakeholders including the emergency services.</p>			X	
10-27.12	Criticism of surveys undertaken for the Project in this Section	There is a staged approach to the process of collection of environmental data as any major project develops. National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project. The assessment is informed by a suite of field surveys and desk studies and results are presented in an Environmental Statement (ES) (document reference Volume 6: Environmental			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Statement) that accompanies the application for development consent. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation (and maintenance) of the Project and recommends appropriate mitigation measures to reduce potential adverse impacts.</p> <p>The scope of the EIA is included in the Scoping Report (document reference 6.19) which was submitted to the Planning Inspectorate in November 2022 and their Scoping Opinion (document reference 6.20) received in December 2022. This provided the opportunity for statutory bodies to comment on the scope of the EIA which included our approach on study areas, data collection and baseline conditions for a range of environmental topics. We also discussed and agreed survey scope with stakeholders (including Statutory Environmental Bodies and Local Planning Authorities) following the Scoping Opinion (document reference 6.20) to ensure a robust baseline assessment.</p> <p>National Grid has prepared an Outline Code of Construction Practice (CoCP) (document reference 7.2) which sets out the required mitigation measures and environmental commitments that would be implemented during the construction phase of the Project to avoid or reduce potential effects of the Project on the environment, including commitments to undertake further surveys.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-27.13	Concern about the impact of the Project on water supply	<p>Appendix 9.3: ES Groundwater Baseline and Qualitative Groundwater Risk Assessment (document reference 6.9.A3) is included to support ES Chapter 9: Contaminated Land, Geology and Hydrogeology (document reference 6.9) which provides an assessment of the potential effects on groundwater from the Project and includes impacts on groundwater receptors such as water supplies (both with regard to quantity and quality), as required.</p> <p>Where the Project constitutes overhead lines, interaction with underlying aquifers would be limited. Any piling activities e.g., for pylon foundations, would be undertaken in accordance with good practice, and informed by Project Ground Investigation data.</p> <p>Where the Project constitutes underground cable, further to the above a hydrogeological risk assessments would be undertaken.</p> <p>These measures are described in the Outline Code of Construction Practice (CoCP) (document reference 7.2) and would be secured through the Development Consent Order (DCO), if granted.</p>	X	X	X	
Construction Impacts						
10-27.14	Concern about disruption from construction	An Environmental Statement (ES) (document reference Volume 6: Environmental Statement) has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 ('the Infrastructure EIA Regulations'). The ES	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>identifies and assesses the likely significant effects on the environment resulting from the construction of the Project and recommends appropriate mitigation to reduce effects.</p> <p>Environmental mitigation measures have been defined within each environmental topic chapter and set out in relevant management documents submitted with the Development Consent Order (DCO) application, including the Outline Code of Construction Practice (CoCP) (document reference 7.2), the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5).</p>				
10-27.15	Concern about impact on traffic levels in local area caused by construction works	<p>As part of the pre-application process National Grid has engaged with the relevant authorities, their highways teams and National Highways to understand and gain information on their road networks. This information has been used to inform and guide the drafting of the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) for the Project that accompanies the Development Consent Order (DCO) application.</p> <p>A strategy has been developed to manage the impact of construction vehicles on the public highway and sensitive receptors, using suitable Local Road Network</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>connections from the Strategic Road Network called Primary Access Routes. In addition, temporary haul roads for construction vehicles are proposed along the Project alignment, further reducing the impact of construction traffic on the local road network. Further details of the strategy can be found within the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).</p> <p>Environmental Statement (ES) Chapter 16: Traffic and Transport (document reference 6.16) includes the assessment of the potential impacts of the Project including changes in traffic flow, delays, road safety and impact on Walking, Cycling and Horse-Riding modes on the roads along the Primary Access Routes located in the Local Road Network.</p> <p>The Transport Assessment (document reference 7.11), submitted with the DCO application, examines capacity, safety, and operational efficiency of the network, identifying potential bottlenecks or safety concerns.</p> <p>Within the assessment of the ES and the Transport Assessment, mitigation measures are proposed to minimise likely adverse impacts</p>				
10-27.16	Concern about noise and other issues resulting from construction (e.g. mud on roads, dust)	An Environmental Statement (ES) (document reference Volume 6: Environmental Statement) has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 ('the Infrastructure EIA Regulations'). The ES identifies and assesses the likely significant effects on	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>the environment resulting from the construction of the Project and recommends appropriate mitigation to reduce effects.</p> <p>Specifically, a Construction Noise and Vibration Impact Assessment has been undertaken and is reported in ES Chapter 14: Noise and Vibration (document reference 6.14). During construction, mitigation would be implemented to reduce noise and vibration impacts from construction activities and increased road traffic noise and vibration due to additional movement from construction traffic. Mitigation measures are outlined in ES Chapter 14: Noise and Vibration (document reference 6.14) and the Outline Code of Construction Practice (CoCP) (document reference 7.2). This includes the assumption that construction working would be undertaken within the agreed working hours, construction traffic would be managed through the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), haul roads would be well maintained, and Best Practicable Means (BPM) would be employed to reduce construction noise and vibration.</p> <p>ES Chapter 7: Air Quality (document reference 6.7) presents an assessment of the potential impacts from the construction of the Project on air quality. During construction, mitigation would be implemented to reduce the impact of dust generation and construction vehicle emissions. Mitigation measures are outlined in ES Chapter 7: Air Quality (document reference 6.7), and the Outline CoCP (document reference 7.2). The dust-</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>emitting activities can be greatly reduced or eliminated by applying the site-specific mitigation measures (see Outline CoCP (document reference 7.2)) for high risk sites following measures recommendations in the Institute of Air Quality Management (IAQM) guidance (IAQM, 2024). The IAQM guidance states that with the implementation of effective site-specific mitigation measures, the environmental effect would not be significant in most cases.</p> <p>In addition, National Grid has prepared an Outline CoCP (document reference 7.2). The Outline CoCP sets out the required mitigation measures and environmental commitments that would be implemented during the construction phase of the Project to avoid or reduce potential effects of the Project on the environment.</p>				
10-27.17	Concern that local road infrastructure is not suitable for heavy construction vehicles and machinery	<p>The Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) provides details about how the impact of construction vehicles on the Public Highway and sensitive receptors will be managed, using a combination of more suitable Local Road Network connections from the Strategic Road Network, and temporary haul roads for access along the alignment.</p> <p>National Grid is developing specific routing proposals for AIL movements and is developing these through engagement with the relevant stakeholders including the Local Highway Authorities and National Highways. An AIL routing strategy containing details about these movements is included in the Outline Construction</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Traffic Management Plan (CTMP) (document reference 7.3).				
10-27.18	Concern about vibrations from construction	<p>An assessment of construction vibration is presented in Environmental Statement Chapter 14 - Noise and Vibration (document reference 6.14).</p> <p>The assessment considers both the potential impact upon people within buildings (i.e. disturbance), and potential damage to buildings and structures.</p> <p>The assessment considers relatively worst-case construction methodologies and does not take account of potential mitigation. This is so that potential 'hot-spots' can be identified where there is the potential for significant adverse effects, without mitigation.</p> <p>The construction vibration assessment has identified 74 locations where there is potential disturbance to people within buildings from construction vibration. Of these, 72 relate to potential vibratory compaction activities which would be expected to be for a relatively short duration (i.e. less than day). The remaining two relate to potential piling activities for pylon foundation construction.</p> <p>With regards to potential damage to buildings and structures, the assessment highlights locations where there is a potential non-zero risk of damage. 14 locations have been identified, all of which relate to potential vibratory compaction activities.</p> <p>In all cases, significant adverse effects, or potential structural damage, can be avoided with the use of best</p>		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		practicable means (BPM). This may include alternative methods, such as non-percussive/vibratory techniques. Additionally, prior to undertaking works, the Main Works Contractor(s) would conduct a detailed construction vibration assessment based on their specific methodologies and determine specific mitigation measures, where applicable.				
Consultation						
10-27.19	Comment supportive of engagement that has taken place / feel listened to	National Grid notes the respondent's feedback.			X	
10-27.20	Comment supportive of the Project in this section	National Grid notes the respondent's feedback.			X	
10-27.21	Criticism of consultation specific to this section	National Grid notes the respondent's feedback.	X	X	X	
10-27.22	Criticism that National Grid have relied upon generalised averages, rather than site specific data to dismiss these issues including at Gislingham as insignificant	In undertaking the air quality assessment detailed in Chapter 7: Air Quality of the Environmental Statement (ES) (document reference 6.7), National Grid has followed the appropriate guidance to assess the Projects impacts during the construction phase. The air quality construction traffic assessment presented in Appendix 7.3: ES Air Quality Assessment Results (document reference 6.7.A3) concludes that significant adverse effects from construction traffic emissions are not expected in or around Gislingham. The nearest human receptor in this area is HR_6, located adjacent to Mill Street. Predicted pollutant concentrations at this location are well below the relevant air quality standards.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-27.23	Criticism that ecological survey information has not been provided for the proposed pylon route presented at statutory consultation, nor for the new route proposed at targeted consultation and the proposed sections of underground cable. Criticism that the lack of information has constrained the ability to make a thorough comparison of the potential impacts for each option	<p>For the targeted consultations, National Grid produced Environmental Implications of Change (EIC) documents for each proposed change. These provided proportionate and appropriate information on the environmental implications when looked at both in local context and in the context of the Project as a whole.</p> <p>The proposed changes were reviewed against the preliminary assessment reported in the Preliminary Environmental Information Report (PEIR) published as part of the summer 2024 statutory consultation. The same methodologies and principles set out in the PEIR based on the information available and recognising that the Project was the subject of ongoing consultation and environmental surveys.</p> <p>All the relevant information required for the public to make informed decisions on the proposals was made available throughout the consultation periods. This information, including the EICs for each proposed change, remains available on the Project website.</p> <p>A range of protected species and other ecological surveys have been undertaken across the Order Limits, and the results are outlined in ES Chapter 8: Ecology and Biodiversity (document reference 6.8) and Appendices 8.1 to 8.16 (document reference 6.8.A1-6.8.A16) of the Environmental Statement (ES).</p>		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Design Change (CR)						
10-27.24	Oppose the use of underground cables	<p>National Grid has carefully considered the feedback received during the 2022 and 2023 non-statutory consultations, the statutory consultation, targeted consultations and landowner consultation, the alternatives available, and other factors including our duties and obligations. These duties include balancing the need to be economic and efficient, which includes keeping costs down in the interests of the bill-paying consumers, with a duty to have regard to preserving amenity, which includes the natural environment, cultural heritage, landscape and visual quality, National Policy Statement (NPS) EN-5 makes clear that <i>'the government's position that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments would cross part of a nationally designated landscape (i.e. National Parks, The Broads, or Area of Outstanding Natural Beauty (AONB))'</i>. The NPS also confirms that widespread and significant adverse landscape and/or visual impacts in other locations may also justify the use of undergrounding. We may also adopt underground cables in other circumstances such as to cross existing 400 kV overhead line infrastructure.</p> <p>Where the installation of underground cables is required in lieu of overhead lines, the design of the Project has incorporated suitable consideration of the existing</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		environment, ecology and site ground conditions based on site specific survey data. We have undertaken an Environmental Impact Assessment (EIA) which includes a baseline of the existing environment as well as site specific information and survey data.				
10-27.25	Suggest a minimum distance that the Project should be sited from residential areas / residences	National Grid does not use standard minimum distances as a routeing consideration. Applying an arbitrary distance may be too big or too small for the specific circumstances. We utilise the Holford Rules (a description of the Holford Rules can be found in Appendix I22 of this report) informed by feedback and professional judgement to define appropriate corridors and alignments that are consistent with the relevant policy framework and duties. In response to feedback to the 2022 and 2023 non-statutory consultations, statutory consultation, targeted consultations, and landowner consultation, we have modified the alignment in various locations to increase separation to properties where this is possible without undue deviation or transfer of effects to other similar properties or other receptors. A Landscape and Visual Impact Assessment (LVIA)) has been undertaken as part of the Environmental Impact Assessment (EIA). The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) This assesses the impact of the Project and identifies the need for additional mitigation if required.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-27.26	Suggest that existing overhead lines in this section should be removed	<p>The existing electricity transmission network provides power, via the local distribution network, into the local area where it is used in homes and businesses. Such lines cannot just be removed as power supplies would not be maintained.</p> <p>The need case and funding for the Project is to deliver the new network reinforcement needed, rather than to remove existing overhead lines which would need to be replaced by another form of connection such as underground cables.</p> <p>Unless required for crossings or mitigation, undergrounding existing overhead lines on the transmission network would not be in accordance with National Policy Statement (NPS) EN-5 and would result in substantial cost to bill payers. There may also be significant environmental impacts due to the removal works on sensitive ecological and archaeological receptors as well as constraints from either existing buildings or unsuitable ground conditions.</p>			X	
10-27.27	Suggest that existing overhead lines in this section should be replaced by underground cables	<p>National Policy Statement (NPS) EN-5 establishes the position that the starting basis for new connections is a presumption on the acceptability of overhead lines but with this presumption reversed within designated landscapes and in certain other circumstances.</p> <p>The existing electricity transmission network provides power, via the local distribution network, into the local area where it is used in homes and businesses. The need case and funding for the Project is to deliver the</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>new network reinforcement needed, rather than to remove existing overhead lines by undergrounding them.</p> <p>We have identified a number of locations where we are proposing to place existing overhead lines underground. These locations are where existing 132 kV and lower voltage lattice pylon lines are crossed by the proposed 400 kV overhead line and / or mitigation of the combination of effects are considered necessary. This includes locations such as at Mellis, between Offton and Bramford Substation, to the south of Bramford Substation and near Fuller Street.</p> <p>Unless required for mitigation, undergrounding existing overhead lines on the transmission network would not be in accordance with NPS EN-5 and would result in substantial cost to bill payers. There may also be significant environmental impacts due to the removal works on sensitive ecological and archaeological receptors as well as constraints from either existing built form or unsuitable ground conditions.</p>				
10-27.28	Suggest that the Project is routed away from populated / residential areas	Deciding where and how to build new high voltage electricity lines is a complex issue and National Grid is mindful of the potential effects this infrastructure may have on local communities and the concerns these may bring. We recognise that people living near our transmission infrastructure, including high voltage overhead lines, may have concerns about audible noise and potential health impacts. It has sometimes been	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>suggested that minimum distances between properties and overhead lines should be prescribed.</p> <p>We do not consider this appropriate since each instance must be dealt with on its merits. However, we have always sought to route new lines away from residential property on grounds of general amenity where possible.</p> <p>We have undertaken a noise and vibration assessment which can be found in the Environmental Statement (ES), Chapter 14: Noise and Vibration (document reference 6.14) that forms part of the Environmental Impact Assessment (EIA) for the Project. Noise levels and the effect on residential properties as well as other sensitive areas, such as hospitals and schools, are carefully considered during planning, assessed according to the appropriate UK standards, and mitigated where necessary. We set strict technical standards for the equipment we install on our network. These will apply to the proposed new East Anglia Connection Node (EACN) substation, and extensions required to the existing Norwich Main, Bramford, and Tilbury Substations. These standards include requirements to ensure the occurrence of audible noise is eliminated or reduced as far as practicable. Therefore, significant adverse effects from noise are not expected.</p> <p>Noise from overhead lines is predominately determined by the conductor design, voltage and weather conditions. The overhead line would be designed using a relatively quiet conductor that meets the design</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>specification required, and operational noise is not likely to be significant at nearby sensitive receptors under any weather conditions. Pylon fittings, such as insulators, dampers, spacers, and clamps, are also designed and procured in accordance with a series of National Grid Technical Specifications to reduce the potential for audible noise and tones to occur from all types of fittings. Where noise does occur, it is likely to be localised and of short duration. If this is due to a fault, action can be taken to rectify it. A technical note has been submitted as part of the application for development consent to support scoping out noise associated with overhead lines from the ES.</p> <p>In addition, we have undertaken a Landscape and Visual Impact Assessment (LVIA) for the Project. This includes an assessment on both landscape character and visual amenity. The LVIA is presented in the ES, Chapter 13: Landscape and Visual (document reference 6.13).</p> <p>The health and safety of the public, local communities and employees is central to everything that we do. The UK has a carefully thought-out set of policies for protecting us all against Electric and Magnetic Fields (EMFs), the main component of which is exposure guidelines. The exposure guidelines are set by independent scientific bodies and are based on decades-long studies into the effects of EMFs and ill health. After those decades of research, the weight of evidence is against there being any health risks of EMFs below the guideline limits. Our approach is to ensure</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>that our network comply with those policies, which are set by Government on the advice of their independent advisors. The Project is designed to ensure it is fully compliant with these policies and guidelines. This ensures that health concerns are properly and adequately addressed.</p> <p>Policies for both noise and EMF are incorporated into the decision-making process for development consent as set out in National Policy Statement (NPS) EN-5. It is National Grid's policy to ensure that all its equipment complies fully with those policies and guidelines. The application for a Development Consent Order (DCO) includes assessments against these policies, including both construction and operational noise and EMF.</p>				
10-27.29	Suggest that the Project should run in closer to / parallel to the existing overhead lines	<p>National Grid notes the potential for close paralleling existing overhead lines to reduce the level of effects that may arise from a new overhead line.</p> <p>However, where existing overhead lines are present along the proposed route, there are constraints and features that mean, overall, we consider close paralleling would lead to greater effects on receptors in the area and be less compliant with the Holford Rules or be less consistent with the policy to be economic and efficient. A summary of the Holford Rules is provided within Appendix I22 of this report. A number of residential properties are present in close proximity to the existing 400 kV overhead line meaning that if the overhead lines were close paralleled it would result in</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		the properties having an overhead line close to both sides. There are also some locations where the combination of existing physical and environmental features (road infrastructure, commercial and residential properties etc) present very substantial challenges to routeing and siting. As a result, whilst close paralleling may appear beneficial in some sections, overall, the increased environmental effects where the overhead lines have to converge and diverge, and those increased effects on properties with overhead lines on both sides are considered greater than those introduced by a new overhead line separated from existing 400 kV overhead lines. Whilst crossings and use of underground cable technology may be able to address various constrained locations, we consider the costs and environmental effects arising from the additional infrastructure required to be less compliant with our duties and relevant policies.				
10-27.30	Suggest that underground cables are used for the entirety of this section	National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed</i>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p><i>developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or Area of Outstanding Natural Beauty (AONB))</i>'. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider this section in its entirety would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN-5. The LVIA is presented in the Environmental Statement (ES),</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Chapter 13: Landscape and Visual (document reference 6.13) and this has identified any need for additional mitigation.</p> <p>Therefore, whilst undergrounding the whole of this section is not considered appropriate, our proposals do include underground cable within the Dedham Vale National Landscape (previously known as Area of Outstanding Natural Beauty (AONB)) in accordance with NPS EN-5. Prior to our 2023 non-statutory consultation we identified the need to extend the underground cable beyond the National Landscape boundary because of potential effects, we have further extended this section of underground cable following consideration of feedback on our 2023 non-statutory consultation and additional investigation into potential effects. We also identified an approximately 4 km section near Great Horkesley as meeting the particularly sensitive criteria where underground cable is also proposed. Additionally, underground cable is proposed at Fairstead for a 400 kV overhead line crossing.</p>				
10-27.31	Suggest alternative routing away from Burgate and respondent's property (plan provided by respondent)	<p>National Grid notes the respondent's feedback. The potential to divert the alignment to pass to the east of Wickham Abbey Farm and other named properties has been considered over the course of development of the Project such as set out in the 2023 Design Development Report (paragraph 6.4.33) and in the 2024 Design Development Report (from paragraph 5.4.74) (available on the Project website). Notwithstanding the</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>respondent's preference, the effects arising by this change would transfer to other similar receptors and would be greater in terms of visual effects for residential occupiers and on listed buildings. In the absence of new evidence or identification of further factors the previous conclusions remain valid. Therefore, it is not preferred, and no change is made. National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project. The results of this assessment are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation (and maintenance) of the Project and recommends appropriate mitigation. Elsewhere in this section north of RG138 the request is interpreted to be more closely parallel to the existing overhead line infrastructure. This has been considered and reported in the 2022 Corridor and Preliminary Routeing and Siting Study (CPRSS) and the 2023 and 2024 Design Development Reports (available on the Project website). It has been further reviewed in respect of the section identified in the feedback in the 2025 Design Development Report (document reference 5.15). In the absence of new information or the identification of other factors, the conclusions drawn previously remain valid that it is less preferred. There are greater effects where lines converge and diverge with sharp direction changes</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		to the north-west of Mendlesham and south-east of Mendlesham Green to connect with the remainder of the alignment. Other identified effects in the feedback are not removed but transferred to other receptors and overall adopting the change would provide an alignment with more angle pylons and be less direct and less consistent with Holford Rule 3. A summary of the Holford Rules is provided within Appendix I22 of this report. There are also increased maintenance and refurbishment risks, especially to the west of Mendlesham where the large direction change on the existing line would require additional separation between parallel overhead lines to provide the appropriate space for future maintenance to be completed safely where there is limited space because of a listed residential property. Overall, a more parallel alignment is considered less consistent with the Holford Rules and likely to increase effects. On this basis, we do not consider the suggested change to be preferred, and it is not taken forward.				
10-27.32	Suggest the Project route is further east on a line east of Wickham Abbey Farm, Hempnalls Hall, Wicks Farm, Old Farm/Hoggars Road (before pylon RG138)	National Grid notes the request but also notes that it consulted on the alternatives to use underground cable or overhead line for the crossing of the Waveney Valley in 2024. We have considered the feedback received and published the basis for decision making within the 2025 Design Development Report (document reference 5.15) and did not need to undertake consultation, as part of the 2025 targeted consultations, on this decision. National Grid has undertaken an Environmental Impact	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Assessment (EIA) for the Project. The results of this assessment are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation (and maintenance) of the Project and recommends appropriate mitigation. This mitigation has been identified through discussion with technical topic consultees and the Wildlife Trusts engaged with the WaLOR project.				
10-27.33	Concern that the Project from Pylon RG102 to RG111 has been altered, bringing it much closer to houses in Little Green, and construction traffic will have to pass through the small hamlet / Suggest that the Project is rerouted between Pylon RG102 and RG111 straight across fields (e.g. to mitigate impact on houses and roads, avoid the need to bury the existing line, and carry out construction away from the Mellis / Gislingham Road which would be a more accessible route to reach the line)	National Grid notes the respondent's feedback and suggested alignment, we proposed the change to the alignment between RG102 and RG117 (previously RG103 and RG116) to adopt the alignment of the existing 132 kV overhead line for approximately 2 km, to then realign south to the west of Burgate Road. This change was proposed due to the identification of historic assets that need to be avoided as well as impacts on Mellis Common and the opportunity to follow the route of existing pylons. In the absence of new information or evidence, we are therefore not proposing a further change to the alignment at this location.			X	
10-27.34	Suggest that the angle pylon north of Little Wenham is removed, and diverted to Chattisham	National Grid notes the respondent's feedback. The angle pylon at JC26 (now JC27), is required in this location in order to avoid other constraints such as woodland and properties while continuing the route north			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		to Bramford Substation. We are therefore not proposing a change to the location or removal of this pylon.				
10-27.35	Criticism that the route will create an "s-shape" around Snow Street, Roydon in an already narrow gap between Bressingham and Roydon and wrapped around Wortham Ling	National Grid is focussed on the potential effects of an alignment which is defined by the actual effects that may arise after consideration of the screening and filtering that is provided by landform, existing buildings and vegetation. There is for example very limited visibility locally of the land around Roydon with that at Wortham Ling. National Grid has considered a variety of route options in this general area encompassing alternative routes to the east of Diss, further to the west of the alignment and then south over farmland along with other alternatives as well as a variety of localised amendments. The basis for selection of the route is as out in the 2023, 2024 Design Development Reports (available on the Project website) and the 2025 Design Development Report (document reference 5.15), with the 2025 report also setting out the decision making that leads to the Project progressing on the basis of overhead line. In the absence of new information or the identification of other factors no change in response to this feedback is proposed.			X	
10-27.36	Concern the proposed 'super pylons' on/or near the village of Offton will present a risk to pilots and low flying training helicopter travelling from RAF Wattisham	In accordance with the requirements of the Overarching National Policy Statement (NPS) for Energy (EN-1), National Grid has consulted with the Ministry of Defence (MoD) and well as the operators of Wattisham Flying Station with regards to potential impacts on military			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>aerodromes and aviation, including from the creation of obstructions within identified low flying areas.</p> <p>National Grid continues to engage with the MoD to support the implementation of reasonable mitigations to address impacts from the Project to low flying, likely to involve the accurate charting of proposed Project structures to allow deconfliction.</p> <p>Further information on the assessment of airfields can be found in the Environmental Statement (ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).</p>				
10-27.37	<p>Suggest that opportunities for the rationalisation of the transmission and distribution networks must be fully explored. For example, the removal of the 132 kV line from Copdock to Lawford, through the designated National Landscape, could result in significant benefits</p>	<p>National Grid has considered this feedback in combination with emerging assessment findings. The East Anglia Connection Node (EACN) substation siting was undertaken from the perspective of establishing the most economic and efficient means of meeting the need for network reinforcement and connecting additional customers. This was set out in the 2022 - Corridor and Preliminary Routeing and Siting Study (CPRSS) (document reference 7.18) and has been reviewed in subsequent 2023 and 2024 Design Development Reports (available on the Project Website) and the 2023 and 2024 Strategic Option Backcheck and Reviews (available on the Project website) and 2025 Strategic Option Backcheck and Review (document reference 7.17).</p>		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Beyond the need to create some headroom by the removal of certain sections the existing 132 kV overhead line in the immediate vicinity of Bramford, neither cumulative nor in-combination effects have been identified at levels where additional removal of 132 kV overhead lines would be justified given the scale of investment required to maintain the connection by alternative means.</p> <p>Section 245 (Protected Landscapes) of the Levelling-up and Regeneration Act 2023 (LURA) places a duty on '<i>relevant authorities</i>', which in this context includes National Grid as a statutory undertaker, to seek to further the statutory purposes of protected landscapes (referred to as the 'seek to further' duty). In relation to National Landscapes (which includes the Dedham Vale National Landscape), this requirement has been incorporated into Section 85 of the Countryside and Rights of Way (CRoW) Act, which states:</p> <p><i>'In exercising or performing any functions in relation to, or so as to affect, land in an area of outstanding natural beauty in England, a relevant authority other than a devolved Welsh authority must seek to further the purpose of conserving and enhancing the natural beauty of the area of outstanding natural beauty'.</i></p> <p>The approach National Grid is taking to meet the 'seek to further' duty in relation to the Project has been detailed in National Landscapes – Duty to Seek to Further the Purposes Report (s85 Countryside and</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Rights of Way Act 2000) (document reference 5.10). The document details how the National Landscape and 'seek to further' duty has been taken into consideration during Project development and highlights potential further measures. The overall approach has been, and continues to be, discussed with relevant stakeholders (which includes but is not limited to the Dedham Vale National Landscape and Stour Valley Partnership) and follows the guidance published by Defra in December 2024 'Guidance for relevant authorities on seeking to further the purposes of Protected Landscapes' (Defra, 2024). It is intended the finalised measures would be secured by an appropriate mechanism as part pursuant to the Development Consent Order (DCO) process.</p> <p>As part of the package National Grid is proposing the preparation of an initial feasibility study to assess the potential feasibility for the PJ Line removal in the longer term. The PJ Line is an existing 132 kV overhead line between Bramford and Lawford. This work would be limited to a feasibility exercise and any steps beyond that regarding potential removal would be for future consideration with relevant stakeholders entirely outside of the Project and DCO. Further detail is available in National Landscapes – Duty to Seek to Further the Purposes Report (s85 Countryside and Rights of Way Act 2000) (document reference 5.10).</p>				
10-27.38	Suggest coordinated delivery of interrelated energy projects and network infrastructure, including	National Grid would only promote new Grid Supply Points (GSP) where they are essential to meet the		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	improved connectivity for Freeport East at Gateway 14 as well as other major commercial operations and other interests in the area, enabling decarbonisation and other green energy objectives for these sites and affected communities. Suggest that National Grid act upon the value that strategic coordination will add to the Project, the wider Great Grid Upgrade objectives by enabling effectively, appropriate and sustainably planned local generation and storage for focused local distribution and consumption as part of the government's priorities for a decarbonised economy and to contribute to the challenge of fuel poverty	purposes of the project by allowing the removal of an existing line to provide space for the new overhead line. This is not the case in the Stowupland area, so the Project cannot provide this. The alternative is for the provision of new GSPs to be defined by National Energy System Operator (NESO), responding to applications by generators or Distribution companies (either UK Power Networks (UKPN)s or independent Distribution Network Operators (DNOs)) No such requirement has been raised to National Grid. No change is therefore proposed.				
10-27.39	<p>Suggest the following, that currently remain unresolved and have not been addressed in the Targeted Consultation:</p> <p>a. Design review around RG123/RG124 regarding risks and opportunities around the poplar plantation in this area</p> <p>b. Realignment through Gipping Valley, around Creeting Hall, RG160-RG167</p> <p>c. Comprehensive scheme of undergrounding south of Stowmarket Road, around Badley Hall and Church, Holyoak Farm and Combs</p> <p>d. Opportunities to reduce cumulative harm around Bramford substation through undergrounding and comprehensive landscape master planning</p>	<p>National Grid notes the respondent's feedback.</p> <p>In respect of item a) we have considered various alternatives here as set out in the 2023 and 2024 Design Development Reports (DDR) (available on the Project website) and remain of the view that a route through the belt of trees is preferred to alternatives that are less direct and considerably closer to residential properties. In the absence of new evidence or the identification of further factors no change is made.</p> <p>Similarly in respect of item b) previous DDRs have set out the preference for an alignment to the east of the Hall compared with alignments to the west, the latter variously transferring effects to a greater number of residential properties, being less direct with more angles or increasing effects on certain listed buildings. In the</p>		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	<p>e. Design review in the area between Bamford and the Dedham Vale National Landscape (undergrounding options)</p> <p>f. Additional undergrounding from JC026 to mitigate aviation impacts at Raydon Airfield with additional benefits for the setting of listed buildings at Wenham Grange and Vauxhall</p> <p>g. Consideration for HDD drilling in the Stour Valley, around Glebe Farm, Springfield Farm and at crossing of Black Brook</p>	<p>absence of new evidence or the identification of further factors no change is made</p> <p>For items c) and d) The Project proposals have considered the potential for cumulative effects. Around the Badley Hall area we are proposing to replace three sections of the 132 kV and 33 kV lattice pylon lines by sections of underground cable where crossed by the alignment. Around Bramford Substation the project includes the replacement of sections of three existing 132 kV overhead lines with underground cable, one to the north of Bramford (for around 8 m to north of Offton) and two to the south of Bramford. The Environmental Statement reports on the effects arising as a result of the Project (document reference Volume 6: Environmental Statement).</p> <p>For items, e) and f) National Grid has carefully considered the feedback proposing the use of underground cable along the route, the alternatives available, and other relevant considerations. These include our duties and obligations under various legislation encompassing consideration of cost, environment, socio-economic and engineering factors. National Policy Statement (NPS) EN-5 makes clear (paragraph 2.9.20) that the government's position is <i>'that overhead lines should be the strong starting presumption for electricity networks developments in general, this presumption is reversed when proposed developments will cross part of a nationally designated landscape (i.e. National Parks, The Broads, or Area of</i></p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p><i>Outstanding Natural Beauty (AONB))</i>'. Where no such designations are present, nor is the area within the setting of such a designated area which may have engaged NPS EN-1 (paragraph 5.10.34) to also consider whether the use of underground cable was justified, the starting presumption for the Project in most locations across the Project is an overhead line. In line with the policy in EN-5 (paragraphs 2.9.14 and 2.9.23) we have also considered (i) whether an overhead line in certain locations would likely result in particularly significant landscape and visual impacts (such that due consideration should be given to the costs and benefits of feasible alternatives to the overhead line: paragraph 2.9.14); and (ii) whether there is a high potential for widespread and significant adverse landscape and/or visual impacts (such that the case for undergrounding must be considered in accordance with paragraphs 2.9.24 and 2.9.25). A Landscape and Visual Impact Assessment (LVIA) has been undertaken which assesses the likely significant landscape and visual effects from the Project. Whilst this assessment concludes that the introduction of an overhead line may give rise to significant adverse effects (in environmental impact terms), we do not consider the Project between Bramford Substation and Raydon Airfield would meet the thresholds established by paragraphs 2.9.14 and 2.9.23 of Policy EN5. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>and Visual (document reference 6.13) and this has identified.</p> <p>For item g) Trenchless installation techniques, such as Horizontal Directional Drilling (HDD), can theoretically be used as an alternative to a trenched (cut and cover) approach to install underground cables. It is usually the choice of methodology where minimal disturbance to above ground features is required, given that trenched methods are more disruptive in terms of the level of disturbance to the landscape and environment. These methodologies increase complexities with regards to engineering, programme, and in turn increase cost, hence why they are not the preferred methodology of underground cable installation, but more so an alternative means where National Grid needs to negotiate the route close to environmentally sensitive receptors. In conclusion having weighed up all relevant factors including cost, engineering/technical feasibility, environmental/community impacts - the use of HDD at the locations noted at (g) is not justified. At Black Brook there is insufficient space available to allow the use of trenchless techniques and at Glebe Farm the route has been proposed to be diverted to the west through farmland meaning that the effects do not justify the additional cost and effects from techniques other than open cut installation.</p>				
10-27.40	Suggestion that the Project is routed away from / the Project should not be located at a specific location	Further assessment and technical appraisal has been undertaken following feedback received from the	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		statutory consultation and subsequent targeted consultations which has resulted in several changes. Further details on these changes can be found in this report and in the 2025 Design Development Report, published as part of the Development Consent Order (DCO) application.				
10-27.41	Suggestion that the Project is routed away from / the Project should not be located at Gislingham	National Grid has considered the respondent's feedback highlighting a preference for an alternative moved away from Gislingham. In the absence of a specific basis for the change or a proposed alternative alignment, we have considered this feedback by following the guidance in the Holford Rules in developing the alignment. Guidelines on overhead line routeing are known as the "Holford Rules" which remain a valuable tool in selecting and assessing potential overhead line route options as part of the options appraisal process. A summary of the Holford Rules is provided within Appendix I22 of this report. We are therefore not proposing a change to the alignment at Gislingham outside of a small change to the alignment between RG112 and RG119.			X	
10-27.42	Suggestion that the Project is routed away from / the Project should not be located at Willisham	National Grid has considered the respondent's feedback highlighting a preference for an alternative moved away from Willisham. In the absence of a specific basis for the change or a proposed alternative alignment, we have considered this feedback by following the guidance in the Holford Rules in developing the alignment. Guidelines on overhead line routeing are known as the "Holford Rules" which remain a valuable tool in selecting			X

		report. We are therefore not proposing a change to the alignment at Little Green.				
10-27.46	Suggestion that the Project is routed away from / the Project should not be located at Burgate (Little Green)	National Grid has considered the respondent's feedback highlighting a preference for an alternative moved away from Burgate. In the absence of a specific basis for the change or a proposed alternative alignment, we have considered this feedback by following the guidance in the Holford Rules in developing the alignment. Guidelines on overhead line routeing are known as the "Holford Rules" which remain a valuable tool in selecting and assessing potential overhead line route options as part of the options appraisal process. A summary of the Holford Rules is provided within Appendix I22 of this report. We are therefore not proposing a change to the alignment at Burgate.			X	
Economic / Employment impact						
10-27.48	Concern about negative impact on businesses in the area	Through the routeing and siting exercise, National Grid has sought to reduce as far as practicable impacts to businesses. Impacts on local businesses within the Local Study Area (the Order Limits) and within the 3 km Study Area (where visual impact is likely to be an economic consideration) are assessed in Environmental Statement (ES) Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15). As part of this assessment, a range of mitigation measures have been considered to reduce disruption to businesses and their	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		users during the construction phase of the Project. These measures are identified in ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15), the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) which accompany the Development Consent Order (DCO) application.				
10-27.49	Concern that the Project makes no reference to socio-economic, health and wellbeing, transport, or other impacts	National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project. The results of this assessment are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation (and maintenance) of the Project and recommends appropriate mitigation measures to reduce potential effects. Specifically, the assessments of the potential impacts of the Project on socio-economic matters (including economic and employment impacts), health and wellbeing and transport can be found in ES Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15), ES Chapter 10: Health and Wellbeing (document reference 6.10) and ES Chapter 16: Traffic and Transport (document reference 6.16), respectively.		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-27.50	Concern about disruption to the economy during the undergrounding process	<p>The Socio-economics, Recreation and Tourism assessment of the Environmental Statement (ES) (document reference 6.15) assesses the local economy and tourism economy within the Wider Study Area as a whole.</p> <p>A temporary not significant beneficial effect has been assessed for the local economy for the Wider Study Area and a temporary not significant adverse effect has been assessed for tourism economy during construction for the Wider Study Area.</p> <p>While a specific economic assessment for the underground cable locations has not been undertaken in order to ensure a proportionate approach, the construction good practices and mitigation measures outlined in the Outline Code of Construction Practice CoCP (document reference 7.2) and Outline Construction Traffic Management Plan (CTMP) (document reference 7.3) will be implemented to mitigate potential impacts on air quality, noise, transport and accessibility.</p>		X	X	
Environmental impact						
10-27.51	Concern that the Project will impact SSSIs	<p>Through routeing, siting and design development, National Grid has sought to reduce, as far as practicable, impacts on biodiversity and in particular features of high ecological value such as Sites of Special Scientific Interest (SSSI). The Project avoids all direct impacts on SSSIs, with no long-term negative</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>impacts anticipated on any SSSIs as a result of the Project. Potential direct and indirect impacts on each SSSI within the study area have been considered within the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8) and any necessary mitigation detailed to ensure no significant residual effects.</p> <p>National Grid will continue to engage with Natural England.</p>				
10-27.52	Concern that the Project will impact ancient woodland	<p>Through routeing, siting and detailed design, National Grid has sought to reduce, as far as practicable, impacts on biodiversity and in particular features of high ecological value, such as ancient woodland. A standard 15 m buffer from construction activities has been applied wherever practicable. Potential direct and indirect impacts on each block of ancient woodland within the study area have been considered within the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8) and any necessary mitigation detailed to ensure no significant residual effects. An Ancient Woodland and Veteran Tree Strategy is included as part of the Outline Landscape and Ecological Management Plan (LEMP) (see Appendix B of the Outline LEMP (document reference 7.4)). The Outline LEMP has been developed in consultation with relevant stakeholders including Natural England and local planning authorities.</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-27.53	Concern that the Project will impact nature reserve / RSPB reserve / Special Protection Area (SPA)	Through routeing, siting and design development, National Grid has sought to reduce, as far as practicable, impacts on biodiversity and in particular features of high ecological value, such as local wildlife sites (LWS), Royal Society for the Protection of Birds (RSPB) reserves and Special Protection Area (SPA's). Whist there are no impacts on RSPB reserves, potential direct and indirect impacts on LWS's and SPA's within the study area have been considered within the Environmental Statement (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8). SPA's and the associated impact on birds has also been considered within the Habitats Regulations Assessment (HRA) (document reference 5.3).	X	X	X	
10-27.54	Concern that the Project will result in a negative impact on the environment / countryside generally (no details given)	National Grid has sought to reduce, as far as practicable, impacts on the environment / countryside through routeing and siting and an ongoing iterative design process which has taken on board feedback at different stages of the Project. The iterative design process sought to avoid areas of highest concern, for example through changes to the route alignment or changes to the method e.g. trenchless crossings. National Grid has engaged with a range of stakeholders (including Statutory Environmental Bodies (SEBs) and relevant local planning authorities) throughout the development of the Project design and environmental assessment work.	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project. The results of this assessment are provided in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the Development Consent Order (DCO) application. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation (and maintenance) of the Project and recommends appropriate mitigation measures to reduce potential effects.</p> <p>A number of mitigation measures have been incorporated into the Project design. Mitigation relevant to specific environmental topics (including Ecology and Biodiversity, Landscape and Visual and Historic Environment) are presented in the relevant ES chapters. The Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Code of Construction Practice (CoCP) (document reference 7.2) contain a list of relevant good practice measures to avoid or reduce risks to habitats and species.</p> <p>In addition to the EIA, National Grid has set itself a target of delivering 10% biodiversity net gain (BNG) with environmental and societal benefits on all construction projects, meaning that as a result of measures taken, the biodiversity rating of the area will be enhanced by 10% greater than prior to the construction of the Project.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-27.55	Concern that the Project will impact conservation area	<p>The BNG target for the Project is currently voluntary and aligned with our corporate sustainability commitment.</p> <p>The potential for the Project to affect the setting and significance of Conservation Areas has been comprehensively assessed in accordance with established best practice and guidance such as Good Practice Advice Note 3: The Setting of Heritage Assets (Historic England, 2017) and other relevant policy and guidance such as Conservation Principles (Historic England, 2008) and relevant planning policies including the Overarching National Policy Statement for Energy (EN-1).</p> <p>The assessment methodology and its application have been discussed with and agreed by key heritage stakeholders, including Historic England and relevant local planning authorities, through the Scoping process and subsequent thematic working group meetings. This collaborative approach has ensured that the assessment is robust, proportionate, and in line with expectations.</p> <p>Each Conservation Area potentially affected by the Project has been individually assessed for both direct and indirect effects, including impacts arising from change to setting. These assessments are presented in ES Chapter 11: Historic Environment of the Environmental Statement (document reference 6.11), supported by detailed mapping and analysis in the ES Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1). The methodology</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>considers all relevant aspects of significance, including historical, architectural, and evidential values, as well as the contribution of setting to that significance.</p> <p>Where adverse effects on the setting of Conservation Areas have been identified, the Project has sought to reduce these through route refinement and design evolution. This includes, where appropriate, adjustments to pylon locations, alignment shifts, and the development of mitigation proposals in the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5).</p> <p>We are therefore confident that the assessment of impacts on Conservation Areas has been carried out to a high standard and that appropriate measures have been taken to mitigate any identified adverse effects.</p>				
10-27.56	Concern about the impact of the Project on flooding	<p>A detailed Flood Risk Assessment (FRA) has been prepared (document reference 7.9). The FRA assesses flood risk to the Project and the impacts that the Project's construction and operation would have on flood risk from a wide range of sources. The assessment has been informed by a wide range of data sets, including the January and March 2025 data from the Environment Agency, and by engaging with the Environment Agency and all of the relevant Lead Local Flood Authorities and Drainage Boards. The FRA (document reference 7.9) has identified a range of controls and mitigation measures to prevent flood risk impacts, which have been secured through a range of commitments set out in</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		the Outline Code of Construction Practice (document reference 7.2). The FRA (document reference 7.9) also describes the measures and strategy that would be put in place to manage surface water runoff arising from Project construction worksites and operational infrastructure.				
10-27.57	Suggest that where cables are to be laid below a watercourse, then they shall be laid least 1 m below the bed level and suitable protected and locations marked	Where cables are laid below the bed of a watercourse the Project design, in terms of burial depths, has been informed by engagement with the Environment Agency (main rivers) and the Local Lead Flood Authorities/Internal Drainage Boards (ordinary watercourses and board drains). Commitment W06 in the Outline Code of Construction Practice (CoCP) (document reference 7.2) sets out that cables will be laid at least 1 m below the hard bed level a main river and will remain at or below this level for not less than 3 m from the brink of the riverbank. Marker posts shall also be positioned on each bank of the river to indicate the location of the under-crossing and the nature of the works.		X	X	
10-27.58	Suggest the low voltage network is placed underground to enhance landscape and public amenity at the Waveney Valley	In respect of this area although the landscape of the Waveney Valley is valued, it is not designated. The presumption in National Policy Statement (NPS) EN-5 in such undesignated locations is that overhead line is generally acceptable. We have also considered whether the effects are nonetheless sufficient to engage other parts of NPS EN-5 to support a change to use underground cable. We conclude that the inherent level		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>of effects from a change to cable, do not justify the cost that would be incurred. Additionally the use of underground cable leads to increased technical risk from channel naturalisation and landscape recovery plans and may compromise success of those plans. After consideration of the decision making guidance at paragraph 2.9.25 of NPS EN-5, National Grid concluded that whilst effects to individual receptors may be significant in Environmental Impact Assessment (EIA) terms they do not justify the expected costs and technical complexities of an underground cable design, particularly given the challenging ground conditions and requirement for predominantly open cut trenching through sensitive peat habitats. On this basis, National Grid concludes that the use of an overhead line should be taken forward for the crossing of the Waveney Valley.</p> <p>National Grid has liaised with statutory undertakers regarding third-party services that would be affected by the proposed alignment. The Project includes proposals to replace certain sections of the existing low voltage 11 kV/33 kV and Openreach wood UK Power Networks infrastructure with underground cables within this area.</p> <p>The Landscape and Visual Impact Assessment (LVIA), presented in ES Chapter 13: Landscape and Visual (document reference 6.13), includes an assessment on both landscape character and visual amenity and sets out the potential landscape and visual effects (including those near the Waveney Valley in Sections A and B of the study area).</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Financial compensation						
10-27.59	Concern that the Project will devalue property / impact on property value in this section	<p>National Grid acknowledges that its proposals may cause concern to landowners. Diminishment of property value known as 'injurious affection' and any other appropriate heads of claim would be considered on an individual basis in accordance with current legislation. We would pursue a voluntary agreement with affected landowners, acquiring rights in accordance with our Land Rights Strategy (the strategy is subject to review). If a voluntary agreement cannot be reached, then the Compulsory Purchase Code allows for a claim of compensation for the loss that property owners may have suffered as a direct result of the retained part of your property ownership being worth less as a direct result of the works.</p> <p>If there are any specific concerns about the devaluation of property, National Grid would advise seeking third party advice. or alternatively please contact the Project team:</p> <p>Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.</p> <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD.</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-27.60	Request for adequate financial compensation / Suggest that impacted individuals need to be compensated	<p>All affected landowners would be compensated for any temporary/permanent losses, and this would be dealt with on a case-by-case basis in line with the Compensation Code.</p> <p>If there are any specific concerns requiring compensation and how it would be assessed, please contact the Project team:</p> <p>Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.</p> <p>Alternatively, you can write to Norwich to Tilbury Land Team, Fisher German, The Atrium, Risby Business Park, Newmarket Road, Risby, Bury St Edmunds, IP28 6RD</p> <p>The Government has published its guidance on community funds for transmission infrastructure (DESNZ, 2025). National Grid is committed to working with Ofgem, industry partners, local communities and their representatives to ensure community benefits are delivered fairly and effectively, driving lasting, positive change for the people and places integral to our developing electricity network.</p> <p>Government has also announced its plans to introduce a bill discount scheme for households within 500 m of new infrastructure, which it proposes to introduce through the Planning and Infrastructure Bill. This is evolving government policy. Government expects this scheme to be in place by 2026 and we would share further details as they emerge.</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		National Grid is committed to providing a coordinated local and regional approach to community benefits. This would be delivered outside the development consent process, since this is not a material consideration in the decision on the proposed Project or a matter to be secured as part of the DCO, as per the Community Funds for Transmission Infrastructure: Guidance (DESNZ, 2025).				
Health, Safety & Wellbeing						
10-27.61	Concern that the Project may result in a negative impact on mental health / wellbeing	<p>National Grid recognises people may have concerns about the health effects of living close to an overhead line, and that the uncertainty whilst the proposals are developed may cause anxiety.</p> <p>We have sought to reduce potential effects on communities and residents through routeing and design. We have also sought to reduce concern or uncertainty about the proposals through making timely design decisions and engaging with the people and stakeholders throughout the development of the Project.</p> <p>The Project team will continue to engage with people potentially affected during progress of the Project, through regular communication including letters, phone calls and meetings. This would enable concerns to be raised and discussed at an early opportunity and provide a regular point of contact to respond to queries and concerns.</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>We urge anyone with concerns to get in touch through the Norwich to Tilbury Freephone number, address or email throughout the progress of the Project:</p> <p>Call our Community Helpline: 0800 915 2497 (Lines are open Monday to Friday 9:00am – 5:30pm)</p> <p>Email us: contact@n-t.nationalgrid.com</p> <p>Write to us: FREEPOST N TO T (No stamp or further address details are required)</p> <p>The UK has a carefully thought-out set of policies for protecting us all against Electric and Magnetic Fields (EMFs), the main component of which is exposure guidelines. Those exposure guidelines are set by independent scientific bodies and are based on decades-long studies into the effects of EMFs and ill health. After those decades of research, the weight of evidence is against there being any health risks of EMFs below the guideline limits. These policies are incorporated into the decision-making process for Development Consent in National Policy Statement (NPS) EN-5. It is National Grid's policy to ensure that all of its equipment comply fully with those exposure limits.</p>				
10-27.62	Concern about health risks associated with the Project / physical health risks associated with the Project	Health considerations are given a high priority in the process by which we arrive at any proposals for new electricity circuits. Assessment of compliance with Electric and Magnetic Field (EMF) guidelines and policies is key to National Grid's approach. The UK has a carefully thought-out set of policies for managing	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>EMFs. There have been over four decades of research looking into whether EMF can cause health effects and there are no established effects below the exposure limits. When designing our overhead lines, substations and underground cables design criteria, we ensure they would not exceed those exposure limits, even when operating at 100% capacity. Additionally, the precautionary measures which the Government have adopted, are applied to the design which ensure the EMFs reduce as quickly with distance as possible. Evidence of that compliance is presented in the EMF compliance report (document reference 7.8) submitted as part of the Development Consent Order (DCO) application.</p> <p>National Grid takes this issue very seriously and looks to authoritative and independent scientific organisations such as the World Health Organisation (WHO) and in the UK Health Security Agency (UKHSA) to review the worldwide body of scientific evidence on health. Important decisions on health are taken independently of industry, and National Grid have followed the guidance and policies adopted by Government on advice from their scientific experts. Each of these organisations have comprehensive reviews of EMF research available to view on their websites.</p>				
10-27.63	Concern that the Project poses a safety risk to aircraft (including balloons) in the area / Concern that the Project will impact airfields in this area	National Grid recognises the need for the Project to be developed collaboratively alongside aviation stakeholders to identify, assess, and as appropriate	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>mitigate, adverse impacts on aviation safety, in accordance with Government's Overarching National Policy Statement (NPS) EN-1.</p> <p>Our review of aerodromes potentially impacted by the Project identified 17 civil aerodromes (including two helipads) within 5 km of the preferred corridor and one military site (Wattisham Flying Station). We have also considered other airfields and flight activities where these have been identified through the 2022 and 2023 non-statutory, statutory consultation, targeted consultations, and landowner consultation, including for ballooning and for model flying. As well as considering feedback, National Grid's aviation advisers (an independent aviation consultancy) have directly engaged with these parties (with National Grid present).</p> <p>A number of route alignment and pylon positioning changes have been made following consideration of feedback and in all but one case the assessment concludes that the airfields can continue to operate. In the remaining case of a private airstrip near Little Burstead, we continue to liaise with the operator to identify an appropriate solution.</p> <p>Specifically in respect of Wattisham Flying Station our proposals position the alignment onto relatively lower ground (to remove the potential for interference with Instrument Landing System (ILS) radar) and adopt an alignment closer to the existing 132 kV overhead line and include replacing part of the 132 kV line south of</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Offton by underground cable to avoid a new overhead line corridor being introduced.</p> <p>We will continue to engage with relevant parties as appropriate.</p> <p>Further information on the assessment of airfields can be found in the Environmental Statement (ES) Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).</p>				
Heritage						
10-27.64	Concern about archaeological impacts	<p>Through routeing and siting National Grid has sought to reduce as far as practicable potential impacts on the historic environment. The impacts of the Project on the historic environment are assessed in Chapter 11: Historic Environment of the Environmental Statement (ES) (document reference 6.11). The assessment considers the potential impact on archaeology, historic buildings and historic landscapes and includes assessment of potential for physical impact, impact through change to setting that affects the value of a heritage asset and impact through indirect factors such as change in hydromorphology. The assessment is supported by walkover, setting and geophysical surveys, as documented in Appendix 11.1: (ES) Appendix 11.1: Historic Environment Baseline Report (document reference 6.11.A1) and Appendix 11.4: Geophysical Survey Results Report (document reference 6.11.A4).</p>		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-27.65	Concern about negative impact on heritage / Suggest that the Project should be routed away from heritage buildings / listed buildings / historical site	<p>Archaeological trial trench evaluation has also been undertaken and is reported in Appendix 11.5: (ES) Appendix 11.5: Trial Trenching Results Report (document reference 6.11.A5). In addition to the proposals in the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4), the Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5) sets out appropriate mitigation for the historic environment. The Project has engaged with Historic England and relevant planning authorities on aspects relating to heritage, including appropriate mitigation measures and techniques and to take their views into account during Project development which are detailed in ES Chapter 11: Historic Environment.</p> <p>Through routeing and siting National Grid has sought to reduce as far as practicable potential impacts on the historic environment. The impacts of the Project on the historic environment are assessed in Chapter 11: Historic Environment (document reference 6.11) of the Environmental Statement (ES). The assessment considers the potential impact on archaeology, historic buildings and historic landscapes and includes assessment of potential for physical impact, impact through change to setting that affects the value of a heritage asset and impact through indirect factors such as change in hydromorphology. Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Baseline Report (document reference 6.11.A1) and Appendix 11.4: Geophysical Survey Results Report (document reference 6.11.A4). In some areas archaeological trial trench evaluation has been undertaken and is reported in Appendix 11.5: (ES) Appendix 11.5: Trial Trenching Results Report (document reference 6.11.A5). In addition to the proposals in the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4), the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5) sets out appropriate mitigation for the historic environment. The Project has engaged with Historic England and relevant planning authorities on aspects relating to heritage, including appropriate mitigation measures and techniques. and to take their views into account during Project development.				
10-27.66	Concern about the impact of the Project on Protected Lanes	<p>The potential impact of the Project on Protected Lanes has been carefully considered throughout the routeing and siting process. National Grid has actively sought to reduce the impact on the historic environment, including Protected Lanes, as part of its commitment to preserving the cultural and historic character of the landscape.</p> <p>The assessment of effects on Protected Lanes, where relevant as heritage assets or contributing to the setting of other designated or non-designated assets, has been undertaken in accordance with established best practice and guidance such as Historic England's Good Practice</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Advice Note 3: The Setting of Heritage Assets (2017) and national and local planning policies.</p> <p>The impacts of the Project on the historic environment are set out in Chapter 11: Historic Environment of the Environmental Statement (document reference 6.11), which includes an evaluation of potential physical impacts as well as impacts resulting from changes to setting. The assessment is informed by baseline data and site-specific investigations, including walkover surveys, geophysical survey results, and trial trenching where appropriate.</p> <p>In addition, management measures to minimise and mitigate impacts during construction and operation phases are detailed in Table 6.1 of the Environmental Statement and in the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5). These documents outline the approach to managing risks to heritage assets, including Protected Lanes, and reflect a commitment to adopting proportionate and appropriate mitigation based on the nature and sensitivity of the asset.</p> <p>We are therefore confident that Protected Lanes have been appropriately considered within a robust and proportionate heritage assessment, supported by consultation with relevant stakeholders and in accordance with national guidance.</p>				
10-27.67	Criticism of the geophysical survey and trial trenching being undertaken within 'high priority'	The high priority geophysical survey areas are focused of sections of the Project which may experience an		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	sections as defined by National Grid and Arcadis / Suggest that priority should also be given to areas of high archaeological potential	impact from proposed underground cable, Cable Seal End (CSE) compounds, temporary construction compounds, substation works or due to the likely medium or high value of potential or known archaeological features. The high priority geophysical areas have been discussed and agreed upon with the relevant Local Planning Authority (LPA).				
10-27.68	Suggest that Table 1.2.3 of the Historic Environmental Section should acknowledge the potential to encounter as yet unknown archaeological heritage assets	<p>National Grid and Arcadis fully acknowledge the potential for as yet unknown below ground archaeological remains. As the Project progresses all areas of below ground impact will be investigated through geophysical survey followed by trial trenching, where deemed appropriate.</p> <p>National Grid recognises that previously unrecorded archaeological remains may be encountered during construction. This contingency is explicitly addressed in the Outline Code of Construction Practice (CoCP) (document reference 7.2) which requires the Project team to notify the relevant Local Planning Authority if an unexpected or more significant-than-anticipated heritage asset is discovered and to agree an appropriate response, whether preservation in situ or investigation and recording, compatible with construction requirements. The same protocol is set out in the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5). Consequently, the potential for unknown archaeology is already built into the Project's mitigation framework.</p>		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-27.69	Criticism that the provided maps do not show the full extent of the temporary haul road or pylon working areas across the entire route within Suffolk, which will have considerable impacts upon archaeological assets	<p>National Grid carried out targeted consultations on localised changes that would potentially alter the draft order limits for the Project where there were new or different impacts on landowners, communities, and/or the environment. There were some further changes to our proposals, such as the movement of pylons within the Order Limits presented, and minor amendments where we did not feel that consultation was proportionate to the change suggested.</p> <p>Our maps were developed in line with this to show the potential impacts of the changes proposed. All the documents from the statutory consultation remain available on the Project website, including detailed maps of the wider route. The alignment and maps are available as part of the Development Consent Order (DCO) submission.</p> <p>We believe that all the relevant information required for the public to make informed decisions at our targeted consultations was made available and do not believe that this impacted the feedback we received. The maps and information we required included details of haul roads and working areas where appropriate.</p> <p>Chapter 11: Historic Environment of the Environmental Statement (ES) (document reference 6.11) assessed impacts upon all known and project identified archaeological assets and is supported by comprehensive figures for cultural heritage. The</p>		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		archaeological potential of the Project in Suffolk is well understood and mapped against the Project.				
Mitigation						
10-27.70	Suggest mitigation measures	An Environmental Statement (ES) (document reference Volume 6: Environmental Statement) has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) (EIA) Regulations 2017 (<i>'the Infrastructure EIA Regulations'</i>). The ES identifies and assesses the likely significant effects on the environment resulting from the construction, operation (and maintenance) of the Project and recommends appropriate mitigation to reduce effects. Environmental mitigation measures have been defined within each environmental topic chapter and set out in relevant management documents submitted with the Development Consent Order (DCO) application, including the Outline Code of Construction Practice (CoCP) (document reference 7.2), the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3), the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (document reference 7.5).	X	X	X	
10-27.71	Request to be included within the targeted consultation/s through which National Grid explain what they are now doing to protect the Waveney	National Grid notes the respondent's feedback and suggested alignment, we proposed the change to the alignment between RG102 and RG117 (previously			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	Valley in light of opting not to proceed with the Waveney Valley Alternative (the underground option) / Suggest mitigation measures in the Waveney Valley (including at Roydon Fen and Wortham Ling)	RG103 and RG116) to adopt the alignment of the existing 132 kV overhead line for approximately 2 km, to then realign south to the west of Burgate Road. This change was proposed due to the identification of historic assets that need to be avoided as well as impacts on Mellis Common and the opportunity to follow the route of existing pylons. In the absence of new information or evidence, we are therefore not proposing a further change to the alignment at this location.				
PROW (Public Rights of Way)						
10-27.72	Concern about negative impact on PROW / footpaths / cycle paths / bridleways	<p>Through routeing and siting, National Grid has sought to reduce, as far as practicable, impacts and disruption to Public Rights of Way (PROW).</p> <p>The iterative design process identified the existing PROW network and their wider connectivity and sought where practicable to reduce and where possible remove impacts to PROW.</p> <p>Effects on PROW would be mitigated where possible, maintaining access where practicable, with closures as a last resort. We will continue to engage with relevant stakeholders on the PROW network to enable feedback and input to be considered as the Project progresses.</p> <p>An Outline Public Rights of Way Management Plan (document reference 7.6) is submitted with the Development Consent Order (DCO) application.</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Requests						
10-27.73	Request for further impact surveys in this section	<p>National Grid has undertaken an Environmental Impact Assessment (EIA) for the Project. The assessment is informed by a suite of field surveys and desk studies and results are presented in an Environmental Statement (ES) (document reference Volume 6: Environmental Statement) that accompanies the application for development consent. The ES identifies and assesses the likely significant effects on the environment resulting from the construction and operation (and maintenance) of the Project and recommends appropriate mitigation measures to reduce potential adverse impacts.</p> <p>The scope of the EIA is included in the Scoping Report (document reference 6.19) which was submitted to the Planning Inspectorate in November 2022 and their Scoping Opinion (document reference 6.20) received in December 2022. This provided the opportunity for statutory bodies to comment on the scope of the EIA which included our approach on study areas, data collection and baseline conditions for a range of environmental topics. We also discussed and agreed survey scope with stakeholders (including Statutory Environmental Bodies and Local Planning Authorities) following the Scoping Opinion (document reference 6.20) to ensure a robust baseline assessment.</p> <p>National Grid has prepared an Outline Code of Construction Practice (CoCP) (document reference 7.2) which sets out the required mitigation measures and</p>		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		environmental commitments that would be implemented during the construction phase of the Project to avoid or reduce potential effects of the Project on the environment, including commitments to undertake further surveys.				
10-27.74	Request for details of mitigation strategy for Raydon Wings Airfield, as the updated proposals pass through Runway 09/27, making it unsuitable for fixed wing aircraft	<p>National Grid recognises that disruption to Raydon Wings aerodrome during construction of the proposed underground cable route is likely. National Grid is engaging with the operator to explore the potential for adjustments to the Project design within the proposed Order Limits and limits of deviation to minimise temporary impacts on aviation operations. Construction practices to manage access and further minimise disruption are also subject to discussion.</p> <p>No permanent effects of the underground cable are anticipated for the aerodrome's operations. Further information on the assessment of airfields can be found in the Environmental Statement (ES Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).</p>	X	X	X	
10-27.75	Suggest that surveys that have previously covered, or will cover, any new field boundaries and the proposed new bellmouth, facing impacts during these works and that they have been/will be comprehensively assessed with regard to potential impacts on important habitats and species	A range of protected species and other ecological surveys have been undertaken across the Order Limits, and the results are outlined in (ES) Chapter 8: Ecology and Biodiversity (document reference 6.8) and Appendices 8.1 to 8.16 (document reference 6.8.A1-6.8.A16) of the Environmental Statement (ES). This has included an assessment of priority habitats such as		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	associated with these features (e.g. arable margins and hedgerows)	arable field margin. Impacts have been identified within Section 8.8 of the ES with appropriate mitigation secured through the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the Outline Landscape and Ecological Management Plan (document reference 7.4).				
Tourism						
10-27.76	Concern about impact of the Project on tourism	<p>Through routeing and siting, National Grid has sought to avoid, as far as practicable, locations important for leisure and tourism.</p> <p>Environmental Statement (ES) Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15) presents an assessment on the potential impacts on tourism economy (during construction) and tourism assets (during construction and operation), including visitor accommodations. As part of this assessment, a range of measures have been considered throughout the construction phase of the Project to minimise disruption on tourism. These include: traffic management, signage and routeing measures. These are identified within the ES Chapter 15: Socio-economics, Recreation and Tourism (document reference 6.15), the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Visual impact						
10-27.77	Concern about cumulative visual impact of the Project alongside existing overhead lines / concern about wirescape	<p>National Grid notes the feedback received and has taken it into consideration as part of the iterative design process. National Grid has liaised with UK Power Network to understand opportunities for 132 kV network rationalisation. The Project includes proposals to replace certain sections of 132 kV overhead line connection with underground cable and also to remove some sections of 132 kV overhead line to rationalise the network and reduce potential for cumulative wirescape effects.</p> <p>A Landscape and Visual Impact Assessment (LVIA) has been undertaken as part of the Environmental Impact Assessment (EIA). Existing infrastructure (such as existing overhead lines) has formed part of the baseline environment for the Project to be assessed against, to identify if significant landscape and / or visual effects are likely to arise. The LVIA presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13) sets out potential landscape and visual effects. The rationalisation of the existing 132 kV network in some areas forms part of the embedded landscape mitigation, as set out in Chapter 13.</p> <p>The findings and conclusions of the LVIA and other topics assessments have been considered within the Cumulative Impact Assessment, presented in ES Chapter 17: Cumulative Effects Assessment (document reference 6.17), lists the developments as part of the cumulative assessment. This chapter considers the</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		landscape and visual effects of the Project cumulatively with other proposed developments that are being progressed.				
10-27.78	Concern that the Project will be unsightly / visually intrusive (including overhead lines, CSE compounds and substations) / Concern that the Project will cause a negative impact on views	<p>National Policy Statement (NPS) EN-5 makes it clear that the Government considers overhead lines to be appropriate and acceptable in most instances, although it recognises that there may be, at particularly sensitive locations, potential adverse landscape and visual impacts of an overhead line that make it inconsistent with our duties and relevant planning policy.</p> <p>The Dedham Vale National Landscape (previously an Area of Outstanding Natural Beauty (AONB)) designation is one such location where underground cable technology is proposed with the extent of underground cabling extending beyond the boundary in response to the potential for the Project to affect the National Landscape. Our proposals include a total of approximately 20 km of underground cable through and in the vicinity of the Dedham Vale National Landscape, including a section at Great Horkesley to reduce the changes in views and setting of the National Landscape from within and adjacent to its designated boundary.</p> <p>Underground cabling is also proposed for a short section of 400 kV overhead line crossing near Fairstead.</p> <p>Cable Sealing End (CSE) compounds are required to facilitate sections of underground cable. The proposed East Anglia Connection Node (EACN) substation is required to connect customers and the proposed Tilbury</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>North Substation is required to connect the Project into the existing Tilbury Substation These components have been carefully sited taking into consideration Horlock Rules including the potential for landscape and visual effects.</p> <p>The higher cost of underground cables to bill paying consumers, and the environmental implications of installing underground cables and maintaining them at locations outside the Dedham Vale National Landscape, are not considered to be justifiable in the context of national policy or National Grid's statutory duties, which include the need to be economical and efficient.</p> <p>A Landscape and Visual Impact Assessment (LVIA), presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13), has been undertaken as part of the Environmental Impact Assessment (EIA). The LVIA includes an assessment on both landscape character and visual amenity.</p> <p>Landscape mitigation is proposed within Environmental Areas around substations and CSE compounds. The Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) includes details regarding the planting proposals.</p>				
Wildlife / Ecology impact						
10-27.79	Concern about impact of the Project on flightpaths for birds	Chapter 8: Ecology and Biodiversity of the Environmental Statement (ES) (document reference 6.8)	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		considers potential impacts during the construction and operational phase of the Project on birds. Bird surveys have been undertaken across the route between 2022-2024 to determine an accurate baseline value, the scope of which has been agreed with Natural England and Local Planning Authorities. The potential for bird collision risk impact during the operational phase has been assessed within the ES and Habitat Regulations Assessment (HRA) (document reference 5.3) and agreed with Natural England. Any adverse impacts identified have been minimised as far as possible, where practicable, and mitigation in the form of bird diverters proposed.				
10-27.80	Concern about impact of the Project on birds	Chapter 8: Ecology and Biodiversity of the Environmental Statement (ES) (document reference 6.8) considers potential impacts during the construction and operational phase of the Project on birds. Bird surveys have been undertaken across the route between 2022-2025 to determine an accurate baseline value, the scope of which has been agreed with Natural England and Local Planning Authorities. The potential for bird collision risk impact during the operational phase has been assessed within the ES and Habitat Regulations Assessment (HRA) (document reference 5.3) and agreed with Natural England. Survey results have identified no areas of significant bird collision risk across the Project.	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		It is noted that birds are a mobile species, and it is likely that active nests for common and widespread species may be encountered during the construction phase. Precautionary working methods for breeding birds are included within the Outline Code of Construction Practice (CoCP) (document reference 7.2) and the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) accompanying the Development Consent Order (DCO) application.				
10-27.81	Concern that the Project will result in a negative impact on species (protected status not specified)	Through routeing, siting and detailed design National Grid has sought to reduce, as far as practicable, potential impacts on biodiversity including protected species. The design process has taken account of existing biodiversity, the natural environment and, where practicable, has sought to reduce impacts on areas of ecological sensitivity including protected species and their associated habitats, through avoidance or mitigation. A comprehensive survey effort for a range of protected species was completed over the 2023 – 2025 period. Chapter 8: Ecology and Biodiversity of the Environmental Statement (ES) (document reference 6.8) assesses the effects on protected species based on this baseline information and where/if required appropriate mitigation measures are detailed. Suitable mitigation for protected species has been developed in consultation with Natural England to ensure legal compliance and best practice guidelines are adhered to. Where necessary, draft licence applications have been drafted	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		and National Grid is in the process of agreeing the detail within the licence documents with Natural England, in order to obtain the relevant Letters of No Impediment (LoNI). Mitigation for non-licensable protected species has been included within the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4).				
10-27.82	Concern that the Project will result in a negative impact on protected species	Through routeing, siting and detailed design, National Grid has sought to reduce, as far as practicable, potential impacts on biodiversity including protected species. The design process has taken account of existing biodiversity, the natural environment and, where practicable, has sought to reduce impacts on areas of ecological sensitivity including protected species and their associated habitats, through avoidance or mitigation. A comprehensive survey effort for a range of protected species was completed over the 2023 – 2025 period. Chapter 8: Ecology and Biodiversity of the Environmental Statement (ES) (document reference 6.8) assesses the effects on protected species based on this baseline information and where/if required appropriate mitigation measures are detailed. Suitable mitigation for protected species has been developed in consultation with Natural England to ensure legal compliance and best practice guidelines are adhered to. Where necessary, draft licence applications have been drafted and National Grid is in the process of agreeing the detail within the licence documents with Natural England, in order to obtain the relevant Letters of No Impediment	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
10-27.83	Concern that the Project will result in a negative impact on flora / plants / woodlands / hedgerows	<p>(LoNI). Mitigation for non-licensable protected species has been included within the Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4).</p> <p>Through routeing, siting and detailed design, National Grid has sought to reduce, as far as practicable, potential impacts on biodiversity including priority grassland, wetland, woodland, and hedgerow habitats. The design process has taken account of existing biodiversity, the natural environment and, where practicable, seeks to reduce impacts on areas of ecological sensitivity, through avoidance or mitigation.</p> <p>Chapter 8: Ecology and Biodiversity of the Environmental Statement (ES) (document reference 6.8) assesses the effects on important ecological receptors (which includes protected plants, woodlands and hedgerows).</p> <p>As part of the Environmental Impact Assessment (EIA) process for the Project, a suite of ecological surveys has been to be undertaken. The findings of which inform the design and approach to mitigation.</p> <p>The Outline Landscape and Ecological Management Plan (LEMP) (document reference 7.4) and the Outline Code of Construction Practice (CoCP) (document reference 7.2) contain a list of relevant good practice measures to avoid or reduce impacts on valuable habitats.</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>The Environment Act 2021 introduces a mandatory requirement for 10% Biodiversity Net Gain (BNG) for new Development Consent Order (DCO) developments (which is not yet in force and not expected until May 2026). National Grid have committed to delivering 10% BNG with environmental and societal benefits on all construction projects. The BNG target for the Project is currently voluntary and aligned with our corporate sustainability commitment.</p> <p>As well as seeking to avoid and minimise impacts to nature, the Project considers the land required for mitigation, compensation and enhancement that can deliver BNG and wider environmental benefits. This will require delivery of offsite Biodiversity Units via habitat creation or enhancement actions in strategic areas, and we will consider all offsite options that are available to us.</p>				
10-27.84	Concern that the Project will result in a negative impact on rivers / other bodies of water	<p>Through routeing, siting and detailed design National Grid has sought to reduce, as far as practicable, potential impacts on biodiversity including river ecology. The design process has taken account of existing biodiversity, the natural environment and, where practicable, has sought to reduce impacts on areas of ecological sensitivity such as river corridor habitats, through avoidance or mitigation. The same approach has been taken to account for rivers and their floodplains, seeking to avoid or reduce the footprint of the Project within floodplains.</p>		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>As part of the Environmental Impact Assessment (EIA) process for the Project, a suite of ecological surveys has been undertaken, including along river corridors. The data has informed the assessment of effects on biodiversity, hydromorphology, water quality and flood risk presented in the Environmental Statement (ES), Chapter 8: Ecology and Biodiversity (document reference 6.8) and ES Chapter 12: Hydrology, Land Drainage and Flood Risk (document reference 6.12) and the Water Framework Directive Assessment (document reference 7.10).</p> <p>Further, the Project has engaged with Natural England, the Environment Agency and Local Planning Authorities on aspects relating to river ecology, water quality and flood risk, and appropriate mitigation measures and techniques have been secured in the Outline Code of Construction Practice (CoCP) (document reference 7.2).</p> <p>The Environment Act 2021 introduces a mandatory requirement for 10% Biodiversity Net Gain (BNG) for new Development Consent Order (DCO) developments (which is not yet in force and not expected until May 2026). National Grid has committed to delivering 10% BNG with environmental and societal benefits on all construction projects including for river ecology. The BNG target for the Project is currently voluntary and aligned with National Grid's corporate sustainability commitment.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		As well as seeking to avoid and minimise our impacts on nature, the Project includes enhancement of watercourse habitats as part of BNG mitigation.				
10-27.85	Concern that the Project will result in a negative impact on wildlife / biodiversity / ecology (generally)	<p>Through routing, siting and detailed design National Grid has sought to reduce, as far as practicable, potential impacts on biodiversity. The design process has taken account of existing biodiversity, the natural environment and, where practicable, has sought to reduce impacts on areas of ecological sensitivity, through avoidance or mitigation.</p> <p>Chapter 8: Ecology and Biodiversity of the Environmental Statement (ES) (Document Reference 6.8) assesses the effects on important ecological receptors. Suffolk 1 Change feedback (Targeted Consultation)

Table 10-28 Summary of consultee comments and National Grid's response

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Consultation						
10-28.1	Criticism of consultation materials on this change (Suffolk 1) (please summarise specific criticism in details sheet)	<p>National Grid notes the respondent's feedback. For each of our targeted consultations we developed an overview leaflet and Environmental Implication of Change (EIC) document, including a section on 'Ecology and Biodiversity', agriculture, and mitigations, alongside other environmental considerations. These were sent to properties within the bespoke consultation zone for the relevant change. We also published a consultation strategy and overview map. All these documents remain available on the Project website.</p> <p>The maps we produced were sent to residents as part of an A4 leaflet, but we did provide larger maps at A3 size to several residents on request where they struggled with the small copy. We also had a dedicated phoneline and email address if people had any questions about the documents or proposed changes.</p> <p>The use of Public Rights of Way (PRoW), including bridleways, during construction, continued access will be facilitated where practical and feasible in order to minimise the number of diversions and temporary</p>	X	X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		closures required. Where this is not feasible, the PRoW will either be temporarily diverted, or if the route cannot be diverted, temporarily closed. An Outline Public Right of Way (PRoW) Management Plan (document reference 7.6) has been submitted as part of the application for development consent.				
Design Change (CR)						
10-28.2	Oppose the proposed change - Suffolk 1 (generally)	National Grid notes the respondent's feedback.		X	X	
10-28.3	Support the proposed change - Suffolk 1 (generally)	National Grid notes the respondent's feedback.	X	X	X	
10-28.4	Oppose the Project access to the main compound via the Parkland to the front of the respondent's property e.g., due to unnecessary interference with respondent's property, impact on the use of the dwelling, disrupting the setting and damaging the parkland and features thereof. Criticism that there is limited sense in making positive changes with regards to pylon relocation and cable route alternation to offset that with installation of what will inevitably be a busy access route	<p>National Grid notes the respondent's feedback and believes this is a misinterpretation of the plan provided at targeted consultation. The buffer extending west from the proposed overhead line to the north of Rookery Farm is a proposed temporary utilities connection route to the existing UK Power Network network to provide a temporary feed to the proposed temporary compound located west of RG96.</p> <p>All temporary construction compounds include for the use of generators. UK Power Network connections may be available to supply electricity to the temporary construction compounds. UK Power Network connections would be made where practicable within the Order Limits. However, any UK Power Network connections remain subject to agreement with UK Power Network and landowners. Note in this location the</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>connection proposed is south of the planting area identified by the respondent.</p> <p>The temporary construction haul road access is still being taken off Old Bury Road, via haul road to the east of the main compound. The permanent access right to pylons is retained for operational survey and maintenance access along the existing track to the west of Rookery Farm.</p>				
10-28.5	Suggest alternative access points are available and their 'opening up' with vegetation removal would not be objectional to the respondent, leaving the parkland untouched (plan provided by respondent - access points are shown circled red)	<p>National Grid notes the respondent's feedback and believes this is a misinterpretation of the plan provided at targeted consultation. The buffer extending west from the proposed overhead line to the north of Rookery Farm is a proposed temporary utilities connection route to the existing UK Power Network network to provide a temporary feed to the proposed temporary compound located west of RG96.</p> <p>All temporary construction compounds include for the use of generators. UK Power Network connections may be available to supply electricity to the temporary construction compounds. UK Power Network connections would be made where practicable within the Order Limits. However, any UK Power Network connections remain subject to agreement with UK Power Network and landowners. Note in this location the connection proposed is south of the planting area identified by the respondent.</p> <p>The temporary construction haul road access is still being taken off Old Bury Road, via haul road to the east</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		of the main compound. The permanent access right to pylons is retained for operational survey and maintenance access along the existing track to the west of Rookery Farm.				
10-28.6	Concern about the impact of the realignment of the Project specifically for Pylon RG95 if the Suffolk 1 change is adopted due to the impact on the junction of Old Bury Road and the A143	<p>Junctions connecting the Primary Access Routes with the Local Road Network and identified as having potential capacity issues due to the Project construction flows have been included in the Transport Assessment (document reference 7.11) submitted as part of the Development Consent Order (DCO) application.</p> <p>The A143 / Old Bury Road junction was not identified as an area of capacity concerns due to the low baseline traffic. Furthermore, the expected maximum number of construction vehicles associated with the Project during the peak construction activity is less than 10 Heavy Goods Vehicles accessing Old Bury Road from the A143 and less than 10 Heavy Goods Vehicles exiting to the A143 from Old Bury Road per hour.</p>			X	
10-28.7	Concern over pylons RG92 and RG93 as they are located within productive arable farmland, and so will impact the use of this land and potentially negatively impact the ability to farm sections of the field	National Grid notes the respondent's feedback. The alignment in this location has been positioned to partly take the alignment of the existing 132 kV overhead line, reduce impacts to a solar farm development and avoid impacts to Brook Farm Airstrip. RG92 and RG93 have been positioned as close to field boundaries as possible to try to reduce impacts to farming, while allowing for space around the pylons for construction. RG93 cannot be positioned closer to the field boundary due to other			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		factors such as reducing impacts to solar development as well as trying to avoid positioning a pylon within the woodland area to the north. We are therefore not proposing a change to the location of these pylons. If you have specific concerns regarding the impact on your land, we encourage you to seek third party advice. Alternatively contact the Lands team, Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.				
10-28.8	Oppose the placement of pylon RG099 and RG100, as well as the new construction laydown area alongside Dam Lane (e.g. due to the negative impact on the historic moat by Seethings Wood, historic Dam Lane, and breach of Holford Rule 5)	<p>The Holford Rules have been an important consideration in the development of the design and routeing of the Project (see Appendix I22 of this report). Holford Rule 5 states '<i>prefer moderately open valleys with woods where the apparent height of towers [pylons] will be reduced, and views of the line will be broken by trees</i>'.</p> <p>Generally, locations for above ground infrastructure were influenced by the existing landform and vegetation, including belts of woodland. The landform around this section of the Project is largely comprised of a low plateau, which is incised by several river valleys (including the River Waveney). The north/south alignment of the required connection largely runs against the 'grain' of the landscape, with plateaux and valleys generally being on an east/west alignment. As a result, there is little opportunity for options within the Study Area to be routed within moderately open valleys as recommended by Holford Rule 5.</p>	X		X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>The consideration of landform and site context demonstrates that Holford Rule 5 has informed the design and routing of the Project where this has been a practicable consideration. Further details on the application of the Holford Rules can be found in the Planning Statement (document reference 5.6)</p> <p>A landscape and visual impact assessment (LVIA) has also been undertaken as part of the EIA and reported in Environmental Statement (ES) Chapter 13: Landscape and Visual (document reference 6.13). The LVIA sets out the potential landscape and visual effects, which includes consideration of visual amenity of visual receptor areas (including, for example, people in communities and using public rights of way). Chapter 13: Landscape and Visual of the Environmental Statement (ES) is supported by Appendix 13.3: Visual Baseline and Assessment (document reference 6.13.A3). This appendix sets out the assessment for visual receptor areas including B1 Wortham and B3 Mellis which are relevant to this feedback relating to the section of the Project containing pylons RG99 and RG100.</p> <p>Proposed pylons RG99 and RG100 respectively fall within the Ancient Plateau Claylands and Rolling Valley Farmlands and Furze Landscape Character Types (LCTs). The landscape assessment within ES Appendix 13.2: Landscape Baseline and Assessment (document reference 6.13.A2) contains detail on the assessment of effects of the Project on landscape character.</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>National Grid has worked to minimise potential impacts on the historic environment and associated settings through strategic routeing and siting measures. Feedback received during statutory consultation, as well as the results of archaeological fieldwork, has informed the development of the design to reduce, as far as practicable, impacts to archaeological remains and historic features in this area.</p> <p>As outlined in the Scoping Report (document reference 6.19), the Study Areas for Historic Environment include the Order Limits and a 250 m buffer for non-designated heritage assets. Furthermore, as stated in Chapter 11: Historic Environment of the Environmental Statement (ES) (document reference 6.11), settings of negligible and low-value non-designated assets outside the Order Limits have not been assessed, nor have medium or high-value non-designated assets outside the 250 m Study Area, due to the absence of potential for significant effects. This approach has been discussed and agreed with stakeholders, including at the February 2025 thematic working group, as detailed in Table 11.1 of the ES.</p> <p>Therefore, where a non-designated heritage asset of medium value, such as the medieval moat adjacent to Seethings Wood (asset 2260), either intersects with the Order Limits or has a setting that extends into the Order Limits, the impact of the Project on the asset due to</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>change within its setting has been assessed in accordance with EIA methodology.</p> <p>The assessment of asset 2260 concludes that during the construction phase due to physical impact and impact through change to setting, after mitigation there would be a not significant effect due to the small proportion of the asset within the Order Limits. During the operation phase, due to change within the setting, there will be a not significant effect on the asset. No additional mitigation measures are proposed during the operation phase as any measures designed to lessen the visual impact of the Project would be of a scale that would visually adversely alter the setting of the asset.</p> <p>For the heritage assets along Dam Lane, the impact due to change within the setting of the assets within the Order Limits such as assets 2624, 2625 and 2737 has been assessed within ES Appendix 11.2: Historic Environmental Assessment Tables of the Environmental Statement (document reference 6.11.A2). The effects to all of these assets would be not significant.</p> <p>Also, based on the methodology above, it has been concluded that there will be no significant effects resulting from the Project on the assets outside the Order Limits, such as 2619, 2620, 2623.</p>				
10-28.9	Suggest that Pylon RG94 is relocated west to the field boundary to minimise the impact on arable production	National Grid notes the respondent's feedback. As RG94 is an angle pylon, space is required around the pylon for stringing the overhead lines through the conductors. We are therefore not able to move RG94			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		west to the field boundary without requiring the removal of the woodland to the west. We are therefore not proposing a change to the location of this pylon. If you have specific concerns regarding the impact on your land, we encourage you to seek third party advice. Alternatively contact the Lands team, Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.				
10-28.10	Suggest that Pylon RG93 is relocated north into the meadow, a smaller less productive field with improved natural screening	National Grid notes the respondent's feedback. In order to move RG93 north, RG92, RG93 and RG94 would have to increase in height due to increased span lengths in order to ensure safe clearances over the road. This would increase the visual impacts of these pylons and would also increase impacts to Brook Farm Airstrip as well as ecological impacts on the meadow. We are therefore not proposing a change to the location of this pylon.			X	
10-28.11	Suggest that Pylon RG95 is relocated south of the A143 to provide better screening	National Grid notes the respondent's feedback. In order to move RG95 south of the A143, RG94, RG95 and RG96 would have to increase in height due to increased span lengths in order to ensure safe clearances over the road. This would increase the visual impacts of these pylons and would also increase impacts to Brook Farm Airstrip. We are therefore not proposing a change to the location of this pylon.			X	
10-28.12	Criticism that the airstrip and the model flying club have been given a disproportionate amount of	The model flying airstrip is a legitimate and established use with established guidance in place to define			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	weight as the use of the airstrip is minimal / Suggest that the model flying club could be re-located at less cost to the project than the cost of the impact of the proposed realignment	appropriate activity. National Grid considers that finding an alternative site will be more challenging than the respondent assumes and considers that this will largely transfer effects to a different group of receptors. Given that the level of effect is considered to be acceptable in planning terms National Grid does not consider the proposed relocation of the club to be a proportionate response compared with the adjustment to the line. Further information on the assessment of airfields can be found in the Environmental Statement (ES) Chapter 15: Socio-Economics, Recreation and Tourism (document reference 6.15) and ES Appendix 15.2: Review of Aviation Impact (document reference 6.15.A2).				
10-28.13	Concern that pylons RG95-RG102 and associated works will cause harm to the trackway of Dam lane	National Grid notes the respondent's feedback. Dams Lane will be crossed by the proposed haul road with associated bellmouths. National Grid and their contractors will take every precaution to avoid damage to the existing highway during construction. Where this is unavoidable, temporary measures will be implemented and reinstated accordingly post completion of the works.			X	
10-28.14	Suggest that undergrounding of the 132kV line should be explored further to PK40 (near Elm Vale Farm)	National Grid must balance its mandate to be economic and efficient against the cumulative impact of multiple overhead lines. Further undergrounding of the UK Power Network PK line beyond PKF35 was not assessed to have sufficient drivers to do so to warrant		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		the additional cost and impacts to additional receptors by extending the cable and works further towards the substation.				
10-28.15	Suggest that overhead lines are used across the A143 to avoid roadside vegetation loss	<p>National Grid notes the respondent's feedback. The alignment is proposed to cross the A143 as overhead line between pylons RG95 and RG96 at the A143.</p> <p>To the east of the alignment the Order Limits also cross the A143 where the Project intends to remove a section of the existing UK Power Network overhead line back to PKF35 which is north of the A143. The existing overhead line will be removed and diverted as underground cables south to PKF16 where it will transition back to overhead line. This section of the existing overhead line is being removed to facilitate space for the alignment and thus reducing cumulative impacts. There for this cross of the A143 will be via underground cable. The amount of vegetation lost will be kept to the minimum required by the contractors to install the cables.</p>		X	X	
10-28.16	Suggest the project route is changed from RG102 and RG109 to avoid the end of Burgate Little Green, mitigating the impact on listed buildings on the Gislingham Road and to avoid Whitmore's Wood and Big Wood (see map provided by respondent)	<p>National Grid notes the respondent's feedback and suggested route change between RG102 and RG109. The alignment was previously moved further from Mellis Common, to avoid historic assets such as moats that were identified through consultation with Historic England as well as in order to follow the route of the existing 132 kV overhead line which is now proposed to be placed underground. We are therefore not proposing</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		a further change to the alignment to move back closer to Mellis Common at this location as suggested. The Order Limits do not encompass Whitmore's Wood and Big Wood which therefore will not be impacted. We have undertaken an Environmental Impact Assessment (EIA) which assesses the impacts on the Project and proposes mitigation where required. The findings of the assessment are presented in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) which accompanies our application for development consent.				
10-28.17	Suggest pylon RG92 is relocated to the edge of the field to ensuring irrigation runs and farming operations can continue uninterpreted	National Grid notes the respondent's feedback. RG92 is positioned as close to the field boundary as possible while allowing for space for construction. We are therefore not proposing a change to the location of this pylon. If you have specific concerns regarding the impact on your land, we encourage you to seek third party advice. Alternatively contact the Lands team, Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.	X		X	
10-28.18	Concern for the overlap of the Project's overhead transmission line and associated works with solar PV panels, which would reduce the generating capacity of the Grange Solar Farm by up to 6.59MWp from the current designed 67.2MWp capacity, depending on the nature and extent of restrictions in place. The extension to the undergrounding of the existing 132	National Grid notes the respondent's feedback. We have amended the route for the undergrounding of the existing 132 kV overhead line to avoid interaction with the substation. We have routed and sited the alignment to reduce interactions with the solar development as far as possible.			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	kV line shown in Targeted Consultation has increased the Project's boundary to overlap with the substation for Grange Solar Farm. If the substation required relocation to another part of the Site, this would further increase the loss of generating capacity (plan provided by respondent)	We will continue to engage with developers throughout the next stages of the Project. If you have specific concerns regarding the impact on your development, we encourage you to contact the Lands team, Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.				
10-28.19	Request that the design of the Grange Solar Farm and its significant contribution to the transition to net zero be taken into account when developing the Project. Request alternative options that avoid and minimise impacts on the solar generating capacity should be progressed. This includes engaging with PS Renewables on any elements of the design that will be 'fixed' in the DCO application as soon as possible	<p>National Grid notes the respondent's feedback. We have amended the route for the undergrounding of the existing 132 kV overhead line to avoid interaction with the substation. We have routed and sited the alignment to reduce interactions with the solar development as far as possible.</p> <p>We will continue to engage with developers throughout the next stages of the Project. If you have specific concerns regarding the impact on your development, we encourage you to contact the Lands team, Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.</p>			X	X
10-28.20	Suggest relocating the laydown site and RG93 to a less intrusive location further from residential properties to reduce visual intrusion, property disruption and EMF related concerns	National Grid notes the respondent's feedback. The proposed material laydown area has been reduced in size and moved away from the adjacent property. It is required to be located adjacent to the public highway to provide access to enable stone to be stored to construct the haul road. Locating the laydown area east of the current alignment would impact a field which is currently unaffected by the Project. In order to move RG93 north, away from properties, RG92, RG93 and RG94 would	X		X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>have to increase in height due to increased span lengths in order to ensure safe clearances over the road. This would increase the visual impacts of these pylons and would also increase impacts to Brook Farm Airstrip. We are therefore not proposing a change to the location of this pylon.</p> <p>We have undertaken a Landscape and Visual Impact Assessment (LVIA) for the Project. This includes an assessment on both landscape character and visual amenity. The LVIA is presented in the Environmental Statement (ES), Chapter 13: Landscape and Visual (document reference 6.13).</p> <p>The health and safety of the public, local communities and employees is central to everything that we do. The UK has a carefully thought-out set of policies for protecting us all against Electric and Magnetic Fields (EMFs), the main component of which is exposure guidelines. The exposure guidelines are set by independent scientific bodies and are based on decades-long studies into the effects of EMFs and ill health. After those decades of research, the weight of evidence is against there being any health risks of EMFs below the guideline limits. Our approach is to ensure that our network comply with those policies, which are set by Government on the advice of their independent advisors. The Project is designed to ensure it is fully compliant with these policies and guidelines. This</p>				

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>ensures that health concerns are properly and adequately addressed.</p> <p>Policies for both noise and EMF are incorporated into the decision-making process for development consent as set out in National Policy Statement (NPS) EN-5. It is National Grid's policy to ensure that all its equipment complies fully with those policies and guidelines. The application for a Development Consent Order (DCO) includes assessments against these policies, including both construction and operational noise and EMF.</p>				
10-28.21	Suggest relocating construction activities near Lion Road Junction (Pylon RG93) into the adjacent fields to minimise traffic congestion and safety concerns at a renowned accident blackspot, ensuring safer and more efficient road usage during construction	<p>National Grid notes the respondent's feedback. The proposed material laydown area has been reduced in size away from the adjacent property. It is required to be located adjacent to the public highway to provide access to enable stone to be stored to construct the haul road. Locating the laydown area east of the current alignment would impact a field which is currently unaffected by the Project.</p> <p>The historic accidents in this area date back prior to the construction of the highways safety improvements and the closure of the Mental Health Hospital, St John's House. These developments have resulted in a better arrangement and reduced turning movements.</p> <p>The proposed bellmouth access in this location has undergone a Road Safety Audit (RSA) which recommendations will be implemented as part of the detailed design of the access.</p>	X	X	X	X

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		The outcome of the RSA recommendations combined with the highway improvements recently constructed and reduce movements following the closure of the hospital reduce the accident risk in this area.				
10-28.22	Suggest that Pylon RG92 is relocated to the edge of the field to preserve the functionality of Grade 3A / 3B irrigated farmland and minimise the disruption to agricultural operations	National Grid notes the respondent's feedback. RG92 is positioned as close to the field boundary as possible while allowing for space for construction. We are therefore not proposing a change to the location of this pylon. If you have specific concerns regarding the impact on your land, we encourage you to seek third party advice. Alternatively contact the Lands team, Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.	X		X	
10-28.23	Suggest relocating RG92 to reduce the proximity to the working farmyard and ensure that farming operations remain unhindered	National Grid notes the respondent's feedback. RG92 is positioned as close to the field boundary as possible while allowing for space for construction. We are therefore not proposing a change to the location of this pylon. If you have specific concerns regarding the impact on your land, we encourage you to seek third party advice. Alternatively contact the Lands team, Norwich-Tilbury@fishergerman.co.uk or by calling us on Freephone 0808 175 3314.	X		X	
Heritage						
10-28.24	Suggest relocating RG92 to reduce the proximity to the working farmyard and ensure that farming operations remain unhindered	Potential physical impacts to archaeology resulting from the 132 kV diversion and associated compound areas will be subject to archaeological evaluation in line with		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		the specification used for the main works. This will include geophysical survey and trial trenching.				
Wildlife / Ecology Impact						
10-28.25	Suggest relocating RG92 to reduce the proximity to the working farmyard and ensure that farming operations remain unhindered	<p>National Grid notes the respondent's feedback. In order to provide a compliant access crossing the public highway visibility splays are required. This will mean retaining and cutting back vegetation in the vicinity of the crossing as well as some removals. National Grid has sought to reduce, as far as practicable, impacts on the environment / countryside through routeing and siting and an ongoing iterative design process which has taken on board feedback at different stages of the project. The iterative design process sought to avoid areas of highest concern. The proposed bellmouth junctions have undergone Road Safety Audits, and mitigation measures for road safety have been developed. This includes temporary traffic management measures such as speed limit reductions and/or temporary signals.</p> <p>Post construction the bellmouth will be removed and the vegetation reinstated.</p> <p>More details on the bellmouths can be found within the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).</p>			X	

Suffolk 2 Change feedback

Table 10-29 Summary of consultee comments and National Grid's response

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Community / Social impact						
10-29.1	Concern that Pylons RG118, RG119 and compounds will result in restricted vehicle access and closure of public footpaths to the Thornham Wildlife Site, if Suffolk 2 change is adopted	<p>Through routeing and siting, National Grid has sought to reduce, as far as practicable, impacts and disruption to Public Rights of Way (PRoW).</p> <p>The iterative process of route design has identified the existing PRoW network and their wider connectivity and sought where practicable to reduce and where possible remove impacts to PRoW.</p> <p>The effects on existing PRoW would be mitigated where possible, maintaining access where practicable, with temporary closures as a last resort. We will continue to engage with relevant stakeholders on the PRoW network to enable feedback and input to be considered as the Project develops.</p> <p>An Outline Public Rights of Way (PRoW) Management Plan (document reference 7.6) has will been prepared and submitted with the application for development consent.</p> <p>Environmental Statement (ES) Chapter 16: Traffic and Transport (document reference 6.16) provides an</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>assessment of the walker, cyclist and horse-rider delays for the PRowWs if it is expected that there would be a temporary maximum increase in journey length for more than four weeks in any 12-month period. The Outline PRow Management Plan has defined the management of the PRow in the area around pylons RG118 and RG119. The PRow will be temporarily closed for the duration of the works with managed access, that is, allowing a safe passage throughout of the PRow users i.e. footpaths W-267/021/0 and 267/022/0. Therefore, movement towards the Thornham Wildlife Site should not be significantly affected near to Pylons RG118 and RG119.</p> <p>The overall effect on PRow users has been classified as not significant.</p>				
Consultation						
10-29.2	Criticism of consultation materials on this change (Suffolk 2) (please summarise specific criticism in details sheet)	<p>National Grid notes the respondent's feedback. For each of our targeted consultations we developed an overview leaflet and Environmental Implication of Change (EIC) document which included a section on 'Hydrology, Land drainage, and Flood risk'. These were sent to properties within the bespoke consultation zone for the relevant change. We also published a consultation strategy and overview map. All these documents remain available on the Project website. The information provided at the targeted consultations was considered proportionate to the changes being consulted upon.</p>		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		The use of Public Rights of Way (PRoW), including bridleways, during construction, will be facilitated where practical and feasible in order to minimise the number of diversions and temporary closures required. Where this is not feasible, the PRoW will either be temporarily diverted, or if the route cannot be diverted, temporarily closed. An Outline Public Rights of Way Management Plan (document reference 7.6), has been submitted as part of this application for development consent.				
Design Change (CR)						
10-29.3	Oppose the proposed change - Suffolk 2 (generally)	National Grid notes the respondent's feedback.			X	
10-29.4	Support the proposed change - Suffolk 2 (generally)	National Grid notes the respondent's feedback.	X	X	X	
10-29.5	Suggest the Project is routed over the railway line before the bridge on the Thornham Road and then carries on parallel with the railway line, putting the next pylon on a small meadow near the next bridge	National Grid has considered the respondent's feedback. We previously proposed a change to the alignment between RG113 and RG118 (now RG119) which would move RG115, RG116, RG117 and RG118 further east away from Gislingham. RG117 would also then be positioned on the other side of a copse. Crossing the railway at the location suggested would result in the loss of a greater amount of woodland to the east of the railway and would be closer to a campsite and venue to the east. Therefore, we are not proposing a change to cross the railway at this location.			X	
10-29.6	Suggest the Project continues north-eastwards and run parallel to the east of the trainline, before	National Grid has considered the respondent's feedback. We previously proposed a change to the			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
	crossing where the train line drops down again, putting the pylon in the field around the area of What3Words location stormy.mixture.hedgehog. (e.g., to reduce the possibly for an additional pylon, to increase the proximity of the pylons and power lines to the residents of Gislingham, to ensure the small wooded area that is to the west of pylon RG117 (walking.spruced.biked) is not surrounded on 2 sides by pylons and powerlines, to ensure the meadow land between RG118 and RG119 would not be impacted)	alignment between RG113 and RG118 (now RG119) which would move RG115, RG116, RG117 and RG118 further east away from Gislingham. RG117 would also then be positioned on the other side of a copse. Crossing the railway at the location suggested would result in the loss of a greater amount of woodland to the east of the railway and would be closer to a campsite and venue to the east. Therefore, we are not proposing a change to cross the railway at this location. We have undertaken an Environmental Impact Assessment (EIA) which assesses the impacts on the Project and proposes mitigation where required. The findings of the assessment are presented in the Environmental Statement (ES) (document reference Volume 6: Environmental Statement) which accompanies our application for development consent.				
10-29.7	Concern about the impact of relocating Pylon RG115 (e.g. if re-located as proposed then this pylon would sit on the entrance of the footpath and bridleway, and would be located closer to residents)	Chapter 15: Socio-economics, Recreation and Tourism of the Environmental Statement (ES) (document reference 6.15) assesses the potential impact on Public Right of Way (PRoW) users during construction and operation. An Outline Public Right of Way Management Plan (document reference 7.6) has been submitted as part of this Development Consent Order (DCO) application. This document sets out management measures and mitigation measures for each PRoW affected by the construction activities and operation of the Project. The Outline PRoW Management Plan has defined the			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>management of the PRow located adjacent to RG115, which is W-267/014/0 (a bridleway) and shares the same path with Gislingham Circular Route 2.</p> <p>The Outline Public Right of Way Management Plan (document reference 7.6) states that W-267/014/0 will be temporarily closed with managed access for the duration of works (current indicative duration of four years), that is, allowing a safe passage throughout for the PRow and Gislingham Circular Route 2 users.</p> <p>The only footpath located near RG115 is W-267/014/A, which falls beyond the Order Limits. Hence, access disruption is not anticipated during construction and operation.</p>				
10-29.8	Suggest that the Project is re-routed from pylon RG117 to RG119, crossing the railway line a few hundred meters to the north of Thornham Road, where there is adequate clearance (e.g. mitigating visual impact, impact on farm, ancient trees, water meadows, long standing hedgerows, listed building, and habitats, moving the Project away from the flood plain, providing a more appropriate tree lined backdrop for a more easterly angle tower, providing a more appropriate location for a construction compound, and making use of open land to the east of the railway line)	<p>National Grid has considered the respondent's feedback. We previously proposed a change to the alignment between RG113 and RG118 (now RG119) which would move RG115, RG116, RG117 and RG118 further east away from Gislingham. RG117 would also then be positioned on the other side of a copse. Crossing the railway at the location suggested would result in the loss of a greater amount of woodland to the east of the railway and would be closer to a campsite and venue to the east. Therefore, we are not proposing a change to cross the railway at this location. We have undertaken an Environmental Impact Assessment (EIA) which assesses the impacts on the Project and proposes mitigation where required. The findings of the assessment are presented in the Environmental</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		Statement (ES) (document reference Volume 6: Environmental Statement) which accompanies our application for development consent.				
10-29.9	Suggest that the Project is crosses the railway line at Pylon RG117 as per plan provided by respondent (e.g. for reasons including re-locating the Project a further 225 to 250 metres away from the village of Gislingham, taking advantage of screening from the railway line, Swattesfield Campsite is only open from April to September, the issue relating to the embankment can be avoided with this proposed alignment, mitigating the impact on listed buildings, avoiding the need for a haul road on respondents land, and removing construction traffic from Thornham Road which is not a suitable route)	<p>National Grid has considered the respondent's feedback. We previously proposed a change to the alignment between RG113 and RG118 (now RG119) which would move RG115, RG116, RG117 and RG118 further east away from Gislingham. RG117 would also then be positioned on the other side of a copse. Crossing the railway at the location suggested would result in the loss of a greater amount of woodland to the east of the railway and would be closer to a campsite and venue to the east. Therefore, we are not proposing a change to cross the railway at this location. We have undertaken an Environmental Impact Assessment (EIA) which assesses the impacts on the Project and proposes mitigation where required. The findings of the assessment are presented in the Environmental Statement (ES) (Volume 6: Environmental Statement) which accompanies our application for development consent.</p> <p>A strategy has been developed to manage the impact of construction vehicles on the public highway and sensitive receptors, using suitable Local Road Network connections from the Strategic Road Network called Primary Access Routes. In addition, temporary haul roads for construction vehicles are proposed along the</p>			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Project alignment, further reducing the impact of construction traffic on the local road network. Further details of the strategy can be found within the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).</p> <p>The proposed bellmouth junctions and primary access routes have undergone Road Safety Audits, and mitigation measures for road safety have been developed. This includes temporary traffic management measures such as speed limit reductions and/or temporary signals. Where visibility is limited or the public highway is narrow and vehicles cannot pass each other safely, vehicle passing places and waiting areas have been proposed to address the concerns raised.</p> <p>Post construction the bellmouth and mitigations will be removed and the vegetation reinstated.</p> <p>More details on the bellmouths can be found within the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).</p>				
10-29.10	Suggest that the undergrounding of the UKPN line should be extended to PKF14 to reduce the concentration of energy infrastructure at Burgate Road	National Grid must balance its mandate to be economic and efficient against the cumulative impact of multiple overhead lines. Further undergrounding of the UK Power Network PK line beyond PKF16 was not assessed to have sufficient drivers to do so.		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Environmental impact						
10-29.11	Concern that Pylon RG118 will be relocated into flood zone 3 if Suffolk 2 change is adopted. Suggest that compensatory storage is required if this is in the 1:100 plus climate change outline	Commitment W17 in the Outline Code of Construction Practice (CoCP) (document reference 7.2) secures that, for events up to and including the 1% annual exceedance probability (1:100) flood event plus climate change, where pylons are located within the fluvial floodplains of watercourses, compensatory storage within the Order Limits will be provided for loss of floodplain storage. This principle has been discussed and agreed with the Environment Agency and would prevent any potential for increases in fluvial flood risk.	X		X	
10-29.12	Suggest that the undergrounding of the UKPN line should be extended to PKF14 to reduce the concentration of energy infrastructure at Burgate Road	National Grid note the respondent's comments. The material laydown area in question is located far enough away from the vegetation meaning we would not need to remove any of it.		X		
10-29.13	Concern that developing settled agricultural and, building roads and associated drainage gully's will have a detrimental effect, with issues such as pollution, run off and damage to heavy clay subsoil drainage infrastructure	Detailed Agricultural Land Classification (ALC) surveys have been undertaken to determine and clarify the soil resources present, the results of which are presented in full in ES Appendix 6.1 Agricultural Land Classification Report (document reference 6.6.A1) of the Environmental Statement (ES). The Outline Code of Construction Practice (CoCP) (document reference 7.2) details that consultation with affected landowners will be carried out to investigate the current extent of land drainage. A scheme of pre-construction land drainage will be designed with the intent of maintaining the			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		efficiency of the existing known land drainage system and to assist in maintaining the integrity of the working area during construction, thereby reducing damage to heavy clay subsoil drainage infrastructure. The Project will also consider surface water runoff and pollution control measures and is committed to adopting suitable Sustainable Drainage techniques to both treat and attenuate rainfall runoff arising from the Project during its construction and operation, to prevent increased pollution and surface water flood risk. A Surface Water Management Plan will be prepared prior to construction. This is secured through a Requirement in the draft Development Consent Order (document reference 3.1).				
Primary Access Routes / Haul Road / Construction Compounds						
10-29.14	Concern about the impact of relocating the bellmouth on Major Lane 200m to the east if the Suffolk 2 change is adopted	National Grid notes the respondent's feedback. The proposed bellmouth junctions have undergone Road Safety Audits (RSA), and mitigation measures for road safety have been developed. This includes temporary traffic management measures such as speed limit reductions and/or temporary signals. Where visibility is limited or the public highway is narrow and vehicles cannot pass each other safely, vehicle passing places and waiting areas have been proposed to address the concerns raised. RSAs for all bellmouths can be found within the Transport Assessment (document reference 7.11).			X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		<p>Post construction the bellmouth and mitigations will be removed and the vegetation reinstated.</p> <p>More details on the bellmouths can be found within the Outline Construction Traffic Management Plan (CTMP) (document reference 7.3).</p> <p>Chapter 16: Traffic and Transport of the Environmental Statement (ES) (document reference 6.16) identified that there would be no likely significant effects as a result of the construction of the Project.</p>				

Suffolk 3 Change feedback

Table 10-30 Summary of consultee comments and National Grid's response

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
Community / Social impact						
10-30.1	Concern that respondent has no legal access to the public highway due to the draft order limits, with no access to the road from respondent's driveway where Wimble Lane meets Lamberts Lane	National Grid and their contractors shall continue to engage with the respondent and will ensure access arrangements during construction maintain right of access to the property in question.			X	
Consultation						
10-30.2	Criticism of consultation materials on this change (Suffolk 3) (please summarise specific criticism in details sheet)	<p>National Grid notes the respondent's feedback. The changes to Suffolk 3 included the repositioning of a haul road to follow field boundaries. This was shown in the consultation leaflet maps and was reflected by a black hatch, as was shown in the key.</p> <p>The use of Public Rights of Way (PRoW), including bridleways, during construction, will be facilitated where practical and feasible in order to minimise the number of diversions and temporary closures required. Where this is not feasible, the PRoW will either be temporarily diverted, or if the route cannot be diverted, temporarily closed. On Outline Public Rights of Way Management Plan (document reference 7.6) has been prepared</p>		X	X	

Ref no.	Summary of matters raised	National Grid's response	S42(1)(a)	S42(1)(b)	S42(1)(d) and S47	Resulted in Design Change
		submitted as part of this application for development consent. We acknowledge that there was a slight inconsistency in the consultation documents produced for Suffolk 3 regarding the number of angle pylons in the proposed change. The annotated maps and Environmental Impact of Change document were both correct.				
Design Change (CR)						
10-30.3	Oppose the proposed change - Suffolk 3 (generally)	National Grid notes the respondent's feedback.			X	
10-30.4	Support the proposed change - Suffolk 3 (generally)	National Grid notes the respondent's feedback.	X	X	X
