

please visit the village of Offton in Midsuffolk District. The village will be impacted in 3 ways:

1. existing UK power Network powerlines & pylons will have to be removed from the west of Middlewood.
2. those powerlines are proposed to be placed underground east of Middlewood Offton which is an ancient woodland. That undergrounding will have to be placed underneath a very deep channel of water and will pass within 30 m of St Mary's church Offton, a listed building.
3. The new powerlines & extremely high pylons will be installed on the east side of Middlewood in an undulating landscape. The pylons will be visible from many viewpoints around the village.

At least 5 of those pylons will be in my view from my lounge window.

It will affect my wellbeing as well as the value of my property.

Please refuse this application and recommend undergrounding in this vicinity. This will save the need to resite the existing pylons and will save a lot of the costs.
